6. From this point downward, the coincidence with Grecian and Roman annals becomes so clear, to the junction with the Christian era, that there can be no doubt respecting the chronology as a whole. The pro- phetic period of Daniel's " Seventy Weeks " (q. v.) covers this period, and accurately sketches the outline of Jewish history. The details will be considered under the special heads to which they belong, e. g. Daniel; Eze; Nehemiah; Maccabees; Jesus; Acts, etc. III. Synchronisms with Profane Annals. There are a number of leading dates which may be regarded as more or less settled by a comparison of the foregoing Biblical statements with those found in classical, Ju- dæo-ecclesiastical, and monumental history. 1. The Deluge. The flood, according to the foregoing adjustments, would end near the close of B.C. 2515, and would have begun near the close of B.C. 2616. It is most reasonable to suppose the Noachian colonists to have begun to spread on foot long after the flood; scriptural intimations, as commonly interpreted, assign their dissemination to the beginning of the second century after that event. If the Division at Peleg's birth be really the same as the Dispersion (q. v.) after the building of the Tower of Babel, this supposed interval of time, which could not necessarily have to be lengthened, for the text of the account of the building of the Tower does not absolutely prove that all Noah's de- scendants were concerned in it, and therefore some may have previously taken their departure from the primeval settlement. See Peleg. The chronology of Egypt, derived from the monuments and Manetho, is held by some to indicate for the foundation of its first kingdom a much earlier period than would be consistent with this scheme of approximative Biblical dates; but other and more careful authors greatly reduce these computations (see J. C. K. Hofmann, Egiptische u. Isr. Zeitrechnung, Nüd. 1847, 8vo). The Assyrians and Babylonians have not been proved on satisfactory grounds, to have reckoned back to so remote a time as the Egyptians; but the evidence of their monuments, and the fragments of their history preserved by ancient writers, as in the case of the Egyptians, cannot well be reconciled with the short interval preferred by Usher. The most probable calculations, based upon independ- ent historical evidence, point to no considerable period beyond the middle of the 26th century B.C. as the time of the foundation of kingdoms, although the chronology of Egypt reaches to about this period (Osinburn, Monumental Hist. of Egypt, p. 584, concludes that Menes founded the Egyptian empire at Memphis in B.C. 2489), while that of Babylon and other states does not great- fully fall short of the same antiquity, although the Assyrian empire was much later (Layard, Babylon and Nine- ceh, p. 581, dates, according to the latest conclusions from the inscriptions, the reign of the first Ninevite king, Dur- etto, from B.C. 1250). See Noah. 2. The Hebrew Calendar. Arguments found in independent evidence afford collateral means of deciding which is the most probable computation from Biblical evi- dence of the date of this event. A comparison of the Hebrew calendar with the Egyptian has led a late writer (Pool, Notes on Egypt and Pakistan, p. 217) to the following result: The civil commencement of the Hebrew year was made for the convenience nearest to the Egyptian equi- nox; and at the approximate date of the Exodus ob- tained by the reckoning given above, we find that the Egyptian year commenced at or about at that point of time. This approximate date, therefore, falls about the time at which the year under the Hebrew year was reckoned, and thus from the above, almost, nearly or exactly coincided in their commencements. It may reasonably be supposed that the Israelites in
the time of the oppression had made use of the vague year as the common year of the country, which, indeed, is rendered highly probable by the circumstance that they had to a considerable extent and in no very private manner adopted Egyptian religious customs (Josh. xxiv. 14; Ezek. xx., 7, 8), the celebrations prescribed of this year. When, therefore, the festivals of the Law rendered a year virtually tropical necessary, of the kind either restored or instituted at the Exodus, it seems most probable that the current vague year was fixed under Moses. If this supposition be correct, we should expect to find that the 14th day of Abib, on which fell the firstfruits, was also observed by the Israelite correspondingly as the 14th day of a Phamenoth, in a vague year commencing about the autumnal equinox. It has been ascertained by computation that a full moon fell on the 14th day of Phamenoth, on Thursday, April 21st, in the year B.C. 1662. A full moon would not fall on the same day of the vague year at a shorter interval than 28 years before or after this date, while the triple coincidence of the new moon, vague year, and autumnal equinox could not recur in less than 1560 vague years (Encyclopedia Brit., 8th ed., s. v. Egypt, p. 466). The date thus obtained is but four years earlier than Hezekiah's accession, and it is therefore very possible that the Foundation of Solomon's Temple, B.C. 1010, would be 642 years, or only six years in excess of that previously obtained from the numerical statements in the Bible. This coincidence is at least remarkable, although the want of exact correspondence in the dates detracts considerably from the force of the argument based upon this comparison. See Exonoe.

Setting aside Usher's preference for the 480 years of 1 Kings vi, 1, as resting upon evidence far less strong than the longer computation, we must mention the principal reasons urged by Bunsen and Lepsius in support of the Rabbinical date (see Bunsen, Biblicalk., i, p. cxiv, cxxvi, cxxxiii, cxlvii., and Notes on the Old Testament, i, 814 sq.). The reckoning by the genealogies, upon which this date rests, we have already shown to be unsafe. Several points of historical evidence are, however, brought forward by these writers as leading to or confirming this date. Of these the most important is the supposed account of the Exodus given by Manetho, the Egyptian historian, placing the event at about the same time as the Rabbinical date. This narrative, however, is, on the testimony of Josephus (Antiq., i, 14; also 26, etc.), who has preserved it to us, wholly devoid of authority, being, according to Manetho's own acknowledging, a record of uncertain antiquity, and being written in a style of vilifying, and noticeable Egyptian annals. An indication of date has also been supposed in the mention that the name of one of the treasure-cities built for Pharaoh by the Israelites during the oppression was Raameses (Exod. i, 11), probably the same place as the Rameses elsewhere mentioned, the chief town of a tract so called. See Rameses. This name is the same as that of certain well-known kings of Egypt of the period to which by this scheme the Exodus would be referred. If the story given by Manetho be founded on a true tradition, the great oppressor would have been Rameses 11, second king of the 19th dynasty, whose reign is variously assigned to the 14th and 18th centuries B.C. It is further urged that the first king Rameses of the Egyptian monuments and Manetho's lists is the grandfather of this king, Rameses I, who was the last sovereign of the 18th dynasty, and reigned at the utmost about 60 years before the great plagues. It must, however, be observed, that there are great reasons for taking as the merer dates of both kings, which would make the reign of the second after the Rabbinical date of the Exodus, and that in this case both Manetho's statement must be of course set aside, as placing the Exodus in the reign of this king's son, and the order of the Biblical narrative must be transposed, that the building of Rameses should not fall before the accession of Rameses I. The argument that there was no king Rameses before Rameses I is obviously weak as a negative one, more especially as the names of very many kings of Egypt, particularly those of the period to which we assign the Exodus, are wanting. It loses almost all its force when we find that the first Rameses of the 18th dynasty, variously assigned to the 17th and 16th centuries B.C., bore the name of Rameses, which name, from its meaning (son of Ra, or the sun, the god of Heliopolis, one of the eight great gods of Egypt), would almost necessarily be a very uncommon one, and Raameses might therefore have been named from this king's great prestige being the name long before Rameses I. The history of Egypt presents great difficulties to the reception of the theory together with the Biblical narrative, difficulties so great that we think they could only be removed by abandoning a belief in the historical character of that narrative; if so, it is obviously futile to found an argument upon a minute point, the occurrence of a single name. The historical difficulties on the Hebrew side, in the period after the Exodus, are on this view no less serious, and have induced Bunsen to antedate Moses's war beyond Jordan, and to compress Joshua's campaign into a mere march through the land (see ccxxviii sq.), and so, we venture to think, to forfeit his right to reason on the details of the narrative relating to the earlier period. This compression arises from the want of space for the Judges. The chronology of events so obtained is also open to the objection brought against the longer schemes, that the Israelites could not have been in Palestine during the campaign in the East of the Pharaohs of the 18th, 19th, and 20th dynasties, since it does not seem possible to throw those of Raameses III earlier than Bunsen's date of the beginning of the conquest of western Palestine by the Hebrews (see the Duke of Northumberland's paper in Wilkinson's Anc. Egypt. Trans. Soc. Lond. 1856, and G. E. Smith's, A. H. Sayce's, and J. A. Baker's). These, therefore, appear to be any good reason for abandoning the definite statements of the Hebrew records in favor of the yet crude and conflicting constructions of synchronical dates from the Egyptian monuments (see Kenrick's Egypt under the Pharaohs, vol. ii). See Egypt.

8. Rehoboam and Shishak. The Biblical evidence for this synchronism is as follows: Rehoboam came to the throne in B.C. 975. The invasion of Shishak took place in his fifth year, or B.C. 969. Shishak was already on the throne when Jeroboam fled to him from Solomon (1 Kings xi, 40). This event happened during the four years of the 23rd year of Rehoboam (1 Kings xiv. 24), and therefore, does not give any new light upon the date. Jeroboam, however, was head of the workmen of the house of Joseph (1 Kings xi, 27). The building of Millo and repairing of the breaches of the city of David was after the building of the house of Pharaoh's daughter, that was constructed about the same time as Solomon's house, the completion of which is dated in his 6th year (1 Kings vi, 1, 37, 38; vii, i; 2 Chron. v., 1, where 5 + 20 = 10 + 15). This building is recorded after the occurrences of that year of Solomon, for Pharaoh's daughter remained in Jerusalem until the king had ended building his own house, and the temple, and the wall of Jerusalem round about (1 Kings iii, 1), and Millo was built only after the removal of the queen (ix, 24); therefore, as Jeroboam was concerned in this building of Millo and repairing the breaches, and was met "at that time" (xx, 20) by Ahab, and in consequence had to flee from the country, the 24th or 25th year is the earliest possible date. The most probable date to come to the ex. 20 or 21 or 22 years (40 - 20 + 2 years (24 + 4) before his expedition against Rehoboam. An inscription at the quarries of Silius, in Upper Egypt, records the cutting of stone in the 21st year of Sheshonk I, or Shishak, for constructions in the chief temple of Thebes, where we now find a record of his conquest of Judah (Champollion, Lettres, p. 190, 101).
On these grounds we may place the accession of Shishak at B.C. cir. 900. The evidence of Manetho's lists, compared with the monuments, would place this event within a few years of this date, for they do not allow us to put it much before or after B.C. 1000, an approach which, at least, the period at which this is period is very valuable. See Shishak.

4. Josiah and Pharaoh Necho.—The death of Josiah can be clearly shown on Biblical evidence to have taken place in the 21st year before that in which the Temple was destroyed—that is, in the Jewish year 588/7 B.C. If B.C. 608 be adopted for the beginning of the reign of Necho, it is certain that his first year is proved by the Apis tablets to have been the Egyptian vague year, either January, B.C. 609-8, or probably B.C. 610-9. The expedition in which this king fell (2 Kings xxiii, 29) cannot reasonably be dated earlier than Necho's second year, B.C. 608-9 or 609-8. See Necho.

5. Jehoiakim and Nebuchadnezzar.—In Jer. xxv. 1, the first year of Nebuchadnezzar coincides, wholly or in part, with 4 Jehoiakim; 2 Kings xxii, 12, the epoch of Jeconiah's captivity and of Zedekiah's reign lies in 8 Nebuchadnezzar; i.e., ibid. xxv, 8, the 11th of Zedekiah, the 5th month, 10th day, lies in 29 Nebuchadnezzar. In Jer. iii, 8, the 12th of Jeconiah, 12th month, 25th day, lies "in the year that Evilmerodach began to reign." From these synchronisms it follows demonstrably that, in this reckoning, Nebuchadnezzar has 45 years of reign, two years more than are assigned to him in the Astronomical Canon, which places the first year of his reign 43 years before E. Nab. 144 = B.C. 604; consequently, that his reign in the Jewish reckoning begins date from the year B.C. 606 (Browne, Ordo Secl. § 151-717, 488). Hence it results that the year of the taking of Jerusalem and destruction of the Temple is B.C. 588. Those chronologists who, not having carefully enough collated and discussed the testimonies, have dated the beginning of Nebuchadnezzar's reign at the first year of Nebuchadnezzar which coincides with 4 Jehoiakim, place the catastrophe two years later, B.C. 586. With this latitude for difference of views, the synchronism 1 Nebuchadnezzar = 4 Jehoiakim = B.C. 606 or 604, has long been generally taken by chronologists as the connecting link between sacred and profane annals, the terminus a quo of the ascending reckoning. See NEBUCHADNEZZAR.

6. Hesekiah's Synchronisms.—In 2 Kings xviii, 13; xix, 9, it appears that Sennacherib, king of Assyria, and Tirhakah, king of Ethiopia, were both contemporaneous with and contemporaneous with Jeconiah, and at the beginning of his reign. Now, in the recently-recovered Armenian version of Eusebius's Chronique, we have it on the authority of Berosus (quoted from Polyhistor) that from Sennacherib to Nebuchadnezzar were 88 years (the names and numbers are given, and agree with the expressed sum); this account places the accession of Sennacherib at B.C. 649, which is 20 years later than the lowest date that the Biblical numbers will allow for 14 Hesekiah. Accordingly, Niebuhr (KL. Histor. u. philol. Schriften, i, 219) proposed to strike out that number of years from the 55 assigned to Manasseh; then the interval to 4 Jehoiakim = 1 Nebuchadnezzar, would be 105-185 + 20 + 3 = 168 years. Since Niebuhr's time an important Assyrian monument of the time of Sennacherib, interpreted by Rawlinson and Hincks, informs us that the invasion of Judæa, which in the book of Kings is said to have been in the 14th of Hesekiah, took place in Sennacherib's third year. Hence the conclusion, accepted unquestioned by Rawlinson and himself, that this does not prove much, and Ewald, iii, 234; Thenius, p. 410; Bunsen, iv, 398, retain the Biblical number, which also the younger Niebuhr (Gesch. Assyriu. u. Babyl. p. 99-165) learnedly upholds against his father's objections. With the assistance, too, of the conclusions arrived at in the sum of the same time, it is not difficult to bring the statements of Berosus into conformity with the Biblical numbers, as by Browne (Ordo Seclorum, § 489 sqq.). Brandis (Rerum Assyriarum tempora emendata, p. 40 sqq.; retracted, however, in his later work, Ueber den historischen Ursprung der Assyrischen Inschriften, p. 46, 78), and in the work just cited of the younger Niebuhr. On the other hand, less satisfactory, especially during the length of time, the conclusions arrived at in the sum of the 25th dynasty, proceeding to the uncertainly dated, his reign begins 1704 (Africanus), 183 or 184 (Euseb. in Gr.), 185, 187, or 193 (Euseb. Armen.). Before Cumlysses, B.C. 525; the extreme, therefore, are B.C. 635 and 718 for his epoch. But we are not dependent on the lists for the time of this king Tarkhos. The chronology of the 26th dynasty had already been partially cleared up by funereal inscriptions (now in the museums of Florence and Leyden), which, by recording that the deceased, born on a given day, month, and year of Neko II, lived so many years, months, and days, and died in a given year, month, and day of Amosis, enabled us to measure the period of the number of years (4) that had elapsed from the one king to the epoch of the other (Böckh, Manetho, p. 729 sqq.); and now it is placed beyond further question by Mariette's discovery of a number of inscriptions, in each of which the birth, death, day of funeral, and age of an Apis are recorded in just the same way (see Mariette's own account, Renoument sur les Apis, trouvé dans les souterrains du Serapeum—Bullet. Archéol. de l'Athén. François., Oct., 1855; and the selection from these by Leusins, On the 23rd Dynasty, translated by W. Bell, 1856.). There remains only a slight doubt as to the epoch of Caml yees; whether with the restoration (at the beginning of the 23rd dynasty, B.C. 163, the date), or with De Rouge to 597, for which Von Gué de, also contends, or 529, with Dr. Hincks (On the Age of the 26th Dynasty), or even 529 (Böckh, Manetho, p. 789 sqq.). The main result is, that Psametik I began to reign 188 years before the epoch of Cumlysses, therefore B.C. 665 (or at most three years earlier). Now Mariette (No. 2097) records that an Apis born 28 Taharks, died 20 Prasert, 12th month, 22nd day, and the name is not given. As the Apis was not usually allowed to live more than 25 years, though some of the inscriptions record an age of 26 years, on this, as an extreme supposition, the interval from 1 Taharka to 1 Psametik will be at most 31 years, and the highest possible epoch for Tirhakah (Vita 9) is 157. This result is not necessarily opposed to the Biblical date for 14 Hesekiah; for in this case, itself, while a "Pharaoh, king of Egypt," is mentioned, xvi, 21, this Tirhakah is called "king of Ethiopia," and he seems to appear on the scene as an unexpected enemy of Sennacherib (Niebuhr, ut sup. p. 72 sq. 173, 456). He may have reigned in Ethiopia long before he became king of Egypt; though, on the other hand, it is clear that this originally Ethiopian dynasty was contemporaneous in its lower part with the 26th, a Saite dynasty of Lower Egypt, and probably in its upper part with the preceding Saite dynasty, as Leusins makes it. The real difficulty, however, consists in this, that the "So (3rd), king of Egypt," whose alliance against Assyria was sought by Hoesen in his 6th or 6th year (2 Kings xviii, 26), can be re-written in one of the texts of Tirhakah, Sebek I or II, to the first of whom Manetho gives 8 (v. r. 12), to the other 14 years of reign. Thus, at the earliest, the former would begin to reign B.C. 728, which is at least one year too low for the Biblical date. As a conjectural remedy for this "desperate state of things," Von Gué de, in Mariette's account, the epoch of the 26th dynasty were possibly not continuous; failing this, either an error must be assumed in the canon
somewhere between its 29th and its 1234 year, both of which are astronomically attested, or else the reign of Manasseh must be reduced. On the whole, it seems best to wait for further light from the monuments. At present we can only rely on 2 Ch 36:15. The 27th year of Jehoiakim (July) appears to be the earliest date in the Codex of Sennacherib. The genealogical connection of the two and of Taharka is unknown; of Bocchoris, the only occupant of the preceding dynasty, no monument has been discovered, but the scanty and precarious traces of the Tanite kings of the 23rd dynasty, the last of whom, 24th may of year 27, the Satat of the Satatis whom Herodotus, ii. 141, makes the hero of the miraculous defeat of Sennacherib's army. Indeed, Isa. xix. 2; xxx, 4, both seem to imply that Zoa (Tanis) was at that time the residence of the Pharaoh of Lower Egypt. Here is ample scope for conjecture, and also for discoveries, which may supersede all necessity for conjecture. See So.

The mention of "Merodach-Baladan, son of Baladan, king of Babylon," apparently in or not long after 14 Hezekiah (2 Kings xx, 12), forms yet another synchronism in this reign. For Sennacherib's inscription records his defeat of this Babylonian king in 701 from 2 Kings 20:19, 21, 25, 30, the former appears to be a Polyhistor's extract from Berosus as king in Babylon early in Sennacherib's reign, but with circumstances which make it extremely difficult to make out the identity of the three persons with each other, and with either the Murdock Empad, who in the Canon reigns in Babylon from 781 to 790, the Memite Merodach of a document, from 692 to 688. See Merodach-Baladan. Here it may be sufficient to mention that Dr. Hincks (Troms. of Royal Irish Academy, vol. xxii, 364), retaining the 55 years of Manasseh, proposes to solve the difficulty by placing Sennacherib's invasion of Judaea in Hezekiah's 25th instead of his 14th year at the date 701 B.C.; Hezekiah's illness remains at its earlier date. Bunsen, tacitly adopting this construction, makes 5 Sennacherib fall in 24 Hezekiah, and imagines that the invasion which terminated disastrously to the Assyrian king was a second, in Hezekiah's 28th year, on which latter occasion it was that Tirhakah came to the relief of Jerusalem (Ezg. St. b, iv, p. 565). Retaining for this Egyptian king an epoch B.C. 712, which is plainly disproved by the Apis inscriptions (see above), he makes it possible for So=3vęk II to have been contemporary with Hoeshea. It must be owned that the received chronology of Hezekiah and Manasseh, with its eccentric distribution of the rises and falls of the side building of Egypt and of Assyria and Babylon. But from neither have we as yet all the facts we need, and the fuller and clearer information which is confidently expected from the cuneiform inscriptions, in particular, will probably make much brighter that is now dark. Colneti Rawlinson indeed regards it as "now generally admitted that there were two invasions of Palestine during the reign of Hezekiah; the first in B.C. 701, when Sennacherib overran the country and expected a heavy tribute, as stated in the inscriptions and 2 Kings xviii, 18-19, and the second some thirteen or fourteen years later, at the time of the insurrection of the Assyrians" (London Athen. Ann., August 22, 1863, p. 247). But the learned antiquarian has ignored the fact that the same inscriptions do not speak of two invasions, and the Bible expressly identifies those here assumed as distinct. Indeed, the paper in which this and other whole sequences of the Biblical numbers are advocated contains in its disguise the evidence and the precarious elements upon which the whole system of reconstructed Assyrian chronology, as drawn from the monuments, is based; and we feel only the more confirmed by its purgation in the belief that we cannot safely correct the definite and consecutive dates of the due consideration of the evidential and coherent data. At least the attempt is yet evidently premature, and we are justified, by the changes which these decipherers and collators of the cuneiform legends are constantly obliged to make in their own computed results, in waiting until they have arrived at some settled and consistent chronology before we adopt it as the basis for rectifying the established points of Scriptural history.

In connection with this discussion, a passage of Demetrius Judeaen has been deemed important (Von Gumpach, ut ms. p. 90, 180). He seems to have put forth a chronological account of the Biblical history, from which Eusebius, Prep. Av. ix, 21, 29, quotes it from Polybius. He makes reference to the patriarchs and Moses; another passage, preserved by Clem. Alex. Strom. i, § 141, is a summary of the period elapsed from the captivity of the Ten Tribes to his own times. Its substance is as follows: From Sennacherib's invasion of Judah to the last deportation from Jerusalem by Nebuchadnezzar, 129 years 6 months; from the captivity of the Ten Tribes to Ptolemy IV (Philopator), 473 years 9 months (so we must read for 573); from Nebuchadnezzar's deportation from Jerusalem, 338 years 8 months. As the epoch of Ptolemy IV in the Canon is B.C. 222 (24th October), this gives for Nebuchadnezzar's "last deportation" B.C. 560 (July). This appears to be supported by Polybius, quoting it from Polybius, whom it makes reference to the captivity of Samaria, B.C. 659 (Jan.). But unless we are prepared to set aside the Astronomical Canon, at least its dates for Nebuchadnezzar and Evilmerodach, the captivity under Nebuchadnezzar, whether he be that in his 15th year (11th Zedekiah), or the last, in his 37th year (11th Zedekiah), it appears folio to the B.C. 560. That the final deportation is meant is plain from the exact correspondence of the sum with the Biblical items—Hezekiah, 15; Manasseh, 55; Amon, 2; Josiah, 31; Jehoahaz, 3; Nebuchadnezzar, 22—158 years. The 6 months over are perhaps derived from the 6 of Jehohaz and 8 of Jeconiah. M. v. Niebuhr, ut ms. p. 102 sq., sets himself to solve the difficulty; but the whole matter may easily be explained by an error in the ordinal of the Ptolemy referred to. Set the goal at Ptolemy III (Euergetes) = B.C. 247, Oct.; then we have for the captivity of the Ten Tribes, 720 (Jan.); for Sennacherib in Judah, 718 (Jan.); for the deportation in 23 Nebuchadnezzar, 595 (July); and consequently 589 for the destruction of the Temple—very nearly in accordance with the date for the last, assigned by Clement of Alexandria, B.C. 588, Strom. i, § 127. In fact, the chronological statements in this portion of the Stenoma swarm with. numerical errors, and it is of the side building of Egypt and of Assyria and Babylon. But from neither have we as yet all the facts we need, and the fuller and clearer information which is confidently expected from the cuneiform inscriptions, in particular, will probably make much brighter that is now dark. Colneti Rawlinson indeed regards it as "now generally admitted that there were two invasions of Palestine during the reign of Hezekiah; the first in B.C. 701, when Sennacherib overran the country and expected a heavy tribute, as stated in the inscriptions and 2 Kings xviii, 18-19, and the second some thirteen or fourteen years later, at the time of the insurrection of the Assyrians" (London Athen. Ann., August 22, 1863, p. 247). But the learned antiquarian has ignored the fact that the same inscriptions do not speak of two invasions, and the Bible expressly identifies those here assumed as distinct. Indeed, the paper in which this and other whole sequences of the Biblical numbers are advocated contains in its disguise the evidence and the precarious elements upon which the whole system of reconstructed Assyrian chronology, as drawn from the monuments, is based; and we feel only the more confirmed by its purgation in the belief that we cannot safely correct the definite and consecutive dates of the due consideration of the evidential and coherent data. At least the attempt is yet evidently premature, and we are justified, by the changes which these decipherers and collators of the cuneiform
himself. "The sum of years from the reign (epoch) of Hirum to the founding of Carthage is 155 years 8 months; and since it was in 12 Hirum that the Temple was built, the time from thence to the founding of Carthage is 148 years 8 months." (The interval, as the historians stand in the fact, is, in fact, 17 years 8 months, minus 12 of Hirum and 40 of Pygmalon, i.e., only 125 years 8 months: it does not concern us here to consider how the missing 18 years may be restored; the number, 148 years 8 months, given twice by Josephus, is not affected by errors which may have crept into the records stand in the fact.) 27 years before the building of Rome, i.e., B.C. 825. Jeshubah (the father), accepting the date B.C. 814-13 as indubitable, deduces for the building of Solomon's Temple the year B.C. 957-56 (Lect. on Anc. Hist., iii, 169); Movers (De Phaenec., ii, 1, 140 sq.), preferring the other, gets the date B.C. 969. Again, Josephus (Ant., vii, 8, 1), after stating that 11 Hirum is 4 Solomon, and the year of the building of the Temple, adds (probably from Menander) that the year in question was 240 years from the building of (New) Tyre. It does not occur to him to say that Hirum is overpressed by Menander or Dius as answering to the 4 Solomon. Probably he obtained the synchronism from his own investigation of the various places in 2 Samuel, 1 Kings, and 1 Chronicles, where Hirum is mentioned; but the number 240 is probably Tyrian. Now Tyron (Josephus, vii, 8) states that Tyre was founded by the Sidonians in the year before the fall of Troy. Among the numerous ancient dates assigned to that event, one is B.C. 1298 (Ephorus, followed by the Parion Chron. and other authors). But B.C. 1298-240=968, precisely the year which resulted from the former argument, such proof given by Movers is accepted by J. v. Gumpach and others, and highly applauded by A. v. Gutschmid (in the Rhom. Museum, 1857). On the other hand, it should be considered—1. That between the flight of Elia in Pygmalion's seventh year, which is the goal of these 143-4 years, and the founding of the city, there certainly occurred a train of events (the settlement in Byra=Bystra, and the growth around it of the Magalia=Makal, which eventually became the New-Town, Kartharana=Carthage) which implies a considerable tract of time; and, 2. That as the ancient dates of the fall of Troy vary over a range of about 180 years (i.e., from 1200 to 1380), it is to be expected that the date 1270, Erastosthenes at 1188, Aretinus, 1144, besides intermediate dates ( Müller, Fragmenta Chronol. § 17), the 240 years may be so measured as to fall near enough to the time given to 4 Solomon by the usual chronology. It has generally been received hitherto that the Tyres of Tyre dates from cir. B.C. 1290, and there seems to be no sufficient reason to the contrary (Bunsen, iv, 280 sq.). The concurrence of the two lines of argument in the year B.C. 969 is one of those coincidences which are so perpetually occurring in chronological combinations that the practised inquirer at a first glance will bet on them. In fact, it may only imply that Justin Movers (De Phaenec., ii, 140 sq.) has not seen the full extent of his argument. 284 Tyre=7 Pygmalion, mistakenly, as by Josephus, identified with 1 Carthage; and having also obtained from the same or some other source the year equivalent to 1 Tyre, would so arrive at his datum for 1 Carthage, or, vice versa, from the latter would rise to the former. But all, with the highest credit is, is the worth of Josephus as a reporter, and, supposing him accurate, what is the value of the Tyrian annals, the answer is not of necessity unfavorable to the claims of the Biblical chronology of the kings of Judah and Israel. Furnished, as this is, by an annalistic series incomplete and unstable, and with any probable dates of the same times which have come to us at second hand, it is not to be impeached by any but clear contemporary monumental evidence (such as Mariette's Apis records); and if the entire Hebrew tale of years from 4 Solomon to 11 Zedekiah is to be materially lowered on the scale of the series B.C., this can only be done by proving some capital error in the Astronomical Canon. See xxv. 8. In fact, an attempt has lately been made in this direction, which, if successful, must set our Biblical chronology adrift from its old bearings. It is contended by Mr. Bosanquet (Readjustment of Sacred and Profane Chronology, Lond., 1868) that a lower date than that professed by the B.C. 904-866 B.C. of the Profane Chronology is imperatively demanded by the historical connection of such an event as Thales' "Eclipse of the Moon;" which, according to Herodotus (i, 74, 108), occurring during a pitched battle between the Medes and Lydians was the occasion of a peace, cemented by marriages, between Cyzaxares and Halysates, after which, as Herodotus seems to imply, the former turned his arms against Assyria, and, in conjunction with Labyntus (the Nabopolassar of Berosus and the Canon), took and destroyed Nineveh. The dates assigned by the ancients to that eclipse lie between OL 48 and 50. Kepler, Scaliger, and Sir Isaac Newton made it B.C. 566; Baily (Astronomical Journal, 1851) fixed the 48th. der Berlin. Akad. 1812-13) found it 30th Sept. B.C. 610, which date was accepted by Idele, Saint-Martin, and most subsequent writers. More recently it has been announced by Mr. Airy (Philos. Mag. 1868) and Mr. Hind (Athenaeum, Aug., 1867), as the result of calculation with Hansen's Improved tables, that in the eclipse of 610 the moon's shadow traversed no part of Asia Minor, and that the only suitable one is that of 25th May, B.C. 586, which would be total in Ionis, Lydia, Lycia, Pamphylia, and part of Cilicia. It has, indeed, been contended by Mr. Adams that the tables do not need a further proof of the eclipse; (as Mr. Airy remarked, Athenaeum, Oct., 1859) would be sufficient to render the eclipse of 586 inapplicable to the recorded circumstances; but it appears that the astronomerroyal no longer entertains any doubts on this point, having quito recently (see Athen. Sept. 1863) expressed his "unalterable conviction that the tables of Hansen give the date of the great solar eclipse, which terminated the Lydian war, as the most reliable records of antiquity placed it, in the year 586 B.C." Indeed, however the astronomical question may ultimately be decided, it would appear, from all that is known of the life of Thales, that he could hardly have predicted an eclipse in B.C. 586. But even if he did, the "severer abendländischen Philosophen, ii, 98). But that the "Eclipse of Thales" occurred at the conjunction indicated by Herodotus rests only on his testimony, and in this he might easily be mistaken. Either he may have confounded the eclipse predicted by Thales an earlier one occurring during the war of Cyzaxares and Halysates—possibly that of 610, for no locality is mentioned, and there is nothing to forbid our recking the battle-field in some suitable situation (e.g. with Niebuhr, p. 508, in Atropaten, or with Von Gumpach, Zeitschrift der Bibl. u. Asyr., p. 94 in Armenia); or, he may have assigned to the latter what really took place during a later war of the Medes and Lydians under Astyages and Halysates. The latter supposition is not without support of ancient authorities. Cicero (de Divin. i, 50), from some lost authority, places the eclipse, without date or mention of the war, under Astyages. Pliny (H. N. ii, 9), giving the date 48 B.C. 48°, is considered to be wrong. 48° 48°, in all, what is the worth of Josephus as a reporter, and, supposing him accurate, what is the value of the Tyrian annals, the answer is, not of necessity unfavorable to the claims of the Biblical chronology of the kings of Judah and Israel. Furnished, as this is, by an annalistic series incomplete and unstable, and with any probable dates of the same times which have come to us at second hand, it is not to be impeached by any but...
In ancient times, the destruction of the Temple in Jerusalem by the Babylonians in 586 BC marked a significant event in Jewish history. This event, referred to in the Bible as the Babylonian Exile, led to the dispersion of the Jewish people throughout the Persian Empire and beyond. The Babylonians, under the leadership of Nebuchadnezzar, conquered Jerusalem and destroyed the First Temple, as recorded in the books of Isaiah, Jeremiah, and the prophet Ezekiel. This event is also mentioned in the Babylonian Talmud and the Targums, which are ancient Jewish texts.

The Exile had profound consequences for Jewish life, religion, and culture. It led to the development of Jewish diaspora communities and the spread of Jewishmonotheism across the Mediterranean world. It also contributed to the formation of the Jewish Bible, as the Babylonian Exile led to the collection, preservation, and transmission of the Hebrew scriptures.

The Books of Daniel, Ezra, and Nehemiah, which are part of the Hebrew Bible, deal extensively with the events of the Babylonian Exile. Daniel, written in the late 6th century BC, recounts the visions of Daniel, who was taken captive to Babylon with the Babylonian army and was later made a prominent figure in Babylonian court life. The Book of Ezra, written in the 4th century BC, tells the story of the return of the exiles from Babylon to Jerusalem and the rebuilding of the Jerusalem Temple. The Book of Nehemiah, also written in the 4th century BC, tells the story of the reconstruction of Jerusalem city walls.

The text you provided discusses the historical and religious significance of the Babylonian Exile, emphasizing the role of Daniel, Ezra, and Nehemiah in shaping Jewish identity and religious discourse. It highlights the importance of these texts in understanding the historical context of Judaism and the development of the biblical canon.

In conclusion, the Babylonian Exile was a pivotal event in Jewish history that had far-reaching implications for the development of Jewish monotheism, diaspora communities, and the formation of the Hebrew Bible. The stories of Daniel, Ezra, and Nehemiah in the Hebrew Bible are key sources for understanding the historical and religious changes that took place during this time.
pousal is given by Dion Cass. iv.; Herod Philip (War, xviii, 4, 6, length of reign and year of death); for Herod Antipas, Josephus (Ant. xvii, 2, 2) gives the date of deposition, but not length of reign; this, however, is known from coins (Ewald, Doct. Antiqu., ii, 28) to have reached his 43rd year. All these indications point to B.C. 4, not long before the Passover, as the time of Herod’s death. See Herod. Those who would impugn this conclusion urge other, discrepant statements in Josephus, or call in question either the face of the eclipse or its calculated date, or contend that the death of Herod took place so soon after it. The inducement is that our Lord’s age may not exceed thirty years at the time of his baptism, i.e., at the earliest in the 16th year of Tiberius, for if this note of time is to be taken strictly, the earliest date for the Nativity should be the year B.C. 5. The year being supposed to be known, it is attempted to approximate to the day by calculating the order of the socalled cycle, and finding at what time in the given week “the course of Abijah” (Luke i, 5) entered upon office. The starting-point for the reckoning is furnished by a Jewish tradition (Mishna, iii, 298, 3), and it is asserted that Josephus supports this statement. But the Baptist entered on the celebration of Zecharias’s work of service, and the Annunciation five months later (Luke i, 23–26, 36; but in the Church calendar six months). Here he should be observed that we have no reason to suppose the ancients to have been in possession of the true date, either year or day. Having ascertained, as they have, the year of Christ’s baptism, they only counted back 30 years to the Nativity (see a paper by H. Brown, on S. Clemens Alex, on N.-T. Chronology in the Journal of Classical and Sacred Philology, 1854, i, 327 sq.). Also, it would be well that all such considerations as the “fitness of things” prescribing a particular year for the birth of John, or any other event of sacred history, should be banished from chronological investigations. See Jesus.

2. Luke’s date, “15th of Tiberius” (iii, 1), interpreted by the rule of the imperial annals (and also of the canon), would denote the year beginning August A.D. 28, and ending in the same month of A.D. 29. Referred to the current consular year, it might mean either A.D. 28 or 29. Taken in the Jewish sense, it might be the year beginning: either 1 Nisan or 1 Tisri A.D. 28, or even 1 Tisri A.D. 27. The hypothesis of a dating of the years of Tiberius from an epoch earlier by three years than the death of Augustus has, however, been developed from the 22nd of January, downward, and is demanded (see Strong’s Gr. Harmony, p. 342 sq.) by the age of Jesus at his baptism (80 years), added to the length of his ministry (3 years), as compared with the date of the Crucifixion (see below).

In A.D. 11, Tiberius appears to have assumed the government of the provinces, and from this time his reign would naturally be reckoned by the Jews (see Jarvis, Introd. p. 229 sq.). This would give Luke’s date of John’s mission B.C. 27. See Tiberius.

3. The note of time (John ii, 10) connected with the Passover after the Baptism points, if the “forty and six years” are reckoned from Herod’s announcement of his son John’s marriage, to A.D. 27; if from the actual commencement, after all the materials were provided, it may denote either A.D. 28, or 29, or 30, according to the length of time supposed to be spent in preparation. But here, again, beside discrepant statements in Josephus as to the epoch of Herod’s announcement, viz. A.D. 25, 26, 27; the amount of the same proceedings (War, i, 21, 31) dates this undertaking of Herod in his fiftieth year. It does indeed admit of proof, even from the context, that the 15th year is too early; but it may, plausibly enough, be urged by those who wish to do so, that, if Josephus is wrong in this, it is as likely not to be right in the other. See Temple.

4. The Crucifixion (q. v.) certainly cannot be placed earlier than A.D. 28, in which year the 15th of Tiberius began, and it has never been proposed by inquirers of any note to place it later than A.D. 38. The astronomical element of the question—namely, that in the year of the Passion, 14th of Nisan fell on a Friday—if it be rigorously applied, would require a more definite rule of Jewish usage and the results of strict lunar calculation, indicates only one of the six years mentioned, viz. A.D. 29, in which 14 Nisan was 18th March and Friday. If a certain laxity as to the rule be allowed, the 14th Nisan may possibly have fallen on 8th April, Friday, in A.D. 28, in compliance with the apparent import of the first three Gospels, without explanation from the fourth, it is contended that the Crucifixion took place on the day after the Passover, the year may have been A.D. 30, in which the 15th Nisan fell on Friday, 7th April, or A.D. 38, in which it was (in strictness) Friday, 8th April. Lastly, if it be maintained that the Jewish Passover-day was regulated, not by actual observation of the moon’s phases, but by cycles more or less faulty, any year whatever of the series may be available in one form or other of the hypothesis. See Passover.

Ancient testimony, if that is to have weight in this question on the year of the Crucifixion when it was known, either by tradition or by access to public records (the Acta Pilati, to which the ancients so confidently appeal), certainly designates the Passover of the year 29, cons. eudias Gemini, the 15th proper year of Tiberius. In the Western Church the consent to this year is allveyeage, but generally of Easter. The name or date named or implied in the two earliest extant testimonies, Clem. Alex. (Strom. i, 21, § 101-143; see Journal of class. and Sacr. Philol. u. z.) and Julius Africanus. See Jesus.

5. In the Acts, the mention of the death of Herod Agrippa (xii, 1) has been properly interpreted between the time of Peter at Jerusalem and his return thence to Antioch (xi, 30; xii, 25), would yield a firm resting-point for that portion of the narrative, viz. Easter, A.D. 44 (Josephus, Ant. xvii, 8, 2; comp. xix, 5, 1; War, ii, 11, 6), could we be certain that the death of Agrippa took place soon after, or even in the same year with the Easter mentioned xii, 1, 4. (The time of Agrippa’s death is determinable with high probability to the beginning of August of that year.) But as it is possible that the writer, after his narrative of the acts of this king, thought fit to finish off all that he had to say about him before going on with the narrative about Paul and Barabas, he might naturally return to the most recent event, the death of Agrippa, and return, after the martyrdom of James and deliverance of Peter, took place before the year 44. It might even be inferred from xii, 26 (Iscf iwyro ekratavi Klaudianov), that the prophecy of Agabus was delivered before, or quite in the beginning of A.D. 41, as the famine is known to have prevailed at Rome during the first two years of Claudius (A.D. 41, 42; Dion Cass. xix, 11), but that it appears not to have been felt in Judaea till after the death of Agrippa, in the procuratorship of Cuspius Fadus and Tiberius Alexander (A. D. 45-47; Josephus, Ant. xx, 2, 5; 5, 2). Conclusive reasons for assigning this second to Paul to Jerusalem (A. D. 41) to A. D. 44, to Peter (A. D. 44 to 47) to 12 times earlier, are given by Lehmann, in the Stud. u. Kris. 1858, ii). See AGRIPPA.

6. In Gal. i, 2, Paul speaks of two visits to Jerusalem, the one (i, 18) “after three years” (viz. from his conversion), the other (ii, 1) “fourteen years afterward.” (Dio cassaristov ekratavi). The first of these is evidently that of Paul to Agrippa, q. v., of the second of those mentioned in the Acts, viz. that of xii, xii, has been understood by many, and probably would have been by all, could it have been made to square with their chronology. The argument, restricted from irrelevant issues, lies in a very narrow compass. This was his last journey to Jerusalem, if he received not his gospel and commission from Peter, or any other man, but direct from Christ himself, the
apostle begins to enumerate the occasions on which alone he was and conversed with the other apostles at Jerusalem. Now, if the visit Gal. ii. 1, be not that of Acts xi. 12, it must be later (as this is an earlier); but, if so, then it would seem he has not enumerated all the occasions on which he saw the other apostles. It is hardly satisfactory (comp. Meyer on Gal. p. 41) to allege (with Wieseler, Chronol. des apost. Zeit- erleb. p. 180) that the apostle, not writing a history, is not bound to recite all his visits to Jerusalem, etc., (with Ewald, Gesch. vi. 50) that he is concerned to enumerate only those visits which he made for the purpose of conferring with the apostles. His intention is plainly to state that he had no intervening opportunity of consulting them. Accordingly, Schleiermacher (Einlaut. aus N. T. p. 569), Neander (Pfem. u. Leti. i. 188 of the 4th ed.), De Wette (Komment. in loc.), Mayer (u. s. p. 47), find the conclusion inevitable that Luke was misinformed in saying that Paul went up to Jerusalem as related in Acts xi. 30, because the apostle himself declares that between his first visit, which can be no other than that of 1x, 28, and the other, which can be no other than that of 1x, 30, and the one related in Acts xv, there was none intermediate. But, in fact, the circumstances of the visit, Gal. ii. 1, are perfectly compatible with those of Acts xi, xii, the only difficulty being that which is supposed to lie in the chronology; nor, on the other hand, is the discrepancy lessened, but it is only made more difficult to see how they can relate to the same fact, although the incongruity in the latter case has been deemed by Baur (Paulus, p. 120 sq.) so great as to furnish an argument in support of his position that the book of Acts is the work, not of a companion of Paul, but of some much later hand (in the 2nd century). Wieseler, to evade this conclusion, gives up the assumed identity of Gal. ii. 1, with Acts xv, and laborers to show that it was the visit of xvii, 29, a hypothesis which needs no discussion. Unless we are prepared to say that the apostle was not even present at the council, Acts xv; for that a council was held is not denied, even by those who contend that the account given of it in the Acts is not authentic; and, if Paul was present at it, it is impossible to explain his passing it by in silence, as if he had been present upon the point which he is concerned to substantiate. The time of Acts xii, being defined to A.D. 44, a term of 17 years, the sum of time in a later period, does not lead to A.D. 27, which cannot possibly be the year of Paul’s conversion, and, if both terms are supposed to be dated from the same epoch, it would follow that the conversion took place A.D. 30, a date still too early for those who assign the Crucifixion to that or a later year. But it is not too early, the year of the Passion was A.D. 29; and it is in exact accordance with the most ancient traditions recorded by ecclesiastical writers, according to which the martyrdom of Stephen took place within a year after the Ascension, and Paul’s conversion, which clearly was not much later, in the year after the Ascension, 1. e. in this year 39 (Brown, Ordo Sociei. § 102). The date of Paul’s conversion is equally compatible with the reference of the second visit in question to Acts xv, which took place A.D. 47; the reckoning of the 14+8 years of Gal. 1 being in that case continuous from the conversion in A.D. 30. On either view, but especially the latter, there is(loader a church, the one thing which brings down the conversion to A.D. 34, and yet dates the visit of Acts xvi, 44, and that of Acts xvi in A.D. 46; a system which there is other and independent reason to suspect (see Metz. Quart. Rev. July, 1866, p. 509). See Paul. The chronological difficulties have been ejected at an early date of the ancient date of the Passion was abandoned for a later year, has induced the conjecture, seemingly as early as the Chron. Pasch. p. 436, ed. Bonn, that for 11 should be read 4 (ΔΙΑ Δ’ to Δ’ 12); see Meyer u. s. p. 49. On this supposition the conversion might be assigned to A.D. 37, the first visit to A.D. 40, the second to A.D. 44. With this would accord the note of Josephus (Ant. xvii. 12, 3), according to which the temple was destroyed in the 37th year. The account of the epistle, viz. A.D. 54, that year being 14 years after the date so assigned to the first visit and the truce (Acts xvii. 17), but there is no need of this conjectural emendation, for the vision of 2 Cor. xii, 2 (which is distinguished from that of Acts xxi, 17, by the fact that the apostle here is not at Jerusalem, but Rome, (with Ewald, Gesch. vi. 50) that he is concerned to enumerate only those visits which he made for the purpose of conferring with the apostles. His intention is plainly to state that he had no intervening opportunity of consulting them. Accordingly, Schleiermacher (Einlaut. aus N. T. p. 569), Neander (Pfem. u. Leti. i. 188 of the 4th ed.), De Wette (Komment. in loc.), Mayer (u. s. p. 47), find the conclusion inevitable that Luke was misinformed in saying that Paul went up to Jerusalem as related in Acts xi. 30, because the apostle himself declares that between his first visit, which can be no other than that of 1x, 28, and the other, which can be no other than that of 1x, 30, and the one related in Acts xv, there was none intermediate. But, in fact, the circumstances of the visit, Gal. ii. 1, are perfectly compatible with those of Acts xi, xii, the only difficulty being that which is supposed to lie in the chronology; nor, on the other hand, is the discrepancy lessened, but it is only made more difficult to see how they can relate to the same fact, although the incongruity in the latter case has been deemed by Baur (Paulus, p. 120 sq.) so great as to furnish an argument in support of his position that the book of Acts is the work, not of a companion of Paul, but of some much later hand (in the 2nd century). Wieseler, to evade this conclusion, gives up the assumed identity of Gal. ii. 1, with Acts xv, and laborers to show that it was the visit of xvii, 29, a hypothesis which needs no discussion. Unless we are prepared to say that the apostle was not even present at the council, Acts xv; for that a council was held is not denied, even by those who contend that the account given of it in the Acts is not authentic; and, if Paul was present at it, it is impossible to explain his passing it by in silence, as if he had been present upon the point which he is concerned to substantiate. The time of Acts xii, being defined to A.D. 44, a term of 17 years, the sum of time in a later period, does not lead to A.D. 27, which cannot possibly be the year of Paul’s conversion, and, if both terms are supposed to be dated from the same epoch, it would follow that the conversion took place A.D. 30, a date still too early for those who assign the Crucifixion to that or a later year. But it is not too early, the year of the Passion was A.D. 29; and it is in exact accordance with the most ancient traditions recorded by ecclesiastical writers, according to which the martyrdom of Stephen took place within a year after the Ascension, and Paul’s conversion, which clearly was not much later, in the year after the Ascension, 1. e. in this year 39 (Brown, Ordo Sociei. § 102). The date of Paul’s conversion is equally compatible with the reference of the second visit in question to Acts xv, which took place A.D. 47; the reckoning of the 14+8 years of Gal. 1 being in that case continuous from the conversion in A.D. 30. On either view, but especially the latter, there is loader a church, the one thing which brings down the conversion to A.D. 34, and yet dates the visit of Acts xvi, 44, and that of Acts xvi in A.D. 46; a system which there is other and independent reason to suspect (see Metz. Quart. Rev. July, 1866, p. 509).
place on the recall of Felix, occurrences of an earlier time. Certainly the account in Suetonius (cont. a. v.) to that earlier conjuncture in the time of Claudius (A.D. 62), when Nero was barely fourteen years old. It might still, in some sense, be notable as the ground of Burrs's influence in the beginning of Nero's reign, when he and Seneca are spoken of having charge of the imperial household, so the writer on the reign of Claudius, = 18th Feb., A.D. 41. Dion Cassius, indeed, mentions the birth under the second year (1x, 10), but not until he has expressly returned to the former year (οτε προτιστι ερχεται). Hence it is clear that if the year of Pallas's loss of office is decisive for the date of his death, this must be placed, as latest, in 54, before the death of Claudius (18th Oct. of that year), and no part of the procuratorship of Felix would have been under Nero; a result totally incompatible with the narrative of Josephus (Ant. xx, 8; War, ii, 13). On the other hand, it is hard to say at what conjuncture in Nero's time Pallas could be said to have been held thus at his highest estimation. At the very beginning of the reign it is noted of him that his arrogance had excited the emperor's disgust (Tacit. Ann. xii, 3); within a month or two he is removed from the focus; about a year later, when impeached, together with his reputation for violence stood in the way of his acquittal (Tacit. ann. xii, 27). Pallas, with any cooperation of Agrippina he was an object more of fear than of favor; and his great wealth caused his removal by death, A.D. 62, as his longevity seemed to preclude the hope of the emperor's otherwise possessing it (Ann. xiv, 65.). This affords strong reason to suspect that in this matter of Pallas's influence, exercised on behalf of his brother, Josephus was misinformed. Of very material circumstances relative to Felix he certainly was ignorant, unless we are to suppose that Tacitus, on the other hand, had no documentary warrant for the very circumstantial account which he gives under the year 52 (Ann. xii, 54); how Felix had then been some time governor of Judaea ("iam pridem Judaeae impositus"), holding a divided command with Cumanus, the latter being over the Galileans, while Felix was over the Samaritans ("ut hic Galilæorum natio, Felixi Samaritæ" pereat). He may have mistaken the nature of this divided rule; in fact, there is reason to believe that Felix, after being in the service of Augustus (Claud. 28 : "Felicem legionibus et alis provincieae Judæis impositum"), and Victor (in Epitome. p. 861 : "Felicem legionibus Judæis prefrecti"). Of that associated government, and of Felix's equal share in the wrongs of which Cumanus was accused, Josephus is ignorant; but what he says of Pallas and Felix is far more suitable to that earlier conjuncture, as described by Tacitus, than to the later occasion to which he refers it. At that time, viz. when Cumanus was deposed, "Felix would certainly have suffered for the wrongs done by him to the Jews but for the intercession of his brother Pallas," (Cud. 8) that very year "he was held in the highest consideration;" for that Pallas just then had reached the pinnacle of his commanding influence, Tacitus shows in the preceding recital of the public honors decreed to him, and by him recorded as the crowning glory of his life in his own epitaph (Plin. Ep. vii, 29 ; viii, 6). Even in the account Josephus gives of the conjuncture in the spring of the rebellion (spring of A.D. 66); indeed (in War, ii, 14, 4), it seems as if the recital had but just then reached Cæsarea. Ewald surmises that the death of Festus and of Burrs may have retarded the process. But the fact may be (as was suggested above) that Josephus in that passage of himself implies his materials for the account of Felix and of his relations to Nero, were so scanty; and the way in which Burrs is introduced, after the passage relating to Pallas (Ant. xx, 8, 9), strengthens the suspicion raised by the conflicting account in Tacitus, that the Jewish historian in this paragraph is mixing up, with his recital of what took
tion of which may have been delayed through the influence of Poppaea (who died Aug., A.D. 65). That Poppaea is spoken of as Nero's "wife," on the occasion above mentioned, may be merely euphemistic anticipation: this woman ("diu pellex, et adulteri Neronis, mel ma-
ritai potens,"Tacit. Ann. xiv, 60) may have befriended the Jews in the same time as after A.D. Ac.
18, xix, 45). In fact, the marriage could not have taken place at the time when she is said to have
aided them, unless it be possible to crowd the sub-
sequent occurrences of Josephus (Ant. xx, 8, 11 and 9, 1)
to the space of three or four months (Brown, Ordo
Secl. p. 122).
Nor can any certain inference be drawn from Josephus (Ant. xx, 11, 2) of certain
priests whom Felix had sent to be tried at home, and
for whom Josephus, after his own 26th year, which
was complete A.D. 64, was enabled, through the good
offices of "Cæsar's wife," Poppaea, to obtain their lib-
erty. The men had been prisoners three years at least,
and, for aught that appears, may have been so seven
or eight years or more. That they were obscure and
insignificant persons is evident from the fact that Is-
mael and Helkias, whom the "devout" Poppaea, two
years before, had graciously detained at her court, ap-
ppear to have made no intercession for their release.
See No.
But Wisseler (p. 99), after Anger (De temp. in Act.
Ap. ratione, p. 108), has an argument to which both
attack high importance, derived from the notice of a
Sunday (Acts xx, 7), the twelfth day after leaving
Philippi, which departure was "after the days of Any-
ma" (13-21 Nisan), and, indeed, very soon after, for
the apostle hasted, if it were possible, to reach Jeru-
usalem for the Pentecost" (versus 16) : and of the 43 days
which he had before him from 22 Nisan to the day of
Pentecost, the days specified or implied in the narrative
(Acts xx, xxi), amount to 35 to the landing at Cæsar-
rea (comp. Chrysost. in Act. Rom. xiv, 2), leaving but
eight days for the stay there (vpp. 24, 25, 30, 19)
and the journey to Jerusalem. Wisseler concludes
that the departure from Philippi was on the 23d Ni-
san, which, being twelve days before the Sunday at
Trog, would be Wednesday, consequently the 15th
Nisan fell on a Tuesday. According to his method of
Jewish calendar reckoning, from A.D. 56 to 59 In-
cluding such with which 16th Nisan would have been
on a Tuesday would be 58, which is his date for Paul's
arrival at Jerusalem. Were it worth while, the argu-
ment might be claimed for the year 55 (th day as-
signed by the ancients), in which year the day of true
full moon = 15 Nisan was 1st April and Tuesday. But
therein is no strong, nor even a stronger, than its
weakest link, and a single "perhaps" in the reckoning
is enough to invalidate the whole con-
catenation. See Passover.
On the whole, it seems that, if not in the Acts (q. v.), then neither in the history of the times from other
sources, have we the means of settling this part of the
chronology with absolute certainty. Josephus in par-
ticular, from whom are derived the combinations which
recent German writers deem so unanswerable, is dis-
credited in this part of the history (written probably
from his own resources and the inaccurate recollec-
tions of the byplay) by the infinitely higher author-
ity of Tacitus, who drew from his information from the pub-
lic records. Only, in whatever degree it is probable
that Paul's first residence at Corinth commenced A.D.
49 (§ 8, above), in the same it is probable that the arrest at
Jerusalem belongs to the year 55, six years being suf-
ficient, as nearly all inquirers are agreed, for the infor-
mation. Then, if the arrival at Rome took place,
as the ancients say, in the second year of Nero, it
will be necessary (with Petavius) to refer the "two
years" (Iurria, xxiv, 27) to the term of Felix's (sole)
procuratorship. See CORINTHIANS (EPHESIENS TO).
That the two years' imprisonment, with which the
narrative in the Acts ends, did not terminate in the
apostle's death, but that he was set at liberty, and suf-
f ered martyrdom under Nero at a later time, appears
to have been the unanimous belief of the ancients (see
the testimonies in Brown's Ordo Secl. § 180). Inde-
ed, in no other way is it possible to find a place for
the three pastoral epistles, and especially to account
for statements in the Second Epistle to Timothy (q. v.).
Wisseler's forced explanations have satisfied and can
satisfy no one. (See also Lange, Apostol. Zeitalter, ii,
owns that the three pastoral epistles "stand or fall
 altogether," and that, if they be genuine, the conclusion
is inevitable that the writer "turns in an argument against
their genuineness."
) But if, after his release, the
apostle visited not only Spain (as Ewald admits, Gerak.
vi, 631, on the unquestionable testimony of Clemens Rom.
c. 5), but Greece and Asia, as is clear from the Epis-
tles to Timothy and Titus, scant room is left for these
movements between the late dates assigned, with al-
most one consent, by recent German writers, to the
close of the first imprisonment (A.D. 68 and 64), and
the year 65 or 66, which the ancients give as the date
of Paul's martyrdom. So far, therefore, it is more
probable that the first imprisonment ended in one of
the years 62-65. A further consideration points the
same way when Poppaea's influence was established
(A.D. 58-65), which, after she became a proselyte or
"theosophos" (i. e. at least as early as 61), was freely used
in favor of the Jews, it would certainly have been in-
voked against the apostle by his enemies (comp. Ew-
ald, vi, 621): and, even if he escaped with life, his con-
fined would not have been of the mild character
described in the concluding verse of the Acts, more
especially as his "bonds in Christ were manifest in all
the palace" (pretorium), (Phil. i, 13), and among his
converts were some "of Cæsar's household" (iv, 22).
We may add that if the Narcissus (q. v.) of Romans
xi, 11, with whom the apostle freedman of Claudius, the
Epistle to the Romans (q. v.), written shortly before the
apostle's last visit to Jerusalem, cannot be placed
so late as A.D. 58 or 59, for Narcissus died very soon
after Nero's accession (Tacit. Ann. xiii, i). See PAUL.
V. Results.—The following table exhibits at one
view the Julian or calendar years of the most impor-
tant Biblical events: the Creation, and also the
Vulgar or Christian Era, according to the preceding
investigations (for a complete and self-verifying tab-
ular construction of all the Scriptural dates, with their
adjestion to each other and the demands of history,
and the authority upon which it rests, see the Metk.
Quart. Rev. 1864, p. 465). In cases where it is uncertain whether an event occurred in
the latter part of one Julian year or in the beginning of
the next, the earlier number is set down, and has a
star prefixed. In the centuries adjacent to the birth
of Christ, many events affecting Palestine are inserted
from the Apocrypha, Josephus, and other sources, in
addition to those properly Biblical.

CHRONOLOGY

314

A.M.  B.C.
1212  1061  Refuge of David at Gath, etc.
1113  1000  Death of Samuel.
1118  1050  Second Sparing of Saul by David.
1129  1040  Solomon's Peace at Zidah.
1120  1030  Asscession of David at Saul's Death.
1127  1034  Coronation of David over all the Tribes.
1128  1034  The Philistines are subdued by David.
1129  1034  Expulsion of the Jebusites by David.
1130  1034  Removal of the Ark to Jerusalem.
1131  1037  Kindness of David to Paul's Family.
1138  1035  Admonition of David with Bathsheba.
1139  1034  Birth of Solomon.
1214  1031  Incest of Absalom with Temar.
1210  1028  Rebellion of Absalom.
1210  1015  Usurpation of Adonijah.
1216  1014  Birth of Rehoboam.
1119  1011  Appointment of Solomon as Viceroy.
1116  1010  Asscession of Solomon at David's Death.
1113  1010  Foundation of Solomon's Temple.
1110  1003  Dedication of Solomon's Temple.
1123  980  Asscession of Rehoboam.
1125  970  Assassination under Jeroboam I.
1220  975  A prophecy by Hosea.
1221  970  Asscession of Ahaz by Shishak.
1227  966  Asscession of Ahaz by Judah.
1230  953  Asscession of Asa by Judah.
1228  952  Asscession of Asa by Israel.
1235  950  Asscession of Baasha by Israel.
1230  947  Birth of Jehosaphat.
1234  939  Invasion of Shishak by Israel.
1235  925  International War.
1234  927  Asscession of Zedekiah over Israel.
1233  926  Invasions of Zedekiah over Israel.
1236  925  Asscession of Omri over Israel.
1235  924  Asscession of Tiber over Israel.
1235  923  Birth of Jeroboam II.
1235  920  Death of Thabut.
1236  917  Appointment of Ahaz as Viceroy.
1236  916  Asscession of Ahaz over Israel.
1236  915  Grot of Hosea.
1236  912  Asscession of Jechonashaf over Judah.
1235  906  Birth of Ahaziah II.
1237  896  Asscession of Jehoram II. as Viceroy.
1237  895  Asscession of Jehoram II over Israel.
1237  894  Asscession of Jehoram I. over Israel.
1237  892  Second Appointment of Jehoram II. as Viceroy.
1236  891  Asscession of Jehoram I. over Judah.
1235  884  Birth of Jehoshaphat.
1235  883  Asscession of Ahaziah II. over Judah.
1234  882  Asscession of Jehoram over Israel.
1235  881  Usurpation of Athaliah over Judah.
1235  880  Asscession of Jehosh I. over Judah.
1236  879  Birth of Ahaziah.
1236  878  Asscession of Jehoshiah I. over Israel.
1235  876  Asscession of Jehoshiah I. over Israel.
1234  876  Asscession of Zachariah over Israel.
1234  875  Asscession of Jehosh I. over Israel.
1234  874  Asscession of Amaziah over Judah.
1235  866  Asscession of Jeroboam II. as Viceroy.
1235  864  Birth of Uzziah.
1235  862  Asscession of Jeroboam II. over Israel.
1235  860  Asscession of Uzziah over Judah.
1236  858  Birth of Amaziah.
1236  857  Asscession of Jeroboam II. followed by an Interregnum in Israel.
1235  857  Birth of Ahaziah.
1236  856  Asscession of Zacharias over Israel.
1236  855  Asscession of Shallum over Israel.
1236  854  Asscession of Menahem over Israel.
1235  853  Asscession of Pekahiah over Israel.
1235  851  Asscession of Pekiah over Israel.
1235  850  Asscession of John over Judah.
1236  849  Asscession of Ahaz over Judah.
1237  848  Birth of Hezekiah.
1237  847  Subjugation of the Ammonites by Jotham.
1237  846  Subjugation of Ahaz over Judah.
1234  845  Death of Pekiah over Judah.
1234  844  Asscession of Hoshea over Israel.
1236  839  Birth of Pekahiah, followed by a Reign of 2 years in Israel.
1236  839  Subjection of Hoshea by Phalmaneser.
1236  838  Asscession of Heziahiah over Judah.
1236  837  First Revolt of Hoshea from Assyria.
1238  835  Imprisonment of Hoshea by the Assyrians.
1239  834  Second Revolt of Hoshea from Assyria.
1239  832  Siege of Samaria by phalmaneser.
1239  831  Assyrian Captivity.
1236  829  Captivity of Mordecai and others.
1236  829  Interregnum.
1236  828  Interregnum of the Assyrians.
1238  827  Restoration of the Assyrians.
1236  827  Birth of Sennacherib, etc.
1236  826  Sickness of Hezekiah.
1236  825  Ambassadors of Merodach-baladon to Hezekiah.
1236  824  Birth of Manasseh.
1237  820  Act of Peace with the Philistines.
1236  820  Death of Hezekiah.
1236  814  Birth of Manasseh.
1236  814  Death of Hezekiah.
1236  814  Birth of Manasseh.
1237  813  Birth of Manasseh.
1236  813  Birth of Manasseh.
1237  813  Birth of Manasseh.
1237  813  Birth of Manasseh.
1237  813  Birth of Manasseh.
1237  813  Birth of Manasseh.
CHRONOLOGY

1. The chronology of the English Bible was regulated by the views of Usher (Annals Vet. et Nov. Test. first ed. fol. 1560, 1724), who followed, in general, the authority of the Hebrew text. Other chroniclers have put themselves under the guidance of the Septuagint and Josephus, maintaining that the modern Hebrew text has been greatly vitiated in the whole department of chronology, and more especially in the genealogical tables which respect the antediluvian patriarchs, as well as the ten generations immediately after the Flood. The examination above does not sustain this conclusion. Yet the shortened scheme, adopted by Usher from the Macurite Jews, is recent in its prevalence among Christians when compared with the more comprehensive chronology of the Septuagint.

VI. Controversies and Literature.—The distance from the Creation of the Christian era, which has been stated with about 140 variations, is given in the Indian Chronology, as computed by Gentil, at 6174 years; in the Babylonian, by Baillis, at 6158; in the Chinese, by Baillis, at 6157; in the Septuagint, by Athalamus, at 5508; while Jewish writers bring it down below the computation of capellus, namely, 4000, and one, Rabbi Lippman, to so contracted a sum as 3616.

1. The chronology of the English Bible was regulated by the views of Usher (Annals Vet. et Nov. Test. first ed. fol. 1560, 1724), who followed, in general, the authority of the Hebrew text. Other chroniclers have put themselves under the guidance of the Septuagint and Josephus, maintaining that the modern Hebrew text has been greatly vitiated in the whole department of chronology, and more especially in the genealogical tables which respect the antediluvian patriarchs, as well as the ten generations immediately after the Flood. The examination above does not sustain this conclusion. Yet the shortened scheme, adopted by Usher from the Macurite Jews, is recent in its prevalence among Christians when compared with the more comprehensive chronology of the Septuagint.
This last was used before the advent of our Lord, and, being followed by the Greek fathers of the Church, was generally current, till, in the eighth century, a disposition to exchange it for the Rabbincal method of interpreting the Septuagint, in the venerable Bede. Roman Catholic authors, however, have usually adopted the latter, from the influence of the Latin Vulgate, which strictly follows the Hebrew numbers. Isaac Vossius, in his treatise De Vera Etate Mundi (Hag. 1530, 4to), was the first of any noteworthv the Hebrew dates. Poccaram, in the Tract L'Antiquité des Temps retriable et défendue contre les Juifs et les nouveaux Chronologiæ (Amst. 1687, 12mo), produced a great impression in favor of the lengthened period advocated by Vossius. He was not, however, till the middle of the last century that Jackson produced his great work, the Chronological Antiquity (Lond. 1732, 3 vols. 4to). He advocated the longer chronology of the Septuagint. In the beginning of the present century Dr. Hales published the first volume of a laborious work entitled A New Analysis of Chronology, an undertaking which ultimately extended to four volumes, written in confirmation and illustration of the conclusions of Jackson. Mr. Faber, in his work on pagan idolatry, offers some judicious observations on the chronology of ancient history, reading generally in the footsteps of Hales. The Origines of Sir William Drummond proceeds also on the ground supplied by the Septuagint chronology. A detailed statement of the subject is to be found in the works of the Septuagint in preference to that of the original Hebrew may be found in a preliminary dissertation prefixed to the first volume of Dr. Michael Russell's Connection of Sacred and Profane History, from the Death of Joshua to the Decline of the Kingdoms of Israel and Judah (Lond. 1827, 3 vols. 8vo).

Upon the data we have considered above, three principal systems of Biblical Chronology have been founded, which may be termed the Long System, the Short, and the Rabbincal. All, or almost all, have erred on the side of claiming for their results a greater accuracy than the nature of the evidence upon which they rested rendered possible. Another failing of these chronologers is a tendency to accept, through a kind of false analogy, long or short numbers and computations for intervals, rather according as they have adopted the long or the short reckoning of the patriarchal genealogies than on a consideration of special evidence. It is as though they were resolved to make the sum as great or as small as possible. The Rabbins have in their chronology afforded the strongest example of this error, having so shortened the intervals as even egregiously to throw out the dates of the great time of the Persian rule. The German school is here an exception, for it has generally fallen into an opposite extreme, and required a far greater time than any derivable from the Biblical numbers for the earlier ages, while taking the Rabbincal date of the Exodus, and so has put two portions of its chronology in violent contrast. We do not lay much stress upon the opinions of the early Christian writers, or even Josephus, their method was uncertain, the numbers unknown to them without any feeling of doubt.

The chief advocates of the Long Chronology are Jackson, Hales, and Des Vignoles. They take the Sept. for the patriarchal generations, and adopt the lengthened chronology of the Exodus, ending in the Foundation of Solomon's Temple. The Short Chronology has had a multitude of illustrious supporters, owing to its having been from Jerome's time the recognised system of the West. Wesler may be considered as its most able advocate. He follows the Hebrew in the patriarchal generations, ending in the Exodus, and the Foundation of Solomon's Temple. The Rabbincal Chronology has lately come into much notice from its partial reception, chiefly by the German school. It accepts the Biblical numbers, but makes the most arbitrary corrections. For the date of the Exodus it has virtually been accepted by Bunsen, Lepsius, and Lord A. Hervey. The system of Bunsen we may regard as constituting a fourth class of itself, based upon theories not only independent of, but repugnant to the Bible. For the time before the Exodus he discards all Biblical chronological data, and reasons altogether, as it appears to us, on philological considerations.

In the post-diluvian period Hales rejects the Second Cain, and reckons Terah's age at Abram's birth 150 instead of 70 years; Jackson accepts the Second Cain, and does not make any change in the second case; Usher and Hales follow the first. But the time at which it alters the generation of Terah, while the latter does not. Bunsen requires "for the Noachian period about ten millennia before our era, and for the beginning of our race another ten thousand years, or very little more" (Outline, 11, 12). These conclusions necessitate the abandonment of all belief in the historical character of the patriarchal genealogies. The writer does indeed speak of "facts and traditions;" his facts, however, as far as we can perceive, are the results of a theory of language, and tradition is, from its nature, no guide in chronology. It is, however, certain that no Shemitic scholar has accepted Bunsen's theory. For the time from the Exodus to the Foundation of Solomon's Temple, Usher alone takes the 480 years; the rest adopt longer periods, according to their explanations of the other numbers of this interval; but Bunsen calculates by generations. The period of the kings, from the foundation of Solomon's Temple, is nearly the same in the computations of Jackson, Usher, and Petavius: Hales lengthens it by supposing an interregnum of 11 years after the death of Amaziah; Bunsen shortens it by reducing the reign of Manasseh from 55 to 45 years. The former theory is improbable and uncritical; the latter is merely the result of a supposed necessity.

3. The system which is now followed by almost all the learned are those of the Bible are those of Ederer's thorough Handbuch der math. u. techn. Chronologie (Berl. 1825, 2 vols.) and Handbuch d. Chronol. (Berl. 1831). The methods and results of these works most pertinent to Biblical chronology are also pursued in the first part of Brown's excellent Orbis Sceletum (Lond. 1841). Comp. Matzka's Chronol. in all s. Epochas (Wien, 1844). Jarvis's introduction to the History of the Church (N. Y. and Lond. 1845) is a fundamental investigation of ancient eras with reference to the Christian, and is remarkable for the evidence there given of an error in the Roman annals between B.C. 45 and A.D. 160, in consequence of which the author carries every event between these periods one one hundred years back. A synopsis of the argument is given in Strong's Harm. and Ergia of the Gospels (N. Y. 1852), App. I.

One of the earliest Christian systematic chronologies is the Pentabiblion of Julianus Africansus (in the 4th cent.), the author being a contemporary of St. Peter. The other is the Chronicon of Eusebius (4th cent.), of the Latin translation of which by Jerome an edition with notes was published by Scaliger in 1658; and the Armenian version has since been discovered and published, with a Latin translation, at Venice, 1818. There is also a Latin edition from the Exordium, ad Foundationem, by Alfonso Postato (Salamanca, 1565, 5 vols. fol.). The Chronicon Paschale (ed. Dufrene, Par. 1888, fol., and by Dindorf, Bonn, 1832) is a Byzantine work ar-
ceralized upon the basis of the Easter festival. There is also the Jewish Chûmos mimûni et minas, or Seder Olen (כְּרֵסֶם בְּבָלָם, in Hebrew, Amsterd. 1711, 4to; in Latin, with a commentary, by J. Meyer, Amst. 1649, 4to), the former part of which is reputed to have been composed about A.D. 180, while the latter is of more recent date.

The foundation of the modern science of chronology may be said to have been laid by J. Scaliger, in his work De Emendatione Temporum (Par. 1588, fol.; enlarged, Leyd. 1598; also Geneva, 1629). Another important work of that age is that of D. Petavius (or Petau), De Doctrina Temporum (Par. 1627, 2 vols. fol.), with its continuation, Uranologia (Par. 1630, fol.), and the abridgment, Uranonotum Creationis Temporum (Par. 1630, 8vo, and 1634, 8vo). Other important treatises bearing more or less directly on Biblical chronology, besides those mentioned above, are: Calvisii Opus Chronologi- gicum (Lips. 1665, and since); Riccioli, Chronologia Reformata (Bon. 1659); Florentini, De anno primit. (Aug. Vind. 1621); Lablli et Brilli Chronologia Historicia (Paris, 1650); Des Vignoles, Chronologie de l'Histoire Sainte (Berl. 1738, 2 vols. 4to), Marsham, Canon Chronicum (Lond. 1672; Lpz. 1676; Frank. 1696). Newton, Chronology (Lond. 1728); Blair, Chronology and History (London, 1744, 1750); Kennedy, Astron. Chronology (London, 1672); Playfair, System of Chronology (Lond. 1814); Clinton, Gnomon (Oxf. 1824-90); Clencemos, L'Art de vérifier les dates (Par. 1818).

More specific are: Vitringa, Hypotheseis chron. et chronologiæ (Havn. 1724); Bengel, Ordo temporum (2d ed. Stuttgart. 1707); Bannigsen, Bibliae Chronologie (Lpz. 1781); Frank, Novo et chro- niologia (Got. 1788); abridgm. Dass. 1783); Tiele, Chronol. d. alt. Test. (Bretn 1888); Archinard, Chronol. sacré (Par. 1841); Seyffarth, Chronol. sacrè (Lpz. 1846); Akers, Biblical Chronology (Cincin. 1855); Anon. Pulmoni (Lond. 1851); also Capellus, Chronologiæ Sacrae (Par. 1655); Allen, Chain of Script. Chronol. (Lond. 1659); Bedford, Script. Chronology (Lond. 1730); Cunningham, Chronology, etc. (Lond. 1834 sqq.); Bosanquet, Chronology of Don. (Lond. 1848); also Assyr. and Heb. Chronology compared (in the Jour. Royal As. Soc., Lond. 1864, p. 148 sqq.); Fausset, Sacred Chronology (Oxf. 1855); with many others of less extent. Compare also Prideaux, Old and New Testament Connected; Shuck- feld, History of Christianity, from the Fall Common- cated; Mem. Acad. des Inscriptions et Belles- Lettres; Michaelis, Zeitrechnung von der Sandfahrt bis Salomo (in the Götting. Mag. der Wissensch. 1 Jahrh.); Gesenius, De Pentateuchal Narrat. Origine (Hal. 1815); Hegewisch, Einl. in die hist. Chron. (Alt. 1811); Beer's Ab. of Dates, and ages nur Erkla, d. alten Zeitchn. Y. 1860); Von Gumpach, Altd. Kalender (Bruss. 1848); and Zeitschri. d. Bab. u. Assyr. (Heidel. 1892). See VULGAS ERA.

CHRONOLOGY, CHRISTIAN.—The first Christians, in the countries which formed part of the Holy Land and other countries they lived in. The ecclesiastical chronology of the early Church was limited to the use of the Jewish week, which began with a work-day and closed with the Sabbath, and in which the several days were not named, but counted. Gradually the day of rest was changed from the last day of the week to the first, and the seven变成了 seven were a specific ecclesiastical name. Both these changes proceeded from the commemoration of the day of the suffering and the resurrection of Jesus Christ—Sunday being the day of the resurrection, Friday the day of the crucifixion, and Wednesday the day of the trial. The two latter days of the week, Saturday and Sunday, are mentioned by Tertullian (de jejum. c. 2) and by Clement of Alexandria (Strom. vii, 12, § 75); but they are probably of an earlier origin, for the name stario (ἀράσιον), by which they were generally designated at the time of Tertullian, occurs in the Pastor Hermas (lib. 3, simil. 5). Sunday, as a day of rejoicing, is first mentioned in the Epistle of Barnabas (chap. xxv. 3), and its celebration seems to reach back to the apostolic age. These three prominent days were called in the Latin Church, fera quarta, fera sexta or parasceve, and dies dominici or domino, and by the Greeks γυπ&aomicron;α, παρασε&omicron;χης, ἡμερα χυα&omicron;ρης (also abbreviated χυα&omicron;ρης or χυα&omicron;ρης), or χυα&omicron;ρης. The names for the station-days are again Tertullian and Clement. The former is also the first to mention the name of dominica, while χυα&omicron;ρης is first found in the epistles of Ignatius (ad Magnes). The other week-days were designated by the Latins with the same name as the station-days (feria), and continued from fera secunda to fera sexta or parasceve, while the Greeks counted from ἡμερα ενεπτα to ἑτερον or παρασε&omicron;χης. The last day retained its Jewish name sabbatum, and αυ&omicron;βισ&omicron;α or αυ&omicron;βισ&omicron;α. The planetary appellation of days which emanated from the pagan astronomers in Alexandria (see Ideler, Geschichte der Mathematik, u. Chronologie, Berl. 1829) is first mentioned by Tertullian, who mentions the dies solis (Sunday) and dies Saturni (Saturday); by Justin Martyr, who mentions τος ἄλος της ημερας (Sunday) and της ημερας (Saturday); and by Clement of Alexandria, who mentions ημερα της Παρασκευης (Friday) ἰημερα της παρασκευης (Saturday), and another way of designating a day another week-days is found in the Easter Canon of Hippolytus, which marks the days of the week (beginning with Sunday) by the first letters of the alphabet, A to G.

Among the weeks of the year, the one including the anniversaries of the death and the resurrection of Christ came early to be celebrated with special solemnity. The time on which the former of these anniversaries should be commemorated even became the occasion of one of the greatest ecclesiastical controversies of the ancient Church, one party, which claimed to follow the example of the apologist John, Philip, and Paul, insisting that it should be celebrated on the anniversary day of the month (the full moon of the Jewish month of Nisan), and the other party, which appealed to the other apologists as their authori- ties, urging the celebration on the anniversary day of the week (Friday). The Church of Rome followed the latter, and the churches of Asia Minor the former practice. Both custom required a special calculation with the Jewish calendar or a special calculation of the Christian Easter. Of the latter class, the most ancient known to us is one found on the marble statue of Hippolytus, and computed to the first year of the emperor Alexander Severus (A.D. 222). It fixes the 18th of March as the time of the equinox, is ar- ranged according to the six years' cycle, and de-termines the Easter Sundays according to the Latin rule, that, whenever the Easter Sundays fall upon Sat- urdays, Easter is to be celebrated, not upon the next, but upon the second next Sunday. In the Eastern churches special calculations were made for the churches of Alexandria, Antioch, and others. Gradually the Alexandrine Easter Canon, the author- ship of which is ascribed by Jerome and Bede to Euse- bius, dislocated all others, and obtained general usage in the Church. It appointed for the celebration of Easter the Sunday following the day of the full moon which falls on or comes after the second ecclesiastical name. The bishops, by pastoral letters, informed the churches of the proper time of Easter in every year. A third, which is mentioned by Tertullian, tried to fix the 14th day of the month of Nisan, in the death-year of Christ (the 25th of March), as the immovable anniversary of the death, and the 16th day of the anniversary of the resurrection of Christ. See Eastern.

Constantine the Great, in 321, ordered a civil observance of Sunday by prohibiting all secular business,
and transferred the pagan **Nundinae** of the old Romans to Sunday. A Roman Calendar, compiled in the middle of the fourth century, divides the whole year, from the 1st of January, according to **Nundinae** and weeks, by placing in parallel columns the eight **Nundinal letters A-H**, and the seven week letters A-G. The entire suppression of the **Nundinae** is thought to have been effected by the **Sunday** laws of **Theodosius the Great**.

But while the week supplanted the **Nundinae**, the Christian apellation of the week-days gave way gradually, at least in the Western countries, to the pagan planetary names. The change was, however, not effected uniformly. While the day of Christ's passion (about 887) counts the use of the planetary names for week-days among the heresies. Ambrose and **Gregory of Tours** (died 594) censure the use of the name Sunday (**Dieu solis**). A bishop of Iceland, in 1107, suppressed the planetary names and substituted for them numbers. The **Spaniard Campanella** made an attempt to introduce, in the place of pagan names of the week-days, the names of the seven sacraments, and in place of the usual names of months those of the twelve apostles. In the Eastern churches the planetary names never came into general use. The **Slav**, Lithuanians, and **Finns** used the days of the week, calling Monday the first day (after the Sabbath).

The months of the Christians (except among the **Copts** and **Abyssinians**, who still use the old **Alexandrine months**) are still those of the **Julian Calendar**. The names of the Roman months have also in most Christian countries come into general use. In the **Byzantine empire**, the **Syro-Macedonian names of the months** maintained themselves 1 by the side of the Roman until late in the Middle Ages, and among the **Germanic and Slavic nations efforts were made to introduce native names**, but the Roman names always prevailed. The **Armenian**, **Syrian**, **Coptic**, and **Abyssinian** Christians still use the **national names of months** exclusively. The **"Society of Friends"** (**Quakers**) reject both the planetary names of days and the Roman names of months, and simply count both (as "first day," instead of Sunday, and "first month," instead of January).

With the names of the Roman months also the **Romano-British names of dating** were extensively used. In the **Latin Church** it remained in use until the establishment of the modern languages (in Germany until the 14th century). Isolated instances of the present way of counting the days are found in a fragment of a **Gothic Calendar in the 4th century**; in an **Anglo-Saxon Calendar** of the 10th century the works entitled Pope **Gregory the Great** (594-604), and elsewhere. The designation of the days of the months by the names of saints came into use early in the Middle Ages. In the **Byzantine Church** the Roman way of dating seems to have been supplanted in the 7th century by the present way of counting the days. In Asia, the **Roman way of dating was used only by way of comparison with the national method**.

The beginning of the year in the Christian countries has remained, as it was fixed in the **Julian Calendar**, on the 1st of January. **Dionysius Exiguus**, in order to give the beginning of the year a **Christian character**, reckoned from the "day of the circumcision" (**dia circumcisionis**). Several attempts were made to substitute for the 1st of January another beginning of the year, relating to some prominent event in the history of Christianity. Thus several popes began to use for that purpose the first day of March, probably on the ground that March was the usual month of the **Passover**, and Venice used in its public documents this day until the downfall of the republic. Another Roman new-year's day was the 25th of March (the festival of the **Annunciation**), and this was used in **Pisa** and **Florence** until 1749. But the most common was Christmas (**a Nativitate Domini**), which was even called **mas**, or **Silvis curium Romanum**. It was not until Pope **Innocent XII** (1691) that this habit was altogether abandoned. In Germany, the calendarium of **Charlemagne** has the 1st of **January**; the 25th of March was in frequent use until the 11th century, when it gave way to Christmas, which maintained itself until the **13th century**. In **France** under the **Merovingians**, the 25th of March was used under the **Capetians**; under the **Capetians**, until the 16th century, **Easter**; the latter was also for a long time in use in **Holland** and in **Cologne**. Spain and Portugal long used the 25th of **March**, and from the 14th to the 16th century, **Christmas**. The **Anglo-Saxons**, according to **Beede**, used the 1st of **Christmas**; but gradually three different years were distinguished—the historical, legal or civil, and ecclesiastical. The beginning of the first has long been on the 1st of **January**; that of the second was the 25th of December until the 18th century, after that the 25th of March until 1732, when it was fixed at the 1st of January. In the **Byzantine empire** the 1st of **January** was in the 5th century supplanted by the 1st of **September** (the epoch of the **Indictions**), which the **Russians** abandoned for the 1st of **January in 1750**, and the kingdom of **Greece** in 1821. The **Chaldeans** have adopted the 1st of **September** as their first. The **Chinese** first use the 1st **Tishri**. The **Copts** and **Abyssinians** still adhere to the 1st of **Thoth**.

Of a special church year there are no traces until the time of **Constantine the Great**. Its beginning seems at first to have been made with the sun-month corresponding to the **Jewish Nisan**. Thus the **Apostolic Constitutions** designate December as the ninth, **January** as the tenth, and "**Xanthicus**" (which is usually identified with **Nisan**) as the first month. **Epiphanius** follows the same calculation; and **Victorius**, **Dionysius**, and **Beda** speak of the **Easter month** as the first. The epoch of the first Sunday of Advent originated with **Gregory the Great**. The **Responsoriale of Gregory the Great**, but seems to have been general in the Latin churches as early as the 7th century. The **Greek Church** has retained the 1st of **September** as the beginning of the church year. See **Herzog**, **Real-Encyklopädie s. v. Zeitrechnung** (which we have chiefly followed in the above article). See also **Encyclopaedia Britannica**; **Cyclopaedia**.

**Chrysaorγytm** (**χρυσοργύτσμος**), a tax on trade and commerce under the later Roman emperors, so called because paid in gold and silver; and also **tributum australe**, because paid once in every five years (**bustrum**). Even the poorest traders were not exempt from it; and it was called an intolerable tax (**φόρος διψίφυγος**, **Libanius**, **Orat. 14**, cont. **Florcnt.**). Yet **Constantius** freed the lower clergy, who gained their bread by trade or labor, from this tax; and later emperors confirmed the exemption.—**Bingham**, **Orig. Eccles.** l. v. ch. iii. § 6.

**Chrysolite** (**χρυσοθήκης, golden stone**), the precious stone which garnished the seventh foundation of the **New Jerusalem** in John's vision (Rev. xxii, 20); according to **Pliny**, however, a gem of gold color, or, rather, of yellow streaked with green and white (see **Plin. xxxvii. 9, 42**; **Idisor. Origg. xvi. 14**). It was called by some **chrysophylgium** (**χρυσόφυλλον**, **Epiph. De geminis, x**). It was a name applied by the ancients to all gems of a golden or yellow color, but it probably designated particularly the topaz of the moderns (see, however, **Herod. lib. 2, 164, 173**; **Origg. iv. 14**). **Christ. the Sept. the word is employed for **πράσιος, ταρσική**, the "beryl" of our version** (**Exod. xxviii. 20**; **Ezek. x. 9**). See **Beryl**; **Topaz**.

What is usually termed chrysolite is a crystalline precious stone of the quartz kind, of a glossy fracture. In chemical composition it is a ferriferous silicate of magnesium. The prevailing color is yellowish-green, and pistachio-green of every variety and degree of
shade, but always with a yellow and gold lustre. There are two particular species of chrysolite: one, called the Oriental chrysolite, of a pistachio-green, transparent, and, when held up to the light in certain positions, often with a cherry-red shade; the other is the granular chrysolite, of different shades of yellowish-green color, but more true green and very pellucid (see the Penna Couriçopila, s. v.). See GEN.

CHRYSOLOGUS. Peter, archbishop of Ravenna, was born at Imola about 400, and was consecrated archbishop about 438. He was noted for strictness of discipline, and especially for eloquence, from which his surname was derived. Eutyches sought to gain the eloquence and reputation of Chrysologus for his party, but, as he rather slyly repelled it, he was vigorously opposed to his dogmas. He died at Imola, according to some accounts, Dec. 2, 450; according to another, in 458. A number of Sermons (176) are preserved, of which the first edition, by Vincentius, appeared in 1584; another at Venice, 1760, fol. One of the best editions is Sermones, edidit omnium certa collationis (Aug. Vind. 1768, fol.). These and the few letters of his that remain are collected in a complete edition in Migne's Patrologia (1846, imp. 8vo).—Migne, Diction de Bibliographie, iii, 425.

Chrysopeias (χρυσοπέιας, mentioned in Rev. xxii, 20, as the tenth row of stones in the foundation of the heavenly Jerusalem), a precious stone of greenish-brown color, pellucid, to which he is given a grass-green (Pliny, Hist. Nat. xxvii, 20, 21); an Indian translucent gem, so called as resembling in color the juice of the leek (ποτάμος), with golden spots (χρυός)—a species of beryl, supposed to be possessed of healing power in diseases of the eyes. Its spotted character may be due to its name, given by Pliny (Hist. Nat. xxxvi, c. 8), pardalos, or, rather, pandakron, from its resembling the leopard-skin (see Braun, de Vert. Sac. Heb. ii, c. 9, p. 509). The chrysopeias of the ancients is by some supposed to be identical with the stone now so called, viz. the apple or leek-green variety of agate, or uncrystallized quartz (London Encyclopedia, s. v.), which owes its color to oxide of nickel; this stone at present is found only in Silesia; but Mr. King (Antique Gems, p. 59, note) says that the true chrysopeias is sometimes found in antique Egyptian jewelry set alternately with bits of lapis-lazuli. See GEN.

In Gen. ii, 12, the Sept. renders the word בְּרֵאשֵׁית, by chrysopeias (λίθος ὢ χρυσόσπας), but they were proscribed by the Christians. See BIBLE.

Chrysostom, St., born 347 at Antioch, died in exile 407. His proper name was JOHN, but since the seventh century he is better known as CHRYSOSTOM (Χρυσόστομος), the golden-mouthed pulpit orator of the Greek Church. Like Gregory of Nazianzen, and Augustine, he had a most excellent Christian mother, Anthusa, who, by her example of virtue and piety, commanded even the admiration of the heathen. It was with reference to her that Libanius, the most distinguished rhetorician and literary representative of heathenism at the close of the fourth century, felt constrained to exclaim, "Ah, gods of Greece! what wonderful women there are among the Christians!" Anthusa was married to a soldier at Antioch, but became a widow in her twentieth year, and continued in that state, devoting herself exclusively to religion and the education of her children. She planted the seeds of early pietas in the soul of Chrysostom, although, like Gregory Nazianzen, Augustus the younger, other sons of Christian mothers, he was not baptized till mature age. She gave him, at the same time, the benefit of the best intellectual culture of the age in the school of Libanius, who esteemed him his best scholar, and desired him to become his successor as professor of rhetoric or forensic eloquence. Chrysostom entered the career of a rhetorician, but shortly after he broke with the world, and resolved to devote himself exclusively to religion. After the usual course of catechetical instruction, he was baptized by bishop Meletius, of Antioch. His first impulse after his conversion was to embrace the monastic life, which, since St. Anthony of Egypt, the patriarch of monks, set the example, and such men as Athanasius, Basil the Great, the two. Augustines, Jerome, and Augustine had given it the sanction of their great authority, carried away many of the noblest and most earnest youths of the Church, as a mode of life best adapted to secure personal holiness and salvation, and to benefit the world by presenting to it, in his holiness, the model of its perfection. He reflected on the beauty and power of heroic self-denial and true happiness in the unbroken communion with God. Anthusa, however, designed his season. She took him by the hand, led him to her room, and by the bed where she had given him birth, she reminded him in tears and tender entreaties not to forsake her. Like an obedient son, he yielded to her wishes; and although he, after her death, spent some time in monastic retreat, and retained ascetic habits even on the patriarchal throne, yet the greater part of his life was devoted to the active service of the Church in some of her most influential positions. He commenced his public life as anHierarchy reader in the church of Antioch under Meletius, and would soon have been promoted to a bishopric, but he evaded the election by a sort of pious ruse, and thrust it upon his friend Basilius (not of Cæsarea, but of Raphana, in Syria), whom he considered worthier, but who bitterly complained of the deception. Chrysostom defended his conduct, and justified the theory of accommodation, or economy (οἰκονομία), as he called it, wherever it may be practiced from pure motives, and as a means to a good end; unwarrantably appealing to Paul, who became a Jew to the Jews, and a Gentile to the Gentiles. Other fathers (e.g. Jerome) had the same lax views on the duty of vescity, which find no support in the Bible, but were universally entertained among the heathen philosophers, especially the Greek sophists. Even Plato vindicates falsehood, and expressly recommends it to physicians as a help to the healing of the sick, and to rulers for the good of the people (De Republic, iii, p. 268). No wonder that even the twelfth century vescity is so rare in the Oriental churches. This occurrence was the occasion of Chrysostom's famous treatise on the priesthood (Μνημούσιας, De Sacrorvm, ibi, etc.), which, notwithstanding the serious defect alluded to, is one of the most useful works on the duties and responsibilities of the holy ministry. It has been often separately edited (by Erasmus, Cave, Bengel, etc.) and translated into modern languages (into English by Hollier, 1740; Bunce, 1759; Mason, 1826 [Phil., 12mo]; Marsh, 1844; and B. Harris Cowper, 1866).

After the death of his mother Chrysostom fled from the seductions and tumult of city life to the monastic solitude of the mountains near Antioch, and there spent six happy years in the study of the Bible, in sacred meditation and prayer, under the guidance of the learned abbot Diodorus (afterwards bishop of Tarsus, 394), and in communion with such like-minded young men as Theodore of Mopsuestia, the celebrated father of Antiochian Nestorian theology († 492). Monasticism bore him a profitable school of experience and self-government; because he embraced this mode of life from the purest motives, and brought into it intellect and cultivation enough to make the exclusion available for moral and spiritual growth. He thus describes the influence of the life of his brother in the nest, and says, after the death of his brother in Antioch: "Before the rising of the sun they rise, hale and sober, sing as with one mouth hymns to the praise of God, then bow the knees in prayer under the direction of the abbot, read the Holy Scriptures, and go to their labors; pray again at nine, twelve, and three o'clock; after a good day's work, enjoy a simple meal of bread.
and salt, perhaps with oil, and sometimes with pulse; sing a thanksgiving hymn, and lay themselves on their pallets of straw without care, grief, or murmur. When one dies they say, ‘He is perfected;’ and they all pray God for a like end, that they also may come to the eternal Sabbath-rest and to the vision of Christ.’

In this period he composed his earliest writings in prose, called the three homilies, two letters to the fallen Theodore (subsequently bishop of Mopsuestia), who had regretted his monastic vow and resolved to marry. Chrysostom regarded this small affair, from the ascetic standpoint of his age, as almost equal to an apostasy from Christianity, and pillared all his excommunication of his stepson and sympathized with his bitter reproach, and terrible warning to reclaim his friend to what he thought the surest and safest way to heaven.

By excessive self-mortification Chrysostom undermined his health, and returned about 380 to Antioch. There he was ordained deacon by Melitians (who died in 381), and presbyter by Flavian in 386. By his eloquence and his pure and earnest character he soon acquired great reputation and the love of the whole church. During the sixteen or seventeen years of his labors in Antioch he wrote the greater part of his Homilies and Commentaries, his work on the Priesthood, a commentary on the Gospel of Matthew, a gospel in harmony on Ephesians, and an admonition to a young widow on the glory of widowhood and the duty of continuing in it. He disapproved second marriage, not as sinful or illegal, but as inconsistent with an ideal conception of marriage and a high order of piety.

Chrysostom was chosen, without his own agency, patriarch of Constantinople. At this post he labored several years with happy effect. By talent and culture he was peculiarly fitted to labor in a great metropolis. He happily avoided the temptation of hierarchical pride and worldly conformity. In the midst of the splendor of New Rome he continued his ascetic habits, and applied all his income to the sick and the poor. He preached an earnest, practical Christianity, insisted on church discipline, and boldly attacked the vices of his age, and the hollow, worldly, and hypocritical religion of the imperial court.

But his unspiring sermons armed the anger of the emperor and his young and beautiful woman, who despised her husband and indulged her passions. His rising fame, moreover, excited the envy of the ambitious patriarch, Theophilus of Alexandria, who could not tolerate a successful rival in Constantinople. An act of Christian love toward the persecuted Origenistic monks in Egypt caused him in an epistle of controversy, which raged at that time with great violence in Egypt and Syria, and at last the united influence of Theophilus and Eudoxia overthrew him. Persecution and suffering were to test his character and to throw around his memory the halo of martyrdom for the cause of purity and charity. Theophilus first sent the aged Epiphanius, so well known for his orthodox zeal and his hatred of the arch-heretic Origen, to Constantinople, as a tool of his hierarchical plans, in the hope that he would destroy the thousand-headed hydra of heresy, and ruin Chrysostom for his apparent connection with it. Chrysostom, as a pupil of the Antiochian school of theology, as a spiritual divine, had no sympathy with the philosophical speculations and allegorical fancies of Origen, but he knew how to appreciate the merits of this great man, and was prompted by a sense of justice and Christian love to intercede in behalf of the Origenistic monks, whom Theophilus had unmercifully expelled from Egypt, and he showed them kindness when they arrived at Constantinople, although he did not admit them to the holy communion till their innocence should be publicly established.

Epiphanius himself found that injustice had been done to those monks, and left Constantinople with the words, ‘I leave to you the city, the palace, and hypoc-

racy.’ He died on board the ship on his return to Cyprus (403). Theophilus now proceeded to Constantinople in person, and at once appeared as accuser and judge of Chrysostom. He well knew how to use the dissatisfaction of the clergy, of the empress Eudoxia, and of the court, with Chrysostom, on account of his moral severity and his bold denunciations. In Chrysostom's absence, his cabinet composed two letters to the fallen Theodore (subsequently bishop of Mopsuestia), who had regretted his monastic vow and resolved to marry. Chrysostom regarded this small affair, from the ascetic standpoint of his age, as almost equal to an apostasy from Christianity, and pillared all his excommunication of his stepson and sympathized with his bitter reproach, and terrible warning to reclaim his friend to what he thought the surest and safest way to heaven.

Chrysostom was recalled, indeed, in three days, in consequence of an earthquake and the dissatisfaction of the people, but was again condemned by a council in 404, and banished from the court, because, incensed by the erection of a silver statue of Eudoxia close to the church of St. Sophia, and by the theatrical performances connected with it, he had, with unwise and unjust exaggeration, opened a sermon, on Mark vi, 17, 18, (a reference to St. Basil's sermon for Easter), in common with his friend, Eunomius, and an al allusion, ‘Again Herodias rages, again she raves, again she dances, and again she demands the head of John [Chrysostom's own name] upon a charger’ (Socrates, Hist. Eccl. vi, c. 18). From his exile in Cucusus and Arabissus he corresponded with all parts of the Christian world, took lively interest in the missions in Persia and Scythia, and appealed to a general council. But even the powerful intercession of pope Innocent I and the sympathy of the people at Constantinople were of no avail against the wrath of the court and the envy of a rival patriarch. The enemies of Chrysostom procured from Arcadius an order for his transportation to the remote desert of Pityus. On the way thither he died at Comana in Pontus, Sept. 14, 407, in the sixtieth year of his age, praising God for everything, even for his unmerited persecutions. His last words were: Δόξα τῷ Σωτήριῳ κυρίῳ. They express the motto of his life and work.

Chrysostom was revered by the people as a saint; and thirty years after his death, by order of Theodosius II (468), his bones were brought back in triumph to Constantinople, and deposited in the imperial tomb in the Church of the Apostles. The emperor himself met the remains at Chalcod, fell down before the coffin, and in the presence of the emperor and empress Eudoxia, implored the forgiveness of the holy man. The age could not, indeed, understand and appreciate the holy spirit of Origen, but was still accessible to the narrow piety of Epiphanius and the noble virtues of Chrysostom.

John Chrysostom is the greatest commentator and preacher of the Greek Church, which reveres him above all fathers. He left a spotless name behind him. As a divine, he was eminently sound, moderate, and practical; less profound and original than Athanasius or Augustine, but superior to both as an exegete and sermonizer. He is the best representative of the Antiochian school of theology, a spiritual divine, far better than a philosopher. He avoided the errors into which his friend Theodore of Mopsuestia, and his successor, the unhappy Nestorius, of the same school, fell soon afterwards. Neander compares him to Spener, the practical reformer of the Lutheran Church in the 17th century. Villiennan has quite justly claimed for him the union of all the oriental attributes, the natural, the pathetic, and the grand, which have made St. John Chrysostom the greatest orator of the primitive Church, and the most distinguished interpreter of that remarkable epoch.” Carl Haase says of him that “he complemented the sober clearness of the Antiochian exegesis and the rhetorical arts of Li-
banks with the depth of his warm Christian heart, and that he carried out in his own life, as far as mortal man can do it, the ideal of the priesthood which, in youthful enthusiasm, he once described" (Church History, § 104). Niedner characterizes him thus: "In his youth and earlier years he was noted for his knowledge of theoretical and practical theology, as well as of the dogmatical and ethical elements, exhibited mainly in the fusion of the exegetical and homiletical. Hence his exegesis was guarded against barren philology and dogma, and his pulpit discourse was free from doctrinal and polemical spirit; he aimed at the production of the knowledge of Christianity from the sources into the practical life of the people left him little time for the development of special dogmas" (Geschichte d. chr. Kirche, 1846, p. 323).

We have from Chrysostom over six hundred homilies, delivered at Antioch and Constantinople, by far the most valuable of his writings. They are consecutively expository sermons on Genesis, the Psalms, and most of the books of the New Testament. They contain his exegesis, and hence are so often quoted by modern commentators, especially the homilies on the Epistles of Paul. Besides them he wrote discourses on special subjects, forming with the homilies on the Statutes, occasioned by a rebellion at Antioch in 387, are the most celebrated. The other works of Chrysostom are his youthful treatise on the priesthood already alluded to; a number of doctrinal and moral essays in defence of the Christian faith, and in commendation of celibacy and the monastic life; and two hundred and forty-two letters, nearly all written during his exile between 406 and 407. The most important of the letters are two addressed to the Roman bishop Innocent 1, with his reply, and seventeen long letters to his friend Olympias, a pious widow and deaconess. They all breathe a noble Christianity, not desiring to be recalled from exile, convinced that there is but one misfortune—departure from the path of piety and virtue, and filled with cordial friendship, faithful care for all the interests of the Church, and a calm and cheerful looking forward to the glories of heaven. The so-called Liturgy of Chrysostom, which is still in regular use in the Greek and Russian churches, bears the unmistakable marks of a later age.

Literature.—The best edition of the works of Chrysostom in the original Greek, with a Latin translation, is the Benedictine, prepared by Bernard de Montfaucon, in Paris 1713-15, 15 fol. vols.; reprinted in Venice 1784-41; in Paris (Gueho), 1834-39; and in Migne's Patrologia, 1839-90. The Homilies have been often translated into French, German, English, and other languages (English translation in the Oxford library of the Fathers, 1842-53), and so also his youthful work on the Priesthood (see above). On the life and character of Chrysostom see especially the Vita in vol. xii of the Opera, p. 91-178; Tillemont, Mémoires, vol. xi, p. 1-405; Stilling, Acta Synodorum for Sept; Neander, Der Kirch. Chrysostomus (Berlin, 1821, 8d ed. 1848, in 2 vols. (the first volume translated by Stapleton, Lond. 1838); Villemain, Théodose de l'Empereur de Rome, 1st ed. Paris, 1849, 154-417; Perthes, Life of Chrysostom (Boston, 1854, 12mo); Abbe Rochet, Histoire de St. Jean Chrysostome (Par. 1866), Comp. also Schaaf's Church History, 1866, vol. iii, p. 702 sq. and 933 sq. (From which a part of the above sketch has been taken).

Chub [pron. Cub] (232), Heb. Keb, deriv. uncert.; Sept. apparently Aliaous, but transposed; Vulg. Chab, a word occurring only once as the name of a place in alliance with Egypt in the time of Nebuchadnezzar (Ezek. xxx, 5); comp. Phut, and Lud, and all the mingled people (252), and Chub (Sept. Pthos and Khetes and Aloud and Aliaous and Pintes y'oratum in avut v. t. Aliaous and Aliai)-X.

come allies. Worthy of notice also is the suggestion of First, who says, "It is possible that it is to be connected with Codon, the existing name of an Ethiopian port, and which, perhaps, was formerly the name of a district." (Hebrew Handbook a.v.)

Chubb, Thomas, an English Diest, was born at East Harnham, a village near Salisbury, in 1678. His father dying, left his family poor, and Chubb was apprenticed to a glover in 1694. At this trade, and that of tailor-chandler, he supported himself, and at the same time cultivated his uncommon natural ability by diligent study. He died at Salisbury, Feb. 3, 1746. His first work, which appeared in 1718, was entitled The Supremacy of the Father asserted (8vo), and denied the divinity of Christ. It was followed by a series of publications, in which his skepticism was more and more fully developed. Among them are Inquiries concerning Liberty of Conscience and the" (Laud, 1715, 8vo); and a great number of tracts on authority, human nature, miracles, etc. He was largely involved in controversy with Warburton, Stebbing, Fleming, and others. His posthumous tracts were published in 2 vols. 8vo, 1748; and were answered by Fleming, in True Dream the Batts of Christianity; or, the Constitution of the Church of England, and by Leeland (View of Dissected Writers, vol. i.). "Chubb was a working man, endowed with strong native sense, who manifested the same inclination to meddle with the deep subject of religion, which afterwards marked the character of Thomas Pain and others, who influenced the lower orders later in the century. In his general view of religion, Chubb denied all particular providence, and, by necessary consequence, the utility of prayer, save for its subjective value as having a reflex benefit on the human heart. He was undecided as to the fact of the existence of a revelation, but seemed to allow its possibility. He examined the three great forms of religion which professed to depend upon a positive revelation, Judaism, Mohammedanism, and Christianity. The claim of the first he wholly rejected, on grounds similar to those explained by Morgan, as incompatible with the moral character of God. In reference to the second he anticipated the modern opinions on Mohammedanism by asserting that its views of the soul were impossible, and not containing the truth which the human spirit needed. In examining the third he attacked, like Morgan, the evidence of miracles and prophecy, and asserted the necessity of moral right and wrong as the ground of the interpretation of Scripture" (Farrar, Critical History of Free Thought in the Church). There is a full account of Chubb, with the opinions of various writers concerning him, in the Biographia Britannica, iii, 521-532.

Chun [pron. Chum] (Heb. ָחָם, ָח כָּחֶר, deriv. uncertain, Sept. ἱεράν, Vulg. Chum), a Syrian city mentioned in connection with Tithath, as one of the "cities of Hadarezer," from which David procured brass for building the Temple (1 Chron. xxviii, 8). In the parallel passage (2 Sam. viii, 8) these two cities are called respectively Hamath and Hamath-Zobah. It is interesting to note the similarity between the Canaanites as situated between Lebanon and Baalbek. The reading of the Sept. seems to imply that instead of "from Chun" (1 Sam. ii) it had read Beerod (בֵּיהֶרֶד, q. d. בֵּי וֹר, i.e. בֵּי וֹר, choice); but Josephus supports the present Heb. text (Miswam, Ant. vii, 5, 5). See BEROTH.м

Church. I. The word Church.—I. The origin of the word is uncertain. In the Germanic and Slavonic languages it is found as follows: Anglo-Saxon, cyreca, cire, cire; English, church; Scottish, kirk; German, kirche; Low-German, kirke; Frisian, tserke or tserke; Bohemian, kirka; an, cyrice; Polish, cerke; Russian, cerkov. The following derivations have been assigned to the word:

(1) Heb. כֵּיָה and כֵּיָה; (2) Teutonic, kirken, kirken; (3) Celtic, creic or clych, clyrec or clylieb; (4) Latin, curia; Greek, κυριακί (the Lord's house, from κύριος, Lord). The preponderance of opinion is in favor of the last derivation (Gieseler, Excl. Hist. § 1; Hooker, Excl. Pol. v, 13; Pearson, On the Creed, Oxlf. 1820, i, 504; and, the principal authority, Jacobson, Kirchenrecht, of Halle, Kossim, 1838, 8vo). On the other hand, Meyrick, in Smith's Dictionary of the Bible (iii, Appendix, p. ci), argues at length against this derivation chiefly on the ground (1) that the Greek missionaries, who are supposed to have carried the Word among the Northern tribes, used ἰερακία, not ἱερακία, as it was used in the East by the Romans (Rom. xvi, 23 et al.); (2) that the Roman Church, through the Latin and Romance languages, never adopted the Greek word ἱερακία, not ἱερακία, from its Greek teachers. His conclusion, after dropping the first derivation, is that "it is difficult to say what is to be substituted. There was probably some word which, in the language from which the Teutonic and Slavonic are descended, designated the old heathen places of religious assembly, and this word, having taken different forms in different dialects, was adopted by the Christian missionaries. It was probably connected with the Latin circeus, circular, and with the Greek κύκλος, possibly also with the Welsh gylch, which, as a kind of circle, was the first to reject the received tradition, was probably right in his suggestion, 'Credo et a circro Kirk nos trum esse, quia veterem tempela instar Circi rotunda' (Epist. ad Birga, Cent. iii, Ep. 44).

2. N.T. use of the word Church.—The Greek word ἱερακία in the New Testament (Matt. xvi, 18; xviii, 17; 1 Cor. x, 23; Eph. i, 9) corresponds ָחָם, ָח כָּחֶר, is from κυριακί, to call (κυριακός, a calling; κυριακή, called), and is rendered by our word church. The meaning of the word would thus seem to be, in the N.T., the whole company of God's elect, those whom he has called to be his people under the new dispensation, as he did the Israelites under the old. Such is the signification in one of the two instances in which Christ uses the word in the Greek: "Upon this rock I will build my church" (Matt. xvi, 18). The other (Matt. xviii, 17) refers to the single congregation. Instead of ἱερακία, Christ generally used the terms "kingdom of God," "kingdom of heaven," or simply "kingdom" or thy kingdom, or the Son of the kingdom (John iv, 6; vi, 28, 29; iv, 25, 26; iv, 44, 11; xii, 28); the word "church" is first applied by St. Luke to the company of original disciples at Jerusalem on the day of Pentecost (Acts ii, 47), and is afterwards applied (in the Acts, Epistles, and Apocalypse) to, 1. The whole Christian body or society; as the sanctified of God (Eph. v, 27); 2. The whole number of those who profess the Christian religion under pastors, etc. (1 Cor. xii, 18); 3. Particular societies of Christians in particular cities or provinces, e.g. the church in Jerusalem (Acts viii, 1); 4. Religious assemblies of these societies and the places in which they met, e.g. (Rom. xvi, 5). 'Greet the church that is in their house,' etc. (1 Cor. xi, 18; xiv, 10, 28).

3. Common use of the word Church.—1. The most common sense in which the word church is used is to denote the body of the acknowledged followers of Christ, or his visible body. It is also used to denote the community of true believers, whether known to be such or not. It is used as "church militant" and "church triumphant" to distinguish between believers yet on earth, and still contending with opposition, and believers already glorified in heaven. It is used to designate the house of Christian worship. 5. Any particular denomination of Christian people, as the Lutherans, the Episcopal, etc. 6. A particular congregation of any one denomination of Christians. 7. The religious
establishment of any particular nation or government, as the Church of England. 8. The sum of the various Christian denominations in a country, as the Church in America. These are the ordinary uses of the word, and it is important, in order to a right understanding of it, to know in which of these senses it is employed. Much confusion might be avoided if disputants would always clearly state in which of all these equally admissible senses they use the word.

II. Idea of the Church.—The Christian religion (subjectively considered) is a divine life wrought in the soul of man by the Holy Spirit, whereby the man is united through Christ unto God. He walks before him in holiness, and finally dies in his favor, and is received into his eternal glory. The personal relation lies wholly between the individual and God. But the instinct of this new life is to propagate itself by diffusion, and for this diffusion it must have organization. This organization is found in the Church, whose function it is to make universal the religion of the individual. Moreover, the individual believer, for the nourishment of his own spiritual life, seeks communion with other believers; and this communion is furnished by the Church. The Christian Church is, then, the voluntary association of individuals connected together by a common faith in Christ, and which seeks to represent in its united life the kingdom of God announced by Christ’ (Gieseler, *Eschatology*, vol. i, § 1).

“Christianity contains, on the one hand, a divine philosophy, which we may call its religion, and a divine polity, which is its Church” (Arnold, *Misc. Works*, N.Y., p. 11). The Church is the particular form or expression of the kingdom of God, the institution through whose agency this spiritual and eternal kingdom is to be made effective among men.

But, although there are elements of truth in the statements already made, it is further true that the Church, under the dispensation of the Spirit, is the necessary form or body of Christianity in the world. Not that the Church is Christianity, any more than the body of man is his life. The object of Christianity is the redemption of mankind; and the Church is the divinely constituted means of the ordinary application of redemption to individuals of mankind. It is therefore something altogether more and higher than a mere form of society, or an organization springing, like any merely human society, from the common wants and sympathies of those who unite to form it. It is “the kingdom and the royal dwelling-place of the Lord,” in which the Church is the kingdom of the Lord. It is, therefore, a life of its own, of which Christ is the source, independent of the ordinary life of the order of nature. Christ, indeed, is the central source of life for both kingdoms (the kingdom of nature, and the kingdom of grace), but the mode of his vivifying operation is very different in the one from what it is in the other. But the Romanist view (and so the Greek and High Anzacian) assumes that the Church is a form of organic life imposed upon the Christian society in a sort of outward way. The Protestant doctrine, on the other hand, is, that the Church is the divinely inspired life of the Christian life; not, therefore, a merely human society, but an organic and faithful body, constituted by the Divine Spirit. The Romanist view makes the outward form the Church essential, and regards the internal nature as derivative; the Protestant view regards the internal life as the essence and outward and visible form as derivative, but both as divinely appointed and constituted (John x, 16; Matt. xvi, 18; xviii, 15-18).

1. The Scripture Idea.—In the N. T. the Church denotes “that one mystical body of which Christ is the sole head, and in the unity of which all saints, whether in heaven, or on earth, or elsewhere, are necessarily included.” Hence the term is made use of even in the case of Christ himself (Eph. v, 23). This Church, chosen in him before the foundation of the world (Eph. i, 4; 1 Peter i, 2), he nourisheth and cherisheth as his own flesh (Eph. v, 29, 30). The Church is called the House, the City, the Temple of God. To whom coming—ye are built up a spiritual house, a holy temple (1 Peter ii, 4, 5). This spiritual temple contains all God’s people, and is his dwelling-place (1 Cor. iii, 17; 2 Cor. vi, 16; Rev. xxi, 3; xxi, 14, 15). The Church is uniformly represented in the N. T. as the company of the saved, and they are spoken of as the body of Christ (1 Cor. xii, 27), as one body (Eph. iii, 6; iv, 4; 1 Cor. xii, 20). Of this body Christ is the Saviour (Eph. v, 20). They are to be known as the Holy Ghost (Eph. v, 1, 22; Rev. xxi, 9, 10); and his fulness (Eph. i, 23). They are termed also the light of the world (Matt. v, 14), and the salt of the earth (Matt. v, 13), as indicating to the Church to be the true source of spiritual illumination and the instrument of salvation to the world. For the work which the Church is to accomplish for Christ by teaching, disciplining, comforting, etc., it must necessarily be visible, though all its members may not always be known.

2. The Creeds and Dogmatic Definitions.—The Apostles’ Creed says, I believe “in one Holy Catholic Church, the communion of which Jesus Christ adds apostolicity. The Catechism in use in the Greek Church gives the following definition: ‘The Church is a divinely-instituted community of men, united by the orthodox faith, the law of God, the hierarchy, and the sacraments’ (Full Catechism of the Orthodox Catholic, Eastern Church, Moscow, 1880). In speaking of the unity of the Church, Platei says: ‘From this unity of the Church all those who have separated who either do not receive the divine word at all, or mix with it their own absurd opinions’ (see Bibliotheca Sacra, xxi, 827). The Roman Catholic Church (Catechism of Trent) says, ‘The Church is one, because, as the apostle says, there is ‘one fold and one Lord’ (John x, 16); but more especially because it has one invisible Ruler, Christ, and one visible, viz., the occupant for the time being of the chair of St. Peter at Rome.’ . . . The Church is holy, first, because it is dedicated to God; secondly, because the Church, consisting of good and evil mixed together, is united to Christ, the source of all holiness; thirdly, because to the Church alone has been committed the administration of the sacraments, through which, as essential instruments of divine grace, God makes us holy; so that whoever is truly sanctified must be found within the pale of the Church. The Church is catholic or universal because it is diffused throughout the world (Acts x, 47), among nations and tongues, and it comprehends all who have believed from the beginning, and all who shall believe henceforward to the end of time. The Church is termed apostolic, both because it derives its doctrines from the apostles, whereby it is enabled to convict heretics of error, and because it is governed by an apostolic ministry, which is the organ of the Spirit of God’ (Catechism, Conc. Trid. c. x, § 1). Bellarmine defines the Church thus: ‘It is a society of men united by a profession of the same Christian faith, and a participation of the same sacraments, under the government of lawful pastors, and formed especially out of the whole body of Christ in one Roman pontiff.’ The Lutheran Church defines the Church to be a congregation of saints, in which the Gospel is purely preached and the sacraments are rightly administered” (Conf. saison of Augsburg, sec. vii).

The sum of what we have prosed to believe is therefore this: that there is one mystical community of saints, composed solely of holy persons, under one Head, collected together by the Spirit; of one faith and one mind, endowed with manifold gifts, but united in love, and without sects or divisions’ (Luther’s Larger Catechism). The Reformed Confessions.—The Church is called this “Church of Christ,” and the Church of Christ is the company of all faithful men, in which the pure word of God is preached, and the sacraments be duly administered according to
CHRIST'S ORDNANCE IN ALL THOSE THINGS THAT ARE OF NECESSITY
REQUISITE TO THE SAME (art. xii).—The same definition is given by the Methodist Episcopal Church.
“CHRIST'S CHURCH is the body and visible representative of the religious fellowship of all saints, gathered out of the world; whose distinction it is to know and to worship, through the Word and by the Spirit, the true God in Christ our Saviour, and by faith to participate in all the blisses freely given to us through Christ. Those are all citizens of one polity, each Church is a community of believers or members, and recipients of the same spiritual blessings” (Helvetic Confession, 1560).—The Catholic Church is the community of all true believers, viz., those who hope in Christ alone for salvation, and are sanctified by his Spirit. It is not attached to any one place or limited to particular persons, the members of it being dispersed throughout the world (Dela, Confession, sec. 27, 29).—The Scotch Confession (Conf. Scot. art. xvi) defines the Church “to be a society of the elect of all ages and countries, both Jews and Gentiles; this is the catholic or universal Church. Those who are members of it worship God in Christ, and enjoy fellowship with him through the Spirit. A true Church is veritably known only to God, who alone knows who are his, and comprehends both the departed in the Lord and the elect upon earth.”—The Confession of Polish churches: “There are particular churches and the Church universal. The true universal Church is the community of all believers dispersed throughout the world, with whom the members of the other Church also form a community, as they are united by subjection to one Head, Christ, by the indwelling of one spirit and the profession of the same faith; and this though they be not associated in one common external polity, but, as regards external fellowship and ecclesiastical regimen, be not in communion with each other.”—A true particular Church is distinguished from a false one by the profession of the true faith, the uninterruptedit administration of the sacraments, and the exercise of discipline” (Declaratio Thomiasi).—Dr. Gerhart, speaking for the German Reformed Church of America in its later form of thought, under the influence of the so-called Mercersburg theology, says: “The Christian Church is a divine-human constitution in time and space: divine as to its ultimate ground and interior life, and human as to its form; brought into existence by the miraculous working of the Holy Ghost on the day of Pentecost, which is sent by Christ as the bearer of his indwelling presence. The Church was constituted to develop this life and salvation, according to the law of the Spirit, in its membership down to the end of time uninterruptedly. As such, it is not a collection of units, but an objective organism that has a principle, a unity, a law, organs, and resources of power and grace, which are in it and its own absolute” (Bibliotheca Sacra, 1868, p. 53, 54. See also Dr. Nevin, in Mercersburg Review, vol. ix [articles on "Hodge on Ephesians"]; vol. x ["Thoughts on the Church", two articles].

Such is the notion of the Church as presented in the great leading churches of the world, and their representative men. The subject is one beset with difficulties, because of the failure always to discriminate between the visible and invisible Church, and because every denomination, in order to render itself powerful and practical, must assume the form of a Church, and is consequently driven to define the Church as they see fit. The distinction between the visible and invisible Church was recognised by Augustine; in his controversy with the Donatists, who held that to predicate catholicity of the Church it was necessary it should have subjective purity in its members, and that, so soon as it allowed any to participate in the ministry who were not truly catholic, he maintained, “Many, by partaking of the sacrament, are with the Church, and yet are not in the Church.” Further: “Those who appear to be the Church, and to contradict Christ, therefore do not belong to that Church which is called the body of Christ” (see Neander, Christian Dogm., ii, 250). That there is one visible Church on earth entitled to be called the true Church, and the only true Church, is the question at issue between Romanists and Protestants. Certainiy, “if we judge of the various churches into which Christendom is divided by the conformity or nonconformity of the government to some standard, it is manifest that low that any one of them is the perfect representation of that ideal state at which they all aim; nor, on the other hand, can we entirely deny the name of a Christian Church to any one which professes to be built on the Gospel of Christ. They have all so much in common in this religious faith and life, and so much which distinguishes them from all other religious societies, as to justify us in considering them as one whole, and calling them, in a wide sense, The Christian Church” (Gieseler, Church History, vol. i, § 1).

8. Notes, Faith, and Attributes of the Church.—(1.) The Church is not only the people of God, but is a visible society in which the saints are set forth as visible witnesses to the reality of the Gospel, and as the human mediators of the divine grace. The Church is distinguished, and differs according to the views which are held in the definition of the Church. (a) The Roman Catechism states them to be unity, sanctity, catholicity, and apostolicity (Cat. Conc. Tr. p. 60, 61). Bellarmine assigns, in addition to these, antiquity, uninterrupted duration, amplitude, agreement in doctrine, and the common use of the name “Church” (Belliarmine’s Notes of the Church examined and refuted by eminent English Divines, Lond. 1646). The “unhappy end of the Church’s enemies” and “temporal prosperity” are rejected by Tournely, Bailly, and generally by modern Romish theologians (see Palmer, On the Church, i, 27). (b) The Church of England has no authoritative declaration beyond its xivth article—the preaching of the pure word of God and the due administration of the sacraments, etc.; but the proper administration of the sacraments by ministers regularly authorized has led to a difference of opinion in determining these notes, which has become a wide divergence, the one side adhering to a free interpretation, in common with all Protestants, and the other approaching to the stricter Roman Catholic view. The unsettled nature of the 14th article begins with the inclusion of apostolicity (Palmer), and extends to truth of doctrine, use of means (as well as sacraments) instituted by Christ, antiquity without change of doctrine, lawful succession without change of doctrine, and universality in the successor sense, i. e. the prevalence of the Church successively in all nations (Dr. Field). This tendency toward Romanizing views has culminated in what is, for convenience, termed the High-Church, or Sacramentarian party, some of whom openly advocate a union of the Church of England with the Church of Rome and the Greek Church, in order that they might secure churchly unity of the Church. “It is worthy of remark,” says Litten, “that every theory of the Church, whether it profess to be Romanist or not, which teaches that the true being thereof lies in its visible characteristic, adopts instinctively the Romish notes, and rejects the Protestant.” (c) The distinctive point of the Protestant notes—the preaching of the pure word of God and the right administration of the sacraments—are applicable not to the mystical body of Christ, but to the visible Church, or, rather, to churches or congregations of believers. “The Protestant says, in general, the church (or a part of it) is there where the Word and the sacraments are; and the holy men in whom the office of the ministry is vested, and who administer the sacraments, are a legitimate part of the visible Catholic Church” (Litten, On the Church, Phila. p. 251). “Some formularies, o. g. the Scotch Conf. (art.
18) add the exercise of discipline” (ibid.); and this it does very properly, for if purity of doctrine and life is to be maintained, it must always be a mark of a true Church that there be discipline. But inasmuch as it is impossible to discern always who are inwardly pure, and also perfectly to prevent the exercise of discipline in the visible Church, it is always liable to the intrusion of the wicked, and hence cannot claim to be identical with the mystical body of Christ in any one place, but may claim to be a part of it, so far as in its doctrine and life it conforms to the requirements of the Gospel.

"As notes" (the sacraments and the ministry of the Word) are elements of the invisible Church, but it outstands of that mystical body which in itself is an object not of sense, but of faith; by which the charge brought of old against Protestant doctrine—that its invisible Church is a fiction of the imagination—is abundantly refuted” (Litton, p. 257).

(2.) Faith.—The faith of the Church is given, in authoritative, though not in dogmatical form, in the Word of God. “The Church, as the body of believers in Christ, existed before the New Testament was written. It was to the Church that the Word was addressed. It is by the Church that the authenticity of the Word has been witnessed from the beginning. But the Word of God was a word not of God, but it outstands of that mystical body which in itself is an object not of sense, but of faith; by which the charge brought of old against Protestant doctrine—that its invisible Church is a fiction of the imagination—is abundantly refuted.” (Litton, p. 257).

The Church’s faith, as drawn from, and resting on, the Word of God, is expressed in her creeds or confessions. At successive periods, as the exigencies of the times have required, or have seemed to require, its leading minds have convened, sometimes by civil, sometimes by ecclesiastical authority, at other times both, in general councils, when, by consent, the doctrine of the Church has been thrown into the form of confessions or symbols. In these symbols, the floating, undefined, but current beliefs of all the general Church have crystallized, and thus have been transmitted to us. The first is the Apostles’ Creed. This is universally accepted in the Church, and is of highest authority. Though the most ancient of all the formularies of belief, there is no evidence that the apostles composed it as it now reads; the best explanation is that it grew into shape from the common and general confession of faith in the primitive Church until it is very early assumed the form it now has. It is the patrimony of the whole Christian Church. Next is the Niceno-Constantinopolitan symbol, commonly called the Nicene Creed, which was the work of two ecumenical councils in 325 and 881. This has always been of great weight, as chiefly settling the doctrine of the Trinity, and expresses the general view of the Church to this day. The Chalcedon symbol followed in 451; and then the Athanasian Creed, called after Athanasius, though it is doubtful if he was the author. There were no other confessions until the Reformation, since which we have the Lutheran symbols (Q); the Reformed (18); the papal (Canones et Decreta Concilii Tridentini, 1645); Profess fideli Tridentini et Revendi (1645, etc.); confessions of the Greek Church; Arminian and Socinian confessions; but none of these are of universal authority, as are the original four of the early Church.

(3.) The attributes of the Church are unity, holiness, catholicity, and apostolicity. These also are explained by describing the attributes of the Church, as she is mainained. Protestants generally find these attributes only in the invisible Church. There is evidently a unity of faith (Eph. iv. 13), a unity of love (1 Cor. xiii. 13), one spirit (Eph. iv. 4), one hope (Eph. 1. 12), one body (Rom. xii. 5), one head (Eph. iv. 15), and one object of worship (Eph. iv. 6). That this unity is under one common earthly head is held by Roman Catholics, but denied by Protestants. By these a spiritual unity is affirmed to exist, even where there is not uniformity of Church polity, nor entire agreement of doctrine, nor, indeed, any internal bond save that of the "communion of saints." Holiness is described to be the Church, as expressing the spiritual nature of its members; they are addressed in the N. T. as "saints," "sanctified," by reason of their union with Christ as their living head, and the possession of the Holy Ghost, the Sanctifier (1 Cor. i. 2; vi. 19). Because this holiness is a personal work in the hearts of believers as such, it can be predicated strictly only of the Church in the personal sense, the existence of that mystical body which in itself is an object not of sense, but of faith; by which the charge brought of old against Protestant doctrine—that its invisible Church is a fiction of the imagination—is abundantly refuted.” (Litton, p. 257).

The apostolicity of the Church is not insisted upon by Protestants; when used, however, by them, it means the possession by the Church of true apostolic doctrine, spirit, and life; while by Roman Catholics it means having a ministry regularly and visibly succeeding to the apostles.

The attributes (unity, holiness, catholicity, perpetuity) are unquestionably essential to the true Church, and are anathema to her in the N. T. But neither the N. T. nor the Apostles’ Creed define the Church as a visible organization, but as the "communion of saints." This Church has always existed; but no visible organization or society on earth has ever been endowed with the attributes above named. See this argument well stated in the Princeton Review (Oct. 1865); compare Burrow, Sermon on the Unity of the Church, III. 311 (N.Y. 1845).

III. History of the Doctrine of the Church.—The apostles and their immediate successors were too much engrossed with the work of spreading the Gospel to pause to prescribe the nature of an institution which was sure to spring up spontaneously. That was the case required. The apostles themselves were too earnestly employed in fulfilling the command of Christ to disciple all nations, and those directly following them partook too largely of their spirit, and understood too fully their mind, to be turned aside by the necessity of explaining what they knew to be a fact. Hence "no exact definitions of the Church are found previous to the time of Cyprian" (Hagenbach, History of Doctrines, i. 198). The definitions of the latter (Cyprian) make an exact history of this doctrine. The first difficulty arose as to the unity of the Church, in confounding the inward with the outward; hence Tertullian shows the first ground of this perversion; it was matured by Cyprian (Neander, Christian Dogmas, vol. i. p. 220). "Thus the Jewish stand-point (a theocracy), which at first had been overcome, made its way into the Church in another form” (ibid.). Trench says the Church alms contains all the riches of truth. Clement describes the Church as a mother and virgin, as the body of the Lord; Origen, though usually mild towards heretics, knows of no salvation out of the Church; Tertullian claimed that whoever separated from the connection with the outward communion, which was of apostolic origin, and had at its head the sedes apostolorum, in so doing renounced Christ, though after joining the Montanists be essentially changed his
opinion. It is of no avail, says Cyprian, what a man teaches; it is enough that he teaches out of the Church; with opinion of Novatian, it is the church, not the pope. The roots of the extreme church doctrine are to be traced thus early. A reaction, however, soon took place, growing out of a more scientific discernment of the spiritual idea of the Church. Clement calls the Church a community of men led by the divine Logos, an invincible city, and as a fortress, a holy house, where the will of God is done as it is in heaven. Others combated the outward unity of the Church as unscriptural. Montanism insisted that the unity is inward; it regarded the internal fact of possessing the Spirit as the fundamental thing—not the ordinary influence of the Spirit in sanctification, but his extraordinary presence in his body as the eternal source of authority and unity in the Church. A further reaction of separatism against the Catholic idea took place in Novatian and his followers. They insisted that the Catholic Church is essentially holy in all its members, and hence must exclude from its communion all unworthy members, and never readmit them, otherwise it would lose its catholicity. They consequently withdrew, and claimed to be the Catholic Church. "The false idealism of the Gnostics, and the subjective, heretical, and schematical tendencies of separate sects, especially of the Montanists, and the followers of Novatian, and the Donatists (thePxouwai), formed a striking contrast with this false external unity of the Catholic Church" (see Hagenbach and Neander).

"Two causes contributed (in the second period of the Church history) to determine about the Church: 1. The external triumph of the Church itself in its victory over Paganism, and its rising power under the protection of the state. 2. The victory of Augustinism over the doctrines of the Pelagians, Manichaeans, and Donatists, which in different ways threatened to destroy ecclesiastical unity. In opposition to the Donatists, Augustine asserted that the Church consists of the sum total of all who are baptized, and that the (ideal) sanctity of the Church is not impaired by the impure elements externally connected with it. The bishops of Rome impressed upon this catholicism the stamp of the papal hierarchy by claiming for themselves the primacy of Peter. But, whatever variant opinions were held respecting the seat and nature of the true Church, the proposition that there is no salvation out of it, the admission to its sacraments, and the consequences" (Hagenbach, vol. i, p. 592). It is worthy of note that at this period Jovinian taught that "the Church is founded on faith, hope, and love. In this Church there is nothing impure; every one is sought of God; no one can break into it by violence or steal into it by artifice." "As Jovinian taught the Pauline doctrine of faith, so did he Pauline idea of the invisible Church, while Augustine obstructed his similar fundamental idea by a mixture of the Catholic idea of the Church." "Here again we have a sign of the Protestant element in Augustine" (his comment on the "Vision art Postix") "that all religious consciences need that condition to be traced up to Christ, and that with him the community originates which is called the Church" (Neander, Christian Dogmas, vol. ii, p. 387, 398).

Until the 14th century the Roman hierarchy had comparatively no opposition in occupying out supreme

time a fresh spirit began to show itself. Even on the Catholic stand-point a difference was stirred respecting the relation of the changeable and changeless in the development of the Church; on the position of the papacy in respect of the Church; whether the pope was to be regarded as a sovereign head, whether the general councils or the pope stood highest. The University of Paris, with chancellor Gerson at its head, led on this controversy. See Gerson. "The mystical idea of the Church and the notion of a universal priesthood, which was intimately connected with it, was propounded, with more or less accuracy of definition, by Hieronymus, and the fathers of the Reformers of the Reformation, Wycliffe, Matthias of Janow, Huss, John of Wessel, Wessel, and Savonarola" (Hagenbach). These tendencies were fully developed in the Reformation and in its results. The Western religious world became divided in the statement of the Church was a city of God, and in the doctrine of the Protestant, regarding the doctrine of justification by faith as fundamental, said the Church is approached through it; the Romanist, still adhering to the Church as the fountain of spiritual life, affirmed that justification is obtained through the Church. Protestants assert that the Church consists in the invisible fellowship of all those who believe and whose union with other believers, of which ideal union is but imperfectly represented by the visible Church, in which the true Gospel is taught and the sacraments are rightly administered; the Roman Catholics, that the Church is a visible society of all baptized persons who adopt a certain external creed, have the same sacraments, and acknowledge the pope as their common head.

The recent controversies concerning the idea and nature of the Church all revolve about the one point, viz., whether the Church of which Christ is the "Head" is, or is not, a visible corporation here on earth, entitled to the promises, privileges, and authority which the Scriptures assign to it. Catholics generally deny; the Romanists, the High-Anglicans, and a few writers in other branches of the Protestant Church, affirm. The so-called New-Lutheran divines of Germany have developed a theory of the Church in which the Protestant idea gives way to the hierarchical; in which the sacraments are not merely notes of the true Church, but the real guards of its continued life. The profound and mysterious synthesis of the divine and human is found in faith, according to the old Protestant system; according to the new, it is found in the sacraments (compare Schwartz, Zur Geschichte d. neuester Theologie, bk. iii, ch. iii). Rothedevelops, with his usual vigor, a theory of the Church akin to that of Arnold, viz., that the Church is indispensable to the moral education of humanity; but that, as humanity improves, the necessity for the Church diminishes; and finally, the state and the spiritual (a real theocracy), and the Church will become blended out into one.

IV. Constitution of the Church.—Christ did not so much create a Church during his sojourn on earth as implant principles which would be subsequently developed into a Church. Whilst he was yet with his disciples, they needed no other bond to hold them together than his person. The founder of the new manifestation of the kingdom of God seemed not to design to collect about him numerous adherents, but to implant deeply into the minds of the few the animating spirit of this kingdom, which through their lives should work out into a complete and effective organization. He chose as his agents whom he called for this work Jews; he associated with and instructed them after the customs of Judaism. He distinctly told them, however, that they, in their persons, faith, life, and teaching, were to constitute the beginning and the agency of a new order of things. They were commanded to go forth after his death and disciple all nations, and thus a new era in the name of the Father, the Son, and the Holy Ghost, and thus bring all people into the kingdom of God. It is thus clear that the religion of Christ was designed by him to supersede all others, not only by its spirit and essence, but also in the particular method or form of its manifestation. He built his Church by constituting apostles, who should authoritatively command and teach, should open and shut the kingdom of heaven, bind and loose on earth, and so render visible and powerful his Word among men.
Before entering upon their mission, they were to tarry in Jerusalem until endowed with power from on high (Luke), which power they were assured would come not many days after the ascension of their Lord. The time, however, while the apostles and disciples, a hundred and twenty in number, were assembled in or near the Temple for the morning devotions of the festal day, and were waiting in prayer for the fulfillment of the promise, the exalted Saviour poured down from his heavenly throne the fulness of the Holy Ghost upon them, and founded his Church upon earth" (Schaff, Church History, vol. i, p. 59). The day of Pentecost may be regarded as the birthday of the Christian Church. Then it was formed; thence its gradual development proceeded. There is a diversity of opinion as to the internal polity it assumed, as might be expected, in the case of a body of men so constituted, as the apostles would have "sufficient guidance" as to the manner in which it was to be organized. This guidance does not imply that its particular form must have been given to them by Christ, but only such direction as would lead them to pursue the wisest methods. Consequently they began by preaching; and, as converts were made, by baptizing them, and then taking them into a closer fellowship for the celebration of the Lord's Supper, spiritual instruction, and worship (Acts iii, 42, etc.). As they were Jews, it was likely they would adopt the methods of worship, government, etc., to which they were accustomed. Archdeacon Whately says (Kingdom of Obedience, p. 89): "It appears highly probable, I might say morally certain, that the synagogues was the whole or chief part of it — to embrace the Gospel. The apostles did not, then, so much form a Christian Church (or congregation, ecclesia) as make an existing congregation Christian by introducing the Christian sacraments and worship, and establishing whatever regulations were necessary for the newly-adopted faith, leaving the machinery (if I may so speak) of government unchanged; the rulers of synagogues, elders, and other officers, whether spiritual or ecclesiastical, or both, being already provided in the existing institutions." Village, town, and city of Christ's day, as well as minister who engaged in the ministry. Littot; and many others agree in this opinion, that the synagogues were the pattern which the apostles proposed to themselves, though it is by no means certain that they adopted any model.

1. All that can be done in the determination of the polity of the apostolic Church is to trace the practice of the apostles as recorded in their acts and writings. This polity is not presented as legislative enactments, but simply as facts, showing how the apostles acted in given cases. In the first account we find the Church composed of the apostles and other disciples, and then of the Church of those that believed." Hence it appears that the Church was a first composed entirely of members standing on an equality with one another, and that the apostles alone held a higher rank, and exercised a directing influence over the whole, which arose from the original position in which Christ had placed them in relation to God and man. The apostles as a body were to be in perfect order (1 Cor. xiv, 40); 8. All unto edification (1 Cor. xiv, 26); 4. All unto the glory of God (1 Cor. x, 31). The sphere of its government was strictly spiritual. The apostles honored the civil authority as a divine institution, and enjoined obedience in the days of Claudius to the emperor Nero, as did also the apostles to Trajan; and tendered obedience to Herod, and commanded that "the things which belong to Caesar should be rendered to Caesar." But in the spiritual calling the rule was "to obey God rather than man," and for this principle they were ready to die.

Since the apostle times the Constitution of the Christian Church has undergone various modifications. The first of these changes is the distinction be
tween bishop and elder. It is maintained by extreme advocates of Episcopacy that St. Paul, in empowering Timothy at Corinth, and Titus in Crete, in the capacity of presbyters, to ordain elders in every city, and to exercise jurisdiction over officers of that class, as well as those who held the office of deacon, appointed them thus to be permanent, and so created the office known in after times as the local bishop. The moderate Episcopalians and the presbyters hold that the mission of Titus and Timothy was peculiar, contemplating a special work, and that the mission ceased with its accomplishment. On the whole, on this case, as well as on that of St. James at Jerusalem, and the angels of the apocalyptic churches, Litton says, "Respecting the two great orders of the Church in the early times, we have very much in the dark. No order of ministers other than these three—apostles, presbyters, and deacons—are mentioned in the New Testament as forming part of the then existing polity of the Church; for every attempt to establish a distinction between the presbyter and the bishop of Scripture will prove fruitless, so abundant is the evidence which proves they were not but different appellations of one and the same office (p. 412)."

As to the rise of episcopacy, it is said "to these successors of the apostolic delegates" (such as Timothy) "came to be appropriated the title of bishop, which was originally applied to presbyters. At the most, etc." (p. 412). By casting them off as "ecclesiastics," forward, bishops, presbyters, and deacons are the officers of the Church wherever the Church existed. Ignatius's epistles (in their unadulterated form), and the other records which are preserved to us, are on this point decisive. . . . They (the bishops) retained in their own hands authority over presbyters and the functions of ordination, but with respect to each other they were equals" (Smith's "Dict. of Bible, art. Church").

Dr. Hitchcock (Am. Presb. and Theol. Rev. vol. v, no. 17) affirms, "Thus throughout do we find in Clement the original New Testament polity (identity of presbyters and bishops) as yet unchanged" (p. 187).

"In short, the Ignatian Episcopacy, instead of having the appearance of a settled polity, handed down from the apostles, has the appearance of being a new and growing institution, unlike what went before, as well as what was coming after it" (ibid. p. 146). "The wavering terminology of Irenæus is indicative not of apostolic polity as such and as it had been during the days of apostolic authority, but growth and development, and that growth not yet completed" (ibid. 147). "No hesitation in Tertullian in accepting the episcopal regimen. Evidently this had become the settled polity. The maturity of the system is indicated by entire steadiness in the use of terms" (ibid. 146). "In Cyprian we find a bishop being the only authority in the system fully matured. Now these are tokens of growth, and inconsistent with the idea of apostolic tradition" (ibid. 153). There is but little doubt the bishops at first succeeded to office by seniority, and afterwards, as the difficulties of the office increased, A.D. 200, they became elective (Hillery). As the Church multiplied and extended its boundaries and borders, in later times, numerous became relatively more important and influential, and their bishops more powerful; hence we find the episcopacy undergoing marked changes: 1. The bishoprics at Jerusalem, Rome, Antioch, Alexandria, Ephesus, and Corinth are termed by pre-eminence sedes apostolorum, without prejudice to the concession of superior authority; 2. Consequent upon provincial synods the metropolitan dignity arose; also, 3. The patriarchal; and 4, finally, the papacy. Cyprian allowed that "pre-ecessory be should be given to Peter, 'that the Church of Christ may be shown to be one.' The same proposition: on monarchical unity, which created custom and the episcopate a centre, for each congregation, then for each diocese, pressed on towards a visible centre for the whole Church. Primacy and episcopacy grew together" (Schaff, "History of the Christian Church," vol. i, p. 427). The high antiquity of the Roman Church; the missionary labors at Rome of Peter and Paul, the two leading apostles; the political pre-eminence of the metropolis of the world; the executive wisdom and orthodox instinct of the Roman Church, and other secondary causes, favored the ascendency of the Roman see (ibid.). The early fathers, as Ignatius, Irenæus, Tertullian, Hippolytus, Cyprian, etc., concede pre-cession to the Church at Rome, but only in honor, not in jurisdiction. After the one version of Constantine, and the removal of the Roman capital to Byzantium (after wards called Constantinople), the see of the new capital boldly disputed the supremacy with the see of Rome, from which time, as new agitations arose in the Church, and the empire gradually fell to decay, the two great Christian sects, the Eastern and Western or Roman Catholic took place, and became the settled forms and sources of ecclesiastical dominion.

Additional and inferior orders of the ministry rapidly multiplied in the Church. These were, archdeacons, deacons, subdeacons, acolytes, exorcists, lecto-rs or readers, ostiarii or door-keepers, psalmists or singers, copists or scribes, catechists, defenders or synods, eunuch or stewards, besides others (Bingham's "Antiquities of Christ, Ch. vol. i, p. 126). There were four several ways of designating persons to the ministry in the apostolic and primitive Church: 1. By election. 2. By casting out and them telling them. 3. By ordination. 4. By ordination without ordination. Ordination was first by the laying on of the hands of the apostles or elders, and afterwards of a bishop or bishop (see ibid.). As to the powers of the clergy in the government of the Church, two principal, distinct, and opposite theories obtain. The Roman Catholic is, that "the government of the Church is a hierarchy, or the relation of the clerical body to the Christian people is that of a secular magistracy to its subjects, and Christian ministers are mediators between God and man—that is, are priests in the proper sense of the word" (Litton. p. 866). The "hierarchy of Rome is the natural and inevitable consequence of the doctrine that the clergy are κατ' εξουσίαν, the Church" (ibid. 927). Bellarmine sums up the Romish doctrine thus: "It has always been believed in the Catholic Church that the bishops in their diocese, and the Roman pontiff in the whole Church, are real ecclesiastical princes, and possess authority, and without the consent of the people or the advice of presbyters, to enact laws binding upon the conscience, to judge in causes ecclesiastical like other judges, and, if need be, to inflict punishment" (Bell. "De Rom. Pont. b, iv, c. 15). The Protestant theory is that "the church is the body of Christ, as such, constitute the Church, and that the whole Church, thus composed of believers differing in gifts according to the operation of the Spirit, is the fountain of authority in the administration of government. "In short, no principle of ecclesiastical polity is more clearly taught by Scripture than that the sovereignty of a church resides in the people, and not in the pastors from their pastors. This, however, being admitted, the converse also remains true, that the sovereignty of a church is not in the pastors exclusively of the people" (Litton, p. 399). Dr. Schaff says, in reference to the first council of Jerusalem, "though not a binding precedent, (it) is a significant example of the addition of the synodical form of church government, in which all classes of the Christian community are represented in the management of public affairs and in settling controversies respecting faith and practice" (Ch. Hist. vol. i, p. 186). By many Protestants this view of the council is questioned, the participation of laymen, the participation in church government, from this and other apostolic examples, denied; so that, to this day, the relative powers of ministry and laity, in the administration of ecclesiastical government, remain undefined among some of the great Protestant churches.
Member of the Church.—"The church members are those who compose or belong to the visible church. As to the real church, the true members of it are such as come out of the world, 2 Cor. vi, 17; who are born again, 1 Peter i, 23; or made anew creatures, Tit. iii, 5; who shall wrought their works by love to God and all mankind. Gal. v, 6; James ii, 14, 26; who walk in all the ordinances of the Lord blameless. None but such are members of the true church; nor should any be admitted into any particular church without evidence of their earnestly seeking this state of salvation. And it is alleged, that the communion in which these members enjoy one with another. The ends of church fellowship are, the maintenance and exhibition of a system of sound doctrine; the support of the ordinances of evangelical worship in their purity and simplicity; the impartial exercise of church government and discipline; the promotion of holiness in all manner of conversation. The more particular duties are, earnest study to keep peace and unity; bearing of one another's burdens, Gal. vi, 1, 2; earnest endeavors to prevent each other's stumbles, 1 Cor. x, 28-33; Heb. x, 24-27; Rom. xiv, 19; Col. iii, 18; steady continuance in the faith and worship of the Gospel, Acts ii, 42; praying and confessing together, Col. ii, 22; 1 Cor. xiv, 23; Eph. v, 18. The advantages are, peculiar incitement to holiness; the right to some promises applicable to none but those who attend the ordinances of God, and hold communion with the saints, Psalm xxxi, 18; xxviii, 15, 16; xxxvi, 8; Jer. xxxi, 12; the being nearer than others to the source of authority by the knowledge of the word, Hab. ii, 3; and by this, that they may restore each other if they fall, Gal. vi, 1; and the more effectually promote the cause of true religion" (Watson, s. v.).

Literature.—Besides the works already cited, see Hooker, Ecclesiastical Policy, i, 946; ii, 226, 244, 442 (On God, the Scripture, the Church, ch. i); Pearson, Exposition of the Creed, art. ix; Cranmer, Works, Burnet, On the 39 Articles, art. xix; Browne, On the 39 Articles, art. xix; Palmer, Treatise of the Church (Anglican: N. Y., 1853, 2 vols. 8vo); Littón, The Church of Christ (Protestant view: London, 1851, 8vo; Philadelphia, revised ed. 1868, 8vo); Stone, The Church Universal (Protestant: N. Y., 1846; new ed. 1867); Watson, Theological Institutes, pt. iv, ch. i; Schaff, Apostolical Church, ch. ii; Rothe, Die Anfänge & christlichen Kirche (vol. i, 1837). In the Romanist view, Perrone, Professiones Theologica, 1, 161 sq.; Mößler, Symbolica, p. 380 (N. Y., 1844, 8vo). Against the Romish national church, see Del振动, Delineations of Romanism, bk. iii, ch. i; Jackson and Sanderson, On the Church, edited by Goole (Philadelphia, 1844, 18mo); Whately, Kingdom of Christ (N. Y., 1848, 12mo). On the doctrine of the Church in the creeds of the churches, Guericke, Allgemeine christliche Symbolik (8th ed. L. pag. 1861, § 71; partly translated from 1st ed. in Evangelische Revue, 1858, art. ii); Ehrard, Christliche Dogmatik, ii, § 490-490; Winer, Compar. Darstellung, xix. CHURCH, ABYSSINIAN. See ABYSSINIAN.

CHURCH AND STATE. 1. Pagan Nations.—In the pagan states, the religion was the state, and the whole, part of the political, and religion an affair of the state. In general, the priestly dignity was vested in the chief of the religious affairs. In Athens and other Greek republics the popular assemblies had the final decision on religious affairs. In Rome the priestly dignity was originally united with the office of the kings; after the establishment of the republic, the Senate had supreme control of religious affairs; on the establishment of the empire, the emperor became Pontifex Maximus.

2. Among the Jews.—Among the Jews, the whole government of the state was based upon the idea that Jehovah was the God of all the people, and that all national institutions were destined to promote the worship of the King of Israel, and to make the people obedient to his precepts as they were laid down in the Old Testament. God, the king of Israel, ruled the people through the organs which he appointed—through Moses, Aaron and his descendants, Judges, and the prophets. The demand of the Jews for a king was therefore censured by Samuel as a weakening of the perfect theocracy; but even the king always remained in the Jewish law the earthly representative of Jehovah, and he had no right to give new laws, but simply to execute and enforce the laws given directly by Jehovah. See THEOCRACY.

3. Teaching of Christ and the Apostles.—The teaching of Christ on the relation of the Church founded by him to the state was very plain. He distinctly recognised the absolute law-giving power of the state governments in all secular affairs, and enjoined upon his followers to obey the state laws in everything that was not opposed to the practice of their religion. He replied to the Pharisees, "Render unto Caesar the things which are Caesar's, and unto God the things that are God's" (Matt. xxii, 21), distinctly pronounces the separation between the Church and the State. He declares the powers of the civil rulers to be of divine origin, and that they are invested with authority by God. "Thou couldst have no power at all against me except it were given thee from above." The apostles enjoined upon Christians obedience to the existing state governments; thus Paul, in the Epistle to the Romans (xiii, 1, 2), "Let every soul be subject to the higher powers, for there is no power but of God's appointment; for the powers that be are ordained by God. Whosoever, therefore, resisteth the power, resisteth the ordinance of God; and they that resist shall receive unto themselves damnation." Similar precepts are given in 1 Tim. ii, 1, 2; 2 Titus iii, 1; 1 Pet. ii, 13. Only in case of demands directly contrary to the Christian religion, obedience was to be refused. Thus Peter and the other apostles, when commanded not to teach in the name of Jesus, answered, "We ought to obey God rather than men" (Acts v, 29).

4. Christianity in the Time of Constantine.—In compliance with these teachings of Christ and the apostles, the first Christians conformed themselves to all secular laws; and only after the edict of Julian, which was contrary to Christian law, as such as the open renunciation of their faith, they refused obedience, but submitted to the penalties imposed upon them. The persecutions which the Christians had to suffer during the first three centuries arose not from any active opposition on their part to the Roman laws, but chiefly from the application of the ancient laws, which forbade any Roman citizen to worship divinities not recognised by the state, and any conquered nation to propagate its religion in other parts of the empire. Hence the more the outward distinction of the Christians from the Jews became apparent, the more they exposed themselves to the application of these laws. Most of the persecutions were, however, of short duration, and some of the emperors even showed themselves favorable to the Christians. As civil and military officers frequently brought the occupants into situations in which they had to pay some homage, direct or indirect, to the pagan gods, the religion of the Christians, by a sort of necessity, as a danger to perform the duties of such offices. The fact, however, that Christian senators and Christian soldiers are mentioned in the early history of the Church, shows that the holding of such offices was, in itself, not deemed incompatible with the religious duties of a Christian.

5. From Constantine to Charlemagne.—A new era in the history of the relation between Church and State.
begins with the reign of Constantine the Great. In the years 312 and 313 full freedom was guaranteed to the Christian Church throughout the empire. Soon imperial edicts granted many privileges to the clergy and their dependents. They received the same immunities which were possessed by the pagan priests, and soon were preferred to the latter; the particular churches obtained the right of receiving legacies; the bishops received some kind of independent jurisdiction. The emperor, in conferring these rights, acted from the old Roman standpoint of the state in matters religious as well as secular. Thus the first exhibition of a Christian state churchism was a direct emanation from pagan views transferred to the Christian Church. The emperor retained the insignia and the name of Pontifex Maximus. Gratian was the first who laid aside the insignia, but the name was retained much longer. On the coin Constantine placed the cross, as a symbol of Christianity, by the side of the sun-god, as the representative of the old religion. The emperors thus from the start began to view themselves more as patrons than as members of the Christian Church, and the clergy were, as it were, up to a certain point, well pleased with the privileges which were conferred upon them, and thought little of disputing the influence which the emperor gradually claimed to exercise upon Church affairs. In the East, this subjection of the ecclesiastical authorities to the state governments went much further than in the West, and has remained a characteristic feature of the Church. The emperors convoked the synods, and claimed the right of sanctioning their resolutions. Even doctrinal formulas were sometimes drawn up by the emperors, and only promulgated by the bishops. The banishment of bishops for not conforming in the resolutions passed by synods convoked by the emperors, and frequently acting under the direct influence of the emperors, began even during the reign of Constantine.

In the western countries of the empire, the prominent position which was early awarded the bishop of Rome, and subsequently the local separation from the seat of the empire, weakened the power of the emperor in Church affairs. Some of the most prominent bishops and priests (Ambrose, Jerome, etc.) rebelled in energetic language the right claimed by the emperors to decide Church questions. Several of the Eastern emperors thought it, moreover, in their interest to gain the friendship of the Roman bishops by making to them grants of lands and privileges. The artful way in which the emperors used the aspirations of the latter to a supreme power in the Church. The Roman bishop Gelasius, in 494, claimed a superiority of the ecclesiastical over the secular power, and a synod convoked by the Roman bishop Symmachus, in 502, condemned the encroachment of King Odoacer upon the rights of the Church. When the German tribes, and in particular the Franks, became Christians, their kings gave to the clergy great privileges, and a great influence upon the administration of national affairs, but in return claimed the supreme power in ecclesiastical as well as secular affairs. Meeting with this, the Frankish bishops did not take part in the elections of the king, and frequently acting under the direct influence of the emperors, began even during the reign of Constantine.

In the western countries of the empire, the prominent position which was early awarded the bishop of Rome, and subsequently the local separation from the seat of the empire, weakened the power of the emperor in Church affairs. Some of the most prominent bishops and priests (Ambrose, Jerome, etc.) rebelled in energetic language the right claimed by the emperors to decide Church questions. Several of the Eastern emperors thought it, moreover, in their interest to gain the friendship of the Roman bishops by making to them grants of lands and privileges. The artful way in which the emperors used the aspirations of the latter to a supreme power in the Church. The Roman bishop Gelasius, in 494, claimed a superiority of the ecclesiastical over the secular power, and a synod convoked by the Roman bishop Symmachus, in 502, condemned the encroachment of King Odoacer upon the rights of the Church. When the German tribes, and in particular the Franks, became Christians, their kings gave to the clergy great privileges, and a great influence upon the administration of national affairs, but in return claimed the supreme power in ecclesiastical as well as secular affairs. Meeting with this, the Frankish bishops did not take part in the elections of the king, and frequently acting under the direct influence of the emperors, began even during the reign of Constantine.
The emperors and kings, aided in general by the laity and a large number of the clergy, opposed the papal claims, in some of at least the ambassadors which were hurled against them. Even men like Bernard of Clairvaux expressed their dissent from these ultrapapal theories. The last pope who endeavored to enforce these claims was Boniface VIII, who, in his notorious bull, *Unam Sanctam*, maintained it to be necessary for salvation to believe that the Roman popes had power over everything on earth. Boniface VIII, in order to find this extraordinary assumption of power with imprisonment and ill-treatment which caused his death. The transfer of the papal see to Avignon, and subsequently the Great Schism, were fatal blows to the practical execution of the medieval theory of Church and State. Although the theory itself was never formally renounced, and the notorious bull, *Unam Sanctam*, of Boniface VIII, which, as far as France was concerned, had been revoked by one of the Avignon popes (Clement V), was formally restored by Leo X in 1516. But the popes had not sufficient power to prevent the emperors and kings from passing laws by which they and others were made subjects of the Holy See of Rome of spiritual and secular power. They all insisted on keeping the two powers apart, and especially in their earlier writings favored the self-government of the Church. But these views were not consistently carried through. As all the bishops opposed the reform of the Church, the princes and the municipal governments were invited by the reformers to see to the execution of the Church reform, and to the reconstruction of the Reformed churches. No provision being made for a common bond of union between the Reformed churches in different countries, the power of the state government in each particular country over the Church grew almost without opposition. To this must be added that most of the reformers adhered to the idea of a Christian state whose authorities were invested with the right to punish those who denial the fundamental doctrines of Christianity. See *Servetus*. Thus State-Churchism was established in all the Lutheran and Reformed churches. It was more rapidly, as the churches had never so powerful a representative as the Church of Rome had had during the Middle Ages. The constant efforts of the Roman Catholic states to root out Protestantism by force naturally led to retaliatory measures on the part of Protestant princes, and thus the dangerous principle came gradually to be developed, *Cujus regio ejus religio* (the religion of a country must conform to that of the prince). The application of this principle led, on the one hand, to many and bloody wars, but, on the other, it induced the Roman Catholic princes to claim, like the Protestant princes, a greater influence over religious affairs than had been the case during the Middle Ages. The success of the Reformation had shown the weakness of the popes, and their opposition to the radical changes in the relation of the Church of Rome to the states was more nominal than efficient. The last coronation of an emperor of the West by popes was that of 1530, to which the popes protested in 1648 against the peace of Westphalia, in 1701 against the creation of a kingdom of Prussia, and in 1815 against the treaty of Vienna, but all these and similar acts had no influence whatever.

The growth of rationalism and infidelity in the 17th and 18th centuries accustomed princes and statesmen to regard the Church of Rome as an organ of the state, and just as absolutely subject to the government of every territory as the civil administration. This is the era of the territorial system, the period of the greatest delusion of the Christian churches. Nearly all the Church assemblies, viz., the convocations in England; the national synods and general assemblies of the Protestant churches in France, Germany, and other countries; the national, provincial, and diocesan symbols of the Church of Rome, were forbidden, or fell into general disuse. In the Church of Rome, during this period, the claims of the pope were not only denied by the state governments, but strenuous efforts were made in France, Germany, Italy, and other countries to reduce the papal prerogatives in matters purely ecclesiastical, and to increase that of the bishops and of the national churches. These efforts, however, were less successful than those of the state governments.

The French Revolution of 1789 shook the structure of society of Europe, political as well as ecclesiastical, to its very foundations. The principles of the Revolution did not prevail, but the governments of Europe saw the necessity of reconstructing the administration of the states. Several important changes date from the Congress of Vienna in 1815. The long alliances of Protestant and Roman Catholic governments in the war against France, and the territorial churches erected by the Congress of Vienna, led to an interchange of toleration, as far as the Lutheran, Reformed, and Roman Catholic churches were concerned. Some states recognized all three as state churches, entitled to support by the state governments; and in most of the countries of Europe others were favored by special laws. Many ministers of the three churches equality of political rights. The relation of the Roman Catholic Church, in both Roman Catholic and Protestant countries, to the pope was regulated by concordats and conventions [see *Concordats*], which stipulated what rights the state governments should allow the pope to exercise upon the Church of a particular country, and what influence the state governments (even the Protestant) should have upon the election of bishops, the appointment of other ecclesiastical dignitaries, the direction of Roman Catholic schools, the management of Church property, and other denominational affairs. In the Protestant churches, a conscientious effort of the unworthy servitude into which the Church had been forced in the 17th and 18th centuries, and the demand grew stronger and stronger for the restoration of at least a part of the self-government of the churches, by means of convocations, synods, assemblies, and councils. A new impulse was given to the political and revolutionary movements of the year 1848, and by the agitation for political reforms which has since been going on in nearly all the European states. The regular convocation of elective Church assemblies, and the transfer to them of a greater or lesser part of the government of the Church, has, since 1848, been the general tendency in all the Protestant churches of Europe.

As regards the Church of Rome, public opinion more and more declared itself against the concordats, and in favor of a regulation of the Roman Catholic affairs of every particular country by special laws, due regard being had to the recognition by the laws of the Roman Catholic synods and general assemblies of the Middle Ages. While the Lutheran and Reformed churches assumed almost from their very beginning the character of state churches, a number of minor sects sprang up in the 16th and the following centuries, which, meeting, on the hand of the state governments, with nothing but persecution, lost a large part of their members not only for themselves, but freedom of religious belief in general. Especially was this the case in England, where the Nonconformists gained greater strength and influence than any dissenters on the Continent of Europe, and became true pioneers of the principle of a complete separation of church and state. Many of the dissenters went to the New World, and there their principles found a genial soil. In some of the colonies Church and State
were united, more or less closely, until after the Rev-
olution. At the declaration of independence, the United
States established the absolute separation of Church
and State, and took unequivocal forms of be-
lief, as fundamental institutions. The United States
have always remained true to this principle, and in
the several states of the Union it is now practically
carried out. The prosperous growth of the free Amer-
ican churches, and their influence upon society, has
gained great effect upon opinion in the Old World. The
expansion has been larger in proportion to the num-
ber of the friends of free churches in Europe. The
number of dissenting churches which claim absolute
independence of the state is everywhere on the in-
crease, and with them sympathize a large political
party of Radicals, which make entire separation between
Church and State a part of their political platform.
In 1848, the principle of separation of Church and
State was formally acknowledged in the new constitu-
tions of France, Austria, Prussia, and other states.
This triumph of the American principle was of only
short duration; but none of the European countries
have since ceased to have a large political party which
always maintains an unflagging interest on Church
affairs to that of the United States, and at carrying through the princi-
ple of entire separation between Church and State. It
is a very remarkable fact that even men like Dr. Pusey
have of late shown themselves favorable to the separa-
tion of Church and State, in order to put an end to the
spirit of persecution. One of the most prom-
inent Protestant statesmen and writers of France, Comte
de Gasparin, speaks on the subject as follows: 'Let no one
be surprised at the extreme importance I attach
to the separation of Church and State. For two cen-
turies past the Church and society have been at war.
In abolishing the unjust and worn-out pretences of both
Church and State, their separation would give both to
the Church and to society the peace they require.
It would seem nowadays that though the citizen and the
Christian were two different persons, having different
rights and different duties. The Christian is taught
to curse liberty as the poisonous fruit of philosophy
and revolution; the citizen is taught to look upon
the Church as the natural enemy of modern institutions.
Thus arises a sullen enmity, a deep-rooted anxiously
in the minds of the people, and, to speak, two nations
within the same society. Yet nothing would be more
erroneous than this distinction. Christianity is so
far from being the enemy of liberty, that these
institutions have never existed but in Christian coun-
tries; the nations which obey the law of Brahma, of
Buddha, and of Mohammed, know of no other form
of government than despotism. Liberty is the fruit
of the Gospel; it proceeds from the only religion which
instructs the individual with the care and the salvation
of his own soul, materialism kills it, faith makes it,
and, in return, by an intimate and mysterious con-
nection, despotism kills faith, liberty nourishes it.
What is this opposition which divides the Church and
society? Nothing but a misunderstanding, whose
mists shall disappear before the sun of liberty. The
idea of liberty is also that of equality for all the citizens.
The state would gain no less than the Church by their
mutual independence. We never attempt with impu-
ity to rule that which God has created to be free.
For two centuries the state has dragged on the Church,
or has been dragged by it; the result was mutual suf-
ffering and mutual servitude. Separation restores to
each to its proper place. The state has no longer but citi-
zens to deal with; it has no longer to fear the mur-
murs of conscience, or those invisible enemies which
sap and weaken its foundations. Free in its action,
authority gains both in strength and in respect; the
vestry-quaflers, which are the plague of all state re-
ligion, are in the state of the Church. The CEan of an
enemy of the state, separation makes them friends.
Conscience revolt at the hand of the state, it
loves a power which guarantees it freedom.' See
Toleration.

Among the liberal party of the Roman Catholic
Church, one meets the principle of a separation be-
 tween Church and State has likewise its ad-
vocates. Of the great statesmen of Europe in modern
times, few have given so cordial an adhesion to the
principle as count Cavour, who, during his whole poli-

cical career, stood up for a free Church in a free state;
and baron Ricasoli, whose famous letter to the Italian
bishops, dated November 19th, 1856, shows how deeply
he felt on the subject, and a document which, in the history
of European State-Churchism, will remain of lasting
importance. We give the following extract from it:
"The decisions adopted by the government arise from
the desire that perfect liberty in the relations between
Church and State should pass from the abstract religion
of principle in which it had hitherto remained into the
reality of fact. The government, therefore, desires that
Italy may very soon enjoy the magnificent and impos-
ing religious spectacle now afforded to the free citizens
of the United States of America by the National Coun-
cil of Baltimore, wherein religious doctrines are freely
and justly discussed, whose decisions, approved by the peo-
ple, will be proclaimed and executed in every town and
village without execrator or placitum. It is liberty which
has produced this admirable spectacle; liberty, pro-
fessed and respected by all, in principle and in fact, in
its amplest application to civil, political, and social life.
In the United States each citizen is free to follow the
Church or cult he may think best, and he worships
the Divinity in the form that may seem to him most ap-
propriate. By side with the Catholic Church rises the
Protestant temple, the Musulman mosque, the
Chinese pagoda. By side with the Roman Church the
clergy Genevan consistory and the Methodists as-
semble, and exercise their functions. This state of things
prohibits neither confusion nor clashing. And why
is this? Because no religion asks either special pro-
tection or privileges from the state. Each lives, de-
velops, and is followed under the protection of the
common law, and the law, equally respected by all,
guarantees to all an equal liberty. In the American
state government wishes to demonstrate as far as possible
that it has faith in liberty, and is desirous of applying it to
the greatest extent compatible with the interests of
public order. It therefore calls upon the bishops to
return to their sees whence they were removed by
those very motives of public order. It makes no con-
ditions save respect for the incumbent under whom
the citizen who desires to live peacefully—namely, that
he should confine himself to his own duty and observe the
laws.
The state will insure that he be neither disturbed nor
hindered; but let him not demand privileges if he
wishes no bonds. The principle of every free state,
that the law is equal for all, admits of no distinctions
of any kind. The government would be glad to cast
off all suspicion and abandon every precaution, and if
it does not now wholly act up to this wish, it is because
the principle of liberty which it has adopted and put
into practice is not equally adopted and practiced by
the clergy. In the United States there is an absolute
equality between the condition of the Church in America
and the condition of the Church in Europe. In those vir-
gin regions the Church is established amid a new so-
ciety, but which carried with it from the mother country
all the elements of civil life. Representing the purest
and most equitable of all the social estates, the reli-
gious feeling which sanctions right, and sanctifies duty,
and carries human aspirations far above all earthly things,
the Church has here sought only the empire pleasing
to God, the empire of souls. Companion of liberty,
the Church has grown beneath its shelter, and has
found all that sufficed for free development and the
light of tranquility, and most of all the Church of the
state. Never sought to deny to others the liberty which
it enjoyed, nor to turn to its exclusive advantage the in
CHURCH AND STATE 333

Church Diet

stitutions which protected it. In Europe, on the other hand, the Church arose with the decadence of the great empire that had subjugated the earth. It was constituted amid the political and social cataclysms of the barbarous ages, and was compelled to form an organization strong enough to resist the shipwreck of all civilization amid the rising flood of brute force and violence. But while the world, emerging from the chaos of the Middle Ages, re-entered the path of progress marked out by God, the Church impressed upon all, as the only refuge of all, her mission to defend the dogma intrusted to its guardianship. It viewed with suspicion the growth of intelligence and the multiplication of social forces, and declared itself the enemy of all liberty, denying the first and most incontestable of all, the liberty of conscience. Hence arose the conflict between the ecclesiastical and the civil power, since the former represented subjection and immobility, and the latter liberty and progress. The conflict, from peculiar circumstances, has greater proportions in Italy, because the Church, thinking that a kingdom was necessary to the independent exercise of its spiritual mission, set up a kingdom in Italy. The ecclesiastical power, from the same reason, is here in contradiction not only with the civil power, but national right. The bishops cannot be considered among us as simple pastors of souls, since they are at the same time the instruments and defenders of a power at variance with the national aspirations. The civil power is therefore not in a position to impose its will upon the bishops which are necessary to preserve its rights and those of the nation. How is it possible to terminate this deplorable and perilous conflict between the two powers—between Church and state? Let us 'render unto Caesar the things that are Caesar's, and unto God the things that are God's,' and peace between Church and state will be troubled no more.'

See Herges, Real-Encyclop. vol. xix (Suppl.), s. v. Staat und Kirche; a complete history of the relation of the Christian Church to the state was begun by Riefel (Rom. Cath.), but not completed (Geschichtliche Darstellung der Verhältnisse zwischen Kirche und Staat, vol. i, Mainz, 1886, embracing the time from the foundation of Christianity to Justinian I); Vinet, Essai sur la manifestation des convictions religieuses et sur la séparation de l'église et de l'état envisagée comme conséquence nécessaire et comme garantie du principe (Paris, 1842; translated into English, London, 1848, 12mo); Laurent, L'État et l'Eglise, Paris, 1884, 12mo; moments in der geschichtlichen Entwicklung des Verhältnisses zwischen Staat und Kirche, in Dove's Zeitschrift für Kirchenrecht, vol. 1 (Berlin, 1861); Roscovány (Rom. Kirchenverfassung in Deutschland (Leipzig, 1851); the manuals of Church law (Kirchenrecht) by Richter, Walter, Philipps, and others. Lord Montague pleads for the State Church in The Four Experiments in Church and State (London, 1863), maintaining that only four forms of Church are possible: 1. When the Church is identical with the state, i. e. a national Church; 2. When the Church is under the state; 3. When the Church overrides the state; 4. When there is no Church at all. In the author's opinion, the national is the only normal form of Church and state. In each of the other forms the Church and state are divided. CHURCH CONGRESS, a name given to free gatherings of ministers and laymen of the Established Church of England, which since 1861 have annually been held for the purpose of discussing important religious and ecclesiastical questions. The first congress was convoked by a self-constituted committee, which invited men of all theological parties to be present. In the following year several small committees of the Church Congress, no resolutions were to be passed. Although this original plan has been adhered to, the High-Church party has been in an unmistakable ascendency at all the congresses, and the Low-Church party, on that account, in 1866, formed a design (not yet executed) of calling a separate Low-Church Congress. The congresses held from 1861 to 1866 were as follows: 1861, Canterbury; 1862, Oxford; 1863, Manchester; 1864, Bristol; 1865, Norwich; 1866, York. At each of these congresses the bishop of the diocese presided. The attendance in every case was large, and a number of bishops, and prominent clergymen and laymen, took part in the proceedings. A curious difficulty stood in the way of the congress of 1865, which deserves mention, as it shows the relation of the bishops of England to these meetings. When it was resolved by the congress of 1864 (at Bristol) to hold the next one at Norwich, it was understood that thesanitize the proceedings of the former; but that the security had been obtained. But this proved to be a mistake; and when the bishop was applied to by the official residuum of the congress, he did not consider the authority of the persons constituting it sufficient to entitle them to his consideration. The request from a public meeting, and a vote taken in the diocese of Norwich on the subject, was deemed no more sufficient. Only when the chapter of Norwich (including the honorary canons) had declared in favor of the congress, the bishop consented to preside. See Rivington's Ecclesiastical Year-book for 1865 (London, 1866). The "Year-book" gives, at p. 129 to 173, a full account of the Congress of 1865, with accounts of each meeting of the congress have been published in a special report.

the Lutheran, the Reformed, and the United Evangelical churches took part, and the High Church "Confessions of 1530," under Strong and Herrergam, worked hand in hand with the Evangelical party, under men like Nitzsch, Bethmann-Hollweg, and others, at the first annual meetings of the Diet at Wittenberg (1848 and 1849), Stuttgart (1850), Elberfeld (1851), Bremen (1852), Berlin (1856), Frankfurt (1854), Lübeck (1856), Stuttgart (1857), Hamburg (1858). The result in 1860 was that the former party did not appear, because the executive committee had refused to put the Dissenter and the Civil Marriage questions on the programme of the meeting. Consequently, at the assembly of Barmen (1860), and the following ones at Brandenburg (1862) and Altenburg (1864), the Evangelical party (the "Consentio") represented itself simultaneously, and with every meeting of the Church Diet has been held an assembly of the Congress for Home Missions. See Home Missions. The full proceedings of each meeting of the diet have been published in a special report. A briefer account is given in the annual Kirchliche Chronik by Hesse.

CHURCH EDIFIES.

Under Architecture (q. v.) a detailed account of the development of ecclesiastical architecture will be given. The present article will contain various particulars concerning the history of some of the most prominent churches, their names, form, site, position, the arrangement of the interior, the outer buildings connected with the Church service, etc.

I. History of the Erection of Churches.—Until the second century Christians were not permitted to erect churches, but were compelled to worship in private houses, in the open fields, or, to escape persecution, in the Catacombs (q. v.) and other concealed places. On the suspension of persecution, we find, from A.D. 202 and forwards, notices of Church edifices in Nicomedia, Edessa (Odessia), and other cities. Diocletian issued an edict (A.D. 305) ordering all Christian churches to be razed to the ground. Under Constantine these were rebuilt, and great numbers of new ones erected over the whole Roman empire. Chief among them were the different basilicas of St. Peter, St. Paul, and St. Peter and St. Paul, and Maria Maggiore in Rome. The form of the buildings and the contamination of idolatry prevented the general changing into Christian houses of worship of the old pagan temples, many of which were destroyed. Still some of them were thus converted, especially after the time of Theodosius I, and the materials of others were largely used. Justinian I (A.D. 565) rebuilt twenty-four churches in Constantinople alone, and many other churches, cloisters, resting-places for pilgrims, and other religious buildings, over the entire empire of the Orient, and especially in Palestine. The church of St. Sophia (q. v.) he rebuilt with solid and splendid material, and this was the model and pattern for Church edifices through the whole Christian world. Such was the splendor of the new St. Sophia that Justinian exclaimed, "Nisi ex isto, Lolos mou, 1 I have surpassed thee, O Solomon!" The emperor appointed for the service of this church sixty priests, thirteen deacons, ninety sub-deacons, one hundred and ten readers, twenty-five singers, one hundred door-keepers, making five hundred and twenty-five of the clergy and attendants. From the death of Justinian (A.D. 575) to the eighth century but few Church buildings of great note were erected. During the reign of Charlemagne, many churches were erected in North-western Europe. The belief that the work was to be destroyed in the year A.D. 1000 paralyzed all energy, and it was not till that year that had passed that the great revival of all departments of human activity called forth the spirit of princes and cities, as well as of the clergy, to the erection of the magnificent churches and other buildings that adorn the history of the Middle Ages. This zeal in church-building became so modified into a spirit of pride, ambition, and corruption during the fifteenth and sixteenth centuries as to become one of the chief causes that produced the Reformation. The system of selling indulgences to raise money for building churches, first introduced in the eleventh century, was carried to such excess in raising funds for rebuilding the gorgeous St. Peter's (q. v.), that the reformers had in this a most powerful argument in their contest with the Romish Church. In Europe, the building, repairing, and maintaining of edifices for the national churches reached the greatest extent, from the general national taxes. Other churches build their edifices by voluntary contributions. This is universally the case in the United States of America.

In the remainder of this article we chiefly follow Bingham, Orig. Eccles. loc. viii., ch. 1, making use of Farrar's abridgment, with modifications and additions.

II. The ancient Names of Churches.—The word dominicus, or domus Dei, the Lord's house, occurs in the 4th century. Cyprian uses it to denote the Lord's day, and also the Lord's Supper; yet it is used by Jerome for a building set apart for divine worship. It answers to the Greek θέατρον, "the house of the Lord," the "the house of the church," the "the house of God,"—expressions in frequent use from the third century. In Eusebius we have ιερας εκκυριους, the house of the church. Domus divina, the house of God, was a term employed to designate the presence of the Roman emperor; but the Christians transferred the appellation to their churches. Tertullian uses the name domus columbar, the house of the dove, or, as Mede explains it, the house of the dove-like religion, or the house of the dove-like disciples of Christ. As the Temple of God at Jerusalem is frequently in Scripture styled the house of prayer, so Christian churches are called προσωπεία, or ιερα εκκυριους, oratories, or houses of prayer. In later times these titles were appropriated to smaller or domestic chapels. Some early writers distinguish between κυριερατισμοι and εκκυρια, the former signifying the building, and the latter the assembly that met in it. In the early church the Clement of Alexandria, Tertullian, Cyprian, and others, the word εκκυρια usually means the building, and at length became the current expression. Basilica was originally applied to the imperial palace, or public halls, and was not used to designate places of worship until Christian emperors had appropriated such buildings to the use of the Church. See basilica. Ανδριωτος is synonymous with basilica, and was occasionally applied to places of divine worship built by emperors. Churches were sometimes called τετρα (τετρα), either from the inscription of dedication, or from the sign of the cross. The term τετραευαυτος, τετρα, occurs in Eusebius. The reason of the title is, that the reported appearance of the cross to Constantine, and the Labarum, on which, according to Eusebius, was inscribed του σαμαρι τριαντα, was, according to Eusebius, was, denoted a church dedicated to the memory of a martyr. If the person in memory of whom the church was built was, or did build it, or the church was consecrated by him, it was consecrated in Eusebius. In addition, we find at different times, and for various reasons, the following names given to Christian churches: cemeta, concilia, concil obula, conventa, ceculae, cenae, concilios, monastic of, eumonastic, eumonysta, and many others. The titles fes- tum and dulcium were at all times rejected as profane.

Names of Individual Churches.—Individual churches were, soon after the time of Constantine(?), dedicated to...
certain saints, and called by the names of those saints. Some of the Protestant denominations name their church edifices after the apostles, but only for the purpose of distinction from each other. Puritans, and the churches associated by them, name their churches by their ordinal numbers, as the first, second, etc., or by the street on which they are located. In the Methodist Church the names of the apostles are often used; and church edifices are sometimes named in honor of Wesley or some other distinguished leader in the Church.

III. Forms of Churches.—The earliest ground-forms were oblong. The barbarians, early-adopters of Christianity, fashioned the church after the analogy of a ship, or perhaps, rather, after the oblong form had been settled upon by other influences—as of architectural convenience, etc.—that part of the church to receive believers was called the nave (σάλος, ship). This was afterward connected with allegorical or mystical meanings; e. g. to denote the dangers to which the Church was exposed, and the safety which it offered to its members. The boat of Peter and the ark of Noah were explained as emblematic of the Church in these two respects. On the other hand, the Byzantine churches, and many that were influenced by them, were round. During the Lombard period and after, the churches assumed the form of a cross. In the late Gothic they had the head of the cross bent, to represent the bowing of the head of Christ when he died; thus at Rouen (St. Ouen). The transepts of the cross often did not extend beyond the walls, not appearing at all in the external architecture. Eventually, the semi-circular apse was privileged with a seat within this inclosure, it was called πρωτόαξιος, regal palace. The platform of this part of the church was an elliptical recess, with a corresponding arch overhead, and separated from the nave by a rail curiously wrought like net-work, called cancellini, can- cell. Within were the bishop's throne, and subordinate seats, right and left for the clergy. The bishop's throne was usually covered with a veil, and for this reason was called cathedra velata. In the middle stood the altar, in such a position as to be easily encompassed on every side. On one side of it was a small table for receiving oblations; on the other a recess, called ex archepiskopion, in which the vessels were conveyed after the sacrament.

2. The Nave.—This was the main body of the church, and called by different names, derived from the uses to which it was applied. It was called the oratory of the people, because they there met for religious worship, reading the Scriptures, praying, and hearing the word. It was also called the place of assembly, and the quadrangle, from its quadrangular form, in contrast with the elliptical form of the chancel. In a central position stood the ambo, sugestum lectorum, or reader's desk, elevated on a platform above the level of the surrounding seats. This was sometimes called the pulpit, the tribunal, or pulpitum of the divine direction from the βιβλία, or tribunal of the choir. The choristers were provided with seats near this desk. The seats on either side, in front, were occupied by the faithful, or the communicants. The gospel and epistles were chanted from before the altar. The sermon was also delivered by the preacher standing on the platform of the sanctuary, or on the steps leading to it. When large churches were erected, it became difficult for the preacher to make himself heard from this position. To remedy this inconvenience, a platform was erected for him in front of the bema, within the body of the nave. The rules of the primitive church required the recitation of the lessons from this platform, and this was generally observed. The men occupied the left of the altar, on the south side of the church, and the women the right, on the north. They were separated by a veil, or lattice. In the Eastern churches the women occupied a gallery, while the men sat below. The cathedra was occupied by the bishop and his clergy during their several classes; but they were required to withdraw at the summons of the deacons—Ita cathedram! In the rear of the cathedrums sat the penitents, who had been allowed a place again within the church. The walls of the church were surrounded by ante chambers and recesses for the accommodation of the assembly, for meditation, reading, and prayer. There were aisles surrounding the nave which separated it.
from the chambers. It was separated from the chancel by a partition or Littice-work, with a curtain, and the entrance to the choir was by folding-doors in this partition. These doors were provided with curtains, which, as well as the larger curtain, called καταπλήσσαι and καταπλήσσαι μνησεῖα, were drawn aside during the celebration of the Eucharist, and during the delivery of the sermon.

3. The Nouthē, or Ante-temple.—This was the outer division within the walls. It was called πρώταιος, ante-temple; πρώτακα, portico; and νάόδης, or ferula. The latter name is supposed to have been given it in consequence of its oblong shape, resembling in this respect a ferula, or rod. It was an oblong section of the building, extending quite across the front of the church.

It was entered by three doors leading from the outer porch. The great entrance was at the west, opposite to the altar; it was called (after the corresponding part of the temple) ὑπαίεις or παύλωσις, the beautiful or royal gate. The vestibule, or πρῶτακα, in the stricter sense, was allotted to the catechumens and penitents. Heretics and unbelievers were also allowed a place here, though this was forbidden by some Eastern synods. The πρώτακα, or portico, was chiefly used for the performance of funerals. But, in the larger churches, meetings on ecclesiastical affairs were held in it. The primitive Christians were accustomed to wash before entering a church, as a symbol of the purity becoming that holy place. In due time the vessel used for that purpose was introduced into the porch. The vessel

1. Propylaion, or verandah magnum, the great porch, or first entrance into the area before the church. 2. The atrium, or area leading from the porch to the church. 3. Cisternae, or puteolae: the fountain of water in the middle of the square. 4. The porticoes, or cloisters about the area. 5. The porticoes, or cloisters about the church, and place of mourners. 6. The great gate into the church. 7. The northern and southern gates. 8. The cloisters on the north side of the church. 9. The inner narthex, where the catechumens and bearers stood. 10. The place of the aedicule, behind the aedicule. 11. The exedra, or reading-desk. 12. The aedicule on both sides of the exedra. 13. The inner porticoes, or cloisters for men below. 14. The catacumbae, or sepulchre, upper galleries for women, above the portions of the men, upper galleries. 15. Catacombs, the rails of the channel. 16. Scala, or channel. 17. The altar, or communion-table. 18. The arched canop over the altar. 19. The bishop's throne. 20. The seats of preachers, in a semicircle about the altar. 21. Diakonikon atriolum, the inner vestry. 22. Proskynesis, or proreumene. 23. Diaconikon magnum, the great repository, or grocery-house. 24. The baptistery. 25. The font. 26. Pantoporia, dwelling-houses, libraries, school-rooms, etc. 27. Exedra, semi-circle buildings. 28. Theophilus, the outermost boundary allowed for refuge, or sanctuary.
CHURCH EDIFICES

was called κρήνα, φαλή, φίλαρ, κολυμβίας, λευτάριος, καθάρας.

VII. The outer Buildings, or Exodra.—All the buildings attached to the church, such as courts, side-buildings, wings, and other projections and places in the area connected with it, were called exodra. The enclosure around the church was known by the names περίβολος, στοι, πετσάρας, πετσάριον, πετσάρικον, αμβών, τονος. The open space between the extreme circumference and the church is called by Eusebius αποστρας, but in no other than the Latin atrium, and is synonymous with the word area. In this space stood the energumenos, and that class of penitents called προσκλητοί, or fientes. They were also called χαμαλόν, or χαμαλόνιον, from the circumstance of their standing in the open air, exposed to all the changes of the weather. The most important of the exodra were the baptisteries. In these places the candidates were instructed and prepared for baptism, and there were separate apartments for men and women; here also councils and ecclesiastical meetings were held, and hence it may be inferred that they were of capacious dimensions. These baptisteries were not attached to all churches, but were generally erected adjacent to cathedral churches, denominated, on this account, baptsimal and central churches. There were also several other smaller buildings, such as the διονυσίων, in which the sacred utensils, and the ornaments and robes of the clergy, were kept. This was called ευφυδίον, ευφύδιον, καθαφόλιον. Here the clergy were accustomed to retire for private exercises preparatory to the public services; hence it was called secretum, or secretarium. It was also a general audience-room, and denominated salutatorium, receptiorium. Many are of the opinion that the building was used as a prison for the confinement of delinquent clergymen. There was another class of buildings called pastophoria. This is a word borrowed from the Saxon translation of Ezek. xi, 17, where it denotes the chambers in the outer courts of the Temple. Learned men are divided in opinion as to the uses of the pastophoria: some suppose them to have been watch-houses, others apartments for the accommodation of the clergy. Libraries were attached to many churches. In these collections were included not only the liturgical and other church-books, and the manuscript copies of the holy Scriptures, in the original languages and translations, but also other theological works. From the libraries of Jerusalem and Cæsarea, both Eusebius and Jerome chiefly derived the materials for their writings. Schools were, in later times, in connection with some churches. If no building was provided for the purpose, the catechumens, or younger clergy, were taught in the baptistery or vestry. Other buildings were οἰκια βασιλίας, the habitation of the bishop and clergy; λοιποὶ, baths; ἀνακαινίω, lodg- ing-places, supposed by some to have been a kind of inn, by others a common place of resort for rest or recreation.

Doors.—Churches were usually provided with three doors, in imitation of the Temple. The principal entrance was called πύλη, II.—Y

CHURCH OF GOD. A denomination of Baptists in the United States, organized in 1850 by John Winebrenner, formerly a minister of the German Reformed Church at Harrisburg, Pa.

I. History. — During the period of Winebrenner's pastorate, revivals of religion were frequent within the bounds of his church, and extended from it gradually and generally to other congregations, although some ministers of the German Reformed Church opposed the movement. As, in the mean time, Mr. Winebrenner's sentiments in regard to theology and church government underwent a change, and other preachers were raised up from among the converts whose views agreed with his, a call was made in 1880 for a Convention to organize an association. Mr. Winebrenner was chosen moderator of the Convention, and it was resolved to form a separate denomination, under the name "Church of God." The Church took root chiefly in Pennsylvania and the Western States, having (in 1867) no eldership in the New England States and no church in Ohio. In New York the union of a church in the Southern States. The latter, at the beginning of the war, separated from the General Eldership because of the anti-slavery doctrines professed by it. At an annual meeting held in 1866, the Texas eldership expressed a desire to reunite with the General Eldership, but no definite resolutions were put forth.

The eighth triennial General Eldership of the Church was held at Decatur, Illinois, on May 31, 1866, and the following days. The following Annual Elderships were represented: East Pennsylvania, West Pennsylvania, East Ohio, West Ohio, Indiana, Southern Indiana and Illinois, Iowa, Michigan, Michigan. A. F. Sheeran was elected speaker. Centralia College in Kansas was recognized as an institution of the Church, and it was resolved to establish another college in Ohio, West Pennsylvania, Indiana, or Illinois. The subscription list of the weekly denominational organ, the Church Advocate, was reported to be 2,598, and resolutions were passed in favor of the establishment of a Sunday school paper by the Board of Publication, and of a German paper by Rev. J. F. Weisheppel. A series of resolutions was also adopted on the duty of loyalty, against slavery, and in favor of equal rights of all men, irrespective of color.

II. Doctrine. — (Cf. cited below.) The following is a short statement of the views of the denomination:

1. She believes the Bible, or the canonical books of the Old and New Testaments, to be the Word of God, revelation from God to man, and the only authoritative rule of faith and practice.
2. She believes in one Supreme God, consisting of Father, Son, and Holy Spirit, and that these three are co-equal and co-eternal.
3. She believes in the full and plenary of man; that is, to say, that man by nature is destitute of the favor and image of God.
4. She believes in the redemption of man through the atonement, or vicarious sacrifice of Jesus Christ.
5. She believes in the gifts and office-work of the Holy Spirit; that is, in the enlightening, regenerating, and sanctifying influence and power of the Spirit.
6. She believes in the free moral agency of man; that he has moral substantial freedom, and is, while he lives, commanded to a fulfillment of the law and the duties of a rational creature.
7. She believes that man is justified by faith in Christ and by the works of his own righteousness. She believes in the necessity of regeneration, or the new birth; or in the change of man's moral nature, after the image of God, by the grace of God, and by the power and word of the Spirit of God, through faith in Christ Jesus.
8. She believes in three positive ordinances of perpetual
CHURCH OF GOD

standing in the Church, via. Baptism, Feet-washing, and the Lord's Supper.

13. She believes two things essential to the validity of baptism, via. faith and immersion—that faith should always precede immersion; and that where either is wanting there can be no scriptural baptism.

14. She believes that the ordinance of feet-washing, that is, the literal washing of the saint's feet, according to the words and example of Christ, is obligatory on all Christians, and ought to be observed by all the churches of God.

15. She believes that the Lord's Supper should be often administered, to be consistent, to Christians only, in a sitting posture, and always in the evening.

16. She believes in the institution of the Lord's day, or Christian Sabbath, as a day of rest and Christian worship.

17. She believes that the reading and preaching of God's word, the singing of psalms and hymns and spiritual song, and the administration of the sacraments by Christian elements, are to be regularly and devoutly observed by all the people and churches of God.

18. She believes in the propriety and utility of holding fast days, experience-meetings,auxiliary meetings, camp-meetings, and other special meetings of united and perfected saints for the edification of the Church and the conversion of sinners.

19. She believes that the Gospel ministry, Sabbath-schools, educa- tion, and religious poems, the mission, missionary, temperance, and all other benevolent causes, ought to be heartily supported.

20. She believes that the Church ought to relieve and take care of her own poor saints, superannuated ministers, widows, orphans.

21. She believes that the manufacture, traffic, and use of ardent spirits as a beverage or common drink, is injurious and immoral, and ought to be abandoned.

22. She believes that the system of involuntary slavery to be impolitic or unchristian.

23. She believes that all civil wars are useless and sinful, and that the wise persons of the Most High God will never to participate.

24. She believes that civil governments are ordained of God for the good; that Christians ought to be subject to the same in all things, except what is manifestly unscriptural; and that opposing the laws of the Church, for justice, and the adjustment of civil rights, are not inconsistent with the principles and duties of the Christian religion.

25. She believes the necessity of a vicarious and holy life, and that Christ will save those only who obey him.

26. She believes in the visibility, unity, sanctity, universality, and perniciousness of the Church of God, in all parts of the world.

27. She believes in the personal coming and reign of Jesus Christ.

28. She believes in the resurrection of the dead, "both of the just and the unjust"; that the resurrection of the just will precede the resurrection of the unjust.

29. She believes in the creation of new heavens and a new earth.

30. She believes in the immortality of the soul; in a universal and final judgment; and in future and everlasting rewards and punishments.

III. Church Government.—1 In church government this body is independent and congregational; yet the members of all churches, when duly organized, are subject to the supervision of a Church Council, composed of elders and deacons, in which the pastors of all churches, all of whom are elected by the members. In addition to the councils of each local church, they have a confederation of churches called an 'eldership,' consisting of all the pastors within certain bounds, and an equal number of deacons: as such they have stations, larger fields of operation, called circuits. Hence her ministers are some of them stationed, and others travel on circuits, and others are missionaries at large. The elderships meet annually. The General Eldership, which consists of delegates from Annual Elderships, is held every three years. The General Eldership owns and controls all the common property or stations, larger fields of operation, called circuits. Hence her ministers can be delegated to it who has not held a preacher's appointment for five years previous (Gorrie, cited below).

IV. Statistics.—The Church has a domestic and foreign missionary society and a printing establishment, all under the control of the General Eldership. A weekly paper, the Church Advocate (in 1867, 832 volume), and a Sunday-school paper, called the Gem (established in 1867), are published at Lancaster, Pa. The denomination in 1899 had 11 elderships, about 475 churches, 430 ministers, and 22,968 members. See Gorrie, Churches and Sects; Winebrenner, History of Religious Denominations; American Baptist

Almanac; Annual American Cyclopedia for 1866, p. 112.

CHURCH OF JESUS CHRIST OF THE LATTER-DAYS SAINTS. See Mormons.

CHURCH OF THE MESSIAH, a religious sect established in 1862, in Maine, by a person named Adams, who previously had been a Masonic elder. The founder of the sect claimed to have visions and special inspirations. Among the peculiar points of the new faith were, that its members are of the tribe of Ephraim, and that, "as the curse was now taken off from Palestine," the time had come for the lost ten tribes to return to the land of their fathers. They anticipated the redemption of Jerusalem at the throne of David in greater than Solomon's splendor. In expectation of the near advent of the Messiah, 156 members of the sect from the State of Maine went in 1866 to Palestine, and established a colony at Jaffa, the seaport of Jerusalem, with one president (Adams) and two bishops as its leaders. The much efforts of the American and English consuls in Jerusalem, they met with a kind reception on the part of the Turkish people and the people of Jaffa. Land had been secured for them before their arrival, through the American vice-consul at Jaffa. The colonists built quite a number of houses and a three-story hotel, having brought the lumber all the way from Maine. Complaints made by the colonists of the hardships they were forced to endure induced the government of the United States to send, at the beginning of 1867, an agent (the Rev. Dr. Bidwell, of New York) to Jaffa, in order to make a thorough examination into the affairs and prospects of the colony. In the course of the year 1867, a considerable number of the colonists became dissatisfied with their condition and the rule of president Adams, and returned home. The remainder have gradually dispersed.

Church of the City of Rome, which became at an early date one of the chief Christian churches of the world, received in 321, by a special edict of the emperor Constantine, the right to accept legacies. The story, however, that Constantine presented bishop Sylvester and the Roman Church with the city of Rome and other territories is an invention, and the pretended document of donation is a late forgery, taken from the so-called Constitutum Sylvesteri, which was compiled from the Gesta brevis Sylvestri (see Münch. [Rom. Cath.], Ueber die erstdiehende Schicksal Constantinus des Grossen, Freiburg 1894; Repeut des empereur Constantimo M. imperatore in Sylvestream pontificem col loving, in his work de coligomniocanum ecclesiam Grcalem, Berlin, 1827). Under the later emperors, a large amount of property of every description, including many landed estates in various parts of Italy and all the control of the Roman Church; and, moreover, the emperors conferred upon the bishops of Rome many lucrative privileges, as Gratian upon Dama- usus in 378, Valentine upon Leo the Great in 445, etc. The ecclesiastical prerogatives which the popes claimed as heads of the Church, and which were gradually conceded by the emperors and acquiesced in by the bishops, greatly enlarged the secular power and
wealth of the popes. Under Gregory I the landed property belonging to the Roman Church was very extensive, especially in Sicily and Gaul. But until the eighth century the Roman Church held all this landed property in subjection to the sovereign authority of the emperors. The first independent possession of the popes was the town of Sutri, which Gregory II, in 729, obtained from the Lombardian king Luprand, who had wrested it, with other territories, from the Byzantine emperors. The friendly relations between the Roman Church and the Lombard king Alboin (721-741), and most of the papal territory was reoccupied by the Lombards. The pope invoked the intercession of Charles Martel, in consequence of which Luprand, in 742, restored to Pope Zachary not only the former property of the Roman bishops, but also the four Byzantine towns of Amelia, Orta, Icmarzo, and Bieda. The pope even succeeded in disposing the king amicably toward the exarch, in reward for which he received from the Byzantine emperor two villas. King Aistulf conceived the plan of conquering and annexing all Italy, and thus forced Pope Stephen II (792-757) to invoke again the aid of the Franks. Pepin, who had been called as a partisan of the pope, twice (754 and 755) undertook a campaign into Italy, declined the demand of the Byzantine emperor to restore to him his former Italian possessions, gave to the pope, in addition to his former possessions, the Exarchate and the Pentapolis (the five cities of Rimini, Pesaro, Fano, Ancona, and Urbania), and assumed for himself the title of patricius (patron) of Rome. The original document of donation is no longer extant. The Lombardian king Desiderius found means to put off the complete execution of the stipulations made by Pepin, and ultimately new hostilities broke out, which induced Adrian I to invoke the aid of Charlemagne, who in 744 put an end to the Lombardian kingdom, and enlarged the donations of his fathers. As the original deeds of these donations are lost, their extent can no longer be fixed with entire accuracy. The extant document in which Louis le Débonnaire sanctions the donations of Charlemagne is a forgery. In consequence of the coronation of Charlemagne as emperor by Leo III, in 800, the connection of the pope with the Eastern empire entirely ceased, and the papal documents were henceforth dated after the beginning of the reign of the new emperor. The king of the Franks, as Roman emperor, had thus become the Stupereus, the protector of the Roman Church. See obtained feudal right over Benevento. The countless Matilda of Tuscany promised to the pope to bequeath to him her extensive territory; but on her death the property became the subject of a violent and protracted dispute, and the claims of the pope were not recognized until 1291, by Otto IV. In the agreement between the pope and the emperor, the latter designated as papal possessions: the country from the defiles of Cefalonia (on the frontier of Naples), as far as the fort of Roccafaro (on the Tuscan frontier), the exarchate of Ravenna, the Pentapolis (see above), the Marches, the duchy of Spoleto, the possessions of the counties of Ancona, Benevento, and the duchy of Spoleto, the possession of Sicily independent of the emperor, the high political position of the pope in the Christian world was confirmed.

During the following centuries the popes were more intent upon preserving than upon enlarging their possessions. In 1278, Philip III presented to Gregory X the county of Venetia, and in 1284 Clement VI purchased Aquitainc from the crown of Sicily, and became in effect the count of Provence. During the residence of the popes at Avignon, and during the schism, the popes had to concede extensive privileges to various cities. Other parts were given as fiefs to Italian princes: thus, in 1415, Alphonso I of Naples was made papal vicar of Benevento and Terracina; but Nicholas V (1447-1455), Pius II (1458-1464), and Sixtus IV (1471-1484) consolidated the papal possessions. Julius II (1503-1513) reconquered from the Venetians all the places which had formerly belonged to the pope, and even added to his territory Parma, Piacenza, and Reggio, thus giving to the papal states the most extensive frontier they have ever had. Parma and Pia- cenza were soon lost again, but in their place Camerino and Nepi were obtained. Reggio had to be abandoned in 1529, and Modena in 1527; but, on the other hand, a number of republican communities were fully subjected, as Ancona in 1569, Perugia in 1590, and the duchies of Ferrara and Bologna as a consequence of the Sack of Rome (1527), and the duchy of Castro (the dispute concerning which lasted until 1785), were abolished. About fifty years later the States of the Church entered into a period of rapid decline. In 1788 the government of Naples declared the feudal relation in which that kingdom had stood to Rome as terminated. In 1798, Avignon and Venetian were annexed to France, and in 1796 another considerable tract of territory was lost. At the peace of Tolentino, Feb. 19, 1797, Pius VI had to cede all the papal possessions situate in France, and to agree that the districts of Ferrara, Bologna, and Romagna should be incorporated with the new Papal Republic. On the 16th of February the republic was proclaimed in the city of Rome, the papal government was declared abolished, and the pope himself was carried into captivity. The treaty of Vienna, in 1815, restored to the pope the Marches, with Camerino, the duchy of Benevento, with the principality of Capua and the exarchate of Benevento, and Ferrara; and gave to the emperor of Austria the right of garrisoning Ferrara and Comacchio. Nothing was said in the treaty of Vienna about the papal claims to Avignon and Venetian, on which account the pope protested against the portion of the treaty relating to the States of the Church.

Certain acts of Leo XII (1824) created general indignation among the inhabitants of the papal territory. In February, 1831, an insurrection broke out in Bologna, which soon spread through the whole province, and from there through the larger portion of the States of the Church. The pope was exiled, and the insurrection was established, and on the 26th of February an assembly of deputies declared the abolition of the temporal power of the pope. The intervention of Austria put, however, an end to the insurrection. The representatives of the great powers found the civil administration so unsatisfactory that they unanimously recommended the introduction of reforms. As these were refused, a new insurrection occurred, which caused another intervention of Austria, and the occupation of Bologna by Austrian troops. This was at once followed by an occupation of Ancona by France, which was unwilling to leave the pope under the sole patronage of Austria. Both occupations were simultaneous, and in 1831-1846 convoked an assembly of deputies, in order to learn the wishes of the people, but it led to no reforms of any account. The discontent of the people contin-
and showed itself in repeated revolutionary outbreaks. Pius IX (elected June 16, 1846) began to introduce important changes into the public administration (motu proprio of 2d and 14th of October, 1847, fundamental statute of 14th of March, 1848, etc.), and thus gave an impulse to a political movement which he himself had not at first encouraged. He had obtained the rough grant, on the 14th of March, 1848, a constitutional form of government, which was soon followed by the appointment of a liberal ministry (Mamiani) and the convocation of a Constituent Assembly. An attempt to curb the liberal movement by the appointment of a conservative ministry (Count Rosso) failed, and the people rose and drove out the king, who gave up the throne in favour of his son, Francis Joseph I. The political and financial condition of the States of the Church after the restoration of the pope was most deplorable, and the people continued to be dissatisfied with the papal rule. When, in 1859, in consequence of their defeat at Magenta, the Austrians had to withdraw their troops from Central Italy, Bologna and the neighboring legations (the Romagna) at once shook off the papal yoke, and, together with Parma and Modena, organized themselves, under the name of Emilia, into a provincial state under the dictatorship of Farini. After the treaty of Zurich (Nov. 10, 1859), Austria and France proposed the convocation of a congress for the regulation of the Italian affairs, but the pope refused to take part in it, as the great powers did not agree to guarantee to him the restoration of the Romagna. Victor Emmanuel consequently, by a decree of the 18th of March, 1860, after a popular vote had declared in favor of annexation, incorporated the Romagna into the Kingdom of Italy. The papal government now tried to organize a body of regular troops, but the chief of foreign volunteers, under the French general Lamoriciere, when, after the conquest of Naples by Garibaldi, a part of the old Neapolitan army had been united with the papal troops, the Italian government demanded the discharge of the foreign volunteers as mercenary soldiers, and the papal government refused to comply with this request, the king marched troops into the papal territory, defeated the papal troops at Castelfidardo on the 18th of September, and captured the remainder at Ancona. Umbria and the Marches now declared at once in favor of annexation, and a popular vote having been taken, were incorporated with Italy by decree of the 17th of December.

As, after the fall of Gaeta, Rome became the refuge of the expelled king of Naples, and the centre of all plots against Italian unity, the Italian Party of Action loudly demanded the conquest of Rome, and in March, 1861, even the Italian Parliament declared the city of Rome the natural and inherent capital of the kingdom. Attempts made by the Italian prime minister Cavour to prevail upon the pope to consent to a separation between his temporal and ecclesiastical power failed; and the same was the case with a proposition of Louis Napoleon to bring about a reconciliation between the two churches--which was based on the existing union of the papal territory.

In 1862, Garibaldi made an attempt, at the head of an army of volunteers, to conquer Rome, and deliver Italy both from the rule of the pope and that of the French, but this movement was promptly suppressed by the Italian government. On the 15th of September, 1864, France concluded with the government of Ialy a convention, by which France promised to withdraw its army of occupation from Rome within two years, while Italy, on the other hand, promised not to attack the papal territory, and even to protect it against any foreign attacks, to assume a proportional part of the expenses of the occupation. He had obtained the rough grant, on the 14th of March, 1848, a constitutional form of government, which was soon followed by the appointment of a liberal ministry (Mamiani) and the convocation of a Constituent Assembly. An attempt to curb the liberal movement by the appointment of a conservative ministry (Count Rosso) failed, and the people rose and drove out the king, who gave up the throne in favour of his son, Francis Joseph I. The political and financial condition of the States of the Church after the restoration of the pope was most deplorable, and the people continued to be dissatisfied with the papal rule. When, in 1859, in consequence of their defeat at Magenta, the Austrians had to withdraw their troops from Central Italy, Bologna and the neighboring legations (the Romagna) at once shook off the papal yoke, and, together with Parma and Modena, organized them, under the name of Emilia, into a provincial state under the dictatorship of Farini. After the treaty of Zurich (Nov. 10, 1859), Austria and France proposed the convocation of a congress for the regulation of the Italian affairs, but the pope refused to take part in it, as the great powers did not agree to guarantee to him the restoration of the Romagna. Victor Emmanuel consequently, by a decree of the 18th of March, 1860, after a popular vote had declared in favor of annexation, incorporated the Romagna into the Kingdom of Italy. The papal government now tried to organize a body of regular troops, but the chief of foreign volunteers, under the French general Lamoriciere, when, after the conquest of Naples by Garibaldi, a part of the old Neapolitan army had been united with the papal troops, the Italian government demanded the discharge of the foreign volunteers as non-commercial soldiers, and the papal government refused to comply with this request, the king marched troops into the papal territory, defeated the papal troops at Castelfidardo on the 18th of September, and captured the remainder at Ancona. Umbria and the Marches now declared at once in favor of annexation, and a popular vote having been taken, were incorporated with Italy by decree of the 17th of December.

As, after the fall of Gaeta, Rome became the refuge of the expelled king of Naples, and the centre of all plots against Italian unity, the Italian Party of Action loudly demanded the conquest of Rome, and in March, 1861, even the Italian Parliament declared the city of Rome the natural and inherent capital of the kingdom. Attempts made by the Italian prime minister Cavour to prevail upon the pope to consent to a separation between his temporal and ecclesiastical power failed; and the same was the case with a proposition of Louis Napoleon to bring about a reconciliation between the two churches--which was based on the existing union of the papal territory. 
provided for and performed, and to represent the body of the parish when occasion may require. They are chosen, with the vestrymen, "annually in Easter-week, according to the custom of the various dioceses." Their duties are enjoined by diocesan, not by general canons. — Hook, *Church Dictionary*, v. s.; Staunton, *Ecclesiastical Dictionary*, v.

CHURCH-YARD, a piece of ground adjoining a church, set apart for the interment of the dead. During the first three centuries of our era the Christians followed the law of pagan Rome, according to which every one could select his burying-place outside of the towns. The Christians generally preferred to be buried near the graves of the martyrs, and thus they early obtained common burying, or, as they called them, sleeping-places (cemetery, dormitorium), which were sometimes above the ground (area), and sometimes in subterranean caves. See CATACOMBS. When the persecution of Christianity ceased, and the relics of the martyrs were transferred to the churches within the towns, the places around the churches, or the vestibules of the churches, were commonly selected for burying the dead; for a burial in the church itself was strictly forbidden, and only granted as a special distinction to bishops, princes, and other persons of high ecclesiastical or political position. Thus gradually the churchyards became an established institution in connection with the church. In large cities every particular church had one, and not until the 14th century are the church-yards to be found without the town. Gradually it became general to close the church-yards in the towns, and to remove them out of the towns, until ultimately the governments of most of the states enforced this rule from sanitary reasons.

In the Church of Rome, church-yards are consecrated with great solemnity. If a church-yard which has been thus consecrated shall afterwards be polluted by any indecent action, or profaned by the burial of an infidel, a heretic, an excommunicated or unbaptized person, it must be re-consecrated; and the ceremony of the re-consecration is performed with the same solemnity as that of the consecration (Buck). See CONSECRATION.

In the Protestant churches of Germany and other countries, church-yards were set apart by prayer and reading of the Scriptures; in England and Sweden a formal consecration is still in use. In England the church-yard is the freehold of the parson; but it is the common burial-place of the dead, and for that reason it is to be fenced at the charge of the parishioners, unless there is a custom to the contrary, or for a particular person to do it, in respect of his lands adjoining to the church-yards; and that must be set forth at common law (Hook). See BURIAL; CEMETERY.

The control of the church-yards has given rise to many conflicts between Church and State. The Church of Rome forbids the burial of heretics, suicides, excommunicated persons, and unbaptized children upon the Roman Catholic cemetery; while the state governments have, on the contrary, regarded the cemetery as public and not ecclesiastical property, have frequently endeavored to compel the burying of all dead without distinction in the same cemetery. In the United States the government does not meddle with the places and modes of burial, and religious bodies, as well as single congregations and individuals, can make any provisions they please for the burial of their dead. — Weizler u. Welte, *Kirchen-Lex.*, vi, 201; Herzog, *Rath-Encyklopaedia*, vii, 706.

CHURCH-YEAR. Neither the New Testament nor the Church literature of the first three centuries contain any indication that the Christians of that time viewed the year from any other stand-point than that of subjects of the Roman emperor or other princes. See CALENDAR; CHRONOLOGY, CHRISTIAN. The first impulse to the idea of a church year distinct from the civil year was given by the establishment of anniversaries of prominent events in the life of Christ. The most ancient of these anniversaries were those of his death and resurrection at various dioceses. They were added to those of his birth [see CHRISTMAS], of the outpouring of the Holy Ghost [see PENTECOST], of the circumcision [see EPHESUS], of the ascension [see ASCENSION DAY]. Christmas, Easter, and Pentecost came each to be regarded as the centre of a cycle, with the three cycles together embracing a common view of every thing memorable in the life of the Redeemer. When the worship of the Virgin Mary and of the saints was developed in the Church of Rome, a number of festivals commemorating events in the life of the Virgin Mary, and the death-days of the apostles, martyrs, and saints, were added to the ecclesiastical calendar. This situation suggested to the Church the idea that the church-year is to celebrate, within the compass of a civil year, the commemoration of all the memorable events in the life of the Church, from the birth of, or, rather, the announcement of the birth of Christ to the death of the last saint. The habit of laying during this year with the first Sunday of Advent is first found among the Nestorians, and was only gradually adopted by the Church of Rome. There are, in all, four Sundays of Advent, intended to prepare the mind for the proper celebration of Christmas (25th of December). Christmas, like Epiphany, has its octave, and each slighter, first, second, etc., Sunday after Epiphany, until the Sunday Septuagesima began the Easter cycle. It was followed by the Sundays Sexagesima, Quinquagesima, four Sundays of Lent, Palm Sunday, and Easter Sunday; Sunday within the octave of Easter ("Low Sunday"), second, third, etc., Sundays after Easter, until the Sunday within the octave of Ascension forms the boundary-line between the Easter and the Pentecost cycles. Whitsunday (Pentecost) opens the Pentecost cycle; and the following Sundays are called the first (festival of the "mort Holy Trinity"), second, etc., Sunday after Pentecost. They run on to the first Sunday of Advent, and the recurrence of the first Sunday of Advent opens the new year. The last festival which Rome added to her church-year was that of Corpus Christi (q. v.), to be an annual celebration of the doctrine of transubstantiation. According to the importance attributed to the several festivals, the Church sometimes made the distinction of "simple," "semi-double," and "double" festivals; the latter being again subdivided into "double second class" and "double first class" (the highest festivals). The Church books, as Missal and Breviary, have special services for each particular festival, and for each class of festivals. See BREVARIUM and MISSAL. The Cursae, regarding the cemetery as public and not ecclesiastical property, have frequently endeavored to compel the burying of all dead without distinction in the same cemetery. In the United States the government does not meddle with the places and modes of burial, and religious bodies, as well as single congregations and individuals, can make any provisions they please for the burial of their dead. — Weizler u. Welte, *Kirchen-Lex.*, vi, 201; Herzog, *Rath-Encyklopaedia*, vii, 706.
and Greek churches took place, and there is, therefore, but little difference in the church-year of the two.

The Greeks begin their year on the 1st of September, and our year on the 1st of January; and the Roman Church who either lived or were canonized after the separation, while the Latins do not recognize the few saints which the Greek Church has added to the catalogue of the ancient saints.

Luther and the Lutheran Church retained, on the whole, the Roman Catholic idea of the church-year. They rejected the Corpus Christi and the feast of the holy and undivided body and blood of the Lord, and the day of mercy, but retained most of the festivals of Mary as being based upon events mentioned in the Bible, and the celebration of the days of the apostles and the angels. In the conflict between High-Church and Low-Church Lutherans in the 19th century, the former party strongly insisted upon retaining every thing to which Luther and the other fathers of the Lutheran Church had not objected, and some leading men of the school even showed a disposition to strain every thing in common between the early Lutheran and the Roman Catholic churches as far as their membership in the Lutheran Church would possibly admit. This tendency showed itself also with regard to church festivals and the idea of a church-year. The Reformed churches desired to return to the form of divine worship as it existed in the primitive service, and therefore showed a tendency to reject the whole idea of a church-year. In Geneva, at the time of Calvin, only the Sunday was celebrated, and the same habit prevailed in most of the Reformed churches of Switzerland. In Germany the opposition of the Reformed to the church-year was not so thorough. In modern times the celebration of Good Friday has been introduced into most of the Reformed churches (in Geneva since 1829). In the Church of England, the High-Church party retained much more of the Latin church-year than was done by the Lutherans; and in modern times efforts have even been made to conform the Anglican church-year in almost every particular to that of the Church of Rome. The Dissenting churches of England and the Protestant churches of the United States have generally rejected the idea of a church-year, with its system of peculiar festivals. Easter and Good Friday, however, are celebrated by church services in many of the Dutch and German Reformed and Methodist churches, and some others; and in the German Reformed Church the idea of a church-year, as it was developed in the Latin Church of the Middle Ages, has been found many defenders. See Herzog, Real-Encyklopädie, vii, 643 sq.; Wettwer u. Welte, Kirchenlexikon, vi, 161 sq. The most important Roman Catholic works on the church-year are Gretser, De Festis Christianorum; Benedict XIV, De Festis; Staudenmayer, Geist des Christentums; Nickel, Die hist. Zeiten; Binnertin, Denkwürdigkeiten. Protestant works: Strauss, Das evangel. Kirchenjahr (Berlin, 1850); Boettger, Das evangel. Kirchenjahr (Breisach, 1850).

Church, John Hubbard, D.D., a Congregational minister, was born at Rutland, Mass., March 17, 1772. He graduated at Harvard 1797, and was installed pastor in Pelham, N. H., Oct. 31, 1798. He died in June, 1840. Dr. Church was trustee of Dartmouth College, President of N. H. Bible Society, and filled several other honorable stations. He published a number of occasional sermons.—Sprague, Annals, ii, 445.

Church, Thomas, D.D., a divine of the Church of England, was born 1707, and educated at Brasenose College, Oxford. In 1740 he was made vicar of Battersea, and afterwards prebend of St. Paul's. He died in 1756. Among his publications are, Essay on the Democratical System of T. (2d Ed. 1757, 8vo); Doctrine of the Church of England, on 1st and 2d Principles (2d Ed. 1757, 8vo); Vindications of the Miraculous Powers of the Church in the first Three Centuries (answer to Middleton [Lond. 1750, 8vo]). He wrote also several tracts against Wesley and the Methodists, notices of which may be found in Wesley's Journals (Works, v, 265, vi, 145).

Churche of Women's form of public thanksgiving for women after child-birth, used in the Greek and Roman churches, in the Church of England, and in the Protestant Episcopal Church. "It is in all probability of Jewish origin, and derived from the rite of purification enjoined in the twelfth chapter of Leviticus. The rubric [of the English Church] commands that the office be used only in the church. Churching in private houses is inconsistent with the very name of the office, and with the devotions prescribed by the office." The Roman Catholic Church allows, in exceptional cases, churching in private houses, and the churching of mothers of illegitimate children.—Eden, Churchman's Dictionary, s. v.; Procter On Common Prayer, p. 427; Brownell, Comm. on Proper-book, p. 490; Wettser u. Welte, Kirchen-Lexikon, i, 592 (s. v. Aussegnung).

Churi ([χρι], 2 Kiry's, kity', Isa. xxiii, 5; or χριτής, kity', ver. 7), a deceiver (as it should have been rendered); while CHURLISH is the proper rendering of χριτής, kashke', rough, as often elsewhere rendered) for a coarse, ill-natured fellow (1 Sam. xxv, 8; compare 2 Macc. xiv, 20; Eccles. xviii, 12; xiii, 14), like Nabal (q. v.).

Churning ([χρι], mtra, squashing) signifies the act of pressing (Prov. xxx, 33), being the same word rendered "wringing" and "forcing" in the same verse, and agrees with the Eastern mode of making butter (see Thomson, Land and Book, i, 893). See BUTTER.

Churton, Ralph, a minister of the Church of England, was born near Bickleigh, Cheshire, Dec. 8, 1734. He was educated at Malpas Grammar-school, and at Brasenose College, Oxford, where he was graduated in 1752, and became fellow in 1758. In 1785 he delivered the Hampton lecture On the Prophecies respecting the Destruction of Jerusalem (Oxf. 1785, 8vo). In 1792 he became rector of Middleton Cheney; in 1806 he was made archdeacon of St. David's. For forty years he labored diligently and faithfully as a parish priest, and was engaged also in frequent and useful literary labors. He died March 23, 1831. Besides the Hampton lecture, he published Memoir of Archbishop Townson (1778, 1829, 1880); Lives of Bishop Smith and Sir Richard Sutton (1800, 8vo); Life of Dean Newell (1809, 8vo); and numerous detached sermons and pamphlets.—Annual Biography and Obituary (Lond. 1832), xvi, 273.

Chus'ahan, Ris-hath'am (Heb. Kushtân, Riša'hath'am, Rissatham; Sept. Ρησαπαθαθα, Vulg. Chusam, Risathaim), the king of Mesopotamia who oppressed Israel during eight years (B.C. 1575-1567) in the generation immediately following Joshua (Judg. iii, 8). The name, if Hebrew, would signify Cush (comp. Cehan, Chab, iii, 7) of the two wickednesses; but Fürst (It. Handwörterb., s. v.) compares the Arabic signification, chief of (the) Abyssins (Abulf. Ams. ii. p. 109), with reference to the twofold form of Arum-Naharim (q. v.). Josephus (Ant., v, 8, 2) calls him "Chusartha (Cusarathaç), king of the Assyrians." The seat of his dominion was probably the region between the Euphrates and the modern Chabur, so that the name of Mesopotamia was attached in a special way. In the early cuneiform inscriptions this country appears to be quite distinct from Assyria; it is inhabited by a people called Na'-zir, who are divided into a vast number of petty tribes, and offer but little resistance to the Assyrian armies. No centralized monarchy is found, but as none of the Assyrian inscriptions date earlier than about B.C. 1100, which is some centuries later than the time of Chusana, it is, of course, quite possible
that a very different condition of things may have existed in his day. In the weak and divided state of the Eastern provinces, it was a brave and skilful chief to build up rapidly a vast power, which was apt to crumble away almost as quickly. Bunson, however, calls him merely "a Mesopotamian satrap," assuming that he must have been posterior to the Assyrian supremacy (Egyp. ii, 272). Chushan-Ish-shaim's yoke was broken from the neck of the people of Israel, during that time of eight years (Judg. viii, 10), and nothing more is heard of Mesopotamia as an aggressive power. The rise of the Assyrian empire, about B.C. 1270, would naturally reduce the bordering nations to insignificance (see Rawlinson, Hist. Evidences, p. 900). See Mesopotamia.

Cnu'el (Xen. v. r. Xoág, Vulg. omits), a place named only in Judith vii, 18, as near Ekron, and upon the brook Mochmarch. If the history be at all genuine, this was doubtless in Central Palestine, but all the names appear to be very corrupt, and are not recognizable. See Judith.

Chuz'za (pron. Cuzza) (rather Chusas, Xoéthas, for Chald. Nis. Nis, i.e. Nis, possession), the "steward" (συντεχνος) of Herod (Antipas), whose wife Joanna (q. v.), having been exiled by our Lord either of possession or of his spirit, became attached to that body of women who accompanied him (A.D. 27) on his journeys (Luke viii, 8); and, together with Mary Magdalene and "Mary the mother of James," having come early to the sepulchré on the morning of the resurrection (A.D. 29), to bring spices and ointments to complete the burial, brought word to the apostles that the Lord was risen (Luke xxi, 5). These circumstances would seem to imply that she was at this time a widow.

Chyt'reus (David) (properly Kochbash), one of the most eminent of the Lutheran theologians of the second half of the sixteenth century, was born at Ingel-fingen, Feb. 26, 1530. Having studied the ancient languages at Tübingen, he went to Wittenberg about 1548, and became a pupil of Melanchthon in theology. In 1548 he began to lecture at Wittenberg on physics, and also on theology. After an extended journey in Germany, Switzerland, and Italy, he was called in 1551 to Rostock; and his character for scholarship and wisdom gained him great influence in Mecklenburg, and also in the neighboring countries. He employed his energies in Maximilian II to arrange ecclesiastical affairs in Austria. He was principal author of the statutes of the University of Helmstedt, and was one of the authors of the Formula of Concord (q. v.). He died June 25, 1600. Among his writings are: Historia Confessionis Augustanae (Frankfort, 1578, 8vo); De Morti et Vita Eternae (Rostock, 1590, 8vo). His works were collected and printed in 2 vols. folio (Leipzig, 1599; Hanover, 1604). A biography of Chyt'reus, with a selection from his works, was published by Pressel in the 8th vol. of the work, Leben u. ausgewählte Schriften der Väter der luth. Kirche (Elberfeld, 1860). See Schütz, Rev. Deutsch. Ges. (Hamburg, 1826, prefixed to the writings of Chyt'reus, 3 vols. 8vo); Melchior Adam, Vite Theologorum (Frankfort, 1700), p. 522; Herzoy, Real-Encyklopädie, ii, 701.

Ciborium (κιβόριον, a cup), a large chalice (a species of pyx, q. v.) or cup, often of gold or silver, with a cover, surmounted commonly by a cross. It is used to contain the host, or consecrated wafer, in the mass. The name ciborium was also given to a canopy on the altar, supported by four columns, to which the cup, in the shape of a dove, was attached by chains, containing the wafer for the communion of the sick.

Ciccar (שכ, šakkār, circuit, esp. of the Jordan). See Topographical Terms; Talent.

Cieling. See Ceiling.

Cilicia (Κιλικία; on the deriv., see below), a maritime province in the south-eastern part of Asia Minor, bounded on the west by Pamphylia; separated on the north by Cappadocia by the Taurus range, and on the east by Armenia; opposite Syria; and by the Gulf of Issus (Iasokeroon) and the Cilician Sea (Acts xxvii, 5) on the south. These lofty mountain barriers can be surmounted only by a few difficult passes, the latter by the Porte Armenides, at the head of the valley of the Finaras, the former by the Porte Cilicia, near the sources of the Cydnus; towards the south, however, an outlet was afforded here by the Sinus Issicus and the spurs of Amanus for a road, which afterwards crossed the Porte Cydnus in the direction of Antioch (hence the close connection which existed between Syria and Cilicia, as indicated in Acts xv, 23, 41; Gal. i, 22). The sea-coast is rock-bound in the west, low and shelving in the east; the chief rivers—Sarus, Cydnus, and Calycadnus—were inaccessible to vessels of any size from sand-bars formed at their mouths. By the ancients the eastern part was called Cilicia Propria (q. iūn. Kilia, Ptolemy), or the lev l Cilicia (q. iūn. Strabo); and the western, the roug (q. rōp. Ptolemy), or the sancta (q. s. Ptolemy, Herod. ii, 84). The former was well-watered, and abounded in various kinds of grains and fruits (Xenoph. Anab. i, § 22; Ammianus Marcell. xiv, 8, § 1). The chief towns in this division were Issus (Xenoph. Anab. 1, 4), at the south-eastern extremity, celebrated for the victory of Alexander over Darius Codomans (B.C. 333), and not far from the pass of Amanus (q. v.; Άμαναν ἄμμων), the birthplace of Menander, the comic poet (B.C. 292), the Stoic philosopher Chrysippus (B.C. 206), and of Aratus (q. v.), author of the astronomical poem Ῥοδοπόμος (B.C. 270); and Taras, the birthplace of the apostle Paul (q. v.). Cilicia Trachès furnished an inexhaustible supply of cedars and fire for ship-building; it was also noted for a species of goat (Martial, xiv, 188), of whose skins cloaks and tents were manufactured. Its breed of horses was so superior, that 260 (one for each day of the year) formed part of the annual tribute to the king of Persia (Herod. iii, 90). The neighborhood of Corycus produced large quantities of saffron (Finn. Nat. Hist. xxi, 1, 1). Josephus identified Cilicia with the Tarshish of Gen. x, 4 (Ant. i, 6, 1). Herodotus says that the first inhabitants of this country were called Hysparchi (Ὑσπαρχαι); and Tarentum, the birthplace of the apostle Paul, was a colony of Aegon, a Phoenician settler (vii, 91). This is confirmed by Phoenician inscriptions, on which the name is written Chalak (.quote, Gesenius, Zc. Jum. Phon. 273). Herodotus also states that the Cilicians and Lycians were the only nations within the Halya who were not conquered by Creesus (i, 28). Though partly subjected to the Assyrians, Medes, Persians, Syrians, and Romans, the Eleutheros (or free) Cilians, as the inhabitants of the mountainous districts were called, were governed by their own kings ("Reguli," Tacit. ii, 78), till the time of Verpasian. The sea-coast was for a long time occupied by pirates, who carried on the appropriate vocation of slave-merchants, and sought ample encouragement for their nefarious traffic among the opulent Romans (Manetti, Barb. 76); and Strabo, xiv, 4); but at last their depredations became so formidable that Pompey was invested with extraordinary powers for their suppression, which he accomplished in forty days. He settled the surviving freebooters at Soli, which he rebuilt and named Pompeiopolis. "Acer was the proconsul of Cilicia (B.C. 82), and gained some successes over the mountaineers of Amanus, for which he was rewarded with a triumph (Epist. ad Philm. xv, 8). As the more level portion was remarkable for its beauty and fertility, as well as
for its luxurious climate, it became a favorite residence of the Greeks after its incorporation into the Macedonian empire, and its capital, Tarsus (q. v.), was elevated into the seat of a celebrated school of philosophy. The connection between the Jews and Cilicia dates from the time when it became part of the Syrian kingdom (see 1 Macc. xi, 14; 2 Macc. iv, 36; comp. Judith i, 7, 12; ii, 21, 25). Antiochus the Great is said to have introduced 2000 families of the Jews into Asia Minor (Josephus, Ant. xii, 3, 4), many of whom probably settled in Cilicia (Pтол. De Legat. ad Cœnsm. 30). In the apostolic age there were still Jews there in considerable numbers (Acts vi, 9). Cilician mercenaries, probably from Trachae, served in the body-guard of Alexander Jannæus (Joseph. Ant. xiii, 13, 5; War, i, 4, 3). The synagoge of “them at Cilicia” (Acts vi, 9) was a place of Jewish worship in Jerusalem, appropriated to the use of the Jews who might be at Jerusalem from the province of Cilicia. See Synagogue.

Cilicia was, from its geographical position, the high road between Syria and the West, and it was also the native country of Paul; it was visited by him, first, soon after his conversion (Gal. i, 21; Acts ix, 30), on which occasion he probably founded the Church there (Neander, History of the Christian Church, ii, 11, 2 Cor. vii, 6, 7; Howson, St. Paul, i, 17-25, 249), and again in his second apostolical journey, when he entered it on the side of Syria, and crossed Anti-Taurus by the Pyle Cilicia into Lycaonia (Acts xv, 41). Christianity continued to flourish here until the 8th century, when the country fell into the hands of the Saracens, by whom, and by their successors the Turks, the light of true religion has been almost extinguished. According to the modern Turkish divisions of Asia Minor, Cilicia Proper belongs to the pasbalic of Adana, and Cilicia Trachae to the Liwhah of Ithil in the Moucemlik of Cyprus (see Penny Cyclopaedia, a. v.; Smith, Dict. of Class. Geogr. a. v.; Vict. Langlois, Voyage dans la Cilicie, Par. 1861). See Asia Minor.

Cimeliarch. See CIMELIARCHI; SACRIFICT.

Cinnamon (κίναμον, kynamon): Gr. κυιναμων; a word, according to Herodotus [iii, 111], of Phoenician origin; according to Gesenius [Thes. Heb. p. 1225], from ןכמ, to stand upright) occurs first in Exod. xxx, 23, where it is enumerated as one of the ingredients employed in the preparation of the holy anointing oil: “Take of pure spices, myrrh, and sweet cinnamon half as much (i. e. 250 shekel) together with sweet calamus and cassia.” It is next mentioned in Prov. vii, 17: “I have perfumed my bed with myrrh, aloes, and cinnamon.” Again, in Cant. iv, 14: “Spikenard and safron, calamus and cinnamon, with all trees of frankincense; myrrh and aloes, with all the chief spices.” In Rev. xviii, 13, among the merchandise of Babylon (Rome), we have "cinnamon, and odors, and ointments, and frankincense.” Also in Ecclus. xxi, 15, “I gave a sweet smell, like cinnamon and asaphlathus.” Cinnamon was probably an article of commerce in ancient Babylon. The Hebrews received this Indian production through the Midianites and Nabathæans, who brought it from the Arabian Gulf. It seems that the Arabians at an early period had commercial intercourse with Ceylon and Continental India, as they were the first navigators of the Indian Ocean (Gen. xxxvii, 25). Many writers have doubted whether the Cinnamon of the Hebrews is the same article that we now call cinnamon. Celso quotes R. Ben-Melech (ad Cant. iii, 14) and S冉dius (Exod. xxx) as considering it the Lignum Aloe, or Agallochum. Others have doubted whether our cinnamon was at all known to the ancients. But the same thing has been said of almost every other drug which is not indigenous. Then too, κυιναμων occurs in many of the Greek authors, as Herodotus, Hippocrates, Theophrastus, Dioscorides, Galen, etc. The first of these, writing 400 years before the Christian era, describes Arabia as the last inhabited country towards the south, and as the only region of the earth which produces frankincense, myrrh, cinnamon, casia, and ledanum (iii, 107). He states, moreover, that the Arabs were unacquainted with the particular spot in which it was produced, but that some asserted it grew in the region where Bacchus was educated. From all this we can only infer that it was the production of a distant country, probably India, and that it was obtained by the route of the Red Sea. Theophrastus (ix, 9) gives a fuller but still fabulous account of its production; and it is not until the time of Dioscorides, Galen, and the Periplus of the Erythraean Sea, that we get more definite information. Galen says that cassia and cinnamon are so much alike that it is not an easy matter to distinguish the one from the other. Cinnamon of the best quality is imported in the present day from Ceylon, and also from the Malabar coast, in consequence of the cinnamon plant (Cinnamonum Zeylanicum) having been introduced there from Ceylon. An inferior kind is also exported from the peninsula of India, the produce of other species of cinnamonamom, according to Dr. Wight. From these countries the cinnamon and cassia of the ancients must most likely have been obtained, though both are also produced in the islands of Sumatra and Borneo, in China, and in Cochín China. Cinnamon is imported in bales and chests, the bundles weighing about 1 lb. each. The pieces consist of compound quills, are about three feet long, slender, and inclose within them several smaller quills. These are thin, smooth, of a brownish color, of a warm, sweetish, and agreeable taste, and fragrant odor; but several kinds are known in modern markets, as they were in ancient times. In Ceylon cinnamon is carefully cultivated, the best cinnamon on gardens being on the south-western coast, where the soil is light and sandy, and the atmosphere moist from the prevalent southern winds. This little tree belongs to the laurel family, and the leaf is not unlike the laurel, though of a lighter green. The white blossom comes out with great profusion, and for many miles around Colombo brightens all the landscape in its season, although it diffuses hardly any perceptible odor through the air. The tree is about twenty feet in height, and spreads into numerous branches; the fruit or nut is about the size of a damson, and when ripe is of a black color. The plants begin to yield cinnamon when about six or seven years old, after which the shoots may be cut every three or four years. The best kinds of cin-
CINNAMON are obtained from twigs and shoots; those less than half an inch, or more than two or three inches in diameter, are not peeled. "The peeling is effected by making two opposite, or, when the branch is thick, three or four longitudinal incisions, and then elevating the bark by introducing the peeling-knife beneath it. In twenty-four hours the epidermis and greenish pulpy matter are carefully scraped off. In a few hours the smaller quills are introduced into the larger ones, and in this way congeries of quills are formed, often measuring forty inches in length. The bark is then dried in the sun, and afterwards made into bundles, with pieces of split bamboo twigs" (Perceval's Account of Ceylon, p. 356-351). Besides cinnamon, an oil of cinnamon from Ceylon, by macerating the coarser pieces of the bark, after being reduced to a coarse powder, in sea-water for two days, when both are submitted to distillation. A fatty substance is also obtained by bruising and boiling the riper fruit, when an oily body floats on the surface, which, on cooling, concretes into a dirty-whitish, rather hard, fatty matter. As this oil burns with a delightful fragrance, when receiving ambassadors and on high state occasions, the king of Ceylon used to have lamps of it burning in their audience-chamber. The wood itself is pervaded by the same grateful perfume, and walking-sticks of cinnamon-wood are highly prized, as well as little articles of cabin-work. Some camphor may be procured from the roots. Cassia bark, as we have seen, was distinguished with difficulty from cinnamon by the ancients. In the present day it is often sold for cinnamon; indeed, unless a purchaser specify true cinnamon, he will probably be supplied with nothing but cassia. It is made up into similar bundles with cinnamon, has the same general appearance, smell, and taste; but its substance is thicker and coarser, its color darker, its flavor much less sweet and fine than that of Ceylon cinnamon, while it is more pungent, and is followed by a bitter taste; it is also less closely quilled, and breaks shorter than genuine cinnamon. Its decoction gives a blue color when treated with tincture of iodine, which the true cinnamon does not. "The great consumers of cinnamon are the chocolate-makers of Spain, Italy, France, and Mexico; and by them the difference in the flavor between cinnamon and cassia is readily detected. An extensive dealer in cinnamon informs me that the Germans, Turks, and Russians prefer cassia, and will not purchase cinnamon, the delicate flavor of which is not strong enough for them. In illustration of this, I was told that some cinnamon (valued at 3s. 6d. per lb.), having been by mistake sent to Constantinople, was unsaleable there at any price, while cassia lignea (worth about 6d. per lb.) was in great request" (Pereira's Materia Medica, p. 1396). From the various sources, independently of the different qualities, it is evident, as in the case of cinnamon, that the ancients might have been, as no doubt they were, acquainted with several species. These, we have no doubt, are yielded by more than one species. Besides cassia bark, there is also a cassia oil and cassia buds, supposed to be produced by the same tree. There can be no reasonable doubt, as cinnamon and cassia were known to the Greeks, that they must also have known the Hebrews also, as the commerce with India can be proved to have been much more ancient than is generally supposed. (See the Penny Cyclopaedia, s. v. Cinnamon; Celsius Hierobot, ii, 850 sq.; Bedeii a Stapel, Comm. in theoph, p. 984; Knox, Travels in Ceylon, p. 92; also Ritter, Erdk. VI, iv, pt. ii, p. 123 sq.; Geiger, Pharmaceut. Botan., li, 785; also the Hebr., De Cinnamono [Bonn, 1823], and Blume in Wiegmann's Archiv für Naturgesch. 1831, i, 116 sq.; Martius, Pharmakogn., p. 192, 141; Smith's Dict. of Class. Antiq., Amer. ed., s. v. Cinnamonum.) Comp. CASSIA.

Cin'nereth (Heb. Kimne roth, כִּנְרֶת, a harp; Sept. Xwvovò, Vulg. Cenereoth, Auth. Vers. "Cinerereth"); Num. xxv, 34; Deut. iii, 17; Josh. xii, 7; Deut. xxxi, 27; xix, 36; or Cin'neroth (Heb. Kimnoroth, כִּנְרֹרֶת, Harpy; Josh. xi, 2; Sept. Xwvovò, Vulg. Cenereoth, Auth. Vers. "Chinneroth"); Josh. xii, 3; Sept. Xwvovò, Vulg. Cenereoth, Auth. Vers. "Chinneroth"); Josh. xv, 20, Sept. Xwvovò, Vulg. Cenereoth, Auth. Vers. "Cineroth"). One of the "fenced cities" of the tribe of Naphtali (Josh. xix, 35; compare Deut. iii, 17; Josh. xi, 2; 1 Kings xv, 20). In the last two of the text cited it seems to indicate a district, since it is named with the "land of Naphtali" and other northern places as having been laid waste by Benhadad, king of Damascus, the ally of Asa, king of Judah (1 Kings xv, 20). It probably took its name from the adjacent city or lake of the same name, and was possibly the small enclosed district north of Tiberias, and by the site of the lake, afterwards known as "the plain of Gennesareth." The expression "All Cinneroth" is unusual, and may be compared with "All Bithron"—probably, like this, a district and not a town. It is also the earlier name of the lake Gennesareth (which is supposed to be a corruption of Genesaret, Lightfoot, Works, ii, 229) Tiberias with the Rakkath (q. v.) of Josh. xix, 35-38. See CHINNEROTH. M. de Sauly thinks he has identified the village of Abu Shueb, lying on the western edge of the plain el-Ouwairir, on an eminence about at its midlength, at the entrance of wady Rubuduyeh, with the site of Cinneroth (Narrativa, ii, 355, 364). See GENESARET.

Cippus (Lat., a post), a small, low column used by the ancient Romans as a mile-post, or to mark divisions of land; also a tomb-stone of small dimensions, containing a diminutive orifice or place to receive the ashes of the dead, being thus the original of the modern tombstone.

Cir'rama, a place whose people (e. Kxwvòc; Vulg. Gezarra, either with those of Gaahas, came up with Zorolelub from Babylon (1 Esdr. v, 20); for which the Heb. texts (Ezra ii, 26; Neh. vii, 80) have RAMAH (q. v.).

Circle (347, chug), any part of a curve, an arch. The word is applied (Job xxii, 14, where, however, it is translated "circuit") to the heavens, which the ancients supposed to be a hollow sphere. They imagined
that the sky was solid, and extended like an arch over the earth. The word is also referred to the earth in Iam. xl, 22, and to the surface of the ocean in Prov. viii, 27, where it is rendered “compass;” in both which passages it still seems to mean the celestial vault, as spanning these. In Wisd. xii, 5, the Greek term κόσμος is so rendered, with reference to the path of the stars. See CIRCUIT.

Circuit (τόπος, tekypshah) signifies the act of going round, as, for example, the apparent diurnal revolution of the sun around the earth (Ps. xix, 5); it is also used with reference to the completion of a year in the original of 2 Chron. xxiv, 22; Exod. xxiv, 22 (in which it is rendered “round”; or of the term of pregnancy in 1 Sam. i, 20 (“when . . . was come about”). The Scriptures, however, afford us very little information as to the astronomical knowledge of the Jews. See ASTRONOMY. In Job xxi, 14, the Heb. word is different. See CIRCLE. In 1 Sam. vii, 16, and Eccles. i, 6, also, a different form of expression is used in the original to signify, in the former passage (וָיבָּב, elsewhere usually rendered “compass”), a regular tour of inspection, and in the latter (וָיבָּב) the periodic series of gatherings, or, rather, directions of the winds, which in the East are quite regular in their seasons. In Exod. xxiv, 5, the original word is γωνία, the rotation of the heavens; but in 2 Macc. vi, 4, it is simply πυρόπολος, an enclosure, e.g. of the Temple.

CIRCUIT. In the Methodist Episcopal Church, a single church, supplied by a pastor, is called a station; but when two or more appointments, within a definite territory, are united into one charge, under one or more ministers, it is called a “circuit.” The English minutes of 1746 give “the first intimation of definite circuits, though they were supposed they existed before. All England was mapped into seventy successive districts.” In America the circuit system was universal in the beginning of Methodism, and it is still widely in use in rural districts and in the Western States.—Stevens, History of Methodism, i, 318. See METHODIST EPISCOPAL CHURCH.

Circumcellians, a fanatical sort of Donatists in the last century of the 3d century of our era, caused by their wandering habits, they were called Circumcelliones (from celle, the cottages of the peasants around which they hovered, cellae circumcines rusticorum). They rambled up and down, plundering, burning houses, and murdering all who resisted them, professing to seek the cross of martyrdom. They called themselves Milesi, Christians, and it is evident from the conduct of the Donats, but their proceedings brought great odium on that party.—Mosheim, Ch. Hist. cent. iv, pt. ii, ch. v, and cent. v, pt. ii, ch. v; Gieseler, Ch. History, pt. iv, div. i, § 84; Gibbon, Decline and Fall, ch. xxii, xxiii. See DONATISTS.

Circumcision (ἐπαφή, mulah); Sept. and N. T. technically περιορθώ, which is translated by the Latin circumciscio (i.e. a cutting around), a custom accustomed in many Eastern nations of cutting off part of the prepuce, as a religious ceremony. The Jews, through Abraham, received the rite from Jehovah; Moses established it as a national ordinance; and Joshua carried it into effect before the Israelites entered the land of Canaan (see Deut. xxxii, 47, 48). Moses (iv, 30 sq.) says that males only were subject to the operation, and it was to be performed on the eighth day of the child's life; foreign slaves also were forced to submit to it on entering an Israelite's family. Those who were not circumcised were excluded from the Israelite's company. The patriarchs were circumcised as a sign of the covenant of their father, and of the respect which they paid to his seed, and practised among those nations only who had learned it from them. This, however, appears not to have been the case (Celsus, ap. Orig. contra Celsum, i, 17, 250; Julian, ap. Cyril. contra Julianum, x, 384; compare Marthum, Canon Chron. p. 73 sq.; Bauer, Gottheitsdienst Vorfass. i, 87 sq.; Jaub, i, ii, 277 sq.; see Böckh, i. 360 ad verum prorogatum [Dulab. and Lemgo, 1798]).

I. Pagan Circumcision. —First of all, the Egyptians were a circumcised people. Vonck (Observ. missicell. c. i, p. 66), followed by Wesseling (ad Herod. ii, 37) and by numerous able writers, alleged that this was not true of all Egyptians, but a private only; that at least the priests were circumcised is beyond controversy. No one can for a moment imagine that they adopted the rite from the despised shepherds of Goshen; and we are immediately forced to believe that Egyptian circumcision had an independent origin. A great preponderance of argument, however, appears to us to prove that the rite was universal among the old Egyptians, as long as their native institutions flourished, although there is no question that, under Persian and Greek rule, it gradually fell into disuse, and was retained chiefly by the priests, and by those who desired to cultivate ancient wisdom (see Origen, ad Hier. xx. 19; Ezech. xxiv. 19; and ad Rm. ii, 13; Jerome ad Gal. iv. p. 477; Hors. Hierogl. Epig. i, 14, p. 13, ed. Paun; Clem. Alex. Strom. i, 180). Herodotus distinctly declares that the Egyptians practised circumcision; and that he meant to state this of the whole nation is manifest, not only since he always omits to add any restriction, but because, immediately following his first statement of the fact, he annexes this remark: “The priests, moreover, shave their whole body every other day,” etc. (Herod. ii, 37). It is difficult to suppose that the historian could have been mistaken on this point, considering his personal acquaintance with Egypt. (Artapanus, however, makes a distinction between Jewish and Egyptian circumcision, ap. Euseb. Prep. Ev. iv, 27.) Further, he informs us that the Colchians were a colony from Egypt, consisting of soldiers from the army of Sesostris. With these he had conversed (ii, 104), and he positively declares that they practised circumcision. Yet if the rite had been confined to the priestly caste of Egypt, it could hardly have been found among the Colchians at all. The same remark will apply to the savage Troglodytes of Africa, every branch of whom except one (the Koloa), as Diodorus informs us (iii, 81, 82), was circumcised, having learned the practice from the Egyptians. The Troglodytes appear to have originally diffused the practice through Africa, which argues a corresponding diffusion of the rite; yet, from the silence of Diodorus concerning the other savage nations whom he recounts as African Ethiopians, we may infer that it was not practised by them. The direct testimony of Diodorus (i, 28), Philo (Cp. ii, 310), and Strabo (xii, 824; comp. Agatharch. ed. Hudson, i, 46) is to the same effect as that of Herodotus respecting Egypt; yet this can hardly be called confirmatory, since in their days the rite was no longer universal. Josephus (contra Ap. ii, 13) speaks of it as practised by the priests only; he, however, refers to the neophytes among the Egyptians, and he is in doubt whether they had learned the rite from the Egyptians, or the Egyptians from them. By the Ethiopians we must understand him to mean the inhabitants of Meroë or Senaar. In the present day the Coptic Church continues to practise it, according to C. Niebuhr, the Copto-African Christians do the same (Ludolf. Hist. Eth. i, 19, and Comment. p. 268 sq.); and that it was not in
CIRCUMCISION appears among the latter with a Judaic Christianity from their performing it upon both sexes. (It is scarcely worth while to invent a new name, recision, or resection, for accuracy's sake.) Oldendorp described the rite as widely spread throughout the region Africa—16° on each side of the line—even among native in which they are well known, partook in the remote ages" (Prichard, *Physical Hist. of Man*, 8d ed. i., 287). Traces of the custom have even been observed among the natives of some of the South Sea Islands (Pickering, *Races of Man*, p. 153, 190, 200, etc.).

How far the rite was extended through the Syro-Arabian沙漠, Edom, and Moab, xv. 60, dtr., 75 f., and Epiphanius, *Hier.* ix. 30; Origen ad *Gen.* i. 10. In the 9th section of the Epistle of Barnabas (which, whether genuine or not, is very old), the writer comments as follows: "But you will say the Jews were circumcised for a sign. And so are all the Syrians, and the Arabs, and the Circassians, and even the Egyptians themselves are circumcised." This language is very rare and popular; yet it shows how notorious was the wide diffusion of the custom (see Hug, in the *Früh. Zeitschrift*, iii, 213). The Philistines, in the days of Saul, were, however, uncircumcised; so also, says Herodotus (ii, 104), were all the Philistines, who had intercourse with the Greeks. That the Canaanites, in the days of Jacob, were not all circumcised, is plain from the affair of Dinah and Shechem. The story of Zipporah (Exod. iv. 25), who did not circumcise her son until fear came over her that Jehovah would slay her husband Moses, proves that the family of Jethro, the Midianite, had no fixed rule about it, although the Midianites are generally regarded as children of Abraham by Keturah. On the other hand, we have the distinct testimony of Josephus (Ant. i. 12, 2) that the Ishmaelites Arabs, inhabiting the district of Natalethe, were circumcised after their 13th year: this accords with the account of the Greeks of the place, and their report was to the effect that the Geni moved their families from the Canaanites, who were uncircumcised, from the sea, to the pitch mountain, which was a great distance from them. St. Jerome also (quoted by Michelin) informs us that, to his day, "vagum kodile, the tribes dwelling round Judæa and Palestine were circumcised, "especially all the Samaritans and they of the desert." Elsewhere he says that, "except the Egyptians, Idumeans, Ammonites, Moabites, and Ishmaelites of the desert, of whom the greater part are circumcised, all other nations in the world are uncircumcised." A negative argument is more or less dangerous; yet there is something striking in the fact that the looks of Moses, of Joshua, and of Judges, were always strongly marked by the practice, as a reproach on any of the seven nations of Canaan, any more than on the Moabites or Ammonites, the Amalekites, the Midianites, or other inland tribes with whom they came into contact. On the contrary, as soon as the Philistines became prominent in the narrative, after the birth of Samson, this epithet is of rather common occurrence. The fact also of bringing back as a trophy the foreskins of slain enemies never occurs except against the Philistines (1 Sam. xviii.). We may perhaps infer, at least until other proof or disproof is attained, that while the Philistines, like the Sidonians and the other maritime Syrian nations known the practice, thepractice was not yet among the Canaanites, and all the more inland tribes, it was at least so far common that no general description could be given them from the omission. It appears from Josephus (Ant. xii. 9) that when Hyrcanus subdued the Idumeans, he forced them to be circumcised on pain of expatriation. This shows that they had at one time passed through the rite; it is, however, wonderful, if it was only a custom, and not a national religious ordinance; for, as Michaelis observes, the disuse of it may have dated from the edict of Antiochus Epiphanes, of which it is said (1 Macc. i. 41, 47), "The king Antiochus wrote to all his kingdom that all should be as the men of Judæa and the laws of the ordinances of his country; and all the nations acquainted according to the word of the king." The rather obscure notices which are found in Jeremiah and Ezekiel of the circumcision of the nations who were in immediate contact with Israel admit of a natural interpretation in conformity with what has been already adduced (Jer. ix. 25; Ezek. xxxi. 18; also xxxii. 12, et passim). The difficulty turns on the new moral use made of the term "uncircumcised," to mean simply "impure." The passage in Jeremiah is thus translated by Ewald: "Behold, the days come that I will visit all the uncircumcised uncircumcised ones; Egypt and Judah, Edom, Edom and Moab, etc. (Dan. 11. 21), and all the dwellers in the wilderness that are shaven on the temples: for all the heathen are uncircumcised, and so is all the house of Israel uncircumcised in heart." The shaving of the temples appears to be a religious custom of the same kind: Herodotus (iii. 8) attributes it to the Ionian Greeks and even to the Egyptians themselves. It is not strange that the Egyptian poet Chorilus (c. Ap. i. 22), as a description of his own countrymen. Knowing that the Egyptians were circumcised, it no longer remains doubtful how the reproach of Egypt (Josh. v. 9) should be interpreted.

How far the rite of circumcision spread over the south-west of Arabia no definite record subsists. The silence of the Koran confirms the statement of Abulfeda (Hist. Ante-Islamique, p. 180, ed. Fleischer, 1831) that the custom is older than Mohammed, who, it would appear, in no respect regarded it as a religious rite. Nevertheless it has extended itself with the Mohammedan faith, as though it were a positive ordinance. Pococke (Specim. Hist. Arab. p. 329) cites a tradition, which subscribes to Mohammed the words, "Circumcision is an ordinance for men, and honourable in women." This extension of the rite to the other sex might, in the opinion of the Moslems, be justified by such nations from Abraham and Ishmael. We have already seen that Abyssinian circumcision has the same peculiarity; so that it is very easy probable that Southern Arabia had the rite from the same source or influence as Ethiopia. In fact, the very closest relations are known to have existed between the nations on the opposite coasts of the Red Sea. Another passage of Abulfeda (Annals Musulm. i. 95) gives specific information on this subject. In the battle of Ohud, in the third year of the Hegira, "Hamza, the uncle of the Prophet, committed great slaughter. When Sabsa' ben-Abd-al-Uzza', whose mother was a Circumciser in the time of Mecca, passed the camp, his face was covered with a cloak, and he said you son of a sho. - circumciser [saeecetis symphosorum]!" The form of the word proves that this was strictly the trade of the old woman, and that the custom, as applied to females, was no innovation of those days. Niebuhr had ocular demonstration of female circumcision in Arabia (Travels, ii. 297). Josephus, however, the same time antecedent to Mohammed, says that the Arabs were accustomed to circumcise between the tenth and
fifteenth years. The origin of the custom amongst this large section of those Gentiles who follow it to be found in the Biblical record of the circumcision of Ishmael (Gen. xvii, 25). Josephus relates that the Arabsians circumcise after the thirteenth year, because Ishmael, the son of Abraham, was circumcised at that age (Ant. I. 12, 2; see Lane's Mod. Eg. ch. ii.). Though Mohammed did not enjoin circumcision in the Koran, he was circumcised himself, according to the custom of his country; and circumcision is now as common among the Mohammedans as amongst the Jews.

The statement of Philostorgius may receive light from the Arab historians, who relate (Jost, Geschichte der Israeliten, v, 236 sq.) that about a century before the Christian era, several Jewish sovereigns reigned in the region called Sheba by the Jews, and Yemen by the moderns, where the Himyarites (or Hormerites) dwelt. The few facts preserved show that they were not close observers of the Mosaic law, and the suspicion might arise that they were called Jews chiefly from their having received Jewish circumcision. We have, however, a collateral evidence of much importance, to prove that the influence acting on them had really come from Judea; namely, it was well known that the Arab nation called the Falasha still exists, which has very thoroughly adopted the Jewish religion, insomuch as to have invented legends that allege their descent from the Hebrews. They possess the Old Testament in the Greek language and character, but their own language is said to be quite alien from the Hebrew; facts which prove that they were really proselyted by the Jews at some early period. See ABYSSINIA. At that same time, it is credible, the Hebrew faith met with similar success on the opposite coast of the Red Sea. Jost believes that, during the war of the Maccabees, great numbers of Jews migrated into Arabia, which under the influence of which were very numerous in Yemen, and their influence great. Wherever they settled proselytes must have been made; and great zeal was doubtless used to induce them to circumcise their children duly according to the Mosaic rite. We can then quite understand Philostorgius's fact, if we are allowed to suppose that he tells us truly of the Himyarites doing what was done by a great many of them. An interesting story is told by Josephus—the date so late as the reign of the Emperor Claudius (Ant. xx, 2)—how Izares, the young king of Adiabene, and his mother Helenas, were converted by Jewish teachers to a belief in the one true God. He was Hebrew in descent, when Izares was desirous of being circumcised, and his mother dreaded that it would alienate his subjects, his Jewish instructor Ananias warmly seconded her views, with a heart like that of Paul; telling him that if he was resolved to imitate Jewish institutions, he could, without being circumcised, adore the true divinity; and that this was far more important than circumcision. At the time he satisfied the young monarch; but afterwards, another Jew, named Eleazar, came from Galilee, and inveighed so strongly on the impiety of his disobedience, that, without more delay, Izares submitted to the operation. It is evident that, in a controversy of this sort, the more narrow and confined advantage; and, in consequence, it appears that "proselytes of righteousness" were always circumcised (Judith xiv, 10, and Tacit. Hist. v, 5). The facility with which whole nations have adopted the practice from the Mohammedans proves that it is not so serious an objection as the Chaldeans have thought it (see the Penny Cyclopaedia, s. v.).

II. Jewish Circumcision.—1. History. — When God announced to Abraham that he would establish his covenant with him, he said to him, "This is my covenant, which ye shall keep between me and you; and thy seed after thee: Every man-child among you shall be circumcised. And ye shall circumcise the flesh of your foreskin; and it shall be a token of the covenant betwixt me and you" (Gen. xvii, 10, 11). It was also ordained that this should be extended to servants belonging to Abraham and his seed, as well as to their own children; and that in the case of children it was to be done on the eight day after birth (Gen. xvii, 14). It was appointed as an ordinance of perpetual obligation in the Abrahamic family, and the neglect of it entailed the penalty of being cut off from the people (12-14). In compliance with this, Abraham, though then ninety-nine years of age, was himself circumcised and all his household, as far as he was able, being circumcised. The son Isaac, the rite was attended to with regard to him (Gen. xxii, 4); and it continued to be observed by his posterity, and distinctively to characterize them from the people amidst whom they dwelt (Gen. xxviii, 14, 15). The usage thus introduced by Abraham was formally enacted as a legal institute by Moses ( Lev. xii, 8; comp. John vii, 22). Slaves, whether home-born or purchased, were circumcised (Gen. xvii, 12, 15); and foreigners must have their males circumcised before they could be allowed to partake of the passover (Exod. xii, 48), or become Jewish citizens (Judg. xiv, 10. See also Esth. viii, 17, where for Heb. מָצָאֲטֶה, "became Jews, the Sept. has παρειτίζοντες καὶ λουδαίον." In short, it was appointed to be observed in relation to all who became proselytes from heathenism to Judaism (comp. Judg. xiv, 10; Maimonides, Instrue BaAl, c. 13, cited by Lightfoot, Horae Semiticae, p. 113). The penalty in the event of a neglect of this ordinance appears in the case of Moses to have actually been demanded of the father, when the Lord "sought to kill him" because his son was uncircumcised (Exod. iv, 24-26). During the passage through the wilderness the practice fell into disuse, so that of those who entered Canaan none had been circumcised (Num. xv, 31). The reason for the abidance of the covenant to take possession of the land, Joshua, in obedience to God's command, caused all the males to be circumcised (Josh. v, 2-9). The most satisfactory explanation of this neglect appears to be, that the nation, while bearing the punishment of disobedience in its forty years' wandering, was regarded as under a temporary rejection by God, and was therefore prohibited from using the sign of the covenant. This agrees with the mention of their disobedience and its punishment, which immediately follows in the passage in Joshua (verse 6), and with the words (verse 9), "This day have I rolled away the reproach of Egypt from off you." The sons of Israel considered themselves as severed taunt of their former masters that God had brought them into the wilderness to slay them (Exod. xxxii, 12; Num. xiv, 18-16; Deut. ix, 28), which, so long as they remained uncircumcised and wanderers in the desert for their sin, was in danger of falling upon them. (Other views of the passage are given and discussed in Kel's Commentary on Joshua, p. 129.) From this time forward it became the pride of the nation to observe this ordinance; on all those people who did not observe it they looked down with contempt, not to say abhorrence (Judg. xiv, 5; xv, 18; 1 Sam. xiv, 9; xvii, 26, 2 Sam. xxi, 15; 1 Kings iii, 9; Ezek. xxxii, 27; Matt. xxi, 33, etc.); and so much did it become a rite distinctive of them, that their oppressors sought to prevent their observing it—an attempt to which they refused to submit, though threatened with the last penalties in case of disobedience (1 Mac. 1, 49, 50, 60 62). The introduction of Christianity was evidently the signal for the abolition of this sign of God; as the old covenant had waxed feeble and was passing away, that which was the token of it also ceased to be binding; the rule was proclaimed that "in Christ Jesus neither circumcision availed anything nor uncircumcision, but a new creature" (Gal. vi, 15; Col. iii, 11), though among the Jewish Christians were still found many who clung tenaciously to
their ancient distinctive rite, and would have imposed it even on the Gentiles converts to Christianity (Acts xv, 1; Gal. vii, 16 etc.). Our Lord himself was circumcised, because it became him to be of the seed of Abraham according to the flesh to fulfil all righteousness, and because he was "a minister of the circumcision for the truth of God, to confirm the promises made unto the fathers" (Rom. xv, 8); and Paul cauised Timothy to be circumcised to avoid offence to the Jews, his mother being a Jewess, but the spirit of Christianity was averse from such institutions (Acts xv, 1-11; Gal. ii, 3, etc.)—for the outward carnal circumcision it sought to substitute that of the heart (Rom. ii, 28, 29), "the circumcision not made with hands in putting off the sins of the flesh, even the circumcision of Christ" (Col. ii, 11).

Among the ancient Jews, the rule that circumcision should take place on the eighth day after birth was rigidly followed (Luke i, 59; ii, 21; Phil. iii, 5), save in very exceptional cases as those mentioned Exod. iv, 25; Josh. v, 5. Even their reverence for the Sabbath did not prevent the Jews from observing it on the day of the child's birth (cf. Joseph. ant. xvi, 12: comp. the דַּשְׁנָתָא דֵּיתָא, used by the Egyptians in preparing bodies for embalming, Herod. ii, 86). See KNIFE.

The operation was a painful one, at least to grown persons (Gen. xxxiv, 25; Josh. v, 8), and required about three days for the inflammation to subside (Arvieux, iii, 146). It was usual to connect the naming of the child with the circumcision (Gen. xxii, 3, 4; Luke i, 59; ii, 21), a practice which probably had respect to the fact that it was in connection with the institution of the rite that God gave to the ancestor of the race his name of Abraham (Gen. xvii, 5). See NAME.

2. Obliteration by apostate Jews.—Some of the Jews, in the time of Antiochus Epiphanes, wishing to assimilate themselves to the heathen around them, built a gymnasion (γυμνασίων) at Jerusalem, and, that they might not be known to be Jews when they appeared naked in the games, "made themselves uncircumcised" (1 Macc. i, 15, ἐπαγονούσας ἠποκοπήν, Vulg. 1. caput), pref. to the prophecy (Lev. xii, 5, 1, ἐπαγονοῦσας προφητείας), Sometimes this was done by a surgical operation, such as Celsius describes (De medic. vii, 25; comp. Galen, Meth. med. xiv, 16; Paul. in his Ep. to the Ephesians, De pond. et mens. p. 598, ed. Basili, 1844), sometimes by other means (Dioscor. iv, 157). The term for this was ἤπαχθείναι (Talm. 49,p. 454, o. druehging over again, sc. the prepuce (1 Macc. vii, 7; see Bartholin, Memb. bbl. xxxvi).

Against having recourse to this practice from an excessive anti-Judaistic tendency, the apostle Paul cautions the Corinthians in the words, "Was any one called being circumcised, let him not become uncircumcised" (μὴ ἠποκοπήθη, 1 Cor. vii, 18). See the Essay of Grodeck, De Judæa propugnatio atque atrocius (Lips. 1699); also in Schlegel's Hor. Hebr. ii; and in Hasel et Ikenius, Theo. ii, 798 sq.; and in Ugo- 

3. Figurative Use of the Term.—The moral meaning of the word "uncircumcised" was a natural result of its having been made legally essential to Hebrew faith. "Uncircumcised in heart and ears" was a metaphor to which a prophet would be carried, as necessary as a Christian preacher to such phrases as "unbaptized in soul" or "washed by regeneration." It was a well-known and readily understood symbol of purity.

4. Modern Usages.—The ceremony of circumcision, as practiced by the Jews in our own times, is thus: If the eighth day happens to be on the Sabbath, the ceremony cannot be performed on that day, notwithstanding its sanctity. When a male child is born, the godfather is chosen from amongst his relations or near friends; and if the party is not in circumstances to bear the expenses, which are considerable (for after the ceremony is performed a breakfast is provided, even amongst the poor), the doctor, in a luxurious vessel, is usual for the poor to get one amongst the richer, who accepts the office, and becomes a godfather. There are also societies formed amongst them for the purpose of defraying the expenses, and every Jew receives the benefit if his child is born in wedlock. The ceremony is performed in the following manner, in general.

The circumcision, provided with his very sharp instrument, called the circumcision knife (see Quadt, De cultui circumcisionis Judaicorum, Regiom. 1718), plasters, cummin-seed to dress the wound, proper bandages, etc., the child is brought to the door of the synagogue by the godmother, when the godfather receives it in his hand and carries it into the temple, where a large chair with two seats is placed; the one is for the godfather to sit upon, the other is called the seat of Elijah the prophet, who is called the angel or messenger of the covenant. As soon as the godfather enters with the child, the congregation say, "Blessed be he that cometh to be circumcised, and enter into the covenant on the eighth day." The godfather being seated, and the child placed on a cushion in his lap, the circumcisor performs the operation, and, holding the child in his arms, takes a glass of wine into his right hand, and says as follows: "Blessed be those, O Lord our God, King of the Universe, Creator of the fruit of the vine, Blessed art thou, O Lord our God! who hast sanctified his beloved from the womb, and ordained an ordinance for his kindred, and sealed his descendants with the mark of his holy covenant; therefore for the merit of this, O living God! our rock and inheritance, command the deliverance of the beloved one from the curse from the fruit from the vine of the covenant which he hath put in our flesh. Blessed art thou, O Lord, the Maker of the Covenant! Our God, and the God of our fathers! preserve this child to his father and mother, and his name shall be called in Israel, A, the son of B. Let the father rejoice in those that go forth from his loins, and let his mother be glad in the fruit of her womb; as it is written, 'Thy father and mother shall rejoice, and they that begat thee shall be glad.'"

The father of the child says the following grace: "Blessed art thou, O Lord our God, King of the Universe! who hast sanctified us with his commandments, and commanded us to enter into the covenant of our father Abraham." The congregation answer, "As he hath entered into the law, the canopoy, and the good and virtuous deeds." (See Buxtorf, Synagoga Judaicae, ch. ii.)

11. History of the Institution.—Herodotus long ago declared that it was adopted by the Egyptians for cleanliness (καθαρισμός νίκες); and a slight acquaintance with the ideas of the Turks concerning personal defilement will make it easy to believe that an idea of cleanliness continued the practice among nations which had once become habituated to it. In the ancient times among this Turkish nation it was fixed by a great height; nor is it wonderful that in hot climates detailed precepts of cleanliness form a very large part of primitive religion. But we can hardly rest in this as a sufficient account of the origin of the rite (see
CIRCUMCISION

It is more important to state that an adequate physical reason for performing the operation on females of several African races has been fully substantiated. The curious reader will find in the works of Dr. D. B. S. and Dr. W. D. S. of Mr. Barrow and Dr. Somerville on this point, with an allusion to the efforts of the Komish missionaries to forbid the practice in Abyssinia, and the unexpected consequences which thwarted them. No positive evidence has yet been obtained that the operation is equally expedient for the males in any of the same races; yet the analogy of the two cases forces us to believe that in both the custom has a physical or medical ground, especially when it is remarked to predominate so much in Africa, where alone (as far as yet appears) such physical peculiarities of structure exist. It was practised, moreover, by the males of African tribes who were acquainted by Montefiore with the monomaniacalism, that a broader ground must be sought for it than simple cleanliness. We have already named the Troglodytes. Strabo mentions two other tribes of Africa, whom he calls Kroepkhagi and Koboli (xvi. p. 443, 467-289, 292, ed. Tauch.), who practised on themselves the custom of cutting the foreskin (καταλακτήριον), ascribed to the Koboli by Diodorus also. The fact, also, that most of these nations performed whatever operation it was, not on infants, but on those who were advancing towards marriageable age, conspires to indicate that some physical inconvenience gradually showed itself (as with the Bushmen formerly, and with the savages of New Zealand, etc.), that it is a practice upon infant circumcision as the distinguishing mark of Judaism; and this may be nearly correct, though we have seen that, according to Abulfeda, some Arabs delayed it only till after teething. In fact, Diodorus (ii. 51), when speaking of that branch of the Troglodyte nations which was called Koboli, declares that they were subjected to the operation in infancy (τρελευτα). Their unnatural and cruel custom is possibly to be referred to superstition. Some, indeed, have looked on circumcision itself as a softened form of the barbarous rite by which the Galli, or priests of Cybele, were consecrated (Cassius) (μεγαλακτηρια), for the custom might, on the contrary, be a carrying out of that barbarity to the extremest point possible, short of exterminating the population of a tribe. Traditionsary or superstitions reasons certainly can alone explain the presence of the custom among the Sandwich Islanders (Michauela, Orient. Biblic. xiv. 50 sq.), and aboriginal Americans (Guinilla, Historia de la Espana, Avign. 1790, i, 183 sq.), for physiological considerations, seem to fail (see Burdach, Physiol. iii. 386). If an independent and human origin has been discovered for Egyptian circumcision, the thought of necessity arises that the Israelites must have had it from the same sources as the nations around them, and it has been discussed (Semenov, De Leg. Heb. i, 4, p. 70 sq.) whether they even borrowed it from the Egyptians. (Moore and Pastore, p. 382) that the latter borrowed it from the Phoenicians, rest on the myth of Saturn, in Sanchonatho, Fraumg. p. 56.) The idea has naturally given much offence; it is emancipatory, peculiar difficulty; it is only a part of another far wider inquiry. It is notorious that many other ancient nations had various ceremonies and institutions in common with the Jews, and that the Hebrew law is by no means in all points original. That sacrifice pre-existed on the surface of the Bible history. The same, however, is true of temples, tabernacles, priests, ever-burning fire, oracles, etc. The fact has often been de

noted by saying that the Jewish institutions are a selection, revision, and re-enactment of an older patriarchal religion. Other treatises on the Gentile origin of circumcision are by Hofmann (Aldorfer, 1771), Rus (Jen. 1707), Zeibich (Ger. 1770), Anton (Lips. 1655). Circumcision, in general, was simply an expedient to promote health, facilitating cleanliness, and preventing certain painful affections, such as of the gonorrhoea apuria (from phymato, or stricture), and especially the ābhajak, or "carbuncle," to which, in hot climates, men are subject (Josephus, Ant. i. 18, vi. 19, x. 7)." It is a ch. xiv.), or an unusual prolongation of the part in question (Thevenot, i, 58; Haqet, in Voigt's Magaz. für Phys. vi. 443; but see Dann, in Belderling's Magaz. für Aetzer, xiv. 416 sq.). In so far as it served this end, the Israelites bad, of course, the benefit of it; but that this formed the reason and design of its appointment by God, though asserted by some men of learning and ability, seems utterly untenable; for, in the first place, this opinion is without the slightest support from Scripture; often as the subject is referred to there, we find no hint as to this being the purpose of the observance; 30th. This hypothesis is quite opposed to the views traced by Montefiore concerning the origin of the rite among the Israelites; 3dly, it is absurd to suppose that a mere prophylactic usage should by God be elevated to the solemnity of a religious ordinance; 4thly, Whatever advantages in a hygienic respect might accrue from the practice, these were confined to individuals, and could not be extended to health to men generally in hot climates (Niebuhr, loc. cit.); and therefore to oblige the whole male community to undergo this process in infancy for purposes of health would have been to act as unwise as a part if it had been enjoined that every one should lose a limb, because it was possible that some one might contract (nec), of what that limb, etc.; 5thly, If circumcision was a mere hygienic precaution, why should it have been abolished by Christianity? why should the apostles have held it to be so hostile to Christianity? and why should the difficulty of becoming a Christian have been increased by the prohibition to those who embraced Christianity of a necessary condition of their children's health? See Philo, De Circumcis. In opp. ii, 210 sq.; Ackermann, in Weise's Materialien für Gottsgelehrtheit (Gera. 1784), i, 50 sq.; Schulz, Eresciatit. i, ii; Michaelis, Orient. Bibl. xxii, 8 sq.; Rust, Handb. d. Chirurgie, v. 50; Hofmann, De Circumcisione in apostrophiis, (Lips. 1730); Wolfshammer, De causis fecunditatis Hæbor. (Hal. 1742); Vogel, Dubia de usu circumciscionis medico (Gott. 1765); Meiners, De circumciscion. origine et causis (in the Comment. Societ. Gott. xiv. 207 sq.); and his Krit. Gesch. d. Relig. iv. 475 sq.). On the supposed tendency of the custom to prevent excessive venery (Michaelis in Berlinh. Journ. iv. 456), especially onanism (Buxtorf, Lex. Othald. coll. 112 sq.), see Schnei- der in Henke's Zeit. f. Staatsw. xiv. 11, 228. For other reasons, see Photius, Ep. 265.

When first appointed by God, circumcision was expressly set forth as a token of the covenant which God had made with Abraham; and the apostle tells us that Abraham received "the sign of circumcision as a seal of the righteousness of that faith which he had, being yet uncircumcised" (Rom. iv. 11); so that to Abraham it was not only a sign or token of God's covenant, but also an obligation or a signification that he was in a state of oblation before God, the question of the Mosaic institution was also the sign of the covenant which God made with Israel, which is hence called the "covenant of circumcision" (Acts vii. 8). In consequence of this, it became the medium of access to the privileges of the covenant, and entailed on all who received it an obligation to fulfill the duties which the covenant imposed (Rom. ii. 26; iii. 1; Gal. v. 9). In other words, it was the token which assured to Abraham
and his descendants the promise of the Messiah (Gen. xvii). It was thus made a necessary condition of Jewish nationality. Circumcision served also to separate the people of the Jews from the rest of the nations, as a people apart to God. These were its uses. As respects its meaning, that was symbolic, and the things which it symbolized were two: 1. Consecration to God; and, 2. Mental and spiritual purification (Exod. vi. 12; Lev. xix. 25; Deut. x. 16; xxx. 6; Isa. iii. 1; Jer. iv. 4; vi. 10; Rom. ii. 25-29; Col. ii. 11, etc. Compare Philo, De Circumcisione; Jones, Figurative Language of Scripture, Lecture v., p. 135). Thus was there thus connected the idea of consecration, and along with this that of reconciliation, in circumcision; and it was thereby, as Ewald rightly remarks (Allers. p. 95), an offering of the body to Jehovah, with the result that the execution of all the offerings, as fully developed and raised to their true elevation by the prophets, had to be presented to him as an offering of the soul. Only as this inner offering was perfectly presented could the obligation to be a priestly kingdom and a holy people be fulfilled' (Valhinger in Herzog's Real-Encycl. ii. 110).—Klotz, a. v.

On this subject in general, see Spencer, De Legibus Hebraeorum; T.D. Ricard, De Mosaicis Lexis; Michaelis, Commentaria in the Laws of Moses, iii. 58-93; Witsius, De Fide, bk. iv, 6, 8; Leovetis, De circumcisione Judorum (Vitember 1769-80); Smeets, De circuncisione Abrahamo divinitus data (Francisco. 1690); Bergson, Beschreibung vom historischen, krit. u. med. Studium (Berlin, 1844); Zimmermann, Die heilige und das heidn. praktisch-operation u. ritualen Systeme (Vienna, 1845); Heymann, Die Beschreibung in p-thol. Bedeutung (Magdeburg. 1844); M. G. Salomon, Die Beschreibung, hist. u. medizinisch beleuchtet (Braunschweig. 1844); S. Salomon, Phineas nebst Beschreibung (Hamb. 1858); Schmid's ed. of Maimonides, tract ⁷ך⁷ך (Strassb. 1861, 1790); Wolfers, Die Beschreibung der Juden (Lambsdorf. 1882).

IV. Christian Views on the Subject.—The attitude which Christianity, at its introduction, assumed towards circumcision was one of absolute hostility, so far as the necessity of the rite to salvation, or its possession of any religious or moral worth was concerned (Acts xv; Gal. v. 2). But while the apostles resolutely forbade its imposition by authority on the Gentiles, they made no objection to its practice, as a mere matter of family custom and piety. Paul would by no means consent to the demand for Titus, who was a Greek, to be circumcised (Gal. ii, 3-5), on another occasion had Timothy circumcised to conciliate the Jews; and that he might preach to them with more effect as being one of themselves (Acts vii. 1). The Abyssinian Christians still observe circumcision as a national custom (see Gibbon, Decline and Fall, N. Y. edition, iv. 565). In accordance with the spirit of Christianity, those who ascribed efficacy to the mere outward rite are spoken of in the N. T. almost with contempt as 'the concision' or 'amputation' (τὴν καρακαριάνυν); while the claim to be the true circumcision is vindicated for Christians themselves (Phil. iii. 3, 2). An ethical idea is attached to circumcision in the O. T., where uncircumcised lips (Exod. vii. 12, 30), or ears (Jer. vi. 10), or hearts (Lev. xiv. 41) are spoken of, i.e. either stemming from, or being related to, the ancient rites. Thus, in Heb., it is directed as a foreskin, or rather rebellious and unholy (Deut. xxx. 6; Jer. iv. 4), because circumcision was the symbol of purity (see Isa. i. 1). Thus the fruit of a tree is called uncircumcised, or, in other words, unclean (Lev. xiii. 25). In the N. T. the ethical and spiritual idea of purity and holiness is fully developed (Col. ii. 11, 13; Rom. ii, 28, 29).

V. Relation to Christian Baptism.—1. The ethical and spiritual value of circumcision did not depend on its existence or use prior to its adoption by God as a symbol of true religion. The condescension of Christ consecrated and elevated old rites to new spheres, upon the principle that 'what God hath cleansed, that call not thou common.' On this principle he elected the baptismal purification, and the simple elements of the rite. When Abraham had reached its full development, including all the seminal elements for the future growth of his Church in the world, God ratified it by the seal of circumcision. Whatever was afterwards added to the polity of the Church or nation worked no modification of the great principles involved, but was rather called into being by the exigencies of times and circumstances. This rite, as a symbol, bespoke the consummation of the Abrahamic covenant in all its power and fulness of temporal, as well as eternal and heavenly interests. 2. This ordinance included in its significance, as a fitting and most impressive emblem, deep spiritual truths. The history of circumcision, in its connection with the Abrahamic covenant and religion, clearly exhibits the nature of the things it symbolized by the direction of its figurative applications. In involving and engaging moral and mental purity, through faith and worship towards Abraham's God, it became the token of our belonging to the pious Israelites in whatever foreign regions he might dwell, notwithstanding he might never be permitted to behold Palestine or the holy city. For he alone was a Jew and a real son of Abraham, entitled to the immunities of the Covenant, whose circumcision was 'of the heart; in the spirit, and not in the letter; whose praise is not of men, but of God' (Rom. ii. 29, 30). Prolificacy of the national government, though it might bring afflictions, could not nullify the spiritual law, or make void the seal upon the faithful. 'All are not Israel which are of Israel' (Rom. ix. 6). The ἐγκαλεσθαι, in pév, 'Circumcise in heart, in spirit'—was then, as now, the only means in which the only seed of Abraham was the Messiah; and, regarding the nation, therein was Abraham's seed an imperium in imperio.

8. The relation, therefore, of CIRCUMCISION TO CHRISTIAN BAPTISM is manifest. Both are initiations into peculiar religious privileges and immunities, the emblems of inward cleansing, the signs and seals of consecration to and faith in the God of Abraham. Baptism follows circumcision, and proceeds to the antecedent, the cause of external likeness, but on account of identity of offices and import, in sealing and imaging the same spiritual truths. For the saving economy of Jehovah has been the same from the beginning; only the instruments, furniture, and external appliances have undergone change. The Zion of the old dispensation is the Zion of the newly-arranged Church; the דָּוִד— omega—has only been purged, its arena enlarged, and the machinery of the garnering process changed from a special to a general object, from the national to the cosmical. The pious patriarch was a Christian in everything but name and extent of privilege. The longitude of the atonement is for all time, and the existence of the blessed, it befits the breadth of the race. The change of the symbolic seal adapts it to a wider sphere, yet it is only in the visible form, not in the substance; it becomes a new and more eligible likeness of the same things. 'Circumcision and baptism correspond in meaning. They both relate to the renewal of the heart' (Carver, p. 367). It was a mark of distinction made upon those entering into covenant with God for worship and salvation; can baptism be either less or more? Compare Andrew Fuller, Lect. Gen. xvii, Dr. L. Chase, Design of Baptism, in Bapt. Tracts for the Times, p. 26.

4. The writers of the N. T. bear testimony to the view here presented. St. Paul uses the very impressive words, 'Baptized with him' (Christos γεννημένος αὐτῷ ἐν τῷ βαπτίσματι (Col. ii. 12), as synonymous with and explanatory of ἡμετεροίς γοι Ἰησοῦ, 'the circumcision of Christ.' Whatever in
tensity there is in the words "buried with him," it was only the effort of the apostle to show how "baptism into Christ" was like circumcision; it "put off the body of the sins of the flesh." Had such not been the literal meaning of circumcision, Paul would never have thus reasoned. What better testimony could be desired to prove the relation of the two rites, and that the one had succeeded the other? Objections from a want of external agreement or circumstances of administration can be of no force. The Greek περιτμήσεως, περιτμήσω, περιτμήσωμα, περιτμητικός, had such a suggestive force, but they are neither of them analogical forms with the Heb. בְּטֶלֶק, employed as a technical in Gen. xvii. Yet the idea of the rite is, perhaps, as perfect under the Semitic as under the European form.

5. The early ecclesiastical writers universally held the views here given. Their doctrine, made dependent on John iii, 5, that βαπτίσματι ἐξ φότος καὶ πνευμάτος, baptism of water and the Spirit, was equivalent to ἀναγέννησις ἐξ φότος καὶ πνευμάτος, regeneration by water and the Spirit, caused them to speak of baptism as ἡ πνευματικὴ διακρίνησις, spiritual circumcision, because the Spirit was always joined with the water in the baptism of an infant, or a converting, adult believer.

6. In Justin Martyr baptism is very frequently alluded to as the "true circumcision," of which the ancient rite was a type (Apol. ii. 41; Dial. c. Trypho. § 16). "God commands us to be washed with this purification, and to be circumcised with the true circumcision" (λατρεύετε οὐκ θανάτου τὸ λογον ἐκεῖνο τὸ τες καὶ περιτμήσεως τῷ αὐλοθρήνῳ πενταγωμών;) (Dial. c. Trypho. § 16). He says that Christians "had not received the flabby circumcision, but the spiritual one, which Enoch and those like him made use of; and we received it—λατρεύετε τῷ βαπτισματι—through baptism," etc. (ib. § 43; comp. § 19). In § 29 of this dialogue he speaks of circumcision under the law as baptism. He says, "What need have I for circumcision who have the testimony of God in my favor?" (Τίς οἰκεῖ τῷ βαπτισματι χωρίᾳ ἐν τω πνευματὶ βαπτίσας;.) "What need have I of that other baptism, who have been baptized with the Holy Ghost?" This must be esteemed as a remarkable identification of the two rites, for we should not forget that, as the ordinance of baptism was to Justin "the water of life" (Ibid. c. Trypho. § 14), so to receive it was to be baptized with the Holy Ghost. From the same point of view Basil asks certain ones who delayed baptism, "Do you put off the circumcision made without hands—καταφυγεινήν πενταγωμόν—putting off the flesh, which is performed in baptism?" (ἐν τῷ βαπτισματι τελευτῶν;) (Orat. exhort. ad Bap. t. ii. ed. Ben. (Par. 1721).) Cyprian and his council, Ep. lxiv, ad Fid., held in the baptism of infants that the analogy then followed of ancient circumcision should not be binding (Nee spiritalem circumcisionem impediendi carnali circumcisione desider.:) "Nor ought the spiritual circumcision (baptism) be hindered by the carnal circumcision." Of the priesthood that Christ was to have the Christian rite, Tertullian calls Christ Novo circumcisionis Purgator, "the purifier of the new circumcision" (adv. Jud. 3, 4; comp. Ambrose, lib. ii, De Abrahamo Patr. c. 11; Ireneus, Her. lib. iv. 30).

7. It remains to be observed, briefly, that the objection to circumcision (Acts xv; Gal. v. 2) was not to the rite itself, which was a seal of promise, not of law, and must stand till abrogated by the perfection of the seed in Christ, and a new symbol be adopted in its stead. As the objects of the covenant was to be attained not by seminal propagation, but by moral and spiritual means, among all nations, it was held that the seal should correspond to these in its import. The "hostility," therefore, was not to circumcision, but to the claim of salvation through the keeping of the law which it enjoined. In this, Christ would be set aside. Circumcision, in its proper sphere, was not "worthless," or it never had been "the seal of the righteousness of faith." The ancient symbol was grasped, and even after the faith of the Jew, and by a wise moderation the apostles saw it accomplished. See, on this subject, Wardlaw, Dism. on the Script. Authority of Infant Baptism, p. 29 37; Hibbard, Christianism usi, p. 61-68; Pond, on Baptism, p. 82-85; Rice, on Baptism of Infants, ch. iii; Fairbairn's Typology of Scripture, i, 274; Dwight, Theology, Ser. iv.; Hillis, Institutes, ii, 616-626; Wesley, Works, N. Y. ed. vi.; Buchanan, on Justification, Edin. 1867, p. 68-73.

CIRCUMCISION, FESTIVAL OF THE, a festival celebrated in the Roman and English churches on the 1st of January, in commemoration of the circumcision of Christ. After the introduction of the festival of Christmas, the 1st of January was distinguished as octava natalis Domini, the octave of the nativity, as Christ was circumcised on the eighth day. "At first it was observed rather as a day of humiliation than of feasting; and this was designed to mark the difference between the manners of Christians and those of the heathen, and as it was placed the first day of the chief day of their saturnalia, with great licentiousness" (Farrar, s. v.). The festival originated, probably, in the 7th century. —Siegel, Handbuch d. kirch.-rechtlichen Verhältnisse i, 207, and references there.

Cis (Κίσ). The Gracianic form (Acts xiii. 21) of the name of Kish (q. v.), the father of king Saul.

Cliai (Κλιαῖ), (rather Cliaius, Cliai.) another Gracianic form (Eth. xi. 2) of the name of Kish (q. v.), the great-grandfather of Mordecai (Esth. ii. 6).

Cliaeus. See Chisleu.

Cleander. See Iemenes.

Cistercians (or Cisterhtians), an order of monks founded in the year 1098 by Robert, a Benedictine, and abbot of Molème, in Burgundy. Finding it impossible to preserve discipline in his convent, he retired, with twenty of his best monks, to Citeaux, in the diocese of Chalon, where he laid the foundations of the famous order named from the place. Robert, being ordered by the pope to resume the government of the abbey of Molème, was succeeded in that of Citeaux by Alberic; and pope Paschal II, by a bull of the year 1100, took Citeaux under his protection. Alberic drew up the first statutes for his monks of Citeaux, or Cistercians, in which he enjoined a strict observance of the rules of St. Benedict. The habit of the order was a white robe in the form of a cassock: it was at first black; but they pretend that the holy Virgin, appearing to Alberic, gave him a white habit, and from this time they changed the black for white, retaining the black scapular and hood: their garment was girt with a black girdle of wool: in the choir they had a white cowl, and over it a hood, with a rochet hanging down before to the waist, and in a point behind to the calf of the leg. In memory of the change of habit, a festival was ordained, on the 6th August, called "the day of the blessed Virgin at Citeaux, and the miraculous changing from black to white." The order made surprising progress. "From the very first, the Cistercians were the spoiled children of the apostolic see, and every conceivable privilege and exemption was heaped upon them" (Christian Remembrances, c. 16). The first Cistercian abbey in England was founded by Giffard, bishop of Winchester, at Waverley, Surrey. The order spread in England rapidly, and accumulated vast estates. Eighty-five abbeys in various parts of England owned the maternity either of Citeaux or Clairvaux. Fifty years after, it had five hundred abbeys; and one hundred years after it boasted of one thousand eight hundred abbeys, most of which had been founded before the year 1200.
The government of the order was in the hands of twenty-five *dejimiores*, the first of whom was the abbot of Citeaux, who, as abbot general, was the head of the whole order. Next to him in dignity were the abbots La Ferté, Pontigny, Clairvaux, and Morimond, the four oldest convents after Citeaux. The abbot of Citeaux appointed four other *dejimiores*. The abbots of La Ferté, Pontigny, Clairvaux, and Morimond nominated in turn twenty-five (five each), four of whom, i.e., one of each nomination, were rejected by the abbot general. The legislative assembly, called the General Chapter, met originally annually. They did not settle in any diocese before the bishop had accepted the Carta Charitatis, the fundamental law of the order, which had been given in 1119 by abbot Stephen of Citeaux. In 1148 the king of Portugal imposed upon his whole kingdom the duties of vassalage towards the abbey of Clairvaux, so that (in 1578) claims were laid by the latter to all Portugal. The decay of the Cistercians began with the rise of the mendicant orders. Their history consists mostly in efforts of popes and some abbots to stay the flood of corruption which early overflowed the whole order. These efforts were usually unsuccessful, but led to the establishment of a number of reformed congregations, which received from the popes the privilege of an independent organization. The most important are those founded in Spain in 1493, in Tuscany in 1497, and that founded by pope Urban VIII in 1630. The present number of abbeys is very limited. There were in 1843 16 abbeys, with 499 members, in Austria; 9 in Italy, several of which have since been suppressed by the Sardinian government; 5 in Switzerland, of which one has since been suppressed; 1 in Belgium; and 1 in Poland. Since then they have re-established themselves also in England, at St. Susan's, Lullworth, and Mount St. Bernard, in Leicestershire. Several other monastic organizations owe their origin directly or indirectly to the Cistercians. The Templars received their rule from St. Bernard of Clairvaux. The Spanish knights of Calatrava, Alcantara, and Monteja, and the Portuguese of Avis and Christ, were affiliated to the Cistercians. The Feuillants took their origin in 1754 in the reformed Cistercian abbey of Feelans, near Toulouse. The austerest congregation that sprung from them are the Trappists, founded in 1862. See Feur, Geschichte der Mönchorden, i, 90 sq.; A concise History of the Cistercian Order (London, 1852, sm. 8vo); Maillard, Dark Ages, p. 838; Luard, Anecdotes Monastici, vols. i, ii (Lond. 1844, 1845); Christian Remembrancer, July, 1867, art. i. See Trappists.

CISTERCIAN NUNS (Bernardinæ), a religious order founded in 1120 by abbot Stephen of Citeaux for the convent of Tarb. They followed the rule of Citeaux under the general administration of the Cistercians. Later, they were frequently subjected to the jurisdiction of the bishops. Their habit was white, with a black veil, scapular, and girdle. They gradually amassed immense riches, and numbered as many as 9000 convents. In Germany some of the abbeys were raised to the dignity of monasteries, and formed a part of the empire, and remained so until 1803. Among all their convents, that of Port Royal (q. v.), in France, became the most celebrated. Only a few convents are left, viz. in Switzerland (which has now by far the largest number), in Italy, Bavaria, Saxony, and France. See Trappists.

Cistern (Gr. or τωρις, hor, from ὑγρός, to dig or bore, Genesises, Thea. Heb. p. 176; Sept. usually νεραγος; Vulg. cisterna or lacus; A.V. generally called a pool), a receptacle for water, either conducted from an external spring, or proceeding from rain-fall (Jer. ii, 13; Prov. x, 15; Eccles. xxi, 6; Jer. xxxvi, 16; a pit is often rendered; the mod. Arab. birka). Thus the cistern is essentially distinguished from the living spring (Jert. xii, 3; τηρις; but from the well ἄηρ, hor, only in the fact that hor is almost always used to denote a place ordinarily containing water, but not being itself a well, while ἄηρ, hor, is often used for a dry pit, or one that may be left dry at pleasure (Stanley, Palest. p. 512, 514). See Ain. But the pit into which Joseph was cast by his brethren (Gen. xxvii, 24) was a hor or dry well (Thomson, Land and Book, i, 412).

The dryness of the summer months between May and September in Syria, and the scarcity of springs in many parts of the country, make it necessary to collect in reservoirs and cisterns the rain-water, of which an abundance falls in the intermediate period (Shaw, Travels, p. 385; Jerome, quoted by Harmer, i, 148; Robinson, ii, 98; Kitto, Phys. Geog. of Palest. p. 502, 500). See Well. Hence the frequent mention of cisterns in Scripture, and the practice generally of those which are found in the open country. These were, it seems, the property of these by whom they were formed (Num. xxii, 22). They are usually little more than large pits (see Eclus. i, 3), but sometimes take the character of extensive subterraneous vaults, open only by a small mouth, like those of a well. They are filled with blocks of stone (and (when the cliff is high) with stones) filled with snow during winter, and are then closed at the mouth with large flat stones, over which sand is spread in such a way as to prevent their being early discovered (comp. the "sealed fountain" of Cant. iv, 12). If by any chance the waters which the shi pherds has thus treasure up are lost by means of an earthquake or some other casualty, or are stolen, both he and his flocks are exposed to great and imminent danger, as are also travellers who hasten to a cistern and find its waters gone (comp. Judith vii, 21). For this reason a failure of water is used as the image of any great calamity (Isa. xlii, 17, 18; xliv, 3). There is usually a large deposit of mud at the bottom of these cisterns, so that he who falls into them, even when they are without water, is liable to perish miserably (Gen. xxxvii, 22 sq.; Jer. xxxviii, 6; Lam. iii, 53; Ps. xi, 2; lxix, 15). In cities the cisterns were works of much labor, for they were eitherewn in the rocks or surrounded with subterraneous walls, and lined with a fine incrustation. See Bethesda. The system which in this respect formerly prevailed in Palestine is doubtless the same that exists at present; and indeed there is every probability that most of the cisterns now in use were constructed in very ancient times. Dr. Robinson assures us that "the extensive dependence of Jerusalem at the present day is on its cisterns; and this has probably always been the case" (Researches, i, 480). Both large and small cisterns are frequent throughout the whole of Syria and Pales-

Cisterian Monk and Nun.
CISTERN

CITHERN

tine, and for the construction of them the rocky nature of the ground affords peculiar facilities, either in original excavations or by enlargement of natural cavities. Dr. Robinson remarks that the inhabitants of all the hill country of Judah and Benjamin are in the habit of collecting water during the rainy season in tanks and cisterns, in the cities and fields, and along the roads where they keep themselves and their flocks, and for the comfort of the passing traveler. Many of these are obviously antique, and exist along ancient roads now deserted. On the long-forgotten way from Jericho to Bethel "broken cisterns" of high antiquity are found at regular intervals. Jerusalemites, when they are not supplied with water, in a dry neighborhood (xvi, 700), depend mainly for this upon its cisterns, of which almost every private house possesses one or more, excavated in the rock on which the city is built. The following are the dimensions of four belonging to the house in which Dr. B. resided: 1, 15 x 8 x 12 feet deep; 2, 8 x 4 x 15; 3, 8 x 10 x 15; 4, 80 x 30 x 20. The cisterns have usually a round opening at the top, sometimes built up with stone-work above, and furnished with a curb and a wheel for the bucket (Excl. xii, 6), so that they have externally much the appearance of an ordinary well. The water is conducted into them from the surrounding country during the rainy season, and the water with care remains sweet during the whole summer and autumn. In this manner most of the larger houses and public buildings are supplied (ib.). Josephus (War, iv, 4, 4) describes the abundant provision for water supply in the towers and fortresses of Jerusalem, a supply which has contributed greatly to its capacity for defence, while the dryness of the neighborhood has in all cases hindered the operations of besiegers. Thus Hezekiah stopped the supply of water outside the city in anticipation of the attack of Sennacherib (2 Chron. xxxvii, 8, 4). The progress of Antiochus Sidetes (B.C. 194) was at first retarded by want of water, though this want was afterwards unexpectedly relieved (Joseph. Ant. xiii, 8, 2; Clinton, iii, 331). Josephus also imputes to divine interposition the supply of water with which the army of Titus was furnished after suffering from want of it (War, v, 9, 4). The Crusaders also, during the siege A.D. 1099, were in want of water, but they were saved by the besiegers being fully supplied (Matth. Paris, Hist. p. 46, 49, ed. Wat.). Benjamin of Tudela says very little water is found at Jerusalem, but the inhabitants drink rain-water, which they collect in their houses (Bohn's ed. of Early Travels, p. 84). Barely gives the most complete description of the subterranean reservoirs of Jerusalem, particularly those under the Haram enclosure ("City of the Great King," p. 266, etc.). See JERUSALEM. The defense of Masada by Joseph, brother of Herod, against Antigonus was enabled to be prolonged owing to an unexpected replenishing of the cisterns by a shower of rain (Josephus, Ant. xiv, 16, 2), and in a subsequent passage he describes the cisterns and reservoirs by which that fortress was plentifully supplied with water, as he had previously done in the case of Jerusalem and Machærus (War, iv, 4, 4; iv, 6, 2; vii, 8, 3). Burckhardt mentions cisterns belonging to private houses, among other places, at Sermein, near Alpae (d'Ange, p. 121), El Bazeh in the Orontes valley (p. 139), Dhami and Mismeza in the Lejah (p. 110, 112, 118). Tiberias (p. 801), Kerek in Moab (p. 877), Mount Tabor (p. 304). Of some at Haleb, near Gilgal, the dimensions are given by Robinson (Later Researches, p. 137): 1, 7 x 5 x 3 feet deep; 2, nearly the same; 3, 14 x 12 x 7. They have one or two steps to descend to them, as is also the case with one near Gaxz, now disused, described by Sandys as "an mighty cistern, filled only by the rain-water, and descended into by stairs of stone" (Sandys, p. 150; but see Robinson, ii, 576). Of those at Haleb, some were covered with flat stones, resting on arches, some en-

tirely open, and all evidently antique (Robinson, new ed. iii, 145). Dr. Olini (Travels, ii, 84) describes something of a better sort near Hebron: "Just without the city are some cisterns, which probably belong to a very early age. A large basin, forty-sevenpaces square, stands outside the gate by which we entered the city. It was nearly full of greenish water, and has been kept by the inhabitants and their flocks, or was carried down and used in times of water shortage. It is of very solid workmanship, built of hewn limestone, and may be eighteen or twenty feet deep. The descent is by flights of stairs situated at the four corners, by which the water is brought up in vessels and skins, and poured into troughs for the flocks, or was carried away by pipes at this time fit for drinking. Another pool, of smaller dimensions, occupies higher ground on the north side of the city. These reservoirs are filled by the rains, and are unconnected with any perennial fountain." Vitruvius (vii, 7) describes the method in use in his day for constructing water-tanks, but the native rock of Palestine usually superseded the use of more art in this work than is sufficient to excavate a basin of the required dimensions. The city of Alexandria is supplied with water contained in arched cisterns supported by pillars, extending under a great part of the old city (Van Escom, Travels, ii, 184). See Pool.

Empty cisterns were sometimes used as prisons and places of confinement. Joseph was cast into a "pit" (Gen. xxxvii, 22), and his "dungeon" is called by the same name (xli, 14). Jeremiah was thrown into a miry though empty cistern, whose depth is indicated by the cords used to let him down (Jer. xxixviii, 6). To this prison tradition has assigned a locality near the gate called Herod's gate (Hassuelqiat, p. 140; Maundrell). Bohn's ed. of Early Travels, p. 80; See Prison. According to Thomson (Land and Book, ii, 262-4), dry cisterns are often used in Palestine for granaries, and are very liable to be plundered of their wheat by ants. See GRANARY.

Various allusions by way of figure are made to cisterns in Scripture. The breaking of the wheel at the cistern—the wheel that was used to tend down and pull up again the bucket which drew water from the larger cisterns—is used in Eccles. xii, 6, as an image of the breaking up of the animal economy, which pervertively sends, while it is at work, the flow of vital blood from the heart to the extremities. To drink waters out of one's own cistern is a proverbial expression (Prov. v, 15) for confining one's self to the legitimate sources of pleasure which God has associated with our state, as contradistinguished from those which are the property of others. But the merely human and artificial nature of cisterns, which are of man's workmanship, and have no living spring within them, serve as a fit emblem of the insufficiency of creature confidences, and of the folly of preferring these to the infinite and everflowing fullness of God—
as in the solemn charge of the prophet, "My people have committed two evils: they have forsaken me, the fountain of living waters, and hewed them out cisterns, broken cisterns that can hold no water" (Jer. ii, 13). See Water.

**Cistertians.** See CISTERCIANNS.

**Citeaux.** See CISTERCIANS.

**Cithern** (κιθάρα, 1 Mac. iv, 54, i.e. *cithara* or *guitar*), a musical instrument most probably of Greek origin, employed by the Chaldaens at balls and routs, and introduced by the Hebrews into Palestine on their return thither after the Babylonian exile (Psal. xc. 9). The lyre of the chithern was the model of the guitar, and was known at a later period as the cithern, under which name it is mentioned by the old dramatists as having constituted part of the furniture of a barber's shop. Of the same species is the *Cither* or *Eieder* of Southern Germany, the Tyrol, and Switzerland.
CITIES

With respect to the shape of the cithern or cithara mentioned in the Apocalypse, the opinion of the learned is divided: according to some, it resembled in form the Greek dela, \( \Delta \); others represent it as a half-moon or a semicircle, like the modern guitar. In many Eastern countries it is still in use with strings, varying in number from three to twenty-four. Under the name of ko\( \text{ko}\)thir, travellers describe it as a wooden plate or dish, with a hole beneath, and a piece of skin stretched above it as a drum. Two strings, joined after the manner of a fan, pass through the skin at the end, and where the two sticks stand apart, they are connected by a transverse piece of wood. From the upper end of this wooden triangle the point below are fastened five chords, which, at a little distance above their junction, pass over a bridge, like the strings of a violin. The chords are made to vibrate by means of a feather thong fastened to one of the lateral sticks of the triangle (see Mendelsohn's edition of the Psalms, 221). The cithara, if it be not the same with, resembles very closely the instruments mentioned in the book of Psalms, under the denominations of \( \text{סְנֶה} \), \( 
\text{כּמְנֶה} \), and \( \text{סְנֶה} \), respectively rendered in the A. V. "harp," "psaltery," "organ." In Chaldee, cithara is transferred to \( \text{כּמְנֶה} \), the Kerith for \( \text{כּמְנֶה} \) (Dan. iii. 5), in the A. V. rendered "harp," and the same Eng. word is employed instead of cithern (1 Macc. iv. 54) in Robert Barker's edition of the English Bible (London, 1651). Gesenius (Thes. Heb. p. 215) considers cithara as the same with harp; but Luther translates \( \text{כּמְנֶה} \) by \( \text{mit Flöte} \), "with pipes." See HARP.

CITIES.

Citis. See CITY.

Cit\( \text{t} \)im (Kiri\( \text{t} \)aia v. r. Kiri\( \text{t} \)aia, Volg. C\( \text{t} \)et, A. V. "Citismi"), a nation whose king Perseus is mentioned (1 Macc. viii. 5) as having been defeated by the Romans; evidently the Cit\( \text{t} \)im (q. v.), or Macedonians.

Citisimship, the rights and privileges of a native or adopted citizen (\( \text{κύριστια} \), 2 Macc. iv. 50; \( \text{κύριστια} \), ii. 6; \( \text{κύριστια} \), 15, 19; Luke xv. 15; xix. 14; Acts xxii. 29), in distinction from a foreigner. The laws in this respect are very different in each different age and country. See ALIEN.

I. Hebrew.—Under the Mosaic constitution, which was named religious, as opposed to the political privileges and distinction, the idea of the commonwealth (\( \text{κύριστια} \), Eph. ii. 12) was merged in that of the congregation, to which every Hebrew, and even strangers under certain restrictions, were admitted. See CONGREGATION. Strict isolation did by no means, as some suppose, form the leading principle in the system of theocracy as laid down by Moses, since even non-Israelites, under various names [see STRANGER], not only were not allowed to reside in Palestine, but had the fullest protection of the law equally with the native Israelites (Exod. xii. 19; Lev. xxiv. 22; Num. xx. 15; xxx. 10; Deut. i. 26; xxiv. 17: the law of usury, Deut. xxv. 15; xxvi. 25; the law of unjustified retaliation, Mal. iii. 5; see Josephus, Ap. iii. 26), as well as to a participation in certain prerogatives granted to the poor of the land, such as is shown in the tithes and feast offerings, and the harvest in the jubilee-year (Deut. xiv. 29; xvi. 10, 14; xxvi. 11; Lev. xxv. 6). In return, it was required on the part of non-Israelites not to commit acts by which the religious feelings of the people might be hurt (Exod. xx. 10; Lev. xvi. 10; xix. 28; xxi. 2, 3; xxv. 16; xxvi. 19). The eating of an animal which had died a natural death, Deut. xiv. 21, seems to have been the sole exception). The advantage the Jew had over the Gentile was thus strictly spiritual, in his being a citizen, a member of the theocracy (the \( \text{κύριστια} \), community of Jehovah, Num. xvi. 3; Deut. xxiii. 2), on whom positive laws were enjoined. But even to this spiritual privilege Gentiles were admitted under certain restrictions (Deut. xxiii. 1, 9); thus we find among the Israelites, Doeg, an Edomite (1 Sam. xx. 26), as also Urish, a Cuthite (a Canaanite). The only nation that were altogether excluded from the citizenship of the theocracy by special command of the Lord were the Ammonites and Moabites, from a feeling of vengeance against them; and in the same situation were all cast- treated persons and bastards, from a feeling of disgrace and shame (Deut. xiii. 1-6). In the time of Solomon no less than 158,600 strangers were resident in Palestine (2 Chron. ii. 17). See GENTILE.

II. Roman.—The right of citizenship (\( \text{κύριστια} \), "freedom," Acts xxii. 28, i. e. to be considered as equal to natives of the city of Rome, \( \text{civitas civitatis} \) was granted in the times of the emperors to whole provinces and cities (Dio Cass. xili. 26; Suet. Aug. 47), as also to single individuals (Tacit. Annal. i. 58; Sueton. Nêris. 10; Dio Cass. xiiili. 89; Aelian, Hist. C. xiii. 8, 9), for some service rendered to the state (Cic. Balb. 22) or the imperial family (Sueton. Aug. 47), sometimes through mere favor (Tacit. Hist. iii. 41), or even for a certain sum of money (Acts xxii. 28; Dio Cass. xiiili. 24); see Helvéc. Antit. jur. Rom. i. 1, 11 sq.). The apostle Paul, in his Galatian (Rom. x. 12-15; Col. iii. 24) and his Second Epistle to the Corinthians (1 Cor. viii. 38; see Amst. De civitate Rom. apoph. Pauli, Utr. 1725) by family (Acts, i. c.) [see TARSUS], and hence his protesting against corporal or capital punishment (Acts xvi. 87, comp. Cic. Ferr. v. 57, 66; Euseb. Hist. Eccles. v. 1, etc.). It appears from a variety of passages in the classical writers that a Roman citizen could not legally be scourged (\( \text{κύριστια} \) or \( \text{κύριστιας} \); this punishment being deemed to the last degree dishonorable, and the most daring indignity and insult upon the Roman name. Such was the famous "\( \text{Fors Lez.} \)." "A Roman citizen, judges," excludes Cicero, in his oration against Verres, "was publicly beaten with rods in the forum of Caesar;" but during this public dishonor, no groan, no other expression of the unhappy wretch was heard amid the cruelties he suffered, and the sound of the strokes that were inflicted, but this: 'I am a Roman citizen.'" Neither was it lawful for a Roman citizen to be bound, or to be examined by a magistrate, unless in certain cases, or by a man of his own rank; even torture was inflicted upon slaves; freemen were exempted from this inhumanity and ignominy. The right once obtained descended to a man's children (Acts xxii. 28; see Zimmern, Gesch. des röm. Privati- rechts, i. ii, 411). The Jews had rendered signal services to Julius Caesar in the Egyptian war (Josephus, Ant. xiv. 8, 1 and 2), and it is not improbable that many obtained the freedom of the city on that ground; certain it is that great numbers of Jews who were Roman citizens were scattered over Greece and Asia Minor (Ant. xiv. 10, 13 and 14). Among the privileges attaching to this rank were, besides, recommended in general terms by Moses to humanity and charity (Exod. xxii. 21; xiii. 9; Lev. xix. 33, 34; Deut. x. 18; comp. Jer. v. 6; Mal. iii. 5; see Josephus, Ap. ii. 26), as well as to a participation in certain prerogatives granted to the poor of the land, such as is shown in the tithes and feast offerings, and the harvest in the jubilee-year (Deut. xxiv. 29; xvi. 10, 14; xxvi. 11; Lev. xxv. 6). In return, it was required on the part of non-Israelites not to commit acts by which the religious feelings of the people might be hurt (Exod. xx. 10; Lev. xvii. 10; xix. 28; xxi. 2, 3; xxv. 16; xxvi. 19). The eating of an animal which had died a natural death, Deut. xiv. 21, seems to have been the sole exception. The advantage the Jew had over the Gentile was thus strictly spiritual, in his being a citizen, a member of the theocracy (the \( \text{κύριστια} \), community of Jehovah, Num. xvi. 8; Deut. xxiii. 2), on whom positive laws were enjoined. But even to this spiritual privilege Gentiles were admitted under certain restrictions (Deut. xxiii. 1, 9); thus we find among the Israelites, Doeg, an Edomite (1 Sam. xx. 26), as also Urish, a Cuthite (a Canaanite). The only nation that were altogether excluded from the citizenship of the theocracy by special command of the Lord were the Ammonites and Moabites, from a feeling of vengeance against them; and in the same situation were all cast-treated persons and bastards, from a feeling of disgrace and shame (Deut. xiii. 1-6). In the time of Solomon no less than 158,600 strangers were resident in Palestine (2 Chron. ii. 17). See GENTILE.

The rights of the Roman citizen included several other important privileges:

- He had a full right over his property, his children, and
CITRON

his dependents; he had a voice in the assemblies of the people, and in the election of magistrates; and his testament had full authority after his death. See Smith's Dict. of Class. Antiq. s. v. Civitas; Signon. De antiquo jure civ. Rom. (Par. 1672; Hal. 1715; also in Grævii Theocr. i); Spanheim, Orbis Rom. (London, 1703; Hal. 1729); Cellarius Dissertat. p. 718 sq.; also Büttner, De c.v. Rom. virgulæmus exempt. (Jen. 1679); Lange, De immunitate civ. Rom. (Haun. 1710). See Freeman.

Citron (cõrtn), the tree is κέρσια or κέρσιν, but was long without a special name among the Greeks, although they were well acquainted with it; see Smith, Dict. of Class. Antiq. s. v. Citrus). In his account of Alexander Janneus, Josephus tells us, "His own people were seditious against him; for at a festival which was then celebrated, when he stood upon the altar and was going to sacrifice, the nation rose upon him, and pelted him with citrons, for the law of the Jews required that at the festival of tabernacles every one should have branches of the palm-tree and citron-tree." In malic and citric acid, the juice of the orange and its congener is one of the most agreeable antidotes which the Creator's bounty has provided against the exhausting thirst and incipient fever of sultry climes. A settler in the torrid swamps of the Amazon will devour a dozen oranges before his morning meal (Voyage up the Amazon, in the "Home and Colonial Library"), and in tropical regions such acidulous fruits are invaluable on account of their anti-febrile virtues. These were doubtless well known to the Hebrews, and, in common with all antiquity, they greatly prized the pleasant pungent odor emitted by the rind. Macrobius speaks of "citrosa vestis," showing that it was usual to keep citrons in wardrobes for the sake of their perfume; and, like the modern Oriental ladies, whose favorite vinaigrette is a citron, in England two or three centuries ago an orange was so commonly used as a scent-bottle that it may often be seen in old pictures of their queens and princesses. It was also believed to have a disinfecting potency; and during the plague of London, people walked the streets smelling at oranges. Understood as belonging to this beautiful family, there is a peculiar fulness in the comparison. "A word fitly spoken is like citrons of gold in salvers (or baskets) of silver" (Prov. xxxv, 11). The famous golden apples which grew in the gardens of the Hesperides were unquestionably either citrons or oranges. See Botany.

CITY

City. The Heb. term most frequently thus rendered is יִרְדָּכֵי (ir, literally something raised up, i. e. having walls reared; or from אֵשׁ, to keep guard [Genius, Thea. Heb. p. 1001]; Sept. and N. T. πόλις, a word of very extensive signification, embracing not only the idea of an encampment, as a nomadic hamlet (Gen. iv, 17), but also that of small fortifications, as watch-posts or watch-towers (comp. Numb. xiii, 10; 2 Kings xvii, 9; Isa. i, 8), and thence extended to regular towns. Nearly equivalent to this is כִּרְנָנָה (kirnah), which, with a few exceptions (Deut. ii, 26; 1 Kings i, 41, 45), is found only in the poetic style and analogous (in sense, as probably also in derivation) to this
of the ancient method of building in towns and cities we have no accurate knowledge, any farther than that we may gather information from the ruins which still lie on the soil of Palestine. But this, as a general notion, is that only general notions, as, though they are numerous, and show that the Land of Promise was thickly populated and highly flourishing in its better days, the actual remains of ancient towns are to be ascribed to different and very distant periods of history. The Crusades left many strongholds which are now in a state of dilapidation; but the Crusades are of modern days compared with the time of the Saviour, which itself is remote from the proper antiquity of the nation. The law of sames, however, which prevails so rigidly in Eastern countries, gives us an assurance that a modern site may be the base of a settlement, and be considered as the site of its ancient predecessors. (See Olin's Travels, i. 429.) To distinguish cities that bore the same name, the name of the tribe was added. In the "latter days," especially under the Herods, it was the fashion to give to ancient towns new Greek names, as Diospolis, Napeoli, Sebaste, Cesaarea, Tiberias, Jerusalem, at a later period, was denominated Zilla Capollina. These innovations indicated the Slavish disposition of the age, and were tokens of the bondage in which the nation was held.

Palestine underwent constant changes in regard to its towns from the earliest ages; one consequence of which was the decided preference of the inhabitants for agricultural pursuits, and the exclusion of certain eras. The period of the Roman domination gave existence, as to structures of great splendor, to many towns and fortified places. Gallilee was especially rich in towns and villages, which, according to Josephus (Life, 40), amounted in all to the number of 204. The names of the Palestinian cities, for the most part, have meaning, reference being made to the nature of the locality or the character of the inhabitants. The population of towns cannot now be ascertained with any degree of accuracy, for the materials are not only scanty and disconnected, but in a measure unmeet. See Cæsarea.

2. The earliest notice is due to the Scribes of Egypt. The name of the city-building of that of the city called Enoch [g.v.] by Cain, in the land of his "exile" (Nad, Gen. iv. 17). After the confusion of tongues, the descendants of Nimrod founded Babel, Erech, Accad, and Calneh, in the land of Shinar; and Assur, a branch from the same stock, built Nineveh, Babel-sed-e-nin, Ashur, Calah, and Rusa., the last being a "great city." A subsequent passage mentions Sidon, Gaza, Sodom, Gomorrah, Admah, Zeboim, and Lasha, as cities of the Canaanites, but without implying for them antiquity equal to that of Nineveh and the rest (Gen. x. 12-13; xi. 9); and (3) that the names of the buildings before the "desert of Sin" was the city of Babylon. After the great buildings of Cambyses the inhabitants of Nineveh were called "the Canaanites," and in a general sense (Gen. xiv.) to the expedition of Chedorlaomer (Gen. xiv.) was prior to the building of Babylon or Nineveh, indicating a migration or conquest from Persia or Assyria; (2) that by Nimrod is to be understood, not an individual, but a name denoting the "settlers" in the Assyrian plain; and (3) that the city of Nineveh, the name first mentioned, only denoted sites of buildings afterwards erected. He supposed that Nineveh was built about B.C. 1250, and Calah about a century later, while Babylon appears to have existed in the 15th century B.C. If this be correct, we must infer that the places then attacked, Sodom, Gomorrah, etc., were cities of higher antiquity than Nineveh or Babylon, in as much as when they were destroyed a few years later.
they were cities in every sense of the term. The name Kirjathaim, "double city" (Genesis, Theamr. Heb. p. 1236), indicates an existing city, and not a site only. It may be added that the remains of civic buildings existing in Moab are evidently very ancient, if not, in some cases, the same as those erected by the aboriginal Emim and Rephanim. (Compare also the name Abraham, p. 329; Gen. xii, 19; xxxvi, 35; Is. xxxiii, 13, 18; see Wilkins, Anc. Egypt., i, 308; Layard, Nin. and Bab. p. 582; Porter, Damascus, i, 809; ii, 106; Rawlinson, Outlines of Assy. Hist. p. 4, 5.) But though it appears probable that, whatever dates may be assigned to the building of Babylon on Nineveh in their later condition, they were in fact really stone towns from the first, for the fixed time, and that towns in some form or other may have occupied the sites of the later Ninevah or Calah; it is quite certain that cities existed in Babylonia prior to the time of Abraham, who himself came from "Ur," the "city" of the Chaldeans (Genesis, i, p. 55; Rawlinson, p. 4."

The earliest description of a city, properly so called, is that of Sodom (Gen. xix, 1-22); but it is certain that from very early times cities existed on the sites of Jerusalem, Hebron, and Damascus. The last, said to be the oldest city in the world, must, from its unrecorded date, be considered as a congeries of towns; Hebron is said to have been seven years before Zoan (Tanis) in Egypt, and is thus the only Syrian town which presents the elements of a date for its foundation (Num. xiii, 22; see Stanley, Palæst. p. 409; Josephus, Ant., i, 6, 4; Conybeare and Howson, St. Paul, i, 94, 96). But there can be no doubt that, whatever date may be given to Egyptian civilization, there were inhabited cities in Egypt long before this (Gen. xii, 14, 15; see Martineau, Eastern Life, i, 151; Wilkinson, i, 807; Smith, Dict. of Class. Geog. v. Tanis). The name, however, of Hebron, Kirjath-Arba, indicates its existence at least as early as the time of Abraham, as the city, or fortified place of Arba, an aboriginal province of Southern Palestine (Gen. xxii, 2; Josh. xiv, 15). The "tower of Edar," near Bethelhem, or "of flocks," indicates a position fortified against marauders (Gen. xxv, 21). Whether the "city of Shalem" be a site or an existing town cannot be determined; but there can be no doubt that the situation of Shechem must be preserved in the present day, as its importance as a fortified place is plain from the narrative (Gen. xxxiii, 18; xxxiv, 20, 26; see Robinson, iii, 114). On the whole, it seems plain that the Canaanite, who was "in the land" before the coming of Abraham, had already built cities of more or less importance, which had been largely increased by the time of the return from Egypt. Even before the time of Abraham there were cities in Egypt (Gen. xii, 14, 15; Num. xiii, 22; see Wilkinson, i, 4, 5). The Israelites, during their sojourn there, were employed in building or fortifying the "treasure city of Pithom" (Exod. i, 11; Herod. ii, 158; see Robinson, i, 79); but their pastoral habits made it unlikely that they should build, still less fortify, cities of their own in Geochen (Gen. xiv, 84; xvii, 1-11). Meanwhile the settled inhabitants of Syria on both sides of the Jordan had grown in power, and in number of "fenced cities." In the kingdom of Sion are many names of cities preserved to the present day; and in the kingdom of Og, in Bashan, were sixty "great cities with walls and brazen bars," besides unwalled villages; and also twenty-three cities in Gilsead, which were occupied, and perhaps partly rebuilt or fortified by the tribes on the east of Jordan (Josh. xii, 22, 28; xxii, 3, 40, 94, 42; Deut. iii, 5, 6, 14; Josh. xii, 3; 1 Kin. xi, 18; 1 Chron. ii, 22; see Burchhardt, Syria, p. 511, 457; Porter, Damascus, ii, 195, 196, 206, 259, 278). On the west of Jordan, whilst 31 "royal" cities are enumerated (Josh. xii), in the district assigned to Judah 125..."
CITY

360

CITY OF REFUGE

also mentions an attempt made by Pilate to bring water to Jerusalem (Ant. xviii, 8, 2). See Conduit.

Other cities appear to have been mostly contented with the fountains whose existence had probably led to their formation at the first. See Water.

Burial-places, except in special cases, were outside the city (Num. xix, 11, 16; Matt. xvii, 28; Luke vii, 12; John xix, 41; Heb. xiii, 12). See Grave.

5. A city and its inhabitants are frequently described in the sacred writings under the similitude of a mother and her children; hence the phrase “Children of Zion” (Joel ii, 23). Cities are also characterized as virgins, wives, widows, and harlots, according to the different conditions. Thus Jerusalem was a virgin (Isa. xxxvii, 22); and the term harlot is used of Jerusalem (Isa. i, 21), also of Tyre (Isa. xxiii, 10), of Nineveh (Nah. iii, 4), and of Samaria (Ezek. xxxii, 5).

Circled City (seldom simply עיר, City), a mound or intrenchment of besiegers; “mount,” Isa. xxix, 8; “water,” Nah. i, 11; “city,” Deut. viii, 16; 1 Sam. vii, 15; 1 Kings x, 1; 2 Kings v, 5; Ps. cxxxvi, 153; P. della Valle, ii, 33). In most Oriental cities the streets are extremely narrow, seldom allowing more than two loaded camels, or one camel and two foot passengers to pass each other, though it is clear that some of the streets of Nineveh must have been wide enough to admit carriages to pass (Nah. i, 4; see Olearius, Trav. p. 294, 309; Burckhardt, Trav. in Arabia, i, 188; Buckingham, Arab Tribes, p. 330; Mrs. Poole, Englishwoman in Egypt, i, 141). The word for “streets” used by Nahum—(ברק, from ברק, broad, נמצית)—is used also of streets or broad places in Jerusalem (Prov. i, 20; Jer. v, 1; xxii, 4; Cant. iii, 2); and it may be remarked that the thoroughfares (צארית) into which the sick were brought to receive the shadow of Pekah (2 Kings x, 18). See more likely to be the ordinary streets than the special plaza of the city. It seems likely that the immense concourse which resorted to Jerusalem at the feasts would wander elsewhere than in other cities (see 1 Kings xx, 84). Herod built in Antioch a wide street paved with stone, and having covered ways on each side. Agrippa II paved Jerusalem with white stones (Josephus, Ant. xvi, 5, 2 and 3; xx, 9, 7). The streets of most cities of Palestine would not need paving, in consequence of the rocky nature of the foundations on which they lay. The street of Damascus is still clearly defined and recognizable (Irby and Mangles, v, 86; Robinson, notes to ed. of De Wette, 454, 455). In his Life of Cæsar, Josephus says that Herod was careful to carry out the drainage effectively (Josephus, Ant. xv, 9, 6). The internal commerce of Jewish cities was probably carried on as now by means of bazaars (q. v.); for we read of the bakers’ street (Jer. xxxvii, 21), and Josephus speaks of the wool market, the hardware market, the place of blacksmiths’ shops, and the clothes market, at Jerusalem (War, v, 8, 1). See Street.

The open spaces (צארית) near the gates of towns were in ancient times, as they are still, used as places of assembly by the elders, of holding courts by kings and judges, and of general resort by citizens (Gen. xxviii, 10; Ruth v, 1; 2 Sam. xv, 2; xviii, 24, xxvi, 35, 2 Kings x, 17; 2 Kings vii, 1, 18, 16; Job xxxii, 7; Jer. xvii, 19; Matt. vi, 5; Luke xiii, 26). They were also used as places of public exposure by way of punishment (Jer. xx, 2; Amos v, 10). See Gate. Prisons were under, the king’s governmental, within the royal precinct (Gen. xxix, 20; 1 Kings xxi, 27; Jer. xxxii, 2; Neh. iii, 25; Acts xxii, 34; iii, 35).

Great pains was taken to supply Jerusalem with water, both by tanks and cisterns for rain-water, and by reservoirs supplied by aqueducts from distant springs. Such was the fountain of Gibon, the aqueduct of Hezekiah (2 Kings xx, 20; 2 Chron. xxxv, 29, 30; 2 Kings xxiv, 18, 20; 2 Chron. xxiv, 9, 10), which last water is still conveyed from near Bethlehem to Jerusalem (Maundrell, in Bohn’s ed. of Early Trav. p. 457; Robinson, i, 514 sq.; Olin, ii, 129 sq.). Josephus
or near the site of se-Salta (Deut. iv. 43; Josh. xxi. 38; 1 Kings xxii. 3; see Reland, p. 566). Golan, in Bashan, in the half-trIBE of Manasseh, a town whose site has not been ascertained, but which doubtless gave its name to the district of Gaulonitis, Jaldan (Deut. iv. 43; Josh. xxii. 27; 1 Chron. vi. 71; Josephus, Ant. iv. 7; see Reland, p. 813; Porter, Dandamas, ii, 251, 252, 254, 255, 256). In the same passage mention is made of the fact that the cities on each side of the Jordan were nearly opposite each other, in accordance with the direction to divide the land into three parts (Deut. xix. 2; Reland, p. 662). Maimonides says all the forty-eight Levitical cities had the privilege of asylum, but that the six refuge-cities were required to receive and lodge the fugitives to the full extent of the area of each city. The directions respecting the refuge-cities present some difficulties in interpretation. The Levitical cities were to have a space of 1000 cubits (about 583 yards) beyond the city wall for pasture and other purposes. Presently after, 2000 cubits are ordered to be the suburb limit (Num., xxxv, 4, 5). The solution of the difficulty may be, either the 2000 cubits are to be added to the 1000 as "fields of the suburbs" (Lev. xxxv, 34), as appears to have been the case in the gift to Caleb, which excluded the city of Hebron, but included the "fields and villages of the city" (Josh. xxi. 11, 12, 15, Paralip., xxvii. 26). Additional 1000 cubits were to be a special gift to the refuge-cities, while other Levitical cities had only 1000 cubits for suburb. Calmet suggests the line of 2000 cubits to be measured parallel, and the 1000 perpendicular to the city wall; an explanation, however, which supposes all the cities to be of the same size (Calmet On Numbers, xxxv).

2. Places of refuge where, under the cover of religion, the guilty and the unfortunate might find shelter and protection were not unknown among the ancient heathen. The _justus_, or right of shelter and immunity, was enjoyed by certain places reputed sacred, such as groves, temples, and altars. This protective power commonly spread itself over a considerable district round the holy spot, and was watched over and preserved by severe penalties. Among the Greeks and Romans the number of these places of asylum became in time very great, and led, by abuse, to a fresh innovation (Tertullian, Adv. Judaeos, 4, 63). The _scandala_, in consequence, caused a solemn inquiry into their effects to be made, which resulted in a diminution of their number and a limitation of their privileges (Suetonius, Tib. 37, compared with Ernesti, Ercursus ad h. l.; Oslander, De Asylis Gentium, in Grot. Nov. Thes. i. 60). In the Apocalypse (2 Macr. iv. 50) mention is made of a city having the _justus_:—"Only as withdrew himself into a sanctuary at Daphne that lilies by Antioch." The temple of Diana at Ephesus (Acts xix. 27) was also a heathen asylum, whose privileges in this respect increased with the progress of the city.

This pagan custom passed into Christianity. As early as Constantine the Great, Christian churches were asylums for the unfortunate persons whom an outraged law or powerful enemies pursued (Smith's Gibbon, c. xx). Theodosius, in 481, extended this privilege to the houses, gardens, and other places which were under the jurisdiction of the churches, and the synod of Toledo, in 681, widened the right of asylum to thirty paces from each church. Since then this ecclesiastical privilege prevailed in the whole of Catholic Christendom, and was preserved undiminished, at least in Italy, so long as the papal independence remained (Hallam's Middle Ages, c. i., pt. 1). The right acted beneficially in a great many cases; _vengeance_ predominated, and fixed habitation were less common than now; but its tendency to transfer power from the magistrate to the priesthood was injurious to the inviolability of law and the steady administration of justice. It has accordingly in recent times been abrogated by most governments (Conversations-Lexi- tois, s. v.).

3. Among the Jews, the "cities of refuge" bore some resemblance to the asylum of the classic nations, but were happily exempt from the evil consequences to which reference has been made, and afforded, even to the present day, no mean proof of the superior wisdom and benignity of God. The OtiMount of the law was framed with a view to avert the evils which ensued from the old-established rights of the blood-avenger [see AVENGER OF BLOOD], and thereby to further the prevalence in the nation of a mild, gentle, and forgiving spirit. An inspection of the map will show how wisely these places were chosen so as to make a city of refuge easily accessible to any part of the land. To any one of these cities a person who had unawares and unintentionally slain any one might flee, and, if he reached it before he was overtaken by the avenger of blood, he was safe within its shelter, provided he did not remove more than a thousand yards from its circuit, nor quit the refuge till the decease of the high-priest under whom the homicide had taken place. If, however, he transgressed these provisions, the avenger might lawfully put him to death. The roads leading to the cities of refuge were to be kept in good repair. Before, however, the fugitive arrived at any of them, he was to undergo a solemn trial, and make it appear to the satisfaction of the magistrates of the place where the homicide was committed that it was purely accidental. Should he, however, be found to have been guilty of murder, he was delivered "into the hand of the avenger of blood, that he might die." The benefit of the protection afforded was common to strangers and sojourners with native Israelites.

According to the Rabbins, in order to give the fugitive all possible advantage in his flight, it was the business of the Sanhedrim to make the roads that led to the cities of refuge convenient by enlarging them, and removing every obstruction that might hurt his foot or hinder his speed. No hillock was left, no river was allowed over which there was not a bridge, and the road was at least two-and-thirty cubits broad. At every turning there were posts erected bearing the words _Refuge, Refuge, to guide the unhappy man in his flight_ (Zunz, Mekol Lechem, 63). The traditionaries, in consequence, caused a solemn inquiry into their effects to be made, which resulted in a diminution of their number and a limitation of their privileges (Suetonius, Tib. 37, compared with Ernesti, Ercursus ad h. l.; Oslander, De Asylis Gentium, in Grot. Nov. Thes. i. 60). In the Apocalypse (2 Macr. iv. 50) mention is made of a city having the _justus_:—"Only as withdrew himself into a sanctuary at Daphne that lilies by Antioch." The temple of Diana at Ephesus (Acts xix. 27) was also a heathen asylum, whose privileges in this respect increased with the progress of the city.

This pagan custom passed into Christianity. As early as Constantine the Great, Christian churches were asylums for the unfortunate persons whom an outraged law or powerful enemies pursued (Smith's Gibbon, c. xx). Theodosius, in 481, extended this privilege to the houses, gardens, and other places which were under the jurisdiction of the churches, and the synod of Toledo, in 681, widened the right of asylum to thirty paces from each church. Since then this ecclesiastical privilege prevailed in the whole of Catholic Christendom, and was preserved undiminished, at least in Italy, so long as the papal independence remained (Hallam's Middle Ages, c. i., pt. 1). The right acted beneficially in a great many cases; _vengeance_ predominated, and fixed habitation were less common than now; but its tendency to transfer power from the magistrate to the priesthood was injurious to the inviolability of law and the steady administration of justice. It has accordingly in recent times been abrogated by most governments (Conversations-Lexi- tois, s. v.).
CIVIL ADMINISTRATION

CLARE

and ambition, to "whosoever they be that flee unto the Temple at Jerusalem, or be within the liberties thereof." In the words now cited, reference appears to be made to a custom which prevailed from very early times, both among the chosen people and the nations of the world, of fleeing, in case of personal danger, to the altar. With the Jews, it was customary for the fugitive to lay hold of the horns of the altar, whether in the tabernacle or Temple; by which, however, safety and security were obtained only for those who had committed sins of ignorance or inadvertence (Exod. xxi. 14; 1 Kings i. 50; ii. 28). From the last two passages, it seems that state criminals also sought the protection of the altar, probably more from the force of custom than any express law. Their safety, however, depended on the will of the king; for in the passages referred to it appears that in one case (that of Adonijah) life was spared, but in the other (that of Joab) it was taken away even "by the altar." Compare Matt. xxiii. 35. A similar instance is found in Grecian history, in the case of Pausanias, who fled from the populace, incensed on account of his public abuse of the practice of the Oracle of Delphi, where he was starved to death by order of the Ephori, by blocking up the entrance and taking off the roof [compare Smith's Dict. of Class. Antiq. s. v. Asylum]. See Asylum.

City of David, a section in the southern part of Jerusalem, embracing Mount Zion where a fortress of the Jebusites stood. See JERUSALEM. David reduced the fortress, and built a new palace and city, to which he gave his own name (I Chron. xi. 5). Bethlehem, the native town of David, is also called, from that circumstance, the city of David (Luke ii. 11).

City of God, one of the names of ancient Jerusalem (Ps. xxi. 4), and its appropriateness is evident from Deut. xii. 5.

Holy City. The sacredness of the Temple extended itself in some measure over the city, and hence Jerusalem itself was called the Holy City, and is so distinguished in the East at the present day (Neh. xi. 1; Dan. ix. 24). See Jerusalem.

Levitical City. See Levite.

City of Palm-trees. See IR-HATTEMARIM.

Sacerdotal City. See Priest.

City of Salt. See IR-HAMMELEH.

Treasure-city (in the plur. הַשָּׁרוֹן יִשְׂרָאֵל, cities of provisions, "store-cities," 1 Kings ix. 19). Pithom and Raamses (q. v.) are mentioned in Exod. i. 11, as treasure-cities built by Pharaoh by the unpaid labor of the Hebrews. Amenemhet III. replaced them by the edifices of Coptos for the royal revenue (which was doubtless paid in kind), such as are indicated in Gen. xli. 48; see xlviii. 26. The Jewish kings had similar places of public deposit (2 Chron. viii. 4, 6; xvi. 4, xvii. 2). See Treasure.

Civil Administration of the Hebrews. See GOVERNMENT (OF THE HEBREWS).

Claggett, William D., a divine of the Church of England, was born at St. Edmundsbury, Suffolk, 1646; entered Emmanuel College, Cambridge, 1659; and took his degree there, the final one of D.D. in 1683. After preaching seven years in his native town he became preacher of Gray's Inn, London, and rector of Farnham Royal in 1683. He died March 28, 1688. Among his writings are, A Discourse concerning the Operations of the Holy Spirit, against Dr. Owen (Lond. 1680, 2 vols. 8vo); Sermons (Lond. 1704-1720, 4 vols. 8vo); and several pamphlets on the Romish controversy.—Kippis, Biographia Britannica, iii, 592 sq.; Darling, Cyclopaedia Bibliographica, i. 606.

Clappe, Thomas John, D.D., a bishop of the Protestant Episcopal Church in the United States of America, born in Prince George County, Md., on the 2d of October, 1743, and graduated at Princeton 1764. He went to England for ordination in 1767, and on his return to America became rector of All Saint's parish, Md. On the breaking out of the Revolution he retired to Prince George's, and in 1778 began to officiate there in St. Paul's parish. In 1772 he was elected to the episcopal see, being the first bishop that was consecrated on this side the Atlantic. In 1800 he was chaplain to the Senate of the United States; in 1808 he became rector of Trinity Church, Upper Marlborough, Md. He died on the 2d of August, 1816.—Sprague, Annals, v. 222.

Clairvaux (Claravalle), the name of a celebrated Cistercian monastery, a valley of the Department Aube, in France. Bernard became its abbot in 1115, and the monastery was the model of monasticism in the 12th and 13th centuries.—Sezne, Ch. History, iv, 254. See VERNARD; CISTERCIANS.

Clap. Thomas, a Congregational minister, was born at Scituate, Mass., June 26, 1763, and graduated at Harvard 1782. He was ordained pastor at Windham, Aug. 8, 1782; was elected to the rectoryship of Yale College in 1798, and entered upon the duties of the office April 2, 1740. He devoted himself energetically to the work of the college; framed its code of laws (1748), "naming the first book ever printed in New Haven"; improved its literary, and in various ways strengthened the institution. He was especially noted for his knowledge of mathematics and physics, and constructed the first orrery made in America. His opposition to Whitefield, and other causes, raised up a party against him, and in 1783 he resigned his office; the corporation, however, passing a vote "expressive of their high estimation of his character and services." He died in New Haven, January 7, 1797. President Clap published An Introduction to the Study of Philosophy, exhibiting a general view of all the Arts and Sciences (1743); The Religious Constitution of Colleges, especially of Yale College, New Haven (1762); A Brief History and Visitation of the Doctrine received and established in the Churches of New England, with a Specimen of the new scheme of Religion beginning to prevail (1755); An Essay on the Nature and Foundation of moral Virtue and Obligation (1785); Annals or History of Yale College (1768); Conjectures upon the Nature and Motions of Meteor which are above the Atmosphere (post, 1781).—Sprague, Annals, i, 348; Allen, American Biography, s. v.

Clara, or Claris, a saint of the Roman Catholic Church, was born at Assisi, Italy, 1198, of a noble family. She abandoned her home in 1212, and was received by Francis of Assisi, who cut off her hair, and then gave her some alms. He replaced her in the monastery, but did not allow her to pray, and put a cord about her with a cord. Her parents strenuously resisted this step; but, under the guidance of Francis, she disobeyed them, and devoted herself to monastic life. She practised unheard of austerities, mournful to read of as described by Butler (cited below). Clara was the founder of the Clarisses, or nunns of St. Clara (q. v.). See Butler, Lives of Saints, August 12; Lowis, Bible, Missal, and Breviary, i, 170.

Clara. See ABRAHAM AND SANTA CLARA.

Clara, St., NUN S OF, an order sometimes called Clarisses or Clarisinas, from their founder St. Clara (q. v.). The reputation of St. Clara soon gained her a large number of followers, for whom several monasteries were built in various parts of Italy. In the year 1219 the order received the edict of Philip II, and the title of Saint. The rules of the order were drawn up by St. Francis of Assisi in 1224: the Clarisses were forbidden to have any possessions, and silence was enjoined upon them from the cloister till the tierce of the following day. Their habit was three tunics and a mantle. After the death of the founder the order made still greater progress, and counted at the time 2000 communities and about 25,000 nuns. After the Reformation there remained in Europe 900 convents, with about 25,000 nuns. In Italy there are monasteries of Clarisses, some of which take
the name of "Nuns of the Strict Observance," others that of "Sorities of the Institution of St. Peter of Alcantara." After Cortez had conquered Mexico, Isabella of Portugal, wife of Charles V, sent thither some nuns of the order of St. Clara, who made several settlements there. Near their monasteries were founded communities of Indian young women, to be instructed by the Clarissas and to be instructed as was usual, and to be suitable to persons of their sex. When Pope Urban IV mitigated the original rule, those who adopted the mitigated rule were called Urbanists, while the name of Clarissæs remained to those who adhered to the original rule. A still stricter rule was observed by the Congregations of St. Colette, which was dissolved in 1447, which was again surpassed in austerity by the discontinue Congregation of the Strictest Ob- servance, founded in 1631 in Italy, and the Hermitses of St. Peter of Alcantara (or Alcantairines), founded in 1676. According to the statistics of 1861, convents were found in Italy, France, Austria, Bavaria, Switzerland, Poland, Belgium, Holland, England, Scotland, Spain, Prussia, Ireland, at Macao and Manilla in Asia, in Mexico, and in Central and South America. The number of members was about 60,900. - Fehr, Geschichte der Minnlerblicher, 1, 456 sq. See Francis of Assisi.

Clarendon. See KLAIRENBACH.

Clarendon Constitutions, 1164. A struggle between the crown and the hierarchy in England began with the elevation of Thomas a Becket to the arch-episcopal chair (June, 1162). The pomp-loving courtier, brave warrior, and powerful statesman, the favorite and confidant of Henry II, had become a se- vere ascetic, a zealous hierarch, and the opponent of the king. At the council held by Alexander III in May, 1163, at Tours, Becket, with other English prelates, appeared, and was received with distinction by the pope. As soon as he returned, he attempted to execute the resolutions of the council in his province. He claimed certain possessions, which, as he asserted, had been long alienated from the see of Canterbury, and protested against the levy of a universal tax on real estate which the king demanded for state pur- poses. This already had occasioned a contest with the king, and a breach was almost effected at the Imperial Diet of Verden in 1157. The latter declares to be a lay fee, if it prove upon trial before twelve respectable men to be a lay fee, and not an ecclesiastical fee, the cause to be finally tried in the king's court, unless both claim tenure under the same bishop or baron, in which case the plea shall be in his court. (Condemned.) 9. In case of any dispute between a layman and a cleric concerning a tenement which the latter declares to be a lay fee, if it prove upon trial before twelve respectable men to be a lay fee, and not an ecclesiastical fee, the cause to be finally tried in the king's court, unless both claim tenure under the same bishop or baron, in which case the plea shall be in his court. (Condemned.) 10. If any one claim tenure under the same bishop or baron, or under the same feudal lord, or under a royal charter, the officers of the king shall be summoned by an archdeacon or a bishop upon account of some misdemeanors, for which he is amenable to them, and he appear not, he may be put under an interdict, but under the ban only after a previous notifi- cation of the royal official of the place, and after the other party has waited six months. If they will not appear at the time appointed, the court shall give the Church satisfaction. (Condemned.) 11. Arch- bishops, bishops, and vassals of the crown must, as holders of royal sefts, appear before the judges and officers of the king, and preserve all the privileges and customs of the crown-fee, and be present also, like the other barons, at the proceedings of the royal council of justice, except at capital trials. (Tolerated.) 12. In case of a vacancy of an archbishopric, bishopric, or ab- bacy, or a priory, the revenues shall accrue to the king. At the reappointment, the king shall assemble the ecclesiastical dignitaries; the election shall take place in the royal chapel, with the king's consent, and the officer of the king's household gives the victor a royal patent, and if it proves the patent be handed over by him. In the same place the elect shall, while preserving his ecclesiastical state, take the oath of fealty to the king, his feudal lord, before he is consecrated. (Condemned.) 13. If any baron or tenant in capite should encroach upon the rights or property of a Prelate or a clergyman, the King shall Procure from the church, and if the encroachment be truly proved, the Church shall treat with that person that he may give satisfaction. (Tolerated.) 14. Forfeited possessions the Church dare not refuse to make over to the king, as such belong to him, whether they be inside or outside of the Church. (Tolerated.) 15. Pleas of debt are to be
CLAREINES

made in the king's court, whether due upon contract or not. (Cond-mnd.) 18. Sons of peasants cannot be ordained without the consent of their feudal lords. (Tolerated.)

The high importance of these decrees of the Diet, for those times, is very obvious. On the one hand, the kings of Bohemia made the dignity of the Church as dependent upon the crown as the barons, and not only to put a limit to their jurisdiction, but also to secure the election and investiture of the prelates, and, by limitations of the appeals to the pope, to preserve his own paramount rights. On the other hand, his act of forbidding to put the exertion of justice upon a secular footing, by subjecting the whole clergy to the common law of the country. The Constitutions contain the germs of the highly important institution of the wandering assizes, founded by him twelve years later at the Diet in Northampton. The barons willingly gave their consent to this improvement of the administration of justice, and still more to the limitation of the powers of the Church, but Becket did everything in his power to destroy the effect of the Constitutions. Above all, the sixteenth article was directed against the lower clergy, who were his principal support. When the Constitutions were submitted to him that act might put his seal to them, as all the other prelates did in token of their consent, he refused. Afterwards, when one of the three copies made of the document was handed to him for his seal and signature, he seems to have yielded, after some resistance, to the command of the king; but he had scarcely left Clareines when he showed the bitterest repentance. He suspended himself from all his clerical functions for forty days, until he had received from the pope absolution for his oath, and the condemnation of the Constitutions. After twice vainly attempting to fly across the sea, he was accused of the violation of the Constitutions at the Diet in Northampton, in October of the same year, and was commanded to give an account of the expenditure of considerable sums he had been intrusted with during his administration as lord chancellor. The crucifix in his hand, he declared that he would not listen to the sentence, and left the chamber, followed by calumnies, but received outside with enthusiasm. A few days after he had fled to Flanders. After an exile of six years, he returned to England on the 1st of December, 1170, as, apparently, at least, a reconciliation had been effected between him and the king. But only four weeks later he was assassinated in his cathedral. The consequences of this event are well known. In 1172, 1173, 1174, and 1175, the Avranches, the king had to take an oath of purification before the papal legate, and revoke all which displeased the pope in the Clareines Constitutions. — Herzog, Real-Enzyklopädie, Supplement, i, 927 (from which this article is translated); Wilkins, Concilia Magnae Britanniae, i, 436; Landon, Manual of Councils, p. 332; Monheim, Church History, cent. xii. bk. ii. pt. ii. ch. ii. § 12; Hume, Hist. of England (Harper's ed.), i, 803-306.

Clareines, a monastic order founded in the neighborhood of Ancona in 1302 by Angelo di Cordova, after the suppression of the Celestines (q. v.), of which he had been a member. Angelo was cited before pope John XXII as a separatist in 1317, but was acquitted. He died at Naples 1340. After his death the Clareines submitted themselves to the ordinaries, and re-established their privileges in the provinces of Italy. In 1472, however, a large number of them joined the Minorites (q. v.). Finally, when pope Julius II rejuvenated the Franciscans (q. v.), dividing them into Observants and Conventuals, the Clareines, after inclining for a while toward the latter, at last connected themselves with the Observants. (Wadding, Annal. Minor; Henriv; Fevr, Alph. Gracch, der Missions-Archiv., i, 265; Wetzer u. Weite, Kirchen-Leben, i, 587.)

Clario, or Clarins, Isidore, a Benedictine monk, bishop, and writer, was born at the castle of Clairvaux, near Brescia, 1495, and at an early age entered the monastery of Monte Cassino, where he studied especially the original languages of Scripture. Paul III sent him to the Council of Trent, where he greatly distinguished himself, especially in the discussions in the Council of Vultcan. This council he left on May 28, 1555. His chief literary labor was the correction of the Vulgate, with annotations (Vulgata editio V. et N. T., Venice, 1542, 1557, 1564, fol.). He asserts that he had corrected 8000 places; and his first edition (1542) was put into the Index Expurgatorius. He bore the name from the monastery of St. Clari (q. v.).—Hoefcr, Nouvelle Biog. Générale, ix, 663; Hook, Eccl. Biog., iv, 77.

Clark, Daniel A., A.M., a Congregational and Presbyterian minister, was born at Rahway, N. J., March 1, 1779, and graduated at Princeton in 1808. While a student at Andover Theological Seminary he was licensed by the Presbytery of New Jersey, and in 1812 he was ordained and installed pastor of the Congregational Union Ch. of Brantree and Weymouth, Mass. Thence he removed in 1815 to Hanover, N. J., and in 1816 to Southbury, Conn., where, in addition to his work as a minister, he taught gratuitously "with a view of elevating the standard of education. In 1820 he was installed pastor of the west parish of Amherst, Mass., and he was involved in some difficultiess, and in 1826 he accepted a call to Bennington, Vt., where he was very active and useful. Leaving Bennington in 1830, he supplied Dr. Beman's pulpit in Troy, labored for a time in Utica, N. Y., and was installed pastor in Adams, Jefferson Co., N. Y., in 1832. In 1833 his health obliged him to withdraw from the ministry. He devoted the remainder of his days to literary pursuits, and died March 3, 1840. Though practically a Congregationalist while he exercised his ministry in New England, he always retained his preference for the Presbyterian form of Church government, and resumed his relations with the Presbyterians as soon as he had the opportunity."—Dr. Osborn (in Sprague, cited below) says: "The published sermons of Mr. Clark, I believe it is generally admitted, take rank with the ablest sermons which our country has produced." For his publications, see His Complete Works, with a Biographical Sketch, etc., by Rev. Geo. B. Atkinson, M. D. (1846, 2 vols. fol.), also edited by his son J. H. Clark, M. D. (N. Y. 1865, 2 vols. 8vo).—Sprague, Annals, iv, 460.

Clark, John, a Baptist minister, was born near Inverness, Scotland, Nov. 29th, 1758. Having from his early boyhood a strong propensity for a seafaring life, he was for about one year on board of a privateer, afterwards sailed as second mate to the West Indies, and arriving at Barbadoes, was impressed into the British navy. Here he deserted, and the next vessel on which he engaged being captured by the Spaniards, he was for nineteen months a prisoner of war at Havana. Soon after his exchange he was a second time impressed, and, deserting again, reached Charleston, S. C. In 1786 he taught school in the back settlements of Carolina. Revisiting England, he became acquainted with Mr. Wesley, and after his return to this country in 1789 he became an itinerant preacher in Georgia. Finally he became a Baptist, and a member of the so-called "Baptized Church of Christ," or "Friends of Humanity," on account of their opposition to slavery. Remaining a few years in the "Florida Parish," Louisiana, where he preached almost daily and with great acceptance, he travelled to Illinois on foot, and in 1811 revisited Louisiana, preaching wherever he had an opportunity, and travelling great distances, always on foot. He died in St. Louis Co., Mo., Oct. 11th, 1859.—Sprague, Annals, vi, 490.

Clark, John, a Methodist Episcopal minister, was born in Washington County, N. Y., July 80, 1792; was
CLARK, JOHN ALONZO

converted in 1817, and in 1820 entered the New York Conference as a Methodist Episcopal Church as an Itinerant. Having labored within its bounds for sixteen years, he was in 1836 transferred to the Illinois Conference, and in 1841 to Texas. In 1844 he was a delegate to the General Conference of that year, and at its close was at his own request transferred to the Troy Conference. He was again transferred, in 1852, to the Rock River Conference, and stationed in Chicago, where he died of cholera, July 11, 1853. In all parts of the country he was eminently well received, and wherever he was stationed he left behind him the reputation of an able and earnest Christian minister. His frontier labors, full of toil and peril, which he met with the patience and forbearance of a Christian, are described in Hall's Life of Rev. John Clark (N.Y. 1850). See also Minutes of Conference, v, 485; Sprague, Annals, vii, 626; Methodist Quarterly, Jan., 1857, p. 148.

Clark, John Alonzo, D.D., a Protestant Episcopal minister, was born in Pittsfield, Mass., May 6, 1801, and graduated in Union College, July, 1823. He studied in the General Theological Seminary, New York, and was ordained deacon in 1836, when he took charge of a missionary station at Palmyra, N. Y. In 1829 he became assistant of Christ Church, New York City. In 1832 he accepted the rectorship of Grace Church, Providence R. I., and in 1835 became rector of St. Andrew's, Philadelphia, where he labored with great zeal and usefulness. His health failing, he made a visit to Europe, and on his return published Glimpses of the Old World (2 vols. 12mo, 1838). In 1843 he was compelled by the decline of his health to resign his rectorship, and on the 27th of November of that year he died. His published works besides those named above, are the following: Christian Experience as displayed in the Life and Writings of St. Paul; The Pastor's Testimony (1835); The Young Disciple, or a Memoir of Anzonnea R. Peters (12mo, 1836); Gathered Fragments (12mo, 1836); A Walk about Zion (12mo, 1836); Cleanings by the Way (12mo, 1842); a posthumous volume of sermons, entitled Awake, thou Sleeper! (12mo).—Sprague, Annals, v, 674.

Clark, Peter, a Congregational minister, was a native of Watertown, Mass., born 1693, graduated at Harvard 1712, and was ordained pastor in Salem village (now Danvers) June 3, 1717. He published several controversial pamphlets concerning "Original Sin" in opposition to the Rev. Samuel Webster and Dr. Thomas Hooker (1717-1720); Sermons on the Treasures of a Baptism of Christian Infants asserted and defended in a Letter, etc. (1735); also several occasional sermons. He died in June, 1768.—Sprague, Annals, i, 291.

Clark, Samuel, a Methodist Episcopal minister, was born about 1800, in Frederick County, Va., of pious parents; entered the Baltimore Conference in 1821, located in 1824; entered the Ohio Conference in 1826, located in 1841, and emigrated to Iowa (then a Territory); entered the Iowa Conference in 1844, and, after various relations to this conference, died at his post, in Van Buren County, Iowa, Feb. 9, 1857. "This venerable man of God . . . . had gone up and down for nearly forty years, preaching 'Christ and the resurrection' to thousands, from the Atlantic to the western borders of civilization." He was formidable in debate, and ranked high as a minister and public speaker.—Minutes of Conference, 1859, p. 248.

Clarke, Adam, L.D., a Wesleyan Methodist minister, distinguished as a divine, an antiquarian, and an Oriental scholar, was born at Maysburg, Londonerry Co., Ireland, in 1760 or 1762 (his own mother could not fix the date). His father, who was a classical teacher, was a member of the Church of England, but his mother, who was of Scottish origin, was a Presbyterian. Adam, when a boy, was remarkable for physical vigor, but seemed rather stupid than otherwise, until about his eighth year, when the sacras--

wise, until about his eighth year, when the sacra--
CLARKE, EDWARD DANIEL

was working on his Commentary, and in studying for its make, circumstances more complete his master, not only of Greek and Hebrew, but also of the Oriental languages. He had long been acquainted with the languages of modern Europe. These varied and extraordinary labors at length injured his health, and in 1815 he withdrew from London to a small estate at Millbrook, Lancashire. Here he continued to prosecute his theological and exegetical labors, and to prepare his Commentary, which was now in an advanced state of preparation. In 1823 he returned to the vicinity of London, and fixed his residence at Haydon Hall, where he spent the remainder of his days, engaged in literary labor, and also in the service of the Church in various ways. Among the most important labor of this period was the organization of Methodism in the Shetland Islands, to which he made two missionary journeys (1826 and 1828). During the summer of 1832 he exerted himself too much, and died at Bayswater, Middlesex, August 26 of that year, of cholera.

Dr. Clarke's life was one of almost unparalleled industry as preacher, pastor, student, and author. His literary reputation rests chiefly upon his Commentary (last ed. Carlton and Porter, N. Y. 1866, 6 vols. 8vo), which has had a wider circulation than any other in the English language, except, perhaps, Matthew Henry's. It is now superseded by later works, but will always be held in high esteem by the faithful and for its numerous learning, and for the frequent originality and acuteness of its annotations. As a theologian, Dr. Clarke was an Arminian, and held the Wesleyan theology entirely, with the exception of the doctrine of the Eternal Sonship of Christ. His error on this point drew out those admirable works, Watson's Remarks on the Eternal Sonship (Works, Lond. ed. vol. vii.) and Tregthv's Inquiry into the Doctrine of the Eternal Sonship (3d ed. Lond. 1819).

Besides the works mentioned, Dr. Clarke also published Discourse on the Eucharist (Lond. 1808, 8vo); Memoirs of the Wesley Family (Lond. 1809, 8vo. N. Y. 12mo, several editions). He also edited, with numerous additions, Baxter's Christian Directory, Fleury's Memoirs of the Reformation, Shockford's Sacred and Profane History; Sturm's Reflections on the Being and Attributes of God; and Harmer's Observations on various Passages of Scripture (1808, 4 vols. 8vo). His contributions to theology, politics, his minor writings, pamphlets, etc., are too numerous to be mentioned. His Miscellaneous Works have been collected since his death (Lond. 1813. 8 vols. 8vo). See Clarke, J. B. B. Life of A. Clarke (Lond. 3 vols. 8vo); Southern, Quarterly Rev. ii. 117; Etheridge, Life of A. Clarke (Lond. 1658, N. Y. 1659, 12mo. 12th Ed.). See also Clarke portraits (Lond. 1811, 2d ed. 1826, 2 vols.), and Stevens, H. Story of Methocyn, ii. 291, et al. A monument to the memory of Dr. Clarke was erected at Port Rush, Ireland, in 1859, by contributions from both the Old and the New World.

Clarke, Edward Daniel, L.L.D., an English divine, of note as a writer of travels, was born at Wilt-\n\n..
CLARKE, SAMUEL 387

In London. He published in the same year an answer to the treatise of Dr. Dodwell "On the Soul," in which that divine contends that it is not immortal until made so by God. Clarke was succeeded in 1724 by Dr. More, bishop of Norwich, by Whiston, whom he succeeded as domestic chaplain to that bishop for twelve years. In 1799 he published three essays on Confirmation, Baptism, and Repentance, together with Reflections on Toland's Answer, concerning the uncertainty of the mind, published in 1714, and afterwards followed by his Paræsæ in the Four Gospels, which induced Bishop More to present him with the living of Drayton, near Norwich. In 1704 he was appointed to preach the Boyle lecture at Oxford, when he chose for his subject The Being and Attributes of God. The satisfaction which he gave on this occasion led to his re-election the following year, when he read a series of lectures on the Evidence of natural and revealed Religion. These discourses passed through several editions.

Clarke's argument for the being of God "rests upon the fact that we have the conceptions of time and space, expressive of certain attributes or qualities—of eternity and infinity. These conceptions were the fruits of the human reason, and every quality must have a concomitant subject to which it belongs, and therefore, he argues, there must exist a being who possesses these attributes of infinity—that is, there must be a God. The similarity between Clarke's argument and that of Spinoza, in many points, is at once evident. They both started with the idea of substance, held by Spinoza to be the only existing thing from the beginning, and by Clarke to be a divine person, who is called the Word or Son; who derives his being or essence, and all his attributes, from the Father, not by mere necessity of nature, but by an act of the Father's optional will. It is not certain whether the Son existed from all eternity, or only before all worlds; neither is it certain whether the Son was begotten from the same essence with the Father or made out of nothing. 'Tis worthy of censure who, on the one hand, affirm that the Son was made out of nothing, or, on the other, affirm that he is self-existent substance. Clarke will not be positive upon these points, because of the danger of presuming to be able to define the particular metaphysical manner of the Son's deriving his essence from the Father. With the Father a third person has also existed, deriving his essence from him through the Son. This Person has higher titles ascribed to him than to any angel, or other created being whatever, being the image of the Father, a part of his substance, being subordinate to the Son, both by nature and by the will of the Father. The error of Clarke originated in his failure to discriminate carefully between the essence and the hypostasis. Hence, in quoting from the Scriptures and the fathers, he refers to the essential nature phraseology that implies subordination, and which was intended by those employing it to apply only to the hypostatical character. He even cites such high Trinitarians as Athanasius and Hilary as holding and teaching that the subordination of the Son to the Father relates to the Son's essence. The term 'unbegotten' he also held, as did the Arians, to signify to a synonym for eternal, and for whom the term 'begotten' must necessarily signify 'created.' Thus, misconceiving the Nicene use of these two terms, he endeavors to prove that the Nicene Trinitarians taught that the Father alone possesses necessary existence, while the Son exists contingently. But both of these terms, as well as the contemporaneous phraseology of Nice to the Person, and have no relation to the essence. The essence, as such, neither begets nor is begotten. They merely indicate the peculiar manner in which the first and second hypostasis participate in one and the same eternal substance or nature. In the common use of the word, it is consequently used "uncreated" as much as does 'unbegotten.' The Begotten Son is as necessarily existent as the Unbegotten Father, because the essence is the seat and
source of necessary existence, and this is possessed alike by both—in the instance of the first Person by 
paternity, and of the second by filiation" (Shedd, _History of Christian Doctrine_, i, 386 388).

"The point on which Clarke's philosophical fame chiefly rests, and to which he devoted a very consider-
able portion of his life, was his controversy upon _Labe-
rieth's_ _Theological Studies_—a controversy which he strenu-
ously opposed to Leibnitz and Collins, and by which he en-
deavored to overturn, finally, the fatalistic conclusions of 
Spinozism. Throughout this contest, the victory in 
which was claimed on both sides, Clarke maintained 
most powerfully the doctrine of Free-will, and, accord-
ingly, the right of the individual to the possession of 
freedom which tends to make the idea of self either 
into that of nature or of God. Of the three fund-
damental conceptions, therefore, from which all phi-
osophy springs, those of finite self and the infinite 
held in the writings of Clarke by far the most promi-
nent place, so that we may properly regard him as the 
chief representative of the idealistic tendency during 
the age immediately succeeding Locke, as Cudworth 
was during the age that immediately preceded him" 
(Morell, _History of Modern Philosophy_, pt. i, ch. ii, § 2).

In 1724 Clarke obtained the mastership of Wigston 
Hospital, and published a volume of sermons. He 
died only in May 1729, when his _Life and Works_ 
were printed. His _Catechism of the Church Catechism and Sermons_ were published 
after his death (London, 1730, 10 vols. 8vo). In the 
_Catechism_ he teaches that worship should be paid to 
the Father only, through the Son, and in the Holy 
Spirit. The moral character of Clarke is praised by 
all his biographers. His principal works were trans-
lated into German by Semler, and prepared the way 
for German Rationalism. "He was a wary and very 
skillful disputant, well disciplined in the scholastic 
logic. Inferior to Locke in comprehensiveness and 
originality, he was greatly superior to him in acquire-
ments, being eminent as a divinity, a mathematician, a 
metaphysician, and a philologist" (English Cyclopedia).

His _Works_ were published in 1738, in 4 vols. 
fol., of which the first contains his Life (by Hoadley), 
and 114 Sermons, published from his MS.; the second 
contains 78 Sermons and the Boyle Lectures; the 
third, a paraphrase of the Four Evangelists, with minor 
prizes on the fourth, the _Catechism of the Church_, 
and a number of controversial tracts. Of the sepa-
rate works numerous editions have been published.

See, besides the writers already cited, (especially 
Fairburn's _Appendix to Damer's Person of Christ_ (Ed-
inburgh translation, div. ii, vol. iii, 570 sq.); Hoadley, 
Life of Dr. Plays (2d ed., Lond., 1811).) Hoadley, _Eccles. Biography_, iv, 88; Watson, _Theological Insti-
tutes_, i, 311 (N. Y. ed.); Hagenbach, _History of Doc-
trines_ (ed. by Smith), § 234, § 262.

**Claramontanus, CODEX. See CLERMONT MANUSCRIPT.**

**Clarke, Thomas, was born March 26, 1670, at 
Wisbeach, Cambridgeshire, where his father, a clergy-
man, was master of the free grammar-school. He 
studied at St. John's College, Cambridge, and became 
a promoter of the anti-slavery agitation in Great Brit-
ain by a Latin prize-essay which he wrote in 1768, 
on the question, "Is it right to make slaves against 
their will?" In order to pursue the agitation of the 
question, he relinquished his chances of advancement in 
the Church, for which he was intended, and in which he 
had taken deacon's orders. His essay was trans-
lated into English, and had an extensive circulation. 
The agitation of the question of slavery was due to his 
philosophical views, and the iniquities and cruelties of the slave-trade, travelling 
years thousands of miles in furtherance of his 
benevolent designs, and publishing on the subject 
every year. He lived to see not only the slave-
trade abolished (in 1807), but the abolition of slavery 
itself in the British West Indies in 1838. He also took 
an active part in other benevolent schemes, particu-
larly in the establishment of institutions for seamen. 
He died Sept. 26, 1846. His principal writings are, 
_History of the Abolition of the Slave-trade_ (2 vols. 8vo, 
1808; new ed., with Preface by Brougham, 1828); _A Portrait of Quakers_, 1807; and _A Life of William 
Penn_, 1816, (Both engraved by T. Clarkes, _Biog. Sketch of T. Clarkes_ (Lond. 1847, 12mo).

**Class-leader. See CLASS-MEETINGS.**

**Class-meetings.** In the Methodist Episcopal 
Church, and indeed in all Methodist churches through-
out the world, the classes are divided into smaller com-
er companies, called classes. One of the more experi-
enced members is appointed by the pastor to be the _leader_ of the 
class. "It is his duty," in the Methodist Epis-
copal Church, "I. To see each person in his class once 
a week at least: in order (1) To inquire how their souls 
prosper. (2) To advise, reprove, comfort, or ex-
hort, as occasion may require. (3) To receive what 
they are willing to give towards the relief of the 
preachers, church, and poor. II. To meet the minis-
ters and the stewards of the society once a week; in 
order (1) To inform the minister of any that are sick, 
or of any that walk disorderly, and will not be re-
ed. III. To visit and urge a man who is dis-
ceived of their several classes in the week proceeding" 
(Discipline, pt. i, ch. ii, § 1).

A rudiment of the "class-meeting" may perhaps be 
found in the _Prophesying_ begun at Northampton. 
These were religious meetings for discussions on the 
Scriptures, prayer, and mutual instruction, conducted 
by clergymen under fixed rules. Bishop Grindal, 
Bishop Parkhurst, and other bishops highly approved 
them, but Queen Elizabeth prohibited them (May 7, 
1577; Wilkins, _Concil. iv, 289;_ they were, however, 
kept up in many places until Whiglifit (who became 
archbishop of Canterbury in 1680) succeeded, in his vi-
olent way, in putting them down. Marston (Churches 
and Sects, i, 250) remarks that these meetings gave 
Wesley "the idea of those social meetings in which the 
laity were to sustain an important part, though still 
under the guidance of their pastors, and in which the 
strength of Methodism consists" (see also Grant, _His-
tory of the Methodist Church_, i, 426, London, 1811). A 
meaner approach to the "class-meeting" is to be found in the "religious societies" so widely diffused in the 
Church of England toward the close of the 17th 
century. According to Woodward (Rise and Progress of 
The Religious Societies, etc., Lond. 1744), it was "about 
1668 that several young men in London, being brought to 
serious concerns by the preaching of the English 
ministers, and applying to their ministers for religious counsel, 
were advised by them to meet together once a week, 
and apply themselves to good discourse and things 
wherein they might edify one another." These 
societies soon multiplied, and in 1678 a digest of rules for 
their conduct was adopted. Hornbeck, Beveridge, Stillingfleet, and Tillotson were among the promoters of 
these societies. By 1691 there were forty of these re-
ligious societies in London, and many in other parts 
of England. For their rules see Woodward (cited 
above), and also Hook, _Ecclesiastical Biography_, ii, 583; 
vi, 166. Dr. Clarke (History of the Wesley family, 
Lond. 1848, vol. i, p. 144) gives a letter from Samuel 
Wesley, _Concerning the Religious Societies_ (1699), in 
which they are named as supplying the lack of contra-
ternities, sодeties, etc., in the Church of England, 
and their objects and methods are highly commended. 
On the Continent of Europe, the _Colonia Pietatis_ be-
gan by David Daubenton about the same time, and 
methods somewhat like those of the later class-meet-
ing (see _Pitirim; Spencer_). Woodward's book was 
translated into German by the excellent D. J. Jablon-
ski (q. v.), and similar societies were formed in vari-
ous parts of Germany (_Christian Remembrancer_, July,
CLASS-MEETINGS

CLAUDE

1854, 200). The nearest approach to the "class-meeting" in the Roman Church is perhaps to be found in the "Society of St. Vincent de Paul," which is composed of laymen, whose objects are mutual edification at periodic meetings, and the promotion of active charity. See MILEY, Treatise on Class-meetings (Cincinnati, 1853, 1856); RUSSELL, On Class-meetings (Richmond, 1853); FISK, On Class-meetings (1856); TAIT'S WORKS (N. Y. ed.), v. 179, and often; PORTER, COMPENDIUM OF MORAL THEOLOGY, 47, 458; STEVENS, History of Methodism, ii, 430, 462; Wesleyan Methodist Magazine, July, 1863, p. 619; August, 1853, p. 704; Smith, History of Wesleyan Methodism, i, 650-672 (Lond. 1857, 8vo); MATH. QUAR. REV. 1867, 650, 652; Life of Father Russo, the Class-meister (N. Y. 1853, 1867).

Claudia (Klaudia), a small island off the S.W. coast of Crete, which Pausanias passed on his tempestuous voyage to Rome (Acts xxvii. 16), called also Gaudio by Mela (ii, 7) and Pliny (Hist. Nat. iv, 42), Claudia (Klaudia) by Polymy (iii, 7), and Claudia (Klaudia) in the Stadikampos Mora Magna: it is still called Claudia-nea, or Gaudounei, by the Greeks, which the Italians have corrupted into Gazo di Candia, to distinguish it from another island of the same name (anciently likewise called Claudia) near Malta. It is said to have been the Calypso's isle of mythical fame (Callin. ap. Strabo, p. 298). According to Pococke, it is now inhabited only by some thirty families (East, iii, 347; Froecht, Dekr. und. i, 586). This otherwise insignificant island, with its great geographical history, is mentioned in reference to the removal of some of the difficulties connected with Paul's shipwreck at Melita. The position of Claudia is nearly due W. of Cape Matara, on the S. coast of Crete (see Fair Havens), and nearly due S. of Phoinice (q. v.). (See Ptol. iii, 17, 1; Stob. ed. Voss.) The ship was seized by the gale a little way after passing Cape Matara, when on her way from Fair Havens to Phoenice (Acts xxvii, 12-17). The storm came down from the island (cor. a'rvp, v, 14), and there was danger lest the ship should be driven into the African Syrtis (v, 17). It is added that she was driven to Claudia, and ran under the lee of it (v, 16). We see at once that this is in harmony with, and confirmatory of, the arguments derived from all the other geographical circumstances of the case (as well as from the etymology of the word Euboea, or Euro-Aquilo, which lead us to the conclusion that the gale came from the N.E., or, rather, E.N.E.). The storm was about seven miles wide and three broad. Its W. shore, which trends in a N.W. direction, and is prolonged by "some rocks adjacent," would "afford the advantage of comparatively smooth water for some twelve or fifteen miles" (Adm. Penrose's M.S. in Conybeare and Howson's St. Paul, ii, 297). This called it "as Paul's was, for his protracted continuance of a wreck on the island of Melita (Smith, Voy. and Shipwreck of St. Paul, 2d ed. p. 92, 98, 106, 238). See SHIPWRECK.

Claude, Jean, one of the most eminent of French Protestant divines, was born at La Sautervat, near Agen, in the south of France, in 1619. He studied theology at Montauban, was ordained in 1645, and began his pastoral labors at La Trègue in the same year. In 1654 he succeeded the late Claude Pinel, who had also taught in the theological school. In 1661 he was interdicted from his functions by the government, as a penalty for opposing, in the provincial synod, a project of union between Romanists and Protestants proposed by the governor of Languedoc. He went to Paris to have this penalty revoked, and while there was prevailed upon by Madame Turenne (who wished
to save her husband from Romanium) to write against Arnaud on the Eucharist, which led to a controversy of great note. Claude’s tractate was circulated in MS.; but in 1654 Arnauld published Perpetuité de la Foi, etc. [see Arnauld], to which Claude replied in 1667 in his Réponse au Traité de la Perpetuité de la Foi, etc. (see an account of the controversy in Bayle, translation of 1736, 10 vols., iv, 366). He had previously been appointed minister at Montauban (1618), and from 1665 onwards he was interdicted again, and in that year he became pastor of the Reformed church at Charenton, near Paris. Here he remained, popular and useful, regarded as the chief literary defender of French Protestantism, until 1685. The eminent Port-Royalists, Arnauld and Nicole, found him a capable and worthy opponent. "In 1673 appeared his Diction de la Réformation, or Réponse aux Projetis légitimes de Nicole (latest ed. Paris, 1844, 8vo). In 1681 Claude had a controversial conference with Bossuet, after which he published Réponses à la Conférence de Bossuet (La Haye, 1683, 8vo). The conference, as usual, led to no approximation between the two men. In 1685 the publication of the edit of Nantes by Louis XIV obliged Claude to seek refuge in Holland, where he was well received, on account both of his talents and his personal character, and the prince of Orange granted him a pension. He died Jan. 13, 1687. His Plaintes des Protestants contre Louis XIV et des Royaumes de France was published after his death (best ed. by Basmage, Cologne, 1763, 8vo). His style, though simple, was vigorous, being sustained by logical skill and erudition. La Devèze wrote a biography of Claude (Amsterdam, 1687) (Eng. Cyclopaedia). Several of his works are translated, viz. Townsend, Claude’s Historical Defence of the Reformation, with Life of Claude (London, 1615, 2 vols. 8vo). —pp. —Essay on the Composition of a Sermon (latest ed. N.Y. 1853, 12mo).—Account of the Complaints of the Protestants (London, 1707, 12mo).—Haag, La France Protestante, iii, 473; Mosheim, Ch. Hist. cent. xvii, sec. ii, pt. i, ch. i, § 12, note; Bayle, i. c. On Claude’s qualities as a preacher, and his homiletic services, see Vinet, Histoire de la Prédication, p. 303 sq. (Paris, 1869, 8vo).

Claude of Turin. See CLAUDIUS, CLEMENS.

Claudia (Klaudía, fem. of Claudius), a Christian female mentioned in 2 Tim. iv, 12 (sustaining Timotheus, A.D. 64). She is thought to have become the wife of Pudens, who is mentioned in the same verse (although Linus is named between). It has been supposed that this Claudia was a British maiden, daughter of king Cogidubus, an ally of Rome (Tacitus, Agr. col. 14), who took the name of his imperial patron, Tiberius Claudius. Pudens, we gather from an inscription at Chichester, and now in the gardens at Goodwood, was at one time in close connection with king Cogidubus, and gave an area for a temple of Neptune and Minerva, which was built by that king’s authority. Claudia is said in Martial (xi, 53) to have been of Bithynia (see note). Moreover, she is there also called Rufina. Now Pomponia, wife of the late commander in Britain, Aulus Plautius, under whom Claudia’s father was received into alliance, belonged to a house of which the Ruui were one of the chief branches. If she herself were a Ruui, and Claudia her protegee, the latter might well be called Rufina; and we know that Pomponia was tried for having embraced a foreign religion (superstitionis externa rea) in the year 57 (Tacitus, Ann. xii, 82), so that there are many circumstances concurrent tending to give verisimilitude to the conjecture. On the other hand, it may be said that the attempt to identify this Claudia with the British princess is as good as impossible (see note to Pudens is celebrated by Martial (Epig. iv, 18), rests on no foundation beyond the identity of the names of the parties, and the fact that Martial calls Pudens "sanctus," and says he was a corrector of his verses. But the identity of names so common as Pudens and Claudia may be nothing more than a mere accidental coincidence; as for the term "sanctus," it is precisely one which a heathen would not have applied to a Christian, whom he would have regarded as the adherent of a "prava superstitionis" (Pliny, Ep. ad Traj.); and as respects Pudens’s correction of Martial’s verses, until we know whether that was a correction of their style or a correction of their morals (in which case Pudens really must have done his work very badly), we can build nothing on it. On the other hand, the immoral character of Martial himself renders it improbable that he should have had a Christian and a friend of Paul among his friends. Further, Paul’s Pudens and Claudia, if husband and wife, must have been married before A.D. 67, the latest date that can be assigned to Paul’s writing. But Martial’s epitaph must have been written after this, perhaps several years after, for he came to Rome only in A.D. 66; so that, if they were married persons in 67, it is not likely Martial would celebrate their nuptials years after this. In all, if Paul’s Pudens and Claudia were unmarried at the time of his writing, they must at least have been persons of standing and reputation among the Christians; and, in this case, can it be supposed that a poet meaning to gratify them would invoke on them the favor of heathen deities, whom they had renounced with abhorrence? See B. F..DecimalField, Ep. Claudia (London 1848): an article in the Quart. Rev., for July, 1838, entitled "The Romans at Colchester;" and an Excursus in Alford’s Greek Testament (vol. iii, preface, p. 104), in which the contents of the two works first mentioned are enclosed in a summary way. See also Conybeare and Howson’s St. Paul, i, 484 n.

Claudianus Mamertus, a presbyter of Vienne, 5th century (died about 479), was a man of speculative talent, and well acquainted with the theology of Augustine. He wrote a treatise, De statu Animae (Bib. Max. Patr. vi; Bib. Patr. Galland, x) against the anthropomorphism of Faustinus of Rhegium (q. v.). He shows that "thought is inseparable from the essence of the soul, and that its spiritual activity is indestructible" (Neander, History of Dogmas, ed. Ryland, i, 340). For an analysis of the tract, see Dupin, Ecles. Writcrs, ii, 150 (London 1863), and Clarke, Succession of Sacred Literature, ii, 249. Certain Latin hymns are attributed to Claudian, viz., Contra Poetarum eosmos (in the De Statu Animae) and Pompeium laudans (in the Epig. iv, 18), but last, however, is more properly ascribed to Venantius Fortunatus. Sidonius Apollinarius, to whom the De Animâ is dedicated, gives a glowing panegyric upon the talents of Claudianus.

Claudius (Klaudios, for Lat. Claudius, perfh. from claudios, i me), the name of two Romans mentioned in the N.T. See also Felix.

2. The fourth Roman emperor (excluding J. Caesar), who succeeded Domitian (see note). Jan. 25, A.D. 41. His full name was Tiberius Claudius Drusus Nero Cesar Augustus Germanicus. He was the son of Drusus and Antonia, and was born Aug. 1, B.C. 10, at Lyons, in Gaul. Losing his father in infancy, he was abandoned to the care and society of domestics, and despised by his imperial grandfathers (Ann. xii, 1; Suetonius, Claud. 2). Notwithstanding the weakness of intellect resulting from this neglect, he devoted himself to literary pursuits, and was the author of several treatises. On the murder of Caligula, he hid himself through fear of sharing his relative’s fate, but was found by a soldier, at whose feet he fell a suppliant, and who, after he had thus unexpectedly, and almost by force, hurried into the popular assembly, and constituted emperor chiefly by the Praetorian Guards, under promise of a largesse to
CLAUDIUS, MATTHIAS

According to Josephus (Ant. xix, 2, 1, 3 and 4), the throne was in a great measure finally secured to him through the address and solicitations of Herod Agrippa I (q. v.). This obligation he returned by great and peculiar favors to that personage, for he enlarged the territory of Agrippa by adding to it Judaea, Samaria, and some districts of Lebanon, and appointed his brother Herod to the kingdom of Chalcis (Josephus, Ant. xix, 5, 1; Dion Cassius, Ix, 8), giving to this latter also, after his brother's death, the presidency over the Temple at Jerusalem (Ant. xix, 3). Indeed, the Jews were generally treated by him with indulgence, especially those in Asia and Egypt (Ant. xix, 2, 3; xx, 1, 2), although those in Palestine seem to have at times suffered much oppression at the hands of his governors (Tacitus, Hist. v, 9, etc.;); but about the middle of his reign those who abode at Rome were all banished thence (Acts xviii, 2; see Habsentreit, De Judaeo Romae exile, Lips. 1714). From the language of Suetonius in relating this event (Claud. 25), it is evident that the Christians were also indiscriminately included in the edict as a sect of the Jews; if, in the least, they were not the more numerous part of that portion of the inhabitants: "Judaeos, impulsose Chresto [, i.e. Chresto, see Rossal, De Chresto, in Chrestum commutato, Grön. 1717] assidue tumultuantes, Româ expulit" ("He banished the Jews from Rome on account of the continual disturbances they made at the instigation of one Chrestus"). See CHERESTUS. The historian has evidently, in his ignorance of the merits of the case, attributed the proverbial insurrectionary spirit of the Jews to the influence of Christianity, a confusion which the disputes between the Jews and Christians on the subject of the Messiah may have contributed to increase. Suetonius does not give the exact year of this edict nor can it be made out from any other classical authority; he mentions it, however, in connection with other events which are known to have taken place at different dates between A.D. 44 and 53: a comparison of the associated events in the Acts appears to fix it in the year A.D. 49. Orosius (Hist. vii, 5) fixes it in the ninth year of Claudius, A.D. 49 or 50, referring to Josephus, who, however, says nothing about it. Pearson (Annal. Paul. p. 22) thinks the twelfth year more probable (A.D. 52 or 53). Anger remarks (De ratione temporum in Acta App. p. 217) that the edict of expulsion would hardly be published as long as Herod Agrippa was at Rome, i.e. before the year 49. The Jews, however, soon returned to Rome. Several famines occurred under Claudius from unfavorable harvests (Dion Cass. Ix, 11; Euseb. Chron. Armen. t, 269, 271; Tacit. Ann. xii, 48), one of which, in the fourth year of his reign, under the procurators Cæcilius Fadus and Tiberius Alexander (Joseph. Ant. xx, 2, 5; 3), extended to Palestine and Syria, and appears to be that which was foretold by Agabus (Acts xi, 28; see Biscoe, On Acts, p. 60, 66; Lardner, Credibility, i, 11; Kitto, Daily Bible Illustr., last vol., p. 229-232; compare Künzl, in loc.; also Kretz, Obs. in N. T. p. 210). The conduct of Claudius during his government, in so far as it was not under the influence of his wives and freedmen, was mild and popular, and he made several beneficial enactments (see Merivale, Romans under the Empire, v, 474 sq.). He also erected numerous public buildings, and carried out several important public works. Having married his niece Agrippina, she prevailed upon him to set aside his own son Tiberius in favor of her own son Nero by a former marriage; but, discovering that he regretted this step, she poisoned him on the 13th of October, A.D. 54. (See Smith's Dictionary of Classical Biography, s. v.) During the reign of Claudius several persecutions of Christians by Jews took place in the dominions of Herod Agrippa, and in one of them the prophet James was executed. These dominions embraced by far the largest number of Christian congregations which were established up to the time of his death (A.D. 44). After his death, most of the territory over which he had ruled was reincorporated with the Roman empire, his son, Agrippa II, receiving only Trachonitis and Gaulonitis. Thus the Christian congregations began to attract to a larger degree the attention of the Roman authorities. At the same time, the apostle Paul began to establish congregations in many of the larger cities of the empire, while those of earlier origin assumed much larger dimensions. Nevertheless, the difference between the Jews and Christians was not generally understood by the Roman authorities, and this circumstance had some beneficial, but also some injurious consequences as regarded the Christians. On the one hand, the missionary activity of the apostles and their helpers met with no opposition on the part of the Roman authorities. See Proteus. II. Christia, ecclesia secta Judaica nominem tuta [Erlang. 1771], and J. H. Ph. Seidensticker, Dies. de Christiania ad Troja- num vaque a Caesaribus et Senatu Romano pro culturibus religiosis Mosaicum semper habitas [Helmstädt, 1790]; on the other hand, many who might have been willing to join the Christian church were deterred from doing so by the fear that the yoke of all the Jewish law would be placed upon them. (See Wetzer und Wels, Kirchen-Lektion, s. v.)

2. CLAUDIUS LYLIAS (Acts xxiii, 26). See LYSIAS.

Claudius, Clements, bishop of Turin, sometimes called the "first Protestant Reformer," was born in Spain about the close of the eighth century, and educated under Felix of Urgel, whom he accompanied into France, Germany, and Italy, but whose errors there is so much reason to believe that he adopted (See G. Ch., History, iii, 430, Torrey's). Called to the court of Louis le Débonnaire to expound the Scriptures, he was sent by that monarch, when emperor, to the see of Turin (an event variously dated from 814 to 823) in order to oppose the prevailing tendency to image-worship. Not only against this form of idolatry, but also against the worship of saints, of relics, and of the cross, against the abuse of pilgrimage, against the rising claims of tradition, prelacy, and the Romish see, he maintained a vigorous and able opposition till his death in 838, with such success and such results as were usually and properly mine who err from the side of boldness rather than of timidity. Pope Paschal I {re proved Claudius; he replied that so long as "the pope did the works of an apostle, he recognised his apostolical character, but otherwise, then Matt. xxiii, 2, 3, applied to him." His writings are chiefly commentaries on several books of Scripture, composed principally of extracts from the fathers, and especially from Augustine. Many remain in MS. in various French libraries. His Comm. in Galatas, and excerpts from his Apologistam, are given in Bibl. Max. Patr. xiv. See Neander, Ch. Hist. iii, 429 sq.; Gieseler, Ch. Hist. per. iii, div. i, § 12; Hagenbach, Hist. of Doctrina, ii, 422; Murdock's Mosheim, Ch. Hist. i, 218; Funth, De Britannia- dius during his government, in so far as it was not under the influence of his wives and freedmen, was mild and popular, and he made several beneficial
CLAUDIUS

nwm de piume of Aenmus, or Der Wanderer Bote (the
Wandsbeck Messen-er), a German writer, was born
at Rheinfeld, in Holstein, Jan. 2, 1740. He studied
law at Jena, and, after having lived for a short time
at an office in Darmstadt, 21, was, in 1778, "revisor"
at the Schleswig-Holstein Bank in Altona. He resided
at the village of Wandsbeck, near Altona (hence his
name de plane), where he spent the greater part of his
life. He died on the 21st of January, 1815, at Ham-
burg, in the house of his son-in-law, the publisher,
Ferdinand Perthes. Claudius is still regarded as one
of the most gifted popular writers of Germany, and
his books had a very large circulation during his life-
time. He was on terms of intimacy with Voss, Her-
der, Jacobit, Hamann, Lavater, Stolberg, and many
other prominent literary men of his time. In the
Church history Germany he bears a honorary
name as one of the most effective opponents of the
vulgar rationalism which at that time threatened to
obtain absolute sway over the whole of Protestant
Germany. In his earlier writings, he, on the whole,
confined himself to ridiculing the arrogance and intel-
loquence of the Rationalists; but he steadily grew war-
mer in his opposition to rationalism, and in his attach-
ment to a strict Lutheranism, and on that account
fell out with some of his former friends, as Voss and
Jacobi. Claudius began in 1765 a complete edi-
tion of his works, under the title Aenmus annua sua
secund portiones, 8 vols., to which some addition was
made in 1791 (Jena, Hedin, 1855). A new edition of
Claudius has been written by Herbst (Gottha, 1857).

Honzog, Real-Encyclop. ii, 712; Brockhaus, Consensus-
Lexicon, iv, 457.

Claudius of Savoy, a Unitarian of the sixteenth
century, who, in a dispute at Berne, 1534, main-
ained that Christ was a man, who "was called God
nymnuch as he had received the fulness of the divine
Spirit beyond all other beings. He dwelt in him
through the divine Spirit, and all through him
might be animated by the Father" (Neander, History
of Doymas, Ryland's translation, ii, 467). He was
expelled from Berne, imprisoned at Strassburg, returned
to Switzerland, and recanted at Lausanne, 1557. See
Schoelhorns, De Minio Celso et Claudio Allbrogo (Ulm,
1748, 8vo); Mothember, Ch. Hist. iii, 223; Trechsel, Die
protest. Antimimantier, i, 55.

Claustrum. See Cloister.

Claustros (Lat.), the enclosure of a monastic es-
stableishment, usually square, and surrounded by a
wall. Ordinarily monks or nuns are not allowed to
go beyond this space, or to receive a visit within it,
without the special permission of the head of the estab-
lishment.

Claw (παρακ, parak, 'left', i. e. a cloven foot),
prop. a hoof (as usually rendered) of a bifurcated ani-
mal (Exod. x, 26; Mic. iv, 13; Ezek. xxxii, 11), or of
a solid-footed quadruped (e. g. a horse, Isa. v, 28; Jer.
xxvii, 3), hence for the distinctive mark of a clean
(π. v.) creature ('claw', Deut. xiv, 16), or the sharp
nail of animals with toothed claws (Job xi, 16), or
the talons of a predatory bird ('claw', Dan. iv, 33).
In one passage (Psal. x, 10) the powerful, clawed paw
of a lion (π. v.) is poetically denoted by the term
παίστη, 'strong ones.'

Clay is the rendering of several words, more or less
accurately, in certain passages in the English Bible:
παλαιο, 'lo, or that were considered, hence potter's
clay, as being trodden fine (Isa. xxii, 25; Nah. iii, 14); corresponding to the Gr.
ἐλατζεν (I, 9, 11, 14; Rom. iv, 21; Wisd. vii, 9; xv, 7, 8; Ecclus. xxxii, 13; xxxviii, 80; Bel 7),
as flavoring or plastic; and δηλομεθαι, 'cherish the
looming (Job iv, 19; xiii, 12; xvii, 16; xxxii, 16; xxxiii, 6), e. g. pot-
ter's clay (Isa. xxii, 16; xlv, 9; Jer. xviii, 4, 6), as
used for sealing (Job xxxviii, 14), or for cement of
building ('mortar,' Gen. xi, 8), so for making brick
(Exod. i, 14; 'mortar,' Isa. xli, 25; Nah. iii, 14), also
common street 'mire' (Isa. x, 6; Job xxx, 19; 'clay,' Job ix, 9). Other terms so rendered less cor-
rectly are: δαμαι, δαμορ, δαμορ, δαμορ, δαμορ, δαμορ, δα-
matum (Job xiv, 16; Jer. xlviii, 16; Job xlviii, 16; Jer.
xxiii, 16; Job xlviii, 16; Jer. xlviii, 16), 'clay,' and the Chal. דמ, שומ, שומ, שומ, שומ, 'clay,'
burnt clay-ware (Dan. xi, 23). The word קָרַ֑ר, 'clay,' (2 Chron. iv, 17), or קָרַ֑ר, קָרַ֑ר, 'clay,' (1 Kings vii, 27) denotes darkness or density of soil, i.e.
perh. depth of earth; and the merely apparent com-
pound קָרַ֑ר, קָרַ֑ר, 'thick clay', in Hab. ii, 6, signifies rather a piling of goods to an exhortor.

See Mineralogy.

'Clay is a sedimentary earth, tough and plastic,
 arising from the disintegration of felspar and similar
minerals, and always containing silex and alumina
combined in variable proportions. As the sediment
of water remaining in pits or in streets, the word is
used frequently in the O. T. (e. g. Isa. viii, 20; Jer.
xxxxvii, 8; Psal. xvii, 42), and in the N. T. (John ix, 6),
a mixture of sand or dust with spittle. It is also
found in the sense of potter's clay (Isa. xli, 25),
the elegant and useful forms assumed by the rude
material under his hands supplying a significant
example of the Divine power. Never over the desert
(Job xlviii, 8; Jer. xlviii, 1-6; Rom. ix, 21). The alluvial
soils of Palestine would have no doubt supply material
for pottery, a manufacture which we know, as it was still,
carried on in the country (Jer. xlviii, 2); but our
knowledge on the subject is so small as to afford little
or no means of determining and the clay of Palestine
like that of Egypt, is probably more loam than clay
(Birch, Hist. of Pottery, 1, 55, 159). See Pottery.

Bituminous shale, convertible into clay, is said to
exist largely at the source of the Jordan, and near the
Dead Sea, also near Bethshan (Burchhardt, ii, 598;
Russegger, iii, 278, 280). The present clay in Palestine is Gaza, where
are made the vessels in dark blue clay so frequently
met with. The Talmud (Aboda Bara, ii, 8) mentions
a peculiar kind of luteous material called 'Hadian's
clay' (אדריאגדל). The use of clay in brick-
making was also common. See Brique. Another use
of clay was in sealing (Job xiii, 14). The bricks of
Assyria and Egypt are most commonly found stamp-
ed either with a die or with marks made by the fingers
of the maker. Clay jars in Egypt are sometimes
sealed with clay; mummy-pits were sealed with the
same substance, and remains of clay are still found
adhering to the stone door-jamb. Our Lord's tomb may
have been thus sealed (Matt. xxvii, 66), as also the
carved vessel containing the evidences of Jeremiah's
purchase (Jer. xxvii, 14). So also in Assyria, at Kou-
yunjik, pieces of fine clay have been found bearing impres-
sions of seals with Assyrian, Egyptian, and Phoe-
nician devices. The seal used for public documents
was rolled on the moist clay, and the tablet was then
placed in the fire and baked. The practice of sealing
contracts with clay goes back to the earliest time, and
this practice is still common in the East (Wilkinson, Anc.
Egypt. xii, 15, 46; ii, 564; Layard, Nin. and Bab. p. 158,
158, 608; Herod. ii, 38; Harmer, Obs. iv, 376)" (Smith, s. v.).

Norden and Pococke observe that the inspect-
ors of the granaries in Egypt, after closing the door,
put their seal upon a handful of clay, with which they
cover the lock. The seal was used with the greatest
doubt, in primitive times for mortars, for the same
term is employed for both (Gen. xi, 3). Houses
are built of clay mixed with sand in countries
where stones are not to be found. See Mortar.

In Job iv, 19, it is said of mankind that they dwell in
huts of clay, either because of such dwellings, or to the "clay-
mentiments" of the body (compare 2 Cor. vi, 1). Our
Saviour anointed the eyes of the blind man with a
salve made of clay and spittle (John ix, 6), a simple

Digitized by Google
preparation, which, it would be manifest to all, could have in itself no curative virtue. The "clay ground" (literally thickness of soil) in which Solomon caused the large vessels of the Temple to be cast (1 Kings vii, 46; 2 Chron. iv, 17) was a compact loam, of a quality or mixture, some 20 feet deep; see 1 Kings iv, not to be found elsewhere in Palestine, which is generally rocky or sandy. See Metallurgy.

Clayton, Robert, born in Dublin in 1695, was a disciple of Dr. S. Clarke, became bishop of Killala, of Cork, and finally of Clogher, and published several works, none of which have gained lasting celebrity but his Essay on Spirit (1751), a treatise maintaining Arianism, of which, though in his compositions, he bore the expense and assumed the responsibility. A powerful reply from Jones of Nayland did not hinder his proposing in the Irish House of Lords (2d Feb. 1756) the omission of the Nicene and Athanasian Creeds from the liturgy of the Church of Ireland; and at last, the third part of his Vindication of the Histories of the Old and New Testament gave occasion to legal proceedings, arrested only by his death on Feb. 26th, 1758. Among his other publications are The Chronology of the Hebrew Bible Vide cated (Lond. 1747, 4to); A Dissertation on Prophecy (Lond. 1749, 8vo).—Kippis, Biographia Britannica, iii, 629.

Clean (מֵאוֹד, tabor, κασάριο) and Unclean (מִכָּל, tami, δακαριος). These words are frequent occurrence and obvious meaning in the sacred writings; but it is in their peculiar application, by the Mosaic law, to persons, animals, and things, that they are now to be considered. In order to partake of the privileges of the Jewish Church, and to engage acceptably in its outward worship, the individual must not only be circumcised, but he must be ceremonially pure or clean; that is, he must be free from uncleanness. How the different kinds of uncleanness were contracted, what time it continued, and what was the process of purification, we find particularly described in Lev. xi-xv; Num. xix. See Purification.

The division of animals into clean and unclean existed before the Flood (Gen. vii, 2), and was probably founded upon the practices of animal sacrifice. The regulations concerning clean and unclean animals are chiefly recorded in Leviticus, ch. xi, and Deuteronomy, ch. xiv, where the following animals are pronounced unclean, and are consequently interdicted to be used as food: (1) Quadrupeds which do not ruminate, or which have uncloven feet. (2) Serpents and creeping things; wherein insects walk, and sometimes fly, and sometimes advance upon their feet; but locusts, in all their four stages of existence, are accounted clean. (3) Certain species of birds; but no particular characters are given for dividing them into classes, as "clean" or "unclean." Judging from those that are specified, as far as the obscure character of the Hebrew names will admit, it will be found that birds of prey generally are rejected, whether they prey on lesser fowls, or on animals, or on fish; while those which eat vegetables are admitted as lawful; so that the same principle is observed, in a certain degree, as in distinguishing quadrupeds. (4) Fish without scales, and also those without fins. (5) Animals of any kind which had either died of disease, or had been torn by wild beasts (Exod. xxii, 81). See Animal.

The animal substances interdicted to the Hebrews were: (1) Blood (Levit. xvii, 10; xix, 26; Deut. xii, 16, 20; xv, 20). (2) The fats, excepted of the intestines, and the net or caul. (3) The fat upon the intestines, called the mesentery, etc. (4) The fat of the kidney. (5) The fat tail or rump of certain sheep (Exod. xxix, 13, 22; Levit. iii, 4-9; ix, 19). See Food.

What was the design of these distinctions, and how they were abolished, may be learned with sufficient accuracy from a comparison of various passages of Scripture (Lev. xx, 24-26; Acts x, 9-16; xi, 1-26; Heb. ix, 9-14). See Decree (of the Apostles). It has been observed that one object of these appointments may have been to make the Jews suspicious of Gentile customs and entertainments, and so induce them to abstain from all intercourse with them. We find in the New Testament that eating with Gentiles was regarded as a peculiar aggravation of the offense of associating with them (Matt. ix, 11; Acts xi, 8). It may be remarked, also, that the flesh of many of the animals interdicted was unwholesome, and others were objects of idolatrous worship among the heathen. The chief design of the regulation, however, appears to have been to establish a system of regimen which should distinguish the chosen people from all other nations. See the treatises De animalibus esse indirectis, by Danz (1687) and Münster (in Menthenthil Thes. diaz. ii, 477 sq.); also Neumann, Usb. d. Kusen Noah (Wittenb. 1711). See Uncleanliness.

Cleanse. See Purification.

Clear-story (or Clerk-story), the upper part of the central aisle of a church, raised above the roofs of the adjoining side aisles, with windows to light the nave below. In many cases the clear-story is evidently a subsequent addition to the original design, especially when the high-pitched roof, which included the body and aisles in its span, gave way to a flat roof covering the nave only. The walls were then raised over the arches of the nave to receive the clear-story windows.

Clavelland, John, a Congregational minister, was born in Canterbury, Conn., April 11, 1722. He was expelled from Yale College for attending a Separatists' meeting, but his degree was afterwards given to him, and his name appears as a graduate of 1745. He was installed pastor over a newly-organized church in Chebacco, Feb. 25, 1747; acted as chaplain at Ticonderoga in 1781; served in the same capacity at Cambridge in 1782, and in New York in 1776. He died April 22, 1799. His church at Chebacco was formed by a secession from Mr. Pickering's, who refused to allow Whitefield to preach in his pulpit. Mr. Pickering issued a pamphlet soon after Mr. Clavelland's organization, to which he replied in A plain Narrative by the new Church. He also published Chebacco Narrative rescued from the Charge of Falsehood and Partiality (1748); an Essay to defend some of the most important Principles in the Protestant Reformed System of Christianity, more especially Christ's Sacrifice and Atonement, against the injurious Aperitions cast on the same by Dr. Mayhew; in a Thanksgiving Sermon (1768), which elicited from Mayhew a sharp rejoinder in A Letter of Reproof to John Clavelland; Justification of his Church from the Strictures of the Rev. S. Wigglesworth, of the Hamlet, and the Rev. Richard Jacques, of Gloucester (1765); with several other controversial pamphlets and a few sermons—An Appeal, Annals, i, 468; Allen, Am. Bp. Dictionary, s. v.

Cleft (גָּפָה, gap', a gap in a building, Amos vi, 11; "breach," Isa. xxii, 9; גָּפָה, she'aa, a split in the hoof of an animal, Deut. xiv, 6; also בָּנָה, naka-
Cleland, Thomas, D.D., an eminent Presbyterian divine, was born in Fairfax County, Va., May 25, 1778, and removed to Marion County, Ky., in 1793. Having developed extraordinary gifts as an exhorter in the great revival of 1801, he was urged by the Presbytery of Transylvania to become a preacher, and was licensed April 14, 1803. His first charge was Union Church, in Washington County. In 1813 he was settled over New Providence and Cane Run (now Harrodsburg) churches, where he labored during the rest of his life with remarkable success, being blessed with numerous revivals. He was one of the most popular and useful preachers in Kentucky. Sixteen young men studied divinity under him. He was appointed one of the synodical commission in the Cumberland Presbyterian difficulties. Dr. Cleland was the diligent student, and wielded his pen with signal ability against the Newlights and Campbellites. His principal printed works, besides Occasional Sermons, were, A brief History of the Action of the Synod in the Case of the Cumberland Presbyterians (1823, p. 29, 8vo); — A Brief Address to A Dissenter (1826, p. 101, 12mo); — Unitarianism Unmasked (1829, p. 184, 12mo); — Narrative of the Bodily Exercises, in Bible, Repertory for July 1834; — Letters on Campbellism; — A Hymn-book, for prayer-meetings and revivals, extensively used in the West. Dr. Cleland died Jan. 31, 1858, in the eightieth year of his age. David’s Hill, Presb. Ch. in Kentucky, p. 854; Memoirs, compiled from the plates Papers by Prof. Humphrey and Rev. Thos. H. Cleland.

Clemanges (Clemangis or Clemangis), Nicolas de, one of the ablest writers of the Roman Catholic Church during the Middle Ages. He was born about 1360 in the village of Champagne, in the province of France, and educated in the College of Navarre at Paris. As early as 1381 he gave public lectures as Magister Artium. In 1386 he began, in the same institution, to give lectures on theology, under the supervision of Ailly, who exercised a great influence upon him, and always remained his friend. In 1391 he became bacheler of theology, and began to give theological lectures. Being possessed of rare talents, and thoroughly familiar with the works of the ancient writers, he was soon regarded as the most expert member of the University of Paris, which in 1393 elected him rector. Henceforth Clemanges took the most active part in the efforts of the University in behalf of a thorough reformation, which constituted so important a part of medieval Church history. Most of the letters addressed by the University to the pope and kings of this time emanated from his pen. In the same year in which he was elected rector (1393) he addressed, in the name of the University, an energetic memoir to Charles VI of France, in order to induce him to put an end to the schism in the Church. In 1384 he compiled a second memorial on the basis of all the opinions of all the prominent members of the French clergy, which had been solicited by the Sorbonne. In accordance with these opinions, he proposed, in a letter to Clement VII, three measures for the reorganization of the Church: first, the abdication of both the popes; secondly, the election of arbitrators; thirdly, the convocation of a general council. In a letter to the pope, much more severe in its language, was not sent off before Clement VII died (September, 1394). Charles VI, following the advice of the University, requested the cardinals of Avignon not to proceed to the election of a new pope until they had come to an understanding with the cardinals of Rome, and with Boniface IX, and Clemanges sent a letter of the same character to Avignon. But the cardinals of Avignon nevertheless hastened to elect Peter de Luna, who assumed the name Benedict XIII. After being elected, Benedict secured recognition by Charles VI and the Paris University, but Clemanges was instructed to request him to do all that might be in his power to end the schism. To this end he had to write letters to the king of Aragon. In his own name Clemanges sent to Benedict an eloquent epistle on the duties of the head of the Church, and recommended to him his friend Pierre d’Ailly as chief adviser. Benedict appreciated the learning of Clemanges, and prevailed upon him to accept the office of secret secretary of the pope. As the king of France and the Sorbonne, however, were opposed by the resolution of a national council, declared in favor of an abdication of both the popes, Clemanges, who was now a decided champion of the claims of Benedict, fell out with many of his former friends. In 1407 the French government withdrew its recognition of Benedict, whereupon the latter laid the ban upon king and country. Clemanges was charged with being the author of the bull of excommunication, but denied the charge, left his position at the papal court, and withdrew to Langres, where he had been appointed canon a short time before. His opponents persisted in calling him the author of the bull of excommunication; he was accused of high treason, and threatened with imprisonment. In order to escape this danger, he concealed himself in a Carthusian convent at Valprofonds, and subsequently in a convent of the same order at Fontaine-du-Bosc. In this retirement he devoted his attention to the Bible, which, as he states, had until then been neglected by him, and which now became his favorite study. Besides a number of letters to his friends D’Ailly, Gerson, and others, he wrote at Fontaine-du-Bosc several works full of reformatory ideas as regarded both the prevailing corruptions of his Church and some of the doctrines. The most important of these are De fructus eremi (on the value of retired life): De fructus erum adversarum (on the spiritual profit to be derived from adversity); De novis festivitatibus non instituendis (complaining of the excessive number of holidays, which promote dissipation instead of edification, and cause the Bible to be forgotten over the stories of saints). In all these works Clemanges recommends Bible reading as the purest and richest source of Christian knowl- edge and Christian life. The decay of the Church he attributed to the neglect of the Bible; the councils, in his opinion, could claim regard for their decisions only if the members were really believers, and if they were moved to action for the general welfare of the church, and not for secular interests. His views on general councils were fully set forth in a little work, entitled Dis- putatio de concilio generali, which consists of three letters, addressed, in 1415 or 1416, to a professor at the Paris University (printed apparently at Vienna in 1492). He not only places the authority of general councils over the authority of the popes, but the authority of the Bible over the authority of the councils. He doubts whether at all the former ecumenical councils the Holy Spirit really presided, as the Holy Spirit would not assist men pursuing secular aims. He de- nies that a council composed of such men represents the Church, and perhaps that God alone is the judge of his people and where the Holy Ghost dwells, and that there may be times when the Church can only be found in one single woman (in sola potest multiplicar- la per gratiam numerorum ecclesiam). Other works, in which he expressed himself even more freely, have been lost, and perhaps were suppressed. Although against the immoral life of the higher clergy he wrote, about 1411, his treatise De presbittis Simoniacis. He also urgently recommended to the secular authorities of his country the teaching of the Bible as the only safe remedy against the continual civil wars and disturb-
Clemens returned to Alexandria before A.D. 211, and then became the master of the school as successor of Pantaenus; but the weight of authority favors the earlier date, and his return to that place is doubtful. We know scarcely anything of the closing years of his life. He appears to have been about 215 at Antioch, for he is mentioned by Eusebius (lib. vii, ch. 11) as the bearer of a letter from Alexander, bishop of Jerusalem, then himself a prisoner for the Gospel's sake, to the Church at Antioch. This Alexander and the more famous Origen are reckoned among his pupils.

Of these the Christian writers, Clemens was the most learned in the history, philosophy, and criticism of the nations of his day, and the influence of his studies is apparent in his writings, which display rather the speculative philosopher than the accurate theologian—more the fanciful interpreter than the careful expounder of the Scriptures on true exegetical principles. Many of his works have been lost, but those extant are the largest belonging to that early period, and very valuable for the light they throw on the social condition of the Roman Empire in his day, and for the information they contain in regard to the systems of ancient philosophy, the heresies and schisms of the Church, and for numerous extracts from non-extant authors. His three chief writings form a series, and were written apparently with a common object, viz., to convert the heathen and educate them in the principles and practice of the Christian life. They are, 1. Λόγος προτεροτοκιός απὸ τοῦ Ελλήνου, Κολοσσαρία καὶ Ηλιαίνη (Appeal to the Greeks), an apologetic work, in which the absurdity, obscenity, cruelty, impostures, and sordidness of heathen worship are clearly set forth in contrast with the simplicity and purity of Christian faith and practice, 2. Προσευχάριον, Παιδισμός (Instructor), a treatise on Christian education, in three books, addressed to those who had been converted from heathenism. Many of its pages I have set forth the function, the means, methods, and ends of the "Instructor," who is Christ, leading the believers "through paths of virtue and truth" to salvation, not through fear as he did the Israelites, but by love, the guiding principle of the new and better covenant. Book I1 contains rules for the regulation of life, embracing minute details as to food, drink, behavior, etc., recommending temperance, purity, modesty, and frugality. Book III begins with an examination of the grounds of true beauty, showing it to be intellectual, and founded on reason and love; then, in considering the various modes in which men have been taught to adorn themselves, the only mode of adornment in Greece, an Ionic; the other in Magna Graecia; the first of them from Cæle-Syria, the second from Egypt, and others in the East. The one was born in the land of Assyria, and the other a Hebrew in Palestine. When I came upon the last (he was the first in power), having tracked him out concealed in Egypt, I found rest. He, the true, the Sicilian bee, gathering the nectar of the flowers of the poetic and apostolic meadow, engendered in the souls of his hearers a deathless element of knowledge" (Strom. lib. i, ch. 1, p. 336, vol. i, of translation in "Ante-Nicene Christian Literature," rev. ed.).

This last teacher was (according to Eusebius) Pantaenus, head of the catechetical school at Alexandria, by whose influence some suppose Clemens, as yet only a sincere inquirer, was led fully to embrace the Christian faith. He is called a presbyter by early Christian writers, having probably been appointed to that office after his retirement. He "became, according to some the assistant, according to others the successor to Pantaenus, when the latter set out on his missionary tour to the East. He continued in that office until the persecution under Severus, A.D. 202, compelled him to leave Alexandria. The writers of the articles in Smith's Dict. of Greek and Rom. Biog. and Mythol. and the New Amer. Cyclopedia state that
Clement of Rome (Clemens Romani). One of the early presbyters of the Church in Rome; probably a presiding presbyter, præsum inter pars, afterwards called bishop. Irenæus, in his adv. Haer. (iii, 3, 18), written between 170 and 180, says of this man: 'He was one of the most curious relics of antiquity, and the book abounds in quotations from ancient authors. Books VI and VII portray the true Gnostic, the perfect Christian, who is presented as a complete model of moral conduct, not so much desirous of living as of living right, controlling his passions and regulating his desires in conformity with the laws of Christ. A small work, Τίς ὁ σώματος πλούσιος; (What rich man may be saved?) is also attributed to Clement. This treatise is an examination of the words of Christ (Matt. xix, 24; Luke xviii, 25), and aims to show that these words do not require the renunciation of worldly goods as a condition of salvation; that the disposition of the soul is the essential thing, and that riches may be the materials and instruments of good works for those who rightly use them.

The following works of Clemens are not extant (the fragments which have been collected are found in the works of Eusebius, Palladius, and Jerome). Hymn of the Church (at the end of vol. ii); in Galland’s Biblioth. Patr. and Migne’s Patrologia: Ὑποτυπώσεις; Περὶ τοῦ πάσαχα; Περὶ Νηστικῶν; Περὶ καταλήξεως; Προτεκτικῶς εἰς Τύμιον; Καὶ τῶν Εκκλησιαστικῶς τῶν Πρώτην Ἀριζω; Περὶ προοιμίων; Ὑποτυπώσεις. Of the other traditions as either written or intended to be written by him, we have no mention of them elsewhere.

The first edition of the three principal works of Clemens was made by Petrus Victorius (Florence, 1550, fol.; a Latin translation in 1551). It was followed by an edition by Fr. Syllburg (Heidelberg, 1592, fol.). A Greek-Latin edition was published by the Heerius (Leyden, 1616, fol.; reprinted Paris, 1629, Paris, 1641, Cologne, 1688). The best edition of all the works of Clemens, genuine and doubtful, is that by the Anglican Bishop Potter (2 vols. fol. Oxford, 1715, with valuable notes and a commentary to Clemens by Gentianus Heresius; reprinted at Venice, 1757, 2 vols. fol., and [without the notes and the commentary] by Oeverholzer, at Wurzburg, 1778-79, 8 vols. 8vo).

Clement is frequently mentioned as a person (apparently a Christian of Philiippi) mentioned by Paul (Phil. iv. 3) as one whose name was in the book of life (q. v.). A.D. 57. This Clement was, by the ancient Church, identified with the bishop of Rome of the same name (Eusebius, Hist. Eccles. iii, 4; Constitut. Ch. iii, 1). He is said to have died in the year 90, as a Christian martyr, who is led to martyrdom not through fear of punishment or hope of reward hereafter, but from love to Christ, and who does not needlessly provoke his fate, but only accepts it cheerfully when called upon to be in that way a witness for the truth. The chief aim of Book V is to prove that the Greeks derived most of their wisdom from those called by them barbarians, and especially from Moses and the Hebrew prophets; but it also enters upon a long and interesting digression on the origin and use of symbols, and makes many valuable statements in regard to the Egyptian hieroglyphics, and the dress and ceremonies of the priests. This Alexamenos gable is one of the most curious relics of antiquity, and the book abounds in quotations from ancient authors. Books VI and VII portray the true Gnostic, the perfect Christian, who is presented as a complete model of moral conduct, not so much desirous of living as of living right, controlling his passions and regulating his desires in conformity with the laws of Christ.

A small work, Τίς ὁ σώματος πλούσιος; (What rich man may be saved?) is also attributed to Clement. This treatise is an examination of the words of Christ (Matt. xix, 24; Luke xviii, 25), and aims to show that these words do not require the renunciation of worldly goods as a condition of salvation; that the disposition of the soul is the essential thing, and that riches may be the materials and instruments of good works for those who rightly use them.

The following works of Clemens are not extant (the fragments which have been collected are found in the works of Eusebius, Palladius, and Jerome). Hymn of the Church (at the end of vol. ii); in Galland’s Biblioth. Patr. and Migne’s Patrologia: Ὑποτυπώσεις; Περὶ τοῦ πάσαχα; Περὶ Νηστικῶν; Περὶ καταλήξεως; Προτεκτικῶς εἰς Τύμιον; Καὶ τῶν Εκκλησιαστικῶς τῶν Πρώτην Ἀριζω; Περὶ προοιμίων; Ὑποτυπώσεις. Of the other traditions as either written or intended to be written by him, we have no mention of them elsewhere.

CLEMENT OF ROME

year, on the anniversary of the martyrdom, the sea
repeats this miracle of receding for seven days. An-
other miracle is the power of exhortation with which
Paul and Peter impart grace, as shown by the
Epistle to the Corinthians, the consolations and
to the emperor Constantine. The Emperor
Flavius Clemens, the consul, and cousin to the
emperor Constantine, by whom he was put to death on a charge of
"atheism," one of the charges then current against
Christians. Such fables, in the absence of authentic
memorials, are not to be wondered at. The wonder
is that the authentic memorials are so meagre; that of
the enemies of Christ is so confused, sable, and
inaudient—there is so little known.

Of the writings falsely ascribed to Clement of Rome
notice is taken in another article. See CLEMENTINES.

The only genuine document is his Epistle to the Corin-
thians, commonly called the First, but improperly,
until the question is settled, for that referred to in
the first chapter of "sudden and successive trials"
which had before the Roman Church seems to re-
quire a later date. The Tübingen school put it into
the second century. But recent critical authority
preponderates decidedly in favor of 90-98 A.D.
Failing thus within the apostolic age, and yet consider-
ably later date than the great bulk of the New Testa-
ment, special interest attaches to this epistle. It may
be considered:

1. In comparison with the canonical books. It is
evidently modelled after the canonical epistles, and
yet is decidedly inferior to them. In regard to lan-
guage it is often wanting in grace, though in some
places the most genuine; in the preservation of the
substantial integrity of the epistle there is no
reason for serious doubt. That it came from the
pen of Clement, though his name is not in the epistle,
is generally conceded. It appears to have been
in the hands of Polycarp of Smyrna when writing to
the Philippians as an exhortation, as 115, certainly
not much later than 150 A.D. It is referred to as
the work of Clement by Dionysius of Corinth in a letter
to Soter of Rome, which must have been written be-
tween 170-176 A.D. Ireneus, in the section already
cited (Adv. Herr. iii. 3, 5), speaks of it as a very able
epistle, sent to the Church in Corinth by the Church
in Rome under the episcopate of Clement, Origen,
who died 254 A.D., speaks of it as written by Clement.
So also Clement of Alexandria [† 220], who frequently
and freely quotes from it, and even calls the author of
it "the apostle Clement." Eusebius, whose History
was written about 335 A.D., ascribes it to Clement,
and says it "should be read in every church.
many churches both in former times and in our own" (Hist.
iii. 16). Jerome (+ 420), in his De Viris Illustri-
bus, § 15, reports it as still "publicly read in some
places." But no one of these writers anywhere speaks
of it as an inspired book. Though highly prized,
neither, this, nor the Epistle of Barnabas, nor the
Shepherd of Hermas, was ever included in any ancient
list of authoritative books. (See Westcott, Canon
of the New Testament, Appendix B.)

This epistle, as we now have it, consists of fifty-nine
short chapters—some of them very short—whose total
bulk is about one third greater than that of the
sixteen chapters of the First Epistle to the Corin-
thians. Presbyters of the Church in Corinth had been
unjustly deposed from office; a bitter dissension had
broken out, and this epistle was written by Clement
in the name of the Church in Rome, in order, if possible,
to end the strife. It was sent by the hands of three
persons—Erastus, the proconsul; Tarsus and
Fortunatus, who, it was hoped (chap. 18), might bring
back the good news of peace and harmony re-
stored. In form it resembles the Canonical Epistles,
beginning with a salutation and concluding with a
benediction. In the first three chapters, the Corin-
thians are exhorted to a proper use of the apostolic
virtues that may then sharply rebuked for the scandals which had oc-
curred. The next nineteen chapters are devoted to
historical illustrations, drawn from the Old and New
Testaments, of the evils flowing from jealousy and
envy; followed by exhortations to repentance, humil-
ity, and meekness. In the next fourteen chapters,
the exhortations are to the same, but more pointed
aiming coming of Christ and their own resurrection;
salvation by grace through faith is taught; and good
works, in their proper relation to faith, are strongly
insisted upon. Twenty-one chapters are then devoted
to the special purpose of the epistle, discussing the
general subject of ecclesiastical organization and or-
der, and urging the Corinthians to put an end to their
grievous sedition. The last two chapters contain a
prayer for helping grace, with a benediction.

As to the date of this epistle, Hefele, who agrees
with Cave, Dodwell, Fleury, and others in assigning
the episcopate of Clement to the years 68-77 A.D., re-
fers it to the time of Nero. But the mention made
in the first chapter of "sudden and successive trials"
which had before the Roman Church seems to re-
quire a later date. The Tübingen school put it into
the second century. But recent critical authority
preponderates decidedly in favor of 90-98 A.D.
Failing thus within the apostolic age, and yet consider-
ably later date than the great bulk of the New Testa-
ment, special interest attaches to this epistle. It may
be considered:

2. With respect to the canon itself. Of the Old Tes-
tament but little needs to be said. In the way either
of express citation or of marked resemblance, nearly
every book is recognized. Two at least of the
apocryphal books are quoted. Clement made use of the
Septuagint, and quotes more accurately than some of
the fathers, and possibly the first Epistle to the Corin-
thians;

The text employed by him, Hilgenfeld says, accords
neither with the Alexandrian nor the Vatican Codex,
but, where these are at variance, steers between them,
agreeing sometimes with the one, sometimes with the
other. In this epistle also Clement never calls it "Scripture" or "Scriptures," as he does the Old Testament; but individual writers are either
quoted or referred to, and in a way which implies his
belief that they had an authority above his own.

Apologizing for the attitude he assumes, he exhorts
the Corinthians to set a high value on the epistle,
overly, to "take in their hands the epistle of the bless-
ed apostle Paul." Besides the Gospels of Matthew
and Luke, the books indicated are Romans, 1 Corin-
thians, Ephesians, Hebrews, and James; perhaps also
1 Timothy and Titus. In short, the usage is precisely what we should expect while the canon was not yet formed, but only silently forming.

2. With respect to the city of the early Church. The object aimed at in the epistle called for certain definite statements on this point. And these are in complete accordance with the representations of the inspired books. In Clement, as in the Acts and Epistles of the New Testament, several features are palpable. No distinction is made between bishops and presbyters. For the local church only two orders are recognised: presbyter-bishops and deacons. And they were appointed at first by the apostles, afterwards by these rulers themselves, though not to the exclusion of the brotherhood. The initiative was not with the congregation, but with its elders, "the whole Church consisting." Such is the representation in the forty-fourth chapter; and it accords with what is related of Paul and Barnabas, who, instead of merely ordaining, as our version appears to teach, "had appointed" them elders in every church (Acts xiv, 23). The New Testament representations are thus not only corroborated, but also elucidated.

3. In regard to doctrine. The orthodoxy of Clement, as of the earlier fathers in general, has been repeatedly called in question, but without good reason. Doctrinal discussion, in the style of the Epistle to the Romans, is certainly not attempted. But the leading features of the Gospel economy come clearly out. The divinity of Christ is quite as truly insisted on in the Epistles to the Colossians and Hebrews. And so likewise are the atonement and justification by faith. If good works are strongly emphasized, so also are they strongly emphasized not only by James in his epistle, but by Paul himself. And as there is no contradiction between Paul and James, there is none between Paul and Clement.

The literature of the subject is abundant. Of the text there have been three recensions. The epistle was first published by Junius, at Oxford, in 1633; again, more accurately, by Wotton, at Cambridge, in 1718; and, lastly, by Jacobson, at Oxford, in four successive editions, 1838, 1840, 1847, and 1866. Jacobson's text is now the standard, and is as nearly perfect as critical acumen and diligence could make it. Of earlier editions, embracing all the apostolical fathers, the best are those of Cotelierus, Paris, 1672, as improved by Clericus (Antwerp, 1609), and again improved by Early (1724), and finally with a valuable dissertation (Leipsic, 1899). Of later editions, the best are those of Jacobson, already named; of Hefele (Tubingen, 1839, 1842, 1847, 1855); and of Dressel (Leipsic, 1856, 1863). Of treatises, the most valuable are those of Lechler, Das apostolische und das nachapostolische Zeitalter (Halle, 1841; Stuttgart, 1857); Hilgenfeld, Apostolische Vater (Halle, 1853); Lipsius, De Clementia Romani Epistola ad Corinthios Priore Disquisito (Leipsic, 1855); and Donovilson, Critical History of Christian Literature and Doctrine from the Death of the Apostles to the Nicene Council (vol. I, London, 1861). Of English translations, the earliest was that of Burton (London, 1647). The next was that of Archbishop Wake (London, 1693, frequently re-published; admirably though inaccurately done): the next was anonymous (Aberdeen, 1678); then Chevallier (London, 1833, 1851, on the basis of Wake); and, lastly, Roberts and Donaldson (Edinburgh, 1867, vol. i of the "Ancient Church Libra"). This last has not got the scriptural tone of Wake, but is greatly superior to it in accuracy of rendering.

Clement I. See Clement of Rome.

II. Pope (Suidger, bishop of Bamberg), was placed in the fourth century, after the Synod of Sutri, by the Emperor Henry III, in the room of Gregory VI, who abdicated. He crowned this emperor, and held in Jan. 1047, a synod at Rome for the suppression of simony. He died, as some think, by poison, Oct. 9, 1047. He was the first of the German popes, and retained the diocese of Bamberg even during his pontificate. The politics of Benevento under the interdict because it had refused to receive the Emperor Henry.—Neander, Ch. Hist. iii, 378; Gieseler, Ch. Hist. per. iii, div. ii, § 72; Hoeftler, Tractate Papyri, 1 Abtheil. 233-288; Wetzer u. Welte, Kirchen-Lexiz, ii, 590.

III. Anti-Pope (Guibert, archbishop of Ravenna), was chosen pope at the Synod of Brixen in 1080, by the party of the Emperor Henry IV, with the view of supplanting Gregory VII. After being repeatedly placed in danger, he was seen by violence, and deposed; but from it by the same means, he submitted to Paschal II in 1099, and died in the following year.—Neander, Ch. Hist. iv, 118 sq.; Gieseler, Ch. Hist. per. iii, div. iii, chap. i, § 47, 48.

IV. Pope (Paolo, cardinal bishop of Rome), was a native of Rome. He was chosen pope at Pisa on the 10th of Dec. 1187, in the place of Gregory VIII, who had died in the same city two days before. The chief concern of the new pope was the speedy organization of a third crusade, as the news of the conquest of Jerusalem by Saladin (Oct. 3d, 1187) had just been received. He wrote at once to all the Christian princes, and succeeded in calling forth an unprecedented enthusiasm. The aged emperor Frederick Barbarossa (67 years old) had on a previous occasion, with the predecessor of Clement on account of the possessions of the Countess Matilda, made peace with the pope and took the cross. Peace was also restored between Venice and the king of Hungary, and between the king of France and the king of England, and all these states, joined by Leopold of Austria, and others, were induced to take part in the crusade. The pope had the grief of learning the death of Frederick in the River Kalicadnaus, and the dissensions between the princes besieging Acre, but he did not live to see the unfortunate end of the crusade.

Clement again secured for the popes the secular rule over the city of Rome, which during forty-nine years had been left by the popes. Tired of their civil wars, the Romans conduced to Clement the right of sovereign. A conflict with the king of Scotland, who had appointed of his own accord a bishop for St. Andrew's, terminated favorably to the pope. The king yielded when the pope was joined with the interdict. In reward for this concession, the pope (by a bull of March 13, 1189) exempted all Scotland from the jurisdiction of the archbishop of York, made it an immediate dependency of the papal see, and provided that henceforth no one should be a papal legate in Scotland who was not either a Scotchman or an officer of the Church in Rome. On the death of King William II of Sicily (Nov. 1, 1189), a dangerous conflict arose between the son of Frederick Barbarossa, Henry (subsequently emperor Henry VI), whose wife was the nearest relation to the late king, and the pope, who claimed feudal rights over Sicily, and hastened to invest with its government Thomas, illegitimate son of the late king of Sicily. Henry, after the death of his father, was marching upon Rome, when Clement died, on March 25, 1191. The personal life of this pope is said to have been blameless. Seven letters and many decrees issued by Clement are given by Mansi (xxii, 548-574).

Herzog, K. W. D. Allg. Top. ii, 780; Delisle, Kirchen-Lexiz, ii, 501; Neander, Ch. Hist. iv, 417; Gieseler, Ch. Hist. per. iii, div. iii, chap. i, § 53.

IV. Pope (Giu Fulvodi, according to others, Guido Foulqua le Gro), was a native of France, first a soldier, then a lawyer, married, and on his wife's death entered the Church, and became in succession bishop of Puy, archbishop of Narbonne, and (1261) cardinal bishop of Sutri. He was chosen pope in the evening of 1265, while he was absent from Italy as papal legate, and solemnly crowned on the 23d of February,
at Viterbo, where he took up his residence on account of the distresses prevailing in Rome. During the whole time of his pontificate he was occupied with the contest concerning the government of Sicily. His predecessor, Urban IV, had invited Charles of Anjou to take possession of Sicily, which was then ruled by Manfred, an illegitimate son of Emperor Frederick II. With the name of Charles of Anjou (1265), five cardinals, in the name of the pope, concluded between him and the papal see a treaty which gave to Charles the whole of the Apulian Empire, while Charles, on the other hand, pledged himself to pay a certain tribute, and to abolish the ecclesiastical decrees of Frederick in Italy. The papal see was to receive money, and the outrages committed by French soldiers, disposed the pope favourably toward Manfred, but the latter died before the reconciliation had taken place. The cruelty of Charles against the family and the adherents of Manfred, and his violation of the treaty, filled the pope with indignation. Nevertheless, when young Conradin, the grandson of Frederick II, appeared in Italy, the traditional hostilities of the popes toward the Hohenstaufen kings induced the pope to communicate with him. Conradin was received with enthusiasm by the Ghibelline opponents of the pope; and, in particular, by the people of Rome, and the pope naturally rejoiced at the news of his arrival. However, it cannot be proved that he knew of, and much less that he approved of his execution. Clement survived exactly one month after the last scion of the Hohenstaufen family was beheaded, dying at Viterbo Nov. 29, 1268. He was an able ruler, and resolutely hostile to nepotism. Many of his letters have been published by Martino and Durand in their Thesaurus Novarum Acta-Historiarum (Paris, 1717, 5 vols. fol.), and by D'Archéy in his Epistolae. He wrote several works, among which was a life of St. Hedwig, Duchess of Poland, who was canonized by him in 1267. On works falsely attributed to Clement, see Cave, Hist. Lit. ad annum 1265. A special work on the life and writings of Clement was published in 1628 by Lyons by the Jesuit Claudius Clemens. See Herzog, Real-Encyclop. ii, 732; Wetzer u. Welte, Kirchen-Lexicon, ii, 594; Neander, Church Hist. iv, 298, 424; Gieseler, Church Hist. per. iii, div. iii, chap. i, § 771.

VII. Pope (Pierre Gr) was a native of Limousin, in France. After having been a Benedictine monk in Chaise-Dieu, professor at Paris, bishop of Arras, archbishop of Sens and Rouen, and (1388) cardinal, he was elected pope on the 7th of May, 1342. He had a protracted quarrel with Edward III, king of England, on the subject of ecclesiastical benefices, over which Clement claimed an absolute right. He issued a frightful bull of excommunication against Louis IV of Germany (see Raymond, ad annum 1346), when the latter and the German Diet refused to promise that the king should do no wrong within his territory, and induced five of the German electors to elect Charles, the son of the king of Bohemia, as German emperor. By a contract of June 9, 1348, he purchased from Joanna, queen of Naples, the city of Avignon and some adjoining territory for 80,000 gold florins, which, however, were never paid. Previously the queen, who personally appeared before him, had been acquitted of the charge of having murdered her husband. An urgent invitation from the Romans (among whose ambassador was Petrarch) to return to Rome was sent to the pope, but he continued at Avignon. By a bull of April 10, 1349, he reduced the interval between the years of jubilee (see Jubilee) from 100 to 50 years, and celebrated the jubilee in 1350 with extraordinary pomp. In the bull of Clement the angels are commanded to introduce into Paradise without delay any one who should die during his stay at Rome. His efforts to bring about a union of the Greek Church with the Roman were unsuccessful, though the emperor Johannes Cantacuzenus declared in favor of the union. More successful were similar efforts with regard to the Armenians, who, at a council held in 1342, condemned those heresies with which they were charged. In 1345 Clement brought about a new crusade against the Turks, in which the city of Cyprus, the greatest power in the Levant, was captured by Philip of Taranto, and when a compromise had been adopted between the party of Boniface and the French party, in virtue of which the French cardinals had to choose the pope among three candidates proposed by the party of Boniface, he was elected, being still regarded as a friend of Boniface. At a secret interview which he had had with Philip before the election he had promised to reconcile the king with the Church, to leave to him during five years the tithe for military wants, to condemn the memory of Boniface, and to create a number of new French cardinals. All these conditions were promptly fulfilled except the one relating to Boniface. While the pope instituted a committee to investigate the charges brought against Boniface, but ultimately (1311) declared him free from the stain of heresy. On the other hand, he yielded to the demand of Philip for the abolition of the order of the Templars. He summoned the grand master of the order, under a false pretext, to his court; issued in 1308 a bull against the order, in which he brought against it the most unfounded and absurd charges; and finally, at the General Council of Vienne (1312), pronounced its abolition. The pope raised no objection to the appropriation of most of the possessions of the order by Philip, and to the burning of the grand master and of many leading members. Clement was the first pope who fixed his residence at Avignon, thus beginning what has been styled the Babylonian Captivity of the popes. He published a large number of constitutions based upon the decrees of the Council of Vienna, which still form, under the name of "Codex Romanus," a basis of canon law. The Decretals. He died April 20, 1314. The contemporary writers accuse him of licentiousness, nepotism, simony, and avarice. See Wetzer u. Welte, Kirchen-Lexicon. ii, 594 sq.; Herzog, Real-Encyclop. ii, 732; Neander, Ch. Hist. iv, 70, 341; Gieseler, Ch. Hist. per. iii, div. iii, ch. iv, § 59, and div. iv, ch. iv, § 95; Landon, Manual of Church Hist., v. 1. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii. vii. viii.
Clement 380

VIII. Pope (Giulio illegitimate son of Giuliano de Medici), became pope in 1523; one of the weak and wavering men whose selfish policy in critical times makes their prominence in history a prominence of disgrace. He married the Maltese ruler and became grand-prior of Capra. When his cousin Leo X ascended the papal throne he was at once appointed archbishop and cardinal. Subsequently he acted as cardinal legate of Tuscany. He was elected pope on the 19th of Nov., 1523. On May 2, 1524, he issued a bull for the reformation of abuses prevailing in Lucca. In the same year he entered as legate, Campagno, to the Diet of Nuremberg, in order to bring about a suppression of the Reformation in Germany. The pope and his legate greatly offended the German princes by their arrogance, but succeeded, nevertheless, in effecting an alliance against the Protestants between Austria, Bavaria, and twelve princes of South Germany. Notwithstanding the zeal of the emperor for the defence of the Church of Rome, the pope was prevalent upon the king of France to join the alliance of France, England, Venetia, and other Italian states against Charles. After the siege and capture of Rome by the hero of German-League, Charles entered it as conqueror (Jan. 6, 1527); but, being unable to fulfil the conditions of the capitulation, he escaped, disguised as a merchant, on Dec. 9, 1527, and fled to Orvieto. Soon after he concluded a peace with Charles (1529), and crowned him emperor at Bologna (1530); while, on the other hand, Charles restored the papal possessions, and made Alessandro de Medici (a reputed son of the pope) sovereign of Florence. The demand of Charles and the German princes for the convocation of an ecumenical council, which was to reform abuses in the Church and restore its unity, it did not fulfil, making his consent contingent upon conditions which he knew to be unacceptable to Charles. In the suit of Henry VIII of England for divorce from his wife, Catharine of Aragon, the pope, after long hesitation, decided against the king, and thereby precipitated the separation of the Anglican Church from the Church of Rome. He sanctioned the new monastic orders of the Capuchins, Tertiaries, Servants, and Recollects, enlarged the influence of the Franciscans, and, in general, patron of literature. He died Sept. 26, 1554. The Bulloarium Romanum (ed. Lugd. 1592, i. 636-694) contains 41 constitutions and decrees of this pope. The life of Clement has been written by Onofrio Panvinio and Jacob Ziegler (in Schelhorn, Amom. loc. eccl. tom. ii). See: B. Wattenweiler, Kirchenlex. ii, 600-602; Haase, Entw. d. Encycl. i. 734-756; Hoefer, Biog. Générale, x. 766; Haase, Hist. Pop., bk. i., ch. iii.; Haase, Ch. Hist., p. 376, 390, 421, 450.

VIII. Anti-pope (Egidius Mousow), took this title in 1421 on being elected by three cardinals at Peschiera, after the death of Benedict XIII. He resigned to Martin V in 1429, and thus terminated the great Western schisme. Migne, Dict. Biol., a. v., Magnl.; GesaeTER, Ch. Hist. per. iii., div. ch. i., p. 130.

VIII. Pope (Joppolo Aldobrandini), was born in 1556, at Fano; became first a lawyer, subsequently consistorial advocate, auditor of the Rota (see Rota), datarius (q. v.), and, in 1585, cardinal, and legate in Poland. He was elected pope Jan. 30, 1592. He was a cautious and politic ruler. He mediated the peace of Varelke between France and Spain in 1593; in the civil war of France he sided, like his predecessors, with the league against Henry IV. Even after the latter had joined the Church of Rome the pope hesitated to recognise him, and it was not until nearly the whole of France had recognised him that the pope consented to lift the ban against Henry IV. (1597). Henry supported the annexation of Ferrara to the papal states, and reintroduced the Jesuits into France, while, on the other hand, the pope abstained from openly opposing Henry's edict of toleration. During his pontificate the king of Poland prevailed upon the metropolitan of Kiev and seven of the Russian bishops to unite with the Church of Rome, and ambassadors arrived at Rome from the Coptic patriarch of Alexandria to negotiate a union of the Copts with the Church of Rome. He issued new editions of the Vulgate, the Roman Breviary, Missal, and of the Index. In order to settle the dogmatical controversy between Jesuits and Dominicans, he convened an Ignot, in which he instituted the Congregatio de causis divinae gratiae. A dispute with the republic of Venice was amicably settled. He died on March 5, 1605. Baroni and Bellarmare were among the cardinals appointed by him. One hundred and twenty-three constitutions and decrees of this pope are contained in Bullar. Rom. Magnmum, tom. iii., 3-170. His life was written by Cirencr. — Haase, Hist. Pop., v. i.; Haase, Ch. Hist., p. 456, 466 sq.; Wetzer u. Welte, Kirchen-Lex. ii, 608-640; Herzog, Real-Encycl. ii, 196.

IX. Pope (Giulio Rospigliosi), was born in 1600 at Pistoia. He was in succession auditor of the Rota, secretary of Sixtus IV, and cardinal, and was elected pope in 1657. He mediated a peace between Louis XIV and the Turks in 1697. He was a man of no upright in his intentions, but easy in disposition. He left his name to the Clementine Peace, a brief pause in the struggle between the Jansenists and Jesuits. He is said to have died of grief at the taking of Candia by the Turks, 1699. — Banke, Hist. Pop. viii.; Haase, Ch. Hist., p. 512, 518; Wetzer u. Welte, Kirchen-Lexikon, ii, 605.

X. Pope (Emilio Alberoni), was born at Rome on the 28th of July, 1590, and held the papal chair from 1670 to 1676. Eighty years old at his accession, he was completely governed by his relations, one of whom, Cardinal Paluzzi, was called by the Romans popo de facto. He was always eager to mediate peace between the Roman Catholic states, and supported the Poles with money against the Turks. The pope and his reign commenced the dispute with Louis XIV of France concerning the rights claimed by the French kings, during the vacancies of episcopal sees, to dispose of the ecclesiastical benefits, and to receive the revenue. — Banke, Hist. Pop. viii.; Haase, Ch. Hist., p. 512; Wetzer u. Welte, Kirchen-Lexikon, ii, 605.

XI. Pope (Giovanni Francesco Albani), was born on July 7, 1629. He was secretary of the secret briefs under Innocent XI, Alexander VIII, and Innocent XII, and, as such, wrote, among others, the celebrated bull of Alexander VIII (1691) against the Gallican liberties adopted by a national convention of the French bishops in 1682. He became cardinal deacon in 1630, and cardinal priest in 1679. He was raised to the pape in 1670 on account of his energy and ability, and displayed abundance of the former quality, but with singular want of success. He opposed the elevation of Prussia to a kingdom, and thus made himself ridiculous in Germany. In the war of the Spanish Netherlands, he voluntarily served under Philip IV. The great genius of Louis XIV of France, but was compelled by the imperial forces threatening Rome to recognise Charles III, the brother of Joseph I of Austria, as king of Spain. He lost Parma and Placentia, and was totally disregarded at the peace of Utrecht (1718). By this peace Sicily was ceded to France while Sardinia was given to Spain. In the civil war of France he sided, like his predecessors, with the league against Henry IV. Even after the latter had joined the Church of Rome the pope hesitated to recognise him, and it was not until nearly the whole of France had recognised him that the pope consented to lift the ban against Henry IV. (1597). Henry supported the annexation of Ferrara to the papal states, and reintroduced the Jesuits into France, while,

XII. Pope (Lorenzo Corsini), was born at Florence in 1562. He was appointed cardinal May 17, 1706, cardinal bishop of Frascati in 1725, and became pope July 12, 1770, when 78 years old. Immediately upon his accession the papal chair decreed a truce against Coesia, the favorite of his predecessor, Benedict XIII, for extortion. Coesia was sentenced to eight years imprisonment, and a fine of 40,000 ducats. In 1728 he issued a papal "constitution" for a better regulation of the conclave; by a brief of 1786 he suppressed the sect of the Cocomari, and in 1738 he condemned the Free-masons. He took a special interest in the union of the Greek Church with the Roman, and in 1734 founded the "Corisianum" ecclesiastical seminary for young Greeks at Bisignano, in Calabria; but the endeavors of the Jesuits to gain over the patriarch of Constantinople were fruitless. Equally inefficient were special efforts made for winning over the Protestants of Saxony and Silesia. His relations to the Roman Catholic states were, in general, not friendly. Parma, which he claimed after the death of the last Farnese (1731), was occupied by Austria. Spain, against the consent of the pope, made enlistsments in the papal states, and placed garrisons in several towns. Portugal claimed the cardinal's hat for a favorite of the king (Bichir), and the pope, in 1731, yielded. Charles Emmanuel of Sardinia was threatened with the ban for occupying several places in Piedmont which the pope claimed as fief. The little republic of San Marino, which Cardinal Alberoni, in 1739, had rashly annexed to the papal states, soon recovered its independence. He supported the emperor of Austria with money in his war against the Turks. He promoted the study of Oriental languages, especially the Syriac, and sent Assemani on his second journey to the East, to collect Oriental manuscripts for the library of the Vatican, and he was rigid in the enforcement of ecclesiastical discipline. He died Feb. 6, 1740. The Bullarium Rom. Cont. P. VIII (Luxemburg, 1740), contains 277 constitutions of these popes.—Hase, Ch. History, p. 514; Banke, Hist. Pop. b. viii; Wetzer u. Welte, Kirchen-Lexikon, ii, 621; Hoefler, Beitr. Geschichte, x, 769.

XIII. Pope (Carlo della Torre di Ressano), was born at Venice March 7, 1699; became governor of Padua in 1709, cardinal of Rome in 1718, and deacon in 1737, bishop of Padua in 1743, cardinal-priest in 1747. He ascended the papal chair July 6, 1758. He owed his elevation to the Jesuits, whom he supported with an earnestness and perseverance that fully displayed the feellessness of the pope. By autograph letters to the kings of France, Portugal, and Spain, he endeavored to avert the destruction of the order in those three states. But in vain. The Portuguese government suppressed all the convents in 1759 and 1760, imprisoning a number of members under the charge of being accomplices of a plot against the life of the king, and transporting most of them into the papal states, as a present to St. Peter.' In 1764 the Jesuits were exiled from their colleges, and in 1766, Clement issued the bull "Apostolici pacendi," in which he again confirmed the order; but the French Parliament forbade the publication of the bull. In April, 1767, the Spanish government expelled all the members of the order in Spain in order to transport them to the papal states. On March 30th of January, 1768, the pope issued a brief, in which he annulled, as head of the Church and as feudal sovereign of Parma, a number of reformatory measures which the duke of Parma had issued in 1765 and 1766, pronouncing the severest censures of the Church against all who had aided in the drawing up, publication, and execution of these decrees, and releasing the subjects of the duke from the duty of obeying them. This bull produced the greatest indignation at all the Bourbon courts. Parma expelled the Jesuits (in 1768), France occupied Avignon and Venasinn, and Naples took possession of Benevento and Pontecorvo. In addition to these troubles, the pope was engaged with the Venetians, which had issued some laws restricting the privileges of the clergy, and in particular that of accumulating property. The republic of Genoa offered a reward of 6000 scudi for the capture of a papal delegate to the island of Corsica, which had risen in insurrection against the Genoese. In January, 1768, the pope protested against the resolution of the Polish Diet, which, although recognising the Church of Rome as the state Church, made some concessions to the dissenters. Besides these conflicts with the state governments, Clement had a hard struggle against an Episcopate which grew up in his Church in Rome, which demanded a restriction of the papal press, and an enlargement of the powers of the metropolitans, and the chief representative of which was the German bishop Febronius (q. v.). The Congregation of the Index forbade the possession and circulation of the book under penalty of the galley; but this rigorous measure, as well as letters from the bishops of Germany to use the utmost efforts for the suppression of the dangerous book, remained useless. Some of the bulls issued by Clement (as Animarum Salutis et Aliud ad Apostolatus), in vindication of the claims of the papacy, offended even the most zealous partisans of the pope. Even the pope himself was dissatisfied, and the idea of policy was seriously contemplated when the pope died on February 8, 1769. Clement restricted the right of asylum, forbade the clergy from engaging in mercantile pursuits, and conferred upon Maria Theresa the title of apostolic majesty.—Banke, Hist. Pop. b. viii; Hase, Ch. Hist. p. 584 sq.; Wetzer u. Welte, Kirchen-Lexikon, ii, 618-618; Herzog, Real-Encyklop. ii, 738-740.

XIV. Pope (Giovanni Vincenzo Antonio Ganganelli), was born at San Arcangelo, near Rimini, October 31, 1705. After receiving an education in the institutions of the Jesuits at Rimini and the Fianisti at Urbino, he entered, on May 17, 1729, the order of the Minorites, exchanging his baptismal Christian name for that of Lorenzo. He soon distinguished himself both as a pulpit orator and as a theologian, and taught theology in several of the institutions of his order. When, on May 20, 1741, Pope Benedict XIV presided over the councils of Lyons in 1742, that the general chapter of the Minorites, in order to elect a new general of the order, Ganganelli, in the name of the chapter, addressed the pope in a speech which gained to him the full confidence of Benedict. He was in 1745 appointed assistant, and in 1746 consultant at the Sant' Ubaldo (the Congregation of the Inquisition), and in this office won general respect by his moderation, amiable character, and scholarship.
On September 24, 1759, he was appointed cardinal-priest by Clement XIII upon the recommendation of the general of the Jesuits. The pope intrusted to him several important missions; but when it was found that he disapproved the uncompromising opposition of the pope to the Jesuits, he was recalled from the mission and died September 10. The pope had been poisoned many believers, and is still defended by a number of writers, but a majority of the best historians have declared it not sufficiently supported. Special works on Clement are, Caraccioli, V. de Clemente XIV (1778; German translation, Frankfort, 1775); Laclau, P. Clemente XIV, (Paris, 1787, 8 vols.); Cretinneau-Joly, Clement XIV et les Jésuites (Paris, 1847, on the side of the Jesuits); Ganganelli, Popes Clement XIV; seine Briefe und seine Zeit (Berlin, 1847); Theiner, Histoire du Pontificat de Clement XIV (Paris, 1868, 8 vols.; German ed. Leipzig.)

Father Theiner, who was a prefect-consul of the archives of the Vatican, consulted the Congregation of the Index and other congregations, a member of the special Congregation on the Immaculate Conception, etc., at Rome, made use of many unprinted documents in the archives of the Vatican. He tried to exalt Clement as one of the greatest popes, and, in order to achieve this, he required the Jesuits of that time. His work led to a lively controversy. The French historian of the order, Cretinneau-Joly, undertook the defence of the Jesuits, but his book was put on the Index. The general of the order, P. Rootan, fearing that the controversy might turn out badly for the order, declined all responsibility for Cretinneau-Joly's work, but at the same time induced P. de Ravignan, the celebrated Jesuit preacher at Paris, to take up the defence of the order. Ravignan accordingly wrote and published Clemente XIII et Clemente XIV (Paris, 1864, 2 vols., p. 574 and 502), in which he endeavours to justify both the Jesuits and the pope. He suppressed the government papers of Avignon, Venaissin, Benevento, and Pontecorvo. But the chief demand of the Bourbon courts, the suppression of the order of the Jesuits, he tried to escape as long as possible. He had held himself aloof from the Jesuits from the day of his pontificate, and had forbidden the admission of the General of the order to the Vatican. He appointed a committee of jurists to examine the subject; acquainted himself personally with all that had been written for or against the order; and took great care to prepare public opinion gradually for its suppression. In a letter to the king of Spain he publicly admitted the necessity of suppressing the society of Jesus; the Jesuits were themselves the authors of this fate by their intrigues. The bishops of the papal states were authorized to examine the houses of the Jesuits, and to secularize those members who desired it. On June 25, 1773, the seals were put on the archives of the novitiate of the order at Rome, and the cardinal of Aragon was directed to possess himself of all their possessions within his legislation. A similar order was given to the bishop of Montalto. Finally, on July 21, 1773, the famous brief "Dominus ac Redemptor Noster," by which the whole order was suppressed, was signed. It was published on the 16th of August. On the whole, the measures were carried with great celerity; some individual members were preserved, but the general, father Ricci, was arrested. The brief states, as a reason for the suppression, that the Church no longer derived from the order the advantages which were expected from it at the time of its foundation; it refers to the suppression of other orders, and the increase of the Church in style and doctrinal importance from the genuine epistle of Clement that it has been generally assigned by critics to a later date. It is orthodox in sentiment. The very beginning contains a distinct confession of the divinity of Christ, who is called "God, and the Judge of the living and the dead." Otherwise it is of no special account.
2. Two encyclical Letters to Virgins, first discovered by Wetstein in 1752, in a Syriac translation, and appended to his edition of the Greek Testament. They commend celibacy, and contain exhortations and rules of discipline for monks and nuns. Later, a particular Swedish pseudo-Isidore has placed at the head of his collection decretals of Roman popes. Two of them are addressed to James, bishop of Jerusalem, and are older than the pseudo-Isidore of the eighth or ninth century; the three others were fabricated by him.

The Constitutions and Canons, including the Liber II of St. Clement, which is a part of the eighth book of the Constitutions. This is a collection of ecclesiastical laws and usages which grew up gradually during the first four centuries, and is valuable chiefly as a rich source of information concerning ancient Church government, worship, and discipline. The work professes to be a bequest of all the apostles handed down through the Roman bishop Clement, or dictated to him. It begins with the words, "The apostles and elders to all who among the nations have believed in the Lord Jesus Christ. Grace be to you and peace," etc. It contains, in eight books, a collection of civil, canon, and liturgical laws, and liturgical formulaires. The object of the compiler was to establish the episcopal hierarchy, and to furnish the clergy with a convenient guide in worship and discipline. The first six books were written at the end of the third century, the remaining two at the beginning of the fourth century. They were collected by the bishop of Nicaea (367). The Apostolical Canons are appended to the eighth book of the Constitutions, and pretend to be likewise of apostolical origin. They consist of 85, or, in other copies, 86 brief rules for the conduct of the clergy and laity, borrowed in part from the Pastoral Epistles, partly from decrees of early councils, and partly from the Gospels. They are also found separately in Greek, Syrian, Ethiopic, and Arabic manuscripts. They were collected by some unknown hand about the middle of the fourth century. The Greek Church in 892 adopted the whole collection of 85 canons; the Latin retained only 56, which Dionysius Exiguus translated into Latin about A.D. 500.

The Apostolical Constitutions and Canons are found in the larger editions of the works of the apostolic fathers, by Coteler and Clericus (1672, 1698, 1700, 1724), in the first volume of Manali's, and also of Harduin's Collection of Councils, and have been separately edited by Gressler, Die legatstreitungen des Kaiser Heinrich VI. (Rostock, 1683), and by P. A. de Pagard, Constitutions apostol. (Lipsiae, 1862). Among the many treaties on the Apost. Const. we mention Krait, Uber die ur sprung und inhalt der apost. Constitutions (1829); S. von Drey, Neuer Untersuchungen, etc. (1882); Chase, Constitutions of the holy Apostles, including the Canons (1848); comp. Hefele, Conciliengeschichte, i. 276 sq.; Schaff, Church History, i, 440 sq.; Bonsein, Hippol., i, 319 sq.

5. The pseudo-Clementine Homilies, to which the title Clementines (r condemnatio, Clementina) is more particularly applied, and the Recognitions (Agnuspaues, Recognitions Clementis Rom.) which resemble them in form and content. To these must be added the Epistole de gestis Petri, which is a summary of the Homilies. The Homilies are twenty in number, but the last has only recently been discovered. They figure very prominently in the history of the ancient heresies. They are a most curious philosophico-religious romance. Clement, an escaped Roman, fanatical healing priest, is sent by the emperor of the heathen world to Rome, and converts Clement to his Christian faith. He accompanies him on his missionary journeys, and takes down in writing the substance of the sermons and disputations with Simon Magus. Simon Peter is thus the proper hero of the romance, and appears as the champion of pure, primitive Christianity, in contrast with Simon Magus, the great deceiver and arch-heretic. The apostle Paul is not mentioned, but is perhaps attacked under the name of Simon. The doctrinal system which is skillfully interwoven with this narrative stands as a peculiar reception of the philosophy of Ebonistic and Gnostic ideas and fancies. It is a speculative form of Ebionism, rather than (as Baur treats it) a school of Gnosticism. It is essentially Judaizing in spirit and aim, though influenced by heathen philosophy. It is bitterly hostile to the theology of the Church fathers, but tends to go to the other extreme to the Gnosticism of Marcion and his school. It presents Christianity as the restorative simply of the primitive religion of Adam, Enoch, Noah, Abraham, and Moses, which was corrupted by demons, until Christ purged it of all false additions. The apostle Peter defended it against the new corruptions of Simon Magus. James, the brother of Christ, is made the general vicar of Christ, the pope to whom even Peter is amenable, and Jerusalem is the centre of Christendom. The Epitome is only a poor abridgment of the Homilies. The Recognitions of Clement, in 10 books, are an orthodox recension of the Homilies, and were probably written in Rome. They exist only in a Latin translation.

The Homilies and Recognitions are incorporated in the large editions of the apostolic fathers by Coteler and Clericus. The former were separately edited by Schweger, 1847 (incomplete); better by Alb. Dressel, 1857, who first discovered the 220th homily in the Vatican library (Gottingen, 1858); and by P. de Lagarde (Leipzig, 1865). On the system of the pseudo-Clementine Homilies, compare the works of Neander and Baur on Gnosticism, the learned monograph of Schleiermacher (Die Clemcntinen nebst den verwandten Schriften, Hamb., 1844), Hilgenfeld (Die Clem dienten in den literareschen Zeitschriften, Hamburg, 1847), and others.

A. A part of the canons law prepared by pope Clement V (1305-1314), and consisting of the decrees issued by the Council of Vienna (1311-1312), as well as his own constitutions. This collection was to follow the five books of decreals collected by Gregory IX in 1294, and the Liber sextus prepared in 1296 by Boniface VIII, under the name of Liber iurium; it is, however, more commonly known under the name of Clementines. Like the two previous collections, it is divided into five books—Jude de judicium, Clerus, Consuetudines, Crimen; and even the series of titles and the headings fully correspond with those of the collection of Gregory IX. Clement made his collection known to the consistory of cardinals in 1313, and in the following year sent it to the University of Orleans. His successor, John XXII, sent it also to the universities of Paris and Bologna. The first glossa (commentary) to it was written about 1256 by Joannes Arendt, and it soon obtained the authority of a general rule. It was revised by cardinal Zabarella (1417). The first editions of the Clementines were published at Mainz in 1460, 1467, and 1471. See Wetzer u. Welte, Kirchen-,Lett. ii, 628; Hase, Ch. Hist., § 296. See also Canon Law.

B. A set of whose members reject most of the forms and ceremonies of the Roman Church, but adhere to its distinguishing doctrines, such as the sacrifice of the
Cleobias, a branch of the Simonians (q.v.), in the first century, extinguished almost at its rise.

Cleopatra (Greek: Κλεοπάτρα, contr. for Κλεοπάτρα, of a renowned father), one of the two disciples who were going to Emmaus on the day of the resurrection, when Jesus himself drew near and talked with them (Luke xxiv, 18), A.D. 29. Eusebius and Jerome (Eusebius, Jerome, Onomast. s. v. Βιβλίων, Emmaus) make him (Kleopatra, Cleopatra) a native of Emmaus. It is a question whether this Cleopatra is to be considered as identical with the Cleophas (q.v.), or rather Cleopas of John xix, 25, or the Alpheus (q.v.) of Matt. x, 8, etc. Their identity was assumed by the later fathers and Church historians (Thiess, Comment. ii, 230 sqq.). But Eusebius (H.E. iii, 11) writes the name of Alpheus, Joseph's brother, Cleopas, not Cleophas; and Chrysostom and Theodoret, on the Epistle to the Galatians, call James the Just the son of Cleopas. Besides this, Clopas, or Alpheus, is an Aramaic name, whereas Cleopas is apparently Greek. Again, as we find the wife and children in constant connection with the family of Joseph at the time of our Lord's ministry, it is probable that he himself was dead before that time. On the whole, then, it seems safer to doubt the identity of Cleopas with Clopas, notwithstanding the similarity of names. (See Rus., Harmon. evang. i, ii, 1272 sqq.; Wieseler, Chronol. Synopsae, p. 431; Clemens, in the Zacharias; Antioch. iii, 30.)

Cleopatra (strictly Cleopatra, Khonoeira, of a renowned father), a Greek female name occurring as early as Homer (II. ix, 556), and borne especially by the Egyptian princesses after the times of Alexander (see Smith's Dict. of Class. Biog. s. v.). The following, being members of the line of the Ptolemies, who frequently intermarried with the Seleucids of Syria, are mentioned in the Apocalypse and Josephus, or alluded to in the Scriptures.

1. A daughter of Antiochus III (the Great), who was married to Ptolemy V (Epiphanes), B.C. 198 (see Dan. xi, 13, 16). Cœle-Syria being given as her dowry (Josephus, Ant. xili, 4, 4; Apian, Syr. 5; Livy, xxvii, 3), they were married, and the Egyptians arranged this marriage (Polyb. xxvii, 17). See Antiochus, 2.

2. A daughter of the preceding monarch, who became "the wife of Ptolemy" (Esth. xi, 1) VI (Philometor), her own brother, on whose death (B.C. 146) she was violently persecuted by her successor (her own brother likewise, and for a time husband) Physcon, or Ptolemy VII, or Esocrates II (Justin, xxxvii, 8, 9; xxxix, 1, 2; Livy, Ep. 69; Diod. Sic. ii, 602, ed. Wess.). She is mentioned by Josephus as having joined her husband in the letter addressed to Onias (q.v.) in favor of reconstructing the Jewish temple at Leontopolis (Ant. xiii, 3, 2), and as befriended in her distress by Onias (Apian, ii, 5). See Ptolemy Philometor.

3. A daughter of the preceding by her first husband; married first (B.C. 160) to Alexander (q.v.) Balas, the Syrian usurper (1 Macc. x, 5; Josephus, Ant. xiii, 4, 1 and 5), and on his death (B.C. 146) to Demetrius (q.v.) Nicator (1 Macc. xi, 12; Josephus, Ant. xiii, 4, 7). During the captivity of the latter in Parthia, B.C. 141 (1 Macc. xiv, 1 sq.), she married his brother Antiochus (Josephus, Ant. xiii, 7, 1) VII (Sidetes), out of jealousy on account of Demetrius's connection with the Parthian princess Rhodogune, and also murdered Demetrius on his return (Apian, Syr. 68; Livy, Ep. 60), although Josephus (Ant. xiii, 9, 8) and Justin (xxxix, 1) represent her as only refusing to receive him. She also murdered Seleucus, her son by Nicator, who on his father's death assumed the government without her consent (Apian, Syr. 68). Her other son by Nicator, Antiochus VIII (Grypus), succeeded to the throne (B.C. 125) through her influence; but afterwards, finding him not disposed to yield her all the power she desired, she attempted to poison him, but was anticipated by him, and compelled to drink the poison herself (Justin, xxxix, 2), B.C. 120. See Antiochus, 6 and 7.

4. A sister of the preceding, and the rival of her own mother (No. 9) in the affections of Ptolemy Physcon, by whom she was left in supreme power, in connection with whichever of her own sons she might choose. She was compelled by her people to set up the eldest, Ptolemy VIII (Lathyros); but she soon prevailed upon them to expel him, and make room for her younger and favorite son Alexander (Pausan. viii, 7), and she even sent an army against Lathyros to Cyprus, an effort in which the Jews became involved (Josephus, Ant. xili, 12, 2 sq.; 18, 1) through the intervention of Alexander Jannaeus (q.v.). Her son Alexander retired through fear of her cruelty, but was recalled by his mother, who attempted to assassinate him, but was herself put to death (B.C. 89) before she could effect her object (Justin, xxxix, 4). See Ptolemy Lathyros.

5. The second daughter of the name by the preceding marriage, and married to her own brother Lathyros after her sister's divorce, from whom she is usually distinguished by the surname of Seleene (Σελεηνη, the moon). After his exile she married Antiochus XI (Epiphanes), and on his death Antiochus X (Eusebes). She was besieged by Tigranes in Syria (Mesopotamia, and either taken and killed by him (Strabo, xxii, 7, 249), or, according to Josephus (Ant. xiii, 16, 4; comp. War. ii, 5, 8), relieved by Lucullus's invasion of Armenia. See Antiochus, 9 and 10.

6. The last queen of Egypt, was the daughter of Ptolemy Anitaeus, born B.C. 69, and celebrated for her beauty and accomplishments, as also for her voluptuousness and ambition. She had various amorous and political intrigues, first with Julius Caesar (Dion Cass. xiii, 27; Sueton. Cez. 83), whom she even accompanied to Rome; and finally with Marc Antony (q.v.), who became so completely enamored of her as to commit suicide when falsely informed of her death, which she presently actually accomplished, it is said by causing herself to be bitten by an asp, on the capture of Alexandria by Octavianus, afterwards called Augustus, B.C. 30 (see Liddell's Hist. of Rome, chap. lxx).
Cleo'phas, or rather Clopas (KALPOS), the husband of Mary (q. v.), the "sister" of Christ's mother (John xix. 25); probably a Graecized form of the name elsewhere (Matt. x. 3; Mark iii. 18; Luke vi. 19; Acts i. 13), but not the Clopas of Jn. xiv. 20 called by the apocryphal gospels (q. v.), perhaps in imitation of the name Chlopas (q. v.). See the Theol. Stud. u. Krit. 1840, 344, 648.

Clero, Le (CLERICUS), Jean, a learned critic and theologian, was born at Geneva March 19, 1657. He studied theology at his native town, and in 1679 passed a brilliant examination for admission into the ministry of Geneva, but had before that fallen out with strict Calvinism, chiefly on grounds of the Sacramentary heresies (Symmorphothes symmol. Basilii, 1655), and the writings of his grand-uncle Cercelleus and of Episcopi. As early as 1679 he published a pseudonymous work on the difference between strict Calvinists and Remonstrants, in favor of the latter (Libri de sacris dogmatibus, Geneva, 1679). In 1682 he openly joined the Remonstrants, and in 1684 the Rotterdam Synod gave to him the professorship of philosophy and ancient languages at the Arminian college of Amsterdam. He there at once began to exhibit his marvelous literary activity. After publishing several exegetical treatises of his uncle David le Clero, and having a dogmatical treatise on predestination, and the nature and limits of human knowledge (Entretiens sur diverses matières de théologie, Amsterdam, 1685), he attracted general attention by his literary controversy with the learned oratorian Richard Simon (Origeni Adscendentis Crutichus Hieropolitanae, 1684, pseudonym.; Sermones sur l'histoire critique du V. T. composés par le P. R. Simon, Amsterdam, 1685, and Défense des Sentiments, etc. Amsterdam, 1685). In the same year he was elected by F. Cornand de la Croze a literary journal, under the title Bibliothèque universelle et historique, which, besides reviews, was to contain new learned essays. He was the active editor of the four editions of Moreri's Dictionnaire (4 vols. 1691-1702). He defended Episcopi against the charge of Socinianism (Lettre à M. Jurieu sur la manière dont il a traité Episcopi, 1690), and translated three works of Burnet into French, and part of the history of ancient philosophy by Th. Stanley into Latin. From 1692-1695 he wrote several compendial works of philosophy (Opera philosophica, 4 vols. 1698; later editions contain a 5th volume, with a life of the author). In 1698 he began the publication of his Latin translation of and commentary on the Old Testament (Genesis 1698; the four last books of the Pentateuch, 1696; the other historical books, 1708; the remainder, 1781), in which he developed some latitudinarian views on Biblical miracles and scriptural interpretation. In 1699 he published his Ars Critica (2 vols. Amsterdam.), one of his most important works, of which the Epistolae Criticae et Exegeticae (1700, against Cave) are a continuation. He translated into Latin and added valuable notes to Hammond's New Testament (1698, 2 vols. fol.; 2d edit. Frankfort, 1714), and in the same year published a new edition of the Patres Apostolicis by Coteller, with notes and additions (Amsterdam. 1698; 2d ed. 1724). A work against some anti-Christian views in Bayle's Dictionary (Parvissimia, Amsterdam, 1699) involved him in a controversy with Bayle which lasted until the death of the latter. He prepared an appendix to the Amsterdam reprint of the Maurine edition of the works of St. Augustine (Appendix Augustiniana, Amsterdam, 1703) and published a French translation of the New Testament (Amsterdam, 1703, 2 vols.), which again brought him into the suspicion of Socinianism, and published new editions, with notes, of Petavius, De theologis dogmaticis (6 vols. fol. Amsterdam, 1700), and doctrina temporum (Amsterdam, 1703, 3 vols. fol.), of the complete works of Erasmus of Rotterdam (Lugd. Bat. 1700, 3 vols. fol.), of Hugo Grotius, De jure et jure religiosis Christianis (Amsterdam, 1709), and of many others. He also continued his literary journal under the title Bibliothèque choisie (1708-13, 27 vols.). In 1712, on the death of Limborch, he was appointed his successor as professor of Church History at the college of Amsterdam. His new office induced him to write a Church History of the first two centuries (Hist. Eccles. duorum prim. sec., Amsterdam, 1716). He also prepared several editions of Latin and Greek classics, a history of the Netherlands, and carried on a very extensive correspondence with scholars in various countries. In 1726 he suddenly lost, in consequence of a paralytic stroke, the use of his memory, and his condition became still worse after a new attack in 1728. He died January 8, 1736. Le Clerc was one of the most prolific writers of modern times, but more critical than productive. Though always in ecclesiastical communion with the Remonstrants, he undertook a new theology in the old school. See Wetzer u. Welsch, Kirchen-Lex. ii, 688 sq.; Herzog, Real-Encyclop. ii, 768; Ersch u. Gruber, Encyclop. vol. xviii, s. v. Clerestory. See Clear-story.

Clergy. Clergy, the general name given to those who are set apart by ordination (q. v.) for the performance of Christian worship and teaching, and who are therefore said to be in orders (q. v.).

1. Origin and Meaning of the Word. —The word is by some supposed to be derived from χηρός (kol), as if the minister were, in a special sense, χηρός τοῦ θοῦ, especially consecrated to God. Others (Augustine, Epist. in Pa. 67; Isidore, De Off. Eccles. ii, c. 1) maintain that it indicates that the lot by which Matthias was chosen apostle gave the first general name for the chiefs of the Church as a class. Jerome says they were called clergy, either because they were chosen by lot to be the Lord's, or because the Lord is their lot or heritage (Epist. vii, 2). The title of clergy from new converts has been extended, and the development has been defined by Baur (Ursprung des Episcopats, p. 98 sq.; D. Christentum v. u. die christl. Kirche der drei ersten Jahrhund. p. 245) and by Ritschl (Entstehc. d. altchristl. Kirche, p. 245) has met with general favor. According to it, the word χηρός is in the N. T. (Acts i, 26; 1 Pet. v. 8), as well as in the language of the ancient Church, commonly used in the signification of "rank," "degree." The "faithful" (fideles) and catechumens were called χηροί (ordines, ranks), just as well as bishops, presbyters, deacons. Gradually —the exact point of time cannot be fixed—the ecclesiastical officials were called the "rank," χηρός, a transition which was very natural when the difference between the offices of the Church and the bulk of the people was emphasized. The earliest writer in which the name "clergy" (ξηρός) in the restricted sense occurs is Clement of Alexandria. "It is clear from the N. T. that Christ made men separate to the work of the Christian ministry. Some of these men have been extraordinary, such as apostles, who had been selected by Christ himself without any intermediate authority; evangelists, such as Timothy and Titus; prohetas; See 1 Cor. xiv, 22-24. These probably continued only during the lifetime of the apostles and those on whom they laid hands. Others were ordinary ministers, denominators elders or..."
presbyters, pastors, bishops, and teachers. See 1 Pet. v, 1-4; Acts xiv, 28; xv, 6; Titus i, 5. These were divinely appointed and called to their work (Acts xx, 28); they were solemnly set apart; they were entitled to be supported by the churches to which they ministered; their positions were hereditary, and handed down from father to son, to take care of and govern the Church of God, and to watch for souls (1 Thess. v, 12, 13; Heb. xii, 7, 17) (Coleman, Christian Antiquities, ch. iii.).

2. Distinction of Clergy and Laity.—In the apostolic Church no abstract distinction of clergy and laity, as to privileges or sanctity, was known; all believers were termed and called to the prophetic, priestly, and kingly offices in Christ (1 Pet. v, 3). The Jewish antithesis of clergy and laity was at first unknown among Christians; and it was "only as men fell back from the evangelical to the Jewish point of view" that the idea of the general Christian priesthood of all believers gave place, more or less completely, to that of the special priesthood or clergy (Neander, Church History, Torrey's ed., i, 194 sq.; Schaff, History of the Christian Church, i, ch. v; Gieseler, Church History, i, § 92). So Tertullian, even (De Baptismo, c. 17, before he became a Montanist): "The laity have also the right to administer the Sacraments and to exercise the gift of prophecy in the community. The Word of God and the sacraments were by the grace of God communicated to all, and may therefore be communicated by all Christians as instruments of the divine grace. But the question here relates not barely to what is permitted in general, but also to what is expedient under existing circumstances. We may here use the words of St. Paul, 'All things are lawful for men, but all things are not expedient.' If we look at the order necessary to be maintained in the Church, the laity are therefore to exercise their priestly right of administering the sacraments only when the time and circumstances require it. The Bishop is the spiritual father of the people; in the hierarchal system, the distinction of clergy and laity became prominent, and very soon was universalized and admitted. Indeed, from the third century onward, the term clericus (εληρηριος, ordo) was almost exclusively applied to the ministry to distinguish it from the laity. As the Roman hierarchy was developed, the clergy came to be not merely a distinct order (which might consist with all the apostolical regulations and doctrines), but also to be recognized as the only priesthood, and the essential means of communication between man and God (Vinet. Past. Theol. Introduct.).

In the Church of the East, the introduction into the Church of a distinction between clergy and laity, a division of the clergy into classes of different rank was gradually developed. The earliest and most important of those distinctions was that between bishop and presbyter (see Bishop). To these were added, in the course of time, deacon, subdeacon, archbishop, patriarch, metropolitan, and a number of officers preceding the subdeaconate. Each class was initiated into office by a special ordination (see Orders). In general, the various classes, according to the higher and lower dignity of the orders, were divided into the higher and lower clergy, the latter embracing the subdeacons, deacons, priests, canon, and acolyte; the former the deacons, deacons, priests, bishops. Up to the 13th century the subdeacons were counted among the lower clergy. The canon law very frequently applies the name clericis exclusively to the lower classes of the clergy, designating each higher class (subdeacons, deacons, bishops) by its special name. Higher (or high) clergy means the bishop and church officers, lower (or low) clergy the others.

In those churches which have monastic institutions, the clergy are also divided into regular and secular clergy, regular being members of orders and congregations who bind themselves to common rules, and secular those who have charge of parishes. In the Church of Russia the common name of the regular clergy is the black clergy, out of which the higher ecclesiastical dignities are chosen, while the secular clergy (priests, deacons, readers, and acolytes) are called white clergy.

4. Exemptions and Privileges.—By laws made by Constantine, Valentinian IV, Gratian, and Theodosius the Great, the clergy were exempted, (1.) From all civil and municipal offices, that they might give themselves to their religious duties. (2.) From contributions to public works. (3.) From a variety of taxes and imposts. (4.) From military service, through the middle ages. (5.) From appearance in civil courts. A bishop could not be forced to give public testimony; but it might be taken in private, though the bishop was not obliged to take formal oath, but only had the Gospels before him. Scurrilous and torturous, which might be applied to other witnesses, could not be inflicted on the clergy. Nor could the civil courts take cognizance of purely ecclesiastical causes (Theodos. Cod. lib. xvi, tit. 5, leg. 23; Justinian, Novell. 68), though they could interfere in criminal matters, and in cases between a clergyman and a layman; for the layman was not bound to obey an ecclesiastical tribunal. Bishops were often arbiters in disputes between subject and subject, but not in those between subject and bishop, the matter before them, and then the episcopal sentence could be put in force by the civil power. In cases of life and death, clerical intervention was strictly prohibited.

The privileges which the clergy enjoyed under the ancient municipal laws of England were numerous; but being much abused by the popular clergy, they were greatly curtailed at the Reformation. "Those which now remain are personal, such as clergymen not being compelled to serve on juries, or to appear at the sheriff's, or consequently at the court-leet, or view of frankpledge. Clergymen are exempt also from tempi, that is, from service in their own capacity on their sacred functions. While attending divine service they are privileged from arrest in civil suit, etc. 50 Edward III, chap. v, and 1 Richard II, ch. xv. It has been adjudged that this extends to the going to, continuing at, and returning from celebrating divine service. The ecclesiastical goods of a clergyman cannot be levied by the sheriff; but on his making his return to the writ of fieri facias, that the party is a clergyman beneficed, having no lay-fee, then the subsequent process must be directed to the bishop of the diocese, who, by virtue thereof, sequesters the same. So in an action against a person who has been in a capital punishment to take his person, on the sheriff's making the same return, further process must issue to the bishop, to compel him to appear; it is otherwise, however, unless the clergyman is beneficed. In cases of felony, benefit of clergy is extended to them without being branded, and they are entitled to it more than once. Clergymen labor also under certain disabilities, such as not being capable of sitting as members in the House of Commons. This, however, though a received opinion, was not restricted by law till so late as the 41 George IIII, chap. xiii, which was passed in consequence of John Horne Tooke, then in deacon's orders, being arrested and sitting in Parliament for Old Sarum. It was then enacted that no priest, nor deacon, nor minister of the Scotch Church, shall be capable of serving in Parliament; that their election shall be void, and they themselves liable to a penalty of £500 a day in the event of their either sitting or voting. It is clear, therefore, as in the case of those of the bishop of Exeter's friend Sheriff, that he could not excommunicate himself of holy orders. Various acts of Parliament have also, from the time of Henry VIII, been passed to prevent clergy from engaging in trade, holding farms, keeping tan or brew houses, all of which are stated, explained, and consolidated by the 57 George III, ch. xci. (Edale, Eccles. Dict. s. v.) For a peculiar privilege, see Clergy, Benefit of.
CLERGY

4. The 4th century it became a law that clergymen were to bring suits only in ecclesiastical courts (i.e. before bishops or synods). Justinian ordained that even laymen should bring suit against clergymen, monks, and nuns only before the bishop of the diocese, and against a bishop only before a synod (De Caes. 8. 5. 9). Thus the privileged jurisdiction of the clergy came to be a general law, which was sanctioned and more fully defined by many imperial and canonical decrees, and which no individual member had a right to renounce. The privileged jurisdiction referred, however, to personal suits only, not to real and codal (see the decisions of the Welte, Kirchen-Lexikon, iv. 400, s. v. Gerichtsbarkeit, Geistliche).

A peculiar privilege of the clergy of the Roman Church is the so called privilegium omnium canonicorum. It consists in a canonical provision that every one who extracts upon a clergyman (including monks and nuns) a bodily injury (embracing spitting, kicking, etc.), incurs by the fact itself excommunication. It was first enacted by the Council of Rheims in 1131 (in the canons which begins Sinequâsquadra diocebro clericum percuti, etc., if any one, at the instigation of the devil, shall strike a clergyman), and was made a general Church law by the Council of Lateran III, 1179. It is a privilege, the excommunication from the excommunication thus incurred should only be given in the hour of death, or if the culprit shall personally go to Rome. The law still exists, but if the injury be a small one, the bishop may dispense from the Roman journey (see Wetzer u. Weite, Kirchen-Lexikon, 709, s. v. Privilegium omnium canonicorum).

5. Special Discipline, Duties, Disabilities.—In the early Church the clergy were placed under strict discipline. The crimes leading to punishment were simony, heresy, apostacy, neglect of duty, immorality, and violation of clerical etiquette. Punishments were various: (1.) Excommunication which the church speaks of as not frequent, the delinquent being first deprived of his clerical rank, and then scourged as a layman. Decanities, or prisons, were attached to many churches. (2.) Depredation—that is, the offender was put down to a lower rank or grade of office, and that to all appearance permanently. (3.) Suspension—either a benefit, from his income, or ab officio, from his office. (4.) Deprivation—either forbidden from the Lord's Supper altogether, and treated as a stranger (communio pergrinorum, or allowed to communicate only with the laity (communio laicis). (5.) Excommunication—the final cutting off from the communion and the denial of all hope of restoration to it, even though he should be restored to the fellowship of the Church. We subjoin a few of the more characteristic of the ancient canons concerning the clergy, as showing the spirit of the age, and revealing some of its tendencies and usages: Thus, in the Apostolical Canons, 6. Let not a bishop, presbyter, or deacon turn away his wife, under pretence of religion; if he do, let him be suspended from the communion (ἀποθεωσεία), and deposed (απεθανατιτικώς) if he persist. 7. Let not a bishop, presbyter, or deacon undertake any secular employ, upon pain of deposition. 17. He who, after his being baptized, has been involved in two marriages, or has kept a concubine, cannot be a bishop, or a presbyter, or a deacon, or at all belong to the sacerdotal catalogue. 18. He that marries a widow, or one that is divorced, or a harlot, or a servant, or an actress, cannot be a bishop, or a presbyter, or a deacon, or at all belong to the sacerdotal catalogue. 41. A priest's sisters, or his niece, cannot be a clergyman. 50. Let the clergymen who gives security for any one be deposed. 51. If any bishop, presbyter, deacon, or any of the sacerdotal catalogue, do abstain from marriage, and flesh, and wine, not for mortification, but out of abhorrence, he has forgotten that all things are very good, and that God made man male and female, and blaspemously reproaching the workmanship of God, let him amend, or else be deposed, and cast out of the Church; and so also shall a layman. In the Canons of Laodicea, 54. That the priests of the priesthood and clergy ought not to gaze on fine shows at weddings or other feasts; but before the masquerades enter, to rise up and leave their seats. The duties of the various ranks of the clergy were strictly defined, and firm laws laid down for their guidance. They were not allowed to leave their station without permission, but were to reside in their cure. Deserters being condemned by a law of Justinian to forfeit their estates; but they could resign in certain circumstances, and a retiring or canonical pension was sometimes granted. They could not remove from one diocese to another without letters dimissory, nor could they possess pluralities, or hold offices in two dioceses. It was forbidden them to engage in secular employments, or attend fairs and markets, nor could they become pleaders in courts of law. They were expected to lead a studious life, their principal book being the Scriptures, while heathen and heretical treaties were only allowed them as occasion served. Bishops could not be "tacetis in officio," that is, they might not, under certain limitations. After the example of Paul, some of the lower clergy might support themselves, or fill up their leisure by some secular occupation. Severe laws were passed against what are called wandering clergy—encomiisti, who appear to have been often fugitives from the disciplinarians, or from the law, or from the church, or from some certificate. If a clergyman died without heirs, his estates fell to the Church, so the Council of Agde in 600 ruled. By a law of Theodosius and Valentinian III, the goods of any of the clergy dying intestate went in the same way (Eadie, s. v.).

6. Election of the Clergy.—Some assume that in the early Church the people had no other power than to give their testimonials to the persons elected, or to make exceptions. If they had any just and reasonable objections to urge; others say that the people were absolute and proper electors, and this from apostolical right, and that they enjoyed this for a succession of ages. That the people had a voice in the elections in several circumstances. No bishop could be intruded upon a Church against the consent of the members: in case the majority of a Church consisted of heretics or schismatics, the practice differed. In many instances recorded in ecclesiastical history the people protests of the denial of the admission of themselves. In addition, we have the words used by the people in the decision, such as δικαιος or αναδικαιος, dignus or indignus; and instances in which persons were brought by force to the bishop to be ordained, or were elected to the office by acclamation. It was declared by the fourth Council of Carthage that that the bishop might not elect clerks without the advice of his clergy, so likewise he should secure the consent, co-operation, and testimony of the people. The popular elections, however, became scenes of great disorder and abuse. A remarkable passage from Chrysostom (De Sacert) has been frequently quoted, and applies more or less to each bishop. It is in Constantinople, but also in Rome, Alexandria, Antioch, and other large cities. He says: 'Go and witness the proceedings at our public festivals, in which, more especially, according to established rule, the elections of ecclesiastical officers take place. You will find the people unruly there complaisant, the clergy devious and as various in their character as the multitude of those who are the subject of church-government. For all those in whom the right of election is vested split into factions. It is evident that there is no good understanding, either among themselves, or with the appointed presbyters, or with the presbytery. One supports one man, and one another. And the reason of this is, that they all neglect to look at that point which
they ought to consider, namely, the intellectual and moral qualifications of the person to be elected. There are other points by which their choice is determined. One, for instance, says, "It is necessary to elect a person who is of a good family." Another would choose a wandering bishop, because he would not require to be supported out of the revenues of the Church. A third votes for a person who has come over from some opposite party. A fourth uses his influence in favor of a relative or friend. While another lends his influence to one who has won upon him by fair speeches and plausible pretensions. In order to set aside these abuses, some bishops claimed an exclusive right of appointing to spiritual offices. In this way they gave offence to the people. In the Latin and African churches an attempt was made to secure greater simplicity in elections by introducing 
\textit{visitors}. This did not, however, long continue. Another plan was to vest the election in members of the lay aristocracy. But the determining who these should be was left to caprice or accident; and the result was that the right of election was taken out of the hands of the people, and vested partly in the hands of the ruling powers and partly with the clergy, who exercised their right either in their own persons, their suffragan bishops, or by collegiate meetings, and this very often without paying any regard to the Church or diocese immediately concerned. Sometimes the extraordinary mode of a bishop's designating his successor was adopted; or some one not connected with the diocese, to whom a doubtful person, or even a stranger, was allowed to nominate. But in these cases the consent of the people was presupposed. Patronage has prevailed since the fifth century; but the complete development of this system was a work of the eighth and ninth centuries" (see \textit{Patronage}).—\textit{Colman, Christian Antiquities}, iii, 22, 515; \textit{Ferrar, Eccles. Hist.} a. v. \textit{Edition}; Bingham, \textit{Orig. Eccles.} bk. iv, chap. ii; Henry, \textit{Ch. Antiq.} bk. ii, ch. i; Wetzer u. Welte, \textit{Kirchen-Lex.}, i, 680; \textit{Hertzog, Real-Encyklop.} a. v. Geistliche. See \textit{Ecclesiastical Polity}.

\textbf{CLERGY, BENEFIT OF}, an ancient privilege whereby the persons of clergymen were exempted from criminal process before the secular judges in particular cases, and consecrated places were exempted from criminal arrests. See \textit{Sanctuary}. "This privilege was originally confined to those who had the \textit{hospitium et tonuram clericorum}, but in time every one was accounted a clerk who could read; so that after the advent of learning, by the invention of printing, it was found that as many laymen as divines were admitted to this privilege, and therefore the statute.

4 Henry VII, ch. xiii, distinguishes between lay scholars and clerks in holy orders, and directs that the former should not claim this privilege more than once, and, in order to their afterwards known, they should be marked with a letter, according to their offence, on the brawn of the left thumb. After this burning, the laity, and before it the real clergy, were discharged from the sentence of the law in the king's court, and delivered over to the ordinary for canonical purgation. This purgation, having given rise to various brawls and confusion of oaths, was abolished at the Reformation; and accordingly by the statute.

18 Elizabeth, ch. vii, it was enacted that every person having benefit of clergy should not be delivered over to the ordinary, but after burning in the hand should be delivered out of prison, unless the judge thought it expedient to burn him thrice. Two quarto volumes will be collected from the above statement that the parties entitled to this privilege are clerks in holy orders, without branding, or any of the punishments subsequently introduced in its place; lords of Parliament, peers, and peersesses for the first offence; commoners not in orders, whether male or female, for clerkyable felonies, upon being burnt in the hand, whipped, fined, imprisoned, or transported. It is a privilege peculiar to the clergy that sentence of death cannot be passed upon them for any number of clergyable offenses committed by them (Blackstone, Com. iv, 374)."—\textit{Eadie, Eccles. Dict.} a. v.

\textbf{CLERICI REGULARI et SECULARI.} See \textit{Canons and Regulars}.

\textbf{Clericus.} See \textit{CLERIC}, LE.

\textbf{Cleric (Acts xix, 85).} See \textit{TOWN-CLERK}.

\textbf{CLERK}, originally and properly the name for one of the clergy (q. v.), and still the common appellation by which clergymen of the Church of England distinguish themselves in signing any legal instrument. It came afterwards, by an obvious transition, to signify a "learned man." Its most usual application in England is to that officer, now a layman, but once, in all probability, an ordained functionary, who leads the responses of the congregation. Properly speaking, in the Church of England, the clerk is not an original functionary of the congregation in the eye of the Church, which, in her rubrics, speaks mostly, if not always, of "clerks" (ordained persons); and it is certain that several duties are by custom yielded to the clerk who properly belong to the clergyman, such as the giving out of the Psalms to be sung, and the publication of notices. (See \textit{Rubric} at "Solemn Creed."") The appointment of parish clerks properly belongs to the incumbency. They should be licensed by the ordinary, and take an oath to obey the minister, with whom properly rests the power of removing the clerk from his office, though he be displaced without sufficient cause a "manda
crum" may restore him. By the Church Temporalities' Act for Ireland, the parish clerk is removable for any misconduct, by the minister with the consent of the bishop.

\textbf{CLERKS, APOSTOLICAL.} See \textit{JEWS}.

\textbf{CLERKS, MINOR.} See \textit{FRANCISCANS}.

\textbf{CLERKS of St. MAJORUS}, a religious order of the sixteenth century in Italy, founded by Jerome Amilarius, and approved by Paul III in 1540 and by Paul IV in 1542. They gave themselves to the religious instruction of the young and the ignorant. See \textit{FRANCISCANS}.

\textbf{CLERKS of St. PAUL}. See \textit{BARNABITES}.

\textbf{CLERKS, REGULAR.} See \textit{Canons and Regulars}.

\textbf{CLERKS, TREATISE.} See \textit{TREATISES}.

\textbf{Clermont}, a city of Auvergne, France, where a council was held in 1095 and 1096, confirming the councils of Pope Urban. A crusade was also recommended, and King Philip excommunicated. The council was attended by 4 archbishops, 225 bishops, and an immense number of lower clergy and laity.

\textbf{CLERMONT MANUSCRIPT} (\textit{Codex Clermontinus}), known as Cod. D of the Pauline Epistles, No. 107 of the Imperial Library at Paris, an uncial MS., with the Greek and Latin on opposite pages, containing Paul's fourteenth epistle, with a few hiatus, most of which have been supplied at various dates. The Epistle to the Colossians stands before that to the Philippians, and Heures after the Pastoral Epistles. The MS. text is curiously arranged on almost every page. The citations from the O.T. are written in red, except in Hebrews. It seems to belong to the sixth century. It probably came from a Latin scribe, with a Greek copy. The original writer made several alterations, then the whole of the Greek text was corrected (apparently in the seventh century) as far as they were visible. Two quarto volumes will be collected from the above statement that the parties entitled to this privilege are clerks in holy orders, without branding, or any of the punishments subsequently introduced in its place; lords of Parliament, peers, and peersesses for the first offence; commoners not in orders, whether male or female, for clergyable felonies, upon being burnt in the hand, whipped, fined, imprisoned, or transported. It is a privilege peculiar...
ment which Weststein unnecessarily impugns. After Beza’s death, it passed into the library of the brothers Jacques and Pierre du Puy, the former of whom being librarian to the king of France, and dying in 1556, it was purchased and deposited in the Royal Library at Paris. In the early part of the eighteenth century, 25 leaves were cut out of this MS. by John Aymon, an apostate priest, who sold one of them to Stukeley in Hol-

land, and the others fell into the hands of the bibliographical Earl of Oxford. Both these purchasers, on learning the theft, restored the leaves to their proper place.

Beza made some use of this document; Walton’s
Cloud (properly 722, *aman, as covering the sky, *nebula). The allusions to clouds in Scripture, as well as their use in symbolic language, must be understood with reference to the nature of the climate, where the sky scarcely exhibits the trace of a cloud from the beginning of May to the end of September, during which period clouds so rarely appear, and rains so seldom fall, as to be considered phenomena—as was the case with the harvest-rain which Samuel invoked (1 Sam. xii, 17, 18), and with the little cloud, not larger than a man's hand, the appearance of which was immediately noticed as something remarkable not only in itself, but as a sure harbinger of rain (1 Kings xviii, 44). As in such climates rain refreshingly fell the oppressive glories of the sun, clouds often symbolize the Divine presence, as indicating the splendor, invisibly cloaked, of that glory which they wholly or partially conceal (Exod. xvi, 10; xxiii, 9; Num. xi, 25; xxi, 6; Job xxii, 14; Psa. xviii, 11, 12; Isa. xix, 1). The shelter given, and refreshment of rain promised by clouds, give them their peculiar prominence in Oriental Imagery, and the individual cloud in that context is the imageless, regal personage well defined, and is dwelt upon like the individual tree in the bare landscape (Stanley, *Syria and Palestine*, p. 110). Similarly, when a cloud appears, rain is ordi-
narily apprehended, and thus the "cloud without rain" becomes a proverb for the man of promise without performance (Prov. xvii, 15; Isa. xlvii, 4; xxv, 5; Jude 12). The cloud is, of course, the figure of transition (Job xxx, 15; Hos. vi, 4), and of whatever intercepts divine favor or human supplication (Lam. ii, 1; iii, 41). Being the least substantial of visible forms, undefined in shape, and unreserved in position, it is the one among material things which most easily suggests spiritual being. Hence it is, so to speak, the repository in which supernatural appearances are introduced (Isa. xix, 1; Ezek. i, 4; Rev. i, 7, et passim), or the veil between visible and invisible; but, more especially, a mysterious or supernatural cloud is the symbolical seat of the Divine presence itself—the phenomenon of deity vouchsafed by Jehovah to the prophet, the priest, the king, or the people (Psa. lxviii, 94; lxix, 6; civ, 3; Nah. i, 3). Sometimes thick darkness, sometimes intense luminousness, often, apparently, and especially by night, an actual fire is attributed to this glory-cloud (Deut. iv, 11; Exod. xiii, 25; xxxiii, 22, 23; 2 Sam. vi, 12, 13). Such a cloud, at any rate, time-visioned and rested on the Mercy-seat (Exod. xxix, 42, 43; 1 Kings viii, 14; 2 Chron. v, 14; Ezek. iv, 4), and was named Shekinah (q. v.) by late writers (see Tholemann, De nube super arca, Lips. 1871-1872; Stiebritz, De arca foederis, Hal. 1875). Thus Jehovah appeared at Sinai in the midst of a cloud (Exod. xii, 6; xxv, 7); and in the cloud he had built and consecrated the tabernacle, the cloud filled the court around it, so that Moses could not enter (Exod. xx, 24, 30). The same happened at the dedication of the Temple by Solomon (2 Chron. v, 13; 1 Kings viii, 9). So Christ, at his second advent, is described as descending upon clouds (Matt. xvi, 27; xxiv, 30, etc.; Acts i, 9; Rev. i, 7; xiv, 14, 16). To come in the clouds, or with the clouds of heaven, was among the Jews a known symbol of Divine power and majesty; and Grocius observes that a similar notion obtained among the heathen, who represented their deities covered with a cloud. (See the treatises on the symbolical nimbus or halo by Nicolai [Jen. 1609].) Relase [Disq. ii, No. 41]. Hence "clouds and darkness" appear to be put as representing the mysterious nature of the Divine operations in the government of the world (Psa. xxxvii, 2). Clouds are also the symbol of armies and multitudes of people (Jer. iv, 15; Isa. x, 8; Heb. x, 3). Clouds may have effects of a large and compact body of men, moving upon the surface of an extensive plain, like a cloud in the clear sky. A day of clouds is taken for a season of calamity (Ezek. xxx, 3; xxxiv, 12). Peter employs false teachers to clouds carried about with a tempest (2 Pet. ii, 17). Solomon compares the infinites of old age, which arise successively one after another, to "clouds returning after rain" (Eccles. xiii, 2). The favor of a king is compared to "a cloud of the latter rain," refreshing and fertilizing the earth (Prov. xvi, 15). The sudden disappearance of threatening clouds from the sky is employed by Isaiah as a figure for the blotting out of transgressions (xiv, 22).

PILLAR OF CLOUD (싼ננ נא, column of the cloud. Exod. xxxiii, 9, 10), otherwise called Pillar of Fire (סגן גלים, Pillar of a fire, Exod. xiii, 22), was the active form of the symbolical glory-cloud, betokening God's presence to lead his chosen host, or to inquire and visit offences, as the luminous cloud of the sanctuary exhibited the same under an aspect of repose. The cloud, which became a pillar when the host moved, seems to have rested at other times on the tabernacle, whence God is said to have spoken in the wilderness (Num. xx, 20), so Exod. xxxiii, 9, 10). See PILLAR. It preceded the host, apparently resting on the ark, which led the way (Exod. xiii, 21; xl, 36, etc.; Num. ix, 15-23; xvi, 84). So by night the cloud on the tabernacle became fire, and the guiding pillar a pillar of fire. See BEACON. Modern Germans explain it of a natural appearance, or of the holy fire carried before the host from off the altar; but it is clearly described as miraculous, and gratefully remembered in after ages by pious Israelites (Psa. cv, 89; lxviii, 14; Wisd. x, 17) as a token of God's special care of their fathers. Isaiah has a remarkable allusion to it (iv, 5), as also Paul (1 Cor. x, 4, 2; see Pflug, De nube Israelitae baptizante, Stuttgart, 1858). A remark in Curtius (v, 2, § 7), descriptive of Alexander's army on the march, mentions a beacon hoisted on a pole from head-quarters as the signal for marching ("a fire was observed by night, a smoke in the day-time"). This was probably an adoption of an Eastern custom. See also an account of an appearance of fire by night in the expedition of Timoleon to Italy (Diod. Sic. xvi, 66). Similarly the Persians used, as a conspicuous signal, an image of the sun enclosed in crystal (Curtius, iii, 8, § 9). Caravans are still known to use such beacons of fire and smoke, the cloudlessness and often stillness of the sky giving the smoke great density of volume and boldness of outline. See EXOD.

Clough, Benjamin, a Wesleyan Methodist missionary, was born at Bradford, England, 1791, and united with the Wesleyan Church in 1808. In a few years he was licensed as a local preacher, and in 1813 he was sent with Dr. Coke, as one of his helpers, in his mission to India. In Ceylon he was soon regarded as one of the most successful students and teachers. He compiled two dictionaries—English and Singhalase, and Singhalase and English—which were published at the expense of the colonial government, and have been of incalculable value to his successors in the mission. He was one of the translators of the Holy Scriptures of the Old and New Testaments into the Sinhalese language; and he assisted in preparing for the press a translation of the New Testament into the Pali, the sacred language of the Buddhists. As a preacher to the natives he was most zealous and successful.

"During the first year of his labors, he won the confidence and convinced the judgment of many distinguished men among the heathen, and assisted to form that system of evangelization which has blessed many thousands of persons in the island of Ceylon." In 1858, failing health compelled him to return to England. He died in London, April 31, 1858—Wesleyan Min. 1858.
the victory. The Alemani were routed, and on Christmas day of the same year Clovis and several thousands of his army were crowned by Remigius, bishop of Rheims. The reception of Clovis into the Church by a bishop in connection with Rome tended greatly to secure the supremacy of orthodoxy over Arianism, to which, at that time, most of the Western Christian princes belonged. Pope Anastasius, who fully appreciated the importance of this gain, saluted Clovis as the "most Christian king." In 507, love of conquest concurred with zeal for the orthodox faith, Clovis marched to the south-west of Gaul against the heretic Visigoth, Alaric II, whom he defeated and slew at Vouillé, near Poitiers, taking possession of the whole country as far as Bordeaux and Toulouse; but he left his son Chlothar in the north of the country, king of the Ostrogoths. Clovis now took up his residence in Paris, where he died in 511. Clovis, in several instances, used the Arianism of other Christian princes as a pretext for war and conquest, and he stained his name by cruelly murdering a number of his relations who he looked upon as dangerous rivals; but the writers of the Romish Church were satisfied that he was chaste, and just toward his subjects.—See Chambers, J. E. "Clovis," s. v.; Wetzer u. Welte, Kirchen-Lex., ii, 490.

Clovis, an ancient episcopal town in the south-east of Cork county, fifteen miles east by south of Cork. The bishopric was founded in the 6th century by St. Colman, the abbey in 707, and the cathedral in the 12th century. Near the latter is the round tower 92 feet high. About 1480 the episcopal see was united to that of Cork, separated in 1678, and re-united in 1835. See Cork. Berkeley, the celebrated philosopher, was born here, and was bishop of Clonfert in 1678. Brinkley, the astronomer, who died in 1855, was also bishop of Clonfert. Population 1126. Clonfert is also the seat of a deanery. The diocesan bishop, who resides at the ecclesiastical province of Cashel.—Chambers, Encyclopaedia.

Club (only once in the plur. and, that in the Apocrypha, 2 Macc. iv, 41, έσθεν πάντως, thickness of sticks, 1. e. stout pieces of wood).

Cluny, Congregation of, a congregation of the Cluniac Order, Benedictine monks, established in 909 at Cluny (now Cluni, a town of France, Department of Saône and Loire, eleven miles north-west of Mâcon) by Duke William of Aquitania and Berro, abbot of the Holy Abbey of Cluny. William gave to the new convent all the lands, forests, vineyards, mills, slaves, etc., of the domain of Cluny. The convent was to be always open for the poor, needy, and travellers, and to pay a small annual tribute to Rome; it was to be exempt from ducal and episcopal jurisdiction, being subject to the pope and the abbot only. William himself went to Rome to obtain the papal sanction. The convent began with twelve monks, under Berro as its first abbot. Under his successor Odo (q. v.), one of the most influential men of his time, numerous French convents succeeded to Cluny, and the see as the "Congregation of Cluny," which soon extended from the Mediterranean to the Atlantic Ocean, and embraced the most important convents of Gaul and Italy. Under the administration of his successors Aymard, Maleul (Majolus), and St. Odilo, the congregation steadily extended, many bishops and princes placing their convents under Cluny as superior; and, under Cluny, the seigneurage was extended to the Anse, during the time of Odilo, declared the exemption of Cluny invalid; but under Odilo's successor, St. Hugo (died 1109), the old privilege was recovered. The reputation of Cluny at this time greatly increased in consequence of three monks of the congregation ascending, within a brief space of time, to the papal chair—Gregory VII, Urban II, and Pascal II. Hugo, in 1089, began the construction of the basilica of Cluny, which at that time was the largest in the world, and subsequently only a little surpassed by St. Peter's Church at Rome. Under Hugo the congregation numbered about 10,000 monks. His successor, Pontier de Melgueux, was abbot, and had the functions of the cardinal, and assumed the title of Archibishop. His ambition having involved him in great difficulties, he resigned, and undertook a pilgrimage to Jerusalem; but a few years after he returned, took forcible possession of Cluny, of which at that time Peter Maurice, of Montboissier, generally called Peter the Venerable, was abbot, and squandered the treasures of the Church. He was arrested and imprisoned at Rome, where he died excommunicated. Under Peter the Venerable, Cluny reached the most brilliant point in its history, more than 2000 convents belonging to the congregation. Soon after it begun to decline, especially in consequence of the rise of mendicant orders and of the immense riches of the congregation. Several abbeys endeavored to restore a strict discipline, and abbots Ivo of Vergy, in 1239, established the College of Cluny in Paris, in order to inspire the monks with greater interest in literary pursuits; but all these efforts led to no permanent improvement. Gradually they fell under the influence of the French kings, and in the 16th century it became a "commendam" (q. v.) of the cardinals and prelates of the family of Guise, and was on that account several times devastated during the civil wars in France. Cluny lost many of its convents in consequence of the Reformations, and the dissolution of the monasteries was decreed to the continuance of a connection of convents in their countries with a French abbey. In 1627, Cardinal Richelieu made himself abbot of Cluny, and united it with the Congregation of the Maurines. This led to violent dissensions among the monks of Cluny, and the union had after a time to be revoked. The corruption at this time steadily increased, and Cluny, as a monastic institution, was only a wreck, when the French Constituent Assembly, on February 13, 1790, suppressed all the convents. The last abbot of Cluny, Cardinal Dominique de la Rochefoucauld, died in 1800. The property of the convent was confiscated, and the church sold for 100,000 francs to the town, which broke it down. Only a few ruins are left. See Lorraine, l'Abbaye de Cluny (Dijon, 1899); Wetzer u. Welte, Kirch-Lex., ii, 641; Herzog, Real-Encyclop., ii, 750; Hase, Church Hist. p. 226; Neander, Church Hist. iii, 417; IV, 249, 263. See also: Benedectines.

Clustering. See BITTER; BISCUIT.

Clyma (Κλυμα), the name given by Eusebios (Inomast. s. v. Βίθησίως) to the head of the Herocopian or western Gulf of the Red Sea, through which the Israelites passed on dry land; and also by Polibio (H. Hist. Eccl. iii, 5) from a town of that name (comp. Epiphanius, ade. Haer. ii, p. 618), apparently corresponding nearly to the modern site of Suez (Reyland, Palest. p. 471), a little to the north of which are some mounds still known by the Arabs as Tell Kolum (Wilson, Island of Bible, 1, 137). See EXODUS.

Cnidian (Κνιδιας, of unknown etymology), by the Romans often called Gadea, is mentioned in 1 Mac. xv, 28, as one of the Greek cities which contained Jewish residents in the second century before the Christian era, and in Acts xxvii, 7, as a harbor which was passed by Paul after leaving Myra, and before running under the lee of Crete. It was a city of great consequence, situated at a small distance southeast of the peninsula (Mela, i, 16, 2) of Doris (Ptolomy, x, 2, 10); in Asia Minor [see Caria], on a promontory which projects between the islands of Cos and Rhodes (Phlynx, v, 29; see Acts xx, 11); in fact, an island, so joined by an artificial causeway to the main land as to form two harbors, one nearer the north, the other, nearer the south, the port of Gades of classical times. All the remains of Cnidian show that it must have been a city of great magnificence (see Mannert, VI, iii, 284 sq.). Its inhabitants were originally Lacedemonian colonists (Herod. i, 174). It
Plan of Cidus and Chart of the adjoining Coast.

was celebrated for the worship of Venus, whose famous statue, executed by Praxiteles, stood in one of her three temples there (Strabo, xiv, p. 965; Plin.Hist. Nat. xxxvi, 15; Hom. Odyssey, i, 80), and was the birthplace of Etesias and other noted ancients (Pausanias, i, 1, 8). It is now a mere heap of ruins, and the modern name of the promontory is Cape Krio (Clarke's Travels, iii, 261). The place has been fully illustrated by Beaufort (Karamania, p. 81), Hamilton (Researches, ii, 89), and Texier (Asie Mineure; see also Leake (Northern Greece, ii, 177; Asia Minor, p. 226), with the Drawings in the Ionian Antiquities, published by the Dilettanti Society, and the English Admiralty Charts, Nos. 1938, 1964.

Coals of Cidus.

Coadjutor, in the churches of Rome and England, an assistant, appointed by competent authority, to a bishop, dignitary of a cathedral, or incumbent who is disabled by age or infirmity from the personal discharge of his duties. Such coadjutor may be either permanent or temporary, and in the former case may be appointed either with or without the right of succession. In the 8th century Bishop Narcisse, of Jerusalem, received as coadjutor Alexander of Cappadocia, and in the 4th century St. Augustine was appointed coadjutor of Valerius of Hippo. The first instance of the bishops of Rome having claimed any influence upon the appointment of coadjutors is found in a letter from Pope Zachary to St. Boniface, in which permission is given to the latter to consecrate a coadjutor. The provincial councils, however, continued to claim this right, until in 1298 Boniface VIII reserved it as a causa major for the papal chair. The laws of the Church of Rome strictly forbade the appointment of coadjutors with the right of succession. The Council of Trent forbade it absolutely, with regard to lower benefices, but in the case of bishops and superiors of monasteries provided that, from important reasons, the popes might make an exception. The popes, however, disregarded this law, as well as so many others given by the councils, and appointed coadjutors for lower offices no less than for episcopal sees. See Wetzer u. Wale, Kirchen-Leiz, i, 486; Herzog, Real-

Encyclopedia, ii, 789; Eden, Thol. Dictionary, s.v.

Coal (Sept. and N.T. ᾑρασα) is a translation usually of one or the other of two Heb. words, viz., γεχελ (gacheleth, literally a kindling, priva), which signifies an ignited or live coal, and is of frequent occurrence (2 Sam. xiv, 7; xxii, 9; Job xli, 21; Psa. xxviii, 8; cxv, 4; Isa. xlix, 18; xlvii, 14; Ezek. xxxix, 11) often with the emphatic addition of "burning" or of "fire" (Lev. xvi, 12; 2 Sam. xxii, 13; Psa. xviii, 12, 13; cxl, 10; Prov. vi, 28; xxv, 22; xxxi, 21; Ezek. ii, 13; x, 2), and πετρα (petcham, literally black, carbo), which properly signifies a coal quenched and not reignited, or charcoal (Prov. xxvi, 21, where the distinction between this and the former term is clearly made, "as coals [petcham] are to burning coals [gacheleth]"), and hence an ignited coal (Isa. xlv, 12; liv, 10). See FUEL. Two other Heb. terms (erroneously) rendered "coal" are γυναί (gynai, "live coal"); Isa. vi, 6, literally a pavement, as elsewhere rendered), which appears to have been a hot stone used for baking upon; γαρναν (re sheph), properly flames (to which jealousy is compared, Cant. viii, 6), and hence poniastic fire (Hab. iii, 5, "burning heat," Dan. ix, 21) where a spark; Job v, 7; "thunderbolt," Psa. lxviii, 48; and ελαφ (re eph, spoken of a cake "baked on the coals"), which appears to cognate both to the preceding words and to combine their meaning, and may thus designate (as explained by the Rabbins a coal, Sept. λυκανθεσ, Vulg. subcinerarius) a loaf baked among the embers. See BREAD. In Lam. iv, 6, "their visage is bluer than a coal," i.e., "black as coal" (shechor), which simply means blackness, as in the margin. In the New Testament, the "fire of coals" (ἀνατλα, John xviii, 16) evidently means a mass of live charcoal, used in a chafing-dish for warming in the East, and so explained by Suidas and parallel instances in the Apocalypse (Ecclesi. viii, 10; xl, 82). The substance indicated in all the foregoing passages is doubtless charcoal, although anthracite or bituminous, although bituminous coal has been found in Palestine in modern times (see Browning's Report; also Elliot, ii, 267). See MINER.

"In 2 Sam. xxii, 9, 13, 'coals of fire' are put metaphorically for the lightnings proceeding from God (Psa. xxviii, 5; Is. lxxi, 9). In 2 Sam. xxii, 1, we have the proverbial expression 'Thou shalt heap coals of fire upon his head,' which has been adopted by Paul in Rom. xii, 20, and by which is metaphorically expressed the burning shame and confusion which men must feel when their evil is revealed by good. (See the essay on this text by Heinrich [Lu. d. B. 1:16], Währer [Got. 1740]). In like manner, the Arabs speak of coals of the heart, fire of the liver, to denote burning care, anxiety, remorse, and shame (Genes. Theaur. Heb. p. 280). In Psa. cxxiv, 4, 'coals' = burning brands of wood (not 'juniper, but broom,' to which the false tongue is compared (James iii, 6). In 2 Sam. xiv, 7, the quenching of the live coal is used to indicate the threatened destruction of the single remaining branch of the family of the widow of Tekoah subdued by Jonath: just as Lucian (Tim. § 8) uses the word ζωμομεν in the same connection." See FIRE.

Coast, an inaccurate rendering in the A. V. of various terms (usually בּרה, בּּרָה, etc., Gr. θάλασσα) signifying border (q. v.), boundary, or extremity, except in the expression "sea-coast" (יוּד, Ḥoph, Ezek. xxv, 16; παράλιος, Luke vi, 17; παραθαλασσας, Matt. ix, 18). See SEA.

Coat (γεχελ, katho' neth, or γυναί, kato' nethe, prob-
COBB 304 COBHAM

ably meaning covering; hence Greek χιτών is the word employed by our translators for the ancient tunic (q. v.), which was in modern phrase a shirt worn next to the skin (Lev. xvi. 4), by females as well as males (Cant. v. 8; 2 Sam. xiii. 18), and especially by the priests and Levites (Exod. xxxviii. 4; xxix. 5; Neh. vii. 70, 72). The same term is used of the "coats of skins" prepared by the Almighty for the first human pair (Gen. iii. 21), which were probably nothing more than aprons for a short skirt bound at the waist. The tunic was commonly (at least with males) without sleeves, and usually reached to the knees. It was generally made of linen, but for the winter was frequently made of wool; and the rich nobles wore tunics of byssus ("fine linen"). I. e. (7) cotton, then very rare. The tunics were sometimes woven without a seam, like the modern hose (John xix. 23). It was also occasionally of a gay pattern; such as was "Joseph's coat of many colors" (Gen. xxxviii.), that is, of different colored threads in stripes or plaided. Sometimes two tunics seem to have been worn at once, either for ornament or luxury, for the term is frequently used in the plural of an individual (Matt. xvi. 10; Mark. vi. 3; Luke iii. 11). In that case the outer one probably supplied the place of the "cloak" or pallium. See CLOTHING; DRESS, etc. The "fisher's coat" (ἰκτίστηριον) mentioned in John xxvii. 6, was evidently an outer garment or cloak, and Peter is said to be "naked" before throwing it about him, as having on only the tunic, or perhaps not more than a strip of cloth about the loins, like the modern Arabs. The little "coat" made by Hannah for the young Samuel (1 Sam. ii. 19) was the ἱμώτια (meil), or outer dress, elsewhere rendered "robe," "mantle," or "cloak" [q. v.]. The "coats" of the three Hebrew children in the furnace (Dan. iii. 1, 21, 27) are called in the original Chaldee ʃɜχ军工 (zarbalin, Sept. αὐτόσαρδα), thought by some to be the Persian name for long and wide trousers, whence Greek ἀναρδόνα, Lat. sarabae, etc., but by others, with greater probability, to be kindred with the Arabic name for a long shirt or cloak, which is corrodorated by the Talmudic interpretation of mant'a, i. e. the pallium or outer dress. (See Smith's Dict. of Class. Antiq. s. v. Tunica, etc.) See Attire.

Coat of Mail (ιχθυόν, shiryon, glittering) occurs in the description of Goliath's armor (1 Sam. xvii. 5), and is mentioned by the Apostle Paul (1 Tim. vi. 11). The plural forms are found in Neh. iv. 16; 2 Chron. xxxvi. 14; where they are translated "habergeons" (q. v.). The kindred terms ʃɜχ军工 (shiryon), "habergeon," Job xli. 26, ἵππων (shiron), "harness," 1 Kings xxii. 34; 2 Chron. xviii. 33; "breast-plate," Isa. lix. 17, and ἵππων (shiron), "ligurandies," Jer. xvi. 4; li. 9, were probably less complete kinds of the same, i. e. corslets. See also Mail.

Cobb, Sylvanus, D. D., a Universalist minister and writer, was born at Norway, Maine, July, 1758. His first education was under orthodox influences, but entered Bowdoin College in 1776. He preached his first sermon at the age of twenty-one, but was not ordained until 1821. He was settled as minister in succession at Waterville, Maine, at Malden, Waltham, and (since 1849) at East Boston. While at Waltham he established the Christian Freeman, which in 1862 was united with the Transcript. In 1864 he retired from editorial life, after a service of nearly thirty years. In the same year he received from Tufts College the honorary degree of doctor of divinity. He died October 31, 1866. Dr. Cobb was a voluminous writer. Many of his earlier controversial sermons were published and widely circulated in Maine and elsewhere. He was also a member of the American Academy of Arts and Sciences, and in 1851 was invited to be a member of the New England Historical and Genealogical Society. On the 11th of September, the day fixed for his appearance, the primate and his associates sat in consistory; when, Lord Cobb not appearing, the archbishop excommunicated him. Cobb now drew up a confession of
father, which he presented to the king. Being again cited to appear before the archbishop, and refusing compliance, he was committed to the Tower by the king's order. "Upon the 24th of September, 1418, he was brought again to the presence of the Tower before the archbishops of London, Winchester, and Bangor sitting upon the bench with him. The archbishop desired Sir John to move for the absolution of the Church in the customary form. He replied he would beg absolution of none but God Almighty. After this, the archbishop desired him to make an express declaration of the sacrament of the altar. To which he gave this answer: that as Christ, when upon earth, consisted of the divine and human nature, his divinity being concealed under his humanity, so in the sacrament of the altar there is a real body and real bread; that the bread is the object of our sight, but that the body of Christ, contained or shrouded under it, is imperceptible to our senses. When he was pressed closer to the point of transubstantiation, he declared expressly against it, adding withal that the common belief in this article was a contradiction to the holy Scriptures; that the decision of the Church did not vary from the old standard till she was poisoned by being endowed. And as to penance and confession, he affirmed that if any person happened to be under the misfortune of any great crime, and was not in a condition to disburse, he himself, conceived it would be advisable to make use of the direction of some holy and discreet priest. But then he did not think there was any necessity of confessing to the parish curate, or any other of that character; for that in that case there was needed no more than contrition to cancel the fault and restore the penitent. Touching the worshipping the cross, he maintained that only the body of Christ, which hung upon the cross, ought to be adored and worshipped. And being further interrogated what regard was to be paid to the resemblance of that cross, to this he replied directly that all the reverence he could pay was only to clean it and keep it handsomely. Being interrogated further about the power of the keys, and what his opinion was of the character and authority of the pope, of the archbishops, and bishops, he made no scruple to declare that the pope was downright Antichrist, and the head of that party; that the bishops were the members, and the friars the hinder parts of this anti-Christian society; that we ought to obey neither pope nor prelate any further than their virtue and proflity concerneth. At the return of the 21st, he was convicted out of St. Saviour and St. Peter in the sanctity of their lives, the pretence of their commission was not to be regarded; that he who was most unblemished in his conduct, most remarkable for his sanctity, was St. Peter's successor, and that all other titles to Church authority signified nothing." (Hook, "Eccl. Biography," i, 817.) Having remained six months in the Tower, he escaped into Wales. In 1414 the king set a price of a thousand marks upon the head of Cobham; and for four years he continued in exile in Wales; but at length his enemies engaged the lord Powis in their interest, who, by means of his tenants, secured and delivered him. But he was sentenced to death both as a heretic and a traitor. On the day appointed for his execution (Christmas, 1417) he was brought out of the Tower with his arms bound behind him, but with a cheerful countenance. Arrived at the place of execution, he devoutly fell upon his knees, and implored of God to receive his soul. He was husbanded alive by the middle, with iron chains, on the gallows which had been prepared, under which, a fire being made, he was burned to death. — Jones, "Christian Biography," s. v.; Middleton, "Memoirs of the Reformers" (3 vols. Lond. 1829), i, 38 sq.; England and France under the Wars of the Roses, p. 174 (London, 1830). - Eclectic Review, 4th series, xvi, 249; Milner, "Church History" (Lond. 1829, 4 vols.), iii, 307-329.

Cocceius, John, one of the most distinguished theologians and Biblical interpreters of the 17th century, was born in Bremen July 30 (or August 9, N. S.), 1603. The family name was Cocx (according to others Cock), but the name was altered at school; for some boisterous falsehood, he ever from that time despised lying, and had such a reputation for truthfulness as never to be compelled to take an oath; and that, having once been struck on the mouth by his father with a spoon for the irreverent use of God's name at the table, he never again took it in vain. He was put to the best schools in his native city, and became, while still a boy, so great a proficient in Greek as to read with delight its historians and poets. He learned from his brother the rudiments of Hebrew, and afterwards obtained the Lexicon of Munster and Pagninus, and studied Latin, Greek, and Hebrew with great industry on his own accord for the investigation of the original language. To the Hebrew he added Chaldee and Arabic, and gave his attention also to Rabbinical literature. Although most strongly drawn to philological studies, because, as he says, he was persuaded that the Scriptures could not be rightly understood without a knowledge of the original languages, he did not neglect other branches of learning, but studied physics and metaphysics with Gerhard Neufville, and theology with Martinus and Crocius. While still a student he wrote a Greek oration on the religion of the Turks, reading the Koran for that purpose. At the age of 22 he went to Hamburgh, at the conclusion of 3 months, to prosecute his Rabbinical studies with the Jews of that city. On his return he went to Franeker, in Friesland, preferring the Belgic schools to those of Germany, which, he says, were in bad repute (quod de his non bonus rumor est). There he formed the acquaintance of an eminent Rabbinical scholar, Sixtus Amana, and with him studied the Talmud. At his request he published a treatise De Synodio, which was highly commended by such scholars as Heinius, Rivetus, Grotius, Selden, and Salmassius. While at Franeker he also became intimately acquainted with Macevius and the celebrated Puritan divine William Laud; and in 1638, on the advice of his friend and patron, he determined to make, at the age of 37, professor of sacred philosophy, and began to lecture on the books of the Old Testament. In the following year he published a Commentary on Ecclesiastes. In 1656 he removed to Franeker, to be professor of Hebrew in the newly-reopened academy in that city; and in 1668 he was also appointed to the theological chair. He remained at Franeker until 1650, giving himself with great diligence to the study and public exposition of the Scriptures. Amongst the fruits of these labors were a Commentary on Job, Lectures on the Minor Prophets, and on the Epistle to the Hebrews; an Expositio de Principio Epistolae ad Ephesios, and a theological treatise, De Faire et Testamento Dei, to which he added a brief Analytis Temporum Novi Testamenti. After fourteen years of laborious and successful teaching at Franeker, he was invited to Leyden, to succeed the celebrated Frederick Spangenberg as professor. That he was huzed to take up alive by the middle, with iron chains, on the gallows which had been prepared, under which, a fire being made, he was burned to death. — Jones, "Christian Biography," s. v.; Middleton, "Memoirs of the Reformers" (3 vols. Lond. 1829), i, 38 sq.; England and France under the Wars of the Roses; "Eclectic Review," 4th series, xvi, 249; Milner, "Church History" (Lond. 1829, 4 vols.), iii, 307-329.
was his holding up of the Scriptures as the living fountain of theology which drew on him the bitter opposition of the scholastic theologians of his day, who would not go beyond what the Reformers had attained to, and used the Bible only as a storehouse of proof texts for doctrine and did not consider the symbolic writings of the Reformation. Against that dry and hard scholasticism Cocceius set himself with uncompromising boldness; and he did as much as any man of his time to restate the Scriptures in their true place of authority, and to make interpretation to be the very goal of exegete from the inexhaustible well-spring of divine truth.

He has been accused of being fanciful as an interpreter, but, in the sense in which it is commonly understood, no charge could be more groundless. His fundamental principle was that "of those things which Christ and the apostles spoke, the foundation, cause, and prescribed formula existed in the writings of Moses and the prophets, and, in truth, that Christ and the apostles accomplished that preaching concerning the kingdom of God which had been promised to Israel," and therefore that "what is to be believed concerning Christ and his righteousness, what is in the Old Testament, New Testament, Luther's view. Clearly, that ought to be demonstrated from the Old Testament, since both the apostles appealed to its testimony, and the Saviour himself charged the Jews to search it as testifying concerning himself." He would bring men to "the examination of all Scripture, the perpetuity of Law, the perpetual analogy of promise, prophecy, and Gospel, and of all the revelations of God's Testament."

In the application of this principle he often erred by going beyond the bounds of clear and definite knowledge, by forcing events into the mould of prophecy, and also by too great subtlety in tracing out anologies, in the Old Testament, particularly those of Paul, and on the Apocalypse; but there are many valuable notions in the Pentateuch. He was also much occupied with the controversies of his time, and wrote with great learning and ability against Jews, Socinians, and Papists. He defended the integrity of the Jewish Scriptures against Isaac Vossius, who maintained that they had been corrupted, and that the translation of the Seventy had divine authority. In addition to his treatise De Fide, he wrote a much larger work with the title Summa Theologiae ex Scripturis perpetua, the form of which was much admired by the systematic theology of his time. But while thus laboriously occupied, and the full maturity of his powers, he was suddenly seized with a fever, and, after a sickness of nineteen days, died on the 4th of November, 1669, at the age of 66.

As an interpreter of Scripture, Cocceius had many of the highest qualifications. He was a man of great learning, the worthy compatriot of the mighty scholars of which Holland could boast in the 17th century. In the range and thoroughness of his acquirements he was not inferior to such men as Grotius, Heinlein, Buxtorf, and Vossius. But it was in his principles of interpretation that his unrivalled gift was chiefly seen. He held that the Scriptures are the source of all sound doctrine; that they have not been exhausted by previous interpreters; that they are to be regarded as one organic whole, the Old Testament containing everything where the hidden, and the New the unfolded Gospel; that they are to be interpreted according to the analogy of Scripture; that their meaning is to be determined by the careful examination of each passage as to the force of its words and phrases, and its relations to the context, or which is derived ex tota compoigne sermoni; that the interpreter is not to force his own opinions into the Scriptures, but to submit his mind to their teachings; and that Christ is the great subject of divine revelation, as well in the Old Testament as in the New.

As a theologian, Cocceius, while conscientiously adhering to the doctrines of the Reformed (Calvinistic) Church, gave to them a more scriptural and less scholastic form, in consequence of his free and penetrating study of the Scriptures. His favorite method of getting forth theology was the historical, as the unfolding of the successive stages of the covenant entered into before all worlds by the Father and the Son. After the Fall, by which the covenant of works, under which Adam in his state of innocence had been placed, was abrogated, the way was opened for the establishing of the covenant of grace, which was the manifestation of that which had existed in the eternal councils of the Godhead, of which the second Person was the mediator and surety. Of these there are three dispensations—that of the Promise during the time of the patriarchs, that of the Law given from Sinai, and that of the Gospel; although the two former are also class-

COCK

ed as one, as preceding the advent of the Redeemer. The fall of man was self-caused, and not necessitated by any act of God (Bona sum operatrix in nobis Deus no meo male); but all his posterity were involved with Adam in the guilt and curse of his sin. This required a Mediator who could not be of the number needing redemption, and yet must be a partaker of their nature; a problem that was solved by the Son of God being made man. He, standing as the sponsor of the eternal covenant, gave unto the Father the obedience that man had not made for himself, and also endured the penalty of death, the curse for sin, thereby making true expiation and atonement.

Coeceius limits the death of Christ in its full force to the elect, but he asserts that Christ was "a victim of so great preciousness and sufficiency that the whole world, and all men, the exception coming to him, can find sure and perfect salvation in him." In respect to most doctrines he does not depart from the Reformed Church; but there is a spiritual life and power in his handling of them which takes them out of the sphere of a cold and lifeless orthodoxy. He was a man mighty in the Spirit, and far in advance of most men of his time in the apprehension of the work of God in Christ. Where he fails in clear sight, we still feel that noble instincts are working in him. His errors, as in regard to the Lord's day, were partly the fruit of his desire to vindicate for the Church her Christian liberty of walking always in the Spirit. He saw clearly the bondage of the law which the Lawgiver had placed upon the Sabbath, as a yoke to which those whom Christ has made free should not be in subjection. This, as in many things, he held but half the truth, not discerning the freedom of divine ordinances; but he is not to be ranked with the lawless spirits who would break down all restraints upon the licentiousness of the flesh. He was among the first in modern times to teach the doctrine of a spiritual dispensation of glory, in distinction from a visible kingdom of Christ, and so far did he carry it as to find nothing of the resurrection in the last chapters of the Apocalypse. But he firmly held the faith of the Church as to the final resurrection of the body and the awards of the judgment.

The views of Coecius were adopted and further developed by a number of prominent theologians of the Reformed Church of Holland and other countries. His followers were commonly designated by the name Coecian. Among the writers of this school in the province of systematic theology are Momma, Witiaus, Burmann, and Van Til (see these articles); in exegetical literature, the greatest and most celebrated member of the school was Vitringa (q. v.).

Cochleus, Johannes (proper name Dömeck), was born in 1479 at Wendelstein, near Nürnberg; became rector in Nürnberg, 1511; in 1527, dean at Frankfort; finally, canon of Breslau, in which office he died, 1553. He was one of the most violent opponents of the Reformation. He attended the Diet of Worms (1522), where he became a sort of volunteer aide to Al-

exander, the papal nuncio. He is charged with having sought to induce Luther to give up his safe-conduct, in order to put him in the power of the legate; but Cocheius afterwards denied that this was his purpose. He was also present at the Diet of Ratibon, 1526, and of Augsburg, 1530. At the latter, with Eck, Faber, and Wimpina, he undertook to refute the Augsburg Confession. His "refutation" was read before the Diet August 8. On the death of Eck (1548), Cocheius took his place as the leading champion of the anti-Reformers. He wrote a tire Diet of Ratibon, entitled Philippico, addressed to the emperor. In 1546 he was active at the colloquy of Ratibon, against Bucer and Major. His numerous pamphlets are full of violence and personalities. Among them are: Bochepiel Martini Lutheri (Mains, 1551); Lutheri Septima Ceynta (Mainz, 1559); De actis et scriptis Lutheri (1548, fol.); Speculum circa Missam; De emendatione Ecclesiae, 1539, 8vo.

Cock (Alector, literally walk-fowl). It is somewhat singular that this bird (and poultry in general) should not be distinctly noticed in the Hebrew Scriptures, especially as rearing gallinaceous fowls was an object of considerable economical importance in Egypt, and their flesh one of the principal resources of the table in every part of Southern and Western Asia. It is true, the date when the practice of obtaining them by artificial heat commenced in Egypt is sufficiently disputable, and birds of the genus Gallus, properly so called, are not indigenous in Western Asia, but belong in their original condition to Lower India, Indo-China, and the great islands of Australasia. Several species, apparently distinct, are still found wild in the forests and jungles of India, and two at least, Gallus Sonnerati and Gallus Balteatus, are abundant in the woods of the Western Ghauts, to which our familiar fowl bear so close a resemblance that naturalists consider the former to be their original. Domestic poultry have existed in Hindoostan from the remotest antiquity; probably much earlier than the twelfth century B.C.; for in the Institutes of Men, which Sir William Jones assigns to that age, we read of "the breed of the town-cock," and of the practice of cock-fighting (v, 12; ix, 222). When the cock found its way to Western Asia and Europe we have no record. Fowl of plumage so gorgeous, of size so noble, of flesh so sapid, of habits so domestic, of increase so prolific, would doubtless early be carried along the various tracks of Oriental commerce. There is no trace of it, so far as we are aware, on the monuments of Pharaonic Egypt, but we find the cock figure in those of Assyria. In a hunting

Ancient Assyrian Game-cock.
COCK-CROWING

It would go to prove that the fowl, in a wild state, existed at that period in Western Asia, though now unknown on this side the Indus. The cock and hen are distinctly represented in the Xanthian sculptures, of an era probably contemporaneous with the Khorsabad palace of Nineveh. They appear also on Etruscan paintings, having probably a much higher antiquity (Mrs. Gray's *Etruria*, p. 38, 45). The early Greeks and Romans dignified them on their coins and gems, and speak of them as perfectly familiar objects, with no allusion to their introduction. They had even found their way into Britain at some unknown period long anterior to the Roman invasion, for Caesar tells us with surprise that the Britons did not think it right to eat the goose or the hen, though they dined both for the pleasure of them (Bell. Gall. lib. v). This is a very interesting allusion, since we are compelled to refer their introduction into that island to the agency of the Phoenicians, who traded to Cornwall for tin centuries before Rome was built. Under these circumstances, their absence from Egypt, where in modern times they have been artificially bred to so immense an extent, becomes a remarkable and unaccountable fact. They were, indeed, it may be surmised, unknown in Egypt when the Mosaic law was promulgated, and, though imported soon after, they always remained in an undetermined condition, neither clean nor unclean, and as to whether they were to be offered by the Egyptians (Scheuchzer, *Phys. Sacr.* on Mark xiv, 62; Whitby's *Note* on Matt. xxvii, 40). Another objection to this part of the Evangelical history has been founded upon an assertion of the Mishna (Baba Kama, 7, 2). They do not breed cocks at Jerusalem because of the Sabbath laws: 'I.e., as in this passage, when the cocks turn up the dung-hills, and set free the reptiles by which the sacrifices might be polluted which were eaten as food; and that, consequently, Peter could not hear one crow. But this is sufficiently answered above. Even the traditions themselves on this subject are not so consistent as the strictness of the Sabbath. Eusebius (Eccl. Hist. 26, 1) of a cock which killed a child, and was stoned by order of the council. Other instances are given by Rodel, which show that the cock might crow, though not in the city, and yet be heard by Peter in the stillness of the night, especially as the palace of Caliphas (according to the modern tradition) stood on an elevated situation, at the distance of scarcely 400 yards from the city walls.' In the modern East the barn-door fowl is a common appendage to every household, and the cock-crowing is a universal signal of morning in Palestine (Thompson, *Land and Book*, ii, 528).

COCK, the, as a Christian symbol. (1) On tombs the cock is a symbol of the resurrection—*praeco dies*, or herald of the light, after the night of death. (2) The cock is also a symbol of vigilance.—Martigny, *Dict. des Antiquités Chrétiennes*, s. v. Coq.

Cockatrice, properly a fabulous serpent supposed to be hatched from a cock's egg, is the rather fanciful translation in our version of *κοτός* (*coele, hasing*, Isa. xiv, 20) and *κοτός* (telephos), *Isa. xi, 8; lix, 5; Jer. viii, 17). The latter word also occurs in Prov. xxvii, 29, where it is translated "adder." Aquila and the Vulgate understand the *basilik*, a fabulous serpent of antiquity, identified by many moderns with the *basiliscus regius*, a small and exceedingly venomous viper of Africa. By others, however, the *cerastes*, or "horned viper" (*coluber cerastes* of Linn., *coluber cerussus* of *Huschvall*), which is found in Palestine, is referred to the animal intended, a very poisonous serpent of Egypt and Palestine, about a foot long, brown on the back and sides, with a white belly, about as thick as the finger, and having two knob-like projections upon the head (comp. Play. xi, 48), which were anciently compared to horns (the Greek, *cerastes*, and the Latin, *cornutus*; *Hus. iv, 13, comp. Herod. ii, 74). It buries itself in the sand, from which it is scarcely distinguishable in color, with the horns projecting out like feelers, whence it suddenly darts forth and seizes its prey (Diod. Sic. iii, 60). (See Bochart, *Hieros. iii, 205 sq.; Hasselquist, *Trav.* p. 153
COCKER 399

COCELY-SYRIA

sq.; Belon, in Paulus's Samml. i, 206; ii, 558; Bruce, Trav. vii, pl. 40; Wilkinson, 2nd ser. ii, 245 sq.; Propr. Alp. Rev. Egypt. iv, 4, p. 210, pl. 8, 6.) Others, again, refer this last to the "adder," i.e. viper (v. v.), of Gen. xlix, 17. See SKEPT.

Cocker, an old English term, used but once in the A. V. of the Apocalypse (Rev. xxxi. 9, rυδαμον, tend as a nurse), in the sense of fondle, or treat gently.

CocLife (-platform), an offensive plant, q. d.

stink-weed; Sept. πυρογόνον, i. e. burnable) occurs only in John xiv. 10; in Matt. xiii. 9, with the addition of "wheat," and is rendered "coccile instead of barley." It is probably a more general term signifying weed, perhaps like the darnel (C. Zavina, "tare") of Matt. xiii. 30. Celsius (Hierobol. ii, 199) would identify it with the "comeile," but Gesenius questions this (Jesuï, i, 230; ii, 364), as the word must not be confounded with the plurn. form (C. beak, bealain) wild grapes" (v. v.), in Isa. v, 2, 4. See BEAK.

Codex Alexandrinus, etc. See Alexandrian Manuscript, etc.

Codex Canonum Ecclesiae Universalis is the name of a work published at Paris in 1610 by Christian Justeau (Justellus), which undertook to give the canons of the first councils in a shape as conformable as possible to the collection of canons which the Council of Chalcedon (451) was supposed to have made. This task was taken up again, etc., was included in the Bibli. bar. can. ect. (tom. i, p. 29), published by Justellus and Voucll. The supposition which led to the compilation of this work, that the Council of Chalcedon had made or ordered to be made such a collection of canons, is erroneous. It is true that the resolutions of the ancient church councils were early collected and circulated among the bishops, and that at the Council of Chalcedon many of the bishops had with them collections containing the canons of the five synods of Nice, Ankara, Neocæsarea, Gangra, and Antioch, from which many passages were read. But it appeared that in the arrangement of the canons the collections widely differed, and it is not known that the council took any action with regard to the matter.—Wetzer u. Welle, Kirchen-Lex., ii, 469.

Codex Justinianus, a code compiled by order of the Emperor Justinian, and intended to embrace all that was still available of former collections of imperial manuscripts and edicts, as well as of edicts then recent. The previous collections were, 1. The Codex Hieronymi, compiled by Jerome, and preserved by Gregory the Great, and living about the middle of the fourth century. It contained the "Constitutiones" (the collective name for the "Recept., or replies to particular inquiries and requests, and the "Edicta," or orders on general questions) of the emperors up to the time of Constantine; 2. The Codex Hieronymi, compiled by Hermogenes, likewise of the middle of the fourth century, and containing the "Constitutiones" of Diocletian and Maximinian; 3. The Codex Theodorianus, compiled in the first half of the fifth century by order of the Emperor Theodosii II, by a committee of sixteen jurists, and containing the Constitutions of the emperors from Constantine to Theodosius. This was promulgated by Theodosius in 436 in the Eastern empire, and in the same year by Valentinian in the Western. It was divided into sixteen books, of which the first five and the part of the sixth are lost. All these three codes are found in the Corpus Juris Civilis Justinianae, published by Hanéel. In Feb. 828 the Emperor Justinian ordered the preparation of a new code, which was to embrace all that was still of practical value of the three previous collections, and, in addition, all the constitutions issued since the publication of the Theodosian Code. This new collection was published in April, 529. After the publication of the Pandects (a compilation of the writings of former Roman jurists) and the Institutiones (an introduction to the study of the Roman law), another revision was made in 584 by Triconianus. This new revision (Codex restituto prolectionibus) still forms an important portion of the Corpus Juris Civilis, while the first revision (Codex vetus) is lost. In its last revision, the Codex Justinianus contains every one of the books, each divided into a number of titles in chronological order. Up to the time of Constantine nearly all the constitutions are rescripta (rescripts); after that we meet with numerous edicta (edicts). The code of Justinian is of great importance for Church history and Church law, as a great many edicts of the Christian emperors concerned religious questions. In quoting the code of Justinian, the editor of the entire new portion of it, book i, title 8, which treats de episcopis et clericis.—Wetzer u. Welte, Kirchen-Lexikon, ii, 650.

Codman, John, D.D., a Congregational minister, was born in Boston Aug. 8, 1782; graduated at Harvard 1802, and studied law until the death of his father, when he commenced theology, and completed his studies at Edinburgh. After preaching a year in Great Britain, he came back to America, and became pastor in Dorchester, Dec. 7, 1808. In 1834 he went to England as delegate to the Congregational Union of England and Wales. He died Dec. 22, 1847. He was made D.D. by the college of New Jersey, 1822, and by Harvard, 1840. Dr. Codman published a View to England (1825); Sermons (1834, 1835); and a number of occasional discourses.—Sprague, Annals, i, 492.

Colestius (Pope). See Celestine.

Colestis. See Celestins.

Celestius, a native of Ireland (or of Bretagne?) of noble birth. According to Marius Mercator (Commentariorum, 2), he was a law student at Rome when Pelagius arrived there. Embracing the views of Pelagius, he accompanied him in 406 (or 408) to Sicily, and in 411 to Africa. By his character and talents he succeeded, even better than Pelagius, in diffusing the views which they held in common. He was accursed of heresy before the bishop of Carthage, A.D. 412, and condemned. He appealed to Rome; and on his way stopped at Sicily, and there spread his opinions very successfully, so that it is supposed by some that he went to Ephesus, where he was ordained presbyter. In 417 Pope Zosimus, at Rome, was so far satisfied by the explanations of Celestius that he recommended the African bishops to restore him. In 418 he was condemned by a synod at Rome, and went to the East for safety; but in 429 he was banished by Constantiopolis by order of the emperor. The Council of Ephesus condemned him A.D. 431. His later years are involved in obscurity. "He wrote a Confessio Fidei Zosimi Papae oblatos, and various epistles and appeals, the substance of most of which can be gathered from the excerpts given by Augustine and Jerome; but none of his writings have come down to us entire. Celestius was a man of pure morality, and more zealous and active (perhaps more honest) than Pelagius as a controversialist. Jerome says of him (in an epistle to Ctesiphon, A.D. 415), 'Although a scholar of Pelagius, he is yet leader and master of the whole host.'" Enz. Cave, Enz. Cave, 1816; Anthonio Mediae Medii et Laterani, 467; Wiggers, Augustinism and Pelagianism, Enz.'s translation, p. 40 sq.; Schaff, History of the Christian Church, iii, § 147. See Pelagius.

Coly-Syria (C skίρα Συρία; Vulg. Caledesia), "the hollow Syria," was (strictly speaking) the name given by the Greeks, in the times of the Seleucidae, to the remarkable valley or hollow (skoiros) which inter-
venes between Libanus and Anti-Libanus, stretching from lat. 35° 20' to 34° 40', a distance of nearly a hundred miles. As applied to this region the word is strikingly descriptive (see Dionysius, Perieg. 899 900). Thus a modern traveller observes: "We finally looked down on the vast green and red valley—green from its yet unripe corn, red from its vineyards not yet verdant—which divides the range of Lebanon and Anti-Lebanon; the former reaching the 'highest' point in the snowy crest to the north, behind which lie the Cedars; the latter in the still more snowy crest of Hermon—the culmination of the range being thus in the one at the northern, in the other at the southern extremity of the valley which they bound. The view of this great valley is slieidly remarkable as being exactly to the eye what it is to the mind: the two mountain ranges of Syria. A screen through which the Leontes (Litany) breaks out closes the south end of the plain. There is a similar screen at the north end, but too remote to be visible" (Stanley's Palaestinae, p. 899). The plain gradually rises towards its centre, near which, but a little on the southern declivity, stand the ruins of Baalbek or Heliospolis. In the immediate neighborhood of Baalbek rise the two streams of the Orontes (Nahr-el-Asy) and the Litany, which, flowing in opposite directions to the north-west and the south-east, give freshness and fertility to the tract enclosed between the mountain ranges. Anges, the name of the plain through which the Orontes flows (tg 'Abunec noxov, Polyb. v. 50, 59), is derived by Bochart from the Greek νοχαις, Amisos, which means deep, and is nearly synonymous with the Greek Code (Geogr. Sac. i. i. 1). The term Coele-Syria was also used in a much wider sense. In the first place it was extended so as to include the inhabited tract to the east of the Anti-Libanus range, between the Litany and the desert, in which stood the great city of Damascus; and then it was further carried on upon that side of Jordan, through Trachonitis and Perea, to Idumaea and the borders of Egypt (Strab. xvi. § 21; Polyb. v. 80, § 3; Josephus, Ant. i. 11, 5). Ptolemy (v. 18) and Josephus (Ant. xiii. 13, 2) even place Scythopolis in Coele-Syria, though it was upon the west side of Jordan; but the name seems to limit its extent southwards to about lat. 31° 80', or the country of the Ammonites (Ptol. v. 15; Josephus, Ant. i. 11, 5). Ptolemy distinctly includes it in the Damascus country. In the time of this David, Coele-Syria was probably included in "Syria of Damascus," which was conquered by that monarch (Josephus, viii. 6), but was recovered by Solomon by Rezon, the son of Eliadah (1 Kings xxii. 34). The possession of it was an object of many struggles between the Seleucids and the kings of Egypt (Polyb. i. 3; ii. 71; iii. 1; iv. 40; xvi. 39; xxvii. 17). There can be little doubt that a part at least of Coele-Syria was included in that "Valley of Lebanon" (εν τοις παραλυκιδοις) mentioned by Joshua (xi. 17; xii. 7), the extent of which has been too much restricted by recent geographers. The name "Valley of Lebanon" could scarcely be applied with propriety exclusively to that section of the great valley which lies at the base of Hermon, at a considerable distance from the range of Lebanon. Doubtless Baal-Gad was situated "under Mount Hermon"; but we have reason to believe that the "Valley of Lebanon" includes the whole of that valley which separates the ridge of Hermon from that of Lebanon. It seems that at a subsequent period this valley was called by Amos, apparently in contempt, "the valley of idols" (εν τοις παραλυκιδοις, chap. i. 5). See AVEX. The name was most appropriate. The whole of this valley was then dotted with old heathen temples. Mr. Porter visited no less than fourteen of them, and he heard of several others. Some of them were of great size and splendor, such as those of Baalbek, Medjdel, Nina, and Hhibbairy. This appears, in fact, to have been the chosen house of idolatry (Porter's Damascus, i. 12; ii. 920; Hand-Book of S. and P. i. p. 568, 570; Robinson, Later Bib. Res. p. 486, 492, 590). The modern name of the valley confirms the above view. It is called el-Buka, which is strictly the same as the Heb. Bikah (ביקה). In the apocryphal books there is frequent mention of Coele-Syria in a somewhat vague sense, nearly as an equivalent for Syria (I Esdr. it. 17, 24, 27; iv. 48; vi. 29; vii. 1; viii. 47; 1 Macc. x. 69; 2 Macc. iii. 5, 8; iv. 1; xi. 7; xii. 11). In all these cases the word is given in the A. V. as "Coele-Syria," i. e. Coele-Syria. In Esdr. vi. 8, it is called simply "Syria." Under the emperor Diocletian, Phoenice and Coele-Syria formed one province, called Phoenicia Libaniaca. Under the present Turkish government the western part of Coele-Syria is in the pashalik of Saide, and the eastern in the pashalik of Damascus. See Syria.

Cofliciles ("worshippers of heaven"), the name of an African sect in the 4th century, who appear to have blended together some parts of Judaism and Paganism with Christianity. An edict of Honorius (A.D. 408) forbids the rites and assemblages and demands their disbandment. As they are counted in this edict among the heretics, and as they were not subject to the jurisdiction of the Jewish patriarch, but had their own chiefs, called mejories, and as they had a kind of baptism, they are by some regarded as a Christian sect. By others they are regarded as an offshoot of the Essenes. See Schmid, Historia Calcolorum (Helmont 1704).—Gieseler, Church History, i. § 78; Bingham, Orig. Eccl. xvi. 6, 2.

Coffin. See COLLIN.

CooMETERIA. See CEMETERIES.

Cona Domini, the Lord's Supper. See Lord's Supper.

Cona Domini, Bull of. See BULL; and in Cona Domini.

CornoMObiles, monks who formed a community living in a fixed habitation (conosoma) under a chief (abbot or father). Their name is derived from κοσσωμα, common, and κοσσω, life; and they are opposed to hermits, who live in solitude. Pachomius is admitted to be the inventor of the conosobine life, as being the first that gave a rule to any community. —Bingham, Orig. Eccl. vii. 2; Coleman, Ancient Christianity ch. vi. § 8. See Monachism.

Coffee (drunk in the East). See CUP.

Coffor (κόφωρ, argus; Sept. Bidge, Vulg. capsailla), the receptacle (apparently a customary appendage to a cart, from the use of the article in every occurrence) which the Philistines placed beside the ark when they sent it home, and in which they deposited the golden mice and emerods that formed their tarspeas-sparing (1 Sam. vi. 8, 11, 15). The root seems to signify to be shacked about; and Gesenius and Lee agree in regarding it as the same, or nearly the same thing, as the Arabian ῥνα, which Jauhari describes as a "kind of wallet, into which stones are put: it is hung on one of the two sides of the handa [a litter borne by a camel or mule] when it inclines towards the other." Dr. Lee, however, thinks that the Hebrew word notes the wallet itself; whereas Gesenius is of opinion that it means a coffor or small box, to which, from its analogous use, the same name was applied. See Ark.

Coffin (κοπρα, a box for gathering articles; Sept. κοφσις) is used with reference to the burial of Joseph (Gen. i. 26): "They embalmed him, and he was put in a coffin in Egypt; and that coffin is now found in the tomb of the same country, and frequently exhibited in modern museums [see Mummy]—a mode of burial peculiarly favorable to the removal of that patriarch's remains:..."
Coffin. Charles, D.D., a Presbyterian minister, was born at Newburyport, Mass., Aug. 18, 1775, and graduated with distinction at Harvard in 1793. Having completed his theological studies, and taught for some time in the Phillips Academy, he was licensed in 1798. He now visited the Southern states for his health, and, after spending some time in Virginia, was appointed vice-president of Greenville College, Tenn., in 1808. Returning to New England in 1804, he was ordained as an evangelist, and removed with his family to Greenville in 1806. In connection with his college duties, he had charge of the Harmony Church, and supplied for many years the churches in Hawkins County, at Rogersville, and at Jonesborough. In 1810 he was elected president of Greenville College, and served till 1827, when he was called to the presidency of the East Tennessee University, Knoxville. He resigned in 1826, and returned to Greenville, where he died June 8, 1828. — Sprague, Annals, iv. 246.

Cogan, Thomas, M.D., an English Unitarian writer, was born at Rowell, Northamptonshire, in 1736. He officiated for some time as a Presbyterian minister at Amsterdam, but finally studied medicine, and practiced in London. He died in 1818. He published (1) An Exposition of the Psalms; (2) The Life of Jesus (Bath, 1807, 2vo); and (2d part, Bath, 1807-10); — (2) Theological Disquisitions on Natural Religion and Jewish Morals (London, 1812, 8vo); — (3) Characteristic Excellencies of Christianity (London, 1819, 8vo); — (4) Letters to Wilberforce, on the Doctrine of Hereditary Depravity (London, 1816, 8vo); — (5) Ethical Questions (London, 1817, 8vo). — Darling, Cyclopaedia Bibliographica, i. 714.

Cognition (Chald. הוביעה, thought, Dan. vii, 28), an earnest action of the mind, elsewhere translated simply "thought."

Cogswell, William, D.D., a Congregational minister, was born in Atkinson, N.H., June 6, 1787, and graduated at Dartmouth in 1811. He was ordained pastor in Delham April 20, 1815, and resigned in 1829 to accept the situation of general agent of the American Education Society, of which, in 1822, he was chosen secretary and director. In April, 1841, he resigned, and was elected professor of history and national education in Dartmouth. In January, 1844, he went to Gilmanton as president of the theological seminary. He died April 18, 1856. Dr. Cogswell published A Catechism on the Doctrines and Duties of Religion (1816) — Assistant to Family Religion (1825); — Theological Class-book (1831); — Hinck's Monument of the Millennium (1838); — Letters to Young Men preparing for the Ministry (1837); and several occasional sermons. He was editor of the Amer. Quart. Register, of the N. H. Repository, of the 1st vol. of the New England Hist. and Geneal. Register, and some other works.—Sprague, Annals, ii. 606.

Cohabitation. The delicacy of this subject did not prevent its being a subject of Mosaic legislation. See CHILDBIRTH. The following are some of the most important Scriptural notices respecting it. See MARRIAGE; CONCUBINE.

1. Every concubine, even conjugal and legitimate, subjected her children to a state of ceremonial impurity until evening (Lev. xv, 18; Joseph. Antiq. ii, 24; comp. Strabo, vii, 745), a regulation which certainly served not merely to restrain polygamy, but was also useful in a sanitary point of view. A similar statute originally prevailed among the Babylonians (Herod. i, 158; see Wesseling, in loc.). See UNCLEANNESS.
2. Whoever corrupted a maiden, either by deceit or force, was compelled to marry her, and pay her father a fine (properly 50 shekels, Deut. xxii, 28 sq.); the latter must still be paid even when the father refused to permit the marriage (Exod. xxii, 17; comp. Philo, Opp. ii, 311; Mishna, Chala. iii). If the man used violence he forfeited the right of divorcing the woman ever after (the Egyptian law was still more severe on this point, Diod. Sic. i, 78). See TREMPSA.

3. In the case of seduction or rape occurring to a betrothed female in an inhabited spot, she must cry for help, as a sign of the debauchment, and thus subjected to the same punishment of stoning as the male party; but if she was in a lonely field, where her screams for assistance could be of no avail, she was presumed to have been forced, and the ravisher alone was stoned (Deut. xxii, 29 sq.; comp. Joseph. Ant. iv, 8, 23; Philo, ii, 312); yet even in these cases the later interpreters of the law understood a repudiation by a bill of divorce as allowable (comp. Matt. i, 19; see Paulus, Comment. i, 123). A priest's daughter thus playing the courtesan was (stoned and) burnt (Lev. xxix, 9). (See generally Michaels, Mon. Rokit. ii, 315 sq.; iv, 328 sq.; v, 963 sq.) See FORNICATION.

Cohort (cohors), a military term used by the Romans to denote a company generally composed of 600 foot soldiers; a legion consisted of ten cohorts, every cohort being composed of three maniples, and every maniple of 200 men; a legion, consequently, contained in all 6000 men. Others allow but 600 men to a cohort, which would make 5000 in a legion. It is probable that cohorts among the Romans, as companies among the moderns, often varied as to their number. See ARMY. Besides the regular legionary cohorts, there were certain others separate and distinct from any legion, as the Cohortes Urbanae and Proctorae. Such appears to have been the "Italian band" mentioned in Acts x, 1, which was in attendance on the Roman governor, who at that time was residing at Caesarea. Of the same description also was the "Augustan band" or cohort (Acts xvii, 1), which most probably derived its name from Sebesta, the capital of Samaria. The commanding officer of an ordinary cohort was called Tribunus Cohortis if it was composed of Roman citizens, or Prefectus Cohortis if composed of auxiliary troops. See BAND.

Coin. Before the Babylonian exile (see Deyling, Observ. iii, 222 sq.; also in Ugolini, Theaer. xxviii) the Hebrews had and knew no regularly stamped money, but generally made use of a currency in traffic consisting of uncoined shekels (or talents) of silver, which they weighed out to one another (Gen. xxiii, 16; Exod. xxii, 17; 2 Sam. xviii, 12; 1 Kings xx, 89; Jer. xxxii, 9 sq.; comp. Pliny, xxxii, 13), just as among other nations in most ancient times uncoined metal served for money (Elian, Von. Nat. xii, 10; Strabo, iii, 153), and even to this day the Chinese makes their commercial transactions by means of silver bars (Rosenmüller, Morgenl. i, 98; see Sperling, De nummis non cuneis, in Ugolini, Theaer. xxviii). Among the earliest Hebrews, but not afterwards (Crusius, De origineb. pecuniae a pecore ante nummum sig., Petropoli. 1748), an ox or other animal (comp. Pliny, xxxii, 8) was traded instead of cash (see Michaelis, De sello ant. exil. Babyl. in the Comment. Soc. Got., ii, 1752, § 1).

Yet already in the time of Abraham there circulated in hither Asia, as it seems, silver ingots (יִשָּׁד, Gen. xxxiii, 19; Josh. xxiv, 32; see Gesenius, Thes. Heb. p. 1241; Bertheau, p. 24; Tuch, Gen. p. 389, 472) of a determined weight, which was probably indicated by marks (Gen. xxiii, 16; xiii, 21) stamped upon them (so the Targum of Jonathan explains the former passage by נַעֲרָעֵב, i. e. נַעֲרָעֵב). See Keseth.

Even under the regularly organized Hebrew state the small silver pieces (comp. ἄπυποτα, silering) may have passed in exchange (as among their Phoenician neighbors; but see Herod. i, 94; Philostr. Her. x, 1), although institute of national authority (see 1 Sam. ix, 8; comp. Exod. xxxii, 13; Lev. xxvii, 3 sq.; Deut. xiv, 26), the bars being weighed only in payment of large sums (comp. 2 Kings xii, 4), although modern Oriental merchants weight out even regularly coined money (Volney, Voyage, ii, 316). See MERCHANT. For transportation and preservation, money, as at this day in the East, was deposited in bags (2 Kings v, 23; xii, 12; see Halm, Observ. iii, 282). See, generally, Berthau, Gesch. d. Jér. p. 14 sq.) See BAG.

After the exile Persian money was most current, especially the daric (q. v.), then Greek-Syrian of the Seleucide (q. v.), till the time (B.C. 148) of prince Simon (q. v.) the Maccabee, who secured from the Syrian monarchs the right of a native coinage (1 Macc. xv, 6), and issued shekels (q. v.), both whole and half, of which several (some eight) are still extant. The following coin has on one side, in Samaritan, the name of Simon, and some emblems, upon which it is very difficult to pronounce, and on the other "The Deliverance of Jerusalem," with the palm-tree and two vases. There are other coins, bearing on one side the inscription, in Samaritan, "Simon," on the other, "Deliverance of Jerusalem," which are supposed to have been struck by Simon Barcocheba, not by Simon Maccabaeus. There are marks on these coins of their having been struck twice, once by the Roman authorities, and again by the Jews; there are also examples of Early Jewish Coin of uncertain Date.

Greek and Roman coins of these double types applied one upon the other. A leaf and vase appear to be the general symbols of the coins struck in Judea during the dominion of the high-priests, and the coins themselves are for the most part indifferently executed. Those of Alexander Janneus are all of bronze, as are also the coins of Antigonus; these last bear the symbol of a cornucopia, the type invariably found upon the coins of this prince. From the inscriptions on the above coins, it is supposed that Antigonus wished to declare that it was in the capacity of descendant of Mattathias that he was high-priest. The coins of the Coins of Antigonus.
Judean kings, from Herod the First, are all of bronze, with the exception of a silver one assigned to Herod the Third, which is supposed to be unique. Of Agrippa the Second there are many coins, struck after the destruction of Jerusalem, which present on their reverse portraits of the reigning emperors. The dates on these coins denote the year of the prince's reign. (See each of the kings in their order.) Eventually, however, these Maccabean shekels passed out of circulation on account of foreign traffic (being especially supplanted by Tyrian mintage, according to Bertheau, p. 45 sq.). See Money-Changers. In the time of Christ Greek currency had mostly prevailed (computes the Alexandrian and Ostrian, which the following pieces are mentioned: the drachmat (q. v.), which was the unit of value; the didrachma (q. v.), or double drachm (δίδραχμον, Matt. xvii, 24); and the stater (q. v.), or tetradrachm. The smallest coin was the lepton (λεπτόν, small; "mite," Mark xii, 42; Luke xii, 50), which was the seventh part of a gold stater or half the Roman denarius or a farthing. See Mite. Under the Roman rule the imperial currency naturally obtained in Palestine (see Matt. xxii, 17-21), so that thenceforward the Roman becomes the standard (so in the Mishnah, Baba Mezie, iv) of Jewish valuation (see Strong's Harm. and Expos. of the G. W. B. D. Single index, 1783). The following are the coins of this currency named in the N. T. are the following: (a) The denarius (q. v.), in Greek denarion (διναριον, Talm. דנאר, A. V. incorrectly "penny"), the usual unit of popular estimation, corresponding to about the modern shilling; (b) the asarus (from as [i. e. eas, brasse], which was the Greek basis of the Roman monetary system, like the modern penny), in Greek assarion (ασσαριον), Talmudic usually נכסא, of copper (Matt. x, 29; Luke xii, 6), originally ην, then 2 denarii, 2 denarii, 5 denarii, 10 denarii (of the emperor during whose reign it was struck. See Penny. (Comp. Kype, Ob. 1, 67 sq.; Barth, Das Rom. As und seine Münze, Lipe, 1884.) (c) The quadrans (or quarter), in Greek kadrane (κάδρανος, Matt. v, 26; Mark xii, 42), which was 1/4 of an as, a copper coin. See Farthing. There is the Attic drachm, passed as equal to the Roman denarius. There are also occasional references to other and smaller coins (see the Mishnah, Maseer Shenai, ii, 9; iv, 8; Kiddushin, i, 1; ii, 1), e.g. the obolus (νομίσματος; οβολός) = 4 asari; the pondium (ποντία) = 2 asari; besides certain antique values, e.g. the sas (σάσ) = 1/6 drachm, or 1/6 of the stater; the permach (περμαχ) = piece of money in general, etc. (see Buxtorf, Lex. Talm. col. 1755, 1754, 1812; Wasers, De nummis Hebraeo. L. ii, c. 28). Coins were punctured and hung as nowadays around children's necks for ornament (Mishna, Chelm, xii, 7). (See Otho, Lex. Bibb. p. 431 sq.; Klemm, De nummis Hebraeo. Tübing. 1790; Xianeschmidt, De pretiorum et monetae ext. Rom. Grec. et Hebr. evid. ed. 2, Argent. 1877; Wurm, De pondium, nummorum et usum, ratiunib. op. Rom. et Grec. Stuttg. 1821.) See Money.

The intrinsic worth of money in the various periods of the Hebrew-Jewish antiquity is very difficult to estimate from the occasional intimations of mercantile value (see Michaels, De pretiorum et monetae ext. op. Hebr. reside, in the Comment. Soc. Gatt. iii, 145 sq.), especially as the measure and quality of articles thus estimated is also uncertain (see Böckh, Metropolos. Untersuch. p. 430 sq.). See Money-Examples. Some somewhat indicative of this point, however, are the following: In times of plenty, 1 ephah of wheat sold for 1 shekel, and 2 ephahs of barley for 1 shekel (2 Kings v, 3; comp. Polycb. l, 15); an Egyptian horse in Solomon's time was worth 150 shekels (1 Kings x, 29); 30 shekels were generally given for a slave (Exod. xxi, 32; comp. Gen. xxxvii, 28); for 10 shekels a chaplain could be hired in the times of the Judges (Judg. xvi, 10), but in flush times prices were often much higher, e.g. a choice vine-stock was held at 1 shekel (Isa. vii, 28); a threshing-floor, with the oven, cost David 50 shekels (2 Sam. xxi, 24); a single vineyard brought Solomon in 1000 shekels yearly (1 Cant. viii, 11). Other less definite values may be collected as to fancy matters (Judg. xvii, 4; 1 Sam. ix, 8; Neh. vi, 15). In later times a learned seventh-century B.C. document records the Greek and Roman money for 1 (Alexandrian) talent (Joseph. Anti. xii, 4, 9); a farm-laborer's daily wages was 1 denarius (Matt. xxi, 2); and the charge for more than a single day's tending of an invalid in a caravanserai was 2 denarii (Luke x, 36). (For other instances, see Luke, 2, 2; War, i, 83, 5; Life, xiii, 44.) The comparative cheapness of living among the Israelites (as among the ancients generally, see Böckh, Statistik. i, 65) is evident, owing, however, rather to the greater rariety of the precious metals as a circulating medium, than to anything else. See Numismatics.

Coislin Manuscript (so called from the library of Coislin, formerly of Metz, which originally contained most of the leaves in name applied to two very different Greek uncial MSS. 1. Codex Coislianius, the great copy of the Sept. Octateuch, first made known by Montfaucon (Bibliothe. Coislin. 1715), and illustrated by a fac-simile in Silvestre's Pictogr. Univ. No. 65. It contains 227 leaves in two columns, 13 inches by 9: the fine massive letters of the sixteenth century are much according to the Alexandrian MS. In the margin, privus manus, Westein found Acts ix, 24, 25, and so inserted this as Cod. F in his list of MSS. of the Acts. In 1842 Tischendorf observed nineteen other passages of the N. T., which he published in his Monumenta Sacra Inedita (p. 490 sq.), with a fac-simile. These are Acts iii, 10; Matt. v, 48; xii, 48; xxvii, 25; Luke 1, 42; ii, 24; xxiii, 21; John v, 86; vi, 53, 56; Acts iv, 88, 94; x, 13, 18; xxii, 21; Cor. vii, 80; xi, 29; Col. iii, 18; ix, 7; xi, 33; Gal. iv, 21, 22; Col. ii, 16, 17; Heb. x, 26. These portions of the MS. are designated as F of the Gospels, etc.—Scrivener, Intro. to N. T. p. 105.

2. Fragmenta Coisliniana, a relic of only fifteen leaves, written stichometrically, with a subscription referring to a comparison with the text of Cæsarea, which had been written by Pamphilus himself. The letters are large and square. When somewhat faded, the whole (except the subscriptions, which were written in strict Musonion) was gone over by a scribe, or, more coarsely, by a corrector, who added the accents and breathings, but blackened the letters in such a manner as thoroughly to destroy their elegance. Fourteen of these leaves were published by Montfaucon (ut sup.), who ascribed the MS. to the fifth or sixth century. These leaves were used at Mt. Athos in 1218 as part of the covers of another book, which at length fell into European hands, and was saved; the rest of the MS. had probably perished previously, or been destroyed in a similar manner. After the fire of St. Germain des Prés, where the fragments were preserved, twelve leaves only were found, which are now in the Imperial Library at Paris, and contain 1 Cor. x, 29-29: xi, 9-16: 1 Tim. iii, 7-18: Tit. i, 1-3: ii, 15-15: iii, 13-15: Heb. ii, 11-13; iii, 13-18: iv, 12-15. Two other leaves, however, were transferred to the Imperial Library at St. Peterburg, and contain Gal. i, 4-10: ii, 9-14. Tischendorf has lately recovered another sheet from Mt. Athos, where the Coislinian Col. iii, 17-17, 22-22, 31 leaves are known as H of the Pauline Epistles.—Tregelles, in Horne's Intro. new ed. iv, 194. See Manuscripts, Biblical.

Coke, Thomas, LL.D., first bishop of the Methodist Episcopal Church, was born at Brecon, Wales, Sept. 9, 1747; became a gentleman commoner of Jesus College, Oxford, in his 17th year, and after his graduation had charge of South Fetherton parish, Somerset.
COKE 404 COLBERT

...While there he came under the influence of Methodism, and the increased fidelity and earnestness of his ministry excited so much opposition that he abandoned the place and joined Wesley, whom he equalled, if he did not surpass, in itinerant ministerial labors. In 1784 Wesley consecrated him a bishop for the Methodists in America, and in the same year he presided at the organization of the Methodist Episcopal Church at Baltimore, Md., and consecrated Francis Asbury a bishop. If we except some local consecrations in the Moravian settlements, Coke was the first Protestant bishop of the Western world. For many years he visited Ireland annually, and presided in its Conference; he was repeatedly president of the English Conference; he traversed England, Scotland, Wales, and America throughout his long life. He was especially the "foreign minister" of Methodism. His stature was small, his voice feminine, but his soul was as vast as ever dwell in a human frame. Though he became the first bishop of Methodism in the United States, he found not in a diocese coextensive with the new republic room for his energies. He was continually contriving new measures for the extension of the Gospel. His plans, had he been a man of ordinary ability, would have been the order of the system of Methodism, but he was one of those rare spirits whose greatest conceptions and schemes are the legitimate products of their energies. He crossed the Atlantic eighteen times at his own expense. To the end of his life he had charge of the Methodist missions throughout the world. He founded the negro missions of the West Indies, which have exerted an important influence on the history of those islands. They included 17,000 members at the time of his death. He not only visited his missions, but spent almost the whole of his patrimonial fortune in their support, preached for them, and begged for them from door to door. The mission stations were thus his "nest" and his "gifts," but he "charity begotten out of his bones;" and during his life it was not deemed necessary to organize a missionary society among the Wesleyans, for he embodied that great interest in his own person. When a veteran of almost seventy years, he presented himself before the Wesleyan Conference as a missionary for the East Indies. The Conference objected on account of the expense, but Coke offered to pay the charges of the outfit himself to the amount of $30,000, and so prevailed over all objections, and embarked with a small band of laborers. He died on the voyage, May 3, 1814, and was buried at sea; but the undertakers decided, and the Wesleyans, the last Indies missions are the result. It has been justly asserted that, except Wesley, no man was ever connected with the Methodist body who contributed more to extend the blessings of Christianity. His colleague in the episcopacy of the American Church would not allow of even this exception; "a minister of Christ," said Asbury, when the news of his death arrived—"a minister of Christ, in zeal, in labors, and in services, the greatest man of the last century." Wesley used to say that Coke was a right hand to him. Withal he was a voluminous writer, publishing A Sermon on Education, 1773; An Address to the Inhabitants of Bristol, 1782; his ordination sermon at Baltimore, 1786; and many other sermons on the Divinity of Christ, The Witness of the Spirit, and three funeral discourses on the deaths of Wesley, Rev. Mr. Richardson, and Hester Ann Rogers; four sermons on the Christian Ministry; A Discourse on the Seventh Chapter of the Epistle to the Hebrews, and in a larger work called As an Address to the Societies in England on the Settlement of the Chapels, 1795; An Address to the Weepers, on a pamphlet of William Hammet, of South Carolina; Letters to the Societies, in reply to Rev. Melville Horne, 1810; Life of Wesley, prepared jointly with Henry Moore; History of the Rice, 1812; Reports and addresses on the missionary cause; Commentary on the Holy Scriptures, 6 vols. 4to, completed in 1807; and, subsequently, Recent Occurrences of Europe considered in Relation to such Prophecies as are now fulfilling or remain yet to be fulfilled; and the Cuttong's Bible, with reflections at the end of the chapters for family reading. See London Review, Oct. 1800, art. iii.; Drew, Life of Coke (New York, 1844); Etheridge, Life of Coke (Lond. 1860); Sprague, Annals vili, 180; Benson, Life of Coke (N. Y. 1860); Stevens, History of Methodism, vols. ii and iii passim, and Hist. of the Methodist Episcopal Church, 4 vols. passim.

Cola (Χωλά, v. r. Κωλά and Κωλά), a place named only in the Apocalypse (Judith xv, 4) in conjunction with Chobal (q. v.), as one of the cities to which Olas and his daughter were to be expelled by the Jews after the death of Holofernes. Simonis (Onom. N. T. p. 170) suggests Abel-macholah. Reland, however (Palest, p. 729), thinks it may be the Culon (q. v.) inserted by the Sept. among the cities of Judah (Josh. xv, 60).

Colarbasia. See Colarbasia.

Colarbasia, the name of a Gnostic mentioned by Hippolytus (Elenchos, iv, 18; vi, 5, 56), Ephiphanus (Her. 50), Theodoretus (Hist. fideb. i, 12), Tertullian (Cat. Valentin. 4; c. 50), and Augustine (de Hebr. c. 15), and whose system, according to these writers, was akin to that of Valentinus, and still more to that of Marcus, representing likewise the emanation of souls according to the order of the letters of the alphabet and of numbers. According to these writers, in the system of Colarbasia, the first emanation (the "Ogdea" of Valentinus) did not signify eight different substances, but only eight different relations and effects of the one God, which, according to their different signification, received different names. In the system ascribed to Colarbasia, the souls were not so much begotten, but all simply created out of an infinite storehouse of souls (δια τοῦ ἀκραφῆς και τῶ ἀκαλάμπονος). The place assigned to the ψυχή in this system is the ἵππωρ (ἰκάλη, a word differing from that in the system of Valentinus. Dr. Volkmar, in an essay entitled Die Kolobarasia-Gnostos (in Niederer's Zeitschrift fur Hist. Theol. 1855), undertook to show that all the accounts of Colarbasia in the writers above mentioned can be traced to the description by Irenaeus (1, 12, 8 sq.) of the system of the Gnostic Marcus and some modified systems; that the word Colarbasia with Irenaeus (1, 14, 1) is nothing but the mystical designation of the personified number of the highest seven, the holy τριγονομεία; and that all the subsequent accounts arose from an erroneous confusion of the two systems. This hypothesis has been adopted by most of the recent writers on Gnosticism.—Hermag, Real-Encyklop. viii, 19 (of which our article is a free translation); Wetzus u. Welte, Kirchen-Lex. ii, 691.

Colbert, Charles-Joachim, a relative of the great Colbert, was born at Paris, June 11, 1667; became vicar of Rouen, and general agent of the French clergy. In 1744 he made bishop of Metz and devoted himself a great deal to induce the Reformed to apostatize. It was under his episcopate that the noted catechism called Cauchismes de Montpellier was drawn up by father Pouyet. Colbert, in several pastoral and memoranda, opposed the bull Unigenitus (q. v.). Some of his writings (8 vols. 1744) were condemned at Hefen. He died April 8, 1786. Hefen, Nouv. Biog. Gen. xi, 114.

Colbert, Jacques Nicolas, Roman Catholic archbishop of Rouen, of the same family, was born at Paris in 1654, was made bishop at an early age, and was noted in his administration for his tolerance of the Reformed. He was one of the first members of the Academy of Inscripticns and Bell-Letters. He died Dec. 10, 1707. —Hefen, Nouv. Biog. Gen. xi, 112.
COLBERT MANUSCRIPT 405

Colbert Manuscript (Codex Colbertinus), the latest critical designation of a beautiful curative Greek MS. of the N. T., now deposited in the Royal or Imperial Library at Paris, of which it is No. 14 (Collot, 2944); usually designated as 83 of the Gospels, 18 of the Acts and catholic Epistles, and 17 of the Pauline Epistles. It is very important in Biblical criticism, being styled by Eichhorn "the key to the MSS. in cursive letters" (Eich. ins N. T. v. 217). It contains all the Greek Test. except the Apocalypse, and includes a portion of the Sept. version of the Prophets. The order of the books is now much confused, but from the writing they appear once to have been arranged as usual. The ed. of nearly all the leaves are torn, or cut away, or have otherwise decayed. The MS. has been much injured by exposure to dampness, and ink has set off on the opposite page, especially in the Acts, so that it is very difficult to read (Tregelles, Account of the Printed Text of the Greek N. T., p. 162). In this way, however, by reading backward the parts thus transferred, many passages have been recovered of which the original writing has become totally effaced, or even the material containing it has perished. It is written in a round hand, in folio form, with 42 lines in each page, in a fine round hand (which undergoes a gradual change in the course of the work), the accents sometimes neglected. Larroque first collated it, but very negligently, and his reading, as communicated by Allix, were inserted in Mill's edition of the New Testament, while they were transferred to Wetstein's, Griesbach re-examined it in part; then Beugrrop to some extent; and Scholz, nuli, but it would seem curiously; Tregelles carefully collated it in 1800. "Its text was published by Sabatier" (Davidson, Treatises on Biblical Criticism, ii, 246). It evidently belongs to the eleventh century, and remarkably confirms the readings of the oldest codices, especially those known as B, D, and L, leaning chiefly to the Alexandrian recension. —Scriven er, Introduction to the Criticism of the N. T., p. 143; Tregelles, in Hodge's Introduction, new ed., iv, 209. See MANUSCRIPTS, BIBLICAL.

Colbert, William, a pioneer of the Methodist Episcopal Church in Western New York, was a native of Maryland. He was admitted on trial into the Philadelphia Annual Conference in 1792, and in 1799 he found him at the General Conference in the city of Baltimore; he then connected with the circuit of Tioga and the lake country (a perfect wilderness at the time), and here he labored faithfully and uncomplainingly, notwithstanding the difficulties of all kinds which he had to encounter, until 1811, when he located. In 1829 he was readmitted as a supernumerary, which relation he retained until his death in 1838. —Minutes of Conferences, ii, 281; Peck, Early Methodism, p. 80, 121, 272.

Cole, Henry, D.D., an English Romanist divine, and opponent of the Reformation, was born at Godshill, Isle of Wight, and was educated at Winchester School and New College, Oxford, where he became fellow in 1532. In 1540 he became rector of Chelmsford; in 1542, warden of New College. On the accession of Edward VI, Dr. Cole inclined to the Reformation, but afterwards returned to his original views, and after Queen Mary's accession he became a zealous Romanist. When Cranmer was burnt, Cole preached a violent sermon at the execution. In 1557 he was made vice-gereral of spiritualities at the English Pole. He was prominent in "all the proceedings against Protestants in those dreadful times." In the first year of Elizabeth he was fined 1000 marks "for contempt of the queen's majesty," and in May, 1560, he was sent to the Tower, where he did not remain long. He died in London in 1579. Among his writings are: Dejutition with Cranmer and Ridley, 1555; Funeral Sermon at the burning of Cranmer (both in Fox's Acts and Monuments); Letters to Bishop Jewell, Lond. 1560, 8vo. —Strype, Annals; Burnet, History of the Reformation; Hook, Eccles. Biography, iv, 126.

Cole, Thomas, an English Nonconformist, was educated at Westminster School, and at Christ Church, Oxford. In 1656 he became principal of St. Mary's Hall, where he was tutor to John Locke. He was ejected from Oxford by the king's commissioners for nonconformity, and opened an academy at Nettlehole, Oxfordshire. Thence he removed to London, where he became pastor of a large congregation, and one of the lecturers at St. Stephen's Hall. He was a strong supporter of the Presbyterian (q. v.) doctrine. He died in September, 1657. Among his writings are: A Course of Regeneration, Faith, and Repentance, Lond. 1659, 8vo; A Discourse of the Christian Church; Imputed Righteousness for Justification incapable of being comprehended by human Reason. —Calamy, Nonconformist's Memorial, i, 196.

Coleridge, Samuel Taylor, was born at Ottery St. Mary, in Devonshire, where his parish was the vicar, on the 21st of October, 1772. An orphan at the age of nine, he was sent to Christ's Hospital, where Charles Lamb was among his contemporaries. Here he made very great progress in classical knowledge, and at an early age plunged deeply into metaphysics. —Speaking of himself in the Biographia Literaria (vol. i, p. 15), he says, "I was a very premature age, even before my fifteenth year. I had bewildered myself in metaphysics and in theological controversy. Nothing else pleased me. History and particular facts lost all interest in my mind. Poetry itself, yes, novels and romances, became insipid to me." In 1793 he entered Jesus College, Cambridge, but in the second year of his residence he suddenly left the University in a fit of despondency, occasioned, it is said, by unrequited love; and after wandering for a while about the streets of London in extreme pecuniary distress, terminated this adventure by enlisting in the 15th Dragoons, under the assumed name of Comberbatch. One of the officers, questioning him in a friendly manner, and eliciting his real history, communicated Coleridge's situation to his friends, who forthwith effected his discharge. Coleridge now betook himself to Bristol, where he joined with three other young and tempestuous men of poetic temperaments, and imbued with strong but vague ideas of universal brotherhood—Southey, George Burnet from Oxford, and Lovell, a young Quaker. They formed a scheme for emigrating to the banks of the Susquehanna in North America, to form a social colony, where selfishness was to be proscribed. But money was needed to establish this "pantocracy," as they
termed it, and Coleridge had not enough to furnish him with daily subsistence. Joseph Cottle, a benevolent bookseller at Bristol, finding that he had written enough poems to make up a small volume, offered him thirty guineas for them. The volume was published in 1794, and the same year Coleridge sailed for the Proctor in the West Indies.

In 1795 Coleridge married Miss Sarah Fricker, of Bristol, a sister of the wife of his friend Charles Lloyd. In 1796 he published a volume of poems, the greater number of which had been written at earlier periods, interspersed with some by Charles Lamb; and in 1797 a second edition of The Rime of the Ancient Mariner appeared, with the addition of some poems by Charles Lloyd.

Coleridge was at this period of his life a Unitarian. He says of himself, "I was at that time, and long after, though a Trinitarian (i.e. a norman Platonism) in philosophy, yet a zealous Unitarian in religion; more accurately, I was a pandeist, one of those who believe our Lord to have been the real son of Joseph, and who lay the main stress on the resurrection rather than the crucifixion" (Biog. Lit. i. 168). In 1798 Coleridge visited Germany, and went through a course of German literature. On his return to England he went to live at the Lakes, where Southey and Wordsworth lived there the greater part of the winter, and other friends, such as Wordsworth, Southey, and the Wordsworths. The appellation of "Lake-poets" was given to these three writers after the publication of the "Lyrical Ballads," Coleridge now became connected with the "Morning Post," and wrote both on politics and literature.

From about 1808 to about 1814 he contributed to the "Censor." In 1809 he edited the "Friend," first published as a periodical at the Lakes. He left the Lakes in 1810, and did not afterwards return to them; his wife and children remained in the house of Southey, and wholly dependent on him. On Coleridge's first arrival in London he resided with Mr. Basil Montagu, and in 1816 he became a tenant of Mr. Gillman's house in Highgate, in whose house he died. The many friendships which Coleridge attracted to himself through life, the sincerity and constancy of which were abundantly shown, place in a striking light the amiability of his character; his neglect of his family and extreme carelessness respecting the obligations, both personal and pecuniary, which devolved upon him, a strikingly illustrate its weakness. It was not before the commencement of his residence in London that he formed any very extensive acquaintance with the writings of the later German metaphysicians, by the adoption of whose method and terminology, rather than his own, he afterwards used. His subsequent publications, he came to be accounted the representative of German metaphysics in England. He published successively, between the years 1817 and 1825, the "Lay Sermons," the "Biographia Literaria," the bound volume of the "Friend," the "Constitution of the Church and State according to the Idea of EACH," and the "Aids to Reflection." During most of his life Coleridge was poor and dependent, from careless imprudence. He suffered also from chronic ill health, combined with, and to a certain extent caused by, a habit of using opium. He died July 23, 1834. - "Engl. Cyclopaedia."

Of Coleridge as a poet we do not here speak. As a metaphysical theologian, his influence upon his own age, and especially upon its younger men of genius, was greater than that of any other Englishman. His mental attributes were of a high order, strangely blended, and thoroughly cultivated. To a subtile and critical mind, of a religious age of scholasticism, he added a great compass of thought. The devotional and expository writings of the best English divines, such as Hooker, Taylor, Baxter, Leightson, and Wesley, were congenial food for his mystical and religious nature. With his enlarged knowledge he was a professed pantheist, and himself a half-complete theology, partly orthodox, partly mystical, and partly (though unconsciously) pantheistic.

"It was one of his most cherished schemes—his favorite vision in cloudland—to compose a work of colossal proportions which should embrace the whole range of mental philosophy taken in its widest meaning; including, of course, theology, and not only wrote a few disconnected fragments of his mighty task. But these fragments have proved of immense suggestiveness to younger intellects," and "Coleridge's poems may be found among every class of English divines, from the Broad Church to the highest Puseyites. The condition of the English mind at the time of Coleridge's life was such as to be receptive and willing for the wonderful influence he gained. "The received philosophy was sensationalism in intelligence and thought, and utilitarianism in morals; and the received theology contented itself with dealing forth, when didactic, the dry husks of a powerless moralism, and, when argumentative, with insisting upon the external evidences of Christianity. Grotius and Paley (whose Moral Philosophy was a text-book at Cambridge) were the oracles on the subject of the Christian evidences. Arianism and Unitarianism, always found alongside of sensationalism and materialism, had crept like a fog-blight over the face of the Christian. As he saw a state of things, it is easy to understand how the appearance of a teacher like Coleridge would be welcomed. He was the declared enemy of the sensational and utilitarian philosophers. He was reputed to have mastered the German philosophy, to have abstracted from it what was sound and true, and to have imparted to a wide audience, from the utmost height of human thought, of the ultimate unity, the perfect and vital harmony, of philosophy and theology, of the revelation of reason and the revelation of God. He professed himself a devout and orthodox Christian believer. Most of all, he impressed and attracted the young men of his time by his ideas of thought and purpose, his reverent spirit, his far-seeing, practical wisdom, his critical and intuitive sagacity, his union of deep learning, fine taste, and recluse habits, with philosophic breadth of view and wide human sympathies. "One main point, perhaps the main point, of Coleridge's Philosophy was the Kantian distinction between the reason and the understanding. Upon this distinction Coleridge grafted his peculiar, and, as we think, unchristian doctrine of the Logos. Many who have not followed Coleridge in the theological doctrine have agreed with him in reference to the metaphysical distinction, according to which the understanding is the logical faculty, the faculty which by its activity makes the object of knowledge, which stands face to face with spiritual and essential truth; and the immediate object of which is, as Mr. Morell says, 'the good, the beautiful, and the true.' The intuitive faculty in man has thus assigned to it an entirely separate sphere, and that the very highest. It dwells in a region apart, elevated above that of the logical understanding, and is quite independent of it. Being thus independent of the understanding, it is independent, so far as the morally good and right is concerned, of revelation also (which must be presented to it through the understanding), except in so far as it may, by its own light and authority, approve and warrant, that which reveals itself to it. For reason, understood as above defined, must, whether in matters of taste, criticism, or morals, be the supreme judge, and be a law unto itself. Thus the scintillations of genius and the light of poetry are but different manifestations of the same faculty. How well this accords with what the Church professes faith, that reason is the light in man of the divine Logos, and how naturally it is developed into Maurice's doctrine of the identification of the Word or Son of God, with all men, will be readily seen. How nearly related it is to the modern Panteism is no less obvious. Coleridge, in a sense, was the teacher of many, of which many passages in his writings fully accord, speaks of 'that higher state, to which Aristotle could
never raise himself, but which was natural to Plato, and has been to others' [himself, for instance], 'in which the understanding is distinctly contemplated and, as it were, looked down upon from the throne of actual ideas, or living, inborn, essential truths.' He speaks of the spirit's ascending into 'the empire of ideas.' He identifies the reason with the divine Logos, making him, in this sense, to be the 'light which lieth every man that cometh into the world.' He denies, as many have learned from him to deny, the possibility of a revelation ab extra. He speaks of the Trinity as an 'idea,' and analyzes this 'idea' in such a way as to resolve the Trinity into what is really no better than a refined, Platonized Sabellianism—only not Sabellianism, because not allowed to be conceived under any conditions of time and space. Such are some of the results of Coleridge's peculiar philosophy as applied to solve, or as used to measure and define, the mysteries of being, human and divine" (see Currie, in Methodism Quarterly, Jan. 1864, art. ii; and Riggs, in Methodist Quarterly, April, 1868, art. 1; July, 1868, art. 1). His view of inspiration, as given in the Confessions of an Inquiring Spirit, are almost as low as those of the Rationalists. His theory of the atonement seems to exclude almost entirely the idea of substitution, in order to avoid what he calls the "commercial" theory.

The only uniform edition of Coleridge's works is that of Professor Shed (N. Y. Harpers, 1858, 7 vols. 12mo). It is intended to be followed by a volume of his admirable Preliminary Essay to the Aids to Reflection, and also an able and genial Introductory Essay by Professor Shed. The work needs nothing but an index to be complete. Of Gillman's Life of Coleridge (Lond. 1868), two volumes were promised, but only one has appeared. In 1866 appeared Dr. J. H. Green's Spiritual Philosophy, founded on the Teaching of S. T. Coleridge, edited by J. Simon (Lond. 2 vols. 8vo). Critical essays on Coleridge abound in the leading reviews: among those that examine his philosophical theology and its results are papers in the Christian Spectator, vi, 617; Princeton Review, xx, 144; Bibliotheca Sacra, iv, 117; Theological Journal (Lord's), i, 681; Am. Biblical Repository, July, 1849, art. 1; British Quarterly, Jan. 1854, art. iv.

Coelas, Eliasha, a native of Northamptonshire, was made steward of Magdalene College, Oxford, during the Commonwealth, when the famous Independent, Dr. Goodwin, was head of that college. After the Restoration he obtained a clerkship in the East India House, which he held until his death in 1690. His name is preserved by his well-known treatise entitled A Practical Treatise on God's Sovereignty, originally published in 1673, 4to, and many times reprinted. It is thoroughly Calvinistic.

Coelas, George, a minister of the Methodist Episcopal Church, and for many years a journalist. He was born in England, June 2, 1792; converted at twelve; became a local preacher in 1814; emigrated to America in 1818, and immediately entered the Itinerant ministry. His first object was "the effective preacher" for thirty-three years, and on the 1st of May, 1858, he died in New York. He was an invalid more than half of his life, yet eminently cheerful and useful. Though his advantages of education while young were limited, he was nevertheless a very well educated man, and most successful as assistant editor of the Christian Advocate and Journal, and three years sole editor of the Sunday School Advocate and Sunday-school books. Among his published works are The Advocate (18mo), Lectures to Children (18mo), Scripture Concordances (18mo), My youthful Days (18mo), My first Years in America (12mo); also a Translation and Notes of the Beethoven (12mo). Mr. Coelas was a sincere and simple-hearted Christian gentleman, loving all, by all beloved. As a preacher, although not powerful, he was clear, instructive, persuasive, and eminently consolatory. "His journal, which was carefully kept for nearly fifty years, shows how he longed to live and labor for God." His death was peaceful and beautiful. —Minutes of Conference, 1858, p. 148.

Colet, Dr. John, was born in London in 1466; was educated at Oxford, and travelled on the Continent for seven years, where he made the acquaintance of many eminent scholars, especially of Erasmus, Budéus, and Linacre, and where he also learned Greek. He obtained Church preferment when very young. In 1497 he commenced lecturing at Oxford on St. Paul's Epistles, and drew crowds of students. In 1505 he was made dean of St. Paul's, in which capacity his endeavors to restore discipline brought on him, though happily without effect, a charge of heresy. He introduced divine lectures to St. Paul's, delivered by himself and others. "These lectures raised in the nation a spirit of inquiry after the Holy Scriptures, which had then long been laid aside for the school divinity, and so might be said to prepare a way for the reformation which soon after ensued. We cannot but think that Colet was in some measure instrumental towards it, though he did not see it effects. He raised a great contempt for religious houses, exposed the abuses that prevailed in them, and the mischiefs attending the imposing celibacy on the clergy. This way of thinking, together with his free and public manner of communicating his thoughts, which were then regarded as seditious and heretical, must have been very obnoxious to the clergy, and exposed him to a persecution from the bishop of London. Latimer tells us in his sermons, not only was Colet brought into trouble, but he would certainly have gone to the stake had not God turned the king's heart." In 1512 he founded and endowed the noble institution of St. Paul's School for 158 scholars. He died in 1515. He wrote a Latin Grammar for St. Paul's School, which was long in use. Among his religious writings were, Daily Devotions, or the Christian's morning and evening Sacrifice (Lond. 1693, 12mo); Meditation to a godly Life (Lond. 1584); Epistles to Erasmus, etc. See Knight's Life of Dr. Colet (Lond. 1792, 8vo); Jones, Christ's Brgs.; Seebohm, Oxford Reformers (Lond. 1867).

Col-bo'zeb (Heb. Kok-koz'zeb, כֹּכְכָּזֶב, every ear; Sept. Koak'kize, Koakh'kize), a descendant of Judah, being the son of Hazahab, and father of one Baruch (Neh. xi. 5), B.C. ante 536. He had also a son named Shallun, who repaired part of the walls of Jerusalem after the Captivity (Neh. iii. 15).

Coligni, Gaspar de, admiral of France, was born February 16, 1617, at his ancestral castle, Châtillon-sur-Loing. His father, Gaspar de Coligni, marshal of France, died early (1522), and bequeathed to his widow the task of educating three sons. In this she was assisted by two masters, one of whom instructed the boys in languages and philosophy, and the other in bodily exercises. Gaspard early distinguished himself for a firmness of character and purity of private life very rare in his age. He was a nephew of the Duke Francis of Guise, afterwards among his bitterest enemies. He entered upon the career of arms, and early won high celebrity in the wars against Italy and Spain. In 1547, at thirty, Coligni was made commander of the French infantry. The very severe discipline introduced by him changed the wild bands of lawless soldiers into an armed army. In 1547, the year in which his mother died, he was married to Charlotte de Laval. But the troubles of his times called him soon again and again to the front of battle; the happy issue of the campaign of 1552-56 is to be ascribed to his being the governor of Champagne, later of Picardy and Lisle de France in 1553-56. He was made admiral of France. When King Henry II violated the truce, and the war with Spain broke out anew, Coligni was commissioned to defend St. Quentin
against the Spaniards. In spite of a heroic defence, on the 27th of August St. Quentin fell. Coligni was taken prisoner and brought to the Netherlands, where he remained two years. Here he became a Protestant. At the peace of Chateau-Cambresis in 1559, he regained his liberty for a ransom of 50,000 florins. Through the sudden death of Henry II (1559), and the ascension of his throne by Francis II, the Guises were temporarily all powerful, and Coligni lost many of his honors. He left the court with a light heart. He had been suspected of "heresy," but had not yet publicly confessed himself a Protestant. Aware that this step might be fatal to his family, it was only after his wife had gladly confessed herself a Protestant that he was permitted to accede to the Lord's Supper in presence of the whole village. The news was received with rejoicing among all Protestants. While Coligni lived a peaceful, secluded life with his family, the public discontent at the usurpations of the Guises had reached a climax. The conspiracy of Amboise in 1560 simply shows the state of popular opinion in France. Coligni did not participate in, though he seems to have known of the plot. But at the Convention of the Notables he made brave but ineffective attempts to gain more freedom of worship for the Protestants.

The death of Francis II, in 1560, however, changed the religious affairs. Coligni and his brother Adolphe were reinstated in their honors, and now more than ever Protestantism found a powerful protector in him. He took part in the terrible religious wars which lasted for thirty years. At the head of the Roman Catholic party stood the Guises, while Condé and Coligni led the Protestants. But the latter suffered severe reverses, and only after the assassination of Francis of Guise, 1563, by Jean Poltrot, fortune began to be once more favorable to them. Coligni was not implicated in this murder, as has sometimes been asserted. After the peace of Amboise, concluded March 19, 1563, which freedom of conscience and of worship was granted the Protestant nobility, the admiral again retired to his estates in Châtillon. Four years later the war broke out anew, and was on both sides waged with the old spirit and bitterness. For a time the prospects of the Reformed party looked very dark. In 1568 Condé fell, and only a few weeks later Coligni himself was slain. The Poiriers was a failure; and, while he withdrew his troops, the Parliament in Paris had condemned him to death, hung him in effigy, broke his escutcheon, and offered a price of 50,000 florins for his head. Coligni's life, indeed, was endangered by several attempts on his life, the knowledge of which could break Coligni's spirit or daunt his energy. In 1570, at Arnay-le Duc, the Protestants gained a complete victory; and shortly after all further movements were ended by a truce, which resulted in the peace of St. Germaine.

Coligni's wife had died three years before, and in 1571 the admiral, although already at an advanced age, married Jacqueline, countess of Montul and En tremont, a young, beautiful, intelligent, and pious lady of Savoy. Meanwhile the current of opinion at court seemed to be gradually settling in favor of the Protestants. The union of the two parties was to be completed by the marriage of Coligni and Diancware (later Henry IV) to Margaret of Valois. Charles IX needed a man who would be equally respected by all parties; and Coligni was summoned to court. He went full of confidence in the king's good-will; and, indeed, it does not appear that Charles and his mother, Catherine de Medici, had at that time any hostile intentions towards him. The admiral wept tears of joy at his reception in Blois (Sept. 18, 1571). The king embraced him, and both Charles and his mother showed him every honor. Gradually Coligni gained a decided influence over the king; and made good use of it in favor of the Huguenots. Catherine became alarmed, and her jealousy of Coligni changed into hatred, although it appears that as yet Charles was not ill disposed towards the admiral. On the 18th of August, 1572, the marriage of Margaret and Marguerite took place. On the same day Coligni wrote to his wife that he hoped to see her soon, as he was weary of court life. These were the last lines she ever received from his hand. Four days later, as he was walking in a plot in which he was joined at him from a house in the present Rue de Rivioli; a finger of his right hand was destroyed, and his left arm wounded. The assassination of the admiral was ascribed to the Guises, and filled all Paris with alarm and horror. The king visited Coligni, professed the greatest sympathy; but the suspicion that his body would be avenged for the bloody deed. But Catharine de Medici had resolved on Coligni's death. On the evening of the 23d, everything was prepared for the terrible massacre that was to take place on the following night. On the 28d, after midnight, a guard of only five men and a few servants remained with the admiral. In the morning, between one and two (Sunday, August 24), a murderous band approached the house. It had been resolved to kill the admiral first, and then give the signal for the general massacre. The young Duke of Guise had undertaken to destroy his great enemy. The doors were burst open and the chamber riddled. At the first noise Coligni requested to be lifted from his bed, and said to his minister, "Say a prayer, sir; I put my soul into the Saviour's hand." A servant burst into the room, and on being questioned, replied, "God calls us." "I have long been ready to die," Coligni replied; "but you others secure yourselves," The murderers entered the room, and found the admiral standing upright. One called to him, "Are you not the admiral?" "Yes," Coligni answered with dignity; "and you, young man, should respect my gray hairs, and not take my life." With an oath the soldier thrust his sword into Coligni's breast. His body, in which life was still not entirely extinct, was thrown out of the window. Guise, who had been waiting below, wiped the blood from the face of the corpse to recognize it, and kicked the body with his foot. An Italian, Peruccchi, cut off the head and brought it to the Louvre. The body was mutilated, dragged through the streets of Paris, and afterwards cut into pieces. When Charles IX came to see it a few days later, he is said to have repeated the words of Vitellius, "The body of an enemy always smells well." In Parliament, on the 26th of August, he stated that the massacre of St. Bartholomew had been necessary to prevent the revolution of corrupt men, who was to be assassinated, and accused Coligni of ingratitude and treason. The servile Parliament accepted these statements, declared Coligni a traitor, and decreed the forfeitures of all his rights and honors, which resolution was, however, afterwards completely revoked. —Hengg. Real-Encycl. xix, 331 sq.; Hoefer, Nouv. Biogr. Generale, xi, 197; Haag, La France Protestante, vol. iii.

Colinusc (Kolos v. r. Keio, Vulg. Colvis), a Levite "also called Calsius" (1 Esdr. ix, 29), for which the Hebrew text (Extra x, 28) has "Kelaia (q. v.), the same as Keleia."

Collar, the rendering of one Gr. and two Heb. words in the Auth. Vers. 1. μετὰ (metā, Job xxx, 18; where, however, some merely read τῇ, properly signifies a mouth, in which sense it often occurs, and is hence suitable to any aperture or orifice. See MOUTH. It is frequently applied elsewhere (as in the passage cited) to the opening of a garment that closes around the neck, such as the tunic (Exod. xxxix, 23; Psa. cxlviii, 2). See EPHR. 2. ἀνῆλθεν (anēlthen, "drops, Judg. viii, 26), "collars," mentioned among the spoils of the Midianites, were a peculiar kind of pen-
COLLATION or ear-drop, probably of pearls, and hence different from the ordinary ear-ring (q. v.). The same term occurs in the list of female attire in Isa. iii, 19, where it is translated "chains" (q. v.). S. "Ister (Isa. iii, 19), a thong, i. e. a strap for harnessing a beast of burden to the yoke (q. v.).

Collation (Lat. collatio). When a bishop gives a benefit, which either he had as patron, or which came to him by lapse, he is said "to collate" to that benefice the clergyman on whom he bestows it. Where the living is not in the gift of the bishop, he is said "to institute" the clergyman to it. The word collation is also used among ecclesiastical writers to denote the spare meal on days of abstinence, consisting of bread or other fruits, but without meat.—Hook: Eden.

Collect (Lat. Collecta, from collectere, to collect), a short form of prayer in the liturgies of the Roman Catholic and the Anglican churches. In a wider sense, the word collecta was used by ancient writers of the Latin Church, like the Greek εὐχαίρεις, to designate a meeting of Christians for public worship. But soon it came to be restricted to several portions of the liturgy. The origin of this signification of the word is due, according to some ritualists, the name indicates the comprehensive brevity of such prayers, the matter of the epistle and gospel, e. g. being gathered up, or collected, into the collect for the day. Others derive the name from an ancient practice of the chief minister collecting into a single brief and public prayer at the end of some part of the service the previous (private) devotions of the people; accordingly, one of the service-books of the ancient Catholic Church was called Collectarium, as containing such prayers. Liturgical writers trace some of the collects to the Leonian Sacramentary used in the Roman Church about 488 A. D.; others to the Sacramentary of Bishop Gelasius of Rome (494); and the majority to the Sacramentary of Gregory I (590).

The collects in the Roman Missal begin with Oremus (Let us pray), and conclude with the invocation: "Per Dominum nostrum Iesum Christum, filium tuum, qui tecum vivit et regnat in unicate Spiritus Sancti Deo per omnia saecula saeculorum. Amen." They occur before the Epistle, before the Preface and after the Communio, and consist sometimes of one, sometimes of several petitions; but if consisting of more than two, the introductory Oremus and the concluding "Per Dominum," etc., are used only twice, all the intermediate petitions being joined to the last. In solemn masses, the collects before the epistle and after the communio are sung. Similar collects as in the Missal occur in the Breviary.

On the collects retained in the Anglican Prayer-book, Dr. Comber remarks: "Our reformers observed, first, that some of the collects were corrupted by superstitious alterations and additions, made by some later hand. Secondly, that the modern Roman Missals had left some of the primitive collects quite out, and put in their stead collects containing some of their false opinions, or relating to their innovations in practice. When the Roman mass had struck out an old and put in a new collect, agreeable to their new and false doctrines or practices, there the Reformers restored the old collect, being pure and orthodox. At the restoration of king Charles II, even those collects made or allowed at the Reformation were strictly reviewed, and what was deficient was supplied, and all that was but incongruously expressed was rectified, so that now they are complete and unexceptionable, and may be ranked into three several classes. First, the ancient primitive collects, containing nothing but true doctrine, void of all modern corruptions, and having a strain of the primitive devotion, being short but regular, and very expressive. The second order of collects are also ancient as to the main; but where there were any passages that had been corrupted, they were struck out, and the old form restored, or that passage rectified; and where there was any defect it was supplied. The third order are such as had been corrupted in the Roman Missals and Breviaries, and contained something of false doctrine, or at least of superstition, in them; and new collects were made instead of these at the Reformation, under king Edward VI; and some few which were added anno 1662."

The following tables of the Collects for Sundays and other holidays used in the English Liturgy were partly formed by bishop Cosins, and published by Comber:

I. Collects retained from ancient Liturgies at the Reformation.

HINTS TAKEN.

How it stood before.

Grant us, O Lord, to lay to our enemies, etc. Grant us to the health of body and soul, that all those things which we suffer for sin, etc. Who makes the means of all faithful people to be of one will, etc. This had been of old the Collect for Ascension Day, on which our venerable Redeemer repeated it as he was dying. Lord, make us to have a perpetual fear and love of thy holy name; for thou never failst, etc. Whose providence is never deceived, etc. That we, running to thy promises, may be made partakers of thy heavenly treasures, etc. To avoid the infection of the devil, etc. That the workings of thy mercy may be in all things, etc.
III. Collects composed anew, and substituted in the Place of those which, containing either false or superstitious Doctrines, were on this Account rejected.

COLLEGE

COLLECTS FOR
St. Paul's Day.
The Annunciation.
St. Philip and St. James.
St. Bartholomew.
Trinity Sunday.

TIME OF IMPROVEMENT.
Improved 1648.
Improved 1649.
Improved 1669.
Improved 1669.

HOW IT CAME TO BE.
In the Breviaries (Midle Ages) a new prayer was added, mentioning St. Paul's intercession; in the year 1549 the old prayer alone out of Græg. Sacr. was restored, which had our walking after his example only, which was a little varied in the year 1642. The Breviaries had put in a new prayer about the blessed Virgin's intercession, which was cast out in 1648, and the form being in Græg. Sacr. restored.

As thou hast taught St. Philip and the other apostles, etc.
To preach that which he taught, etc., was altered, because there is no writing of his exactness.

This Collect is no older than the Sacramentary sacrificed to Alcimus. The old offices have another Collect for it, and call it the Oration of Pentecost.

COLLECTION. (1) נֶפֶשׁ, maasheh', something taken up, e. g. tribute (2 Chron. xxiv, 6, 9; elsewhere "gift," "mess," etc.); (2) for awawaw, to contribute (Baruch i, 6); (3) λογία, a pecuniary collection (1 Cor. xvii, 1; "gathering," ver. 2). See ASSESSMENT.

In the apostolic age the Christians of Palestine were more straitened than other churches, and this might be from their being assailed with every sort of oppression by the Jews. The activity of Paul in taking up collections on their behalf is evident from what is said in Acts xxiv, 17; Rom. xxv, 26, 27; 2 Cor. viii and ix, and Gal. ii, 10. For this purpose the apostle, in 1 Cor. xvi, 2, says, "Upon the first day of the week let every one of you lay by him in store as God hath prospered him." The reason why this day was appointed for this purpose seems to be that, by the early Christians, the first day of the week was observed as the Sabbath of the Lord; and consequently, as on that day they commemorated that which formed the great bond of union between them and other Christians, it was the most suitable occasion for their displaying their love in the way prescribed, and also for when they would be most liberal (1 Cor. xvi, 1-8). See ALMS.

Collector (ἀρχων φορολογιας, chief of the tributary), a tax-gatherer (1 Macc. i, 29). See PUBLICAN.

College occurs (2 Kings xxii, 14; 2 Chron. xxiv, 22) as the translation of מֶשֶׂכֶל (misknekhet, second rank), the residence of the prophetess Huldah (q. v.). The same term is used in Zeph. i, 10 (translated "second"); where the different quarters of Jerusalem are spoken of, and is found more fully in Neh. x, 9 (where, instead of "the second over the city," the original has רֵיחֶם רֵיחֶם לָבֶט, " upon the city second," i. e. over the second part of the city). From all these notices we can only gather that there was ancienly a quarter or district that went by this appellation, but there is no definite intimation of its position. It may have been only another name for Akra (q. v.), or the Lower City, which was built subsequently to the more fashionable portion of the city on Mt. Zion. The word occurs frequently elsewhere in its ordinary signification of persons or things that occupy a second place in order, dignity, honor, etc. See JERUSALEM.

COLLEGE (Lat. collegium, a collection or assemblage). (1) "In its Roman signification, a college signified any association of persons for a specific purpose. In many respects it was synonymous with corporative body or collection of members, a corporation—with universities, a whole as contrasted with its parts—and with societas, a company or partnership, as opposed to all the members of which it was composed. A Roman college had a common chest, and it could sue and be sued in the name of its manager (actor or syndicus), just like an incorporation with us. It required, also, to be incorporated by some sort of public authority, springing either from the Senate or the emperor. A college could not consist of fewer than three persons." (2) The term is applied to any company of persons associated upon some common principle; so we speak of the college of the apostles; the college of cardinals; a college or synod of bishops; and as "three" are required for a college, it has come to be usage that three bishops unite in the act of ordination of bishops. (3) The word "college" is used also, in England, to designate "an endowed institution connected with a university, having for its object the promotion of learning." In this relation a college is a sub-corporation, i. e. a member of the body known as the University. The constitution of a college in this sense depends wholly on the will of the founder, and on the regulations which may be imposed by the visitors whom he has appointed. In Scotland and in America, the distinction between the college as the member and the university as the body has been lost sight of, and we consequently hear of the one and the other indiscriminately granting degrees, a function which in the English and in the original European view of the matter belonged
exclusively to the university. Where there is but one college in a university, as is the case in the universities of Scotland and most of those in America, the two bodies are of course identical, though the functions which they perform are different. In Germany there are no colleges in the English sense; and though the universities in that country perform precisely the same functions as in Scotland, the verbal confusion between the college and the university is avoided by the latter performing the functions of both in its own name, as two separate parts of its proper duties. In France the college has a meaning totally different from that from which we attach to it: it is a school, corresponding, however, more to the gymnasium of Germany than to the grammar-school of this country. All the colleges are placed under the University of France, to which the centralizing tendencies of that country have given a meaning which also differs widely from that which the term university bears in England. See University.

Collegia Pontificia (papal colleges), institutions for training Roman missionaries for service among "heretical" and pagan nations. The first was the German college at Rome, founded by Loyola in 1559. Greek, English, Hungarian, Maronite, and Thraco-Illyrian colleges were established by Gregory XIII. Scottish, English, and Irish colleges followed; and the institution of the Congregation de propaganda fide was succeeded by the erection of the colleges which bears the same title. More recently, an "American college" (1864) and a South American college have been established. See Propaganda.

Collegial or Collegiate Church: (1.) In the Roman Church, a church served by canons regular or secular. They originated in a desire to have mass conducted in towns which had no cathedral (q. v.), with greater pomp than could be had with one priest. Originally the canons dwelt in common in one college, but this was afterwards abandoned. See Canons. (2.) In England there are several collegiate churches, which are served by a dean and a body of canons. They differ from cathedrals in that the see of the bishop is at the latter. The service is or should be the same in both. They are under the jurisdiction of the bishop of the diocese in which they are situated, and he exercises visitatorial powers over them. (3.) Several of those connected in a loose association are called "collegiate" churches: e. g. a combination of several Reformed Protestant Dutch churches in New York is so styled.

Collegial or Collegiate System, a mode of exhibiting the relation of Church and State employed by Puffendorf and Pfaff in Protestant Germany. The churches were regarded as being, after Constantine's time, legal corporations (collegia lictoria), with rights to form their creeds, conduct their worship, choose their presiding officer, admit and expel members; to make and administer by-laws, correct such abuses as might creep in among them, call in the aid of the civil power if necessary, or in certain cases to leave the exercise of these rights to others. It was asserted that the rights originally belonging to the congregations, which had been in course of time usurped by the hierarchy, were restored to the congregations by the Reformation, and were left by the Reformed congregations to the civil authorities. According to this view, the civil authority would have a double power with regard to the Church: the power sacra, the right of superintendence and of patronage, which inheres in the secular authority, and the jus in sacris, the sum of the collegial rights in internal affairs of the Church, transferred to it (the secular government) as the representative of the congregations of the country. For some time this view was generally made use of by most of the Protestant state governments, but in modern times it has more or less given way in every country to a sounder conception of the relation between Church and State. —Wetzer u. Weize, Kirchen-Lex. ii, 667. See Church and State.

Collegiants, a party of the Remonstrants of Holland. It derived its name from the members calling their assemblies collegia. They rejected all creeds, all regular ministers, and all tests of communion and forms of ecclesiastical government. At an early period they were sometimes called Rhinseigers, because they met twice a year at Rhinsberg, a village near Leyden. The Collegiants were confined to Holland; but some of their practices are followed by other religious bodies in other countries, as by the Plymouth Brethren (q. v.) in England. —Moiseh, Church History, cent. xvii, pt. ii, ch. vii.

Collegiate Church. See College or Corporate Church.

Collier, Jeremy, an English non-juror, was born Sept. 23, 1650, at Stow-with-Quy, Cambridgeshire. He passed M. A. at Caius College, Cambridge, in 1676, and obtained the living of Ampton, Sussex, which he resigned for the lecturership of Gray's Inn, 1685. At the Revolution of 1688 he not only refused the oaths, but was active in behalf of the deposed monarch. In 1696 he was arrested. At last he turned his talents to better ends, and made war on the licentiousness of the theatre. His first work on this subject was A Short View of the Immorality and Profaneness of the Stage. (Lond. 1698, 3d ed. 1800). The wits in vain opposed him, and after a ten years' struggle, in which he wrote other books and pamphlets on the subject, he accomplished his object. The rest of his life was spent in various literary labors. He was consecrated a nonjuring bishop by Dr. Hicks in 1713, and died April 26, 1726. Collier was a man of eminent abilities, but of small reasoning faculty. Besides the books above named, he wrote Essays on Moral Subjects (Lond. 1709). History of the English Language, 2d ed. (Lond. 1763). His Life of Collier (prefixed to his Ec. History of England, 4 vols. 1730), with additions (Lond. 1701-27, 4 vols. fol.), besides numerous controversial tracts. —Macaulay, Hist. of England, iii, 963; Life of Collier (prefixed to his Ec. History of England, 4 vols. 1730). Eccles. Biography, iv, 187; Biographia Britannica, iv, 12.

Collier, Joseph Avery, a minister of the Reformed Protestant Dutch Church, was born at Plymouth, Mass., Oct. 26, 1828, graduated at Rutgers College, New Brunswick, N. J., July, 1849, and at the theological seminary of the Reformed Dutch Church in that city, July, 1852. Died at Kingston, N. Y., August, 1864. He was a clear, methodical, persuasive, and eloquent preacher. His literary attainments were unusually large, and entirely consecrated to his ministry. As a preacher to children and the young men he is entitled to the first rank. His publications were the following: The right Way, or the Gospel applied to the Intercourse of Individuals and Nations (a prize essay on Peace, Am. Tract Society, N. Y., 1854, of which over ten thousand copies have been circulated). —The Christian Homestead, or Religion in the Family (prize essay, Presbyterait Board, Phila. 1859). —The Young Man of the Bible (Am. Tract Soc. N. Y. 1861). —Little Crowns, and how to Coin them (N. Y., 1864; reprinted in England.) —Pleasant Paths for Right Feet (Am. Tract Soc. N. Y. 1864). —The Dam of Heaven, or the Principles of the heavenly Life applied to the earthly, a posthumous work, to which is prefixed a brief and just biographical sketch by his brother, Rev. Ezra W. Collier (N. Y. 1866).

Collier, William, a Baptist minister, was born in Scituate, Mass., Oct. 11, 1771. He graduated at Brown University in 1800, studied divinity under president Maxey, and was licensed to preach in 1798. In 1799 he was ordained at Boston as minister at large,
but soon went as pastor to Newport, spent one year there, and as pastor of the First Baptist Church, New York. In 1836 he became pastor of the Baptist church in Charlestown, Mass., where he remained sixteen years, a faithful and successful minister. In 1820, his health failing, he resigned his charge, and removed to Boston, where he remained during the rest of his life, doing service as minister at large. He was a pioneer of the temperance reform, and from 1830 to 1856 was editor of the National Temperance Advocate, the first temperance paper. He died March 19, 1848. Among his literary labors were a Hymn-book, a series of Sermons from living Ministers (begun in 1827), editions of Saurin and of Andrew Fuller, and several occasional Sermons. —Sprague, Anna's, vi, 375.

Collins, Anthony, an English Deist, was born at Histon, near Huntingdon, in 1676, and was educated at Eton and King's College, Cambridge. Being a man of property, he spent his life chiefly in literary pursuits. He died in 1729. His infidel principles brought him into collision with Bentley, Chandler, and many others. His chief works are: Discourse on the Grounds and Reasons of the Christ-in-Religion (Lond. 1737, 8vo); — An Answer to the Proof of Miracles (Lond. 1710, 8vo); — Discourse on Free-Thinking (1713); — Essay on the Thirty-Nine Articles, in reply to Bennet (Lond. 1724, 8vo), besides various pamphlets. In 1715 he published his Philosophical Inquiry concerning Liberty and Necessity, which was reprinted in 1717 in 8vo, with corrections, and is appended to the second edition of Maizena's Advancement of Learning (1720). Dr. Samuel Clarke replied to the necessary doctrine of Collins chiefly by insisting on its inexpen- diency, considered as destructive of moral responsibility. Bentley's Remarks upon a late Discourse of Free-thinking (given in Randolph's Enchiridion Theologicum, vol vi) is a sharp and sarcastic, but fully adequate reply to the objections, and the arguments of the absentee. See Land, Deistical Writers, ch. vi; Farrar, Critical History of Free Thought.

Collins, John, a Methodist Episcopal minister, was born in New Jersey in 1769. In 1808 he removed to Ohio, and entered the itinerant ministry in 1807. He was one of the pioneers of Methodism in the West. In 1804, while yet a local preacher, he preached the first Methodist sermon ever preached to a dozen persons, in an upper room. With a brief interval, he labored as an itinerant until 1836, when he became superannuated. He died Aug. 21, 1845. He was an able and faithful preacher, often impressively eloquent, and eminently successful as an evangelist. Revivals of religious interest were often produced by his preaching. An instructive sketch of his life, from the pen of Justice M'Lean, was published in 1850 (Cincinnati, 18mo). — Minutes of Conferences, iii, 630; Meth. Quart. Revew, 1860, p. 824.

Collins, John A., a distinguished Methodist Episcopal minister, was born near Seaford, Del., 1801. His parents removed to Ohio in 1805, and to Georgetown, D. C., in 1812, and his academic education was obtained at the latter place. Giving early promise of talent, he was placed as a law student in the office of William Wirt; but the plan of his life was changed by his conversion at a camp-meeting in Loudoun Co., Va., in 1820. He joined the Methodist Episcopal Church, and in 1826 was licensed as a local preacher. In 1830 he entered the Hinerati ministry in the Baltimore Conference, and his great talent as a preacher soon gained him a commanding reputation. He filled all the prominent appointments in his Conference as pastor, and served several terms as presiding elder. In 1886 he was elected assistant editor of the Christian Advocate at New York. This office he soon resigned, partly on account of the climate, and partly on account of the health of his family, but mainly because he believed he could better serve the Church in the more regular duties of the ministry. Few men in any period of the history of the Methodist Episcopal Church have more successfully fully preached her doctrines, or more faithfully defended her discipline. He was elected to the General Conference as soon as he was eligible, and to every subsequent one down to the last, when he led the delegation. He had pre-eminent pulpit power. His sermons were marked with great clearness of thought, apt and scriptural illustrations, and were delivered with elegance of speech, and often with an eloquence, earnestness, and power that were overwhelming. He was a debater on the floor of the General or Annual Conference he had few equals, certainly no superior. He died of pneumonia, after a short illness, May 7, 1857. —Minutes of Conferences, 1856, p. 16.

Collins, Judson Dwight, superintendent of the Methodist Episcopal missions in China, was born in Wayne County, N. Y., Feb. 12, 1822. He removed with his parents to Michigan in 1831, was converted in 1836, graduated at Michigan University 1845, entered the itinerant ministry in the Michigan Conference, and was appointed teacher in the Wesleyan Seminary at Albion in the same year. He was sent as missionary to China and superintendent in 1847, returned with impaired health in 1851, and died May 18, 1852. In his later years he wrote a number of clear and vigorous, more solid than brilliant, and more logical than eloquent. “Years before the Church established the China mission, and while prosecuting his collegiate studies, he pursued a course of reading on China, preparatory to a whole life of missionary labor among its bright and gifted people. He was a man of morose habits, until it was actually surrounded by their darkness and misery. No temporary impulse led him thither, no transient fervent feelings urged him to a life of toil in that distant land; but a permanent conviction of duty possessed his mind, one great idea of supreme service to Christ controlled his whole existence, and carried all his thoughts, all his affections, all his impulses, to that extensive territory of heathenism, and his martyr-like attachments to his work were only lessened by death.” —Minutes of Conferences, 1852, p. 113; Sprague, Anna's, vi, 831.

Collins, Wellington H., a Methodist Episcopal minister, was born May, 1816, in Wolcott, Wayne County, N. Y.; removed with his parents to Michigan in 1829, 1839, 1849, 1859, 1869, 1879, 1887 under the presiding elder, and entered the Michigan Conference in 1888. The Conference then included all of Michigan and Northern-western Ohio. After twenty years' service as a stationed minister and seven years as presiding elder, he died at Detroit, Aug. 11, 1858. — Minutes of Conferences, 1858, p. 834. An instructive sketch of his life, from the pen of Justice M'Lean, was published in 1850 (Cincinnati, 18mo). — Minutes of Conferences, iii, 630; Meth. Quart. Review, 1860, p. 824.

Collin, Daniel George Conrad Von, was born Dec. 21, 1788, at Oeringhausen, in the principality of Lippe-Detmold, where his father was minister. His family were of Moravian origin. He studied at Detmold, Marburg, Tbingen (under Flatt and Schnurrer), and finally in Göttingen. In 1816 he became professor extraordinarius of Theology at Marburg, and in 1817, at the Reformation college he became the professor of theology. In 1818 he received a double call, one from Heidelberg to the philosophical, the other from Breslau to the theological faculty. He accepted the latter. His academic discourses, embracing exegetical and historical theology, attracted the more gifted among the students. Besides his chemical writings (De Jodii prophetae statu [Marb. 1811], Spicilegium observationum exegetico-criticarum ad Zephaniae vaticinium [Vratisl. 1818], Memoriae professorum theolog. Marburg. Philippo Magnanimo regnante [Vratisl. 1837], Confessi-
COLLOPS

Cologne

omen Melanchthonis et Zwingli Augustanarum copiae;
graviora inter se conferentur [Wratil, 1880]), and many valuable articles in journals, two books particularly have made his name universally known. First, his revision of the first volume, and the first part of the second, in the third edition of Münsscher's Christsiche Dogmengeschichte (Cassel, 1882 and 1884). This edition formed an epoch in the History of Dogmas. But his principal book is the Biblica Theologie (2 vols. Leipzig, 1888, ed. by Schultz), which for a long time, especially in its Old Testament part, was considered as a standard work by his science. He died on the 17th of February, 1883. In theology he was a moderate Rationalist. See a sketch of him by Schulz in the above-mentioned Bibl. Theologie, vol. 1—Hertzog, Real-Encyklop., xix, 880.

Collopyridian, a sect of heretics which arose towards the close of the fourth century, so named from a small city in Asia Minor (Pyrgi, collyrie- do) which they offered to the Virgin Mary with libations and sacrifices. They were chiefly Arabian women, who rendered divine honors to the Virgin Mary as a goddess. It is conjectured by Neander that the cake-offering was a transfer of the oblations of the Lord's Supper to the worship of the Virgin, the whole taking the shape of a pagan ceremony; the truth probably being that the corruption was introduced from the pagan worship of Ceres, and that the customary bread-offerings at the heavenly feast of the harvest, in honor of Ceres, had been changed for such offerings in honor of the Virgin. See Ephiphanus, Harr. 78; Mosheim, Church History, i, 317; Neander, Church History (Torrey's transl.), ii, 339.

Colman, an Irish missionary of the 7th century. Colman was the third ecclesiastic who by royal authority had been called from Ireland to preside over the see of Lindisfarne, in North Britain. During his and his predecessors' superintendence, the churches in that country which had been devastated by Penda, the last Pagan king, were restored, and were enjoying great temporal and spiritual prosperity. But about A.D. 662, the Anglo-Saxon clergy, who had deserted these churches in the hour of danger, wished to return and to share them at least with the Irish and Irish of their own jurisdiction. Their move as if to be reconstructed by Augustine, and of that the Scoto-Irish, were found to be so dissimilar in doctrine and usage that they could not conduct worship in the same edifices. The differences were numerous; among them were the question of the Three Chapters (q. v.), the tonsure, and the time of keeping Easter. An appeal to the pope was useless, for long before he had put forth his decision; but the Irish Church and those of Iona had not complied with it. Oswy, the king, required the whole to be presented to him for adjustment. The discussion was in Irish and Anglo-Saxon, by Colman and Wilfred, the venerable G Gda, bishop of the East Angles, acting as interpreter. When the arguments had ended, the king and a majority of the assembly decided for Wilfred and the Anglo-Catholics (see Bede, lib. iii. c. 29). This decision, however, was far from effecting peace. The dominant party soon became intolerant, and refused the clergy of Colman to be bound; that their churches, previous to the performance of Catholic worship, "should be sprinkled with exorcised water (Usher, vol. vi. p. 274); and also that they should observe many new rites and usages to which they had been entire strangers. To all of these, like the Welsh Christians before them, Colman and the most of his clergy refused to submit, and quietly relinquished in North Britain the churches which they had built or had restored, and in which they had successfully preached for nearly seventy years. Colman now returned to Ireland, taking with him all his own countrymen and thirty-six ecclesiastics or students who adhered to his teaching. For the latter he established on the island of Muck, long known as "Mayo of the English," to which Bede says many flocked from England, that they might "gain knowledge and lead a holy life." But, notwithstanding his success in his new enterprise, he could not recover himself from his former defeat; he went abroad, traveled on the Continent, visited the East, and died about A.D. 679. See Bede, Hist. Eccl., iv, 4; Moore, History of Ireland (Am. ed.), Philad., 1843.

Colman, Benjamin, D.D., an eminent Congressional minister, was born in Boston, Oct. 19, 1678. He graduated at Harvard 1692, and sailed for London 1695, but on the voyage was taken by a French vessel and carried to France. After remaining in England some three years, he was called to take charge of Brattle Street Church, Boston. He accepted, and was ordained, May 1699, in London, July 29, 1747. He was made D.D. by the University of Glasgow, 1731. Dr. Colman published a Poem on Elijah's Translation, occasioned by the Death of Rev. Samuel Willard (1707); The Incomprehensibleness of God, in four Sermons (1715); Five Sermons from Luke xi, 21, 29 (1727); Observations on an Essay of Mr. Locke (1730); A Treatise on Family Worship (1750); A Dissertation on the Image of God wherein Man was created (1786); and a large number of occasional sermons.—Sprague, Annals, i, 228.

Cologne, a celebrated city on the Rhine, the seat of an early bishopric. The legend that a disciple of the apostle Peter, by the name of Maternus, was the founder and first bishop of the church of Cologne, is now generally believed even by learned Catholic writers. Maternus, the first (historical) bishop of Cologne, is mentioned as early as 218 (Man, Collect. Concil. t. ii, fol. 486). The successor of Maternus, Euphrates, attended in 347 the Synod of Sardica, and was one of the delegates of this synod to the Emperor Constantius. The acts of a Synod of Cologne of 346, which state that Euphrates was deposed for being an Ariam, are now generally regarded as spurious. In 623-668 we find Canibert mentioned as archbishop of Cologne (Retberg, Kirchengesch. Deutschlands. ii, 605); yet it does not appear to have been at the time a regular archbishopric. Brabantius, a bishop of Cologne, was consecrated after that date, and Bonifacius (q. v.) in 748 subjected it to the metropolitical of Mayence, from which it was probably detached under Charlemagne, between 794 and 799, in order to be raised to the dignity of an archbishopric. A national synod was held at Cologne in 874, to regulate the administration of the goods of the church, and to consecrate the cathedral. The importance this see had obtained in the 10th century is proved by the fact that the Emperor Otto I gave it to his brother Bruno I, the first archbishop who was at the same time a prince of the German Empire. Popes and emperors vied in increasing the wealth and power of the archbishop of Cologne, and synods held at that place declared him to have the right of precedence over all other clergy, the papal legates a latere alone excepted. About the middle of the 12th century, the archbishops of Cologne were elevated to the rank of electors. Prominent among the archbishops of this see, two who died were Bruno II, who abducted the young em- peror Henry IV, and Rainald, count of Dossel, an able general of the Emperor Frederick I, who patronized the anti-popes, and brought from Milan to Cologne the pretended bodies of the "three holy kings," which up to this day are venerated as the most precious relics of Cologne. The political troubles of the 13th and 14th centuries diminished the power of the archbish-opic, but it rose again under Conrad von Hochstaden.
COLOMBIA, UNITED STATES OF 414

COLONNA

(1238–1261). But, while outwardly prospering, the see was inwardly weakened by the relaxation of the clergy, which became so great that complaint was made to Pope Alexander IV, by whose direction Gonsalvo de Carbonell was called to Colonna for the purpose of reforming abuses (Hartbach, Concil. Germ. iii, p. 588 sq.). In 1266 (according to others, 1271 or 1272) another council was held against the violators of the rules of discipline. After the Reformation of the 16th century, two archbishops of Cologne, Herman V, count of Wied, and Gaffgen II, turns Protestants, and were on that account deposed. After that, the see was held for 178 years without interruption (until 1761) by Bavarian princes. Joseph Clement (+1728), who was elected in 1688, was not even ordained a priest until 1706. Clement Augustus (1723–1761) was at the same time bishop of Mainz, Paderborn, Hildesheim, and Osnabrück. Maximilian Frederick (1761–1764) founded the Academy of Bonn. Maximilien Francis, archduke of Austria (1784–1801), changed the Academy of Bonn into a university, and supported his brother, Emperor Joseph II, in his ecclesiastical reforms (see EMAS, CONVIVAS op.). His successor, Anthony Victor, archduke of Tuscany, and as in 1802, the dominions of the archbishop were secularized, and divided among other princes. The electorate of Cologne at that time had about 2,545 English sq. miles, and 280,000 inhabitants. But the diocese of Cologne was much more extensive than the electorate. Even to this day, being a Free City, the church was subject only to the spiritual, not to the temporal rule of the archbishops who resided at Bonn. At the time of the Reformation the diocese had about 800 parishes, divided into 22 deanseries; in the 18th century the number of parishes was about 1,800 (a map of the diocese is given in Spitzer's Histor. Atlas, No. 11). After the reorganization of Germany by the Vienna Congress, Cologne, now belonging to Prussia, was reconstituted an archbishopric by a bull of July 16, 1811, with the suffragan bishops of Treves, Münster, and Paderborn. The diocese of Cologne had, in 1867, 44 deanseries, about 650 parishes, and a population of about 1,900,000. The first archbishop, Ferdinand Joseph, count Spiegel (1824–1835), was a man of moderate principles, and a patron of the Heserians (q.v.). His successor, Clement Augustus Drost von Vilschyr (1835–1845), had a violent controversy with the Prussian government on the subject of marriages between Protestants and Catholics. He resigned in 1837, and set free in 1840 only on condition that he resigned the administration of the diocese into the hands of a coadjutor. Joannes von Geisell, who succeeded him in 1845, was a cardinal in 1850, and died in 1864. He was succeeded by Paul Melchers, who was the incumbent in 1867. See GERMANY and PRUSSIA.

Of the councils of Cologne, besides those already mentioned, the most important were: (1) in 1290, called by the Archbishop Sifridus (Sifro), in which eighteen canons of discipline were drawn up; (2) in 1536, by Herman, on discipline, the duties of bishops, offices of the clergy, etc.; (3) in 1540, by Adolphus, the canonicate, and several statutes were made for the reformation of the church. The restoration of learning was recommended as one of the means of accomplishing this end.—Wetter u. Weiße, Kirchen-Lex. ii, 673; Retberg, Kirchen-Gesch. Deutschlands (Gott. 1846); Friedrich, Kirchen-Gesch. der Stadt Köln; Bintzler & Moor, Die alte und neue Erzbisch. Köln (4 vols. Mayence, 1828); Mering u. Reichert, Die Bischofs- u. Erzbisch. von Köln (Cologne, 1848); Ersch u. Gruber, s. v. (vol. xviii, 176 sq.; here a complete list of the bishops and archbishops of Cologne is given); London, Mensch und Staat, 4th ed., p. 198, note 4; Herzog, Real-Encyklop. ii, 792.

Colonna, De (Colonna), the name of an ancient princely family in Italy, which was famous for many centuries, and especially during the Middle Ages, for the numerous popes who were connected with the Roman Church, and for the prominent influence which it exercised upon the election of the popes and the government of the papal states. In the quarrels between the popes and the emperors, the Colonnas mostly sided with the emperors. Boniface VIII being employed by the popes to fetch to the Lateran that the descendants of the princes John III and Otto Xvii were declared by him to be "irregular" until the fourth generation. According to some ecclesiastic
tical writers, Pope Alexander III (according to others Gregory IX) declared all the members of the family, for all time to come, incapable of holding any ecclesiastic office. The authenticity of this decree is doubtful, for it was never issued, it soon fell into disuse, for there is no other family which counts so large a number of cardinals among its members as the Colonnas. Only one of the family ascended the papal chair under the name of Martin V (q. v.); in general, public opinion in Rome was so much opposed to the election of a Colonna that there was a mad rush to elect a Neo Cister, nec Gallus, nec Colonna erat papa (Neither a brother [of the deceased pope], nor a Frenchman, nor a Colonna, must be elected pope). A great many of the cardinals of this family were known for their fighting propensities; and as late as 1527 the Cardinal Pompey Colonna expelled Pope Clement VII from Rome, who on that account deposed him from his ecclesiastical dignity, and pronounced the ban against him. He was, however, restored to all his dignities in 1529. But very few of the Colonnas published any theologica

Colonna, Giovanni, born at the beginning of the 18th century. He entered the Dominican order; was in 1288 provincial of his order in Tuscany; became in 1285 archbishop of Massa, and was archbishop of Nicosia, in Cyprus. The latter see he resigned in 1288, on account of political disturbances in Cyprus. He died between 1280 and 1290. He wrote Liber de viris illustribus ethicos et Christianis (published in 1720, with notes by B. Zonellii). A number of other works (as Mare historiarm, Epistola ad diversos, De gloriosis, De heraldica, De Sanctorum, etc.) were never printed. See Wesser u. Welte, Kirchen-Lex. ii, 679 sq.

Colony (colonia, from the Lat. colonia), a distinction applied to the city of Philippi, in Macedonia (Acts xvi, 12). After the battle of Actium, Augustus assigned to his veterans those parts of Italy which had espoused the cause of Antony, and transported many of the expelled inhabitants to Macedonia, by which means the towns of Philippi, Durraschium, etc., acquired the right of Roman colonies (Dio Cass. xxi. 460). Accordingly, we find Philippus described as a "colonia" both in inscriptions and upon the coins of Augustus (Orelli, Inscr. 652, 8658, 8746, 4064; Rasche, vol. viii, pt. ii. p. 1260). See Philippi. Such towns possessed the jus coloniariae (Plin. Nat. Hist. iv, 1), i. e. some rights of Roman citizenship, viz., the right of voting in the complete, in a free municipal constitution, such as was customary in Italy, in exemption from personal and land taxes, and in the commerce of the soil, or the right of selling the land. Originally and properly a colony was a body of Roman citizens sent out as volunteers (Livy, x, 21) to possess a commonwealth, with the approbation of their own state (Servius, ad Exod. i, 12). The old Roman colonies were thus in the nature of garrisons planted in conquered towns, having a portion of the conquered territory (usually a third part) assigned to them, while the native inhabitants retained the rest, and lived together with the new settlers (Dionysius, l. v., 41; 14) as Roman colonists, of course, remained Roman citizens in the fullest sense. The original natives, however, and their descendants, did not become Roman citizens by having a colony planted among them, unless it was conferred, either at the time or subsequently, by a special act of the Roman people, senate, or emperor. Their exact relation in this respect it is somewhat difficult to determine in the absence of such a specific act, as the jus Italicum, readily and often conferred upon provincial cities, and which now would be more likely to obtain than colonial cities, conferred only the above rights upon the community, without making the individual inhabitants Roman citizens. See CIVILIZATION.
tract the restricted application of our green; when applied to grass, it means specifically the young, fresh grass (N², de'shā, Psa. xxxvii, 2) which springs up in the desert (Job xxxix, 8). Elsewhere it describes the sickly yellowish hue of mildewed corn (Deut. xxviii, 22; 1 Kings vii, 37; 2 Chron. vi, 28; Amos iv, 9; Hag. ii, 17); and, lastly, it is used for the entire absence of color produced by fear (Jer. xxx, 6; comp. ch. xxviii, Hom. I. x, 876); hence to be colorless (Rev. vi, 8) describes the ghastly, livid hue of death. In other passages “green” is erroneously used in the A.V. for white (Gen. xxx, 87; Esth. i, 6), young (Lev. ii, 14; xxii, 14), moist (Judg. vii, 7, 8), sappy (Job viii, 16), and unripe (Cant. ii, 19). Thus it may be said that green is the color in the Bible to convey the impression of proper color. See GREEN.

The only fundamental color of which the Hebrews appear to have had a clear conception was red; and even this is not very often noticed. They had, therefore, no scientific knowledge of colors, and we cannot but think that the attempt to explain such passages as Rev. iv, 3, by the rules of philosophical truth must fail (see Hengstenberg, Comm. in loc.). Instead of assuming that the emerald represents green, the jasper yellow, and the sardine red, the idea intended to be conveyed by these images may be simply that of pure, brilliant, transparent light. The emerald, for instance, was compared with the transparent body of water in its glistering, scintillating qualities (αἰγυτός, Orpheus, De loc. p. 608), whence, perhaps, it derived its name (σπαραγός, from μαραγόνος). The jasper is characterized by John himself (Rev. xxi, 11) as being crystal-clear (ἑρακλινός), and not as having a certain hue. The sardine may be compared with the amber of Ezek. i, 4, 27, or the burnished brass of Dan. x, 6, or, again, the fine brass, “as if burning in a furnace,” of Rev. i, 15, each conveying the impression of the color of fire in a state of pure incandescence. Similarly the beryl, or, rather, the chrysolite (the Hebrew tawshish) may be selected by Daniel (x, 6) on account of its transparency. An exception may be made, perhaps, in regard to the sapphire, in as far as its hue answers to the deep blue of the firmament (Exod. xxiv, 10; compare Ezek. i, 26; x, 1), but even in this case the pelliculity (τετράπλος, i.e. omitted in A. V., Exod. xxiv, 10) or polish of the stone (comp. Lam. iv, 7) forms an important, if not the main, element in the comparison. The highest development of color in the mind of the Hebrew evidently was light, and hence the predominance given to white and black (representative of light and darkness). This feeling appears both in the more numerous allusions to it than to any other color—in the variety of terms by which they discriminated the shades from a pale, dull tint (τυφλός, ke'vet, blackish, Lev. xiii, 21 sq.) up to the most brilliant splendor (τόια, so'har, Ezek. viii, 2; Dan. xii, 8)—and in the comparisons by which they sought to heighten their ideas of it, an instance of which occurs in the three accounts of the Transfiguration, where the council and robes are described as like “the sun” and “white light” and “white” (“as succeeding white as snow” (Mark ix, 5), “glistening” (Luke ix, 29). Snow is used eleven times in a similar way, the sun five times, wool four times, milk once. In some instances the point of the comparison is not so obvious, e.g. in Job xxxviii, 14, “they stand as a garment” in reference to the white dress of the Hebrews, and in Psa. lxxvi, 13, where the glorious sun of the Eastern plumage suggested an image of the brilliant effect of the white holiday costume. Next to white, black, or rather dark, holds the most prominent place, not only as its opposite, but also as representing the complexion of the Orientals. There were various shades of it, including the color of the Nile water (exceed its name Sihor)—the red/sch tint of early dawn, to which the

complexion of the bride is likened (Cant. vi, 10), as well as the lardic hue produced by a flight of locusts (Joel ii, 2) — and the darkness of blackness itself (Lam. iv, 8). As before, we have various heightening images, such as the tents of Kedar, a flock of goats, the raven (Cant. i, 5; iv, 17; v, 11), and so on. (Rev. vi, 12). Red was another color of which the Hebrews had a vivid conception; this may be attributed partly to the prevalence of that color in the outward aspect of the countries and peoples with which they were familiar, as attested by the name Edom, and by the words a'dom (earth) and edom (man), so termed either as being formed by the light of the red earth, or in comparison with the fair color of the Assyrians and the black of the Ethiopians. Red was regarded as an element of personal beauty: comp. I Sam. xxxvi, 12; Cant. i, 11, where the lily is the red one for which Syria was famed (Psal. xi, 11); Cant. iv, 3; vi, 7, where the complexion is compared to the red fruit of the pomegranate; and Lam. iv, 7, where the hue of the skin is redder than coral (A. V. "rubies") contrasting with the white of the garments before noticed. The three colors, white, black, and red, were sometimes internalized in animals, and gave rise to the terms הָּשָּׁן, ta'shan, 'dappled (A. V. "white"), probably white and red (Judg. v, 10); נָּשָּׁן, nashan, ringstreaked, either with white bands on the legs, or white-footed; מָעָּשָּׁן, ma'ashan, speckled, and מָעָּשָּׁן, ma'ashen, spotted, white and black; and lastly נָּשָּׁן, na'shan, píebald (A. V. "grizzled"), the spots being larger than in the two former (Gen. xxx, 32, 85; xxxi, 10): the latter term is used of a horse (Zech. vi, 8, 6) with a symbolic meaning: Hengstenberg (Christol. in loc.) considers the color itself to be meaningless, and that the prophet has added the term strong (A. V. "bay") by way of explanation; Hitzig (Comm. in loc.) explains it, in a peculiar manner, of the complexion of the Egyptians. It remains for us now to notice the various terms applied to these three colors (See each of the above words in its place).

1. White. The most common term is שָּׁן, na'shan, which is applied to such objects as milk (Gen. xlix, 12), manna (Exod. xvi, 31), snow (Isa. i, 18), horses (Zech. i, 8), raiment (Eccles. i, 8), and a cognate word expresses the color of the moon (Isa. xxxvi, 22). נָּשָּׁן, ta'shan, dressing white, is applied to the complexion (Cant. v, 10); נָשָּׁן, na'shan, a term of a later age, to snow (Dan. vii, 9 only), and to the paleness of shame (Isa. xxxix, 22, מָעָּשָּׁן); מָעָּשָּׁן, ma'ashan, to the hair alone. Another class of terms arises from the textures of a naturally white color, as וַעֲשָּׁן, sa'ashan, and וַעֲשָּׁה, bu'ta. These words appear to have been originally of foreign origin, but were connected by the Hebrews with roots in their own language descriptive of a white color (Genesius, Theaur. p. 130, 1890). The terms were without doubt primarily applied to the material; but the idea of color is also prominent, particularly in the description of the curtains of the tabernacle (Exod. xxxvi, 1), and the priests' vestments (Exod. xxviii, 6). Sa'ashan is also applied to white marble (Eccles. i, 6; Cant. v, 15); and a cognate word, מָעָּשָּׁד, ma'ashahd, to the lily (Cant. ii, 16). In addition to these we meet with מָשָׁן, chér (יוֹשָּׁשְו, Esth. i, 8; viii, 15, and בְּשָּׁן, k'trapsa (ękta'pasto; A. V. "green," Esth. i, 6), also descriptive of white textures.

White was the symbolical of innocence; hence the rai-

ment of angels (Mark xvi, 5; John xx, 12), and of glorified saints (Rev. xix, 8, 14), is so described. It was also symbolical of joy (Excc. ix, 8); and, lastly, of victory (Zech. vi, 8; Rev. vi, 2). In the Revela-

tions (vi, 2) the term שָּׁן is applied exclusively to what belongs to Jesus Christ (Wordsworth's Apoc. p. 106). See WHIT.
2. **Black.** The shades of this color are expressed in the terms ὄμος, skakhor, applied to the hair (Lev. xiii, 81; Cant. v, 11); the complexion (Cant. i, 11), particularly when affected with disease (Job xxx, 80); horses (Zech. vi, 2, 6; ἄλογον, chum, lit. scorched (προκιοῦ), A. V. "brown," Gen. xxx, 92), applied to sheep; the word expresses the color produced by influence of the sun's rays: κατάρα, καθάρα, lit. to be dirty, applied to a complexion blackened by sorrow or disease (Job xxx, 80); mourners' robes (Jer. viii, 21; xiv, 2; Mal. iii, 14; Zech. vi, 2; see Flaturach, Periel. 38; Mishna, Midrash, 8; comp. veseta fuscus, Apollon. Matt. lii, p. 110, 5; Herod. ii, 316; Plin. xvi, 45; Plin. vii, 219; Reinigau, s.v. Helmiat 1726); a clouded sky (1 Kings xviii, 45); night (Mic. iii, 6; Jer. iv, 28; Joel ii, 10; iii, 15); a turbid brook (whence possibly Kadros), particularly when rendered so by melted snow (Job vi, 15). Black, as being the opposite to white, is symbolical of evil (Zech. vi, 2, 6; Rev. vi, 5). See **BLACK**.

3. **Γάντζος, adom,** is applied to blood (2 Kings iii, 22); a garland sprinkled with blood (Isa. xliii, 2); a sheifer (Num. xix, 2); pottage made of lentils (Gen. xxxviii, 30); a horse (Zech. i, 8; vi, 2); wine (Prov. xxiii, 31); the complexion (Gen. xxxv, 25; Cant. v, 10; Lam. iv, 7). Πνίγω, ad Damascus, is a slight degree of red, reddish, and is applied to a leprose spot (Lev. xix, 23; xiv, 37). Πνίγω, sarox, lit. fox-colored, bay, is applied to a horse (A. V. "speckled"); x. i, 8); and to a species of vine bearing a purple grape (Isa. ii, 2; xvi, 8); the translation bay" in Zech. vii, 5; A. V. is incorrect. The corresponding term in Greek is ἐρυθρός, lit. red as fire. This color was symbolical of blood-bath (Zech. vi, 2; Rev. vi, 4; xii, 3). See **RED**.

II. Artificial Colors.—The art of extracting dyes, and of applying them to various textures, appears to have been known at a very early period. We read of scarlet thread at the time of Sarah's birth (Gen. xxvii, 26); of blue-dyed purple at the time of the Exodus (Exod. xxvi, 1). There is, however, no evidence to show that the Jews themselves were at that period acquainted with the art; the profession of the dyer is not noticed in the Bible, though it is referred to in the Talmud. They were probably indebted both to the Egyptians and to the Phenicians for the lattier for the dyes, and to the former for the mode of applying them. The purple dyes which they chiefly used were extracted by the Phenicians (Ezek. xxvii, 16; Pin. ix, 60), and in certain districts of Asia Minor (Hom. ii, 141), especially Tydratra (Acts xvi, 14). It does not appear that those particular colors were used in Egypt, the Egyptian colors being produced from various metallic and earthy substances (Wilkinson, Anc. Egypt. ii, 301). On the other hand, there was a remarkable similarity in the mode of dying in Egypt and Palestine, inasmuch as the other color was applied to the raw material previous to the processes of spinning and weaving (Exod. xxvii, 26; xxxix, 8; Wilkinson, iii, 125). The dyes consisted of purpurs, light and dark (the latter being the "blue" of the A. V.), and crimson (A. V. "scarlet"); vermilion was introduced at a late period.

1. **Purple** (μέλανος, argaman; Chald. form, ἀργομέλανος, ἀργομέλανος, Dan. v, 7, 16; ἄργος: ποπώρου: parpworth). This color was obtained from the secretion of a species of shell-fish (Palm. ix, 60), the *Murex trunculus* of Linnaeus, which was found in various parts of the Mediterranean. See particularly κορίνθαι ἁλός (1 Macc. iv, 29), particularly the coastal of Calabria (Strab. viii, 75). Africa (Strab. viii, 883) Lacoonia (Hor. Od. ii, 18, 7), and Asia Minor. See Elis. The derivation of the Hebrew name is uncertain; it has been connected with the Sanscrit *rgama*, "tinged with red;" and again with arghamena, "costly" (Bid., Comment. 2 Dan. v, 7). Gesenius, however (Theur. p. 193), considers it highly improbable that a color so peculiar to the shores of the Mediterranean should be described by a word of any other than Shemitic origin, and connects it with the root * spécifique, ragum*, to keep up or overlay with color. The coloring matter was contained in a small vessel in the throat of the fish; and as the quantity amounted to only a single drop in each fish, the value of the fish was determined proportionately high; sometimes, however, the whole fish was crushed (Plin. ix, 60). It is difficult to state with precision the tint described under the Hebrew name. The Greek equivalent was, we know, applied, with great latitude, not only to all colors extracted from the shell-fish, but even to other brilliant colors; thus, the purple upper garment (γαλαγεία μορφώματος) of John xix, 2: the crimson cloak (ὑλαλείμειον) of Matt. xxvii, 28 (comp. Plin. ix, 62). The same may be said of the Latin *purpura*. The Hebrew term seems to be applied in a similarly broad sense in Cant. vii, 5, where it either = black (comp. v, 11) or, still better, shining with oil. Generally speaking, however, the tint must be considered as having been defined by the distinction between the purple proper and the other purple dyes (A. V. "blue"), which was produced from another species of shell-fish. The latter was undoubtedly a dark violet tint, while the former had a light reddish tint. The purple of a light tint was worn by kings (Judg. viii, 26), and by the highest officers, civil and religious; thus Mordecai (Esth. viii, 10), Daniel (A. V. "scarlet"); Dan. vii, 16, 29, and Andronicus, the deputy of Antiochus (2 Macc. iv, 58), were invested with purple in token of the offices they held (comp. Xen. Anab. i, 5, 9); so also Jonathan, as high-priest (1 Macc. x, 20, 64; xi, 66). They were also worn by the wealthy and luxurious (Jer. x, 9; Ezek. xxviii, 17: Luka xvi, 19; Rev. xvii, 4; xviii, 16). A similar value was attached to purple robes both by the Greeks (Hom. od. xiii, 225; Herod. ix, 27; Strab. iv, 648) and by the Romans (Virg. Georg. ii, 405; Hor. Ep. ii, 21; Suet. Cez. 43; Nero, 22). Of the use of this and the other dyes in the textures of the tabernacle, we shall presently speak. See **PURPLE**.

2. **Blue** (μελαζωυη, tekel'ath; Sept. ιωκαλους, ιωκαλους, νουλαροφυς, Num. iv, 7; Vulg. hacilitius, hacilitius). This dye was procured from a species of shell-fish found on the coast of Phenicia, and called by the Hebrews Chitelon (Targ. Pseudo-Jon. in Deut. xxxiii, 10), and by modern naturalists Βάλτικον. The Hebrew term, however, is derived, according to Hitzig (Comment. in Ezek. xxiii, 6), from **kalil**, in the sense of dull, blunted, as opposed to the brilliant hue of the proper purple. The tint is best explained by the statements of Josephus (Ant. iii, 7, 7) and Philo that it was emblematic of the sky, in which case it represents not the light blue of our northern climates, but the deep azure of the eastern sky (Opp. i, 556). The term adopted by the Sept. is applied by classical writers to a color approaching: to black (Hom. od. vi, 231; xxiii, 158; Theoc. Id. 10, 28); the flower, whence the name was borrowed, being, as is well known, not the modern *hyacinth*, but of a dusky red color *carnation* (Virg. Georg. iv, 183; coloria raminus hacilitius, Colum. i, 4, 4). The A. V. has rightly described the tint in Esth. i, 6 (margin) as violet; the ordinary term blue is incorrect; the Lutheran translation is still more incorrect in giving it geile Seide (yellow silk), and occasionally simply blue. Βάλτικον (Ezek. xxvi, 2), used by the Sept. was properly the purple. Princes and nobles (Ezek. xxvi, 6; Esdr. iv, 4), and the idols of Babylon (Jer. x, 9), were clothed in robes of this tint; the rhabd and the fringe of the Hebrew dress was ordered to be of this color (Num. xv, 35); it was used in the tapestries of the Persians (Esth. i, 6). The effect of the color is well described in Ezek. xxiii, 12, where
COLOR

418

such robes are termed Ἱλικρίνης, Ῥώμας, robes of perfection, i.e. gorgeous robes. We may remark, in conclusion, that the Sept. treats the term τῆς ἱππίας, tach ἅρα (A. V. "badger") as indicative of color, and has translated it ταξίνωμος, hydrocynthia (Exod. xxv, 5). See BLUE.

8. SCARLET (Crimson, Isa. i, 18; Jer. iv, 90). The terms by which this color is expressed in Hebrew vary: sometimes רדד, "shani," is simply used, as in Gen. xxxviii, 28-30; sometimes רדד אָנַף, רדד אָנַף, tola at, shani, as in Exod. xxv, 4, and sometimes רדד אָנַף, tola at, simply, as in Isa. i, 16. The word רדד, carmin (A. V. "crimson"); "2 Chron. ii, 7, 14; iii, 14) was introduced at a late period, probably from Armenia, to express the same color. The first of these terms (derived from רדד אָנַף, tola at, to shine) expresses the brilliancy of the thread, רדד אָנַף, tola at, the worm, or grube, which the dye was procured, and which gave name to the color occasionally without any addition, just as κερία is derived from κερί, a lamp.

The Sept. generally renders it κόκκινον, occasionally with the addition of such terms as κακοξύλος (Exod. xxvi, 1), or δικακοξύλος (Exod. xxvi, 8); the Vulgate has it generally cocceus, cocceus tenebraculus (Rom. xvi, 8), apparently following the erroneous interpretation of Aquila and Symmachus, who render it βιβλασφόν, double-dyed (Exod. xxv, 4), as though from רדד אָנַף, to repeat. The process of doubling-dyed was, however, peculiar to the Tyrian purples (Plin. ix, 39). The dye was produced from an insect, somewhat resembling the cochineal, which is found in considerable quantities in Armenia and other Eastern countries. The Arabian name of the insect is κερνής (whence crimson); the Linnéan name is Coccus viaticus. It frequents the boughs of a species of ilex: on these it lays its eggs in groups, which become covered with a kind of down, so that they present the appearance of vegetable gall or excrescences from the tree itself, and are described as such by Pliny, iv, 12. The dye is procured from the female grub alone, which, when alive, is about the size of a kernel of wheat, and is covered with a bluish mould (Parrot's Journey to Armenia, p. 114). The genus and species of the color are described by the Hebrew term γαλακτίνων, camultas (Isa. lix, 1-13), lit. sheep, and hence dazzling (compare the expression γαλακτίνω 
vii, 11), and in the Greek λαμπρά (Luke xxiii, 11), compared with κόκκινον (Matth. xxv, 28). The tin produced was crimson rather than scarlet. The only natural object to which it is applied in Scripture is the lir, which are compared to a scarlet thread (Cant. iv, 3). Josephus considered it as symbolical of fire (Ant. iii, 7, 7; comp. Philo, i, 536). Scarlet threads were selected as distinguishing marks from their brilliancy (Gen. xxxviii, 28; Josh. ii, 18, 21), and hence the color is expressive of what is excessive or glorious (Isa. i, 10). Scarlet robes were worn by the luxurious (2 Sam. viii, 14; ii, 11; Jer. iv, 90; Rev. xvii, 4; xviii, 12, 16); it was also the appropriate hue of a warrior's dress from its similarity to blood (Nah. ii, 8; comp. Isa. iv, 5), and was especially worn by officers in the Roman army (Pinn. xxii, 2; Matth. xxvi, 28). See SCARLET.

The three colors above described, purple, blue, and scarlet, together with white, were employed in the textures used for the curtains of the tabernacle, and for the sacred vestments of the priests. The four were used in combination in the outer curtains, the veil, the entrance curtain (Exod. xxvi, 1, 31, 36), and the gate of the court (Exod. xxvii, 10), as also in the high priest's ephod, sash, and breastplate (Exod. xxvii, 6, 8, 18). The first three, to the exclusion of white, were used in the pomegranates about the hem of the high-priest's robe (Exod. xxviii, 38). The loops of the curtains (Exod. xxvi, 4), the lace of the high-priest's breastplate, the robe of the ephod, and the lace on his mitre, were exclusively of blue (Exod. xxviii, 28, 31, 37). Cloths for wrapping the sacred vessels were either blue (Num. iv, 6), scarlet (9), or purple (18). Scarlet thread was specified in connection with the rites of cleansing the leper (Lev. xiv, 4, 5, 51), and of burning; the red heifer (Num. xix, 6), apparently for the purpose of binding the hysop to the cedar wood. The hangings for the court (Exod. xxvii, 9; xxviii, 9), the hangings, curtains, and tresses of the priests were white (Exod. xxix, 27, 28). The application of these colors to the service of the tabernacle has led writers both in ancient and modern times to attach some symbolic meaning to them (see Philo and Josephus, s. sup.). The subject has been followed up with a great variety of interpretations, more or less probable, see Krause, De orac. sacro, Vit. 1707; Creuzer, Symbolik, i, 125 sq.; Bahr, Symbolik, i, 385 sq.; Friederich, Symbol. d. Mose. Sittigkeiten, Lpz. 1841; Wind. u. Krit. 1844, ii, 815 sq.). Without entering into a discussion on this subject, we will remark that it is unnecessary to assume that the colors were originally selected with such a view; their beauty and costliness is a sufficient explanation of the selection. See CRIMSON.

4. VERMILION (而现在, shahar); Sept. μαλαχ; Vulg. sinopia). This was a pigment used in fresco-paintings, either for drawing figures of idols on the walls of temples (Ezek. xxiii, 14), for coloring the idols themselves (Wisd. xiii, 14), or for decorating the walls and beams of houses (Jer. xxii, 14). The Greek term μαλαχ is applied both to minium, red lead, and rubricina, red ochre; the Latin sinopia describes the best kind of ochres, which came from Sinope. Vermilion was a favorite color among the Assyrians (Ezek. xxiii, 14), as is still attested by the sculptures of Ninevah and Khorsabad (Layard, ii, 908). See VERMILION.

III. Hebrew Symbolical Signification of Colors. — Throughout antiquity color occupied an important place in the symbology both of sentiment and of worship. Of the analogies on which these symbolic meanings were founded, some lie on the surface, while others are more recondite. Thus white was everywhere the symbol of purity and the emblem of innocence; hence it was the dress of the high-priest on the day of atonement, his holy dress (Lev. xvi, 4, 8); the angels, as Job xxii, 13, 4; Joel iii, 17, wore white clothing (Mark xvi, 5); John xx, 12, and the bride, the Lamb's wife, was arrayed in white, which is explained as emblematical of the ἐνθαμματος τῶν ἐγγίων (Rev. xix, 8). White was also the sign of festivity (Ecccl. i, 8; comp. the ἡσταύρα of Horace, Sat. ii, 2, 6) and of triumph (Zech. xvi, 8; see Krause, De color. N. T. loc. in.). As the light-color (comp. Matth. xxi, 2, etc.) white was also the symbol of glory and majesty (Dan. vii, 9; comp. Psa. civ. 2; Ecccl. ix, 8 sq.; Dan. xii, 6 sq.; Matth. xxviii, 3; John xxi, 12; Acts x, 80). As the opposite of white, blax was the emblem of mourning, affliction, calamity (Lam. iv, 17; Lam. iv, 8; v, 10; comp. the atrament and toga pulchra of Cicero, in Varro, xvi, 13); it was also the sign of humiliation (Mal. iii, 14) and the omen of rain (Zech. vi, 2; Rev. vi, 5). Red indicated, poetically, bloodshed and war (Nah. ii, 4 [A. V. 8]; Zech. vi, 2; Rev. vi, 4). Green was the emblem of freshness, vigor, and prosperity (Psa. xxxi, 15; iii, 10; 16; 71, 19; 104, 15; 105, 10). Blue, or leu-

leon, was the symbol of revelation; it was pre-eminent-
dominant in the Mosaic ceremonial; and it was the color prescribed for the ribbon of the fringe in the border of the garment of every Israelite, that as they looked on it they might remember all the commandments of Jehovah (Num. xv, 38, 39). With purple, as the dress of kings, were associated ideas of royalty and majesty (Judg. viii, 26; Esth. viii, 15; Cant. iii, 10; vi, 5; Dan. v, 2; comp. Odylyas, A. of the gabbul, purpurum of the Jupiter Capitolinus at Rome, purpurae vestis of Phæbus [Ovid, Metam. ii, 1, 23], the χλαμάδος πορφύρας of the Diocleti [Pausan. iv, 27], the πορφυρώνγυρος of the Byzantines, etc.). Crim- son and scarlet, from their resemblance to blood (pro- bably), become, in the symbolism of life, the color of the slain; as crimson was a crime, a sinner, the road which Rahab was to bind on her window as a sign that she was to be saved alive when Jericho was destroyed (Josh. ii, 18; vi, 25), and it was crimson which the priest was to use as a means of restoring those who had contracted defilement by touching a dead body (Num. xix, 5-22). From its intensity and fixedness this color is also used to symbolize what is Indelible or deeply engrained (Isa. i, 18). The colors chiefly used in the Mosaic ritual were white, hyacinth (blue), purple, and crimson. It is a superficial view which concludes that these were used merely from their brilliancy (Braun, De Vitr. Sta. Hdb.; Bähr, Sym. d. Mosa. Col.); see further below.

COLORS, CHRISTIAN SYMBOLISM OF. Colors are made use of in religious symbolism among the Jews, and in several branches of the Christian Church. Specific directions were given in the O.T. for the colors to be used in building of the tabernacle and the making of the dress for the Jewish priests. Colors are also introduced in giving moral or spiritual lessons, and in describing scenes in revelation, as in Isa. i, 18, in the description of the Transfiguration, and often in the imagery of the Apocalypse. See article above.

Very early in the history of Christianity the symbolism of colors was introduced in the ritualism and the art of the Church. In the Greek Church this symbolism has been worked out to such a degree of minuteness that little or no discrimination in the use of colors is allowed to the painter. In the Roman Church somewhat more latitude is allowed to the artist. Five colors are recognized as having a theological meaning or expression: White, Red, Green, Violet, and Black.

I. White is the most often referred to in the Scriptures. As the union of all the rays of light, it is the symbol of truth and spotless purity. It is applied to:

1. God the Father, the source and essence of immutable truth. In Daniel (vii, 9) the Ancient of Days has garments white as snow, with his hair like pure wool. The manna in the wilderness, being white, has been considered as the emblem of the Word of God. (2) Christ, at the Transfiguration, appeared in garments "white as the light" (Matt. xvii, 2; Mark ix, 3). As the Great Judge, he will be seated on a great white throne (Rev. x, 7). In works of art, when Christ appears as the Lord of truth among the doctors of the law, he is represented in white garments. (3) The angels are never represented in the Scriptures as clothed otherwise than in white— as at the sepulchre of Christ (Matt. xxviii, 9), at the Ascension (Acts i, 10). (4) The saints in glory shall walk in white (Rev. iii, 4) shall be arrayed in white (iv, 4; vii, 9; xv, 6, and xix, 8, where the fine linen, clean and white, is the right- cousness of the saints), and they shall receive a white stone (ii, 17). (5) The priests, at the consecration of the Temple, were "arrayed in white linen" (2 Chron. v, 2). In church ceremonies the priest of the Christian Church wore white garments while performing offices. In their Roman Church white is yet retained for the alb, the cope, the amice, etc., and in the entire priestly garments on the festivals of the Nativity, Epiphany, Easter, etc. In the Church of England the white surplice of the Roman Church is retained. It is the same as the albc, except that the sleeves are broad and full. (6) The catechumenus formerly were dressed in white for one week from their baptism, and white is yet usually the dress worn by girls in their confirmation.

II. Red is a symbol of fire and of glowing love. It was used in the dress of the Jewish priesthood. It is usually adopted largely in painting Christ performing his miracles or the labors of love, students of giving to his disciples the mission to carry into the world the fire of his word (Luke xii, 49). On the famous standard or labarum of Constantine, the monogram of Christ rested on a purple cloth. Bede says that at his time the holy sepulchre was painted white and red. Some angels have been painted with red wings (perhaps from the word seraph—plenteous of love). The priestly vestments in the Roman Church are red on Whit-Sunday and on days of the martyrs. The Ambrosian rite prescribes red during the consecration of the host, and the Ambrosian and Lyonnese rites during the festival of the Circumcision. The red dress of the cardinals is professedly intended to remind them constantly the love and passion of the Saviour. The pope wears red on Good Friday. The Greek priests wear red ornaments during funeral services.

The red spoken of above is always scarlet. Crimson red is appointed for certain days in certain rites of the Roman Church.

III. Green, from its analogy to the vegetable world, indicates life and hope, especially in the future life and in the coming of our Lord. The perpetual youth of angels is often indicated by painting them in garments of green. The saints, and especially John the Evangelist, were often represented in green by painters and sculptors (who often colored their works). The tree of life in Paradise is painted green. An old tradition has it that a twig of the tree of life was transplanted, and produced the tree from which the cross of Christ was made! John the Baptist and the Virgin Mary are often represented in mantles of green. Branches of cypress, laurel, and other evergreens are often placed in the coffins or over the graves of the dead, as emblems of the hope in a future life. The Roman Church directs the priests to wear green from the Epiphany to Sexagesima Sunday, and from the third after Easter to Advent. The Ambrosian rite orders the cloth that covers the host to be green.

IV. Violet. Violet colored the color of mourning and sorrow. The Roman Church orders it to be worn during all times of penance. In painting, this color is often applied to John the Baptist, who preached repentance; to the Virgin Mary, as the mother of grief; and to the angels, who are sent to call men to repentance.

V. Blue is forbidden by the Roman Church, but it is sometimes used as the color peculiarly appropriate to the Virgin Mary.

VI. Black is the universal representative of sorrow, destruction, and death, and is considered only appropriate on mourning occasions. It was also appointed in one of the later reforms of the Benedictine order of monks as the favor of that order. The students of the universities of Oxford and Cambridge thus were given the black gown, which they wear yet. This gown was adopted by the Reformed Church of England as the dress of ministers, who were all students of the universities, and thus it passed over to the Protestant Episcopal Church of America, and so has come into the color of clerical dress to all Protestant churches.

Kreuser, Bilderbuch (Paderborn, 1865); Martigny, Dictionnaire des Antiquités Chrétienennes (Paris, 1865); Palmer, Antiquities of the English Ritual; Partier Messen- buch (1766); Jamieson, Sacred and Legendary Art, i, 36 sq.

Colossæ (Kolossai, Col. 1, 2); but the preponderance of MS. authority is in favor of Kolossai, Co-
Colossians, a form used by the Byzantine writers, and which perhaps represents the provincial mode of pronouncing the name. On coins and inscriptions (see Eckhel, Diet. Num. i. 614, 647), and in the New Testament (see Valcken. ad Hier. vii, 30), we find Κολοσσαί, a city of Phrygia Pacatiana, in the upper part of the basin of the Maeander, on one of its affluents named the Lycore. Hierapolis and Laodicea were in its immediate neighborhood (Col. ii, 1; iv, 13, 15; see Rev. x, 11; iii, 14); but these other cities as the name suggests were in importance. At a later date they were all overshadowed by an earthquake. Herodotus (vii, 30) and Xenophon (Anax. i, 2, 6) speak of it as a city of considerable importance (comp. Pliny, v, 29). Strabo (vii, 536) describes it as only a πόλις, not a πόλις; yet elsewhere (p. 884) he implies that it was of mercantile importance; and Pliny, in Paul's time, describes it (v, 41) as one of the "celeberrima oppida" of its district. Colossae was situated close to the great road which led from Ephesus to the Ephruses. Hence our impulse would be to conclude that Paul passed this way; and founded or confirmed the Colossian Church, on his missionary journey (Acts xxvii, 20; xix, 1). He might also have easily visited Colossae during this prolonged stay at Ephesus, which immediately followed. The most competent commentators, however, a tree in thinking that Col. ii, 1, proves that Paul had never been there when the epistle was written (but see the note on Col. ii, 1). The argument of Theodore's that the apostle had visited Colossae on the journey just referred to, because he is said to have gone through the whole region of Phrygia, may be proved fallacious from geographical considerations; Colossae, though ethnologically in Phrygia (Herod. l. c.; Xen. l. c.), was at this period politically in the province of Asia (see Rev. i, 11). That the apostle hoped to visit the place on being delivered from his Roman imprisonment is clear from Philonem 22 (compare Phil. i, 24). Philemon and his slave Onesimus were dwellers in Colossae. So also were Archippus and Epaphras. From Col. i, 7; iv, 12, it has been naturally concluded that the latter Christian was the founder of the Colossian Church (see Alford's Prolegomena to Gr. Test. iii, 35). See EPHPHAS. The worship of angels mentioned by the apostle (Col. ii, 18) curiously reappears in Christian times in connection with one of the topographical features of the place. A tradition of the change in the celestial element was erected at the entrance of a chasm in consequence of a legend connected with an inundation (Harley's Researches in Greece, p. 52); and there is good reason for identifying this chasm with one which is mentioned by Herodotus. This kind of superstition is mentioned by Theodoret as subsisting in his time; also by the Byzantine writer Nicias Choniat, who was a native of this place, and says that Colossae and Chone were the same (Ciren. p. 115). The probability is that under the later emperors, Colossae, being in a ruinous state, made way for a more modern town, Chone (Χόινος, so Theophylact, ad Col. ii, 1), situated near it. The town was mentioned by Mr. Arundel (Seven Churches, p. 156; Asia Minor, ii, 160); but Mr. Hamilton was the first to determine the actual site of the ancient city, which appears to be at some little distance from the modern village of Chonias (Researches in Asia Minor, i, 507). The hame range of Mount Cadmus rises immediately behind the village, close to which there is in the mountain an immense periclinal scarp, affording an outlet for a wide mountain torrent. The ruins of an old castellum stand on the summit of the rock forming the left side of this chasm. There are some traces of ruins and fragments of stone in the neighborhood, but barely more than sufficient to attract the attention of an ancient site (Pockock, East, iii, 114; Schubert, Reise, i, 282; see generally Hofmann, Introdc. in edition. p. 563 col. Lips. 1749; Cellarius Notit. ii, 102 sq.; Munster, 'Geogr. VI, i, 127 sq.; Smith, Dict. of Class. Geogr. a. v.'). See COLOSSIANS (EPHESIUS TO THE). 

Colossians, Epistle to the, the seventh of the Pauline epistles in the New Testament. (See Davidson's Introduction to the N. T. ii, 394 sq.) See Epistle.

I. Authorship.—That this epistle is the genuine production of the apostle Paul is profoundly satisfying evidence, and has never, indeed, been seriously called in question. The external testimonies (Just. M. Trypho, p. 811 b; Theoph. ad Autol. ii, p. 100, ed. Col. 1686; Irenæus, Hœr. iii, 14, 1; Clem. Alex. Strom. i, p. 225; iv, 256; l, ed. Potter; Tertull. de Præscr. ch. 7; de Remov. ch. 23; Origen, contra Cel. v, 31, 5; Tertull. ad Præscr. ch. 10) are incontestable, and the internal, founded on the style, balance of sentences, positions of adverbs, uses of the relative pronoun, participial anacolutha, unusually strong and well defined. It is not right to suppose the fact that Mayerhoff (Der Brief an die Kol. Berlin 1889) and Baur (Der Apostel Paulus, i, 417) have deliberately rejected this epistle from claiming to be a production of the apostle Paul. The first of these critics, however, has been briefly, but, as it would seem, completely answered by Meyer ('Koment. p. 7); and to the second, in his subjective and anti-historical attempt to make individual writings of the N. T. mere theosophical productions of a later Gnosticism, the very character and critical result of the matter yield but little credence (see Räber, De Christologia Paulinae, etc. Vratisl. 1852; Köpper, Der ursprüngliche Epiph. an die Ephesiers und Colossianen, Geyrho. 1853). It is, indeed, remarkable that the strongly-marked peculiarity of style, the nerve and force of the arguments, and the originality that appears in every paragraph, should not have made these writings noticeable in their own system, and not been seriously attacked on this epistle (see Trephelles, in Horne's Introduction new ed. vol. iii).

II. It is less certain, however, when and where it was composed. The common opinion is that Paul wrote it at Rome during his imprisonment in that city (Acts xxvii, 16, 30). Erasmus, followed by others, supposes that Ephesus was the place at which it was composed; but this suggestion is obviously untenable from its incompatibility with the allusions contained in the epistle itself to the state of trouble and imprisonment in which the apostle was whilst composing it (i, 24; iv, 10, 18). In Germany, the opinions of theologians have changed; the change has been divided between two hypotheses and one proposed by Schulz in the Theologische Studien und Kritiken for 1829 (p. 612 sq.), viz., that this epistle, with those to the Ephesians and Philemon, was written during the apostle's two years' imprisonment at Caesarea previous to his being sent to Rome. This opinion has been adopted by Smend, by Schött, Röttger, and Wiggers, whilst it has been opposed by Neander, Steiger, Harless, Rücker, Credner, and others. In a more recent number of the same periodical, however, the whole question has been subjected to a new investigation by Dr. Wiggers, who comes to the conclusion that, of the facts above appealed to, neither new nor further explored hypothesis (Stud. u. Krit. 1841, p. 456). The above opinion that this epistle and those to the Ephesians and to Philemon were written during the apostle's imprisonment at Caesarea (Acts xxvi, 27–xxvii, 32), has been recently advocated by several writers of ability, and stated with such cogency and clearness by Wiggers ('Einleitung. a. Epiph. i, 15, sq.), as to deserve some consideration. It will be found, however, to rest on ingenious, argument.
as such as to harmonize admirably with the freedom in this respect which our present epistle represents to have been accorded both to the apostle and his companions (see chap. iv. 11, and comp. De Wette, loc. cit. Coloss. p. 12, 18; Wieseler, Chronol. p. 420). Further, the foundation of this opinion is taken away by the fact that the imprisonment of Paul at Caesarea was not so long as commonly supposed. See Paul. It is most likely, therefore, that it was written during Paul's first imprisonment at Rome, probably in the spring of A.D. 57, and apparently soon after the letters from the apostle, written from that time, which contains numerous and striking coincidences. In support of this date the following facts may be adduced: Timothy was with Paul at the time (chap. i. 1; comp. Phil. ii. 19); Epaphroditus (Epaphras) had lately come from Asia Minor (i. 4, 7, 8; comp. Phil. ii. 25; iv. 10), and was now with Paul (iv. 2); Paul was in prison, and had been preaching in his confinement (iv. 3, 18; see Acts xxviii. 30, 31); various friends were at this time with him (iv. 7-14); these had therefore had time to gather about him, and it was not a reason of danger; Tychicus (on his second journey) and Onesimus accompanied the letter (iv. 7, 8; and subscriptions in Eph. iv. 21; Phil. iv. 22); from this last circumstance, it would appear that the epistle could not have been written very early in his imprisonment; as the letter to Philomen (doubtless written not long after) speaks confidently of a speedy release (see Connors and Howson's Life and Epistles of St. Paul, ii. 394).

The striking similarity between many portions of this epistle and of that to the Ephesians has given rise to much speculation, both as to the reason of this studied similarity, and as to the priority of order in respect to composition. These points cannot here be discussed at length, but it must be briefly dismissed with the simple expression of an opinion that the similarity may reasonably be accounted for, (1) by the proximity in time at which the two epistles were written; (2) by the high probability that in two cities of Asia, within a moderate distance from one another, there would be many doctrinal prejudices, and many social relations, that would call forth and need precisely the same language of warning and exhortation. The priority in composition must remain a matter for a reasonable difference of opinion." See Ephesians and Philemon (Epistle to).

III. Design.—The Epistle to the Colossians was written by Paul through Epaphras concerning the internal state of their church (i. 6-8). Whether the apostle had ever himself before this time visited Colossae is matter of uncertainty and dispute. From chap. ii. 1, where he says, "I would that ye knew what great conflict I have for you and for them at Laodicea, and for as many as have not seen my face in the flesh, etc.", it has by some been very confidently concluded that he had not. It has been urged, however, that when, in ver. 5, the apostle says, "though I am absent in the flesh, yet am I with you in the spirit," etc., his language is strongly indicative of an active presence of himself among the Colossians, for the aπαντάνακτος is used properly only of such absence as arises from the person's having gone away from the place of which his absence is predicated. In support of the same view have been adduced Paul's having twice visited and gone through Phrygia (Acts xvi. 6; xviii. 23), in which Colossae was; the church of Laodicea; the close dealings with so many of the Colossian Christians, Epaphras, Archippus, Philemon (who was one of his own converts, Phil. 18, 19), and Apphia, probably the wife of Philemon; his apparent acquaintance with Onesimus, the slave of Philemon, so that he recognised him again at Rome; the cordiality of friendship and interchange of love between the apostle and the Colossians as a body (Col. i. 24, 25; ii. 1; iv. 7, etc.); the apostle's familiar acquaintance with their state and relations (i. 6; ii. 6, 7, etc.); and their knowledge of so many of his companions, and especially of Timothy, whose name the apostle associates with his own at the commencement of the epistle. In this circumstance which was weighty of consideration from this, that Timothy was the last companion of Paul during his first tour through Phrygia, when probably the Gospel was first preached at Colossae. Of these considerations it must be allowed that the cumulative force is very strong in favor of the opinion that the Christians at Colossae had been privileged to enjoy the personal ministrations of Paul. At the same time, if the Colossians and Laodiceans are not to be included among those of whom Paul says they had not seen his face, it seems unaccountable that in writing to the Colossians he should have referred to this class at all. If, moreover, he had visited the Colossians, was it not strange that he should have no deeper feeling towards them than he had for the multitudes of Christians scattered over the world whose faces he had never seen? In fine, as it is quite possible that Paul may have been twice in Phrygia without being once in Colossae, is it not easy also to account for his interest in the church at Colossae, his knowledge of their affairs, and his acquaintance with those members of that church that had frequently visited him in different places, though he had never visited Colossae? See Laodiceans (Epistle to).

A great part of this epistle is directed against certain false teachers who had crept into the church at Colossae (see Rheinwald, De pseudo doctoribus Colossensis, Bonnæ, 1834). To what class these teachers belonged has not been fully determined. Heinrichs (Nov. Test. Kopfian. VII. ii. 156) contends that they were disciples of John the Baptist. Michaelis and Storr, with more show of reason, conclude that they were Essenes. Others, taking the Epistle as a branch of the Magian philosophy, of which the outlines are furnished by Iamblichus. But the best opinion seems to be that of Neander (Planting and Training, 1. 374 sq.), by whom they are represented as a party of speculatists who endeavored to combine the doctrines of Oriental theosophy and asceticism with Christian common sense, and promised thereby to their disciples a deeper insight into the spiritual world, and a fuller approximation to heavenly purity and intelligence than simple Christianity could yield. (See below.) Against this party the apostle argues by reminding the Colossians that in Jesus Christ, as set before them in the Gospel, there is one who appeareth that he was the image of the invisible God; that he was before all, that by him all things consist; that they were complete in him, and that he would present them to God holy, unblamable, and unreprouvably, provided they continued steadfast in the faith. He then shows that the prescriptions of a mere carnal asceticism are not worthy of being submitted to by Christians, and concludes by directing their attention to the elevated principles which should regulate the conscience and conduct of such, and the duties of social and domestic life to which these would prompt. (See Journ. Soc. Lit. vol. iii. 266.)

What these dangerous tendencies therefore were that had appeared in the doctrine and practice of the Colossian Church we discover more particularly from three specifications: 1. A pretentious philosophy, which affected an esoteric knowledge, received through tradition, and which, isolating Christ the Head, indulged in minute and minute distinctions within the nature of the spiritual beings with which the invisible world is peopled (Col. ii. 8, 18). 2. The observance, if not the asserted obligation (for this does not appear), of Jewish ordinances (Col. ii. 16, 20-22). 3. The practice of ascetic regulations (Col. ii. 23). A question arises here as to whether they were united in the same party or individual? At first sight they seem mutually to exclude each other. The phar-
tsaic Judaizers exhibited no proneness either to a speculative gnosis or to asceticism; the Gnostic aceticas, on the other hand, were usually opposed to a rigid ceremonialism. It is so improbable, however, that in a small community like that of Colossae, three distinct parties should have existed, that we are driven to the conclusion that the corrupt tendencies in question did really exist in combination in the same persons; and the difficulty will perhaps be alleviated if we bear in mind that in the apostolic age two classes of Judaizing teachers, equally opposed to the simplicity of the apostolic message, though in different ways, busied themselves in sowing tares among the wheat in the visible Church. The former consisted of the rigid formalists, chiefly Pharisees, who occupy so prominent a place in the apostolic epistles; the latter the Presbyter and Paul’s epistles, and who contended for the continued obligation of the law of Moses upon Gentile converts; the latter were speculative adherents of the Alexandrian school, whose principle it was to subordinate the letter to the spirit, or rather to treat the former as a mere shell, which the initiated were at liberty to cast away as useless, or to be used as the vessel. With this false spiritualism was usually combined an element of Oriental theosophy, with its doctrine of the essential evil of matter, and the ascetic practices by which it was supposed that the soul is to be emancipated from the material thraldom under which it at present labors. On these bases, the gnostic gnostics, the Jews in general of that age were notoriously addicted; in the pastoral epistles (see 1 Tim. i, 4) we again meet this idle form of speculation. That persons imbued with these various notions should, on becoming Christians, attempt an amalgamation of them with their new faith is but natural; and the ill-assorted union seems to have given birth to the Gnosticism of a subsequent age, with its monstrous tenets, the product of an unbridled imagination. Teachers then, or perhaps a single teacher (Col. ii, 16), of this cast of Judaizers had effected an entrance into the Colossian Church, and seems to have there experienced a favorable reception. In a Gentile community like this, pharisaic Judaism could not so easily have gained a footing; but the mixture of mystical speculation and ascetic discipline, which distinguished the section of the Alexandrian school alluded to, was just adapted to attract the unstable, especially in Phrygia, from time immemorial a region of a spirit of innovation, connected with the worship of Cybele, and of magical superstition. From this congenial soil, in a subsequent age, Montanism sprang; and, as Neander remarks (Apostolische Geschichte, i, 442), it is remarkable that in the 4th century the Council of Laodicea was compelled to prohibit a species of angel-worship, which appears to have maintained its ground in these regions (Can. 35). We must not, however, suppose that these tendencies had worked themselves out into a distinct system, or had brought forth the bitter practical fruits which were their natural consequence, and which, at a later period, distinguished the heresies allied to it in the pastoral epistles, and the Church of Corinth. The corrupt teaching was as yet in its bud. The apostle therefore recommends no harsh measures, such as excommunication: he treats the case as one rather of ignorance and inexperience; as that of erring but sincere Christians, not of active opponents; and seeks by gentle persuasion to win them back to their allegiance to Christ. See Gnosticism.

IV. CONTENTS.—Like the majority of Paul’s epistles, that to the Colossians consists of two main divisions, one of which contains the doctrinal, the other the practical matter.

After his usual salutation (chaps. i, 1-2), the apostle returns thanks to God for the faith of the Colossians, the spirit of love they had shown, and the progress which the Gospel had made among them as preached by Epaphras (i, 3-8). This leads him to pray with-out ceasing that they may be fruitful in good works, and especially thankful to the Father, who gave them their inheritance in his spirit; and translated them into the kingdom of his Son—his Son, the image of the invisible God, the first-born before every creature, the Creator of all things earthly and heavenly, the Head of the Church, He in whom all things subsist, and by whom all things have been reconciled to the eternal Father (i, 9-20). This reconciliation, the apostle reminds them, was exemplified in their own cases; they were once alienated, but now so reconciled as to be presented holy and blameless before God, if only they continued firm in the faith, and were not moved from the hope of which the Gospel was the source and origin (i, 21-24). Of this Gospel the apostle declares that he himself is the servant of Christ, the news of which he first brought to them, by which he was cast into the dust of the hosts of darkness (ii, 8, 15). Surely with such spiritual privileges they were not to be judged in the matter of mere ceremonial observances or beguiled into creature-worship. Christ was the head of the body; if they were truly united to him, what need was there of bodily anointing and the like?

In the latter half of the epistle the apostle enforces the practical duties flowing from these truths. The Colossians were, then, to mind things above—spiritual things, not carnal ordinances, for their life was hidden with Christ (iii, 1-4): they were to mortify their members and the evil principles in which they once walked; the old man was to be put off, and the new man put on, in which all are one in Christ (iii, 5-12). Furthermore, they were to give heed to special duties; they were to be forgiving and loving, as was Christ. In the consciousness of his allying word were they to sing; in his name were they to be thankful (iii, 13-17). Wives and husbands, parents and children, all were to perform their duties; servants were to be faithful, masters to be just (iii, 18-1 v).

In the last chapter the apostle gives further special precepts, strikingly similar to those given to his Ephesian converts. They were to pray for the apostle, and for his success in preaching the Gospel; they were to walk circumspectly, and to be ready to give a seasonable answer to all who questioned them (iv, 2-7). Tychicus, the bearer of the letter, and Onesimus would tell them all the state of the apostle (iv, 7-9): Aristarchus and others sent them friendly greetings (iv, 10-14). With an injunction to interchange his letter with that sent from Laodicea (iv, 16), a special message to Archippus (iv, 17), and an autograph salutation, this short but striking epistle comes to its close. See EPISTLE.

V. COMMENTARY.—The following are expressly on this Epistle (including, in some instances, one or more of the other Pauline letters), the most important being designated by an asterisk (*): Jerome, Comment. (in Opp. [Suppos. ii]); Chrysostom, Hom. (in Opp. ii, 368); Zuinglio, Annotationes (in Opp. iv, 512); Melanchthon, Enarrationes (Wittenb. 1559, 4to); Zanchius, Comment. (in Opp. vi); Musculus, Commentary. (Basel. 1565, fol.); Arnauld, Comment. (Morg. 1580, 8vo); Olevianus, Notes (Gen. 1580, 8vo); Grynewis, Expositio (Basel. 1585, 8vo); Rolloch, Commentary (Edinb. 1600, 8vo; Genev. 1602); also Locke (Lond. 1650, 4to); Cartwright, Commentary (Lond. 1655, 4to).
and other parts, preaching and calling upon all immediately to repent and believe in Christ. TheVen-
ereal and leprous diseases, which were common among
the Irish, came to North Brittain he founded a noble
monastery in Ireland, which, in the language of the Scots
'Irish,' was called Dairmacht, that is, the 'Field of
Oaks.'" Archbishops Usher, who studied the life of
this saint carefully, says "that, directly or indirectly,
Columba founded, or at least established, several
monasteries in Ireland." The bishop may have meant simply
Christian schools; for, like his prototype St. Patrick,
wherever he had built a church he founded a school.
With these early Irish Christians religion and learning
were twin sisters. But Columba is better known in
history as the Apostle of the Picts, or the Western
Isles. For in the 5th century the Irish colony in Allyn or North Britain, the chief-
tains of which were his own relatives, for the first
time he was brought into contact with the Picts,
who were then pagans. From that moment he
resolved to devote his life to their evangelization.
For this purpose, about A.D. 563, Columba formed a compa-
y of twelve, and embarked for Druide's Island, situated
west of Mull, in the country afterwards called
Scotland. Here he founded the monastery, or, more
properly, the great theological school known on the
Continent during the Dark Ages as 'The Western
School of St. Columba.' The government was whole-
ly within itself, presbyterial and republike, and
the abbot or head invariably to be a presbyter, and to be
chosen only by the inmasts. Having built his huts,
and left some of his men to till the ground for their
support, with a few attendants he set out to preach
to the Picts and the Highlanders on the north side of
the Grampian Ranges. At first he was sternly resisted by
the chieftain and his Druidic priest. At last, how-
ever, the king not only embraced Christianity, but
became active in spreading it among his people.
Columba and his companions afterwards set sail for
the Western and Orkney Islands, and founded several
churches and schools upon them. Having thus es-
ablished his mission beyond the Grampian Hills, he
returned to Iona and Allyn. For several years his
field of labour was very large, extending from the
Western Islands to the Lowland Picts, to the Irish
colony in Argyleshire, to the Angil-Saxons in Northumber-
land, and, lastly, to Ireland. Although nobly
episcopally ordained, he thus became the greatest
missionary bishop of his day. His last visit to Ireland
was one of peace, to adjust a political difference be-
tween two princes. On reaching Iona, "the isle of
his heart," as he usually called it, he was very feeble.
Finding that he was drawing near the close of life,
he was taken to a little eminence from which he
might see the holy settlement, and from which he invoked
God's blessing upon it. Having returned, he began
his favorite employment of transcribing the Scrip-
tures. That night, being led to the altar, he fell on
his knees and began to pray; soon, however, he was
discovered as resting against the railings in the
chapel. The brothredow, now gathering around him with
their lighted torches, began to weep and to crave his
last blessing. Recovering for a moment, and feebly
opening his eyes and smiling on all around, he attempted
to raise his hand to pronounce the blessing; but it im-
mediately fell. He then sank down in death, and
breathed his last about the 7th year of his
monastic life. Columba was no ordinary man. In person he
said to have been very comely—beautiful even to old age.
He was never idle. When not engaged in study,
prayer, or missionary duty, he employed himself in
transcribing the Holy Scriptures. When travelling he
was always solaced by the presence of his monks, whom he
called Colum na Cielle, or Colombille, Colum of the
Church. His mother, Ethena, was of the royal house of
Leinster. Before Columba went abroad on his mis-
ion he had travelled over Leinster, Connaught, Meath,
work till they had thanked God, the giver of bread.

His early biographers say that he was a powerful preacher, speaking the Irish and Latin with equal ease, and both with great fluency. His voice was tender, tremulous, musical, and sufficiently strong to be heard at a great distance. His soul was in his preaching, and was constantly manifesting itself through his words, tones, and gestures. He was a man of great power, and the vocabulary of the languages he had learned was a part of the atmosphere in which he lived. If he entered a boat, mounted a horse, administered medicine, or parted with a friend, in all these he acknowledged God, and asked his protection. He was not a Romanist—Romanism proper had not reached Ireland in his day. He was not a disputant, but lived as a silent religious truth that was not sustained by proof drawn from the Holy Scriptures (Proletia sacra Scriptura tramitum).—Adamnan, Life of Columba; Bede, Eccl. Hist. iii; 4; Moore, Hist. of Ireland, often; Pict. Hist. of England, i, 277; Montalembert, Monks of the West, vol. iii; Todd, Ancient Irish Church; Smith, Religion of Ancient Britain, p. 256; McLear, Christian Missions in the Middle Ages, London, 1863; Princeton Rev. Jan. 1867, p. 5.

Columbanus, a missionary of the sixth century, was born in Leinster, Ireland, about A.D. 543, and descended of a noble family of the province. His early life, from talents, position, and property, the world opened to him with unusual attractions, but he decided to enter the monastery of Banchor, in Ulster, then giving instruction to about one thousand students. Having formed a company of missionaries, Columbanus set out for France, and settled at the foot of the Vosges Mountains, among the wildest, poorest, and most uncultivated of all the Franks. Here he built huts. The daily routine of the fraternity was, in their cabins, reading, praying, and transcribing the Scriptures and other books; in the field, cultivating; the ground for their sustenance and to give to the poor; some went abroad, visiting the people, and inviting them to hear the Gospel. Their establishment, although generally called a monastery, was far more like one of our modern missionary stations. After a few years another was commenced at Fontaine—"The Springs"—which soon became a place of general resort, and which greatly enlarged the influence of their efforts, inasmuch as they continued for about twenty years, exerting the most benign influence on all the surrounding country; and through the wives and daughters of the semi-barbarous chieftains, Christianizing its political institutions.

The common people had followed these missions in great numbers, and Columbanus had long chafed the most of the ruling classes. At a royal festival a glass of wine was presented to him, which he dashed on the floor because it had been polluted by the touch of an adulterer" (Godwin's Ancient Gaul, p. 388). At another time four illegitimate children of Theuderic, or Thierry, the king, were placed before him to receive his blessing, which he refused, and pronounced them to be the offspring of sin. Upon this the famous Brunehilda vowed his destruction. When the soldiers came to disperse his establishment, he met them with intrepidity. But the monastery was broken up. The brotherhood now rallied around him, and were willing to die with him; but he advised them to go to Germany.

Columbanus went to Italy, where new troubles awaited him. Holding with the Irish Church in regard to the Three Chapters (q. v.) and the time of keeping Easter (q. v.), he learned that the Roman Church had condemned these views under severe penalties. He found, however, a protector in Theodolinda, the pious queen of the Lombards, who agreed with him about the Three Chapters. He had everywhere avowed his principles, and even addressed a letter to pope Boniface, in which he charged him and the General Council with departing from the faith of the apostles. He reminded ed him that in Rome and Italy there had been many disputes and dissensions, while in Ireland "there never had been a heretic or schismatic but that from the beginning they had held without wavering (inconcussa) the true catholic faith." Soon afterwards he retired to Bobbio, in the Apennines, where he founded his last monastery, and died prematurely about A.D. 615.

Columbanus was one of those men who cannot pass easily through revolutions. The subjects of his rebukes were generally shining marks—kings, queens, dukes, popes, and others in high places. By nature he was a poet; and the fragments of Irish poetry left by him are said by competent judges to have been imitated in Macpherson's Ossian. He has been almost overlooked by critics. The contrast with the Literary History of France are even extravagant in his praise. He left a treatise on Penitenence, from which it is evident that communion in both kinds was allowed in the Irish Church in his day. Of the works written by Columbanus are still extant: De octo vitiis principalibus, Pannoniae, Instructiones de officiis Christiani, and some letters and psalms. They have been published by N. Dufour, in Paris, 1577; (Louvain, 1592); (Paris, 1600); (Paris, 1626); (Gand, Bibl. veterum Patr. tom. xii. Columbanus' monastic rule has been published in Holsten-Brocke, Codex Regul, i, 166 sq. Biographies of Columbanus were written by his companion Jonas and by the monk Waalfrid Strabo, both of which are given by Malabri, Acta S. Brev. i, sect. vi; Welte, Kirch.-Les. ii, 700; Herzkog, Real-Encycl., ii, 789; Hefele, Gesch. der Einführung des Christ. in Süd-Deutsch. p. 292-298; Kottwitz, Diep. de Columbano (Leyd. 1809); Historie Lit. de la France, iii, 379-505; Usher, vi, 281; Livres des Hist. M. de l'Irlande, i, 226 (Dublin, 1829); Moore's Hist. of Ireland, p. 465 (Philadelphia); Neander, Light in Dark Places, p. 187.

Column (Lat. columna), a pillar to support a roof or other part of a building. It is most generally applied to ancient architecture, the columns of Gothic buildings being usually termed pillars. Still, distinction of terms is not universally observed. A column generally has a base, shaft, and capital. The proportions vary with the style of architecture, and the size and purpose of the building. It was frequently merely an architectural element in those palatial and cultivated ages. Those employed by the ancient Egyptians, Greeks, and Persians may be taken as the best and most classical examples of antiquity. See Pillar.

1. Egyptian columns may be classed in eight orders, as in the column, but the column, when, being drawn to the same scale, their respective dimensions are shown. For, though columns of the same order vary very much in different buildings, an average proportion may be assigned to them, which, indeed, is all that can be done in those of Greece, though they varied less than in Egyptian architecture. In point of antiquity, the first was certainly the square pillar; then the polygonal and round fluted column of the second order; and soon afterwards the third and fourth came into use. But the fourth and fifth, though used long before, were not common till the 18th dynasty, and the fourth assumed a larger size than any other, as at Karnak and Luxor. The square, square in Ptolemaic and Roman temples, dates at least as early as the 18th dynasty; as does the sixth, which is, in fact, the square pillar, with a figure attached, and the evident original of the Caryatid of Greece; but the seventh is limited to the age of the Ptolemies, and has an endless variety in its ornamentation and ornament of its capital. It was, however, quite Egyptian, and in no way indebted to Greek taste for its introduction. Of the same kind were the columns described by Athenaeus (v, 103), with circular capitals, set round with rose-like ornaments, or with flowers and interlaced leaves, some of which were made of the long tapering

The Persian style of columns (see Assyria; Jachin) greatly resembled the Ionic, having a circular and ornamental base, a fluted shaft, and a capital, consisting either of two half-formed animals (the horse-head or demi-bulls were the favorites) crosswise of the architrave, or of a complex pyramidal ornament surmounted by volutes (Fergusson's Nineveh and Assyria, p. 159 sq.). See Architecture.

Combes, François, a learned Dominican monk, was born in November, 1605, at Marmande, in the Department of Lot-et-Garonne, in France. He was educated by the Jesuits at Bordeaux, and in 1624 entered the Dominican order. After completing his theological studies, he was appointed professor of philosophy and theology in several houses of his order (in 1640 at Paris). But soon he withdrew from his professorship in order to devote all his time to literary labors, and, in particular, to the study and publication of the ancient writers of the Church. After publishing, in 1644, the works of Amphiloctius, bishop of Icomium, of Methodius and Andreas of Cypre (2 vols. fol., Greek and Latin, with notes), and in 1645 the Scholia of St. Maximus on Dionysiou, he attracted great attention by the publication of the Novum Auctarium Gracce-Latine Bibliothecae Patrum (Paris, 1646), which consists of an exegetical and a historical part. The former contains homilies and sermons of St. Asterius, bishop of Amasea, of St. Proclus, of St. Anastasius of Alexandria, and of several other Church fathers and writers. The second part contains a history of the Monothelites, which was not well received in Rome, and the writings of several Greek writers, ecclesiastical and secular. In 1655 he published the Chronography of the Byzantine writer Theophanes, which had been begun by the Dominican monk Goar, but was unfinished at his death. In order to encourage these literary labors, the French bishops, at a meeting in Paris in 1655, assigned to Combes an annual salary of 500 livres, which in the next year was increased to 800, and later to 1000 livres. In 1656 he published seven works of Chrysostom; in 1660 the acts of martyrs of the Greek Church (Illustration Christi Martyrum Lecti Triumphi, Greek and Latin). In 1662 he appeared one of his greatest works, the Bibliotheca Patrum Concina torum (8 vols. Paris). Among the most important of his later works are the following: Auctarium noniusi unum Bibliothecae Gracceorum Patrum (Paris, 1672, 2 vols.), containing Liber Flavii Josephi de imperio rationis in laudem Maccobaeorum, two books of Hippolytus, one essay of Methodius, two works against the Manicheans by Alexander of Lyceopolis (formerly himself a Manichean), and by Didymus of Alexandria; some essays of the Hesychast Palamas and his opponent Manuel Kalakas, who, on account of his Romanizing tendencies, had been expelled from the Greek Church and
COMBER 428 COMMANDMENT

had entered the Dominican order: the Ecclesiastes Gres-
ues (Par. 1674.), containing a Latin translation of select
works of Basil the Great and Basil bishop of Seleucia;
and new editions of the works of Maximus Confessor
(Paris, 1675, 2 vols. fol.: this work was left incom-
plete in consequence of the death of Combeo) and of
Basil the Great. The edition of Gregory of Nazian-
zinus, and of the works by those Byzantine writers who
wrote after Theophanes, were prepared by Combes,
but not finished. The latter was published by Du
Fresno (Paris, 1685); the former was made use of by
the Maurice Louvard for his edition of Gregory. Com-
beo died March 23, 1679. See Wetzer u. Wetze, Kirch-
enn.-Lesc. ii, 701 sq.; Quetif and Echard, Script. Ord.
Francisc., vi, 438.

Comber, Thomas, a learned English divine, was
born at Westham, Kent, March 19, 1644. It is said
that he could read Greek at ten years old. Admitted
B.A. at Cambridge in 1662, he was made Prebendary
of York in 1677, dean of Durham in 1691, and died in
1699. His chief works are: Companion to the Temple
(new edit., Oxford, 1641, 7 vols. 8vo); the same of the
same date (with the title Hebr. Bible: Common Pray-
er):—Short Discourses on the Common Prayer (1684,
8vo);—Roman Forgeries in the Councils of the first four
Centuries (London, 1689, 4to). His Memoirs, by his
great grandson, T. Comber, were published in London
in 1739 (8vo).—Hook, Eccles. Biography, iv, 156; Kip-
pl.-Preston, iv, 301.

Comber, Thomas, grandson of the preceding,
passed M.A. at Cambridge in 1770, and L.L.D. in 1777.
He was rector of Hickby-Misherton, Yorkshire, after-
wards of Morborne, and rector of Buckebour in 1788.
He wrote The Hebrew Rejection of Christianity in the first
Ages considered (London, 1747, 8vo):—Examination of
Middle Ages (London, 1776, 8vo):—Treat-
ise of Love, from the Greek of Sylburgusia (1776, 8vo).

Comenius (properly Komensky), John Amos, was
born at Coma, in Moravia, March 28, 1592. Having
studied at Herborn and Heidelberg, he entered the
ministry of the Bohemian Brethren's Church, and
took charge (1616) of the parish of Prazau, as also of
the rectoryship of its theological seminary. In 1638 he
removed to Fulneck, where he filled the same offices.
Driven from his native country in the Bohemian an-
Reformation, he settled at Lissa, in Poland, where he
superintended the high school of the Brethren. In
1632 he became one of their bishops, and, as such, pre-
pared the way for their renewal as a church, caring in
particular for the continuance of their episcopal suc-
cession. His skill in language, partly his natural
method of teaching Latin, gave him great celebrity, and
he traveled through a large part of Protestant Europe to
improve the methods of education, being called to England for this purpose in 1641, and to
Sweden in 1642. He became closely connected with
the mystic Antoinette Bourignon (q. v.), and in 1657
published Luci in Tenebris (4to), in which he reported the
"visions" of Kotter, Pontiatora, and Drahtius.
In after years, however, he regretted this connection, and acknowledged that "he had been entangled in an
inextricable labyrinth." He settled finally at Amster-
dam, where he died Oct. 15, 1671. His principal works are:
Theatrum Divinae (Prague, 1616)—Labyrinth der Welt (Prague, 1631; Berlin, 1787).—Juxta lingvaram
reservata (Lissa, 1631), translated into many languages,
and, among others, into Italian and Arabic, an ele-
mentary encyclopaedia divided into 100 chapters and
100 parts, and Amst. Operae omnes (Amst. 1607, fol.):—Ratiocinio ordinatio eccl. in Unius Per-
trum Bohemorum (Lissa, 1682; Amst. 1699): Halle,
1702; in German by Köppen; in English by Seifichert,
Ch. Const. of the Boh. Brethren (Lond. 1867).

Comer, John, one of the early Baptist ministers
in America, was born in Boston, Aug. 1, 1704. He was
apprenticed to a glover, but at seventeen, by the influ-
ence of Increase Mather, he was released by his mas-
ter, and soon entered Harvard College, whence he re-
moved, after a few years, to Yale. In 1721 he joined the Congregationalist Church at Cambridge, but in
1726 became a Baptist, connecting himself with Mr.
Callender's church in Boston. In the same year he
began preaching, and in 1726 he was ordained co-
pastor at Newbury, where he and John Daniel in 1729 a dispute about the "laying on of hands" in admitting baptized members into the
Church led to his dismissal from his charge. In 1727
he became pastor at Old Rehoboth, about ten miles
from Providence, where he died of consumption, May
23, 1754. He left a Diary in MS., which is of great interest for the early history of the Baptist Church in America.—Ames, viii, 313; Anstal, vi, 427.

Comforter. See PARACLETE.

Comming (prozopon, being present) of Christ, a
phrase employed, (1.) literally, in reference to our
Lord's first appearance in the flesh (1 John v, 20; 2
John vii), or to his future appearance at the last day
to fulfill his promises to raise the dead and judge the
world in righteousness (Acts i, 11; iii, 20, 21; 1 Thess.
iv, 14; 2 Tim. iv, 1; Rev. xix, 27).—(2.) Metaphorically, Christ is said to come when his
Gospel is introduced or preached in any place by his
ministers (John xv, 22; Ephes. ii, 17); when his church or kingdom is visibly or powerfully established
in the world (Matt. xvi, 28); when he bestows upon
believers the fullness of his spiritual blessings, or the
tokens of his love (John xiv, 18, 23, 28); when he ex-
cutes his judgment on wicked communities who reject or corrupt his Gospel (2 Thess. ii, 8); and when his
providence calls us away from the world by death,
as preparatory to the judgment of the last day (Matt.
xxv, 23). In this sense the expression is used regard-
to the coming of Christ is the same as in rela-
tion to the coming of God; that as he governs the
world, every specific act of his providence and auth-
ority indicates his presence in a more striking manner
to human conception, on the principle that no agent
can act where he is not. See ESCATOLOGY.

Commandary. See DECALOGUE.

COMMANDMENTS, THE FIVE, OR COMMAND-
MENTS OF THE CHURCH, certain rules of the Roman
Catholic Church which, within the last three centu-
ries, have been laid down as obligatory on the
Christian laity as the commandments of the decalogue.
These five commandments are generally stated as follows:
1. To keep holy the obligatory feast-days; 2. Devout-
ly to hear mass on Sundays and feast-days; 3. To ob-
serve the days of fast and abstinence; 4. To confess
to the priest at least once a year (at Easter) (Conc.
Lat., IV, Can. 21); 5. To partake of the sacrament at
least once a year, towards Easter. As these different
rules have no common origin in the regulations of
the Church, and are not even taken from the Catechismus
Romanus, it is not to be wondered at that they have
undergone several modifications. Among other vari-
atations, it has been a general practice to divide the
fourth and fifth commandments together, and to replace
the fifth by "Not to marry at certain prohibited times."
Others have made various alterations. Bellarmine in-
cludes the paying of tithes among the commandments
of the Church, whilst some of the French catechisms,
unable to include all the rules under the five heads,
have added a sixth, yet without reaching their object.
In the United States the "commandments" are en-
joyed in the following form:
1. The Catholic Church commands her children, on
Sundays and holy days of obligation, to be present at the holy
sacrifice of mass, to rest from servile works on those days, and
to keep them holy.
2. She commands them to abstain from flesh on all days of fasting and abstinence, and on fast-days, if they can, one meal. 3. She commands them to confess their sins to their pastors at least once a year. 4. She commands them to receive the blessed sacraments at least once a year, and that at Easter, or at the paschal time. 5. To contribute to the support of their pastor. 6. Not to marry within the fourth degree of kindred, nor privately without witnesses; nor to solemnize marriages at certain prohibited times.

We have said that these commandments are as obligatory for the Romanist layman as the commandments of God. The Council of Trent has dogmatically settled the point (Sess. VI, De Just. f. Can. xx). The Protestant opposition to this great wrong was commenced by such writings as Luther's De captivitat. Babyloniana, and Zwingle's Von der Freihett der Lyse. The Evangelical Confessions express the same opposition, as, for instance, the Augsburgia in the articles XV, XVII, XXVI, the Helvetic in 23, 24, and 27, Tetrapol. cap. 7, 8, 9, 10. The clearly expressed protestation contained in these passages does in no way seek to overthrow the dutiful obedience commanded towards pastors and rulers (Heb. xiii, 17), or towards decency and order (1 Cor. xiv, 40), and the power of government held by the Church in the persons of its constituted organs. All this is entirely different from the commandments established by the Romish hierarchy in opposition to the Word of God, as is shown in Col. ii, 16, 18, 19; Eph. v, 22; Phil. iv, 7; 1 Tim. iv, 1-4; 1 Cor. viii, 8; vii, 6; iii, 21; Mark, ii, 23; Gal. iv, 9-11. The old plea constantly presented by the Romish apologists, that the doctrine of the commandments of the Church has its foundation in the power of the keys and in the commandments of God himself, is of no weight.—Herzog, Real-Encyclop. iv, 644; Wetzer u. Welte, Kirch.-Lex. iv, 944.

**Commentary.** When a vacant living is commissioned in the Church of England to the charge of a clergyman until it can be supplied with a pastor, the benefice is said to be supplied in commendam. Anciently the administration of vacant bishoprics belonged to the nearest bishop, hence called commendatory. This custom was at a very early period introduced into the Church. Athanasius says of himself, according to Nicophorus, that there had been given him, in commendam, another church beside that of Alexandria, of which he was the stated bishop. When a priest is made bishop, his episcopal functions are taken from him, unless he be appointed bishop emeritus, as is the case with the Dutch bishops of England. Thus the bishopric of a Church belongs to a bishop or to his appointed successor; and this custom formed the practice sometimes in England for the crown thus to annex a bishopric of small value either the living which had been held by the newly made bishop, and of which, in virtue of such elevation of its incumbent, the patronage became at the disposal of the crown, or some other in its stead.—Eden, Churchman's Dict.; Farrer, Eng. Law; Wetzer u. Welte, Kirch.-Lex. iii, 705.

**Commendone,** Giovanni Francesco, a cardinal and papal legate in Germany, was born at Venice March 17, 1523. After studying law, he went (1560) to Rome, where he attracted the attention of Pope Julius II, who employed him as envoy as his ambassador for a political mission. In 1562 he went as papal envoy to the Netherlands, and from there to England, where he had an important secret interview with Mary, the daughter of Henry VIII, who, on the death of her brother Edward, was to ascend the English throne. Mary gave him an autograph letter to the pope, and proceeded, the whole, with his proposal. He should perform in the Ministry, the digressions made by the writer—these, and other particulars of a like nature, should be pointed out by the true commentator. The connection of one argument with another, the consistency and ultimate bearing of all the statements advanced—in short, their logical development, various relations, as far as these are developed or intimated by the author, should be clearly apprehended and intelligently stated.
Another characteristic of commentary is, that it presents a comparison of the sentiments contained in one book, or one entire connected portion of Scripture, with those of another, and with the general tenor of revelation. A beautiful harmony pervades the whole. Diversities, indeed, it exhibits, just as we should expect a priori to do; it presents difficulties and mysteries which we cannot fathom, but with this variety there is a uniformity worthy of the wisdom of God. A commentator should therefore be able to account for discrepancies of sentiment, in reference to the same topic, that appear in the pages of books written at different periods, and addressed to individuals or communities whose circumstances, intellectual and physical, were dissimilar. Without its religious truth will be seen in disjointed fragments; no connected system, compact and harmonious in its parts, will meet the eye.

From what has been stated in regard to the constituents of commentary, it will also be seen that it differs from translation. The latter endeavors to find in another language equivalent terms expressive of the ideas which the words of the Hebrew and Greek languages conveyed; it is easy to see, however, that in many cases this cannot be done, and that in others it can be effected very imperfectly. There are and must be a thousand varieties of conception expressed in the original languages of Scripture, of which no other can afford an adequate representation. The inhabitants of the several parts of the sacred books have written amid circumstances in many respects diverse from those of other people. These circumstances naturally gave a color to their language. They affected it in such a way as to create terms for which there are no equivalents in the languages of tribes who are conversant with different objects, and live amid different relations. In such a case no expedient is left but circumlocution. By the help of several phrases we must try to approximate at least the sentiment or shade of thought which the inspired writers designed to express. Commentary is thus more diffuse than translation. Its object is not to find words in one language corresponding to those of the original languages of the Scriptures, or nearly resembling them in significance, but to set forth the meaning of the writers in notes and remarks of considerable length. Paraphrase occupies a middle place between translation and commentary, partaking of greater diffuseness than the former, but of less extent than the latter. It stands at the intermediate point to those which the sacred writers employ, accompanied with others that appear necessary to fill up the sense, or to spread it out before the mind of the reader in such a form as the authors themselves might be supposed to have employed in reference to the people to whom the paraphrast belongs. Scholia differ from commentary only in brevity. They are short notes on passages of Scripture. Sometimes difficult places alone are selected as their object; at other times they embrace continuously an entire book.

II. There are two kinds of commentary which we shall notice, viz. the technical and the popular. 1. The former contains grammatical and philological remarks, unfolds the general and special significations of words, points out idioms and peculiarities of the original languages, and always brings into view the Hebrew or Greek phraseology employed by the sacred writers. It dilates on the peculiarities and difficulties of construction which present themselves, referring to various readings, and occasionally bringing into comparison the sentiments and diction of profane writers, where they resemble those of the Bible. In a word, it takes a wide range, while it states the processes which lead to results, and shrinks not from employing the technical terms common to scholars. Extended dissertations are sometimes given, in which the language is made the direct subject of examination, and the aid of lexicons and grammars called in to support or confirm a certain interpretation. 2. Popular commentary states in perspicuous and untechnical phraseology the sentiments of the holy writers, usually without detailing the steps by which they have been discovered. It leaves philological observations to those whose taste leads them to such studies. All scientific investigations are avoided. Its great object is to present, in an attractive form, the thoughts of the sacred authors, so that they may vividly impress the mind and be appreciated. It avoids even that thing that a reader unacquainted with Hebrew and Greek would not understand, and occupies itself solely with the theology of the inspired authors—that holy sense which enlightens and saves mankind. This, however, is rather what popular commentary should do, than what it has hitherto done.

The limits of critical and popular commentary are not so wide as to prevent a partial union of both. Their ultimate object is the same, viz. to present the exact meaning which the Holy Spirit intended to express. Both may state the import of words and phrases; both may investigate the course of thought and the manner in which the sacred authors pursued it; both may expound the process of argumentation, the scope of the writers' remarks, the bearing of each particular on a certain point, and the connection between different portions of Scripture. Yet there is much difficulty in combining their respective qualities. In popularizing the critic, and in elevating to a higher stand of intelligent interpretation, there is room for the exercise of great talent. The former is apt to degenerate into philological sterility, the latter into trite reflection. But by vivifying the one, and solidifying the other, a good degree of affinity would be effected. Critical and antiquarian knowledge should only be regarded as a means of assisting the truth taught. Geographical, chronological, and historical remarks should solely subserve the elucidation or confirmation of Jehovah's will.

III. The prominent defects of existing commentaries.—1. Prolixity. This defect chiefly applies to the older works; hence their great size. It is not uncommon to meet with a large folio volume of commentary on a book of Scripture of moderate extent. Thus Byfield, on the Epistle to the Colossians, fills afolio volume; and Venema, on Jeremiah, two quarto volumes. Peter Martyr's "most learned and fruitful commentaries upon the Epistle to the Romans" occupy a folio, the thickness of which is exceeded only by that of its editor, Filson. The commentaries of Calvin, on the other hand, are only of the same extent. But Venema on the Psalms, and Caryl on Job, are still more extravagant, the former extending to no less than six volumes quarto, the latter to two goodly folios. It is almost superfluous to remark that such writers wander away, without confining themselves to exposition. We do not deny that even their extraneous matter may be good and edifying to those who have the patience to wade through its labyrinths, but still it is not commentary. It is very easy to write, currente calamo, anything however remotely connected with a passage, or to note down in a form the thoughts as they rise; but to think out the meaning of a place, to exercise independent mental effort upon it, to apply severe and rigid examination to each sentence and paragraph of the original, is quite a different process. To exhibit in a lucid and self-satisfying manner the results of deep thought and indomitable industry, is far from the intention of those professors who, in their apparent anxiety to compose a full commentary, present the reader with a chaos of annotations, and bury the holy sense of the inspired writers beneath the rubbish of their prosaic musings.

2. Some commentators are fond of detailing various opinions, and of disagreeing with them. They procure a number of former expositions, and write down out of each what is said upon a text. They tell what one and
another learned annotator affirms, but do not search or scrutinize his affirmations. No doubt an array of names looks imposing; and the reader may stare with surprise at the extent of research displayed; but nothing is easier than to pick up pages, with such patchwork, and to be as entirely ignorant of the nature of commentary as before. The intelligent reader will be inclined to say, What matters it to me what this rabbi has said, or that doctor has stated? I am anxious to know the true sense of the Scriptures, and not the varying opinions of men concerning them. It is a work of art, and one that requires much critical and methodical study. It is not a work of conjectures, but of sober conclusions, drawn from various sources, most of which the industrious collector knows to be improbable or erroneous. It is folly to adduce and combat interpretations from which the common sense and simple piety of the unsophisticated reader turn away with instinctive aversion. If plausible views are stated, they should be thoroughly analyzed. But in all cases the right meaning ought to be a prominent thing with the commentator, and prominently should it be manifested, surrounded, if possible, with those hues which Heaven itself has given it, and qualified by such circumstances as the Bible may furnish.

3. Another defect consists in dwelling on the easy and evading the difficult passages. This feature belongs especially to those English commentaries which are most current among us. By a series of appended remarks, plain statements are expanded; but wherever there is a real perplexity, it is glanced over with meretricious superficiality. It may be that much is said about it, but yet there is no penetration beneath the surface; and when the reader asks himself what is the true import, he finds himself in the same state of ignorance as when he first took up the Commentary in question. Pious reflections and multitudinous inferences enter largely into our popular books of exposition. They are spirited, but they do not expound. They sermonize upon a book, but they do not catch its spirit or comprehend its meaning. When a writer undertakes to educate and exhibit the true sense of the Bible, he should not give forth his own meditations, however just and proper in themselves. Put in the room of exposition, they are wholly out of place. The simple portions of the Bible are precisely those which require little to be said on them, while the more difficult superlative attention should be paid. But the reverse order of procedure is followed by our popular commentators. They pliöusly descant on what is well known, leaving the reader in darkness where he most needs assistance.

4. A very common fault with modern commentators is the attempt to go over much ground of text, and thus do the whole work superficially. Many are ambitious of writing a commentary on the whole Bible, with very inadequate preparations, or leisure, or research, and thus do but little else than rehearse the conclusions of others, with scarcely any original investigation themselves. The commentator should come to his work only after a long and matured study of the Scriptures as a whole, and then, with great deliberation, and patient study and balancing of various views and conflicting opinions, point them out, with one book at a time; not hastily run over the entire volume, and produce the crude and first-catch materials that he has gathered suddenly and by one-sided investigations. Hence those annotations are almost always the best where a writer has confined himself to a single point or passage, and perhaps may ascribe it his life-long study, looking at it from every possible point of view, and verifying his conclusions by repeated comparisons and researches. Commentaries "written to order" have almost invariably been worthless. See American Biblical Repository, January, 1845, p. 243.

IV. We shall briefly review the principal works of this class on the Bible at large, with criticisms especially on the older commentaries and those best known in modern times.

1. Such as are most accessible by having been written in English or Latin, or translated into one or those languages. (See a select list of this kind, with criticisms, in the Supp. to Junius's Comprehensive Commentary.)

(1.) J. Calvin ("Commentarii," etc. in his Opp., translated, Edinb. 1845-56, 52 vols. 8vo).—In all the higher qualifications of a commentator Calvin is preeminent. His knowledge of the original languages was not so great as that of some of his predecessors, but in developing the meaning of the sacred writers he has few equals. It has been well remarked that he chiefly attended to the logic of commentary. He possessed singular acuteness, united to a deep acquaintance with the human heart, a comprehension of mind by which he was able to survey revelation in all its features, and an enlightened understanding competent to perceive sound exegetical principles, and resolve in adhering to them. He can never be consulted without advantage, although all his opinions should not be followed, especially those that result from his doctrinal predilections.

(2.) T. Beza ("Test. Vet. et schol. Tremellii et Junii, Apocr. c. notis Junii et N. T. c. notis Bezae," fol. Genev. 1575-79, Lond. 1598, and often; "Bible with Annotations," fol. Gen. 1601 2, and often).—Beza's talents are seen to great advantage in expounding the argumentative parts of the Bible. He possessed many of the best exegetical qualities which characterize his great master. In tracing the connection of one part with another, and the successive steps of an argument, he displays much ability. His acuteness and learning were considerable. He was better acquainted with the theology than the criticism of the New Testament.

(3.) H. Hammond ("Paraphrase and Annotations" on the N. T., Lond. 1658, best ed. 1702; on the Psalms, in his Works, 4 vols. fol. 1674-84).—This learned annotator was well qualified for interpretation, and many good speciments of criticism are found in his notes. Yet he has not entered deeply into the spirit of the original, or developed with uniform success the meaning of the inspired writers. Many of the most difficult portions he has superficially examined or wholly mistaken.

(4.) M. Poole ("Annotations" on the whole Bible, Lond. 2 vols. fol. 1700 and before, best ed. Lond. 1849, 3 vols. 8vo).—These annotations contain several valuable, judicious remarks. But their defects are numerous. The pious author had only a partial acquaintance with the original. He was remarkable neither for profundity nor acuteness. Yet he had piety and good sense, amusing industry, and an extensive knowledge of the older commentators. Poli "Synopsis Criticorum" (fol. 4 vols. in 5, Lond. 1669-76, and several eds. since; best ed. by Leusden, Utr. 1684).—In this large work, the annotations of a great number of the older commentators are collected and condensed, many of them from the still more extensive collection known as the Critici Sacri (q. v.), edited by P. P. L. Dibner, and printed in 12 supplemental vols. Fret. s. a. M. 1656 1701, 9 vols. fol.). But they are seldom sifted and criticized, so that the reader is left to choose among them for himself.

(5.) H. Grotius ("Annotations" on all the Bible and Apoc. in his Opp., also ed. Moody, Lond. 1727, 2 vols. 4to).—This very learned writer investigates the literal sense of the Scriptures with great diligence and success. He had considerable exegetical tact, and a large acquaintance with the heathen classics, from which he was accustomed to adduce parallels. His taste was good, and his mode of unfolding the meaning of a passage simple, direct, and clear; his sentiments were sound, free from prejudices, and liberal beyond the age in which he lived. As a commentator
but he had an excellent judgment, and a calm candor of inquiry. His paraphrase leaves much unexplained, while it dilutes the strength of the original. The practical observations are excellent. The notes are few, and ordinarily correct.

(12.) T. Scott ("Holy Bible with Notes," etc. Lond. 1796, and often since; Lond. 1841, 6 vols. 4to; Bost. 1827, 6 vols. 8vo).—The prevailing characteristic of Scott’s commentary is judiciousness in the opinions advanced. The greater portion of it, however, is not proper exposition. The author preaches a good and paraphrases the original. His simplicity of purpose generally preserved him from mistakes; but as a commentator he was neither acute nor learned. He wanted a competent acquaintance with the original, power of analysis, a mind unprepossessed by a doctrinal system, and penetration of spirit.

(13.) A. Clarke ("Holy Bible, with Commentary," etc. 8 vols. 4to, Lond. 1810–23, and often since; best ed. Lond. 1844, 6 vols. 8vo. N. Y. 1845).—In many of the higher qualities by which an interpreter should be distinguished, this man of much reading was wanting. His commentary, however, which is a labor of his life, is written with profound and varied, though not always accurate, and often inapoposite, learning. He is always thoroughly earnest and practically spiritual. Some of his notions are indeed extravagant, but they are never the errors of the heart. Many of the dissertations scattered through the work possess a kind of continental power. The historical notes are the best. Its quotations from ancient and Oriental authors are abundant and unusually apt. Its remarks in vindication of the truth and consistency of Scripture are also often worthy of consultation.

(14.) E. F. C. Rosenmüller.—The “Scholia” of this laborious writer extends over the greater part of the Old Testament (11 pts. in 23 vols. 8vo. Lpz. 1755 sq.; “in Compendium redacta,” by Lechmere, 5 vols. 8vo).—The last editions especially are unquestionably of high value. They bring together a mass of annotation such as is sufficient to satisfy the desires of most Biblical students. Yet the learned author understood too much to perform it in a masterly style. Hence his materials are not properly sifted, the chaff from the wheat. He has not drunk deeply into the spirit of the inspired authors. He seems, indeed, not to have had a soul attuned to the spirituality of their utterances, or impregnated with the celestial fire that touched their hallowed lips. (Father, J. G.) Penrose, the author of the “Scholia” on the New Testament (5 vols. 8vo. Nurnbg. 1785, and since), is a good exort-explainer for students beginning to read the original. He has not produced a masterly specimen of commentary on any one book or epistle.

(15.) H. Olshausen (“Biblische Commentar” on the N. T. continued by Ebrard and others, 7 vols. 8vo. Königsb. 1837–56; tr. in Clarke’s Library, Edinb. 1847 sq.; ed. by Kendrick, N. Y. 1856 sq, 6 vols. 8vo, have hitherto appeared).—One of the best examples of commentary on the New Testament with which we are acquainted has been given by this writer. The latest arrangement, however, but the best of historical, has some inconveniences, especially as the text is not given. The exposition is almost wholly free from the influence of German neology. Verbal criticism is but sparingly introduced, although even here the hand of a master is apparent. He is intent, however, on higher things. He is a master of the art, puts himself in the same position as the writers, and views with philosophic ability the holy revelations of Christ in their comprehensive tendencies. The critical and the popular are admirably mingled. The continuation of the work by other hands is scarcely equal in value.

(16.) A. Tholuck.—The commentaries of this eminent writer on various books of the New Testament, especially those on the Epistles to the Romans and
Hebrews, exhibit the highest exegetical excellences. While he critically investigates phrases and idioms, he ascends into the pure region of the ideas, unfolding the sense with much skill and discernment. His Commentary on John is of a more popular cast. His interpretation of the 
Bergenfield, or Sermon on the Mount, is very valuable. That on the Psalms is less thorough. (For the editions, see each of these books in their place.)

(17.) E. W. Hengstenberg.—This writer is too fanciful in his exegetical, too arbitrary in his philology, and too free in his theology to be fully trustworth-
y as a commentator; yet his expositions of the Psalms, Ecclesiastes, Revelation, etc., may be consulted with advantage, if used with comparison of other authors.

(18.) E. Henderson.—This commentator's translation and notes on the Minor Prophets, as well as Isaiah, Jeremiah, and Ezekiel, are admirable specimens of sound learning, good judgment, and evangelical piety. Their only fault is the exposition in an excessive leaning to literalism.

(19.) A. Barnes.—This series of Notes on the New Test. (N. T. 12 vol. 12mo; Lond., 1860-62), and portions of Isaiah (Deutsch), has had a pop-
ularity which shows their adaptation to an extensive want. They are simple, lucid, and practical, and, written
with the writer's happy flow of style, and are
marked by genuine spirituality; but they are not character-
ized by critical or extensive learning.

(20.) J. Alexander.—The notes of this eminent
scholar on Isaiah are a thorough and well-digest-
ed production. His commentaries on the Psalms and his historical books of the N. T., however, are too popular to add anything to his reputation.

(21.) C. T. Kuhn.—The commentaries of this writer on the New Test. (in Latin, best
ed. London, 1835, 8 vols. 8vo), although more
stuck with rationalism, are among the best, criti-
cally and philologically considered, extant. Lear-
ning, acuteness, and candor are everywhere apparent.

(22.) G. Bush.—This author's commentaries on
several of the first books of the O. T., although intended for popular use, are generally characterized by good sense, genuine learning, and pious sentiment; and are the more valuable as being nearly the only good com-
mentary on these portions of Scripture available to the common reader.

(23.) M. Stuart.—His commentaries on Romans, Hebrews, Revelation, Ecclesiastes, and several others; on Psalms, Proverbs, Ecclesiastes, and several others, on Psalms, Proverbs, Ecclesiastes, and several others, are among the best, criti-
cally and philosophically considered, extant. Learn-
ing, acuteness, and candor are everywhere apparent.

(24.) S. T. Bloomfield.—This author's critical
Digest (5 vols. 8vo. Lond. 1826-8), as well as his Com-
mentary (Lond. 1838 sq. 2 vols. 8vo; Phila. 1836) and his Supplement (London, 1840, 1 vol. 8vo), all on the N. T., give very much sound and judicious exposition, and have the advantage of placing before the reader the views of earlier interpreters. Without any great attempt at originality there is generally a careful sift-
ing of opinions and balancing of arguments that make his comments, on the whole, the best synopsis of sim-
ple exegesis yet produced.

(25.) H. Alford ("Gr. Test.") with critical appara-
trum and notes. Lond. 1858 sq, 5 vols. 8vo; vol. i, N. T. 1860.) This critical Gr. Test. con-
tains a critically-revised text, a copious exhibit of vari-
rions readings, valuable prolegomena, and a series of analytical, philological, and expository notes. There is not much strictly new in any of these departments, but a convenient assemblage of materials not usually accessible. The whole is wrought out with great care and learning, and presented in the most condensed form. A very serious drawback upon its value, how-
ever, is the latitudinarianism evident in the author's theological, or, perhaps, rather hermeneutical principles, which leads him in very many difficult passages rather to array the sacred authors against one another than to reconcile their apparent discrepancies. Un-
der argeon's commentaries or "honesty" are crimina-
lines the prime task of an expositor by pronouncing difficulties insoluble. The critical apparatus is per-
verted by the same subjectivity, insomuch that the writer has himself once or twice completely remodelled it.

(26.) F. V. D. Mauger ("Commentaries in V. T.") Lpö, 1835-47, 4 vols. 8vo).—This is a series of brief annotations on the Old Test., considerably full on the poetic portions, and characterized by great acu-
men, with much accuracy of scholarship, but little or no combination of the spiritual insight into Holy Writ. It is chiefly valuable to students for expounding the literal meaning.

(27.) J. C. Wolf ("Cum in N. T.") 5 vols. 4to, Bas-
il. 1741.—This author, although somewhat old, de-
serves especial notice for his valuable mass of sound annotations.

Besides what is above, the following English commentaries on portions of Scripture are entitled to particular mention, including several German works presented in an English dress by the publishers Clark, of Edin-
burgh (valuable additions to our literature these last, but sadly in need, as a general thing, of judicious editing), and some reprinted in this country: Trench on the Miracles of Jesus; Stier on the Epistles to the Gentiles: Christ; Kitto's Pictorial Bible and Daily Bible Illustrations: Conybeare and Howson's Life and Epistles of St. Paul; Watson on Matt. and some other parts of the N. T.; Bengel on the N. T.; Baumgarten on the Acts; Eadie on several of the Pauline epistles; Horsley on Hosea; Elliot on Joah; Lowth on Gen. and Exod.; Payy and Fry on Job; Elliott on the pastoral epistles; Good on the Psalms and Canticles; Steiger on 1st Pet.; Umbret on Job; Billroth on Corinthians; Titt-
mann on John; Lightfoot's Hora Hebraica; Keil on Joshua and Kings; Anselm on Daniel; Kalisch on Gen. and Exod.; Stanley on Corinthians; Jowett on several of Paul's epistles; Ginsburg on Cant. and Eccles.; Phillips and De Burgh on the Psalms; Maclellan on Hebrews; Preston on Ecclesiastes, and many others which space does not permit us here to enumer-
ate. There are commentaries on the entire Bibli. by Girdlerstone, Wellbeloved, Wesley, Coke, Benson, Cobbin, Sumner, and others; on the OT by Baxter, Burkit, Gillies, Trollope, and others; on the Gospels by Queenel, Campbell, Norton, Ryle, and others; on the Epistles by Macknight, Pyle, and others. There are also serviceable annotations on various parts of Scripture by several of the early Church fathers, especially Origen, Jerome, and Chrysostom (see CATENA), by the medieval theologians and reform-
ers, especially Luther, and an almost innumerable se-
ries of later commentators more or less extensive, sufficiently complete lists of which are given under the appropriate heads in this Cyclopaedia. There also exist an immense number of academic dissertation of an exegetical character, chiefly by Germans, for cer-
tain collections of a few of which, well known on the Continent, see Walch, Bibl. Theol. iv. 920 sq. See also the several books and divisions of Scripture in their proper place in this work. For Hebrew com-
mentaries on the whole Jewish Scriptures, see RAB-
INISCH BIBL.

2. The modern Germans, as they are in theo-
logical works, have seldom ventured to undertake an expostion of the whole Bible. Each writer usually confines himself to the task of commenting on a few books. In this their wisdom is manifested. Yet they do not usually excel in good specimens of com-
mentary, at least in the more sacred elements. They are word-explainers. In pointing out various readings, in
COMMENTARY

grammatical, historical, and geographical annotations, as also in subtile speculations respecting the genius of the times in which the writers of the Bible lived, they are at home. In the lower criticism we willingly sit at the mercy of these speculations with regard to the higher, in all that pertains to the logic of commentary, in development of the sense in its holy relations, the great majority of them are lamentably wanting. Reined notions usurp the place of practical piety in their minds; and the minutiae of verbal criticism furnish them nutriments apart from the rich resources of theological judgment and sanctifying truth. But there are some noble exceptions, several of which are designated above.

One of the most complete and recent series of German commentaries (although somewhat meagre in detail) is that published by Hirsel (Leipz., 1841-57), consisting of a Kurzgefaßte ehr-freie Schriften Handbuch, on the Old Test., by Hitzig, Hirsel, Theilus, Knobel, Bertheau, and J. Olschhausen (in 16 vols. 8vo); on the New Test. by De Wette, with additions by Brückner, Messmer, and Lücke (in 11 vols. 8vo); on the Apocrypha by Fritzsche and Grimm (in 5 vols. 8vo). A much more recent text of the same kind is the Critische exegetische Kommentar zum Neuen Testament, by Dr. H. A. W. Meyer and others (Götting. in 16 pts. lately completed, with new eds. of the earlier portions). Another is the Erev. Handb. zu den Briefen des Apostels Paulus, by A. Bieging (Münster, 1858), and still more deserving of notice, Die Heilige Schrift: Einleit. zu den Briefen des Ap. Paulus (4th ed. Berl. 1858), to which may be added Die post-tisch Bücher des alten Bundes erläutert, by H. Ewald (Götting. 1836-54, 4 vols. 8vo), together with his Drei Erste Evangelien (ibid. 1851, 4vols.), Sendeschreiben des Paulus (ib. 1857, 4 vols.), Das J. B. von (ib. 1834, 4vols.); Die Propheten der alten Bundes erläutert (Stutt. 1847, 4 vols. 8vo), and Comment, in Apocalypsin (Lips. 1828, 8vo); likewise F. W. C. Umbreit's Commentar ad. d. Propheten (Hamb. 1842-6, 4vols. 8vo), Römer (Gotha, 1836, 8vo), Psalter (ib. 1848, 8vo), Sprüche Salomos (ib. 1856, 8vo), Kohelet (ib. 1820, 8vo), and Habeb. (ib. 1826, 8vo); also the Hamb. d. Einl. d. Apocryphen, by G. Volkmar (Tub. 1860 sq.). A new series of critical and exegetical commentaries of great value, in German, on the books of the O. T., is also in progress by Delitzsch and Keil (Lpz. 1861 sq.), which will doubtless include the substance of those already published by several of the best men of Germany (Genesis, Psalms, Canticles, Habakkuk, Jeremiah, Kings, Chronicles, separately); it is in course of publication, in an English dress, by the Messrs. Clark of Edinburgh.

J. P. Lange, assisted by several evangelical scholars, is also issuing a series of admirable homiletical commentaries on the books of the O. and N. T., of which improved translations are in course of publication in this country, edited by Dr. Schaff (N. Y. 1864 sq.), Weistcin's Novum Testamentum Græcum (Amst. 1751, 2 vols. fol.), and Grinfield's Hellenistic Edition and Scholia on the New Test. (Lond. 1843, 1844, 4 vols. 8vo) afford much valuable philological elucidation of the text. Under the present system of progress of publication (Lpz. 1858 sq. 8vo), although equal in man manu- l, its place in the estimation of competent judges, but still espects, has also its valuable exegetical features, espe- cially the new translation of the text.

In addition to these, Germany has produced many other species of commentary that occupy a high place in the estimation of competent judges, but still remain untranslated.

1. John's writings, especially in the third edition; Ge- senius on Isaiah; De Wette on the Psalms; Fritzsche on Matt., Mark, and Rom.; Bähr on Colossians; Philip- ppi on Romans; Bleek on Hebrews; Hufield on the Psalms; Gramberg on Chronicles; Rickert on Roman Book of Esther, etc.; Lach; O. H. Gerke on Daniel; Stier on Acts, Hebrews, James, and Jude; Hävernick on Ezekiel and Daniel; Harless on Ephesians; Winer (in Latin) on Galatians; Schultens (Lat.) on Job and Proverbs; and Tuch on Genesis; with numerous others, which possess much merit, ac- companied, it is true, with some serious faults. Dr. Nast, of Cincinnati, is publishing under the title of Freier Commentary on the New Test. in German on an excellent plan, of which an edition in English is also issued.

2. To these may be added the American commentaries of Turner on Genesis, Romans, John, Ephesians, Galatians, and Hebrews; Hackett on Acts; Moore on Haggai, Zechariah, and Malachi; Whedon, Bely, Jacobus, Hodge, and others, on the Gospels, Epistles, etc.; and numerous other less im- portant works that might be specified, which are given more fully under the respective books of Scripture. We may also refer to the notes accompanying the revision of the Eng. Bible now in progress by the Am. Bible Union, as furnishing much exegetical elucidation. (See a convenient list of works most accessible and useful to American students, with prices attached, and judicious practical hints on the general subject of aids to Biblical knowledge, in the Methodist Quar. Rev. April, 1856, p. 288-297.) Notwithstanding the above enumeration, we may, however, be admitted that a convenient and satisfactory manual of exposition on the entire Bible, adapted to the wants of the public in this country, is still a desideratum.

4. The following is a chronological conspectus of professed Commentaries, in general, with their names and purposes (exclusive of merely improved versions or editions), as complete as we have been able to make for it. For those covering the Old or the New Testament alone, see under those titles. The most important of those here enumerated are designated by an asterisk (*) prefixed: Origine, Commentaria (ed. Huetius, Roth- magl, 1668, 2 vols. 4to); Exegetica (in Opp. ii.); also his Commentationes ecclesiasticæ (Lug. 1661, 8vo); Paterius, Expositio (from Gregory, in the latter's Opp. IV), II); Hugo de S. Caro, Postilla (6 vols. fol., Ven. et Basil. 1487, Basil. 1494, 1504, Par. 1568, Colon. 1221; 8 vols. fol., Lugd. 1649, 1669); Walafridi Strabo, Expositio (excerta part of Cutemas, including extracts from Rabanus Maurus, and the Postilla of De Lyra, 6 vols. fol., Nuremb. 1494: also more complete, Duaci, 1617, and Antw. 1654); Nezen, Operationes Bibliæ (from Luther's expositions) (Jen. 1510-11, 2 vols. 4to); Dionysius Carthusianus, Commentaria (Colon. 1502, 12 vols. 4to); Pellican, Commentationes (except Jonah, Zechar. and Joel); (Tigur. 1592, 7 vols. fol., with Meyer's notes on the Apocalypse, Tigur. 1542, 10 vols. fol.); Bp. Clario, Annota- tiones [those on the O. T. are chiefly from Seb. Munster] (Venice, 1462, 1567, 1664, fol.; also in the Critici Sacri). Gastius, Commentarii [from Augustine] (Basil. 1482, 2 vols. 4to); Vatablus, Scholia [from his lec- tures] (in Stephens's Latin Bible, Paris, 1545, 1551; also separately, Salamanca, 1684, 2 vols. 4to; and in the Critici Sacri, and since); Bruecioli, Commento (Venice, 1546, 7 pts. fol.); Castello, Bibliia Sacra, etc. (Basil. 1551, fol.; later with various additions, especially Francfort, 1697, fol.; also in these, Marlot: portions of Scripture) (various places and forms, 1562 85, etc.); Strici- gious, Scholia (on the books of the O. T. separately, Lips. etc. 1566 sq., 18 vols. 8vo) and Hypynommatia (on the N. T., Lips. 1555, 8vo, and later); L. Olander, Annota- tiones (Tub. 1573-84, 8 vols. 8vo, 1689-92, 12 vols. 8vo); Lickes, Exercitiorum (Stuttg. 1600, and often); Tremellius and Beza, Scholia et Nota [chiefly notes by Tremellius and Junius] (Gen. 1575 9, Lond. 1598, fol. and later); Brentz, Commentarii [sermons] (in his Opp. i-vii, Tub. 1576-90); *Cal- vin, Commentarii [except Judges, Ruth, 2 Sam., Kings, Esther, Ezek., Ezra, Eccles., Cant., and Rev.] (at various times in different languages; to- gether in Latin, in his Opera, Geneva, 1578, 12 vols.,
1617, 7 vols., Amst. 1671, 9 vols. fol.; in English [except 1 Sam. and Job], Edinb. 1845-56, 52 vols. 8vo. 8vo.

* Lucas Dregusius, Notationes (Antw. 1670, 4to.; also in the Critici Sacri.)

Notes in the Bibliotheca Lombarde (Antsw. 1808, 1822 sq.; 1500, fol.; also in the Critici Sacri.) Chytresus, Commentarius [on most of the books of Scripture] (Off. Eieg. Viteb. 1699-2, Lippes. 1698-9, 2 vols. fol.; S. Sa, Notationes [4to.], Antw. 1698, 1610, Lodgr. 1699, 1604, Colon. Lugd. 1699, 1624. loc. 1. Mollanus and others. (Antw. 1808, 1822 sq.; 1500, fol.; also in the Critici Sacri.)

* Pope, Synopsis [in large part a condensation of the Critici Sacri, De la Haye's Biblias, and similar works] (Lond. 1690-1676, 4 vols. in 5, fol.; Franc. 1679, 5 vols. fol.; Ultra, 1665, 5 vols. fol.; Franc. 1694, 5 vols. 4to.; 1715, 5 vols. 4to.; a different work is his original, De la Haye's Biblias, and similar works] (London, 1688-9, 1702, 2 vols. fol.; Edinb. 1824, 5 vols.; Lond. 1840, 5 vols. 8vo.; De Sacry, Sainte Bible, etc. [chiefly Patristic] (Par. 1622, 80 vols. 8vo.; Leyd. 1668, 62 vols. 12mo.; Bruxelles, 1728, 3 vols. 4to.; Lyons, 1702, 8 vols. fol., and other ed.; Calovius, Biblia Illustiata [in opposition to Grotius] (F. ad M. 1672-5, 5ed. 1715, 4 vols. fol.; Cocсиens, Commentarius [on many portions of Scripture] (at various times, separately; also in Opera, i-v, Amst. 1676, fol. and later).

* Olearius, Exclair. [Lips. 1681-8, 5 vols. fol.]

* Park, Louth, Arnold, Whitby, and Lowman, Commentary [originally in separate portions by each author on selected books, and were subsequently combined into a single volume] (Lond. 1698, 7 vols.; ed. Pitman, Lond. 1821, 6 vols. 4to.; Phila. 1844, Lond. 1688, 8 vols. 4to.; Schmid, Commentarius [on most of the books of Scripture] (at various places, separately, 1689-1704, 18 vols. 4to.); Allix, Reflections (Lond. 1688, 2 vols. in 1, 8vo.; 1689, 8 vols.; Oxfor. 1682, 8 vols. in 6; also in Bishop Watson's Theol. Tracts; also in French. Lond. 1709, 8 vols.; Amst. 1698, 8 vols.; S. Clarke, Annotationes, etc. (Lond. 1690, 1760, Glaes. 1765, fol.; Nese, Hist. and Mystery (Lond. 1690-9, 4 vols. fol.); L. de Carrières, Commentaire (Paris, 1703-1708, 24 vols. 12mo.); Haase, Anmerk. etc. (Lpz. 1704, 1710, 1788, 8vo.; 1707, fol.; also in Dutch, Amst. 1715, 4 vols.); Du Hamel, Annotationes, etc. (Paris, 1706, 5 vols. fol.); Martin, Bible explicant (Amst. 1707, 2 vols. fol.); Henry, Exposition, etc. [completed from Acts by others] (London, 1707-15, 5 vols. fol.; 4th ed. complete, London, 1757, 5 vols. fol., and often since; new ed. Lond. 1698, 4 vols. fol.; condensed in Jenkes's Compendious Commentary] (Calmet, Commentaire (Paris, 1707-7, 23 vols., 1716, 25 vols. 4to.; 1724, 8 vols., in 9, fol.; the Dissertations, etc., separately, by the same, 1715, 6 vols. 8vo.; 1720, 3 vols. 4to.; the last in Latin by Masse,Luca, 1729, 2 vols., fol., and the whole of the same, Wicel, 1788-99, 19 vols. 4to.; also in German by Mosheim, Brem, 1788-9, 6 vols. 8vo.; abridged in French, Paris, 1721, 5 vols. 8vo.; a second ed., Paris, 1729, 4 vols. 8vo.; and the Abrége Vénec's Bible, Paris, 1767-73, 17 vols. 4to., and later); Wells, Paraphrasis, etc. (in parts., Oxf. 1708-79, 7 vols. 4to. and 8vo.); Raphelis, Annotationes [illustrations from Xenophon, etc.] (first separately on the O. and N. T., Amsterdam 1708-9, 2 vols. 8vo.; together, Luneb. 1781, 8vo.; enlarged, L. Beit., 1747, 2 vols. 8vo.; Horche, Erklärung [mystical—Cant. and Rev. omitted] (Mahr. 1712-40); Míme Guyon, Explications [mystical] (Col. et Amst. 1715-5, 20 vols. 12mo.); Otterwald, Observations, etc. [tr. from his French Bible, Amst. 1714, 6 vols. fol.); (by Chamberlayne, London, 1722, 8vo.); the 2nd edition (Paris, 1758, 4to.); Amon. Bible, etc. (Stutt. 1716, 8vo.); Parker, Commentaries [in large part compiled] (Oxf. 1717-25, 4to.); Anon. Bible, etc. (Lemgo, 1720, fol.); the Berleburg (q. v.), etc.); Amon. Bible, etc. [pictish], by various anonymous editors (Berleburg, 1726-9, 7 vols. fol.); Pfeitschener, Anmerk. (Zitt. 1726, 4to.); *Gill, Exposition [largely from Rabbinical and other sources] (London, 1669, 9 vols. fol.; together, Lond. 1810, 9 vols. 4to. 1856, 4 vols. 8vo.) Pfaff and Klemm, Anmerk. (Tüb. 1729, 4to.); Lang, Erklär. [in part by Adler] (in separate works, Hal. 1729-37, 7 vols. fol.); also substantially condensed in his Biblia paraphrasis (in German—an edition of F. Ad. *Clarck, Erklärung (Amst. 1698, 8vo.; 1740, 4to.; Wall, Notes (London, 1780-39, 3 vols. 8vo.); Willisch, Selbst-Erklär. [completed by Haymann) (Freib. 1759, 10 vols. 8vo.); Hohn, Job, and the Psalms] (Antw. 1684, 1671, 1681, 1694, 1706, Venice, 1708, 1780, 10 vols. fol.); Helmin, Rel. II.-E.}
COMMENTS

Schmidt, Erkärt (Erf. 1740, 4to); Stareck, Auslegungen (O. Test., Lpz. and Hal. 1741-7, 4 vols. N. T., Lpz. 1748, 2 vols.); Pf. Nicholas, Der Tischler [chiefly compiled by Pf. Nicholas]; *Chais [completed by Macclaine, Commentaries, etc. from the best English interpreters] (Hague, 1743-90, 7 vols. 4to); the former part also in German, Lpz. 1749-62, 4 vols. 4to); Lucas ed. [by order of the pope]; Commentaries, etc. [from various authors] (Ven. 1745, 4to); also [by the same author] (1750, 4to); [a more or less complete work, with a Germ. version, for the use of the monastery of Ettlingen] (Constantine, 1751, fol.); Edwards, Notes (in Works, ii, 676); Koike, Ammer (Hild. 1750, 4to); Slezina, Commentarius (Prague, 1757-90, 1770, 4 vols. 4to); Goedeker, Illustration [Areri] (London, 1759, 70, 8 vols. fol., and later); Rides, Popular Commentary (London, 1759, 4 vols. 4to). Brutus, Notes [those on the N. T. are short, but valuable] (Londo, 1764, 4 vols. 4to, also in Works); Allen, Exposition [Antinomian] (London, 1765, 2 vols. fol., and later); Liebig ed., Ammer (Hirschberg, 1765, 3 vols. 8vo); Dodd, Commentary, etc. [in part extracts from MSS. (in numbers, Lond. 1766; complete, 1770, 3 vols. fol.); Hawes, Exposition (London, 1766-67 also published in America), 2 vols. fol.); S. A. Braun, Erklärung (Erf. 1768, 8 vols. fol.); Michaelis, Ammer (Got. and Tha, 1789-98, and 1790 2, 17 vols. 4to; also in Dutch, Utrecht, 1789-86, 8vo; and Erklärungen on the same by Schultze, Halle, 1790-4, 6 vols. 4to); Körner, Ammer (Rheine, 1793, 6 vols.); Ewald, Ammer (Quedlin. 1787-87, 10 vols. 4to and 2 vols. fol.); Weitenaer (Rom. Cath.); Ammer (Aug. 1777-82, 14 vols. 8vo); Hezel, Ammer (Lemgo, 1780-91, 10 vols. 8vo; conditioned by Schenk, Lemgo, 1787, 8vo); with the author's partial enlargement, Halle, 1788-90, 9 vols. 4to; and this again annotated by Rico, Tübingen, 1788, fol.); Bp. Wilson, Notes, etc. (Lond. 1785, 8 vols. 4to); H. Braun, Ammer (Nürnberg, 1786, 8vo; ed. by Feder, 1808, 3 vols.; by Allioli, 1830-2, 6 vols.); also his [patristic] Bemerkungen (Aug. 1788-1806, 18 vols. 8vo; with a Lexikon, 1806, 2 vols. fol.); Yonge, Commentary (London, 1787, 4to); *Scott, Notes, etc. (in parts, London 1788 sq., 4 vols. 4to; 5th ed. London 1822, 6 vols. 4to; new ed. London 1841, 6 vols. 4to; often reprinted in England and America; also condensed in Jenks's Comprehensive Commentary); *Rosenmüller and Son, Schola [on all the books except Sam.-Ex.] (O. T. by the son, Lpz. 1791, 8vo, etc.); Behrens, Commentary (Lips. 1791, 8vo); Carm. Interpretes, etc. 6 vols. 8vo; the N. T. by the father, Norim. 1777, 6th ed. enlarged by the son, 1815-5, 9 vols. 8vo); Brentano, Erklär. (Frankf. 1797-9, 13 vols. 8vo); Horst, Rullmann, Scherer, and others, Commentar (Altanb. 1799-89, 7 vols. 8vo); Alber, Interpretatio (Poth, 1801-4, 15 vols. 8vo); Bulkley, Notes [chiefly illustrations from the ancient texts] (ed. by Toulmin, Lemgo, 1802, 8 vols. 8vo); Priestley, Notes (Northumb. 1803, 4 vols. 8vo); Coke, Commentary [mostly a reprint of Dodd] (Lond. 1806, 6 vols. 4to); Webster, [Rev. T.], Notes [chiefly from the Genevan Bible and Beza] (London, 1671, 4to); A. Clarke, Commentary (London 1610-62; 2 vols., N. Y. 1717-3, 4 vols. 4to); new Ed. London and N. Y. 1822, 6 vols. 8vo; London, 1842, 6 vols. 4to); Hewlett, Notes (London, 1811, 3 vols. 4to); Fawcett, Devotional Bible (London, 1811, 2 vols. 4to); Benson, Commentary [largely after Poole] (London, 1811-18, 5 vols. 4to; 6th ed. 1846, 8 vols. 8vo); N. Y. 1839, 9 vols. 8vo); Hawkes, Commentary (London, 1816-22, 10 vols. 12mo, and later. Mrs. Corwallis-Observation (London, 1817, 4 vols. 8vo); D'Oyly and Mant, Notes [chiefly compiled] (Oxf. 1817, 8 vols. 4to, and again in N. Y. 1818-20, 2 vols. 4to); London, 1856, 1861, 8 vols. 8vo); Von Meyer, Ammerzungen (Frankf. and M. 1819, 1822, 3 vols. 8vo); Anon., Erklärung, (Quedlin. 1820, 8vo); Mrs. Stevens, Comments (Knaresbor. 1822-31, 20 vols. 8vo); Boothroyd, Versions, etc. (Huddersf. 1824, 8 vols. 4to; London, 1853, 8vo); Williams, Cottage Bible (Lond. 1825-37, 5 vols. 8vo); Greenfield, Comprehensive Bible (Lond. 1827, 4to); Plumptre, Sermons (London, 1827, 2 vols. 8vo); Stokes, Commentary (chiefly from Scott) [Ser. 9] (Lond. 1833, 4to); Cobb, Commentaries [chiefly compiled] (Paris, 1839-43, 27 vols. 8vo); *Simeon, Discourses [mostly practical] (Lond. 1840, 21 vols. 8vo); Sutcliffe, Commentary (5th ed. London, 1840, 2 vols. 8vo, 1861, 1 vol. 8vo); Bunsen, Bibelwerk [intended as a popular elucidation—learned and ingenious, but extravagant] (Lpz. 1860 sq., 9 vols. 18 vol. 8vo); Luther, [translation of the G., history, with suppl. Atlac]; Lange, Bibelwerk [mostly theoretical and homiletical] (Bielefeld, 1864, 8vo; a large part of the N. T. has been issued, and several books of the O. T., in successive volumes, a considerable number of which have been translated in Clark's Foreign Theol. Lib., Stuttgart, 1866, 8vo; a greatly enlarged and improved under the editorship of Dr. Schaff); Wordworth, Notes (Lond. 1865, 8vo); Jamieson, etc., Commentary (Lond. 1865 sq. 8vo).

COMMERCE

A commerce, a word that does not occur in the Anc. Vers., which uses the term "trade" or "traffic;" but the idea is designated by two Heb. words: 1. מַעַבְדָּר (Ger. Messiah, Thes. Heb. p. 1289); Sept. in Ezek. xxvi. 12, רָעָנֵיסוַר, Vulg. negationes; in xxvii. 5, 16, 18, לאוֹנַיִה, negatio; from לַעַנְיַה, רַעְלָק, to travel (on foot); 2. רִיָּבָר, secborah (Ger. ת. ב. p. 945); Sept. iaמִיא, Vulg. negatio, Ezek. xxvii. 15; from נְיַא, secbor, to travel (migrate). See TRAFFIC.

1. Commerce, in its usual acceptation, means the exchange of one thing for another—the exchange of goods, as what we have been long accustomed to, in whatever country it is produced. The origin of commerce must have been nearly coeval with the world. As pastoral and agriculture were the only employments of the first inhabitants, so cattle, flocks, and the fruits of the earth were the only objects of the first commerce, or that species of it called barter. It would appear that some progress had been made in manufactures in the ages before the flood. The building of a city or village by Cain, however insignificant the houses may have been, supposes the existence of some mechanical knowledge. The musical instruments, such as harps and organs, the works in brass and in iron exhibited by the succeeding generations, confirm the belief that the arts were considerably advanced. The construction of Noah's ark, a ship of three decks, covered over with pitch, and much larger than any modern effort of architecture, proves that many separate trades were at that period carried on. There must have been parties who supplied Noah and his three sons with the great quantity and variety of materials which they required, and this they would do in exchange for other commodities, and perhaps money. That enormous pile of building, the tower of Babel, was constructed of bricks, the process of making which appears to have been well understood. Some learned astronomers are of opinion that the celestial observations of the Chinese reach back to 2249 years before the Christian era; and the celestial observations made at Babylon, contained in a calendar of above nineteen centuries, transmitted to Greece by Alexander, reach back to within
fifteen years of those ascribed to the Chinese. The Indians appear to have had observations quite as early as the Babylonians. See ANTIQUE VASES.

Such of the descendants of Noah as lived near the water may be presumed to have made use of vessels built in imitation of the ark—if, as some think, that was the first floating vessel ever seen in the world—but on a smaller scale, for the purpose of crossing rivers. In the course of time the descendants of Japheth settled in "the isles of the Gentiles," by which are understood the islands at the east end of the Mediterranean Sea, and those between Asia Minor and Greece, whence their colonies spread into Greece, Italy, and other Western lands. See ETHNOLOGY.

It appears that, from the earliest times that mention to this day, in cities, trade, in some shape, must have been carried on to supply the town-dwellers with necessaries (see Heeren, Afr. Nat. i, 469); but it is also clear that international trade must have existed and affected to some extent even the pastoral nomad races, for we find that Abraham was rich, not only in cattle, but in silver, gold, and gold and silver plate and ornaments (Gen. xiii, 2; xxiv, 22, 53); and further, that gold and silver in a manufactured state, and silver, not improbably in coin, were in use both among the settled inhabitants of Palestine, and the pastoral tribes of Syria at that date (Gen. xx, 16; xxi, 16; xxvii, 18; Job xxii, 24). These metals must have been imported from other countries (Housey, Anc. Weights, c. xii, 8, p. 198; Kittto, Phys. Hist. of Pol. p. 109, 110; see Herod, i, 215). See CRY.

2. Among trading nations mentioned in Scripture, Egypt holds in very early times a prominent position (see Hub bard, Commerce of Ancient Egypt, in the Biblical Repository, April, 1886), though her external trade was carried on, not by her own citizens, but by foreigners, chiefly of the nomade races (Heeren, Afr. Nat. i, 468; ii, 571, 572). It was an Ishmaelite caravan, laden with spices, which carried Joseph into Egypt, and the account shows that slaves formed sometimes a part of the merchandise imported (Gen. xxxvii, 25; xxxix, 1; Job vi, 19). From Egypt it is likely that at all times, but especially in times of general scarcity, corn would be exported, which was paid for by the non-nomader nations in silver, which was always weighed (Gen. xii, 7); xiii, 9, 25, 56; xlii, 11, 12, 21; xliii, 21).

There was brought to Egypt, as well as the spices of India into Egypt (Exod. xxv, 8, 7; Wilkinson, Anc. Ep. ii, 236, 287). Intercourse with Tyre does not appear to have taken place till a later period, and then, though it cannot be determined whether the purple in which the Egyptian woolen and linen cloth was dyed was brought by land from Phoenicia, it is evident that colored cloths had long been made and dyed in Egypt, and the use, at least, of them adopted by the Hebrews for the tabernacle as early as the time of Moses (Exod. xxxv, 4, 5; comp. Heeren, Anat. Nat. i, 502; see Herod, i, 1). The pasture-ground of Shechem appears from the story of Joseph to have lain in the way of these caravan journeys (Gen. xxxvii, 14, 25), probably a thoroughfare from Damascus. See CARAVAN.

At the same period it is clear that trade was carried on between Babylon and the Syrian cities (see Hubbard, Commerce of Anc. Bab. in the Biblical Repository, April, 1886). For the very early time the dates which were common among the Syrian and Arabian races; a trade which was obviously carried on by land-carriage (Num. xxxi, 50; Josh. vii, 21; Judg. v, 30; viii, 24; Job vi, 19). See BABYLON.

Sidon, which afterwards became so celebrated for the wonderful mercantile exertions of its inhabitants, was founded about 2290 years before the Christian era. The neighboring mountains, being covered with excellent cedar-trees, furnished the best and most durable timber for ship-building. The inhabitants of Sidon accordingly built numerous ships, and exported the produce of the adjoining country, and the various articles of their own manufacture, such as fine linen, embroidery, tapestry, metals, glass, both colored and figured, cut, or carved, and even mirrors. They were unrivaled by the inhabitants of the Mediterranean coasts in works of taste, elegance, and luxury. Their great and universally acknowledged preeminence in the arts procured for the Phenicians, whose principal seaport was Sidon, the honor not being ascribed, among the Greeks and other nations, as the inventors of commerce, ship-building, navigation, the application of astronomy to nautical purposes, and particularly as the discoverers of several stars nearer to the north pole than any that were known to other nations; of naval war, writing, &c., to the keeping of accounts, and weights—to which, it is probable, they might have added money. See SIDON.

The earliest accounts of bargain and sale reach no higher than the time of Abraham, and his transaction with Ephron. He is said to have weighed unto him 440 shekels of silver, current money with the merchant" (Gen. xxiii, 16). The word merchant implies that the standard of money was fixed by usage among merchants, who comprised a numerous and respectable class of the community. Manufactures were by this time so far advanced that not only those more immediately connected with agriculture, such as flour ground from corn, but also, from corn or other grain, bread, fisheries, necessary articles of clothing and furniture, but even those of luxury and magnificence, were much in use, as appears by the ear-rings, bracelets of gold and of silver, and other precious things presented by Abraham's steward to Rebecca (Gen. xxiv, 22, 55.). See BAR.

In the book of Job, whose author, in the opinion of the most learned commentators, resided in Arabia, and was nearly contemporary with Abraham, much light is thrown upon the commerce, manufactures, and science of the age and country in which he lived. There is mention of gold, iron, brass, lead, crystal, jewels, the art of weaving, merchants, gold brought from Ophir, which implies commerce with a remote country, and topazes from Ethiopia; ship-building, so far improved that some ships were distinguished for the velocity of their motion; writing in a book, and engraving letters or writing on plates of lead and on stone with iron pens; and iron and brass, metal, with hooks, and nefs, and spears; musical instruments, the harp and organ; astronomy, and names given to particular stars. These notices tend to prove that, although the patriarchal system of making passages the chief object of attention was still maintained by women, yet an extensive trade was carried on. The author of the book of Job resided, the sciences were actively cultivated, the useful and ornamental arts in an advanced state, and commerce prosecuted with diligence and success; and this at a period when, if the chronology of Job is correctly settled, the arts and sciences were scarcely so far advanced in Egypt, from whence, and from the other countries bordering upon the eastern part of the Mediterranean Sea, they afterwards gradually found their way into Greece. See JOB.

The inhabitants of Arabia appear to have availed themselves at a very early period of their advantages so favorable to commerce over distant countries. Both the countries of India and Egypt, and to have obtained the exclusive monopoly of a very profitable carrying trade between those countries. They were a class of people who gave their whole attention to merchandise as a regular and established profession, and travelled with caravans between Arabia and Egypt, carrying upon the backs of camels the spiceries of India, the balm of Canaan, and the myrrh produced in their own country, or of a superior quality from the opposite coast of Abyssinia—all of which were in great demand among the Egyptians for embalming the dead, in their
COMMERCE

religious ceremonies, and for ministering to the pleasures of that superstitious and luxurious people. The merchants of one of these caravans bought Joseph from his brothers for twenty pieces of silver, and carried him into Egypt. The southern Arabs were eminent traders, and enjoyed a large proportion, and in general the entire monopoly, of the trade between India and the eastern world from the earliest ages, until the system of that important commerce was totally overturned when the inhabitants of Europe discovered a direct route to India by the Cape of Good Hope. See ARABIA.

At the period when Joseph's brethren visited Egypt, Inns were established for the accommodation of travellers in that country and in the northern parts of Arabia. The more civilized southern parts of the peninsula would no doubt be furnished with caravanserais still more commodious. See CARAVANSERAI.

During the residence of the Israelites in Egypt, manufacturers of almost every description were carried to great perfection. Flax, fine linen, garments of cotton, rings and jewels of gold and silver, works in all kinds of materials, chariots for pleasure, and chariots for war, are all mentioned by Moses. They had extensive manufactures of brick. Literature was in a flourishing state; and, in order to give an enlarged idea of the extent of the knowledge of Moses, it is said he was "learned in all the wisdom of the Egyptians" (Acts xii, 22). See EGYPT.

The expulsion of the Canaanites from a great part of their territories by the Israelites under Joshua led to the gradual establishment of colonies in Cyprus, Rhodes, and several islands in the Egean Sea; they penetrated into the Exeine or Black Sea, and, spreading along the shores of Sicily, Sardinia, Gaul, Spain, and Africa, established numerous trading places, which gradually rose into more or less importance. At this period mention is first made of Tyre as a strong or fortified city, whilst Sidon is dignified with the title of Great. See CANAANITES.

The rising prosperity of Tyre soon eclipsed the ancient and long-flourishing commercial city of Sidon. About 600 years before Christ her commercial splendor appears to have been at its height, and is graphically described by Ezekiel (xxvii). The imports into Tyre consisted of gold, silver, tin, lead, copper, glass, timber, ivory, purple, myrrh, balsam, myrrh, frankincense, pitch, pine-tree trunks, and wool, and of the produce of Syria, Egypt, and Africa. They exported also copper, iron, tin, lead, pitch, fire-wood, bones, skins, wine, oil, gum and frankincense, and the products of her own land, such as raisins, figs, olives, and wine, as well as common necessaries and provision of every kind. The country was a large exporter of precious stones, metals, and other valuable commodities, and these were carried to a great distance, by sea and by land, to the various parts of the world. The commerce of Tyre was conducted by Arab merchants, who were paid by the hundred, and their services were freely availed of by all nations. See EGYPT.

The subject of Tyre, "the renowned city which was strong in the sea, whose merchants were princes, whose traffickers were the kings of the earth," by appointment with Cyprus, and its subsequent overthrow by Alexander, after a determined and most formidable resistance, terminated alike the grandeur of that city and the history of ancient commerce, as far as they are alluded to in Scripture. (See Anderson's History of Commerce, Lond. 1764, and latest 1801; Vincent's Commerce and Navigation of the Indian Ocean, Lond. 1807; Hearne's Researches; Barnes on the Ancient Commerce of Western Asia, in the Biblical Repository, Oct. 1840, Jan. 1841; Gilbert, Leoda, on Anc. Commerce, Lond. 1847.) See ALBIA.

3. Until the time of Solomon the Hebrew nation may be said to have had no foreign trade (see Tychsen, De Comm. et negot. rerum, in the Oriental Repository, 1806, p. 150-79). Foreign trade was indeed contemplated by the Law, and strict rules for morality in commercial dealings were laid down by it (Deut. xxviii, 12; xxv, 13-16; Lev. xix, 35, 36), and the tribes near the sea and the Phoenician territory appear to have engaged in commerce to some extent (Gen. xlix, 13; Deut. xxiii, 18; Judg. vi, 7); but the spirit of the Law was more in favor of agriculture and against foreign trade (Deut. xvii, 15, 17; Lev. xxv; see Josephus, A Dionys. i, 12). See ALLIANCE.

During the reigns of David, king of Israel, that powerful monarch disposed of a part of the wealth obtained by his conquests in purchasing cedar-timber from Hiram, king of Tyre, with whom he kept up a friendly correspondence while he lived. He also hiredTyrian masons and carpenters for carrying on his works. He also had Tyrian masons and carpenters for carrying on his works. See DAVID. Solomon, however, organized an extensive trade with foreign countries, and chiefly, at least so far as we are informed, with the Phoenicians (1 Kings x, 22-30; see Gesenius, Thes. Heb. p. 1202; comp. Heeren, As. Nat. i, 384). It was by the Phoenicians also that the cedar and other timber for his great architectural works was brought by sea to Joppa, whilst Solomon found the provisions necessary for the workmen in Mount Lebanon (1 Kings v, 6, 9; 2 Chron. ii, 16). The united fleet used to sail into the Indian Ocean every three years from Elath and Ezion-geber, ports on the Arabian gulf of the Red Sea, which David had probably gained from Edom, and they brought back gold, silver, ivory, sandal-wood, ebony, precious stones, apes, and peacocks. Some of these may have come from India and Ceylon, and some of the produce of the denizens of the coast of Africa (2 Sam. viii, 14; 1 Kings i, 26; x, 11, 22; 2 Chron. viii, 17; see Herod. iii, 114; comp. Livingstone, Travels, p. 687, 692). See ORPHIN.

But the trade which Solomon took so much pains to encourage was not a maritime trade only. He built, with the produce of his commerce, cities, and placed at least expressly as a caravan station for the land-commerce with eastern and south-eastern Asia (1 Kings ix, 18). See SOLOMON.

After his death the maritime trade declined, and an attempt made by Jeheshaphat to revive it proved unsuccessful (1 Kings xxii, 48, 49). See Tanan. We know, however, that Phoenicia was supplied from Judea with wheat, honey, oil, and balm (1 Kings v, 11; Ezek. xxvii, 17; Acts xii, 20; see Josephus, War, ii, 21, 2; Lk, 13, whilst Tyrian dealers brought fish and other merchandise to Jerusalem at the time of the return from captivity (Neh. xiii, 10), as well as timber for the rebuilding of the Temple, which as in Solomon's time, was brought by sea to Joppa (Ezra iii, 7). Oil was exported to Egypt (Hos. xii, 1), and fine linen and ornamental girdles of domestic manufacture were sold to the merchants (Prov. xxxi, 24). The successive invasions to which Palestine was subjected, involving a progressive decrease of treasure by invaders, and heavy imposts on the inhabitants to purchase immunity or to satisfy demands for tribute, must have impoverished the country from time to time (under Rehoboam, 1 Kings xiv, 26; Asa xv, 18; Joash, 2 Kings, xii, 18; Amaziah, xiv, 13; Azaz, xvi, 8; Hezekiah, xviii, 15-16; Jehoshaph and Jehoikim, xiii,

COMMINATION 437  COMMON PRAYER

83, 35: Jebelachin, xxiv, 13); but it is also clear, as the denunciations of the prophets bear witness, that much wealth must somewhere have existed in the country, and much foreign merchandise have been imported; so much so that, in the language of Ezekiel, Jerusalem appears as the rival of Tyre, and through its port, Joppa, have carried on foreign trade with the countries (Isa. ii, 16; iil, 11, 29; Hos. xii, 7; Ezek. xxvi, 2; Jonah, i, 8; comp. Heerem, Ac. Nat. i, p. 229).

See PHOENICIA.

Under the Maccabees Joppa was fortified (1 Macc. xiv, 24), and later still Cæsarea was built and made a port. Joseph. Ant. xxx, 1 1, 2. Acts xxvi, v. 29. Joppa became afterwards a haunt for pirates, and was taken by Cestius; afterwards by Vespasian, and destroyed by him (Strab. xvi, p. 758; Josephus, War, ii, 18, 10; iii, 9, 1). See PALESTINE.

4. The internal trade of the Jews, as well as the external, was much promoted, as was the case also in Egypt, by the festivals, which brought large numbers of persons to Jerusalem, and caused great outlay in victims for sacrifices and in expense (1 Kings viii, 63; comp. Heerem, Afr. Nat. ii, 386). See FESTIVAL.

The places of public market were, then as now, chiefly the open spaces near the gate, to which goods were brought for sale by those who came from the outside (Neh. xiii, 15, 16; Zeph. i, 10). See GATE.

The traders in later times were allowed to intrude into the Temple, in the outer courts of which victims were publicly sold for the sacrifices (Zech. xiv, 21; Matt. xxii, 12; John ii, 14). See TEMPLE.

In the matter of buying and selling great stress is laid by the Law on the fairness of dealing. Just weights and balances are strictly ordered (Lev. xix, 35, 36; Deut. xxv, 13-16). Kidnapping slaves is forbidden under the severest penalty (Exod. xxi, 16; Deut. xxiv, 7). Trade in slaves was forbidden by the Jewish doctors (see Surenhusius, Mischna, de domm. c. 7, vol. iv, 60; Lightfoot, Hor. Heb. de Mith. viii, 33; Saalschütz, Arch. Hebr. c. 15, 16). See MERCHANT.

Commination, an office in the Liturgy of the Church of England, which contains God's threatening against impendent sinners. It is directed to be used on the first day of Lent, and at other times, as the ordinary shall appoint. It is called Commination from the opening Exhortation to Repentance, in which case the sin of sin is against sin is recited in the office in these words: "A Commination, or denouncing of God's anger and judgments against sinners," was left out of the American Prayer-book, but the three concluding prayers of that office were introduced into the service for Ash-Wednesday, immediately after the Collect for that day. See Procter on Common Prayer, 429; Hook, Church Dictionary, s. v.; Eden, Churchman's Dictionary, s. v.

Commissary. 1. In the Church of England, an officer who fills the bishop's place in exercising ecclesiastical jurisdiction. In places ofiso, the chief city that the chancellor cannot call the people to the bishop's principal consistory court without great trouble to them.—Eden, Churchman's Dictionary, s. v.

2. In the Church of Rome, archbishops, bishops, or other dignitaries are deputed as Papal Commissaries for the exercise of functions properly belonging to the pope; and in the same manner bishops may depute episcopal commissaries. If they are deputed for one particular act they are temporary commissaries (commissarius temporarius). If several individuals are concurrently deputed for a function they are a commissio. If persons are clothed by the pope, or by a successor in the See, to exercise partly functions belonging to them, they are called perpetual commissaries (commissarius perpetuus). See Weter und Wele, Kirchen-Lex. ii, 714.

Commission. 1. ἔθνη, dath (a mandate, Extra viii, elsewhere "decrees," etc.); 2. ἑπισκόπως (an overseer, Acts xxvi, 12).

COMMISSION, ECCLESIASTICAL. See COMMISSARY.

Commissioneer, a gloss rendering (1 Macc. ii, 25) for avípavg, mam, i. e. officer.

Commodianus, a Christian historian, supposed to have been born in Africa in the second half of the 3rd century, and to have been converted from heathenism. He wrote, in a sort of acrostic verse, LXXX inscriptiones ade. gentium deos, which ridicules heathenism and exhorts the Christians to lead a pure life. It also contains Chaldaic notions, and gives out the idea that Nero was the Antichrist. It is one of the oldest monuments of Christian history. It was published by Nigels (1660); and by Schurz, Fleisch (Wittenberg, 1704, 4to); and by Davisius (Cambridge, 1711). See Clarke, Succession of Sac. Lit. i, 171; Water, u. welle, K. Rick, Lex. ii, 715.

Commodus, Lucius Elius Aurelius, a Roman emperor, was born A.D. 161, and succeeded his father, Mark Aurelius, as emperor in 180. From early youth he was noted for his kindness of character, and cruel. His father was the first emperor who issued a decree of persecution against the Christians. On the accession to the throne of Commodus the persecution ceased, owing, it was said, to the influence of his concubine, Marcia. According to Irenæus, Christians were first scattered during the reign of Commodus, both at Rome and in the provinces, even in the palace, and in the service of the emperor. But, though Commodus did not decree to persecute the Christians, there were laws according to which Christians who were informed against were to be tried. Thus the learned senator Apollonius, who was informed against by his slaves, was condemned to death. Partial persecutions during the reign of Commodus are mentioned by Tertullian, and Irenæus likewise speaks of martyrs of this time. But, as Commodus was supposed to be favorably disposed toward the Christians, the governors of the provinces felt no inclination to carry out the laws against the Christians.

Comon (evouuic). The Greek term properly signifies what belongs to all (as in Wins. vili, 8, evouuic éthn), but the Hellenists applied it (like the Hebrew עמי) to what was profane, i. e. not holy, and therefore of common or profane use (Acts x, 14). They also applied the term to what was impure, whether naturally or legally (as in Mark vii, 2, compared with 1 Macc. vii, 47, 62). It was used of evil things, or of such as had been partaken of by idolaters, and which, as they rendered the partakers thereof impure, were themselves called euvou (common), and õtou aptra (unclean) (see Kuiinol on Acts x, 14). See CLEAN.

Common-house. A room in a monastery where a fire is constantly kept for the monks to warm themselves.

Common Life. See BRETHREN OF THE COMMON LIFE.

Common Lot, BROTHERS OF THE. See BRETHREN OF THE COMMON LIFE.

Common Prayer, the service-book of the Church of England and of the Protestant Episcopal Church. It is so called because it contains the prayers which the members of those churches use in common, as distinguished from their devotions as private individuals. In the view of those churches, the duty of separate families or persons may be conducted in any mode which best suits the circumstances of each; but joint worship, common prayer, must be in forms on which all are previously agreed, because these alone can equally express common wants (see Canons 4, 98, and 99, Church of England, on the obligation to use the Book of Common Prayer). Eden, Churchman's Dictionary,
COMMON PRAYER

As to the question of the value of such forms, see Forms of Prayer. On liturgies proper (i.e. communion service), see Liturgy. We give here a brief sketch of the history of English and American COMMON PRAYER.

I. The English Prayer-book. — The "Common Prayer" contains, in one volume, the articles of faith, and all the rites, ceremonies, and prescribed forms of the Church of England; and it is thus not only a Prayer-book, but a Ritual and Confession of Faith. Before the Reformation, Breviaries, etc., of the Roman Church of Rome were in use in England. In 1537 the Convocation put forth, in English, "The godly and pious Institution of a Christian Man," containing the Lord's Prayer, the Creed, the Commandments, and the Ave Maria. In 1547, the first of Edward VI, a committee was appointed to draw up a prayer in English, free from Popish errors. Cramner, Ridley, and other eminent reformers were of this committee, and their book was confirmed in Parliament in 1548. This is known as the first Prayer-book of Edward VI. Great part of it was taken from the old services used in England before the Reformation; but the labors of Cranmer and other reformers made it a Protestant form. "About the end of the year 1550 exceptions were taken against some parts of this book, and archbishop Cranmer proposed a new revision. The principal alterations occasioned by this second revision were the addition of the Sentences, Exhortation, Confessions, and Communion Articles, and the omission of morning and evening services, which in the first Common Prayer-book began with the Lord's Prayer; the addition of the Commandments at the beginning of the communion office; the removing of some rites and ceremonies retained in the former book, such as the use of oil in confirmation, the infliction of the sick, prayers for souls, etc.; the addition of the Holy Ghost at the consecration of the eucharist, and the prayer of obligation that used to follow it; the omitting the rubric that ordered water to be mixed with the wine, with several other less material variations. The habits, likewise, which were prescribed in the former book were in this laid aside; and, lastly, a rubric was added at the end of the communion office to explain the reason of kneeling at the sacrament" (Hook).

The liturgy, thus revised and altered, was again confirmed by Parliament A.D. 1551. This is cited as the second Prayer-book of Edward VI. See Cardwell, Two Liturgies. Two editions of this Prayer-book: Edward VI compared (London, 1838, 8vo); Kettley, The two Liturgies, A.D. 1549 and 1552 (edited for the Parker Society, 8vo, 1844). See Cramner.

Queen Mary, on her accession, repealed the acts of Edward, and restored the Romanist prayer-book. "On the accession of Elizabeth, however, this repeal was reversed, and the second book of Edward VI, with several alterations, was re-established. This liturgy continued in use during the long reign of Elizabeth, and received further additions and improvements. An accurate edition of it, and of the Latin translation of it made by Alexander Ales, was published for the Parker Society. It is entitled Liturgies and occasional Forms of Prayer set forth in the Reign of Queen Elizabeth (Cambridge University Press, 1847, 8vo). Early in the reign of James I it was again revised. At this revision a collect in the daily morning and evening service, and a particular intercession in the litany, were introduced for the royal family; the forms of thanksgiving upon several occasions were then added; the questions and answers concerning the sacraments were subjoined to the catechism; and the administration of baptism was by the rubric expressly confined to the lawful minister. These and some other additions and improvements were made by the archbishop and the bishops of the church of England. The books of prayer of the bishops of London, where the ancient forms were not ratified by Parliament. In 1661, the year after the restoration of Charles II, the commissioners, both Episcopal and Presbyterian, who had met at the Savoy to revise the liturgy, having come to no agreement [see Savoy Conference], the Convocation agreed to the following alterations and additions, viz.: several lections in the calendar were changed to more proper for the days; the prayers upon particular occasions were disjoined from the litany; several of the collects were altered; the epistles and gospels were taken out of the last translation of the Bible, published in 1611, instead of being read from the old version. For the prayer for the dead, that for all conditions of men, the general thanksgiving, the office of baptism for those of riper years, the forms of prayer to be used at sea, for the anniversary of the martyrdom of Charles I, and for the restoration of the royal family, were added; and throughout the whole liturgy ambiguities were removed, and various improvements made. The whole book, being finished, passed both houses of Convocation; it was subscribed by the bishops and clergy, and was ratified by act of Parliament, and received the royal assent May 19, 1662. This was the last revision of the Book of Common Prayer in which any alteration was made by public authority. (See the appendix to introduction; Nicholl's Pref. to his Comment. on the Book of Common Prayer; Tomlin's Christ. Theol. ii, 20-29; Dr. Cardwell's History of Conferences and other Proceedings connected with the Revision of the Book of Common Prayer, from the year 1536 to the year 1660, Oxford, 1844.) The numerous mentions of Divine Offices (London, 1659, fol.; reprinted at Oxford in 1844 in 8vo), exhibits all the liturgies of the Church of England since the Reformation, as also the service-book introduced into the Church of Scotland in 1667; it is illustrated with ample annotations. The Liturgic Britanniæ, published by the Rev. William Keeling, B.D., at London in 1842, exhibits the several editions of the Book of Common Prayer of the Church of England from its first compilation to its last revision in 1662, together with the liturgy set forth for the use of the Episcopalian Church in Scotland. The Rev. W. R. Clay's Book of Common Prayer Illustrated (London, 1841, 8vo) most commodiously shows the various modifications, the date of its several parts, and the authority on which they rest. An appendix, containing various important ecclesiastical documents, concludes the volume. To those who can procure more expensive publications, the complete collection of the authentic text of the Book of Common Prayer, London in 1848, in six large folio volumes, will doubtless be preferred. The collection, which is uniformly printed in black letter, like the original editions, comprises the liturgies of king Edward VI, 1549 and 1552; the first Prayer-book of queen Elizabeth, 1550; king James the First's Prayer-book, as settled at the Hampton Court Conference in 1604; the Scotch book of king Charles I; and the Charles's Second's book, as settled at the Savoy conference in 1662. By the Act of Uniformity, 18 and 14 Car. II, c. 4, sec. 28, it was enacted that true and perfect copies of that act, and of the Book of Common Prayer, 1662, should be delivered into the hands of the respective commoners; and it is entitled The Sealed Books, and occasional Forms of Prayer set forth in the Reign of Queen Elizabeth (Cambridge University Press, 1847, 8vo). By the Act of Uniformity, 18 and 14 Car. II, c. 4, sec. 28, it was enacted that true and perfect copies of that act, and of the Book of Common Prayer, 1662, should be delivered into the hands of the respective commoners; and it is entitled The Sealed Books, and occasional Forms of Prayer set forth in the Reign of Queen Elizabeth (Cambridge University Press, 1847, 8vo).
Irish statutes 17 and 18 Car. II, c. 6, now preserved in the Rolls Office at Dublin. In 1849-55 Mr. Stephens also published (3 vols. 8vo) the text of the Book of Common Prayer for the use of the Church of Ireland, from the Sarum Manuscript, with an introduction and notes" (Eadie, Eccles. Encyclop., p. 203). Several attempts have been made to revise the book since 1662 without success. The first was in the reign of William III, furthered by Tillotson and Stillington, who in 1668 had united with Bates, Manton, and Baxter in preparing a bill for the 'comprehension of the Sarum Missal'; the scheme was resumed after the Revolution, and in 1689 a commission was formed to revise the Prayer-book. A number of alterations were suggested, in order, if possible, to gratify the Dissenters (see the Revised Liturgy of 1689, a blue-book, 1655). Nothing came of the proposition. A full account of this and other proposed revisions is given by Procter, Hist. of the Book of Common Prayer (Camb. 1856, 2d edit.). There is now a Liturgical Revision Society in England, which, in its Declaration of Principles and Objects proposes the following changes: 1. The Rubric: the word priest to be changed; 2. The Ordination Service: words abused to be revised; 3. The Missal: certain words to be altered; 8. The Visitation of the Sick: the absolution to be omitted or qualified. 4. The Baptismal Offices: words asserting the spiritual regeneration of each recipient to be altered. 5. The Catechism to be revised. 6. The Burial Service: general language to be employed in the Visitation of the Dead. 7. The Athanasian Creed: the damnable clauses to be omitted. 8. The Apocryphal Lessons to be replaced by Scripture. A careful examination of the changes here specified will illustrate the chief aim of this society, which is to bring the Book of Common Prayer into closer conformity with the principles and practices of the Reformation, by excluding all those expressions which have been assumed to countenance Romanizing doctrine or practice. It is believed this object will be greatly advanced by the combination of numbers, and the abandonment of desultory for systematic action. All, therefore, who are friendly to the cause of Protestantism in our Church—all who would gladly see the letter of our formularies, which have been altered for the worse more than once since the Reformation, brought again into harmony with the spirit of that glorious epoch—are invited to co-operate in this work, and to aid the society with their contributions, their influence, to nut. So, all our lev. One hundred and sixty English clergymen signed a petition in 1860, presented by Lord Elrury, asking for a commission to revise the Book of Common Prayer. On the other hand, the clerical declaration against the proposed revision received between six and seven thousand signatures. See also Fisher, Liturgical Purity and Our Rightful Inheritance (London, 1857, 12mo). The Nonjurors (q.v.), whose quasi-separation from the Church of England lasted from 1688 to 1779, generally used the authorized Prayer-book, except in the prayer for the king. "Dr. Hicks, whose example was probably followed by Jeremy Collier, used the common service in the first book of King Edward VI, which he regarded as more conformable to the ancient practice; but most others continued to use the English Prayer-book until the year 1718 (Lathbury's History of the Nonjurors). The following are the principal liturgies of the Nonjurors: (1) A Communion Office, with Additions, 1718; (2) Common Prayer, from the first English Reformed Common Prayer-book: together with Offices for Confirmation and the Visitation of the Sick (London, 1718, 8vo). Reprinted in the fifth volume of Hall's Fragmenta Liturgica, in 1848, 12mo). From the publication of these offices the Nonjurors were divided into two parties: one adopted the new, and those who retained the old offices. The obsolete, not to say superstitious ceremonies, revived in this new communion office, were four, viz. mixing water with the wine, prayer for the dead, prayer for the descent of the Holy Spirit on the elements, and the prayer of obligation. These were called the usages, and those who practised them were called usagers. Three other ceremonies, apart from those already freq.-ently reckoned among them, viz. trine immersion in baptism; chriom, or consecrated oil in confirmation; and anunction at the visitation of the sick (ibid. vol. i. p. xxxviii). (2) A Compendium of Devotions, taken from the Apostolical Constitutions, the Ancient Liturgies, and the primitive and apostolical customs of the Church, Part I comprehending the Publick Offices of the Church, . . . . Part II a Method of Private Prayer (London, 1784, 8vo). Part I is reprinted in Hall's Fragmenta Liturgica (Eadie, s. v.). Common Prayer—books of Dissenters from the Church of England. (1.) The earliest of these is A Book of the Forms of Common Prayer, Administration of the Sacraments, etc., agreeable to God's Words and the use of the Reformed Churches. This liturgy was printed by Waldegrave at London, without date, and at Middleburg, in Holland, in 1586, 1667, and 1692. The text of Waldegrave's edition is reprinted in Hall's Fragmenta Liturgica, vol. i. Middleburg edition, 1586, in his Reliquiae Liturgicae, vol. i. (2.) At the conference held in the Savoy in 1661 between the royal commissioners for reviewing the liturgy and the Nonconformists, the office of drawing up certain additional forms was assigned to Baxter, who presented a new form of prayer of his own composition, entitled, The Reformation of the Liturgy as it was presented to the Right Reverend the Bishops, by the Divines appointed by his Majesties Commission, to treat with them about the alteration of it. This form of prayer is now more generally known as the Savoy Liturgy. It has been reprinted, and was found in the fourth volume of Hall's Fragmenta Liturgica. A new edition of The Book of Common Prayer, as amended by the Westminster Divine, in 1661, edited by the Rev. Dr. C. W. Shields, was published in Philadelphia (1865). The Savoy Liturgy comprises forms of prayer for 'the ordinary public worship of the Lord's day; the order of celebrating the sacrament of the body and blood of Christ, and the celebration of the sacrament of baptism; a short discourse of catechizing, and the approbation of those who are to be admitted to the Lord's Supper; the celebration of matrimony; directions for the visitation of the sick, and their communi- tion,' with others. Baxter conceived that there should be no dead, prayer and thanking for particular members of the Church; a discourse 'on pastoral discipline, with forms of public confession, absolution, and exclusion from the holy communion of the Church.' (8.) William Whiston (q. v.) was deprived of his professorship as an Ariotel, and being for a time suspended from communion with the Church on the act of con- vocation, he formed a religious society at his house in London for public worship. There he erected The Liturgy of the Church of England reduced nearer to the primitive standard, humbly propos'd to public consideration. This liturgy was first published at London in 1718. Whiston believed that the constitutions to be the genuine work of the apostles, and has made use of them in the composition of some of his prayers. (4.) The Book of Common Prayer, Reformed according to the Plan of the late Dr. Samuel Clarke; or, as it is designated in the prefatory adver- tamine, The New Liturgy: and revised according to the Amendments of Dr. Clarke, and such further Alterations as were judged necessary to render it Unexception- able with respect to the Object of Religious Worship, was first published in 1747 by the Rev. Theophilus Lindsay, M.A., who Socinianized the Ariotel alterations in the form proposed by Whiston, but adopted the new, and those who retained the old offices. This Prayer-book has subsequently passed through numerous editions. It contains al-
COMMON PRAYER

most all the offices in the Book of Common Prayer, except the order of baptism for persons of riper years and the communion. The great object of the whole is to address the entire worship to God the Father, to the utter exclusion of God the Son and God the Holy Spirit. This liturgy is the basis of A Liturgy collected principally from the Book of Common Prayer, for the Use of the First Episcopal Chapel in Boston [Massachusetts], together with the Psalter or Psalms of David (Boston, 1735; Rep. 1811), and again in 1888, with further alterations. (5.) The Book of Common Prayer, compiled for the Use of the English Church at Dunkirk, together with a Collection of Psalms, was printed at Dunkirk in 1791. The anonymous compiler states that he followed throughout the plan propounded by Clarke. The book deviates less from the liturgy of the Church of England than the Scottish liturgy above noticed” (Edie, s. v.). (6.) The Sunday Service of the Methodists was originally prepared by John Wesley. On comparing a copy of the edition of The Sunday Service of the Methodists, with other occasional services (reprinted in 1839), with the Book of Common Prayer, the differences for Sunday services are readily perceived, but for the second lessons in the morning, a chapter out of the four Gospels or the Acts of the Apostles is to be read, and in the evening a chapter out of the epistles in regular rotation. Many verbal expressions, which have been excepted against, are found. The sermons are abridged, while others are abridged. The only creed read is that of the apostles. The offices for the baptism of infants, or of persons of riper years, the celebration of matrimony, the communion of the sick, and the burial of the dead, are shortened. The offices for the ordination of priests and deacons, and for the consecration of bishops, are altered into forms for the ordination of deacons, elders, and superintendents; and the Thirty-nine Articles are reduced to twenty-five. The Nicene and Athanasian Creeds, and the apocryphal books of the Old Testament, are omitted. Some obsolete words are replaced by others which are more easily understood. An edition of this book was prepared, with the necessary modifications, for the use of the American Methodist Church, by Mr. Wesley, in 1784; a second edition, slightly modified, in 1786. This Prayer-book was used for some time in the American Methodist Church; but it gradually dropped out of use, without a change from the present form. (7.) The Liturgy of the New Church, signed by the New Jerusalem in the Revelation, prepared by order of the General Conference, was published in 1849, and superseded all the liturgies which had previously been used by the Swedes, Danes, or followers of Emanuel Swedenborg.

III. Scottish Common Prayer-books. — 1. Ancient Liturgy of the Kirk of Scotland. — At the commencement of the Reformation in Scotland the Protestant nobles and the town of Edinburgh, in December 1557, agreed that they would rest satisfied with the present with the reading of the prayers and lessons in English, according to the order of the Book of Common Prayer, that is, the liturgy of king Edward VI, in every parish on Sundays and other festival days. This regulation, however, continued in force only to a short time; for in 1562 the Book of Common Order, commonly termed Knox’s Liturgy, was partially introduced; and by an act of the General Assembly, passed December 26, 1564, its use was authoritatively ordained in all the churches in Scotland. This liturgy was taken from the order or liturgy used by the English church. In the office of morning and evening prayer, the celebration of baptism, the Lord’s Supper, and marriage; and for the election of superintendents or presbyters who were invested with

episcopal functions; the order of ecclesiastical discipline, of excommunication, and of public repentance; a treaty on fasting; and forms of prayer for domestic and private use. And it was called by the name of Knox’s Book of Common Order, or, John Knox’s Book of Common Order, was published by the Rev. Dr. Cumming, at London, in 1840, in 18mo. The New Books of Common Prayer, according to the forms of the Kirk of Scotland, our brethren in faith and covenant, printed in 1644, is a revision of this in 1811, and again in 1888, with further alterations. (5.) The Book of Common Prayer, compiled for the Use of the English Church at Dunkirk, together with a Collection of Psalms, was printed at Dunkirk in 1791. The anonymous compiler states that he followed throughout the plan propounded by Clarke. The book deviates less from the liturgy of the Church of England than the Scottish liturgy above noticed” (Edie, s. v.). (6.) The Sunday Service of the Methodists was originally prepared by John Wesley. On comparing a copy of the edition of The Sunday Service of the Methodists, with other occasional services (reprinted in 1839), with the Book of Common Prayer, the differences for Sunday services are readily perceived, but for the second lessons in the morning, a chapter out of the four Gospels or the Acts of the Apostles is to be read, and in the evening a chapter out of the epistles in regular rotation. Many verbal expressions, which have been excepted against, are found. The sermons are abridged, while others are abridged. The only creed read is that of the apostles. The offices for the baptism of infants, or of persons of riper years, the celebration of matrimony, the communion of the sick, and the burial of the dead, are shortened. The offices for the ordination of priests and deacons, and for the consecration of bishops, are altered into forms for the ordination of deacons, elders, and superintendents; and the Thirty-nine Articles are reduced to twenty-five. The Nicene and Athanasian Creeds, and the apocryphal books of the Old Testament, are omitted. Some obsolete words are replaced by others which are more easily understood. An edition of this book was prepared, with the necessary modifications, for the use of the American Methodist Church, by Mr. Wesley, in 1784; a second edition, slightly modified, in 1786. This Prayer-book was used for some time in the American Methodist Church; but it gradually dropped out of use, without a change from the present form. (7.) The Liturgy of the New Church, signed by the New Jerusalem in the Revelation, prepared by order of the General Conference, was published in 1849, and superseded all the liturgies which had previously been used by the Swedes, Danes, or followers of Emanuel Swedenborg.

1. Ancient Liturgy of the Kirk of Scotland. — At the commencement of the Reformation in Scotland the Protestant nobles and the town of Edinburgh, in December 1557, agreed that they would rest satisfied with the present with the reading of the prayers and lessons in English, according to the order of the Book of Common Prayer, that is, the liturgy of king Edward VI, in every parish on Sundays and other festival days. This regulation, however, continued in force only to a short time; for in 1562 the Book of Common Order, commonly termed Knox’s Liturgy, was partially introduced; and by an act of the General Assembly, passed December 26, 1564, its use was authoritatively ordained in all the churches in Scotland. This liturgy was taken from the order or liturgy used by the English church. In the office of morning and evening prayer, the celebration of baptism, the Lord’s Supper, and marriage; and for the election of superintendents or presbyters who were invested with
From respect, however, for the authority which originally sanctioned the Scotch liturgy, and for other sufficient reasons, it is hereby enacted, that the Scotch communion office continue to be held of primary authority in this Church, and that it shall be used in all consecrations of bishops, but also at the opening of all general synods—p. 29, 30. Although the Scotch communion office is thus established, it is worthy of notice that this canon does not prescribe what specific edition is to be used, almost every single bishop, in the tape of the Book of Common Prayer, has made small alterations, and even some omissions, according to their own judgment or preference. In point of doctrine, the difference between the English and Scotch offices is clear and unequivocal—the English offices being exclusively commemorative, and the Scottish most distinctly sacrificial. Besides which, the following usages are practised, not one of which is adopted in the English offices, viz.: 1. The mixing of water with the wine in the Eucharist; 2. Commemorating the faithful departed at the altar; 3. Consecrating the elements by an express invocation; 4. Using the obilatory prayer before distribution (Ezek. 44:20, 21). Notwithstanding all these variations, the "Protestant Episcopal Church" was established as an organization separate from the Church of England in 1784. In 1786 a committee was appointed to adapt the English liturgy to use in this country, and they prepared a book which, however, never saw the light. (N. Y. Church Book, 1790). It was reprinted in Hall, Religio Liturgica, Lond. (1847).

At the General Convention in October, 1789, the whole subject of the liturgy was thrown open by appointing committees on the different portions of the Prayer-book, whose several reports, with the action of the two houses thereupon, were consolidated in the Book of Common Prayer, etc., as it is now in use, the whole book being ratified and set forth by a vote of the Convention on the 16th of October, 1789, its use being prescribed from and after the 1st day of October, 1790. The American liturgy retains all that is excellent in the English service, omits several of its really objectionable features, brings some of the offices (the communion, for example) nearer to the primitive pattern, modifies others to suit our peculiar institutions, and, on the whole, is a noble monument to the wisdom, prudence, piety, and churchmanship of the fathers of the American Church. By the 45th canon of the Church of England (Can. 17), before mentioned, all sermons and lectures, and all other occasions of public worship, use the Book of Common Prayer, as the same is or may be established by the authority of the General Convention of this Church. And in performing said service, no other prayers shall be used than those prescribed by the said book (Hook, Church Dictionary, Am. ed. s. v.).

There seems to be a widely-diffused conviction, both in England and America, quite apart from doctrinal considerations, that the forms of morning service, which are composed of what were formerly several distinct services, are too long for use. Bennett, in his Paraphrases with Supplemental Preparations on the Book of Common Prayer (Lond. 1709, 8vo), observes that the using of the morning prayer, the litany, and communion service at one and the same time, in one continued order, is contrary to the first intention and practice of the Church. On this subject the Church of England Quarterly (Lond. 1858, 8vo), pp. 173, 174, has advanced some suggestions which are not generally conceded. There is, in no one will deny, much repetition in them as they are at present conducted; and the recitation of the Lord's Prayer six times in a sacrament morning may be taken as an instance. We recognize our liturgy as deservedly esteemed by our forefathers; would we recommend, nor would they suffer, any alterations in it which would tend to lower its tone. A few verbal changes, the omission of a few rubrics, a new arrangement of the morning lessons, and we might go on without detriment for another three centuries. Much, too, must at all times be left to the discretion of the clergy." On this and other questions as to needed changes, see the Memorial Papers, containing the Circular and Questions of an Episcopal Commission ordered by the General Convention of the P. E. Church in 1858, edited by Bp. A. Potter (Philad. 1857, 12mo); Powys, Reconstruction of the Liturgy (Lond. 1864).

A writer in the London Daily News (1867) relates the discovery of a manuscript in the library of the House of Lords, of the copy of the Act of Uniformity, 14 Charles II, 1662, with the roll affixed containing the words of the Book of Common Prayer, which had been detached and lost from the copy deposited with the House of Commons. Technically and practically, therefore, the writer remarks, the two rolls form one engrossed act, and nothing can be so distinct a proof that the prayers, psalms, rubrics, etc., are the law of the land" (Nation, Sept. 19, 1867).

The most important works on the Common Prayer, besides those cited in the course of this article, are: Wheatly, History of the Liturgy of the English Church (Lond. 1720, fol.; new ed. 1843, 8vo); Goodwin, Standard Library, 12mo); Comber, Companion to the Temple (new ed. Oxf. 1841, 7 vols. 8vo); Sparrow, Rationale upon the Book of Common Prayer (new ed. Oxf. 1888, sm. 8vo); Bailey, The Liturgy compared with the Bible (Lond. 1863, 2 vols. 8vo); Palmer, Origins Liturgice (Oxf. 1861, 8vo); Pusey and Grindal, Catechisms and Offices (Oxf. 1829); Procter, History of the Book of Common Prayer (Lond. 1856, 2d ed. 8vo); Cardwell, The two Liturgies of Edward VI compared (Oxf. 1828, 8vo); Maskell, Monumenta Ritualis Ecclesiae Anglicane (Lond. 1846, 8 vols. 8vo); Freeman, Principles of Divine Service (Lond. 1835, 8vo); Christen Remembrancer, Oct. 1855, art. vii; Letherby, History of the Book of Common Prayer from the Reformation (1585, 2d ed. 8vo); Cardwell, History of Conferences for revision of the Common Prayer in 1558 to 1690 (Oxf. 1849, 2d ed. 8vo); Humphry, Historical and Explanatory Treatise on the Common Prayer (Lond. 2d ed. 1856, 8vo); Studdart, The History of the Book, and of its Formation from previous Liturgies, with a Draft showing how our present Liturgy might, with some alterations, be advantageously revised and rearranged in more civil services (Lond. 1864, crown 8vo); The Annotated Book of Common Prayer, being an Historical, Ritualistic, Doctrinal, and Devotional System of the Church of England, edited by John Henry Blunt (Lond. 1866, imp. 8vo). On the American book, see Brownell, Family Prayer-book (N. Y. 1855, royal 8vo); Butler, Common Prayer Interpreted by its History (Boston, 1845, 12mo); Am. Church Review, Jan. 1836, art. 1. See Forms of Prayer; Liturgy; Church.

Commune, or Communicate, a term made use of to denote the act of receiving the Lord's Supper. See Lord's Supper.

Communicanda, (1) a sect of Anabaptists (q. v.); (2) a term used to designate church-members who partake of the Lord's Supper (q. v.).

Communicatio Idiomatum, a doctrine of the Lutheran Church as to the person of Christ. In the ancient Church the question arose if a real personal unity of the divine and the human elements in the person of Christ was maintained. These are two persons, of two distinct natures. The ancient Church maintained the reality of the personal unity of the two elements by condemning the Nestorian, Monophysite, and Monotheletic doctrines. The Lutheran theology undertook to show the possibility of this union. Luther had laid the foundation of the new church, and it was by the grace of God that the doctrine of the ancient Church, according to his humanity, fills all things, and is ubiquitous. He did not use, however, the expression communicatio idiomatum, which was first employed
COMMUNION IN THE FORMULA CONCORDIA (q.v.). Three classes of Scriptural passages were adduced by the old Lutheran writers in behalf of this doctrine: 1. those in which qualities belonging to one nature only are attributed to the whole person; 2. those which predicated of one nature an activity which belongs to the work of redemption, consequently to the whole person; 3. those which transfer divine attributes to Christ's human nature. The Formula Concordia, however, expressly rejects a restriction of the divine nature in consequence of its union with the human. Zwingle, with whom, on the whole, the theologians of the Reformed Church agreed, rejected the doctrine of a real communicatio idiomatum (peculiar qualities of the two natures), and explained the passages adduced by the Lutherans as figures of speech (e.g., Paul's). The Supra-naturalistic school of the latter German theology does not expressly reject the doctrine, but explains it away. The Rationalistic, Aesthetic, and Speculative schools of Germany either reject it entirely, or partly put it upon it an ethical or speculative construction. The revived Lutheran orthodoxy of the 19th century partly restricts itself to a mere revival of the old doctrine, and partly attempts to complete it by asserting a self-restriction of the divine nature in Christ, in consequence of his union with the human. According to this doctrine, which was in particular developed by Sartorius (De communione in Christo, Hamburg, 1832) and Thomasius (Beiträge zur kirklichen Christologie, Erlangen, 1845), the Logos, from the moment of his incarnation, renounced his divine self-consciousness in order to develop himself in a merely human form. See, besides the works already mentioned, Dornm., Kirche und Gott (2d ed., 2 vols., Brunswick, 1837), p. 221 sqq.; Giesen, History of the Holy Communion of the Church (2d ed., 1848), p. 155 sqq.; Hagenbach, History of Doctrines on the Lord's Supper, p. 57; Pearson On the Creed, art. ii.; and the article CHRISTOLOGY, p. 281.

Communicative Life. Ecclesiastical writers, in describing the habits of monks, distinguish between vita communicativa and vita renuntiatica. The usual plan was for candidates to take a solemn vow of poverty, and consequently to renounce the world by disposing of their estates to charitable uses, before they entered into a community, where they were to have all things in common. Others kept their estates in their own hands, and yet enjoyed no more of them than if they had passed over to others; for they distributed their revenues to the use of the community, and to such uses as the daily necessities of men required. The latter was called the communicative life.—Farrar, Eccl. Dictionary, s. v.; Bingham, Orig. Eccl. vili, s. v.

Communio Laica, in the language of the Church of Rome, means properly the rank of the laity, but is more commonly used to signify the status of a clergyman transferred from the privileged class of the clergy to the laity. The lower clergy can, according to the canon law, contract a valid marriage, but thereby lose their benefits and dignities as clergy. The Holy Council of Trent allowed that in exceptional cases the lower orders be conferred upon married men (in case they had not been married oftener than once), and, on condition of their wearing the tonsure and the clerical habit, granted to them the privilege communicatio et fori (see COMMUNIO). The dispensation for transfer of the higher clergy to re-enter the rank of the laity (in particular, for the purpose of marrying) has only been given in rare instances. The transfer of a clergyman to the rank of the laity, as a punishment, took place, according to the ancient canonical law, in connection with deposition, but, according to the later law, only in consequence of conviction of a grave delinquency (V. See: Weitzel, Kirchen-Lex., II, 718; Bingham, Orig. Eccl. xvii, 2; Farrar, Eccl. Dict. s. v.).

Communio Peregrina. In the early Church the term communio denoted not only a participation of the Eucharist, but also a right of partaking of the bounty of the Church. When travellers or strangers came to any church without bringing letters legitimati, by which they might be ascertained to be members of some other Church, they were received with the suspicion that they were under the censure of the Church to which they had belonged. Until they could thus clear themselves from imputation, they were not admitted to the Lord's table, but were allowed to derive their means of temporal maintenance from the Church fund. In this way delinquent clergy were sometimes treated in their own churches, and this was called communio peregrina. They were not permitted to officiate or to be present at the celebration of the Lord's Supper until they had given satisfaction to the Church. —Farrar, Eccl. Dict. s. v.; Bingham, Orig. Eccl. xvii, 2, 9, 1.

Communion (cœnasia, a sharing), in ordinary terms, an association or agreement when several persons join and partake together of the wine and bread in celebration of the Eucharist. As an act of fellowship among Christians (1 Cor. x, 16), and it is to this act of participation or fellowship that the word "communion," in the religious sense, is now chiefly applied in the English language. In 2 Cor. vi, 14, it takes the derived sense of cœnas, the "communion of the Holy Ghost," the Bible signifies the spiritual intercourse with the divine Spirit which the child of God maintains by faith and prayer. The Greek term has also a secondary meaning of benefit by the church, or something peculiarly the church's, and therefore of "communication," "distribution," or "communication" [which see]. The word is elsewhere translated simply "fellowship" (q. v.). For a large number of treatises on this subject, see Volbeding, Discourse, p. 147 sqq.

(1) Communion (cœnasia) therefore properly means the sharing something in common with another. Hence, in the Christian sense, it signifies the sharing divine converse or intercourse (1 John i, 8); and as this takes place, sacramentally, in the Lord's Supper, the word, in a third sense, signifies a joint participation in a spiritual sense of the body and blood of Christ, i. e. of his Spirit (John vi, 63) in that sacrament (1 Cor. x, 16). Some explain the cœnasia in the Lord's Supper to be a communciation of the body and blood of Christ, as though these were given by the Church to the receiver, but the above account of the order in which the senses of the word have grown out of one another shows that such an interpretation is untenable. The Church has not, nor pretends to give, anything as from herself in that ordinance, but Christians come together to hold communion with each other, and, their (once-sacrificed) Lord, of the benefits of whose death, sacramentally exhibited, they are in a special, though only spiritual, manner then partakers. As (2) In a historical sense, communio denotes participation in the mysteries of the Christian religion, and, of course, Church fellowship, with all its rights and privileges. Hence the term "excommunication."
In this sense the word is used also with reference to the admission of persons to the Lord's Supper. This is said to be open when all are admitted who apply; to be closed when confined to the members of a single society, or at least to members of the same denomination; and it is strict when persons are admitted from societies of different denominations, on the profession of their faith and evidence of their piety, as is the case in Protestant churches generally. The principal difficulty on this point arises between the strict Baptists and Free and Strict communionists, that to what ever imputation a strict adherence to the commission of Christ may subject the Baptist churches, it is better to suffer them than to sin; and that a deviation in deference to modern error, however conscientiously maintained, is neither charity nor Christian wisdom, since whatever is right is wise. Christians may cordially unite in the avowal of the principal truth that they do not, nor can they, without a change of sentiments, unite in the constitution of their churches (Conversations on Strict and Mixed Communion, by J. G. Fuller)."

It is said that most of the English Baptists favor free communion; those of the United States are mostly close communionists, except the Free-will Baptists, who are, as a body, open communionists. See Curtis, Communion, a Review of the Arguments of Hall and Noel (Phila. 1850, 12mo), for a full argument for close communion; also Christian Review, xvi, 210, and an able article by Dr. Hovey, Bibliotheca Sacra, Jan. 1862, art. v. See also the same for July, 1864, art. i, and July, 1867, art. iii, for Baptists.

II. A similar controversy has been going on in the Lutheran Church, in which the High-Church party refuses the admission of members of the Reformed and all non-Lutheran churches to communion. See Lutherans.

III. The Reformed Presbyterians (Covenanters) in Scotland and the United States, and the United Presbyterians in the United States, are also believers in the doctrine of close communion; but in all these churches there is a party which strongly contends against this doctrine, and in favor of open communion. At the United Presbyterian General Assembly of 1867 the subject of close communion was the chief topic of discussion. The Rev. W. C. McCune, the author of a book against close communion, was censured by a large majority. See W. C. McCune, Close Communion, or Church Fellowships, by Rev. J. T. Pressly, D.D., of the United Presbyterian Theological Seminary, Allegheny, Penn. (Cincinnati, William Scott, 1866, p. 147); also W. Annan (O. S. Presbyterian), The Doctrine of Close Communion tested by Scripture and Reason (Pittsburg, 1867). Mr. Annan endeavors to establish that the views entertained and defended by the leading men at present in that Church are neither those which were held by the fathers of the Church, nor by the fathers of the Reformed Church, beyond the reach of conviction our Baptists would have been, and to engender among the Baptists themselves a narrow and sectarian feeling, wholly opposed to the enlarged spirit of the present age (Complete Works of Robert Hall, ii, 207-280; also i, 283-504).

(b) The positions urged on the opposite side by Mr. J. G. Fuller are these: 1. That all the arguments which are used to destroy the identity of baptism as practiced by John and the apostles before the death of Christ, with that practiced afterwards, amount only to proof of a circumstantial, not an essential difference, and cannot, therefore, warrant the inferences of Mr. H. H. Griswold. 2. That the commission, of the Lord (Matt. xxviii, 19, 20) furnishes the same evidence that baptism is an indispensable prerequisite to external Church fellowship as that faith is an indispensable prerequisite to baptism. 3. That the uniform examples of the apostles is an inspired explanation of the commission. 4. That the pattern intended for the instruction of the Church in all succeeding ages. 4. That that strict conformity to the commission of Christ, thus explained, is not schism, but the only possible mode of restoring and perpetuating Christian union. 5. That the mutual forbearance enjoined in the New Testament rests on the same principle, and to matters of real indifference, not involving the surrender of any positive institution of Christ, and is therefore applicable to the present case. 6. That to unite with Pedo-Baptist brethren in all such acts of worship and benevolent effort as do not imply an abandonment of the commission is not an inconsistency, but the dictate of Christian charity. 7. That whatever is right is wise. Christians may cordially unite in the avowal of the principal truth that they do not, nor can they, without a change of sentiments, unite in the constitution of their churches (Conversations on Strict and Mixed Communion, by J. G. Fuller)."

COMMUNION IN BOTH KINDS. "The communion was universally administered in both kinds (bread and wine), to both clergy and laity, until about the twelfth century, when the cup began to be gradually withdrawn from the laity in the Western Church, on account (as was affirmed) of the disorders to which the use of it had given rise. Communion in one kind is intimately connected with the doctrine of transubstantiation. Romanists profess to believe that Christ, his body and soul, is present in the bread and wine, and is contained in either species, and in the smaller particle of each. Hence they infer that, whether the communicant receives the bread or the wine, he enjoys the full benefit of the sacrament. Thus, to support this absurd and monstrous dogma, a Christian ordinance is disqualified; transubstantiation of any kind, and communion in one kind proves the truth of transubstantiation. This is the principal reason assigned in the Catechism of the Council of Trent. After alleging many frivolous reasons, such as that there is danger of spilling the wine in a crowded assembly, and that the wine is the better drink of Christ; that many cannot bear the smell or taste of wine; that it may become vapid; that it is extremely scarce in some places, and would involve
COMMUNION OF SAINTS, one of the points of a Christian's faith according to the Apostles' Creed.

1. According to the Roman Catholic definition, it is the 'union between the Church triumphant (in heaven), the Church militant (on earth), and the Church suffering (in purgatory). These three forms of the one body of Christ—Christ is the invisible head, and of which the pope, Christ's vicar, is the visible head. Its members are united by a mutual communication of intercessions and prayers' (Bergier). This definition, it will be seen, prepares the way for the Roman superstitions of the invocation of saints and prayers for the dead. 'The saints in heaven are to be venerated and invoked by the Church militant, and the members of the latter are to be supported by the intercessions of the former. The Church militant is to support by her prayers the Church suffering; and the members of the Church militant may also offer prayers for each other.' See Wetzer and Welse, Kirchen-Lexicon, IV, 292 seq.

2. The Protestant definitions vary somewhat. (a) The Westminster Confession says: 'All saints that are united to Jesus Christ, their head, by his Spirit and by faith, have fellowship with him in his graces, sufferings, death, resurrection, and glory. And being united to one another in love, they have communion in each other's gifts and graces, and are obliged to the performance of such duties, public and private, as do conduce to their mutual good, both in the inward and outward man. Saints by profession are bound to maintain a holy fellowship and communion in the word of truth and in all other spiritual services as tend to their mutual edification, as also in relieving each other in outward things, according to their several abilities and necessities; which communion, as God offereth opportunity, is to be extended unto all those who in every place call upon the name of the Lord Jesus. This communion which the saints have with Christ doth not make them in any wise partakers of the substance of his Godhead, or to be equal with Christ in any respect; either of which to affirm is impious and blasphemous.' (b) Pearson and Leighton agree, substantially, in stating that 'Christians have communion or fellowship with the Father, Son, and Holy Ghost; and they are possessed of these gifts (1 John i, 3; 2 Pet. i, 4), with his son Jesus Christ, through whom forgiveness and mercy are conveyed to us (1 John i, 8; John xvii, 29, 23), and with the Holy Ghost, whose sanctifying graces are conferred upon those whose hearts are duly prepared for their reception (Phil. ii, 1; 2 Cor. xiii, 15); that Christians have also communion with the holy angels and the holy spirits sent forth to minister for them, that shall be heirs of salvation (Heb. i, 14; Luke xx, 10; Matt. xviii, 10); that, besides the external fellowship which they have in the word and sacraments of the Church, they have an intimate union and conjunction with all the holy angels and spirits, as the living (John i, 7; Col. ii, 19); and that Christians have communion not only with the saints on earth, but are of one city and one family with all those who have ever died in the true faith and fear of God, and now enjoy the presence of the Father, and who, in their state of glory, still sympathize with the faithful below, assisting, comforting, and encouraging (Heb. xii, 22, 23). The belief of this communion of saints should excite and encourage us to holiness of life. If 'we walk in the light, as God is in the light, we have fellowship one with another;' but 'if we say that we have fellowship with him, and walk in darkness, we lie, and the truth is not in us.' (1 John i, 7, 8.) All this induce us to wish well to all mankind, and to render them every good in our power. To those who have obtained the like precious faith with ourselves, we are still more nearly related, as being in a peculiar sense children of the same Father, disciples of the same Master, animated by the same spirit, and members of the same body' (Secker, On Catechism, lect. xiv; Pearson, On the Creed (ed. 1710, p. 759); Leighton, On the Creed (Works, ii, 412). (c) Another view is given by Wilson, who remarks that, while the Roman view is scriptural, that of Pearson and others is vague. His work aims to show that the bond of union among Christians (denoted by the communion of saints) is not to be sought (1) in identity of doctrinal beliefs, or (2) in identity of religious feeling or experience, as feeling, or (3) in identity of forms of Church government in worship, but in moral unity, founded in the act of the grace of God not merely in the Church but in the human heart. See Wilson, Hampton Lectures (Oxford, 1851, 8vo).

COMMUNION OF THE SICK. See Lord's Supper.

COMMUNION SERVICE, the office for the administration of the Eucharist, or sacrament of the Lord's Supper. See Liturgy.

COMMUNION-TABLE, a table on which the sacramental bread and wine are placed for the communion in Protestant churches. At the Reformation, atoms altars were rejected, as likely to support the notion of a material sacrifice, against which the Reformers protested. See Altar; Lord's Supper.

Communism, a theory of 'community of property,' often attempted to be realized in practice.

1. Communitarian Ideas, the religious and philosophical Systems of ancient Paganism.—The most ancient form of communism known to us is found in the monasteries of Buddhism, in attempts to reach an ideal of sanctity by the severest monastic discipline. But the history of Greece, a form of society based upon community of goods is ascribed to the order of Pythagoreans. But by far the most important representative of communistic ideas in pagan antiquity is Plato, whose work on the ideal state still ranks among the best that has ever been written in favor of communism. Plato regards the possession of private property as the source of every evil for the state—of avarice, of egoism, of a low character. He therefore allows only the lowest of the three classes, into which, according to him, the state is divided, and which he excludes from a participation in the government of the state, to possess private property. The highest classes, the archontes and the warriors, are subjected by Plato to compulsory communism in the widest sense of the word. As both classes were to live exclusively for the state, and any private possession appeared to Plato as productive of egoism, he not only demanded for these two classes community of property, but, under certain restrictions, to be regulated by law, communality of women. After the establishment of Christianity, the Neo-Platonic philosopher Plotinus was a prominent representative of communistic ideas, and applied to the Roman Emperor Gallienus for permission to establish a state according to the Platonic ideal, upon the ruins of the Western empire of the Caesars.

II. Communism among the Jews.—Among the Jews, the sects of the Therapeutae and the Essenes, whose fundamental principle was the dualism of the Eastern
COMMUNISM

religions, formed, like the Buddhists, communistic societies, the former on Lake Moeris in Egypt, the latter in the deserts near the Dead Sea. See Essenes, 

III. Monastic Communism and Socialism in the ancient Christian Church.—The infant Christian Church at Jerusalem has been held up at once as an example of communism and an argument for it (Acts ii, 44, 44, 46). But the passage in Acts does not imply either an absolute, total, or permanent communism. There is no trace in the New Testament of Jewish Esseneism or of modern communism. Christianity carefully guards the individuality of each member, and considers love as the only law by which Christians are bound. It is true, however, on the other hand, that a communist tendency existed in the Church, which developed itself in the 4th century in the establishment of the communities of anachorets and monks. See Monachism. The reformation of the monastic orders, began principally through the efforts of Bernard de Clairvaux in the 12th century, gave a new socialistic and communist impulse to the laity, and led to the formulation of religious bodies, united in the vows of life-long poverty and asceticism. Such were the Humiliates (q. v.), who made vows of voluntary poverty, chastity, and fasting, but were not distinguished from the people in dress, though living together as a religious community; the Bigards (q. v.), a society of unmarried men, who lived in community under a master, and made vows of poverty, chastity, and devotions; and a similar female association, formed as early as the 11th century, under the name of Beguines (q. v.). These lay associations differed from the clerical communities by considering poverty and continence as essential rules, and bore more of a socialistic than a communistic character. In the 13th century, the Menecotic orders (q. v.) united the socialistic organization to the clerical character, and cast the lay brotherhoods in the shade. Another sort of communitarian was that of the Fratres et sorores Liber et Veri (see BRETHREN OF THE FREE SPIRIT) (13th century), who held that the original state anterior to the Fall should be restored, and that the distinctions created by the law of Church, state, society, should be abolished. In their secret assemblies (paradies) the principles of the community of goods and of women were advocated by naked preachers before naked audiences of both sexes. This sect extended under different names to Spain, Italy, and the Holy Land. A similar sect, under the name of Adamites (q. v.), advocating the community of women, arose during the Hussite wars, but was put down by the Hussite general Ziska.

IV. Communist and Socialistic Associations of the Times of the Reformation.—A socialistic impulse, tending to a universal division of property, lay at the foundation of the peasant war of Germany in the early days of the Reformation. The twelve articles of the peasants, however, demanded only the abolition of feudal privileges, not a total subversion of society. The German Prophets, instituted by Nicholas Storch in 1523, went further than the advocates of communism. They proposed the community of goods, the substitution of polygamy for monogamy, and the abolition of all civil and ecclesiastical authority. Münzer (q. v.) went still further; his doctrine of the absolute community of all possessions was pure communism. These doctrines were admitted as the basis of the Reign of Terror (q. v.) on the Rhine, by Munster. Some isolated followers of Anabaptism in the Netherlands disseminated these doctrines afterwards in France and the north of Germany. Following in the same road we find the Libertins de Geneva, whom Calvin strenuously opposed, and the Familiæt of England, about 1524. The communist element is also apparent in a pure form in the organization of the Herrnhuters (Moravians), and in some communities of Auvergne, which are unions of families under one head, by whom work is divided according to different individual capacities.

V. Modern Communism and Socialism.—By the side of the above religious communistic tendencies arose the modern communism, taking its source in the new antagonism to the institutions of the Middle Ages, which recognised two classes of people—the rulers, nobles and clerks, and the ruled, civilans and peasants. All the privileges belonged to the former, all the burdens to the latter. For the old divisions of society by sex and age, and peasants—were substituted gradually two new classes, a moneved aristocracy and a proletariat. The recognition of the principle of equality tended to overthrow all conventional authority and privileges. In Great Britain the germs of communism are to be found in Roger Bacon's New Atlantis; in More's De optimo rei publicae status (1516); and in Harrington's Oceana (1556); but no practical form of socialism appeared till the 18th century, when the Buchanies (q. v.) of Scotland formed a religious communistic association, which lasted fully for half a century. In the 18th century, Robert Owen (q. v.) attempted to better the condition of the people, by establishing a new system of life. He published his system (A New View of Society, 1818), in which, starting from the principle that all men are born equal, he maintains that they become good or bad through the influence of outward circumstances. But his political radicalism obliged him to leave England, and he came to the United States, where he founded New Harmony, the colony of New Lanark. He was successful so long as money lasted, but this failing, it was abandoned in 1826. See Owen. In the mean time, the Owenites had founded another colony at Orbiston, near Edinburgh, Scotland, under the guidance of Abram Combe, but it was dissolved after his death in 1827. Owen, having returned to England, became the founder and director of the National Labor Equalable Exchange, and the Community Friendly Society of Manchester. These Owenite working associations brought forth the Chartists, who aimed at the suppression of the powers of the clergy, the land-owners, the large capitalists, and all privileged classes.

In France, the Declaration of the Rights of Man, in 1789, laid down the principle of equality as the foundation of the state organization. The Constitution of 1791 acknowledged the right of property, but recognised also the corresponding right of employment for those destitute of property. The Constitution of 1793, on the contrary, acknowledged the rights of the working man. Marat often expressed the idea that real equality could only be established on the basis of equality of rights and equality of tastes. Under Napoleon and the Restoration these ideas were for a time forgotten, until the Revolution of July, 1830, showed again their existence and power among the proletariat. The Socialists before the Revolution, whose way had been prepared by other Utopists, such as Pétion (République de Salonde, Voyage dans l'île de Plaisance, etc.), are but few in number, if considered as distinct from the advocates of equality. Among their works the most remarkable are La Basilisk, a novel by Morlier (Paris, 1785); Le Code de la Nouvelle Société, advocating the abolition of subsisting labor. The materialist and atheistic works of Holbach, Helvétius, Diderot, Voltaire, Rousseau, Rey, full of Utopian theories, greatly damaged the authority of existing institutions. Communism did not practically take its modern form until after the end of the Reign of Terror (q. v.) of 1793. The Directory (q. v.) had made the franchise of voting to depend on property, the remaining terrorists joined the disfranchised classes in their opposition to all right of individual property. They aimed at bringing back society to the state of nature, claiming that in a true state of society there should be neither rich nor poor, the education would be equal in their attainments. The heads of the party were Babeuf and his followers. After the fall of Babeuf, and under the military rule of
Napoleon, arose the socialistic doctrines of St. Simon and Fourier. The former explained his views in Le Considérations sur l'Industrie Nationale, and the latter published Christianisme Communisme, or the principles from which he proposed to establish an industrial system on the basis of perfect equality; while in the latter he attempts to demonstrate that this equality is a result of the divine commandment to love one another as brethren. In order practically to arrive at the object of St. Simon, Bazard proposed that after the law of inheritance should be abolished, and the property of a man, instead of being inherited by his children, should revert to the state. Fourier expounded his system in La Théorie des Quatre Mouvements, and Le Traité de l'Association Domestique Agricole (1822, 2d edit. 1841). He aims at the practical perfection of mankind, and considers happiness as the aim of all living creatures. Wealth is to be increased and disseminated, and this is to be accomplished by dividing the common property and by regulating labor, uniting persons to work in groups, industrial series, and phalanges, according to their capacity for labor; the result of the joint labor to be divided among the producers in proportion to their capital, labor, and talent. Fourier succeeded in gaining the public favor, and the All of St. Simonism, and was greatly helped by Victor Considerant. He published a newspaper, Le Phalanx, in 1832, and in 1836 another, La Phalange, Journal de la Science Sociale, to disseminate his ideas.

St. Simonism and Fourierism gave rise to an immense publication in France. Among the most eminent writers are found, among the Socialists, Lamennais, who, in his Éssai sur l'Indifférence (1827), attempts to bring the socialistic idea into union with religious dogmas, while in his pamphlet D'avenir he calls the people back to union with the Church of Rome on the ground that it upholds the doctrine of equality before the God, from whose social equality will follow. For this he was put under the ban by the pope. Stung by this treatment, he published the Paroles d'un Croquant; Politique à l'Usage du Peuple; Pays et Gouvernement, which are among the most radical works extant. Of a more abstract and speculative character are the works of Pierre Leroux, Éssais sur l'Equité (1837), and De l'Humanité (1840), wherein he considers the principle of equality as a dogma, and recognizes no distinctions of country, family, or property. The latter point is the foundation of Proudhon's doctrine; he attempts to prove that the right of property is universal in his work Qu'Est-ce que la Propriété? (1840), in which he returns the significant answer, La Propriété c'est le Vol. This work was followed by De la Création de l'Ordre dans l'Humanité (1843), and the Philosophy of Misery (1846). As the advocate of socialism among the newspapers, Louis Blanc stands first. His principal object is the organization of labor, to be accomplished by using state competition to destroy private competition; the state acting as capitalist, and rewarding each worker according to his deserts. Bonarroti's († 1837) History of the Conspiracy of Babeuf (La Conspiration de Babeuf) (Paris, 1829), gave fresh circulation to Babeuf's theories, which found organs in La Vérité, 1837—39, and La Stimuleuse, later August, 1839. A practical application of these principles was prevented by the insurrection of the Société des Saisons, May 12th, 1839, led by Blanqui and Barbès. The failure of that enterprise damped the communist spirit, and for a while there were only a few solitary efforts made, such as Quennelasse (1841). Still secret societies continued to be organized, such as the Société des Travailleurs Égaux, composed of the remaining followers of Barbès, who pushed the communist principles to extremes, and considered materialism as the immutable law of nature. Opposed to them were the Riformes, comprising the greater part of the French society, and led by the majority of labor, a newspaper advocating their principles, L'Atelier, appeared in 1840. The Icarien Communists, headed by Cabet, strove to realize an ideal system of communism, depicted by the latter in his Voyage en Icarie (1840). The state, in this system, has no property, money, or distinct function; there are no classes or ranks, and yet the state is immensely rich, as everything belongs to it; the integrity of the family is preserved, and marriage held sacred, but the women are employed in the general workshops; all affairs are to be settled by the Comités, from whose decisions there is no appeal. These ideas were further disseminated in France by Désassy, who, bringing everything back to the individual, arrived at the fundamental maxim, We must do as we can; consequently, one may take all he requires for the time being. In this system no God is necessary, and man satisfies himself with what he finds in nature.

VI. Communism and Socialism since the Revolution of February, 1848. — This revolution gave at first a new impulse to socialism. The words Liberté, Égalité, Fraternité, posted on all the walls and appended to all the decrees of the republic, seemed to contain all that Socialists could wish for. The government itself was composed in part of Socialists. The result was the organization of the national work-shops, which only served to prove again the impracticability of these theories. But communism began to lift its head by the side of socialism, and made great progress with the lower classes of France. In 1850 a secret socialistic society was discovered, whose ramifications, from its centre at Beziers, extended almost through the whole of southern France, and which had completed a plan of general insurrection. This also led to the discovery, in Paris, of the secret society La Némésis, whose members, at their initiation, swore to defend the inalienable rights of man to liberty, equality, and fraternity.

The Socialism and Communist of Switzerland and Germany present no particularly new features, being mostly based on French theories. After the failure of the Revolution of 1848, the leaders fled from Germany to England, from whence they continued to direct the affairs of the Grand'Ordre, divided in circuits and communities, and strongly organized in Germany. But the alliance of the governments in 1850, the lack of energy among the confederates, and the publication of the aims of the society in June, 1851, by a tailor's apprentice, Peter Noah-jung, at Leipzig, materially injured the organization. In Belgium French communist ideas also obtained to some extent, and were upheld in several newspapers. In 1846 Considerant went to Brussels to advocate the Fourierite theories, but found no opportunity of carrying them into practice. These ideas, however, took a firmer hold among the lower classes of Italy; in May 1848, Pius IX and the French government offered a reward of 500 lira to the bishops, December 9th, 1849, recommended them to use all efforts to prevent the propagation of socialism. That the existence of these communist societies depends on the personality of their founders, and not on their own excellence, has been demonstrated. After the death of the leading spirits, the organizations invariably degenerate, if they do not entirely disperse. In the United States a number of attempts have been made to establish communist colonies, partly upon a merely humanitarian, and partly upon a religious basis. Among the former belong the communist colonies established by Cabet at Nauvoo, several colonies established by the followers of Fourier, and his adherents, and several phalanges established by the admirers and followers of Fourier. They have all perished. Among the second class of communist assoc-
COMMUNITY OF GOODS

ciations belong the Shakers (q. v.), and the German Seventeenth-day Baptists (q. v.), who enjoin universal celibacy, the colonies Economy and Eoar, established by Separatists from Wurtemberg, and the Oneida Community (q. v.), which teaches the community of goods as well as of property. —Pierer, Universal-Lexikon, s. v.; Herzog, Real-Encyclopädie, iii, 21; Romang, Bedeutung des Communismus aus dem Gesichtspunkt des Christenthums (Bern, 1847); Reupaud, Études sur les Réformateurs ou Socialistes Modernes (2 tom. Paris, 1848); Sédille, Hist. de la Société des Amis de la Communauté, 14th edit. Paris, 1860); L. Stein, Jus Societatis u. C. d. heutigen Frankreichs (Lpz. 1842; 2d ed. 1848); Gesch. d. sozialen Bewegung in Frankreich v. 1789 b. a. unsere Tage (Lpz. 1850, 8 vols.); Karl Grün, Die sociale Bewegung in Frankreich u. Belgien (1846); Th. Muntz, Die Gesch. d. Gesellschaft in ihrer modern Entwicklung u. Problemen (1844); Williams, The Harmony Society at Economy, Pennsylvania (New Haven, 1867). See SOCIALISM.

Community of Goods. (1.) From the fact that the early Christians 'had all things common,' (Acts ii, 44), some have supposed that to renounce all property, and to share one's goods with fellow Christians, was the duty of all the faithful. But it is to be observed that no precept is given in Scripture to this effect; we have only the fact recorded that the early disciples were indifferent to property, unsellish, and 'willing to communicate.' And, if history is to be our help in this matter, it seems never to have been a part of the discipline that goods should be common. It is usually supposed that the renunciation of private property, and the system of community of goods, was, for a time at least, adopted by the whole of the infant Church of Jerusalem. That the system, if ever so adopted, was soon discontinued, is perfectly evident. Those who 'were rich in this world' were exhorted to be 'ready to give and glad to distribute,' which implies both that there were rich men in the churches, and that they were not required to sell all that they had, and cease to possess property, which would have left them, for the future, nothing to give. And the same may be learned from all that we read about the collections made in Greece for the poor Christians of Judaea, and from many other circumstances in the sacred history.

(2.) "But it has been contended that even in the infancy of the Church of Jerusalem, the community of goods was in reality confined to those engaged in the ministry, and that the female penitents of deser- tress, who were called 'widows.' Just at first, this description may have included all the believers; that is, those who were the first to embrace the Gospel may all have been employed in some department of the ministry. That Ananias and Sapphira thus offered themselves for the ministry is (doubtless) both a correct supposition, and one which will make the whole of the transaction recorded in Acts iv intelligible!" (Eden, Churchman's Dictionary, s. v.). This view is taken by Hinds, Early Christianity (pt. ii, ch. ii), who refers to Eusebius (lib. iii, c. 137) for confirmation of the suggestion.

Moham treat the subject largely in his treatise De Vera Natura Comunitatis bonusorum in eccl. Hierosol. (Dis. ad Eccl. Hist. pertin. vol. i), and seeks to show that the passages in Acts ii, 44; iv, 32, imply a communion merely of the use, not the possession of property, and that only for a temporary purpose. But the main view is that the early Christians of Jerusalem "went so far in the ardor of their first love as to abolish the external distinction of rich and poor," perhaps as "a prophetic anticipation of the state of things in the perfected kingdom of God." The offering was entirely voluntary, and not the fruit of any compulsory levy, the N. T. abounds in precepts for the right use of property and its separate and proper possession. See Hinds (l. c.); Schaff, Apost. Ch. Hist. § 114; Killen, Ancient Church, p. 52; Neander, Planning and Training (Bohn's ed.), i, 252; ii, 64.

Communion of Presence in the Roman Catholic Church. See Presence.

Compass (usually 229, excussin., to surround) is used as a noun by the A. V., especially in the phrase "fetch a compass" (2 Macc. Num. xxxiv, 5; Jos. xv, 3; 2 Sam. v, 23; 2 Kings iii, 9; πρόβατος, Acts xxviii, 13), i.e. to go around.

Compel, in Matt. v, 41; xxvii, 52; Mark xv, 21, is the rendering of the A. V. for the technical term ἀναγκαίον, to impress into public service [see Anga-

Knoop]; in Luke xiv, 20 (ἀναγκαίον, often to "constrait"), is in the strict sense, i.e. to impose, rather than the full meaning of coercion (as elsewhere).

Compiegne, SYNODS OF (Convenit Compendiens; Concilium Compendiens). The synods held in Compiegne began first in the middle of the 8th and ended in the 14th century. The Diet held by Pepin the Little, A.D. 757, at Compiegne, is counted among the synods, because the privileges of the archbishop of Sens to ordain eremites were ratified and signed before the assembled bishops (Mansi, Conciliorum nova et ampl. Collectio, vii, 658 sq., Florence, 1766). Whether the few church laws which were issued under Charlemagne in the year 775 as capitularies, which related partly to church government, partly to ecclesiastical revenues, and partly to monastic discipline, were established at a synod in Compiegne or not, is very doubtful, because, in the record of the capi
tullary there is only mention made of a synodulis conventus (see Harduinus, Acta Conciliorum, iii, 2066, Paris, 1714). A synod held there in 832, at which the bishops spoke of the usurpations practised by laymen in church matters, may indeed be regarded as a diet (Mansi, l. c. xiv, 410, Venet. 1780). The synod held in Compiegne in 838 was of real importance in the development of the Church. In the year 839, a Council at Paris, in a letter to the kings Louis and Lothaire, referring to an explanation which it was said the Emperor Constantine had given, set up the opinion that the bishops were the judges of kings, but that the bishops themselves could not be judged by men. This thesis first found a practical application at the above-mentioned synod in Compiegne, as the sons of Louis desired their father to be sentenced to a public penance by the bishops, and thus declared unfit to reign (Harduinus, l. c. iv, 1576, Par. 1714; Mansi, l. c. xiv, 647). The synod of 1063 declared the bishop of Sens, Hugh of Leu, under the ban; that of 1236 established several regulations which aimed at securing ecclesiastical liberties; and that of 1270 declared against the unlawful possession of ecclesiastical benefices, which was regarded as sacrile
gue (see Harduinus, l. c. vii, 654, Par. 1714; Mansi, l. c. xxiv, 18, Venet. 1782). More important was the synod in 1301, as it made several decisions concerning ecclesiastical jurisdiction (Harduinus, l. c., p. 1247; Mansi, l. c. xxx, 87, Venet. 1782). The last synod in Compiegne issued only some decrees for the mainte

ance of Church discipline (see Harduinus, l. c. p. 1269; Mansi, l. c. p. 117.)—Herzog, Real-Encyclopädie, Supplementbd. i, 948.

Competentes, a class of catechumens in the early Church. See Catechumens.

Compositorium, Completum, or Complin. (from Lat. completum, a term of the last service in the evening; the bed-time service. According to the ca

nonical hours, fixed hours for public prayer were in
troduced into the Church with the institutions of the monastic life. In the Western Church the practice of praying seven times a day was adopted in the 5th or 6th century, and became complete by the establishment of the evening or Complin, the last of the seven hours. The following is the usual form of the evening service. See Procter, Hist. of the Common Prayer, p. 11; Freeman, Principles of Divine Ser
ericompany. p. 88. Comp. Canonical Hours; Breviary.
COMPLETENSIAN POLYGLOT. See POLYGLOTS.

Compostella, MILITARY ORDER OF ST. JAMES OF. "St. James the Elder was adopted as the patron saint of Spain for the victory of Christ, and his relics were preserved at Compostella. The miracles supposed to be performed by these relics drew vast numbers of pilgrims, for whose support hospitals were established by the canons of St. Eloi. The vicinity of the Moors having rendered the roads unsafe, thirteen nobles were consecrated for the protection of the pilgrims, and with the canons resolved to found an order of the same kind as that of the Hospitallers or Templars. The pope granted his assent in a bull, dated 6th July, 1175, accompanied with the statutes of the order. Whatever conquests were made from the infidel were declared the property of the order, and a council of thirteen knights was vested with authority to elect and depose a grand master. The knights made war against poverty, obedience, and celibacy, and professed their belief in the immaculate conception. To protect Christians and convert infidels they vowed to be the only object in their wars with the Saracens. In most of the great battles between Christian and Moor the red cross of the order was conspicuous. The conquests of the order itself, combined with the grateful munificence of the nation, speedily increased its wealth and power beyond those of any of the other orders of knighthood. In addition to the three large commanderies of Leon, Castile, and Montalvan, it possessed nearly 200 minor commanderies, comprising, it is said, more than 200 priories, with many cells, collectors, castles, boroughs, two towns, and 178 villages, exclusive of its possessions in Portugal. This enormous wealth and power of the order excited the jealousy of the crown, in which, in 1522, the grand mastership was permanently vested by the pope. Having thus become merely honorary and dependent on the crown, the order rapidly decreased in importance."

Compostella, SANTIAGO DE, a town in Spain, and one of the three most famous places of pilgrimage in the Church of Rome, the two others being Rome and Jerusalem. The place was formerly called ad Sanctum Jacobum Apostolum or Girona Fudato, whence by a slight corruption Girona has been derived. According to a Spanish tradition, the apostle James the Elder came to the Pyrenean peninsula, and is buried at Compostella. The legend of the apostle having preached in Spain is first mentioned in the ninth century, and has generally been repudiated by the Roman Catholic writers, although it was defended by the Benedictines (Acta Sanct. tom. vi, July, Appendice; and tom. i, Aprilis, Distribe), and by the Protestant J. A. Fabricius (Salutatoria Lux Evangelii, c. 16, § 2). The claim of Compostella to the body of the apostle has found more advocates among the Roman Catholic writers, although the church of St. Saturnine at Toulouse prefers the same claim. The rival claims have been compromised by assuming that each church had one half, as a division of famous relics, it is alleged, frequently occurred in the Middle Ages. Compostella was made a bishopric in the beginning of the 9th century, and in 1120 an archbishopric. —Wetzler u. Welte, Kirch. Lex. i, 732.

Comprehension, in English history, "the scheme first proposed by Sir Orlando Bridgman in 1698 for relaxing the terms of conformity to the Established Church of England, and admitting Protestant dissenters into its communion. In 1674, Tillotson and Stillingfleet renewed the attempt, and the terms were settled to the satisfaction of the nonconformists; but the bishops unanimously refusing their consent, the project fell to the ground. Immediately after the Revolution, the scheme was renewed at the instance of William III, but after two attempts the design of union was abandoned, and the Act of Toleration passed in its stead." See Macaulay, History of England, iii, 68, 380; art. ENGLAND, CHURCH OF; Eden, Churchman's Dictionary, s. v.

Compton, Henry, bishop of London, son of the second Earl of Northampton, was born at Compton in 1632, and was educated at Queen's College, Oxford, which he left in 1652. After some years spent in travel on the Continent, he returned to England on the restoration of Charles II. For a short time he was a cornet in the army; then went to Cambridge, passed M.A., took orders, and was made canon of Christ Church, Oxford, in 1666. After various preferments, he was made bishop of Oxford in 1674, and was translated to the see of London in 1675 or 1676. He became tutor to the princesses Mary and Anne, and imbued them with his own earnestly Protestant sentiments. On the accession of James II he was dismissed from his preferments, and compelled to appear before the Royal Chapel on account of his vigorous opposition to popery. In 1686 he was tried before the lords commissioners (the notorious Jeffries presiding) on a charge of disobedience to the king's mandate (for the suspension of Dr. Sharp), and was suspended from his episcopal functions. In 1688 he was dismissed from his see on the accession of William he recovered all the offices from which he had been expelled. Bishop Compton sought to conciliate Dissenters, and to find means of reuniting them to the Church of England. His ro-called "ultra-Protestantism" made him unpopular with High-churchmen. He died July 7, 1718. He published A True and complete History of his own life (London, 1677); a number of episcopal letters and charges, etc.

Comstock, Grover S., a Baptist missionary, was born at Utica, N.Y., March 24, 1869. He graduated at Hamilton College in 1887, studied law afterwards, and was admitted to the bar in 1890. Under the ministry of the Rev. C. G. Finney he was converted, and studied theology at the Madison University. Devoting his life to missions, he entered the service of the Baptist Foreign Missionary Board, and sailed from Boston for Birmah on July 2, 1884. He remained some time at Amberet and Mandal, studying the language, and then chose Aracan for his field. At Compestella he was in the church at Kyoun Pbyou; and he remained, in spite of a deadly climate, to which his wife and two children fell victims in 1848, unremitting in labor until the illness which ended his life, April 28, 1844. —American Missionary Memorial, p. 155.

Comte, Auguste, founder of the so-called Positivism, was born at Montpellier Jan. 19, 1798, and died at Paris Sept. 5, 1857. He was the propagator of an elaborate system of philosophy, to which he gave the name of Positive, to denote its scientific and practical character, and to distinguish it from all schemes of metaphysical speculation. He sprung from a family eminently Roman Catholic in religion and Royalist in politics, and these influences affected the development of his theories, notwithstanding the fever of innovation which always possessed him. He was educated in Paris at the Polytechnic school, in which he became a subordinate instructor in 1802. His first dreams of philosophic reform are ascribed to him to his fourteenth year, perhaps in many of the precocity attributed to him. In 1816 he contended for emigration to the United States, and the transplanting of his nascent philosophical career to America. In August, 1817, he became acquainted with the notorious St. Simon — half seer.
half charlatan—and was so strongly impressed with his visionary raptures as to be considered his most
goodly disciple, and the successor upon whom that
strange sage desired his mantle to fall, though recogn-
ising Comte's fatal want of religious susceptibility.
This connection on the part of Comte, though mentioned in later years with increasing bit-
terness and disgust. He declared all obligations to
St. Simon, and burned and fretted whenever the traces
of St. Simonism were recognised in his own philos-
ophy. In April, 1828, he opened a course of gratu-
titious lectures on the same topics, and had been
reduced to a somewhat determinate form by several
essays previously published. The course was inter-
rupted by brain fever, terminating in insanity. In
consequence of this attack, which he designates as
crise cerebrale, he was for some time confined in a lu-
nant asylum.
In 1829 he commenced the immense structure of his
Positive Philosophy. It was completed in six heavy
volumes, containing nearly 5000 pages. The first
volume appeared in 1830, its 750 pages having been
composed in the space of three months. M. Comte
rarely revised, and never recopied his manuscript.
As it appeared in its first press, and improved from
the press to the public. The Revolution of July
delayed the prosecution of his labors for five years,
but with the return of more tranquil times he resumed
them, and achieved the sixth and last volume in 1842.
This is the work on which M. Comte's reputation as
a philosopher almost exclusively rests. It is the
only one of his works accepted by the majority of
his disciples, or regarded by those who follow his
guidance without attaching themselves to his banner.
It contains the body and substance of Positivism, and
was justly recapitulated Systeme de Philosophie Positive.
In his later philosophical development Comte endeav-
ored to infuse the vital breath of a moral and religious
spirit into the cadaverous Pyrrhonism of his earlier
views. But this attempt, which was flagrantly un-
successful, offended alike his sect and his distant ad-
mirers, who halted and honored his labors rather for
their systematic insidiously than for their recognised
truth.
On the completion of his scheme of philosophy
Comte proceeded to apply its principles to the rectifi-
cation of society. It was nine years, however, before
the first volume of his Systeme de Politie Positive
appeared. They were years of annoyance, anguish,
more or less. But the son, like the father, was con-
sidered himself and his family by the scanty fruits of
his vocation as a public and a private teacher of math-
eematics. To this vocation we are indebted for his
Treatise on Analytical Geometry, published in 1843. He
relieved the dull routine of duty by lectures to the
Parian community on topics connected with science,
or with the promulgation of his philosophy. One of
these courses is perpetuated in his Philosophical Trea-
isse on Popular Astronomy (1845). His heretical opin-
ions, and, still more, his arrogant and irritable disposi-
tion, provoked opposition, and excited ill-will among
his collèques. His position in the Polytechnic School
was ruined precariously, and he was finally deprived
of it. At a later period his public lectures were for a
short time closed by the intervention of the govern-
ment. This is the long personal persecution of which
he complains with habitual acrimony in his later
works. He was married, but had been separated from
his wife. With his book of 1848, he was rung with
many sorrows, a new fascination consolé him, and
opened unsuspected fountains in a dry and thirsty soil.
In 1845 Comte became violently attached to an accom-
plished lady, Madame Clotilde de Vaux, who was sepa-
rated from her husband, as he was from his wife. They
married. Comte was terminated. In a year by the death of the sire on April 5, 1846. The Positive Politics is animated throughout by her in-
spiration, and is dedicated to her, with a commemora-
tion of her virtues, in language which would sound
extravagant in Dante or Petrarch. Brief as the inti-
macy had been, it revolutionized Comte's whole na-
ture and the entire spirit of his speculations.
This strain of development inhibited itself in the Dis-
course on the general Character of Positiv-
ism, which belonged to the midsummer of 1848, and
was employed as an introduction to the System of Pos-
ite Politics. The rigidity and sterility of the cold
and heartless rationalism of the Positive Philosophy was
evidently unsuited to many minds; it had been neces-
sitated to produce a system of national education; and the
argument itself, and the application of the Positive doc-
trine to practical ends almost necessitated the ad-
miration of the moral element, which had been pre-
viously disregarded. Men are not controlled by their
reason; they are stimulated by their imagination, and
impelled by their emotions. To discipline the heart,
an authority, and not a system, is required. But no
practical morals are possible, as an obligatory rule of
action, which do not result from the decrees of a
supreme will. Thus the first step towards a system-
atic plan of political authority, or of sociological inter-
pretation, must be the recognition of a Divine Legis-
lator and the creation of a Church. M. Comte was thus
affected by the extension of his theories to their practical applications, to introduce
ethics into the circle of the sciences, to institute a div-
inity, to recognize or to invent a religion. His per-
ception of the need was quickened, if his susceptibili-
ties were not awakened, by the resuscitation of his
natural affections, and the glow of sentiment was
induced by his preposterous passion. The long inter-
val which separated the completion of the Philosophie
Positive from the commencement of the Politique Pos-
tive may have been, in reality, due less to the personal
execution of which he believed, and an abatement of
national animosity of 1848, than to the time and thought
required to systematize his new views, and to produce
some appearance of harmony between the philosophic
doctrine and its efflorescence in a theocratic dream.
The whole plan was, however, arranged in his own
mind when he entered upon the composition of his so-
ciological treatise. Nothing is more admirable than
the rapidity and completeness, the methodical regular-
ity, and the preordained precision with which each
successive year brought forward at the appointed time
a new volume of the Politique Positive, till the whole
was accomplished. Each volume appeared in its sec-
ond year. The first was published in July, 1851; the second in May,
1852; the third in August, 1853; and the fourth in August,
1854. The second volume of the Positive Politics was preceded in the same month by the pub-
lication of the Calendur of Positivism—that singular
and elaborate relapsism of the months of the year
and the days of the week which substitutes the no-
tabilities of human progress for the Sundays and
saints' days of the Catholic Church, and the months of
imperial Rome. In the October of the same
year was published the Catechism of Positivism, de-
signed to diffuse a knowledge of the new philosophy
and the new creed among the masses of the people.
At the close of the Politique Positive M. Comte marks
out the exteriors projects which he designed to achieve
before advancing years should demand repose. Seven
years were to be devoted to the enlargement and rec-
ification of his theory; and then, on the attainment
of his grand work, there was thought to be the
A System of Positive Logic, or the Philosophy of Mathemat-
ics, was promised for 1856; A System of Positive Morals, or Treatise on Universal Education, for 1859;
and A System of Positive Industry, or Treatise on the
Action of Humanity on its terrestrial Abode, for 1861.
The first was delivered terminated, according to announcement, in 1856, but before the second was ready Comte died, in 1857.
pamphlets had been issued by M. Comte at different periods of his career, in order to give immediate consistency to his views on special points, or to popularize his ideas to the general public. They are interesting in themselves, as more important for an appreciation of the man, are the annual circulars issued to those who participated in the subscription for his support.

The system of Positivism, in accordance with what has been shown in the last lectures, they succeeded under two distinct, though connected aspects—the scientific theory as originally expounded in M. Comte's earlier work, and the practical application of that theory as presented in his latest complete treatise.

(1.) The Positive Philosophy.—This is the development and co-ordination of all the materialistic tendencies of science in the age of the Encyclopedia and the Revolution. It is not itself materialistic, because it proceeds beyond materialism in the same direction, and is attenuated into a pure sensuous phenomenalism. It contemplates merely "the shows of things," and it coordinates them according to their concomitances and successions, and to the functions of their part in the general system of the universe, not merely as objects of thought, but as causes and effects, and as agents in the formation of the whole.
CONANIAH

The manuscript text is not entirely legible, but it appears to discuss a topic related to religious or historical matters, possibly involving a church, bishops, and a text by St. Gregory the Great. The text mentions various sources such as "Collectanea" and "Concilia," which are likely references to collections of church councils or church laws.

CONACLE

The text seems to continue from the previous page, discussing a religious order and perhaps the establishment of a church. It mentions a council, possibly the Council of Constance, and references to church buildings such as the Cathedral of Notre Dame.

The text also references a church's foundation by Peter Fournier, which is discussed in the context of other significant church events.

The primary focus appears to be on the establishment of church structures and councils, with a particular emphasis on the Council of Constance and its impact on church organization.

The text is rich in historical and ecclesiastical references, indicating a detailed exploration of church history and council proceedings.

Overall, the manuscript contains a detailed account of church history, emphasizing the importance of church councils and their role in shaping the structure and governance of the church.

CONCLAVE 452

CONCOMITANT

for the others. The coat of arms of each cardinal is affixed to his cell. When a pope dies, ten days are allowed for the obsequies, for the arrival of absent cardinals, and for the provisions of the house mentioned for the conclave, together with the selection of persons styled conclaveists, who are to enter the conclave as servants of the cardinals (two to each, or, if the cardinal be very old, sickly, or of princely birth, three), masters of ceremonies, confessors, clerks, physicians, carpenters, masons, bartenders, and others. The prescribed time having elapsed, the cardinals and conclaveists attend the mass of the Holy Ghost, formerly in St. Peter's, lately in St. Sylvester's church. The papal ordinances governing the conclaves are read, to the strict observance of which all who are to enter the conclave are sworn. Then the cardinals, with their conclaveists, proceed solemnly to the apartments prepared, and repair severally to their cells, where they receive visits until evening from persons not of their number. At the third signal from the bell, about three hours after sunset, all not belonging to the conclave are excluded, and all the entrances except one are barred. The bell is also rung so much as may be necessary for air and light. The excepted entrance is closed by double locks and strictly guarded, admission being allowed to none except the absent cardinals. No egress is allowed except by permission of the conclave itself in case of grave illness. The theory is that all communication between those within and persons without in regard to the pending election must be prevented; but these precautions have not always secured their end. In spite of the law, there is frequent correspondence between the cardinals within and their political friends without. The decree of Gregory X prescribed that, if a choice was not made by the cardinals within three days, for the next five days only one dish at noon and evening should be allowed to each, and after that time only bread, wine, and water; but this rigid regimen was modified somewhat by Clement VI (1351). The execution of these regulations is entrusted externally to the civil authorities of the place where the conclave is held, and internally to the officers appointed by the conclave.

Prior to the latter half of the 11th century, the choice of the bishop of Rome was the joint prerogative of the clergy and people, exercised, we may suppose, as at present, by the pope through his procurator. Popular participation in the election appears to have been through some representative body; while the supreme ecclesiastical power asserted its authority by requiring that the election should receive its sanction, the origin, doubtless, of the right exercised by certain Catholic governors (Pope Sylvester, St. Gregory, St. Leo I), and claimed by Italy (Naples and Portugal), of each excluding from the papal throne some particular cardinal, a right, however, to be exercised before an election, and limited to one veto at each conclave. By a decree of Pope Nicholas II (In nomine Domini, 1059), the election of pontiff was given to the cardinal bishops, the other cardinals being only the pope's approvers of it. By a further decree of Alexander III (1179), the choice was vested exclusively in the college of cardinals, with the proviso that the concurrence of two thirds of the cardinals present should constitute a legal election, the assent of clergy and people being no longer required. The Council of Lyons (1274), under the auspices of Gregory X, promulgated a constitution minutely prescribing the forms to be observed in regard to such elections, which were to be made in conclaves clausae, so as to shut out secular influence. These three instruments furnish the organic laws and regulations both of franchise and ceremonies, which, without fundamental change, are still in force in papal elections. It is laid down as a settled principle that no pope can appoint his successor, and that every cardinal, however recently made such, provided he has taken the solemnity of his election, may participate in a conclave, though under papal censure, suspension, interdict, or excommunication.

According to the bulls of Gregory XV (Eiusae Patris filius et Doctum Romanum Pontificem), confirmed by that of Urban VIII (ad Romanos Pontificis providiionem), the choice must be made in one of three ways, viz., by inspiration, compromise, or ballot. Election can proceed by inspiration when all the electors spontaneously (per quasi inspiracionem), without any previous concert, the saint for whom the person for the election. Examples of such elections are given by early ecclesiastical writers, as that of Fabianus (Euseb. Hist. Eccles. vi, 29), but in modern times none such has occurred. Election by compromise is when, in default of agreement themselves, the cardinals delegate to a select number of their body, with or without conditions, authority to choose a pope, as was the case in the election of Clement V. The ordinary way, however, is by ballot. In this method, after the usual morning Mass, each cardinal (when the conclave is assembled in the basilica, at the pontiff's command) offers to the purity of his intentions in the vote, deposits in the chalice on the altar a square paper, folded at opposite corners so as to conceal the voter's name and motto (which, once selected, must be adhered to), while the name of the person voted for is written in the open part of the paper. The votes are counted in turn by three cardinals, appointed scrutatores, and the numbers taken, which must agree with that of the cardinals present, all being required to vote, and are filed to await the result. If any one has received just two thirds, the folded ends are opened to see that he has not voted for himself, which is not allowable. If no one has attained the required majority, the conclave proceeds in the afternoon session, after the hymn Veni Creator Spiritus, to try the process called accedendo (accedas), in which each cardinal may give a supplementary vote, in the words accedo domino cardinale suffit, to any one who received votes in the first process from others than the accedent; those declining to change the morning's choice write semini. If the supplementary votes for any, added to the morning's votes for the same, do not make up the two thirds majority, the papers are burned, and the same process of balloting is repeated the next day. When the vote is obtained, the cardinals meet in the evening, to see that no cardinal has voted twice for the same person, and that the mottoes of the evening and morning vote tally; then the recipient of the highest vote equalling or exceeding two thirds is declared duly elected. On his acceptance the work of the conclave strictly ends, fees, etc., being distributed to the electors. He is invested with the pontifical robes, receives the homage of the cardinals, adopts his official name, and is proclaimed from a reopened balcony window to the people by the cardinal dean, in the words Annuntio eum quemcumque populum voce regem populi. He then elevates the cardinalights, and is seated on the popemobile, appro
ing it. By a further decree of Alexander III (1179), the choice was vested exclusively in the college of cardinals, with the proviso that the concurrence of two thirds of the cardinals present should constitute a legal election, the assent of clergy and people being no longer required. The Council of Lyons (1274), under the auspices of Gregory X, promulgated a constitution minutely prescribing the forms to be observed in regard to such elections, which were to be made in conclaves clausae, so as to shut out secular influence. These three instruments furnish the organic laws and regulations both of franchise and ceremonies, which, without fundamental change, are still in force in papal elections. It is laid down as a settled principle that no pope can appoint his successor, and that every cardinal, however recently made such, provided he has taken the solemnity of his election, may participate in a conclave, though under papal censure, suspension, interdict, or excommunication.

Concomitant. (1) A term used by Roman theologians to denote the graces of an action, as distinguished from praecedit grace (against the Pelagians) is necessary to excite to good desires and actions (Bergier). (2) Concomitance in the Roman doctrine of the Lord's Supper (qu. v.), means
CONCORD, FORMULA OF 453

The accompanying of the body of Christ by the blood, and of the blood by the body." in the Eucharian. Aquinas introduced the term (concomitance). The withholding of the cup from the laity is justified by this Romanist doctrine of concomitance on the ground that as Christ is present entirely in each of the elements, it was necessary that also the body should be communicant. Of course this theory goes along with transubstantiation. — Burnet, On the Articles, art. xxxii; Smith's Hagenbach, History of Doctrines, § 195. See Lord's Supper.

Concord, Formula of (Formola Concordiae), the name of the symbohash book of the Lutheran Church, first publicly adopted in 1580. It was framed in consequence of the long disputes between the stricter Lutherans and the milder Philippists and the Crypto-Calvinists in Germany. The principal theologians and evangelists considered it their duty to unite the Church as much as possible by clearly defining its fundamental doctrines in accordance with the principles of the Augsburg Confession of 1580. In 1574, duke Julius of Brunswick and the elector Augustus of Saxony commissioned professor Jacob Andreae (q. v.), of Tübingen, to frame a suitable formula. His work underwent divers alterations in the hands of Gevers and Böcking, which agency, and the confission of Swabia and Saxony. Subsequently, by the influence of prince George Ernest of Hanneberg, a second formula of concord was framed by Osiander and Bidentlenbach, theologians of Württemberg, and revised and completed by a body of theologians in the convent of Maulbronn in January, 1576 (known as the formula of Maulbronn). Andreae considered this latter as too short, the former as too diffuse, and undertook to base a third on these two. For this purpose the elector, in May, 1576, called a meeting of theologians at Torgau. Among the eighteen who answered to the call were Andreae, Chemnitz, Chyträus, Selnecer, Cornius, Musculus, Crell, and Morlin. Between them, and based on the two preceding formulas and the Augsburg Confession, they framed the Book of Torgau (published by Semler, Halle, 1780), which was submitted to the elector and his council on the 7th of June, and by him sent to the other evangelicals of his dominion, not as altered by eclectic considerations, but according to their suggestions. After many additions had been made to it, the elector required Chemnitz, Andreae, and Selnecer to remodel it. This was done in March, 1577, in the convent of Bergen, near Magdeburg. In order to embody the different additions made, he provided for the making of a supplement (Epitome). At a second session in April they adopted a new reduction; and in a third, in May, where they were assisted by Musculus, Cornerius, and Chyträus, they perfected the final version, which was then handed to the elector. The latter named it Formola Concordiae, and with the elector of Brandenburg called on the theologians of their states to sign it. It was then joined with the other received symbols in a Corpus doctrinae, and this Book of Concord was officially recognised at Dresden, June 25th, 1580, as the fundamental symbol of the Lutheran Church.

It is divided into two parts: 1. The Epitome, or summary, consisting of eleven articles, each headed by the enunciation of some controverted point of doctrine (status controversiae), which is then followed by the orthodox doctrine (pars affirmativa), and finally by the condemnation of the opposite view (pars negativa). 2. The eleventh article is fundamental exposition, which treats of the same articles in connection with each other. The eleven articles, taken in the order of the Augsburg Confession, are on: 1. Original Sin (human nature by original sin has become utterly depraved [in univirum corrupta]); 2. Free-will; 3. Justification by Faith; 4. Good Works; 5. The Law and the Gospel; 6. The Third Use of the Law; 7. The Lord's Supper (the body and blood of Christ is really and substantially [esse et substantialiter] present: there is a sacramental union between bread and wine and the body and blood of Christ, and consequently an oral [ore] reception of the body and blood of Christ, in a supranatural and heavenly manner, so that the body and blood of Christ are really in and on the elements in the communion); 8. The Person of Christ; 9. The Descent of Christ into Hell; 10. The Customs of the Church; 11. Predestination and Election (the foreknowledge of God [proscientia] relates to all men, the predestination relates only to the elect). To these are added a number of articles concerning heresies and sectaries (i. e., all who had not accepted the Augsburg Confession). The appended testimony of the witnesses of the Holy Scriptures, and of the pure doctrines of the original Church, on the person and work of Christ (Communioceit idiomatum), by Andreae and Chemnitz, in eight articles, is not considered as part of the creed.

As to Anthropology, the Formola Concordiae carries out the doctrines of the Augsburg Confession with regard to original sin to their logical results, and after distinctly rejecting the view of Flacius, which made original sin to be the substance of the human soul's depravity and corruption, and which received as the confession of Swabia and Saxony. Subsequently, by the influence of prince George Ernest of Hanneberg, a second formula of Concord was framed by Osiander and Bidentlenbach, theologians of Württemberg, and revised and completed by a body of theologians in the convent of Maulbronn in January, 1576 (known as the formula of Maulbronn). Andreae considered this latter as too short, the former as too diffuse, and undertook to base a third on these two. It was then joined with the other received symbols in a Corpus doctrinae, and this Book of Concord was officially recognised at Dresden, June 25th, 1580, as the fundamental symbol of the Lutheran Church.

The Formula is the only Lutheran symbol in which the distinction between the active and passive righteousness of Christ is explicitly set forth. The following is contained in it: "That righteousness which is imputed to faith, or to the believer, of mere grace, is the obedience, suffering, and resurrection of Christ, by which he satisfied the law for us and expiated our sins. For since Christ was not only man, but truly God and man in one indivisible person, it is plain that, if he was to suffer and death [i. e., if his person merely be taken into account, without any reference to his vicarious relations], because he was the divine and eternal Lord of the law. Hence not only that obedience to God his Father which he exhibited in his passion and death, but also that obedience which he exhibited in voluntarily subjecting himself to the law, and fulfilling it for our sakes, is imputed to us for righteousness, so that God, on account of the total obedience which Christ accomplished (prosthetit) for our sake before his heavenly Father, both in acting and in suffering, in life and in death, may remit our sins to us, regard us as holy and righteous, and give us eternal life (Hase, Libri Simplicici, p. 589, 640; Sheed, II, 155).

The Formula is the only Lutheran symbol in which the distinction between the active and passive righteousness of Christ is explicitly set forth. The following is contained in it: "That righteousness which is imputed to faith, or to the believer, of mere grace, is the obedience, suffering, and resurrection of Christ, by which he satisfied the law for us and expiated our sins. For since Christ was not only man, but truly God and man in one indivisible person, it is plain that, if he was to suffer and death [i. e., if his person merely be taken into account, without any reference to his vicarious relations], because he was the divine and eternal Lord of the law. As to the work of regeneration, it teaches that "before man is illuminated, converted, regenerated, and drawn by the Holy Spirit, he can no more operate, co-operate, or even make a beginning towards his conversion or regeneration, than a natural person can cut a tree, or a piece of clay" (Hase, Libri Simplicici, p. 622; Sheed, II, 368). For a full discussion of the Christology of the Formula, see Dorner, History of the Doctrine of the Person of Christ, div. II, vol. ii, 209 sq.

The Formula was originally framed in German; the Latin translation by Osiander was adopted by Sel-
Concordance

See Hopkinian, Concordia diacora (Zürich, 1697; Gen. 1679); Leonard Hutter, Concordia concors (Wittenb. 1614, 1621; Lpz. 1690); J. Musaeus, Protocritic in epist. Formula conc. (Jena, 1701); Balthasar, Hist. d. Torgaucischen Buches (Greifsw. 1741-56, 8 vols.); J. M. Anton, Gesch. d. Formul. Conc. (Lpz. 1779, 2 vols.); Francke, Lib. Symbol. p. iii; Moehmel, Ch. Concordance (Lat. concordantiae), a book containing the texts in the Holy Scriptures, in alphabetical order, with their context more or less fully given, and a designation by chapter and verse of the places in which they are to be found. (See Glauchius, De usu Concordiae, Lips. 1662.) Some of the Scripture remains in manuscript, or were not divided into sections and paragraphs, indexes of their words and phrases could neither be formed nor used. As soon as any regular divisions began to be made, the importance of concordances, or alphabetical indexes, was felt, and learned men labored to form them. The first concordances were prepared for the Latin Vulgate. (See below.) See orme's biblia latina, p. 112; Watta's biblia britannica; Winer's handbuch; Walch, biblioth. Theol. iv, 307; Röhr's kritische predig-biblisch. 1841; Meth. Quart. Review, 1847, p. 451; Princeton review, 1828, p. 471. The following are the more important works on the subject of concordance.

1. Hebrews. - The first Hebrew concordance was by Rabbi Isaac (or Mordecai) Nathan (q. v.), in 1445. It cost seven years' hard labor by himself and some assistants. It was first printed at Venice in 1594, fol., by Dan. Bomberg, then by Franzoni (ib. 1564, fol.), again by Alari (ib. 1561, fol.), and afterwards at Rome in 1622. It is entitled Hebrews concordantia and entitled Meir Nahib (מְרַשָּׁוֹן), "the Light of the Way." It was translated into Latin by A. Reuchlin (Basil. 1566, fol., 1659, 4to), but both the Hebrew and the Latin editions are full of errors.

2. These errors were for the most part corrected and other deficiencies supplied by Mario di Calasio (q. v.), a Franciscan friar, who published Concordantiae Sacrorum. Bibl. Hebr. et Lat. (Romae, 1621, 4 vols. fol.), republished in London under the direction of W. Romeo (1747-9, 4 vols. fol.), under the patronage of all the monarchs in Europe, not excepting the pope himself. Concordantiae Bibli. Ebraicae nova et accurata methodis dispositae (Basil. 1632, fol.), by John Buxtorf, the father, but published by his son. It takes for its basis the work of Rabbi Nathan, though it is much better arranged, more correctly printed, the roots more distinctly ascertained, and the meanings more accurately given; but as the references are made by Hebrew letters, and relate to the rabbinical divisions of the Old Testament, it is of little service, unless the student is familiar with the Masoretic system. This work was abridged under the title of Fons Leonis, etc. (Berolini, 1677, 8vo). A new edition of Buxtorf's Hebrew Concordance, by Yb r, has lately been published (Stettini, 1861 sq., 4to).

3. Before the republication of Calasio there appeared Chr. Nolde's (q. v.) Concord. particularum Ebraicae Chaldaicae (Hafn. 1679, 4to; an edition seems to have been made by the author himself). This work contains the particles, or in-declinable words, omitted in former editions as later concordances. The best edition of Nolde is that by Tympne (Jena, 1734, 4to). It contains, as an appendix, a Lexicon of the Hebrew Particles, by John Henry Michaelis and Christian Kircher.

5. But the best, or at least to the English reader most important work up to the present century on this subject is The Hebrew Concordance, adapted to the English Bible, disposed after the manner of Buxtorf, by John Taylor, D.D. (London, 1794, 2 vols. fol.). It was the fruit of many laborious years.

6. An edition of Buxtorf's Hebrew Concordance, which has received so much care and attention on the part of the editor as nearly to deserve the name of a new work—Hebraische und Chaldäische Concordian zu den heiligen Schriften des alten Testaments, by Dr. Julius Fürst (Leipsic, 1840, fol.), offers one of the most useful aids to the study of the Bible that has ever appeared. In addition to those of a more mechanical kind, such as a good type and clear arrangement, there are, 1. A corrected text, founded on Hahn's Vanderhoeck; 2. The Rabbinical significations; 3. Explanations in Latin, giving the etymology of the Rabbinical; illustrations of the three principal forms of Aramaic Paraphrase, the Vulgate, etc.; the Greek words employed by the Seventy as renderings of the Hebrew; together with philological and archaeological notices, so as to make the Concordance contain a brief Hebrew lexicon.

7. The Englishman's Hebrew and Chaldee Concordance, edited by G. V. Wigram (Lond. 1843, 2 vols. 8vo), is an original and exceedingly useful work, and remarkably accurate. It gives the Hebrew words in their order, but quotes the passages in which they occur from the common English Bible. It contains the first complete list of the Heb. proper names ever made. It deserves to be more extensively studied and used. Its high price is a serious check to its circulation.

8. Aaron Pick, The Bible Student's Concordance (Lond. 1845, 8vo), a work of little account to scholars.

9. W. Wilson, The Bible Student's Hebrew Guide (Lond. 1850, 4to), equally brief and insufficient.

Other and earlier Heb. Concordances are: Rabbi Anschel, רבי ענשלן (a vocabulary, with references to passages, Crasow, 1640, 4to, and later); Crijnesius, Concordiacum Ebriacum et Chaldaicum (Vit. 1695, 4to); Layman, Concordantiam Ebraice-ascal, etc. (1861, 4to); Trotius, Concordantiae Chaldaccae (Vit. 1617, 4to).

Greek Concordances.—(a) To the Septuagint.—1. Conrad Kircher, Concordantiae Veteris Testamenti Graec.
2. The best Greek Concordance to the Septuagint is that which bears the title A. Trommeli Concordantiae Graecae Vera vulgo doc. LXII Interprete. (Amst. et Trad. ad Th. 1718, 2 vols. fol.). See Tromm. It follows the words of the Greek text, and is the first of those which is most useful in consulting the Hebrew than the Greek Scriptures.

2. The best Greek Concordance to the Septuagint is that which bears the title A. Trommeli Concordantiae Graecae Vera vulgo doc. LXII Interprete. (Amst. et Trad. ad Th. 1718, 2 vols. fol.). See Tromm. It follows the words of the Greek text, and is the first of those which is most useful in consulting the Hebrew than the Greek Scriptures.

It follows the words of the Greek text, and is the first of those which is most useful in consulting the Hebrew than the Greek Scriptures.
first it was thought sufficient to specify the chapter with the letters a, b, c, d, as marks to point out the beginning and end of the concordances. But in 1545 Robert Stephens divided the Bible into verses, thus preparing the way for a more exact reference in concordances, etc.; but Marbeck does not appear to have made use of this improvement, as his work refers merely to the chapters. See MARBECK.

The first concordance, which was published in the same year as the last, is a translation from the German—A Briefes and Compendious Table, in maner of a Concordance, opening the way to the pricipal Histories of the whole Bible, and the most canon articles grounded and comprehended in the New Testament and Olds, in maner as amyly as doth the great Concordance of the Bible, Glosa, Table, c. of the Vtes. New Testament, by Leoni, Jodul, Conrade Pelicione, and by the other ministers of the Church of Liguerie. Translated from the High Almaine into English by Walter Lynne. To which is added, a Translation of the Third Book of Machabees (6v0, 1660). Lynne, the translator, was an English printer, who flourished about the middle of the 16th century, a scholar, author, and translator of several books. See BULLINGER. An improved edition of the tabular Concordance, adapted to the translation of 1611, was published by John Downman (London, 1646, 6vo).

All other English concordances were superseded by the more correct and valuable work of Alexander Cruden (q.v.), entitled A Complete Concordance to the Holy Scriptures of the Old and New Testament, etc., to which is added a Concordance to the books called Apocrypha (1757, 4to). Three editions were published by the author during his life, and many have appeared since his death. The London edition of 1810 is the best standard edition. Several useful editions of Cruden have been put forth by the Messrs. Bagster, who have also issued An Alphabetical Index of the Holy Scriptures, comprising the Names, Characters, and Subjects, both of the Old and New Testament, in two sizes, which the Biblical student will find very serviceable.

Cruden's Concordance has been for a century the basis of every other work of the kind, such as Brown's, Butterworth's, Coles's, Edie's, etc. With all its excellences, however, it has more serious defects than is generally apprehended. The Rev. Thomas Scott was of this as well as of that he compiled a full vision of the work. Its chief fault is its great want of completeness, but a motley of the words being really given at all, and only a part of the occurrences of these, the proper names being especially defective. These and other defects are in a good measure remedied in the edition issued by the "Society for Promoting Christian Knowledge" (Lond. 1869, 8vo), but this still is far from perfect. A really complete and accurate English concordance is yet a desideratum. The want is about to be met by Strong's Exkautische Concordance to the Auth. Engl. Version of the Holy Scriptures, which is now passing through the press.

A treaty, but usually restricted to a convention between the pope of Rome and any secular Roman Catholic government for the settling of ecclesiastical relations. Treaties which the pope, as a secular sovereign, concludes with other princes, are not called concordates. Conventions between the pope and a Protestant government for the settlement of the ecclesiastical relations of the Roman Catholic subjects of the latter are properly only called conventions, though it is common to apply the term concordat to any convention. The name concordat was for the first time applied to the convention made in 1418 between Pope Martin V and the representatives of the German nation for the Union of Rouen, or concordat ab utroque parte suscepta. The name is now, however, generally applied to earlier conventions also. One of the most important of the earlier concordates is that of Worms, called also the Calixtine Concordat, made in 1227 between Calixtus II and Henry V, in order to put an end to the long contest on the subject of investiture, and to determine the papal temporal power in Germany. Most of the concordates have been extorted from the popes by the different civil powers. This was done as early as the fifteenth century; for when the Council of Constance urged a reformation of the papal court, Martin V saw himself obliged, if he would conclude the concordat of Constance with the German, the French, and the English nations. Chap. 1 restricts the number of cardinals, and makes provisions as to their character and mode of appointment. Chap. 2 restricts the papal reservations. Chap. 3 treats of papal annates and taxes, which for France were reduced for the space of five years to one half of their former amount; while in the English concordat these were abolished altogether. Chap. 4 defines what trials are to be lodged at Rome. Chap. 5 reduces the number of commandants. Chap. 6 enjoins a strict proceeding against simony before the forum concordatico. Chap. 7 provides that excommunicated persons need not be shunned before the publication of the ban. Chap. 8 reduces the number of papal dispensations. Chap. 9 treats of the revenue of the papal curia. Chap. 10 reduces for Germany the papal indulgences, and repeals those that had been issued since the death of Gregory XI: in the French concordat nothing is said at this point. Chap. 11 provides that the German and French concordats are to be valid only for five years, and that with regard to the French the royal sanction is reserved. The English concordats are definite. The German and English concordats obtained at once legal authority; the French in 1424.

At a meeting of the German electors at Frankfort, in October, 1448, the reformatory demands of the German nations, which for several years had been the subject of negotiations, were finally agreed upon. They chiefly concerned the recognition of the supreme authority of general councils, the convocation of a new general council, and the redress of the grievances of the German nation. Pope Eugene IV, through his ambassadors, declared his readiness to concede these demands, and on his death-bed, Feb., 1447, signed five bulls by which they were severally granted. The Frankfort demands, and the bulls of Eugene IV, by which they are ratified, are together called the Frankfort Concordats or Concordat of Princes. The chief basis of these concordats was the concordat of 1423, a reformatory decrees which had been adopted by the Council of Basle. Nicholas V, on March 28, 1447, ratified the concessions made by his predecessor to the German nation.

On Feb. 17, 1448, the Emperor Frederick III concluded (without the co-operation of the electors) with the cardinal legate Carvajal a concordat at Vienna, which made to the pope far-reaching concessions; in particular, the right of raising the election of all the bishops (which right, by the Concordat of Princes, had been restricted to the bishops immediately subject to the pope), but usually restricted to a convention between the pope of Rome and any secular Roman Catholic government for the settling of ecclesiastical relations. Treaties which the pope, as a secular sovereign, concludes with other princes, are not called concordates. Conventions between the pope and a Protestant government for the settlement of the ecclesiastical relations of the Roman Catholic subjects of the latter are properly only called conventions, though it is common to apply the term concordat to any convention. The name concordat was for the first time applied to the convention made in 1418 between Pope Martin V and the representatives of the German nation for the Union of Rouen, or concordat ab utroque parte suscepta. The name is now, however, generally applied to earlier conventions also. One of the most important of the earlier concordates is that of Worms, called also the Calixtine Concordat, made in
session, approved and embodied with its decree, while the kingdom made it a law of the country, notwithstanding the protest of the Parliament and the University of Paris. This decree must be agreed to by all the states; the council was maiora for adjuration to Rome, and gives to the king the right of nominating the bishops.

In 1451 a concordat was concluded with the duke of Savoy, by which the latter received the right of nominating for the most important benefices. In 1468 King John II of France concluded a concordat with Pope Paul II, by which he abandoned the Placet Regium, which the kings had exercised since the beginning of the century, though, since 1427, the popes had protested against it. The concordat was disapproved by the Cortes. In 1529 Pope Adrian II gave to the kings of Spain the same right as regards the nominating for ecclesiastical benefices which had been conceded to France. No concordat was concluded during the 16th century after the year 1538, and none at all during the 17th century.

II. The Concordats of the Eighteenth Century.—The concordats of this period (1717–1774) were occasioned by the revival of the anti-papal tendencies of the Church of Rome, which had prevailed in the 16th century, and still more by the development of the theory of the absolute state. They all belong to the Latin nations of Europe.

1. Savoy.—The arrangement of 1451 had been the subject of long controversy, which were partly settled in 1472, and fully settled in 1727, and finally confirmed by a concordat concluded on Jan. 6, 1741, which made provisions on the admission and authority of papal bulls in the country, on the limits of ecclesiastical jurisdiction, on the exemption of church property, on the right of asylum, etc.

2. For Milan, which, since 1706, belonged to Austria, a concordat was concluded Dec. 10, 1757, concerning exclusively the exemption of church property.

3. In Naples, the so-called Monarchic Sicilia, or the right claimed by kings to act as papal legates, had long been a hereditary subject of controversy between the secular governments and the popes. It was finally regulated, together with other differences, by a treaty concluded June 2, 1741, which recognised, though in somewhat modified form, the exemption of church property and of the clergy from taxation, the right of asylum, ecclesiastical jurisdiction in marriage affairs, and the right of the Church to superintend the importation of foreign books.

4. The conflicts between Spain and the pope concerning the extent of the royal right of collation were settled by a preliminary agreement in 1787, and by a concordat concluded Jan. 11, 1788. An appendix to the concordat concerning the rights of the papal nuncio in Madrid was agreed upon.

5. Portugal.—In 1740 Benedict XIV granted to the kings of Portugal, by a concordat, the right of nominating for the episcopal sees and all benefices.

III. The Concordats of the Nineteenth Century.—The present century has witnessed the conclusion of a very large number of concordats. Most of them were called forth by the extraordinary importance of the range of ecclesiastical affairs, which had been thrown into utter disorder by the French Revolution and the territorial changes in Europe following it.

1. France.—Bonaparte, when first consul, concluded a concordat with Pius VII, July 15, 1801, which went into operation in April, 1802. It re-established the Roman Catholic Church as the state religion of the majority of Frenchmen, and has become the basis of the present ecclesiastical constitution of that country. It guaranteed to the Roman Catholic Church freedom and publicity of worship, which was, however, placed under the general laws of political corporations; it also provided for the resignation of all the bishops at that time in office; it gave to the first consul the right of nominating the bishops, and prescribed the oath of fidelity toward the secular government which the bishops and other priests have to take. The bishops received the right to appoint the parish priests, but the latter must be agreeable to that. The secularization of the churches not yet sold, as many as were necessary for divine worship were to be restored to the bishops. The Church renounced all claims to the property that had been sold during the Revolution, and the state promised to pay the bishops and priests a sufficient salary. The former rights and prerogatives of the French crown were restored as having been transferred to the first consul, but in case a person not a member of the Church of Rome should be invested with the latter office, new provisions were reserved. The concordat was published as a law of France in 1802, together with some introductory 'organic articles.' Against the latter, however, the popes always protested. The concordat and the new circumscription of dioceses were also valid for Belgium, and those parts of Germany (the left bank of the Rhine), Switzerland, and Savoy which, by the treaties of peace at Lunéville and Amiens, had been united with France.

In 1803 a special concordat was concluded between Pius VII and Napoleon for the Italian republic. It substantially agrees with the French concordat, though some provisions are more favorable to the pope. This concordat remained valid for the kingdom of Italy, which was established in 1805.

In 1815 Napoleon negotiated with the pope a second concordat, the so-called convention of Fontainebleau, which was published against the consent of the pope, who had regarded it only as a preliminary agreement, and at once took back his consent. As the reign of Napoleon ceased soon after, the concordat never became effective.

Louis XVIII concluded at Rome with Pius VII (July 11, 1817) a new concordat, by which that of 1801, so injurious to the liberties of the Gallican Church, was again revived; the concordat of 1801 and the articles organiques of 1802 were abolished; the nation was subjected to an enormous tax by the demand of endowments for forty-two new metropolitan and episcopal sees, with their chapter houses and canons; and free scope was afforded to the intolerance of the Roman court by the indefinite language of art. 10, which speaks of measures against the prevailing obstacles to religion and the laws of the Church. This revival of old abuses, this provision for the luxury of numerous clerical dignitaries and the expenses of court, would please only the ultra-royalist nobility, who saw in it the means of providing their sons with benefices. The nation received the concordat with almost universal disapproval; voices of the greatest weight were raised against it; the Chambers rejected it, and it was never carried through. After the Revolution of 1830 the government fell back on the concordat of 1801, and the organic articles became a new subject of controversy between Church and State.

2. Germany, Prussia, and Austria.—The relations of the German Roman Catholics to the pope were greatly disturbed by the secularization of ecclesiastical possessions, which had been thrown into utter disorder by the French Revolution and the territorial changes in Europe following it.

For some time everything was in confusion; at the time of the Congress of Vienna only five German bishops were still alive. When the political reorganization was begun, the pope at first demanded the restoration of the entire former state of things. But when it was found out that this demand would never be granted, it was agreed to be dropped. The negotiations concerning the conclusion of concordats began. (1.) Bavaria was the first state which succeeded (July 5, 1817) in arriving at an agreement. By the Bavarian concordat two archbishoprics were established; seminaries were instituted and provided with land; the bishops were placed in nomination by the state; the pope's right of confirmation on the papal right of confirmation; the limits of the civil and ecclesiastical jurisdiction were precisely settled, and the erection of new monasteries was promi-
This concordat was published in May, 1818, together with the new political constitution, by which all apprehensions for the Protestant Church in Bavaria were allayed.

(2.) The government of Prussia, in 1821, agreed with the pope upon a bull of circumcision (De Salute Animarum), which was published by the Prussian government. It was adopted by the emperor into two archbishoprics and six bishoprics, and contains provisions as to the re-establishment of chapters, the election of bishops by chapters, the dotation of bishops and chapters, and the taxes to be paid by the episcopal chancellories to Rome.

The Protection of the Upper Rhine. — In 1818 the state governments of Wurttemberg, Baden, and a number of other minor German states sent delegates to a conference at Frankfort to conduct joint negotiations with the pope concerning the reconstruction of episcopal sees. In 1821, a bull of circumcision, beginning Prorsus adleriagr, and providing for the establishment of an archbishopric in Baden, and bishoprics in Hesse-Darmstadt, Hesse-Cassel, Nassau, and Wurttemberg, and for the dotation of the bishop, was issued and ratified by the governments in 1822. Some further points were agreed upon between these governments and the pope in 1827, and others continued to be discussed during the interregnum, and were in most states not yet settled in 1867.

A concordat with the king of Wurttemberg, consisting of thirteen articles, was concluded in 1867. The government promises in it to execute the dotation of the bishopric as soon as circumstances will permit. The bishop received the right to confer all benefices which have no patron, of appointing his vicar general, the extraordinary members of the chapter, and the rural deans, yet he must appoint persons to whom the government has no objections. To the bishops belong all the regulations concerning divine service, the holding of synods, and the introduction of monastic orders, the latter, however, only in concert with the government. The episcopal court has jurisdiction over all ecclesiastical affairs, in particular also over all marriage affairs. The bishop has the right of inducing ecclesiastical censures on clergymen and laymen. If clergymen transgress civil laws, the secular court with which the bishop has no connection, that is, the court of the bishop, the clergy, and the people with the papal see is free, and ecclesiastical decrees do not require the placet regium. The religious instruction of the youth, both in public and private institutions, is under the control of the bishop. He recruits the catechism. He has the right also to examine and superintend the church schools. Provisionally, special regulations are made for the continuance of the three seminaries at Ehingen, Rottweil, and Tübingen. The theological faculty of the university of Tübingen is also under the control of the bishop, who authorizes the professors to lecture, and may refuse this authorization; he takes their confession of faith, and examines the manuscript of their lectures. The property of the Church is inviolate, but subject to public taxes. It is administered by the Church. The vacant benefices and the intercalar fund are administered by a joint committee of Church and State. The concordat was published by the government in the special papal bull, but did not receive the consent of the Legislature, without which many of its provisions cannot become valid.

In 1821 Hanover obtained a bull of circumcision similar to the one issued for Prussia, by which two bishoprics were established. For the kingdom of Saxony a papal bull was appointed vicars apostolic. The other minor states had their Roman Catholic subjects placed under the jurisdiction of Prussian or Hanoverian bishops, or of those of the province of the Upper Rhine, and thereby ratified the agreements concluded between those states and Rome.

Austria. — The government of Austria began to negotiate with the pope about a new concordat soon after the beginning of the revolutionary movements in 1848. The concordat was concluded in 1855, and was most favorable to the claims of the papacy. The following are the most important points of the Austrian concordat. The Roman Catholic Church in all parts of the empire enjoys the protection of the government. The pope chooses the bishops, and the intercourse of the bishops with the pope is free. The instruction of the Roman Catholic youth must be in accordance with the Roman Catholic religion. The bishops have the power to detain the faithful from reading pernicious books. Cases of the canon law, especially in cases of the clerical courts, while the civil relations of marriage remain under the jurisdiction of the secular judge. The bishops have the right of exercising the discipline of the Church, and of proceeding against members of the Church with ecclesiastical punishments. The power of the state is promised to the maintenance of the immunity of the Church. The episcopal seminaries are under the jurisdiction of the bishops. The emperor has the right of nominating the bishops, after taking counsel with the other bishops of the ecclesiastical province. The first dignity at every metropolitan and suffragan church is conferred by the pope. The monastic orders are to be maintained in their privileges. The bishops have the right of introducing new orders, after coming previously to an understanding with the government. Church property may be acquired in the legal way, and is secured to the Church. In Feb., 1856, twenty "Separat-Artikl" (separate articles) to the concordat were published. They provide that the bishops may found one university independent of the state; that only Roman Catholic professors shall be appointed at the University of Pesth; that Church and State will work together for the suppression of books against religion and morals; that the state shall lay no obstacle in the way of erecting such conferraries and associations as the Church has approved; and that the bishops shall not be hindered from regulating in religious institutions everything that concerns religion and the purity of the Christian life. The immense majority of the Austrian people were indignant at this concordat, and in July, 1867, while in its entirety, the Austrian government, by a unanimous vote, called on the government to abolish it.

6. The Netherlands and Belgium. — Between the government of the Netherlands and the pope a concordat was concluded in 1827, which extended to the northern provinces the provisions of the French concordat of 1801, with the addition of a provision that the bishops be nominated by the Protestant king, but to be chosen by the chapter from a list of candidates from which the government had the right to strike out any names not agreeable to it. The concordat was officially published by the government, but the bull of circumcision by which the provinces were divided into bishoprics was not recognized, and the concordat was never carried out. Later the papal government itself disregarded the concordat, and made a new division of dioceses without concert with the government.

In Belgium, which at the time of the publication of the French concordat of 1801 was a part of France, that concordat continued in force, while the country was annexed to Holland (1815-1830). In the new Belgian kingdom the Church was separated from the state, and thus the concordat naturally lost its authority.

7. Switzerland. — The idea of establishing one national church could not be carried out, as the cantons were unable to agree with the papal see. Gradually, by agreement with some of the cantonal governments, the ecclesiastical relations of the Roman Catholics were regulated, and six bishoprics established.

8. Italy. — For Sardinia a new bull of circumcision:
CONCORDAT

tion was issued July 17, 1817. Naples concluded a convention with the pope July 18, 1818, which in the same year was promulgated as a law of the country. The convention consists of thirty-five articles, and yields all the chief demands of the Roman court. The pope was declared to be the exclusive religion of the state; the right of nominating the bishops is given to the king; the right to nominate the members of the chapters is divided among the pope and the bishops of the diocese. The Church recognizes the sale of Church property which had taken place after the French rule, if the property not yet sold is restored to her; she also receives the right of acquiring new landed property. The jurisdiction of bishops is enlarged; the influence of the Church upon public instruction is guaranteed; the abolition or fusion of ecclesiastical benefices without the consent of the pope is declared invalid; the property of the Church is declared inviolate. The concordat with Tuscany of June 19, 1851, consists of fifteen articles. It provides that the ecclesiastical authorities, in the exercise of their offices, shall find the protection of the state. The intercourse of the bishops with their dioceses and the papal see shall be free. They shall also have the right of censorship over religious publications, and the right of preventing the faithful from reading pernicious books. If priests offend against civil laws they shall be amenable to the civil courts, but the punishment shall not be inflicted without the consent of the bishops; and if it be the penalty of death, or any penalty involving infamy, the papal see shall take cognizance of the case. The property of the Church shall be administered by the bishops and the parish priests, and, in case of vacancies, by a joint committee of priests and laymen. By this concordat the ecclesiastical legislation of Leopold II, which was nearly the same as that of Joseph II in Austria, was abolished. This concordat was soon followed by some organic interpretations, by which the state, with the consent of the papal see, guarded some of its former rights. The provisional government of Tuscany in 1859 declared this concordat abolished. By the absorption of Naples and Tuscany into the kingdom of Italy their special concordats ceased.

9. Russian Concordat.—For the Roman Catholic Church of Russia a concordat was concluded by the emperor Nicholas Aug. 15, 1847. It guarantees to the Roman Catholics of Russia the free exercise of their religion, and permits the establishment of a new bishopric at Riga. The papal legation was established. The government charged itself with maintaining the bishop, his chapter, and seminary. It also contained provisions on the elections of bishops not yet officially published.

10. A concordat with Spain, consisting of forty-five articles, was concluded March 10, 1851. According to it, the Roman Catholic religion is, to the exclusion of every other religious worship, the only religion of the Spanish people. Public instruction in all institutions is to be imparted in accordance with the Roman Catholic doctrine, and placed in this respect under the control of the bishops. The government is bound to assist the bishops in maintaining the purity of doctrine and of morals, and in suppressing pernicious books. The female orders which occupy themselves with education, and the Sisters of Charity, are to be maintained. The confiscated Church property which was not yet sold at the time of the conclusion of the concordat was to be restored to the Church, and to be administered in the same manner as other property. The pope promised to leave the former buyers of Church property in the undisturbed possession thereof. A new concordat, slightly modifying the preceding, was concluded Nov. 25, 1869.

11. Portugal.—A concordat with Portugal was concluded in 1857, and ratified by the Portuguese Legislature in 1859—almost unanimously by the Chamber of Peers, but only by a majority of fifteen (65 votes against 51) in the Chamber of Deputies. This concordat concerns only the present and former Portuguese possessions in India. It places again nearly the whole of British India under the jurisdiction of bishops appointed by the Pope. The concordat states that marriage and concubinage were equal according to Roman law, as even for marriage nothing was required but the agreement of the contracting parties. But they were different with regard to the legal effect of the union. In a regular marriage the wife obtained the rank of the husband (dignitas maritatis), and her children were legitimate and in the power of the father. None of these results took place in case of concubinage. The Church distinguished between temporary and life-long concubinage. The former was always forbidden; the latter, though not approved, was long tolerated. The Council of Toledo (A.D. 400), by its Canon 17, excommunicates a married man who concubines; for unmarried men to do so; and allows either a wife or a concubine. In the Latin Church, it was not until the Council of Trent, which made the validity of a marriage dependent upon a declaration of consent before the parish priest and two witnesses, that life-long concubinage was to be considered a crime and subject to punishment. The punishment for ministerial concubinaria was withholding of income, suspension, imprisonment, and, ultimately, excommunication. The evangelical churches have never recognised concubinage.—Herzog, Real-Encyclop. iii, 108; Lea, Sacrorud Catoloy, chap. xii. See Concubine.

Concubine (κόμβος, pāte gēsh, deriv. uncertain, but apparently connected with the Gr. παλλαξ [fully in the plur. ἐνδυσάμαι], 2 Sam. xv, 16; xx, 5; Chald. דַּלַּא, lechennāh, Dan. v, 2, 3, 28), denotes in the Bible not a paramour (Gr. ἔκλακην), but only a female conjugally united to a man in a relation inferior to that of a regular wife (ἡ γυναῖκα). The position of the wife anomalous among the Jews cannot be referred to the standard of our own age and country; that of concubine being less degraded, as that of wife was, especially owing to the sanction of polygamy, less honorable than among ourselves. The natural desire of offspring was, in the Jew, consecrated into a religious hope, which tended to redeem concubinage from the degradation into which the grosser motives for its adoption might have brought it. The whole question must be viewed from the point which touches the interest of propagation, in virtue of which even a slave concubine who had many children would become a most important person in a family, especially where a wife was barren. Such was the true source of the concubinage of Nahor, Abraham, and Jacob, which indeed, in the two latter cases, lost the nature which it has in our eyes, through the process, analogous to adoption, by which the offspring was regarded as that of the wife herself. From all this it follows that, save in so far as the latter was generally a slave, the difference between the two hands was much marked, owing to the absence of moral stigmas, than among us. We must therefore beware of regarding as essential to the resolution of concubinage what really pertained to that of bondage.

The concubine's condition was a definite one, and quite independent of the fact of there being another woman having the rights of wife towards the same
man. The state of concubinage is assumed and pro-
vided for by the law of Moses. A concubine would
generally be either (1) a Hebrew girl bought of her
father, i.e. a slave, which alone the rabbins regard
as a lawful connection (Maimonides, Halach-Mekil-
not, iv), at least for a private person; (2) a gentile cap-
tive taken in war; (3) a foreign slave bought, or (4),
a Canaanitish woman, bond or free. The rights of (1)
and (2) were protected by law (Exod. xxi, 7; Deut.
xxi, 10), but (3) was unrecognized, and (4) prohibited.
From (1) and (2) concubines might take possession.
So Gideon's concubine seems to have been of a family
of rank and influence in Shechem, and such was prob-
ably the state of the Levite's concubine (Judg. xxi).
The ravages of war among the male sex, or the impov-
erishment of families, might often induce this condi-
tion. The case (1) was not a hard lot. The passage
in Exod. xxix is somewhat obscure, and seems to mean,
in brief, as follows: A man who bought a Hebrew girl
as concubine for himself might not treat her as a mere
Hebrew slave, to be sent "out" (i.e. in the seventh
year, v, 2), but might, if she displeased him, dismiss
her to her father on redemption, i.e. repayment prob-
able of the price paid for her, so long as she had taken her
for a concubine for his son, and the son then married
another woman, the concubine's position and rights
were secured, or, if she were refused these, she became
free without redemption. Further, from the provision
in the case of such a concubine given by a man to his
son, she should be dealt with as if she were among the
"many daughters," we see that the servile merged in the
conjugal relation, and that her children must have
been free. Yet some degree of contempt attached to the
"handmaid's s w" (תמצע), used reproachfully to the
son of a concubine merely in Judg. ix, 18; see also
Psa. cxxvi, 16. The provisions relating to (2) are
meritorious and considerate to a rare degree, but overlaid
by the rabbis with distorting comments.

Concubinage therefore, in a scriptural sense, means
the state of being lawfully betrothed to a woman of
rank, who enjoyed no other conjugal right but that of
cohabitation (q. v.), and whom the husband could
repudiate, and send away with a small present (Gen.
xxi, xiv). In like manner, he could, by means of pres-
ents, exclude his children by her from the heritage (Gen.
xvii, 23); "such concubine in Nahor" (Gen.
xxii, 24). Abraham (xxxv, 6), Jacob (xxxv, 22), Eli-
phaz (xxxv, 12), Gideon (Judg. viii, 3), Saul (2 Sam.
iii, 7), David (1 Sam. v, 13; xv, 16; xvi, 21), Solomon
(1 Kings xi, 3), Caleb (1 Chron. ii, 46), Manasseh (ib.,
vi, 14), Rehoboam (2 Chron. xi, 21), Adliah (2 Chron.
xxi, 27), and Belshazzar (Dan. v, 2). Their issue
was reputed legitimate (though the children of the first
wife were preferred in the distribution of the inherit-
ance), but in all other respects these concubines were
inferior to the primary wife, for they had no authority
in the family, nor any share in household govern-
ment. If they had been servants in the family before
they came to be concubines they continued to be so
afterwards, and in the same subjection to the mistress
as if they had been made into war slave. She was allowed a month in which she was at liberty to
mourn the loss of her parents and friends; and nei-
ther father nor son was permitted to take her as a con-
cubine until the expiration of that time (Deut. xx, 10,
14). To judge from the conjugal histories of Abra-
ham and Jacob (Gen. xvi and xxvi), the immediate
cause of concubinage in patriarchal times was the bar-
renness of the lawful wife, who in that case introduced
her maid-servant of her own accord to her husband for
the sake of having children. Accordingly, we do not
read that Isaac, son of Abraham, had any concubine.
Rebecca, his wife, not being barren. In process of
time, however, concubines appeared to have degener-
ated into a regular custom among the Jews, and the
institutions of Moses were directed to prevent excess
and abuse in that respect by wholesome laws and regu-
lations (Exod. xxi, 7, 9; Deut. xxii, 10-14). The un-
faithfulness of a concubine was regarded as criminal
(Judg. xix, 2; 2 Sam. iii, 7, 8), but it was not pun-
ished as murder. Representative of a law which ap-
plied to the wife (ver. 8), but her father is
called his father-in-law and he his son-in-law (4, 5),
shows how nearly the concubine approached to the
wife. He is held to "conduct ad tempus ex pacto," whom Ammiunus
Marcellinus attributes to the Saracens (xiv, 4), were
unknown among the Hebrews. To guard adult male
offspring from debauchery before marriage, their par-
ents, it appears, used to give them one of their fe-
male slaves as a concubine. She was then consid-
ered as one of the children of the house, and she re-
tained her rights as a concubine even after the mar-
rriage of the son (Exod. xxi, 9, 19). When a son had
intercourse with the concubine of his father, a sort of
family punishment, we are informed, was inflict-
ed on him (Gen. xxxix, 22; 1 Chron. v, 1). Where
he had more than one concubine in the same town, or
in the same hou-
brow— the permission of concubinage would not seem
so much at war with the interests and preservation of
society as we know it to be. Christianity restores the
sacred institution of marriage to its original character,
and concubinage is ranked with fornication and adult-
ner sin (Matt. v, 32). In the Talmud (H. Ceteloda), the Rabbins
differ as to what constitutes concubinage, some regarding
as its distinguishing feature the absence of the betroth-
ing ceremonies (romensia) and of the dowry (ibellus dotis),
or portion of property allotted to a woman by special
engagement, and to which she was entitled on the mar-
rriage day, after the decease of the husband, or in the
case of repudiation; others, again, the absence of the
latter alone. In the books of Samuel and Kings the
concubines mentioned belong to the king, and their
condition and number cease to be a guide to the gen-
eral practice. A new king stepped into the rights of his
predecessor, and by Solomon's time the custom had
approximated to that of a Persian harem (2 Sam.
xxii, 8; xvi, 21; 1 Kings ii, 22). To seize on royal
concubines for his use was thus a warper's first act.
Such was probably the intent of Abner's act (2 Sam.
iii, 7), and similarly the request on behalf of Adonijah
was considered as that of a warper (2 Sam. xii, 21-23).
Stern, Sel'den's treatises De Usure Hebra and De Jure
Natur. et Gent. v, 7, 8, and especially that De
Successionibus, cap. iii, may, with some caution (since
he leans somewhat easily to rabbinical tradition), be
consulted; also the treatises Sotoch, Kethubhim, and
Charde'ah in the Gemara Hｉe生, and that entitled Sand-
bedrin in the Gemara Babylon. The essential portions
of all these are collected in Ugelini, vol. xx, De Us-
ore Hebra. See also Otho, Les. Rabbim. p. 151; Sel-
den, De Successionibus, iii; Michaelis, Lexicon of Moses,
1, 455-460.

The Roman law calls concubinage an allowed cus-
tom (Utile Seminuum). When this expression occurs in
the constitutions of the Christian emperors, it sig-
nifies what we now sometimes call marriage of con-
scince. The concubinage tolerated among the Ro-
mans, in the time of the Republic and of the heathen
emperors, was that between persons not capable of
contracting legal marriage. Inhabitants might descend
to children that sprung from such unauthorized
cohabitation. Concubinage between such persons they
looked on as a kind of marriage, and even allowed it
several privileges; but then it was confined to a sin-
gle person, and was of perpetual obligation, as much
as marriage itself (Guili, Institut. lib. i, § 109 sqq.; Ju-
stin. Insti. lib. i, tit. x). Hitherto, however, it appears that
the Romans had allowed concubinage long before Ju-
lius Caesar enacted the law by which every one was at
CONUPISCENCE

liberty to marry as many wives as he pleased. The emperor Valentian, Socrates tells us, allowed every man two. Concupiscence is also used to signify a marriage with a woman of inferior condition, to whom the husband and does not convey his rank. Dajos (Parastilis) observes that the ancient laws allowed a man to espouse, under the title of concubine, certain persons who were esteemed unequal to him on account of the want of some qualities requisite to sustain the full honor of marriage; and he adds that, though such concubine was beneath marriage both as to dignity and civil rights, yet was concubine a reputable title, and very different from that of "mistress" among us. The connection was considered so lawful that the concubine might be accused of adultery in the same manner as a wife (see Smith's Dict. of Class. Antiq. s. v. Concubine).

This kind of concubine is still in use in some countries, particularly in Germany, under the title of halb-she (half-marriage), left-hand or morganatic marriage, in allusion to the manner of its being contracted, namely, by the man giving the woman his left hand instead of the right. This is a real marriage, though without the ceremony of marriage, and a marriage beyond sound bound to last to such other forever, though the female cannot bear the husband's name and title. See MARRIAGE; CONCUBINE.

Concupiscence (Lat. concupiscencia), evil desire (inerthia, Rom. vii, 8; inerthia wuri, Col. iii, 5); generally used in the sense of indwelling sin. The term is especially used in Roman Catholic theology. For its import there, and its controversy concerning it, see SIN.

Conder, Josiah, born in London 17th September, 1789, was the son of a bookseller, and very early displayed a taste for literature. In 1814, being at the time a bookseller, he purchased the Eclectic Review, of which he continued to be editor until 1857. Under his management the Eclectic Review received the assistance of many eminent men among the Nonconformists, such as Robert Hall, John Foster, Dr. Chalmers, Dr. Vaughan, and others. In 1818 he published a treatise On Protestant Nonconformity (Lond. 2 vols. 8vo); in 1824 The Star in the East, a poem; and in 1834 a new translation of the Epistle to the Hebrews, with Notes. In 1836 he edited a Congregational Hymn-book, issued under the sanction of the Congregational Union. Besides these, he issued An Analytical View of all Religions (1888, 8vo); Exposition of the Apocalypse (8vo); Literary History of N. T. (1845, 8vo). His works are chiefly compilations, but are carefully executed, and well adapted to popular use. He died Dec. 27, 1853.

Condescension, a term both earlier and more correct for the modern theory of the Accommodation (q. v.) of Scripture; we have therefore reserved for this place some remarks supplementary to the article under that head. The general idea expressed by the term Accommodation is that some object is presented, not in its absolute reality as it is in itself, but under some external or metaphorical aspect, so as to make the better to secure some end at which the writer or speaker aims. Of this leading conception there are several forms known among Biblical scholars under the titles of formal and material accommodation. The following is a somewhat fuller analysis.

1. Real.—This takes place when a person is set forth as being or as acting under some modified character, accommodated to the capacity for conceiving him, or the inclination to receive him, of those to whom the representation is addressed. Thus God is frequently in Scripture described anthropomorphically or anthropomorphic accommodation as he is in himself, but relatively to human modes of thought and comprehension. See ANTHROPOMORPHISM. So also the apostle describes himself as becoming all things to all men, that by all means he might save some; i. e. he accommodated himself to men's habits, usages, and modes of thought, and even prejudices, in order that he might disarm their opposition, and secure a favorable reception for the gospel of salvation in men's case and for his redemption. (See Stulzer, Theologia Ecc. s. v. avvavora f and oivovovia, and Theophanis. They apply these terms also to the incarnation and state of humiliation of Christ, which they regarded as an accommodation of the divine to human nature. The species of accommodation is what the Christian fathers usually have in view under the terms avvavora f and oivovovia, and Theophanis.)

2. Verbal.—This takes place when a passage or expression used by one writer is cited by another, and applied with some modification of the meaning to something different from that to which it was originally applied. Such accommodations are common in all languages. Writers and speakers lay hold of the utterances of others for the sake of giving to their own ideas names new and expressive than they feel themselves able to give them, or for the purpose of procuring for them acceptance, by uttering them in words which some great writer has already made familiar and precious to the general mind. Sometimes this is done almost unconsciously. "Wherever," says Lecky, "a book is a daily reading and studied, it cannot be otherwise than that passages of it should frequently flow into our pen in writing; sometimes accompanied with a conscious recollection of the place where we have read them, at other times without our possessing any such consciousness. Thus the lawyer speaks with the corpus juris and the laws, the scholar with the Latin authors, and the preacher with the Bible" (Einleitung, i, 228). Our own literature is full of exemplifications of this, as is too well known to need illustrative proof. In the writings of Paul we find him making use in this way of passages from the classics (Acts xvii, 19; 1 Cor. xv, 54; Tit. i, 12), all of which are afterwards applied by him to Christian subjects only by accommodation. We need not be surprised, then, to find the later Biblical writers quoting in this way from the earlier, especially the N.-T. writers, from the great classic of their nation, the tetra byliyara of the former dispensation. As above may be adduced the passage from Ps. xiii, 4, and Rom. xii, 20 from Prov. xxx, 21, 22. See also Matt. ii, 15, 18, with Calvin's notes thereon. "They have done this," says Michaelis, "in many places where it is not perceived by the generality of readers of the N. T., because such are too little acquainted with the Septuagint.

3. Rhetorical.—This takes place when truth is presented, not in a direct and literal form, but through the medium of symbol, figure, or apologue. Thus, in the prophetical writings of Scripture, we have language used which cannot be interpreted literally, but which, taken symbolically, conveys a just statement of important truths; e.g. xxv, 4; xxxix, 4; Joel ii, 28-31; Zech. iv, 2, 10, etc. Many instances occur in Scripture where truth is presented in the form of parable, and where the truth taught is to be obtained only by extracting from the story the spiritual, or moral, or practical lesson it is designed to enforce. In all the sacred books there are instances constantly presenting passages of words and sentences, which are designed to convey, under the vehicle of figure, a truth analogous to, but not really what they literally express. (See Knobel, Prophetismus der Hebräer, § 30—38; Smith, Summary View and Explanation of the Writings of the Prophets, Prel. Observ., p. 1—22; Glaisner, Phil. Soc. Lond. x, p. 168, ed. 1717; Lightfoot, De Sacris Poet. Hebr. pent., Davison, Sacred Hermetica, ch. ix.)
4. Logical—In arguing with an opponent it is sometimes advantageous to take him on his own ground, or to argue from principles which he admits, for the purposes of rebutting in an unanswerable conclusion which he cannot refuse, if he would retain the premises. It does not follow from this that his ground is admitted to be the right one, or that assent is given to his principles; the argument is simply one ad hominem, and may or may not be also ad veriitatem. When it is not, that is a fallacy; in other cases the murder of an opponent by a logical inference from his own principles, there is a case of logical accommodation.

5. Doctrinal—This takes place when opinions are advanced or statements made merely to gratify the prejudices or gain the favor of those to whom they are addressed, without reference to their intrinsic soundness or truthfulness. If, for instance, the N.T. writers were found introducing some passage of the O.T. as a prediction which had found its fulfillment in some fact in the history of Jesus Christ or his Church, merely for the purpose of overcoming Jewish prejudices, and leading those who venerated the O.T. to receive more readily the Christian message, they would deserve no blame; but when they were found not only clothing their ideas in language borrowed from the Mosaic ceremonial, but asserting a correspondence of meaning between that ceremonial and the fact or doctrines they announced when no such really existed, thereby warping truth for the sake of gaining the approval of the Jews, they furnished speciments of this species of accommodation.

In both respects, a charge to this effect has been brought against them. It has been alleged that when they say of any event they record that in it was fulfilled such and such a statement of the O.T., or that the event occurred that such and such a statement might be fulfilled, they did so merely in accommodation to Jewish feeling and prejudices. A firmer place will be found elsewhere for considering the import of the formula ινα πληρωθη, τοις επιληφθης, and the like. See QUOTATION. At present it will suffice to observe that it may be admitted that these formulae are occasionally used where there has been no intention on the part of the writer to intimate that in the event to which they relate there was the fulfillment of a prediction; as, for instance, where some gnomon or maxim contained in the O.T. is said to be fulfilled by something recorded in the N.T., or at least is pressed into the occasion in particular instance (comp. Matt. xii. 55; John xv. 25; Rom. i. 17; Jam. ii. 23; 2 Pet. ii. 22, etc.). It may be admitted, also, that there are cases where a passage in the O.T. is said to be fulfilled in some event recorded in the N., when all that is intended is that a similarity or parallelism exists between the two, as is the case, according to the opinion of most, at least, in Matt. ii. 17, 18. But, whilst these admissions throw the obus prolektos on those who, in any special instance, maintain that there is in it an actual fulfillment of an ancient prediction, it would be preposterous from them to foreclose the question, and maintain that in no case is the N.-T. passage to be understood in reference to an actual fulfillment of an ancient prediction recorded in the O.T. Because some accommodations of the kind specified are admitted, it would be folly to conclude that nothing but accommodation characterizes such quotations. If this position were laid down, it would not be easy to defend the N.T. writers, nor our Lord himself, from the charge of insincerity and duplicity.

Still more emphatically does this last observation apply with respect to the notion that our Lord and his apostles accommodated their teaching to the current notions and prejudices of the Jews of their own times. It might seem almost incredible that any one should have been so prepossessed by his own views and so insensible of the probability of a course, were it not that we find the imputation broadly made, and the making of it defended by some very eminent men of the anti-supernatural school, especially in Germany. By them it has been asserted that our Lord and his disciples publicly taught many things which privately they repudiated, and an attempt has been made to explain the conclusion which he cannot refuse, if he would retain the premises. It does not follow from this that his ground is admitted to be the right one, or that assent is given to his principles; the argument is simply one ad hominem, and may or may not be also ad veriitatem. When it is not, that is a fallacy; in other cases the murder of an opponent by a logical inference from his own principles, there is a case of logical accommodation.

The prompt and thorough repudiation of such views even by such men as Wegscheider (Instit. Theolog. i. 100, 6th ed.) and Breitschneider (Handb. der Dogmatik. 1, 260, 265, 2d ed.) renders it unnecessary to enlarge on the formal refutation of these. These men, however, contend that, though our Lord and his apostles did not make use of a positive accommodation of their doctrine to the prejudices or ignorance of the Jews, they did not refrain from a negative accommodation, by which they intend the use of reservation in the communication of truth or refutation of error, and the allowing of others to make a free use of truth without express or formal correction of them. They adduce as instances, John xvi. 12; vi. 15; Luke xxiv. 21; Acts i. 6; i Cor. iii. 1, 2; viii. 9, etc. By these passages, however, nothing more is proved than that in teaching men truth our Lord and his apostles did not teach, not by a wilful forgetting of the outward form of other men, from truth to truth as they were able to receive it or bear it. In this there is no accommodation of the material of doctrine; it is simply an accommodation of method to the capacity of the learner. In the same way Paul's assertion, which they have also cited, that he became all things to all men, that he might by all means save some (1 Cor. ix. 22). To be regarded as relating merely to the mode and order of his presenting Christian truth to man, not to his modifying in any respect the substance of what he taught. When he spoke to Jews, he opened and alleged out of their own Scriptures that Jesus was the Christ (Acts xvii. 2, 3). When he spoke to the Athenians on Mars' Hill, he started from the ground of natural religion, and addressed the reason and common sense of his audience; but in either case it was the same Jesus that he preached, and the same Gospel that he published. Had he done otherwise, he would have been found a false witness with the historical principle of interpreting Scripture. It is so, however, only as the historical principle of interpretation means the treating of the statements of our Lord and his apostles as merely expressing the private opinions of the individual, or as historically traceable to the prevailing opinions of their day. This is not to be confounded with that true and sound principle of historical interpretation which allows due weight to historical evidence in determining the meaning of words, and to the circumstances in which statements were made, as determining their primary application and significance. (Storr, Opusc. Acad. vol. i. Abhandl. u. d. Zweck des Todes Jesu, § 10; Lehrh. d. Chr. Dogmatik, § 18 [Eng. tr. by Schmucker, p. 67, Lond. 1866]; Planck, Intro. to Sac. Interpretation, tr. with notes by Turner [N. Y. 1884], §§ 134, 276; Concretionem orthodoxam [Lips. 1766]; Smith, First Lines of Christian Theology, p. 518; Alexander, Connection and Harmony of the Old and New Testaments, p. 45-48; 148-157, 416, 2d ed.). See Hrpmkmc- tics.

Conduct, in A., D.D., a clergyman of the Reformed Dutch Church at New Brunswick, N. J., from 1798 to 1811, and vice-president of Queen's (now Rutgers) College, and professor of moral philosophy. He was an eminent, useful, and honored minister and college officer. He died suddenly in 1811. See Sprague,
CONDIGNITY

Condignity and Congruty (merumum de condigno et de congruo), "terms used by the schoolmen to express their peculiar opinions relative to human merit and deserving. The Scotists maintain that it is possible for man in his natural state so to live as to deserve the grace of God, by which he may be enabled to obtain salvation; this natural fitness (congruitas) for grace being such as to oblige the Deity to grant it. Such is the merit of congruity." The Thomists, on the other hand, contend that man, by the divine assistance, is capable of so living as to merit eternal life, to be worthy (condignus) of it in the sight of God. In this latter view, the grace which en unites him to be worthy is not introduced. This is the merit of condignity." The 13th article of the Church of England is directed against these opinions, and maintains that the grace of Christ and the inspiration of his Spirit can alone produce the fitness required in Christians; and that so far are any works not springing of faith in Christ from being pleasing to God, that they have the nature of sin.

Conditional. Strict Calvinists maintain that the decrees of God with regard to the salvation or damnation of individual men are absolute; Arminians, that they are conditional. The Pelagian doctrine is that God's will concerning grace is merely a condition on their so using their natural power as to merit that grace. To say that God decrees to save all men if they, i.e. if they, without grace, are willing to obey God, is Pelagian; to say that God wills to save all men if they will: this is the prevalent grace given to them, which they are left at liberty to resist, is Arminianism. (Arminianism; Grace.

Condillo, Etienne Bonnot de Mably, one of the chief French philosophers of the 18th century. He was born at Grenoble in 1715. At the age of thirty he published his first important work, Essai sur l'origine des connaissances humaines (Amsterdam, 1746, 2 vols.; Eng. transl. by Th. Nugent, 1756), by which he largely contributed to the spreading of views of Locke in France, and to their further development. This book is a natural history of human cognition, the foundation of which is found by Condillac in the sensuous impressions and their transformations. To refute the metaphysical systems which do not proceed from experience, he wrote his Traité des Systèmes (Amsterdam, 1749, 2 vols.). His views on the relation of human sense were more fully developed in his Traité des Sensations (Amsterdam, 1754, 2 vols.). As he was charged with having plagiarized from Diderot and Buffon, he wrote for his defense Traité des Animaux (Amsterdam, 1775). By all these writings Condillac became one of the chief representatives of Sensualism, although he steered clear of the Materialism of his age. His knowledge had procured for him at an early age the position of tutor of the infants of Parma, a nephew of Louis XV. He wrote for him a Cours d'étude (Paris, 1775, 13 vols.), which contains a grammar, an Art d'écrire, an Art de raisonner, an Art de penser, and a universal history. In 1788 he was made a member of the French Academy. During the latter part of his life he lived very retired, and died August 3, 1780. His complete works have appeared in several editions (Oeuvres Completes, Paris, 1798, 23 vols.; 1803, 32 vols.; 1824, 16 vols.). (Brockhaus) Concerrent. Lex. s. v.; Wetzer u. Wette, Kirchen-Lex. II, 701.

Conduit (P. 127), teiak [from τέλος, akas, to ascend, Gesenius, Thes. Heb., p. 1022], a channel, "watercourse," Job xvii, 33, 35, stream, Ezek. xxvi, 4, or "trench," 1 Kings xviii, 82-98). spoken of the aqueduct made by Hezekiah for conveying the waters from the upper pool in the valley of Gihon into the western part of Jerusalem (2 Kings xvii, 17; xx, 20; Isa. vii, 8; xxxvi, 2); apparently the same with that which now supplies the mosque enclosure with water from the pools at Bethlehem. It seems at first to have been an open trench, but was closed by Hezekiah with a dam on the approach of the Assyrians (Sirisach xlviii, 12).

See JERUSALEM.

At Jerusalem, although no notice is given either by Scripture or by Josephus of any connection between the pools of Solomon beyond Bethlehem and a supply of water for Jerusalem, it is unlikely that the people, as the pools should be constructed merely for irrigating his gardens (EccI. ii, 6); and tradition, both oral and as represented by Talmudical writers, ascribes to Solomon the formation of the original aqueduct by which water was brought to Jerusalem (Maundrell, Early Trav. p. 488; Hasselquist, Trav. 146; Lightfoot, Dil. Temp. c. xxvil., vol. i, 612; Robinson, i, 300). Pontius Pilate applied the sacred treasure of the Corban to the work of bringing water by an aqueduct from a distance, Josephus says of 800 or 400 stadia (War, ii, 9, 4), but elsewhere 200 stadia, a distance which would fairly correspond with the length of the existing aqueduct with its two tunnels and windings (EccI. ii, 6; Williams, Holy City, ii, 501). His application of the money in this manner gave rise to a serious disturbance. Whether his work was a new one, or a repARATION of Solomon's original aqueduct cannot be determined, but it seems more probable that the ancient work has merely been a destruction process during various sieges since Solomon's time. The aqueduct, though much injured, and not serviceable for water beyond Bethlehem, still exists; the water is conveyed from the sources which supply the pools about two miles S. of Bethlehem. The watercourse then passes from the pools in a N. E. direction, and, winding round the hill of Beth hag, on the S. side of the city, sometimes above and sometimes below the surface of the ground, partly in earthen pipes and partly in a channel about one foot square of rough stones laid in cement, till it approaches Jerusalem. There it crosses the valley of Hinnom at the S.W. side of the city on a bridge of nine arches at a point above the pool called Birket es-Sultan, then returns S.E. and E. along the side of the valley and under the wall, and, continuing its course along the east side, is finally conducted to the Haram. It was repaired by Sultan Mohammed Ibn-Kalain of Egypt about A.D. 1800 (Williams, Holy City, ii, 499; Raumer, Pal. p. 280; Robinson, i, 614; ii, 166; new ed., 1797). See POOL.

2. Among the works of Hezekiah he is said to have stopped the "upper watercourse of Gihon," and brought it down straight to the W. side of the city of David (2 Chron. xxxii, 30). The direction of this watercourse of course depends on the site of Gihon. Dr. Robinson identifies this with the large pool called Birket es-Mamaliʿ at the head of the valley of Hinnom, on the S.W. side of Jerusalem, and considers the lately-discovered subterranean conduit within the city to be a branch from Hezekiah's watercourse (Researches, new ed. iii, 284: 4: i, 327; Gesenius, Thea. Heb., p. 618, 1805). Mr. Wilson states on the other hand, that Gihon, on the N. side, not far from the tombs of the kings, and supposes the watercourse to have brought water in a S. direction to the temple, whence it flowed ultimately into the Pool of Siloam, or Lower Pool. One argument which recommends this view is found in the account of the interview between the Sennacherib, king of Assyria, and the officers of Hezekiah, which took place "by the conduit of the upper pool, in the highway of the fuller's field" (2 Kings xviii, 17), whose site seems to be indicated by the "fuller's monument" mentioned by Josephus as at the N.E. side of the city, and by the once well-known site called the Camp of the Assyrians (Josephus, War, v, 4, 2; 7, 8; 12, 2). (See Maundrell, p. 490 sqq., Bonn's ed., Richardson, Digitized by Google
Coney, Spencer Houghton, D.D., an eminent Baptist minister, was born in Princeton, N. J., April 30, 1835. His early education was carefully conducted, and at twelve years of age he entered Princeton College. Two years after, through his father’s failure in business, he was compelled to leave college, and devoted himself to teaching, first in Princeton, then in Burlington, and finally (under Dr. Abercrombie) in Philadelphia. Here he began to study law; but his fine powers of eloquence led him in 1858 to become an actor. He took the boards with the ‘Coney’ for eight years, and then was suddenly converted, and was baptized by immersion Feb. 4, 1814. Obtaining a government clerkship in Washington, he removed thither, and began to preach within a year after his baptism. In 1815-16 he was chaplain to Congress, and immediately became pastor of a Baptist church at Alexandria, D. C. In 1825 he accepted a call from the Oliver Street Baptist Church, New York, where he remained until 1841, when he became pastor of the First Baptist Church, which built a new edifice in Bowman Street. In this charge he remained until his death, Aug. 28, 1855. Dr. Cone’s career as a preacher was very brilliant. He filled his pulpit with great force, speaking in a rich, sonorous voice, and very appropriate and expressive gestures. In doctrine he was a Calvinist, and a strenuous advocate of Baptist views, yet courteous and charitable to all Christians. His preaching and pastoral labor exhausted but a small part of his activities. He took a deep interest in missions, was a member of the Baptist Board, and was president of the Convention from 1832 to 1841. He did his utmost to avert the disruption of the Convention in 1845 through the slavery disputes. He was also an officer of the Baptist Home Missionary Society from its beginning in 1832 to 1855. For many years he was active in the service of the American Bible Society, but on the formation of the Baptist (American and Foreign) Bible Society in 1836, which he aided greatly in organizing, he was made its president. On the refusal of this society to embark in the enterprise of “Bible Revision,” so called, he seceded from it in order to form the American Bible Union, one of the chief objects of which was to substitute “immaculate” for “baptize” in the versions of Scripture.—Sprague, Annals, vi, 565.

Coney (κῆνος, skhēnos; Sept. κυρογόνας), an animal joined in Lev. xi, 5, and Deut. xiv, 7, with the hare, and described as chewing the cud; in Psa. civ. 18, it is spoken of as an inhabitant of the mountains and rocks, and in Prov. xxx, 26, it is represented as a feeble, but gregarious and cunning animal. These descriptions some think best with the different species of the jerboa, the Mysicus of Linnaeus. It is on the authority of Rabbinical writers that the word has by our translators been rendered “coney,” or rabbit, which cannot be sustained, as the rabbit is not an Asiatic animal, and does not seek a rocky habitation, which is the leading characteristic by which the skhēnos is distinguished. The animal is, in truth, as Brucu justly indicated, the same as the Askekoko of Abyssinia, or Damas of Syria, the Wabher of the Arabs, and in scientific zoology is one of the small genus Hyrax, distinguished by the specific name of Syrian (Syriacus). This animal has been described by travellers, but their accounts are often contradictory. The numbers, shape, and structure of the teeth are totally different (as is true also of the hare); nor is the jawbone articulated so as to admit freely of a similar action; finally, the internal structure, as well as the whole osteology, represents that of a rhinoceros in miniature, and a strong appearance of a fold of skin and fur on the back of the animal; therefore the hyrax is neither a rodent like hares and rabbits, nor a ruminant, but is anomalous, and most nearly allied to the great pachyderms of systematic zoology. It may be that the peculiar structure of their anterior teeth is convenient for stripping off the seeds of grasses and tritica, and that these, in part retained in the mouth, cause a practice of working the jaws, which, to common observers, may appear to be chewing the cud. In hares and rats a similar appearance is produced by a particular friction of the incisors or nippers, which, growing with great rapidity, would soon extend beyond a serviceable length if they were not kept to their proper size by constant gnawing, and by working the cutting edges against each other. This action, observed in the motion of the lips of most rodents when in a state of rest, caused the belief of rumination in the hare, though, like the hyrax, all rodents are equally unprovided with the several stomachs, and want the muscular apparatus necessary to force the food back into the mouth for restimulation at pleasure, which constitute the leading peculiarities of the anatomical structure of the ruminantia. But they may possess, in common with pachydermata, like the horse and hog, the peculiar articulation and form of jaws which give them the power of grinding their food, and laminated teeth fitted for the purpose. Externally the hyrax is somewhat of the size, form, and brownish color of a rabbit, and it has short, round ears, sufficiently like for inexact observers to mistake the one for the other. The hyrax is of clumsy structure than the rabbit, without tail, having long hair scattered through the general fur; the feet are naked below, and all the nails are flat and rounded, save those on each inner toe of the hind feet, which are long and awl-shaped; therefore the species cannot dig, and is by nature intended to reside, not, like rabbits, in burrows, but in the clefts of rocks. This character is correctly applied to the shapen by David.” The total length of the animal is as it is about one foot. It presents at first sight the idea of a rat rather than any other creature. The color is gray, mixed with reddish-brown, and the white belly. They do not appear to have any cry, nor do they stand upright on walking, but seem to steal along as if in fear, advancing a few steps at a time, and then passing. Their timid, gregarious habits, and the tenderness of their paws, make them truly the ‘wise and fertile folk’ of Solomon, for the genus lives in colonies in the crevices of stony places in Syria, Palestine, Arabia, Eastern Egypt, Abyssinia, and even at the Cape of Good Hope, where one or two additional species exist. In every locality they are quiet, gentle creatures, living to bask in the sun, never stirring far from their
retreats, moving with caution, and shrinking from the shadow of a passing bird, for they are often the prey of eagles and hawks; their habits are strictly diurnal, and they feed on vegetables and seeds." The flesh of the shoaphan was forbidden the Hebrews, and it appears that the Mohammedans and Christians of the East at the present day abstain from the flesh of the daman. (See further particulars in the Penny Cyclopaedia, s. v. Hyrax; also Bochart, Hieroz. ii, 421 sq.; Rosenmüller, Alterth. IV, ii, 218 sq.; Shaw, Trav. p. 501; Sonnini, l. c. 98; Bruce, vii, 241; Hasselianis, p. 577 sq.; Wilson, Persia, ii. 295; Laborde, Voyages, p. 47; Robinson, Researches, new edit. iii. 367; Thomson, Land and Book, i. 460; Oedmann, Samml. Amaran. p. 122; Kitto, Phys. History of Palestine p. ccclxxvi; Laborde, Syria, p. 114.) See ZOOLOGY.

Confalon. A fraternity of seculars in the Church of the Millerpenitents, established originally by some Roman citizens. Henry III commenced a similar fraternity in Paris in 1688, and, dressed in the habit of a penitent, assisted at a procession wherein the cardinal of Guyse carried the cross, and his brother, the duke of Mayence, was master of the ceremonies.—Hook, Church Dictionary, s. v.

Confecction (κήφη, ro' khek, Exod. xxxi. 51), CONFECTIONARY (κήφη, rakkekah), 1 Sam. viii. 18), both derived from the root κήφη (rakke), to space, denote respectively perfume and a female perfumer, as the title is an old feminine form of the word. It is derived from the same root (and translated "apothecary," "perfume," "ointment") indicate. See APOTHECARY.

Conference, the bringing together of individual opinions upon any subject of debate: hence applied, peculiarly, to religious discussions of any kind (Gal. ii, 6).

CONFERENCE, FREE-WILL BAPTIST. The ecclesiastical bodies among Free-Will Baptists, higher than the local church, are the Quarterly Meeting, the Yearly Meeting, and the General Conference. The latter meets every three years. See BAPTISTS, FREEWILL.

CONFERENCE, HAMPTON-COURT. A conference held at Hampton Court in the year 1694, between nine bishops and as many other dignitaries of the Church on the one side, and four Puritan divines on the other. It was held in the presence of James I., and lasted for three days. Some of the demands of the Puritans were acceded to, but others were rejected. One lasting advantage, however, resulted from this conference, namely, our present authorized version of the Bible. The alterations and insertions made in the liturgy; all the thanksgivings now in use which were inserted except the "general one" which was subsequently introduced; and there was added to the Catechism the portion explaining the sacraments.—Elen, Churchman's Dictionary, s. v.; Neal, History of the Puritans, ii. 30; Mosheim, Ch. Hist. iii. 408.

CONFERENCE, METHODIST. There are three synods of this styled Conferences in the Methodist Episcopal Church.

I. The Quarterly Conference of each circuit or station consists of the travelling and local preachers, exhorters, stewards, and class-leaders of the circuit or station. The presiding elder, and, in his absence, the preacher in charge, is president. The regular business of the Quarterly Conference is to hear complaints, and to receive and try appeals; to superintend the instruction of the Sunday-schools; to license local preachers, to appoint stewards," etc. (Discipline, pt. ii, ch. i. § 8).

II. The Annual Conference is composed of all the ministers in a certain territory included in the "Conference." There are now (1867) fifty-nine Conferences of the Methodist Episcopal Church, including Mission Conferences, besides those of the Methodist Episcopal Church South. The functions of the Annual Conference are purely administrative. At each session the preachers are "appointed" to several stations for the ensuing year by the bishop (Discipline, pt. ii, ch. ii. § 9).

III. The General Conference is "composed of one member for every twenty-seven members of each Annual Conference, appointed either by seniority or choice, at the discretion of such Annual Conference." It meets once in four years, and is presided over by the bishops. It has full power to "make rules and regulations for the Church," subject to certain limitations known as "constitutional restrictions" (Discipline, pt. ii, ch. i. § 1). See METHODISM.

In the Wesleyan Church, in England, all the ministers meet in one Conference. "The first Conference of the Wesleyan Methodists was held in London in the year 1744, and included only those of whom were clergymen. By them the characters of the preachers were examined, differences of theological opinions repressed, the stations of the preachers determined, and their hearts warmed and cheered by mutual consultation and prayer. As Mr. Wesley declined into infirmity of body, the system of doctrine and discipline, which had been so signally owned of God in the conversion and salvation of men, became a matter of anxious concern both to himself and his people. The appointment of the preachers to the various chapels, and to the consequent pastoral charge of the societies, presented the greatest difficulty. After much consideration of the case, and requested Mr. Wesley to consider what could be done in this emergency, so that, in the event of his death, the connection might not be dissolved. He took legal advice, and drew up the 'deed of declaration,' constituting one hundred preachers by name 'the Conference of the people called Methodists,' at the same time defining their powers, and making provision for the filling up of all vacancies occasioned by death, superannuation, or expulsion. This deed he caused to be enrolled in the High Court of Chancery in the year 1784. Thus the power of government which Mr. Wesley possessed during his life, by his appointment devolved upon the Conference after his decease, he having nominated its members, provided for its perpetuity, and defined its powers by the 'deed of declaration.' To prevent any abuse of this instrument on the part of the 'legal hundred,' Mr. Wesley left a letter, to be read by the Conference at its first assembly after his death, of which we subjoin an extract: 'I beseech you, by the mercies of God, that you never avail yourselves of the 'deed of declaration' to assume any superiority over your brethren, but let all things go on, among those itinerants who choose to remain together, exactly in the same manner as when I was with you 30 years ago. Have no respect of persons in stationing the preachers, in choosing children for Kingswood school, in disposing of the yearly contribution and the preachers' fund, or any other public money, but do all things with a single eye, as I have done from the beginning.' When this letter was read after Mr. Wesley's decease, the Conference was forcibly resolved that all the preachers who are in full connection with them shall enjoy every privilege that the members of the Conference enjoy, agreeably to the above-written letter of our venerable deceased father in the Gospel. The Conference of the preachers of the Methodist societies is held annually in some one of the principal cities and towns in the kingdom. Representatives from the Irish Con-
CONFERENCE, PASTORAL, a meeting of ministers for the discussion of religious and ecclesiastical topics. They are either convoked by the bishop of the diocese, or are held by priests of their own accord. Conferences are not mentioned before the 11th century. They seem to have had their origin in the large extent of the dioceses, which made the regular meetings of all the clergy of a diocese difficult. They consequently met in deaneries and archipresbyteries, under the presidency of the dean and archpriest. They were called \textit{Calendar} because they were held on the first day of the month, or Chapters, Consistories, Synods, Sessions. They were common until the middle of the 13th century, when they fell into disuse. In the 16th century cardinal Charles Borromeo gave special orders for these conferences and ordered them to be held regularly. The same order was given by a number of French provincial synods. In 1720 they were declared by the congregation of the Council of Trent to be a proper substitute for diocesan synods. They have, however, never been in general use. — \textit{Winer u. Weiss, Kirchen-Lex.}, II, 786.

CONFERENCE, SAVOY, a series of meetings held by royal commission at the residence of the bishop of London, in the Savoy, in the year 1661, between the bishops and the Nonconformist ministers, in order so to review, alter, and reform the Liturgy as to meet the feelings of those who had serious scruples against its use, and thereby promote the peace of the Church. The individuals chosen comprehended the archbishop of York, with twelve bishops, on the one side, and eleven Nonconformist ministers on the other. Had the episcopal ministers entered into a fair and open discussion on the points at issue, reconciliation, to a certain extent, might have taken place; but as they were not invited to the conference, the two sets of prelates singlehanded came to the Dissenters, the negotiation turned out a complete failure. At a convocation of the bishops, held almost immediately after, instead of removing anything that was at all likely to stumble tender consciences, they rendered the Liturgy still more objectionable by adding the story of Bel and the Dragon to the lessons taken from the Apocalypse. See Procter, \textit{On Common Prayer}, ch. v; Neal, \textit{History of the Puritans}, pt. iv, ch. 6.

\textit{Confessio Augustana.} See \textit{Augsburg, Confession of.}

\textit{Confessio Belgica.} See \textit{Belgic Confession.}

\textit{Confession.} In the Church of Rome and in the Eastern churches the confession of sins is considered to be one of the seven sacraments. See \textit{Auricular Confession.}

\textit{Confession.} The law prescribing how often the member of the Church should go to confession was not the same in all parts of the Church, some synods enjoined one, others two, others three confessions a year. Since the Council of Trent, the Church inflicts ecclesiastical censures only upon those who omit going to confession once a year. For nuns the Council of Trent prescribes a confession once a month. Priests are exhorted to go often to confession; some synods, like that of Ghent, enjoined upon them a weekly confession.

In the Middle Ages it was customary to pay a tax to the priests (\textit{numerus confessionarius}) for bearing confession; but the demand for the abolition of this custom was so urgent that after the 16th century the payment of the tax was generally optional, and in this form it still exists in some Roman Catholic dioceses. Offerings of this kind remained also in use in many Lutheran churches until the present century, while the Reformed churches entirely abolished them.

The priest to whom a confession is made has the duty of observing with regard to it an absolute silence. No exception is made to this rule if a person makes communication to a priest of a crime which is still to be committed, the priest must try to change the mind of such a person, and induce him to do all that is possible to prevent its being committed by others, but he is not allowed to notify the secular government of it. In several countries (as Prussia) the civil law demanded in the latter case a notification, but the Church of Rome has always refused compliance with such a law. Luther, and the Church regulations in the Lutheran countries, also enjoined the strictest observance of the secret of confession.

\textit{Confession, Auricular.} See \textit{Auricular.}

\textit{CONFESSION OF FAITH}, a collection of the articles of belief of any Church. See \textit{ Creed.}

I. \textit{Their Use in the Church.} — (1.) The Protestant Confessions were the result of efforts, at the dawn of reviving toleration, to separate the Christian doctrines from the moral and civil opinions which ignorance, negligence, or artifice had conduced to accumulate around them, under an implicit obedience to the authority and domination of the Church of Rome.

(2.) Many persons altogether object to Creeds and Confessions of Faith on the ground that they enfringe Christian liberty, supersede the Scriptures, exclude topics which ought not to be excluded, and admit such as ought not to be admitted; are often too particular and long; are liable to be abused; tempt men to hypocrisy; preclude improvement; and have been employed as means of persecution. It is said further that confessional formularies, if they do not supersede the Word of God, are placed on a par with it; and, to a wider extent, are of greater practical authority. Two consequences follow: the first is, that spiritual life is either altogether extinguished, or, where it exists, is so dwarfed and imprisoned that it has neither scope nor power of manifestation; and the second, that the Church, which occupies a dominion on the outside of the confessional parastasis, is condemned as schismatics, and at the same time feared as if they were foes."

(3.) On the other hand, the arguments in favor of them are such as the following. All arts and sciences have been reduced to system, and why should not the truths of religion, which are of greater importance? A comprehensive view of the principal points of the Christian religion must be useful to inform the mind, as well as to hold forth to the world which are the sentiments of particular churches. They tend to discover the common friends of the same faith to each other, and to bring them together. They thus countenance them. We have the moral law, the Lord's prayer, "the form of doctrine," mentioned by St. Paul (Rom. vi, 17), and "the form of sound words" (2 Tim. i, 18). Their becoming the occasion of hypocrisy is not the fault of the Confessions, but of those who make use of them. If the Confessions were expressed in the words of Scripture, this would set aside all exposition and interpretation, and would destroy all means of distinguishing the sentiments of one man from those of another (Farrar, s. v.). And to say that each individual is to interpret the Creeds by the Bible, and to hold and publish his own interpretation without reference to that of the Church to which he may belong, "is not to exalt the Scriptures, but only to confound the uses of the Word.
of God and the word of the Church. The one is at all times the ultimate appeal of every believer's conscience; the other is the interpretation of that appeal by the collective body of the Church. The Church does not first make a minister, and then tie him down to her standards, as is too generally supposed to have been moved by the Holy Ghost, and demanding to exercise his office and to be intrusted with the cure of souls in the community to which he applies, is asked by the Church whether his individual interpretation of the Scripture accords with that of the collective mind of the Church. If he cannot answer in the affirmative, it is evident that he cannot be excommunicated by the negative ministry elsewhere. A particular Church may be in the wrong, and an individual may be in the right; in which case there will arise controversy, and the Church, by the secession and opposition of individuals, may be led to modify and improve its theology. But this must be done by a collective act, and not by the insubordination of private clergymen filling the Church with various doctrines, and giving to its proclamation of the Gospel an uncertain sound. For, if it were otherwise, what hereby could be excluded?"

(4.) In the interpretation of Confessions there are some points very fraudulently overlooked, some more important principles of interpretation but little attended to. For instance, sometimes the private opinions of the framers of formularies confessedly beyond them; now these private opinions are sometimes appealed to as a proof that the formularies ought to be understood in that extended sense, whereas they prove the direct contrary. (See Archbishop Whately's Kingdom of Christ, sec. 24.) If, indeed, the writings of these framers contain indications of the design with which they were framed, this ought to be considered. For instance, articles, etc., framed manifestly on purpose to exclude certain Romish doctrines, as being so utterly averse to justify and secure that separation from Rome which the Reformers deliberately resolved on, ought not to be interpreted so as to be consistent with these doctrines; not, however, because this would have been at variance with the private opinions of each Reformer separately, but because it would be at variance with their deliberate public declaration as a body. Again, there is a distinctition to be observed between the interpretation (i) of anything put forth by an individual for the purpose of instructing others or explaining his own views, and (ii) of anything emanating from an assembly, the members of which could not be expected exactly to agree, not only with each other in the precise phraseology, but relative importance also of every point, but also in the degree of concession to be made to those whom their declarations were to be put; e.g. an individual (unless a blunderer) will never make one part of his statement so far neutralize the other, that the whole effects no object which might not have been equally well obtained by omitting the whole, yet some public declarations drawn up by assemblies of sensible men may be expected to be such; the XVIIth Article of the Church of England, for instance, is by many considered to contain nothing which might not have been obtained by saying it. In any such case, it may have been that a strong necessity was felt to say something on the point; many may think that so and so ought to be said; and many others may object to this, unless some qualification be added, such as nearly to neutralize it. These principles of interpretation are incalculably important, and should be considered by every student. (See Eden, The True Church, pp. 90-92.)

II. Confessions of Different Churches. - 1. That of the Greek Church, entitled "The Confessions of the True and Genuine Faith," which was presented to Mohammed II in 1485, but which gave place to the "Orthodox Confession of the Catholic and Apostolic Greek Church," composed by Mogila, metropolitan of Kiev, in Russia, and approved in 1648 by the patriarchs of Constantinople, Alexandria, Antioch, and Jerusalem. It contains the standard of the principles of the Russian-Greek Church. For the originals, see Libri symbolici ecclesiastici Oriantici, ed. E. J. Kimmel (Jena, 1848, 8vo); Neale, Hist. of the Eastern Church (Lond. 1850, 2 vols.).

2. The Church of Rome, though she has always received the Apostles', Nicene, and Athanasian creeds, had no fixed, public, and authoritative symbol till the Council of Trent. A summary of the doctrines contained in the canons of that council is given in the creed published by Pius IV (1564) in the form of a bull. It is called the Pius Creed, to which it adds twelve articles, comprising those doctrines which the Church of Rome finally adopted after her controversies with the Reformers. See Credo of Pius IV. Besides this creed, and the "Canons and Decrees of the Council of Trent," the Church of Rome acknowledges no symbolical books as authoritative. See Trent, Council of. The best editions are Canonum et Decret. Concil. Trid. (Lips. 1853, 8vo); Buckley, Canons and Decrees of Trent (Lond. 1851, 12mo); Donovan, Catechism of the Council of Trent (Balt. 8vo). See also Streitwolf, Libr. Symbol. Eccl. Cath. (Göt., 1844), and the article Trent.

3. The books of faith and discipline are called Libri Symbolici Ecclesiae Evangulicae. They contain the three creeds—Apostles', Nicene, and Athanasian (see Credo), the Augsburg Confession (see Augsburg), the "Apology" for that Confession by Melancthon, the Articles of Smalcald (q. v.) drawn up by Luther, the Catechisms of Luther, and in many churches the Form of Concord, or Book of Concord. See Concord. The Saxon, Wurtzburg, Sutian, Pomeranian, Mansfeldian, and Copenhagen Confessions agree in general with the symbolical books of the Lutherans, but are authoritative only in the countries in which they are established. There are many editions of the Libri Symbolici; the best and most convenient are those of Hase (3d ed. Leip. 1846, 12mo) and of Francke (edit. sterned. Leip. 1846, 12mo). See Lutheran Church.

4. Of the Calvinistic Confessions the following are the principal: (1) The four Helvetic Confessions—that of Basel, 1536, the Summary and Confession of the Helvetic churches, 1556; the Expositio Simplicis, etc., 1556, ascribed to Bullinger; and the Formula Consensus Helvetici, 1575. See HELVETIC. (2) The Tetrapost Theme, 1553, which derives its name from four cities, Strasbourg, Constance, Memmingen, and Lindau. The relative importance of the last letter is attributed to Bucer. (3) The Palatine or Heidelberg Catechism, framed by Ursinus and Olevianus, first published in 1553. See Heidelberg. (4) The Confession of the Gallican churches, accepted at the first synod of the Reformed, held at Paris, 1568. See GALICIAN CONFESSION. (5) The Confession of the Reformed churches in Belgium, drawn up in 1550, and approved in 1561. See BELGIC. (6) The Confession of Faith of Scotland, allowed by the Estates in 1560, and subscribed by king James in 1561. (7) The Westminster Confession. See WESTMINSTER. (8) The Canons of the Synod of Dort. See Dort. See Conv. can. Libr. Consensum in codicem reformatum, edit. H. A. Niemeyer (Lips. 1840, 8vo, the most complete and convenient manual); Böckel, Die Bekennnisschriften der evangelisch-reformierten Kirche (Leip. 1847). The last-named work contains, besides all the Confessions, besides all the Protracted Confessio (of Germany, Switzerland, France, Great Britain, Bohemia, Hungary, Poland, and the Netherlands), brief introductions and notes to each of them.

5. The Anglican Confession, or "Thirty-nine Articles of the Church of England," agreed on in the Convocation held in London, 1562. They were drawn up in Latin, but in 1571 they were revised, and subscribed...
CONFESSOR 1. In early ecclesiastical history the word is frequently used for martyr (q. v.), but its proper application was to those who, after having been tortured, were permitted to live and die in peace. At length it indicated those who, after having lived a good life, died in the reputation of suffering. According to Cyprian, he who presented himself to torture, or even to martyrdom, without being called to it, was not designated a confessor, but a professio, and if any through want of courage abandoned his country, and became a voluntary exile for the sake of the faith, he was called ex terra. Later the title Confessor was applied to persons of eminently pious life, as "witnessing a good confession." Edward of England was made "Confessor" by a bull of Alexander III. (2.) In the Roman Church, a confessor is an ordained priest who has power to hear sinners in the so-called sacrament of penance, and to give them "absolution." He is generally designated a confessor, though the term is used also from confessor. The confessors of the kings of France, from the time of Henry IV., were constantly Jesuits; before them, the Dominicans and Cordeliers shared the office between them. The confessors of the house of Austria have also ordinarily been Dominicans and Cordeliers, but the later emperors have taken Jesuits. (See Audi- ucal.)

Confirmation, a rite by which, in some Christian churches, baptized persons are fully admitted into the Church by the imposition of hands and prayer. The Churches which practise this ceremony profess to do it in imitation of apostolic example recorded in the New Testament. (1.) It appears from the Acts that the apostles laid hands only on baptized persons, and in the case of the converted Samaritans, Acts viii, 12-17, and the disciples at Ephesus, Acts xix, 5, 6. It is, however, evident that in those passages allusion is made to the miraculous gifts imparted by the apostles. It is said that "when Simon saw that through laying on of the apostles' hands the Holy Ghost was given, he offered them money, saying, Give me also this power, that on whomsoever I lay hands he may receive the Holy Ghost." Nothing is said of the laying on of hands in the baptism of the three thousand on the day of Pentecost (Acts ii, 41-42). Nor does the ceremony appear to have been taken place by the churches of Lydia and Corinth, Acts xvi, 15; or the Phillipian jailer and his family, Acts xvi, 31-38. In Heb. vi, 2, mention is made of "the doctrine of the laying on of hands" immediately after that of "the doctrine of baptism," but there is no intimation that the two transactions were connected. The journey of St. Paul through Syria and Cilicia in confirmation of churches does not necessarily imply the rite of confirmation as practised by the Church of England. These churches had been probably planted by himself at an earlier period, and he now gives them such regulations as are neces-
CONFIRMATION

sary for their welfare, ordaining elders, imparting mir-
caculous gifts, so important to the instruction of con-
verts, and to the furnishing convincing evidences of
the truth of the power of the Gospel. The union, or
christian, referred to in 1 John ii. 27, and 2 Cor. 1, 21,
has been supposed by some to refer to the ceremony
of confirmation; it seems rather to relate to a spiritual
anointing, to the royal and priestly dignity of Chris-
tians, or to the communication of extraordinary and
miraculous gifts. (2) As the practice cannot be
traced to very remote times. The earliest records of ecclesiastical antiquity contain any
clear and certain testimony concerning it. Passages
supposed to refer to this rite have been pointed out
in the writings of Dionysius, in the Apostolical Con-
stitutions, in Clement, and in Eusebius; but they
rather relate to the sacrament of baptism. Confor-
mation in connection with baptism may be traced to
the time of Tertullian, who informs us that the ceremon-
ies of unction and the imposition of hands followed
immediately after baptism. Cyprian refers to the
subject of confirmation; and applies to it the word
sacramentum; but it is evident, from the use of the
term in the passages in which it is used, and from the
scope of the passages in which it occurs, that sacra-
mentum was not used in its strictly theological
meaning, but simply in the sense of ceremony. Numerous
references to later writers might be made to show the
connection of baptism and confirmation. The baptism
of the ancient church was a solemn and religious
act, confirmation followed as the seal by which the
contract was ratified; and hence confirmation was ad-
ministered, not by the person officiating, but by the
bishop. At the stated baptismal seasons, the bishop
was chiefly occupied with the rite of confirmation;
but he sometimes commenced the whole solemnity by the
baptism of a few individuals with his own hands.
When baptism was administered in the absence of the
bishop, confirmation was solemnized at some conven-
tient season afterwards, either by the bishop or by his
representative. Hence it followed that confirmation
was often deferred until several years after baptism,
especially in those dioceses which were seldom visited,
either on account of their great extent, or the negli-
gence or ignorance of the bishop. Even after the gen-
eral introduction of infant baptism, confirmation im-
mediately succeeded. In the Oriental churches, bap-
tism, confirmation, and the Lord's Supper are admin-
istered together; but in the West, there is no positive evidence that such was the ancient custom. (3) The perma-
nent separation of confirmation from baptism is gener-
ally traced to the 18th century. The bishop was, for
the most part, the ordinary minister. Several canons
deny to the other orders of the clergy the right of con-
firming; but presbyters appear to have conferred im-
position of hands, (a) in the absence of the bishop;
or, (b) in the presence of the bishop, only by his ex-
press orders; or, (c) on the conversion of a reputed
heretic, if such a one, desirous of being received into
the church, was at the point of death while the bishop
was absent. Deacons were on an equality with pres-
byters, and were permitted to administer this rite by the
Council of Tole-
do, A.D. 400.

In the Latin Church, after the separation of con-
firmation from baptism, a series of preliminary reli-
gious exercises was requisite for this rite, similar to
those which had been previously required for baptism.
Names were assumed, very early in confirmation. Sponsors
were also required; and a separate edifice in some instances provided, called com-
signatorium, alistorium, and chrismarium. After the
diocese of baptisteries, both baptism and confirmation
were administered in the church (Farrar: Bingham,
Hist. of Eng', 2. 555. Schaff, A.H.I., 216). Con-
firmation is a sacrament in the Romish and Greek
churches. In the Greek Church confirmation is
administered at the same time with, or as soon as pos-
sible after, baptism, even in the case of infants, it
being considered perilous to die without it; and in the
Latin Church also it is often administered to young
children—the Church of Rome not considering a per-
son a complete Christian till he has partaken of this
'sacrament.' To reconcile this opinion with the sal-
vation of children who die after baptism but before con-
firmation, or 'committing actual sin,' the Church of
Rome has decided that they are condemned to death,
as they cannot do otherwise. In England, five cen-
turies ago, children were usually confirmed at the age
of five years. The Council of Trent appointed from the
age of seven to twelve; and a synod of Milan, in
1565, prohibited confirmation under seven years of age.
The canon law fixes no time, but says 'of perfect
age,' which may be interpreted strictly or laxly.
The earlier German Reformers rejected it even as a
ceremony; but it was restored through the influence
of Spener in the 17th century, and is now in use, as
a renewal of the baptismal covenant, in the Reformed
and Lutheran Churches. In the Church of England,
and in the Episcopal Church, infants are usually
confirmed at an early age, the service of Confirmation
being administered by the bishop. These churches di-
rect that the child shall be confirmed 'so soon as he
can say the Creed, the Lord's Prayer, and the Ten
Commandments in the vulgar tongue, and is further
instructed in the Church Catechism set forth for that
purpose.' Bishop Gibson, to elucidate the words
'soon,' adds, 'within 12 or 18 months, or in C. II. 11,
verses to Lyndwood's Gloss upon Archbishop Walter's
Con-
stitutions, which makes the proper age to be above
seven and under fourteen. The ritualists and canon-
ists of the English Church generally incline to a ten-
der age. Thus, in reply to Bucer, who 'finds fault
with our Church for administering confirmation too
soon,' and says that none ought to be confirmed 'who
have not had opportunity of giving sufficient testi-
monies of their faith and desire of living to God by
their life and conversation,' Whately argues that con-
firmation is administered 'to assist them in manifesting
their faith and practice, and is not to be deferred till
these are already manifested.' The rite, he says, is
that of guarding them against sin, before they are exposed
to temptation, 'that so the Holy Spirit may take early
possession of their youthful hearts, and prevent those
sins to which, without his assistance, the very tender-
ness of their age would be apt to expose them.' All
latter that the Church 'ought to understand the nature and advantages of the
rite, and the obligations it lays upon them.' The
High and Low Church differ as to the essence of con-
firmation, the latter regarding it as being essentially a
personal renewal of the promises made in the name of
the subject by others at baptism, while the High-
Churchmen look upon it as a kind of sacramental rite for con-
veying the strengthening power of the Holy Ghost.
Some High-Churchmen have therefore maintained that
the Roman doctrine of the sacramental character of con-
firmation (as well as of all the other sacraments of
the Church of Rome) may, in some sense, be accepted by
the Anglican Church; but absolutely forbidden as a dif-
ference of views as to the sacramental character of con-
firmation that the High-Churchmen generally
urge an earlier (about five or six years) and the Low-
Churchmen a later age (from fourteen to sixteen),
for the performance of the rite. Their difference of
opinion begins with the subject of an oath. A few years ago, bishop Baring, of Dur-
ham, refused to confirm any children less than fourteen years of age. See Coleman, Ancient Christianity, ch. xx.;

CONFIRMATION

CONFUSCUS

Confusius (Latinized by the Jesuit missionaries from Cong-fu-tze to Koong-foo-tee), a Chinese reformer and moralist, was born about 551 B.C. at the village of Qufu, which was the small kingdom of Lu (now a part of the province of Shantung), and died B.C. 479. He is said to have been a descendant of the emperor Hoang-ti, who reigned B.C. 2600. He was three years old his father died, but his mother trained him with great care, and was rewarded by the rapid progress and filial tenderness of her son. At seventeen he was sent to public schools, especially the grain-markets. He was married at nineteen, but, according to some accounts, subsequently divorced his wife (after she had borne him a son) in order to devote himself to the study of the ancient writings, and prepare for the work of restoring the usages and doctrines of the old sages. He was soon after promoted to the office of inspector general of agriculture. At twenty-four, having lost his mother, he resigned his public employments that he might pay the respect to her memory prescribed by the ancient traditions. During the three years passed in mourning he was a diligent student. China at that period was divided into a number of feudal kingdoms but slightly under the control of the central authority, whose constant quarrels filled the land with disorder, while the social and moral condition of the people had fallen so low that the ancestral religious rites were no longer observed. To restore the proper observance of these, rather than to introduce any new religion or system, was the aim of Confucius determined to devote himself. About the age of thirty he began his public teachings, making journeys through the various states of China, instructing all ranks of the people, and gaining fame and disciples, though meeting often with opposition, and even persecution, in his efforts to reform the manners and better the condition of his countrymen. When fifty-five years old he re-entered public life as prime minister of his native kingdom, Lu, with opportunity and authority to test the efficacy of his proposed means of amelioration. In three years, it is said, he brought about a considerable change in its social and moral condition. His success, however, excited the jealousy of neighboring princes, and through their intrigues he was obliged to flee to the north of China. After several unsuccessful efforts to obtain office and opportunities to teach the people, he retired to the kingdom of China, where he lived in great poverty. His doctrines, however, were taken root, but his rich theories and practice made him many enemies. When full of years, in company with some chosen disciples, he retired from the world, that he might complete and arrange the works which, under the name of the King (or Books), constitute the sacred books of the Chinese, and, standing at the head of their literary head for more than 2000 years, the recognised authority in moral and political conduct for nearly one third of the human race. Soon after the completion of these works

Conflagration

General. The opinion that the end of the world is to be affected by the agency of fire is very ancient, and was common among heathen philosophers. Pindar, in "Pythian," i. 203, and other testimonies are quoted by Grotius (De Verteitate ed. Crit. lib. i. § 22). It is not easy to discover the origin of this opinion; it can scarcely be traced to tradition derived from revelation, since there is no distinct reference to such a catastrophe in the Old Testament. It is, moreover, remarkable, considering how universal and definite is the ordinary belief on the subject, that there is only one passage in the New Testament, viz., 2 Pet. iii. 7-10, which can be added as speaking distinctly of this event. This passage is, indeed, very explicit, but some learned and able expositors have referred it altogether to the destruction of Jerusalem and of the Jewish polity. Among these are Dr. Lightfoot (Horae Hebr. in Joh. 21, 22) and Dr. John Owen (Isokrhoiyomwv, edit. Breneman, 1864, p. 147, quoted by Dr. Pye Smith, Scripture and Geology, sect. 6, p. 233, 1st ed.). If, however, with the majority of interpreters, we refer the prediction to the end of the world, to which it seems specially to apply, we should not have a more distinct statement of the fact than the present order of things is to be terminated by the world we inhabit and all the works of man it contains being "burnt up." There is no reason for assuming that the whole material universe is to be involved in this catastrophe; the mention of the heavens leads our thoughts not farther than the atmosphere and vapors surrounding this planet. Nor should we regard this conflagration as involving the absolute destruction or annihilation of the world: it is more consistent with the narrative itself, as well as with physical science, to consider it as introductory to a new and better state of things—"new heavens and a new earth, wherein dwelleth righteousness" (ver. 11). By what means the conflagration is to be effected we are not informed, and all attempts to explain how this is to be accomplished must be mere speculation. We have only at present to remark that such an event is not inconsistent with physical facts. We know that the temperature of the earth increases gradually with considerable regularity as we descend below the surface (Phillips, Geology, ii, 232), and we have every reason to believe that the central mass is intensely hot. We know, moreover, that there are subterranean fires of great extent, if not forming part of this heated central mass, therefore, of course, are near at hand. But even if there were no such central heat, chemistry points out very easy means by which the conflagration may be effected through the agency of various elementary substances (Phillips, Geology, ii, 211). We find evidence also in the pyrogenous rocks which form so large a part of the earth, that the world has already been subjected, if not to conflagration, yet to a more intense and general action of heat than which any is now observed on the surface of the earth; and it is clearly not impossible that the action may be yet more intense and more general. The example of the conflagration of a star in the constellation of the Southern Cross in 1866, by the sudden evolution of hydrogen gas, shows one way in which such a catastrophe might be produced (Bibliotheca Sacra, July, 1867, p. 473). In speculation on this subject, however, the caution of Calvin should not be disregarded, that the apostle is not speaking to gratify the curiosity of the curious, but to add impressiveness to his pious exhortations (Rom. vii. 1 Pet. iii. 10).

Conformity strictly means, (1) the being reduced to the same shape with anything else; hence it has acquired the figurative sense of (2) agreement with any existing set of principles, or any institution; and has, in a more limited and technical sense, been used for (3) compliance with the discipline of the Church of England. Conformists are therefore generally contrasted with "Nonconformists," a name which now includes generally all those who, either in doctrine or government, or both, dissent from the Church of England. A declaration is required of all persons who are to be licensed or instituted to an ecclesiastical charge in the Church of England in the following words: "I, B., do declare that I will conform to the Liturgy of the Church of England as it is now by law established." This declaration is to be made and subscribed before the bishop or his commissary, and the making and subscription thereof is to be testified under the episcopal seal of the bishop, and under the hand of the bishop or his commissary.—Eden, Churchman's Theol. Dict.; Hook, Church Dict.
CONFUCIUS

Le died, leaving a single descendant, his grandson, Tso-Tse, whose offspring, numbering A.D. 1671 about 11,000 males, mostly of the seventy-fourth generation, from a direct male in the line of Confucius, the only instance of a hereditary nobility among them. The veneration of the Chinese for Confucius amounts to worship, to which the second and third months are months are devoted. In every district and every department there is a temple erected in his honor (Colburnet, p. 41).

The Rev. Dr. Wentworth, Methodist Episcopal missionary at Shanghai, says that the worship of Confucius is witnessed by himself in a temple in that city, from which we make the following extracts: "The temple is one of the finest buildings in the city. It is one storied, in the form of a hollow square, with a spacious court in the centre, apartments on each side, and the main temple at the end. It has a fine por- tico, and the roof within is sustained by columns of solid granite of enormous size. There are no idols, but ancestral tablets supply their places in the gilded shrines. In the centre is that of Confucius, on the sides are those of twelve of his most celebrated disciples, six on each side. The worship of the philoso- pher is performed there by the literati, on the manda- rins, who are literary graduates of the highest distinction, are the only priests who officiate on the occasion. The sacrifice takes place twice a year, in the second and eighth months. It is performed before daylight in the morning, and the common people are regularly present, one hour to help, but better than that five minutes too late. The manda- rins had not yet made their appearance. A burst of music indicated the coming of the masters. Their first business was to get the 'whang kee-angs,' 'for- eign babies,' out of the sacred precincts, and a mandar- in of high rank came to request us to go outside. We asked him to let us stand next one of the great doors on the portico outside. To this he consented. The platform was cleared and the ceremonies began. The darkness was dispelled by rows of gaudy lanterns and a forest of blazing torches. The court was filled with mandarins and their servants. Privileged spec- tators from the literary classes, with their attendants, crowded all the available space below. In front of the great central door of the temple, on the portico, was a band of musicians, with flutes and 'soft record- ers,' and another of boys fantastically dressed. With them were musicians chanting vocally, accompanied by the couching yam, the praises of the sage. The loud voice of a crier within the temple, and the loud response of a herald below, indicated that all was ready. Clouds of incense filled the temple, while two or three mandarins, in full official dress and caps, preceded by attendants, ascended the steps and entered the lofty doors on either side, prostrating themselves with the head to the pavement before the shrines successively, and offering the various articles placed in their hands by the attendants for that purpose to Confucius and his favorite followers. This was repeated three times in succession, the officiers retiring and re-entering with the same stately ceremony on each occasion. They were all solemn and reverent. On a broad table is front of the shrine and altar of Confucius lay shrouded the carcass of a whole ox, de- nuded of his skin, and on either side of him a pig and a goat. On the altar were vases of flowers and plates of cooked provisions. At one point in the cer- eemony an officier kneeling before the image of Confucius at a respectful distance, and in a loud voice chanted a prayer or a hymn of praise. The ordinary chants were very simple, consisting of four notes perpetually repeated, thus:

The last offering was material for clothing; a sort of coarse silk, in large patches, first offered bodily in the temple, and then taken down into the court and burned, that it might become spirit-silk in the other world. The Buddhist may offer ready-made clothing, stamped on paper. The mandarins send Confucius the raw material. About the first grey streakings of the dawn of a cloudy morning the ceremonies ended, the torches were suddenly extinguished, and the offi- cers and their retinues slowly retired" (Christian Advocate and Journal, 1869).

"It was the usual object of Confucius to regulate the manners of the people. He thought outward decorum the true emblem of excellence of heart; he therefore digested all the various ceremonies into one general code of rites, which was called Le-ke, or Ly- king, etc. In this work every ritual in all the rela- tions of human life is strictly regulated, so that the true Chinese is a perfect automaton, put in motion by the regulations of the Ly-king. Some of the rites are most excellent; the duties towards parents, the respect due to superiors, the decorum in the behavior of common life, etc., speak highly in favor of Confucius; but his substituting ceremony for simplicity and true politeness is not to be wished. No moral is so important as many excellent maxims and inculcates morality, but it has come to us in a mutilated state, with many inter- polations" (Guttmann, Sketch of Chinese History).

In the writings of Confucius the duties of husbands towards their wives were slightly dwelt upon; the duties and reproaches to be early, but be no better than that five minutes too late. The manda- rins had not yet made their appearance. A burst of music indicated the coming of the masters. Their first business was to get the 'whang kee-angs,' 'for- eign babies,' out of the sacred precincts, and a mandar- in of high rank came to request us to go outside. We asked him to let us stand next one of the great doors on the portico outside. To this he consented. The platform was cleared and the ceremonies began. The darkness was dispelled by rows of gaudy lanterns and a forest of blazing torches. The court was filled with mandarins and their servants. Privileged spec- tators from the literary classes, with their attendants, crowded all the available space below. In front of the great central door of the temple, on the portico, was a band of musicians, with flutes and 'soft record- ers,' and another of boys fantastically dressed. With them were musicians chanting vocally, accompanied by the couching yam, the praises of the sage. The loud voice of a crier within the temple, and the loud response of a herald below, indicated that all was ready. Clouds of incense filled the temple, while two or three mandarins, in full official dress and caps, preceded by attendants, ascended the steps and entered the lofty doors on either side, prostrating themselves with the head to the pavement before the shrines successively, and offering the various articles placed in their hands by the attendants for that purpose to Confucius and his favorite followers. This was repeated three times in succession, the officiers retiring and re-entering with the same stately ceremony on each occasion. They were all solemn and reverent. On a broad table is front of the shrine and altar of Confucius lay shrouded the carcass of a whole ox, de- nuded of his skin, and on either side of him a pig and a goat. On the altar were vases of flowers and plates of cooked provisions. At one point in the cer- eemony an officier kneeling before the image of Confucius at a respectful distance, and in a loud voice chanted a prayer or a hymn of praise. The ordinary chants were very simple, consisting of four notes perpetually repeated, thus:
the eighteenth century asserted were equalled, if not surpassed by them. To show the falsity of such statement, we need only contrast the results achieved by the development of the two systems, starting from what has been claimed to be cognate doctrinal bases.

Founding his system upon the duty enjoined in the fifth commandment of the Decalogue, Confucius inculcated the duty of respect to parents, in contrast to the duty of respect to children of parents, then to citizens to the emperor, the representative father of the state, as to give to the imperial power that despotist cast which, while it has made him so great a favorite with all governments in China, native or Tartar, has nevertheless undoubtedly tended to check progress and make the people desiccated. But, as in all despotism, the continued existence of their nationality vindicates the promise made by God of long life to those who honor their parents, for this injunction, it would seem, the Chinese obey beyond all nations of the earth. His celebrated maxim of negative reciprocity, 'What you would not wish done to yourself, that do not to others' (Analects, xvi. 23), fitly contrasts the immobile, selfish spirit of Confucianism, limited in its aims to China only, with the active reciprocity of Christ's golden rule, whose progressive spirit embraces all the world.

Whether Confucius recognised the existence of a personified, all-powerful, all-knowing, and benevolent deity, or in the religions, ceremonies observed by him, and certain expressions of his (Analects, iii. 13, and xiv. 13) — "He who offends against Heaven has none to whom he can pray," "But there is Heaven that knows me" — are urged as proofs that he did (see preface to the Amer. ed. of the recent translation by Dr. Legge). He maintained that "ma hu shi de," and consequently that matter is eternal; that the cause or principle of things had a coexistence with the things themselves, and therefore also is eternal, infinite, indestructible, omnipotent, and omnipresent, having the blue firmament (Tien) as the central point; therefore offerings, particularly at the equinoxes, should be made to Tien. Neither Confucius nor his true followers have ever represented the Great First Cause by any image. "The images and idols of China belong to other faiths." The doctrine of the soul's immortality is implied in the worship paid to ancestors, and the absence of the word death from his philosophy. When a person died, the Chinese say "his family." The spirits of the good were, according to him, permitted to visit their ancient habitations on earth, or such ancestral halls or places as were appointed by their descendants, to receive homage and confer benefits. Hence the duty of performing sacred rites in such places, under the care of the head of the family, as while living, neglected such duty, of their spiritual part being deprived after death of the supreme bliss flowing from the homage of descendants. The aim of the living should be the attainment of perfect virtue by the observance of the five fundamental laws of the relation between ruler and subject, parents and children, husband and wife, friends and brothers, and the practice of the five cardinal virtues—humanity, justice, order, rectitude, and sincerity, or good faith."

Of the five canonical books composing the King, three (I-king, Shih-King, and Shu-King) were compiled, and one (Chun-Tien) was composed by Confucius, while one (Lun-Yu) was composed by Confucius's disciples, and brought to its present form some centuries after his death. The first (I-king, Book of Changes), assigned by tradition to the mythical emperor Fuh! (B.C. 2800) as its author, is "simply a number of figures made up of straight lines, entire and broken, vertical or horizontal, put together in different arrangement," and which "are regarded as typifying the elements and processes of nature, and the great truths of the moral and intellectual world," and "expressing the earliest cosmical philosophy of the Chinese. To the brief early interpretation of these emblematic figures Confucius added a fuller one of his own." The second (Shu-King, Book of Songs) is a selection of 311 pieces of lyric poetry, relating to moral sentiments, public and private affairs, as harvesting, marriage, etc., with praise of the good and censure of the wicked. The third and most important (Shu-King, Book of Anna!s) is a historical work, recording not only events, but the maxims of the great statesmen, first and forefathers of the sovereigns of ancient China, drawn confessedly from authentic sources, and coming down to about 200 years before Confucius. The fourth (Chun-Tien, Spring and Autumn), composed by Confucius as a supplement to the third, records from memorials of his native kingdom Lu the events from Ping-wang to B.C. 569. This is the only work coming directly from the hand of Confucius. The fifth (Lun-Yu, Book of Rites) is a "compilation, brought into its present form some centuries after Confucius, and made up from material of very different age and character." It is a text-book especially of ceremonial and etiquette, in which the possibilities teachings of Confucius occupy an important place. His doctrines are also set forth in the Hsiao-King (Filial Piety) by an anonymous writer, which contains apothegms of Confucius, collected during his conversations with his disciple Tsang-Tein, and in the four Chinese classics termed "Great Learning," "Great Peace," and "Great Life" (Great Learning, for disciples for adults), consisting of seven sections from Confucius, with ten chapters of commentary by Tsang; (2) Tsz-Yang (the Doctrine of the Mean), by Tsz-tein, the grandson of Confucius; (3) Lung-yu (conversations—replies), conversations of Confucius, written by two disciples after his death; (4) the Meng-tein-shu, the work of his great disciple Meng-tein (Mencius), who lived about B.C. 870, and ranks among the Chinese next to Confucius as moralist and philosopher. Dr. Legge is now publishing all the Chinese classics, giving original texts, versions, and literary apparatus. Four volumes have appeared (Hong Kong); see also his Life and Teachings of Confucius (London, 1867. 2dmo); Huc, Trav. in the Chinese Empire (N. Y., Harpers, 2 vols. 12mo) New-Englander, Feb. 7, 1859, p. 116-121; Edinb. Rev., April, 1855, p. 223-5 (Amer. ed.); Quart. Rev., xi. 382; Coburn, China, Its Religions and Superstitions (N. Confusion of Tongues. See Tongues (Confusion of).

Confé d'élie, a French term, signifying love to choose. It is used in England to denote the king's writ or license to the dean and chapter of the diocese to choose a bishop in the time of vacancy of the see. Prior to the reign of Edward i the kings of England used to invest bishops with the ring and staff, in virtue of their donative right. Henry I so far ceded this right as to give a confé d'élie to deans and chapters for the election of bishops. Henry VIII added "letters missive," nominating the person whom he required them to elect, under pain of presumption; and Edward VI (i Edw. V, 1548) abolished elections by confé d'élie, but they were revived by queen Elizabeth. The confé d'élie is now a mere form, as the nominee of the crown is invariably chosen by the dean and chapter.

Congo, a country of Western Africa, extending from latitude 6° to 8° 20' S. It was discovered in 1484 by the Portuguese, who soon afterwards made settlements
and erected forts along its coast. A few years after, Dominican monks were sent there as missionaries, and in 1491 the prince of Congo was baptized under the name of Sultan. His son, a prince who reigned for fifty years, sent ambassadors to Rome, of whom several were ordained priests. The next king, Peter I, obtained for Congo a special bishop. The following kings remained, with the people, nominal adherents of the Church of Rome. The efforts of Roman Catho- lic missionaries to introduce reforms have been fruitless. In 1678 Congo was united with the Portuguese diocese of Angola (q. v.). Some Roman Catho- lic missionaries were appointed and even went to Belgium and afterwards expanded into the Congo Free State. As this was the result of Mr. Stanley's explorations, he was made governor in 1890. Congo is nominally still an Episcopate see, but at present united with the Portu- guese diocese of Angola (q. v.).

SOME ROMAN CATHO-

lic religious officers of the (as P. Karl v. Heil, Joseph Jakobucci de Kircs, Ratisbon, 1812) claim for the diocese of Congo a Roman Catholic population of 80,000, and for that of Angola of 300,000.—Wetzer u. Welte, Kirchen-Lex. ii. 784.

The Congregatio de auxiliis divine gratiae is the name given to a commission formed by Pope Clem- ent VIII in 1598, to examine Molina's (q. v.) book entitled De causis heretricarum: ad arbitrium inquisitorum. This work had been the cause of great disputes between the Jesuits and the Dominicans, and it was hoped that the investigations of the commission would settle these difficulties. The Congregatio de auxiliis, after three months, decided that the Jesuits were in the wrong in most of the treated points. At the last meeting of the commission, submitting to this decision, that powerful order managed to inveigle the civil authorities, and even kings and em- perors, into the quarrel. After colloquies between the most celebrated theologians of the two parties had led to no result, in 1602 the pope ordered the controversy to be discussed in his own presence. These transac- tions lasted until 1606. The Dominicans still tried to show that the doctrines of Molina were Semipelagian errors, and the Jesuits charged their opponents with Calvinistic views. Pope Clement VIII, who personally sympathized with the views of the Dominicans, resolved to read the book himself, but before he could do so he died (1605). During the decline following his death, every cardinal had to take an oath that if elected pope he would bring the controversy, as soon as possible, to a close. The new pope, Paul V, conse- quently dissolved in 1607 the congregation, and in an encyclical, addressed to the generals of the Jesuits and Dominicans, ordered them which the latter party the provincial magistrates to all the provinces of the two orders, allowed both parties to retain, teach, and defend their opinions, and forbade them to charge the other party with heresy. This decision was confirmed by a constitution of Oct. 2, 1738. Soon after the dissolution of the congressa- tion, the general of the Jesuits prescribed that in the schools of the order a somewhat modified form of Mol- ina's views should be taught. As some of the Jesu- forner Capitulare, "assembly;" Gr. εκκλησία or συνενώγηση, a term that describes the Hebrew people in its collective capacity, term peculiar as a holy community. Here also the natural bounds. Sometimes it is used in a broad sense as inclusive of foreign settlers (Exod. xii, 19), but more properly as exclusively appropriate to the Hebrew element of the population (Num. xvi, 15); in each case it expresses the idea of the Roman civitas or the Greek ἱπτατδ. See Alien. Every circumcised Hebrew (יִשְׂרָאֵל; av- ṭiybhw; indigens; A. V. "home-born," "born in the land," the term specifically descriptive of the Israelite in opposition to the non-Israelite, Exod. iv, 26; Lev. xvi, 29; Num. ix, 14) was a member of the congregation, and took part in its proceedings probably from the time that he bore arms. It is important, however, to observe that he acquired no political rights in his individual capacity, but only as a member of a house; there the basis of the Hebrew polity, whence it was formed in an ascending scale the family or collection of houses, the tribe or collection of fami- lies, and the congregation or collection of tribes. See Government. Strangers (גֶּרֶג) settled in the land, if circumcised, were, with certain exceptions (Deut. xxiii, 1 sq.), admitted to the privilege of citizenship, and are spoken of as members of the congregation in its more extended application (Exod. xii, 19; Num. ix, 14; xxv, 10): it appears doubtful, however, whether they were represented in the congregation in its cor- porate capacity as a deliberative body, as they were not, strictly speaking, members of any house; the position probably resembled that of the προσκύνηται at Athens. The congregation occupied an important po- sition under theocracy, as the church of the national Convention, invested with legislative and judicial pow- ers. In this capacity it acted through a system of patriarchal representation, each house, family, and tribe being represented by its head or father. These representatives were named יִשְׂרָאֵל (Sept. πρεσβυτεροι; Vulg. seniores; A. V. "elders") דָּרֶכְוָנִים (ἀριστοκρατεῖς, princi- pates; "princes"), and sometimes יִשְׂרָאֵל (ἱερακοπολαι, נוֹקְנָר, Num. xvi, 2; A. V. "renown- ed," "famous"). See Elder. The number of these representatives being inconveniently large for ordinary business, the general selection was limited in 70, who formed a species of standing committee (Num. xi, 16). Occasionally, indeed, the whole body of the people was assembled, the mode of summoning being by the sound of the two silver trumpets, and the place of meeting the door of the tabernacle, hence usually called the tabernacle of the congregation (אֶלֶּה, l. i. i. of merchant) (Num. x, 3); the occasions of such general assemblies were solemn religious services (Exod. xii, 14; Num. xvi, 6; Joel ii, 16), and some specific new commandments (Exod. xix, 7, 8 [comp. Acts vii, 88]; Lev. viii, 4). The elders were summoned by the call of one trumpet (Num. x, 4), at the command of the supreme governor or the high-priest; they represented the whole congregation on various occasions of public interest (Exod. iii, 16; xii, 21; xvii, 8; xxiv, 1); they acted as a court of judicature in capital of- fences (Num. xv, 30; xxxv, 12), and were charged with the execution of the sentences (Lev. xxiv, 14; Num. xv, 37); they joined in certain of the sacrifices (Lev. xiv, 15); and they exercised the usual rights of sovereignty, such as declaring war, making peace, and concluding treaties (Josh. ix, 18); the people were strictly bound by the acts of their representa- tives, even in cases where they disapproved of them (Josh. ix, 18). After the occupation of the land of Canaan, the congregation was assembled only on matters of the highest importance. The delegates were summoned by messengers (2 Chron. xxx, 6) to such places as might be appointed, most frequently to Mis- peh (Judg. x, 17; xi, 11; xxx, 1; 1 Sam. vii, 6; x, 17; 1 Macc. iii, 46); they came attended each with a band of retainers, so that the number assembled was very considerable (Judg. xx, 2 sq.). On one occasion we hear of the congregation being assembled for judi- ticial purposes (Judg. x, 10); on other occasions for re- ligious festivals (2 Chron. xxx, 5; xxxiv, 29) [see Convocation]; on others for the election of kings, as Saul (1 Sam. x, 17), David (2 Sam. v, 1), Jeroboam
CONGREGATION 474

(1 Kings xii, 20), Josiah (2 Kings xi, 19), Josiah (2 Kings xxi, 24), Jehoahaz (2 Kings xxiii, 30), and Uz- siah (2 Chron. xxvi, 1). In the later periods of Jew- ish history the congregation was represented by the Sanhedrim; and the term synagogue (συναγωγή), which in the Sept. is applied exclusively to the con-gregation itself (for the place of meeting ἱερον ὑπὸ διάφορον τῶν μακρινῶν, tabern- aculum testimonii, the word ἱερον being considered = θύσιν), was transferred to the places of worship established by the Jews, wherever a certain number of fami- lies assembled. See Assembled.

Mount of the Congregation (᾿αυτῇ ἡ μονο- ταινία τῆς ἑκκλησίας, Isa. xiii, 14 [14]; Sept. ἦς ἐν τῷ ναῷ, Vulg. mons testamenti), usually supposed to refer to Mount Moriah as the site of the Temple (comp. Isa. xxxiii, 20), who contends that the name designates some place of religious ceremony among the Babylonians, and has hence been compared with the sacred hill of the gods (q. d. mount of their meeting), such as the Albori named in the Zend-Avesta as situated in the north of the camp (Rhode, Heil. Sige, p. 220 sqq.). We may also compare with this the Mount Olympus of the Greek mythology, and the Mēra of the Indians. In- deed all pagan systems seem to point to the north of the home region of the ordinary gods, and the highest mountains, naturally assumed as the abode of the gods; possibly having a vague reference to the great Caucasian range (see Gesenius, Jena, ii, 316 sq.; Rosenmüller, Altr. l. i, 154 sq.; Henderson, Comment. in loc.). See Mount.

Congregation, (1.) An assembly, or gathering together of persons, more particularly for divine service. This word is used, in the Rubrics of the Church of England, in the same sense as "people" is used, to mean that portion of the Church of the nation who are assembled in any one sacred edifice for the purposes of worship (Eden).

(2.) Monastic Congregations.—(a) In a wider sense, all ecclesiastical associations of laity in the Roman Catholic Church, for contemplative, ascetic, or practi- cal purposes; and these are called congregational associations which, like monastic orders, lead a common life, and are bound by vows. They differ from the monas- tical orders by not demanding from their members the vow of poverty, by binding them to less stringent or to no monastic discipline, and, fre- quently by prescribing only the simple vow of chastity (see Vows). The number of congregations of this class is very large; among them are the Oratorians, the Priests of the Mission, the Doctrinarians, the Piarists, the Brothers of the Christian Schools, the Mecchiarists, the Redemptorists, and the Marianists (see these articles).

(c) The name is also applied to several branches of the Reformed Church. In these congregations each monastery has its own abbott or prior, but all were subordinate to the head of the chief abbey. The most noted of these congregations were those of Cluny, Vellambron, Camaldoli, the Cistercians, Carthusians, and Maurines (see these articles).

(3.) In Eccumenical Synods, at the Eccumenical Synod of Constance, it was resolved to take the vote not by heads, but by nations, of which there were at first four (German, French, Italian, English), and sub- sequently five (Spanish). Each nation was to cast one vote. In order to establish the vote of a nation, its members and delegates were called "congregations." In these congregations, every mem- ber, without distinction of rank, had an equal vote. When the vote of each congregation had been estab- lished, all the congregations met as a general congru- gation, and the resolutions, for a majority of

the nation voted were declared the Resolutions of the Ecumenical Council. See Wetzer u. Wetze, Kirchen- Lex. ii, 794.

(4.) Congregation of Cardinals.—A committee of cardinals, prelates, and others, met for the dispatch of some particular business, and deriving its name from the particular business it has to dispatch. The follow- ing accounts will be found to include the names of the chief of these congregations, and the particular busi- ness of each:

1. The Consistorial Congregation, instituted in 1586 by Sixtus V. They prepare the most difficult benefici- ary matters, afterwards debated in the Consistory in the presence of the pope. Such matters include the ap- pointment of new religious orders; the erection of new episcopal sees; the separation, union, or suppression of benefices of the higher grade; the examination of newly-appointed or elected bishops; the appointment of coadjutors. The number of cardinals is not fixed.

2. The Congregation of the Holy Office, or Inquisition, instituted in 1542 by Paul III, at the desire of car- dinal Caraffa, who afterwards became Paul IV. The privileges were enlarged by the addition of statutes by Sixtus V, by which this tribunal became so formidable that the Italians were accustomed to say, "Pope Six- tus would not pardon Christ himself." It takes cogni- nize of all matters of heresy and all and every opinion of a kind of apostacy, magic, witchcraft, abuse of the sacra- ments, and the circulation of pernicious books. The pope himself is prefect of this congregation. It con- sists of 12 cardinals, a number of theologians and canoni- cals as "consultors," of several "qualificators" who give their opinion in special cases, of a defender of the accused, and several other persons. See Inquisition.

3. The Congregation of Propaganda Fide, instituted by Gregory XV in 1622, consists of 24 cardinals, one of the secretaries of state, an apostolic prothonotary, a referendary, an assistant or lateral judge, and the secretary of the Holy Office. See Propaganda.

4. The Congregation of the Council, for explaining the Council of Trent. When the council closed its ses- sions, Pius IV deputed certain cardinals, who had as- sisted in it, to put an end to all doubtful which might arise concerning its decrees. This congregation meets once a week; "Its decisions from 1789 to 1948 all 1051 vol.; the prefect is chosen by the pope, and has a salary.

5. The Congregation of the Index, instituted in 1570 by Pius V. This committee is deputed to examine all books. It is composed of several cardinals, and has a secretary of the order of Dominic. The pope gen- erally presides at it himself.

6. The Congregation of Ecclesiastical Immunity. This was established by Urban VIII in order to obviate the disputes which arose in the judgment of such suits as were carried on against churchmen for various mat- ters, whether criminal or civil.

7. The Congregation of Bishops and Regulars. Six- tus V, in the beginning of his pontificate, united two congregations under this name. It has power to reg- ulate all disputes arising between bishops and regular or monastic orders.

8. The Congregation for the Election, Examination, and Residence of Bishops. This was instituted by Clement VIII, to examine into the qualifications of all such churchmen as are nominated to bishoprics. The examiners are chosen by the pope. It has the power of enjoining or dispensing with the residence of bishops, and obliging all abbots to reside in their several communities.

9. The Congregation of Religious Disciple. This has the right to inquire into the state of Italian mon- asteries, and to suppress those whose temporalities are so far diminished that the remainder is not sufficient for the maintenance of six monks.

10. The Congregation of Apostolic Visitations. Its
CONGREGATIONALISTS

business is to visit, in the name of the pope, the six bishops, suffragans to the metropolis of Rome.

11. The Congregation of Indulgences and Sacred Relics, instituted in 1689 by Clement IX. Its business is to

superintend the relics of ancient martyrs, which are frequently said to be found in caves and subterranean places in Rome, and to distinguish their bones, shrines, and tombs from those of the heathen. After the congregation has pronounced sentence on the validity of any relics, they are consigned to the cardinal-vicar and the pope's sacristan, who distribute them to applicants. Often the congregation also investigates the causes and motives of those who sue for indulgences. The registrar sends the minutes and conclusions of petitions to the secretary of briefs, who dispatches them under the fisherman's seal.

12. The Congregation of Sacred Bibles. Sixtus V founded this congregation to regulate all matters relating to ceremonies and rites in worship, and especially to take the chief part in the canonization of saints. It has authority to explain the rubrics of the Mass-Book and the Breviary when any difficulties are started in relation thereto.

13. The Congregation of the Reserved Fabric of St. Peter's. This congregation is to superintend the building of St. Peter's, and is now employed in repairing and beautifying it. This congregation has the peculiar privilege of altering the last wills of those who-bequeath money to pious uses, and to apply it to the support of the fabric of St. Peter's.

14. The Congregation of the Sacred Consulata. This congregation is civil and criminal jurisdiction over the subjects of the papal states. It was instituted by that famous founder of congregations, Sixtus V.

15. The Congregation of Good Government. This watches over the conduct of the magistrates throughout the states, and works in concert with the Consulata. This is the council of the governor of the city, and other ecclesiastics bearing civil and judiciary offices. They dispose of cases relating to the numerous occupants of secret prisons, gałęże, etc., having under their jurisdiction all that are in legal bonds; the sufferers in the Inquisition and in the monasteries excepted, whom it is not within the province to visit, pity, or release.—Par- rar, Eccl. Dict. s. v.; Herzog, Real-Encyclop. ii, 577; Broughton, Bibliotheca Historico-Sacra (London, 1787, vol. i); Meier, Die heutige römische Curie in Jacobson, Zeitschrift f. d. Recht, 1847, ii; Wetzer u. Welte, Kirchen-Lex. ii, 844.

CONGREGATION, LORDS OF THE, a title given, in Scotland, to the bishops of the Church of Scotland and gentlemen who signed the Covenant of December 5, 1637. From the frequent recurrence of the word congregation in the document, the adherents were called "the Congregation," and the chief signers (such as the earls of Argyle, Glengarn, and Morton, the Lord of Lorn, Erskine of Dun, etc.) were styled "Lords of the Congregation."—Barbour, History of the Church of Scotland, chap. ii.

Congregationalists, a denomination of Christians (generally Calvinistic in theology) holding to a system of church government which embraces these two fundamental principles, viz., (1) that every local congregation of believers, united for worship, sacraments, and discipline, is a complete church, and not to be subject to any government to any ecclesiastical authority outside itself; and (2) that the several churches are in communion one with another, and bound to fulfill all the duties involved in such fellowship. The system is distinguished from Presbyteri-anism by the first, and from Independency by the second. It involves the equal right of all brethren to vote in all church affairs; and the election of ministers. It has secured the separation of the civil and the religious, and has placed the church on its own ground, in which it may be chosen pastors. In England they are often, but not quite accurately, styled Independents. Several denominations in the United States are congregational in practice, but not in principle, as that than of the denomination known distinctly as "The Congregational Churches of the United States."

I. HISTORY.—Congregationalists claim that their system is only a substantial return to the order and practice of the apostolic churches, which had been corrupted by the tendencies that culminated in the papacy, and that traces of dissent from the episcopal power are found in every age (see Pynchard's History of Congregationalism). The origin of modern Congregationalism is seen in the early stages of the reformation in England. From the beginning of the protest against Romanism, ministers, and members of the Church of Scotland, shared and afterwards developed into Congregationalism, especially the identity of "bishop" and "presbytery," and the independent right of each congregation to choose its pastor and exercise discipline, found decided adherents. While Henry VIII., after throwing off the Roman supremacy, clung in the main to the Romish theology, and in part to the Romish polity and practices, the process of thought continued in the opposite direction. When the reforms carried on by Edward VI. were peremptorily stopped by Mary, dissenting congregations, in substance Congregationalist, came immediately, though privately, into existence in various places, as in London in 1553. This existence is learned from some of the persecutions to which their members were subjected, and but few particulars in their history are preserved. Among the Congregational martyrs were Barrow, Greenwood, and Penny, executed in 1598. Of the Congregational church formed in London in 1562, of which Francis Johnson was pastor, and John Greenwood the first elder, fifteen members were put to death and imprisoned. Many of them eventually found their way to Amsterdam, where they reorganized under the same pastor. Robert Brown's publication, in 1582, of "A Book which shoeth the Life and Manners of all true Christians," etc., presents the earliest full development of the Independent side of Congregationalism. While at first only Puritans, many became Separatists,
In despair of securing complete reformation in the Church of England. About 1602 a church was organized at Gainsborough, in Lincolnshire, Rev. John Smyth pastor. In 1606 another was formed at Scrooby, Nottinghamshire, Richard Clyfton pastor, which met at the house of William Brewster. Of that church John Robinson was a member, and afterwards associated with his friend and pastor. Smyth was called away from England, and in 1607 Mr. Clyfton and many of his church, after great persecution, also escaped to Amsterdam, and in 1608 most of the remaining members of the Scrooby church followed. After about a year the church removed to Leyden. Owing to the different language and customs from their own, they resolved to emigrate to America, and a portion of the Leyden church, with elder William Brewster, after many trials landed at Plymouth, Massachusetts, Dec. 21, 1620 (N. S.), while Robinson, with a part of the church, remained at Leyden.

In 1616 a Congregational church was established at Southwark, London, under the care of Henry Jacob, who had been confirmed in Congregational views by conference with John Robinson at Leyden. This church, organized after Mr. Jacob had conferred with leading Puritans, probably gathered together some of the scattered members of Mr. Johnson's church and called "the first Independent church in England," there had been the secret congregations in the reign of Mary, and the churches of Gainsborough and Scrooby, and, it is said, one at Duckenfield, Cheshire Co. About 1624 Rev. John Lathrop became pastor of the Southwark church; he was, in 1629, imprisoned, with forty-one other of its members. In 1634 Mr. Lathrop, obtaining release, removed to America, with about thirty of his flock, and in that year organized the church in Scituate, Mass., where he continued until 1638, when the majority removed to West Barnstable, where that church is still existing.

1. America's Congregationalists.—The Plymouth settlement was distinct in origin and government from that of Massachusetts Bay, the Pilgrim settlers being distinctively known as "the Pilgrims." The persecutions under Laud led many Puritans to the resolution to emigrate. Endicot and his company began to move in 1629. John Winthrop, their governor, with other emigrants, occupied Boston and the surrounding towns. Settlements were made at Hartford and Saybrook, in Connecticut, in 1633, and in 1638 Davenport and his associates founded the New Haven colony, while in 1638 a distinct company re-enforced the colonies on the Connecticut River. The Plymouth church had come out fully organized; in the other settlements churches were immediately formed. None but the Plymouth people had come over as Separatists; the others declared that they did not separate from the Church of England, but only desired to remove its corruptions. But, gathered in a new land, away from all ecclesiastical establishments, and searching the Scriptures for their ecclesiastical order, they all fell into the Congregational order.

Their ministers had almost all been regularly ordained in the Church of England, and were highly educated men, as (e. g.) Cotton and Wilson, of Boston; Mather, of Dorchester; Hooker and Stone, of Hartford; Holder and Wren of New Haven.

Congregationalism proper received substantially its firm in the early history of New England. If traced to the writings of any one person, it would be to those of John Robinson, of Leyden; those of John Cotton and Thomas Hooker, in America, being next in importance. The latter was acknowledged as a leader, he being a strict Independent, and finally returning to the communion of the Church of England; but his writings undoubtedly aroused many minds to examine and reject the claims of episcopacy. The system cannot, however, be traced to any one man, but rather to the united sentiments of the early emigrants, who agreed in carrying into practice the opinion that every church is, according to the Scriptures, confined to the limits of a single congregation, and must be democratic in government; while all churches are in fellowship with one another. Hence the term "the Congregational Church" is never used to denote the denomination, but "the Congregational churches."

Church and State.—From the earliest settlement of New England there was a definite but peculiar relation between the churches and the state. It was neither that in which the State rules the Church, nor that in which the Church rules the State. There was a peculiar blending of the two. Townships were incorporated with a view to the ability to maintain a settled ministry, and to the convenience of the people in attending public worship. Provision was made by law for the support of pastors, and for all necessary expenses. The choice of a pastor belonged to the church. A peculiar feature of the constitution was established in 1631, in Massachusetts Bay, and later (in substance) in the Connecticut colonies, and, by the authority of Massachusetts, in Maine and New Hampshire, that "no man shall be admitted to the freedom of the body politic but such as are members of some church or skilful in the practice of the Protestant religion."

This was in no respect a principle of Congregationalism, but grew out of the objects of the emigration from England. As the population increased the rule was modified, and by-and-by abandoned. Ministers, although their influence was great, had no voice as ministers in public affairs. The laws taxing all persons for the support of the ministry were first annullated by allowing persons to contribute to whatever church they might prefer; and the whole system of compulsory taxation was abolished in Connecticut in 1616, and in Massachusetts in 1688.

General Synods.—The history of the denomination is rather the history of distinct churches than of an organized body. Yet the fellowship of the churches has always been maintained, and all "matters of common concern" have been decided by the common consent of the whole body, and sometimes embodied in the pronounced opinions of general bodies convened for that purpose. In major matters the establishment of any standing judiciary, Congregationalists recognize the necessity and desirability of occasional synods for deliberation and advice on great public interests. Only four such general synods have been held. The first met in 1657, at Cambridge, Mass., to deliberate on the doctrinal speculations of John Wheelwright, Anne Hutchinson, and others. It consisted of "all the teaching elders through the country" and of "messengers from the churches;" Rev. Peter Bulkeley, of Concord, Mass., and Rev. Thomas Hooker, of Hartford, Conn., were moderators. The second synod met at Cambridge in 1646, and dissolved in 1648. It declared its approval of the Westminster Assembly's Confession of Faith, and set forth an elaborate statement of Church polity, known as the "Cambridge Platform," which has always—though latterly with modifications—been regarded as an important standard. The third synod, or "Convention," met at Albany, N. Y., in 1862, composed, like the preceding, of moderator and three commissioners from each church. Its most significant result was the formal dissolution of the "Plan of Union between Presbyterians and Congregationalists" agreed upon by the Presbyterian Church and the General Association of Connecticut in 1801. The fourth synod, styled "National Council," met in Boston, Mass., in 1869, composed of one representative from every group of ten churches; William A. Buckingham, governor of Connecticut, was its moderator. It was called to deliberate upon the exigencies of religious duty growing out of the circumstances of the country in its emerging from the war of 1861-5.
Among its important acts was a Declaration of Faith and a revised Platform of Church Polity. Partial synods of importance have been held—from Massachusetts in 1667, which recommended the disannulment, and now long since abandoned the "Half-way Covenant," by which baptized persons might "own the covenant" of the Church, but without coming into full communion;—of Massachusetts in 1679-80, called the "Reforming Synod:" that synod readopted, with some alterations, the Confession agreed upon by the Congregational Synod which met at the Savoy, in London, in 1658, which was itself that of the Westminster Confession of Faith, which appears to have been the basis of the three documents being carefully shown in the Congregational Quarterly, Boston, 1866;—and the Synod of Connecticut, which met at Saybrook in 1708, and framed the "Saybrook Platform" of Discipline, which established the "consecration" system in that state.

All of these synods claimed authority over the churches to impose either a platform of polity or a creed; they declared only what were the sentiments and usages of the churches in the understanding of the Scriptures.

Other Organizations.—In each state and territory where Congregationalism was in sufficient numbers, there was formed a General Assembly, or other Conferences, which are without any ecclesiastical authority, and not allowed to hear causes or give advice in any ecclesiastical affairs. All are now composed of both ministers and lay delegates, except the General Assemblies of Massachusetts and Connecticut, which are purely bodies of ministers; but that of Massachusetts voted unanimously in 1866 to unite with the Conference of the same state, and admit laymen. The General Conference of Maine, where the "Conferences" (including laymen) system originated, was organized in 1835; New Hampshire, 1839; Vermont, 1786; Massachusetts, 1808; the New England Conference in 1804; Connecticutt, 1807; New York, 1834; Ohio, 1852; Indiana, 1858; Illinois, 1848; Michigan, 1852; Wisconsin, 1840; Minnesota, 1855; Iowa, 1840; Missouri, 1855; Nebraska, 1857; Kansas, 1855; Oregon, 1848; California, 1857; Canada, 1858; Nova Scotia and New Brunswick, 1847. These bodies all held annual meetings. In addition, a "Convention" of the Congregational ministers of Massachusetts has met annually since near the beginning of the 18th century, of which Unitarians are a component part, which holds funds, mainly contributed before the division, for the relief of widows and orphans of ministers of either denomination. The "Northwest" was formed in 1858, mainly to supervise the affairs of the Chicago Theological Seminary. Local Conferences of churches covering groups of (usually) from ten to thirty churches have been voluntarily formed, and embrace nearly all the churches: they generally meet semi-annually for religious conference, and are denied every power of jurisdiction. Nearly all the ministers are grouped in local associations of convenient size for purposes of mutual improvement, but with no ecclesiastical authority; but the churches look to them to examine and recommend candidates for the ministry. These associations began in the 1740s, and the New England Association in 1801. These ecclesiastical bodies, which will be noticed under "government."

"Plan of Union" with Presbyterians.—Congregationalists and Presbyterians, holding the same doctrinal views, have always had more or less intimate relations. With the settlement of the territories beyond the Delaware were rapidly settling, a formal "Plan of Union" was adopted by the Presbyterian General Assembly and the General Association of Connecticut in 1801. To prevent division into small and weak churches, it was arranged that Congregationalists and Presbyterians in any locality could unite in one church, its character to be settled by the majority; and, if Congregational, the church could, while retaining power of internal government, hold a qualified relation to Presbyterians. The result was that large numbers of Congregationalists and of Congregational churches were finally absorbed in the Presbyterian Church.

The Plan grew into a full convention of the Congregational Convention of 1852. Many churches which still hold that abnormal relation are now dropped from the Congregational statistics.

Unitarianism.—Owing to various causes, particularly the "Half-way Covenant," the connection of Church and state, and opposition to the great revivals of the middle of the 18th century, there occurred in some of the churches a dislike to the doctrines of the denomination, which developed itself into Unitarianism. The first church to become such, however, was the Episcopal church of King’s Chapel, Boston. Sharp controversy ensued, which resulted in an entire separation. The division was going on from about 1810 to 1825 by the steady withdrawal of fellowship from the churches and ministers which had become Unitarian. The change of doctrine was chiefly confined to Massachusetts, and, in a great degree, to Boston and vicinity. In 1825 there were found to be 36 Unitarian churches (a part of which were churches organized as such, and 310 Congregational); while in the other states the defection was hardly known. Many churches were deprived of their property by adverse majorities in parishes, and were forced to begin anew. The trials of the churches awakened a vigorous life in the denomination, which added 146 new churches in Massachusetts in the following 25 years, and increased the number of communicants from 87,987 in 1830 to 64,830 in 1850. The terms "Unitarian Congregational" and "Trinitarian Congregational" have been sometimes used in Massachusetts; but the latter title has never been allowed by the denomination, while the Unitarian National Convention has refused to insert the term "Congregational" in its official name.

Benevolent and Missionary Operations.—In the earliest history of American Congregationalism efforts were directed to the conversion of the Indians, of which the work of John Eliot is the most noted. Later, when the country became settled westward, missionary societies, of which those sponsored by the New England Theological Seminary are most important, sent ministers to the new settlements of New York, Ohio, etc. In 1825 an American Home Missionary Society was suggested by Congregationalists, and was organized to embrace the several state societies and the Presbyterians. In Home Missions, the efforts of the denomination have been centered in the North and South, which has now really become Congregational by the withdrawal of the Presbyterians since 1860. Foreign Missions have been carried on through the American Board of Commissioners for Foreign Missions, which was formed by the General Association of Massachusetts in 1810, but through which the New School Presbyterian Church also does its mission work. An impetus was given to assisting Congregational churches in building meeting-houses by the Albany Convention, under whose recommendation a large amount was immediately raised. That work is successfully carried on by the American Congregational Union, which was organized at the 1827 General Assembly. The Congregational Association has collected a fine and rapidly-increasing Congregational Library in Boston, and a large fund to be devoted to the erection of a Congregational House. Large amounts of money have been collected through co-operative societies for ministerial education, Sabbath-schools, tract and other religious publications; for temperance, education, missions in the West, etc. The denomination, from its polity, has no Church Boards. Its benevolent operations have been carried on through such channels as the churches preferred. The National Council, in 1866, recommended the American Board, the American Home Missionary Society, the American Missionary Association, the
American Education Society, the Society for promoting Collegiate and Theological Education at the West, the American Bible Society, the American and Foreign Christian Union, the National Board of Publication, the American Congregational Association, the Massachusetts Sabbath-school Society, and the objects of the American Tract Societies. While co-operation is still adhered to, there is an evident drift in the denomination towards separate methods of work, due undoubtedly to an increasing conviction of the importance, and efficacy of the denominational polity.

Progress.—The denomination, while always predominant in New England, was retarded in its growth beyond the Hudson River partly by the "Plan of Union," and partly by the advice of theological institutions to their pupils going westward to become Presbyterians. The result has been that the Congregational churches have given a large number of ministers to the Presbyterian Church, and furnished the material of many of its churches. Not a few of the early New York churches became Presbyterian, and Congregational associations were disbanded lest they should be gutted with Presbyterianism. Consequently, the gradual increase of ministers who, removing to the West, refused to give up their ecclesiastical fellowship, and a growing conviction that the Congregational polity demanded its own preservation, has changed the current. The oldest church in Ohio was founded in 1796; in 1826 the first was established in Indiana; in 1828, in Illinois; in 1830, the churches numbered in 1866, 221. Commencing in Michigan about 1827, the number in 1866 was 150. The oldest in Minnesota dates from 1851; in 1866 there were 58. In Iowa, from the first in 1839, the number increased to 166 in 1866. In Missouri, from 2 in 1864, they increased to 41 in 1867. In Kansas from 1 in 1854, to 39 in 1866. In California, from 10 in 1859 to 92 in 1866. In the Southern States the denomination had no foothold prior to the war of 1861-5; but beginnings have since been made in Delaware, Maryland, the District of Columbia, North and South Carolina, Louisiana, and Tennessee; and Congregationalists have planted the first church, other than Mormon, in Utah.

2. In the British Islands.—The removal of Robinson and others to Leyden, and the large emigration of Puritans to America, left many others in England whose views coincided with theirs. The Southwark church in that city, the Congregational Board of part of Mr. Lathrop's pastorates, the Baptists, hitherto mingled with the Pseudo-Baptists, by the cheerful consent of those remaining, withdrew and organized the first Baptist church in England. Mr. Jacie succeeded Mr. Lathrop, and, with his congregation, suffered much persecution. Another church appears to have been organized in Southwark in 1621, which soon emigrated to Ireland to avoid the severities under which they suffered; but it returned to England, and chose Rev. John Canne as pastor, who, with others, was soon driven to Holland. In 1640, sixty-six of that congregation were imprisoned at once, who, on trial, boldly declared their faith as the Church of Jesus Christ. From these roots grew the denomination which came to exercise potent influence in England. Its adherents increased, and might soon have had comparative quiet but for the opposition of the Presbyterians. In the Westminster Assembly there were a few Congregationalists, who steadily upheld the Christian Union, the Congregational Board of the Church than Jesus Christ. From these roots grew the denomination which came to exercise potent influence in England. Its adherents increased, and might soon have had comparative quiet but for the opposition of the Presbyterians. In the Westminster Assembly there were a few Congregationalists, who steadily upheld the Christian Union, the Congregational Board of the Church, which was called by some, a dissenter's union. These were the voices of the people, which are not likely to be silenced, "fears," said they, "we believe the truth to lie and consist in a middle way betwixt that which is falsely charged on us, Brownism, and that which is the contention of these times, the authority Presbyterial government, in all the subordinations and proceedings of it." During the Commonwealth they stood on an improved footing. Cromwell being in power, with many of the men who overthrew the tyranny of Charles I. Eminent Congregationalist ministers were appointed chaplains, or placed in leading positions in the universities, among whom were John Owen, Thomas Goodwin, Gale, Howe, Charnock, Bridge, Nye, and Jenkinson. The establishment, in the subsequent reign, of Congregationalists resolutely opposed all union of Church and State. The most important early public proceeding was the meeting of elders and messengers at the Savoy, in London, in 1659. They then issued "A Declaration of the Faith and Order owned and practiced in the Congregational churches in England." The declaration of faith, known as the 'Savoy Confession,' was a modification of the Westminster Confession, changing doctrinal statements only slightly, but excluding everything Presbyterian in polity, and changing the Westminster theory of the relation of the Church and State so as to set up the political theory of toleration, in harmony with ecclesiastical liberty. This Confession is the one which, slightly amended, was adopted by the American Synod of 1680, and reaffirmed by the American National Council in 1865. The 'Toleration Act' of 1689 gave shelter to the Congregationalists, but at that time there was no union of church and state compared with the Presbyterians—the three leading denominations of Dissenters. The Congregationalists had increased considerably at the date of the accession of George I, in whose time that defection from orthodox doctrine appeared which so greatly involved the Presbyterians; from that the Independents were free, to which the laborers of Watts and Doddridge were greatly conducive. In 1727, on the adoption of a rule by the Congregational ministers of the metropolis for making up their list, there were found to be fifty ministers in that city. In 1734 a writer says that all the Independent ministers were Calvinists. In 1813 was formed the CONGREGATIONAL UNION OF ENGLAND AND WALES, "on a full recognition of their own distinctive principles, viz. the Scriptural right of every separate church to maintain perfect independence in the government and administration of its own particular affairs." This Union meets annually. "Protesting against a scriptural, and a term of communion," the Union declares the 'Principles of Religion' as held by their churches. The English and Welsh churches are associated in local unions or associations. The Congregationalists forming the CONGREGATIONAL UNION OF SCOTLAND trace their immediate origin to the enterprises of Robert and James Haldane (q. v.) in 1738 and subsequent years. Originally having no idea of forming churches, when God blessed their labors their converts instinctively drew towards each other. Places of worship were built in several of the largest towns, in which churches were formed. The Union was organized in 1812. The oldest church in Scotland was the original church, respectively from 1760, 1787, 1798, and 1796. The churches are united in a Union. In the British colonies there are churches forming the following Unions, viz. Victoria, New South Wales, Queensland, South Australia, Tasmania, and Natal, besides those of Canada, and Nova Scotia, and New Brunswick, which are regularly connected with the statistics of the United States churches.

8. Continental Europe.—L'Union des Églises Eucariotiques de France, which was formed in August, 1849, shortly after the secession from the Église Reformed of the late Frederick Monod and those who acted with him, though not formally, holds to the essential principle of that polity in this constitutional declaration: "Each church which en-
CONGREGATIONALISTS

letters the union preserves the liberty of determining for itself its own constitution, according to its conviction and necessities. Every church must be constituted in its own way, and the many ministers of various denominations who have, with a guarantee of discipline being exercised by the church itself. It is a union of self-sustaining churches, and hence is small; but a large number of churches dependent on aid are in sympathy, and are represented at the biennial meetings. In Switzerland, where there are other doctrinal differences, a basis of union, which, though Presbyterian in form, secures the independence of each. There are also independent churches in Neuchâtel and Berne. These, all with the Free Church of Geneva, the independent churches of the north of France, compose the alliance of Free or Independent Evangelical Churches formed in 1890, admitting all churches free of state control which accept the simple Evangelical Confession of Faith adopted by the Alliance, practise a scriptural discipline, recognize the ministry as a divine institution, and engage in the propagation of the Gospel. In Italy evangelical communities are being formed, since the establishment of a kingdom, upon independent principles, but no definite statements can be given as present regarding actual organization into churches.

4. Other Parts of the World.—Missionary churches exist in all parts of the missionary world, established by missionaries of mainly the London Missionary Society, the American Board of Commissioners for Foreign Missions, and other missions.

II. DOCTRINES.—I. In America.—The Congregational churches are "orthodox" in the general sense of Christendom, holding that the Scriptures are the only rule of faith and practice, and that no creeds may be imposed on any; yet it is the duty of the churches to set forth declarations of the understanding of the Scriptures in Confessions of Faith. Alleged erroneous opinions are to be tested, however, not by the Confessions of Faith, but by the Scriptures. They are, in their views of human nature, Augustinian in distinction from Pelagian, and, as regards the method of the divine government, Calvinistic in distinction from Arminian. While no power can impose a creed on the churches, and each Church, adopts its own formulas, yet the principles of fellowship, in which a council of churches is called for the recognition of a new church, secures a general agreement in doctrine. For a more general standard, the Westminster Confession is the only authority of the government of Savoy (a slight modification) by the synod of 1680. The General Association of Massachusetts, comprising 600 ministers, declares the Westminster Catechism to be its standard of doctrine. The National Council of 1653 declared, "we, adhering to the faith and order of the apostolic and primitive churches held by our fathers, and substantially as embodied in the confessions and platforms which our synods of 1648 and 1680 set forth or reaffirmed." The study of theology has been pursued with great earnestness by Congregationalists, and, as a consequence, many shades of opinion are held, while as a body they stand within the principles of individual conviction. The great power have published systems or criticisms upon points in divinity, from which has arisen a view of Calvinism often styled the "New England theology," which has many adherents, and which doubtless affects the views of those who do not adopt it as a whole. For the help of the dead, Dr. Jonathan Edwards, who, from his sympathy with the "great revival," directed his powerful energies to such explanations of truth as should remove obstacles supposed to be found in the then understanding of Calvinism. The views which he promulgated were subjected to the scrutiny of his son, Dr. Jonathan Edwards; and those of his son, also, Dr. John Edwards, who, by a school of writers, among whom may be named Hopkins, West, Smalley, Bellamy, Emmons, and

Dwight, and, later, Taylor, of New Haven, and Park, of Andover. While not all of these agree in all points, and while the later views are considered by many ministers and people as inconsistent or at variance from those of the older Edwards, yet the Calvinism thus explained is wide-spread. The great problem of this "New England theology" has been to harmonize the sovereignty of God and the freedom of men, and from that centre peculiarities in explaining other doctrines have arisen. The result of these efforts has been a view of Calvinism of which the following may be called distinctive features. The doctrine of original sin is held as involving the hereditary corruption of men's nature, but not as involving the guilt of men before actual transgression. The doctrine of depravity is held as indicating a moral inability, or such an unwillingness and aversion as render it certain that man will not comply with God's demands without the regenerating grace of God, but not as involving a natural inability. Of the Will, the doctrine is held that it always chooses the greatest apparent good, but with a power of contrary choice. The doctrine of Predestination is held as involving the certainty of its accomplishing its object, but not as irresistible. The doctrine of Decrees and Predestination is held in the sublapisarian sense, and not in the supralapisarian sense. Of the Atone-ment, the "governmental" theory is held. In regard to the Trinity, the Incarnation, the mode of the Divine existence, etc., "New Divinity" and "Old Divinity" peculiarities differing from the general view of the Christian Church. This system is by no means held by all Congregationalists. Very many pastors and churches class themselves among the older Calvinistic schools, and all are held in general conformity with the early Confessions. The Congregationalists hold as to mode, while "sprinkling" or "affusion" is the general custom, adults are held entitled to choose the mode they conscientiously prefer. The doctrine of the Lord's Supper is variously held, although rarely debated; but only persons professing a change of heart are admitted to the communion, and members of all evangelical churches are generally welcomed. The Declaration of Faith set forth by the National Council in 1865, adopted on Burial Hill, at Plymouth, Mass., declares (1) the doctrinal standards of the denomination, and (2) the principles of its recognition of fellowship with all the evangelical bodies. It is as follows:

"Standing by the rock where the Pilgrims set foot upon these shores, upon the spot where they worshipped God, and among the graves of the early generations, we, elders and messengers of the Congregational churches of the United States in National Council assembled, like them acknowledging no rule of faith but the Word of God, do now declare our adherence to the faith and order of the apostolic and primitive churches held by our fathers, and substantially as embodied in the confessions and platforms which our synods of 1648 and 1680 set forth or reaffirmed. We declare that the experience of the nearly two and a half centuries which have elapsed since the foundation of our sires here a Christian commonwealth, with all the development of new forms of error since their times, has only deepened our confidence in the faith and polity of those fathers. We bless God for the inheritance of these doctrines. We invoke the harvest, the Reformation, and the presence of the promised Comforter, and in the presence of the promised Comforter, we will enable us to transmit them in purity to our children.

In the times that are before us a nation, times at once of duty and of danger, we rest all our hope in the Gospel of the Son of God. It was the grand peculiar-ity of our Puritan fathers that they held this Gospel, not merely as a right of man, but as declaring the worth of man by the incarnation and sacrifice of the Son of God; and therefore applied
its principles to elevate society, to regulate education, to civilize humanity, to purify law, to reform the Church and the State, and to assert and defend liberty; in short, to mould and redeem, by its all-transforming energy, to bring back harmony and peace among all who love our Lord Jesus Christ in sincerity.

Thus recognizing the unity of the Church of Christ in all the world, and knowing that we are but one branch of Christ's people, while adhering to our peak and order. We exalt to all believers the hand of Christian fellowship upon the basis of those great fundamental truths in which all Christians should agree. With them we confess our faith in God, the Father, the Son, and the Holy Ghost, the only living and true God; in Jesus Christ, the incarnate Word, who is exalted to be our Redeemer and King; and in the Holy Ghost. From the Church to regenerate and sanctify the soul.

With the whole Church, we confess the common sinfulness and ruin of our race, and acknowledge that it is only through the work accomplished by the life and expiatory death of Christ that believers in him are justified before God, receive the remission of sins, and through the presence and grace of the Holy Comforter are delivered from the power of sin, and perfected in holiness. We believe also in the organized and visible Church, in the ministry of the Word, in the sacraments, and in the Lord's Supper. We believe in both regeneration and the recreation of the body, and in the final judgment, the issues of which are eternal life and everlasting punishment.

We receive these truths on the testimony of God, given through prophets and apostles, and in the life, the miracles, the death, the resurrection of his Son, our Divine Redeemer—testimony preserved for the Church in the Scriptures of the Old and the New Testaments, which were composed by holy men as they were moved by the Holy Ghost.

Affirming now our belief that those who thus hold 'one faith, one Lord, one baptism,' together constitute the one holy Church, the several households of which, though called by different names, are the one body of Christ, and that these members of his body are sacredly bound to keep 'the unity of the spirit in the bond of peace,' we declare that we will co-operate with all who hold these truths. With them we will come into every part of this land, and with them we will go into all the world, and 'preach the Gospel to every creature.' May he to whom 'all power is given in heaven and earth' fulfill the promise which is all our hope: 'Lo, I am with you always, even to the end of the world.' Amen.

2. In Europe.—The doctrines of the English Congregationalists were set forth in 1680 in the Savoy Confession. As now stated, they are presented in the declaration of the Congregational Union, in articles of a Calvinistic type, but not presenting 'a scholastic or critical confession of faith.' While able writers have vigorously maintained the great doctrines of the evangelical churches, speculations upon doctrine do not seem to have been carried on as in the American churches, and the peculiarities of the 'New England theology' have not been prominently discussed.

III. GOVERNMENT.—1. In America.—The whole administration of Congregationalism grows out of the two principles of (1) the excellence of our Congregational system that it exalts that which is more above that which is less important, and by the simplicity of its organization facilitates, in communities where the population is limited, the union of all true believers in one Christian Church; and that the division of such communities into several weak and jealous societies, holding the same common faith, is a sin against the unity of the body of Christ, and at once the shame and scandal of Christendom.

We rejoice that, through the influence of our free system of apostolic order, we can hold fellowship with all who acknowledge Christ, and act efficiently in the work of the Church, and divide the labour of bringing back harmony and peace among all who love our Lord Jesus Christ in sincerity.

Thus recognizing the unity of the Church of Christ in all the world, and knowing that we are but one branch of Christ's people, while adhering to our peak and order. We exalt to all believers the hand of Christian fellowship upon the basis of those great fundamental truths in which all Christians should agree. With them we confess our faith in God, the Father, the Son, and the Holy Ghost, the only living and true God; in Jesus Christ, the incarnate Word, who is exalted to be our Redeemer and King; and in the Holy Ghost. From the Church to regenerate and sanctify the soul.

With the whole Church, we confess the common sinfulness and ruin of our race, and acknowledge that it is only through the work accomplished by the life and expiatory death of Christ that believers in him are justified before God, receive the remission of sins, and through the presence and grace of the Holy Comforter are delivered from the power of sin, and perfected in holiness. We believe also in the organized and visible Church, in the ministry of the Word, in the sacraments, and in the Lord's Supper. We believe in both regeneration and the recreation of the body, and in the final judgment, the issues of which are eternal life and everlasting punishment.

We receive these truths on the testimony of God, given through prophets and apostles, and in the life, the miracles, the death, the resurrection of his Son, our Divine Redeemer—testimony preserved for the Church in the Scriptures of the Old and the New Testaments, which were composed by holy men as they were moved by the Holy Ghost.

Affirming now our belief that those who thus hold 'one faith, one Lord, one baptism,' together constitute the one holy Church, the several households of which, though called by different names, are the one body of Christ, and that these members of his body are sacredly bound to keep 'the unity of the spirit in the bond of peace,' we declare that we will co-operate with all who hold these truths. With them we will come into every part of this land, and with them we will go into all the world, and 'preach the Gospel to every creature.' May he to whom 'all power is given in heaven and earth' fulfill the promise which is all our hope: 'Lo, I am with you always, even to the end of the world.' Amen.

2. In Europe.—The doctrines of the English Congregationalists were set forth in 1680 in the Savoy Confession. As now stated, they are presented in the declaration of the Congregational Union, in articles of a Calvinistic type, but not presenting 'a scholastic or critical confession of faith.' While able writers have vigorously maintained the great doctrines of the evangelical churches, speculations upon doctrine do not seem to have been carried on as in the American churches, and the peculiarities of the 'New England theology' have not been prominently discussed.
them ought to continue, and they advise any Church to which he may apply to receive him. A Church may become erroneous in doctrine, or scandalous by its conduct, and no power can reverse its actions; but inasmuch as the scandalous conduct injures all the churches, they remain in the admonition and rebuke, and, if that fails, withdraw fellowship from the offending Church. The general principle, therefore, is, that while no external power can interfere with any act of a Church whose result is confined to itself, yet if that act, in its effect and influence, goes beyond and affects the church itself, or has other full significance to consider such external effect and influence. The practical result of the working of these principles has been to secure both the rights of local churches, and the harmony, stability in doctrine, and united action of the denomination.

(3.) Of the Ministers. —"The ministry," says the National Council of 1865, "includes all men called to that work, and orderly set apart by ordination. When ordination of a pastor is to be performed, the church in which he is to bear office invites a council to examine as to faith, grace, and ability, that, if he be approved, they may extend the hand of fellowship. If the ordination be without or against which the council request for a council ought to come from the church of which he is a member. A pastor dismissed does not cease to be a minister, but he cannot exercise any official act over a church until orderly replaced in office, except when particularly invited by a church." Congregationalism regards the church as the ruler of its ministers; regarding the apostolic office as extraordinary, and to have ended with the death of those mentioned in the Scriptures. In the early history of American Congregationalism no ministry was recognized except that of a pastor. But when it became necessary to preach the Gospel where there were no churches, as in missions, Congregationalism was continued, but with no distinction in permanent character or authority from other ministers. A further modification of the original view has taken place. Until now, all the Congregational churches," says Dr. Leonard Bacon, "acknowledge the difference between a minister of the Gospel and a pastor of a church. The former has no official power in any church or over any Christian. He is only a man set apart to preach the Gospel where God in his providence may call him." In the ordination of a pastor a distinction is now generally recognized between (1) the act of setting him apart as a minister, (2) the act of his installation as pastor of the particular church. Ordinations without pastoral charge are now frequent, but never except in view of some particular sphere of labor.

Synods and Councils. —There are no standing bodies to hear appeals, give evidence, or declare the opinions of the denomination. But bodies to hear, determine, and advise are held to be involved in the fellowship of the churches, and are always called when the occasion is seen to demand them. They are more or less extensive, according to the number of churches affected by any matter to be considered. In all cases they are meetings of the churches, represented, however, by pastor and consistory. Only four general synods, as stated above, have been held in the United States. Matters affecting only a limited territory cause the convening of a limited council, as in Connecticut in 1709; while matters of merely local interest are the occasion of local councils, or those made up of a few contiguous churches, such as the ordination of a pastor or the ordination of a case of annulment. All are convened on the motion of a Church or churches, but no Church is obliged to participate. The proposal of the National Council of 1865 was first made in a local association; was recommended by the "Convention of the North-West," was submitted to all the state bodies, and approved by all save one, which afterwards, however, was represented; and was called, in behalf of the various churches represented in the state bodies, by a joint committee composed of each body assenting. Local councils are frequent, being called to advise upon the recognition of new churches, the ordination or dismissal of pastors, the resolution of cases of complaint or of formation; and, in the case of a church desiring it. In calling a council, a Church must always be a party; the only apparent exception being that wherein, on complaint of injury to a member, the Church ought to be a party by assenting to his request for a council, but unreasonably refuses. In the latter case, the council is held before the Church with a statement of the grounds and of the unreasonable refusal of the Church, in which case the council is known as ex parte, but is entitled to all the respect of a mutual one. If the Church and member (or, in similar circumstances, the Church and pastor, if there be differences between them) unite in the call, it is a mutual council. A council is composed of those churches invited, a list of which is given to every Church called, and cannot add to or diminish the number. It can act only on the matters presented in the document calling it, which is known as the "letters-missive." When it has examined the case, it puts its opinion in writing, which is presented to the parties, and then dissolves. Refusal to adopt the result does not prejudice the standing of a Church; if the refusal is a grave offence, and such as should affect fellowship with that Church, as in cases of doctrinal error, then new proceedings would be necessary. For admonition, all states of Church are considered for decision of the results of council by one party in difference is held to justify that party, and in legal matters, such as relate to the contract of a pastor and parish, will be sustained by courts. The legal decisions on ecclesiastical matters have been numerous in Massachusetts. But the courts merely declare what the usages of Congregationalism are. The decision is made by consent, and they refuse to go behind the declaration of facts made by a council properly convened and properly conducted. The system of occasional councils is varied from only in Connecticut, where most of the churches are united in local consociations, in which system all matters which could elsewhere be referred to a special council, originated for the purpose, are referred to a fixed and recorded list of churches united in the consociation, which have bound themselves to constitute a mutual council whenever needed. Any Church may withdraw from a consociation without affecting its other relations.

Customs and Usages. —Persons desiring approbation to preach apply, for convenience and fitness, to local associations of ministers, who receive his credentials of Church membership and of theological study, examine him as to his religious experience, his doctrinal views, his knowledge of scriptural learning, and his general fitness. Their approval, given in a certificate, merely commends him to the churches as a candidate for the ministry. In ordinations or installations of pastors, a council of churches makes similar examinations. Ordinations are accompanied by a sermon, an ordaining prayer (in connection with the "laying on of hands") by ordained ministers, a vote of the pastor, the hand of fellowship, and an address to the Church. In the celebration of the Lord's Supper there is no prescribed liturgy. Persons applying for membership in the Church on profession of faith are examined by the Church or a committee, publicly proposed for a reasonable time prior to the vote on reception, and approved in open meeting. They are ordained to church-ship, and are received in public on adoption of the Church covenant, and (generally) assent to the doctrinal confession of the Church. Persons are dismissed from one Church to another, on their application. By vote of the Church dismissing, which takes effect on the reception of the person by the Church to which he is dissuaded, which also votes on his reception.

II. —H S
Public worship is conducted in the form any Church prefers, although there is a general similarity; but a few churches use a more or less extended liturgy, which is entirely within the control of every Church. In cases of the discipline of alleged offenders, the rules given in the 18th chapter of Matthew are required to be followed. If the first and second steps have been properly taken, the alleged offender is summoned by the Church to appear at a time reasonably distant, and is entitled to a copy of all charges, and an unqualified right of being heard; all else is left to the vote upon the case. Church censures are of two kinds, admonition (which is often accompanied by suspension from Church privileges) and excommunication. If a member claims to have been unjustly suspended or excommunicated, his remedy is in asking the Church for a mutual council to consider and advise in the matter, and, in case of unreasonable refusal, to call a counsel himself, with the effect already described under Councils.

2. In Great Britain.—The general principles of Congregationalism are held in England precisely as in the United States. In the doctrine of the ministry, Church completeness, and formal fellowship; total churches, 39,806; ministers, 6,141; communicants (estimating the whole from the proportion of members to churches in the United States), about 1,000,000.

Institutions of Learning.—United States.—A large number of academies are controlled by Congregationalists, but no record has ever been made. Of colleges, though none are conducted on any exclusive principle, or require any denominational test, the Congregationalists control Bowdoin, Dartmouth, Vermont University, Middlebury, Williams, Amherst, Yale, and partially a number in the Western States, which they have helped liberally to endow. Theological schools are owned by them in 1887, with 289 students, and 70 faculty, etc., and students, were as follows: one in San Francisco, California, was also chartered in 1866, and has 8 professors and 14 students:

**V. Literature.**—The American Congregational churches have required from the beginning ministers of liberal education and extensive learning. From this culture large contributions have resulted to general as well as denominational and religious literature. Of the very many authors in each department of the
CONGREGATIONALISTS 483

CONONITES

later, the following may be mentioned as the most prominent:

In the 18th century, Cotton Mather, Samuel Mather, John With, Ezra Stiles (Pres. Yale College).

In the present century, John Mitchell, Thomas C. Upham, Nathanael Emmons, Leonard Bacon, Preston Cummings, George Puchard, Henry M. Dexter. The work on "Congregationalism" by the last named, which is the latest American work, is also the fullest and most exhaustive, and is generally received by the church as a safe and comprehensive guide.

In the 18th century, Cotton Mather, Thomas Prince, Jeremy Belknap. In the present century, Leonard Bacon, Bola B. Edwards, George Puchard. The "History of Congregationalism" by the latter, though not yet completed, is a work of thorough research and peculiar value.

In the present century, Anna Mahan (Pres. Oberlin College), Mark Hopkins (Pres. Williams College), Edwards A. Park, Horace Bushnell, George P. Fisher.

In Biblical Literature, Moses Stuart. The missionaries of the American Board have made very extensive contributions in the languages of the world, as well as to general science; among these, Myron Winslow is specially prominent.

In English and Latin writings in Leyden began strictly Congregationalist literature, are found the names of Milton, Goodwin, Nye, John Owen, Charnock, Watts, Doddridge, and, later, Wardlaw, Davidson, Newman Hall, Robert Vaughan, John Angell James, Hurn's "Memoirs" is a work of great historical value.

VI. AUTHORITIES.—As Congregationalists admit no obligatory standards of human devising, there are properly no authorities for government or doctrine; but their principles are stated in Declarations, in which they are agreed, and which carry great moral force. The principal on doctrine are the Westminster Confession, as revised by the Savoy Synod in 1659, and again by the Boston Synod of 1860; the "Principles of Religion" of the Congregational Union of England and Wales; and the "Declaration of Faith" set forth by the American National Council in 1865. Of ecclesiastical polity, the principal are the Savoy "Order of the Church" in 1659; the "Saybrook Platform" in 1648; the "Saybrook Platform" in 1708; the "Principles of Church Order and Discipline" of the "Congregational Union of England;" and the "Platform of Church Polity" of the National Council in 1865. The works of many writers are also considered of great value, as showing what Congregational principles and usages are. The volumes of the Congregational Quarterly (Boston) also contain careful discussions on the several points of polity as well as history, and furnish full statistics. The English Year-book furnishes such statistics as are collected in Great Britain.

Congregationalists, or Apostolical Congregation, a designation of the Ultramontane party in France, which, under the reign of Napoleon I, resumed the direction of primary instruction, and established religious associations. After the restoration of the Bourbons, the power of the Congregationalists increased rapidly, and they made extraordinary efforts to bring back the Church of France under the dominion of Rome. They usurped the control of public instruction, established colleges and seminaries, connected themselves with the Jesuits, and even gained the control of the police of Paris. Their leaders held the highest stations at court. The material means of the Congregation were to a large extent furnished by the laboring classes (in 1630 there were 600,000 persons contributing, each one cent a week). The celebrated Lamennais belonged to this party. At last their usurpation of power gave rise to the formation of a counter-party, which gradually gained strength and influence. In 1826 count Montesqui elaborated the existence of the Congregation to be illegal. A large number of bishops appealed to the pope against the aim of the Gallican liberties. The Congregation endeavored to excite the fanaticism of the people by sermons and tracts, but in 1827 the Higher Chamber resolved to interfere actively in putting down all Jesuitic associations, and in 1828 the control of the primary schools was given to the minister of Public Instruction. It was then decided that every teacher should declare in writing that he was not a member of any forbidden religious association, or be suspended. A large number of Congregationalists left France in consequence, but their influence, which made itself felt even after their departure, was not entirely lost until the Revolution of 1830.—Pierer, Universal-Lexicon, iv, 388.

Congravity. See CONDIGNITY.

Coni'lah (Heb. in the prolonged form Conu'lah, or, a contracted form of Jeconiah; Sept. Œxovc), another modern rendering (Jer. xxii, 24, 28; xxxvii, 1) the name of king Jeconiah (q. v.).

Consists. See CONONITES.

Conjuration, the form of words or ceremony by which demons are supposed to be expelled in the Church of Rome. See EXORCISM.

Connell, ZECHARIAH, a Methodist Episcopal minister, was born in Connellsville, Fayette County, Pa., September 11, 1794. In 1801 his father removed to the West, and settled in Adams County, Ohio. His early education was such as could be obtained in the West at that day, which he diligently improved. He was a faithful student and became a wise man. He entered the itinerant ministry in 1818, and filled various stations, as minister and presiding elder, with uniform fidelity and success, up to the year of his death. Methodism in Ohio was largely dependent on Mr. Connell not only for its extent, but for its character. By his zeal as a preacher, and his skill as an administrator, he gained and kept the confidence of the Church during his long career of service. He was five times elected to the General Conference. He died December 18, 1863.—Ministerial Memorial, 1864, p. 214.

Conon, bishop of Rome. He was native of Tarsev, in Mysia (now Hungary), educated in Sicily, and was elected bishop of Rome, Oct. 21, 686. He sent the Irish missionary Killian to Germany to preach to the pagan Thuringians. He died Sept. 21, 687.

Conon'lah (2 Chron. xxxi, 12, 13). See CONIAH.

Cononites, followers of Conon, bishop of Tarso, in Cilicia, in the 6th century, a disciple of Johannes
Philoponus (q. v.). Conon differed from Philoponus in the doctrine of the resurrection, maintaining that the dissolution of the body after death affected only the form, not the matter of the body, and that at the resurrection the soul was reunited with the same, though transformed body.—Wetzer u. Welte, Kirchen-Lex., ii, 798. See Johannes Philoponus; Trithemius.

Conrad of Marburg. See Konrad von Marburg.

Conrad, William, a highly useful minister in the German Reformed Church, born Aug. 11, 1808. He pursued his classical and preparatory studies in the Reformed Academy and Theological Seminary, then located at York, Pa. He was licensed to preach by the Westmoreland Classis, Pa., in May, 1835, and labored the whole of his subsequent life as a pioneer in West Pennsylvania. His death occurred Feb. 16, 1885. He was an earnest student. As a writer he often appeared in the Church papers. He is also the author of a volume on Baptism, published 1847, and of several unpublished works on different subjects—one on the Heidelberg Catechism. For thirty years he gathered geological specimens, the entire collection of which he presented to Westmoreland College, one of whose founders and best friends he was.

CONING (C. mirabilis), Hermann, one of the most learned men of his time, was born at Norden, in East Friesland, Nov. 24th, 1606; became professor of Philosophy, Physics, Minerals, and Jurisprudence at Helmstedt, and in 1630 privy councillor of the duke of Brunswick. He died Dec. 12, 1681. Public law is greatly indebted to him, and he may be said to have first brought it to a scientific form. He was also among the first to adopt Harvey's theory of the circulation of the blood. His complete works, embracing a number of treatises on the physical and political rights of Protestantism as opposed to the Roman Church, were published by Göbel (Brunsw. 1790, 7 vols. fol.).—Pierer, Universal-Lexikon, s. v.

Consalvi, Ercole, Marquis of, an Italian cardinal, and one of the ablest diplomatic agents of Rome in the present century, was born at Rome, June 8, 1757. Pius VI appointed him in 1792 to the office of Uditore della sacra modica, and after the minster of war. In this capacity he showed himself a steady enemy of the French Revolution. When the French troops took Rome in 1798 he was made prisoner, but soon after released. After the death of Pius VI he was secretary of the concile which elected cardinal Chiaramonti (1800) pope, and after (1800) he was made by the new pope secretary of state and cardinal. In 1801 he went to Paris, where he signed the concordat with Napoleon, July 15; but having afterwards incurred the displeasure of the emperor, Consalvi resigned (1806) his office. He refused his assent to the divorce of Napoleon and Josephine, in the council held on the subject, and was exiled in 1809. The pope having returned to Rome in 1814, Consalvi was restored to his position as prime minister, and soon sent to the conferences held by the great powers at Vienna as representative of the papal interests. He was also papal plenipotentiary at the Congress of Vienna, when he secured the restitution of all the papal territories with the exception of Avignon and Venetia. Against the incorporation of these places with France he protested, as also against the occupation of Ferrara and Rimini by Austrian troops, and against the secularization of the ecclesiastical states of Germany. This protestation however was of no avail, and he was also unsuccessful in his endeavor to rearrange the ecclesiastical affairs of Germany by one general concordat. He was more fortunate in his negotiations with particular states, and successfully concluded concordats (q. v.) with France, Russia, Poland, Prussia, Austria, Bavaria, Wurttemberg, Sardinia, Spain, Geneva, and even with St. Domingo and Chili. At the death of Pius VII (1823) he retired to Porto d'Ano, but was called again to Rome by Leo XII, who placed him at the head of the Propaganda, which office he had hardly accepted when he died, Jan. 24, 1824.—Memoires du Cardinal Consalvi (with introduction and notes by Creten-Joly, Paris, 1864, 2 vols.); Wetzer u. Welte, Kirchen-Lex., ii, 811; Bartholdy, Züge aus dem Leben des Card. Consalvi (Stuttgart, 1852); Revue Chrétienne, 5 Feb. 1865.

Consanguinity, alliance by blood, as affinity (q. v.) is alliance by marriage. Certain degrees of consanguinity are among the impediments to marriage, both by the law of nature and by the revealed word of God. These degrees, as defined by the Church of England, are expressed in a table drawn up by archbishop Parker in 1563, and set forth by authority. This table is as follows:

A Table of Kindred and Affinity, wherein whosoever are related are forbidden in Scripture and our Laws to marry together.

A man may not marry his

1 Grandmother, 1 Grandfather,
2 Grandfather's Wife, 2 Grandfather's Husband,
3 Wife's Grandfather.

4 Father's Sister, 4 Brother's Wife,
5 Mother's Brother, 5 Mother's Brother's Wife.
6 Father's Brother's Wife, 6 Father's Sister's Husband,
7 Mother's Brother's Wife, 7 Mother's Brother's Husband.
8 Wife's Brother's Sister, 8 Wife's Brother's Husband,
9 Wife's Brother's Sister's Husband.
10 Father, 10 Father,
11 Step-father, 11 Step-father.
12 Husband, 12 Husband.

13 Daughter, 13 Son, 13 Son's Wife, 13 Son's Daughter.
14 Wife's Daughter, 14 Husband's Son, 14 Husband's Daughter.
15 Sister, 15 Sister, 15 Sister's Husband.
16 Brother, 16 Brother, 16 Brother's Sister.
17 Wife's Brother, 17 Husband's Brother, 17 Husband's Sister.
18 Brother's Sister, 18 Sister's Husband.
19 Son, 19 Son, 19 Son's Wife, 19 Son's Daughter.
21 Son's Wife, 21 Son's Wife, 21 Son's Wife's Husband.
22 Daughter's Son's Wife, 22 Daughter's Son's Wife, 22 Daughter's Son's Husband.
23 Wife's Daughter's Son, 23 Husband's Son, 23 Husband's Daughter.
26 Sister's Daughter, 26 Brother's Son, 26 Brother's Son's Husband.
27 Brother's Son's Wife, 27 Brother's Son's Wife, 27 Brother's Son's Husband.
28 Sister's Son's Wife, 28 Sister's Son's Wife, 28 Sister's Son's Husband.
29 Wife's Brother's Daughter, 29 Husband's Brother's Son, 29 Husband's Brother's Daughter.
30 Woman, 30 Woman, 30 Woman's Husband, 30 Woman's Daughter.
31 Son's Brother, 31 Son's Brother.

See Affinity.

Conscience. See Ethics; Moral Philosophy.

Conscience, Cases of. See Customary.

Conscientiarii (conscience people), the name of a sect of atheistic freethinkers in the 17th century. The founder of the sect was a student of theology at the University of Jena, Matthias von Knuten (also called Knuzan or Kuntzen), born at Oldenworth, in Schleswig, who while studying at Jena (1674), circulated among the students two writings, in which he denied the existence of God, the authority of the Bible, and the difference between marriage and fornication, recognizing only the individual reason and conscience (hence the name) as rules of religious belief. Knuten claimed to have numerous adherents at all the universities and capitals of Europe, as well as in no less than 700, and thus brought the university into bad repute. The professors of Jena indignantly denied his assertion. The excitement produced by the discovery of the agitation of Knuten soon died out, and the Conscientiarii were no longer heard of. See Wetzer u. Welte, Kirch.-Lex., ii, 815; Arnold, Kirch. u. Ketzerei, vol. ii.

Consecration (properly some form of the verb
The act of consecrating or setting apart anything to the worship or service of God. See Dedication. The Mosaic law ordained that all the first-born, both of man and beast, shall be sanctified or consecrated to God. See First-Born. The whole race of Abraham was in a peculiar manner consecrated to God through the tribe of Levi and family of Aaron were more immediately consecrated to the service of God (Exod. xiii. 2; xii. 15; Num. iii. 12; 1 Pet. ii. 9). See Sacerdotal Order. Besides these consecrations ordained by God, there were others which depended on the will of man, and were a necessary part of the religious service for a time only. See Vow. Hannah, the mother of Samuel, offered her son to the Lord to serve all his lifetime in the tabernacle (1 Sam. i. 11; comp. Luke i. 15). David and Solomon devoted the Nethinim to the service of the Temple forever (Ezra viii. 20). The Hebrews sometimes devoted their fields and cattle to the Lord, and sometimes the spoils taken in war (Levit. xxvii. 28, 29). In like manner, vessels (Jos. vi. 19), profits (Mic. iv. 18), individuals (Num. vi. 9–13; 1 Sam. i. 11; Luke i. 15), and nations (Exod. xix. 6), were often dedicated. See ANATHEMA. The New Testament also furnishes us with examples of consecration. Christians in general are esteemed as consecrated to the Lord, and are a holy race, a chosen people (1 Pet. ii. 9). Ministers are in a peculiar manner consecrated or set apart, and so are places of worship, the forms of dedication varying according to the views of different bodies of Christians. See Ordination. It does not appear that we have any particular accounts of the formal consecration of churches earlier than the fourth century, a fact which may be easily accounted for by considering the circumstances of the times before Constantine. See the articles following; also Bells.

**Consecration—Offering.** At the inauguration of the Jewish priesthood, in connection with the oblation, certain parts of the victim (a ram), besides bread and cakes, were laid in the hand of the person to be consecrated, before he came to the altar (Exod. xxix. 22 sq.; Lev. viii. 23 sq.), as a manipulation expressive of the representative power thus conferred (Barkley, Symbolics, 125). This depositing in the hand is called by the technical term *filium in manum* (filium in manus), as in Exod. xviii. 41; xxix. 9; Lev. xxii. 10; Num. iii. 3; comp. Exod. xxiii. 29; 1 Chron. xxiii. 5), and thus the sacerdotal consecration-offering itself was styled a *filium* (filius, son, of the hand, Sept. ἱλικών, Lev. vii. 37; xxviii. 31), and the sacred ram was designated by the corresponding term (ἱλικῶς, Exod. xxiii. 26). See Offering.

**Consecration.** In the Christian Church, a ceremony of dedicating persons or things to the service of God. It is especially applied to the setting apart of bishops for their office, and to the dedication of Church edifices to the worship of God.

**I. Consecration of Bishops.**—The forms for the consecration of bishops in the Greek, Roman, Anglican, and Methodist Episcopal churches are given under Bishop (i, 822, 825). In the preface to the form used in the Church of England, it is stated that no one shall be consecrated or taken to be a bishop, or suffered to execute the office of bishop, unless he be bapped, tried, and admitted thereunto according to that form, or *hath formerly had episcopal consecration*. The concluding portion of this sentence recognises the validity of consecrations given in foreign churches by any other form adopted by those churches. Thus a Greek or Roman bishop, being to the ruin of the Church of England, requires no fresh consecration, but is at liberty to officiate in that Church (Hook, s. v.). The Greek and Roman churches, on the contrary, do not recognise the validity of Anglican consecrations.

According to a canon of the first Nicene Council, there must be four, or at least three bishops present at the consecration of a bishop. See COLLOQ. 37. 11. Consecration of Churches. —The practice of solemnly dedicating to God those edifices which had been built for his worship is very ancient. The precise manner in which it was done for the first three ages of Christianity is unknown; but Eusebius gives an account of the ceremony by which the church of Jerusalem, built by Constantine, was consecrated, A.D. 385. On some occasions it was usual for a whole synod of the neighboring, or provincial bishops to assemble. "The solemnity ordinarily began with a panegyrical oration or sermon in commemoration of the founder, which was followed by prayers, among which there seems to have been one in particular for the church which was then to be dedicated. The act of consecrating churches was so peculiarly reserved to the office of bishops that prelates were not allowed to perform it. Anciently churches were always dedicated to God, and not to saints, though they were sometimes distinguished by their names as a monument of them. Consecration was performed, indifferently, on any day; but whenever the day was, it was usually kept and observed among their annual festivals. To this pope Gregory, surnamed the Great, added a new custom in England, which was, that on the anniversary of the dedication of churches, and particularly of those which had been hallowed temples, the people might build themselves booths round the church, and there feast themselves, in lieu of their ancient sacrifices while they were heathens. The wakes, which are still observed in some English counties, are the remains of these feasts of dedication."

**2. Church of Rome.**—The consecration of a church is performed with much ceremony in the Church of Rome, by which the bishop performs a dedica tion. As a preliminary step, the relics which are to be deposited in the altar of the new church are put into a clean vessel, together with three grains of incense, to which a piece of parchement is added, containing the day of the month and year, and the name of the officiating bishop. Three crosses are painted on each of the church walls, and over each cross a candle is placed. On the morning appointed for the ceremony, the bishop, arrayed in his pontifical vestments, and attended by the clergy, goes to the door of the church, where they recite the seven penitential psalms; after which he makes a circuit of the church walls, sprinkling them in the name of the Holy Trinity. This rite being performed, he knocks at the church door with his pastoral staff, repeating from Psalm xxiii [xiv.], "Attolite portas, et introbiti Rex Gloriae." A deacon, shut up in the church, demands, "Quis est ius Rex Gloriae?" To which the bishop answers, "Dominus potsis in precio?" At the same time the bishop crosses the door, repeating the following verse: "Ecco Cruuds signum, fugaat phantasma cuncta." On the admission of the bishop and clergy into the church, the Veni Creator is sung. Then one of the subdeacons takes ashes, and sprinkles them on the pavement in the form of a cross; next follow the litanies and other parts of divine service. After which the bishop, with his pastoral staff, describes, as with a pen, the alphabet in the air, and proceeds to consecrate the altar by sprinkling it with a mixture of water, wine, salt, and ashes, in the name of Jesus Christ. The consecration of the altar is followed by a solemn procession of the relics, which are deposited under it with great ceremony. During the whole of this imposing solemnity the church is finely adorned, and tapers are lighted upon the altar. Mass is afterwards performed by the bishop, or by..."
some other person." (Eadie, Ecclesiastical Dictionary, s. v.)

5. Protestant Churches. — The Church of England retains the usage of consecration both for Church edifices and cemeteries. What is called the consecration of a church at present is purely a legal (not a religious) act, duly setting aside a certain building from secular uses. There is no form of prayer for consecration of churches prepared by competent authority; it is left to every bishop to use any which he thinks fit, though the form which was prepared by the bishops in 1712 is that most generally used. But all existing unauthorized forms are illegal, and contrary to the Act of Uniformity (Eden, s. v.). The form of 1712 was adopted, with slight modifications, by the Protestant Episcopal Church in the United States: it is given in the Prayer-book. The form used in the Methodist Episcopal Church (for Dedication) is taken partly from a form of consecration prepared by bishop Andrews, and partly from the above-mentioned form of 1712. It may be found in the Discipline (ch. iv. ch. v.), or in the "Liturgy of the Evangelical Lutheran Church" (§ 15).

Consensus Genevensis, a confession of faith drawn up by Calvin in 1551. Its title is De aeterna Dei predestinatione, qua in salatione alio ex hominibus elegit, alio suo exercite religi, it. de predestination, qua res humanas sequuntur consensum patris, et scholias ecclesiae, et a J. Calvin. exposita (Genev. 1552, 8vo, in Opp. viii, 688). It is given in Niemeyer, Col. dict. Confess. (1840), p. 218 et sq. Its purpose was to unite the Swiss churches with regard to predestination, as the Consensus Fugiatus (q. v.) had served to do with regard to the Roman Catholic church. It presents the consensualistic theory of predestination with great clearness and decision.—Smith's Hagenbuch, History of Doctries, § 222; Shedd, History of Christian Doctries, bk. vii, ch. ii, § 2.

Consensus Turginianus, a confession prepared by Calvin in 1549, and adopted by the Zurich theologians.

"It grew out of a desire on the part of Calvin to effect a union among the Reformed upon the doctrine of the Eucharist. The title is Consensus ex sacro consensu re sacramentis: Ministerio, Tigur. et J. Calvinii, and consists of 26 articles (Calenii Opp. viii, p. 648 sq. and in his Trad. Theol. [Genev. 1611; Amster. 1667, fol.]). It was separately printed in 1549 by Robert Stephen, and is given in Niemeyer, Confess. Collection (1840), p. 192 sq. In his History of Doctries, viii, ch. ii, § 2; Hagenbuch, History of Doctrines, § 222.

Consilia Evangelica, in the Roman Catholic Church, are such moral counsels as are not obligatory for every Christian, but are advised in order to perfection. The name is generally applied to the three monastic vows of virginity, voluntary poverty, and obedience (to the monastic superior), but some theologists of the Church of Rome count as many as twelve such evangelical counsels. It is needless to say that Protestants admit of no such distinctions.—Herzog, Real-Encyclopedia, iii, 119. See Supererogation.

Consistory (Lat. consistorium), a name designating a college of men who acted as advisers of the Roman emperors in important affairs of the state, as well as the place where these meetings were held. 1. In the Roman Catholic Church the name has frequently, but not generally, been used to designate colleges of members of the chapter, also the episcopal chapters themselves, viewed as a whole, in their relations to the bishop and to the diocese. "Papal consistories," or Consistories of cardinals (Consistorium cardinalium), are meetings of the college of cardinals, called by the pope for deliberating on important affairs of the Church, and generally under his presidency.

These consistories are partly regular (usually once a fortnight), in which only cardinals take part, under the presidency of the pope or of the dean of the college of cardinals. These are called secret consistories (consistoriasecretæ). When solemn occasions, or the ministers of foreign powers are admitted, they are called public consistories (consistoria publicae). The latter are always presided over by the pope. At both the cardinals have only a consultative vote. The subjects which are to be finally disposed of in a consistory are first selected by the pope. Then the cardinals and the ordinary congregation, consisting of the oldest (as to the time of appointment) cardinal bishop, the oldest cardinal priest, and the oldest cardinal deacon, the cardinal vice-chancellor, the cardinal chamberlain, and the cardinal secretary of state; and after that referred for preparatory examination to the Consistorial Congregations. See Consistorial Congregations. The cardinals at secret consistories are promulgated in a public consistory, and mostly accompanied by a solemn "allocation" (q. v.) of the pope. While presiding the pope is mounted on a magnificent throne and habited in his pontifical; on his right sit the cardinal bishops and priests, and on the left the cardinal deacons. The other prelates, protonotaries, auditors of the rota, and officers, are seated on the steps of the throne; the courtiers on the ground; ambassadors on the right, and consistorial and fiscal advocates behind the cardinals.—Wetzer u. Welte, Kirchen-Lexik. ii, 865 and 891.

2. In the Reformed states churches, a council of bishops, made up of members of the college of bishops, which is the representative of the sovereign of the church, acts as highest bishop for the administration and superintendence of ecclesiastical affairs, for exercising jurisdiction in marriage affairs, and for inflicting ecclesiastical penalties. The first consistory was established at Wittenberg in 1567, the second at Leipzig in 1543. The members are called "consistorial councillors," the chief "consistorial president." If there are more than one consistory in a country, a "supreme or national consistory" (Ober-Consistium, Londer-Consistium) is placed over the "provincial consistories." If the right to establish a consistory was conceded by the sovereign of a country to a nobleman or city, such a consistory was called a "mediate consistory" (Mediat-Consistium). Nearly all the consistories of this class have been abolished in modern times. As the power of consistories was defined by the princes, it differed in different countries. The Reformed churches call a provincial consistory equal to the session of the Presbyterians of an church. For full information, consult Böhmer in Dic Ecclesiasticum Protestantismis, and Richter, Kirchenborde.

8. The lower Church courts in the German and Reformed Dutch churches in America are called consistory. — Herzog, Real-Encyclopedia, iii, 130; Wetzer u. Welte, Kirchen-Lexik. ii, 822; Constitution of the Reformed Dutch Church, ch. ii, art. ii.

Consociation. See Congregationalism.

Consolamentum. See Cathari.

Consolone (Lat. consolata), a bracket to support cornices, figures, busts, etc.

Constate, Council of (Concilium Constantinum), a synod assembled by pope John XXIII, in accordance with the wish of the emperor Sigismund, and which sat from 1414 to 1418. One of its professed objects was to put an end to the Western schism which lasted for thirty years, and which was caused by the several claims of the papacy. At this time, besides John (Balthasar Cossa), two others claimed the title of pope, viz., Pedro of Luna, a native of Catalonia, who styled himself Benedict XIII, and Angelo Corrario, a Venetian, who assumed the name of Gregory XII. An other object of the council was to take cognizance of the so-called heresies of Huss and Wickliffe. The council was convened to meet at Constance on the festival of All Saints, A.D. 1414, and so great was the influx of persons, that it was reckoned that less less
than thirty thousand horses were brought to Con-
stance, which may give some idea of the enormous
course of people. It is stated that, during the ses-
sion, the emperor, the pope, twenty princes, one hun-
dred and forty counts, more than twenty cardinals,
seven patriarchs, twenty archbishops, ninety-one bish-
ops, six hundred other clerical dignitaries, and about
four thousand priests, were present at this celebrated
assembly. The pretended heretics of Wickliffe and
Huss were here condemned, and the latter, notwith-
standing the assurances of safety given him by the
emperor, was burnt, July 6, 1415 [see Huss], and his
friend and companion, Jerome of Prague, met with the
same fate May 30, 1416 [see Jerome]. The three
popes were formally deposed, and Martin V was legally
chosen to the chair of St. Peter; but, instead of fur-
thering the emperor's wishes for a reformation in the
affairs of the Church, he thwarted his plans, and noth-
ing was done till the Council of Basle (q. v.). At
this council the question was very warmly agitated wheth-
er the authority of an ecumenical council is greater
than that of a pope or not? Gerson proved that in
certain cases the Church, or, which is the same thing,
an ecumenical council, can assemble without the com-
mand or consent of the pope, even supposing him to
have been canonically elected, and to live respectably.
These peculiar cases he states to be, "1. If the pope,
bearing against some church brought into a position requiring
the opinion of the Church, refuses to invoke a council for the
purpose. 2. When important matters concerning
the government of the Church are in agitation, requir-
ing to be set at rest by an ecumenical council,
which, nevertheless, the pope refuses to invoke."

The sources of information as to this council are am-
pious: among them are Van der Hardt, Magne's eccenum-
ica Constanciense Concilij (ed. Bohnstedt, Berlin,
1742, 6 vols. fol.); Chastenet, Noue. H. et du Concile
de Constance (Paris, 1718, 410); L'Enfant, Hist. du Conc.
de Constance (Amst. 1727, fol.); the same translated
(Lond. 1730, 2 vols. 6to). See Landon, Mé nual
de Concilia, 190 sq.; Iisse, Ch. Hist. 277, 291, 348;

heim, Ch. Hist. ii, 436 sq.; Wessenberg, Die grossen
Kirchenvormerkel, vol. ii; Wetzlar u. Welte, Kirchen-
Lex., ii, 849; Herzog, Real-Encycl. iii, 144.

Constant, Benjamin, a distinguished French poli-
tician of the liberal school, was born at Lausanne 1777;
educated in England and Germany. He entered pub-
lic life in 1799; was banished by Napoleon in 1801;
took office under Napoleon on his return from Elba,
1814; became a popular representative of Charles
X.; and died Dec. 8, 1830. He wrote largely in poli-
tics; but it is our place only to mention his treatise
De la Religion considérée dans ses sources, ses formes et
ses développements (Paris, 1824-81, 5 vols. 8vo),
and a posthumous work, Du Polythéisme romain considéré
dans ses rapports avec la philosophie et la religion Chrét-
ienne (Paris, 1839, 2 vols. 8vo).

Constantine the Great (Constantinus, Cal-
bus Flavio, Palaeon, Constantius Cae-
ribus, Augustus); son of the emperor
Constantius Chlorus, born May 16, 272,
was born Feb. 27, 272 or 274 (see Helkea), at Naissus (now Nis-
sa) in Illyricum, or, according to other traditions, in
Britain. He first distinguished himself by his milita-
ty talents under Diocletian, in that monarch's famous
Egyptian expedition, 256; subsequently he served
under Galerius, and in A.D. 293 was proclaimed
emperor, Diocletian and Maximian, abdicated, and
were succeeded by Constantius Chlorus and Galerius.
Galerius, who could not endure the brilliant and en-
getic genius of Constantine, took every means of ex-
posing him to danger, and it is believed that this was
the period during which he acquired that mixture of re-
cussing, and wisdom which was so conspicuous in his
conduct in after years. At last Constantine fled to
his father, who ruled in the West, and joined him at
Boulogne; just as he was settling out on an expedition

Ancient Effigies of Constantine and his wife Fausta.

against the Picts in North Britain. Constantine died
at York, July 25, 306, having proclaimed his son Con-
stantine his successor. The Roman soldiers, in the
Pretorium at York, proclaimed Constantine emperor.
He now wrote a conciliatory letter to Galerius, and re-
quested to be acknowledged as Augustus. Galerius,
however, would not allow him the title of Augustus,
and gave him that of Caesar only. Constantine took
possession of the countries which had been subject to
his father, viz., Gaul, Spain, and Britain; and, hav-
ing overcome the Franks, he turned his arms against
Maxentius, who had usurped the government of Italy
and Africa. He conquered Maxentius in three bat-
tles, the last at the Milvan bridge, under the walls of
Rome. Constantine was now declared by the senate
Augustus and Pontifex Maximus (Oct. 29, 312). It
was in this campaign that he is said to have seen a
flaming cross in the heavens, beneath the sun, bearing
this inscription, In hoc signo vinces, i.e. "by this
sign shalt thou conquer;" and on the same authority it
is stated that Christ himself appeared to him the follow-
ing night and ordered him to take for his standard an
imitation of the fiery cross which he had seen. He
 accordingly caused a standard to be made in this form,
which was called the labarum (q. v.). This account
rests chiefly on the testimony of Eusebius (Vita Con-
stantini, i, 29, 80), said to be founded on a communica-

cion from Constantine himself. "Lactantius, the ear-
}

i

liest witness (De mortuis persequatorum, c. 44, a work
which may not have been written by Lactantius, but
yet was composed about A.D. 314 or 315), speaks only
of a dream, in which the emperor was directed to stamp
on the shields of his soldiers 'the heavenly sign of
God,' that is, the cross, with the name of Christ, and
thus to go forth against his enemy" (Schauf, History of
the Christian Church, vol. iii, § 3, where this point,
and indeed the whole relation of Constantine to the
Church, is admirably treated). In January, 318, he
published the memorable edict of toleration in favor
of the Christians, by which all the property that had
been taken from the Christians during the persecutions
was restored to them. "They were also made eligible
to public offices. This edict has accordingly been re-

marked as marking the triumph of the cross and the
downfall of paganism. Having defeated Licinius, who
showed a mortal hatred to the Christians, Constantine
became sole head of the Eastern and Western empire
in 325, the year noted for the ecumenical council which
he convened at Nice, in Bithynia, and which he attend-
ed in person, for the purpose of settling the Arian
controversy. Towards the close of his life he favored
the Arians, to which he was induced by Eusebius of Nic-
media, in consequence of which he banished many
orthodox bishops. Though he professed Christianity,
he was not baptized till he fell sick in 337, in which
year he died in Nicomedia." (Buck, Theol. Dict. s. v.).
The senate of Rome placed him among the gods, and
the Christians of the East reckoned him among the saints; his festival is still celebrated by the Greek, Copt, and Chaldean Churches on May 14.

Whatever may have been the true character of Constantine's conversion to the Christian faith, its consequences were of vast importance both to the empire and to the Church of Christ. It opened the way for the unobstructed propagation of the Gospel to a wider extent than at any former period of its history. All impediments to an open profession of Christianity were removed, and it became the established religion of the empire. Numerous, however, in various points of view, as were the advantages accruing to it from this change, it soon began to suffer from being brought into close contact with the fostering influence of secular power. The simplicity of the Gospel was corrupted; pompous rites and ceremonies were introduced; worldly honors and emoluments were conferred on the teachers of Christianity, and the kingdom of Christ in a great measure converted into a kingdom of this world. The character of Constantine has been the object of various and contradictory judgments, according to the religious and political spirit of the various writers. Eusebius, Nazarius, and other Christian contemporaries, grateful for the protection afforded by the emperor to the Christian religion, may be considered his panegyrists, while Zosimus and other heathen writers, animated by an opposite feeling, were his enemies. The question, what utterance best approached to the nearest truth: 'In the first part of his reign he was equal to the best princes, in the latter to middling ones. He had many great qualities; he was fond of military glory, and was successful. He was also favorable to civil arts and liberal studies; fond of being loved and praised, and liberal to most of his friends. He made many laws; some good and equitable, others superfluous, and some harsh and severe' (Iren. Bucd.). See Gibbon, Decline and Fall, i, 454 sq.; Manso, Leben Konstantins (Breslau, 1817); Keim, Cebertis Konstantin zum Christusum (Zurich, 1862); Burchardis, Die Zeit Konstantins des Grossen; Schaff, Ch. Hist. L. c.; Neander, Ch. Hist. (Torrey's ed.), li, iii; Stanley, Eastern Church, Lect. vi. See DONATON.

Constantine, Pope (708-715), a native of Syria, succeeded Sisinianus in 708. He visited Constantinople and Nicomedia, where he was received with great honor by the emperor Justinian the younger. After his return to Rome he defended the worship of images against John, patriarch of Constantinople, and supported St. Felix, archbishop of Ravenna, who had at first refused to acknowledge Constantine, and had been exiled in consequence, made his submission to him, and was reinstated in his see. Constantine died April 8, 715, and was succeeded by Gregory II. — Wetter und Wele, Kirch.-Lex. ii, 883.

Constantinople.—There are few cities which unite more points of interest than Constantinople. It is unsurpassed in the magnificence of its temples of beauty, and for twenty-five centuries has been a seat of great political and commercial importance. During several hundred years it was the chief centre of learning, refinement, and military power. As the seat of the Greek Church, in it were held a large number of councils. The indications are that its future will be as important as its past. Yet the city has been subjected to desolations from the devastations of earth, sea, pests, famine, fire, and sword.

1. History.—There are three defined epochs: 1, from the foundation of the city (B.C. 667) till it became the capital of the Roman empire (A.D. 330); 2, from this time till the capture of the Turks (A.D. 1453); and, 3, under the Turkish dominion till the present time.

1. Byzantium.—The ancient Greeks attributed the foundation of Byzantium to a colony of Megarians, who, directed by an oracle of Apollo, built a city (B.C. 667) on the high land formerly occupied by the old seraglio. This city soon became the entrepôt for the grain trade between the East and the West. But, in the time of Constantine the great, any military power or ambition of its own, the Byzantium fell into the hands of the different cities that successively became dominant in Greece. It yielded without resistance to Darius (B.C. 612). The ten thousand rested here in their retreat (B.C. 400). During the days of Alexander of Macedon (B.C. 340), a light suddenly appeared one night, enabling the Athenian garrison to see and thwart an intended assault by the besiegers. In commemoration of this event, a crescent appears on some Byzantine coins, and to this is usually attributed the origin of the crescent, the emblem of the Turkish empire, adopted immediately after the conquest of Cyprus by the Turks in 1570. The city fell under the dominion of Rome (B.C. 146). An ancient legend relates that the apostle St. Andrew, on his arrival at Galata, a suburb of Constantinople, pressed the form of a cross into the rock with his hand. After preaching here two years, he was driven away by the tyrant Zenophilus, and he continued his labors on the opposite Aegean shore. Byzantium had, in order to resist the frequent sieges of the Northern barbarians, been made the strongest fortified city in the Roman empire. For harboring Piscinus its walls were razed by Septimius Severus (A.D. 169). These were soon rebuilt, but the city was completely destroyed by Constantine the Great in 326, with the object of building in its place a city nearest to the truth: 'In the first part of his reign he was equal to the best princes, in the latter to middling ones. He had many great qualities; he was fond of military glory, and was successful. He was also favorable to civil arts and liberal studies; fond of being loved and praised, and liberal to most of his friends. He made many laws; some good and equitable, others superfluous, and some harsh and severe' (Iren. Bucd.). See Gibbon, Decline and Fall, i, 454 sq.; Manso, Leben Konstantins (Breslau, 1817); Keim, Cebertis Konstantin zum Christusum (Zurich, 1862); Burchardis, Die Zeit Konstantins des Grossen; Schaff, Ch. Hist. L. c.; Neander, Ch. Hist. (Torrey's ed.), li, iii; Stanley, Eastern Church, Lect. vi. See DONATON.

CONSTANTINOPLE 489

CONSTANTINOPLE

tan a yearly tribute of 10,000 ducats. In 1438 the Turks took the city by assault, after a siege of forty days. In this siege the Turks had several cannon of three and four feet diameter, and when these had been used up, they forwarded others the last century. These, then, are all the remains of ancient art that have been preserved from the immense number brought to Constantinople. What few the Crusaders left (1204) the Turks have since destroyed.

8. Under the Turks.—For the space of three days after the taking of the city it was given up to pillage, and was the scene of frightful massacre and destruction of public and private property. After the three days had elapsed Mahomet caused the carcasses to be consumed by the fire, and when there were no remains left he ordered his soldiers to remain in their property and in the exercise of their religion. The sultan then entered upon the erection of a series of public edifices. He built the castle of seven towers, the two seraglio, and a number of magnificent mosques. He also transformed St. Sophia and other churches into mosques. The chief sultans after Mahomet have followed his example in building at least one magnificent mosque. Constantinople has suffered frequently from fires that have often devastated whole quarters. In 1726 the first printing-press was set up in the city. During an outbreak in the Greek quarter in 1821, during the Greek Revolution, the Turks quelled the rebellion in 1827. In 1878 the power of the Janissaries, who had opposed most fanatically the introduction of modern civilization by the sultan, was completely broken by the shooting of 40,000 of them by the other troops of the army.

II. Description of the City previous to its Occupation by the Turks (1453).—The city in ancient Byzantium occupied the extreme point of the peninsula from the Sea of Marmora and the Golden Horn, upon which the great capital was afterwards built. As Constantinople, the city was extended to its present limits. On the water side was built a single wall without a ditch. On the land side was a double, inter a triple wall, each part from 24 to 26 feet high, 20 feet thick, with a ditch 28 feet broad in front, defended also by 548 towers, and a castle at each corner of the great triangle which the city covered, and penetrated by 8 gates. The private houses were small and poor.

Of the many public places or edifices we can notice but a few. (a) The Forum of Constantine (now part of the seraglio palace), which Constantine surrounded with a circus, an imperial palace, churches, baths, and many private palaces. Here he placed the porphyry column surrounded with wreaths of gold, "the Palladium of Rome," which he brought from that city; on the column he erected a statue of Apollo, brought from Helios, in Phrygia, and he instructed Constantine wished to have considered as his own statue, substituting the nails of the passion for the rays of the sun, in order to give the statue a resemblance to Christ. This statue is now lost. The column is partly destroyed, the remainder being called the "Burnt Column." (b) The Foro of Theodosius, laid out by Theodosius (A.D. 393), and containing a triumphal pillar like the Column of Trajan in Rome, and an equestrian statue of a man with winged feet, whom the popular tradition held to be Joshua commanding the sun to stand still; under the left foot of the horse was buried the Palladio dietro (front or back of a doll or body wrapped in woolen garments, and which the Latins in 1204 dug up and burnt, after having destroyed the statue. (c) The Forum Boecii, containing the brazen bull in which criminals were burnt to death. (d) The Hippodrome or Circus, near St. Sophia, in which were held the public games, and other games were held, and which Constantine added to burned for the amusement of Greek and Roman art, brought from all parts of the empire; over the gate through which the horses entered the circus stood the four horses of Lysippus, which originally were placed in Athens, were brought here from Chios, then taken to Venice (1506), to Paris by Napoleon (1797), and thence to Constantinople, is yet standing; the triple bronze statues, that formed the interior of the Tripod of Del-

phos, 13 inches in diameter and 10 feet high, is yet standing, one spider's head having been cut off by Mahomet with his sabre when he entered the city (1453), the other two having been cast down in the last century. These, then, are all the remains of ancient art that have been preserved from the immense number brought to Constantinople. What few the Crusaders left (1204) the Turks have since destroyed.

(e) The Imperial Palace stood on the site of the old seraglio. In the palace are the "head of John the Baptist," and containing the "head of a willow and rooms: in the chapel of St. Theodore were the relics, consisting of the "original cross" and the "staff of Moses." (f) The Hidemara Palace, where Leo Philoppos held his school, containing five golden towers, supporting a golden tree on which golden birds sat, and containing the "head of John the Baptist." (g) The Palace of Baths of Lysanias, adorned with many works of art, and containing the imperial library of 120,000 volumes (burnt 475). (h) The many basilicas were either turned into churches or secularized by Theodosius. (i) Of churches, by far the most important is that of St. Sophia (q.v.). (j) The Church of the Holy Apostles, built by Constantine, together with the Heron (the burial-place of the emperors from the time of Constantine), with their rich ornaments and treasures, were plundered by the French in 1453, and destroyed in 1468. (k) The Church of St. George, the Greek patriarchal church, is an ancient edifice, with many mosaics and Byzantine paintings. Externally it is entirely destitute of ornament. It contains the "chair of St. Chrysostom," richly inlaid with pearls, and on which the patriarch sits during great festivals; also the "pillar to which Christ was bound when he was scourged." (m) The Blacksemen Church, containing the "holy chest with the garments of the Virgin Mary," and a "miraculous image whose veil lifted itself every Friday evening, and settled down again on Saturday at vespers." On the yearly festival of this church a great procession took place, with the emperor at its head. (n) The Church of the Virgin at the Golden Spring, near a spring or cistern of that name containing golden or "fried fish." A tradition has it that "during the last assault by the Turks, a Greek monk in the monastery at this place diseulvered the chest of the Virgin, when the Turks were at the walls, saying, I would sooner believe that these fish I am frying would leap out of the pan of hot oil and come to life again in the cistern." Secretly had he uttered these words when the fish sprang out into the cistern. Their descendants are red on one side and brown on the other, in commemoration of this event. (o) Monasteries abounded in the city soon after the origin of this institution. Some of them were large, and occupied sightly positions. (p) The Jews were allowed a synagogue by Constantine, but they were expelled from the city by Theodosius. (q) Large aqueducts supplied the city with an abundance of water; some of these are yet in use, others consist of iron or timber cisterns, or of vaulted reservoirs, were dug out during the reigns of the first emperors. Most of these are now out of repair, and but few contain water. One of the most remarkable of these was the cistern of Philoxenus (now called the cistern of the thousand and one columns), containing three stories, supported each by 294 pillars, and which contained 1,000,000 cubic feet of water. The cistern of St. Peter contained 6,000,000 cubic feet of water. III. The Modern or Turkish City.—With Christian nations the city retains its Greek name, Constantinople. The Turks call it Stamboul, or Istanbul; also Constantinople, after the name of the city.
CONSTANTINOPLE blends with the brown of the unpainted wooden houses, and contrasts with the white of the mosques and other public buildings, presenting a picturesque effect to be seen in no other European city. The harbor is crowded with vessels and steamers from all parts of the world, and is the chief port of the Bosphorus. A part of the large boats, and give an unusual animation to the already over-crowded harbor. The suburbs of Pera and Galata rise on the other side of the Golden Horn, covered with massive palaces and stone houses. Across the Bosphorus is Scutari, with its vast, dark, cypress-shaded temples, and the magnificent snow-capped Olympus raises its head above the horizon.

Constantinople is at present the capital of the Turkish empire, of which it forms a distinct province. It is the residence also of the Greek patriarch, who holds here the patriarchal synod, composed of twelve bishops. Here are also an Armenian patriarch and a Greek-Catholic bishop. The Protestant missions of Europe and America for the Orient have their headquarters in Constantinople. The city, with its immediate suburbs, contains above a million inhabitants. Stamboul, or the old city, contains about half this number. More than half of the population are Turks; the rest are Greeks, Armenians, Bulgarians, and some thousands each of nearly every nation of Europe, Western Asia, and Northern Africa.

Within, the city loses much of its charm. The streets are narrow, uncleanly, and full of dogs; they are not lighted, and every passer-by, after nightfall, is arrested if he has not a lighted lantern; the streets are not named, nor the houses numbered. (a) The houses are almost entirely of wood, are unpainted, of two or three stories, and have projecting latticed windows. (b) Of public squares there are but few of importance. The chief are the Hippodrome (see above), and the Seraskeri Place, containing the offices of the war department, being erected, it is said, by Constantine the Great. From which street you will be able to obtain the finest view of Constantinople and its environs. This place is about a mile in circumference. (c) The Seraglio, once so famous as the splendid palace of the sultans, has not been used as a royal palace since the ejection of the new Seraglio on the Bosphorus. It was burned in 1855. Near the old seraglio is the office of the grand vizier, entered by the "Sublime Porte," where the sessions of the cabinet are held, and where the sultan meets the foreign ambassadors. There are many bazaars, or royal sumptuous houses on the Bosphorus and the Golden Horn. (d) Constantinople contains thirteen imperial mosques, besides the mosques at the mosques of St. Peter's, and more than a hundred bestiaries of smaller mosques (or Medjidi, i.e. places of prayer). The chief mosque is that of Omur. See ST. SOPHIA. The second mosque of importance is that of Achem the First (built in 1610). Here are celebrated with great pomp the festivals of Balram, that of Nevilou (the birth of the Prophet), and the Dog of the departure of the caravans for Mecca. It is said to contain a piece of the black stone of Mecca. (e) Churches and Synagogues. —The Greeks have twenty-one churches in the old city. Of these, St. George's (see above, II, 2) is the chief or patriarchal church. The Armenians have a number of churches at St. Petka, St. Peter, etc. The Orthodox church (or, rather, two churches—one for men, the other for women), and the Church of the Nine Angelmothers, containing a "miracle-working pillar," to which the sick of fevers are brought. The Romish and Protestant churches are in Pera. There are several in the British and American Bible Societies have their head-quarters in the old city. (f) There are many Mohammedan monasteries for the different orders of dervishes, and also several Greek monasteries. (g) Burial-places for the Turks are found near all the mosques. Burial-chapels (Turbe) for the sultans, the founders of mosques, and their families. are found within the inclosure of the mosques. (h) The public instruction was reorganized in 1847. Schools were divided into three grades. Attendance upon the primary schools is obligatory. In them are taught reading, writing, arithmetic, geography, history, the Turkish empire, and the Turkish language. In the higher part of the Mohammedan religion, mathematics, natural science, and other branches are taught. The technical schools are many in number, as the two schools in the mosques of Achem and Selim for the persons designed for civil offices; the school founded by the sultans in 1850 for the training of diplomats and other high officers of state; the colleges for the training of the ulamas or priests: the schools of military and naval instruction; the college of medicine; the veterinary, and other schools. All of these are supported by the state when the endowments do not suffice. The University, comprising many of their highest schools, has a large building, but is only partially organized. The school systems of the Christians and Jews stand under the direction of their church authorities, and are much neglected. (i) Of libraries there are over a hundred smaller ones connected with the mosques, and forty large ones, some of which have fine rooms, and are accessible to the Greeks.

IV. The Environs of Constantinople. — (a) Eyoub, above Stamboul, on the Golden Horn, is the most sacred spot in Turkey. Eyoub was the standard-bearer of the Prophet, and perished in the first attack on Constantinople by the Saracens (668). His body was miraculously discovered by Mahomet II (1453), who built here the mosque of Eyoub. There is a stone, surrounded by a silver plate, containing an "impression of the foot of the Prophet," which he made in the rock at the building of the Caaba. Within this mosque is the sword of Othman, which the sultans gave on as their inaugural ceremony instead of the sword of the Prophet. It is said to have been built and decorated, are tombs of many great men's state, mingled with trees and shrubbery, and surrounded by hospitals and an extensive cypress-covered grave-yard. (b) Galata, on the opposite side of the Golden Horn, was formerly a Genoese city. It now contains many important European houses of business, and one part is filled with the scum of all European nations. (c) Pera, on the crown of the hill above Galata, contains the residences of European ambassadors and merchants, many fine and lofty residences, and many Christian churches. (d) At Kasim-pasha, where vessels are built, and at Top-kona, where the cannon are made, the i.e. places of (a) reunion, and more than a hundred bestiaries of smaller mosques (or Medjidi, i.e. places of prayer). The chief mosque is that of Omur. See ST. SOPHIA. The second mosque of importance is that of Achem the First (built in 1610). Here are celebrated with great pomp the festival of Balram, that of Nevilou (the birth of the Prophet), and the Dog of the departure of the caravans for Mecca. It is said to contain a piece of the black stone of Mecca. (e) Churches and Synagogues. —The Greeks have twenty-one churches in the old city. Of these, St. George's (see above, II, 2) is the chief or patriarchal church. The Armenians have a number of churches at St. Petka, St. Peter, etc. The Orthodox church (or, rather, two churches—one for men, the other for women), and the Church of the Nine Angelmothers, containing a "miracle-working pillar," to which the sick of fevers are brought. The Romish and Protestant churches are in Pera. There are several in the British and American Bible Societies have their head-quarters in the old city. (f) There are many Mohammedan monasteries for the different orders of dervishes, and also several Greek monasteries. (g) Burial-places for the Turks are found near all the mosques. Burial-chapels (Turbe) for the sultans, the founders of mosques, and their families. are found within the inclosure of the mosques. (h) The public instruction was reorganized in 1847. Schools were divided into three grades. Attendance upon the primary schools is obligatory. In them are taught reading, writing, arithmetic, geography, history, the Turkish empire, and the Turkish language. In the higher part of the Mohammedan religion, mathematics, natural science, and other branches are taught. The technical schools are many in number, as the two schools in the mosques of Achem and Selim for the persons designed for civil offices; the school founded by the sultans in 1850 for the training of diplomats and other high officers of state; the colleges for the training of the ulamas or priests: the schools of military and naval instruction; the college of medicine; the veterinary, and other schools. All of these are supported by the state when the endowments do not suffice. The University, comprising many of their highest schools, has a large building, but is only partially organized. The school systems of the Christians and Jews stand under the direction of their church authorities, and are much neglected. (i) Of libraries there are over a hundred smaller ones connected with the mosques, and forty large ones, some of which have fine rooms, and are accessible to the Greeks.
CONSTANTINOPLE

The First Ecumenical Council of Constantinople (or the second in the list of ecumenical councils) was convoked at Constantinople in 381 by Theodosius the Great, emperor of the East, and attended by 330 bishops (mostly Eastern), and 36 bishops of Macedonia, who left Constantinople when their doctrine was rejected by the majority. The council condemned, besides the Macedonians, the Arians, Eunomians, and Eudoxians, and confirmed the resolutions of the Council of Nicene. It was attended by the bishop of Constantinople, the second rank Bishop of the Church next to the bishop of Rome, and in controversies between the two reserved the decision to the emperor. 2. The Second Ecumenical Council of Constantinople (the fifth in the list of ecumenical councils), held in 553 on account of the Three Chapters’ controversy, by 165, mostly Oriental, bishops. This council uncompromised the defenders of the Three Chapters, Theodore of Mopsuestia, Ibas, and others, and the Roman bishop Vigilius, who refused to condemn the Three Chapters unconditionally. 3. The Third Ecumenical Council of Constantinople (the sixth in the list of ecumenical councils), held from 680 to 691 in the Tranlaw period of the Byzantine empire, among whom were three Oriental patriarchs, and four legates of the Roman bishop Agapetus. The opinions of the Monothelites were condemned, especially through the influence of the Roman legates, as heretical. 4. The General Council convoked in 691 by the emperor Justinian I, and also held in the Tranlaw period of the Byzantine empire, during the fifth and sixth ecumenical councils, which had given no Church laws, it was called Quinisexta (Synodus) or Quinquiesimatum (Concilium). It gave 102 stringent canons on the morals of clergy and ecclesiastical discipline. It is recognised as an ecumenical council by the Greeks only. 5. The Fourth Ecumenical Council of Constantinople, or the eighth in the list of ecumenical councils, held in 869. It deposed patriarch Photus, restored patriarch Ignatius, and gave laws on Church discipline. It is, of course, not recognised by the Greeks. 7. In 879 another General Synod was held at Constantinople, attended by 893 bishops, and convoked by John the Empress. Photius was recalled, the resolutions of the preceding council against him repealed, and the position of the patriarch of Constantinople to the pope defined. The Greeks number this council as the Eighth Ecumenical. 8. The Ninth Ecumenical Council of the Greek Church was held in Constantinople, under the emperor Andronicus the younger, in 1181. It condemned the opinions of Barlaam as heretical. 9. Particular Synods.—The most important of the particular synods are: 1 and 2. In 336 and 339, two Arian synods, under the leadership of Eusebius of Nicomedia. The former disposed and excommunicated Marcellus, and the latter disposed of the bishop Paulus, of Constantinople, and appointed Eusebius his successor. 3. A semi-Arian synod against Eutychus, who was banished. 4. In 426, a synod held against the Messalians; in 448, 449, and 450, synods against the Eutychians. 5. In 465 and 496, Eutychian synods, and 6. The councils recognising the Henothicon of Zeno. 7. A synod in 516, condemned the resolutions of the Council of Chalcedon. 8. In 556, against Severus, Anithamus, and other chiefs of the Acheophiles. 9. In 541 (3437), against some views of Origen. 10. In 615, two synods on the question of veneration of images, the one, attended by 270 bishops, in favor, and the other, attended by 470 bishops, in favor. 11. Introducing patriarch Photius, and approving the veneration of images. 11. In 1170 (according to others in 1108), a synod, attended by many Eastern and Western bishops, on the reunion of the Eastern and Latin churches. Similar synods were held in 1277, 1289, 1285, all with the same results. The last convoked by the emperor Constantine Paleologus deposed the patriarch Gregory, put in his place the patriarch Athanasius, and declined to accept the resolutions passed by the Council of Florence in favor of the union of the Greek and the Latin churches. 10. In 1629 and 1642, a synod inveighed against the crypto-Gnostic views of the patriarch Cyril of Alexandria. 11. Univers. Lexiv, 887; Wetzer u. Welte, Kirchen-Lexi. ii, 838; Christian Rememb. April, 1854, art. i; Schaff, Hist. of the Christian Church, ii, iii; Landow, Manual of Councils; Hefele, Concil.-Geschichte; Edinburgh Review, July, 1867, p. 40.

CONSTANTINOPLE, PATRIARCHATE OF. Until the time of Constantine the bishop of Constantinople was subject to the bishop of Jerusalem as metropolitan. When Constantinople became the residence of the emperor, the dignity of the bishop naturally rose. The second ecumenical council, in 381, gave to the bishop of Constantinople precedence over all the bishops of Asia, and the bishop of Rome, on the ground that Constantinople was New Rome. This canon implied no extension of jurisdiction except the exemption of the bishop of Constantinople from the metropolitan jurisdiction of the bishop of Jerusalem; but gradually the bishop of Constantinople obtained a right of supervision over the churches of Eastern Asia. In the 5th century an imperial edict placed Eastern Illyricum under the jurisdiction of the bishop of Constantinople, but the Roman bishop Boniface protested against this as an encroachment on the patriarchal rights of Rome in Illyricum, and the decree was not carried through. In 449, Theodosius II issued a decree that no bishop in Asia and Thracia should be ordained without the consent of the Council of Constantinople. The execution of this decree met with much opposition, but the metropolitan jurisdiction over Thracia and Asia was nevertheless gradually confirmed, and it was even extended over Pontus and the patriarchate of Antioch. In 451 the Council of Chalcedon formally sanctioned this right of jurisdiction. Canon 9 authorized bishops and clergy to appeal from the decisions of the metropolitan to either the exarchs or to the see of Constantinople. Canon 38 gave to the bishop of Constantinople equal ecclesiastical prerogatives with the bishop of Rome, stating that the bishops of Rome and Constantinople were the second; and provided that the bishop of Constantinople should have the right to ordain the metropolitan of the three dioceses of Asia, Pontus, and Thracia, and of the bishops of the pagan countries belonging to those three dioceses. The papal legates protested against the 28th canon, and their protest was ratified by the Roman bishop Leo. The opposition of the Roman bishops against this canon prevented it from being received into the Oriental legislation, although the patriarchs of Constantinople never relinquished any of the rights conceded to them by the Council. During the controversy on the images, Leo 1095, 1123, on effect, expelled the patriarch of Rome, and united them with that of Constantinople. Entire separation from Rome was carried through by the patriarchs Photius and Michael Candinarius. The extensive dioceses of the patriarch of Constantinople, containing, since the 8th century, the whole of the Churches of Asia, Thracia, and Pontus, embraced (since the 10th century) also Russia, for which, however, in the 16th century, a special patriarchate was established at Moscow. See RUSSIA. In the 14th century a special Servian patriarchate was established, which, however, was again dissolved in 1765. See SERBIA. After the establishment of the independence of the Church of Greece, the Church of Greece made itself independent of the jurisdiction of the patriarch of Constantinople in 1832. See
Greece. The Greek bishops of Austria are likewise not subject to the patriarch of Constantinople. See Austria. The jurisdiction of the latter embraces the mediate and immediate provinces of the Turkish empire, with the exception of the patriarchates of Antioch, Alexandria, and Jerusalem, and the archbishoprics of Cyprus and Chios in Rumelia. In 1867 the patriarchate of Constantinople had 135 sees, of which 90 are metropolitan and 4 archbishopiscopal. From the conquest of Constantinople by the Latins in 1204 until the reconquest of the city by the Greeks in 1261, there was a Latin patriarch in Constantinople, to whom the pope assigned the highest place in the Church next to himself. Since the destruction of the Byzantine empire the title of patriarch has been given by the popes to some dignitary of Rome. At Constantinople there resides a patriarchal vicar, under whose jurisdiction are about 10,000 Latin Catholics, in Constantinople, Thracia, Macedonia, and Northern Asia Minor.—Herzog, Real-Encycl. iii. 138; Wetzer u. Wolte, Kirchen-Lex. ii, 838; Wiggers, Kirch. Statistik, i, 176; The Churchman's Calendar for 1867, p. 39.

Constellation, a cluster of stars, stands in the Auth. Vers. only in Isa. xiii. 10, ("the stars of heaven and constellations thereof shall not give their light"), for the Heb. בֵּית הַנְּעָרִים, kesel (in the plur.), i.e. the fat or clear (Sept. 'Up'wh, Vulg. splendor), as a designation apparently of the large starry bodies generally. The same (Heb. בֵּית נְעָרִים) elsewhere designates some special assemblage of stars ("Orion," Job ix, 9; xxxviii, 31; Amos v, 8); and once the name of a town ("Chesil," Josh. xv, 30). (See Schaarsch. Ueb. d. Sternbilder, etc. Rink. 1791.) See Astronomy.

Constitution, in the Roman Church, a decree in the pope of matters of doctrine. In France, the name has been applied, by way of eminence, to the famous bull Unigenitus of the year 1718. See Unigenitus.

Constitutions, Apostolical. See Canons; Clementine.

Constitutions and Canons. Books of, "the code of 141 rules which regulates the order and worship of the Church of England. The preface thus describes itself: "Constitutions and canons ecclesiastical, treated upon by the bishop of London, president of the convocation for the province of Canterbury, and the rest of the bishops and clergy of the said province; and agreed upon with the king's major by licence, hath been engrossed at London, Jan. 26 domini 1608, and in the year of the reign of our sovereign lord James, by the grace of God king of England, France, and Ireland, the first, and of Scotland the thirty-seventh; and now published for the due observation of them by his majesty's authority, under the great seal of England." See Canons.

Substantial, a word of similar import with co-essential, denoting something of the same substance with another. The term υποστασις was first used by the fathers of the councils of Antioch and Nicea to express the orthodox doctrine more precisely. At first the term had only a negative use, as against the Arian heresy; but after the adoption of the Nicene Creed it became a test-word of orthodoxy. —Tomline, Theology. ii, 110; Schaff, History of the Christian Church, § 127.

Substantiation, the doctrine that, in the Lord's Supper, the bread remains bread, and the wine remains wine; but that with and by means of the consecrated elements the true natural body and blood of Christ are communicated to the recipients. It differs from Transubstantiation (q. v.) in that it does not imply a change in the substance of the elements. —Browne on 39 Articles, art. xxviii., § 1; Hagenbach, History of Doctrines, ii, 500 (Smith's ed.). See Impa-

NATION; LORD'S SUPPER; LUTHER; LUTHERAN CHURCH; TRANSUBSTANTIATION.

Consul (gravor, i.e. highest in office), a title applied (1 Macc. xvi, 16) to Lucius (q. v.), the Roman officer, whose communication to Ptolemy is there cited. The sept. elsewhere uses the same Greek term as a rendering of the Chald. עַבָּדָא, satrapa ("princes," Dan. iii, 2, 8), and יִשְׂרָאֵל ("counselors, Dan. vi, 7, etc.). It is often used by classics. Greek writers for the Roman consul. See Rome.

Consumption, as a disease, is the rendering of the Heb. פִּיהוּ, sacheh'pheth (occurs only Lev. xxvi, 10; Deut. xxviii, 22), from פִּיהוּ, sachypheth, to pine away; and probably designates a wasting malady. See DISEASE.

Contarini, Gaspare, Cardinal, was born in 1488 of a noble Venetian family, and carefully educated. Entering the public service, he was ambassador to Charles V, 1551, and met Luther at Worms. In 1555 he was made cardinal by pope Paul III. In 1558, Contarini, together with the cardinals Caraffa (subsequently Paul IV), Sadolet, and Polus, was appointed a member of a committee on the reformation of the Church. Their report, made to the pope the same year, and entitled Consilium de Emundanda Ecclesia, was printed against their wish and contrary to the order of the pope, and published in a German translation, with pungent notes, by Luther. It was subsequently put on the Index. In 1541 Contarini was sent as papal legate to the Diet of Ratisbon, where he showed a conciliatory spirit toward the Protestants, and urgently admonished the bishops to labor for the reformation of the Church. On his return to Italy he was by some accused of having encouraged heresy, but was appointed by the pope cardinal legate of Bologna. His religious fault was of a more deep; he accepted the doctrine of justification by faith, and looked for a reform of the Roman Church, while he utterly distrusted the Lutheran reformation. He was, on the whole, one of the best men in the Roman Church at the time of the Reformation. He died in Bologna, 1542. Among his writings are, De Immortalitate Anima adversus Petrum Pomponianum; De Libero Arbitrio et Predestinatione; De Septem Ecclesiae Sacramentis:—Confutatio Articulorum Lutheri:—Scholia in Epistolis Dni Pauli:—De Officio Episcopi:—De Potestate Pontificii (liberal). His works were collected and published together at Paris (1571, fol.) and Venice (1578, fol.). See Banke, History of Popery. iii. 261; Wetzer, Kirchen-Lex. ii, 860; McCrie, Reformation in Italy (Am. ed p. 171).

Contemplation. See Mystics.

Contentment (αινοποιευση), 1 Tim. vi, 6; "sufficiency," 2 Cor. ix, 8) is a disposition of mind in which our desires are confined to what we enjoy without murmuring at our lot, or wishing ardently for more. It stands opposed to envy (James iii, 10); to avarice (Heb. xiii, 5) to pride and ambition (Prov. xiii, 10); to anxiety (Matt. vi, 25, 26); to sloth (Matt. xxi, 25); to grief and repinings (1 Cor. x, 10). Contentment does not imply unconcern about our welfare, or that we should not have a sense of anything uneasy or distressing; nor does it give any countenance to idleness, or prevent diligent endeavors to improve our circumstances. It implies a fixed and steady habit; it has a particular gravity, moderation; that we do not indulge unnecessary care, or use unlawful efforts to better ourselves; but that we acquiesce with, and make the best of our condition, whatever it be. Contentment arises not from a man's outward condition, but from his inward disposition; and is the genuine offspring of humility, attended with a fixed and habitual sense of God's particular providence, the recollection of past mercies, and a just estimate of the true nature of all earthly things. CONTENVN 4

Contrition, in the Roman Catholic theology, is perfect or thorough repentance (contritus cordis), as distinguished from attrition, or imperfect repentance, which is not adequate to justification without penance (see Attrition for a fuller statement). The Council of Trent makes contrition part of the matter of the sacrament of penance. "The acts of the penitent, namely, contrition, confession, and satisfaction, are the matter, as it were, of this sacrament, which, inasmuch as it is required by the Church in order to the completeness of the sacrament, and the full and perfect remission of sins, are for this reason called the parts of penance. . . . Contrition, which holds the first place in the above-mentioned acts of the penitent, is the sorrow and detestation which the mind feels for past sin, with a purpose of sinning no more. Now this emotion of contrition was always necessary in order to obtain the pardon of sins; and when a man has sinned after baptism, it prepares him for the remission of sin, if joined with confidence in the mercy of God, and an earnest desire of performing whatever is necessary to the proper reception of the sacrament. . . . The solemn formula given by our Lord, in which it may sometimes happen that this contrition is perfect in charity, and reconciles a man to God before the sacrament of penance is actually received, nevertheless the reconciliation is not to be ascribed to contrition without the desire of the sacrament, which was in fact included in it."—Canons of Trent, sess. xiv, chap. iv.

It will be observed from the preceding quotations that the Church of Rome teaches that we are to be truly grieved or sorry on account of our sins; that we are to hate them; and that we must purpose or resolve to forsake them. All this is excellent so far as it goes. But one essential element or mark of true repentance is entirely omitted, or so slightly referred to that this sorrow or hatred of sin, together with all good purposes of amendment, are counteracted, or may be substituted by additional resolutions to do better in future, by piously absolution, by penances, and by the doctrine of attrition or imperfect contrition. The deficiency to which reference is made is forsaking sin. This practical act is overlooked, counteracted, or rendered unnecessary by the resolutions of amendment, absolution, penances, and whatever may pertain to them.—Elliott, Delegation of Romanism, bk. x, chap. ii, § 1.

Convenient, used in the A.V. only in its old Latin sense of suitable or becoming, as a rendering of "νόμος, ὕσταρ" (Jer. xi, 4, 5, "right", as often elsewhere), πρός, chōk (Prov. xxx, 8, an alloted "portion," as sometimes elsewhere), ἐκδοτος (Rom. 1, 28, "Εὐαγγελίου", as in Acts xxii, 29), ἐσθίων (Eph. iii, 4; Phil. iv, 8, "eating", as in Col. iii, 18); but νιγμός (Mark vi, 21), νιγμός (Mark xiv, 11), νιγμός (1 Cor. xvi, 12), or simply καφός (Acts xxiv, 25), refer to opportunities of time or season. Similarly in the Apocalypse (ἐκδοτος, Euclus. x, 28; 1 Mac. xii, 11; 2 Mac. iv, 19, xl; λόγος, λόγος, (1 Mac. iv, 46; 2 Mac. 34; ἐσθίων (2 Mac. iv, 32; xiv, 22), simply καφός (Eclus. xxxix, 17), or mere construction (2 Mac. x, 18).

Convent, (1.) the name given in monasteries and similar institutions to the assembly (and the whole) of the members entitled to a vote ("conventuals"). The heads of these institutions (abbot, priors, provosts) are bound, in some points of administration, either to hear the counsel or to obtain the consent of the convent. Monastic congregations [see Congregations] sometimes hold "general convents" (or "general chapters"), consisting of the abbots of all the houses of the congregation. The constitution of
The mendicant orders and of the regular clerks provides for the holding of "provincial convents" (or provincial chapters), consisting of the heads of the monasteries of a province, and "general convents" (or general chapters), consisting of the chief of all the monastic provinces ("provincialia"). But the latter, in modern times, have generally fallen into disuse, and written reports have taken their place. (2.) The word is also used to denote a society of monks or nuns in one establishment, or the building itself in which they dwelt (Peter U. Welle, Kirchen-Lex. II, 809). See also MONASTIC.

Conventicle (place of meeting, Lat. conventiculum, diminutive of conventus). The word conventiculum was known to the primitive Church to designate a house of prayer, conventicula ubi summus oratus Deus (Arnob. iv; see also Laclant. v, 11; Orosius, vii, 12). In after times it denoted a calum among the monks of a convent, to secure the election of some favorite candidate for abbot or superior. The term conventicle is said to have been first applied in England to the assemblies of Wickliff's followers; but in the reign of Charles II it was given contumuously to the meetings for religious worship of Protestant dissenters from the Church of England, which were not at the time sanctioned by law.

Conventicle Act, an act of the British Parliament, passed in 1664. It enacted that only five persons above sixteen years of age, besides the family, were to meet for any worship, domestic or social. Th: first offense on the part of him who officiated was three months' imprisonment, or five pounds' fine; the second, six months' imprisonment, or ten pounds'; the third offense was transportation for life, or a fine of one hundred pounds. Those who permitted conventicles to be held in their bars, houses, or outhouses, were liable to the same forfeitures; and married women taken at such meetings were to be imprisoned for twelve months, unless their husbands paid forty shillings for their redemption. The power of enforcing the act was lodged in the hands of a single justice of the peace, who might proceed, without the verdict of a jury, on the bare oath of an informer. In consequence of this act, houses were broken open, goods and cattle distressed, persons arrested, and the jails in the different counties filled with those who had been guilty of no other misdemeanor than that of assembling together to worship God, or listen to the exposition of his holy word.—Buck, Theol. Dictionary, s. v.; Neal, History of the Parliams, part iv, ch. viii; Orme, Life of Baxter, i, 221, 254.

Conventuals, (1) Monks or clerical knights who are members of a convent, and have the right of voting at the meetings (conventus). See convent. (2) Monks in general, in opposition to hermits. (3) In several orders, especially the mendicant, Conventuals is a name for those congregations which follow a mitigated rule (see franciscans, Carmelites), in opposition to the Observants (q. v.), who demand the observance of the rigorous and strict rule, and who had sometimes even passed by it. The name is especially applied to the Franciscan conventuals (see franciscans). (4) Sometimes, also, a community of candidates for the priesthood, who, in a monastic manner, lived in common under a provost, were designated by this name.

Conversation (κωνωνία, de n. gr. ν. gr. Pa. xxxviii, 14; i, 28; Apostroph. and N. T., ἐπισκοπή, but ἐπιστολή, 12; Act. viii, 23). This word is next to usage when it occurs in the Scriptures in the sense of verbal communication, but always in its now obsolete meaning of course of life or deportment, including all one's words and acts, In Phil. i, 27; iii, 20, a different term is found in the original (φορμήν, πολιτεία), which literally signifies resident, or relations to a community as a citizen. See citizenship.

Orontes are little in the habit of repairing to each other's houses for the purpose of social intercourse, but rather prefer to resort to some spot out of doors, where friends can meet together, and for this purpose the gate of the city is generally chosen. See Gate.

Such was the custom of all the people who came in and went out, and with any trifling occurrences that might present themselves to their notice, or attended to the judicial trials, which were commonly investigated at public places of this kind (Gen. xxxiv, 20; Ruth iv, 11; Ps. xxvi, 4, 5; cxxvii, 5). Promenading, so agreeable in colder latitudes, is wearisome and unpleasant in the warm climates of the East, and this is probably one reason why the inhabitants of those climates preferred holding intercourse with one another while sitting near the gate of the city, or beneath the shade of the fig-tree and the vine (1 Sam. xxii, 6; Micah iv, 4).

This mode of passing the time is still customary in the East. In common things. Ch. ii, 13, et seq., "to see an individual or a group of persons, even when very well dressed, sitting with their feet drawn under them, upon the bare earth, passing whole hours in idle conversation. Europeans would require a chair, but the natives here (Syria) prefer the ground; in the heat of summer and autumn, it is pleasant to them to while away the time in this manner, sitting in the shade of a tree. Richly-adorned females, as well as men, may often be seen thus amusing themselves."

The Oriental, when engaged in conversation, are, in general, very mild in their demeanor, and do not feel themselves at liberty directly to contradict the person with whom they are conversing, although they may at the same time be aware that he is telling them falsehoods. The ancient Hebrews, in particular, very rarely used any terms of reproach more severe than those of מַסָת, masah, meaning "adversary," or "opponent;" מַסָת, masah, "contemptible;" and sometimes מֵבִט, mabat, "fool," an expression which means "a wicked man," or "an atheist," not, as with us, a person deficient in understanding (Joh ii, 10; Ps. xiv, 1; Isa. xxxxi, 6; Matt. v, 22; xvi. 23). See fool. When anything was said which was not acceptable, the most common form of expression was "what is your tree?" (Deut. iii, 29); or "It is enough." (Luke xxii, 38). In addressing a superior, the Hebrews did not commonly use the pronouns of the first and second person, but instead of "I," they said "thy servant," and instead of "thou," they employed the words "my lord." Instances of this mode of expression repeatedly occur in Scripture (as in Gen. xxii, 4; xlv, 16; xviii, 19; Daniel, x, 17; Luke i, 38).

The form of assent or affirmation was, "Thou hast said," or "Thou hast rightly said;" and modern travelers inform us that this is the prevailing mode of a person's expressing his assent or affirmation to this day in some parts of the East, especially when they do not wish to assert anything in express terms (comp. Matt. xxvi, 64). See affirmative.

Conversion, a theological term, used to denote the "turning" of a sinner to God. It occurs in Acts xvi, 3 ("declaring the conversion of the Gentiles"). The verb ἐπισταθήσομαι is used in the N. T. actively in this way, Luke xii, 10, 16, 16, 18, (Luke i, 16, et al.), intrinsively; in the sense of "turning back," "returning," and tropically, to denote "turning to good," "to be converted" (Luke xxii, 32, "when thou art converted, strengthen the brethren"). In general, the word is used to designate the "turning of men from darkness unto light, and from the power of Satan unto God." (Acts xxiv, 16.) In a general sense, heathens or infidels are "convert-
ed" when they abandon paganism or unbeliev, and embrace the Christian faith; and men in general are properly said to be "converted" when they are brought to a change of life through the influence of divine grace upon the soul.

Specifically, then, conversion may be said to be "the active change of life, disposition, and life of a sinner which is brought about when the Holy Ghost enters the heart as the result of the exercise of a saving faith in the atonement, by which the sinner is justified. The process by which this great change is effected is this: The sinner is convinced of sin by the Holy Spirit; he exercises a penitent faith in Christ as his Redeemer; and immediately, by the Holy Spirit, he repents of the fact of his pardon, and instantly sheds abroad the love of God in the heart, when all things are indeed new." (Farrar, Biblical Dictionary, s. v. J

The word is also used, in a narrower sense, to denote the "voluntary act of the soul consciously embracing Christ in faith;" and in this sense it is to be distinguished from regeneration, which is "a second creation, brought only by the Spirit of God." Kling, in Herzog, Real-Encyclopädie (s. v. Bekehrung), gives the following statement of the relations between God and man in the whole work of conversion: "It is not a purely passive act of man (Jer. xxxi, 18, Turn thou me and I shall be turned), but includes both the divine act and the human. Conviction, calling, and justification are of God. The Word of God declares God's will convincingly in the law, and offers salvation through faith in Christ in the Gospel. In Christian law and Gospel are united. None of these divine acts preclude man's activity (Phil. ii, 12, Work out your own salvation, etc.)." The truth lies midway between that extreme, on the one hand, which teaches that the will of man is entirely absorbed by the grace of God, and that false Synergism, on the other, which conceives the will as capable of action, in the work of conversion, without the inworking of divine grace.

Wesley, (Letter to Bishop Lavington, Works, v, 398) remarks: "Conversion is a term I very rarely use, because it rarely occurs in the N. T." Lavington had spoken of Wesley's idea of conversion as "to start upon perfect men at once. Indeed," replies Wesley, "it is true the sinner is usually considered before he is a perfect man. It is probable most of those Ephesians to whom St. Paul directed his epistles were converted, yet they were not come (few, if any) to a perfect man, to the measure of the stature of the fullness of Christ."

See REPENTANCE; REGENERATION.

CONVERSION OF ST. PAUL, Feast of this, observed in the Roman Church on the 25th of January. It is generally supposed that this festival had its beginning in the year 1200, when it was established by order of Innocent III. Baronius says it was observed in earlier times, but had grown into disuse after the 9th century. After the 15th century it became generally observed. See PAUL.

Conviction. The first stage of repentance, when a penitent is led to see the evil nature of sin, and has been proved, to himself, guilty of it. See REPENTANCE.

Convocation (κοινοβουλikk, mikra, from κοινος, kara), to call; comp. Num. x, 2; Isa. i, 18), applied invariably to meetings of a religious character, in contradistinction to congregations, in which political and legal matters were transacted, especially under Government. Hence it is connected with κοινος, holy, and is applied only to the Sabbath and the great annual festivals of the Jews (Exod. xii, 16; Lev. xxiii, 2 sq.; Num. xxvii, 18 sq; xxix, 1 sq). In this sense, with one exception (Isa. i, 18, "assembly"), the word is peculiar to the Pentateuch; but in Isa. iv, 5, it denotes the place of gathering ("assembly"), and in Neh. vii, 5, it signifies the public "reading" of the law in the synagogue service. The Sept. treats it as an adjective (ελεγχή, ελεγχόμενος; called); but there can be no doubt that the A. V. is correct in its rendering (Smith, s. v.). See CONGREGATION. Like the Greek πανηγυρις or mass-meeting (Smith's Dict. of Class. Antiq. s. v. Panegyris), it signifies "a meeting or solemn assembly of a whole people for the expressing of their joying at a common sanctuary." The phrase "holy convocation" is applied, I. To the Feasts: 1. To the Sabbaths, all of which were "holy convocations" (Lev. xxiii, 2, 8). 2. To the Passover: (a.) its first day (Exod. xii, 16; Lev. xxiii, 7; Num. xxvii, 16); (b.) its last day (Exod. xii, 16; Lev. xxiii, 8; Num. xxvii, 27). 8. To the Pentecost: Feast of Trumpets on the 1st of Tisri, the New Year's day of the civil year (Lev. xxiii, 24; Num. xxix, 1). 5. To the Feast of Weeks or First-fruits (Num. xxvii, 28). 6. To the Feast of Tabernacles: (a.) its first day (Lev. xxiii, 39; Num. xxix, 12); (b.) its last day (Lev. xxiii, 36). 7. As introductory to the enumeration of these feasts (Lev. xxvii, 4), and as closing it (ver. 7). II. To the one great Fast, the annual Day of Atonement (Lev. xxiii, 27; Num. xxix, 7). To the deep solemnities of the "holy Convocation," whether of joy or of sorrow (afflicting the soul), as in the last passage, one great feature is marked, by the converse of, Ye shall do no servile work therein (see all the passages); or more fully in Exod. xii, 18, "No manner of work shall be done in them, save that every man must eat, that only may be done of you." (Such are serious about the Rabbinical opinions of what might be done, and what might not; on these occasions, may find them in Burkitt's Synagoga Judaica, specially ch. xix; the joyous celebrations are described in ch. xxi, and the expiatory in ch. xxv, xxvi; see also Ugozlin Theaur. iv, 986-1052). With this may be compared Strabo's statement (bk. x), "This is a common practice both of Greeks and barbarians, to perform their sacred services with a festive cessation of labor." See SABBATH.

CONVOCATION, a convention of the English clergy to discuss ecclesiastical affairs in time of Parliament. This body grew out of the ecclesiastical councils held in the earlier times. From the time of Edward I, when the Convocation was first assembled in Parliament, it became the practice to hold Convocation at the same time. About the year 1400 it assumed its present form. There was at this time a Convocation for the province of York, and another for that of Canterbury. At the Reformation the king assumed the title of supreme head of the Church. Both convocations were intended to acknowledge the supremacy of the king, but the king, says Strype, made them buckle to at last; and the recognition of his supremacy was made at Canterbury in 1531, and the next year at York. In 1532 the Act of Submission passed: it required the clergy, in the first place, to consent that no ordinance or constitution should be enacted or enforced but with the king's permission; secondly, that the existing constitutions should be revised by his majesty's commissioners; and, thirdly, that all other constitutions, being agreeable to the laws of God and of the land, should be enforced. The bishops demurred, but the king and the commons were against them, and without any form of yield; and in 1534 the submission was confirmed by act of Parliament. Since this period the Convocation can only be assembled by the king's writ; when assembled, it cannot make new canons without a royal licence, which is a separate act from the permission to assemble; having agreed upon canons with the royal licence, they cannot be enacted or take effect until confirmed by the sovereign; nor, lastly, can they enact any canon which is against the law or customs of the land or the king's prerogative, even should he himself consent. Prior to this period, the archbishop of each province could assemble his provincial synod at his pleasure; though,
CONVOCATION

at the same time, the sovereign could summon both provinces by a royal writ (Hook).

England is divided into the two provinces of Canterbury and York, and by the term Convocation is meant the synod or provincial council of those provinces. There are, therefore, two convocations, each independent of the other; but instances have frequently occurred in which they have acted together by mutual consent. Commissioners have sometimes been sent from York to sit in the Convocation of Canterbury, with full power to act on the northwestern counties; and, for obvious reasons, the legislation of the Church of England was virtually in the hands of the southern Convocation. That of York seldom originated any important measure, or persisted long in resisting the decisions of Canterbury. It became at length the faint echo of its more favored sister's voice. The Convocation of Canterbury consists of all the bishops of the province, who constitute the upper house; and of the deans, archdeacons, proctors of chapters, and proctors for the parochial clergy, who compose the lower house. In 1867 the upper house of Canterbury consisted of 21 members of the consistories of York of 7 members; while the lower house of Canterbury had 146 (namely, 24 deans, 56 archdeacons, 24 proctors for cathedral chapters, and 24 proctors for the clergy), and that of York 57 members (6 deans, 15 archdeacons, 7 proctors of the chapters, and 29 proctors for the clergy). As president, the archbishop summons the Convocation to meet at the command of the king. Were he to attempt to assemble a synod by his own authority, he would be subject to a præsumnire, and the proceedings of such synod would be void. Since the Act of Submission the power to summon the Convocation at the commencement of a new Parliament has usually been granted, though from the time of George I. (1714) until recently no business was transacted. It is also the duty of the archbishop to prorogue and dissolve the Convocation, under the direction of the crown. Of late the convocations of Canterbury and York have been revived, and the revival of the Irish Convocation has been strenuously urged, especially by the High-Church party. The decisions of Convocation have no legal force in England. "As essentially interwoven with the State, the Church possesses no independent action; its articles, liturgy, organization as to benefices, etc., are all regulated by Parliament; while its discipline falls within the scope of the ecclesiastical courts; its claims of tribunals against the ministering clergy. The Church, therefore, in its distinct capacity, is left little to do in the way of jurisdiction. It is further urged, as a reason for restricting the power of Convocation, that, being purely sacerdotal, it might be apt to run into excesses, and put forth claims adverse to the prevailing tone of sentiment on religious matters; that, in short, as things stand, it is safer for the public to be under the authority of Parliament than to be subject to the ordinances of a body of ecclesiastics." Chambers, Encyclopaedia, s. v. There is an able article against the revival of Convocations in the Edinburgh Review, 1836, vii. 621; and further information may be sought in the History of Convocation, see Collier, Eccles. Hist. of Great Britain; Wilkinson, Concilia Magnae Britanniae (London, 1737, 4 vols. fol.); Wake, State of the Ch. of England, etc. (London, 1763, fol., containing a large collection of documents on Convocation); Fellowes, Convocation: its Origin, Progress, and Authority (1712) until recent times; Lord Campbell, "Remarks on the Power and Constitution of Convocation" (London, 1852; proposes to establish one Convocation instead of the three [2 English, 1 Irish] then in existence); Lathbury, Hist. of Convocation (London, 1853, 8vo, 2d ed.); London, Manual of Councils, s. v. London; Cardwell, "Documentary Anecdotes" (London, 1844, 2 vols. 8vo); M. Mistral, "Costa de S. Cristian, Remembrancer, Oct. 1854, p. 369; Overall, Convocation Book (Oxford, 1844, 8vo); Palmer, On the Ch. h.

CONVOLUTIONISTS, a term applied to persons who were the subjects of fits, of which they were said to be cured by visiting the tomb of the abbé Paris, a celebrated zealot among the Jansenists. The name was afterwards given to persons who by violence or imposture caused them to work themselves up into the strongest agitations or convulsions, during which they received wonderful revelations, and abandoned themselves to the most extravagant antics that were ever exhibited. They threw themselves into the most violent contortions of body, rolled about on the ground, imitated devils, and sometimes completely exhausted themselves, went off in a swoon. Pinault, an advocate, who belonged to the Convolutionists, maintained that God had sent him a peculiar kind of fits to humble his pride. See Jansenism.

Conybeare, John, D.D., a learned divine and distinguished preacher, was born at Tinboe, Devonshire, in 1592, and was educated at Exeter College, Oxford, of which he became fellow in 1710. In 1724 he became rector of St. Clement's, Oxford, and in 1727 obtained great celebrity by his visitation sermon on subscription. He was appointed rector of his college in 1730, dean of Christ Church two years after, and finally bishop of Bristol in 1750. He died at Bath, July 18, 1772. He published several works of the most important of which are, A Defense of Revealed Religion against the Exceptions of [Tindal's] Christianity as Old as the Creation (London, 1732, 8vo);—Sermons (London, 1757, 2 vols. 8vo).—Darling, Cycl. Bibl. a. v.

Conybeare, William Daniel, dean of Llandaff, was born at his father's rectory, St. Botolph's, Bishopsgate, June 7, 1787. He entered Christ Church College, Oxford, January 1, 1788, and graduated of B.A. in 1808 and M.A. in 1811. Mr. Conybeare was one of the earliest promoters of the Geological Society, and the important services he has rendered to geological science may be seen in his numerous papers printed in the society's "Transactions." In 1839 he was Hampton lecturer, and was made dean of Llandaff in 1845. He died near Portsmouth, Aug. 12, 1857. Besides his numerous writings on geological topics, he published The Christian Fathers during the Anti-Nicene Period (Oxford, 1839, Hampton Lecture, 8vo); Elementary Course of Theological Lectures (London, 1836, sm. 8vo).

Conybeare, W. J., son of the preceding, was a frequent contributor to the Edinburgh Review, especially on ecclesiastical topics. Together with the Rev. J. S. Howitt he published the Life of Paul (London, 1854, 2 vols. 8vo, reprinted in N.Y.; also abridged, 2 vols. 12mo), one of the best works of its class. He died in 1857.

Cook (male, וּבָכָא, tabbak), 1 Sam. ix. 28, 24; female, וּבָכָא, tabbakah, viii, 8, both properly a servant, a person employed in families of rank to perform culinary service. Cooking (בעק, bastek), however, among the Hebrews (at least in early times) was generally done by the matron of the family, even though she were a princess (Gen. xviii. 2-6; Judges xiii. 13); but among the Egyptians and Syrians a man cooked. The cook was a professional character. (See Wilkinson's Ancient Egyptians, i, 174, ad not.) The process of cooking seems to have been very expeditiously performed (Gen. xxvii. 3, 4, 9, 10), and all the flesh of the slain animal, owing to the difficulty of preserving it in a warm climate, was commonly roasted at once, which is the custom of the East at the present day. (See Rosenmuller, Morgenbl., ii, 117; Thomson, Land and Book, ii, 162.) See Food. The Assyrian monuments lately discovered by Layard and Botta contain similar delineations of sumachs cooking over charcoal braziers, and engaged in other culinary operations, often attended by a servant with a fly-spat. See Bake; Crackle.

"As flesh-meat did not form an article of ordinary
diet among the Jews, the art of cooking was not carried to any perfection; and, owing to the difficulty of preserving it from putrefaction, few animals (other than sacrifices) were slaughtered except for purposes of hospitality or festivity. The proceedings on such occasions appear to have been as follows: On the arrival of a guest, the animal, either a kid, lamb, or calf, was killed (Gen. xiii, 7; Luke xv, 20), its throat cutting so that the blood might be poured out (Lev. vii, 26); it was then flayed, and ready either for roasting (יִרְטַח) or boiling (שקָח); in the former case the animal was preserved entire (Exod. xii, 46), and roasted either over a fire (Exod. xii, 8) of wood (Isa. xliv, 16), or perhaps, as the mention of fire implies another method, in an oven, consisting simply of a hole dug in the earth, well heated, and covered up (Burckhardt, Notes on Bedouins, i. 240).

The Paschal lamb was roasted by the first of these methods (Exod. xii, 8, 9; 2 Chron. xxxv, 13). Boiling, however, was the more usual method of cooking, both in the case of sacrifices, other than the Paschal lamb (Lev. vii, 31), and for domestic purposes (Exod. xvi, 26), so much so that לָכְסָךְ, to cook, generally included even roasting (Deut. xvi, 7). In this case the animal was cut up, the right shoulder being first taken off (hence the priest's joint, Lev. vii, 32), and the other joints in succession; the flesh was separated from the bones and minced, and the bones themselves were broken up (Micah iii, 8); the whole mass was then thrown into a caldron (Ezek. xxiv, 4, 5) filled with water (Exod. xii, 9), or, as we may infer from Exod. xxiii, 19, occasionally with milk, as is still usual among the Arabs (Burckhardt, Notes, i, 68), the prohibition being to eat a kid in his mother's milk.

Having reference apparently to some heathen practice connected with the offering of the first-fruits (Exod. 1 c.; xxiv, 26), which rendered the kid so prepared unclean food (Deut. xiv, 21). No cooking was allowed the Jews on the Sabbath (Exod. xxv, 9, 10). The materials for making dough were grass and cow-dung. See FUXI. The caldron was boiled over a wood fire (Ezek. xxiv, 10); the scum which rose to the surface was from time to time removed, otherwise the meat would turn out loathsome (6); salt or spices were thrown in to season it (10); and when sufficiently boiled, the meat and the broth (דרשׂ; Sept. Zowwâ; Vulg. juv.) were served up separately (Judg. vi, 19), the broth being used with unleavened bread, and butter (Gen. xviii, 8) as a sauce for dipping morsels of bread into (Burckhardt, Notes, i, 63). Sometimes the meat was so highly spiced that its flavor could hardly be distinguished; such dishes were called "mammon" (Gen. xvii, 4; Prov. xxiii, 8).

There is a striking similarity in the culinary operations of the Hebrews and Egyptians (Wilkinson's Anc. Egypt. ii, 574 sq.). Vegetables were usually boiled, and served up as potage (Gen. xxv, 20; 2 Kings iv, 35). Fish was also cooked (Luke xiv, 42), probably broiled. The cooking was in early times performed by the mistress of the household (Gen. xvii, 6); professional cooks were afterwards employed (1 Sam. viii, 13; ix, 23). The utensils required were: כָּרָה יִרְטַח (Sept. χαρποδία; Vulg. chaptredes); a cooking range, having places for two or more pots, probably of earthenware (Lev. xi, 85); יַרְטַח בֵּיְגָר (בֵּיְגָר, lebes), a caldron (1 Sam. ii, 14); מָזוֹל (מָזוֹל, emporos; focculum), a large fork or flesh-hook; מַעָּר (ma̩q̱, alis); a wide, open metal vessel, resembling a fish-kettle, adapted to be used as a wash-pot (Ps. ix, 6) or to eat from (Exod. xvi, 9); נַעֲרָא (na̩′ar); דַּעְו (da̩v); נַעֲרָא (na̩′ar), "kallach'ath", pots probably of earthenware and high, but how differing from each other does not appear; and, lastly, נַעֲרָא (na̩′ar), נַעֲרָא (na̩′ar), נַעֲרָא (na̩′ar), "tallack'ath", or נַעֲרָא (na̩′ar), נַעֲרָא (na̩′ar), "telo-k'ith", dishes (2 Kings ii, 20; xii, 13; Prov. xix, 24; A. V. "bosom"). The מַעָּר (ma̩q̱), re'terph (fem. מַעָּרָא), was, according to Genesis, a hot stone, used for baking on; or, as Wiener thinks (in Simonis Lex. p. 926), for cooking milk or broth, by throwing it into the vessel; but
COOKMAN

Seventy regards it as simply meaning live embers. See VICTUALS.

Royal Kitchen of the Ancient Assyrians.

Cook, Charles, D.D., one of the founders of French Methodism, was born in London, May 31, 1787. Skeptical in youth, he was converted at twenty-one, chiefly under the instruction of the Rev. Jacob Stanley. In 1808 he entered the ministry of the Wesleyan Methodist Church in 1817. In 1818 he was sent to France, and commenced his ministry at Caen, in Normandy. He soon acquired a good French style, both in writing and speaking, and became eminently popular and useful as an evangelist. The Sunday-school Society and Bible Society were originated chiefly through the impulse given by him. In numerous evangelical journeys, especially in the south of France, he preached in the Reformed churches with great acceptance, and revivals of religion followed his labors. His administrative talent was very great. Merle d'Aubigné, in a letter to M. Gallienne, president of the French Conference, says that Cook "was to France, Switzerland, and Sardinia what Wesley was in his day to England." He died Feb. 21, 1868.—J. P. Cook, Vie de Charles Cook (Paris, 1863); Stevens, History of Methodism.

Cook, Russell S., an American Congregational clergyman, was born in New Marlborough, Mass., March 6, 1811. After being for a short time in a law-yer's parlor, he died October 18, 1864, at the Theological Seminary at Auburn. In 1836 he was ordained pastor of the Congregational church in Lakeside, Mass. In 1839 he was elected secretary of the American Tract Society, in which office he remained until 1856, when failing health obliged him to retire. He was a regular contributor to the American Messenger, the monthly organ of the society; and to his labors the development of the colportage system was greatly due. After a visit to Europe in 1856, he in 1857 became the secretary of the Sabbath Committee in New York, and in 1888 he added to his work on this committee several weeks of exhausting labor in organizing and energizing the Christian Commission in New York. He died at Pleasant Valley, near Poultney, N. Y., Sept. 4, 1864.—See Annual American Cyclop., for 1864, p. 354.

Cook, Valentine, a Methodist Episcopal minister. He was born in Pennsylvania (date wanting), of pious and cultivated parents; removed early to Western Virginia; was converted in youth; entered Cokosbury College while a boy, where he was one of the four boys placed on the charity foundation, and, after a partial course in 1797, entered the itinerant ministry in 1798. In 1794-7 he was presiding elder on Philadelphia and Pittsburg districts; and in 1798, missionary to Kentucky. In 1799 he took charge of Bethel Seminary, the second Methodist literary institution in America; afterwards was some time principal of Harrodus Academy, and finally removed to a farm near Russellville, Logan Co., Ky., where he resided until his death. In his youth he was very studious and serious, and became in subsequent life a good classical scholar. He had great reputation as an eloquent and effective minister. Many were converted by his preaching, and his influence was widely extended.—Stevenson, Life of Cook (Nashville, 1856, 12mo); Methodist Quart. Rev. April, 1859, p. 183; Geo. Peck, D.D., Early Methodisms (New York, 1850, 12mo, p. 71, 72, 80); Sprague, Annals, vii, 151; Summers, Biograp. Sketches, p. 188.

Cookman, George Grimston, one of the most distinguished Methodist preachers, was born Oct. 21, 1800, at Kingston-upon-Hull, England. His father, a man of wealth and position, was a Wesleyan local preacher, and gave his children a thorough religious training and a careful academical education. In early youth Cookman gave promise of his powers in oratory by speeches at Sunday-school anniversaries, etc., which excited extraordinary interest. When about twenty-one years old he visited America on business for his father, and while at Schenectady, N. Y., he began his labors as a local preacher. In 1821 he returned to Hull, and entered into business with his father, exercising his talents meanwhile zealously in the Wesleyan local ministry. He continued in his father's firm during four years, but with a restless spirit; and finally, deciding to enter the ministry in America, he took passage for Philadelphia in 1825. After laboring there for a time he removed to that city as a local preacher, he was received into the Phil-Iphis Conference in 1826. He continued in the itinerant ranks, without intermission, the remainder of his life, laboring with indomitable energy, and constantly increasing ability and success, in various parts of Pennsylvania, New Jersey, Maryland, and the District of Columbia.

Mr. Cookman was slight, but sinewy in person, and capable of great endurance. His arms were long, which gave a striking peculiarity to his gestures. In the act of public speaking, every nerve and muscle of his lithe frame seemed instinct with the excitement of his subject. In 1838-39 he was chaplain to the American Congress, and the Hall of Representatives at Washington never echoed more eloquent tones than during his chaplaincy to Congress. Several of his distinguished hearers, both in Congress and the executive department of the government, were awakened to a personal interest in religion by his powerful appeals. Imagination was Mr. Cookman's dominant mental faculty. It can hardly be doubted that, had he devoted himself to the production of some work in this rare and difficult department of literature, he might have been the only disciple of the glorious old dreamer of Bedford Jail. On the 11th March, 1841, he embarked in the ill-fated steamer President
COOPER, EZEKIEL

Cooper, Ezekiel, an early and celebrated Methodist preacher, born in Caroline County, Md., Feb. 22, 1736. He joined the Conference in 1758; labored from Boston to Baltimore as a travelling preacher for many years, and was editor and general agent of the Book Concern from 1799 to 1804. His abilities for this office were soon shown to be of the highest order. He gave to the "Book Concern" an impulse and organization which has rendered it the largest publishing establishment in the New World. After managing its interests with admirable success for six years, during which its capital stock had risen from almost nothing to forty-five thousand dollars, he resumed his itinerant labors, and continued them in Brooklyn, New York city, Wilmington, Del., Baltimore, etc., for eight years, when he located. He remained in the latter relation during eight years, when he re-entered the travelling ministry, but was soon afterwards placed on the supernumerary list in the Philadelphia Conference. He continued, however, for many years to perform extensive service, visiting the churches, and part of the time superintending a district. During the latter years of his life he resided in Philadelphia, where he died Feb. 21, 1847. He was distinguished for pulpit eloquence, logical ability, and especially for his multifarious knowledge, which obtained for him among his brethren the title of "the Walking Encyclopedia." He published a "Funeral Sermon" on Rev. John Dickens, and "the Substance of a Funeral Discourse on Rev. Francis Asbury," etc., Philad. 1818. The latter work was a copy of 500 copies, an edition of 325 was sold before the 18th edition was printed. The apologist Paul, in his return from his third missionary journey, passed the night here, after sailing from Miletus. The next day he went on to Rhodes (Acts xxii, 1). The proximity of Cos to these two important places, and to Cnidus, and its position at the entrance to the Archipelago

The 11th of May, 1716, was the election season of Harvard in 1729, and the Harvard Press published a four-page tract defending the Act of Secession (1721); The Doctrine and Practice of Freedom of Conscience in 4 Sermons (1740); and several occasional discourses—Sprague, Annals, i, 298.

Coos [or rather Cos, as it is usually written] was engaged in the Ft. de la Madeleine, and was an important commercial centre. As early as the year 1770, the French had established a fort here. The town was named after the stream flowing through it, the Coos River. The town was first settled in 1770, and was incorporated in 1792. The population was about 1,200 at the time of the first census in 1790. The town is located in the northwestern part of the state, near the junction of the Coos and Nez Perce rivers. It is a trading centre for a large area, and is the seat of the Coos County government. The town is served by a railroad and is connected with the outside world by a good system of roads.
and vol. ii, pt. ii, p. 321–330; but the best description is in Ross (Reisen nach Kos, Halicarnassus, u. w. s. W. Halle, 1862, with which his Reisen auf den Griech. In-
seln should be compared, vol. ii [1843], p. 66–92; vol. iii [1844], p. 186–189)" (Smith). See also the PompeiCy- cleopedia and Smith’s Dict. of Class. Geog. s. v. Cos.

COPE (Lat. copa, Fr. chapé), a sort of cloak, forming part of the sacerdotal vestments in the Roman Church. It was formerly worn by the clergy of the Church of England during divine service, but has fallen into disuse, except on such occasions as a coronation. It reaches from the neck nearly to the feet, and is worn in front, except at the top, where it is fastened by a band or cordon. The Catholic Church of England describes it as a part of clerical dress. See Du Cange, s. v. CopA.

Copitâtes (κοπιτάται, from κοπιάω, to toil), undertakers, grave-diggers; in ancient times a subordinate class of servants of the Church and clergy, intrusted with the care of funerals and the burial of the dead. They are also called «πεπελεκτα, β-πελεκτα, νεκο-κται; or ροσσονομισκος, ροσσοκεφαλος, grave-diggers;» lectionarii, bearers of the bier; and collegiati, deconi, collegiates and deans. The order is supposed to have been first instituted by Constantine, and in some codes they are designated clerici. —Bingham, Orig. Eccl. I, ii, v, 1.

Coping (also called copping), a course of stones, either flat or sloping, to throw off the water, especially used in the walls of Gothic edifices.

Coping (κοπία, te\'phach, a haw\'bread; Sept. τά ρέ πιτα) occurs in 1 Kings vii, 9, as an architectural term for the corbels (mutuli) or projection; in stones in a wall on which the ends of the timbers are laid. See COBEL.

Coponius (Greeked Koptómacos), the first Roman procurator of Judaea, established by Augustus after the banishment of Archelaus (Josephus, War, ii, 8, 1), A.D. 6. He was of the equestrian order (Josephus, Ant. xvii, 1, 1), and was succeeded by M. Ammiarius (ib. 2, 2), A.D. 9. He was probably the same person as Caius Coponius, a praetor, who, having espoused the cause of Pompey, narrowly escaped execution by the triumvirs (Appian, Bell. Civ. iii, 40), but was afterwards exiled from Italy, respect of Brut. Pat. ii, 85), and seems to have held an office in the Imperial mint.—Smith’s Dict. of Class. Biog. s. v.

Copleston, Edward, D.D., Bishop of Llandaff and dean of St. Paul’s, was born at Oswestry, in Devonshire, of which parish his father was at once the patron and incumbent, Feb. 2, 1776. In 1791 he was elected to a scholarship at Corpus Christi, Oxford; and in 1793 he obtained the chancellor’s prize for a Latin poem; and in 1795 he was elected a fellow of Oriole College. In 1797 he was appointed college-tutor, though he had not then taken his degree of M.A. In 1802 he was elected professor of poetry to the University. He published in 1813 the substance of the lectures which he had delivered, under the title of Prelections Academica; a work which gained him a high reputation for elegant Latin composition. In 1814 he was elected provost of Oriole College, and soon afterwards the degree of D.D. was conferred upon him by diploma. His ablest work is An Inquiry into the Doctrine of Necessity and Predetermination, with Notes and an Appendix on the Subject of the Character of Life (London, 1821, 8vo). Between the years 1811 and 1822 he contributed many articles to the Quarterly Review. In 1826 he was appointed dean of Chester, and in 1827 he succeeded Dr. Sumner in the bishopric of Llandaff and deanery of St. Paul’s. He died Oct. 14, 1849. Dr. Whately published, after his death, a work, with Memoires of his Life (8vo). See also W. J. Copleston, Memoirs of E. Copleston, with Selections from his Diary and Correspondence, etc. (London, 1851, 8vo).—English Cyclopaedia, s. v.; North British Review, Feb. 1852; English Review, vii, 245.

Copper (κόππη, neco’s sheeth [whence also properly as an adjective, κόππα, κόπα, bronze, fem. μηλικόππα, neco’khah]; Greek χαλκός) occurs in the common translation of the Bilbo only in Ezra viii, 27 ("two vessels of copper, precious as gold," i.e. probably of a purer kind or more finely wrought than ordinary), being elsewhere incorrectly rendered " brass," and occasionally even "steel" (2 Sam. xxiii, 16; Jer. vi, 12), i.e. hardened as steel; and a temporary expression 'bow of steel' (Job xx, 24; Prov. xviii, 54) should therefore be rendered 'bow of copper,' since the term for steel is μεταλλακτικός, or νόμισμα τό νόμισμα (northern iron). The ancients could hardly have applied copper to these purposes without possessing some judicious system of alloys, or perhaps some forgotten secret for rendering the metal harder and more elastic than we can make it. It has been maintained that the cutting-tools of the Egyptians, with which they worked the granite and porphyry of their monuments, were made of bronze, in which copper was a chief ingredient. The arguments on this point are found in Wilkinson (Anc. Eg. iii, 260, etc.), but they are not conclusive. There seems to be no reason for supposing iron and excellent steel, which has for ages been practised in India, may not have been equally known to the Egyptians. The quickness with which iron decomposes will fully account for the non-discovery of any remains of steel or iron implements. For analyses of the bronze tools and articles found in Egypt and Assyria, see Napier (Ancient Workers in Metal, p. 58). This metal is usually found as pyrites (sulphuret of copper and iron), malachite (carb. of copper), or in the state of oxide, and occasionally in a native state, principally in the New World. It was almost exclusively used by the ancients for common purposes, for which its plastic and durable nature rendered it practically available (see Smith’s Dict. of Class. Ant. & G. s. v. Aes). It is a question whether in the earliest times iron was known. In India, however, its manufacture has been practised from a very ancient date by a process exceedingly simple, and possibly a similar one was employed by the ancient Egyptians (Napier, ut sup. p. 18). There is no certain mention of iron in the Scriptures; and, from the allusion to it as known to Tubal-Cain (Gen. iv, 22), some have ventured to doubt whether in that place מַכְזָר means iron (Wilkinson, Anc. Eg. iii, 245).

The vessels of ‘fine copper,’ mentioned in Ezra viii, 27 (comp. 1 Esdr. viii, 57, ‘vases of Corinthus brass’), were perhaps similar to those of ‘bright brass’ in 1 Kings vii, 45; Dan. x. 6. They may have been of aurichalcum, like the Persian or Indian vases found among the treasures of Darics (Aristot. De Mirob. Auscult.). There were two kinds of this metal, one natural (Serv. ad Ex. xii, 67), which Pliny (H. Nat. xxiv, 2, 2) says had long been extinct in his time, but which Charlin alludes to as found in Sumatra under the name of aurichalcum; the other kind was identified by some with electrum, ἵππος, whence the mistaken spelling aurichalcum), which Bochart (Hieron, vi, ch. 16, p. 871 sq.) considers to be the Hebrew צעום, chazzamal, a word compounded (he says) of מַכזָר (copper), and Chald. מַכזָר (7 gold, Ezek. i, 4, 57; vii, 9). On this substance, see Pausan. v, 12; Plin. xxxii, 4, § 28. Gesenius considers the κοπαλδομον of Rev. i, 15, to be κοπαλος λαμαρος = מַכזָר; he differs from Bochart, and argues that it means merely smooth or polished brass." See AMBER. Many of the ancient copper alloys had to stand working by the hammer; iron could only be had by great toughness or hardness, that we cannot at the present day make anything like it” (Napier, ut sup. p. 54). The Mexicans and Peruvians, when first visited by the
COPPERSMITH

Spaniards, were in possession of tempered implements of copper, and had the means of smelting, refining, and forging this metal. They were also able to harden it by alloying. "The metal used for this latter purpose was tin; and the various Peruvian articles subjected to analysis are found to contain from three to six per cent. of that metal" (Stillman's Journal, ii, 51). See METAL.

Tubal-Cain is recorded as the first artificer in brass and iron (Gen. iv. 22). In the time of Solomon, Hiram of Tyre was celebrated as a worker in brass (1 Kings vii., 14; comp. 2 Chron. ii., 14). To judge from Hesiod (Op. et Dm., 184) and Lucret. (v. 1260), the art of working in copper was even prior to that in iron, probably from its being found in larger masses, and from its requiring less labor in the process of manufacture. Palestine abounded in copper (Deut. viii., 9), the mines being apparently worked by the Israelites (Isa. ii, 1); and David left behind him an immense quantity of it to be employed in building the Temple (1 Chron. xxii., 3-14). Of copper were made all sorts of vessels in the tabernacle and temple (Lev. vi, 28; Num. xvi., 39; 2 Chron. iv., 16; Ezra viii., 27), weapons, and more especially helmets, armor, shields, spears (1 Sam. xvii., 5, 6, 35; 2 Sam. xx., 16), and bows (2 Sam. xxi., 35), also chains (Judg. xix., 21), and even mirrors (Exod. xxxix., 8; Job xxxvii., 18). The larger vessels were moulded in foundries, such as lavers, the great one being called "the copper sea" (2 Kings xxv., 18; 1 Chron. xviii., 8); also the pillars for architectural ornaments (1 Kings vii.). It would, however, appear (1 Kin. v., 14) that the art of copper-casting was, even in the time of Solomon, but little known among the Jews, and was peculiar to foreigners, particularly the Phoenicians, who seem to have imported the material and even wrought articles from a distant quarter (Ezek. xxvii., 18), probably from the Moschi, etc., who worked the copper mines in the neighborhood of Mount Caunesus. Michaelis (Memo. to Enc. iv., 217, 344) observes that Moses seems to have given to copper vessels the preference over earthen (Lev. vi., 28), and on that ground endeavors to remove the common prejudice against their use for culinary purposes. From copper also, money was coined (Ezek. xvi., 98; Matt. x., 9). See BRASS.

COPPERSMITH (χαλκος, q. d. brassier, from χαλκος, copper), a worker in metals of any kind, a smith (Hesych. s. v.); a sense in which the word is used in other Greek writings (Hom. Od. ix., 391). Alexander, an opponent of Paul, is designated as being of this trade (2 Tim. iv., 14). See MECHANIC.

Coptic Church. See COPTS.

Coptic Language, a mixture of ancient Egyptian with Greek and Arabic words, spoken in Egypt after the introduction of Christianity. It is not now a spoken language, having been everywhere supplanted by the Arabic. It has not been spoken in Lower Egypt since the tenth century, but lingered for some centuries longer in Upper Egypt. It is, however, still used by the Copts in their religious services, but the lessons, after being read in Coptic, are explained in Arabic. The Coptic literature consists in great part of lives of saints and homilies, with a few Gnostic works (Chambers, s. v.). It is of interest, and suggesting as giving us a clue to the meaning of the hieroglyphic (q. v.) after they have been phonetically deciphered. It is divided into three dialects, the Memphitic, or Lower Egyptian, which is the most polished, and is sometimes exclusively called Coptic; the Sahlic, or Upper Egyptian; and the Bashambousch, which was spoken in the Delta, and of which only a few remains exist (Penry Cyclopædia, s. v.). See EGYPT. A full list of works on the subject is given by Julowicz, Bibliotheca Egyptiaca, p. 101 sq., 229; also the Supplem. p. 29 sq. See COPTS.

Coptic Liturgy. See Liturgy.

Coptic Version. See Egyptian Versions.

Copts, a denomination of Monophysite Christians in Egypt. Some writers derive the name from Coptic, once a great city in Upper Egypt (Wilkins; Pococke), but it is generally taken as an abbreviation of the word Μωνοψίτος. The native Christians of Egypt chose this name when the Monophysite doctrines became prevalent among them, and they, on this account, fell out with the court of Constantinople. The Monophysites chose their own patriarch, while the imperial court sustained an orthodox patriarch at Alexandria. The Monophysites called themselves Egyptian or Coptic Christians, and gave to their opponents the nick-name of Jacobitae in Latin countries (from Melek, king; see Neander, Ch. Hist. vol. iii).

I. History.—The Copts are not an unmixed race. Their ancestors in the earlier times of Christianity intermarried with Greeks, Nabians, and Alyssians. After the condemnation of Monophysitism by the Council of Chalcedon (A.D. 451), the Copts were opposed so grievously that, from hatred of the Greeks, they facilitated the conquest of Egypt by the Mohammedans. We know from the Arabic historian Macrizi (see below) that at that time there were in Egypt only about 300,000 Jacobites, but several millions of Copts. Persecution and intermarriages with the Moælena greatly reduced these numbers by course of time, and left wasteful many of their churches and convents. It was not until the reign of Mehemet Ali, in the beginning of the 19th century, that they ceased to be a despised race. Some of them have since been raised to the rank of beys. The sad condition of the Coptic Church induced the Church Missionary Society of England in 1825 to send two German missionaries to Cairo for the purpose of awakening them a new spiritual life. They established several schools and a small theological seminary for the training of priests, where, among others, also the present abunas of the Coptic Church was educated. The patronage for schools seemed to be the missionaries, and to aid their efforts for the education of the clergy and the circulation of the Bible, numerous copies of which have been repeatedly supplied by the Bible Society (500 in 1855, at the request of Dr. Tattam). The mission was subsequently transferred to the care of the United Presbyterian Church of the United States, and has since then greatly increased in extent and importance. Several native congregations have been constituted, and have been organized into the Missionary Presbytery of Egypt, in connection with the General Assembly of the Church in the United States. At the General Assembly for 1867 the following statistics of the Presbytery of Egypt were reported: ministers, 9; congregations, 8; families, 46; communicants, 126. Besides a number of valuable missionary-schools, there is a theological school for training theological students in Ossiout. For several years the mission has received a contribution of £1000 annually from the maharajah Dhuleep Singh, besides occasional liberal donations, the maharajah having met his wife in one of the mission-schools at Cairo. The maharajah also presented the missionaries at Cairo with a printing-press, which, up to 1867, has issued a selection of the book of Psalms and 5000 copies of Brown's Short Catechism. The Coptic patriarch instituted a method of teaching children, by a religious society, to read the missionaries, causing their children to be beaten and withdrawn from the schools, and burning all the Bibles and other religious books he could lay hands on. The Mussulman authorities at first countenanced these proceedings, but finally stopped them, in consequence of the representations of the American consular general.

II. Doctrines.—It has already been remarked that the Copts are Monophysites (q.v.). They hold seven sacraments. They postpone the baptism of male children forty days, and that of girls eighty days, and administer it only in church. In case of emergency, they substitute baptism for anointing. They agree with the Greek Church in using trine immersion, and also in the doctrine and administration of the Lord's Supper. Confession among them is rare, and is generally followed by unction. unction in general is used among them very extensively in the case of sickness, and is administered not only to the sick, but also to the by-standers and to the dead. They invoke the saints, pray for the dead, and venerate images and relics, but they reject all sculptured representations except the cross. Their fasts are long, frequent, and rigorous. They observe four Lents—one before Easter, which consists of nine days; one during the Latin Church; a second after the week of Pentecost, which lasts thirteen days; a third after the feast of Assumption, lasting fifteen days; and a fourth before Christmas, which lasts forty-three days for the clergy and twenty-three for the people.

III. Worship.—The liturgies, called after St. Basil, Gregory of Nazianzus, and Cyril of Alexandria (see Liturgy), which are translated into Coptic from the original Greek. They continue to use the Coptic language, though but few persons, even among the priests, understand it. The liturgical books have been translated into Arabic. Readings of homilies from the fathers is generally substituted for preaching. Instead of seasts, the congregations are provided with crutches, on which they rest themselves during the service. One part of the worship is celebrated with the clanger of cymbals, in imitation of David's rejoicing before the Lord. The conducting of the prayers at the altars is done by priests by voices, butlers as careless, if not indecorous. In private, it is said, they abide more strictly than other Orientals by the prescribed daily services, which, in reference probably to David's resolution (Ps. cxix, 164), are seven in number. The full form enjoins the recital of one seventh part of the entire text of the Psalms, but there is a shorter form for the lower classes, containing in each of the seven daily prayers the "Pater" seven, and the "Kyrie Eleison" forty-one times—a string of
notitia Iob [Davenant, 1606], p. 521 sq.,) and the dialects afford little support. According to the Rabbins, it means red corals. The ancient translators were evidently much perplexed to determine whether the word רָנוֹת (Rannot), literally branches; rendered "rubies," Job xxviii, 18; Prov. iii, 15; vii, 11; xx, 15; xxxi, 10; Lam. iv, 7) meant corals or pearls. This will always be doubtful; but the text in Lam. iv, 7, by describing the article as red, suggests a preference of the former. It is scarcely credible, indeed, that such a product should have circulated under two different names (if Rannot also means corals); but surely there is no difficulty in conceiving that one word may have denoted coral generally, while another may have distinguished that red coral which was the most esteemed, and the most in use for ornament (see Gesen- nius, Thes. Heb. p. 1113, 1249).

Branch of Coral.

Coral is a hard, cretaceous marine production, arising from the deposit of calcareous matter by a minute polyzoan animal, in order to form the cell or polypod into whose hollow the tenant can wholly or partially retire. The corals thus produced are of various shapes, most usually branched like a tree. The masses are often enormous in the tropical seas, where they top the reefs and cap the subaqueous mountains, frequently rising to or near the surface, so as to form what are called coral islands and coral reefs (see Kit- to, Fict. Bible, on Job xxviii, 18). These abound in the Red Sea (Walted, Trem. ii, 181; Rippel, Abyssin. i, 140), from which, most probably, was derived the coral with which the Hebrews were acquainted; but coral is also found in the Mediterranean. The coral brought by the merchants of Syria to Tyre must have come from the Indian seas, by the Euphrates and Da- mosaic (comp. Plin. xxii, 2). Coral was in higher esteem formerly as a precious substance than now, probably because the means of obtaining it in a fine state were not so efficacious as those now practised. It is of different colors—white, black, red. The red was anciently, as at present, the most valued, and was worked into various ornaments (Plin. xxii, 11, comp. Hartmann, Hebr. i, 275 sq.). For the scientific classification of corals, see the Penny Cyclopaedia, n. v. Poly- paria. The red variety is the stony skeleton of a compound zoophyte, allied to the sea-anemones of our coasts. It forms a much-branching shrub, the beautiful scarlet colonnade consisting of the solid axis, which is covered during life by a leathery bark, out of which protrude here and there upon the surface

Coral is usually understood to be denoted by the word הָנָּה (Rannot), literally heights, i.e. high-priced or valuable things, or from its upright growth; Sept. μερισωμα, but in Ezek. Ρανον, in Job xxviii, 18; Ezek. xxvii, 18; and this interpretation is not unsuitable (comp. Niebuhr, Brucker, p. 41), although the etymology is not well made out (Parac. De immortalitatia

COR 503

Coral
gloss; for though the son did not give, or even mean to give, his property to the Temple, yet, if he afterwards repented of his rashness, and wished to supply his parent with anything, what he had formerly said precluded the possibility of doing so, for, according to the Pharisaic doctrine, the sacred treasury had a claim upon him in preference to his parents, although he was perfectly at liberty to keep it to himself (see Lightfoot, ii. r. Heb., and Gravis, Annot., in Matt. xv, 5). The law laid down rules for vows, 1. affirmative; 2. negative. By the former, persons, animals, and property might be devoted to God, but, with certain limitations, they were redeemable by money payments. By the latter, persons interdicted themselves, or were interdicted by their parents, from the use of certain things and property in themselves, wine, either for a limited or an unlimited period (Lev. xxvii; Num. xxx; Judg. xiii, 7; Jer. xxxxy; comp. Josephus, Ant. iv, 4; War, ii, 15, 1; see Acts xviii, 18; xxi, 23; 24). See Vow. Upon these rules the traditionists enlarged, and laid down that a man might interdict himself by vow, not only from using for himself, but from giving to another, or receiving from him, a particular object, whether of food or any other kind whatsoever. The thing thus interdicted was considered as corban, and the form of interdiction was virtually to this effect: "I vouch for myself to touch or to concern myself in any way with the thing thou hast interdicted, as if it were devoted for thee," i.e., "I interdict thee"; and the exact formula, בְּנַּכְוֹן וְנַכְוֹן, "[that] has been given [to God], which [in respect to me] is beneficial to thee," of which the Evangelist's כְּפָאָר, כְּפָאָר, כְּפָאָר is possibly a strict rendering, is cited by Schöttgen, Hor. Hebr. i, 186, from the Mishna, Nedarim, fol. 24, 1.) So far did they carry the principle that they even held as binding the incomplete exclamation of anger, and called them בְּנַּכְוֹן, familials. A person might thus exempt himself from assisting or receiving assistance from some particular person or persons, as parents in distress; and, in short, from any inconvenient obligation under plea of corban, though by a legal fiction he was allowed to suspend the restriction in certain cases (Surenhusius, Mischna, de Posit. ii, 14), as annulling the spirit of the law. See OFFERING.

Theophrastus, quoted by Josephus (Ap. i, 22), notices the system, misclassifying it a Phaenician custom, but in naming the word corban identifies it with Judaism. Josephus (War, ii, 9, 4) calls the treasury in which offerings were deposited, חָפַצְוּת, corbanas; and Matthew (xxvii, 6) uses the same word to signify the treasury, saying that the chief priests did not think it lawful to put the money of Judas into it (civ iv εἰς τὸν ἱεροσόλυμα) (Bingham, Orig. Ecc. v, 4, 2). Origen’s account of the corban-system is that children sometimes refused assistance to parents on the ground that they had already contributed to the poor fund, from which they alleged their parents might be relieved. In the early Church, obligations were presented monthly, and they were always voluntarily placed in the treasury. Barcinius thinks this treasury was called corban, i.e., Cyprian uses the word when he speaks of the offerings of the people, rebuking a rich matron for coming to celebrate the Eucharist without any regard to the corban. See ALMS.

Corbē (Xopzē, Vulg. Choraza), one of the captive Jews whose "sons" (to the number of 705) are stated to have returned from Babylon (1 Esdr. v, 12); apparently the Zephôn (q. v.) of the Hebrew lists (Ezra ii, 9; Neh. vii, 14).

Corbel (Fr. corbeille, a basket), in Gothic architecture a projecting stone or timber to bear the superin- cent weight, usually of some architectural member of the structure, as the risa or gruna of an arch.

CORDELIERS

506

CORDELIERS

The most celebrated literary institutions of the Arabs in Spain. It was founded about 800 by caliph Hakem II, and had a student body of 31 in place of the ordinary head-dress was a sign of abject submission." (14.) The "small cords" (σεμιαζων, a rush-rope) used by our Saviour in expelling the traders from the Temple (John xii, 15) were probably the same used for leading the animals for sacrifice and binding them to the altar (2 Par. xxvii, Psa. cxxviii, 27). (15.) The same word is employed in Acts xxvii, 52, "ropes," i.e. cordage, with which the yawl-boats were secured to the ship (q. v.). See RESE.

Among the figurative uses of the word the following are the most striking: (1) To give one's self with a cord was considered a token of sorrow and humiliation (1 Kings xx, 31-33; Job xxxvii, 10). (2.) To stretch a line or cord about a city signifies to ruin it, to destroy it entirely, and to level it with the ground (Lam. ii, 8). (3.) The cords (δεντα) extended in setting up tents furnish several metaphors in the prophetic books (Isa. xxxi, 3; Jer. x, 20). (4.) Hence to "loose one's cord" was a metaphor for dissolving one's comfort and hopes (της, geber, elsewhere "withe"). (5.) "The cords of sin" (Prov. v, 22), metaphorically speaking, are the consequences of crimes and bad habits. (6.) The "silver cord" (i.e. composed of silver thread, or precious metals) is metaphorically supposed to refer to the spinal marrow, to which, as to its form and color, it may not be inaptly compared. (7.) A "three-fold cord" (i.e. one of treble strands) is put as the symbol of union (Eccles. iv, 12, τεσσαρες, acest, elsewhere "thread"). (8.) The "cords of a man," in Hos. xi, 4, are immediately explained as meaning "the bands of love," although some interpreters join this clause to the preceding sentence, and render it "amid the desolations of men," referring to the plagues of Egypt (Hosrely, in loc.). See LINE. For cords of Salk, see SNAKES OF DEATH.

Cordelia, a name given to the Franciscans (q. v.) in France. The name has been supposed to have originated in the war of St. Louis against the Infidels, in which the friars who had repelled the Saracens, and the king having inquired their name, it was answered they were people called cordellia, that is, tied with ropes. See FRANCISCANS.

Cordonniers et Tailleurs, Frères (brothers Shoemakers and Tailors), the title of a religious society founded in France by Henry Michael Buch, a shoemaker, in 1645. They chose as their patron Crispin and Crispinian, two sainted shoemakers. They lived in community, and under fixed statutes and officers, by which they were directed both in their temporal and spiritual concerns. The produce of their labor was put into a common stock to furnish necessaries for their support; any surplus was distributed among the poor. The society became extinct in the French Revolution.

Cordova, an ancient city of Spain (called by the Romans Corduba), seat of a Roman Catholic bishop, and noted for its cathedral church, which is the most beautiful of all Spain. 1. A celebrated Synod of Cordova was held on occasion of the persecution of Spanish Christians from 850 to 859, during the caliphate of Abderrahman II (822-852). A synod was held at the wish of Abderrahman, in order to enjoin moderation upon monks and others who craved martyrdom by provoking the Mohammedans. In accordance with this wish, the council, of which the metropolitan Hostigis of Malaga seems to have been the leading spirit, wrote a self-sought martyrdom. This action met at once with a determined opposition on the part of the rigorists, who called the synod impium conciliaulum. The acts of the council are lost, as it soon came to be generally disowned by the Spanish Church. 2. The School of Cordova, was one of the

CÓRÉ, a dependency of China. It is an extensive peninsula, bounded east by the Sea of Japan, north by the Strait of Corea, west by the Yellow Sea and the Gulf of Leatong; and north by Manchuria. It is governed by a king, who, though tributary to China, exercises virtually an absolute power. The prevailing religion is Buddhism. Confucius also has many followers. The area is about 87,550 English square miles; the population, according to a census of 1798, was 7,342,361, and in 1885 was estimated at 6,500,000. The Roman Catholic missionaries in China and Japan speak of Corea as a "perilous" or "laborious" mission, and describe it as the "nether part of the 17th century. In the 17th century one of the kings of Corea was a patron of the celebrated Jesuit Adam Schall. There seems always since to have been some small number of Roman Catholics in Corea, and in 1800 the total number of Christians was reported to amount to 10,000; but the progress of the Church was prevented by constant persecution. Early in the present century the mission of Corea was placed under the Paris "Congregation of Foreign Missions." The missionaries greatly extol the zeal of the native converts, and report a number of accessions to their Church. Thus, in 1668, the number of catechumens who were admitted to baptism was stated to be 460. A new persecution broke out in February, 1866. Two Roman Catholic bishops and seven priests, all natives of France, were put to death by order of the king for preaching a forbidden religion. Three others succeeded in concealing themselves, one of them being sent to Corea, having been sent by the other two to communicate the sad intelligence. The escaped missionary asserted that there were 50,000 converts in Corea, and that great consternation was produced among them by the fierceness of the persecution. The missionery proceeded to throw the blame of it all upon the French ambassador. In October, 1866, the French undertook an expedition against Corea, demanding the punishment of the three principal ministers who instigated the execution of the missionaries, and the conclusion of a treaty guaranteeing the Christians against future persecutions. The expedition was not successful, and in December returned to Shanghai. Mr. Williamson, the agent of the Scottish National Bible Society, wrote in 1866 from Chefoo, China, that he had visited two Roman Catholic natives of Corea who had come to that port. According to their statement, there are in Corea eleven European priests, who visit from house to house, and who hold mass, and complain that they are not allowed to worship in private houses. They showed a catechism containing a full statement of their faith, in which Mr. Williamson was delighted to find much truth forcibly expressed. They appeared to be ignorant of any distinction between Protestantism and Roman Catholicism, and would have the natives return to them of Jesus, at once saluted him as "the holy father." They agreed to act as the guides of the Rev. J. R. Thomas, who offered to accompany them, on their return to Corea, as the agent of the Bible Society. The mission of the Presbyterian board was first begun in
CORINTH

1844. It now has 25 communicants, 6 native helpers, and 25 pupils in school. In 1885 the Methodist Episcopal Church entered Corea. It has 12 foreign workers, 2 native ordained preachers, 4 communicants, 150 adherents, and 68 pupils. The National Bible Society of Scotland published, in 1885-6, two of the Gospels in Corean.

Corea (Kópia), a fortified place mentioned by Josephus (Ant. xiv, 3, 4) as lying on the northern border of Judea, on the route of Pompey to Jerusalem (War, i, 6, 5), and also visited by Vespasian, who marched in one day thither from Napesiopol, and the next reached Jericho (War, iv, 8, 1). Near this place (φωβός) was situated the fortress Alexandrium (q. v.), where the princes of Alexander Jamnia's family were mostly buried, and whither Herod carried the remains of his sons Alexander and Aristobulus (who were maternaly of that family), after they had been put to death at Sebasto (Joseph. Ant. xiii, 24; xiv, 6, 10, 27; xv, 6, 2, et ult.). The situation of Corea, which determines that of the castle, is not known; but Dr. Robinson (Bib. Researches, iii, 83) conjectures that he may have found it in the modern Kurjep, which is about eight miles S. by E. from Nablous (Shechem), and half an hour N. by E. of Shiloah (Ritter, Erdk. xv, 466). It is small, with no very definite traces of antiquity (Wolcott, in the Bibliotheca Sacra, 1848, p. 72). The similarity of name to that of Beth-she (Xóppia, Joseph. Ant. vi, 22) seems to be accidental. See Enac. Ks. E.

Corethè (Kópia), an episcopal village of Trachonitis (Reland, Palst. p. 218) in the early Church notices (S. Paulo, Geogr. Sac. p. 51); probably the modern Kirahat (Ritter, Erdk. xv, 866), on the southern edge of the Lejah (Porter, ii, 216).

Coriander (Τύ, gat, from the root τύς, to make an incision, referring to the furrows in the seed). The Syriac, Chaldees, and Arabic, with the Sept. and Vulg., render this word coriander (Gesenius, Thesaur. Heb. p. 261), as does our version in Exod. xvi, 13: 'Num. xi, 7, the only passages where it occurs, and in both of which the appearance of mannah is compared to that of its seeds as to form, and in the former passage as to color also. See Manna. According to Dioscorides also (iii, 64) the ancient Carthaginian name for coriander was gat (grof), evidently kindred with the Hebrew gat. Celsius states (Hierob. ii, 78 sq.) that the coriander is frequently mentioned in the Talmud (where it is called שׁוֹרֶב, xasor, or שׁוֹרַב, xasor). It was known to and used medicinally by Hippocrates: it is mentioned by Theophrastus, as well as Dioscorides, under the name of κοτόνιον or κοτινοῦν; and the Arabs, in their works on Materia Medica, give korion as the Greek synonym of coriander, which they call kürak, the Persians kūrahez, and the natives of India (compare Pliny, xx, 82) dàban. It is known throughout all these countries, in all of which it is cultivated, being universally employed as a grateful spice, and as one of the ingredients of curry-powder (see Büsching, Wökenh. Nachr. 1775, p. 42; Bauwolle, Flora, p. 94; Flamand, Natursch. d. ind. Pflanzen 1850). It is also found in Egypt (Proc. Alpin. Res. Ég. ii, p. 156).

It is now very common in the south of Europe, and also in England, being cultivated, especially in Essex, on account of its seeds, which are required by confectioners, druggists, and distillers in large quantities; in gardens it is reared on account of its leaves, which are used in soups and salads (see Pereira's Materia Medica). The coriander is the Coriandrum sativum of botanists, an umbelliferous plant, with a round tall stalk. The flowers are small and pale pink, the leaves are much divided (especially the upper ones) and smooth. The fruit, commonly called seeds, is globular, grayish-white, about the size of a pea, having its surface marked with fine striae. Both its taste and smell are agreeable, depending on the presence of a volatile oil, which is separated by distillation (see Penny Cyclop. s. v.). See Botany.

Corinth (Kópia), occurs Acts xviii, 1; xix, 1; 1 Cor. i, 2; 2 Cor. i, 1, 23; 2 Tim. iv, 20; "Corinthian," subsc. to Ep. to Rom.), a Grecian city, placed on the isthmus which joins Peloponnesus (now called the Morea) to the mainland of Greece. A road rises above it, on which was the citadel, and the Acrocorinthus (Livy xiv, 28). It had two harbors: Cenchrea, on the eastern side, about seventy stadia distant; and Lechaen, on the modern Gulf of Lepanto, only twelve stadia from the city (Strabo, viii, 6). Its earliest name, as given by Homer, is Epigra (Ephiga, Il. vi, 102); and a mysterious legend connects it with Lycurgus, the founder of the hero Bellerophon, to whom a plot of ground was consecrated in front of the city, close to a cypress grove (Pausan. ii, 2). Owing to the great difficulty of weathering Males, the southern promontory of Greece, merchandise passed through Corinth from sea to sea, the city becoming a sort of entrepôt for the goods of Asia and Italy (Strabo, viii, 6). At the same time, it commanded the traffic by land from north to south. An attempt made to dig through the isthmus was frustrated by the rocky nature of the soil; at one period, however, they had an invention for drawing galleys across from sea to sea on tracks. With such advantages of position, Corinth was very early renowned for riches, and seems to have been made by nature for the capital of Greece. The numerous colonies which she sent forth, chiefly to the west and to Sicily, gave her points of attachment in many parts; and the good will, which, as a mercantile state, she carefully maintained, made her a valuable link between the various Greek tribes. The public and foreign policy of Corinth appears to have been generally remarkable for honor and justice (Herod. and Thucyd. passim); and the Isthmian games, which were celebrated there every other year, might have been converted into a national congreugation, if the Corinthians had been less peaceful and more ambitious. When the Achaean league was rallying the chief powers of Southern Greece, Corinth became its military centre; and, as the spirit of freedom was active in that confederacy, they were certain, sooner or later, to give the Romans a pretext for attacking them. The fatal blow fell on Corinth (B.C. 146), when L. Mummius, by order of the Roman
Corinth was a major city in ancient Greece and later in the Roman Empire. It was originally founded as a Greek settlement, but it was later captured by the Romans. After the Roman conquest, Corinth became a major center of trade and politics. The city was known for its luxury and wealth, which attracted many merchants and traders. However, in the years following the Roman conquest, Corinth experienced a decline in its prosperity and influence, eventually falling into obscurity.

In the New Testament, Corinth is mentioned several times. In Acts 18:1-18, the apostle Paul spent a year and a half in Corinth, preaching the gospel and establishing a church. The city was famous for its intellectual and cultural life, and Paul's preaching was met with both enthusiasm and skepticism. The church in Corinth was characterized by a variety of problems, including factions, immorality, and spiritual pride. Paul wrote two letters to the Corinthians, in which he addressed these issues and provided guidance for the church.

Map of Corinth and its Ports
were written (probably A.D. 54), the first during Paul’s stay at Ephesus, the second from Macedonia, shortly before the second visit to Corinth, which is briefly stated (Acts xxv, 8) to have lasted three months. See CORINTHIANS (Epistles to). During this visit (probably A.D. 55) the epistle to the Romans was written. From the three epistles last mentioned, compared with Acts xxiv, 17, we gather that Paul was much occupied at this time with a collection for the poor Christians at Jerusalem. It has been well observed that the great number of Latin names of persons mentioned in the epistle to the Romans is in harmony with what we know of the colonial origin of a large part of the population of Corinth. According to Philo (Opp. ii, 587), it was extensively colonized by Jews. From Acts xviii we may conclude that there were many Jewish converts in the Corinthian church, though it would appear (1 Cor. xii, 2) that the Gentiles predominated. On the other hand, it is evident from the whole tenor of both epistles that the Judaizing element was very strong at Corinth. Party spirit also was extremely prevalent, the names of Paul, Peter, and Apollos being used as the watchwords of restless factions. Among the eminent Christians who lived at Corinth were Stephanas (1 Cor. i, 16; xvi, 15, 17), Crescens (Acts xviii, 8; 1 Cor. i, 14), Caius (Rom. xvi, 23; 1 Cor. i, 14), and Erastus (Rom. xvi, 23; 2 Tim. iv, 20). The epistle of Clement to the Corinthians is among the most interesting of the post-apostolic writings. The Corinthian church is remarkable in the epistles of Paul by the variety of its spiritual gifts, that seem for the time to have eclipsed or superseded the office of the elder or bishop, which in most churches became from the beginning so prominent. Very soon, however, this peculiarity was lost, and the bishops of Corinth take a place co-ordinate to those of other capital cities. One of them, Dionysius, appears to have exercised great influence over many and distant churches in the latter part of the second century (Eusebius, Hist. Eccles. iv, 23). In the year 265 of the Christian era the city was burned by the Goths, and in 323 it was destroyed by an earthquake. During the Middle Ages Corinth shared the fate of many of the cities of Greece in being wrested from the emperors of Constantinople and possessed by a succession of adventurers, and at length formed a part of the duchy of Athens, ruled first by the French, then by the Aragonese kings of Sicily, and finally by the Accolot, a family of Florence, from whom it was taken by Mohammed II in 1460. During a war between the Venetians and the Turks, it was captured by the former in 1687, but was recovered by the Turks in 1715, and held by them until the period of the Greek revolution, when it became the seat of the new government, although taken and retaken more than once during the war. Corinth is still an episcopal see. The cathedral church of St. Nicholas, "a very mean place for such an ecclesiastical dignity," used in Turkish times to be in the Acrocorinthus. The city has now shrunk to a wretched village, on the old site, and bearing the old name, which, however, is often corrupted into Sotira (see Hassel, Handbuch der neuesten Erdbeben, III, i, 673 sq.).

Pausanias, in describing the antiquities of Corinth as they existed in his day, distinguishes clearly between those which belonged to the old Greek city and those which were of Roman origin. Two relics of Roman work are still to be seen, one a heap of brickwork which may have been part of the baths erected by Hadrian, the other the remains of an amphitheatre

with subterranean arrangements for gladiators. Far more interesting are the ruins of the ancient Greek temple—the "old columns which have looked down on the rise, the prosperity, and the desolation of two [in fact, three] successive Corintians." At the time of Whalburg, some of his most famous imagery in the temple was gone. Before 1795 they were reduced to five; and further injury has very recently been inflicted by an earthquake. It is believed that this temple is the oldest of which any remains are left in Greece. There are also distinct traces of the Poseidonion, or sanctuary of Neptune, the scene of the Istamian games, from which Paul borrows some of his most striking imagery in 1 Cor. and other epistles. See GAMS. The fountain of Peirene, "full of sweet and clear water," as it is described by Strabo, is still to be seen in the Acrocorinthus, as well as the fountains in the lower city, of which it was supposed by him and Pausanias to be the source. The walls on the Acrocorinthus were in part erected by the Venetians, who held Corinth for twenty-five years in the 17th century. This city and its neighborhood have been described by many travellers, but we must especially refer to Leake's Moræa, iii, 229-304 (London, 1830), and his Peloponnesicus, p. 592 (London, 1846); Curtius, Peloponnesos, ii, 514 (Gotha, 1812); Sauerwald, Gesch. des Alterthums, i, 427 sqq.; Lortz, Corinth (London, 1858). See also Pauly, Real-Encycl. ii, 645 sqq.; Pott, Prof. gr. in 1 Cor.; Conybeare and Howson, St. Paul, ch. xii. There are four German monographs on the subject—Wilckens, Rerum Corinthiacarum specim. ad illustrationem tria singularis Epistole Paulineum (Bre- men, 1747; also in Oeurch's Collect. Opusc. i, 427 sqq.); Walch, Antiquitates Corinthiae (Jena, 1761); Wagner, Rerum Corinthiacarum specimen (Darmst. 1824); Barth, Corinthiorum Commercii et Mercuriae Historiae particia (Berlin, 1844). For a full elucidation of the history and topography of the city, see Smith's Dict. of Classical Geography, s. v. Corinthian. See ACRAEA.

Corinthian (Koripîs), an inhabitant (Acts xviii, 8; 2 Cor. vi, 11) of the city of Corinth (q. v.).

Corinthian ORDER, the latest developed and the most ornamental of the three orders of Greek architecture. The column (q. v.) is about ten diameters in height and is fluted. The capital is over a diameter of the column in height, has two rows of richly-carved leaves of acanthus, olive, or other plant, from above which protrudes the abacus, surmounted by a capital, and crowned by a moulding, called the abacus. The base is richly moulded. The Corinthian order was largely introduced in the Renaissance architecture, both in ecclesiastical and civil buildings. See Architecture.

Corinthians, First Epistle to the. 1. The testimony of Christian antiquity is full and unanimous in ascribing this inspired production to the pen of the apostle Paul (Lardner's Critical, Works, vol. ii, plur. loc.; see also Heydenreich, Comment, in priorem D. Pauli ad cor. epist. Prolog. p. 20; Schott, Insynope in N. T. p. 236, 239 sqq.). The external evidences (Clem. Rom. ad cor. ch. 47, 48; Polycarp, ad Phil. ch. 11; Ignat. ad Epî. ch. 2; Irenæus, Haer. iii, 11, 9; iv, 27, 8; Athenaeus, De Clar. Or., 61, ed. Col.; Clem. Alex. ; Euseb. H. E. iii, 38; Tertull. de Præst. cum Ordine, 8, iii, 6) are distinct, and with this the internal evidence arising from allusions, undisguised coincidences, style, and tone of thought fully accords (see Davidson, Introd. ii, 225 sqq.).

2. The epistle seems to have been occasioned partly by an intelligence received by the apostle concerning the Corinthian church from the domestics of Chloe, a plous female connected with that church (i, 11), and probably also from common report (exoîrētai, v, i), and partly by an epistle which the Corinthians themselves had addressed to the apostle, asking advice and instruction on several points (vii, 5), and which probably was conveyed to him by Stephanus, Fortunatus, and Achaicus (xvi, 17). Paul, also, who succeeded the apostle at Corinth, but who seems to have been with him at the time this epistle was written (xvi, 15), may have given him information of the state of things among the Corinthians in that city. From these sources it appears that the apostle has become the standing and fact that since he had left Corinth (Acts xviii, 18), the church in that place had sunk into a state of great corruption and error. One prime source of this evil state of things, and in itself an evil of no inferior magnitude, was the existence of schisms or party divisions in the church. 'Every one of you,' 'Paul tells them, 'with Iam of Praæs is my God of departures, and I of Christ' (i, 12). This has led to the conclusion that four great parties had arisen in the church, which boasted of Paul, Apollos, Peter, and Christ as their respective heads. By what peculiarities of sentiment these parties may be supposed to have been distinguished from each other it is not difficult, with the exception of the last, to conjecture. It appears that the schisms arose merely from quarrels among the Corinthians as to the comparative excellence of their respective teachers—those who had learned of Paul boasting that he excelled all others, and the converts of Apollos and Peter advancing a similar claim for themselves, and pretending that they derived all their religious knowledge from the direct teaching of Christ. The language of the apostle in the first four chapters, where alone he speaks directly of these schisms, and where he resolves their criminality, not into their relation to false doctrine, but into their having their source in a disposition to glory in men, must be regarded as greatly favoring this view. (Comp. also 2 Cor. v, 16.)

The few facts supplied to us by the Acts of the Apostles, and the notices in the epistle, appear to be as follows: a schism had existed in the church of Corinth when the apostle himself (1 Cor. iii, 6) in his second missionary journey, after his departure from Athens (Acts xviii, 1 sqq.), had abode in the city a year and a half (ch. xviii, 11), at first in the house of Aquila and Priscilla (ch. xviii, 8), and afterwards, apparently to mark emphatically the factious nature of the conduct of the Jews, in the house of the proselyte Justus. A short time after the apostle had left the city the eloquent Jew of Alexandria, Apollos, after having received, when at Ephesus, more exact instruction in the Gospel from Aquila and Priscilla, went to Corinth (Acts xix, 1), where he preached, as we may perhaps infer from Paul's conduct, in his own manner, or in some manner marked by unusual eloquence and persuasiveness (comp. ch. xii, 4). There is, however, no reason for concluding that the substance of the teaching was in any respect different from that of Paul (see ch. i, 18; xvi, 17). This circumstance of the visit of Apollos, owing to the sensuous and carnal spirit which marked the church of Corinth, appears to have formed the commencement of a gradual division into two parties, the followers of Paul, and the followers of Apollos (comp. ch. iv, 6). These divisions, however, were to be multiplied for, as it would seem, shortly after the departure of Apollos, Judaizing teachers, supplied probably with Jewish devices, entered the extreme party; and the church of the Jerusalem, appear to have come to Corinth, and to have preached the Gospel in a spirit of direct antagonism to Paul personally, in every way seeking to depress his claims to be considered an apostle (1 Cor. xi, 2), and to exalt those of the Twelve, and perhaps especially Peter, occupying that party, which appears to have been characterized by a spirit of excessive bitterness and faction, we may perhaps add a fourth, that, under the name of the "followers of Christ" (ch. i, 12), sought at first to separate themselves from the factious adherence to particular teachers, but were eventually driven by antagonism into positions equally sectarian and inimical to the
unity of the church. At this momentous period, before parties had become consolidated, and had distinctly withdrawn from communion with one another, the apostle writes; and in the outset of the epistle (ch. i. 19) he has his noble and impassioned protest against this fourfold rending of the robe of Christ. This spirit of division appears, by the good providence of God, to have eventually yielded to his apostolic rebuke, as it is noticeable that Clement of Rome, in his epistle to this church (ch. 47), alludes to these evils as long past, and as but slight compared to those which existed in his own time. See Division (in the Church at Corinth).

Besides the schisms and the erroneous opinions which had invaded the church at Corinth, the apostle had learned that many immoral and disorderly practices were tolerated among them, and were in some cases defended by them. A connection of a grossly incestuous character had been formed by one of the members, and gloried in by his brethren (v. 1, 2); lawsuits before heathen judges were instituted by one Christian against another (vi. 1); licentious indulgence was not so firmly denounced and so carefully avoided (v. 3); fastings were observed (vi. 13); the public meetings of the brethren were brought into disrepute by the women appearing in them unveiled (xi. 3-10), and were disturbed by the confused and disorderly manner in which the persons possessing spiritual gifts chose to exercise them (xii-xiv); and, in fine, the dyorh, which were designed to be scenes of love and union, became occasions for greater contention through the selfishness of the wealthier members, who, instead of sharing in a common meal with the poorer, brought each his own repast, and partook of it by himself, often to excess, while his needy brother was left to fast (xi. 29-34). The judgment of the apostle had also been solicited by the Corinthians concerning the comparative advantages of the married and the celibate state (vii. 1-40), as well as, apparently, the duty of Christians in relation to the use for food of meat which had been offered to idols (vii. 18). For the correction of these errors, the remonstrating of these disorders, and the solution of these doubts, this epistle was written by the apostle.

3. The epistle consists of four parts. The first (I-xiv) is designed to reclaim the Corinthians from schismatic contentions; the second (vii-xvi) is directed against the immoralities of the Corinthians; the third (xvii-xviii) contains replies to the queries addressed to Paul by the Corinthians, concerning the comparative advantage of the married and the celibate state which prevailed in their worship; and the fourth (xviii-xviii) contains an elaborate defence of the Christian doctrine of the resurrection, followed in the close of the epistle by some general instructions, intimations, and greetings.

The apostle opens with his usual salutation and with an expression of thankfulness for their general state of Christian progress (ch. i. 1-9). He then at once passes on to the lamentable divisions there were among them, and incidentally justifies his own conduct and mode of preaching (ch. i. 10; iv. 10), concluding with a letter to the Ephesian church (ch. ii. 14). The authoritative visit on his own part (ch. iv. 17-21). The apostle next deals with the case of incest that had taken place among them, and had provoked no censure (ch. v. 1-8), noticing, as he passed, some previous remarks he had made upon not keeping company with fornicators (ch. v. 9-15). He then comments on their evil course of waywardness and worldliness (ch. vi. 1-8), and again reverts to the plague-spot in Corinthian life, fornication and uncleanness (ch. vi. 9-20).

The last subject naturally paves the way for his answers to their inquiries about marriage (ch. vii. 1-24), and about the celibacy of virgins and widows (ch. vii. 25-35). He proceeds to the subject of the lawfulness of eating things sacrificed to idols, and Christian freedom generally (ch. viii), which leads, not unnaturally, to a digression on the manner in which he waved his apostolic privileges and performed his apostolic duties (ch. ix).

He then reverts to and concludes the subject of the use of things offered to idols (ch. x-xi), and passes on to the egocentric character of their behavior in the assemblies of the church, both in respect to women prophesying and praying with uncovered heads (ch. xi. 2-16), and also their great irregularities in the celebration of the Lord’s Supper (ch. xi. 17-24). Then follow full and minute instructions on the exercise of spiritual gifts (ch. xii-xiv), in which is included the notice of the necessity of order in the church (ch. xiii), and further a defence of the doctrine of the resurrection of the dead, about which doubts and difficulties appear to have arisen in this unhappily divided church (ch. xv).

The epistle closes with some directions concerning the contributions for the saints at Jerusalem (ch. xvi. 1-4), brief notices of his own intended movements (ch. xvi. 5-9), commendation to them of Timothy and others (ch. xvi. 10-18), greetings from the churches (ch. xvi. 19, 20), and an autograph salutation and benediction (ch. xvi. 21-24).
CORINTHIANS 512

CORINTHIANS

Greece (chap. xvi, 5; Acts xix, 21), and before the culminating act of mobbing (which cannot in any case be referred to in chap. xv, 32, since the apostle was still in Asia, chap. xvi, 19; and he mentions this incident in his next letter as a special piece of news, 2 Cor. i, 8), that only served to expedite his plan (Acts xx, 1; comp. xix, 29). See Acts. This opinion is further verified by the following coincidences: [chap. i, 1, "Sothenes" here was a Christion, and therefore of the same generation as Paul himself, Acts xviii, chap. i, 11-16; ii, 1; iii, 1-6, 9. Paul had left the Corinthian church in its infancy some time since, and Apollon had visited them meanwhile (Acts xvi, 18; xix, 1); chap. iv, 17, 19; xvi, 10, 11, Paul had just sent Timothy to them, and designed visiting them himself shortly (Acts xii, 22; x, 1, 9); chap. xiv, 22, he had some time previously been violently opposed (ἐφάγεται) at Ephesus (Acts xix, 9); chap. xvi, 1, he had visited Galatia not very long before (Acts xviii, 23); chap. xvi, 5-7, he was about to set out for Macedonia, and thence to Corinth, where he designed to spend the coming winter (Acts xx, 1-9); chap. i, 8, he had still expected to arrive at Ephesus till Pentecost, which stay was prolonged till the uproar about Diana (Acts xix, 22, 23); chap. xvi, 8, 4, he afterwards designed to visit Jerusalem (Acts xix, 21) (chap. xvi, 12, Apollon was at this time in the vicinity of Paul, but was not about to revisit Corinth just yet; Acts, xiv, 1); chap. xvi, 10, Paul was surrounded by the emblems of that city on which Aquila and Priscilla were now settled (Acts xviii, 18, 19, 20). Finally, the subscription (so far as of any authority) agrees with all this (comp. chap. xvi, 17), except as to Timothy, who was then on his way to Corinth (chap. iv, 17; xvi, 10) [for from 2 Cor. vii, 17, 18, it does not necessarily follow that Timothy (even supposing him to be there alluded to) did not visit Corinth till afterwards; and also except to the date at Philippi (the best copies read Ephesus), an error of tradition apparently arising from the fact that Paul was doubtless expecting to pass through (ὑπολείπον) that city (Acts xx, 6). See Timothy. (Comp. Conybeare and Howson’s Life and Epistles of St. Paul, II, 23). The date assigned this epistle by the foregoing particulars is the spring of A.D. 54. The bearers were probably (according to the common subscription) Stephanus, Fortunatus, and Achaicus, who had been recently sent to the apostle, and who, in the conclusion of the epistle (chap. xvi, 17), are formally commended as belonging to the honorable regard of the church of Corinth. For commentaries, see below. Of treatises on special points we may name the following (in Latin): those of Faust on the alleged lost epistle (Argent. 1671); on the schisms of the Corinthian Church, Dorschus (Hafn. 1729), Mosheim (Helmst. 1725), Schongard (Hafn. 1780), Vitrings (Obs. auct. iii, 800 sq.); on “leading about a wife,” Quistorp (Rost. 1602), Witte (Viteb. 1831); on other national aflusions, Olearius (Lips. 1807), Schlegier (Helmst. 1769), Wollo (Lips. 1751). See Paul.

CORINTHIANS, SECOND EPISTLE TO THE. 1. We have seen above that, when writing his first epistle to the Corinthians, Paul expected shortly to visit them, and had indeed formed a detailed plan of the journey. But we may safely infer from 2 Cor. i, 15, 16, 23, that Paul had not been at Corinth between the writing of the first and second epistles, so that we must place the second three days after his arrival at this second epistle, probably on his arrival at Philippi. The place whence it was written was clearly not Ephesus (see chap. i, 8), but Macedonia (chap. vii, 5; viii, 1; ix, 2), whither the apostle went by way of Troas (chap. ii, 12), after waiting a short time in the latter place for the return of Epaphroditus (chap. vii, 15). The bulk of later MSS., and the old Syr. version, positively assume Philippi as the exact place whence it was written; that the bearers were Titus and his associat-
Corinths 513

CORNUTHANS

lon Titus had been sent by Paul to Corinth, partly to collect money in aid of the distressed Christians in Palestine, partly to observe the effect of the apostle's first epistle on the Corinthians. In this expectation of meeting Titus at Troas Paul was disappointed. He accordingly proceeded into Macedonia, where at length his desire was gratified, and the wished-for information obtained (2 Cor. ii. 15; vii. 15 sq.).

"The epistle was occasioned by the information which the apostle had received also, as it would certainly seem probable, from Timotheus, of the reception of the first epistle. It has indeed recently been doubted by Neander, De Wette, and others, whether Timothy, who had been definitely sent to Corinth (1 Cor. iv. 17) by Paul, reached it, or whether he merely reached his destination (comp. 1 Cor. xvi. 10); and it has been urged that the mission of Timothy would hardly have been left unnoticed in 2 Cor. xii. 17, 18 (see Rücker, Comm. p. 409). To this, however, it has been replied, apparently convincingly, that as Timothy is an associate in writing the epistle, any notice of his own mission in the third person would have seemed inappropriate. His visit was assumed as a fact, and as one that naturally made him an associate with the apostle in writing to the church he had so lately visited.

"It is more difficult to assign the precise reason for the mission of Titus. That he brought back tidings of the reception of the first epistle is a fact, and met with a measure of success; but whether he was specially sent to ascertain this, or whether to convey fresh directions, cannot be ascertained. There is a show of plausibility in the supposition of Bleek (Stud. u. Krit. 1830, p. 323), followed more recently by Neander (Planta. u. Lett. p. 487), that the apostle had made Titus the bearer of a letter couched in terms of decided severity, now lost, to which he is to be supposed to refer in chap. ii. 3 (compared with ver. 4, 9); vii. 8, 11 sq.; but, as has justly urged (see Meyer, Einl.-St. p. 3), there is quite enough of severity in the first epistle (consider chap. iv. 19-21; v. 2 sq.; vi. 5-8; xi. 17) to call forth the apostle's affectionate anxiety. Moreover, the supposition of a lost letter is in itself improbable. If it be desirable to hazard a conjecture on this mission of Titus, it would seem most natural to suppose that the return of Timothy and the intelligence he conveyed might have been such as to make the apostle feel the need of further directions to the contentious church one of his immediate followers, with instructions to support and strengthen the effect of the epistle, and to bring back the most recent tidings of the spirit that was prevailing at Corinth.

"The Intelligence brought by Titus concerning the church at Corinth was on the whole favorable. The censures of the former epistle had produced in their minds a godly sorrow, had awakened in them a regard to the proper discipline of the church, and had led to the exclusion from their fellowship of the incestuous person. They had so soon repented, and showed such contrition that the apostle now pitied him, and exhorts the church to restore him to their communion (2 Cor. ii. 6-11; vii. 8 sq.). A cordial response had also been given to the appeal that had been made on behalf of the saints in Palestine (ix. 2). But with all these pleasing symptoms there were some of a painful kind. The anti-Pauline influence in the church had increased, or at least had become more active; and those who were actuated by it had been seeking by all means to overturn the authority of the apostle, and discredit his claims as an ambassador of Christ.

"This led the apostle to compose his second epistle, in which the language of commendation and love is mingled with that of censure, and even of threatening. This epistle may be divided into three sections. In the first (i-iii) the apostle chiefly dwells on the effects produced by his first epistle and the matter therewith connected. In the second (iv-vi) he discourses on the substance and effects of the religion which he proclaimed, and turns from this to an appeal on behalf of the claims of the poor saints on their liberality. And in the third (vii-xii) he vindicates his own dignity and authority as an apostle against the parties by whom these were opposed. The divided state of feeling in the apostle's mind will account sufficiently for the difference of tone observable between the earlier and later parts of this epistle, without our having recourse to the arbitrary and capricious hypothesis of Semler (Disert. de duplice appendice Ep. ad Rom. Hal. 1767) and Weber (Prog. de numero opp. ad Cor. rectius consulendo, Vitenb. 1780), who Paulus shows, as it were, on the first person, that this epistle has been extensively interpoled.

"A close analysis is scarcely practicable, as in no one of the apostle's epistles are the changes more rapid and frequent. Now he thanks God for their general state (chap. i. 8 sq.); now he glances at his purpose to visit (chap. i. 15 sq.); now he alludes to the special directions in the first letter (chap. ii. 8 sq.); again he returns to his own plans (chap. ii. 12 sq.), pleads his own apostolic dignity (chap. iii. 1 sq.), dwells long upon the spirit and nature of his own labors (chap. iv. 1 sq.), his own hopes (chap. v. 1 sq.), and his own sufferings (chap. vi. 1 sq.), returning again to more specific declarations of his labors (chap. vi. 1 sq.), to the faith (chap. vi. 11 sq.), and a yet further declaration of his views and feelings with regard to them (chap. vii). Then again, in the matter of the alms, he stirs up their liberality by alluding to the conduct of the churches of Macedonia (chap. viii. 1 sq.), their spiritual progress (ver. 7), the example of Christ (ver. 9), and passes on to speak more fully of the present mission of Titus and his associates (ver. 18 sq.), and to reiterate his exhortations to liberality (chap. ix. 1 sq.). In the third portion he passes into language of severity and reproof: he severely warns those who presume to hold lightly his apostolical authority (chap. x. 1 sq.); he puts strongly forward his apostolical dignity (chap. xi. 5 sq.); he illustrates his forbearance (ver. 8 sq.); he makes honest boast of his labors (ver. 25 sq.); he declares the revelations vouchsafed to him (chap. xii. 1 sq.); he again returns to the nature of his dealings with his converts (ver. 12 sq.), and concludes most tenderly (chap. xiii. 1 sq.), brief greetings, and a doxology (ver. 11-14).

5. "The genuineness and authenticity is supported by the most decided external testimony (Irenaeus, Hær. iii. 7, 1; iv. 28, 8; Athenagoras, de Rerum p. 61, ed. Col.; Clem. Alex. Strom. iii. 94; iv. 101; Tertull. de Paulis, chap. 15), and by internal evidence of such a kind that what has been said on this point with respect to the first epistle is here even still more applicable. The only doubts that modern pseudo-criticism has been able to bring forward relate to the unity of the epistle, but these are not such as seem to deserve serious consideration (see Meyer, Einl.-St. p. 7).

6. For a further discussion of the separate Commentaries on both epistles, the most important being designated by an asterisk (*) prefixed: Jerome, Commentarii (in Opp. ii. 901; Chrysostom, Homiliae (in Opp. x. 1, 485; transl. in the Library of Fathers, Oxon. 1839, 1848, vol. 4, 7, and 27); Cramer, Ep. ad Cor. (Catenae Graecae Patr. vi); Hugo a Saclier, Comment. in Opp.); Appian, Expositio (in Opp. vii); Zuingler, Annotationes (in Opp. iv); *Calvin, tr. by Tymme, Commentarie (Lond. 1517, 4to); also tr. by Pringle, Commentary (Edinb. 1848, 2 vols. 8vo); Bullinger, Commentaries (Tigur. 1584-5, 2 vols. 8vo); Sarcer, Meditationes (Argent. 1544, 8vo); Meyer, Annotationes (Bernae, 1546, 4to); Major, Emendationes (Amst., 1586, 4to); *Dugan (Gen. 1568, 8vo); Musculus, Commentarius (Bas. 1559, 1562, 1582, 1690, 1611, fol.); Shanenburg, Predigten (Eisleb. 1561-4, 2 vols. fol.); Arelius, Commentaries (Laus. 1579, 8vo; Mor. 1583, fol.); Sta-
The cormorant belongs to the natural order of the *Pelecanidae* of Linnaeus, and the species have the characteristic habit of watching on high cliffs, and, on perceiving a fish in the water, of darting down like an arrow and seizing its prey. The "greater cormorant," however, more frequently shoots along, in a line nearly close to the surface of the water, or, sitting on the wave, dives after the prey. It is trained to fish for man's use in China. It is common on the coasts of Syria and Palestine; Rauwolf saw numbers of them along the sea-washed cliffs of Acre, which he mistook for sea-eagles. The cormorant is a widely-diffused genus, and is found in almost every country in the world. (See the *Penny Cyclopaedia*, s. v. Pelicanidae.)

The large kind weighs about seven pounds, and is nearly of the same size as the goose; it lives upon fish, and has a long, straight, and compressed bill, with the upper mandible black at the point, to confine the prey with the greater security; its head and neck are of a sooty blackness, more resembling in figure those of the goose than of the gull. Its distinguishing character, however, consists in its toes being united by membranes, and by the middle toe being notched like a saw, to assist in seizing its slippery prey. In winter these birds are seen dispersed along the seashore, and ascending the mouths of rivers; they are remarkably voracious, and have such a quick digestion that the appetite appears insatiable. They build their nests on the highest parts of the cliffs that overhang the sea. The female usually lays three or four eggs about the size of those of a goose, and of a pale green color. See Bird.

**Corn.** There are several words thus translated in the English version of the Scriptures, in which it is used in the proper sense of *grain* of any kind, and never in the American application of maize or "Indian corn" (*Zea mays* of Linn.), which it generally thought was anciently unknown. In 1617, Permentier (Newel de Nomenclature d'Hist. Naturelle, vol. xxviii), founding on the silence of Varro, Columella, Pliny, and the other agricultural and botanical writers of classical antiquity, concluded that maize was unknown till the discovery of America; and in 1884 Meyer asserted that "nothing in botanical geography is more certain than the New-World derivation of maize." (Duchartre in Corail d'Hist. Nat.)*

But since then, in the magnificent monograph (Hist. Naturelle du Maïs, 1836), M. Bonsfous, the director of the Royal Garden of Agriculture at Turin, has shown that it is figured in a Chinese botanical work as old as the middle of the sixteenth century—a time when the discoveries of Columbus could scarcely have penetrated to the Celestial Empire; and, what is more conclusive, in 1819 M. Rifaud discovered under the head of a mummy at Thebes not only grains, but leaves of Indian corn. Nor is it at all impossible that the *fūd* of Homer and Theophrastus may include the plant in question. The wide diffusion of this corn through the Indian archipelago, and on the Indian continent itself, is in favor of the hypothesis which claims it as a native of the Old World; and if it was known to the Egyptians, nothing could be more natural than its early introduction into Palestine. See Cereals.

1. The word יִפְגָּן, *yipgan* (from its increase), which is rendered "grain," "corn," and sometimes "wheat" in the Anglo-Vers., is the most general of the Hebrew terms representing "corn," and is more comprehensive than any word in our language, seeing that it probably includes not only all the proper cereals, but also various kinds of pulse and seeds of plants, which we never comprehend under the name of "corn," or even of "pigeon." It may therefore be taken to represent all the commodites which we describe by the different words corn, grain, seeds, peas, beans. Among other places in which this word occurs, see...
Gen. xxvii, 28-37; Num. xviii, 27; Deut. xxviii, 51; Lam. ii, 12, etc. See GRAIN.

2. There is another word, ἔλατον, bar, i.e. (cf. sycamore), which denotes any kind of cleansed corn, that is, corn purified from the chaff and fit for use (Gen. xlii, 35-49; Prov. xvi, 26; Jer. iv, 11; Joel ii, 24). The same word is more rarely used to describe corn in a growing state (Psa. lxxv, 13). It elsewhere signifies the open "fields" or country. See LAND.

3. The word χειμών, che'hen (i. e. grist), which is sometimes rendered corn, denotes in a general sense "provision," and by consequence "corn," as the principal article in all provisions (Gen. ii, 1, 20; Exod. viii, 5; Neh. x, 32, etc.). See VICTUALS.

4. The Greek σιτάρι corresponds to the first two of the above Hebrew words, for which it often stands in the Sept. (Matt. iii, 12; Luke iii, 17; John xii, 24; Acts vii, 12, etc.). See EAT (of corn).

The other words occasionally translated "corn" in the Bible are βρωμή, bell (Job xxi, 6), "prosencer" (Isa. xxx, 24) or "fodder" (Job vi, 5); γεώτροι, ge'o-tróe (Deut. xvi, 13), elsewhere "threshing-floor"; τὸς θημέλιος, kamah (Deut. xvi, 9; Isa. xvii, 5), "standing corn," as often elsewhere; καλακλημένον (John xii, 24), a "grain" of any kind, as elsewhere; and σπόρος (Matt. xii, 1), a "corn-field," as elsewhere; besides kindred or different terms rendered "beaten corn," "standing corn," "ears of corn," "heap of corn," "corn-ground," etc. A single ear is τὸ μακάριον, shikholet; "pounded wheat," τὸ χειμών, ripetekh (2 Sam. xvii, 19; Prov. xxvii, 22). The most common kinds of corn were σιτάρι, ch'elem; barley, τριπλή, tl'pol, sor'ach; spelt, (A. V., Exod. ix, 22, and Isa. xxv, 25, 27); (Ezch. iv, 9, "fitches of sycamore" or "in plur. form τριπλάσια, kussemim;" and millet, τὴν δικαίαν, oata are mentioned only by rabbinical writers. The doubtful word τὸ Χειμών, sor'ach, rendered "principal," as an epitome of wheat, in the A. V. of Isa. xxx, 25, is probably not distinctive of any species of grain (see GEnElius, s. v.).

The different products coming under the denomination of corn are noticed under the usual heads, as BARLEY, WHEAT, etc.; their culture under agriculture; their preparation under bread, food, mill, etc.

"Corn crops are still reckoned at twenty-fold what was sown, and were anciently much more. 'Seven ears on one stalk' (Gen. xii, 22) is no unusual phenomenon in Egypt at this day. The many-cored stalk is also common in the wheat of Palestine, and it is of course of the bearded kind. The 'heap of wheat set about with lilies' (which probably grew in the field together with it) may allude to a custom of so decorating the sheaves (Cant. vii, 7). Wheat (see 2 Sam. iv, 6) was stored in the house for domestic purposes—the 'midst of the house' meaning the part more retired than the common chamber where the guests were accommodated. It is at present often kept in a dry well, and perhaps the 'ground corn' of 2 Sam. xvii, 19, was meant to imply that the well was used. From Solomon's time (2 Chron. ii, 10, 15), i.e. as agriculture became developed under a settled government, Palestine was a corn-exporting country, and her grains were largely t-k'en by her commercial neighbor Tyre (Ezk. xxvii, 17; comp. Amos viii, 5). Plenty of corn was Jacob's blessing (Gen. xxvii, 28; comp. Psa. lv, 13). The 'store-houses' mentioned 2 Chron. xxxii, 28, as built by Hezekiah, were perhaps in consequence of the havoc made by the Assyrian armies (comp. 2 Kings xix, 29); without such protection, the country, in its exhausted state, would have been at the mercy of the desert marauders. Grain crops were liable to τὸ μακάριον, yeraqos, 'mildew' and σπόρος, 'blasting' (see 1 Kings viii, 27), as well as of course to fire by accident or malice (Exod. xxii, 6; Judg. xv, 5). Some good general remarks will be found in Saalschutz, Archiv. d. d. Itur." See HEBRANDET.

Cornariata, the disciples of Theodore Cornheart or Coornhart, secretary of the States of Holland (c. 1590). He wrote against the Romanists, the Lutherans, and Calvinists. He maintained that every religious communion needed reformation, but he said no one had a right to engage in it without a mission supported by miracles. He was known by consequence as the "cornariata," as the principal article in all provisions (Gen. xii, 1; 20; Exod. viii, 5; Neh. x, 32, etc.). See VICTUALS.

The religious position of Cornelius before his interview with Peter has been the subject of much debate. On the one side it is contended that he was what is called a proselyte of the gate, or a Gentile, who, having renounced idolatry and worshipping the true God, submitted to the seven (supposed) precepts of Noah, frequented the synagogues, and submitted himself to the hands of the priests, but, not having received circumcision, was not reckoned among the Jews. In support of this opinion it is pleaded that Cornelius is φωστήριος τῶν θεών (a man fearing God), ver. 2, the usual appellation, it is alleged, for a proselyte of the gate, as in chap. xiii, 16, 26, and elsewhere; that he prayed at the usual Jewish hours of prayer (x, 29); that he read the Old Testament, because Peter refers him to the prophets (x, 49); and that he gave much alms to the Jewish people (x, 22). On the other side it is answered that the phrases φωστήριος τῶν θεών, and the similar phrases ἀλλοτρίῳ and εὐγενεῖς, are used respecting any persons imbued with reverence toward God (x, 35; Luke i, 50; ii, 25; Col. iii, 22; Rev. xi, 18); that he is styled by Peter ἀλλοτριοφόρος (a man of another race or nation), with whom it was unlawful for a Jew to associate, whereas the law allowed to foreigners a perpetual residence among the Jews, provided they would renounce idolatry and abstain from blood (Lev. xvii, 10, 11, 15), and even commanded the Jews to love them (Lev. xix, 33, 34); that they mingled with the Jews in the synagogue (Acts iv, 1) and in private life (Luke vii, 5); that, had Cornelius been a proselyte of the gate, his conversion to Christianity would not have occasioned such a surprise to the Jewish Christians (Acts x, 46), nor would "they that were of the circumcision" have contended with Peter so much on his account (xi, 2); that he is expressly classed among the Gentiles by James (xv, 14), and by Peter himself, when claiming the honor...
of having first preached to the Gentiles (xv, 7); that the remark of the opposing party at Jerusalem, when convinced, "then hath God also to the Gentiles granted repentance unto life," would have been inapplicable upon the very principles of those who assert that Cornelius was a proselyte, since they argue from the tradition of the Mosic Maimonides, admires a sincere proselyte to be in a state of salvation. The other arguments, derived from the observance of the Jewish hours of prayer by Cornelius, and his acquaintance with the Old Testament, are all resolvable into a view of his religious position, which will shortly be stated. The strongest objection against the proselyte theory, that the gate arises from the very reasonable doubt whether any such distinction existed in the time of the apostles (see Tomlin, Elements of Theology, i, 266 sq.). Dr. Lardner has remarked that the notion of two sorts of proselytes is not to be found in any Christian writer before the fourteenth century (Works, vi, 592). See also Jennings' Jewish Antiquities (bk. i, ch. 3). The arguments on the other side are ably stated by Townsend (Chronology. N. Test. note in loc.). See PROSYLITE. On the whole, the position of Cornelius with regard to religion appears to have been in the hands of the church. See Tomlin, Consisting of Gentiles who had so far benefited by their contact with the Jewish people as to have become convinced that theirs was the true religion, who consequently worshipped the true God, were acquainted with the Scriptures of the Old Testament, most probably in the Greek translation, and observed several Jewish customs, as, for instance, their hours of prayer, or anything else that did not involve an act of special profession. This class of persons seems referred to in Acts xiii, 16, where they are plainly distinguished from the Jews, though certainly mingled with them. To the same class is to be referred Candace's treasurer (Acts viii, 27, etc.); and in earlier times the midwives of Egypt (Exod. i, 17). Rahab (Josh. vi, 25), Ruth, Aranabah, the Jebusite (2 Sam. xxiv, 18, etc.), the persons mentioned 1 Kings vii, 41, 42, 43, Naaman (2 Kings v, 16, 17). See also Josephus, Antiq. xiv, 7, 3, and his account of Alexander the Great going into the Temple, and offering sacrifice to God according to the direction of the high-priest (ibid. xi, 8, 5); of Antiochus the Great (ibid. xii, 3, 3, 4), and of Pтолemæus Philadelphus (ibid. xii, 2, 1, etc.). Under the influence of these facts and arguments, we regard Cornelius as having been selected of God to become the first-fruits of the Gentiles. His character appears suited, and he was the most eligible to abate the prejudices of the Jewish converts against what appeared to them so great an innovation. It is well observed by Theophylact that Cornelius, though neither a Jew nor a Christian, lived the life of a good Christian. He was εὐρυπιστημόνας, influenced by spontaneous reverence to God. He practically obeyed the restraints of religion, for he feared God, and this latter part of the description is extended to all his family or household (ver. 2). He was liberal in alms to the Jewish people, which showed his respect for them; and he "prayed to God always," at all the hours of prayer observed by the Jewish nation. Such piety, obedience, faith, and charity prompted him to an imperious attachment, and benefited, and secured to his enjoyment (Psa. xxx, 9; 1, 23; Matt. xiii, 12; Luke viii, 15; John vii, 17). His position in command at Caesarea doubtless brought him into contact with intelligent Jews, from whom he learned the truths respecting the Messiah, and he seems to have been prepared by a personal knowledge of the external facts of Christianity to welcome the message of Peter as of divine authority.

The remarkable circumstances under which the benefits of the Gospel were conferred upon him are too plainly and forcibly related in Acts x to require much comment (see Fæller, Evidences, prop. 2, ch. 5; Niemeyer, Charakter, i, 650 sq.). Neander, Planting and Training, p. 69 sq.). While in prayer at the ninth hour of the day, he beheld, in waking vision, an angel of God, who declared that "his prayers and alms had come up for a memorial before God," and directed him to send to Joppa for Peter, who was then abiding "at the house of one Simon, a tanner." Cornelius sent accordingly; and when his messenger had nearly reached that place, Peter was prepared by the symbolic revelations of a noontday ecstasy, or trance, to understand that nothing which God had cleansed was to be regarded as common or unclean.—Kitto, s. v. This event took place about September, A.D. 32 (see Med. Quart. Rev. 1850, p. 409-401). "On his arriving at the house of Cornelius, and while he was explaining to them the vision which he had seen in reference to this mission, the Holy Ghost fell on the Gentiles present, and thus anticipated the reply to the question, which might still have proved a difficult one for the apostle, whether they were to be baptized as Gentiles into the Christian Church. They were so baptized, and thus Cornelius became the first-fruit of the Gentile world to Christ, publicly recognized as such. Tradition has been busy with his life and acts. According to Jerome (adv. Joenin, l. p. 301), he built a Christian church at Cesarea; and tradition makes his bishop of Scandamisio (Scandamandis ?), and ascribes to him the working of a great miracle (Menyl. groc. i, 129)."

There are monographs on the history of Cornelius in German by Linder (Basel, 1890), Krummacher (Bremen, 1829; transl. Edinburgh, 1-80), in Latin by Basili (Opp. p. 106), in English by Evans (Script. Sib. iii, 809); also in Latin, on his character by Fecht (Rost. 1701), Feuerlin (Altorf. 1736); on Peter's vision, by Deysering (Marb. 1710), Engeström (Lund. 1741); on the effusion of the Spirit, by Goetz (Lubeck. 1712); on his baptism, by the same (ib. 1713); on his prayers, by Michaelis (in the Bibl. Bren. v. 670 sq.); on Peter's sermon, in English, by Taylor (London, 1659). See also Krummacher, Life of Cornelius (Edinb. 1839, 12mo); Journ. Soc. Lit. April, 1864.

Cornelius, bishop of Rome, succeeded Fabianus in that see June 4, A.D. 251. Some of the clergy and people of Rome, not approving of the election of Cornelius because of his controversy with Novatianus about the heretics, when Cornelius was consecrated lenient, chose Novatianus bishop, and three Italian bishops ordained him; he therefore was the first antipope. In October, 251, Cornelius having convened a numerous council at Rome, consisting of sixty bishops and a number of presbyters and deacons, confirmed his election. He did not enjoy his honor long, for he was banished by the emperor Gallus to Civitas Vacchia, where he died (or, according to some accounts, suffered martyrdom) September 14, 252. Ten of Cyprian's letters are directed to Cornelius. There are two genuine letters of Cornelius to Cyprian still preserved among Cyprian's epistles; they are the forty-sixth and fourth, ed. Oberthul. Besides these, Cornelius wrote a long letter to Fabianus concerning the character and conduct of Novatianus, considerable extracts from which Eusebius has preserved (Hist. Eccl. b. vi, chap. xilii.)—Lardner, Works, iii, 74 sq.; Cave, Hist. Lit. i, 80; Wetzer u. Weite, Kirchen-Lex. iii, 879.

Cornelius Agrippa. See AGrippa.

Cornelius a Lapide (Cornelius Cornelihm van den Steen), a learned Roman Catholic commentator, who was born about 1365 at Liege, entered the order of Jesuits, and became professor of Hebrew at Louvain, where he gave exegetical lectures for twenty years. He was then made professor at Rome, where he died March 12, 1657. He wrote commentaries on all the books of Scripture except Job and the Psalms, which are in great esteem, more, how-
ever, from the rich material in the form of citations from the fathers than from any critical skill of his own.
The commentaries on the Pentateuch and the Pauline Epistles are commonly regarded as his best. They were published at Antwerp, 1631 (10 vols. fol.); at Venice, 1730 (11 vols. fol.); and at Lyons (best edition, 1838, 11 vols. 4to).—Wetzer u. Welte, Kirchen-Lex. ii, 679.

Cornelius, Elias, D.D., a Congregational minister, was born in Somers, N. Y., July 8, 1794. He graduated at Yale in 1815. In 1816, after being licensed to preach, he was appointed pastor of the American Board of Commissioners for Foreign Missions. In the spring of 1817 he started on a missionary tour to the Creeks and Cherokee, and then to New Orleans, where he remained until April 2, 1818, when he returned to Boston, visiting the Indian Mission on his way. He was ordained pastor of Tabernacle church in Salem July 21, 1819. In Oct. 1826, he resigned, and entered upon his duties as secretary of the American Education Society. In Oct. 1831, he was elected secretary of the American Board of Commissioners for Foreign Missions. He died Feb. 12, 1882. He published several occasional sermons and useful tracts—Sermons, 1838, 12mo; Edwards, Memoir of Cornelius (Boston, 1834, 12mo).

Corner. The words thus translated in our version of the Bible are the following:

1. ... pin'nah, signifies properly a pin'nacl, as shooting up (2 Chron. xxvi, 15; Zeph. i, 16; iii, 6); hence an angle, properly exterior, as of a house (Job i, 19), of a street (Prov. vii, 8); also interior, as of a roof (Prov. xxvi, 9; xxv, 24), of a court (Ezek. xiii, 20), of a city (2 Chron. xxvii, 24). It is properly metaphoric for a prince or chief of the people (1 Sam. xiv, 38; Judg. xx, 2; Isa. xix, 13). The abbreviated form, ... pen, occurs Prov. vii, 8; Zech. xiv, 10.

2. ... pe'lah, properly the mouth, then the face; hence, generally, a "side" of anything (especially a point of the compass, as on the east side, i.e. eastward, "the four corners" standing for the whole extent), or region, as of the face (parti, Lev. xiii, 41); of country ("corners", Neh. ix, 22, i.e. various districts of the promised land allotted to the Israelites; so "corner of Moab", Jer. xlvi, 15, i.e. that country: and in the plural, "corners" [literally, the two sides] of Moab, Num. xxiv, 17, the whole land). Secondary it denotes the extreme part of anything, as of a field (Lev. xix, 9; xvii, 22), of the sacred table (Exod. xxv, 26; xiv, 20), a couch or divan, the place of honor (Amos iii, 12). The "corners of the head and beard" (Lev. xix, 27; xxii, 5) were doubtless the extremities of the hair and whiskers running around the ears, which the Jews were forbidden to cut or shave off round, like the clipped earlocks (mistranslated "almost corners", Jer. ix, 26; xxix, 22; xlix, 32) of the heathen and the ancient Arabs of the desert (Herod. iii, 8). Illustrations of this fashion are still extant; indeed, Mr. Osburn (in his Ancient Egypt, p. 125) seems to have identified some figures on the Egyptian monuments with the ancient Hittites, one of the very tribes here alleged to be; and who are said to be wearing as beards a helmet or skull-cap of a peculiar form, so as to leave exposed this peculiar national badge. They appear to have had a hideous custom of shaving a square place just above the ear, leaving the hair on the side of the face and the whiskers, which hung down in a plaited lock. Illustrated Ear-looks.

3. ... kakhap', a wing (as elsewhere often), is used in Isa. xi, 12; Ezek. vii, 7, to express "the four corners of the earth," or the whole land.

4. ... kathoph', a shoulder or side (as often elsewhere), occurs in 2 Kings xi, 11, in speaking of the opposite parts of the Temple.

5. ... mitk'dot (literally cut off or bent), an angle, spoken of the external extremities of the tabernacle (Exod. xxvi, 24; xxxvi, 29), and the internal ones of a court (Ezek. xxii, 22; xxvi, 21, 22); also a bend or "turning" of a wall, conventionally applied apparently to the intersection of the internal wall of Jerusalem skirting Mount Zion on the east, with the continuation of that on the northern brow towards the Temple (2 Chron. xxvii, 9; Neh. iii, 12, 20, 24, 25). A kindred form occurs in the last clause of Ezek. xxii, 22, where some render four-square.

6. ... po'adam (literally a step, usually a "time" or instance), spoken of the four corners of the sacred ark (Exod. xxv, 12), and of the brazen laver (1 Kings vii, 30).

7. ... tera'a (literally a rib or side, as often elsewhere), spoken of either extremity of each side of the altar of incense (Exod. xxx, 4; xxxvii, 27).

8. ... kastech', an end (as elsewhere usually), spoken of the four corners of the same (Exod. xxvii, 4).

9. ... sim'eh, spoken of the "corners" of the altar (Zech. ix, 15); fig. of the corner columns of a palace (Psa. exlv, 12, 13; our daughters being as cornerstones'), skilfully sculptured, in allusion probably to the caryatides, or columns, representing female figures, so common in Egyptian architecture (the point of comparison lying in the slenderness and tallness combined with elegance, comp. Cant. v, 15; vii, 8).

10. The Greek word auxia signifies properly an angle, either exterior, as when streets meet, forming a square or the public resort (Matt. vi, 5), or interior, a dark recess, but for secrecy (Acts xxvi, 29). "The four corners of the earth" denote the whole land or world, as in No. i above (Rev. vii, 1; 4 quarters, xx, 8). On the "head of the corner," see CORNER-stone below.

11. The "corners" of the great sheet in Peter's vision (Acts ii, 1) express a different word in the original, topia, which has elsewhere usually the signification of "beginning.

"The ... pe'lah, or 'corner', i.e. of the field, was not allowed (Lev. xix, 9) to be wholly reaped. The law gave a right to the poor to carry off what was so left, and this was a part of the maintenance from the soil to which that class were entitled. Similarly the gleaning of fields and fruit-trees, and the taking of a sheaf accidentally left on the ground, were secured to the poor and the stranger by law (xxiii, 22; Deut. xxiv, 19-21). See GLEANING. These seem to us, amid the sharply defined legal rights of which alone civilization is cognizant, loose and inadequate provisions for the benefit of the poor. But custom and common law had probably ensured the observance (Job xxiv, 10) previously to the Mosaic enactment, and continued for a long but indefinite time to give practical force to the statute. Nor were the 'poor,' to whom appertained the right, the vague class of sufferers whom we understand by the term. On the principles of the Mosaic polity, every Hebrew family had a hold on a certain fixed estate, and could by no ordinary and casual calamity be wholly beggarred. Hence its indigent members had the claims of kindred on the 'corners,' etc., of the field which their landed brethren reaped. Similarly the 'stranger' was a recognized dependent; 'within thy gates' being his impressively descriptive, as sharing, though not by any tie of blood, the domestic claim. There was thus a further security for the maintenance of the right in its
definite and ascertiable character. Neither do we discover in the earlier period of the Hebrew polity, closely detailed as its social features are, any general traces of agrarian distress and the unsafe condition of the country which results from it—such, for instance, as were characteristic of the circumstances of David, a popular leader (1 Sam. xviii, 80; xxii, 11), could only muster from four to six hundred men out of all Judah, though every one that was in distress, in debt, and every one that was discontented, came to him (1 Sam. xxii, 2; xxv, 13). Further, the position of the smooch was a factor further claiming on the produce of the land, but no possession in its soil, would secure their influence as expounders, teachers, and, in part, administrators of the law, in favor of such a claim. In the later period of the prophets their constant complaints concerning the defrauding of the poor (Isa. x, 2; Amos v, 11; viii, 6) seem to show that such laws had lost their practical force. (These two passages, speaking of 'taking burdens of wheat from the poor,' and of 'selling the refuse of the wheat,' i.e., perhaps the gleanings, seem to point to some special evasion of the harvest laws.) Still later, under the Scribes, minute legislation fixed one sixtieth as the portion of a field which was to be left for the legal 'corner,' but provided also (which seems hardly consistent) how the fields should be divided so as to leave one corner only where two should fairly be reckoned. The proportion being thus fixed, all the grain might be reaped, and enough to satisfy the regulation subsequently separated from the whole crop. (This corner was, like the gleaning, tithe free. Certain fruit-trees, e.g., nuts, pomegranates, vines, and olives, were deemed liable to the law of the corner. (Maimonides, indeed, lays down the principle (Constitutiones de donis pauperum, cap. ii), that whatever crop or growth is fit for food, is kept, and gathered all at once, and carried into store, is liable to that law. A Gentile holding land in Palestine was not deemed liable to the obligation. As regards Jews, an evasion seems to have been sanctioned as follows: Whatever field was consecrated to the Temple and its services was held exempt from the claim of the poor; an owner might thus consecrate it while the crop was on it, and then redeem it, when in the sheaf, to his own use. Thus the poor men did not 'get the right to the corner.' This reminds us of the 'Corban' (Mark vii, 11). For further information, see AGRICULTURE. The treatise Puchah, in the Mishna, may likewise be consulted, especially chap. i, 2, 3, 4, 5, 6; II, iv, 7; also the above-quoted treatise of Maimonides.) See HARVEST.

The Corner-Gate (נַחַל הַנַּחַל) of Jerusalem, spoken of in 2 Kings xiv, 13; 2 Chron. xxvi, 9; Jer. xxxii, 38, was one of the gates of the ancient city, in Josephus's "second wall," and between the present sites of Calvary and the Damascus Gate. (See Strong's Harmony and Exposition of the Gospels, Appendix ii, p. 17.) See JERUSALEM.

Corner-Stone (נַחַל הַנַּחַל) Job xxxviii, 6; Isa. xxxviii, 16; Sept. and N. T. εὐαγγελίζω, a quoin or block of great importance in binding together the sides of a building. (On Psa. cxlv, 12, see No. 9 above.) Some of the corner-stones in the ancient work of the temple foundations are 17 or 19 feet long, and 73 feet thick (Robinson, Researches, 1, 5). Corner-stones are usually laid sideways and endways alternately, so that the end of one appears above or below the side-face of the next. At Nineveh the corners are sometimes formed of one angular stone (1 Yeard, Nineveh, ii, 201). The corresponding expression, "head of the corner" (ןַחַל הַנַּחַל), in Psa. cxviii, 22, is by some understood to mean the coping or ridge, "coign of vantage," i.e., toptone of a building; but as in any part a corner-stone must of necessity be of great importance, the phrase "corner-stone" is sometimes used to denote any principal person, as the princes of Egypt (Isa. xix, 13), and is thus applied to our Lord, who, having been once rejected, was afterward set in the highest honor (Matt. xxvi, 42; see Reuel on Ps. xlv, 8). The symbolic title of "chief corner-stone" (ἐντὸς ἐκ τοῦ ἔντυφος) is also applied to Christ in Eph. ii, 20 and 1 Pet. ii, 8, 16, which last passage is a quotation from Isa. xxviii, 16, where the Sept. has the same words. The "corner-stone," or half-underlying buttress, properly makes no part of the wall (cf. Jer. xxiv, 12). It is mentioned in Jer. li, 56; though, as the edifice rests thereon, it may be so called. Sometimes it denotes those massive slabs which, being placed towards the bottom of any wall, serve to bind the work together, as in Isa. xxviii, 16. Of these there were often two layers, without cement or mortar (Bloomfield, Recens. Ægyp. on Eph. ii, 20). Christ is called a "corner-stone," (1) In reference to his being the foundation of the Christian faith (Eph. ii, 20); (2) In reference to the importance and conspicuousness of the place he occupies (1 Pet. ii, 6); and (3) Since men often stumble against a projecting corner-stone, Christ is therefore so called, because the gospel will be the stumbling and gravitated condemnation to those who reject it (Matt. xxii, 44). See STUMBLING-STONE.

The prophet (Zech. x, 4), speaking of Judah, after the return from the exile, says, "out of him came [i.e. shall come] forth the corner [i.e. prince], out of him the nail; primarily referring ultimately to the "corner-stone," the Messiah.

CORNELIUS, CHRISTOPHORUS (KÖRNER), a German divine was born in Friesland in 1518, and was educated under his uncle, Conrad Wimpina, in 1540 he was made professor at Frankfort-on-the-Oder and ecclesiastical superintendent. He sided Andreas in the preparation of the Formula of Concord (see CONCORD), and wrote several works in Biblical literature and theology, now of little account. He died April 17, 1549. Melchior Adam, Vite Eruditorum, i, 315.

Cornet, properly כִּנֶּרֶת, skophar (prob. from כִּנֶּר, to be bright, with reference to the clearness of sound; comp. כִּנֶּר, Psa. vii, 6), Gr. καλλιχρόν, Lat. bucino, a loud-sounding instrument, made of the horn of a ram or of a charger. A reference of some importance to ancient Hebrews for news, for announcing the נַחַל, "jubilee" (Lev. xxv, 9), for proclaiming the new year (Mishna, Sotah Hoshannah, iii and iv), for the purpose of war (Jer. iv, 19; comp. Job xxxix, 25), as well as for the sentinels placed at the watch-towers to give notice of the approach of an enemy (Ezek. xxxix, 4, 5). Skophar is generally rendered in the A.V. "trumpet," but "cornet" is used in 1 Chron. xv, 29; 2 Chron. xvi, 14; Psa. xxxvii, 6; Hos. v, 8. "Cornet" is also employed in 2 Sam. vi, 5, for תֶּרֶף, messanim', sistrum, a musical instrument or rattle, which gave a tinkling sound on being shaken (used in E. rapt in the worship of Isia; see Wilkinson, ii, 283 sq.). Finally, in Dan. iii, 5, 7, 10, 15, for the Chal. (and Heb.) term כַּרְסֵן, a horn (as elsewhere rendered) or simple tube.

Ornamental scholars for the most part consider the skophar and the keren to be one and the same musical instrument; but some Biblical critics regard the skophar as the rams' horn (invariably rendered "trumpet") in the A.V., as belonging to the species of the keren, the general term for a horn (Joel Brill, in preface to Mendelssohn's version of the Psalm). Jahn distinguishes keren, "the horn or crooked trumpet," from chatzatur th, the straight trumpet, an instrument a cubit in length, hollow throughout, and at the larger extremity expanded as much as to resemble the mouth of a short hill" (Archdral. xv, 4, 5); but the generally received opinion is, that keren designates the crooked
horn, and skophar the long and straight one. The cornet properly denotes a shrill wind military instrument of wood, now mostly superseded by the oboe. It was blown with a mouth-piece, and varied in size and tone (Mersenne's Harmonie Universelle). The sounds emitted from the cornet in modern times are exceedingly harsh, although they produce a solemn effect. See Municorn.

Ancient Cornets: a, from Herculesaeum; b, from Calmet.

"The silver trumpets (נִשָּׁף יָדָם) which Moses was charged to furnish for the Israelites were to be used for the following purposes: for the calling together of the assembly, for the journeying of the camps, for sounding the alarm of war, and for celebrating the sacrifices on festivals and new moons (במדבר xix. 32). The divine command through Moses was restricted to two trumpets only, and these were to be sounded by the sons of Aaron, the anointed priests of the sanctuary, and not by laymen. It would seem, however, that at a later period an impression prevailed that 'while the trumpets were used to be sounded only by the priests when the sanctuary, they might be used by others, not of the priesthood, without the sacred edifice' (Conrad Iken's Antiquitates Hebraicae, par. i, sec. viii, 'Saceordatum cum instrumentis ipsoresm')

In the age of Solomon the 'silver trumpets' were increased in number to 120 (2 Chron. v, 12); and independently of the objects for which they had been first introduced, they were now employed in the orchestra of the Temple as an accompaniment to songs of thanksgiving and praise.

"Vobel", בֶּנְבֶל, used sometimes for the 'year of Jubilee' (בָּנָבָל); comp. Lev. xxv, 13, 15, with xxv, 28, 30, generally denotes the institution of Jubilee; but in some instances it is spoken of as a musical instrument, resembling in its object, if not in its shape, the keraim and the skophar. Genesius pronounces gobel to be 'an onomatopoetic word, signifying jubilium or a joyful sound, and hence applied to the sound of a trumpet signal, like רָעָד (alarm, Num. x, 5); and Dr. Munk is of opinion that the word vobel is only an epithet (Palestine, p. 456 a, note). Still it is difficult to divest gobel of the meaning of a sounding instrument in the following instances: When the trumpet בנבאל soundeth long, they shall come up to the mount' (Exod. xix. 13); 'And it shall come to pass when they make a long blast with the ram's horn בנבאל, Joshua vi, 6); 'And let seven priests bear seven trumpets of rams' horns בנבאל, Joshua vi, 6). See JUBILEE.

"The sounding of the cornet (נִשָּׁף יָדָם) was the distinguishing ritual feature of the festival appointed by Moses to be held on the first day of the seventh month, under the denomination of 'a day of blowing trumpets' (נִשָּׁף יָדָם, Num. xxix, 1), or 'a memorial of blowing of trumpets' (נִשָּׁף יָדָם, Lev. xxix, 24); and that rite is still observed by the Jews in their celebration of the same festival, which they now call 'the day of memorial' (נִשָּׁף יָדָם), and also 'New Year' (נִשָּׁף יָדָם). 'Some commentators,' says Rosenmüller, 'have made this festival refer to the preservation of Isaac (Gen. xxii), whence it is sometimes called by the Jews 'the Binding of Isaac' (נִשָּׁף יָדָם). But it is more probable that the name of the festival is derived from the usual kind of trumpets (rām's horns) then in use, and that the object of the festival was the celebration of the new year and the exhortation to thanksgivings for the blessings experienced in the year just finished. The use of cornets by the priests in all the cities of the land, not in Jerusalem only (where two silver trumpets were added, while the Levites chanted the 1st Psalm), was a suitable means for that object' (Morgenland, vol. ii, No. 387, on Lev. xxii, 24).

"Although the festival of the first day of the seventh month is denominated by the Mishna 'New Year,' and notwithstanding that it was observed as such by the Hebrews in the age of the second temple, there is no reason to suppose that it had not as well a name or character in the times of Moses. The Pentateuch fixes the vernal equinox (the period of the institution of the Passover) as the commencement of the Jewish year; but for more than twenty centuries the Jews have dated their new year from the autumnal equinox, which takes place about the season when the festival of 'the day of sounding the cornet' is held. Rabbinical tradition represents this festival as the anniversary of the creation of the world, but the statement receives no direct support from Scripture. On the contrary, Moses expressly declares that the month Aviv (the moon of the spring) is to be regarded by the Hebrews as the first month of the year; 'This month shall be unto you the beginning (נִשָּׁף יָדָם) of months; it shall be the first (נִשָּׁף יָדָם) month of the year to you' (Exod. xii, 2) (Munk, Palestine, p. 184 b). See Year.

"The intention of the appointment of the festival of 'the sounding of the cornet,' as well as the duties of the sacred institution, appear to be set forth in the words of the prophet, 'Sound the cornet (נִשָּׁף יָדָם) in Zion, sanctify the fast, proclaim the solemn assembly' (Joel ii, 15). Agreeably to the order in which this passage runs, the institution of 'the festival of sounding the cornet' seems to be the prelude and preparation for the awful day of atonement. The divine command for that fast is connected with that for 'the day of sounding the cornet' by the conjunctive particle וְ. 'Likewise on the tenth day of this seventh month is the day of atonement' (Lev. xxiii, 27). Here וּכְ (likewise) unites the festival of 'the day of sounding the cornet' with the solemnity of the day of atonement precisely as the same party connects the festival of tabernacles with the observance of the ceremonial of 'the fruit of the hadar-tree, the palm branches,' etc. (Lev. xxiii, 34-40). The word 'solemn assembly' (נִשָּׁף יָדָם) in the verse from Joel quoted above applies to the festival 'eighth day of solemn assembly' (נִשָּׁף יָדָם) (Lev. xxiii, 36), the closing rite of the festive cycle of ‰ (see Marks, Religions Discourses, i, 201-2).

"Besides the use of the cornet on the festival of 'blowing the trumpets,' it is also sounded in the synagogue at the close of the service for the day of atonement, and among the Jews who adopt the ritual of the Sapharim, on the seventh day of the feast of tabernacles, known by the post-biblical denomination of 'the Great Hosannah' (נִשָּׁף יָדָם). See TRUMPET.
CORONA

animals, or angels richly carved in the hollow, constituted the predominant feature. With the Renaissance the classical cornice returned.

Corona (Lat.), the lower member of a classical cornice. The horizontal surface of it is called the scul. English ecclesiastical writers often have applied the term corona to the semicircular apsis of a church.

Coronati, (I.), "a name of the ancient clergy, supposed to have been given to them in consequence of their shaven crowns. But Bingham and others have shown that the tonsure, as used by the Romanists, did not exist at the time of the introduction of this epitaph. The custom was to cut the hair to a moderate degree simply for the sake of decent appearance, and especially to avoid conformity to the existing fashion of wearing long hair. St. Jerome says that none but the priests of Isis and Serapis have shaven crowns. The term coronati might be given to the clergy out of respect to their office and character, which were held in great honor. It was customary, in addressing bishops, to use some words of respect, such as per corona, and per coronam vestram; and the allusion may be to the corona, or mitre, which the bishops wore as a part of their priestly dress; or it may be considered as a metaphorical expression, denoting the honor and dignity of the episcopal order."—Bingham, Orig. Eccle. vi, iv, 17.

(II.) A title traditionally given to four martyrs—Severus, Severianus, Carphophorus, and Victorinus—so named because, it is said, they were killed, in 804, by having corona with sharp nails pressed into their heads. A church erected at Rome in their honor is mentioned by pope Gregory I, and still exists. They are commemorated in the Church of Rome on Nov. 8; the Acts of their martyrdom are spurious. See Wetzer u. Welte, Kirch.-Lex. ii, 880.

Corporal (corporale, sc. retinum), the linen cloth which is spread over the symbols after communion. It is so called from being originally intended to represent the sheet in which our Lord's body (corpus) was wrapped after death. It is of linen with reference to Luke xxiii, 55. Originally it was so large as to cover the host and wine, hence the name corpus (Ghurbo), but in the Middle Ages it received its present smaller size. It was retained by the English Reformers.—Herszog, Real-Encyk. iii, 153; Wetzer u. Welte, Kirch.-Lex. ii, 881.

CORPORAL INFLECTIONS. 1. In all ages, among the Israelites, beating was the commonest form of bodily chastisement known in civil offences (Deut. xxv, 2), e. g. in cases of a team of different sorts of beasts (I. e. the driver as well as the person sitting in the wagon), forty blows were inflicted (Mishna, Chal. viii, 3). See Bastinado. The delinquent probably received the strokes from a stick (comp. Prov. x, 18; a rod of "scorpions" is named in 1 Kings xii, 11, 14; 2 Chron. xi, 14, either a thorny, knotty staff [comp. scorpion in Job, xiii, 17; 28; but see Gesenius, Thes. p. 254], or one set with pointed projections [Gesen. Thes. p. 1062], probably an unusual severity), in a prostrate attitude (not on the soles of the feet, as in the modern East, Arvieux, iii, 198), and in the presence of the judge (comp. Wilkinson, ii, 41; Rosellini, ii, 5, p. 274); but not over forty stripes (Deut. xxv, 3). The later Jewish inflection (see the Mishna, Macoth) was expressed by means of the back of thong (whip), and the blows, not exceeding thirty-nine in number (Macoth, iii, 10; compare Josephus, Ant. iv, 8, 21; 2 Cor. xi, 24), were dealt by the officer of justice (779) upon the culprit, who stood bent forward (Macoth, iii, 12). In the cases in which this punishment was applied were sometimes such as were deemed a capital offence by the Mosaic law (Macoth, iii, v, 15). That scourging was also in vogue in the synagogue is evident from the New Test. (Matt. x, 17; xxiii, 34), where there seems to be an allusion to the threefold sentence that prevailed in that ecclesiastical court (Lightfoot, Hor. Heb. p. 382); yet the Talmudists are not agreed whether forty blows could be inflicted in any case (Sanhedr. i, 2). See SYNAGOGE.

Scouring in capital cases (Acts v, 29) was a penalty in the power of the Sanhedrin; an increase of severity being employed in instances of repeated offence (Sanhedr. ix, 5; see Wendt, De debitis rectitudinis, Erlangen, 1824). See COUNCIL. Under the Syrian rule chastisement with the lash occurs as a form of torture (3 Macr. vii, 1; comp. Juvenal, xii, 197; Cicero, Cluent. 63). See FLAGELATION. The Roman scouring (φαραγγελλων, παραγγελων) with thongs was inflicted on Jesus before crucifixion (Matt. xxix, 26; John xix, 1), and on the apostles as a civil penalty (Acts xvi, 22, 67); but Roman citizens could only be beaten with rods (σενοσεβον, Cicero, Verr. v, 66; comp. Acts xxii, 20). That this punishment might be carried to a fatal extent is evident (Cicero, Verr. v, 64; Pluto, Opp. ii, 528); it was generally applied with fearful severity by the Roman governors (Josephus, War, v, 5, 5). See SCOURGE.

2. Physical injuries committed upon a free Israelite were to be avenged by retaliation upon the author (Exod. xxi, 23 sq.; Lev. xxiv, 19 sq.). See DAMAG.

8. Of foreign corporal inflections we may here enumerate the following: (1) Partial dichotomy, or the cutting off of the nose and ears, also of the hands or one of them, which species of punishment was often practised among the later Jews, but chiefly in tumultuous times (Josephus, Lrfs, 30, 34, 85). A similar maiming of the toes occurs among the Canaanitish inciidents (Judg. i, 7). In Egypt such mutilations were sanctioned by law; and it was usually the member through which the offence had been committed that was cut off (Diod. Sic. 1, 78); the adulteress plate her crime by the loss of the nose (so as to spoil her countenance), a penalty to which Ezek. xxiii, 25, is usually referred, a passage, however, that rather relates to Babylonian usage. (On the Persian custom, see Xenophon, Anab. 1, 9, 12; Curtius, v, 5, 6; vili, 5, 40. An allusion to dichotomy occurs in the Behistun inscription; see Rawlinson's explanation, p. 9, 17.) On captives in war such disfigurements were and still are (Russegger, Reine, ii, 138) most recklessly perpetrated. (2) Blinding (?d2) was a Childream (Jer. iii, 11; 2 Kings xxv, 7) and ancient Persian punishment (Herod. vii, 18). See Eye. It still prevails in Persia with regard to princes, who are sometimes thus deprived of all prospect to the succession; vision is not entirely obliterated by the process employed in such cases (Chardin, v, 245; Rosenmüller, Morgell, iii,
CORPORATION

250 sq.; a different treatment is mentioned by Proco-
plus, in Phot. Cod. 63, p. 32). The extinction of the
eyes (22622, Pers. 2152, 22182) is a practice frequent in Persia
(Ctesias, Pers. 5), is named in Judg. xvi, 21, as a piece of
Philistine barbarity, in 1 Sam. xi, 12, the same
sacrifices appears to have obtained with the Ammonites.
See Punishment.

C. Corporation, Ecclesiastical. (Corpus Eccles.
siasticum), an association for ecclesiastical purposes
sanctioned by the state and recognised as a civil per-
son (corpus). Among the usual rights of corporations
are those to acquire property, to contract obligations
and debts, to sue and to be sued. Their legal status
may be regulated either by general law or by applying to all
 corporations of a certain class, or by special laws given
for the benefit of one corporation only.—Wetzer u.
Weihe, Kirchen-Lex. ii, 881.

Corps (Corps, gen. y'ayak), Neh. iii, 8, a carcase, as
rendered in Judg. xiv, 8, 9, elsewhere "body" (2266,
pe'ger, 2 Kings xix, 38; Isa. xxxviii, 6, a "carcase"
or "body" [usually dead], as elsewhere rendered; pi'ayak, Mark vi, 29, a dead "body" or "carcase," as
elsewhere rendered), the dead body of a human being.
See Body.

Corpus Catholicorum (body of the Catholic)
formerly the collective name of the Roman Catholic
states of Germany, as contradistinguished from the
Corpus Evangelicum (q. v.) of the Protestant states.
It was not until after the treaty of Westphalia, where-
in the pope had, by settling, so to say, the rights of
both parties, officially recognised their existence, that
the expression Corpus Catholicorum came into general
use. Yet the confederation had existed before the
Corpus Evangelicum, as is proved by the harmonious
action of the Roman Catholic states at the Diet of
Nuremberg and the decisions of the Confederation of
Ratisbon (1624). The elector of Mayence was the Presi-
dent of the Corpus Catholicorum, which generally held
its proceedings in a convent of that city in which the
diet happened to meet. The abolition of the German
Empire in 1806 led to the extinction of the Corpus
Evangelicum and, as a consequence, of that of the
Corpus Catholicorum.—See Faber, Europaische Staats-
Centrale, who, in vol. iii, p. 297, gives a complete list
of all the constituting the Corpus Catholicorum, Moses,
Teutsche Staats- Recht, etc.; and Corpus Evan-
gelicum.

Corpus Christi (body of Christ), a festival insti-
tuted in the Roman Church in honor of the consecrated
host and of transubstantiation. It owes its origin to
a nun of Liége named Juliana. In 1290, while look-
ing at the full moon, she said she saw a gap in its orb,
and, by a revelation from heaven, learned that the
moon represented the Christian Church, and the gap
the want of a certain festival—that of the adoration
of the body of Christ in the consecrated host—which
she was to begin to celebrate, and to announce to the
world. Further, in 1294, while a priest at Bolsena,
who had been examining some sources of the transub-
stantiation, was going through the ceremony of benediction,
it is said drops of blood fell on his surplice, and, when he endeavored
to conceal them in the folds of his garment, they formed
bloody images of the host! A bloody surplice is still
said to be shown at Civita Vecchia. Urban IV pub-
lished in the same year a bull, in which he appointed
the Thursday of the week after Pentecost for the cele-
bration of the Feast of Corpus Christi throughout Chris-
tendom, and promised absolution for a period of from
forty to one hundred days to the penitent who took
part in it. It was afterwards neglected, but was re-
established by Clement V, and since that time the fes-
tive observance of the Most Holy Body of Christ has
been the most important in the Roman Church. Splendid
processions form a part of it. The children belonging to the choir
with flags, and the priests with lighted tapers, move through
the streets in front of the priest who carries the
host in a precious box, where it can be seen under a
 canopy held by four laymen of rank. A crowd of
common people closes the procession.—Elliott, De-
lineations of Roman Church, bk. ii, ch. vii; Hunger, Hand- 
d. Chrl. Alterthümere, and references there given
and for the Romanish view, Butler, Feasts and Fastes, trea-
tise xi.

Corpus Doctrinae, the name given to certain
collections of writings which were intended to have
authority in the Protestant churches of Germany. The
most important of these collections are the following: 1.
Corpus Philippinorum, also called Corpus Philippi-
mis (published in 1560, fol. and often). It contained
the three general symbols (the Apostolic, Niceman,
and Athanasian), the Confession of Augsburg (the Inca-
ratae) and the Apology, and Melanchthon's Locci Com-
manes, Examen Ordinariarum, and resp. ad artis. Sa-
turc. It was considered as crypto-Calvinistic, and
violently denounced by the rigorous Lutherans. The
Elector of Saxony, in 1569, threatened with deposition
all who refused to teach in accordance with it, but
subsequently this decree was repealed, and a number
of defenders of the work were tried and imprisoned.
2. The Corpus Doctrinae Pomeranicae in a similar man-
ner, and in some contests as the preceding one. 3. The Corpus Doctrinae
Prusiana (Prussian), also called Repetitio doctrinae ec-
clesiasticae, was published in 1567, and directed against
the Osiandrian errors. A decree of the prince, in 1567,
prescribed it as a rule of faith for all times to come,
and declared that none who refused to accept it should
receive office.

Corpus Evangeliciorum (body of the Evangelical),
formerly the collective name of the evangelical
states of Germany. The first league was made be-
tween Saxony and Hesse in 1526. Other evangelical
states followed, and at the Protestantation of Spires in
1529, the Corpus Evangelicum was organized. In the
Nuremberg religious peace in 1522, it entered as such
in relation with the Corpus Catholicorum (q. v.). The
head-quarters of the latter were in the electorate of
Mayence, while Saxony stood at the head of the evan-
gelical states. At the close of the sixteenth century,
Frederic III, elector of the Palatinate, having become
Protestant, became head of the Corpus Evangelicum,
but after the conclusion of the Treaty of Passau in
1648, when the Thirty Years' War, Sweden took the lead, which was, however,
restored to Saxony by the Diet of 1658. After the elec-
torial house of Saxony, the arrangements had become Romanist, the lead of
the Corpus Evangelicum was claimed by several other
Protestant states; yet it remained finally with Saxony, however, stipulated that the envoy
of Saxony should receive his instructions, not from the
elector, but from the college of the privy council at
Dresden. The Corpus Evangelicum ended with the
suspension of the German empire in 1806.—Herzog,
Real-Encyklop. iii, 156; Bilow, Deber von u. Verf.
des Corp. Evang. (1780).

Corpus Juris Canonici, a collection of the
major part of the canon law of the Roman Catholic
Church, consisting of old canons, resolutions of coun-
cils, decrees of popes, and writings of Church fathers.
The collection gradually arose from the desire to have
for the decision of ecclesiastical cases a law—book of
equally general authority as the Corpus Juris Civilis
possessed in the province of civil legislation. Its component parts were originally compiled in strict im-
litation of the Corpus Juris Civilis.

1. Component Parts.—Generally recognized as parts of
the Corpus Juris Canonici, and constituting what is
called the Corpus Juris Civilis, are the Decretum
Gratiani (1151), the decretales of Gregory IX (1254),
the Liber Pontificalis (1146), and the Clementinas (1818). Disputed is the authorship
of the two collections of Excolagenses of pope JohnXXII
(1340) and of the Excolagenses Communis (1454).
CORPUS JURIS CIVILIS

Generally regarded are now the 47 Canones pontificiales taken from the Summa de Casibus Consistentia of cardinal d' Asti ("Summa Astasiensis"), and the Canones Apostolorum, both of which were, in the earlier editions of the Corpus Juris Civilis, given as an appendix to the Decretum Gratian. The same is the case with the Institutiones Juris Civilis, and with the Liber Septimus of Peter Mathews of Lyons.

II. The Formation of the Collection.—The name of Corpus Juris Civilis was early given to the Decretum Gratian, in distinction from the Corpus Juris Civilis. But from the tenth century it became customary to apply the name to the collection of the law-books above enumerated. Printed editions of the collection with the title of Corpus Juris Civilis do not occur before the sixteenth century. Among those who are most noted for spending critical labor on the editing of the Corpus Juris Civilis are Anthony Demoulin (ed. Paris, 1560, 6 vols. fol.), with glosses, who completed the indefinite renderings in the headings of the Decretum by more accurate statements; Charles Dumoulin, or (as he called himself with a Latin name) Car. Molinusa (Lyons, 1564, 4to, and 1563, fol.), who designated the several passages in the Decretum (with the exception of the Pseudo) with notes; Le Conte, or Contius (Antw. 1569-1571, 4 vols. 8vo), who from older unprinted collections added, in particular in the decretales of Gregory IX, the partes decies which had been suppressed by Raymond of Pennafort; the Correctores Romani (q. v.). A new work (Roma, 1562, 6 vols. fol.) is a turning-point of the history of the Corpus; the brothers François and Pierre Pitou, whose valuable notes were used by Le Pelletier in his edition (Paris, 1567; again Lpz. 1690 and 1705; and Turin, 1746, 2 vols. fol.); Justus Henning Böhmer (Halle, 1747, 2 vols. 4to); Aem. Lud. Richter (Leips. 1688-1689, 1 vol. in 2 parts, 4to), who added the complete collection of all the legal authority. For fuller information on the component parts of the Corpus Juris Civilis, and for their legal authority, see article Canon Law (p. 87 sq.). See also Wetzer u. Weite, Kirchen-Lex. ii, 886.

Corpus Juris Civilis (body of Civil Law). See Justinian.

Correctores Romani, a congregation of cardinals and Roman theologians of thirty-five members, especially cited in the Decretal Geminiani (see Corpus Juris Civilis). Among the five cardinals who belonged to the college was Hugo Concompagnus (subsequently pope Gregory XIII). The work was completed during the pontificate of Gregory XIII, who ordered the compilers to index all that had been collected, with regard to the decrees, by the congregation and by others, to invite all Catholic academies to co-operate in the work of revision, and to have all the former editions of the decrees compared. Gregory sanctioned the work July 1, 1580.—Wetzer u. Weite, Kirchen-Lex. ii, 891.

Corrodi, Heinrich, a prominent writer of the Rationalistic school, was born at Zurich, July 81, 1732. He was admitted to the ministry in 1775; continued his theological studies in Leipsic and Halle, where especially Semler (q. v.) had great influence upon him, and was in 1786 appointed professor of ethics and natural law at the gymnasium of Zurich. This position he retained until his death, Sept. 14, 1793. His principal works are Geschichte des Chiliasmus (4 vols. Frankf. and Leipzig, 1798, 4to; 2 vols.; 2 vols.; Versuch über Gott, die Welt u. d. Mensch. Seelen (Berlin, 1788), and the periodical Beiträge zur Beförderung der Abgeschaffung des Judenthums in d. Religion (18 numbers, Winterthur, 1781-1794; two numbers appeared after his death under the name of Neues Beiträg.)

Corruption (prop. some form of γράφουσα, skachōs, ἀπαρτίον). This term is used in Scripture to signify the putrefaction of dead bodies (Psalm xvi, 10), the blemishes which rendered an animal unclean for sacrifice (Lev. xxii, 20), sinful inclinations, habits, and practices, which defile the mind (Rom. vii, 18, 24; 2 Peter ii, 19), everlasting ruin (Galat. vi, 8), men in their mortal and imperfect state (1 Cor. xv, 49, 50).

Mount of Corruption (Ἀργυροῦ ἔρημος, Sept. ὅσος τοῦ Μούχας τ. Βορίας, Vulg. mons omnifrustin). a hill in the neighborhood of Jerusalem, where Solomon had established the worship of the Ammonite deity Milcom, which Josiah overthrew (2 Kings xxiii, 15). Tradition assigns the locality of the "Mount of Olives" to the eminence immediately south of the Mt. of Olives (see Barclay, City of the Great King, p. 64 sq.; Stanley, Palestine, p. 185, note). See Jerusalem.

Corruptior, a sect of Monophysites, who taught that the body of Christ before the resurrection was corruptible. See Monophysites; Severians.

Cortes, Donoso. See Donoso Cortez.

Cortholt, Christian, an eminent Lutheran church historian, was born at Burg, in the island of Fennem, Denmark, Jan. 13th, 1582. His studies, commenced at Schleswig, were continued in the universities of Tostock, Jens, Leipsic, and Wittenberg. In 1662 he became professor of Greek at Rostock, where he was made D.D. He was afterwards called to the professorship of theology at Kiel by the duke of Holstein-Gottorp, and in 1668 became vice-chancellor of that university. He died March 81 (or April 1st), 1694. His principal works are: De persecutione ecclesiae primum prot. imperatorum etiam Christianorum (Jena, 1661; 4to); Kilien. 1689); Paganus obcettorator s. de calendariis gentilium (lib. iii, Kili. 1698; Lubec, 1708, 4to); Disquisitiones Anti-Baronum (Lib. 1700, 1708, etc.); Hist. eccl. N. T. (Lib. 1697), etc. See Flügel, Memoria Theologorum nostrarum et extrarum inserentur (Lips. 1785, 571 sq.); Bayle, Dictionary, s. v.; Iselin, Hist. Württ.; Schröck, Hist. 1, 173); Herzog, Real-Encyclop. viii, 32.

Corvey, Abbey of, a celebrated monastery near Höxter, in Germany. The Benedictines of Corbie (q. v.), in Picardy (France), sent out in 816 a colony to found a convent in the forests of Sollingen, but the monks removing thence in 842 to a more peaceful site there established Corvey, or Corvey. Louis the Pious endowed them with numerous possessions and privileges, and his example was followed by many other princes and laymen, so that Corvey soon became the richest of all the German convents. The abbey obtained a voice in the diet, and was amenable only to the papal authority. The school of the convent was highly flourishing during the 9th and 10th centuries. Among the many celebrated men who proceeded from Corvey was Ansgar (q. v.), the apostle of the Scandinavians, with his eminent associates and pupils, St. Adalbert, archbishop of Magdeburg, and many archbishops of Bremen and Hamburg. At the period of its greatest prosperity the convent had twenty-four theological professors, and its library was celebrated for its large number of classical manuscripts. Thus the first five books of Tacitus, which were commonly regarded as lost, were found in Corvey. Unfortunately, this exquisite library was destroyed in the Thirty Years' War. In 1794 Corvey was erected into a bisch. opic, but secularized in 1804, and joined in 1807 to Westphalia, and in 1815 to Prussia. See Wigand, Gesch. d. Abtei Corvey (Höxter, 1819); and Kurscheische Geschichtequellen (Lpz. 1841); Schumann, Ueber das Chromicum Corvey (Göttingen, 1835); Wetzer u. Weite, Kirchen-Lex. ii, 896.

Corvinus, Anthonius (properly Rübenzer), one of the German Reformers, was born at Wurzburg in 1001.
He became a monk, and as such resided for a time in the convents of Riddagshausen and Loccum, but having embraced the doctrine of Luther, was expelled in 1528. He then went to Wittenberg, and thence to Marburg in 1529, and laid the foundation of the university there. He was present at the two synods of Pattensen, 1541, and Münden, 1545, and made himself very useful to the cause by his preachings, writings, and travels; but the duke Erich II having returned to the Roman Church, Corvinus was taken and held a prisoner at Kalenberg in 1549. He died in Hanover in 1575. His principal work is the Postilla in evangelica et epistolas. See Baring, Leben Corvin's (Hann. 1749); Uhlnhorn, Ein Sendbrief v. Antonius Corwinus m. einer biographischen Einleitung (Göttingen, 1853); Herzog, Real-Encyclop., iii, 166.

COS

(Cosme, see Cosmo, Cosmae, Cosmas, Coss, Cosmico, Cosmo). Son of Elmodam, and father of Addi, ancestors of Christ, and descendents of David in the private line, according to Salathiel (Luke iii, 29), S.C. ante 588. He is not mentioned in the Old Testament. See Genealogy (of Christ).

Cosin, John, a learned prelate of the Church of England, was born at Norwich Nov. 20, 1594. In 1624 he became a prebendary of Durham, in 1628 rector of Brancepath, in 1634 master of Peter-house, and in 1640 dean of Peterborough. The Puritans deprived him of his prebend for opposing the Composing Oath, and even went the length of impeaching him on a charge of being inclined to popery. (For the charges, see Hook, Eccles. Biog. iv, 182.) He was acquitted of all these charges, and then retired to France, where he remained until the restoration of Charles II, who raised him to the see of Durham, Dec. 5, 1660, which office he filled with eminent charity and zeal. He died Nov. 1, 1672. Among his writings are, A History of Transplantation, and A Scholastical History of the Canon of the Holy Scriptures, published with his Life, 1673. His whole works are collected in the Library of Anglo-Catholic Theology (Oxford, 1842-53, 5 vols. 8vo).

Cosmas, Sr., and his brother St. Damianus, of Arabia, lived in the 4th century, and practiced medicine at Gaza, in Cilicia. The gospels of Lysiass commanded that they, with their three other brothers, should sacrifice to the heathen deities, and as they refused so to do, commanded their heads to be cut off in 303. They are honored as martyrs, and as special patrons of physicians and druggists. They are commemorated in the Roman Calendar on the 27th Sept. Wetzer u. Wele, Kirchen-Lex., ii, 902; Acta Sanctorum (Sept., tom. xii).

Cosmas and Damianus, Order of, an order of knights spiritual, founded in the 11th century, who adopted the rule of St. Benedict. They devoted themselves especially to the care of the pilgrims going to Palestine. They were destroyed by the Turks soon after their organization.

Cosmas Indicopleustes (i.e. traversing India), an Egyptian monk, living probably about the middle of the 6th century. He visited as a merchant Egypt, India, and other Eastern countries, and wrote a work, entitled Χριστιανική ποροτρια, in which he undertook to substitute for the pagan geography of the ancients the New Christian system of geography, based upon all kinds of delusions. His work is contained in the second volume of Montfaucon's Collectio nova patrum Gr. (Paris, 1707).

Cosmology (from κόσμος, the world, and γένεσις, generation), strictly the science of the origin of the earth. The term is applied also to the various theories of the formation of the material universe. If we except the theories of the Indians (which is for the most part extravagant and even monstrous, although the "Institutes of Menu" speak of a simpler system; see Sir William Hamilton's Asiatic Researches, vol. 1, the earliest profane cosmogony extant is that of Herodotus (in the first part of his Thucydides, ver. 116-482), which is delivered in verse, and which served as the ground-work for the various systems of the late Greek philosophers. It differs widely from the notion of Homer (Hliad, xii, 205), which is also poetic, and represented the more popular view of the Greeks on this subject. The first prose cosmogonies among heathen writers were those of the early Ionic philosophers. Of these the Anaximenes, Anaxagoras, and Anaximenes were the most celebrated. The theories of the ancients on this subject may be reduced to three; for those of moderns, see Creation; for the view of Ovid (in his Metamorphoses), see Chaos.

1. That which represents the world as eternal in form as well as substance. Oceillus Lucanum is one of the most ancient philosophers who supposed the world to have existed from eternity. Aristotle appears to have embraced the same doctrine. His theory is, that not only the heaven and earth, but also animate and inanimate beings in general, were without beginning. His opinion rested on the belief that the universe was necessarily the result of a causal evolution. That, such as the Divine Spirit, which, being at once power and action, could not remain idle. Yet he admitted that a spiritual substance was the cause of the universe, of its motion and its form. He says positively, in his Metaphysics, that God is an intelligent spirit (soul), incorporeal, immovable, indivisible, the mover of all things. According to him, the universe is less a creation than an emanation of the Deity. Plato says the universe is an eternal image of the immutable Idea or Type, united, from eternity, with changeable matter. The followers of this philosopher both developed and distorted this idea. Ammonius, a disciple of Plotinus, taught in the 3rd century, at Alexandria, or the eternity of God and the universe. Several ancient philosophers (as also moderns) have gone further, and taught that the universe is one with Deity. Of this opinion were Xenophanes, Parmenides, Melissus, Zeno of Elea, and the Megarit sect.

2. The theory which considers the matter of the universe eternal, but not its form, was the prevailing one among the ancients, who, starting from the principle that out of nothing nothing could be made, could not admit the creation of matter, yet did not believe that the world had always been in its present state. The primary state of the world was the subject to a continuous expansion of uncertain movements, which chance afterwards made regular, they called chaos. The Pythagoreans, Babylonians, and also the Egyptians, seem to have adhered to this theory.

The Chaldean cosmogony, according to Berosus, when divested of allegory, seems to resolve itself into this: that darkness and water existed from eternity; that Belus divided the humid mass, and gave birth to creation; that the human mind is an emanation from the divine nature. The cosmogony of the ancient Persians is very clumsy. They introduce two eternal principles, the one good, called Ormacedra, the other evil, called Arminass; and they make these two principles contends with each other in the creation and government of the world. Each has his province, which he strives to enlarge, and Mithras is the mediator to moderate their contentions. This is the most inartificial plan that has been devised to account for the existence of evil, and has the least pretensions to a philosophical basis. To the Egyptian cosmogony, according to the account given of it by Ptolemy, seems to bear a strong resemblance to the Phoenician, as detailed by Sanchoniatho. According to the Egyptian account, there was an eternal chaos, and an eternal spirit united with it, whose agency at last arranged the discordant materials, and produced the visible system of the universe. The cosmogony of the Northern nations, as may be collected from the Edda, supposes an eternal
COSMOGONY

priortotheprincipioftheworkofthefellowship:the
Orphic Fragments state everything to have existed
in God,and to proceed from him."The ancien poet
who handshadown to us the old mythological
verses,representsthe firmament as spring-
ingforth without the assistance of the Deity.
Hesiod feignsthaeppen was the parent of Erebos
and Night, from whose union sprang the Air (Aíósi
and the Day. He further relates how the sky
and the stars were separated from the earth, etc. The
system of atoms is much more famous. Leucippus
and Democritus of Abdera were its inventors.
The atoms,or indivisible particles, saidthey, existed
from eternity, moving at hazard, and producing,
by their constant meeting, a variety of substan-
ces. After having given rise to an immense variety
of combinations, they produced the present organization
of bodies. This system of cosmogony was that of
Epicurus, as described by Lucretius. Democritus
attributed atoms to form and size; Epicurus added
weight. Many other systems have existed, which
must be classed under this division. We only men-
tion that the Stoics, who admitted two principles,
used the term atomos, both corporeal, and spiritu-
al, for they did not admit spiritual beings. The first
was active, the second passive.

3. The third theory of cosmogony attributes the
origin of the world to a great spiritual cause or
Creator. This is the doctrine of the sacred Scriptures, in
which the creation is united with the greatest dignity and
beauty. From its being more or less held by the
Etruscans, Magi, Druids, and Brahmins, it would seem
to have found its way as a tradition from the regions
in which it was possessed as a divine revelation.
Anaxagoras was the first who taught among the
Greeks, and to the extent adopted by the Romans,
notwithstanding the efforts of Lucretius to establish
the doctrine of Epicurus." Dr. Good, however, shows
that this view was far from general among even the
most cultivated nations of antiquity, or, indeed,
unquestioned by early Christian writers (Book of Nature,
p. 27). See Cosmology.

COSMOGONY, MORAVIC, or the Biblical account of
the origin of the world, especially as contained in the
first chapter of the book of Genesis. The following is
a close translation of the first (Elohist) or general
account of the creation as given by Moses (Gen. i, 1-
11). See Genesis.

At first God created the heavens and the earth but
the earth was chaos and darkness was her (a scene of
darkness was upon the face of the abyss, while the Spirit of
God brooded upon the face of the waters. Then God said,
let there be light and there was light. God saw the
light, that it was good: so God divided between the light
and the darkness; and God called the light Day, but
the darkness he called Night. Thus (there) was evening
and there was morning—(the) first day.

Then God said, 'let there be a firmament in the midst
of the waters, and let it be a divider between the waters
(below it) as to the waters (above it)'; so God made the
firmament, and divided between the waters that are
underneath as to the firmament, and the waters that are
abovehand as to the firmament; for it was accordingly;
and God called the firmament Heavens. The
firmament was evening, and there was morning—(the)
second day.

Then God said, 'Let the waters underneath the heavens
be gathered together into one place, and let the dry
land appear'; and it was accordingly; and God called the
dry land Earth, but the gathering of the waters he called
Sea; so God saw that it was good. Then God said,
'Let the earth sport the sproat (grasses), the plant (annuals) seedling seed;
the fruit-tree (of woody stems) bearing fruit after its kind— in
which (be) its seed after its kind, and in the
fruit-bearing tree—in which (be) its seed after its
kind, and the tree bearing fruit—(which) was the
first day, and there was evening, and there was morning—(the)
third day.

Then God said, 'Let there be light in the firmament of
the heavens, to divide light from the darkness, and to rule
over the day and over the night, and to divide between the light
and the darkness. And God saw that it was good; and God
spake there was evening, and there was morning—(the)
fourth day.

Then God said, 'Let the waters swarm with the swarm
of the living creature, and let the bird fly upon the earth—
upon the face of the firmament in the space of the
divided great sea, monsters, and every living creature
that creep (with) which the waters swarmed, after its kind; also
every winged thing (of the) air, after its kind; so God
said; and it was good: and God blessed them, saying, 'Be fruitful
and multiply, and fill the waters in the seas; and let the bird mul-
tiply on the earth, and (there) was evening, and (there)
was morning—(the) fifth day.

Then God said, 'Let the earth bring forth the living
creature after their kind, cattle and creeping things, and
beasts of the earth, and every winged thing of the
air, after their kind; so God said; and it was accordingly; for
God made the living thing of the earth after its kind, and
the beast after its kind, and every reptile of the ground after
its kind: so God saw that (it) was good. Then God said, 'Let
us make man in our image, according to our likeness
(thesame exact reflection of the divine [mental] formations);
and let him have dominion over the fish of the sea, and over
the bird of the heavens, and over all the earth, and
over every reptile that creepeth upon the earth;' so God
created mankind in his own image, in the image of God be
he created him, (yet) male and female he created them;
and God blessed them, when God said to them, 'Be fruitful,
and multiply, and fill the earth, and subdue it; and rule
over the fish of the sea, and over the bird of the heavens,
and over every living thing (that) creepeth upon the earth.'

For God said, 'I have given to you every green seed
which is upon (the) face of all the earth, and every tree
in which (be) the fruit of a tree seedling seed; to you it
shall be for food. And to every living thing (in) every
tree of all the earth, and to every bird of the heavens,
and to every thing (in) every tree (in) every tree (in)
earth in which (be) a living creature, (even) every
green plant for food.' And it was accordingly; so God
said every thing (that) he had made, and lo! (It) was very
good: thus (there) was evening, and (there) was morning—
in the sixth day.

Now were finished the heavens, and the earth, and the
all their army (of stars); for God blessed the seventh day his work
which he had made, and (therefore) ceased on the seventh
day from all his work which he had made. Then God blesses the
seventh day and sanctified it: by saying, 'The seventh day
(ahabôth, rested) from all his work which he had created.

The statements contained in this passage are thought
by a certain class of semi-Infidel philosophers to be in
conflict with the conclusions of modern astronomy
and physical science. We are sure, how-
ever, that the works and word of God can never be
otherwise than in harmony, and if any conflict ap-
ppears, it must be in consequence of the unskilfulness
or erroneous system of the expounders, either
the book of nature or of revelation. The difficulty
consists in the alleged contradiction between the
logical "interpretation" of the sacred record and the
scientific or historical exposition of the facts. In
this, as in similar instances of apparent discrepancy, it
is no disparagement of philology that it is obliged to
modify previous interpretations on account of new
light from collateral branches of knowledge; the same
course has always been pursued, e. g., in the verifica-
tion of prophecy, where history has necessarily come
in as a supplementary aid in fixing a definite mean-
ing to what before was dark and general. This, it is
true, would not be allowable if the scriptural state-
ments in question were explicit and in detail, or if
they were couched in the precise terms of modern sci-
ence; but it is a legitimate method of interpretation
in the case of such brief and popular phraseology as
we often find in the Bible on subjects adverted to for
collateral purposes. It is therefore only necessary to
show that the essential meaning of the text, when
explained according to the language of the ancients
and the evidence of the lexicon, is not inconsistent
with the conclusions of late scientific investigators.
See Interpretation.

There are three principal modes in which this ad-
justment has been attempted with regard to Mo-
na's account of the world: 1st, the Elopistic or First
Chapter of Genesis as a general statement of the origi-
inal formation of all created things, including that of
man as a race, in the several varieties scattered over
the earth's surface; and chap. ii as a detailed account of a subsequent creation of the Adamic or Hebrew lineage in particular. It cannot be denied that the difference in language (especially the distinctive use of the titles "Jehovah" and "El Elohim"), and the resumptive form of the latter chapter, somewhat favor this view; but, on the other hand, it is emphatically forbidden by the doctrine of the unity of the human race (and "man"

is in both cases alike called (2 Thess.); and after all it leaves essentially untouched the principal question of the reconciliation of the Mosaic order and date of creation with the geologic ages suggested by the evidence. See ADAM.

(2.) Others regard the several "days" of the scriptural narrative as periods of indefinite extent, and so find time enough for the astronomical and geological cycles required. See EARTH. But this interpretation is met by two objections: (a) Although the term παντά, day, is sometimes used in a vague sense for a longer or shorter period of time, such a signification here is forbidden by the distinct recurrence of the divisions "night and morning" stated in connection with each νύνιον or space of twenty-four hours; and the Sabbath comes in as a similar space of time at the close of the week, in a sense probably strict and literal, since it is made the basis of the hebdomadal cycle religiously observed ever since. (b) The exact number of six such periods cannot be made out satisfactorily from the records of science: e.g. the astronomical system requires the sun at the outset of the demiguric period, whereas Moses does not introduce it till the fourth day, although light had existed from the first; and the lowest geological strata exhibit animal life, whereas Moses speaks of vegetables as created first. See GEOLOGY.

(3.) Perhaps the best solution of the difficulty is that which inserts the entire geological period between the original creation of matter in ver. 1 of Gen. i, and the literal account of the last, or, properly, Moses creating the present race of living things detailed in verses 11-31; the intermediate verses (2-10) describing phenomenally, i.e. just as the facts would have appeared to a spectator, the gradual restoration of mundane order, after the grand cataclysm that closed the geological period, and swept off the terrestrial tribes then existing; and chap. ii, resuming the account, ascribed to further divisions, especially with reference to the formation of Eve. See CREATION.

For a more general exposition of the Hebrew views on this subject, see COSMOLOGY.

Cosmological Argument. See God; Natural Theology.

Cosmology, Biblical. The views of the Hebrews on this subject are, in a scientific point of view, confessedly imperfect and obscure. This arises partly from the exterior objects which led them to the study of natural science, and still more from the poetical coloring with which they expressed their opinions. The books of Genesis, Job, and Psalms supply the most numerous and, as the two latter, the most poetical, and their language must be measured by the laws of poetical expression; in the first alone have we any thing approaching to a historical and systematic statement, and even this is but a sketch—an outline—which ought to be regarded at the same distance, from the same point of view, and through the same religious medium as its author regarded it. The act of creation itself, as recorded in the first chapter of Genesis, is a subject beyond and above the experience of man; human language, derived, as it originally was, from the sensible and material world, fails to find an appropriate means for expressing the idea of "creation" and the Hebrew berah, though most appropriate to express the idea of an original creation, are yet applicable and must necessarily be applicable to other modes of creation; nor does the addition of such expressions as "out of things that were not" (I.e. oE b3ov, 2 Sam. vii, 25), or "not from things which appear" (μη 3 δοξαω, Heb. xi, 5) contribute much to the force of the declaration. The absence of a term which shall describe exclusively an original creation is a necessary infirmity of language: as the event occurred but once, the corresponding term must, in order to be adequate, have been coined for the occasion and reserved for it alone, which would have been impossible. The same observation applies, though in a modified degree, to the designation of the various periods of the universe, as well as to the existence of original matter. Moses viewed matter and all the forms of matter in their relations primarily to God, and secondarily to man—as manifesting the glory of God, and as designed for the use of man. In relation to the former, he describes creation with the special view of illustrating the divine attributes of power, goodness, wisdom, and accordingly he throws this narrative into a form which impresses the reader with the sense of these attributes. In relation to the latter, he selects his materials with the special view of illustrating the subordination of all the orders of nature, and of the need of subjection to the necessity of man. With these objects in view, it ought not to be a matter of surprise if the simple narrative of creation omits much that scientific research has since supplied, and appears in a guise adapted to those objects. The subject itself is throughout one of a transcendental character; it should consequently be subjected to the same style of interpretation as the rest of the oracles of the Bible, descriptive of objects which are entirely beyond the experience of man, such as the day of judgment, the states of heaven and hell, and the representations of the divine majesty. The style of criticism applied to Gen. i by the opponents, and not unfrequently by the supporters of revelation, in such as the complement of the earth. The Hebrew language has no expression equivalent to our universes: the phrase "the heavens and the earth" (Gen. i, 1; xiv, 19; Exod. xxxi, 17) has been regarded as such; but it is clear that the heavens were looked upon as a necessary adjunct of the existence of the earth. It is beyond the curtaining of the earth, which the Jews dwells (Isa. xi, 22), the sphere above which fitted the sphere below (comp. Job xxii, 14, and Isa. xi, 29)—designed solely for purposes of beneficence in the economy of the earth. This appears from the account of its creation and offices: the existence of the heaven was not prior to or contemporaneous with that of the earth, but subsequent to it; it was created on the second day (Gen. i, 6). The term under which it is described, ra'achie (2 Nephi), is significant of its extension, that it was stretched out as a curtain (Psa. civ, 2) over the surface of the earth. Moreover, it depended upon the earth; it had its "foundations" (2 Sam. xxvii, 8) on the edges of the earth's circle, where it was supported by the mountains as by massive pillars (Job xxvi, 11). Its offices were (1) to support the waters which were above it (Gen. i, 7; Psa. cviii, 4), and thus to form a mighty reservoir of rain and snow, which were to pour forth through its windows (Gen. vii, 11; Isa. xxiv, 18) and doors (Psa. lix, 23), as through opened sluice-gates, for the fructification of the earth; (2) to serve as the substratum (persiprom) or firmament) in which the celestial bodies were to be fixed. As with the heaven itself, so also with the heavenly bodies; they were restored merely as the minutiae of the earth. Their offices were (1) to give light (2) to separate between day and night; (3) to be for signs, as in the case of eclipses or other extraordinary phenomena; for so-

COSMOLOGY

some, as regulating seed-time and harvest, summer and winter, as well as religious festivals; and for days and years, the length of the former being dependent on the sun, the latter being estimated by the motions both of sun and moon (Gen. i, 14-15); so that while it might truly be said that they held "dominion" over the earth (Job xxxviii, 8), that dominion was exercised solely for the convenience of the tenants of earth (Psa. civ, 19-25). So entirely, indeed, was the existence of heaven and the heavenly bodies designed for the earth, that when the ark rested on Mount Ararat (Gen. vii, 4; xlii, 10); the curtain of the tent shall be rolled up, and the stars shall of necessity drop off (Isa. xxxiv, 4; Matt. xxiv, 29)—their sympathy with earth's destruction being the counterpart of their joys when its foundations were laid (Job xxxviii, 7).

2. The cosmology was regarded in a twofold aspect: in relation to God, as the manifestation of His infinite attributes; in relation to man, as the scene of his abode.

(1.) The Hebrew cosmology is based on the leading principle that the universe exists, not independently of God, by any necessity or any inherent power, nor yet contemporaneously with God, as being co-existent with Him, in opposition to His will, hostile element, but dependently upon Him, subsequently to Him, and in subjection to Him. The opening words of Genesis express in broad terms this leading principle; however difficult it may be, as we have already observed, to express this truth adequately in human language, yet there is no doubt that the expression of the idea of the dominion of God in every respect is implied in that passage, as well as in other passages, too numerous to quote, which comment upon it. The same great principle runs through the whole history of creation: matter owed all its forms and modifications to the will of God; in itself dull and inert, it received its first vitalizing capacities from the influence of the Spirit of God brooding over the deep (Gen. i, 2); the progressive improvements in its condition were the direct and miraculous effects of God's will; no interposition of secondary causes is recognized—"He spake, and it was" (Psa. xxxiii, 9); and the pointed terseness and sharpness with which the writer sums up the whole transaction in the three expressions "God said," "it was so," "God saw that it was good"—the first declaring the divine vocation, the second the immediate result, the third the perfectness of the work—harmonizes aptly with the view which is intended to express. Thus the scene which the Hebrew mind surveyed before the eyes of the earth was pictured. The heavens (Psa. xix, 1), the earth (Psa. xxiii, 1; civ, 24), the sea (Job xxxvi, 10; Psa. lxxxix, 9; Jer. v, 22), "mountains and hills, fruitful trees and all cedars, beasts and all cattle, creeping things and flying fowl!" (Psa. cxlvii, 2), all displayed one or other of the leading attributes of his character. So also with the ordinary operations of nature—the thunder was his voice (Job xxxvi, 5), the lightnings his arrows (Psa. lxvii, 17), the wind and storm his messengers (Psa. cxlviii, 8), the earthquake, the eclipse, and the comet the signs of his presence (Joel ii, 10; Matt. xxiv, 29; Luke xxi, 25; Rev. x, 5). (2.) The earth was regarded in relation to man, and accordingly each act of creation is a preparation of the earth for his abode—light, as the primary condition of all life; the heavens, for purposes already detailed; the dry land, for his home; "grass for the cattle and herbs for the beasts of the earth" (Gen. i, 14); the alternations of day and night, the one for his work and the other for his rest (Psa. civ, 23); fish, fowl, and flesh for his food; the beasts of burden, to lighten his toil. The work of each day of creation has its specific application to the requirements and the comforts of man, and is recorded with that special view.

(3.) The earth was, not a progressive work—a gradual development from the inferior to the superior orders of things. Thus it was with the earth's surface, at first a chaotic mass, waste and empty, well described in the paronomastic terms tohu va-bohu, overspread with waters and enveloped in darkness (Gen. i, 2), and thence gradually brought into a state of order and beauty so complete as to enable it to assume the name Mundus. Thus also with the different portions of the universe, the earth before the light, the light before the firmament, the firmament before the dry land. Thus also with light itself, at first the elementary principle, separated from the darkness, but with undivided brightness (Gen. i, 14); this illuminating bodies with their distinct powers and offices—a progression that is well expressed in the Hebrew language by the terms or and madr (םד, מדר). Thus also with the orders of living beings; firstly, plants; secondly, fish and birds; thirdly, cattle; and, lastly, man. From "good" in the several parts to "very good," as a whole (Gen. i, 31), such was its progress in the judgment of the Omniscient workman.

4. Order involves time; a succession of events implies a succession of periods; and, accordingly, Moses assigns the work of creation to six days, each having its specific portion—light to the first, the firmament to the second, the dry land and plants to the third, the heavenly bodies to the fourth, fish and fowl to the fifth, beasts and man to the sixth. In none of these acts are described as having been done precludes all idea of time in relation to their performance; it was miraculous and instantaneous: "God said," and then "it was." But the progressive, and consequently the individuality of the acts, does involve an idea of time as elapsing between the completion of one and the commencement of another; otherwise the work of creation would have resolved itself into a single continuous act. The period assigned to each individual act is a day—the only period which represents the entire cessation of a work through the interposition of night. That a natural day is represented under the expression "evening was, and morning was," admits, we think, of no doubt; the term "day" alone may sometimes refer to an indefinite period contemporaneous with a single event; but when the individual parts of a day, "evening and morning," are specified, and when a series of such days are noticed in their numerical order, no analogy of our language admits of the misunderstanding that the thing else than its literal sense. The Hebrews had no other means of expressing the civil day of twenty-four hours than as "evening, morning" (םיון שבתים); Dan. viii, 14), similar to the Greek νυκτιςμερας; and, although the alternation of light and darkness lay at the root of the expression, yet the Hebrews in their use of it no more thought of these elements than do we when we use the terms night or day; in each case the lapse of a certain time, and not the elements by which that time is calculated, is intended; so that, without the least inconsistency either of language or of reality, the expression may be applied to the days previous to the creation of the sun. The application of the expression to the sun is equivalent to the creation of the sun, as well as the use of the word "day" in the fourth commandment without any indication that it is used in a different sense, or in any other than the literal acceptation of Gen. i, 5 sq., confirm the view above stated. The interpretation that "evening and morning"—beginning and end, is opposed not only to the order in which the words stand, but to the sense of the words elsewhere.

5. The Hebrews, though regarding creation as the immediate act of God, did not ignore the evident fact that existing materials and intermediate agencies were employed both then and in the subsequent operations of nature. Thus the simple fact, "God created man" (Gen. i, 27), is expanded by the suggestion that the material substance of which his body was made (Gen. ii, 7); and so also of the animals (Gen. i, 24; ii,
The separation of sea and land, attributed in Gen. i, 6, to the divine fiat, was seen to involve the process of partial elevations of the earth's surface (Psa. civ. 8, "the mountains ascend, the valleys descend;", comp. Prov. viii, 25-28). The formation of clouds and the supply of moisture to the earth, which in Gen. i, 7, was provided by the creation of the firmament, was afterwards attributed to its true cause in the continual return of the waters from the earth's surface (Exod. xxviii. 27, "the pillars of light, etc."); and that the light of sun and moon is distinct from the sun (Gen. i, 3, 14; Job xxxiii. 19), has likewise been explained as the result of a philosophically correct view as to the nature of light; more probably, however, it was founded upon the incorrect view that the light of the moon was independent of the sun.

6. With regard to the earth's body, the Hebrews conceived its surface to be an immense disc, supported like the flat roof of an Eastern house by pillars (Job ix, 6; Psa. lxxxv, 8), which rested on solid foundations (Job xxxviii. 4, 6; Psa. civ, 5; Prov. viii, 29); but where those foundations were on which the "sockets" of the pillars rested, none could tell (Job xxxviii. 8). The corridors of light, the "pillars of darkness," being suspended in free space seems to be implied in Job xxvi. 7; nor is there any absolute contradiction between this and the former view, as the pillars of the earth's surface may be conceived to have been founded on the deep bases of the mountains, which bases themselves were unchangeable. Other passages (Job xxxiv, 2; xxxvi, 6) seem to imply the existence of a vast subterranean ocean; the words, however, are susceptible of the sense that the earth was elevated above the level of the sea (Hengstenberg, Comm. in loc.), and that this is the sense in which they are to be accepted appears from the converse expression "water under the earth" (Exod. xxx, 4), which, as contrasted with "heaven above" and "earth beneath," evidently implies the comparative elevation of the three bodies.

Beneath the earth's surface was shel (תנן), the holow place, "hell" (Num. xvi, 30; Deut. xxxii. 22; Job xi, 8), the "house appointed for the living" (Job xxx, 23), a "land of darkness" (Job x, 21), in which were inscribed in poetical language gates (Isa. xxvii, 18) and bars (Job xvii, 24), and which had its valleys or deep places (Prov. ix, 18). It extended beneath the sea (Job xxxvi, 5, 6), and was thus supposed to be conterminous with the upper world.

7. The Mosaic statement of the world's formation (Gen. i) has been variously treated by different writers on the connection between science and the Bible. Skeptics have designated the Mosaic septemeron as a "myth," or, more mildly, the speculation of an ancient sage. Most Christians speak of it as a "history" or "narrative," or, more vaguely, a "record." Huxtable calls it a "parable" (Sacred Record of Creation, Lond. 1861). Others (e.g. Kurtz, Hugh Miller) suggest that it is a "vision;" one style it as a "plan" (Challier, Lond. 1861). The writers are evidently more grosses. The choice still lies between the Chalmerian interpolation of the geological ages before the first creative day begins (so Buckland, Pye Smith, Hitchcock, Crofton, Archd. Pratt, Glog. and others), and the Cuvierian expansion of the six days into geological ages (with Miller, Macdondall, Stillman, Garrod, and others). See also the "Origin of the Species" of Lyell, the "Eons of Time" of Bruck, and the "Creation" of W. D. Whitney.

COSMOS. See WORLD.

CoSETT, FRANCISWAY RANNA, D.D., a prominent minister of the Cumberland Presbyterian Church. He was born in Claremont, New Hampshire, April 24, 1790. His parents were Episcopalians, his grandfather being the founder and for many years the pastor of the first Episcopal church of Claremont. He studied at Middlebury College, Vermont, and graduated with the degree of A.B. in 1813, and of M.D. in 1819. In 1839 he was conferred the degree of Doctor of Divinity, which degree was also conferred upon him in after years by Cumberland College, Kentucky. Soon after leaving college he engaged in teaching a classical school in Morristown, N. J. After two years he accepted a call as principal of the Willard Academy, and held that position for several years, when, his health being poor, he returned to New England, where soon after he was converted. He felt deeply impressed with the duty of preaching
the Gospel, and soon after entered the Episcopal Theological Seminary at New Haven. From the seminary he went to Tennessee, with the commendation and sanction of the bishop as a "lay preacher." Here he became acquainted with the first time with Cumberland Presbyterians, "participated in their extraordinary revivals, attended their delightful camp-meetings." He was especially pleased with their success in winning souls to Christ, and, after a long, prayerful, and hard struggle, he felt it his duty to cast his lot with them, which he did by the advice of the Anderson presbytery of this church. He taught very successfully for some time in a classical school in Elkton, Ky. He was the first president of Cumberland College at Princeton, Ky., over which he presided for years with great honor and success. When Cumberland University was started some years later at Lebanon, Tennessee, he accepted a call to the first presidency of that institution. He presided over it until it had arisen to be one of the foremost institutions in the entire South. He was for years, and up to his death, president of the Board of Foreign and Domestic Missions of the C. P. Church. He also started and maintained, with carefulness a weekly religious paper called the "Banner of Peace," which is still (1867) being published at Nashville, Tenn. Dr. Cossett published The Life and Times of the King, which contains a history of the early years of the C. P. Church. Mr. Cossett was a man of great learning and ability, and in his younger days was a very successful preacher. He was indefatigable in his efforts to promote education among all classes, but especially in the ministry. In all his intercourse with men, either personally, by letter, or as a controversialist, he never deviated from the rules of honorable Christian discussion, or the manners of the Christian gentleman. He died at Lebanon, Tennessee, July 3, 1863.

Costa, Da. See Da Costa.

Costobiru (Ktσββρχα). 1. An Idumean of honorable connections, married to Herod to his sister Salome, and appointed governor of Idumæa, but afterwards denounced by her on pretext of his favoring the escape of the sons of Babæus, the last scions of the Hyrcanian dynasty, and eventually slain by Herod (Josephus, Ant. xvi. 7, 8-10).

2. A relative of Agrippa, and a ringleader of the Samaritans in their excesses at Jerusalem (Josephus, War, xxi. 9, 4).

Costume, Oriental. The subject of the style of dress of the ancient Hebrews is involved in much obscurity and doubt. Sculptured monuments and coins afford us all needful information respecting the apparel of the ancient Egyptians, Babylonians, Persians, Greeks, and Romans; and even the garb worn by the barbarous nations is perpetuated in the monuments of their antagonists and conquerors. But the ancient Hebrews have left no monuments, no figures of themselves; and the few figures which have been supposed to represent Jews in the monuments of Egypt and Persia are so uncertain that their authority remains to be established before we can rely upon the information which they convey. There are, however, many allusions to dress in the Scriptures, and these form the only source of our positive information. They are often, indeed, obscure, and of uncertain interpretation, but they are invaluable in so far as they enable us to compare and verify the information derived from other sources.

1. The range of inquiry into monumental costume is very limited. It is a common mistake to talk of "Oriental costume" as if it were a uniform thing, whereas, in fact, the costumes of the Asiatic nations differ far more from one another than do the costumes of the Semitic. The case is still more so in the case anciently is shown by the monuments, in which the costumes of Egyptians, Assyrians, Babylonians, Persians, Medes, Syrians, and Greeks differ as much from one another as do the costumes of the modern Syrians, Egyptians, Arabs, Turks, and Persians. It is therefore nearly useless to examine the monumental costumes of the Jews that are remote from Palestine, for the purpose of ascertaining the costume of the ancient Hebrews. Syria, Arabia, Egypt, and, to some extent, Assyria, Persia, and Babylonia, are the only countries where monuments would be likely to afford any useful information; but Arabia has left no monumental figures, and Syria some of sufficiently ancient date, while those of Assyria, Babylonia, and Persia depict few scenes of social life; and it is left for Egypt to supply nearly all the information likely to be of use. But the Egyptians and the Hebrews were an exceedingly different people; and the climates which they inhabited were also so different as to necessitate a greater difference of dress and dress than might be presupposed of countries so near to each other. It is true that the Jewish nation was cradled in Egypt; and this circumstance may have had some influence on ceremonial dress and the ornaments of women; but we do not find that nations circumstanced as the Jews were readily adopt the costumes of other nations, especially when their residence in Egypt was always regarded by them as temporary, and when their renown was of home manufacture—spun and woven by the women from the produce of their flocks (Exod. xxxv. 25). We find also that, immediately after leaving Egypt, the principal article of dress among the Hebrews was some ample woollen garment, fit to sleep in (Exod. xxi. 37), to which nothing similar is to be seen among the costumes of Egypt. 2. With respect to the supposed representation of Jews in ancient monuments, if any authentic examples could be found, even of a single figure, in the ancient costume, it would afford much satisfaction, as tending to elucidate many passages of Scripture which cannot at present be with certainty explained. (See also under the article Black.)

(a.) A painting at Beni Hassan represents the arrival of some foreigners in Egypt, and is supposed to figure the arrival of Joseph's brethren in that country. The accessories of the scene, the physiognomies of the persons, and the time to which the picture relates, are certainly in unison with that event; but other circumstances are against the notion. Sir J. G. Wilkinson speaks hesitatingly on the subject; and, until some greater certainty is obtained, we may admit the possible correctness of the conjecture. The annexed cut shows the variety of costume which this scene displays. All the men wear sandals. Some of them are clad only in a white garment, or shirt, with three sleeves (fig. 1); others wear over this a kind of sleeveless clad or mantle, thrown over the left shoulder, and passing under the right arm (fig. 2). It is of a striped and curiously figured pattern, and looks exceeding like the fine woven cloth of the South Sea. Others have, instead of this, a fringed skirt of the same material (fig. 1). All the figures are bareheaded, and wear beards, which are circumstances favorable to the identification. The fringed skirt of fig. 1 is certainly a re-
markable circumstance. Moses directed that the people should wear a fringe at the hem of their garments (Num. xiv, 38); and the probability is that this command merely perpetuated a more ancient usage. The fringe reappears, much enlarged, in the other Egyptian sculpture in which Jews are supposed to be represented. These are in a tomb discovered by Belzoni, in the valley of Bah el-Meluk, near Thebes. There are captives of different nations, and among them four figures, supposed to represent Jews. The scene is imagined to commemorate the triumph of Pharaoh-Necho in that war in which the Jews were defeated at Megiddo, and their king Josiah slain (2 Chron. xxxv, xxxvi).

(c.) On the face of a rock at Behistun (q. v.), on the Median border of the ancient Assyria, there is a remarkable sculpture representing a number of captives strong together by the neck, brought before the king and conqueror, who seems to be pronouncing sentence upon them. The venerable antiquity of this sculpture is unquestionable; and Sir R. K. Porter was led to fancy that the sculpture commemorates the subjugation and deportation of the ten tribes by Shalmaneser, king of Assyria (2 Kings xvi, 6). The reasons why he assigns to Behistun a Persepolitan date (159 sq.) for this conclusion are of little weight, and not worth examination. But the single fact that the figures are arrayed in a costume similar to the ancient and present garb of the people of Syria and Lebanon inclines us to think that the figures really do represent the costume of nations west of the Euphrates, including, probably, that of the Jews and their near neighbors. The dress here shown is a shirt or tunic confined around the waist by a strap or girdle; while others have a longer and larger robe, furnished with a spacious cape or hood, and, probably, worn over the other.

There is no reason to think that the dress of the Jews was in any important respect different from that of the other inhabitants of the same and immediately bordering countries. It would therefore be satisfactory, and would enable us to judge better of the figures which have been noticed, if we had representations of Canaanites, Phoenicians, Syrians, Moabites, etc., by the Egyptian artists, who were so exact in discriminating, even to caricature, the peculiarities of nations. Under the article ARMOR (p. 428) there is a supposed figure of a Canaanite warrior from this source. The dress, being military, does not afford much room for comparison in the present instance; but we are once again in it most of the articles which formed the military dress of the Hebrews. The annexed figures, however, convey more information, as they appear to represent inhabitants of Samaria and Lebanon. The evidence for the last (fig. 2) is as conclusive as can be obtained, for not only is there the name "Lemnon" (as being constantly interchanged with δ), but the persons thus attired are represented as inhabiting a mountainous country, and falling fences to impede the chariots of the Egyptian invaders. The dresses are similar to each other, and this similarity strengthens the probability that the dress of the Jews was not very different; and it is also observable that it is similar to the full dress of some of the figures in the sculpture at Behistun: the figures are bearded, and the cap or head-dress, is bound round with a fillet. The figures are arrayed in a long gown reaching to the ankles, and confined around the waist by a girdle; and the shoulders are covered by a cape, which appears to have been common to several nations of Asia. At first view it would seem that this dress is different from those already figured. But, in all probability, this more spacious robe is merely an outer garment, covering the inner dress which is shown in the figures that seem more minutely arrayed. (See the ingenious papers by a lady on the costumes of the ancient Canaanites in the Jour. f. Sac. Hist., Jan. 1853, p. 291 sq., and the cuts in the No. for April, 1854.) See CANAANITE; LEBANON.

3. The information on this subject to be obtained from tradition is embodied—(1.) In the dresses of monks and pilgrims, which may be traced to an ancient date, and which are an intended imitation of the dresses supposed to have been worn by the first disciples and apostles of Christ. (2.) The garb conventionally assigned by painters to scriptural characters, which were equally intended to embody the dress of the apocalyptic period, and is corrected in some degree by the notions of Oriental costume which were collected during the Crusades.

To judge of the value of these costumes, we must compare them, first, with the scanty materials already produced, and then with the modern costumes of Syria and Arabia. The result of this examination will probably be that these traditional garbs are by no means the reminiscences of Hebrew costume; and that the dresses which the painters have introduced into scriptural subjects are far more near to correctness than it has latterly been the fashion to suppose. It is per-
CO_{STUME} 531

The Jews had for above five centuries ceased to be inhabitants of Palestine; and it is certain that during the intermediate period the dress of the upper classes—the military and the townspeople—had become assimilated to that of the Greeks of the Eastern empire. Arabia had meanwhile been subjected to no such influences, and the dress which it brought into Syria may be regarded as a restoration of the more ancient costume, rather than (as it was in many countries) the introduction of one previously unknown.

It is to be observed, however, that there are two very different sorts of dresses among the Arameans. One is that of the Bedouin tribes, and the other that of the inhabitants of towns. The distinction between these is seldom clearly understood or correctly stated, but is of the utmost importance for the purpose of the present notice. Instead, therefore, of speaking of the Arabian costume as one thing, we must regard it as two things—the desert costume and the town costume.

If, then, our views of Hebrew costume were based on the actual costume of the Arameans, we should be led to conclude that the desert costume represented that which was worn during the patriarchal period, and until the Israelites had been some time settled in Canaan; and the town costume that which was adopted from their neighbors when they became a settled people.

(a) The annexed cut represents, in fig. 2, a Bedouin, or desert Arab, in the dress usually worn in Asia; and fig. 1 represents a townswoman in a cloak of the same kind, adopted from the Arabs, and worn very extensively as an outermost covering in all the countries from the Oxus (for even the Persians use it) to the Mediterranean. The distinctive head-dress of the Bedouin, and which has not been adopted by any other nation, or even by the Arabian townsmen, is a kerchief (leghû🥳) folded triangularly, and thrown over the head so as to fall down over the neck and shoulders, and bound to the head by a band of twisted wool or camel's hair. The cloak is called an abbax. It is made of wool and hair, and of various degrees of fineness. It is sometimes entirely black, or entirely white, but is more usually marked with broad stripes, the colors of which (never more than two, one of which is always white) are distinctive of the tribe by which it is worn.

We may here remark, (1.) That the usages of the Arabians in Syria and Palestine are more in agreement with those of Scripture than those of any other inhabitants of those countries. (2.) That their costume throws more light on the scriptural intimations than any other now existing, while it agrees more than any other with the materials supplied by antiquity and by tradition. (3.) That the dress which the Arabian garb gradually superseded in Syria and Palestine was not the same as that of scriptural times, excepting, perhaps, among the peasantry, whose dress appears to have then differed little from that of the Arabian cou-

Fancy Sketches of Oriental Costume by early Painters.
most common outermost garment in Western Asia. This singular neglect has arisen from their information being chiefly derived from Shaw and others, who describe the costume of the Arab tribes or Moors of Northern Africa, where the outer garment is most generally the *bourrous* (fig. 3), a woollen cloak, not unlike the *abbas*, but furnished with a hood, and which is sometimes strangely confounded, even by well-informed persons, with a totally different outer garment worn in the same regions, usually called the *ahke*, but which also, according to its materials, quality, or color, distinguished by various other names; and writers have produced some confusion by not observing that these names refer to an article of raiment which under all these names is essentially the same. Regardless of these minute distinctions, this part of dress may be described as a large woollen blanket, either white or brown, and in summer a cotton sheet (usually blue or white, or both colors together). Putting one corner before over the left shoulder, the wearer brings it behind, and then under the right arm, and so over the body, throwing it behind over the left shoulder, and leaving the right arm free for action. This very picturesque mode of wearing the *ahke* is shown in fig. 2 of the accompanying cut. Another mode of wearing it is shown in fig. 3. It is sometimes thrown over the head as a protection from the sun or wind (fig. 1), and calls to mind the various passages of Scripture in which persons are described as covering their heads with their mantles (2 Sam. xxv. 30; 2 Kings xix. 13; Esther vi. 12). This article of dress, originally borrowed from the nomads, is known in Arabia, and extends westward to the shores of the Atlantic, being most extensively used by all classes of the population. The seat of this dress, and of the robe respectively, is indicated by the direction of their importation into Egypt. The *ahkes* are imported from the west (i.e., from North Africa), and the *abbas* from Syria. The close resemblance of the above group of real costumes to those in which the traditional ecclesiastical and traditionary aristocratic costumes are displayed, must be obvious to the most cursory observer. It may also be noticed that the *ahke* is not without some resemblance, as to the manner in which it was worn, to the outer garment of one of the figures in the Egyptian family, supposed to represent the arrival of Joseph's brethren in Egypt (above).

5. We now turn to the costumes which are seen in the towns and villages of south-western Asia. In the Scriptures *drawers* are only mentioned in the injunction that the high-priest should wear them (Exod. xxviii. 42), which seems to show that they were not generally in use; nor have we any evidence that they ever became common. Drawers descending to the middle of the thighs were worn by the ancient Egyptians, and workmen often laid aside all the rest of their dress when occupied in their labors. As for different garments of cotton, or woollen frocks or shirts, which often, in warm weather, form the sole dress of the Bedouin peasants, and the lower class of townpeople. To this the *abbas or ahke* is the proper outer robe (as in fig. 1, second cut preceding), but it is usually, in summer, dispensed with in the daytime, and in the ordinary pursuits and occupations of life. It is sometimes (as in the foregoing cut, fig. 2) worn without, but more usually with a girdle; and it will be seen that the shorter specimens are not unlike the dress of one of the figures (fig. 3) in the earliest of the Egyptian subjects which have been produced. The shirt worn by the superior classes is of the same shape, but of finer materials. This is shown in the accompanying figure, which represents a gentleman as just risen from bed. If we call this a shirt, the Hebrews doubtless had it—the solo dress (excepting the cloak) of the poor, and the inner robe of the rich. Such, probably, were the "sheets" (translated "shirts" in some versions), of which Samson haggled thirty Philistine to pay the forfeit of his riddle (Judg. xiv. 18, 19). It is shown from the Talmud, indeed, that the Hebrews of later days had a shirt called *pekh, chalak*, which, it would appear, was often of wool (Lightfoot, Hor. Heb. on Luke ix. 8), and which is described as the ordinary inner garment, the outer being the cloak or mantle. This shows that the shirt or frock was, as in modern usage, the ordinary dress of the Jews, to which a mantle (*abbas, ahke, or bourrous*) was the outer covering.

The Talmud enumerates eighteen several garments which formed the clothing of the Jews from head to foot (Talm. Hieros. Sabb. fol. 12; Talm. Bab. Sabb. fol. 190), mentioning, however, two sandals, two buskins, etc. This shows, at least, one thing, that they were not more sparingly clad than the modern Orient...
The being the case, we may be sure that although persons of the humbler classes were content with the shirt and the mantle, the wealthier people had other robes between these two, and forming a complete dress without the mantle, which with them was probably confined to out-of-doors wear or ceremonial use. It is, of course, impossible to discriminate these precisely, but in this matter we cannot be far wrong in trusting to the analogy of existing usages.

In all the annexed figures, representing persons of the superior class, we observe the shirt covered by a striped (sometimes figured) gown or kafan of mingled silk and cotton. It descends to the ankles, with long sleeves, extending a few inches beyond the fingers' ends, but divided from a point a little above the wrist, so that the hand is generally exposed, though it may be concealed by the sleeve when necessary; for it is customary to cover the hands in the presence of a person of high rank. It is very common, especially in winter, for persons to sleep without removing this gown, but only unloosening the girdle by which it is bound. It is not unusual within doors to see persons without any article of dress outside this; but it is considered decidedly as an undress, and no respectable person is beheld out of doors, or receives or pays visits, without an outer covering. Hence persons clad in this alone are said to be "naked" in Scripture—that is, not in the usual complete dress; for there can be no manner of doubt that this, or something like this, is the γενέα, kothα'nɪa, of Scripture (Exod. xxi. 30; Job xxx. 18; Isa. xxi. 21, etc.). A similar robe is worn by the women, as was also the case among the Israelites (2 Sam. xiii. 18, 19; Cant. v. 3). It is in the bosom of this robe that various articles are carried. See BOW oN.

The girdle worn over this, around the waist, is usually a colored shawl, or long piece of figured white muslin. The girdle of the poorer classes is of coarse stuff, and often of leather, with clasps. This leathern girdle is also much used by the Arabs, and by persons of condition when equipped for a journey. It is sometimes ornamented with workings in colored worsted, or silk, or with metal studs, shells, beads, etc. Both kinds of girdles were certainly in use among the Hebrews (2 Kings i. 8; Matt. iii. 4; Mark i. 6; comp. Jer. xiii. 1). See GIRDLE. It seems from 2 Sam. xx. 8 (comp. fig. 1 above), that it was usual to wear a knife or poniard in the girdle. This custom is still general, and denotes not any deadly disposition, but the want of clasp-knives. Men of literary vocations replace it by an ink-horn, as was also the case among the Israelites (Ezek. ix. 2).

Over the gown is worn either the short-sleeved gīb̄ēk (fig. 5), which is a long coat of woollen cloth, or the long-sleeved bēmāk (fig. 2), which is also of woollen cloth, and may be worn either over or instead of the other. The bēmāk is, by reason of its long sleeves (with which the hands may be covered), the robe of ceremony, and is worn in the presence of superiors and persons of rank. Over one or both of these robes may be worn the abba, bouraas, or kyke, in any of the modes already indicated. Aged persons often wrap up the head and shoulders with the latter, in the manner shown in fig. 4.

This same kyke or wrapper is usually taken by persons going on a journey, for the purpose of being used in the same manner as a protection from the sun or wind. This is shown in the annexed cut, represent-
occasion for baring the arm; but others, whose occasions are more incidental, and who are, therefore, unprovided with the necessary cords, draw up the sleeves and tie them together behind the shoulders (fig. 2).

For the dress of females, see the article WOMAN. Certain parts of dress, also, admit of separate consideration, such as the head-dress or turban (q. v.), and the dress of the feet or sandals (q. v.). See "The Book of Costume," ancient and modern, by a Lady, London, 1847; Prisse and St. John's Oriental Album, London, 1847; Costumes of Turkey, London, 1802; Lane, Arabian Nights, cutes; Perkins, Residence in Persia, plates; Reimhoud, Erinnerungen an d. Pilgerfahrt nach Jerusalem, Coln, 1864. Compare the article Dresss.

COSTUME, SACERDOTAL. See PRIEST.

COSTUME, CLERICAL. See VESTMENTS (of the CHEROY).

Cote (only in the plur. כות, aerota, by transposition for כות, racks for folders), properly criba; hence pens, or enclosures for flocks (2 Chron. xxxii, 28, where, instead of "cotes for flocks," the original has "flocks for [the] cotes"). See SHEEP-COTE; DOVE-COTE.

Cotelierius (Cöteler), Jean Baptiste, an eminent French scholar, born at Nimes, 1627. At twelve years of age he could read the Hebrew Bible and the Greek Testament with ease. In 1649 he was elected a member of the Sorbonne. He did not receive the degree of doctor, because he refused to take orders. In 1676 he was made Greek lecturer at Paris, and retained this post, with great reputation, till his death, August 12, 1686. Most of his literary labors were spent upon the Greek fathers; and in 1672 he published the "Apostolic Fathers" (Patres Aesti Apostolici, Paris), of which the best edition is Patrum qui temporibus Apostolici floruerunt opera, recensuit J. Clericus (Amst. 1724, 2 vols. fol.). In 1667 he was commissioned by Colbert to revise and catalogue the Greek manuscripts of the Royal Library. He was engaged in this work, conjointly with the celebrated Du Cange, for five years. In 1676 he obtained through Colbert the chair of Greek at the Royal College of Paris. In 1677 he began the publication of his Ecclesia Graeca Monuments, e M S S., codices, Gr. and Lat. (3 vols. 4to; the 3d vol. appeared two days before his death). The fourth volume of this work, for which he had collected much material, was published in 1692 by the Maurines.—See Wetzer u. Welte, Kirchen-Lex. ii, 905; Dupin, Nouvelle Bibliothèque, xviii, 186.

Cottage is employed in our version for three Hebrew words. See BOOTH.

1. מַעֲקָק, kukkak, signifies a hut made of boughs (Isa. i, 8), and is usually elsewhere translated "booth." It was anciently the custom in the East, as it still is, to erect little temporary sheds, covered with leaves, straw, or turf, giving shelter from the heat by day and the cold dews at night to the watchman that kept the garden or vineyard while the fruit was ripening, which otherwise might be stolen, or destroyed by jackals. These erections, being intended only for the occasion, were of the very slightest fabric, and when the fruits were gathered were either taken down, or left to fall to pieces, or were blown down during the winter (Job xxvii, 18). See LODGE.

Modern Oriental Lodge in a Melon-patch.

2. מְלוּנָה, melunah (fem. of מְלוּנָה, an iwm), signifies properly a lodging-place, and is associated with the booth ("cottage") in the above passage (Isa. i, 8), where it is translated "booth," being probably a somewhat lighter structure, if possible, as a cucumber patch is more temporary than a vineyard. It also occurs in Isa. xiv, 20, in the mis-translated expression "and shall be removed [i. e. shaken about] like a cottage," where it denotes a hanging-bag or hammock suspended from trees, in which travellers, and especially the watchmen in gardens, were accustomed to sleep during summer, so as to be out of the reach of wild animals. The swinging of these aptly corresponds with the staggering of a drunken man. Or it may, perhaps, more appropriately denote here those frail structures of boughs, supported by a few poles, which the Orientals use for the same purpose.

Summer sleeping-place among the Kurdish Hills.

3. In Zeph. ii, 6, the original term is נַפְּנֹת, kerokh (literally dipings), i. e. pits for holding water, and, instead of "dwellings [and] cottages for shepherds," it should be rendered "hills full of shepherds' cisterns,"
COTTON

for watering their flocks; that is, the sites of the cities of Philitia should be occupied for pastoral purposes. This word does not occur elsewhere.

Cotton (from the Aral, name butun), the well-known wool-like substance which envelopes the seeds, and is contained within the roundish-pointed capsule or fruit of the cotton-shrub. Every one also knows that cotton has, from the earliest ages, been characteristic of India. Indeed, it has been well remarked that, as from early times sheep's wool has been principally employed for clothing in Palestine and Syria, in Asia Minor, Greece, Italy, and Spain, hemp in the northern countries of Europe, and flax in Egypt, so cotton has always been employed for the same purpose in India, and silk in China. In the present day, cotton, by the aid of machinery, has been manufactured in this country on so extensive a scale, and sold at so cheap a rate, as to drive the manufactures of India almost entirely out of the market. But still, until a very recent period, the calicos and chintzes of India formed very extensive articles of commerce from that country to Europe. For the investigation of the early history of cotton, we are chiefly indebted to the earliest notices of this commerce; before adducing these, however, we may briefly notice the particular plants and countries from which cotton is obtained. India possesses two very distinct species: 1. *Gossypium herbaceum* of botanists, of which there are several varieties, some of which have spread north, and also into the south of Europe, and into Africa. 2. *Gossypium arboreum*, or cotton-tree, which is little cultivated on account of its small produce, but which yields a fine kind of cotton. This must not be confounded, as it often is, with the silk-cotton tree, or *Bombbyx lepidophrum*, which does not yield a cotton fit for spinning. Cotton from these kinds is now chiefly cultivated in Central India, from whence it is carried to and exported from Broach. It is also largely cultivated in the districts of the Bombay Presidency, as also in that of Madras, but less in Bengal, except for home manufacture, which of course requires a large supply, where so large a population are all clothed in cotton. American cotton is obtained from two entirely distinct species—*Gossypium Barbascens*, of which different varieties yield the Sea Island, Upland, Georgian, and the New Orleans cottons; while *G. Peruvianum* yields the Brazil, Pernambuco, and other South American cottons. These species are original natives of America. The *Gossypium herbaceum*, a figure of which is annexed, is probably the species known to the ancients. (See Penny Cyclopædia, s. v. Gossypium.)

This substance is no doubt denoted by the term ἱφυς, *karpos* (whence Gr. καρπανος, Lat. carboanum, from Sanscr. karpa), of Esth. 1, 6, which the A. V. renders "green" (Sept. καρπανος; Vulg. corboana). There is considerably of doubt, however, whether under ἱφυς, *shekh*, in the earlier, and ἱφυς, *bute*, in the later books of the O. T. rendered in the A. V. "white linen," "fine linen," etc., cotton may not have been included as well. Both these latter terms are said by Gesenius to be from roots signifying originally mere whiteness; a sense said also to be inherent in the word "bute, bad, used sometimes instead of, and sometimes together with shew and mean the fabric. In Ezek. xxvii, 7, 16, *shekh* is mentioned as imported into Tyre from Egypt, and *bute* as from Syria. Each is found in turn coupled with ἱφυς (argammon), in the sense of "purple and fine linen," i.e. the most showy and costly apparel (comp. Prov. xxi, 22, with Esth. viii, 15). The dress of the Egyptian priests, at any rate in their ministrations, was without doubt of linen (Herod. ii, 37), in spite of Pliny's assertion (xxi, 1, 2) that they preferred cotton. Yet cotton garments for the worship of the temples is said to have been made for the Rosetta stone (Wilkinson, Anc. Eg. iii, 117). The same was the case with the Jewish ephod and other priestly attire, in which we cannot suppose any carelessness to have prevailed. If, however, a Jew happened to have a piece of cotton cloth, he probably would not be deterred by any scruple about the heterogenet of Deut. xxii, 13, from wearing that and linen together. There is, therefore, no word for the cotton plant (like ἱφυς for flax) in the Hebrew, nor any reason to suppose that there was any early knowledge of the fabric in Palestine. See LINEN.

The Egyptian mummy swathings also, many of which are said to remain as good as when fresh from the loom, are decided, after much controversy and minute analysis, to have been of linen, and not cotton (Egyp. Antiq. in the Lib. of Entertaining Knole, ii, 183). The very difficulty of deciding, however, shows how easily even scientific observers may mistake, and, much more, how impossible it would have been for ancient popular writers to avoid confusion. Even Greek naturalists clearly include "cotton" under ἱφυς (ἰφυς). The same appears to be true of διθυμ, διθυνος, and the whole class of words signifying white textile vegetable fabrics. From the proper Oriental name for the article *karpos*, with which either their Alexandrian or Parthian intercourse might familiarize them, the Latins borrowed carboanum, completely current in poetical use in the golden and silver period of Latinity, for sails, awnings, etc. Varro knew of tree-wool on the authority of Ctesian contemporary with Herodotus. The Greeks, through the commercial consequences of Alexander's conquest, must have known of cotton cloth, and more or less of the plant. Amasis indeed (about B. C. 525) made as a present from Egypt a corselet ornamented with gold and "tree-wool" (πινακις ἐνω ἦλκων, Herod. iii, 47), which Pliny says was still existing in his time in a temple in Rhodes, and that the minuteness of its fibre had provoked the experiments of the curious. Cotton was manufactured and worn extensively in Egypt, but extant monuments give no proof of its growth, as in the case of flax, in that country (Wilkinson, ut sup. p. 116-189, and Plate No. 356); indeed, had it been a general product, we could scarcely have missed finding some trace of it in the monumental details of ancient Egyptian arts, trades, etc.; but especially when Pliny (A. D. 165) asserts that cotton was then grown in Egypt, a statement confirmed by Julius Pollux (a century later), we can hardly resist the inference that, at least as a curiosity and as an experiment, some plantations existed there. This is
the more likely, since we find the cotton-tree (Gossypium arboreum, less usual than, and distinct from, the cotton plant, Gossypium herbaceum) mentioned still by Pliny as the only rem. xarb. tree of the adjacent Ethiopias; and since Arabia, on its other side, appears to have known cotton from time immemorial, to grow it in abundance, and in parts to be highly favorable to that product. In India, however, we have the earliest records of the use of cotton for dress, of which, including the starching of it, some curious traces are found as early as 800 B.C., in the Institutes of Menu; also (it is said, on the authority of Prof. Wilson) in the Rig-veda, 105, v. 8. For these and other some curious antiquities of the subject, see Royle's Culture and Commerce of India, p. 30. (1774.)

Cotton is now both grown and manufactured in various parts of Syria and Palestine, and, owing probably to its being less conductive of heat, seems preferred for turbans and shirts to linen; but there is no proof that, till they came in contact with Persia, the Hebrews generally knew of it as a distinct fabric from linen, whilst the negative proof of language and the probabilities of fact offer a strong presumption that, if they obtained it at all in commerce, they confounded it with linen under the terms shekel or buta. The greater cleanliness and durability of linen probably established its superiority over cotton for sepulchral purposes in the N.-T. period, by which time the last must have been commonly known, and thus there is no reason for assigning cotton as the material of the "linen clothes" (Philo.) of which we read. (For the whole subject, see Yates's Textum Antiquum, pt. i, chap. vi, and app. D.) See Botany.

Cotton, George Edward Lynch, Anglican bishop of Calcutta and metropolitan of the Anglican dioceses of India and Ceylon, was born at Chester, England, Oct. 29, 1833. After some years at Westminster School and Trinity College, he was appointed to a mastership in Rugby School, and shortly after was elected to a fellowship at Trinity College. About 1841 he succeeded to the mastership of the fifth form, the highest but one. In 1852 he was elected head master of Marlborough College, which under his management rose to a high position among leading public schools. In 1858 he was appointed to the metropolitan see of Calcutta, where he rendered himself generally beloved. In 1868, with the full concurrence of the governor general, he officially sanctioned an innovation in the use of consecrated churches, which had often been desired, but never till then secured. Since the mutiny, several Scotch regiments have been stationed in the barracks of Upper India, and in many stations they have no churches of their own. Bishop Cotton ordered that at a convenient hour on the Sunday the Episcopal churches should be available for their worship, and that the Presbyterians clergymen should have full liberty to officiate after the rules of his own Church, to the great dissatisfaction of the High-Church party in the Church of England. In England strong measures were suggested in order to compel him to retract. But he knew that the measure was right in itself, that the law was on his side, and that his conduct was heartily approved by the Indian government and by all right-thinking men. In the same spirit, when the Marriage Bill was brought before the Legislative Council, to provide increased facilities for the marriage of Presbyterian and Nonconformists, and to give to Nonconformist ministers and registrars powers which they do not possess in England itself, he gave the act his cordial approval. He was accidentally drowned while disembarking from a steamcr., October 6, 1866.—Ann. Amer. Cyclopaedia for 1866, p. 261; Brit. Quart. Review, Jan. 1867.

Cotton, John, an eminent Congregational minister, was born at Derby, Eng., Dec. 4, 1585. He was a student in Cambridge, became fellow of Emmanuel College, and was chosen successively head lecturer and dean. In 1612 he was settled as minister at Bosten, Lincolnshire. After preaching some few years, he was silenced for nonconformity with some ceremonies which he held to be unscriptural, but after a short time he was reinstated. About 1622, to escape examination before the High Commission Court, he sequestered himself in London, and thence sailed for New England, arriving in Boston Sept. 2, 1630. On Oct. 10 he was appointed preacher in the First Church. He died Dec. 23, 1652. He published An Abstract of the Laws of New England (1641);—The Church's Reorganization (1642);—The Pouring out of the Seven Vials (1612);—The Way of Life (Lond. 1611, 4to);—Sermons on Mercy and Justice of God (Lond. 1614, 4to);—Exposition of the Canones (Lond. 1642, 8vo);—The Covenant of Grace (Lond. 1662, sm. 8vo).—A practical Commentary upon the 1st Epistle of John (Lond. 1656, fol.), with several minor writings.—Sprague, America, i, 25.

Cotton MSS. See PURITANIC, CODEX.

Couch (כַּפַּךְ, yatarse, something spread, Gen. xlix, 4; "bed," 1 Chron. v, 1; Job xvii, 13; Ps. lxxii, 6; xxxii, 8; אֶתָּפָּךְ, mishak, something to lean on, Job vii, 18, elsewhere "bed;" אֶתָּפָּךְ, e'ree, something erected, Ps. vi, 6; Amos iii, 12; vi, 4; "bed." Job vii, 13; Ps. xili, 3; xxxii, 8; Prov. vii, 16; Cant. i, 16; "bedstead," Deut. iii, 11: אֵלֶוִּישׁוֹנ, a little bed, Luke v, 19, 24; אֶתָּפָּךְ, a pallet, Acts v, 13, elsewhere "bed.") Feather-beds, as among us, are unknown in the East, as indeed generally in southern climates. The poor sleep on mats or wrapped in their overcoats (Exod. xxvi, 27; Deut. xxxiv, 18; comp. Thoee. xviii, 19; Stobai. Serm. 72, p. 404: as to Ruth iii, 9; Ezek. xvi, 6, see Biel in the Miscell. Lips. Nov. v, 289 sq.), and, in the open air, sometimes have only a stone for a pillow (Arvieux, iii, 216; comp. Gen. ix, 21, 23; xxviii, 11). The wealthy use bolster or mattresses (Rusell, Aleppo, i, 195), stuffed with wool or cotton. These are not laid upon a bedstead, but on a raised portion (דַעַמ, q. v.) along the side of the room, which by day serves for a seat (Harmar, i, 184; ii, 71; Rosenmüller, Morgenl. iii, 211; vi, 14; Lorent, Wunder. p. 82). Whether the couches of the ancient Hebrews for the sick or sleeping, which are usually termed אֶתָּפָּךְ, mithra (Gen. xlii, 8; 1 Sam. xix, 13; 2 Sam. iv, 7; 2 Kings i, 4, אֶתָּפָּךְ, mishak) (Exod. xxii, 18; 2 Sam. xiii, 5; Cant. iii, 1, אֶתָּפָּךְ, e'ree (Job vii, 13; Cant. i, 16; Prov. vii, 11; properly a bedstead, see Deut. iii, 11), were upon such a platform, is uncertain, as they appear to have been movable (1 Sam. xix, 15), and were probably used in the daytime, like sofas, for sitting down and repose (1 Sam. xxvii, 23; Ezek. xxiii, 41; Amos iii, 12; vi, 4; yet compare 2 Kings iv, 10). Costly carpets graced the houses
the rich (Prov. vii. 16 sq.; Ezek. xxiii. 41; Amos iii. 12); those who lay upon them covered themselves with similar tapestry, and placed a soft fur under their head (1 Sam. xix. 16). A canopy, or bed with a tester, is names in the Apocalypse (Judith xvi, 29), and elsewhere a hanging bed or hammock (2 Tim. iv. 20), such as watchers in gardens used (Gesenius, Thes. Heb. p. 194), Niebuhr, Bechber, p. 98). In this the Mishna various kinds of beds or couches are referred to; e.g. the סַלְגָּשׁ (Nedar. vi. 5). The couches (אֶלֶו, σπαρδάριον) for the sick, named in the N. T. (Matt. i. 6; Mark ii. 4; iv. 55; Luke x. 18; Acts v. 5, etc.) were movable (Becker, Charic. ii, 72). See Bta.

Coulon. See Coulon.

Coutler occurs in 1 Sam. xii. 20, 21, as the translation of פֶּסֶל (asl), an agricultural instrument, rendered elsewhere "plough-share" (Isa. ii. 4; Mic. iv. 8; Joel iii. 10), for which, however, a different word stands in the passage in 1 Sam. The Sept. renders it by the general term εὐπρόσ, ἐπισελαίων, in 1 Sam., but plough-share in his translation in 1 Kings. The Sept. understands it to be a mattock. It was probably the fact- pointing or edge of a plough, analogous to our coulter, as it was of iron, with an edge that required sharpening, and was easily transformed into a sword. Such an appendage to the plough, however, is not now in use in the East [see AGRICULTURE], but would be greatly necessary in a strange country, the frame and structure of the plough itself, the point being usually only of wood (see Wilkinson's Ancient Egyptians, ii, 14, 17). See PLOUGH.

Council is the rendering given by our translators chiefly to two Greek words.

1. Συμβουλή (a meeting of counsellors) signifies a consultation of persons for executing any enterprise (Matt. xii. 14), a seat of deliberation, considering the frame or structure of the plough itself, the point being usually only of wood (see Wilkinson's Ancient Egyptians, ii, 14, 17). See PLOUGH.

COUNCIL is the rendering given by our translators chiefly to two Greek words.

1. Συμβουλή (a meeting of counsellors) signifies a consultation of persons for executing any enterprise (Matt. xii. 14), a seat of deliberation, considering the frame or structure of the plough itself, the point being usually only of wood (see Wilkinson's Ancient Egyptians, ii, 14, 17). See PLOUGH.

COUNCIL, APOSTOLICAL, at Jerusalem (Acts xv, 6 sq.). See APOSTOLICAL COUNCIL. Many writers, Protestants as well as Romanists, have regarded the assembly of the apostles and elders of Jerusalem, of which we read in Acts xv, as the first ecclesiastical council, and the model on which others were formed, in accordance, as they suppose, with a divine command or apostolic institution. But this view of the matter is unsupported by the testimony of antiquity, and is at variance with the opinions of the earlier writers who refer to the councils of the Church. Tertullian speaks of the ecclesiastical assemblies of the Asiatic and European Greeks as a human institution; and in a letter written by Firmilian, bishop of Cesarea, to Cyprian, about the middle of the third century, the same custom is referred to merely as a convenient arrangement existing at that time among the churches of Asia Minor for common deliberation on matters of extraordinary importance. Besides this, it will be found, upon examination, that the councils of the Church were assemblies of altogether a different nature from that of the apostles and elders: the only point in which our alleged model was really imitated being, perhaps, the form of preface to the decree, "It hath seemed good to the Holy Ghost and to us" (see the Studien u. Kritiken, 1842, i, 102 sq.). See DECKH (OF APOSTLES).

COUNCIL (Lat. concilium), assemblies of pastors or bishops for the discussion and regulation of ecclesiastical and spiritual concerns.

1. The beginning of the system of church councils is traced to the gathering together of the apostles and elders narrated in Acts xv. This is generally considered to be the first council (see above); but it differed from all others in this circumstance, that it was under the special inspiration of the Holy Spirit. Roman Catholic writers, like Scaliger, Mansi, and Fabricius, however, refer it to the council of Jerusalem vix, Acts i, 18, for the election of an apostle; Acts vi, to choose deacons; Acts xv, the one above named: Acts xxii, 18 sq. But none of these had a public and general character except that in Acts xv (Schauf, Hist. of Christian Church, ii, § 65). Although the Gospel was soon after propagated in many parts of Europe, Asia, and Africa, there does not appear to have been any public meeting of Christians held for the purpose of discussing any contested point until the middle of the second century. From that time councils became frequent; but as they consisted only of those who belonged to particular districts or countries, they are usually termed dioecesan, provincial, patriarchal, or national councils, in contradistinction to council or in ecclesiastical or general councils, i.e. supposed to comprise delegates or commissioners from all the churches in the Christian world, and consequently supposed to represent the Church universal.

2. Ecclesiastical Councils.—The name συνόντων εκσυνάγουσας (concilium universale or general) occurs first in the 6th canon of Constantinople, A.D. 381 (Schauf, i. c.). No such assembly was held, or could be held, before the establishment of the Christian religion over the ruins of paganism in the Roman Empire. Their title to represent the whole Christian world is not
valid. After the 4th century the lower clergy and the laity were entirely excluded from the councils, and bishops only admitted. 17. The second ecumenical council, held at the greatest of the councils constituted but a small portion of the entire episcopate of the world. The ecumenical councils which are generally admitted to have title most justly were rather Greek than general councils. In the strict and proper sense of the term, therefore, no ecumenical council has ever been held.

There are seven councils admitted by both the Greek and Latin churches as ecumenical. The Roman Catholics add twelve to the number, making nineteen, named in the following list. For details as to the doing of the councils, see the separate articles under each of the lists.

2. The first council of Nice, held 325 A.D., to assert the Catholic doctrine respecting the Son of God in opposition to the opinions of Arius.
3. The first council of Constantinople, convoked under the emperor Theodosius the Great (381 A.D.), to determine the Catholic doctrine regarding the Holy Trinity.
4. The first council of Ephesus, convoked under Theodosius the Younger (431 A.D.), to condemn the Nestorian heresy.
5. The Council of Chalcedon, under the Emperor Marcian (451 A.D.), which asserted the doctrine of the union of the divine with the human nature in Christ, and condemned the semi-theses of Monophysites.
6. The second Council of Constantinople, under Justinian (553 A.D.), which condemned the doctrines of Origen, Arius, Macedonius, and others.
7. The council of Constantinople, convoked under the emperor Constantine V, Poenomatus (681 A.D.), for the condemnation of the Monothelites.
8. The second Council of Nice, held in the reign of the emperor Irene and her son Constantine (787 A.D.), to establish the worship of images.
9. The council of Frankfort (794 A.D.), under the Basilians and Adrian (869 A.D.), the principal business of which was the deposition of Photius, who had intruded himself into the see of Constantinople, and the restoration of Ignatius, who had been his former occupant.
10. The first Lateran Council held in Rome under the emperor Henry V, and convoked by the pope Calixtus II (1129 A.D.), to settle the dispute on indulgence. It was the first more scientific synod. Under the emperor Conrad III and pope Innocent II (1139 A.D.), condemned the errors of Arnold of Brescia and others.
12. The third Lateran Council, convoked by pope Alexander III (1179 A.D.), in the reign of Frederick I of Germany, condemned the "errors and impurities" of the Waldenses and Albigenses.
13. The fourth Lateran Council, held under Innocent III (1215 A.D.), among other matters asserted and confirmed the dogma of transubstantiation and necessity for the reform of abuses and the extirpation of heresy.
14. The first ecumenical synod of Lyon, held during the pontificate of Innocent IV (1246 A.D.), had for its object the establishment of ecclesiastical discipline, etc.
15. The second ecumenical synod of Lyon was held during the pontificate of Gregory X (1274 A.D.); its principal object was the reunion of the Greek and Latin churches.
16. The Synod of Vienne in Gaul, under Clemens V (1311 A.D.), was convoked to suppress simony, the abuse of the gifts Temporal clergy, bishops, etc.
17. The Council of Constance was convoked at the request of the emperor Sigismund, 1414 A.D., and sat for four years. It asserted the authority of an ecumenical council over the pope, and condemned the doctrines of John Huss and Jerome of Prague and the Monothelites. It convoked by pope Martin V, 1430 A.D. It sat for nearly ten years, and proposed to introduce a reformation in the discipline, and even the constitution of the Roman Catholic Church. All acts passed in this council, after it had been formally dissolved by the pope, are regarded by the Roman Catholic Church as null and void. 19. The celebrated Council of Trent, held 1540-1568 A.D. It was opened by Paul III, and brought to a close under the pontificate of Paul IV.

The Church of England (Homily against the Peril of Idolatry, pt. ii) speaks of "those five councils which were allowed and received of all men," viz., Nice, A.D. 325; Constantinople, A.D. 381; Ephesus, A.D. 431; Chalcedon, A.D. 451; Constantinople, A.D. 680 (see Amer. Quart. Church Rev. Oct. 1867, art. iv). The Articles of Religion (art. xxii) declare that "general councils may not be gathered together without the commandment and will of princes. And when they be gathered together (forasmuch as no man can assemble of his own will, not governed with the Spirit and Word of God) they may err, and sometimes have erred, even in things pertaining unto God; wherefore things ordained by them as necessary to salvation have neither strength nor authority unless it may be declared that they be taken out of Holy Scripture." The importance of the so-called ecumenical councils has been often greatly over-estimated, not only by the Greeks and Roman Catholics, but also by many Protestants. Jortin remarks, with his usual sharpness, that "they were a collection of men who were frail and fallible. Some of these councils were not assembled in the Church of Rome, but in the provinces of the Arian or the Manichean Church. The majority of which were quarrelsome, factional, domineering, dishonest prelates, who wanted to compel men to approve all their opinions, of which they themselves had no clear conceptions, and to anathematize and oppress those who would not implicitly submit to their determinations" (History of the Church, ii, vol. iii). The value of the decisions of the councils depends, not upon their authority, as drawn together at the call of emperor or pope, not upon the number of the bishops who attended them, but upon the truth of their decisions, and their conformity to the Word of God. The Councils of Nice and Chalcedon rendered great service to the Church and to theology; but their Chris tological statements of doctrine have been received by the general Church down to the latest times, not because they emanated from the councils, but because they satisfy the intellectual and moral needs of the Church, and are held to be true statements, though in many cases the details of their expression are not explicitly contained in the Word of God. As to the earlier councils, it "must be remembered that the bishops of that day were elected by the popular voice. So far as that went, they truly represented the Christian people, and were but seldom called to account by the people for their acts. Eusebius felt bound to justify his votes at Nice before his diocese in Cesarea. Furthermore, the councils, in an age of ecclesiastical despotism, sanctioned the principle of common public deliberation as the best means of arriving at truth and settling controversy. They revived the spectacle of the Roman senate in ecclesiastical form, and were the forerunners of representation in the Church as a "representation of representation" (Schaaf, History, ii, § 65; also in New-Englander, Oct. 1863, art. iv, and in Jahrb. für deutsche Theologie, 1868, ii). The Romanists hold that the pope alone can convene and conduct ecumenical councils, which are supposed, on this authority, to represent the universal Church under the guidance of the Holy Ghost. In matters of faith, councils profess to be guided by the Holy Scriptures and the traditions of the Church, while in lighter matters human reason and expediency are consulted. In matters of faith ecumenical councils are held to be infallible, and have been bound to the pope that all such synods have agreed together; but in matters of discipline, etc., the authority of the latest council prevails. The Roman claim is not sustained by history. The emperors called the first seven councils,
and either presided over them in person or by commissioners; and the final ratification of the decisions was also left to the emperor. But the Greek Church agrees with the Latin in ascribing absolute authority to the decisions of truly canonical councils. Gregorius (a name given to a number of those of the second ecumenical council) speaks strongly of the evils to which such assemblies are liable: "I am inclined to avoid conventions of bishops; I never knew one that did not come to a bad end, and create more disorders than it attempted to rectify." A remarkable view of the authority of councils was that of Nicolai of Constantinople, (v., vii., 1), who claimed a red carpet for their resolutions only if the members were really believers, and if they were more concerned for the salvation of souls than for secular interests. His views on general councils were fully set forth in a little work entitled Disputatio de concilio generali, which consists of three letters, addressed to 1145 or 1416, to a professor at the Paris University (printed apparently at Vienna in 1482). He not only places the authority of general councils over the authority of the popes, but the authority of the Bible over the authority of the councils. He doubts whether at all the councils have anything to do with the Holy Spirit really presided, as the Holy Spirit would not assist men pursuing secular aims. He denies that a council composed of such men represents the Church, and asserts that God alone knows who are his people and where the Holy Ghost dwells, and that there may be times when the Church can only be found in one single woman (in sola potent materia per gratiam mense ecclesiasicum). After the lapse of over 300 years, the pope in 1867 signified his purpose to summon another ecumenical council. Of course none but Romanists will attend it.

3. Provincial councils have been too numerous to be mentioned in detail. The most important of them are mentioned under the names of the places at which they have been held (e.g. Aix-la-Chapelle, Compiègne). Lists are given in most of the books on Christian antiquities, and in Landon, Man. of Councils.

4. The most important collections of the acts of the councils are Binius, Concilia Generalia (Cologne, 1856, 4 vols. fol.; 1868, 4 vols. fol.; Paris, 1868, 9 vols. fol.). The same, edited by Labbé and Cosson (Paris, 1671 sq., 17 vols., with supplement by Bailleux, 1838, 1 vol.); Hardouin, Collectio Maxima Conciliorum, etc. (Paris, 1715 sq., 12 vols. fol.); Colleti (Venice, 1728, 28 vols, 4to, with supplement by Lilius, 1748-52, 6 vols.); Monteferrante, (5th year 1727); Maximi Concil. nova et ampliss. Collectio (Florence, 1759-69, 81 vols. fol.). The abéd Migne proposes a complete collection, in 80 vols. There are special collections of the acts of national and provincial councils; e.g. for France, Simondon (Paris, 1629); La Londe (Paris, 1668); for Spain, Aiguirre (Madrid, 1781); for Germany, Binterim (Mainz, 1833-43, 7 vols.). Of manuals, histories of councils, etc., the following are the most important: Walch, Kirchengeschichtliche (Leips. 1769); Grier, Epitome General Councils (Dublin, 1828, 8vo); Land, Manual of Councils (London, 1840, 12mo); Beveridge, Synopsis, five volumes Conum S. S. Apostolorum et Conciliorum (Oxon. 1872-82, 2 vols. fol.); Hasse, Concilia-Geschichte (Freiburg, 1855 sq., 6 vols. 8vo.—yet unfinished). See also Gibbon, Decline and Fall, chap. xx; Lardner, Works, iv, 63; Elliott, Delivery of Romanum, bk. iii, ch. ii; Ferraris, Promota Bibliothecis, v. Concilia; Schaff, History of the Christian Church, vol. ii, 65; James, "Corruptions of the Scripture, Bishops, and Councils, by the Church of Rome (London, 1868, 8vo); Comber, Roman-Forgery in the Councils, etc. (London, 1869, 4to); Brown, On the Thirty-nine Articles, Art. XXI; Palmer, On the Church, ii, 144; Cramp, Textbook of Prose, p. 474; Siegela, Aehlersemer, iv, 406.

COUNCILS, ECCLESIASTICAL. See CONGREGATIONISTS.

Counsel (prop. προσπέλασις, etchep, διάβολος). Beside the common signification of this word, as denoting the consultations of men, it is used in Scripture for the decrees of God, the orders of his providence. God frustrates the counsels, the views, the designs of princes, but "the counsel of the Lord stand for ever" (Ps. xxxiii, 11; evii, 11; Luke vii, 80). See Dehke (of God).

COUNCILS, EVANGELICAL. See CONSILIA EVANGELICA.

Counsellor (usually γνώμη, godis, σύμβουλος), an adviser upon any matter (Prov. xi, 14; xv, 22; 2 Chron. xxv, 16; Ezra iv, 5, etc.; Rom. xi, 84), especially the king's state counsellor (2 Sam. xvii, 12; Ezra vii, 28; 1 Chron. xxvii, 88, etc.) hence one of the chief men of a government (Job iii, 14; xii, 17; Isa. i, 26; iii, 2, etc.), and once of the Maccabees (1sa, ix, 5; Sept. σύμβουλος, Vulg. consiliarius). The Chaldee equivalent term is διάβολος (godis, Ezra vii, 15, 16). Other Chaldee terms thus rendered are μάσσαρα (masarā), ministers of state or victors (Dan. iii, 24, 27; iv, 36; vi, 7), and τρόμος (tromos), a judge (Dan. iii, 2, 8). In the Apocrypha, σύμβουλος, in the ordinary sense of adviser, is thus rendered (Wis. viii, 9; Ecclus. vi, 6; xxxvii, 7, 8; xili, 21); also συμφωνία (1 Ead. vii, 11). In Mark xv, 48; Luke xix, 56, the Greek term συμφωνία, which is thus translated, is probably designated by the member of the Jewish Sanhedrin (q. v.) See Council.

Country. Heaven is called a country in the Bible, in allusion to Canaan. And it is a better country, as its inhabitants, privileges, and employments are far more excellent than any on earth (Heb. xi, 14, 16). It is a far country, very distant from and unknown to our world (Isai. xxvi, 7, and xxvii, 12; Luke xix, 15). A state of apostasy from God, whether of men in general or of the Gentile world, is called a far country; it is distant from that in which we ought to be in; in it we are ignorant of God, exposed to danger, and have none to pity or help us (Luke xv, 19). A state or place of gross ignorance and wickedness is called the region and shadow of death (Matt. iv, 16).

Coup'ling, γρατίων, chobe-reth, a junction of curtains (Exod. xxxvi, 4, 10; xxxvii, 17), l. q. γρατίων, machbe-reth (Exod. xxxvi, 4, 5, etc.); but γρατίων, mecha-reth, mecha-brers (7 girders) for fastening a building (2 Chron. xxxiii, 11); γρατίων, holding stones together (i. e. "joinings," 1 Chron. xxii, 8).

Courayer, Pierre François Le, an eminent and liberal Roman Catholic divine, born at Vernon, in Normandy, in 1681, was a canon and librarian of St. Genevieve, and a professor of theology and philosophy. Having written a Defence of the Validity of English Ordinations (Brux. 1728, 2 vols. 8vo), he was so persecuted that he took refuge in England in 1728, where he entered the English Church, obtained a pension, and died in 1776. He translated into French Sarpi's History of the Council of Trent, and Selden's History of the Reformation, and wrote several tracts. His Disputation on English Ordinations was republished at Oxford, 1844, 4to. His edition of Sarpi is better than any other (London 1736, 2 vols. fol.).

Courier. See Post.

Court. an open enclosure, applied in the A. V. most commonly to the enclosures of the Tabernacle and the Temple. 1. The Hebrew word invariably used for the former is "katheter," from מ苄כ, to surround (Genesius, Theb. Heb. p. 512). (See, e.g., Exod. xxv, 9 to xi, 88; Lev. vi, 16; Num. iii, 26, etc.) The same word is also most frequently used for the "courts" of the Temple, as 1 Kings vi, 8; vii, 8.
COURT 540  COURT

The same word is very often employed for the enclosures of the "villages" of Palestine, and under the form of Hazer or Hazor (q. v.) frequently occurs in the names of places in the A. V. See VILLAGE. It also designates the court of a prison (Neh. iii, 25; Jer. xxxvi, 2, etc.), of a private house (2 Sam. xvn, 18), and of a palace (2 Kings xx, 4; Esth. i, 5, etc.). In Isa. xxxiv, 19, "court for owls," the cognate "nēzīm, kātarām," is found. 2. In 2 Chron. iv, 2, and vi, 15, however, a different word is employed, apparently, for the above sacred places—"ɔwōria, nēzīm, nēzirām," from a root of similar meaning. This word also occurs in Ezek. xliii, 14, 17, 20; xliv, 19 (A. V. "settle"), but apparently with reference to the ledge or offset of the altar (q. v.) 3. In Amos vii, 13, where the Hebrew word is ḫūr, bērūth, a "house," our translators, anxious to use a term applicable specially to a king's residence, have put "court." 4. In the Apocrypha ἁβῆδι is rendered "court" with respect to the Temple (1 Esdr. ix, 1; 1 Macr. iv, 33; ix, 54), or the palace (1 Macr. xi, 46), which latter is expressed also (1 Macr. xiii, 40) by a periphrasis (τῷ ἡμεῖς ἡμῶν). 5. In the N. T. the word ἁβῆδι designates such an open court (as it is once rendered, Rev. xi, 2, referring to the temple: elsewhere "halle" or "palace"); and ἱσαλατία, a palace, is once (Luke xvii, 28) rendered "kings' court." See PALACE.

The term παρεκτή, τα'ρεκ (fully παρεκτάρεκ, τα'ρεκ, middle of the house, 1 Sam. iv, 5) also designates in Hebrew the quadrangular area in Eastern houses, denominatized in the New Testament τὸ μισόν, the centre or "midst" (Luke v, 19). This court is sometimes paved with marble of various kinds, and in the centre there is usually a fountain, if the situation of the place admits of it. It is generally surrounded on all sides, but sometimes only on one side, with a cloister or covered walk, called παρέκτᾳ, μυκῶν, over which, if the house have more than one story, is a gallery of the same dimensions, supported by columns. Large companies were received into the court on particular occasions (Esth. i, 5; Luke v, 19). At such times, a large veil of thick cloth was extended by ropes over the whole of the court, in order to exclude the heat of the sun. This veil or curtain of the area may be that termed in the New Testament στεγή, covering, or "roof" (Mark ii, 4; Luke vii, 6). See HOUSE.

COURT, Royal. The natives of the East have ever been remarkable for a more reverential estimation of the state and dignity of a king than has usually prevailed among other people, and to this fact the language of Scripture bears ample testimony. Although on some special occasions we read of the Jewish monarchs sitting in the gate with their people (2 Sam. xix, 8; Jer. xxxviii, 7), and the prophets appear to have had easy access to them (1 Kings xx, 19; 2 Chron. xxx, 15), yet it is abundantly evident that royal state was, in general, fully maintained, with only that admixture of occasional intercourse and familiarity which may be noticed by every traveller at the present day in the East. Hence it was accounted the height of human felicity to be admitted into that splendid circle which surrounded the monarch and his retinue, and they seem to have considered it a good omen if any one was so fortunate as to behold the face of the king (Prov. xxix, 26); whence the expression of seeing God (Matt. v, 8) is to be understood as the enjoyment of the highest possible happiness, such as his favor and protection, especially in the life to come. In reference to this custom, the angel Gabriel replied to Zacharias that he was Gabriel that stood in the presence of God; thus intimating that he was in a state of high favor and trust (Luke i, 19). Hence to "stand before the king" is a phrase which intended the same as to be occupied in his service, and to perform some duty for him (Gen. xii, 46; 1 Sam. xxii, 5, 7), and imparted the most eminent and dignified station at court. This illustrates the statement of Christ respecting children, "In heaven their angels do always behold the face of my Father." (Matt. xxiii, 9). It also attributes to the custom of Oriental courts, where the great men, those who are highest in office and favor, are most frequently in the prince's palace and presence (Esth. i, 14; 1 Kings x, 8; xii, 6; 2 Kings xxv, 19). In like
manner, the contentions among the apostles for the chief position under Christ shows that they mistook the spiritual nature of his kingdom; the request of the mother of James and John, that her sons might sit, the one on his right hand, and the other on his left, in his kingdom (Matt. xx. 20-23), evidently alludes to the custom which then obtained in the courts of princes, where two of the noblest and most dignified personages were respectively seated, one on each side, next the sovereign himself, thus enjoying the most eminent places of dignity (1 Kings ii. 19; 1 Sam. xiv. 9; Heb. ii. 3, 9). See King.

Court. Antoine, an eminent French Protestant divine, was born in 1606 at Villeneuve-la-Berge (according to others at La Tour d'Aigues), in Vivarais. After the revolution of the Edict of Nantes in 1685, the French Protestant Church was in danger of self-destruction through fanaticism. Under these circumstances, Court, in the synod of Delphinas in 1716 and of Languedoc in 1717, laid the foundation for an ecclesiastical constitution, based upon the old discipline of the French Church. In so doing he met great opposition, and even encountered personal peril, yet his work went on. To obviate the difficulty of intrusting the functions of the sacred office to persons who neither possessed the proper qualifications nor received the approbation of his colleagues, he sent one of his associates to Zurich to receive it, and the latter imparted it to the others in a synod held in 1718.

With the aid of the government of Berne and the archbishop of Canterbury, Court established in 1729 a seminary at Lausanne, where ministers were prepared for the churches of "the Desert," as they were called, very appropriately. All the ecclesiastical papers were dubbed from "the Desert." The duke of Orleans, while regent, was allied with England against Spain, and sought to induce Court to leave France, but the latter remained at his post until his death in 1760. Court wrote Histoire des troubles des PROTESTANTS, Geneve, 1760, 4 vols. 12mo; Alais, 1818, 8 vols.; Le Patriote Francois et impartial, ou Reponse a la lettre de M. l'Exequy d'Agen a M. le contrdle-geneal sur la tolerance des Huguenots (Villefranche, 1751, 1768); Lettre d'un patriote sur la tolerance civile des Prot. de France (1765), etc. Weiss gives an account of numerous MS. writings of Court (preserved in the Geneva library) in his Histoire des Refugies, ii, 298 (see Camilier).

Courtesies. Orientals are much more studious of politeness in word and act than Europeans (Niebuhr, Beobachtungen, p. 49; Arvieux, iii. 807). They were undoubtedly the ancient Hebrews. Inferiors in an interview with superiors (both on meeting and separating, 2 Sam. xvii. 21) were wont to bow (עָנָּה, עָנַּנְיָה, הַעָנַּנְיָה), see Klaister, De ceremoniis in § 4. Lipsius 1750 (low) (Gen. xiii. 7; xxii. 5, 6; xxi. 21), in proportion to the rank to which they were added by the king or his agents, Gen. xxiii. 3; 1 Sam. xx. 41. In the presence of princes, high civil officers, etc., persons threw themselves prostrate (at their feet) upon the ground (עָנָּה, עָנַּנְיָה, הַעָנַּנְיָה, Gen. xiii. 6; הַעָנַּנְיָה בְּשֵׁם הָאֱלֹהִים, Gen. xv. 14; I, 18; 2 Sam. i. 2; also simply עָנָּה, עָנַּנְיָה, 2 Sam. xiv. 19; comp. Judith xii, 21; רָעָּה, Deut. xvi. 22; 2 Sam. xiv.; 14; I, 18; 2 Sam. i. 2; also simply עָנָּה, עָנַּנְיָה, 2 Sam. xiv. 19; comp. Matt. xii, 11; Herod. i, 184; ii, 80; see Hyde, Rel. et Litt. Pers. p. 6 sq.; Harmer, ii, 80 sq.; Kype, Observations, i, 9, 410; Ruppell, Abyssin., i, 217; ii, 94). They would not only kneel (2 Kings i. 16; comp. Matt. xxvii. 29; Acta x, 29). Of course the courtesies, which in the modern East are customary (Harmer, iii, 34; Shaw, Trav. p. 207; Niebuhr, Trav. i, 232), e. g. laying the hand on the breast, there is no trace in the Bible. If an inferior mounted on a beast met a superior, he quickly alighted (Arnob. vii, 18; see Orelli ad loc.), and made the due obeisance (Gen. xxv. 64; 1 Sam. xxv. 28; see Niebuhr, Beobachtungen, Trav. i, 180).

Whether in such cases an individual turned out of the road, like the ancient Egyptians (Herod. ii, 80) and modern Arabsians (Niebuhr, Besch. p. 50), is uncertain, but probable. On the greeting by a kiss, which, however, does not appear to have been so usual or varied as among the modern Orientals (see Herod. i, 324; Harmer, ii, 80 sq.; Burckhardt, 210), see Kiss. Rising from a sitting posture before persons entitled to respect, such as elders, was early universal (Lev. xix, 22; Job xxix, 8, comp. Pophyry, Ablatins, i, 61). See Eider. Forms of salutation at meeting or entrance consisted of a pious expression of well-wishing (Gen. xxiii, 9; 1 Sam. xxv, 6; Judg. vii, 12; 2 Sam. xxv, 9; Ps. cxxxi, 8; Jud. xiv, 12). The music of Harm. iii, 172) and inquiries concerning the health of the family (2 Kings iv, 26; hence דִּבְרָה בְּעֵינֶהוּ = to greet, Exod. xviii, vii; Judg. xviii, 15; 1 Sam. x, 4; comp. Gesenius, Theol. Heb. p. 1347). One of the simplest formulas was "Jehovah be with thee!;" to which was replied, "The Lord bless thee;" (Ruth ii, 4). Among the later Jews, the phrase יִזָלַע, "May it go well with thee," was general (Lightfoot, p. 502). With the modern Arabs the expression of salutation, Salem alaykum, "Peace be upon you," and the reply, Ale glamorous, is "on you be peace," are customary (Niebuhr, Besch. p. 48; Bingen, iv, 249). The expression פָּדָה, פָּדָה, פָּדָה, פָּדָה, "Peace to thee," does not appear in the O. T. (Judg. xix, 20; 1 Chron. xii, 18) as a constant form of salutation (yet comp. Luke xxiv, 38; John xii, 26; also Tobit, xii, 12; and comp. on this Purman's Expositio form. salut. p. 134. Pazi Bocicam. Fruct. a. M. 1799). The Masonic greeting was Ato (ד' יַר) or Avo doum (ד' יַר), according to Plautus (Pom. v, 2, 84, 88; comp. Aesop, Antol. Gr. iii, 25, epigr. 70). Persons were also sent on their way with a similar formula (Tob., x. 20). But besides such set terms, individuals meeting one another made use of verbous methods of inquiring after each other's circumstances (as appears from the prohibition in 2 Kings iv, 29; Luke x, 4; see Niebuhr, Besch. 49; Arvieux, iii, 162; Russia, sloppy, i, 229; Jaubert, p. 170; Ruppell, Abyssin. i, 205). See Salutation.

Whether the following are ancient custom among Greeks and Romans (Homer, Odysseus, xviii, 541; Pliny, xxvii, 5; Petron. 98) of wishing well to one who sneezed (which was regarded as ominous, Eustath. ad Odysseus, xvii, 545; Cicero, Divin. ii, 40; Pliny, ii, 7; Xenoph. Anab. iii. 2, 9; Propert. ii. 2, 84; Augustine, Doctr. Chr. i, 20; comp. Metam. iv, 2. 3 ed. Bip.; Harduin ad Plin. xxviii, 5; see Weiss, Der Citius, sternuuntibus bene precordi, Lips. 1741; Rhan, De more sternuuntibus salutem appropinquant, Tigur. 1742), prevailed also among the Israelis, is uncertain; the later Jews observed it, and the Rabbins maintained that it was an ancient usage (Buxtorf, Synops. p. 125).

In conversation, the proudest person spoke of himself in the third person, and styled himself the other's servant (Gen. xviii, 8; xix, 2; xxxiii, 5; xiii, 28; Judg. xix, 19) and the other master (Gen. xxiv, 18; 1 Sam. xxvi, 18, etc.). Sometimes he applied, by way of further subservience, epithets (e. g. dog) of disparagement to himself (2 Sam. ix, 5; 2 Kings xiii, 18; see Oecolamp. Serm. 42). The usual title of respect was יִזָלַע, "My lord" (Rabbis); other respectful terms were also יִזָלַע, "My father" (especially to prophets, 2 Kings v, 13; vi, 21; xii, 14; comp. the Romanist title "father" for priest); on the later name, יִזָלַע, "My master," see Rabbi. The later Jews seem to have utterly excluded, in their bigotry, the heathen from all salutation (Matt. v, 47), as now.
Cousin was given (Luke 1, 86, 58) by the Auth. Vers. in its vague acceptance as the rendering of aegyptius, a blood-relative, or, "kinsman," as elsewhere translated. So also in the Apocrypha (1 Esm, iii, 7; iv, 42; Tob, vi, 10; 2 Mac, xxi, 1, 85).

Cousin, Victor, an eminent philosopher and writer, was born in Paris November 28, 1792, and was educated at the LyceÌ© Charlemagne, where, at sixteen, he gained the grand prix of honor. Soon after he was admitted into the Ecole Normale, where he became ripuÌ©rite, or private teacher of Greek literature, and afterwards professor of philosophy. In 1811 he attended the lectures of LaromiguÌ©re (q. v.), whose theory was a mixture of Condillac and Descartes, of some kind of philosophical idealism, and who insisted on reconciling the two systems. Cousin was at first fascinated by this theory, and still more by the elegant phraseology and lucid exposition of the lecturer. It was very probably at the same period that his great idea first presented itself to his mind, that each system is true, but incomplete, and that by collecting all the systems together a complete philosophy would be obtained. In 1812 and 1813 he attended the courses of philosophical lectures delivered at the FacultÌ© des Lettres by Royer-Collard, whose earnest mind had long distrusted that school of sensation which Locke and Condillac had established in the 18th century, and who had sought refuge from these doubts in the doctrines of the Scotch system. This doctrine, which insisted that there were notions in the mind totally independent of the senses, was ardently embraced by Cousin, who became lecturer at the FacultÌ© des Lettres, and began his famous course of the History of Philosophy. December 1813. Having learned to doubt from Royer-Collard, he resolved to examine in turn all the great philosophers, both ancient and modern, before he formed his opinions. He became a universal inquirer. He professed to judge without prejudice each philosopher, and in each he believed he had found a fragment of truth. As fast as he proceeded in the inquiry he communicated what he had found to the public, sometimes in lectures, at other times in books. To enable his pupils to judge for themselves, he published the works of Plato, the inedit works of Proclus, and an edition of Descartes, though the whole did not appear till after his dismissal. His translation of Plato in 13 vols. would preserve the work, and caused him to be arrested and conveyed to Berlin, where he was thrown into prison as an agitator. He remained in close confinement for six months. After his return he published, in 1826, his celebrated Fragmens Philosophiques, with a remarkable preface, which is still considered the best summary of his particular doctrine. In 1828 he recommenced lectures on Philosophy at the FacultÌ© des Lettres. His former lectures had consisted principally of the history of ideal truth, as it had been explained by the great thinkers who had preceded him. But this time his own theory was exhibited. The first series was published in 1829, under the title of Discours sur la nature de la PhÌ©Ì©osophie, and ended in 1829, as Cours de Philosophie. Soon after, the accession of Louis Philippe introduced his friends Guizot and De Broglie to power. He now became a counsellor of state, a member of the Board of Public Education, an officer of the Legion of Honor, and a peer of France, in 1831. In 1837 he was commissioned by the ministry to proceed to Germany to examine the state of education in that country. The results were given to the world in 1832, Rapport sur l'état de l'instruction publique dans quelques pays de l'Allemagne (translated by Mrs. Austin, and published in London in 1834). He succeeded Fourier in the Academy, and delivered his discours, or reception address, May 5, 1831. He seldom spoke in the Chamber of Peers, and when he did it was almost invariably on the subject of National Instruction. On March 1, 1840, Cousin entered the liberal cabinet of Thiers as minister of Public Instruction. He introduced a number of reforms during his administration, which lasted eight months, and of which he published himself a review in the Revue des deux Mondes in 1841. In 1848 M. Cousin seemed cordially to accept the introduction of the republic, and when General Cavaignac appealed to the Academy of Moral and Political Sciences to aid the government in the reduction of the Communes, Cousin published, with a republican prefix, a popular edition of the Profession de foi du vicarÌ© savoyard. He wrote, under the title of Justice et CharitÌ©, a pamphlet against the socialistic tendencies. But after 1849 Cousin altogether withdrew from public life. He published, besides the works already mentioned, among others, Procli Opera, 6 vols. 8vo, 1830-27; Descartes, Exercules CollecteÌ©, 11 vols. 8vo; AbÌ©Ì®ard, Sic et non, 1836; several series of Fragmens Philosophiques, 1838-40; Hist. de la PhÌ©Ì©osophie (1st series, 5 vols. 8vo; 2d, 3 vols. 8vo; 3d, 4 vols. 8vo): Du Vrai, du Beau, du Bien (1853, 8vo, a republication of his lectures delivered between 1815 and 1816); and in 1857, Morale, 5 vols. 1840-41. A collected edition of his principal works (up to 1846) in 22 vols. 18mo, was published in 1846-47. From 1858 to 1864 he published a series of works on celebrated literary women of the 17th century, which are an important contribution to the history of literature. The series comprises Jacques Pascal and Madame de Longueville (1855); Madame de Sillery (1854), Madame de Charlevoix and Madame de la FortiÌ©e (1856); La SociÁ©te FranÁ©aise au XVIIIe siÁ©cle (1858, 2 vols.); La Jeunesse de Madame de Longueville (1856, 4th ed.); La Jeunesse de Mme de Maintenon (1865). In 1869 he published again, in a new form, the Cours de Philosophie, after les temps les plus reculés jusqu'au XVIIIe siècle (1869), being a revised edition of his Cours de l'histoire de la philosophie. Cousin was also a
frequent contributor to some of the leading periodicals of France, such as the Revue des Deux Mondes, the Journal des Savants, and others. A kind of Galillean catechism, published anonymously in 1838, under the title Le Journal des Savants and of Religion, has also been ascribed to Cousin. He died in Jan. 14, 1867.

Cousin undoubtedly rendered great service to modern thought by his advocacy of "spiritualism" (spiritualist philosophy) as opposed to materialistic doctrines. In the preface to De l'âme, De l'étre, De Dieu, he expressed himself thus (1850): "Our true doctrine, our true standard, is spiritualism; the philosophy, generous and solid at the same time, that commences with Socrates and Plato, that the Gospel spreads over the world, that Descartes forced into the severer forms of the genius of modern times. The name of spiritualism is properly given to this philosophy, for its character is that it subordinates the senses to the spirit, and that, by all means which reason can avow, it perpetually tends to elevate man and make him greater. Spiritualism teaches the immortality of the soul, the freedom and responsibility of human action, the obligation of morality, the virtue of disinterestedness, the dignity of justice, the purity of charity, and the beauty of this earth, spiritualism points to God, the Creator and the Type of humanity, who, having created man evidently for an excellent end, will not abandon him during the mysterious development of his destiny.

As to method, Cousin follows the psychological rather than the a priori method, but he avoids carefully the pitfalls of Locke and the sensationalists. His psychology is idealistic, his ontology also. What he calls "spontaneous reason" acquaints us with the "true and essential nature of things." In place of "commencing, as the Germans do, with ontology, he affirms the possibility of finding a passage from the world of phenomena to real existence. Since reason receives truth spontaneously, by direct and immediate perception, he considers that we may, by means of this faculty, attain to the knowledge of essential and absolute existence." (Morel, Hist. of Mod. Philos. pt. ii, ch. viii). The tendency of this view to pantheism has been shown by many writers, especially by Globert (Considérations sur les doctrines religieuses de M. Victor Cousin, trans. by Tourneur, Paris, 1847, 8vo). Cousin himself always strenuously repudiated the name of pantheist. It is certain that towards the end of his career he "sought more and more the support of the great Christian mystics, and directed his thoughts towards Pascal, Descartes, and Leibnitz" (North British Review, March, 1867, art. v). Of translations of his works, we have, by Daniel, The Philosophy of the Beautiful (N.Y. 1846, 8vo); by Wight, History of Modern Philosophy (N.Y. 2 vols. 8vo, 1852); by the same. Lectures on the True, the Beautiful, and the Good (N.Y. 1854, 8vo); by Henry, Psychology, including an Examination of Locke's Philosophy (N.Y. 4th ed., 1866, 8vo).

Cout'ha (Koutho, Vulg. Phousa), named (1 Esdr. v, 32) as one of the heads of the Temple-servants whose "sons" returned from Babylon; but the Hebrew lists (Est. ix, 36; Neh. vii, 55) contain no corresponding name.

Covel, James, Jr., a Methodist Episcopal minister, was born at Marblehead, Mass., Sept. 4, 1796, became a trapper at 19, a preacher in 1816, and travelled chiefly in the state of New York. He was the author of a Dictionary of the Bible (18mto), and was a man of sound judgment, sincere piety, and steady industry. From 1888 he was appointed principal of the Troy Conference Academy, and filled the post acceptably until 1861. His last station was State Street, Troy, where he died, May 16, 1846. He also edited Minutes of Conferences, iii, 600; Sprague, Annals, vii, 564.

Covel, John, an English divine, was born at Horningsea, Suffolk, in 1688, and was educated at Christ's College, Cambridge, of which he became fellow. In 1670 he went to Constantinople as chaplain to the British embassy. In 1687 he was made chancellor of York, and in 1688 master of Christ's College, Cambridge. He returned to England in 1722. After the fruit of his residence in Constantinople, he wrote Some Account of the present Greek Church, with Reflections on the present Doctrine and Discipline, etc. (Camb. 1722, fol.).

Covenant, a mutual contract or agreement between two parties, each of which is bound to fulfil certain engagements to the other. In Scripture it is used mostly in an analogical sense, denote covenant relations between God and man. (See Daniele Reuven, March, 1862.)

I. Term.—In the Old Test. הָכּוֹנֶן, beriuah (rendered "league," Josh. ix, 6, 7, 11, 15, 16; Judg. ii, 2; 2 Sam. iii, 12, 18, 21; v, 8; 1 Kings v. 12; xv, 19, twice; 2 Chron. xvi, 3, twice; Job v, 23; Ezek. xxxix, 5; "confederacy," Oud; 7; "covenant," Gen. xv. 13; Hebr. 3: 6; 8: 16) is the word usually translated (Sept. διακολος; once, Wisd. i. 16, ouairoh; Vulg. fidelitas, pectum, often interchangeably, Gen. ix, xvii; Num. xxxv; in the Apocalypse testamentum, but sacramentum, 2 Esdr. ii, 7; sponsones, Wisd. i. 16; in N. T. testamentum [alogue fuderea, Rom. i. 21; Gr. δεικνυομενον]). For a Hebrew word see συμβεβηκασθαι (Thes. Heb. p. 237, 238; so Fürst, Hebr. Handb. p. 217) from the root הָכּוֹנֶן, i. e, הָכּוֹנֶן, "he cut," and taken to mean primarily "a cutting," with reference to the custom of cutting or dividing animals in two, and passing between the parts in ratifying a covenant (Gen. xv; Jer. xxxiv. 18, 19). Hence the expression "to cut a covenant" (יהוה הכנין, Gen. xv, 18, or simply הכנין, with הכנין understood, 1 Sam. xi, 2) is of frequent occurrence. (Comp. עָכָּב רִמְעוֹן, רִמְעוֹן אֵין שְׁכָּו, לְהַר, הַר הַר הַר, etc.) Professor Lee suggests (Esh. Lex. s. v. הכנין) that the proper signification of the word is an eating together, or banquet, from the meaning "to eat," which the root הכנין sometimes bears; because among the Orientals to eat together amounts almost to a covenant of friendship. This view is supported by Gen. xxxi, 46, where Jacob and Laban eat together on the heap of stones which they have set up in ratifying the covenant between them. It affords also a satisfactory explanation of the expression of "covenant of salt" (יהוה הכנין יַסִּים, יַסִּים אֱלֹהִים, Num. xviii. 19; 2 Chron. xiii, 5), when the Eastern idea of eating salt together is remembered. If, however, the other derivation of הכנין be adopted, this expression may be explained by supposing salt to have been eaten or offered with accompanying sacrifices on occasion of very solemn covenants, or it may be regarded as figurative, denoting, either, from the use of salt in sacrifice (Lev. ii, 13; Mark ix, 40), the sacredness, or, from the preservation of the qualities of salt, the perpetuity of the covenant. (See below.)

In the New Test. the word διακονή is frequently, though by no means uniformly, translated testament in the English Auth. Vers., whence the two divisions of the Bible have received their common English names. This translation is perhaps due to the Vulgate, which, having adopted testamentum as the equivalent for διακονή in the Apocalypse, uses it always as such in the N. T. (see above). There seems, how-
COVENANT

ever, to be the introduction of a new word conveying a new idea. The Sept. having rendered τελεμάχος (which never means will or testament, but always covenant or agreement) by διαθέσεις consistently throughout the O.T., the N.T. writers, in adopting that word, may naturally be supposed to intend to connect it with their readers, most of them, familiar with the Greek O.T., the same idea. Moreover, in the majority of cases, the same thing which has been called a "covenant" (τηλεμάχος) in the O.T. is referred to in the N.T. (e.g. 2 Cor. iii, 14; Heb. vii, ix; Rev. xvi, 19); while in the same context the same word and thing in the Greek are in the English sometimes represented by "covenant," and sometimes by "testament" (Heb. vii, 22; viii, 13-15). In the confusedly difficult passage, Heb. ix, 16, 17, the word διαθήκη has been thought by many commentators absolutely to require the meaning of will or testament. On the other side, however, it may be alleged that, in addition to what has just been said as to the usual meaning of the word in the N.T., the word occurs twice in the context, where its meaning must necessarily be the same as the translation of τελεμάχος, and in the unquestionable sense of covenant (comp. διαθήκη καινού, Heb. ix, 15, with the same expression in viii, 8; and διαθήκη, ix, 16, 17, with ver. 20, and Exod. xxxiv, 8). If this sense of διαθήκη be retained, we may either render "testament," "over, or in the case of, dead sacrifice," "the solemn covenant," "the holy covenant," "the solemn covenant," "the covenant translation of the N.T.," or (with Ewald and others) restrict the statement of ver. 16 to the O.T. idea of a covenant between man and God, in which man, as guilty, must always be represented by a sacrifice with which he was so completely identified that in his person (διαθήκη, the human covenant) actually died (comp. Matt. xxvii, 28). See Testament.

II. Their Application.—In its Biblical meaning of a compact or agreement between two parties, the word "covenant" is used—1. Properly, of a covenant between man and man; i.e. a solemn compact or agreement, either between tribes or nations (1 Sam. xi, 1; Josh. ix, 6, 15), or between individuals (Gen. xxvi, 44), by which each party bound himself to fulfill certain conditions, and was assured of receiving certain advantages. In making such a covenant God was solemnly invoked as witness (Gen. xxxii, 50), whence the expression "a covenant of Jehovah" (תֵּלֶּםָאָה תַּלֶּםָאָה, 1 Sam. xii, 5; comp. Jer. xxxiv, 18, 19; Ezek. xxi, 19), and an oath was sworn (Gen. xxvi, 21); and accordingly, a breach of a covenant was viewed as a very heinous sin (Ezek. xviii, 12-20). A sign (תֵּלֶּםָאָה or witness (תֵּלֶּםָאָה) of the covenant was sometimes framed, such as a gift (Gen. xxvi, 30), or a pillar, or heap of stones erected (Gen. xxxii, 52). The marriage compact is called "the covenant of God," Prov. ii, 17 (see Mal. ii, 14). The word covenant came to be applied to a sure ordinance, such as that of the shew-bread (Lev. xxiv, 8-9), which was figuratively in such expressions as a covenant with death (Isa. xxvi, 18), or with the wild beasts (Hos. ii, 18). The phrases תֵּלֶּםָאָה תֵּלֶּםָאָה, זָּכַר תֵּלֶּםָאָה, "lords or men of one's covenant," are employed to denote confederacy (Gen. xiv, 18, Ob. 7). See Contract.

2. Improperly, of a covenant between God and man. Man not being in any way in the position of an independent covenanting party, the phrase is evidently used by way of accommodation. See אֱמֹרֵהַ. Strictly speaking, such a covenant is quite unconditioned, and amounts to a promise (Gal. iii, 15 sq., where תֵּלֶּםָאָה and διαθήκΗ are used almost as synonyms) or act of mere favor (Psa. lxxviii, 28, where תֵּלֶּםָאָה stands in parallelism with תֵּלֶּםָאָה) on God's part. Thus the assurance given by God after the Flood that a like judgment should not be repeated, and that the recurrence of the seasons, and of day and night, should not cease, is called a covenant (Gen. ix; Jer. xxxiii, 20). Generally, however, the form of a covenant is maintained, by the bestowal of God's favor to be bestowed being made by him dependent upon the fulfillment of certain conditions which he imposes on man. Thus the covenant with Abraham was conditioned by circumcision (Acts vii, 8), the omission of which was declared tantamount to a breach of the covenant (Gen. xvii); the covenant of the priesthood by the zeal for God in his service (Num. xxv, 12, 15; Deut. xxxiii, 9; Neh. xiii, 29; Mal. ii, 4, 5); the covenant of Sinal by the observance of the ten commandments (Exod. xxxiv, 27, 28; Lev. xxvi, 16), which are therefore called "Jehovah's covenant" (Deut. iv, 18), a name which was extended to all the books of Moses, if not to the whole body of Jewish canonical Scriptures (2 Cor. iii, 18, 14). This last-mentioned covenant, which was renewed at different periods of Jewish history (Deut. xxix; Josh. xxiv; 2 Chron. xv, xxiii; xxxiv, xxxiv, xxxiv; Ezra x; Neh. ix, 1), is one of the two principal covenants between God and man. They are distinguished by the old and new testaments (81, 82, 83, 84). The Hebrew, viii, 8; x; 16), with reference to the order, not of their institution, but of their actual development (Gal. iii, 17); and also as being the instruments respectively of bondage and freedom (Gal. iv, 24). Consistently with this representation of God's dealings with man under the form of a covenant, such a covenant is said to be confirmed in confpute, by an oath (Heb. xii, 20; Ps. lxxxxxix, 3, 8), to be sanctioned by curses to fall upon the unfaithful (Deut. xxxii, 21), and to be accompanied by a sign (תֵּלֶּםָאָה), such as the rainbow (Gen. xiv), circumcision (Gen. xvii), or the Sabbath (Exod. xxxi, 16, 17). Hence, in Scripture, the covenant of God is called his "counsel," his "wont," his "promise" (Psa. lxix, 8, 4; Deut. xxxii, 18-20; Luke vii, 44, 45; Gal. iii, 15-18, etc.); and it is described as consisting wholly in the gracious bestowal of blessing on men (Isa. lix, 21; Jer. xxxi, 38, 84). Hence also the application of the term covenant to designate such fixed arrangements or laws of nature as the regular succession of day and night (Jer. xxiii, 39), and such religious institutions as the Sabbath (Exod. xxxi, 16); circumcision (Gen. xvii, 10); the Levitical institute (Lev. xxvi, 15); and, in general, any precept or ordinance of God (Jer. xxxiii, 13, 14), all such appointments forming part of that system or arrangement in connection with which the blessings of God's grace were to be enjoyed. COVENANT OF SALT (תֵּלֶּםָאָה תֵּלֶּםָאָה). This phrase is supposed to denote a perpetual covenant, in the sealing or ratification of which salt was used. As salt was added to different kinds of viands, not only to give them a relish, but to preserve them from putrefaction and decay, it became the emblem of incorruptibility and permanence. Hence a "covenant of salt" signified an everlasting covenant ( sweeps. xviii, 20; Lev. lii, 13; 2 Chron. xiii, 5). See Salt.

Covenant, Solemn Leaguest and. There were several covenants drawn up in Scotland having regard to the maintenance of the Reformed or Presbyterian religion in that country. The First Covenant was subscribed in Edinburgh Dec. 8, 1557, the mass of signers being known as the Congregation, and the nobility and leading burghers as the Lords of the Congregation (q.v.). They petitioned the government for liberty of worship. Being met with dissimulation and treachery, a Second Covenant was signed at Perth, May 31, 1558, wherein the subscribers bound themselves to mutual assistance in defense of their religious rights. This covenant was made to appear that Queen Elizabeth of England was called in to counteract the French troops invited by the Papal party. On
COVENANTS 545

COVERDALE

the death of the queen-mother in 1569, the French troops were withdrawn, and Parliament, being left at liberty, ordained the Presbyterian as the Established Church of Scotland. In 1568 the National Covenant was subscribed over all Scotland with great enthusiasm. This was not only a repetition of the former covenants, but contained, moreover, a solemn protest against the papacy.

The Solemn League and Covenant was a compact entered into in 1643 between England and Scotland, binding the united kingdoms to mutual aid in the extinction of popery and prelacy, and the preservation of true religion and liberty in the realm. It was drawn up by Alexander Peden, approved by the General Assembly of the Church of Ireland Aug. 17, ratified by the Convention of Estates, and accepted and subscribed Sept. 25 by the English Parliament and the Westminster Assembly (q. v.). In 1645 it was again ratified by the Scottish General Assembly, together with the Directory for Worship framed by the Westminster Assembly. Although Charles I would not approve of it, Charles II engaged by oath to observe it, a promise which he broke upon the first opportunity. The Scottish Parliament of 1661, in the interest of the king, established the royal supremacy, annulled the Solemn League and Covenant, and abolished the lieses from its obligations. The "Covenants" have a place in the volume which comprehends the Westminster Confession of Faith (Scottish edition), but for what reason it is difficult to say, for the Church of Scotland does not make adherence to them obligatory on either clerical or lay members. Certain Scotch and Irish dissenters, however, still profess attachment to the covenants, and on particular occasions renew their subscription to them. — Hetherington, Hist. of Church of Scotland; McCrie, Sketches of Ch. Hist.; Rudloff, Geschichte der Reformation in Schottland (Berlin, 1868, 2 vols.). See CAMBRIANIS; PRESBYTERIANS, REFORMED; SCOTLAND, CHURCH OF.

Covenants, Theology of. See Federal Theology.

Covenanter, the name given primarily to that body of Presbyterians in Scotland who objected to the Revolution settlement in Church and State, and desired to establish a civil and ecclesiastical polity that prevailed in Scotland from 1638 to 1649.

"According to the Solemn League and Covenant, ratified by the Parliaments of England and Scotland, and also by the Assembly of Divines at Westminster in 1643, Presbyterianism was to be maintained in the kingdom, including in churches, courts, and people, prelacy, superstition, heresy, schism, etc., were to be extirpated. The 'Covenants' in Scotland contended, as is well known, under much suffering, for this species of Presbyterian supremacy throughout the reigns of Charles II and James VII (II). As a measure of pacification at the Revolution, Presbytery was estab. in an act of Parliament, 1599; but it was of a modified kind. Substantially the Church was rendered a creature of the State, more particularly as regards the calling of General Assemblies; and prelacy was not only confirmed in England and Ireland, but there was a general toleration of heresy — i.e. dissent. In sentiment, if not in form, therefore, this party repudiated the government of William III and his successors, and still maintained the perpetually binding obligations of the Covenants. The Covenanters acted under strong convictions, and only desired to carry out a legitimate issue principles which have always been found in the Presbyterian Church of Scotland; but which, for prudential considerations, had been long practically in abeyance. In short, it is in the standards of the Covenanters that we have to look for a true embodiment of the tenets held by the great body of English and Scotch Presbyterians of 1643. Others gave in to the Revolution settlement, and after-wards found cause to secede. The Covenanters never gave in, and, of course, never seceded. Although thus, in point of fact, an elder sister of the existing Church of Scotland and all its secessions, the Cameronian body did not assume a regular form till after the Revolution; and it was with some difficulty, amidst the general contentment of the nation, that it organized a communion with ordained ministers. The steadfastness of the whole was put to a severe trial by the defection of their ministers, and for a time the people were as sheep without a shepherd. At length, after their faith and patience had been tried for sixteen years, they were joined by the Rev. John M'Millan, from the Established Church, in 1706. In the same year the communion was joined by the Rev. John M'Neil, a minister of the Established Church. As a means of confirming the faith of members of the body, and of giving a public testimony of their principles, it was resolved to renew the Covenants; and this solemnity took place at Auchencasch, near Douglas, in Lanarkshire, in 1712. The subsequent accession of the Rev. Mr. Nairne enabled the Covenanters to constitute a presbytery at Brasehead, in the parish of Carnwath, on the 1st of August, 1743, under the appellation of the Reformed Presbytery. Other presachers afterwards attached themselves to the sect, which continued to flourish obscurely in the west of Scotland, having its history and tenets we refer to the Testament of the Reformed Presbyterian Church (Glasgow, John Keith, 1842). Holding strictly to the Covenants, and in theory rejecting the Revolution settlement, the political position of the Covenanters is very peculiar, as they refuse to recognise any laws or institutions by which they conceive to be inimical to those of the Kingdom of Christ." (Chambers, Encyclopaedia, s. v. Cameronians.) The Reformed Presbyterians regard themselves as the modern representatives of the Covenanters. See History of the Covenanters (2 vols. 18mo, Philad. Presb. Board); also the articles Presbyterians (Reformed) Church; Cameron; Scotland, Church of.

Coverdale, Miles, one of the earliest English reformers, was born in Yorkshire about 1487, and was educated at Cambridge, where he became a monk of the Augustine order. At an early period he perceived the errors of Popery. In 1514 he was ordained priest. About 1516 he published a small work on the impropriety of preachers against papal errors. In 1528 he joined Tyndale at Hamburgh, and in 1535 he himself, having translated the Bible, called up the dedication to Henry VIII. It formed a folio, printed at Zurich. "He thus had the honor of editing the first English Bible allowed by the royal authority. His translation of the Bible printed in our language. The Psalms in it are those now used in the Book of Common Prayer. About the end of the year 1538 Coverdale went abroad again on the business of a new edition of the Bible. Graf ton, the English printer, had permission from Francis I, at the request of king Henry VIII himself, to print a Bible at Paris, on the account of the king. Coverdale went to Paris, and the workmen, and the goodness and cheapness of the paper. But, notwithstanding the royal license, the Inquisition interposed by an instrument dated December 17, 1538. The French printers, their English employers, and Coverdale, who was the corrector of the press, were summoned before the Inquisition, and a number of copies, consisting of 2500 copies, was seized and condemned to the flames. The avarice of the officer who superintended the burning of the copies, however, induced him to sell several chests of them to a haberdasher for the purpose of wrapping his wares, by which means a few copies were preserved. The English matrons, who had fled at the alarm, returned to Paris when it subsided, and not only recovered some of the copies which had escaped the fire, but brought with them to London the press, types, and printers. This importation enabled Grafton and Whitelocke to print, in 1539, what is called Cranmer's, or 'The Great Bible,'
in which Coverdale compared the translation with the Hebrew, corrected it in many places, and was the chief overseer of the work. Coverdale was also, some time afterwards, to queen Catharine Parr, the last wife of Henry VIII, at whose funeral he officiated in the chapel of Sudeley Castle, in Gloucestershire, in 1548. On August 14, 1561, he succeeded Dr. John Harman, otherwise Voysey, in the see of Exeter (English Cyclopedia). On the accession of Queen Mary, he was ejected from his see and thrown into prison. On his release, at the end of two years, Coverdale repaired to Denmark, and afterwards to Wezel, and finally to Geneva, where he joined several other exiles in producing that version of the English Bible which is usually called "The Geneva Translation," part of which was New Testament, was published at Geneva in 1557 by Conradus Badius, and again in 1560. On the accession of Queen Elizabeth Coverdale returned from exile; but having imbibed the principles of the Geneva reformers, as far as respected the ecclesiastical habits and ceremonies, he was not allowed to resume his bishopric, nor was any prebend offered to him for a considerable time. In 1568 bishop Grindal recommended him to the bishopric of Llandaff; but it is supposed that Coverdale's age and infirmities, and the remains of the plague, from which he had just recovered, made him decline so great a charge. In lieu of it, however, the bishop procured him the right of precincts of St. Bride's, London Bridge. He resigned this living in 1566. The date of his death has been variously stated. The parish register of St. Bartholomew, behind the Royal Exchange, however, proves that he was buried Feb. 19, 1568. His principal writings have been recently republished in England by the Parker Society, under the titles of "Writings and Translations of Miles Coverdale," edited by G. Pearson (Camb. 1844, 8vo); "Remains of Miles Coverdale," edited by G. Pearson (Cambridge, 1846, 8vo). See Bagster, Memorials of Coverdale; Johnson, English Translations of the Bible; Hook, Eccles. Biography, iv, 209.

Covering of the Eyes, a phrase of much disputed signification, occurring in the expression ἐξετάζειν ἐκεῖνόν, he (or this) [shall be] to thee a covering of the eyes (Gen. xx, 16; Sept. rabrō terrā, oraptopsis αὐτοῦ, R. V. would be οὐκ έρίθη τις, in valvis oculorum), which is usually understood to refer to a veil that ought to have been worn by Sarah to hide her dangerous beauty, and which either her husband (if οὐ κατείστη be masc.) or the present (if neuter) would furnish. See Abraham. Against this interpretation, however, there lies this objection, that such a piece of apparel, in modern Oriental usage, covers rather the face or person, and leaves the eyes free. See Woman. Hence many commentators (but see Rosenmüller, in loc.) explain the phrase as an idiomatic one for a peace-offering (see Genesis, Thes. Heb. p. 700) or propitiatory present (comp. Gen. xxxxi, 21; Exod. xxii, 8; Josh. ix, 24; in none of which passages, however, are we sure of the propriety of the word, but this does not so well suit the difficult context, "unto all that are with thee," since her companions had no cause of complaint, and a reproof would then have been inap propriate. We may therefore recur to the explanation of Kitto (Pict. Bible, note in loc.): "It is customary for all the women inhabiting towns to go about closely veiled; while all the women of the different pastoral people who live in tents do not commonly wear veils, or at most only so far as to cover their foreheads and lower parts of the face, leaving the countenance exposed from the eyebrows to below the nose. Abimelech, according to this view, intended to give Sarah, as the proper one, no other than that veiled, that being the dress of all the women who were in or near towns, they had better conform to the customs of towns, and wear the complete veil, instead of that partial covering which left the eyes and so much of the face exposed." (see also his Daily Bible Illustrations, in loc.). At the same time, there appears to be a refined allusion to the other meaning of the phrase in question, by one of those plays upon words so frequent in these early narratives. Hence the terseness of the whole phraseology. See Veil.

Covering the Head in Prayer (1 Cor. xi, 4-6). See Veil. (Buchner, De ritu caput retegendi, Vitub. 1703; Zeilich, De moraliitate ritus capit operiendi, ib. 1704; Berger, De ritu capitis operiendi, ib. 1708; Mallincourt, Id. Lips. 1784). See PRAYER.

Covert, prop. some form of the verb גִּבֵּשׁ, sathar, to hide: namely, פָּרָשֵׁה, se'ther, a shelter (1 Sam. xxv, 20; Job xi, 21; Ps. lxi, 4; Isa. liv, 4, xx, 2; elsewhere usually "secret place"); הַמִּשְׁרֶה, mistror, protection (Isa. iv, 6); elsewhere some form of the verb פָּרַשׁ, sakak, to entrust: namely, פָּרָשִׁים, muak (text פָּרָשׁים, meyak), a covered walk or portico (Sept. Septuaginta, apparently reading פָּרַשׁי, Vulg. muak); פָּרָשֵׁה, sakak, a laver (Jer. xxi, 8; "den," Isa. x, 9; elsewhere a bath, "pavilion," Ps. xxviii, 5; "tabernacle," Ps. lxvi, 2; פָּרָשׁוֹ, sakak (Job xxxvii, 40), a booth (as elsewhere usually rendered). This term is generally applied to a shelter for wild beasts, but in 2 Kings xvi, 18, we read that Ahaz, when spelling the Temple, "took down the covert (פָּרָשִׁים, muak) for the Sabbath that they had built in the house;" which bishop Patrick imagines was a "covered place, where the king sat, in the porch of the Temple, or at the entranee of it, upon the Sabbath, or other great solemnities." Ahaz took this away, intending, probably, not to trouble himself with coming to the Temple any more, but to sacrifice elsewhere. See TEMPLE. It rather designates a cloister, shaded from the heat of the sun for the accommodation of the courtly worshippers (Theneus, in loc.), such as we know ran around the interior of the Temple in later times. See Temple.

Covetousness (θλιψία, b'sa, rapine, lucre; πλανοφορία, a grasping temper), in a general sense, means all inordinate desire of worldly possessions, such as undue thirst for honors, gold, etc. In a more restricted sense, it is the desire of increasing wealth, and the means by appropriating that of others. It is a disorder of the heart, and closely allied to selfishness. We here consider it under its more restricted aspect.

1. Covetousness (πλανοφορία, φλανγκρατία) is a strong, sometimes irresistible desire of possessing or of increasing one's possessions. It is a desire that unites its influence the heart, instead of aspiring to noble, high, and divinl goods, will be brought to the almost exclusive contemplation of earthly, material things; and thus, instead of becoming gradually more closely united with God, will become more and more estranged from him. Since where the treasure is there the heart is also, the love of the covetous cannot be with God, but with Mammon; he is not a servant of God, but of idols. The love of God and the love of Mammon cannot find place in the same heart; the one excludes the other (Matt vi, 21; Luke xiv, 13; Col. iii, 5, Mortify therefore your members which are upon the earth: fornication, uncleanness, lasciviousness, and covetousness, which is idoltry). But since to love God is our highest duty, and God alone is to be prayed to, loved, and trusted, the covetous man, as a servant of Mammon, is forever excluded from the kingdom of Christ and of God (1 Cor. vi, 10, Nor thieves, nor covetous, shall inherit the kingdom of God; Eph. v, 5, For this ye know that no harlot, nor unclean person, nor covetous man, who is an idolater, hath any inheri-

We are further told that the citizen of the kingdom of God is to lay up riches in heaven (Matt vi, 20); he must be
content with food and raiment (1 Tim. vi. 7, 8); but the covetous act in opposition to all these commandments (Heb. xiii. 5, Let your conversation be without covetousness: if any man be an idler, let him not be found therein). Covetousness makes war with such things as ye have: for he hath said, I will never leave thee nor forsake thee). This state of the heart is very dangerous, for covetousness is the source of all evil, and brings forth all manner of sin (1 Tim. vi. 9, 19, For the love of money is the root of all evil; which some coveted after, and have erred from the faith, and pierced themselves through with many sorrows). Here the folly of covetousness is also shown, inasmuch as it is said to bring "many sorrows." It is further proved by the fact that earthly goods are perishable, and that their possession renders none happy. But it is corrupting as well as unsatisfactory. By attempting to gain the world the soul is wounded, and loses the everlasting life (Matt. vi. 20, Lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal; xvi. 25, 26, For whoever will save his life shall lose it, and whoever will lose his life for my sake shall find it; for what is a man profited if he shall gain the whole world and lose his own soul, or what shall a man give in exchange for his soul?); Luke xii. 15-21, And he said unto them, Take heed, and beware of covetousness; for a man's life consisteth not in the abundance of the things which he possesseth). Covetousness is not a part of covetousness. It consists in amassing either for the sake of possessing or from fear of want. This phase of covetousness is the surest mark of a cold-heartedness and worldliness, making pure, high, and holy aspirations impossible. It is also a sort of idolatry, for it is the love of mammon (Matt. vii. 19-24). It is essentially uncharitable, and incapable of affection (James ii. 15, 16, If a brother or sister be naked, and destitute of daily food, and one of you say unto them, Depart in peace, ye warm and filled; notwithstanding ye give them not those things which are needful to the body, what doth it profit?). Covetousness is as painful as it is deceitful in the end; it cripples the natural powers, renders life miserable and death terrible. The pursuits to which it leads are painfully laborious, and the care of the possessions, once secured, is equally so. The labor it entails is sinful, as it does not spring from love, but from selfishness and worldliness. As the wealth amassed by the covetous is applied to the benefit of the rich only, the poor are the losers and undergo the severest privations in the midst of plenty (Horace, con- gesta undique sacris indormis inhasis. Necis quo vacat at nummus, quem propebat usum). However great the natural power of a man, it is paralyzed by this sin. To the covetous death is horrible, as it deprives them of all to which the worldly heart most clings. Considering the nature of covetousness, it cannot appear strange that the apostle particularly recommends a bishop to avoid that sin. The bishop, or spiritual head of the community, is to be spiritual (σπirtu- mannus, the centre of the Christian life of the community (Timothy ii. 2, 5); and covetousness is a mark whereby false teachers may be known (2 Tim. iii. 2)—Kreil, N. T. Handschriftbuch.

COW occurs in the Anth. Vera. (see Kirke) as the translation of γαβριὴν (parob'), Job xxi. 10; Isa. xi. 7; elsewhere usually "kine", ληβος (glish), Isa. vii. 21, "a young cow"; a keifer (as usually elsewhere), ἄρρα, "bark", "kine", Deut. xxiii. 21; 2 Sam. xvii. 20, "cow"-dung, Ezek. iv. 15; a young "cow," Isa. viii. 21), any animal of the ox kind (elsewhere "bullock," "herd," etc.), and ἱππα (skor, Lev. xxvii. 28; Num. xviii. 17), any beef animal (usually an "ez"). See BULL; CATTLE; OX. The first of the above Hebrew words (generally found in the plur. γαβριην, parobh'), rendered "kine" in Gen. xlii. 2, 3, 4, and "heifer" in Num. xix. 2), properly signifies a heifer or young cow in milk (1 Sam. vi. 7); also as bearing the yoke (Hos. iv. 16). In Amos iv. 1, the phrase "kine or heifers of Bashan" occurs, and may be contrasted with such things as ye have: for he hath said, I will never leave thee nor forsake thee."

COWLES

By the Mosaic law (Lev. xxii. 28), a cow and her calf were not to be killed on the same day. Similar precepts are found in Exod. xxii. 19; Dent. xxii. 6, 7. Whether they were designed to prevent inhumanity, or referred to some heathen custom, is uncertain. The cow is esteemed holy by the Hindoos. In the remarkable prophecy (Isa. vii. 21-25), the event foretold is, that the face of the land of Judah should be so completely changed, and the inhabitants so greatly reduced in number, that, with only a single young cow, and two barley loaves, the family should be supplied with an abundance of milk and corn; and when the king, who before commanded a high rent, should be overthrown with briars and thorns. It may be observed that dried cow-dung was, in Palestine, commonly used for fuel, as it is at the present day among the Arabs, but it is remarkably slow in burning; on this account the Arabs frequently threaten to turn a person with cow-dung as a lingering death. This fuel forms a striking contrast to the short-lived and noisy violence of thorns and furze, which are speedily consumed with a cracking noise (Ecc. vii. 6). Roberts, on Exek. iv. 15, observes: "In some places, firewood being very scarce, the people dry the dung of the cows in the sun, and dry it in the sun, after which it is ready for fuel. Those who are accustomed to have their food prepared in this way prefer it to any other; they tell you it is sweeter and more holy, as the fuel comes from their sacred animal." See Dung.

Coward, William, M.D., was born at Winchester, 1657, and became fellow of Wadham College, Oxford. He settled first at Northampton, and afterwards at London, where he died in 1724. In 1702 he published Second Thoughts concerning the House of Commons, demonstrating that the notion of the human soul, as believed to be a spiritual and immaterial substance vised to a human was an invention of the heathens. This work gave much offence, by defending the doctrine of materialism, that the House of Commons ordered it to be burned by command of the King. It was published also by Dr. Nichols, in his Conference with a Theist; by Broughton, in his Psychologia; and by Turner. Dr. Coward also published, in 1704, Further Thoughts on Second Thoughts; and The Grand Essay, or a Vindication of Reason and Religion against the Impostures of Philosophy.—Darling, Cyclopaedia Bibliographica, i. 786.

Cowl (ruculus), a sort of hood worn by certain classes of monks. Those worn by the Bernardines and Benedictines are of two kinds: the one white, very large, worn in ceremony, and when they assist at the office; the other black, worn on ordinary occasions and in the streets. Maillon maintains that the cowl is the same in its origin as the scapular (q. v.). Others distinguish two sorts of cowl; the one a gown, reaching to the feet, having sleeves, and a capuchin, used in ceremony; the other a kind of hood worn in, called also a scapular, because it covers only the head and shoulders.—Farrar, Eccl. Dict. r. v.; Birmingham, Orig. Ecc. viii. 3, 6.

Cowles, Giles Hooker, D.D., a Congregational minister, was born in Farmington, Conn., Aug. 26, 1766. He graduated at Yale in 1789, entered the ministry in May, 1791, and was installed pastor of the First Church at Bristol in 1792. He was appointed in 1910, by the Conn. Miss. Soc., to travel through the Northern part of Ohio. He accepted the position of pastor over the churches of Auburn and Morgan, Ohio, and was installed in 1811. He died in the former place July 6, 1835. He was made D.D. by Williams College, 1823. Sprague, Amos, ii. 380.
COWPER

Cowper, William, an eminent Scotch divine, was born at Edinburgh in 1666. He studied at the University of St. Andrews, and in 1685 was appointed minister of Bothkennar, Sterlingshire. In 1693 he removed to Perth, where he continued until 1612, after which he was appointed bishop of Galloway. He died Feb. 15, 1619. His works breathe a spirit of cordial piety, and simplicity. This style is peculiarly worthy of commendation. Among them we remark *Heaven Opened* (5th ed., Lond. 1619, 4to). A collection of his works was published after his death (Lond. 1692, fol.).—*Past. Eccles. Scot.*, i, 777; ii, 515, 693.

Cox, Francis Augustus, D.D., LL.D., an eminent English Baptist minister, was born about 1783. He was pastor at Hackney, London, and was one of the leading men in many of the religious societies of the metropolis. Of his works the most important are the *History of the Baptist Missions*, a volume on *Antiquities*, reprinted from the *Encyclopedia Metropolitana*; *Our Young Men*, a prize essay (1847); and *A Life of Melchionno*. He was a contributor to the first series of the *Journal of Sacred Literature*. His name is worthy of being associated with those of Ryland, Fuller, Carey, Marshman, Ward, Robert Hall, and John Foster, who in recent times have brought honor on the Baptist denomination by their literary as well as their religious labora. He died Sept. 5, 1858.

Cox, Melville Beveridge, a Methodist Episcopalian missionary to Africa, was born at Hallowell, Me., Nov. 3, 1795, and was converted in 1818; entered the ministry in 1822; on account of failing health was superannuated from 1826 to 1831; and afterwards served some time as an agent of the Wesleyan University. In 1881 he was stationed at Raleigh, N. C. Soon afterwards he volunteered to go to Africa as a missionary, and sailed from Liverpool, Nov. 11, 1832, arriving in Liberia March 8, 1833. Here at once he set to work to lay the foundations of the Church in Africa. He labored faithfully, organizing the mission, collecting information, and preaching and teaching incessantly. In a few months he had formed a school of 70 scholars; but the African fever seized him, and on the 21st of July, 1833, after four months' labor, he died in triumph. Mr. Cox was a man of great piety and devoted zeal.—*Meth. Mag. and Quart. Review*, Jan. 1834; *Amer. Miss. Mem. and Review*, p. 481; *Cox, G. F., Life and Remains of M. B. Cox* (N. Y. 1840); *Sprague, Amasa*, vii, 566.

Cox, Richard, bishop of Ely, was born about 1505 at Whaddon, Buckinghamshire, England. He was educated at Eton School and at King's College, where he obtained a fellowship in 1519. He was invited by cardinal Wolsey to Oxford to fill up his new foundation. For speaking his mind too freely of the corruptions of popery, he was deprived of his preferment and thrown into prison. When he had recovered his liberty he left Oxford; some time after he was chosen master of Eton School, which flourished remarkably under him; and by the interest of archbishop Cranmer he obtained several dignities in the Church, viz., the archdeaconry of Ely, a prebend of the same church and of Lincoln, and the deanery of Christ Church. He was appointed tutor to prince Edward, and on that prince's accession to the throne became a great favorite at court. He was made a privy councillor and the king's almoner; was elected chancellor of the University of Oxford in 1547; the next year installed canon of Windsor, and the year following dean of Westminster. About this time he was appointed one of the commissioners to visit the University of Oxford, and is accused by some of abusing his authority by destroying many books out of his zeal against popery. After Mary's accession he was stripped of his preferments and committed to the Marshalsea; but his confinement was not long, and on his release he went to Strasbourg, and thence to Frankfurt, where he formed a kind of university, and appointed a Greek and a Hebrew lecturer, a divinity professor, and a treasurer for the contributions remitted from England. On the death of Mary he returned, and was the chief champion on the Protestant side in the disputation at Westminster between eight papists and an equal number of the Reformed clergy. His abilities and zeal were rewarded by the bishopric of Ely, over which see he presided above 21 years. He opposed with great zeal the queen's retaining the crucifix and lights in her chapel, and was a strenuous advocate for the marriage of the clergy, against which she had contracted a strange aversion. He was one of the compilers of the Liturgy of the Church of England; and when a new translation of the Bible was made in the reign of Elizabeth, now commonly known by the name of "The Bishop's Bible," the Four Gospels, the Acts of the Apostles, and the Epistle to the Romans were allotted to him for his portion. A number of his tracts on the Romish controversy are to be found in the addenda to Burnet's *History of the Reformation*. Several letters and small pieces of his have been published by Strype in his *Annales of the Reformation*.—Downe, *Life of Bishop Cox*; Collier, *Ecclesiastical History*; Kiplis, *Biographe Briennoné*, iv, 566 sq.

Cox (Heb. כֹּחַ, Koa), the same name elsewhere Anglicized KOZ [q. v.], Sept. KU, the father of Anub and others of the posterity of Judah (1 Chron. iv, 6, where, however, his own parentage is not stated, unless he be a son or brother of Aahur in ver. 6).—B.C. post 1618.

Cov'bi (Heb. כֹּבִי, Kobi), false; Sept. Xoebia; Joseph. Xoebia, *Ant. iv*, 6, 10, the daughter of Zuar, a Midianitish prince. Phinehas, in his holy indignation, slew her, while in the act of committing lewdness with Zimri, an Israelitish chief, by thrusting a javelin through the middle of both (Num. xxxvi, 13, 18).—B.C. 1619.

Craik. See KOZIRL.

Crackling (קֶרֶךְ, keresh, i. e. noise) of thorns (q. v.) under a pot; a proverbial expression for a roaring but quickly-extinguished fire (Eccles. vii, 5). See FENT.

Cracknel (only in the plur. קְרָכִנִים, kerkekinim, literally cakes marked with points), probably a kind of biscuit or other cake baked hard and punctured with holes, such as Jeroboam's wife took in disguise.
CRADOCK, SAMUEL

They being of a very common description) as a present to the prophet Ahijah (1 Kings xiv, 8, where the Sept. has collocar; Vulg. crustula). See BREAD. The original word (in nearly the same form) occurs in Josh. ix, 5, 12, where it is improperly rendered "mouldy" (q. v.). See CAKE.

Cradock, Samuel, B.D., an eminent Nonconformist, was born in 1620, and was educated at Emmanuel College, Cambridge, of which he became fellow. He was presented to the college living of North Cadbury, but ejected for nonconformity in 1662, and retired to an estate at Wickenbrook which had been left to him. He died in 1706. He was a man of serious and truly catholic spirit, solid judgment, digested thought, clear method, and unaffected style. His works have been greatly commended by archbishop Tillotson and bishop Reynolds. Dr. Doddridge says that no author assisted him more in what relates to the New Testament. His principal works are, The History of the O. T. methodized (Lond. 1688, fol.):—The Harmony of the Four Evangelists (Lond. 1688, fol.):—The Apostolical History, with an Analytical Paraphrase (Lond. 1672, fol.):—Knowledge and Practice (4th ed., with eight new chapters, Lond. 1702, fol.):—Darling, Cyclop. Bibliog. s. v.

Cradock, Walter, an eminent English divine, was born at Trefall, Monmouthshire. He was educated at the University of Oxford, joined the Puritans, and became curate of St. Mary's, Cardiff. During the civil wars he became pastor of Allhallows the Great, London, and occasionally itinerated through Wales. He died in 1660. He was an Independent in Church government—a man of excellent character and high reputation; in doctrine, he was zealous in preaching justification by imputed righteousness. His principal works are, Gospel Liberties in the Extentions and Limitations of it (Lond. 1648, 4to):—Divine Drops distil'd from the Fountain of Holy Scriptures (Lond. 1650, 4to):—Gospel Holiness (Lond. 1651, 4to). A collection of his works has been published (Chester, 1800, 8vo).—Darling, Cyclop. Bibliog. s. v.

Craftsman (วด, charash), Deut. xxvii, 25; 2 Kings xxi, 18; Hos. xiii, 2; elsewhere "engraver," "workman," etc.; וגד, che' rekh, Neh. xxi, 25; "cunning," Isa. iii, 8; "secretly," Joel ii, 1; "Charashim," 1 Chron. iv, 14; both from וגד, charash, to carve in stone, hence to be an architect in general: see in general: see־, Acts xix, 34, 38; Rev. xvii, 22; "builder," Heb. xii, 10; an artisan), a workman at any mechanical employment requiring skill. See MECHANIC. Persons of this class professionally (for every Jew was required to learn some manual trade, to fall back upon in case of want) seem to have congregated in a special street or bazaar (q. v.) in the environs of Jerusalem (1 Chron. iv, 14, where it is called a valley), or rather in the vicinity of Lod (Neh. xi, 85) ; regarded by Dr. Robinson (Phys. Geogr. of Palest. p. 113) as the plain of Beulah, or rather a side valley opening into it. See CHARASHIM.

Craig, John, one of the Scottish Reformers, was born in Scotland about 1512. Having spent some time as a tutor in England, he returned to Scotland and entered the Dominican order, of which he had not long been a member when he fell under the suspicion of heresy, and was cast into prison. On his release he travelled on the Continent; and after some time was, through cardinal Pole's influence, intrusted with the education of the novices in the Dominican order at Bologna. While here, Calvin's Institutes fell in his way, and converted him to Protestant doctrines. Having openly avowed the change in his opinions, he was brought before the Inquisition, and sentenced to be burnt—a fate from which he was saved by the mob, on the death of pope Paul IV, breaking open the prisons in Rome, and setting the prisoners at liberty. Craig escaped to Vienna, and obtained some favor at the court of Maximilian II; but the news of his being there reached Rome, and the pope demanded his surrender as one condemned for heresy. The emperor, however, instead of complying with the request of his holiness, gave Craig a safe-conduct out of Germany. He now returned to Scotland, and was appointed the colleague of John Knox in the parish church of Edinburgh. Thinking the marriage of queen Mary and Bothwell contrary to the Word of God, he, while holding this position, boldly refused to proclaim the banns. In 1572 Craig was sent 'to illuminate the dark places' in Forfarshire and Aberdeenshire, and remained in the North until 1573, when he was appointed minister to king James VI in Edinburgh. He now took a leading part in the affairs of the Church, was the compiler of part of the Second Book of Discipline, and the writer of the National Covenant signed in 1580 by the king and his household. He was a man of great conscientiousness, and was not slow to oppose the proceedings of the court when he deemed them opposed to Scripture, and to speak wholesome and unpleasant truths to his majesty himself. He died December, 1600.

Crakanthorp, Richard, D.D., was born at Strickland, in Westmorland, in 1567. He was admitted to Queen's College, Oxford, in 1588, and became fellow in 1598. He obtained the rectory of Black Notley, Essex, and died in 1624. He had the reputation of being a general scholar, was quite a canonist, perfectly acquainted with ecclesiastical antiquity and scholastic divinity, and was a celebrated preacher. His principal works are, Defensio Ecclesie Anglica contra M. Antonii de Dominis, D. Archiepiscopi Spalatensis, injurias (new edit. in The Library of Anglican Theological, Oct. 1847, 5vols.):—Rome's Peer overthrown (Lond. 1631, fol.):—The Defence of Constantinople, with a Treatise of the Pope's temporal Monarchie (Lond. 1621, 4to).—Darling, Cyclop. Bibliographica, s. v.

Cramer, Johann Andreas, a German theologian and poetical writer, was born at Josephstadt, Saxony, Jan. 29, 1728. He studied at Leipzig, was invited to Copenhagen by Frederick V, and, with the exception of three years, resided in Denmark from 1754 to 1768, in which latter year he died. At the time of his death he was chancellor of the University of

CRANMER

Kiel. He translated Bossuet's Universal History, the Homilies of St. Chrysostom, and the Psalms of David into verse (Leips. 1765), and wrote the Northern Spectator (der nordische Aufseher), three vols. (Copenhagen, 1758); Sermons, twenty-two vols.; and Poems, three vols. (1762). Germany ranks him among her best lyric poets.

Crane occurs in our version as the translation of חֹנֶשׁ (chosheh, literally a leader, from its swiftness, Isa. xxxviii, 14) or חָנִי (hanis, Jer. viii, 7), in connection with another bird, the "חָנִי (hanis), the chatterer, or, as Gesenius renders it in Isaiah, the chattering, as an epithet of the other, which latter is rendered "swallow" in our version. The Rabbinists agree with our version in rendering the former of these words (chosheh or hanis) by "crane," but Bochart and Gesenius (in accordance with the Sept., Theod., and Vulg.), more correctly, as we think, decide in favor of "swallow" while Luther, rejecting both, prefers "heron." Where so much diversity of opinion reigns, it will be most safe to search for the true meaning by examining the internal evidence furnished by the texts in question, the two names occurring in no other instance. In Isaiah, allusion is made to the voice of both the species (if distinct), which is described by the verb "to chatter," in accordance, or nearly so, with all critical authorities. See Swallow. In Jeremiah, where both names occur in the same order, the birds are represented as "observing the time of their coming." Now, if the "crane" of Europe had been meant by either designation, the clamorous habits of the species would not have been expressed as "chattering," and it is most probable that the striking characteristics of that bird, which are so elegantly and forcibly displayed in Hebrew and Aristophanes, would have supplied the lofty diction of prophetical inspiration with associations of a Mediterranean into Africa, and does not appear in Palestine, unless by accident (driven thither possibly by a western storm of wind); and when a troop of cranes all, or half under these circumstances, it is only for a moment; they do not give evidence of purposely assembling like the swallow. Thus the few characteristics indicated might seem to point out the stork, which does assemble in Syria in flocks before its departure, and is not a clamorous bird, having little or no voice. But as the stork is clearly designated by a different appellation in the original (see Stross), we must search for another species as the representative of the "chosheh," or at least of the latter term; and we fortunately find one which completely answers to the conditions required; for, being neither a genuine crane, a stork, nor a heron, having a feeble voice, and striking, but distinct manners, it is remarkable for beauty, numbers, residence, and periodic arrival and departure. The Numidian crane (Ardea virgo of Linn., the Grus virgo of later writers, and Anthropoides virgo of some)

[Image of a crane]

is the bird, we have every reason to conclude, intended by "hanis," though not coming from the north, but from Central Africa, down the Nile (the very circumstance which puzzled Hasselquist), and in the spring arriving in Palestine, while troops of them proceed to Asia Minor, and some as far north as the Caspian. They are frequently found portrayed on Egyptian monuments, and the naturalist just quoted, who saw them on the Nile, afterwards shot one near Smyrna; they visit the swamp above that city, and the lake of Tiberias, and depart in the fall, but do not utter the clangor of the crane, nor adopt its flight in two columns, forming an acute angle, the better to cleave the air. This bird is not more than three feet in length; it is of a beautiful bluish gray, with the cheeks, throat, breast, and tips of the long hinder feathers and quills black, and a tuft of delicate white plumes behind each eye. It has a peculiar dancing walk, which gave rise to its French denomination of "demoiselle" (see the Penny Cyclopaedia, s. v. Herons. See Bird.

The Hebrew term chosheh occurs frequently elsewhere, but only in the sense of "horse" or cavalry.

Crane, John, D.D., a Congregational minister, was born at Norton, Mass., March 29, 1756. He graduated at Harvard in 1780, and was installed pastor at Northbridge, Mass., June 25, 1783, where he remained until his death, Aug. 31, 1836. He published Eight Discourses on Baptism (1806) and a few occasional sermons.—Sprague, Amada, ii, 214.

Cranmer, Thomas, archbishop of Canterbury, and one of the greatest of the English reformers, was born at Ashlon, Nottinghamshire, July 2, 1510. He entered Jesus College in 1528, became a fellow in 1510-11, studied Greek, Hebrew, and theology with great diligence, and acquired high repute for scholarship. He forfeited his fellowship by an early marriage, but his wife died within a year, and he was restored. In 1528 he took the degree of D.D. In 1538 he was at Waltham Abbey, where his friend Mr. Crewe was a patron. Cranmer was engaged in educating gentleman's children. Here he met Gardiner and Fox, who asked his opinion as to Henry VIII's di-
CRANMER 551

CRANMER

worst. His reply was made known to the king, and gave him so much satisfaction that he sent for Cranmer, who reluctantly obeyed the summons, and reduced his opinion to writing. "It asserted that the marriage of Henry with his brother's widow was condemned by the Scriptures, the councils, and the fathers; and that the pope had no power to give a dispensation contrary to the word of God." Pains were taken to make this judgment known. Cranmer himself disputed upon it at Cambridge, and brought several over to his opinion. He was appointed chaplain to the king, presented to the archdeaconry of Taunton, and joined the embassy to Rome in 1530. The marriage, finding all arguments unsuavelling with pope Clement, quickly returned, leaving Cranmer in Italy. The pope conferred on him the empty title of "Supreme Penitentiary." Wearyed with delays, Cranmer left Italy in 1530, and went afterwards, on the same business, to France and Germany—an expedition which, although it produced no decisive public result, led to an event of great consequence to himself. Regardless of the Romish injunction for clerical celibacy, he married (1582) a second time, the object of his choice being the niece of Osiander, the pastor of Nuremberg. This secret act exposed him to many unworthy evasions. He was put in the Congregatory, and, when consecrated (March 80, 1530), made a public protestation, "That he did not intend by this oath to restrain himself from anything that he was bound to either by his duty to God, or the king, or the country." By this, says Burnet (Hist. Reform., vol. 1), "if he did not wholly save his integrity, yet it was plain he intended no cheat, but to act fairly and above-board." On the 28d of May, 1533, Cranmer declared the king's marriage void. Five days afterwards publically married the king to Anne Boleyn, a private marriage having taken place in the January previous. The new business of the pope and parliamentary duty occupied his time. With his assistance were passed several statutes, by which the power of the pope in England was materially diminished; the Convocation and universities ascertained to these statutes, pronouncing that "the bishop of Rome has not any greater jurisdiction conferred on him in this realm of England than any other of his bishops." In 1534, with the consent of the Convocation, he set on foot a translation of the Bible, by dividing Tyndale's version of the New Testament into nine or ten parts, which he required the most learned bishops to revise; the translation was completed and ultimately prefixed to the second edition of the "King's Primer," a book containing doctrines bordering upon Protestantism. In 1536 the divorced queen died, and Henry, being now tired of Anne Boleyn, determined to get rid of her, and Cranmer a second time served the bad passions of the king, and, in virtue of his office, pronounced the marriage void (1536). The pope threatened to assemble a synod to censure Henry. Cranmer and others signed a declaration that the king need not obey the decisions of such an assembly. With the assistance of many eminent divines, Cranmer arranged the "Bishop's Book," inculcating the doctrines of the Reformers, who had hoped to apply them to the pope; he himself inserted some corrections, from which the archbishop was bold enough to dissent. The destruction of the greater abbeyes was now rapidly proceeding, and the funds which arose from them were lavished by Henry upon unworthy favorites, until Cranmer, who had hoped to apply them to the promotion of religion and education, renounced against their improper application. A sum of money was obtained for the foundation of some new bishoprics, but the king's prodigality could be checked no further. From 1538 to 1544 the mind of Henry VIII was against progress in the Reformation. On the 6th of May, 1538, Cranmer and others were appointed commissioners "to inquire" (Le Bas, vol. i, 204) "into the debated doctrines, and to prepare such articles as would pacify the spirit of controversy." At the end of eleven days the labors of the commissioners coming to no result, the duke of Norfolk offered six articles (Barlow, vol. i, 204) "to the consideration of the whole House of Lords." Cranmer's opinion agreed only with one of these articles, but they were passed (see ARTICLES, SIX). Latimer and Shaxton resigned their bishoprics, an example which Cranmer did not think it his duty to follow. In July, 1540, he presided at the Convocation which pronounced the unjustifiable dissolution of the marriage of Catherine Howard, who had been married to the knowledge of the archbishop, he reported her proficacy to the king (1541). The proofs of her crimes were held to be conclusive; she was condemned and executed. The Reformation now (1542) became the sole occupation of Cranmer, who had transferred to the universities the task of revising a new edition of the Bible published the year before. In a minor degree Cranmer's attention was occupied in reproving the luxury in which some ecclesiastical establishments, as well as the bishops, had indulged. In May, 1543, appeared the King's Book, which was, in fact, a new edition of the "Institution of a Christian Man," altered in some points by the papal party; it received its name from the preamble, which was written in Henry's name. The clergy being hostile to this book, Cranmer, at a visitation of his diocese, in submission to the king's supremacy, forbade them from preaching against any portions of it, however they or he himself might dissent from them. In 1544 Cranmer carried through Parliament a bill to mitigate the severity of the "Six Articles." He also assisted in compiling an improved English Liturgy, essentially similar to that which is now in use. Difficulties, however, were increasing around him. The duke of Norfolk and other members of the privy council accused him of spreading heresies through the land, and Henry caused Sir Anthony Denny to carry a message to Cranmer, who rose from his bed to attend upon the king at Whitehall. The council assembled the next day, and summoned the private. Sentence of imprisonment was passed upon him, but, to his consolation, he produced the signet of the king, from whose hands he had received it the night before. The council did not venture to proceed further.

King Henry died 27th January, 1547. Cranmer was named one of the regents of the kingdom. On the accession of Edward VI., Cranmer was appointed a member of the second Convocation; but was soon the object of the opposition which other extension of the Reformation. A visitation was immediately set on foot; twelve bishops, four of which are ascribed to Cranmer, were drawn up, and ordered to be placed in every church, with the translation of Erasmus's paraphrase of the N. T., for the instruction of the people. The cardinal, conscious to oppose the Reformation, but Cranmer's influence prevailed; and when he produced in convocation an ordinance that the laity as well as the clergy should receive the sacrament in both kinds, the proposition passed unanimously, and soon after obtained the sanction of the Legislature. In 1546 he revived the proposal for substituting the Easter service for the communion service of the Reformation, and fixed the time of the celebration to the following Easter. A translation of a catechism, written in German and Latin by Justus Jonas, was published by the archbishop, entitled Cranmer's Catechism. In the month of May a commission of twenty-two divines with Cranmer at their head, was appointed for the compilation of an English Liturgy. See COMMON PRAYER; LITURGY. On the condemnation of Lord Seymour (1545), Cranmer signed the warrant for his execution, notwithstanding the canon law that no churchman should meddle in matters of blood. Bonner, bishop of London, was now
degraded by commissioners, of whom Cranmer was one. An addition was made to the ritual in the shape of a formulary for ordination, and other steps were taken by the primates in order to diffuse a better knowledge of the creed of the Protestants. At Lambeth he received the most eminent foreign divines, Martin Bucer, Fagius, Peter Martyr, and several more. Cranmer was unwilling to assent to the destruction of the substitution of tables for altars in the churches. In July, 1550, Hooper was made bishop of Gloucester, and soon after Cranmer received from him a refusal to wear the episcopal habits. Cranmer, upon consideration, determined to oppose Hooper, and, in case he persisted, to resign his episcopate. Hooper adopted some of the usual habits. The bishop of Chichester would not obey the order respecting the removal of altars, and the primate consequently deprived him of his see. Bishop Gardiner, who had now been in prison nearly two years, was deprived of his bishopric and sent back to the Tower. The conduct of Cranmer in the cases of Bonner and Gardiner was a great exception to his usual moderation. Gardiner, during his imprisonment, occupied himself in answering a treatise published by Cranmer, entitled the "Defence of the True Doctrine of the Sacrament." This controversy was carried on by the archbishop until the end of his life, and the "Service-book" of 1548 was commenced by Cranmer, with the assistance of Ridley and Cox, Peter Martyr and Bucer. The undertaking was completed in 1551 by the death of Bucer. The bishops being now (1551) for the most part divines favorable to the Reformation, the compilation of articles for the greater uniformity of faith was undertaken by them at the suggestion of the king. This labor so filled the hands of Cranmer, that his time was nearly always occupied by one or other of the great duties that he had imposed upon himself; scarcely could he attend the trial of bishop Tomstal. The bishop was deprived of his see, a sentence which was so contrary to Cranmer's opinion, that, with Lord Stourton, a Roman Catholic, he protested against it. It was not till 1552 that Cranmer gave up all hope of an agreement among all the churches that had withdrawn from the papal supremacy, and for which he had entered into correspondence with Calvin, Melancthon, and other divines of the Continent. The "Service-book" was completed, and the Book of Common Prayer adopted by Parliament in the spring of 1552. In May, 1553, Edward issued a mandate that the clergy should subscribe to the Forty-two Articles upon which the divines had agreed, but he died soon afterwards.

A letter was sent to the princess Mary declaring queen Jane (Lady Jane Grey) to be the sovereign. This letter was signed by many persons, and among them by Cranmer, whose zeal for the Protestant cause must have blinded him to the danger of the enterprise. On the 9th of July, 1553, the chief officers of the state swore allegiance to Jane; on the 20th we find many of those who had been zealous in her cause "impatient to send in their submissions to Mary." On the same day an order was sent by Mary to Northumberland to disarm. The hopes of the Protestants were now at an end, as queen Mary's unshaken attachment to the Roman Catholic creed was universally known. Gardiner was released and made chancellor, and a commission was formed to degrade and imprison Protestant prelates and ministers on the charges of treason, heresy, and matrimony. In the beginning of August Cranmer was summoned before the council; and in September, with Latimer and Ridley, was confined to the Tower. In March, 1554, he was removed, with bishops Latimer and Ridley, to prison at Oxford, where was renewed the controversy respecting the Lord's Supper, which, by the queen's desire, was named the subject for discussion. On the 18th and 19th of April the discussion was held; and on the 20th the accused were brought to St. Mary's, where it was declared that, unless they would turn, they were obstinate heretics, and no longer members of the Church. Cranmer then replied, "From this your judgment and sentence I appeal to the just judgment of the Almighty, trusting to be present with him in heaven, for whose presence in the altar I am thus condemned," and he was removed again to prison. He was arraigned before Cranmer had been tried was not competent to decide the case. The pope issued a fresh commission, and on the 12th of September, 1555, the primate was examined by Brokes, the bishop of Gloucester, and two civilians, Martin and Story. Before the commission, those proceeded against Cranmer were within eighty days before the pope at Rome; this must have been a mere fiction of papal law, as it was impossible for Cranmer to obey. On the 29th of November the eighty days had elapsed, and on the 4th of December he was excommunicated and deprived of his bishopric. A letter from the pope (Paul IV.), bearing date the 14th of November, affirms him to be "contumacious because "he took no care to appear" at Rome when cited, and declaring him guilty of heresy and other enormities, finally commanded his excommunication. On the 14th of February Cranmer was degraded in a few days after this form to give way; he formed his protestation was a recantation. It was of no avail towards the preservation of his life. On the 20th of March, the eve of his execution, he was visited by Dr. Cole, and Cranmer stated that he remained firm in the Catholic faith as he had recently professed it, an answer that has been considered equivocal. On the following day he was led to St. Mary's church, where, after an exhortation by Dr. Cole, Cranmer finished his private devotions and then solemnly addressed the people, openly professing his faith, and at length declaring, "Now I come to the great thing that troubleth my conscience more than any other thing that I ever said or did in my life, and that is the setting abroad of writings contrary to the truth which I thought in my heart, and writ for fear of death, and to save my life, if it might be; and that is all such bills which I have written or signed with mine own hand since my degradation, wherein I have written many things untrue. And forasmuch a my hand offended in writing contrary to my heart, therefore my hand shall first be punished, for, if I may come to the fire, it shall be first burned. And as for the pope, I refuse him as Christ's enemy and Antichrist, with all his false doctrine." The assembly was astonished; they had supposed that he would have recanted and not retained his profession. He was hurried away to the state, where he stood motionless, holding up his right hand, and exclaiming, until his utterance was stilled, "This unworthy hand! Lord Jesus, receive my spirit!"

Cranmer's diligence and application were unusual; he was deeply read in theology and canon law, and was familiar with Hebrew, Greek, and Latin, as well as French, German, and Italian. His reservation respecting the oaths which he swore when appointed archbishop, his subserviency to Henry VIII in annulling his marriages, his share in the condemnation of some heretics, his conduct at the disgracing of Bonner and Gardiner, and the want of courage which made him recant after his condemnation, are great blots on his character. But, though his conduct on these occasions was marked by want of firmness, it cannot be denied that Cranmer was sincere, mild, and moderate, and, for the most part, a firm man; nor was it beneath him to defend the cause of all religious parties at this period. "Cranmer was neither fool, knave, nor demigod. He lived in an age when men had need of all the tact they could muster, and he proved himself prudent and learned. He was one of those useful persons who sometimes acquire influence by the very absence of striking and ardent qualities—
CRANTZ

the Melanchohy of our English Reformation. The
greatest defect of his character, want of firmness,
which has made many a man of genius and learning,
by a peculiar combination of circumstances, secure his
advancement and guided him to fortune. His mind possessed great acuteness; he could generally perceive
what was best, although, had vigorous action been re-
quired of him, he would have failed to do justice to the
clearness of his views. Such a mind is common
enough. Fortunately for the usefulness of Cranmer,
the time required of him little more than to follow his
bent and be moderate. He was surrounded by vehe-
mence and excited spirits, who required all the restraint
of his temperate and quiet character. And these very
traits of his have impressed upon the Church which he
moulded, and upon the public office which he, as
primate, had the chief share in drawing up," a sort of
compromising and uncertain character," which has never been lost.
It is through Cranmer's in-
fluence that the Church of England at the present day is
capable of sheltering at once the High and Low
Churchman, the Universallast and the Calvinist." His
cruel death was one of the most unpopular measures
of Mary's government. See—Stype, Memorials of
Cranmer (Oxford, 1840, 2 vols. 8vo; also 1853, by
Barnes, 2 vols. 12mo, and 1854 [Eccl. Hist. Soc.], 4
vols. 8vo); Todd, Life of Cranmer (Lond. 1833, 2
vols. 8vo); Le Bas, Life of Cranmer (Lond. 1838, 2
vols. 12mo); Burnet, History of the Reformation (par-
sam); Gilpin, Life of Cranmer; Eng. Cyclo-pedia (which
has been freely used in the preparation of this article).
Cranmer's writings are still of value for theology as
well as for Church history. A full list of them is
given by Jenkins, iRemains of Archb. Cranmer, collected
and arranged (i. 8vo, 1833, 4 vols.). The "Parkers
Society" has republished Cranmer's Writings on the
Lord's Supper (Camb. 1844, imp. 8vo), and his Miscel-
naneous Writings and Letters (Camb. 1846, imp. 8vo).
Cranmer. See Krantz.

CRASSUS (Grecized Κρασσος), fully M. LICINIUS CRASSUS,
surnamed Diex ("the Rich"), one of the
members of the first Roman triumvirate, was born
about B.C. 106, and after various civil and military
engagements, on the triumviral coalition started, B.C.
55, as governor of the consulship of Syria (where he
succeeded Gabinus, Josephus, Ant. xiv. 6, 4),
and on a campaign against the Parthians. On his way
he stopped at Jerusalem (according to Josephus, War
1, 8, 8, although the statement is confirmed by no
other historian of the times, and this city lay off his
route), and,"it is supposed, entered the Temple also, like
wise that of the goddess Deroeto at Hierapolis, in Syria
(Stabo xvi, in fn.). Infatuated by this sacrilege
(Prideaux, Connection, pt. ii), he proceeded on his
campaign, which ended in defeat, capture, and death
—Smith, Dict. of Class. Biog. E. V.

Cra'ṭè̂s (Κρατίς; Vulg. translates prælatus at) govern-

or of the Cyprians (δ ιρι ιακώκ), who was
left in charge of the "castle" (τις ιαντολέως) of
Jerusalem (?) during the absence of Sosriatus, in the
reign of Antonius Epiphanes (2 Macr. iv. 29).

CRATO VON CRASFELD (Kraft), JOHANNES, a prominent
representative of Protestantism in Aus-
tria, was born at Breslan Nov. 22, 1315. At the Uni-

versity of Wittenberg, to which he went in 1534,
he lived for six years in the house of Luther, and while
there collected the material for the Table-talk of Lu-
thor, which was subsequently published by his friend
Auffid. He became also intimate with Melano-
thon, pastor to the castle, and August, after he had
ad-

upon the advice of Luther, he left the study of
theology, on account of his feeble health, for that
of medicine. In 1550 he was appointed city physician
in his native city, Breslan. His successful practice,
especially during the prevalence of the plague in 1569,
and a number of able works, procured him a great
reputation, an appointment as imperial private
physician (1569), which position he kept during the
reign of the emperors Ferdinand, Maximilian II, and
Rudolph II. He lived at the imperial court of
Austria from 1563 to 1581, was made an imperial coun-
cillor, and a nobleman under the name of Crato of
Craßfeld, and received from the emperor Maximilian
II, who was favorable to Protestantism, the privileges
of a Comes Palatinius, and many other proofs of favor.
At the court of Austria he was one of the most zealous
and influential representatives of Protestantism, and
took a leading part in the regulation of the affairs of
the Protestant Church. Being at first a moderate,
Lutheran of the Melanchthonian school, and an earnest
opponent of the exclusive system of Friius, he gradu-
ally embraced the views of the Reformed Church,
with many prominent men of which he was intimately
acquainted. After the death of Maximilian (1576),
the influence of the Jesuits for a short time occasioned
his dismissal from the court, but in 1578 he was re-
called. In 1581, tired of court life, he withdrew of his
own accord. In 1588 he returned to Breslan, where
he exercised a great influence upon the courts of Liege,
Brieg, and Oslau. He died Oct. 19, 1586. See
Gillet, Crato von Craßfeld und seine Freunde (Frankf.

CRAVEN, WILLIAM, a celebrated and eccentric
Methodist Episcopalian. He was minister, was born
in Stamford County, Va., July 31, 1776. Converted in
1794, he began to preach about 1800, and for many
years, as a local preacher, he served the Church in
his native state. He travelled extensively without fee or
reward, everywhere producing great effects by his
courageous denunciations of sin. He was a strong
opponent of slavery, and, having emancipated his own
slaves, removed to the West in 1819, chiefly with a
view to their advantage. In 1820 he was admitted on
trial in the Missouri Conference, which then embraced
Illinois, Indiana, and part of Tennessee. He con-
tinued to travel and preach on the frontier to the to-
day of his death, which took place at his home in
DeWitt County, Ind., Oct. 10, 1826. He was a man of
great physical power, a vast fund of wit and humor,
and indomitable energy. Virginia and the West abound
in stories of his adventures, which, if collected, would
make a biography of romantic interest.—Minutes of
Conferences, 1831, 3; Craven's History of Methodism;
Wekely, Heroes of Methodism.

Crawford, Elijah, a Methodist Episcopal minis-
ter, was born in New York in 1812. Trained in a
pliuse household, his youth was virtuous, and at seven-
teen he united with the Church. His early manhood
was spent in trade, but in 1856 he entered the ite-
ranent ministry in the New York Conference. His
stead-fast piety, manliness or character, and diligence, both
in study and labor, in a few years gained him the con-
fidence of the Church, and he filled with great accep-
tance a number of important pastoral charges. His
last station was Hartford, Conn., where he died of dys-
tentery September, 1840.—Mfr. of Conferences, iv, 454.

Crawford, John, a Methodist Episcopal minister,
was born in Westchester County, N. Y., in 1781. He
was converted in 1787, entered the itinerant ministry in
the New York Conference in 1789, became superannu-
ated in 1819, and died in 1851, aged over ninety years.
He was "a sound and earnest preacher, eminently
faithful and punctual, always cheerful, and living the
religion he preached."—Mfr. of Conferences, iv, 579.

Creech, Bartholomew, a Methodist Episcopal
minister, was born in Clifton, N. J., in 1760. He
was converted at sixteen. His studies in Greek and Latin
were pursued at Dublin. In 1822 he came to Ameri-
can, and soon, by his admirable qualities of intellect and
heart, gained many friends. He entered the itinerant
ministry in the New York Conference in 1827, and for fifteen years was in great repute as an earnest, eloquent, and successful minister. For four years he was president, and was a delegate to the General Conference in 1848 and 1852. The record in the Minutes states that "he was among the very best models of ministerial excellence, a holy man, a faithful pastor, a generous friend." He died at Williamsburgh, Aug. 10, 1852.—Minutes of Conferences, v. 211; Sprague, Annuals, vii. 731.

Creationism. See Creationism.

Creation. Creation is the absolute bringing into existence of the world by God. It is that act of God by which he in making before and among all mundane and natural things, made and arranged the universe. It embraces everything which is not God.

I. The Idea of Creation.—In order to form a proper conception of what creation is, we must concede the absolute dependence of the world upon God. We err in limiting it to the mere beginning of the world. It is true that it was that divine act by which all objects were brought into being. It therefore stands as the beginning of all divine operation in the world, and of the universal development of the world. But that God created the universe implies not only that he gave a beginning to its existence, but that he continues to govern it, and that he is the fountain of its present being. The world is not self-derived nor self-sustained; it is only from and by God that it now exists. But creation is not a mere accident of the divine character, nor a temporary moment in the divine life, nor an imputation and manifestation of God, nor a blind, passive, and pathological evolution or emanation of the divine essence. Yet it is God's work alone, and was as unconstrained as any other deed performed by divine power. When we say that God created the world, we not only do not affirm, but actually deny that God has imparted himself, and passed into his own nature. God is the absolute founder of the world, and he has not passed into its nature, but stands high above all the conditions of created being. Nor, while the work is not God himself, can it be said to partake of any other divine nature. It is simply God's work and manifestation; it is a creation which is from, by, and for God. Thus the full idea of creation implies that God is the absolute, impartial, and personal Spirit who, of his own free will, gave existence to the universe.

In the Mosaic account of the creation, we find that magnificent testimony of the faith which recognizes God's creation in the surrounding world (compare Heb. xi. 3, through faith he perceived that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear). This testimony possesses a strong religious and canonical worth, apart from our views of the peculiar character of the cosmogony of Moses, whether we shape them according to the opinions of the old Church theologians, who hold that the Mosaic account was actual history; or whether we harmonize with the modern allegorists, who claim that it is prophecy reversed, or prophetic vision; or whether we take the low view of attributing to it a mythical character.

The most important portion of this, as of other scriptural statements concerning the creation, is contained in the proposition that God, in his eternal, infinite love, is the only highest cause; that he is limited by no principle beyond himself; that he is the independent Founder of the world. By world we mean κόσμος, κόσμους, Heb. i. 21, or the universe, which is always described in the Old Testament and the New, as "heaven and earth," "heaven, earth, sea, and all which is therein." It is God alone who has brought all things into being (Heb. iii. 4; Acts xvii, 24; xiv, 15; Rev. iv, 11; Heb. xi, 8; Psa. xxxviii, 6; cii, 28; Isa. xlv, 18; Jer. x, 12). Nothing has had a being without the Logos of God (John i, 1). Everything owes its existence and its life to the word of God. It is because God endowed it with entity; because he so willed it; ὑπὸ τοῦ διανόησιν αὐτοῦ (Rev. iv, 11); by his word, ὑγιά τοῦ (Heb. xi, 8; Psa. xxxviii, 6); by his speaking (Gen. i, 8; 2 Cor. iv, 6); by his absolute power, καταρακτικὸς ὑγιά (Wis. Sol. xi, 18); and by his personal power (Jer. x, 12), in which he needed no assistance whatever, but by which he was able to create whatever he desired (Psa. cxv, 6; cxxvii, 6). By his power he, in his absolute majesty, evoked into existence that which was non-existent (Rom. iv, 17; Psa. xxxiii, 9), and by virtue of the same omnipotence is able to annihilate what he has called into being (Psa. civ, 29; cii, 26, etc.; Isa. li, 6; Luke xxi, 33; Rev. xxi, 1, 4). The Spirit of God, or "the breath of his mouth," (Psa. xxxiii, 6) stands parallel with the creative word that "moved upon the face of the waters," is nothing less than the active, forming, animating, divine power. The strength by which God creates takes its place beside his wisdom and knowledge (Jer. x, 12; Rom. xi, 36); and the divine wisdom or intelligence appears to follow (Prov. vii, 2); but God is the first ground and adjusting principle of creation. Instead, however, of reading in John i, 3, of this world-creative "wisdom," we find a description of the same eternal Logos of God who became flesh in Christ. Thus the creative principle is identified with that of redemption; and while the creation is distinguished as an act of love, the highest revelation of that love is to be found in the incarnation of God in the world. In both creation and redemption we perceive the thought that God, without the intervention and aid of any foreign power, gave existence to that which had previously no being; and that he did this by virtue of no blind necessity, but by his own volition alone.

It may be proper here to treat briefly of the meaning of הָבָה (bara, "create"), in Genesis, chap. i. Genesisius and Furst agree in giving to this word bara, in Genesis i, the sense of proper creating, although they seem to give that of making or cutting as the primitive (not usual) idea inherent in the root, comparing as cognate הָבָה, to choose, "א"a, a son (which Furst, on the other hand, derives from יָבָא), and the Arab. bara, etc. Genesisius refers to the Piel form of the Heb. root (נָבָה, to fashion), as the most characteristic (?) conjugation. He concludes, however, with the following judicious note (Theol. Hebr., 296): "In the true dispute of interpreters and theologians concerning creation out of nothing, some appeal likewise to the word under consideration, as if it might be gathered from its very etymology and proper signification that the first chap. of Genesis teaches not a creation from nothing, but a conformation of matter eternally existing. On the contrary, from the instances we have given, it will abundantly appear that the actual use of this word in Kal is altogether different from its primary signification, and that it is rather employed with respect to the new production of a thing (see Gen. ii, 3) than to the conformation and elaboration of material. That signifying clause Genesis sets forth the world as first created out of nothing, and this in a rude and undigested state, while the remainder of the first chapter exhibits the elaboration of the recently created mass, the connection of the whole paragraph renders entirely plain. So also the Rabbins (Aben-Ezra ad Gen. i, 1): Most hold הָבָה יָבָא יָבָא, that creation is the production of a thing from nothing) and the N.T. writers (Heb. xi, 8; Rom. iv, 17; 2 Pet. iii, 22; 2 Macc. vii, 28), teach, although the writer of the Book of Wisdom (xi, 17), following the Grecian dogmas, holds matter to be eternal. See on this question Moses Maimon. In More Nebochim, iii, 18; Moehem, De concretione mundi ex nihil, appended to Codworth's Intellectual Sys-
The examples to which Gesenius refers as sustaining this position are (in addition to the equivalent Arab. bāriyya, create; Koran, Sur. ii, 51; bāriyyaḥ, creature, Abbott. Am. i, 18; Jajałów. Spec. ed. Schweid. p. 14; and all the other Semitic tongues, which have the same usage), the following: "Spoken of the creation of the heaven and earth, Gen. i, 1; Isa. xii, 26; xlv, 18; of the bounds of the earth, Isa. xi, 26; of the wind, Amos iv, 16; of men, Gen. i, 27; v, 1, 2; vi, 7; Deut. iv, 32; Isa. xlv, 12; Ps. lxxxix, 48; Mal. ii, 10; and of Isaac, Isa. xliii, 1, 15; of beast, Gen. i, 11; of light and darkness, Isa. lxv, 7, etc. Add these examples: Ps. li, 12 ('create in me a clean heart, O God!'); Isa. xlv, 7 ('I make peace, and create evil'); Jer. xxxi, 22 ('the Lord hath created a new thing'); comp. Num. xxv. 30. It is used with a double accusative, Isa. lxv, 18 ('create Jerusalem a rejoicing,' i. e. joyous); iv, 5; xlvii, 7. The participle (יוּת, the plar. of majesty, but according to many MSS. in the sing. יִתָר, stands for the Creator (Eccles. xii, 1). נַעַר is joined with the words יִתָר ['yatar,' to form], in Isa. xxxii, 7; xlv, 18; and יִתָר [טָמאׇ, to make], in Isa. xlii, 20; xlv, 12; generally as synonymous: with the latter it is not seldom interchanged. Gen. i, 26 (comp. ver. 27); ii, 4; but that there is never less than a difference, at least between the two, is evident from Gen. ii, 8 ('which God created and made,' נַעַר [where the δ of union is generally regarded as ἐνεγκεκατέριον]). These words, which have perked many, even Hebrew interpreters, L. de Dieu (ad loc.) has rightly explained by adding parallel phrases (יוֹתָר, יִתָר, יִתָר הָעָר, etc.), as meaning by making, i. e. made by producing something new; comp. Jer. xxxi, 22, and יִתָר (2 p. 235). The word occurs (in the Kal or simple form) likewise in Ps. lxxxix, 12; Isa. xlii, 5; xlv, 8, 18; lv, 16; lvii, 19; lxv, 17 (in the Niphal or passive, Gen. li, 4; v, 2; Ps. cxii, 18; cv, 80; cxviii, 5; Ezek. xxvi, 30; xxviii, 13.15 ('done'); Exod. xxxiv, 10. From this examination, it is evident that although the word in question is etymologically connected with roots (like the Eng. pare, Lat. pura, etc.) that have a less decided import, yet its current and legitimate signification is the production in the due way and proper manner. As the Hebrews were not given to philosophical disquisition, their language is peculiarly barren in terms expressive of metaphysical or dialectical niceties, and hence they frequently employed this word in less exact applications. Moreover, as the act of creation was in the nature of the case but once performed, the term could only be used infrequently with reference to that event, just as 'create' with modern etymologically and even practically refers rather to production in a subordinate sense than to absolute origination. In both words, however, the higher and full sense is never lost sight of, and thus they appear as nearly synonymous in actual usage as any two in different and widely remote languages could well be. The translators of the Auth. Vea have therefore done well by invariably (except in the single passage above noted) rendering נַעַר (in Kal and Niphal at least), and no other Heb. term, by create. The N. T. writers employ in the same sense κτίζω (with the nouns εἰκόνα, κτίσις, κτίσιον, κτίσω, κτίσων, etc.) as the nearest equivalent in Greek, after the example of the Sept., in most passages. (In Gen. it has παρασυ. See Macdonald, Creation and Fall (Edinb. 1866), p. 61-4.) That this absolute sense is the true one in Gen. i, 1, at least, is demonstrable from the association there with the term 'beginning.' For if matter had existed eternally, there would have been no proper 'beginning' at all of its existence; and to understand the mere arrangement of chaotic elements by the phraseology in question would be to confound something that is said to have taken place 'in the beginning' with what is afterwards detailed under successive days. On the other hand, if matter be not eternal, it must at some time have come into being, and precisely that act would be the real 'beginning' of all material things. This is obviously what the sacred writer intended to state: in opposition to the general belief of antiquity, he affirms that matter was originally the direct product of divine power, and from this event he dates the history of the physical universe. II. God's Motive in Creation.—This motive has been ascribed by doctrinal writers to the free operation of God's love, his bonitas communicatio. He was not affected by any compulsion or selfish desire. In the essence and volition of divine love, all the much-discussed antagonism between freedom and necessity is cancelled. To suppose that the creation could have been otherwise than it was is an abstraction of no utility whatever. We only speak relatively when we declare that God could not have created otherwise than he did. But if we make the same affirmation absolutely, we degrade God's freedom to abstraction, and creation to accident or a mere experiment. The necessity in which God created the universe is the definitiveness of his own will, his self-determination which he possesses by virtue of his own divine character. It is not an external compulsion, but an interior impulse of the divine nature to manifest itself; a necessity of God's love to communicate itself. The question whether God could have created any other world than he has was discussed earnestly by the Scholastics, and later by Leibnitz in his Theodicy. If we imagine that God had a number of world-plans, out of which he selected the one which he consummated, we concede too much to the Optimists. That creation which he brought into being was the only one to which he was moved by the deep inner love of his infinite divine character. The aim which God had in view was not his own glory exclusively; he was not impelled by a purely egotistical power, but by eternal love; he desired the good of his creatures; and he thought it his task to wish his creation to be pure that he desired to be glorified by that purity. All created beings are not solely mean for an end; but they have been created for their own sake, that they might receive the communications of God and be permeated by his goodness; not that they might perform any special office to be absorbed into the heart: for no creature is eternally happy in and with him. Creation reached its aim relatively in personal creatures and absolutely in Christ the God-man. The kingdom of the natural creation attains its perfection in the kin, dom of grace and glory; the effulgence of the glory of God appears in, and concomitant with, the happiness of his creatures; and the perfection of the Church takes place, not by the overthrow, but by the renewal and illumination of the world in God (2 Pet. iii. 13; Isa. lxv, 17; lxvi, 22; Rev. xxi, 1; comp. Rom. viii, 19, etc.; comp. Twisten, Vorles. üb. d. Dogmatik, ii, 89). III. Time occupied in Creation.—La Place's theory of the formation of the whole solar system is that it was originally a mass of vapory or nebulous matter, which, according to the laws of gravitation, assumed the form of an immense sphere. This sphere received from without an impulse which caused it to revolve on its axis from west to east. In consequence of the revolution, the mass became flattened at the poles and swollen in the middle; in consequence of the great centrifugal force at the equator, and the contemporaneous condensation and contraction of the nebulous mass, a free revolving ring, similar to that of Saturn, detached itself in the region of the equator. This ring, not being of uniform density, and in consequence of contraction, broke in one
CREATION

or more places; and these fragments, in obedience to the laws of gravitation, became spheres or planets, all revolving from west to east around the parent mass. Another ring was formed in like manner, and another planet came into existence; and so on until the whole solar system was complete. According to this theory, not only the earth, but all the planets, existed before the sun in its present condition; and thus some of the supposed difficulties of the Mosaic cosmogony are removed (M'Caul, Aids to Faith, p. 242, 243), for it is impossible to distinguish the earth as distinct by being universally pronounced "good." On the third "day"—that closing the Inorganic era—there was, first, the dividing of the land from the waters, and afterwards the creation of vegetation, or the institution of a kingdom of life—a work widely diverse from all preceding it in the era.

In order to arrive at some conclusion harmonious at once with the results of modern science and the account of Moses, we must determine the meaning of the terms "in the beginning" and "day." The Hebrew word for "beginning," בְּכָלֵ֣י מִשְׁכָּנָ֗יו (reshith), is in the original without the definite article; so that Moses really says, "In reshith (not in the reshith) Elohim created the heavens and the earth." The Septuagint, Chaldee, and Syriac versions corroborate the antiquity and correctness of this reading. Thus there is an indefiniteness of the time of creation. It may have been millions of years ago just as easily as thousands, for the Hebrew word is indefinite, and the verse reads in substance thus: 'Of old, in former duration, God made the heavens and the earth.' Arguing from analogy, many contend that the term "day" does not mean literally twenty-four hours. That word often signifies in the Bible undefined periods of time, as the "day of the Lord," "the day of vengeance," "that day," "the day is far spent, the day is at hand." The first day consisted of an alternation of light and darkness; but how long the night lasted, and how long the darkness until the next dawn, is not stated. The whole time of light in which God's creative work proceeded he called "day," and the whole time of darkness he called "night." It was not a day measured by the presence of the sun's light, nor a night measured by the absence of that light. (Compare M'Caul, Aids to Faith, p. 291, 246, 247.) The name "day" is therefore regarded as given, not as a measure of extent—which is a later and a subordinate idea—but as denoting a wondrous phenomenon, marking the first great transition, and casting out the one and entering into the corresponding name ever since, "God called the light day, and the darkness he called night." He called it Yom, and from that it has the lesser naming. We now indicate the gradual, developing character of the creation. It was not the work of six ordinary days, measured by twenty-four hours, but a series of supernatural growths extending over vast periods of time. (Comp. Prof. Taylor Lewis, Meth. Quart. Review, April, 1865.)

Others maintain that, while it is true that the word "day" (q.v.) is sometimes used (e.g. in relation to the whole cosmogical period, Gen. ii. 4) in a vague sense, indefinite period, or for some set occasion without regard to its length, such a signification in the first chapter of Genesis is emphatically forbidden by the following explicit subjoined in the context itself: (1) The several demiurgic days are regularly numbered—"first," "second," etc., till the last—making an exact and obviously literal week. (2) Each is divided, in the usual Hebrew style, into "night" and "morning," constituting undoubtedly a Jewish νυκτίςινυσμ, or night-and-day, like the modern phrase "twenty-four hours." (3) To prevent all misconception, these alternations of light and darkness are distinctly prefixed in the same connection "night" and "day." (4) The institution of the Sabbath is based upon the correspondence between this and each of the six preceding days in point of length. For these philological and exegetical considerations, requiring the word בַּיּוֹם to be here taken in its strictly literal sense as an actual day, might be added others derived from scientific investigations. (See Hitzcbeck's Elementary Geology, 5th ed., p. 388 sqq., and the article Cosmogony.

IV. Era of Creation.—The Mosaic account recognizes in creation two great eras of three days each—an Inorganic and an Organic. Each of these opens with the appearance of light: the first, light diffused; the second, light from the sun for the special uses of the earth. Each era ends in a day of two great works; in the two shown to be distinct by being actually pronounced "good." On the third "day"—that closing the Inorganic era—there was, first, the dividing of the land from the waters, and afterwards the creation of vegetation, or the institution of a kingdom of life—a work widely diverse from all preceding it in the era.

In addition, the last day of each era included one work typical of the era, and another related to it in essential points, but also of prophetic. Vegetation, while for physical reasons a part of the creation of the third day, was also prophetic of the future Organic era, in which the progress of life was the grand characteristic. The record of Moses thus accords with the fundamental principle in history, that the characteristic of an age has its beginnings within the age preceding. So, again, man, while like other mammals in structure, even to the homologies of every bone and muscle, was endowed with a spiritual nature, which looked forward to another era—that of spiritual existence. The "seven" "day"—the day of rest from the work of creation—is man's period of preparation for that new existence; and it is to promote this special end that, in strict parallelism, the Sabbath follows man's six days of work.

Some 'interpreters contend that the whole account is to be taken together; that the days are to be understood as literal days; but that the whole, however, is to be interpreted as referring to a more remote period than is commonly imagined, and as not intended to describe the existing species of plants and animals, but various other species, now extinct, which have been, by subsequent convulsions of nature, destroyed, while others have been successively, by fresh acts of creation, introduced into the place."

Another consideration, that of Dr. J. Fyfe Smith in his volume on the Relations of Scripture to Geology, etc., is briefly this: the separation of the first verse he adopts as above: this refers to the original universal creation; and in the vast undefined interval an almost unlimited series of changes in the structure and products of the earth may have taken place. After this, at a comparatively recent epoch, a small portion of the earth's surface was brought into a state of disorder, ruin, and obscurcation, out of which the creation of the existing species of things, with the recall of light, and the restored presence of the heavenly bodies, took place like a seedling from the Mosaic narrative of the "four months of natural days."

"Lastly, others have thought that the whole description must be taken literally as it stands; but yet, if found contradicted by facts, may, without viol-
CREATIONISM

ience to its obvious design and construction, be regarded as rather intended for a mythic poetical composition, or religious apologue, than for a matter-of-fact

fact-history." (See Kitto’s Jour. iii, 165; v, 186; Lit. and Theol. Rev. iv, 526; Nat. and Acad. Dec. lx, 610; Meth. Rev. vi, 292; xli, 497; De Bow’s Rev. iv, 177; Hitchcock’s Religion and Geology,§ 2; Biblio. Sacra, xiii, 88, 328; xiii, 749; Journ. Sac. Lit. 1855; Amer. Bibl. Repos. vi, 236.) See GEOLOGY.

To sum up, there are three theories of creation: 1. The theories of the Jews—defended by Kal. It claims that the world was created in six ordinary, literal days. 2. The Restitution Hypothesis. According to it, the theocratic declaration of the Tohna da Bohn is accepted. The geological epochs which extend from the first earth-formations down to the diluvium form an incalculably long period before the creation of light, and before the other creative acts recorded in Genesis 1, 3, etc. Therefore the Mosaic six days’ work is but the restitution of a preceding organic creation which had been previously many times disorganized and overthrown. Chalmers and Buckland were the first to advocate this hypothesis, the latter writing in his Geology, 4th ed. Berlin, 1840: "Kersel, die Schöpfungsgeschichte u. d. Lehre vom Paradies (reviewed by Warren, Bibliotheca Sacra, Oct. 1863, art. iii); Nath. Böhrer, Naturvorgänge u. Kulturleben, 2d ed. 1863; Gouv. Planck, Compositions restrain comparativa col l’anti (Roma: 1862); F. Laurent, Etudes Géologiques sur la Composicion de Mote (Paris, 1863); F. H. Reusch, Bibel u. Naturl (Freiburg, 1862); F. Michels, the chief advocate of the Restitution theory, in his jour. Natur u. Ojtenarmung; F. W. Schultz, Die Schöpfungsgeschichte nach Naturwissenschaft und Bibel (Gotua, 1865); Baltzer, Die biblische Schöpfungsgeschichte (Leipzig, 1869, vol. 1); Wolff, Bedeutung der Weltgeschichte (Gotha, 1862); Zöckler, in Der Beseel des Glaubens, No. 1, translated in Meth. Quart. Rev. April, 1866, art. 2; Taylor Lewis, Six Days of Creation. See GENESIS; MAN; SPECIES.

Creationism, or (in the German mode of spelling from a supposed adjective) Creationismus, is a technical term (very common among German philosophers and divines, but not yet fully naturalized in English) for one or three of four theories concerning the origin of the human soul. It derives not only the soul of Adam, but every rational soul, directly from God, though not by way of an emanation in a Gnostic or pantheistic sense. It supposes the soul to be united to the body at the moment of its generation or afterwards. It differs from tradi-

Cv pubtianum or generationism, so called, which teaches that the soul is propagated, together with the body, through the process of generation from age to age, and from the theory of pre-existence, which assumes that every individual soul existed, as a spiritual being, as a perfected moral being, in the body, to leave it again at the close of its earthly pilgrimage. Creationism is traced back to Aristotle, who made an essential distinction between the animal soul (anima) and the rational principle (rational wisdom), and derived the former together with the body from the original world, but the latter (as the soul) above, as a part or reflex of the general reason of God. Plato, on the other hand, taught the theory of pre-ex-

stance, which was introduced into Christian theology by Origen. Tertullian was the founder of traducianism. The whole question of the origin of the soul was first seriously discussed during the Pelagian controversy, in connection with the problem of heredity and sin and guilt. (See Schaff, Church History, iii, 880 sq.) Pelagius, and several Oriental fathers, held the creation theory, which fell in with his view of the complete innocence of every child that is born. Jerome was also a creationist, although he wrote against Pelagius. "He says, "Deus fabricator animals, cujus velicesse ostet, et conscius esset," He appeals for this view to the unceasing creative activity of God, and to such passages as John v, 17; Zech. xii; Ps. xxxiii, 15. Augustine frequently discussed the question, but never arrived at a satisfactory solution. He wavered between creationism and traducianism; but, on the whole, he was inclined to the latter, which best agreed with his doctrine of hereditary sin. "Where the Scripture," he says, "renders no certain testimony, human inquiry must beware of deciding one way or the other. If it were necessary to salvation to know anything concerning the soul, then Scripture would teach it. ""Augustinian divines traducianism has found more acceptance. But creationism has never been without supporters, among whom Leibnitz (in his Theology) occupies a prominent position. The great argument in favor of creationism is that it guards the dignity and spirituality of the rational soul, which differs in kind from the animal soul, and is the proper seal of the image of God. Traducianism is liable to the objection of materializing the soul. But creationism makes the union of body and soul accidental and mechanical, and does not account for the transmission of sin from generation to generation. It must either confine sin to the sensual sphere, which is not true (for unbelief, pride, profanity, blasphemy, are spiritual sins), or assume that each soul becomes sinful by contact with the naturally generated body; since, from the creative hands of God, it can only proceed free from sin and defect, like the soul of our first parents. These difficulties on the one side point to a theory which combines the truths of creationism and of traducianism, and avoids their errors. Every human being, both as to body and soul, is a child of its parents, and at the same time a creature of Almighty God.

Creatures (prop. దృష్టి, ne'pHah, animated or spiritual thing; నేలి, 'less distinctively నేలి; on Rom. viii, 19, see the Baptist Quarterly, Apr. 1867, art. 2); but also నేలి, 'nepheta, "moving creature," elsewhere "creeping thing," i.e. not merely reptile (q. v.), but any gliding or short-legged quadruped, a general term in the Scriptures for any animal (q. v.). See also CREATURE.

In the New Test. this word designates 1. The whole creation, any or all created objects or beings; so Rom. viii, 39, "Nor height, nor depth, nor any other creature, etc.; Col. 1.15, "the first-born (Master) of every creature;" Rev. iii, 14, "the beginning (source) of the creation of God;" 2. Humanity, or the whole human race, in the universal sense; so Mark x, 6, "But from the beginning of the creation (kreioic) God made them male and female." The word here cannot mean the creation in general, since we find adrocio to explain the word kriko, or to bring the meaning back to it. Mark xvi, 15, "Preach the Gospel to every creature Which was preached to every creature which is under heaven." That mankind alone is here alluded to is evident, and the expression "under heaven" shows that all reasonable beings on earth are to be included in the meaning. Particularly remarkable, though different in sense, is the use of the word in the earnest expectation of the creature waiteth for the manifestation of the sons of God. For the creature
was made subject to vanity, not willingly, but by reason of him who hath subjected the same in hope: because the creature itself also shall be delivered from the bondage of corruption, into the glorious liberty of the children of God. For we know that the whole creation groaneth, and travaileth in pain together until now, in which also the expression creature is used to designate the totality of mankind. This is first indicated by the ἀναγίνου in verse 16, which brings forward in behalf of the ἀναγίνου which rests on it, that "all mankind takes part in this aspiration and in the hope of future glorification." In ver. 23, Christians, as part of humanity, are set over against the whole of it. We cannot here place Christians in contrast with the insatiate creation, and overlook entirely the non-Christian part of mankind, to whom a vague longing after the glorious freedom of the children of God could be better attributed than to inanimate nature. Paul nowhere speaks of a "change" or glorification of the earthly abode of men; this δύσκολα is exclusively reserved for men (1 Cor. xi, 51-50).—Krehl, N. T. Hand- wörterbuch; see also Elliott, The Doctrine of the Creature, 2d. ed. 1862; Journal of Sacred Literature, Oct., 1862, p. 27.

The Living Creatures spoken of in Ezekiel x, 15, 17, 20 (掸, chay, alive; the ζωος of Revelations vi, vi, sq., improperly "beast"), are imaginary or composite beings, symbolical of the divine attributes and operations, such as were common in the ancient Oriental composite Winged Figures: 1. Egyptian; 2. Assyrian.

mythological representations of all antiquity. See CHERRY.

Credence-table, or Credence, a table beside the altar, on which the cup, etc., are placed in the celebration of the mass. Du Cange says that the word credensarius means praepositus, one that tasters beforehand, and the reference seems to be to an ancient court-practice, performed by cup-bearers and carvers, who were required to taste the wines and meats which they presented (securitatis gratia), to insure the safety of the monarch. The Italian word credensarius has the same meaning. Hence also the credens-teller, credence-plate, on which cup-bearers crendigned the wine, and which means generally a plate on which a person offers anything to another; credence-tisch, credence-table, a sideboard, a cupboard with a table for the purpose of arranging in order and keeping the drinking apparatus therein. Credences were common in ancient churches. In the Liturgy under the names of Chrysostom and St. James we meet with the words πράθειν and παραποιήτων. In the Ord. Romanus the names oblationarium and prothesis occur, and one is made the explanation of the other. We meet also with the word præsulatorium, because when the offerings were received, preparation was made out of them for the Lord's Supper. In many instances the place of the credence-table was supplied by a shelf across the piscina: this shelf was either of wood or stone, and is to be found in many old churches. The use of credence-tables is one of the restorations of obsolete usages which have marked the so-called Puseyite movement in England.—Farrar, Eccles. Dict. s. v.; Coleman, Ancient Christianity.

Creditor (παραπράξατος, mazakeh'), a lender, 2 Kings iv, 1; Isa. 1, 1; elsewhere "extorter," "usurer," etc.; παραπερατία mazakeh', debt, Deut. xv, 2; δανειόφορος, a lender, Luke vii, 41). See DEBT; LOAN.

Credner, Karl August, was born Jan. 10, 1797, at Waltershausen, near Gotha. He studied at Jena, Breslau, and Göttingen. In 1830 he became professor extraordinary of theology at Jena, and in 1833 obtained the appointment of ordinary professor at Giessen. He died in 1857. Among his numerous writings are, Der Prophet Joel übersehst u. erklärt (Halle, 1831);—Beiträge z. Einleitung in die Biblischen Schriften i. :—Die Evangelien der Petrinier oder Judenchristen (Halle, 1832, ii);—Das alttestamentliche Urempfandimentum (Halle, 1838):—Einleitung in das N. T. (Halle, 1830);—Zur Geschichte des Kanons (Halle, 1847; new edition by Volckmar, with additions, Berl. 1860);—Das N. T. für denkende Lehrs (Giess. 1841-48, 2 vols.). Credner was one of the chief representatives of the Rationalistic school in Germany. In many of his works his theological views are but little apparent, and these, especially his Einleitung, are generally valued by theologians of all schools for their vast amount of information. In some of his later works, however, he shows himself a very determined Rationalist. Credner took also an active part in the religious controversies of his time, publishing a number of books in defense of the Rights of the Rationalistic party to remain in the state church, and to enjoy liberty of teaching and (Die Rechtigung der protestant. Kirche Deutschlands, 1845; Asterisken, 1847; Die stiitlichen Vorwürfe, etc., 1855). Credner also contributed many articles to German periodicals, and to Kitto's Cyclopaedia of Biblical Literature.—Herzog, Real-Encyclop. xix, 366.

Cred (credere, to believe), a form of words in which articles of belief are comprehended; not necessarily a complete summary of the faith, but a statement respecting some points which are fundamental, and have been disputed. See CONFESS. For instance, while the doctrine of the atonement must be reckoned a fundamental part of the apostle's doctrine, it is yet not in the Apostle's Creed as a doctrine. Hence some infer that it was not believed, though the more obvious inference would be that it was not stated. 1. In the early Eastern Church a summary of resorted was called μονακε, the leemn, because truly chumens were required to learn it. Sometimes made the nature of its contents, or the use to which it applied, was called ἄνωθεν, symbolum, a ideotoken, or badge, as a seal—ring—the proof of owner's doxy; sometimes καθώς, regula fidei, the rule, or
CREED

The words "and from the Son" (Lat. "filioque") were not added till the fifth century. The first copies of this creed, in the Council of Constantinople, and the councils of Ephesus and Chalcedon, have only the words "proceeding from the Father," without any mention of the Son. This addition to the creed of the Western Church first appears in the acts of an assembly of bishops at Braga (412)—"procedentem Patre et Verbo" (Concil. Bracar. 1; Mansi, iv, 287)—and in the third Council of Toledo (589), according to some copies. In 589, in the Lit. Gulic, 18, it says it, "quod a Caroll. M. tempore exordium ductum." It was then (circa 800) of old standing. Very probably it is due to the Spanish Church in the middle of the fifth century (Harvey, Hist. of the Creeds, p. 452 sq.; Hardwick, Middle Age, p. 61, n. 4; Brown, Exposition of the Nicene Creed, 2d ed., p. 1 sq.);—Procter, On Common Prayer, p. 294. See Fitiouare.

Among the Syriac MSS. discovered some years ago, now in the British Museum, is a version of the original Nicene Creed, and also the Niceno-Constantinopolitan, of which Mr. B. Harris Cowper has printed translations. The differences between this Syrian version and the Greek and Latin text of both creeds are very slight.

The Nicene Creed is held to be of authority in the Greek and Roman churches, and is admitted by most Protestant churches. It was adopted, with the Apostles' and Athanasian creeds, by the Catholics after the Reformation, and was introduced into the Formula Constitutionis, and later incorporated into the English Prayer-book. On its value in theology, see Sheddo, History of Doctrines, bk. iii, ch. iii; Schaff, History of the Christian Church, § 127-131; Cunningham, Historical Theology, ch. ix; Dorner, Doctrine of the Person of Christ, div. i, vol. ii; Neander, History of Dogmas (Hyland's transl.), i, 291-294; Stanley, Eastern Church (Lect.), Brown, On the 38 Articles, 222 sq.; Waters, Works, vol. iii; Bull, Defensio Fidei Niceneae (transl. in Lib. of Anglo-Catholic Theology, Oxford, 1851, 2 vols.). See also Forbes, Short Explanation of the Nicene Creed (Lond. 1854); Palmer, Origins Liturgicae, ii, 66; Procter, On Common Prayer, p. 294; Harvey, On the Three Creeds; Harvey, Ecclesi. Anglic. Vind, i, 558 sq.; Wingfield, Orig. Eccles. bk. x, ch. iv; Amer. Quart. Church Review, April, 1868, art. v.

CREED OF CHALCEDON. See Chalcedon.

CHISTOLOGY.

CREED OF PAPAS IV, a summary of the dogmatics of the Roman Church as contained in the canons and decrees of the Council of Trent. It was issued in the form of a bull in December, 1564, by pope Pius IV, and usually bears his name. All bishops, eclesiastics, and teachers in the Romish Church, as well as all converts from Protestantism, publicly profess assent to it. It may be found in Richter, Canones et decreta Concil. Trident. p. 574, in Cramp, Text-book of Popery, p. 542; and in Elliott, Delin. of Romaniun, ch. i. We subjoin an English version. It will be seen that the former part is the Nicene Creed, slightly altered.

1. A.B., believe and profess with a firm faith all and every thing which is contained in the following articles, to wit, which is used in the holy Roman Church; namely, I believe in one God the Father Almighty, Maker of heaven and earth, and of all things visible and invisible; and in one Lord Jesus Christ, the only-begotten Son of God, born of the Father before all worlds, God of God, Light of Light, true God of true God, begotten of the only-begotten Father; of the same substance with the Father; whom all things were made; who for us men and for our salvation came down from heaven, and was incarnate by the Holy Ghost of the Virgin Mary, and was made man, and was crucified also for us under Pontius Pilate, suffered and was buried, and rose again the third day according to the Scriptures, and ascended into heaven, and sits at the right hand of the Father, and will come again with glory to judge the living and the dead, of whose kingdom there will be no end; in one Holy Catholic and apostolic Church, I confess one baptism for the remission of sins: and I expect the renewal and restoration of the life of the world under the kingdom of the Father, Son and Holy Ghost. Amen.

I most firmly admit and embrace apostolic and ecclesiastical traditions, and all other constitutions and observances of the same church. I also admit the sacred scriptures according to the sense which the holy mother Church has held and does hold, to whom it belongs to judge of the true sense and interpretation of the sacred writings, to judge whether one take or interpret them otherwise than according to the unanimous consent of the fathers. I profess, also, that there are truly and properly seven sacraments of the Holy Church, ordained by Jesus Christ our Lord, and for the salvation of mankind, though all are not necessary for every one,—namely, baptism, confirmation, eucharist, confession, extreme unction, orders, and matrimony, and that they confer grace: and of these, baptism, confirmation, and order cannot be reformed without serious injury to the church. I also receive and subscribe the canons of the Catholic Church, received and approved in the solemn administration of all the above said sacraments. I receive and approve of the teaching and every one of the sacred writings, which have been definitely and declared in the holy council of Trent concerning sin and justification. I profess likewise, that the mass is offered to God a true, proper, and propitiatory sacrifice for the living and the dead; and that in the mass holy sacrifice of the body and blood, together with the soul and divinity, of our Lord Jesus Christ; and that there is made a conversion of the whole substance of the bread into the body and of the wine into the wine, which conversion the Catholic Church calls transubstantiation. I confess, also, that under either species they are present; and that the body and blood of Christ is received. I constantly hold that there is a proper, and that the souls detained therein are helped by the suffrages of the church. I likewise hold that Christ together with the sacraments are to be honored and invoked, that they offer prayers to God for us, and that their relics are to be venerated. I firmly assert that the pope is the vicar and representative of Christ, and of the mother of God ever Virgin, and also of the saints, to be held and esteemed, and that due honor and reverence are to be paid them. I allow that the power of indulgences was it by Christ in the Church, and that the use of them is most wholesome to all people, and that I acknowledge the holy catholic and apostolic Roman Church, the mother and mistress of all churches; and I promise and swear true obedience to the Roman bishop, the successor of St. Peter, prius of the apostles and vicar of Jesus Christ. I also profess and undoubtedly receive all other things delivered, defined, and established in the sacred councils and synods, and also by the holy council of Trent; and likewise I also condemn, reject, and anathematize all things contrary thereunto, and all heresies whatsoever have been condemned and anathematized by the Church. This true catholic faith, out of which none can be saved, which I now freely professed and truly hold, I, A.B., promise, vow, and most constantly to hold, and to observe the same whole and entire, with God a assistance, to the end of my life; and to procure, as far as lies in my power, that the same shall be held, taught, and preached by all who are under me, or are intrusted to my care, by virtue of my office. So help me God, and these holy Gospels of the Lord.

This creed is also known under the name of the Professio Fidei Tridentina, or Forma Professae Fidei Catholicae. See Cramp, Text-book of Popery, p. 496; Buckley, History of Council of Trent, p. 519; Elliott, Delin. of Romaniun, bk. i, ch. i; Streitwolf und Klein, Lib. Symb. ecclesiae Cath. (Gotz. 1846, t. ii).

Creeke (κρεικ, boom, as elsewhere rendered), a boy or indiget,-as he is from the sea (so Josephus, Ant. iii. i. 5, e.g. St. Paul's Bay, on the island, and particularly of and to the Roman bishops). In the sacred code, the -t7 is always, and particularly by the Holy Catholic and Apostolic Church, the mother and mistress of all churches, and by the pope, the successor of St. Peter, the chief of the apostles and vicar of Jesus Christ. I also profess and undoubtedly receive all other things delivered, defined, and established in the sacred councils and synods, and also by the Holy Council of Trent; and likewise I also condemn, reject, and anathematize all things contrary thereunto, and all heresies whatsoever have been condemned and anathematized by the Church. This true catholic faith, out of which none can be saved, which I now freely professed and truly hold, I, A.B., promise, vow, and most constantly to hold, and to observe the same whole and entire, with God a assistance, to the end of my life; and to procure, as far as lies in my power, that the same shall be held, taught, and preached by all who are under me, or are intrusted to my care, by virtue of my office. So help me God, and these holy Gospels of the Lord.

Creeking Thing (κραυγεθ, she ret, any swarming creature; or κραυγεθ, she ret, any loc-feeding animal; iperisus) is used in Scripture to designate not only reptiles, properly so called, but also insects, aquatic creatures, and even the smaller mammalia. See Reptile.

Creighton, William, D.D., was born in New York, Feb. 22d, 1738. He was educated in Columbia College, graduating in the class of 1812, and received his doctor's degree in 1815. In 1816, and soon after was employed in Grace Church, N. Y., as an assistant to the Rev. Dr. Bowen. In 1816 he was called to the rectoryship of St. Mark's Church, in the Bowery, of which he remained rector until 1826, when he became rector of Zion Church, Greenwich, and resigned his living in 1825. In the year 1826 the Parish of Christ Church, Tyrwhitt, in which he was chosen rector, and remained so up to the time of his death, a period of twenty-nine years,
without salary. In 1845 he was elected president of the Convention of the Diocese of New York, and was re-elected every succeeding year until the consecration of the Rev. Dr. Winwright in 1852. At the first election of a provisional bishop of New York he was chosen to that high office, but, from various considerations, declined its acceptance. He was also chosen president of the House of Clerical and Lay Deputies of the General Conventions of 1853, 1856, and 1859 respectively. He had previously served the Church in different stations of trust, as member of the Standing Committee, chair of the Missionary Committee, etc. In 1849-50 the Church of St. Mary's, Beechwood, was founded by him and his son-in-law, the Rev. Edward N. Mead, D.D.; the principal part of the cost for the erection and ground being contributed by them, and divine service being maintained by them in it, as a free church, to the present time. Dr. Creighton died at Tarrytown, April 29th, 1862.—Church Bazaar, July, 1865.

Crell (Crellicius), Johannes, a Socinian divine, whose works form part of the Bibliotheca Fratrum Polonorum, was born in Franconia in 1590, and studied at Nuremberg and other German universities. Originally a Lutheran, he afterwards adopted the principles of Socinianism, and went to Cracow in Poland, in 1612, where he became a preacher; he then was appointed professor of Greek, and afterwards rector of the university at that place. He died in 1688. His works are collected in Opera omnia exegetica, didactico et polemica, magna partem hactenus inedita (Irenopolii, 1656, 4 vols. in 8); Touching the God (trans. Lond., 1656, 4to).—Darling, Cyclop. Bibliographica, i, 812.

Crelil (or Krell), Nicholas, a distinguished German jurist, was born at Leipsic between the years 1550-53; graduated at Leipsic 1575, and was called to the court of the elector Augustus. Christian I, who succeeded his father in 1586, made him privy councilor and chancellor. Augustus had been zealous in opposing Crypto-Calvinism, but Christian I did not share his partiality for the Formula Concordiae, and Crelil, by his order, superintended the preparation of a German Bible, with practical notes, for popular use. Christian dying before its completion (Sept. 25, 1591), the work was discontinued. The electress Sophia, who succeeded him among the minority of her son Christian II, favored the extreme Lutheran party, and Crelil was thrown into prison. In Sept., 1597, he had a bearing in prison, and in 1599 he was condemned as an unfriendly to the elector and to his trust. His appeal to the imperial court at Spire was rejected, and he was executed Oct. 2, 1601, condemning himself to God. See Niedner, Zicht, f. hist. Theol. (1848, p. 813); Huttenius, Concordiae Concordia, c. 49; Arnold, Kircher, u. Ketzehistorie, ii, 16, 32; Herzog, Real-Encyklop. iii, 183; and Crypto-Calvinistic Controversy.

Crelil, Samuel, grandson of Johannes Crelil, born in 1600. After being for some time a preacher at Königswalde, he lived successively in Berlin, in the Netherlands, and in England, where he was acquainted with Sir Isaac Newton, Dr. Graebe, and other eminent men, by whom he was highly esteemed. He died at a very advanced age at Amsterdam in 1747. He wrote several historical treatises on the ante-Nicene fathers, and one on the Introduction to St. John's Gospel. He was a disciple of Socinius, but it is said that towards the end of his life he received the orthodox view of the atonement. See Fock, Socinianismus, etc., p. 240; Nichols, Calvinism and Arminianism, ii, 642.

Crescens, a Cyric philosopher who acquired great influence over the mind of the emperor Aurelius. While the other schools of philosophers looked down with contempt on the Christians, the Cyricus had been more favorably inclined towards them; but Justin Martyr having offended Crescens by some remarks he made against him in an apology, the emperor, Crescens swore to be revenged, and, to accomplish his purpose, incited the emperor to persecute the Christians. Justin Martyr was one of the victims of this persecution. See JUSTIN MARTYR.

Crescens, the emblem of the Ottoman empire. See CONSTANTINOPLE, i, 1.

Creapin, Jean, a French Reformer, born at Arns, studied law at Lowen and Paris, but, being persecuted for his religious opinions, he fled to Geneva in 1548. Here he was ordained a priest and published a catechism in 1552, and died in 1572. The books issued from his press, which can be recognised by the sign of an anchor, are remarkable for beauty of typography and for correctness. Among his own writings are, Historia des martyr par excellence, es mis a mort pour la vertu de l'église (Geneva, 1570, fol., 1691); L'acqua de l'eglise des tems des tropes jusqu'en 1560 (1564, and a trsul., The Estate of the Church (Lond., 1602, 4to); Bibliotheca studii theologici ex patribus collecta (1681, fol.).

Crete (Κρήτη), one of the largest islands in the Mediterranean, now called Cunda, and by the Turks Kride. It is 11 miles long, but very unequal width, varying from 3½ to 5 miles. It is situated at the entrance of the Archipelago, having the coast of the Morea to the south-west, that of Asia Minor to the north-east, and that of Lilyba to the south. Great antiquity was affected by the inhabitants, and it has been supposed by some that the island was originally peopled from Egypt. This is found in the old relation that Crete was the Caphtor of Dent, ii, 28, etc., and the country of the Philistines, which seems more than doubtful. See CAPHTOR. Surrounded on all sides by the sea, the Cretans were excellent sailors, and their vessels visited all the neighboring coasts. Though extremely bold and mountaneous, this island and has very fruitful valleys (Virgil, Æn. iii, 106), and was highly prosperous and full of people in very ancient times: this is indicated by its "hundred cities" alluded to in the epiteth ἐκατομμυρίς, applied to it by Homer (II, vi, 649). It was remarkable for its patriotism, although it kept aloof from the intestine wars of Greece. One of its peaks was the famous Mt. Ida, and in one of its remarkable caverns was the renowned Labyrinth of antiquity. This island was also the scene of many of the fables of mythology, and was even reputed as the abode of "the father of gods and men." The chief glory of the island, however, lay in its having produced the legislator who gave to these institutions so important an influence in softening the manners of a barbarous age, not in Crete only, but also in Greece, where these institutions were imitated. The natives were celebrated as archers. Their character was not of the most favorable description (see Hom. Od. Polyb. vi, 46; 47, 5; Diod. Sic. Ey. X, 180. 181); Livy, xlv, 45; Ovid, Ars Amat. i, 297; Plutarch, Philopoemen, 13); the Cretans, or Kretans, being, in fact,
CRETE was an independent state, with some variations of government, until it was conquered by the Romans, B.C. 67, under Metellus, hence called Creticus, and united in one state with Cyrenaica, which was at no great distance (Strab. x, 475) on the opposite coast of Africa. See CYRENE. It is possible that in Tit. III. 1, there may be an implied reference to a turbulent condition of the Cretan part of the province, especially as regarded the Jewish residents. It formed part of the Eastern empire until taken by the Saracens in 828, and was recovered from them by the emperor Nicephorus Phocas in 981. On the establishment of the Latin empire of Constantinople in 1204, it came by a temporary papal brief into the hands of the Venetians, the possession of which was retained by them until the year 1669, when, after a twenty-four years’ siege of the capital, the conquest of the whole island was effected by the Turks, to whose dominions it still nominally belongs. In August 1666, the Christians of Crete rose in insurrection against the Turkish rule, and demanded annexation to the kingdom of Greece. They resisted throughout the years 1866 and 1867 the whole force of the Ottoman empire, and thereby enlisted the sympathy of all the Christian powers of Europe, most of which urged the Turkish government to consent to the annexation of the island to Greece. (In November, 1867, the fate of Crete was not yet decided.) (See Paullin, Description physique de l’ile de Crète, Paris, 1859.)

It seems likely that a very early acquaintance took place between the Cretans and the Jews. The story in Tacitus (Hist. v. 2) that the Jews were themselves of Cretan origin, may be accounted for by supposing a confusion between the Philistines and the Jews, and by identifying the Cherethites of 1 Sam. xxx, 14; 2 Sam. viii, 18; Ezek. xxv, 16; Zeph. ii, 5, with Cretan emigrants. In the last two of these passages they are expressly called Kaphres by the Sept., and in Zeph. ii, 6, we have the word Kaphr. Whatever conclusion we may arrive at on this point, there is no doubt that Jews were settled in the island in considerable numbers during the period between the death of Alexander the Great and the final destruction of Jerusalem. Gortyna (q. v.) seems to have been their chief residence, for it is specially mentioned (1 Macc. x, 25) in the letters written by the Romans on behalf of the Jews, when Simon Maccabaeus renewed the treaty which his brother Judas had made with Rome (see 1 Macc. x, 67). At a later period Josephus says (Ant. xvii, 12, 1; War, ii, 7, 1) that the pseudo-Alexander, Herod’s supposed son, imposed upon the Jews of Crete when on his way to Italy. And later still, Philo (Leg. ad Cai. § 36) makes the Jewish envoys say to Caligula that all the more noted islands of the Mediterranean, including Crete, were full of Jews. Thus the special mention of Cretans (Acts ii, 11) among those who were in Jerusalem at the great Pentecost is just what we should expect. No notice is given in the Acts of any more direct evangelization of Crete; and no absolute proof can be adduced that Paul was ever there before his voyage from Cæsarea to Puteoli, though it is barely possible that he may have visited the island in the course of his residences at Corinth and Ephesus. See TITUS. The circumstances of Paul’s recorded visit are too brief for lasting judgment. The vessel in which he sailed to Italy, being forced out of her course by contrary winds, was driven round the island, instead of keeping the direct course to the north of it. In doing this, the ship first made the promontory of Salmone, on the eastern side of the island, which they passed with difficulty, and took shelter at a place called Fair-Havens, near to which was the city Lasca. But after spend-
CRETE 566

GRIP

ing some time at this place, and not finding it, as they supposed, sufficiently secure to winter in, they resolved, contrary to the advice of Paul (the season being far advanced), to make for Phcenice, a more commodious harbor on the western part of the island; in attempting which they were driven far out of their course by a furious east wind called Euroclydon, and wrecked on the island of Melita (Acts xxvii. 1). See Shipwreck (of Paul). It is evident from Tit. i, 5, that the apostle himself was here at no long interval of time before he wrote the letter. We believe he has been between this and second imprisonments. See Titus, Epistle to. Titus was much honored here during the Middle Ages. The cathedral of Megalos-Castra was dedicated to him; and his name was the watchword of the Cretans when they fought against the Venetians, who themselves seem to have placed him above St. Mark in Candi, when they became masters of the island (Passage’s Travels in Crete, i, 6, 175, Lond. 1857). See Höck’s Kreta (Gött. 1829), and some papers from the Italian in the Museum of Class. Antiq. (vol. ii, Lond. 1865). Also Meursius, De Rhodo, Cretea, etc. (Anatol. 1675); Neumann, Rev. Crabiter. Graec. (Göttingen, 1807); Smith, Dict. of Geog.; Goss, s. v. Crete; Spratt’s Researches in Crete (London, 1866, 2 vols. 8vo). See GREECE.

Crete (Acts ii, 11) or Creťans (Tit. i, 12 and subsc.), is a Cretan (Kipos), or inhabitant of the island of Cretan (k. v.). Treatises on the notoriously bad character of this people (referred to in the latter passage) have been written in Latin by Hollebeck (Ludg. B. 1796), Peffner (Argent. 1703), Schmidt (Lips. 1673), and Steger (Lips. 1844).

Crime (κρανατος, crime), a stall or barn where fodder is stored (Prov. xiv, 4) and where cattle are fed (Job xxxix, 9; Isa. i, 5); perhaps simply a storehouse for them to eat out of, as the Sept. and Vulg. render in the last-cited passage. See Manna.

Crippl (κροκων, crip), a stall or barn where fodder is stored (Prov. xiv, 4) and where cattle are fed (Job xxxix, 9; Isa. i, 5); perhaps simply a storehouse for them to eat out of, as the Sept. and Vulg. render in the last-cited passage.

Crime (κρανατος, crime), a stall or barn where fodder is stored (Prov. xiv, 4) and where cattle are fed (Job xxxix, 9; Isa. i, 5); perhaps simply a storehouse for them to eat out of, as the Sept. and Vulg. render in the last-cited passage. See Manna.
CRISPIN and CRISPINIAN, two brothers who, during the reign of Diocletian, went as missionaries from Rome to Gaul, and settled at Soissons. In order to support themselves and to have access to the people, they became shoemakers. They worked for some time for the propagation of Christianity, until 287, when, by order of the emperor Maximianus, they were beheaded. They are commemorated in the Church of Rome on Oct. 25, and are commonly venerated as the special patrons of the shoemakers. There is a legend that, before their execution, the angel appeared to them and said they should be made into shoes for the poor.—Wetzer u. Weile, Kirchenlex., ii, 918.

Crispin-pin (Krispin), something chiselled; the Sept. translates undistinguishably, Isai., iii, 22. This word properly signifies a casket or pouch, and is elsewhere rendered a "bag" for money (2 Kings v. 23, where the Arabic gives a leather money-bag); but in the person of the minister it is to be understood as some kind of female ornament; probably, like our modern reticule, it was a richly ornamented purse or small bag, which the women wore attached to their kir-dles. They are usually described as made of silk, and wrought with gold and silver; but Jahn thinks that this purse was made of solid gold and sometimes of pure gold, and fashioned like a cone, with a border of rich cloth at the top. See ORNAMENT.

Crispus (Κρίπος), for Lat. Crispus, curle; found also in the Talmudists under the forms נָכָר (Nakar) and נָכָרָב (Nakarab), chief of the Jewish synagogue at Corinth (Acts xviii, 8), converted and baptized by the apostle Paul (1 Cor. i, 14) A.D. 50. According to tradition (Constitut. Apost. viii, 46) he was afterwards bishop of Alexandria. The Greek Church observes his festival on the 4th of October.

Crítico Sacri, a very useful work in Biblical literature, undertaken and published by Cornelius Bee, bookseller (London, 1660, 9 vols. fol.), as an appendage to Walton's Polyglot, under the direction of bishop Pearson, John Pearson, Anthony Scottgander, and Francis Gouldman. It was reprinted at Frankfurt, under the care of Gurtler, in 1655, in 7 vols. In 1688 it reappeared at Amsterdam in 3 vols. and a supplement in 1706, and a second supplement in 2 vols. fol., Amst. 1752. This collection contains all, or most of the books of the O. T., the entire annotations of Munster, Vatablus, Castalio, Claissius, Drusius, and Grotius; brief annotations of Fagioli on the Chaldeic paraphrase of the Pentateuch, and his larger exposition of the first four chapters of Genesis; the commentaries of Maius on Joshua; the annotations of Codurcus on Job; of Pri- cesius on the Psalms, and of Bayne on the Proverbs; the commentary of Forrerius on Isaiah, that of Lively on Hosea, Joel, Amos, Obadiah, and Jonah; of Badwell on Haggai, Joel, and Ezechiel, etc. On the N. T. it contains the collations of Valla, with the animadversions of Reins; the annotations of Erasmus, Vatablus, Castalio, Cliserius, Zegerus, and Grotius; on particular places and subjects of the N. T., Munster, Drusius, Scaliger, Cesaubon, Cameron, Lut. Calpisius, Gualperius, Schelteius, and Priscian. There are a number of philosophical tracts and dissertations, such as John Gregory's Notes and Observations; Fagioli's Comparison of the principal Translations of the O. T.; Cartwright's Mqellideum Ebricum; Drusius on the Mandrakes; Jos. Scaliger and Amama on Tythes; Lut. Calpisius on the Word of Jethpha and Corban; Plutarchus De Latinis Bibliorum Interpretantibus; Usuardus De fabrica Arca Noae; Rittershaulinus De Jura Agrelliorum; Allatius De Ergastumutho; Montaus on Jewish Antiquities; Bertram and Census on the Hebrew Republic; Wasser on the Ancient Coins and Measures of the Hebrews, Chaldæans, and Syrians; and many others of a similar description (Orme, Stud. Biblici, vol. iv. The Amsterdam edition, 1782, 18 vols. fol.*) is the best, being well printed, with additions, and including four volumes of Thesaurus not contained in the original edition. Poole's Synopsis forms an excellent abridgment of this great work. See Commentary.

Criticism, Biblical. This phrase is employed in two senses. Some take it to signify not only the restoration of the text to its original state, but the principles of interpretation. This is an expensive and improper application. The science is strictly occupied with the text of the Bible. It is limited to those principles and operations which enable the reader to detect and remove corruptions, to decide upon the genuineness of disputed readings, and to obtain as nearly as possible the original words of inspiration.

I. There are only three or four sources of material for the work of Biblical criticism, both in detecting the changes made upon the original text, and in restoring genuine readings: 1. MSS. or written copies of the Bible. 2. Ancient translations into various languages. 3. Other writings and remarks of ecclesiastical writers who have quoted the Scriptures. 4. Critical conjecture; but this must be used with extreme caution. See OLD TEST.; NEW TEST.

Criticism employs the same materials furnished by these sources. To attain its end, it must work upon them with skill and discrimination. They afford wide scope for acuteness, sobriety, and learning; and long experience is necessary in order that they may be used with efficiency and success. (See Jour. Soc. Lit., Jan. 1864; Heinseifer, The True Text of the [Hebr.] Scriptures, 2d ed. Lond. 1861.) See MANUSCRIPTS; VERSIONS.

Canons of Biblical Criticism.

I. External on Objective.

1. Readings found in the most ancient and more carefully written MSS. should be preferred. Hence "uncial" copies are in general more weighty than "extensive." Yet great unam-

2. Independent witnesses must chiefly be regarded. Hence the necessity of classifying authorities, and of reckoning all that can be traced to a common origin as one and the same, since no copy can rise higher in value than its source, and each transcript requires an additional opportunity for error. On this account the critical materials of the O. T. and N. T. are as all existing Heb. MSS. are of the Masoretic recension; and but for the Alexandrian, which in Ptolemaic and Roman times assumed the character of a learned institution, the competency, care, and scrupulosity on the part of these editions, their work would be of much less utility than it now is. In the N. T. the text greatly reformed since the earliest extant MSS., inasmuch as they all seem to belong to the Alexandrian type, and for this reason their provincial-

3. Readings found in the original text are not to be lightly set aside through difference of versions or citations. This not only follows from the authority of the text, but because its importance is enhanced by the ignorance, prejudices, special objects, and laxity of translators and writers quoting compo-

In doubtful cases only (from conflict, failure or improbability in the original readings, therefore, can there be any safety resort to. Hence is evident equally the absurdity of existing the work of one who was a whole above the Hebrew, and the Vulgate above the Greek Testa-

4. Texts are to be suspected from any cause, however, and where sufficiently exact to be verbally appreciable, translations and quotations, like direct and explicit historical sources, are to be regarded, and submitted to consideration in proportion to their antiquity and excellence of opportunity.

II. Internal or Subjective.

N. B.—This whole kind of evidence is only to be used, and that but speculatively, as the foregoing rules fail short, or are opposed by some palpable inconsistency in point of exegesis or philology in the text.

1. Purposive or intentional emendation may sometimes be cau-

In such cases, because it is possible that some clerical errors may have existed in the original autograph, and that they may have been corrected by the copyists in the earliest date in copying; these would therefore be liable to cor-

All other later testimony. On the other hand, arbitrary cor-

In doubtful cases only (from conflict, failure or improbability in the original readings, therefore, can there be any safety resort to. Hence is evident equally the absurdity of existing the work of one who was a whole above the Hebrew, and the Vulgate above the Greek Testa-
ly demanded, and where they can also be shown to have been naturally displeased by the errata; not yet unless they are such as would be likely to have eluded the diligence of earlier correctors.

2. Among several various readings, which are otherwise nearly equally supported, that one is to be set aside which the other cannot possibly be derived from. On this principle Locke based the famous law of critics in general, that "the most difficult readings are those which are most often rejected;" but the principle is as true, however, since the harsher readings may have been the result of inadvertence in copying, and on this principle they would sometimes have been retained; whereas the very fact that the criticism in the common sense of one inseminating rather than increasing the incongruities of the text. It is only meant that we should choose the more probable, and that another, if original, in the text, would be more obnoxious to copyists; yet the rule must not be so construed as to come into collision with the formerly canonized.

3. When the evidence in favor of the omission or insertion of a passage, curse, or highly significant word is nearly equally deposited on either side, we refer to reject that (if it is not included in the received text), or if it is retained for the sake of conventionality) to make it as probably spurious; for the disposition of the church, from quite an early to a comparatively recent period, has leaned towards the admixture of more and more matter (whether marginal glosses or apochryphal additions) into the sacred canon; and copies as well as editors have felt the influence of that reverent familiarity which renders it so increasingly difficult to expunge anything once included in Scripture. But in judging of the genuineness in such instances, little stress can be laid upon considerations drawn from documented copies or from the context, because these are greatly affected by the individual sentiments and conventional opinions of each critic.

II. The remainder of this article (which relates to the so-called "lower criticism") will contain a brief historical sketch of Biblical criticism, or a history of the texts of the Old and New Testaments; the condition in which they have been at different periods; the evidences on which our knowledge of their purity or corruption rests, and the chief attempts that have been made to rectify or amend them. A history of criticism must describe the various stages and forms through which the texts have passed. It will be convenient to reason from an enumeration of those phases which gave rise to various readings for a future article [see Various Readings], and in this place to detail the phases which the Hebrew and Greek texts of the Old and New Testaments have presented both in their unprinted and printed state, in connection with the books formed on them.

A. The Old Testament. — There are four marked periods in the history of the Hebrew text.

1. That Period in the History of the Unprinted Text which preceded the Closing of the Canon. — Of this we know nothing except what is contained in Scripture itself. The Jews bestowed much care on their sacred books. The people in general were accustomed to read them in great veneration even in the darkest times of national apostasy from Jehovah. How often the separate books were transcribed, or with what degree of correctness, it is impossible to tell. Many German critics suppose that the Hebrew text met with very unfavorable treatment; that it was early subjected to the carelessness of transcribers and officious critics. Differences, however, between parallel sections show rather the genuineness and integrity of the books in which they occur. Had such paragraphs exactly harmonized, we might have suspected design or collusion; but their variability is a testimonial of the writers. We disagree with Eichhorn, Bauer, Gessner, De Wette, and others, who have given lists of parallel passages in some books in order to show that the text was early exposed to extensive alterations.

The most important particular in this part of the history is the Samaritan recension of the Pentateuch. Since the origin of the famous schism which is incorrectly called (if it may be called) of the Pentateuch is indeed uncritical in its character. While we freely acquit the Jews of tampering with the text of the Mosaic books, the Samaritans cannot be so readily exonerated from the imputation. Alterations, additions, and transpositions are quite apparent in their copy of the Pentateuch. A close alliance between the text which lies at the basis of the Septuagint version and that of the Samaritan Pentateuch has been always noticed. Hence some think that they flowed from a common recension. One thing is certain, that the Seventy agrees with the Samaritan in about 2000 places in opposition to the Jewish text. In other books, too, of the Old Testament, besides the five books of Moses, the Samaritan Jewish and the text considerably differ from the Jewish. Thus in Jeremiah and Daniel we find a different arrangement of sections, as well as a diversity in single passages. The books of Job and Proverbs present a similar disarrangement and alteration, which must be put down to the account of the Alexandrian Jews and Greek translators. Far different was the conduct of the Palestinian Jews, which are the treatment of the sacred books. They were very scrupulous in guarding the text from innovation, although it is impossible that they could have preserved it from contamination. But whatever errors or mistakes had crept into different copies were rendered apparent at the time when the canon was formed. We believe with Hävernick (Einleitung in das Alte Testament, p. 49) that Ezra, in unison with other distinguished men of his time, completed the collection of the sacred writings. He revised the various books, corrected inaccuracies that had crept into them, and rendered the contents of the text perfectly free from error. Thus a correct and genuine copy was furnished under the sanction of Heaven. Ezra, Nehemiah, and those with whom he was associated, were infallibly guided in the work of completing the canon. See CANON.

2. From the Establishing of the Canon to the Completion of the Talmud, i. e. the commencement of the sixth century after Christ. — The Targumists Onkelos and Jonathan closely are with the Masoretic text. The Greek translations of Aquila, Symmachus, and Theodotion, belonging to the second century, deviate from the form of the text afterwards called the Masoretic. Much less than the Seven, the Hexapla of Origen's Hexapla presents a text allied to the Masoretic recension. Jerome's Latin version, made in the fourth century, is conformed to the same Hebrew original. In the two Gemara, viz. the Jerusalem and the Babylonian, belonging to the fourth and sixth centuries respectively, we discern many traces of critical skill applied to the preservation of a pure text. Different readings in MSS. are mentioned, precepts are given respecting Biblical calligraphy, and true readings are restored. By far the most important fact which they present is the aduction of classes of critical corrections made at an earlier period, and which Moses ben Maimon in his Mishneh Elohim and in his commentaries on the Pentateuch calls the fragments or vestiges of recensions. These are:

(1) בכר ושם, Retrenchment of words. (2) מפרש, Correction of words. (3) חסר, Extraordinary punctuation. (4) קֶד, "Keri k-o kekhath," read but not written. (5) קֶד, "Keri k-o kekhath," written but not read. (6) קֶד, "Keri k-o kekhath," read and written. See KERI and KEKHATH. The writings of Jerome afford evidence that, in the fourth century, the Hebrew text was without the vocal-points, or even the diacritical signs.

3. From the sixth Century, in which the Talmud was completed, to the Invention of Printing. — The learned Jews, especially those at Tiberias, where there was a unique meeting of all the famous schools, continued to occupy themselves with the Hebrew language and the criticism of the Old Testament. The observations of preceding Rabbis were enlarged, new remarks were made, and the vowel-system was invented, the origin of which can hardly be placed earlier than the sixth century. The name Masorah has usually been applied to that grammatico-historical tradition which, having
been handed down orally for some centuries, became afterwards so extensive as to demand its committal to writing. Much what is contained in the Masora exists also in the Talmud. Part of it, however, is older than the Talmud, though not reduced to its present form till a much later period. The various observations comprised in the Masora were at first written in separate books, of which there are MSS. extant. Afterwards they were put into the margin of the Bible MSS.

When we speak of the Masoretic recension of the text, it is not meant that the Masoretes gave a certain form to the text itself, or that they undertook and executed a new revision. They made the textus receptus of the Masora massaiah MSS. were made to give their sentiments concerning it. Had the text been altered in every case where they recommend; had it been made conformable to their ideas of what it should be, it would have been appropriate to have called it the Masoretic recension. The designation, however, though not applicable in strictness, is customary.

The most important part of the Masora (q. v.) consists of the marginal readings or Keri, which the Masoretes always preferred to the textual, and which the later Jews have adopted. The Keri are critical, grammatical, orthographical, expository, and euphemistic. It has been a subject of dispute among scholars whether an Arab text was interpolated into the Keri. It is highly probable that they were generally taken from MSS. and traditions, though they may have been in part the offspring of conjecture. It is but reasonable to suppose that these scholars sometimes gave the result of their own judgment. In addition to the Keri the Masora contains an enlargement of critical remarks found in the Talmud. Besides, the verses, words, and consonants of the different books of the Bible are counted, a task unparalleled in point of minute labor, though comparatively unprofitable.

The application of the Masora in the criticism of the Old Testament is difficult, because its text has fallen into great disorder. It was printed for the first time in the first Rabbinical Bible of Bomberg, superintended by Felix Pratensis. In the second Rabbinical Bible of Bomberg, R. Jacob ben-Chayyim bestowed considerable care upon the printing of the Masora. At the end of this second Rabbinical Bible there is a collection of notes on the Masora, in other words, Babylonian and Palestinian, communicated by the editor, and the result of an ancient revision of the text. The number is about 216. Of the sources from which the collection was drawn we are entirely ignorant. Judging by the contents, it must be older than the observations made by the Masoretes. Hence it should probably be referred to a period anterior to the introduction of the vowel system, as it contains no allusion to the vowels. It is certainly of considerable value, and proves that the Oriental no less than the Western Jews had always attended to the state of the sacred text. In addition to this list, we meet with another in the Rabbinical Bibles of Bomberg and Buxtorf, and in the sixth volume of the London Polyglot, belonging to the eleventh century. It owes its origin to the labors of Ben-Asher and Ben-Naphtali, the respective presidents of academies in Palestine and Babylon. These readings, with a single exception, refer to the vowels and accents. The vowel system had therefore been completed when this collection was made.

Here the history of the unprinted text may be said to close. The old unwovelled copies perished. New ones furnished with points and accents came into use. But, although the ancient copies are now irrecoverably lost, there is reason to hope that their preservation to the present time would have had any essential influence in altering the form of the text. The text appears to have been established and settled when the punctuation system was completed. The labors of the Masoretic doctors have been of substantial benefit in maintaining its integrity.

The first edition of the Hebrew Scriptures ever printed. The text is furnished with the points and accents, but we are ignorant of the MSS. employed by the editor. The second great edition was that in the Complutensian Polyglot (1514-17) taken from seven MSS. The third was the second Rabbinical Bible of Bomberg, superintended by R. Jacob ben-Chayyim (Venice, 1526, 6 vols. fol.). The text is formed chiefly after the Masora, but Spanish and Palestinian readings are differently printed, and printed copies have been taken from it. The Antwerp Polyglot has a text compounded of those in the second and third recensions just mentioned.

Among the editions furnished with a critical apparatus, that of Buxtorf, published at Basle 1619, occupies a high place. It contains the commentaries of the Jewish Rabbin Iarchi, Aben- Ezra, Kimchi, Levi ben-Gerson, and Saadiah Haggaon. The appendix is occupied with the Jerusalem Targum, the great Masora corrected and amended, with the various readings of Ben-Asher and Ben-Naphtali.

The other principal editions with various readings are from the MS. manuscript, Van der Hooght, J. H. Michaelis, C. F. Houbigant, and Benjamin Kennicott.

(1.) Münster's edition appeared at Basle in 1558, 2 vols. 4to. The text is supposed to be founded upon that of Breslau, 1494, 4to, which resolves itself into the Sioncino edition of 1488.

(2.) Jablonski's edition was published at Berlin in 1699, 8vo, and again at the same place in 1712, 12mo. It is founded upon the best preceding editions, but chiefly the second edition of Leusden (1667). The editor also collated various MSS. The text is remarkably accurate.

(3.) Van der Hooght's edition appeared at Amsterdam 1705. The text is taken from Athian's (1661 and 1667). The Masoretic readings are given in the margin; and at the end are the varied readings of the editions of Bomberg, Plantin, Athias, and others.

(4.) The edition published by J. H. Michaelis in 1720 is accompanied with the readings of twenty-four editions which the editor examined, besides those of five MSS. in the library at Erfurt. There is a want of accuracy in his collations.

(5.) In 1738, C. F. Houbigant published a new edition in folio. The text is that of Van der Hooght, with a few changes, without the Masoretic readings. But the Samaritan readings are added. For it he collated, but hastily, twelve MSS. He has justly been blamed for his rash indulgence in conjectural emendation.

(6.) Dr. Kennicott's edition, which is the most important hitherto published, appeared at Oxford, in folio—the first volume in 1776, the second in 1790. The number of MSS. collated by himself and his associates, the chief of whom was Professor Bruns of Helmstadt, amounted to 694. In addition to his collation of MSS. and printed editions, he followed the example of various editors of the Greek Testament in having recourse to Rabbinical writings, especially the Talmud. The immense number of various readings taken from MSS. and printed text is collected is unimportant. It serves, however, to show that, under the influence of the Masora, the Hebrew text has attained a considerable degree of uniformity in all existing MSS.

(7.) In 1784-88, John Bernard de Rossi published at Parma, in 4 vols. 4to, an important supplement to Kennicott's collection of MSS. Various readings were taken from 88 MSS. used by Kennicott and collated anew by De Rossi, from 479 in his own possession and 110 in other hands, from many editions and Samaritan MSS. and also from ancient versions.
CRITICISM

(8.) In 1728, Döderlein and Meisner published at Leipzig an edition intended in some measure to supply the want of the extensive collations of Kennicott and De Rossi. It contains the most important readings. The edition of Jahn, published at Vienna in 1806, is very serviceable and convenient. The text of Van der Hooght may now be reckoned as the textus receptus. (For full lists of the printed editions of the Hebrew Bible, the reader is referred to Le Long's Bibliothèque, edited by Meur, and to Rosenmüller's Handbuch für die Literatur der biblischen Kritik und Exegese, 1, 189–577. See also Darling's Cyclopaedia Bibliographica, vol. on "Holy Scriptures," col. 49 sq.)

Notwithstanding all these editions, something is still wanted. In the best of them there are passages requiring emendation. It is curious to observe how contradictions are allowed to remain on the face of the Old Testament history. It may be that the Masora has produced so great a uniformity that extant MSS. do not sanction any departure from the present text, but, where passages are manifestly corrupt, it is proper that they be restored. The criticism of the Hebrew Bible is still behind that of the Greek Testament. The latter was earlier begun, and has been more vigorously prosecuted. We remain nearly in the same state with regard to the Old Testament text as that in which Kennicott and De Rossi left us, and it is time that some advance should be made in this department. The only important recent work in this direction is Dr. S. Davidson's Revision of the Heb. Text of the O. T. (London, 1855, 8vo). See Scriptures, Holy.

B. We shall now give a brief history of the New Testament text in its unprinted and printed forms. The criticism of the New Testament is rich in materials, especially in ancient MSS. But, although the history of New Testament criticism records the industrious collection of a large amount of materials, it is not equally abundant in well-accustomed facts, such as might be of essential benefit in enabling us to judge of the changes made in the text. History is silent respecting the period when the two parts of the New Testament, viz., the \( \text{\textgamma\textalpha\textgamma\textnu\textalpha\textomicron\nu} \) and \( \text{\epsilon\nu\iota\sigma\omicron\tau\omicron\sigma\omicron\nu\alpha\omicron\upsilon\omicron\alpha\omicron} \), or, in other words, the four Gospels, and the Pauline and remaining epistles, were put together, so as to form one whole. About the beginning of the third century, it is certain that copies of the New Testament which we now possess were acknowledged to be divine and regarded as canonical. See Canon.

1. In the middle of the same century Eusebius and Lucian undertook to amend the MSS. of the New Testament. Of their critical labors Jerome seems not to have entertained a high opinion. The MSS. they revised did not meet with general approval, and pope Gelasius issued a decree against them. It is highly probable that they were not the authors of recensions which were widely circulated or generally adopted. Origen did not revise the text of the New Testament.

At a comparatively recent period certain internal marks were introduced into the text, according to documents containing the same text. A similarity in characteristic readings was noticed. Bengel appears to have been the first to whom the idea suggested itself of dividing the materials according to the peculiarities which he faintly perceived. It was afterwards taken up by Semler and Griesbach, who contributed much to the study of the New Testament. Later editors and critics have endeavored to improve upon Griesbach's system. The different forms of text observed by Semler and Griesbach they called recensions, although the appellation of family is more appropriate. Perhaps the data that have been so much regarded in classifying the documents containing the New Testament text are insufficient to establish any system.

The subject of recensions, though frequently discussed, is not settled. In the history of the unprinted text it is the chief topic which comes before the inquirer. Reserving it for future notice (see Recensions), we pass to the history of the printed text, and the efforts made to emend it.

2. The whole of the New Testament was first printed in (1.) in the Complutensian Polyglot, 1514, fol. (vol. v), though not published till 1517. The first published was (2.) that of Erasmus, at Basle, in 1516, 2 vols. in 1, fol. Both were issued independently of one another, and constitute the base of the received text. Yet the best materials were not considered in preparing them, and on both the Vulgate was allowed to exert an undue influence. Even critical conjecture was resorted to by Erasmus. No less than five impressions were published by Erasmus, into the third of which I John v, 7, was first put. In the last two he made great use of the Complutensian Polyglot.

(3.) The third place among the early editors of the Greek Testament has been assigned to Robert Stephens, whose first edition was printed at Paris (1546, 12mo), chiefly taken from the Complutensian, and generally styled the Milesian edition, from the commencement of the Greek Testament (1549) and the English version (1550). The second edition (1549) was revised in 1550, in folio. In this last he followed the fifth of Erasmus, with which he compared fifteen MSS., and the Complutensian Polyglot. In 1551 appeared another edition, accompanied by the Vulgate and the translation of Erasmus. It is remarkable for being the first into which the division of the verses was introduced.

(4.) The next person that contributed to the criticism of the Greek Testament was Theodore Beza. The text of his first edition (1565, folio) was the same as that of the third of Stephens, altered in about fifty places, accompanied with the Vulgate, a Latin version of his own, and a Greek version. In his second edition (1569) he had the benefit of the Syriac version and two ancient codices. A third impression appeared in 1569, and a fourth in 1568. The Elzevier editions exhibit part the text of the third of Stephens, and partly that of Beza. The first appeared at Leyden in 1624. The second edition of 1628 proclaims its text to be the textus receptus, which it afterwards became. Subsequently three other editions issued from the same press. The editor does not appear to have consulted any Greek MSS. All his readings are either in Beza or Stephens. The Elzevier editions are all in 12mo.

(5.) Brian Walton, the learned editor of the London Polyglot, was the first to print any considerable portion of the New Testament which we now possess, and to add the parallel readings in the sixth volume of that work than had before appeared, which was further enlarged by Dr. Fell, in his edition, published at Oxford in 1675, and reprinted by Gregory in 1708, folio. See Polyglot.

(6.) Dr. John Mill, encouraged and supported by Fell, gave to the world a new edition in 1707, folio. The text is that of Stephens's third edition. In it the editor exhibited, from Gregory's MSS., a much greater number of readings than is to be found in any former edition. He revised and increased the extracts formerly made from ancient versions. Nor did he neglect quotations from the fathers. It is said that the work was aimed at the holy classics of the Roman Church, and that it was used as a text-book in the universities. But it has been too much neglected. This important edition, so far superior to every preceding one, cost the laborious editor the toilsome study of thirty years, and excited the jealousies of many who were unable to appreciate its excellence. It constituted a new era in the criticism of the New Testament. In 1719, the Amsterdam Polyglot was printed at Amsterdam in 1719, enriching it with the readings of twelve additional MSS. The first attempt to emend the textus receptus was made by John Albert Bengel, abbot of Alpirbus. His edition appeared at Tubingen (quarto, 1734), to which was prefixed his "Introductio in crimin Novi Testamenti." Subjoined is an apparatus criticus, containing his collection of
CRITICISM

various reading, chiefly taken from Mill, but with im-
portant additions.

(7.) Dr. John James Wetstein contributed, in no small measure, to the advancement of sacred criticism, by his large edition of the Greek Testament, published at Amsterdam in 1751-2, 2 vols. folio. In 1730 he had published prolegomena. It was his desire to give a new and corrected text, but he was compelled by circumstances to exhibit the textus receptus. Yet he noted, partly in the text itself, partly in the inner margin, his correction of various readings, with their respective authorities, far exceeds all former works of the same kind in copious-
ness and value. He collated anew many important MSS. that had been superficially examined, gave ex-
tracts from many for the first time, and made use of the Hocxian (improperly called the Philoxenian) ver-
ton, hitherto uncollated. For convenience he marked the uncial MSS. with the letters of the alphabet, and the cursive with numerical letters. His exegetical notes are chiefly extracts from Greek, Latin, and Jew-
ish writers. The edition of the Greek Testament un-
doubtedly is responsible for every critical work, and will always be reckoned a marvellous monument of indomitable energy and unwearying diligence. The Prolegomena contain a treasure of sacred learning that will always be prized by the scholar. They were re-
published, with valuable notes, by Seimler (1774, 8vo).

(8.) The scholar who is pre-eminently distinguished in this line of work is Dr. John James Griesbach. He enriched the materials collected by Wetstein with new and important additions, by collating MSS., versions, and early ecclesiastical writers, particularly Origen, with great labor. The idea of recensions, recommended by Bengel and Seimler, he adopted, and carried out with much acuteness and sa-
gacity. His first edition appeared at Halle (2 vols. 8vo, 1774-5). The first three gospels were synoptically ar-
ranged, but in 1777 he published them in their natural order. The text is founded on a comparison of the copious materials which he possessed. Nothing was adopted from conjecture, and nothing received which had not the sanction of codices as well as versions. A select number of readings is placed beneath the text. In his Symbola Critica he gave an account of his criti-
cals labor, and of the collations of new authorities he had made. Such was the commencement of Griesbach's literary labors.

In the years 1782-88, C. F. Matthaei published a new edition of the Greek Testament at Rigas, in 12 vols. 8vo. His text was founded on a collation of more than 100 Moscow MSS., which he first exam-
ined. It is accompanied with the Vulgate, scholiæ, and ecrasarv. He avowed himself an enemy to the idea of recensions, despised the ancient MSS. (especially cod. Beza) and the quotations of the fathers, while he un-
duly exalted his Moscow MSS. His chief merit lies in the careful collation he made of a number of MSS. hitherto unknown.

(10.) Before the completion of Matthæi's edition appeared that of Alter (Vindob., 1786-7, 3 vols. 8vo). The text is that of the Vienna MSS., Philo which he, himself, colla-
lated 22 others in the Imperial library. To these he added readings from the Coptic, Slavonian, and Latin versions.

(11.) In 1788, Professor Birch, of Copenhagen, en-
larged the province of sacred criticism by his splendid edition of the Old Testament. In 1793 he published the first volume of a new and greatly-improved edition of Griesbach's New Testament. For it he made extracts from the Armenian, Slavonic, Latin, Sahidic, Coptic, and other versions, besides incorporating into his collection the results of the labors of Mattheis, Alter, and Birch. The second volume appeared in 1786, both published at Halle, in 8vo. At the end of the second volume there is an appendix on 1 John v. 7. The work was reprinted at Leipzig, 1803-7, in four splendid 4to vols.; also at London in 1809, and again in 1816, 2 vols. 8vo. The prolegomena are exceedingly valuable. This edition cannot be too highly rated. It is indispensable to every critical and intelligent theologian.

In 1827, many new materials having been procured since the date of Griesbach's last edition, it was thought necessary to publish a third. It appeared accordingly, under the superintendence of Dr. Schulz, at Berlin, in 8vo. The first volume contains the prolegomena and the Gospels. It exhibits various readings from about 20 new sources for certain passages, and gives many refer-
ces and citations, besides considerable improvements in other respects. The second volume has not been published.

The editions of Knapp, Schott, Tittmnan, Vater, Nö-
be, and Gœsch are chiefly founded upon that of Griesbach. From the edition of John James Knapp, which has passed through five editions, and is characterized by sound judgment, especially in the punctuation and accents.

(14.) In 1830 appeared the first volume of a large and critical edition, superintended by Dr. J. Martin Augustus Scholz, professor at Bonn, containing the Gospels. The second volume, in 1836, completed the work. Both are in quarto. The editor spent twelve years of incessant labor in collecting materials for the work, and travelled into many countries for the purpose of collat-
ing MSS. The prolegomena prefixed to the first vol-
ume occupy 372 pages, and contain ample information respecting all the codices, versions, fathers, acts of councils, etc., etc., which are used as authorities, to-
gether with a history of the text, and an exposition of his classification system. In the inner margin are given the general readings characteristic of the three great families. The total number of MSS. which he has added to those previously collated is 600. Little reli-
ance, however, can be placed on the accuracy of the extracts which he has given for the first time. His researches have tended to raise the textus receptus higher than Griesbach placed it. In consequence of his preferring the Constantinopolitan family, his text comes nearer the Elzevir edition than that of Griesbach. The merits of this laborious editor are considerable. He has greatly enlarged our critical apparatus. Yet in acuteness, sagacity, and scholarship he is far inferior to Griesbach. His collations appear to have been super-
\textit{ficial}. They are not to be depended on. Hence the text can not command the confidence of Protestant critics. We believe, with the editor, that the Byzantine family is equal in value or authority to the Alexandrine, which is confessedly more ancient, nor can we put his junior codices on a level with the very valuable documents of the Oriental recension. His text is, on the whole, inferior to that of Griesbach. In a few important points it is inferior to Griesbach.

(15.) The edition of Lachmann, though small in compa-
\textit{passus}, deserves to be especially mentioned. It was published at Berlin in 1831, 12mo. The editor says that he has nowhere followed his own judgment, but that the usage of the Oriental churches. The text of Lachmann has been well regarded, and much impor-
tance has been attached to it. From the authority it has obtained, it would appear that the Constantinopol-
itan text of Scholz is not very favorably regarded.
CRITICISM
752

CROATIA AND SLAVONIA

De Wette, in his "Introduction to the Bible," shows a leaning towards the views of Lachmann. Kirck con-
coincides on the same basis. The same scholar has enlarged the critical apparatus of the New
Testament by collating and describing several MSS. (Loci Critici in Acta Apost. \\
\varepsilonτων, etc., etc., Basel, 1830, 8vo.) There is also a large edition
by Lachmann (Novum Testamentum, Graece et Latine.),
which is a revised account of Philippus Brothmann's Ph. F. Graecae literae 
\varepsilonκτειναι τοιαύτη; Tomus prior, Berolini, 1842, 8vo; \varepsilonκτειναι alter, ib. 1850.

The editions by this critic are by far the most im-
portant that have appeared since the days of Gries-
bach, and must produce results highly favorable to the
advancement of New Testament criticism. The pri-
mance is obvious. Lachmann's editions were ex-
pounded in the Theolog. Studien, und Kritiken for 1830,
p. 817-845, and again in 1835, p. 570 sq. The
path which he first pursued in his smaller edition was indi-
cated by Bentley, who purposed to publish the Greek
Testament on similar principles. In order to discover his
Oriental text (a text which is substantially the same
as the Alexandrian), Lachmann makes use of the follow-
ing authorities: 1. A, B, C, D, as also F, Q, T, Z, in the Gospels, and in the Pauline epistles, H in
addition. 2. Latin interpretations, viz. in the Gospels the Vercellian, Veronian, Colbertina, Cambridge; in
the Acts the Cambridge and Laudian; in the Pauline epistles, St. Germain, Graecae litterae, Amiens; in
the Apocalypse the Primasian. In addition to these, the Vulgate, as edited by Jerome, is everywhere em-
ployed. Of the fathers, he consults Irenæus, Origen, Cyprian, Hilary, and Lucifer. The immense mass of
later MSS. and fathers is entirely overlooked as use-
less. The authorities for the Greek readings are given
below the text; and, when it is considered how few
materials are employed, it will readily be sup-
posed that the various readings noted are not numer-
cious. They are, however, most valuable and important.
In addition to the Greek text and critical apparatus, the Hieronymian Vulgate is given, in the same form,
and nearly as possible, in which it proceeded from Jerome, with important readings extracted from the Ful-
desian Codex, from the same corrected by Victor, bishop of Capua, and from the Laurentian Codex.
The great aim of the editor has been to exhibit a text in
which the most ancient authorities are entirely agreed and can be used. With certain texts his critical apparatus shows the degree of probability attached to the text as given by him. To the volume is prefixed a preface of 55 pages (a few of them from Buttmann), in which the learned editor expounds his mode of procedure, and the authorities consulted. Respecting the opponents of his system, he does not
speak in the most courteous or becoming language, nor is his Latinity the purest. Yet the preface is in-
structive withal, and must be studied by him who uses
Lachmann's text. Were we disposed to follow the
text of any one editor absolutely, we should follow
Lachmann. Whether he be doubtless right or not has
not confined himself to a range of authorities too cir-
sumscribed. By keeping within the fourth century he has occasionally been compelled to rest upon one or
two testimonies. We should therefore like to see more
authorities consulted. We are persuaded, however,
that this author has entered upon a right path of in-
vestigation, and has his text in so far a peculiarly
useful and unusually successful. The correctness of
these principles, in the main, has been vindicated by the fact that later eminent critics have pursued es-
tentially the same path.

(16.) Since the appearance of Lachmann's first ed-
ition, another has been published in Germany by Dr. Tischendorf (Leipzig, 1841, 8vo), which requires notice. It exhibits a corrected text, taken from the most an-
cient and best MSS., with the principal various read-
ings, together with the readings of the Eusevii, Knapp,
Scholz, and Lachmann editions. Great pains have
manifestly been bestowed on the text and the critical
apparatus. No less than 85 pages of apparatus consist-
ing of 85 pages, are exceedingly valuable. They treat
of recensions, with an especial reference to Scholz's sys-
tem; enumerate the readings peculiar to the third ed-
iton of Stephens and that of Mill, to the editions of
Mattasch and Griesbach; and specify the critical ma-
terials employed in the elaboration of a pure text.
A careful perusal of the scholar's preface, and a col-
collation of his text and critical apparatus beneath it,
have convinced us of the great candor, minute disli-
gence, extreme accuracy, and admirable skill by which this edition of the Greek Testament is characterized.

In 1859, Tischendorf published the seventh edition
of his Greek Testament, which was exhausted and im-
proved, from the materials which he had brought to light in the interim. A notable addition to the latter is the famous Sinalite MS. (q. v.) discovered by him, and lately published, the results of the ex-
akamination of which, together with those of the Codex Vaticans recently given by cardinal Msi to the pub-
lic, are embraced, with other fresh materials, in Tis-
cherdorf's eighth edition now in course of publication
(Lpz. 1864, sq. 8vo).

(17.) A new and critical edition of the Greek Testa-
ment, accompanied by the old Latin version, has been
begun by Dr. Tregelles, and issued in fasciculi, of which the third fasc. is in the press (Londo.). The
editor aims at great accuracy in his authorities. His
text, however, shows defective judgment, and relies too exclusively on a few ancient MSS. It will be a
valuable contribution, however, to sacred criticism.

(18.) Alford's Greek Testament (London, 1865-61, 5
vols., 8vo) contains a revised text and a copious criti-
cal apparatus, mostly compiled, however, from Tis-
cherdorf, and marked by too great a leaning to sub-
jective or internal evidence.

(19.) Mr. Scrivener's critical labors on the Greek
Testament deserve mention in this connection for their
accurate research. An account of them may be found in his Introduction (Cambr. 1861, 8vo).

III. The operations of sacred criticism have estab-
lished the genuineness of the Old and New-Testament
texts in every matter of importance. All the doctrines
and duties remain unaffected by its investigations.
It has proved that there is no material corruption in the
accepted texts; that it has inspired respect and boldness in those of many centuries the Holy Scriptures have been
preserved in a surprising degree of purity. The text is
substantially in the same condition as that in which it was found seventeen hundred years ago. Let the
plain reader take comfort to himself when he reflects that the received text which he is accustomed to read is
substantially the same as that which men of the
greatest learning and the most unwearyed diligence have
elicted from an immense heap of documents.

For a copious account of the various editions of the
Greek Testament the reader is referred to Le Long's
Bibliotheca Biblica, edited by Tischendorf; or to Rosenmüller's Handbuch für die Literatur der biblischen Kritik
und Exegese, i, p. 278-422; or to Tregelles' Account of the printed Text of the Gr. New Test. (Lond. 1854).
A pretty full list may be found in Darling's Cyclopaedia of Biblical, col. 51 sq. See also an article on the "Manuscrip-
1848. For an account of the principal authors on Bib-
lcal Criticism, see Davidson's Lectures on Biblical Criti-
icism (2 vols. 8vo, Edinb. and Bost. 1882). See BrMLE.

Croatia and Slavonia, a united province of the
Austrian empire; area 9900 square miles; population
in 1857, 808,116, of whom 301,174 are of the slavonic
descent, and mostly belong to the Roman Catholic
religion (in 1851, 779,686 Roman Catholics, and 88,831
United Greeks). There were, besides, 886 Lutherans,
4445 Reformed, 718 Greeks, 6 Unitarians, and 3914
Jews. Crocia is considered a part of Hungary, but formerly possessed some privileges; among others, to exclude Protestants from its borders. In 1866 the Croatian Diet passed resolutions in favor of religious toleration.

Crocius, Johannes, a German theologian, was born at Lassabge, July 28, 1690; studied at Herborn and Marburg, and graduated in 1608. In 1612 he became court preacher of the Landgrave Mortiz at Cassel, doctor of divinity in 1613, and in 1616 preacher at Königsegg. Returning to Marburg, he became professor of Theology in the University. He was the leader of the evangelical state Church of Hesse-Cassel, and the Lutheran having overcome the Reformed Church, he fled to Cassel in 1624; but after the peace in 1653, he returned and became rector of the University. He died July 1, 1659. His principal works are, Erromana dogmatia novorum Arianorum in Polonia (Bremen, 1619, 8vo); Fasus et concordia evangelicorum sacra deicenos (strength, and beautiful armor). In Manuali motum examen, ex S. S. et antiquitate institutu (Cassel, 1643, 2 vols. 4to); Anti-Becconia Magistrorum theologorum columnata justa medicatio (Marburg, 1654); Auctorita apostolica (Cassel, 1651).—Herzog, Recens Encyclopadie, iii, 187.

Crocodile, an animal doubtless referred to. under the name Leviathan ( לוּאָ החָטַן) in the famous description of Job xii (Heb. xl, 25-31), of which the following is a close rendering:

Canst thou draw out Leviathan with a hook,even so bold that will rose him.(then who is he) before Me shall take a stand? Who has anticipated me (in giving), that I should repay? Under the whole heavens to me (belongs) that! I will not pass in silence his members, his bones, that I have not spitted his feet, that I have not put down his head. Who has divided the surface of his covering? In his double (row) of grinders who can enter? The valves of his face who has opened them? The circuit of his teeth (are) frightful! A pride (are) his strong shields (L. e. scales). Shalt (with) a close seal? One in (the) other will they join; And a breath cannot come between them: Each in his fellow will adhere; They will cling together that they cannot be parted. (Are) his sneezings a light with flash, And his eyes (are) like the flashes of dawn? From his mouth will flames proceed; Siege of fire will escape; From his nostrils a smoke will go, Like a pot blown with blazing reeds; His breath (are) coals of fire upon earth. And a flame from his mouth will go. In his neck force shall lodge, And before his terror shall run. The flaps of his flesh have stuck [fast]; Sold upon it, cannot be shaken: His heart (is) solid like a stone. Even solid like (the) under mill-stones. From his rising (the) mighty shall fear, From terror they shall shiver. (One) hitting him [with] the sword, it will not at all stand [the shock]. Lance, dart, or mail... He will regard as straw, iron; As rotten wood, copper; The bow-shot cannot make him fire; To have shing stones been changed for him: Like chief clubs have been regarded (by him), And he will laugh at the brassing of the javelin. Under him (are) points (as) of pottery; He will stare (his spilled belly like) a threshing-sledge upon [the] mud; He will cause (the) deep to boil like the pot, (The) sea will he make like the ungent-kestel; Behind him he will illuminate a path; (One) would regard (the) main as hoary. (There) is not upon [the] dust his ruler—; (The) one made without dismay; Everything lofty will be behold; He, (the) king over all the sons of pride (L. e. larger beasts).

This description is in the main strikingly applicable to animals of the alligator tribe, although highly colored in the poetic style. Yet, as observed with regard to the associated animal (see HEMMATO), the phraseology is perhaps rather intended generically for large amphibious monsters of the saurian or lizard family, than for any one creature distinctively; a conclusion that is confirmed by the employment of the Heb. term levainathan to speak of animals of the fishy and reptile kinds. Indeed, as in the case of the hippopotamus, despite the formidable attributes ascribed to the beast in question by the writer in Job, it appears to have been attacked without much fear by the ancients; and although held sacred in some parts of Egypt, where it is especially found, in other names it was hunted successfully (Wilkinson, Anc. Eg. 1, 241 sq.). The crocodile, however, is apparently elsewhere definitely referred to in Scripture by other names, especially as the reed-beast (Psa. lxxxviii, 81; see Schrann, De beatae arachnidos, P. ad O. 1718). See RARAH.

"The crocodiles, constituting the order Loricata among reptiles, are distinguished pre-eminent by the character noticed in Holy Writ. They are clothed on the entire upper parts of the body with distinct series of bones, imbedded in the substance of the skin, and for the most part furnished with a ridge or crest, which greatly augments their strength, and constitutes the whole a coat of plate-mall which is able to resist the assaults of the most powerful enemy. The structure of the skull is remarkably solid, and it is surmounted by bony crests. There is a single row of teeth in each side of each jaw, looking into each other. The gape is enormous; the lips are altogether wanting, so that the teeth are visible when the mouth is closed; hence the animal, even when tranquil, seems to be grinning with rage. The tongue is fleshy, flat, but free only at the extreme edge, the inferior surface being adherent to the chin and throat; hence the crocodile has been erroneously represented as tongueless.

"All the species of this order are of huge size: not
only are they the hugest of reptiles, but they are among the most gigantic of all animals. Crocodiles have been described as attaining a length of twenty-five feet, but no specimens have been brought to Europe of nearly that size. They are probably longer-lived, and perhaps their increase of dimensions is commensurate with their age. Highly carnivorous and predacious, fierce and cunning, they are greatly dreaded in all the tropical regions which they inhabit. Lurking in the dense reeds or tangled herbage that grows rank and teeming at the edges of rivers in hot climates, or under the masses of groves that interweave their myriad roots in arches above the water, or concealed among the bleaching trunks and branches of trees that have fallen into the stream, these huge reptiles watch for the approach of a living prey, or feed at leisure on the putrid carcases with which the waters daily supply them. It is even affirmed that they prefer a condition of putrescence in their prey, and that their practice, when not pressed by immediate hunger, is, on seizing a living prey, to plunge into the stream in order to drown it, after which it is dragged away to some hole, and stored until decomposition has commenced.

The palace of the palace of Shalmaneeser, M. Botta discovered a bas-relief continued over five slabs, and representing a great naval expedition against a maritime city. A fleet of ships transport timber along a coast washed by the sea, and studded with fortified islands—perhaps the siege of Tyre by this Assur-nasir-pal. The sea is represented as filled with various marine animals, such as fishes of various forms, turtles, tunbristle shells, crabs, and crocodileis (Mon. de Nimis). This, it is true, may have been but a license of the artist; but Mr. Lyell, in his Principles of Geology, observes that the gavial, a larger species than the crocodile of the Nile, inhabiting the Ganges, descends beyond the backwater of Bistees to the sea. Other species of the genus Crocodileus (as restricted) are frequently known not only to haunt the mouths of rivers, but even to swim among islands, and pass from one to another, though separated by considerable spaces of open sea.

See the Penny Cyclopaedia, s. v. Compare Liviathan.

"The crocodiles consist of three varieties, or perhaps species, all natives of the Nile, distinguishable by the different arrangement of the scute or bony studs on the neck, and the number of rows of the same processes along the back. Their general lizard-form is too well known to particular description; but it must be remarked that of the whole family of crocodiles, comprehending the sharp-beaked gavials of India, the alligators of the West, and the crocodiles properly so called, the last are supplied with the most vigorous instruments for swimming, both from the strength and vertical breadth of the tail, and from the deeper web of the fingers of their paws. Although all have from thirty to forty teeth in each jaw, shaped like spikés, without breadth so as to cut, or surface so as to admit of grinding, the true crocodile alone has one or more teeth on each side in both jaws, exerted, that is, not closing within, but outside the jaw. They have no external ear beyond a follicle of skin, and the eyes have a position above the plane of the head, the pupils being contractile, like those of a cat, and in some having a luminous greenish tinge, which may have suggested the comparison of the eyes of leviathan to 'the eyelids of the dawn' (Job xii, 10 [A. V. 18]). The upper lip is not cut, but simply fringed; the gum is extremely dense and bony; the rest of the upper surface being covered with several rows of bosses, or plated ridges, which on the tail are at last reduced from two to one, each scale having a high horned crest, which acts as part of a great fin. Although destitute of a rectum, they are not in danger when angry, since a surging sound, something like a deep grun (or rather grunt); and occasionally they open the mouth very wide, remain for a time thus exposed facing the breeze, and, closing the jaws with a sudden snap, cause a report like the fall of a trap-door. It is an awful sound in the stillness of the night in tropical countries. The gullet of the crocodile is very wide, the tongue being completely tied to the lower jaw, and beneath it exuding a musky substance. On land the crocodile, next to the gavial, is the most active, and in the water it is also the species that most readily frequents the open sea. Of the immense number of genera examined, none reached to 25 feet in length, and the specimen in the Museum of the British Museum is believed to be one of the largest. Sheep are observed to be unmolested by these animals; but where they abound no pigs can be kept, perhaps from their frequenting the muddy shores: for we have known only one instance of crocodiles being encountered in woods not immediately close to the water's side: usually they bask on sandy islands. They rarely attack men, but women are sometimes seized by them; in Nubia they are much more dangerous than in Egypt. (See Wilkinson's Modern Egypt and Thebes, ii, 127.) As their teeth are long, but not fitted for cutting, they seize their prey, which they can not masticate, and swallow it entirely, or lurry it beneath the waves of the sea. Having very weak organs, their digestion requires, and accordingly they are found to possess, an immense biliary apparatus. They are oviparous, burying their eggs in the sand; and the female remains in the vicinity to dig them out on the day the young have broken the shell. Crocodile eggs are said to be as filled with fluid as those of amniotes, in cutting the rope when properly prepared. Though a ball fired point blank will penetrate between the scales which cover the body, the invulnerability of these great saurians is sufficiently exemplified by the following occurrence. One being brought well bound to the bazar at Caenpore on the Ganges, it was purchased by the British, trained with bees and carrs, and carried farther inland for the purpose of being bailed. Accordingly, the ligatures, excepting those which secured the muzzle, being cut, the monster, though it had been many hours exposed to the heat, and was almost suffocated with dust, fought its way through an immense crowd of assailants, soldiers and natives, armed with staves, lances, swords, and stones, and covered by numerous terriers, hounds, and curs; overturning all in its way, till, scenting the river, it escaped to the water at a distance of two miles, in spite of the most strenuous opposition.

"With the Egyptians the crocodile was a sacred animal, not, however, one of those revered by the whole nation, but only locally held in honor. Of old it was found in Lower as well as Upper Egypt; now it is restricted to the latter region, never descending as low as Cairo, and usually not being seen until the traveller approaches the Thebats. In hieroglyphics it bears the name man, literally 'in the egg,' as though expressing surprise that so great an animal should issue from so small an egg. From this name the Coptic and Arabic names take their origin. The crocodile was sacred to the god Sebaq, represented with the head of this animal and the body of a man, and adorned with wings and of unlike color. In the eyes of the Egyptians it was not only not worshiped throughout Egypt, but was as much hated in some as venerated in other parts of the country: thus in the Omphite nome it was worshipped, and hunted in the Apollonopolis and Tentyrite nomes. The worship of this animal is no doubt of Nigritarian origin; but, as the forbears of Egypt. It is not certain that the crocodile was an emblem of the king with the Egyptians, but it seems probable that this was the case.

"There is evidence that the crocodile was found in Syria at the time of the Crusades. A reptile of this kind has lately been discovered in the Naher el-Kebl, the ancient Lyra.

"The exploit of Diodon de Boxon, knight of St. John, who, when a young man, slew the dragon of
Rhodes, an exploit which Schiller has celebrated in his 'Kampf mit dem Drachen,' must be regarded as a combat with a crocodile, which had probably been carried northward by the regular current of the eastern Mediterranean, for the picture still extant in its harem of a Turkish inhabitant depicts the Haya-wán Kebôr, or Great Beast—a picture necessarily painted anterior to the expulsion of the knights in 1480. As De Bozon died Grand Master of the Order at Rhodes in 1533, and the spoils of the animal long remained hung up in a church, there is not, we think, any reason to doubt the identity of the real life of the described circumstance. The remains may be said to be a Dragon. All the ancient Greek and the later Mediterranean dragons, as those of Naples, Aries, etc., where they are not allegorical or fictitious, are to be referred to the crocodile. "See Lizard.

Crocodilepôlis (κροκόδειλας πόλις), the name of a town in Syria, situated near a river of the same name (Crocodileus flumen, between Cesarea Palestine and Ptolemais (Strabo, xvi. p. 758; Pliny, v. 17. 19). Rhode (Pausan. p. 789) thinks the latter may have been the same with the SHIHOR-LIBNATH (q. v.) of Josh. xix. 26. It is now identified with the Nahar Zeeka (Raman, Palast. p. 83, 191), in which crocodiles have been found (Pococke, Travel. ii. 88; Thomson, Land and Book, ii. 244).

Cross, John, D.D. Protestant Episcopal bishop of New Jersey, was born June 1, 1762, and ordained in 1790. Having previously acted as lay reader in the P. E. church of Swedesborough, N. J., he became its rector in 1792. He was a prominent member in the Convention of New Jersey for forty years. In 1810 he was made a bishop of the New Church in New Brunswick, and of St. Peter's Church, Spotswood. In 1811 he was made D.D. by Columbia College, and in 1815 was chosen bishop of New Jersey, having declined the episcopate of Connecticut. From the time of his consecration he observed a system of annual visitsations, and his last public act was an ordination in Christ Church, New Brunswick. He died July 28, 1832. He published several charges to his clergy, and a sermon on The Duty and the Interest of contributing liberally to the Promotion of Religious and Benevolent Institutions.—Sprague, Annals, v. 578.

Croft, George, D.D., an English divine, was born at Skipton, Yorkshire, in 1747; admitted at University College, Oxford, in 1762, was elected scholar in 1764, and in 1772, when only twenty, he came vicar of Arncliffe, Yorkshire; in 1791, lecturer of St. James's, Birmingham, and finally rector of Thwing in 1802. He died in 1809. He wrote Thoughts concerning the Methodists and the Established Clergy (London, 1786, 8vo)—Eight Sermons preached in 1786 (Cant. 1786, 8vo)—Sermons preached before the University of Oxford (Birming. 1811, 2 vols. 8vo).—Darling, Cyclopaedia Bibliographica, s. v.

Croston, Zachary, a learned Nonconformist in the seventeenth century, was born and educated in Dublin. He obtained the living of Wrenbury, Cheshire, but, being a zealous Royalist during the Commonwealth, and refusing the engagement, he was deprived. He afterwards obtained the living of St. Botolph, Aldgate, London. He was ejected from Nonconformity in 1662, and died in 1672. He published The Saint's Care for Church Communion (Lond. 1671, sm. 8vo).—Altar Worship (Lond. 1661, 24mo).—Darling, Cyclopaedia Bibliographica, s. v.

Crosters. The term croster is also applied to the bishop's staff, which is surmounted by a crook or curved circular head. This "pastoral staff," in the Roman Church, is carried before bishops, abbots, and abbesses as an emblem expressive of their dignity while they are exercising the functions of their office, and the figure of which is also found in their coat of arms. The origin of the croster is the shepherd's crook, the bishops being regarded as an easing of their diseases. By degrees this humble emblem became greatly adorned, and was made of costly materials. Some suppose the croster to have been originally only a simple staff, which, from the earliest times, was given to judges, kings, etc., as an emblem of authority. St. Isidore says bishops bear the staff because it is their duty to correct the erring and to support the weak. See Staff.

Cross (κρόσσος), a pointed stake, prob. from στακει, to stand upright, in the New Test., signifies properly with great credit, both as preacher and pastor, up to the day of his death, Nov. 24, 1860. Dr. Croly wrote several extravagant novels and tragedies, among them Salathiel, Marius, and Cælia. His better reputation rests upon his fiction in prose as a preacher, after his appointment to St. Stephen's, Wallbrook, and he occupied that parish
the instrument of crucifixion; and hence (by metonymy) crucifixion itself. Hence, that of Christ (Eph. ii. 16; Heb. xii. 2); 1 Cor. i, 17, 18; Gal. v. 11; vi. 12, 14; Phil. iii. 18). It is also put figuratively (in the phrases "take up [or bear] the cross," etc.) for any severe sufferer, including the idea of exposure to contumely and death (Matt. x. 38; xvi. 24; Mark viii. 34; x. 21; Luke ix. 23; xiv. 27). (See below.)

The Latin crucifix there was no word definitively and invariably applied to this instrument of punishment. The Greek word σταυρός properly, like σκιώπ, means merely a stake (Iomer, Od. xiv. 11; H. xiv. 435). So Eustathius and Hesychius both define it. The English use the word to translate both τέμπλος and κεφαλής; e.g., "Jesus Crucified" in D. Case. (xxi. 22) is exactly equivalent to the Latin ad palam deligere. In Livy even crucius means a mere stake (xxvii. 20), just as vice versâ the fathers use σκίωπ, and even εισκότης, of a cross proper. In consequence of this vagueness of meaning, implying (Herod. i. 76) is sometimes spoken of, loosely, as a kind of crucifixion, and σταυρολογία is nearly equivalent to σταυροποιία (Seneca, Consol. ad Marc. xx. 3; and Ep. xiv.). Other words occasionally applied to the cross are pátubulum and furcius, pieces of wood in the shape of Η or Y and Α respectively (Dug. 48, tit. 13; Plautus Mil. ii. 47; and Sallust, fr. ap. Non. iv. 355, seems clearly to imply crucifixion). After the abolition of this mode of death by Constantine, Trebonianus substituted furcius afgendos for crucifigendos wherever the word occurred. More generally the cross is called arbó in inflix (Livy, i. 26; Seneca, Ep. 101), or ligamentum inflexum (Cicer. pro Bab. 5); and in Greek ξελόν (Sept. at Deut. xxii. 23): comp. "the accused tree." The fathers in controversy used to quote the words ὁ Κόρος ἐξ ξανθίνου, "The Lord reignèd." (αὐτὸ τῶν ξανθίων), from Ps. xlv, 10, or Ps. xcvii, as a prophecy of the cross; but these words are a gloss (adulterina et Christiana devotione addita), though Genebrardus thought them a prophetic addition of the Sept., and Agellius conjectures that they read χρυσός (Schleusner's Theaurus). The Hebrews had no word for a cross more definite than χρυσός, "wood" (Gen. xi. 19, etc.), and so they called the transverse beams κρυσός, κρυσός, "warp and wood" (Pearson, On the Cruz, art. iv), like ξελόν ξανθίων, of the Sept. Cruz is the root of crucio, and is often used proverbially for what is most painful (as Colum. i. 7; Terence, Phorm. iii. 3, 11), and as a nickname for villains (Plautus, Pseud. ii. 5, 17). Rarer terms are ἄραθρον (Eusebius, viii. 8), σαιτῶ (7), and γαλακτος (Varro ap. Quinct. 11, 22). Comp. Capit. ap. Capit. cap. 11). This last word is derived from κρύος, "to complete."

II. Forms of the Cross.—In its simplest shape, consisting of two pieces of wood, one standing erect, the other crossing it at right angles, the cross was known at an early age in the history of the world. Its use as an instrument of punishment was probably suggested by the form so often taken by branches of trees, which stand and branch out as the first crosses were employed. It was certainly customary to hang animals on trees. Cicer. (Ratfr. 3) appears to consider hanging on a tree and crucifixion as of the same import, and Seneca (Ep. 101) uses similar language. (See above.) Trees are known to have been used as crosses (Tertull. Ap. viii. 16), and to every kind of hanging which became the custom to crucify criminals. In that of Ps. methus, Andromeda, etc., the name was commonly applied. Among the Scythians, Persians, Carthaginians, Greeks, Romans, and the ancient Germans, traces are found of the cross as an instrument of punishment. The sign of the cross is found as a holy symbol among these first crosses, to which may liotherwise be named, in the language of Tertullian, "crucis religiosio," devotes of the cross. Among the Indians and Egyptians the cross often appears in their ceremonies, sometimes in the shape of the letter Τ, at others in this shape +. At Susa, Ker Porter saw a stone cut with hieroglyphics and cruciform inscriptions, on which in one corner was a figure of a cross, thus, +. The cross, he says, is generally understood to be symbolic of the divinity or eternal life, and certainly a cross was to be seen in the temple of Serapis as the Egyptian emblem of the future life, as may be learned in Sozomen and Rufinus. Porter also states that the Egyptian priests urged its being found on the walls of their temple of Serapis as an argument with the victorious army of Theodosius to save it from destruction. From the numerous writings on this subject by La Croze, Jablonzaki, Zoea, Visconti, Pococke, Pluche, Petit Radel, and others, the symbol of the cross appears to have been most various in its significations. Sometimes it is the Phalus, sometimes the planet Venus, the Nilometer, or as a sign for the four elements, or the seasons (Cruzer's Symbolik, p. 168-9). It is therefore not surprising that ancient and even modern Christian writers should have subject on this occasion indulged in some degree of refinement and mysticism. Justin Martyr (Apol. 1, § 27) says, "The sign of the cross is impressed upon the whole of Nature. There is hardly a handcraftsman that uses the figure of it among the implements of his industry. It forms a part of man himself, as may be seen when he raises his hands in prayer." In like manner Münchins Felix (c. 29): "Even Nature itself seems to have formed this figure for us. We have a natural cross on every ship whose name is spread, in every spoken form, in every outspreading of his arms in prayer. Thus is the cross found both in the arrangements of Nature and among the heathens."

We may tabulate thus the various descriptions of crosses (Lipsius, De Cruce, 1, Godwin's Musae and Achar, liv. v, cap. ix, and Carpezius' Annotations thereon):

Cruix.

1. Simplex.

1. Compacta.

2. Crosses.

3. Décussata.

4. Cruciformes.

5. Longitudinals.

6. Transversals.

7. Oblique.

10. Pentagons.

11. Hexagons.

12. Heptagons.

13. Octagons.

15. Decagons.

16. Hippolytus says that he was crucified upright on an olive-tree. It is in the shape of the Greek letter X (Jerome, in Jer. xxxix; Iseid, Orig. i, 8). Hence Justin Martyr (Dei. c. Tryptph. p. 200) quotes Plato's expression (ὑπηρέτησεν ἐξ ἐνάρετοις) with reference to the cross. The fathers, with the same ancient interpretation, discovered types of this kind of cross in Jacob's blessing of Joseph's sons (χιὼν ἐναρετῶν; comp. Tert. de Baptismo, viii); in the anointing of priests "decussatively" (Sir T. Browne, Garden of Cyrus); for the
8. The cross commissa, or St. Anthony’s cross (so called from being embossed on that saint’s cope; Mus. A. M. L. ii. 156) is described by the shape of an H. Hence Lucian (in his Δια τήν ζωήν, i.e. ad formam X Croceorum, Schöttgen’s Hor. Hebr. et Talm. iv, ad f.) and in the crossing of the hands over the head of the goat on the day of expiation (Targum Jonath. ad Lev. xvi, 21, etc.).

9. A variety of this cross (the crux anastat, “crosses with circles on their heads”) was found “in the sculptures from Khorsabad and the ivories from Nimrud. M. Lajard (Observations sur la Croix assyrie) refers it to the Assyrian symbol ΑΣΑΒΑ of divinity, the world, and pictures in a divinized figure but Egyptian antiquaries quite reject the theory (Layard’s Niniveh, i, 170, note). In the Egyptian sculptures, a similar object, called a crux anastata, is constantly borne by divinities, and is variously called “the key of the Nile” (Dr. Young in Encycl. Briton.), “the character of Venus,” and more correctly (as by Lacretse) “the emblem of life.” Indeed this was the old explanation (Sozomen, Hist. Eccl. vi, 15; so, too, Rufinus [ii, 29], who says it was one of the “iσπαραξια και σαρκοστετεια”), “The Egyptians there by expressing the powers and motion of the spirit of the world, and the diffusion thereof upon the celestial and elemental nature” (Sir T. Browne, Garden of Cyrus). This, too, was the significance given to it by the Christian converts in the army of Theodosius, when they remarked it on the temple of Serapis, according to the story mentioned in Suidas. The same symbol has been also found among the Copts, and perhaps among the Indians and Persians.

4. The crux immissa (or Latin cross) differed from the former by the projection of the upright post (δύπος ουριον, or stipites) above the transverse beam (ειπον ισχυρον, or patibulum, Eusebius, de V. Constanti. i, 81). That was the kind of cross on which our Lord died (among other reasons) from the mention of the “title” (q. v.), as placed above our Lord’s head, and from the almost unanimous tradition; it is repeatedly found on the coins and columns of Constantine. Hence ancient and modern imagination has been chiefly tasked to find symbols for this sort of cross, and has been eminently successful. They all pointed, for instance, in the attitude of Moses during the battle of Rephidim (Exod. xvii, 12), saying that he was hidden to take this posture by the Spirit (Barnabas, Ep. 12; Justin Mart. Dial. c. Tryph. 89; Tertull. adv. Marc. iii, 18). Firmicus Maternus (de Errore, xxii) says (from the Talmudists) that Moses made a cross of his rod in order to execute greater things than at faciatur immissam, “the customary cross” (Capco fædem, xxii) of our Christian “custom” (Xenop. Epics. iv, 2); the mention by Pliny (xxviii, 11) of sparvius cruce among magical implements; and the allusion to crucifixion noted by the fathers in John xix, 24 (Theophyl. and Tertull.). On the other side we have the expression προσφυγιον, and numerous inscriptions (Saneec. De IV. Beati, 24); the crucifix, “the cross and the moon,” and, after the form of a cross” (Vitringa, Obs. Sacr. ii, 9; Schöttgen, L. c.). A true type (John iii, 14) is the II.—O o
CROSS

(John xx, 25, 27, etc.; Zech. xii, 10; Psa. xxii, 16; comp. Tertull. adv. Marc. iii, 19, etc.; Sept. ὡπείρων, although the Jews maintain that in the latter text ἡ ὁμιλία, "like a lion," is the true reading; Sixth S. Xenod. Bibl. Sacr. viii, 5, p. 640). It is, however, extremely probable that both methods were used at once (see Lucan, vi, 547 sq.; and Hilary, De Trin. x). We may add that in the crucifixion (as it is sometimes called) Tertull. adv. Marc. i, 16; comp. Manili. de Aen. v. 359; Plautus, Aeneas, 79). When either method was used alone, the lying was considered more painful (as we find in the Martyrologies), since it was a more tedious suffering (diastomus cruca- tionis). It is doubtful whether three or four nails were employed. The passage in Plautus (Mont. ii, 1, 13) is, as Lipsius (De Crucie, ii, 9) shows, indiscernible. Nonius speaks of the two feet (ὑμωνκολιακος) being fastened with one nail (διψηλος γυμος), and Gregory Naz. (de Christ. pat.) calls the cross "three-nailed" (οθυνρησεως); hence on gold and silver crosses the nails were represented by one ruby or carbuncle at each extremity (Mrs. Jameson, l. c.). In the "invention" of the cross, Socrates (Hist. Eccl. i, 17) only mentions the hand-nails; and that only two were found has been argued from the τα μεσα, τα δε (instead of τα μεσα) in Theodoret, l. c. (died 493). Roman writers, however, generally follow Gregory of Tours (de Glor. Mart. vi) in maintaining four, which may indeed be implied by the plural in Cyrillic (de Pasone), who also mentions three more, used to nail on the title. Cyprian is a very good authority, because he had often been a witness of executions. (See below.)

Besides the copious monograph of Lipsius (De Crucie, Antwerp, 1596; Amst. 1670; Brunsw. 1649), there are works by Salmusius (De Crucie, Epp. 3); Kippinings (De Crucie et Crucifixurum, Brem. 1671); Bosius (de Crucie triumphante et glorioso, Antw. 1617); Groester (de Crucie Christi); and Bartholomus (Hynomematia de Crucie); very much may also be gleaned from the learned notes of bishop Pearson (On the Creed, art. iv). See CRUCIFIXION.

IV. The Cross as a Symbol.—The word cross was early used in Roman literature to represent any torture, pain, or misfortune, or anything causing pain or misfortune. Christ adopted this use of the word when he says (of course before his crucifixion had taken place) to his disciples (as he was seen by his presence) that they must be willing to take up their cross and follow him (Matt. xvi, 24), meaning that they must be willing to endure such sufferings as the service of God may bring. After the death and resurrection of Christ, the cross was spoken of, especially in the epistles of Paul, as the representative of Christ's whole sufferings from his birth to his death (Eph. ii. 16; Heb. xii. 2), and for the whole doctrines of the Gospel (1 Cor. i, 18; Gal. vi, 14). The opposers of the Gospel are spoken of as enemies of the cross (Phil. iii, 18). As a symbol of Christianity, its doctrines, and its duties, the cross has become a familiar figure of speech in the expression of Christian Christianity, in the preaching of Christian ministers, and in the hymns and songs of Christian poets. Very early in the history of the Church it became the custom for Christians to make the sign of the cross. See CROSS, sign of. That the early Christians had a high regard for the cross is shown by Tertull. and Octavius made to the pagans who charged Christians with the practice of shipping the cross. It is not easy, however, to fix the date at which Christians commenced to have material representations of the cross. There exist no earlier preserved examples than some rings of stone, with the cross engraved on them, the style of which seems to indicate that they were made before the time of Constantine. The martyr Procopius and a Christian soldier named Orestes are said to have had crosses attached to their necks before going to their execution. A single example of the cruces comites, T, is preserved, of the date A.D. 570. On tombs, no cross of any kind is found before the same century. No cruces immissae, +, or Greek cross, φ, is found earlier than the fifth century. As far as yet examined, no crosses are to be found on the coins of the Rhine provinces until the time of Constantine. In the more remote provinces of the Roman empire, as in Carthage, marble cross marks the by are found of the fourth century. Zeno of Verona, made bishop in 362, states that he placed a T cross on a basilica which he built. This same cross appears on the coins and medals of the emperor Valentinian I (died 375), and on bronze struck by Constantine at Aquileia and at Tresves, although many consider that these were Egyptian in origin, though adopted by the Christians. Constantine is stated to have placed a cross of gold on the tomb of St. Peter in the Vatican. Our Lord resting on a cross is seen on the tombstone of Probus and Proba (A.D. 355). Paulinus of Nola says (died 431) that the emperors, the officers, and Roman writers, when they are forty years old, are crowned by crowns. Other similar ones are found in old mosaics, as in those of San Vitale of Ravenna (A.D. 547). Over the summit of an arch are two angels holding a crown, in the midst of which is a cross adorned with gems. Some diptychs of the fifth century also contain such crosses. The top of the cross was an attribute of a martyr, and on the early sarcophagi is specially used to designate St. Peter, as he died on the cross. After his vision of the cross in the heavens, Constantine (q. v.) changed the standard of the Roman empire to a cross. See LABARUM. From the sixth century the consuls began to have a cross on their scepters. Valentinian III, and his queen Eudoxia were the first (A.D. 445) to wear a cross on their crown. About A.D. 400 the cross called cruces stationaria was first borne at the head of processions. A number of Christian cities and villages in the neighborhood of Antioch, Aleppo, and Apamæa, which are said to have been deserted on the return of Syria by the Saracens, and which remain in the form in which they were left by their inhabitants, show how extremely general had become the custom at that time—in the early past of the sixth century—to paint the cross and the monogram of Christ, X, over the doors, windows, posts, and on the walls of the houses. It was also used on all domestic objects, as weights, vases, chairs, and all articles of furniture, and was put on ships to keep off disaster and the evil eye. After the fall of the Roman empire, when the labarum ceased to be used, the ensign of many cities became a real cross. The cross-bearer often held two lighted torches, under which were suspended by a chain the letters A and Ω. These cross-standards were soon decorated with figures, and the painting of scenes from the Old and New Testament, or busts of sacred or patriotic persons, either painted or sculptured, or adorned with gold and precious stones. This ensign was then borne into the thickest of the battle, being the rallying-point for the army, while a priest on the altar was to direct the place, charged on the spot with light, or declared about to succumb to the dying. Many Christian kings on the eve of battle, or of any great enterprise, erected a cross, and, bowing before it, offered up prayer to God for success. Oswald had a wooden cross erected before he fought with Cadwallon, his soldiers all kneeling devoutly, while he himself held the cross as the earth was stunned down around it. The stones that formed the crookedness (q.)
V. The Cross as a Signature.—As early as the sixth century had it become the custom to put three crosses (✝✝) near the signature of important documents, these having the value of an oath on the part of the signer. Priests never omitted to add it to their signature, and bishops, as a sign of the dignity of their office, placed it before their signature. In diplomatic documents, crosses were used extensively as early as the fifth century. The appropriate use of crosses (ἐγγυηθέοι) was an important part in diplomatic knowledge. They were sometimes the ordinary cross (✝), or the St. Andrew's cross (✝✝), the starry cross (☆), the rhomboid cross (♦), or of other ornamental forms. They were usually made with black ink. The Byzantine emperors used red ink till they were imitated by other sovereigns, when they adopted the green color. The Anglo-Saxons kings used a golden cross, dispensing with the signature and the seal. Blue and silver crosses are also met with. The crosses were marked with a stile or pen, or were stamped, or were sometimes made of a thin plate of ivory, bone, or metal. By tradition the cross is now used as a signature, but only by those who cannot write. Crosses were often placed on the tombs of distinguished persons, on public buildings, on pictures, and in the arms of parishes, and sanctuaries; as monuments of battles, murder or other crimes, or disastrous events; to indicate places of public gathering to hear proclamations, sermons, and prayers; to mark the spot where the corpse of any famous person rested on its way to interment; that people might pray for his soul; to mark the place, where some person had been delivered from great danger; to line the way to a cemetery or a church; and at cross-roads in the country, or in a market-place, to furnish protection from a passing storm. (Beggar often took their station at these crosses, asking alms in the name of Jesus, giving rise to the expression, "He begs like a cripple at a cross.") Crosses were sometimes erected on the tops of houses, tenents thus claiming the privileges of templars-hospitallers, of being free from the claims of their lords or landlords. Many of these crosses were very costly, and built in the hihest architectural taste of the age. Political and religious passions have wrought many of these crosses; time has destroyed others. Of the 800 crosses formerly existing in the small but historic island of Iona, but one now remains. Of the numerous serics by the road leading from Paris to St. Denis, where the kings of France were buried, all are destroyed, or at least marred. On the rest, the resting-places of the corpse of queen Eleanor (died A.D. 1290), on its removal from Grantham to Westminster, but three now remain. Among the most famous preaching-crosses were those of St. Paul's in London and of Spitalfields, London, where the noted Spital Easter sermons were preached. Crosses are used on tombs as well as on churches and on all parts of the interior and exterior of Greek, Armenian, and Roman houses of worship, and other ecclesiastical establishments. The Church of England and the Lutheran Church use them to crown their houses of worship; some other Protestant denominations use them thus at the discretion of the individual society; while others still, especially those who hold the views of the original Puritans, reject the use of the visible and material cross in any form or place. Those Christian bodies, that use the cross freely, place it upon the tombs of the dead. The cross we have hitherto spoken of is called an acceptance of Christ's suffering. In the Catacombs, Christ is represented as coming forth from his tomb bearing a cross, the symbol of his triumph over death, and of the ultimate triumph of his doctrines. This triumphal cross, also called Cross of the Resurrection, never hearing Christ upon it as a crucifix, is used as a symbol of the authority and jurisdiction of certain officials in certain branches of the Church. See CROSSES.
capital. Fourteen years afterwards Heracles recovered them, and had them carried first to Constantinople, and then to Jerusalem, in such a way that, on his arrival before the latter city, he found the gate barred and entrance forbidden. Instructed as to the cause of this hindrance, the emperor laid aside the trappings of his greatness, and, barefooted, bore on his own shoulders the sacred relic up to the gate, which then opened of itself, and allowed him to enter, and thus place his charge beneath the dome of the sepulchre. See also Cai..

From this time no more is heard in history of the true cross, which the advocates of its genuineness claim may have been destroyed by the Saracens on their conquest of Jerusalem, A.D. 637. Fragments only of it are now exhibited in various parts of Europe. (See below.) The whole story is justly regarded by Protestants as containing unmitigated evidence of being at best a pious fraud on the part of Helena, or a trick on the part of her guides. See HELENA. But, even if the story were not so intrinsically absurd (for, among other reasons, it was a law among the Jews that the cross was to be learned; Othonis, Lex. Rabb. a. v. Supplicum), it would require far more evidence to prove the silence of Eusebius. It clearly was to the interest of the Church of Rome to maintain the belief and invent the story of its miraculous multiplication, because the sale of the relics was extremely profitable. To this day the supposed title, or rather fragments of it, are shown to the people in the church of St. Croce in Gerusalemme at Rome. On the capture of the true cross by Chosroes II, and its rescue by Heraclius, with even the seals of the case unbroken, and the subsequent sale of a large fragment to Louis IX, see Gibbon, iv, 326; vi, 66. Those sufficiently interested in the annals of such imposture may see further accounts in Baronius (Ann. Ecc. A.D. 386, No. 42–50), Jortin, and Schmidt (Probl. de Cruce Dom. Invenientio, Helmst. 1759); and on the fate of the true cross, a paper read by Lord Mahon before the Society of Antiquaries, Feb. 1831.

According to Ambrosius (Oratio de Obiis Theodor. p. 498), the piece which bore the title stood on the top of the cross of our Lord (John xix. 19–22, Ivi wov crwvpe; comp. Matt. xxvii. 37; Mark xv. 26; Luke xxviii. 38): the form then would be somewhat thus, \( \square \). This fact would lead to the expectation of more accurate information from those who have most care for the cross. But the conduct of Helena in dividing the cross, setting aside one part for Jerusalem, another for Constantinople, and another as a phylactery for her son, and the subdivisions thereof which subsequently took place, rendered it impossible to ascerin in any satisfactory manner not only whether the alleged was the real cross, but also of what wood and in what shape it had been made. This only, then, as to the shape of the Saviour's cross, can be determined, that the prevalent form was that of the cruz capitata, and that this form is generally found on coins and in the so-called monogram (Mont's Symb. I. iv). The wood, however, is said to have been preserved in Rome—not entirely, indeed, for only fragments remain of the Hebrew letters, so that they are illegible. The Greek and Latin, except the letter \( \iota \), are both written after the Eastern manner, from right to left. This is said to have happened either because they were Jews, following a national custom, or from a desire on the part of the emperor. If a Roman, to accommodate himself to what was usual among the Jews. Nicetus (Titulus sanct. Crucis) holds that it is not all the work of one hand, since the Roman letters are firmly and distinctly cut, but the Greek letters very badly. He thinks that a Jew cut the Hebrew (or Armenian), and a Greek, and the Latin. All that remains of the Greek is \( \Lambda KATARIPS B[\check{I}. e. NAXARENIS REX], i. e. 'Nazarine, King.' This tablet is said to have been sent by Constantine to Rome, and there deposited in a leaden chest, above the vaulted dome of the church of St. Croce, in a little window, and then bricked into the wall, its position being recorded by a Mosaic inscription without. Time rendered the inscription almost illegible; and the window, owing to the carelessness of workmen engaged in repairing the church, was accidentally broken open, when the relic was discovered. A bull was issued by pope Alexander III commemorating the discovery and authenticating the title. The whole story is evidently of a piece with the foregoing. Monographs on the subject and relic in question have been written in Latin by Alberti (Lips. 1890; Jen. 1748), Altmann (Bern. 1789), Felter (Lips. 1729), Freisleben (Lips. 1694), Hanze (Jen. 1762), Hiller (Tubing. 1696), Niepelt (Antw. 1770), Belogrud (Eichst. 1753). Perty (Kilon. 1694; also in Menthenii Diss. ii, 241 sq.), Weserus (L. B. 1712). See Title.

Much time and trouble have been wasted in disputing as to whether three or four nails were used in fastening the Lord to his cross. (See above.) Nonus: affirms that three only were used, in which he is followed by Gregory Nazianzen. The more general belief gives four nails, an opinion which is supported at much length and by curious arguments by Curtius (De Clavis Dom.), Others have carried the number of nails as high as fourteen. Of the four original nails, the empress Helena is reported (Theodore, Hist. i, 17) to have driven one into the Adriatic when furiously raging, thereby producing an instant calm. The second is said to have been put by Constantine into either his helmet or crown, or (as Zenonars says) on the head of the statue which he intended to be the palladium of Constantinople, and which the people used to surround with lighted torches (Scheele. Eccl. Hist. ii, 1, 3, and notes). This nail, however, was afterwards to be found in a mutilated state in the church of St. Croce. In the Duomo of Milan is a third nail, which Eutropius affirms was driven through one of Jesus's hands, and which Constantine used as a bit, intending thereby to verify the prophecy of Zechariah (xiv. 20): "In that day shall be upon the bells (margin, bridel) of the horses, Holiness unto the Lord." Treves possesses the fourth nail, which is alleged to have been driven through the sufferer's right foot (Lipins, De Crucis, ii. 9). Those who maintain the number of nails to have been more than four have had no difficulty in finding as many nails as their hypothesis in each case needed, and as many sacred places for their safe keeping. There are monographs on this subject, in Latin, by Fontanus (Amst. 1643), Frischmuth (Jen. 1663), Semler (Dresd. 1741), Winer (Lips. 1845), Curtius (Monatc. 1622; Antw. 1670; also in the Symh. Litt. i, iii, 99); in German, by Reinhard, in Heydenreich's Zeitschr. ii, 809, Paulini (Memorial. iv, 56–64). See Nail.

Another dispute has been agitated relative to the existence of a hypopodium or tablet wherein the feet were supported. Gregory of Tours, who had seen the alleged true cross, affirms that it had such a footstool, but his description has been called in question. It is, however, doubted whether the hands alone, without a prop beneath, could sustain the weight of the body,
and some have supposed that a kind of seat was placed, on which the sufferer may be said to have been in some way sat. The controversy is treated at length in the first book of the Imperatis de Crucis of Bartholomaeus (Hafn. 1651, Amst. 1670, L. B. 1895).

A common tradition assigns the perpetual shiver of the aspen to the fact of the cross having been formed of its wood. Lipius, however (De Crucis, iii, 19), thinks it was of oak, which was strong enough, and common in Judæa. Few will attach any consequence to his belief, as the relics appear to be of oak.

The legend to which he alludes,

"Ps crusca est codrus, corpus tensa alta cupressus, Palmæ manus restituo, titulo lastatur oliva."

(The foot is cedar, cypress forms the shaft, the arms are palm, the title olivæ heavy, hardly needs refutation. It must not be overlooked that crosses must have been of the neatest and readiest materials, because they were used in such marvellous numbers. Thus we are told that Alexander Jennæus crucified 800 Jews (Josephus, Ant. xiii, 14, 2), and Varus 2000 (Ann. vii, 10, 10), and Hadrian 500 a day; and Titus so many that "room failed for the crosses, and crosses for the bodies" (Josephus, War, vi, 28, where Reland rightly notices the strange retribution, "so that they who had nothing but 'crucify' in their mouth were therewith paid home in their own bodies"; Sir T. Browne, Vulp. Err. v, 21). In Sicily, Augustus crucified 600 (Crocius, vi, 18). See Crucifixion.

CROSS, BULL OF THE (Crusado), a bull by which pope Calixtus III, in 1467, granted very extensive indulgences to all who would take up arms, under king Henry of Castile, against the infidels, or pay to that king a certain sum for defraying the expenses of the war. The indulgence was at first granted for only five years, but was from time to time renewed and enlarged, so as to include many privileges, such as exemption from the commandment of abstinence. The proceeds of the Bull of the Cross constituted a considerable portion of the public revenue. The last renewal of the bull is of the year 1758. A similar bull was issued in 1614 by pope Leo, in favor of king Sebastian of Portugal, to whom, in consideration of his endeavors for the conversion of infidels in Africa, the third part of the tithe and the tenth part of his taxes due to the churches and ecclesiastical benefices of the kingdom were conceded. —Wetzer u. Welte, Kirchen-Lex. vi, 265.

CROSS, EXALTATION OF THE, a festival in the Roman Catholic Church, instituted in commemoration of the exaltation of the supposed cross of Christ at Jerusalem, after its recovery from the Persians. The latter, when conquering Jerusalem in 614, carried off with them the relic which, since its "invention" [see Cross, Crazer's] by the empress Helen, had been venerated as the "Holy Cross." With a view to a heavy sum of ransom, they had sealed up by the patriarch Zacharias the patriarchal seal, and took it to a strong castle in Armenia. When, in 627, the emperor Heraclidus conquered the Persians, he negotiated in the treaty of peace for the restoration of the Holy Cross, and took it with him to Constantinople. From there, in 629 (according to others in 630), he took it himself, accompanied by a large retinue, to Jerusalem, where it was again set up with great solemnities. It is this restoration of the cross to Jerusalem which is annually commemorated on Sept. 14 in the Church of Rome as the Exaltation of the Cross. —Wetzer u. Welte, Kirchen-Lex. vi, 268.

CROSS, INVENTION OF THE, the name given in the Roman Catholic Church to a festival which commemorates the finding of the alleged true cross of our Saviour, and which is celebrated on the 9th of May. An order of Carthusians, founded in honor of the invention of the cross, and carrying in their hand a staff, on the top of which was a cross, received the name of Croisiers (Fr. croix, cross), corrupted into Crochets or Crocheted Friars. They came to England in the 13th century, and had monasteries in London, Oxford, and Ryegate. The festival of the Exaltation of the Cross (September 14) commemorates its re-erection in Jerusalem by the emperor Heraclidus, after it had been carried away by the Persians. See Cross, Exaltation of.

CROSS, METAPHORICAL SENSE OF. This word (1), in its most comprehensive sense, as figuratively used in N. T., designates not only the whole passion of Christ, culminating in the death on the cross, but also the whole Gospel system, as a means of reconciliation with God through Christ. (2) It is also used to designate the sufferings and trials sent upon Christians for their moral improvement, and which have the effect of strengthening faith, and teaching humility, love, and submission. The command to "take up the cross" daily (Luke ix, 23) signifies that we are cheerfully to submit to all the evils of life, circumstance, and position, which God, in his wisdom, sees fit that we should encounter; we are even to rejoice at misfortune, as the discipline of suffering brings fruits of sanctification to those who patiently submit for Christ's sake, remembering that all things work for good to them that love God (Rom. viii, 28). Four kinds of "crosses" have been recognised: 1, the cross of martyrdom, the witness unto death for Christ and the Gospel; 2, the cross of trials, for the preservation in faith, love, and hope; 3, the cross of discipline, for the purification of the heart and the subjection of sinful desires and inclinations; 4, the cross of punishment, for the chastisement of sin; though the aim of punishment also is the improvement of the sinner. God is love, and therefore lays the "cross" on every one as he needs it. He chasteneth whom he loveth. It is a sad mistake to consider suffering as the result of caprice or anger on the part of God (2 Cor. iv, 18-19; xiv, 7; Heb. xii, 1-12; Gal. vi, 14; Eph. ii, 16; Col. i, 19-22; 1 Cor. i, 17, 18; Gal. v, 11; Phil. iii, 18). —Krehl, N. T. Handwörterbuch, s. v. Kreuz.

CROSS, ORDERS OF THE, in the Roman Church. 1. Comma Regular of the Congregation of the Holy Cross, founded in 1211 by Theodore de Celles, a descendant of the dukes of Bretagne. It was confirmed by Innocent IV in 1248, and was exempted from the jurisdiction of the bishops by John XXII in 1318. The order spread especially in the Netherlands, Western Germany, and France, and still exists in the Netherlands and Belgium, whence in 1850 a colony was sent over to the United States, where they have an establishment in the diocese of Milwaukee. See Helyot, who calls them Croisiers or Porte-Croix; American Catholic Almanac. 2. Croisiers (Cross-bearers) of Italy, an-
other congregation of the same order, the origin of which is unknown, but which was renewed by pope Alexander III in 1169, and is now extinct. 8. Cro-
sisters of Bohemia, see KNIGHTS, TECTONIC. 4. Daugh-
ters of the Cross, founded by Madame de Villeneuve, in
France, in 1640, under the direction of Vincent de Paul, and confirmed by pope Clement IX. They devote themselves principally to the instruction of girls, and have their principal establishment, with more than 100 members, at Paris. The order is rapidly increasing in France, and has one establishment in the United States, in the diocese of Natchitoches, founded in 1854. — Febr. Geschicht der Missionen, ii, 319. 5. Another congregation of Daughters of the Cross was founded in 1835 at Liege, by Habets, a Belgian priest. They teach, keep asylums for fallen women, etc., and have established several houses in Belgium and Germany. — Febr. Geschicht der Missionen, ii, 322. 6. Sisters of the Cross, also called "Sisters of St. Andrew," founded in 1806 by Mademoiselle Bechier, in the diocese of Poitiers. They devote themselves to the instruction of children, and to the nursing of the sick in the country. They are very numerous in France. 7. Another congregation of Sisters of the Cross, also called "Sisters of the Immaculate Heart of Mary," was founded by Abbe Moreau, at Mants, about 1834, and approved by the pope in 1857. They came to the United States in 1843, and have establishments in the dioceses of Fort Wayne, Philadelphia, and Chicago.

A Congregation of Regular Clerics of the Holy Cross was founded in 1835, together with the congregation mentioned under No. 7, by Abbe Moreau. It was afterwards united with the "Brothers of St. Joseph," founded about the same time by Very Rev. Mr. Dujarier, and the rule of the united congregations was approved by Pius IX in 1857. They had, in 1867, 92 houses and missions, of which 58 were in France, 12 in America, 7 in Bengal, 2 in Algeria, and 1 each in Rome, Poland, and Austria.

CROSS, SIGN OF, a rite in the Roman Church, and in the Greek and other Eastern churches. It is used by officiating priests as a form of blessing at all liturgical actions and consecrations, and by all the members of the Church at the beginning of a prayer during divine service, on entering a church, on passing the host, and on many other occasions. It is always made with the right hand. In the 6th century it became customary to make the sign of the cross with the thumb on forehead, mouth, and chest. Since the 8th century the so-called "large" or "Latin" cross has been in common use among the laity. It is made with the palm of the hand by touching first the forehead; next, in direct line downward, the chest; next, in horizontal line, the left and the right shoulder. The same form of cross is used in liturgical actions, if the cross is to be made over the object to be blessed without touching it. While among the Latins the cross beam is drawn from the left to the right, the reverse is the case among the Greeks and Russians. In making the sign of the cross, it is common to pronounce the words, "In the name of the Father, and the Son, and the Holy Ghost. Amen." Formerly there were also other forms in common use (Buetin enumerates cii. h.), but all have been displaced by the above. The different ways of making the sign of the cross, and the number of fingers used, have called forth in the Church of Rome the most fanciful and mystical significations, and a special power has commonly been attributed to the sign of the cross. It is, therefore, also made over water, salt, oil, etc. In the Greek Church the sign of the cross is of even more frequent use than in the Roman Catholic. Among the Protestants it is almost universally abandoned (in the Lutheran Church of Saxony it was in use until the introduction of a new liturgy in 1812). In the Church of England and in the Protestant Episcopal Church its use in baptism is optional.

CROSS, WAY OF THE (Via Crucis), the collective name of a certain number of pictures or stations in or near Roman Catholic churches and sanctuaries, to represent an equal number of events in the history of the Passion of the Saviour. Generally the number of the pictures is 14 or 16, but sometimes less. The people who "walk the way of the cross" stop a little while at each picture, saying a prayer, until they have, in turn, visited every station, and thus completed the commemoration of the Passion. In some Roman Catholic countries, as in Southern Germany, the "Way of the Cross" can be met with in almost every church. This practice was invented by the Franciscan monks, who offered the people as a substitute for the pilgrim's journey to the Holy Land, and justly calculated that, by obtaining numerous indulgences from the popes for those who would adopt this peculiar kind of worship, they would achieve a great popularity for the churches of their order. Their expectation was realized. The popes granted to the visitors of the "Way of the Cross" all the indulgences which had formerly been granted to the visitors of different places in the Holy Land, thus enabling the people to gain in a few minutes several "plenary" indulgences, besides a number of partial. Every "Way of the Cross" must be instituted by a Franciscan monk, and it requires a special permission from the pope if any one who is a pilgrim to the place does not have the right to the pallium, throughout their respective jurisdictions. A prelate wears a single cross, a patriarch a double cross, and the pope a triple cross on his arms.

Cross-bearer (crucifer). 1. In the Romish Church, the designation of the chaplain of an archbishop, or a primate, who bears a cross before him on solemn occasions. The pope has the cross borne before him everywhere; a patriarch anywhere out of Rome; and primates, metropolitan, and those who have a right to the pallium, throughout their respective jurisdictions. A prelate wears a single cross, a patriarch a double cross, and the pope a triple cross on his arms. 2. The name cross-bearers ("cruciferi") was also applied to those Flagellants in the thirteenth and fourteenth centuries. See Flagellants.

Crosowell, Henry, D.D., a Protestant Episcopal minister, was born in West Hartford, Conn., June 16, 1778. While quite young he entered his brother's printing-office in Catskill, N. Y., and soon became editor of a newspaper published in that place. About 1800 he established a paper at Hudson, N. Y., called The Balance. He removed to Albany, and his paper attained a still wider circulation and influence. Finally he turned his attention to the Christian ministry. Though brought up among Congrega-
CROSWELL

CROWN

tionalists, he determined to unite with the Protestant Episcopal Church, and prepared to enter its ministry. In the year 1814 he was ordained deacon. After preaching a short time in Hudson, he removed to New Haven, where he took charge of Trinity Church, and in February, 1818, he was ordained priest. He remained in the same parish 43 years. It is stated that in a period of 41 years he officiated at 1844 burials, administered 2568 baptisms, and married 588 couples. He died March 13, 1868.

Crosowell, William, D.D. (son of Henry), was born in Hudson, N. Y., Nov. 7, 1804, and graduated at Yale College in 1822. After studying at the General Theol. Seminary, N. Y., he was ordained in 1828, and in May, 1829, he accepted the rectorship of Christ Church, Boston. In 1840 he became rector of St. Peter's Church, Auburn, N. Y., but, after somewhat more than four years, he returned to Boston, and connected himself with a new enterprise—the Church of the Advent, which proved very successful. With this church he continued till the close of his life. In 1846 he was conferred upon him by Trinity College, Hartford, and on Nov. 9, 1861, he died suddenly, after the partial delivery of a beautiful sermon, addressed to the children of his church, in connection with a baptism. His productions, especially on poetry, were published soon after his death by his father, in an extended Memoir, but he had strictly forbidden the publication of any of his sermons.—Sprague, Annals, v. 697.

Crothers, Samuel, D.D., a Presbyterian minister, was born near Chambersburg, Pa., October 22, 1788. His father removed to Lexington, Ky., in 1787. In February, 1798, he entered the Lexington Academy, and in 1804, placed himself under the care of the Kentucky Presbytery as a candidate for the ministry. He entered the New York Theological Seminary in 1805, and, returning to Kentucky in 1809, was there licensed to preach. He settled in Chillicothe in 1810, where he remained for three years, removing to Greenfield in 1813. At this time the Associate Reformed Church was greatly agitated with controversies respecting intercommunion and psalmody. With Dr. Mason and most of his students, Mr. Crothers opposed close communion, and the exclusive use of what has been called inspired psalmody. Troubles growing out of these things, he resigned his charge, and removed to Winchester, Ky. In 1830 he returned to Greenfield, where he remained 38 years. He died suddenly in Oswego, Ill., at the house of his son, on July 20, 1856.—Wilson, Presbyterian Hist. Almanac, 1864.

Crow (κόρων), Baruch vi, 54, prob. the jackdaw. See Raven.

Crowell, Joshua, an early Methodist Episcopal minister in New England, was born in Massachusetts in 1777, of Presbyterian parents, was converted through the agency of Methodist preaching at about 20, entered the itinerancy in 1801, located in 1803, and died at Sturbridge, Mass., July, 1858, in the fifty-seventh year of his ministry. He had a strong intellect, sound judgment, genial humor, and an earnest love of Methodism. He was an able and successful minister. He was one of the founders of the Wesleyan Academy, Wilmot, and in many ways was of eminent service to the Church. —Sherman, Sketches of New-England Divines, p. 389.

Crowell, Seth, a Methodist Episcopal minister of more than ordinary talents, was born at Tolland, Conn., in 1781, entered the New York Conference in 1801, was returned superannuated in 1816, ministered upon work as a missionary in 1816, located in 1819, and was readmitted as superannuated in 1824. He died in 1826 in New York city. See Minutes of Annual Conferences, i, 542; Stevens, Memorials of Methodists, ii, ch. xviii.

Crowning. See Cock-crowning.

Crowl, John F., a Methodist Episcopal minister, was born at Salem, N. Y., about 1828. He removed with his parents when quite young to Troy, N. Y.; was converted in 1839, and in 1848 united with the Troy Conference. For some time during his early and Early Ministry he labored in evangelism. His labors were abundant and highly successful to the close of his life, Sept. 14, 1875. Mr. Crowl was a sweet singer, powerful in exhortation, and mighty in prayer. He had a deeply emotional nature, and his soul seemed greatly burdened for souls. See Minutes of Annual Conferences, 1874, p. 81.

Crown, an ornament often mentioned in Scripture, and in such a manner as in most cases to indicate the circumstances under which the persons by whom it was worn for; for crowns were less exclusively worn by sovereigns than among modern nations. Perhaps it would be better to say that the term "crowns" was applied to other ornaments for the head than those exclusively worn by royal personages, and to which modern usage would give such distinctive names as crownet, band, mitre, tiara, garland, etc. This ornament, which is both ancient and universal, probably originated from the fillets used to prevent the hair from being dishevelled by the wind. Such fillets are still common, and they may be seen on the escutcheons of houses, in Europe, where they gradually developed into turbans (Josephus, Ant. iii, 7, 7), which, by the addition of ornamental or precious materials, assumed the dignity of mitres or crowns. The use of them as ornaments was probably suggested by the natural custom of encircling the head with flowers in token of joy and triumph ("Let us crown ourselves with rosebuds," Wisd. ii, 8; 8 Macc. vii, 16; Jud. xv, 13, and the classical writers, passim). See Bread. The first crown was said to have been worn for Pandora by the Graces (comp. στίγματος Xαριτων, Prov. iv, 9). According to Plutarch, Saturn was the first to wear a crown; Diodorus says that Jupiter was first crowned by the gods after the conquest of the Titans. Pliny, Harpocration, etc., ascribe its earliest use to Bacchus, who gave to Ariadne a crown of gold and Indian gems, and assumed the laurel after his conquest of India. Leo Egyptian attributes the invention to Isis, whose wreath was cereal. These and other legends are collected by Tertullian from the elaborate treatise on crowns by Claud. Saturenius. Another tradition says that Nimrod was the first to wear a crown, the shape of which was suggested to him by a cloud (Eustychius Alexandr. Ann. i, p. 68). Tertullian, in his tract De Cor. Mundi (c. vii sq.), argues from Deut. xviii, 13, as unimportant. He is, however, singularly unsuccessful in trying to disprove the countenance given to them in Scripture.
by Alexander the Great to Jaddus (Jennings's Jewish Ant. p. 158). The use of the crown by priests and in religious services was universal, and perhaps the badge belonged at first "rather to the pontifical than the royal." Thus Q. Fabius Pictor says that the first crown was used by Janus when sacrificing. "A striped head-dress and queue," or "a short wig, on which a band was fastened, ornamented with an asp, the symbol of royalty," was used by the kings of Egypt in religious ceremonies (Wilkinson's Anc. Egypt. iii. 354, fig. 13). The crown worn by the kings of Assyria was "a high mitre ... frequently adorned with flowers, etc., and arranged in bands of linen or silk. Originally there was only one band, but afterwards there were two, and the ornaments were richer" (Layard, ii. 320, and the illustrations in Jahn, Arch. Germ. ed., pl. i, vol. ii, tab. ix, 4 and 8). See Mitre.

Ancient Assyrian Crowns.

Fig. 1, Early Kings; 2, Later.

The royal crown originated in the diadem, which was a simple fillet fastened round the head, and tied behind. This obviously took its rise among a people who wore long hair, and used a band to prevent it from falling over the face. The idea occurred of distinguishing kings by a fillet of different color from that usually worn; and being thus established as a regal distinction, it continued to be used as such even among nations who did not wear the hair long, or was employed to confine the head-dress. We sometimes see this diadem as a simple fillet, about two inches broad, fastened round the otherwise bare head; we then find it as a band of gold (first cut, above, figs. 2, 5). In this shape it sometimes forms the basis of raised ornamental work (figs. 6, 7, 8, 10), in which case it becomes what we should consider a crown; and, indeed, the original diadem may be traced in most ancient crowns. Fig. 10 is curious, not only from the simplicity of its form, but on account of the metallic loop to be passed under the chin—a mode of securing the crown probably adopted in war or in the chase. Then we find the diadem surrounding the head-dress...
or cap (figs. 8, 9, 13), and when this also is ornamented, the diadem may be considered as having become a crown. See DIadem.

2. The more general word for a crown is ἀτοραῖος (a circle), Gr. στέφανος; and it is applied to crowns and head ornaments of different sorts, including those used by the kings. When applied to their crowns, it appears to denote the state crown as distinguished from the diadem. Such was probably the crown, with its precious stones, weighed (or rather “was worth”) a talent, taken by David from the king of Ammon at Rabbah, and used as the state crown of Judah (2 Sam. xii, 30). Some groundlessly suppose that, being too heavy to wear, it was suspended over his head. The royal crown was sometimes buried with the king (Schickard, Jus Reg. vi. 19, p. 421). Idolatrous nations also “made crowns for the head of their gods” (Ep. Jer. 9). The Rabbins allege that the Hebrew state-crown was of gold, set with jewels. Of its shape it is impossible to form any notion, unless by reference to the examples of ancient crowns contained in the preceding cut. These figures, however, being taken mostly from coins, are not of that very remote antiquity which we would desire to illustrate matters pertaining to the period of the Hebrew monarchies. In Egypt and Persia there are sculptures of earlier date, representing royal crowns in the shape of a distinguishing tiara, cap, or helmet, of metal, and of cloth, or partly cloth and partly metal.

Ancient Egyptian Crowns.
Fig. 1, Lower Egypt: 2, Upper Egypt: 3, both kingdoms united: 4, Royal Phylotet.

The diadem of two or three fillets (figs. 4, 5, first cut, above) may have been similarly significant of dominion over two or three countries. In Rev. xii, 8; xiii, 1; xiv, 12, allusion is made to “many crowns” (σαξαγαρα) worn in token of extended dominion. Thus the kings of Egypt used to be crowned with the “phalera,” or united crowns of Upper and Lower Egypt (Wilkinson, Anc. Egypt. ii. 361 sq.; comp. Layard, ii, 320); and Ptolomy Philometer wore two diadems, one for Europe and one for Asia. This would, in fact, form three crowns, as his previous one was doubtless the double crown of Upper and Lower Egypt. Similarly the three crowns of the papal tiara mark various ascensions of power: the first crown was added to the mitre by Alexander III in 1159; the second by Boniface VIII in 1308; and the third by Urban V in 1362. These Egyptian tiaras were worn in war and on occasions of state, but on ordinary occasions a fillet or diadem was worn. It is important to observe that the mitre of the high-priest, which is also called a crown (Exod. xxxix, 80), was of similar construction, if not shape, with the addition of the golden fillet or diadem.

3. Similar also in construction and material, though not in form, was the ancient Persian crown, for which there is a distinct name in the book of Esther (1, 11; 2, 17; 4, 6); viz., ἄθριος or εὔρος (crown or circlet), which was doubled, the ἀθρίες or εὐρίες (crown or circlet), the high cap or tiara so often mentioned by the Greek historians.

CROWN

Modern Oriental Crowns.

As this is, or of a stiff cap of cloth, studded with precious stones. It must often occur to the student of Biblical antiquities that the modern usages of the East have more resemblance to the most ancient than have those which prevailed during that intermediate or classical period in which its peculiar manners and institutions were subject to much extraneous influence from the dominion of the Greeks and Romans. So, in the present instance, we are much impressed with the conviction that such head-tires and caps as those represented in the above cut more correctly represent the regal “crowns” of the Old Testament than those figured in the first cut, above (with the exception of fig. 12 and the simple diadems); which, however, may be taken to represent the style of the crowns which prevailed in and before the time of the New Testament. See TURBAN.

4. Other Heb. terms rendered “crown” are יִשְׁרָא, a wreath or border of gold around the edge of the ark of the covenant (Exod. xxv, 11, etc.); and קוקָלָד, the scalp or crown of the human head (Gen. xlix, 26, etc.; Ezek. xlvii, 17, and of women (Isa. iii. 20); הַרְפָּרָה, a head-dress of bridgroom (Isa. ixi, 10; Bar. v, 2; Ezek. xxiv, 17), and of women (Isa. iii. 20); הַרְפָּרָה, a head-dress of great splendor (Isa. xxviii, 5); הַרְפָּרָה, a wreath of flowers (Prov. i. 9; iv. 9); such wreaths were used on festival occasions (Isa. xxviii, 1); מַעְרָה, a common tiara or turban (Job xxix, 14; Isa. iii. 28); הַרְפָּרָה, a coronet or diadem (“hat,” Dan. iii. 21, rather mantle). ἄθριον occurs in the N. T. only once (Acts xiv, 13) for the garlands used with victima. In the Byzantine court this word was
CROWN

confined to the imperial crown (Du Fresne, Glos. Coc. p. 1442). See GARLAND.

The Jews boast that three crowns were given to them: רְעֵב בְּיָד, the crown of the law; לְבָנָה בְּיָד, the crown of priesthood; and רְעֵב בְּיָד, the royal crown; better than all which is בְּיָד רְעֵב, the crown of a good name (Carpov, Apparat. Critic. p. 60; Othonios Lex. Rabb. s. v. Corona). Crowns were often used symbolically to express honor and power that it is not always safe to infer national usages from the passages in which they occur. Hence we would scarcely conclude from Ezek. xxiii, 42 that crowns were worn by Jewish females, although that they were some ornament which might be so called is probable from other sources. Mr. Lane (Arabian Nights, i, 494) mentions that until about two centuries ago a kind of crown was worn by Arabian females of wealth and distinction. It was generally a circle of jewelled gold (the lower edge of which was straight, and the upper fancifully heightened to a mere point), surmounting the lower part of a dome-shaped cap, with a jewel or some other ornament at the summit. It is certain that "crows" of this or some similar kind were worn at marriages (Cont. iii, 11; Isa. lxii, 10); and it would appear that at feasts and public festivals "crows of rejoicing" were customary. These were probably garlands (Wis. ii, 8; iv, 2; Ecclus. i, 11).

With the ancients generally the crown was the symbol of victory and reward; it being customary for conquerors to be crowned, as were also victors in the Grecian games. From ancient coins and medals we may observe that these crowns or wreaths usually consisted of leaves of trees, to which were added flowers. The crown worn by the victor in the Olympic games was made of the wild olive; in the Pythian games of laurel; in the Nemean games, of parsley; and in the Isthmian games [see CORINTH], of the pine. Indeed, Claudius Saturninus says there was hardly any plant of which crowns had not been made. The Romans had several kinds of crowns or wreaths which were bestowed for various services, but the noblest was the civic crown, given to him who had saved the life of a citizen; it was made of oak leaves, and was presented by the person who had been saved to his preserver. These were all ornamental, for they began to wither as soon as they were separated from the tree or plant out of the earth. In opposition to these, there is an incorruptible crown, a crown of life, laid up for those who are faithful unto death (Jas. i, 12; 1 Pet. v, 4; Rev. ii, 10; see A. M. Præb. Rev. July, 1883). Pilate's guard platted a crown of thorns, and placed it on the head of Jesus Christ (Matt. xxvii, 29) with an intention to insult him, under the character (Prov. xii, 4; xvii, 6; Isa. xxviii, 5; Phil. iv, 1, etc.). The term is also applied to the rings of altars, tables, etc. (Exod. xxv, 25, etc.; Deut. xxii, 8; comp. Vitru. ii, 3; Q. Curt. iv, 4, 80). The ancients as well as the moderns had a coin called "a crown" (τὸν στῆφανον ὑπὸ σφυλακῆς, 1 Macc. xii, 80; x, 29; A. V. "Crown-

CRUCIFIX

The chief writers on crowns are Gaschalius (De Coronis, lib. x) and Maurusius (De Coronâ, Hafniae, 1671). For other works, see Fabricius, Bibl. Ant. xiv, 18. See HEAD-DRESS.

CROWN OF THORNS (στῆφανον ἀκανθών, Matt. xxvii, 29). Our Lord was crowned with thorns in mockery by the Roman soldiers. The object seems to have been insult, and not the infliction of pain, as has generally been supposed. The Rhamnus, or Sphaer Christi, although abundant in the neighborhood of Jerusalem, cannot be the plant intended, because its thorns are so strong and large that it could not have been woven (σκελετικός) into a wreath. The large-leaved acanthus (bear's-foot) is totally unsuited for the purpose. Had the acacia been intended, as some suppose, the phrase would have been ἀκανθών. Obviously some small, flexible thorny shrub is meant; perhaps especially the hawthorn (Rosalba's crowns, ii, 593) or the Hasselquist (Travelz, p. 260) says that the thorn used was the Arabian sâbûk. "It was very suitable for their purpose, as it has many sharp thorns which inflict painful wounds; and its flexible, pliant, and round branches might easily be plaited in the form of a crown." It also resembles the rich dark green of the triumphal ivy-wreath, which would give additional pungency to its ironical purpose (Rosenmüller, Botany of Scripture, p. 202, Eng. ed.). Another plant commonly fixed upon is the "southern buckthorn," which was very suitable to the purpose. See BAMBUL.

On the emblem Helena's supposed discovery of the crown of thorns, and its subsequent fate, see Gibbon, i, 806; vi, 66, ed. Milman.—Smith, s. v. Treatises on the crown in question have been written in Latin by Bartholin (Hafn. 1651), Bottier (in the Bibl. Brem. viii, 542), Frenzel (Viteb. 1657, 1679), Götsch (Auldtorf, 1694), Gerson (Hafn. 1713), Lidemann (Viteb. 1679), Sagittarius (Auldtorf, 1672), Welde (Jena, 1723); Lersch (Leipsic, 1661), Hallmann (Rost. 1737), Müller (in Methuen Theol. ii, 230—338). See THORN.

Crucifix (Low Latin crucifæcum; from cruci, to a cross, and fæx, fastened), a representation of Christ on the cross, executed in wood, ivory, metal, or other hard material.

I. History of Crucifixes.—Among the many symbols which the early Christians used to represent Christ as the central object of their faith, the lamb was among the most predominant. In the beginning of the 6th century the lamb bears a triumphal cross; then it is lying on an altar at the foot of a cross; then it appears with blood flowing from a wound in its side, as well as from its feet; and finally, by the end of this century, the lamb is painted in the centre of the cross, where the body of Christ was later placed. On the celebrated "cross of the Vatican," on which this lamb thus appears, are two busts of the Saviour: one above, holding a book in his left hand, and giving a benediction (q. v.) in the Latin manner with the right, while the other has a scroll on a scroll in the right hand, and a little cross in the left. The sixth Ecumenical Council (A. D. 680) ordered that Christ should be represented with his proper human body rather than under the symbol of the paschal lamb, and in the following century crucifixes multiplied greatly throughout all Chris-

Crown" is often used figuratively in the Bible as a general emblem of an exalted state of the king of the Jews (see below). The laurel, pine, or parsley garlands given to victors in the great games of Greece are finely alluded to by Paul (1 Cor. ix, 25; 2 Tim. ii, 5, etc.). See GAMES. They are said to have originated in the laurel-wreath assumed by Apollo on conquering the Python (Tertull. de Cor. Mort. i, 15; 18, 20, and Romans 5:12, Smith, Dict. of Class. Antiq., s. v. Corona.) See AMARANTHINE. "Crown" is often used figuratively in the Bible as a general emblem of an exalted state.
CRUCIFIX

gradually overcome in the minds of the Christian world. Thus, on the vias of Monza, which Gregory the Great gave to queen Theodelinda, there is a head of Christ in a nimbus containing a cross. A mosaic of St. Etienne, of about the same period, contains in addition one of the thieves on each side of the head of Christ, with a highly ornamented cross below and in the centre of the vial, with an ornamented ediculum below, crowned by a cross, with an angel on one side, and the two women bringing spices to the tomb of Christ on the other side, indicating the resurrection of Christ. On another, Christ is represented with his arms extended—like the praying persons of the Catacombs—with the two thieves on crosses at his side, and the sun and moon, or other emblems, added to the representation. In the pictorial cross of Monza, said to be a present from Gregory the Great to the empress Theodelinda, and in others of the most ancient crucifixes, the figure of Christ was scratched in on the metal with some sharp-pointed instrument. Later, it was painted. It is in the 9th century that the figures first appeared in relief. The first crucifix used in a church, of which we are aware, is said to have been by Gregory of Tours as being in the church of Narbonne (A.D. 595). After the council of 692 the Greek Church used painted crucifixes freely. Pope John VII., a Greek by birth (elected A.D. 705), first used the crucifix in St. Peter's Church, Rome. A single crucifix is found in the Catacombs, and the custom spread to Italy from the 8th century. The crucifix soon assumed the most prominent place in the Roman church edifice, being placed over the centre of the high altar, overshadowing the piers, and being removed only at the elevation of the Host. This altar-crucifix is often made in the most costly and artistic way, being usually of gold or silver, and adorned with pearls or precious stones. Crucifixes are also placed at the doors of churches, in cloisters, in chapels by the roadside, and at every place where crosses (q.v.) are erected. They are constantly used by Roman Catholics, both ecclesiastics and laymen, and especially are kept in the beidchamber. The reason given for this abundant use of the crucifix is “to keep the sufferings and death of Christ, and the fact of atonement, ever before the minds of believers.” Among the Protestant churches, the Lutheran has not rejected the use of the altar-crucifixes, though Protestants generally consider the use of the cross offensive to the Christian with regard to the material, on which they are made, and to a forgetting of the true spiritual meaning of the Saviour's death; hence they reject them altogether, regarding them as only valuable, whether sculptured or painted, as marking a phase of the development of ritualistic worship, or as works of art.

II. Details.—Until the 11th century Christ was represented as living, and usually with his head crowned with a nimbus or other symbol of his triumphant resurrection. His head was erect, his eyes open, indicating his divine nature, which is not subject to death; or, more probably, his triumph over his death. Though Christ was in the world, he was also in heaven, for he, in his entirely naked condition, the earliest crucifixes represent him clothed with a chalefica, a tunic without arms, and reaching to the feet. At the close of the 9th century, this was modified to a tunic bound around the waist and extending about to the knees; and by the close of the tenth century, the tunic was almost universally contracted to a simple band of cloth around the loins. This has been universally adopted by artists till the present time.

The crucifix of the church of St. Genes, at Narbonne, is the only example extant of this type being adopted after the 9th century. A manuscript in the Laurentian library at Florence, dating about the year 1060, contains the first extant of Christ being represented as dead. All the crucifixes from that time represent the head as drooping, and life as just extinct. A stream of blood is sometimes rep-
CRUCIFIXION

CRUCIFIXION

ory of the world, occur in various crucifixes. Many other modifications exist of the presentation of the crucifixion, whether given in full relief, or high or low relief, or whether painted in miniature, in mosaic, on fresco, or on canvas.

Crucifixion (prop. σταυρωσις) is in the N. T. the noun does not occur, the act being designated by some form of the verb σταυρω, to apply the cross; once προσταυρωσις, to fasten, i.e. to the cross, Acts ii, 23; the classical writers use σταυρος, ἀνασταυρος, σταυρομετωπις, and, less properly, ἀνασταυροσιας; cruci or patiōbile ofire, sussuere, or simply figere [Tertull. de Pat. iii.], cruciare [Auston.] ad palaillum allegare, crucem alicui staturque, in crucem agere, tollere, etc.; the sufferer was called cruciferus. See Passion.

I. History. — The variety of the phrases shows the extreme commonness of the punishment, the invention of which is traditionally ascribed to Semiramis. It was in use among the Egyptians (as in the case of Inarus, Thuc. i, 30; comp. Gen. xl. 19), the Carthaginians (as in the case of Hanno, etc., Val. Max. ii. 7; Polyb. i. 68; Sil. Ital. ii. 544; Flutarch, Parn. 24; Julius. Ap. iv. 503; Plutarch, Bell. Alex. 12; the Perseians (Polytarchus; etc., Herod. iii. 125; iv. 43; vii. 194; Ctesias, Excip. 5; comp. Esth. vii. 10), the Assyrians (Diod. Sic. i. 2), the Scythians (id. ii. 44), the Indians (id. ii. 18), the Germans (possibly Tacit. Germ. 12); and was very frequent from the earliest times (Livy, i. 25) among the Romans. Cicero, however, refers it, not (as Livy) to the early kings, but to Tarquinius Superbus (Pro Rab. 4); Aurel. Victor calls it cetus veternissimum (i.e. terr. patulationis supplicium. Both κραυμα and suspendere (Ovid, Ibis, 299) refer to death by crucifixion; thus, in speaking of Alexander's crucifixion of 2000 Tyrants, dienappi on in Diod. Sic. answers to the crucim officiis in Q. Curt. iv. 4. The Greeks (Strabo, xiv. 647) and Macedonians (Appian, Mithr. 8; Curt. vii. 11, 28; ix. 6, 6) also sometimes resorted to this mode of punishment.

This accursed and awful mode of punishment was happily abolished by Constantine (Sozom. i. 8) probably towards the end of his reign (see Lipsius, De Cruce, iii. 15), although it is curious that we have no more definite account of the matter. Examples of it are found in the early part of that emperor's reign, but the repercussion which, at a later period, he was led to feel for the cross, doubtless induced him to put an end to the cruel practice (Aurel. iii. 401; Niescha, vii. 46; Firm. viii. 29). "An edict so honorable to Christianity," says Gibbon, "deserved a place in the Theodosian Code, instead of the indirect mention of it which seems to result from the comparison of the 5th and 18th titles of the 9th book" (ii. 154, note). See Punishment.

II. As a Jewish Custom. — Whether this mode of executation was known to the ancient Jews is a matter of dispute (see Bommiatus, De Cruce num Eun Modis, suppl. fuscit, Vitea, 1644; Chauffep, in the Miscell. Dutub. ii. 401 sq.). It is asserted to have been so by Baro-nius (Annot. i. xxxiv., Sivigia) (De Rep. Hebr. vi. 8, etc., who are refuted by Casaubon (c. Boym. Erurc. 15)) Carpyev (Apparatus, Curt. p. 601). The Hebrew words said to allude to it are מָתָלון, takah (sometimes with the addition of עַלָּהּ, upon the tree); hence the Jews in polemics call our Lord הַיָּדָה (the hand), and Christians מַרְכּוֹס, מַרְכּוֹס ("worshippers of the crucified"); and מַרְכּוֹס, yasia, both of which in the A. V. Vers. are generally rendered "to hang" (2 Sam. xiii. 10; Deut. xxii. 22; Num. xxxu. 4; Job xxvi. 7); for which σταυρω occurs in the Sept. (Esth. vii. 10), and crucifixerunt in the Vulg. (2 Sam. xx. 6, 9). The Jewish account of the matter (in Maimonides and the Rabbins) is, that the exposure of the body tied to a stake by its hands (which might loosely be called crucifixion) took place after death (Lightfoot, Hor. Hebr. in Matt. xxvii. 51; Othonia Lex. Robb. s. v. Supplicia; Reland, Ant. ii. 6; Sir T. Browne, Adv. Errors, v. 21). Even the placing of a head on a single upright pole has been called crucifixion. This custom of crucifixion after death (which seems to be implied in Deut. xxii. 23, 25) was by no means rare; men were first killed in mercy (Tertull. de Haer. iii. 125; Hist. Eccl. xii. 38). According to a strange story in Pliny (xxxvi. 15, § 24), it was adopted by Tarquin as a post-mortem disgrace, to prevent the prevalence of suicide. It seems, on the whole, that the Rabbis are correct in asserting that this exposure is intended in Scripture, since the most barbarous punishments (of which the sword, Exod. xxii. 1; strangling, Ex. xxix. and stoning, Deut. xxii. 30) were, in the days of Moses, adopted as crucifixion as a murderer's punishment because it was the worst he could discover; but the passage in Deut. (xxii. 23) does not prove his assertion. Probably, therefore, the Jews borrowed it from the Romans (Josephus, Ant. xx. 6, 2; War, ii. 12, 6; Life, 76, etc.), although there may have been a few isolated instances of it before (Josephus, Ant. xiii. 14, 2). See Hanging.

It was unanimously considered the most horrible form of death, worse even than burning, since the "cross" preserved the "suffrance" (tremens) in the case of sinners (Deut. xxvi. 11). Hence it is called cruculitius tertium in supplicium (Cicero, Verr. iv. 66), extrema pena (Apul. de Aur. Asin. xiii.), xumnum supplicium (Paul. Sent. v. tit. xxii., etc.); and to a Jew it would acquire fictitious horror from the curse in Deut. xxii. 23. Among the Romans also the degradation was a part of the infliction, since it was especially a servile supplicium (Tactius, Hist. iv. 11; Juvenal, v. 218; Horace, Sat. i. 8, 8, etc.; Plautus, passim); or a slave's punishment (De Insano quo Chr. auctus est cruc. supp., in Lange's Observat. Sacr. [Lubeck, 1731], p. 151 sq.; also Hencke, Opusc. p. 157 sq.), so that even a freedman ceased to dread it (Cicero, Pro Rab. 4); if applied to freemen, only in the case of the vilest criminals (Joseph. Ant. xxvii. 10, 10; War, i. 11, 1; Paul. Sent. v. tit. xxiii.; Lamprid. Alex. Scar. 29), such as persons guilty of robbery, piracy (Seneca, Ep. vii; Cicero, Per. 27), assassination, perjury (Firm. vi. 24), sedition, treason (the case of soldiers) desertion (Dion. v. 59; Joseph. Ant. xiii. 23; Apuleius, Asin. 8). Indeed, exemption from it was the privilege of every Roman citizen by the jus civiliss (Cicero, Verr. ii. 1, 8). Our Lord was condemned to it by the popular cry of the Jews (Matt. xxvii. 25, as often happened to the early Christian) on the charge of treason (Cicero, Pro Rab. 4), although the Sanhedrim had previously condemned him on the totally distinct charge of blasphemy. Hundreds of Jews were crucified on the former charge, as by Florus (Joseph. War, i. 14, 9) and Varus, who crucified 2000 at once (Ant. xxvii. 10, 10). See Execution.

III. Process. — The scarlet robe, crown of thorns, and other insults to which our Lord was subjected, were illegal, and arose from the spontaneous petulance of the brutal soldier. But the punishment properly commenced with scourging, after the criminal had been stripped; hence, in the common form of sentence, we find "summum, licitio, despectus, vasa crucis" (Livy, i. 26). For this there is a host of authorities —Livy, xxxi. 18; Q. Curt. vii. 11; Lucan, de Piacoc. 2; Jerome, Comment. ad Matt. xxvii. 26, etc. It was inflicted, not with the comparatively mild rigor, but the more terrible flagrum (Horace, Sat. i. 8, comp. 2 Cor. xi. 24, which was not used by the Jews (Deut. xxx. 5). Into these scourges the soldiers often stuck nails, pieces of bone, etc., to heighten the pain (the μαρακες ἀναγεννωται mentioned by Athenaeus, etc.; flagrum perpetuum consuls existentum, Apul.), which was often so intense that the sufferer died under it (Ulp. de Puniis, i. viii.) The scourging generally took
place at a column, and the one to which our Lord was bound is said to have been seen by Jerome, Prudentius, Gregory of Tours, etc., and is shown at several churches among the relics. In our case, however, this infliction seems neither to have been the legal scourging after the sentence (Val. Max. i, 7; Josephus, War, vii, 14, 10; nor yet the one sometimes called the “flaying” (Acts xxii, 24), but rather a scourging before the sentence, to excite pity and procure immunity from further punishment (Luke xxiii, 22; John xix, 1); and if this view be correct, the reference to it (σχοινίαβολευσ) in Matt. xxvii, 25, is retrospective, as so great a change of heart in the case of Peter (τιμασία, v. 53) as to be wholly unexpected; and, therefore, the expression would lose its force and be rendered a mockery. (Pol. Synop. ad loc.) How severe this was it is indicated in prophecy (Psa. xix, 15; Isa. i, 6). Vossius considers that it was partly legal, partly tentative (Harm. Pat., v, 13). See Soro. The criminal carried his own cross, or, at any rate, a part of it (Plutarch, De sis qua sera, etc., 5; Arminid. Oecumen. ii, 61; see John xix, 17, comp. "patibulum ferat per urbem, deinde affigatur cruci,") Plant. Carbo- nar. Hence the term surcifer, cross-bearer (q. v.). This was prefaced by Isaac carrying the wood in Gen. xxii, 6, where even the Jews notice the parallel; and to this the fathers fantastically applied the expression in Isa. ix, 6, "the government shall be upon his shoulder, and his name shall be called the Prince of peace." They were sometimes scourged and goaded on the way (Plut. Montel. i, 1, 52). "In some old figures we see our Lord described with a table appendent to the fringe of his garment, set full of nails and pointed iron" (Jer. Taylor, Life of Christ, iii, xv, 2; Horat. ligum quo sedebat, Cypr. de Pas. p. 60). See Simov (op. cibens). The place of execution was outside the city ("poet urbem," Cicero, Verr. v, 66; "extra portam," Plant. Mil. II. iv, 4, 6; comp. 1 Kings xi, 18, Acts vii, 56; Heb. xii, 12; and in camps "extra vallum"), often in some public road (Quinct. Decd. 275) or other conspicuous place like the Campus Martius (Cicero, pro R. B. in or some spot set apart for the purpose (Tacit. Ann. xv). This might sometimes be a hill (Val. Max. vi); it is, however, rather an inference to call Golgotha a hilly: in the Evangelists it is called a "place" (τόπος). See Calv. Arrived at the place of execution, the sufferer was stripped naked (Ardemimou, "Χριστός ἐκ τοῦ πετρικοῦ ἐν τῷ δρόμῳ τῶν στρατιωτῶν") Matthew vii, 35; Dig. xlvii, 20, 6); possibly not even a cloth round the loins was allowed him; at least among the Jews the rule was "that a man should be stoned naked" (Sanhedr. vi, 3), where the context shows that "naked" must not be taken in its restricted sense. The cross was then driven into the ground, so that the feet of the condemned were a foot or two above the earth (in pictures of the crucifixion the cross is generally much too large and high), and he was lifted upon it (ἀγγειον, extricer, tollere, ascendere in crucem: Prudent. ποιη στεφ: Plant. Montel. "Crucifususkit: id. Bosc. 2, 8, 128; ζεῖναι, ζωονει, ζωονειν τινα ναον τους Greec. Naz.). or, more correctly, be stretched upon the ground, and then lifted with it, to which there seems to be an allusion in a lost prophecy quoted by Barnabas (Ep. 12), ἐν τοις κληρδιῃ και αναστηρ [Ponard, On the Creed, Acts iv]. The former method was the commoner, for we often read (as in Esth. vii, 10, etc.) of the cross being erected by the hand in terrour and rage, as the nailing or binding took place, a medicated cup was given out of kindness to confuse the senses and deaden the pangs of the sufferer (Proor. xxxii, 6), usually of bitter wine (ὀξον ισεμόντινοι or λεισσαμόντινοι, among the Jews (Lightfoot, Hor. Hebr. ad Matt. xxvii), because myrrh was soporific. Other bitter herbs were also employed (Filling, Exercit. Acad. p. 86). Our Lord’s expression of this that his senses were clouded (Matt. xxvii, 34; Mark xv, 29; Malalides, Sanhed. xiii). Matthew calls it "vindes mingled with gall," (δαμοτι τυλινος, γαρ) an expression used in reference to Psa. lxix, 21, but not strictly accurate. This mercifully intended draught must not be confounded with the spongeful of vinegar (or poecas, the common drink of Roman soldiers, Spart. Hadr.), Plant. Mil. Gl. iii, 2, 28), which was put on a hysoap-stalk and offered to our Lord in mocking and contemptuous pity (Matt. xxvii, 34). "He was tasted to the agony of thirst (John xix, 29)."

The body was affixed to the cross by nails (see Coes. Curtius, De clavis Domini, Antw. 1760) driven into the hands, and more rarely into the feet; sometimes the feet were fastened by one nail driven through both (Suet. Dom. 19; Lactant. iv, 13). The feet were occasionally by both to the cross by cords; and Xenophon asserts that it was usual among the Egyptians to bind in this manner not only the feet, but the hands. An inscription (titulus) was written upon a small tablet (στεζοι, Socrat. Hist. Eccl. i, 17) declaring the crime (see Alberti, De Inscriptione crucum Ch. Lips. 1729, and placed on the top of the cross (Sueton. Cal. 88; Dom. 10; Euseb. Hist. Eccl. v, 1). The body of the crucified person rested on a sort of seat (περιπατος) (Iren. adv. Haer. ii, 42). The criminal died under the most frightful sufferings—so great that even amid the raging passions of war pity was sometimes overcome (Joseph. xiii). Hundreds of captives taken at the siege of Jerusalem that "they were first whipped, and tormented with all sorts of tortures, and then crucified before the walls of the city. The soldiers, out of the wrath and the hatred they bore the Jews, nailed those they caught one after another to one cross and another after another to crosses, by way of jest, when their multitude was so vast that room was wanting for the crosses and crosses wanting for the bodies."

This wondrous procedure made Titus greatly pity them." Sometimes the suffering was shortened and abated by breaking the legs of the criminal—cras Prax (Cicero, Phil. xiii, 12). The execution took place at the hands of the cornfari, or hangman, attend- ed by a band of soldiers, and in Rome under the supervision of the Triumvir Capitales (Tacit. Ann. xv, 60; Lactant. iv, 26). The accounts given in the Gospels of the execution of Jesus Christ are in entire agreement with the customs and practices of the Romans in this affair (Tholuck, Glaubwürdigkeit der evangl. Gesch. p. 361).

Our Lord was crucified between two thieves (Xp- rai, roberes) or "malefactors" (then so common in Palestine, Josephus, War, ii, 6, etc.), according to prophecy (Issa. liii, 12); and was watched according to custom by a band of soldiers (Matt. xxvii, 28), with their centurion (curtorvnia, Matt. xxvii, 56; misce que crucem assembrat, Vetr. Sat. iii, 6; Plutarch, Vit. Cl. p. 38), whose express office was to prevent the suetration of the body (Senca, Ep. 101). This was necessary from the lingering character of the death, which sometimes did not supervene even for three days, and was at last the result of gradual buming and starvation (Euseb. viii, 8; Seneca, Prov. 8). But for this guard, the persons might have been taken down and recovered, as was actually done in the case of a friend of Josephus, though only one survived out of three to whom the same careful nursing (παρασκηνα ειμιλια- τρυγι) was applied (Lut, 70). Among the Con- quermans in the reign of Louis XV, women would be repeatedly crucified, and even remain on the cross three hours; we are told of one who underwent it twenty-three times (Encyl. Metr., a s. Cross); the pain consisted almost entirely in the nailing, and not more than a baseline of time was lost. We believe from the Martyrologies that Victorina (crucified head downward) lived three days, or Timotheus and Maurra nine days (compare Brechtneide, in the Studi- dien u. Krit., 1832, ii, 625; Paulus, in the Darmst. Kir- chen. etc, 1833, No. 9, 9). Fracture of the legs (Plant. Fox. iv, 2, 64) was especially adopted by the Jews (Dost. xx, 22) to hasten death (John xix, 31), and it
CRUCIFIXION

was a mitigation of the punishment (Casab. Exerc. Anihi, p. 537), as observed by Origen. But the unusual rapidity of our Lord's death was due to the depth of his previous agonies (which appears from his inability to bear his own cross far), and to his mental anguish (Schott, loc. cit., 6 sqq.). After the agony, or it may be sufficiently accounted for simply from peculiarity of constitution. There is no need to explain the "giving up of the ghost" as a miracle (Heb. vi, 77), or say with Cyprian, Preveno curnificia officio, spiritum sponi dimisi (Ad. Dom. Deut.). Still less can this be made to be the more noteworthy, since, had our Lord been in a swoon, the piercing of his pericardium (proved by the appearance of lymph and blood) would have ensured death. (See Eschenbach, Opusc. Med. de Servantore non apprarenti sed vera mortuo, and Gruner, De morte Christi non synepicici, quoted by John in his Bibl. Acr.). (See below.) Plate expressly stated himself of the actual death by questioning the centurion (Mark xv, 44); and the omission of the breaking of the legs in this case was the fulfillment of a type (Exod. xiiil, 46). Other modes of hastening death were by lashing fires under the cross (hence the nicknames Sarmuntati and Sermantici, Tert. Apol. Hort.,edition quaring loose wild beasts on the crucified (Suet. Ner. 49).

Generally the body was suffered to rot on the cross (Cicer. Tus. Q, i, 43; Sili. Ital, viii, 486) by the action of sun and rain (Herod. iii, 12), or to be devoured by birds and beasts (Apul. de Auv. Anim, 6; Horace, Epod. xxvii, 93; Juvenal, xiv, 77). Sepultura was generally therefore forbidden (Pline, Hlst. Nat, xxxvi, 24), though it might be granted as a special favor or on grand occasions (Ulp. ix, x, De off, Paenam). But, in consequence of Deut. xxxi, 22, 23, an express national exception was made in favor of the Jews (Matt. xxviii, 56; comp. Joseph. War, iv, 5, 2).

But only remains to speak of the manner of death, and the kind of physical suffering endured, which we shall very briefly abridge from the treatise of the physician Richter (in John's Bibl. Acr.). These are, 1. The unnatural position and violent tension of the body, which cause a painful sensation from the least motion. 2. The nails, being driven through parts of the hands and feet which are full of nerves and tendons (and yet at a distance from the heart), create the most exquisite anguish. 3. The exposure of so many wounds and lacerations brings on inflammation, which tends to become gangrenous, and every moment increases the sufferings. 4. In the dilated parts of the body more blood flows through the arteries than can be carried back into the veins: hence too much blood finds its way from the aorta into the head and stomach, and the blood-vessels of the head become pressed and swollen. The general obstruction of circulation which ensues causes an internal excitement, exertion, and anxiety more intolerable than death itself. 5. The inexpressible misery of gradually increasing and lingering anguish. To all this we may add, 6. Burning and raging thirst.

Death by crucifixion (physically considered) is therefore to be attributed to the sympathetic fever which is excited by the wounds, and aggravated by exposure to the weather, privation of water, and the painfully constrained position of the body. Traumatic fever corresponds, in intensity and in character, to the local inflammation of the wound. In the first stage, while the inflammation of the wound is characterized by heat, swelling, pain, the fever is rapidly inflammatory, and the sufferer complains of heat, throbbling headache, intense thirst, restlessness, and anxiety. As soon as suppuration sets in, the fever somewhat abates, and gradually ceases as suppuration diminishes and the stage of cicatrization approaches. But if the wound is not healed and suppuration continues, the fever assumes a hectic character, and will sooner or later exhaust the powers of life. When, however, the inflammation of the wound is so intense as to produce mortification, nervous depression is the immediate consequence; and if the cause of this excessive inflammation of the wound still continues, as is the case in crucifixion, the sufferer rapidly sinks. He is no longer able to support his weight. At first the suppuration is copious; but the immense quantities of prostration are excessive; bichocc supervenes, his skin is moistened with a cold clammy sweat, and death ensues. It is in this manner that death on the cross must have taken place in an ordinarily healthy constitution. The wounds in themselves were not fatal; but in the presence of inflammation, the suppuration must have increased in intensity until it produced gangrene. The period at which death occurred was very variable, as it depended on the constitution of the sufferer, as well as on the degree of exposure and the state of the weather. It may, however, be asserted that death would not take place until the local inflammation had run its course; and though this process may be much hastened by fatigue and the alternate exposure to the rays of the sun and the cold night air, it is not completed before forty-eight hours, under ordinary circumstances, and in healthy constitutions; so that we may consider thirty-six hours to be the earliest period of actual crucifixion without danger to the sufferer in a healthy adult. It cannot be objected that the heat of an Eastern climate may not have been duly considered in the above estimate, for many cases are recorded of persons having survived a much longer time than is here mentioned, even as long as eight or nine days. Eschylus (Hist. Eclen, iii, 8) says that many of the martyrs in Egypt, who were crucified with their heads downward, perished by hunger. The want of water was a much more important privation. It must have caused the sufferer inexpressible anguish, and have contributed in no slight degree to hasten death.

Several eminent writers had occupied themselves with the physiology of our Saviour's passion, as if we may so express ourselves, before the "scientific" method of treating it was resorted to; such were Scheuchzer, Mead, Bartholinus, Vogler, Triller, Richter, and Eschenbach. But a much fuller and more exact investigation has since been made by the two Gruners, father and son, the latter of whom first wrote under the direction, and by the advice of the former. These earlier authors have collected all that medical analogies could furnish towards establishing the character of our Saviour's sufferings and the reality of his death.

"The path C. F. Gruner (Commentario Antiquaria Medica de Jesus Christi morte vera non simul ita, Halm, 1805, p. 30-45). To these he might have added other reflections, as that our Saviour was evidently weakened beyond other persons in similar circumstances, seeing he could not have taken enough nourishment to have led to execution were always able to do; and if the men whom we are answering suppose our Lord to have
only fallen into a trance from exhaustion, they have manifestly no right to judge from other cases, for in them even this did not occur. The younger Gruner goes further; in the last paragraph of the text, he makes the following statement: "...".

The narrative, after quoting the authorities, as is usual in Arabic histories, proceeds as follows: "It is said that he had killed his master for some cause or other, and he was crucified on the banks of the river Barada [Burada], under the castle of Damascus, with his face turned towards the east. His hands, arms, and feet were nailed, and he remained so from midday on Friday to the same hour on Sunday, when he died. He was remarkable for his strength and prowess; he had been engaged with his master in sacred war at Askelon, where he slew great numbers of the Franks; and when very young he had killed a lion. Several extraordinary things occurred at his being nailed. It is said he gave himself up without resistance to the cross, and without complaint stretched out his hands, which were nailed, and after them his feet: he in the mean time looked on, and did not utter a groan, or change his countenance, or move his limbs." Thus we see a person, in the flower of his strength, and strength, inured to military fatigue, nay, so strong that we are told, in another part of the narrative, that "he moved his feet about, though nailed, till he loosened the fastenings of the nails, so that, if they had not been well secured in the wood, he would have drawn them out;" and yet he could not endure the suffering more than eight-and-thirty hours. But the peculiar circumstance in this narration, and the illustration of the scriptural narrative principally in view, is the fact, not mentioned by any ancient describer of this punishment, that the principal torture endured by this servant was that of thirst, precisely as is intimated in the Gospel history of John xix. 28. For the Arabic narrator thus proceeds: "I have heard this from one who witnessed it—and he thus remained till he died, patient and silent, without wailing, but looking up to heaven in the right and to the left, upon the people. But he begged for water, and none was given him; and the hearts of the people were melted with compassion for him, and with pity on one of God's creatures, who yet a boy, was suffering under so grievous a trial. In the mean time, the water was flowing around him, and he gazed upon it, and longed for one drop of it ... and he complained of thirst all the first day, after which he was silent, for God gave him strength."

Various things have therefore been proposed to account for the speedy death of Christ upon the cross. That it did not occur simply and directly from the crucifixion is evident from the above statements, and from the surprise of Pilate that it had taken place so soon, when the thieves crucified at the same time had not expired. The usual theory attributes his sudden death to a voluntary surrender of his own life, which is supposed to be favored by the expression "yielded or 'gave up the ghost,' ἀνείπη [ἀνείπω] τὸ πνεῦμα, Matt. xxvii. 50; John xix. 30, and also by his declarations concerning his "laying down his life" (τέλοι σαυς φυτή, John x. 15, 16, 17). The impropriety of this (the same terms being often used of ordinary decease and of voluntary submission to a violent death), this view is derogatory to the character of Christ (who is thus, in effect, made a suicide), and inconsistent with the expressions concerning the guilt of his murderers (who are thus made only accessories or assistants) on such an event of the sudden death of Christ is that proposed and extensively argued by Dr. Stroud (Treatise on the Physical Cause of the Death of Christ, Lond. 1847), who attributes it to a proper rupture of the heart, a pathological accident, which he thus describes (p. 88): "The immediate cause of the sudden and violent death of one of the ventricles, usually the left, on the column of blood thrown into it by a similar contraction of the corresponding auricles. Prevented from returning
CRUCIFIXION 592

backward by the intervening valve, and not finding a sufficient outlet forward in the connected artery, the blood stagnates in the sacrum, in which it is consequently torn open at the point of greatest distention, or least resistance, by the influence of its own reflected force. A quantity of blood is hereby discharged into the pericardium, and, having no means to escape from that capsule, stops the circulation by compressing the heart from without, and induces almost instantaneous death. A case of the kind was witnessed in the man collected in the pericardium soon divides into its constituent parts, namely, a pale, watery liquid called serum, and a soft clotted substance of a deep red color, crassamentum; but, except under similar circumstances of extravasation, this distinct separation of the two does not occur. The heart was found to have died 12.5 hours after this explanation meets all the circumstances of Christ's passion. The violence of his emotions was sufficient to burst open the heart, as Dr. Stroud shows by a multitude of examples of immediate death from sudden mental affections; and this, as a secondary cause, is confirmed by the occurrence of the sanguinaceous perspiration in the garden from similar emotions. See BLOODY SWEAT. It explains the suddenness of Christ's death, so evident in all the evangelical narratives, as well as its early occurrence, so surprising to Pilate. The loud shrieks that immediately preceded death, the excitement of the mental paroxysms (Matt. xxvii, 50; Mark xv, 37), and the effort of nature to relieve the system from the sense of suffocation consequent upon the congestion of blood at the heart. This will also account for the presence of "water" (serum), as well as "blood" (crassamentum), in a commingled yet distinct state, within the pericardium, and discharged at the orifice made by the soldier's spear (John xix, 34), since no blood would flow from a wound in a corpus's serice. See BLOOD AND WATER.

V. Literature.—An explanation of the other circumstances attending the crucifixion belongs rather to a commentary than a dictionary. The assertion of Paulus and others, that the feet were not nailed (Curtius, De clavis Domini, Antw. 1670), is amply refuted by Winer (De pedem affixione, Lips. 1845) and others. For the detailed incidents in our Saviour's case, see Jesus; and compare Hase, Leben Jesu, § 118. On the types and prophecies of it, see the Cybernet. On the resurrection of the saints, see Lightfoot, ad Matt. xxvii, 59 (there is a monograph by Gebauerstein—Disert. de Resur. sanciorum cum Chri-to, in his Comment. Miscell. No. 6). See RESURRECTION. On other concomitant prodigies, see Schütz, Hor. Hebr. et Talmud, vi, 5, 8; See DARKNESS; EARTHQUAKE. The chief ancient authorities may be found in Lipsius, De Cruce (Antwerp, 1689, 1594, and since); see also in Fabric, Bibliog. Antiquar. (Hamburg, 1760), p. 755 sq.; and especially Friedlieb, Archäologie der Leidenageschichte (Bonn, 1843). On the points in which our Lord's crucifixion differed from the ordinary Jewish customs, see Othonis Leg. Rubricinian, s. v. Supplicatio; Bynaeus, De Moro J. Christi; Vossius, Hist. Carpozov. Apparatus Crit. p. 591, sq. etc.; Salmusius, De Cruce (L. B. 1649); Bartholomius, De latere Christi aperto (L. B. 1646); also De Cruce Christi (Amst. 1670, L. B. 1688); Zobel, in the Mogas. fur bibl. Interprett, ii, 821 sq. See CROSS. CRUDEN born at Leipsic Jan. 1, 1504, of religious parents, who took pains with his education. In his sixteenth year he embraced the doctrines of the Reformation, and about 1521 he began to study theology at Wittenberg with Luther and Melancthon. He became profoundly skilled in Hebrew. In 1524 he was called to Magdeburg, where he labored for some years, and then he died. When he returned to Wittenberg, where he lectured on the Scriptures, and aided Luther in his translation of the Bible. He was very expert in short-hand writing, and to this faculty we are indebted for many of Luther's precious remains. He died at Wittenberg Nov. 16, 1552. His first book, De Religione Syriae, appeared in 1530; the Corpus Reformationis. — Middleton. Evang. Dogm. ; Adam, Vita Theologorum; Piper, Evangel. Kalender, 1854; Pressel, Caspar Crusciger nach gleichzeitigen Quellen (Elberfeld, 1882).

Cruden, Alexander, author of the well-known Concordance, was born in Aberdeen May 81, 1701, and was educated at Marischal College with a view to the ministry, but aberration of mind caused his temporary confinement in an asylum, and prevented entry on the ecclesiastical career. In 1732 he went to London, and was employed as a classical tutor and corrector of the press. He was appointed bookseller to the queen, to whom in 1737 he dedicated his Complete Concordance to the Holy Scriptures of the O. and N. Test., which first appeared in that year. Overcoming difficulties growing out of the publication of this work now increased his insanity, and led to his temporary confinement, but he escaped from Bethnal Green, and brought an action against the proprietor and physician of the asylum, who of course obtained a verdict in their favor. For the rest of his life he was permitted to remain at liberty, and he returned with zeal to his learned and severe labors, manifesting his strange eccentricity in a thousand forms—sojourned knighthood from the king, a seat in Parliament from the people of London, and courting the daughter of the lord mayor, but preserving unchanged his piety and benevolence. He made a verbal index to Milton's poems, a Scripture Dictionary, and several religious works, continuing to the last the emendation of his Concordance. Many editions of this work have since appeared. On November 1, 1770, he was found dead in his chamber in the attitude of prayer. See Concordance.

Crumbaugh, John Samuel, a Lutheran minister, was born in Frederick County, Md., November 7, 1831. He graduated at Pennsylvania College, Gettysburg, in 1851, and the same year was appointed principal of the High School, Lancaster, Pa., a position to which he seemed specially adapted. While thus engaged, he also pursued his theological studies under the direction of Rev. Dr. Baker, and in 1858 was licensed to preach the Gospel. His first and only pastoral charge was St. John's (Lutheran) Church, Lancaster. His health, never very vigorous, began to fail under its labors, to which he had so assiduously and successfully devoted himself. He resigned his charge in 1867, and accepted the offer of superintend-ent for common schools of Lancaster County, in the expectation that an opportunity would be afforded, in the active exercise required, for the resuscitation of his health. His zeal and success in the discharge of his varied and difficult duties were regarded by the board of trustees as unusual. He was more his teacher than ordinary ability, and as a teacher possessed peculiar qualifications. He died Jan. 18, 1859. "His brief life," says Dr. Burrows, "was a record of learning, usefulness, and honor." He published an address on God in History, delivered before the literary societies of Franklin and Marshall College in 1855.

Crusades, the name given to the religious wars carried on from the close of the eleventh to the close of the thirteenth century by the Christian coun-
tries of Europe against the Mohammedans for the conquest of the Holy Land. (In this article we make free use of the article in Chambers's Encyclopedia.) From an early period in the history of the Church it was considered a pious act to make a pilgrimage to the Holy Sepulchre, and to visit the various spots in which the Saviour of the world had walked. When Palestine was conquered by the Arabs in the seventh century, that fierce but generous people respected the religious spirit of the pilgrims, and allowed them to build a church and a hospital in Jerusalem. Under the Fatimides of Egypt, who conquered Syria about A.D. 900, and the Coptic Christians of Egypt and the Balkan Peninsula, the Christian residents of and the pilgrims became less favorable; but the conquest of Jerusalem in 1078, and the subjugation of the country by brutal hordes of Seljuk Turks from the Caucasus, rendered it intolerable. The news of their atrocities produced a deep sensation throughout the whole of Christendom, and kindled a general desire for the liberation of the Holy Land from the hands of the infidels. The popes encouraged this movement to the best of their ability. They saw in it an opportunity to extend the Church, to re-enforce its power, and to turn the warlike ardor of the Western princes, which so often led to conflicts between Church and State, against the infidels. The Greek emperor, Manuel VII, sent to supplicate the assistance of the great pope, Gregory VII, against the Turks, accompanying his petition with many expressions of profound respect for his holiness and the Latinate Church. Gregory cordially responded, but circumstances prevented him from ever carrying the vast designs which he entertained into execution. The idea of a crusade was, however, revived by his successor, Urban II, an able and humane man, whose sympathies were kindled by the burning zeal of Peter the Hermit, a native of Amiens, in France, who had made a pilgrimage to the Holy Land, witnessed the cruelties perpetrated by the Turks, and was now traversing Europe, preaching everywhere to crowds in the open air, and producing the most extraordinary enthusiasm by his impassioned descriptions of how pilgrims were murdered, robbed, or beaten, how shrines and holy places were desecrated, and how nothing but greed restrained the ruffian Turks. The pope made the Christian peoples pay heavy taxes for their visits to Jerusalem) from destroying the Holy Sepulchre, and extirpating every vestige of Christianity in the land.

First Crusade, 1096-1099. — When, by the addresses of Peter the Hermit and others, the feelings of Europe had been sufficiently excited, two contingents set out for the Holy Land. In 1096, one at Piacenza, in May, and the other at Clermont, in France, in November, to organize the war. At the second, at Clermont, a crusade was definitely resolved on. The pope himself delivered a stirring address to a vast multitude of clergy and laymen, and as he proceeded, the pent-up emotions of the crowd burst forth, and cries of Deus vult (God wills it) rose simultaneously from the whole audience. These words, Deus vult, by the injunction of Urban, were made the war-cry of the enterprise, and every one that embarked in it wore, as a badge, the sign of the cross; hence the name Crusade (Fr. croisade, from Lat. cruz, a cross). From all parts of Europe thousands and tens of thousands hurried at the summons of the pope to engage in the holy war. In May, 1096, the crusade was actually begun by an undisciplined force of about 20,000 foot, commanded by a Burgundian gentleman, Walter the Penniless. It marched through Hungary, but was cut to pieces by the natives of Bulgaria, only a few, among whom was Walter himself, escaping to Constantinople. The second, consisting of 40,000 men, women, and children, was led by Peter the Hermit. It followed the same route as its predecessor, and reached Constantinople greatly reduced. Here the two united, crossed the Bosphorus, and were utterly defeated by the Turks at Nicie, the capital of Bithynia.
A third expedition of a similar kind, composed of 15,000 Germans, led by a priest named Gottschalk, was slaughtered or dispersed in Hungary, which also proved the grave of the fourth, a terrible horde, consisting of about 200,000 men, recruited from France, England, Flanders, and Lorraine, who had swept along through Germany, committing horrid ravages, especially against the Jews, whom they murdered without mercy. Now, however, the real Crusaders made their appearance—the gentry, the yeomanry, and the serfs of the great baronial house, who had made their stand and were sworn to reduce at first Damascus and subsequently Ascalon, the relics of this mighty host returned to Europe.

Third Crusade, 1189–1192.—The death blow to the kingdom of Jerusalem was given by Salah-Eddin, commonly called Saladin, a young Kurdish chief, who had made his power felt in Syria, Egypt, and who aspired to the presidency of the Mohammedan world, in October, 1187, Jerusalem itself capitulating after a siege of fourteen days. The news of this led to a third crusade, the chiefs of which were Frederick I (Barbarossa), emperor of Germany, Philippe Auguste, king of France, and Richard Cour de Lion, king of England. Barbarossa took the field first in the spring of 1189, but accidentally lost his life by fever caught from bathing in the Orontes. His army, much reduced, joined the forces of the other two monarchs before Acre (or Ptolemais), which important city was immediately besieged, and after a besieging of twenty-three months, during which the army was not united among themselves. Philippe soon after returned to France; and Richard, after accomplishing prodigies of valor, which excited the admiration of the Saracens, concluded a treaty with Saladin, by which the people of the West were to be left in possession of the towns and castles which the Saracen princes had in former times possessed. On October 25, 1192, Richard set sail for Europe.

Fourth Crusade, 1202.—In 1202 a fourth expedition was determined upon by pope Innocent III, although the condition of the Latin kingdom was by no means such as to call for it. It assembled at Venice, the government of which republic, from political reasons, promised to support the movement by its navy. The army never went to Palestine at all, but preferred to take possession of the Byzantine empire. The leader of this host of pseudocrusaders, Baldwin, brother of Flanders, was seated on the throne of the East in 1204, where he and his successors maintained themselves for fifty-six years. Some writers do not number this expedition among the regular crusades, but count as the fourth crusade another expedition, in 1217, which king Andrew II of Hungary was prevailed upon by Nicholas of Cusa to lead against Greece, by the kings of Jerusalem and Cyprus, conquered a fortress on Mount Talor and some small forts, but in 1218 returned home. In the same year, count William of Holland, being allied with the kings of Jerusalem and Cyprus, landed in Egypt. He conquered in 1219 Damietta, but in 1221 this town and all other conquests were lost again.

Fifth Crusade, 1218–1229.—This was commanded by Frederick II, emperor of Germany. It began in 1228, and terminated in a treaty of ten years between that monarch and the sultan of Egypt, by which Palestine was ceded to Frederick, who, after being crowned king of Jerusalem in 1229, was permitted to retain as a prize the land of the infidel. Eight days after the capture of the city, Godfrey of Bouillon was unanimously elected king of Jerusalem.

Second Crusade, 1147.—In 1144 the principality of Edessa was conquered by the emir of Mosul, and the Christians(getClass="paragraph") first to destroy the Latin kingdoms of Syria and Palestine. Europe once more trembled with excitement. A second crusade was preached by the famous St. Bernard, abbot of Clairvaux, in Champagne; and early in 1147 two enormous armies, under the command of Louis VIII, king of France, and Conrad III, emperor of Germany, set out for the Holy Land. Their united numbers were estimated at 1,200,000 fighting-men. The expedition, nevertheless, proved a total failure. The Greek emperor, Manuel Comnenus, was hostile; and through the treachery of his emissaries the army of Conrad was all but destroyed by the Turks near Iocum, while that of Louis was wrecked in the deserts of the Plataian Mountains. The object of the Crusaders was to reduce at first Damascus and subsequently Ascalon, the relics of this mighty host returned to Europe.

Sixth Crusade, 1248.—In 1244 a new race of Turks burst into Syria, and once more the Holy Land fell into the hands of these ferocious barbarians. Jerusalem was burned and pillaged. In 1246, Louis IX of France (St. Louis) headed a crusade against them. At the head of 40,000 soldiers he embarked from Cyprus, and from there went to Egypt, conquering the coast and the town of Damietta, but when he advanced further he was utterly defeated, and taken prisoner by the sultan of Egypt. By the payment of a large ransom he obtained his liberty (1250). The Holy Land remained under the sultan of Egypt. On his return to Europe he was regarded as a sort of martyr in the cause of Christ.

Seventh Crusade, 1270.—This also was primarily un
CRUSADES

dertaken by St. Louis, but he having died at Tunis in 1270, on his way to Palestine, prince Edward of England, afterwards Edward I, who had originally intended to place himself under the command of St. Louis, marched direct for Palestine, where his rank and reputation in arms gathered round him all who were willing to go to his help. Not till after this, however, was accomplished, and Edward soon returned to England, the last of the Crusaders. Acre, Antioch, and Tripoli still continued in possession of the Christians, and were defended for some time by the Templars and other military knights; but in 1291 Acre was surrendered by the Crusaders, and the other towns followed its example, and the knights were glad to quit the country, and disperse themselves over Europe in quest of new employment, leaving Palestine in the undisturbed possession of the Saracens.

Since that time there have been no further crusades, although the popes have more than once attempted to excite the Christians to the undertaking. Some writers do not hesitate to affirm that the popes, under this device, aimed at universal power over the kings and armies employed in their service, which were numerous, because a plenary indulgence was the reward of a Crusader. The Christian princes were exhausted in the field, and the popes increased the Christendom both over clergy and people. The people sold their property for a mere trifle, or made a gift of it to monasteries and abbey.

It is computed that nearly two millions of Christians lost their lives during the crusades by slaughter, hunger, pestilence, etc.

It is impossible to overlook the fact that, in some respects, the crusades exercised a most beneficial influence on modern society. M. Guizot, in his Lectures on European Civilization, endeavors to show their design and function in the destiny of Christendom.

"To the first chroniclers," he says, "and consequently to the first Crusaders, of whom they are but the expression, Mohammedans are objects only of hatred: it is evident that those who speak of them do not know them. The historians of the later crusades speak quite differently: it is clear that they look upon them no longer as monsters; that they have to a certain extent entered into their ideas; that they have lived with them; and that relations and even a sort of sympathy, have been established between them."

Thus the minds of both, but particularly of the Crusaders, were partly delivered from those prejudices which are the offspring of ignorance. "A step was taken towards the enfranchisement of the human mind." Second, the Crusaders brought into contact with two civilizations, richer and more advanced than their own—the Greek and the Saracen; and it is beyond all question that they were mightily struck with the wealth and compatriotic refinement of the East. Thirdly, the close relationship between the Christian men of the West and the Church occasioned by the crusades enabled the former "to inspect more narrowly the policy and motives of the papal court." The result was very disastrous to that spirit of ventilation and belief on which the Church lives, and in many cases an extraordinary freedom of judgment and hardihood of opinion were induced, such as Europe had never before dreamed of. Fourthly, great social changes were brought about. A commerce between the East and West sprang up, and towns—the early homes of liberty in Europe—began to grow great and powerful. The crusades, indeed, "gave maritime commerce the strongest impulse it had ever received." As the crusades were a rising of the German nation of Europe for the triumph of the Church under the direct control of the popes, they naturally gave a powerful influence to the hierarchical plans of the popes. The emperors and kings, by following the exhortations of the popes and taking the cross, acknowledged the claims of the popes that the ecclesiastical power was higher than the secular. As the popes did not perma-

CRUSE

ally join the crusades, but were represented by legates, the system of papal legates was developed, which became in the hands of the popes a powerful weapon for curtailing the jurisdiction of archbishops and bishops. The origin of bishops in partibus infidelium can also be traced to the crusades. The raising of immense armies was a great pretext for the popes to extract large sums of money from princes and nations. The warlike enthusiasm against the Mohammedans kindled the popular fanaticism against all heretics, and stimulated the bloody persecutions of the Cathari, Waldenses, and other sects in Western Europe.

The influence of the crusades upon scientific theology was only indirect. The better acquaintance with the philosophical and theological literature of the Greek Church and the Mohammedans could but yield a favorable influence. In particular, the study of Aristotle was greatly promoted by the crusades, and several of his works were then first made known in the western countries of Europe. See Chambers, Cyclopædia, s. v.; Brockhaus, Conversations-Lex. ix, 76; Christian Remembrancer, xlv, 5; Herzog, Real-Encyclop. viii, 65; Mosheim, Church History, ii, 112, 141, 238, etc.; Milman, Latin Christianity, vol. iv; Wilken, Geschichte der Kreuzzüge (Leips. 1861, 3 vols.); Michel, Histoire des croisades (Paris, 1843); translated by Robson, London, 8 vols. 12mo, (1854); Mills, History of the Crusades (London, 1829, 4th ed., 2 vols. 8vo); Knightly, The Crusades (London, 1847, 2 vols. 12mo); Hume, History of England, 1, 226 et al.; 2, 60 et al.; Haeckel, Ch. Hist. p. 196, 229, 219; Sybel, Geschichte des ersten Kreuzzuges (Leips., 1846); Eggenberger, Stundenspiegel, zwischen 1866. A list of writers on the subject is given by Michaud, Bibliothèque des Croisades (Paris, 1830, 4 vols.).

Cruse. This now obsolete English word denotes a small vessel for holding water or other liquids. Three Hebrew words are thus translated in the A. V. See CUR.

1. דעבש, teppachath (lit. something spreading out), is applied to a utensil (usually considered a flask, but more probably a shallow cup) for holding water (1 Sam. xxvi, 12, 12, 16; 1 Kings xix, 6) or oil (1 Kings xvii, 12, 14, 16). Some few to the nature of this vessel is perhaps afforded by its mention as being full of water at the head of Saul when on his night expedition after David (1 Sam. xxvi, 12, 16), and also of Elijah (1 Kings xix, 6). In a similar case in the present day this kind of globular vessel is brought into contact with two civilizations, richer and more advanced than their own—the Greek and the Saracen; and it is beyond all question that they were mightily struck with the wealth and compatriotic refinement of the East. Thirdly, the close relationship between the Christian men of the West and the Church occasioned by the crusades enabled the former "to inspect more narrowly the policy and motives of the papal court." The result was very disastrous to that spirit of ventilation and belief on which the Church lives, and in many cases an extraordinary freedom of judgment and hardihood of opinion were induced, such as Europe had never before dreamed of. Fourthly, great social changes were brought about. A commerce between the East and West sprang up, and towns—the early homes of liberty in Europe—began to grow great and powerful. The crusades, indeed, "gave maritime commerce the strongest impulse it had ever received." As the crusades were a rising of the German nation of Europe for the triumph of the Church under the direct control of the popes, they naturally gave a powerful influence to the hierarchical plans of the popes. The emperors and kings, by following the exhortations of the popes and taking the cross, acknowledged the claims of the popes that the ecclesiastical power was higher than the secular. As the popes did not per-

measured by the falling of water from one vessel into another, the undermost vessel containing a piece of cork, the different altitudes of which, as it gradually rose upon the rising water, marked the progress of time. But we cannot bar 'time' in this manner, as much as the measures were known at that early period. It is usual for persons in the East in the present day, when they travel, to take with them a flask for holding water, and also, when they sleep in the open air, to have a small vessel of water within their reach (Thomson, Land and Book, ii, 21). These flasks are of various forms, and are sometimes covered with a wicker-case, See Dish.

2. प्राप्त, bakkub' (from the gargling sound in emptying), perhaps a bottle (as it is translated in Jer. xix, 1, 10) for holding any liquid, as honey (1 Kings xiv, 8), but more probably a pitcher (q. v.).

3. γονή, telesochis' (lit. that it which fluids are poured out), a platter (2 Kings ii, 20). This was probably a flat metal saucer of the form still common in the East. It occurs in 2 Kings ii, 20, "cruse;" xxii, 13, "dish;" 2 Chron. xxxv, 13, "pan;" also Prov. xix, 24; xxvi, 15, where the figure is obscured by the choice of the word "bosom." See PAN; PLATTER, etc.

Cruse, Christian F., D.D., a minister of the Protestant Episcopal Church, was born June 27, 1794, in Philadelphia, of Lutheran parentage. He entered the University of Pennsylvania in 1811, and graduated Jan. 10, 1815, with distinguished honors. He was appointed professor in the University in 1831, and resigned in 1838. He was ordained by bishop White about 1822; became rector of Trinity Parish, Fishkill, N.Y., in April, 1846, but resigned the cure in 1851, and afterwards he removed to Chicago. He soon after removed to the General Theological Seminary, where, as librarian, he had ample opportunities for those studies in which he was so successful. In the ancient languages—Syriac, Hebrew, and Greek—Dr. Cruse was very well informed. He translated and edited Seiss's Church History, and his edition is the best in English. He died in New York October 5, 1865.—Church Eco. Review, January, 1866.

Ctenius, Christian August, a German theologian, was born at Leuna, near Merseburg, January 10, 1715. He studied at Leipzig, where he afterwards became professor of philosophy in 1744, of theology in 1750, and primarius of theology in 1757. He died October 27, 1793. Dissatisfied with the existing philosophical systems, he attempted a new one, which he sought to bring into harmony with orthodox theology. The school which he represented in Leipzig may be designated by the name of a Philosophico-Biblical Realism. As a philosopher, he was one of the most important proponents of the idealism and mechanism of the Leibnitz-Wolffian philosophy, while, as a Bible theologian, he maintained the historical and literal as opposed to an exclusively spiritualistic exegesis. In morals he drew his conclusions, not from the conceptions of the intellect, but the suggestions of the will and conscience. He derived the notion of duty from moral necessity or obligation. He asserted the free-agency of the human mind (which he contemplated principally in a negative point of view, i.e. as uninfluenced by physical or material laws), and developed the formal conditions of our free-will actions and the motives of them. The principle of a moral law led him to a deistic theory of Legislation, and consequently to the hypothesis which ascribes all moral obligations and laws to the divine authority, deducing, as the schoolmen had done, the principles of morals from the will of God. That which is consistent with the nature of the divine perfections, and according to the will of God, is good, and becomes obligatory on all rational beings. God demands of his rational creation, in the first place, that they should be good; and also wills their happiness as a consequence of virtue.' (Tennemann). His principal works are: Logik o. d. Wey u. Gewissheit u. Zwecklosigkeit d. menschlichen Erkenntniss (Lpz. 1747; 2 ed. 1762); Ent- sorfy d. naturliche Moral (Lpz. 1746; 3 ed. 1766); Anweisung, vervoirsig v. leben (Lpz. 1747; 3 ed. 1767); Anleitung, u. naturliche Begrundenord. ordentlich u. vorichtig nachzudenken (Lpz. 1749, 2 vols., 1772); Begriff d. christlichen Moraltheil (Lpz. 1772, 2 vols.). See Pierer, Universal-Lexikon, s. v.; Kah- nis, German Protestantism (Edinb. 1856, 12mo, p. 107); Delitzsch, Geschichte der europäischen Theologie. Fort- bildung durch Chr. Ctenius, etc. (Lpz. 1845); Tennen- mann, Manual Hist. Phil. § 368.

Cryer, Thomas, a Wesleyan missionary of rare piety and usefulness, was born at Bingley, in Yorkshire, in 1800. At 20 he was converted, and was called into the ministry about seven years after, and labored for a few months in an English circuit. He was then appointed a missionary to India, and embarked for that country in 1829. For 22 years he labored for the salvation of the heathen, and his name will be long remembered in the East. In spite of opposition and of the long delay of prosperity, which is the great and peculiar trial of the Eastern missionary—in spite of the most severe personal and family trials—his heart was undaunted and his faith unsubdued. Few of his fellow-missionaries excelled him in power of utterance, in the adroitness and effect with which he exposed the sophisms of the Brahmin, or in searching and persuasive appeals to the conscience. He "determined to know nothing but Christ and him crucified." Such a minister could hardly fall of winning souls; and many will be the crown of his rejoicing in the day of Jesus Christ, not only among the natives of India, but also among the Europeans resident in that country. He died of cholera, October 5, 1852.—Wesleyan Minutes, 1853.

Cryp (Gr. κρύπτω, a concealed place; Lat. crypta; Fr. crypte). I. Among the ancient Greeks and Romans a crypt was primarily a long, narrow gallery, above the level of the ground, surrounding a courtyard, and having walls on both of its sides, with windows in the wall facing the court. These crypts had often a portico lining them or running between them and the open court. They served as a place of promenade during the hot or wet weather. They were sometimes finally so secured that they were even built for the officers near the Pretorian camps in Rome. Crypts similar in construction and location were built for storing wines, vegetables, and other articles, like the modern subterranean cellars. When all the windows were closed they were dark and cool, and hence the word was applied even by the ancients to any dark and long chamber or passage, as the dark stables where horses were kept under the amphitheatre, the claustra maxima at Rome, the tunnel at Naples, and to a grotto where Quartiella offered sacrifice.

II. The word crypt was applied by the early Christians to those subterranean burial-places which were afterwards called Catacombs (q. v.). The term was later limited to the larger chambers in the Catacombs where one or more martyrs were buried. These crypts were larger than the other rooms in the Catacombs, and were often ornamented, and devoted to divine worship. For this purpose they were double, one part serving for the men and the other for the women, with small antechambers for the catechumens. Some of these crypts had openings into the fields above.

III. When persecution ceased, and Christians built church edifices above ground, the custom was adopted of placing the remains of martyrs—later of archbishops, bishops, abbots, and other high church officials—in crypts under the intersection of the cross in the plan of the church. In the basilian period of architecture
CRYSTAL-CAST CONTROVERSY 597

CRYPTO-CALVINISTIC CONTROVERSY, the name given to a dispute within the Lutheran Church of Germany (1552–1574) concerning the doctrine of the Lord's Supper. The followers of the Melanchthonian doctrine, as distinguished from the strict Lutherans, were styled Crypto-Calvinists (also Philippists, Melancthonians).

1. Melancthon, it is well known, earnestly desired a union of the Lutheran and Calvinistic divisions of the Protestant body. His tendency towards the Calvinistic view of the Lord's Supper was early shown in the difference between the Augsburg Confession in 1530 and the Formula of Concord in 1577. In the confessions of the 1554, he states that the body and blood of Christ are truly present in the Lord's Supper (in the form of bread and wine), and are there distributed and received (distributio sustentat), therefore the opposite doctrine is rejected. In the concordia (Latin of 1540) the reading is "cum pane et vino praebentur corpus et sanguis Christi sustentato in Domino," the condemnation of the "opposite doctrine," i.e., the Zwinglian, is omitted. This alteration did not meet the approval of Luther, who nevertheless tolerated Melancthon's change of doctrine. But the Emperor Henry VIII granted some measures to the Zwinglians: toleration; and during Melancthon's lifetime he was held by many to be a concealed (crypto-) Calvinist. The truth seems to be fairly stated by Hase, as follows: "As Melancthon was convinced that neither Luther nor Calvin's doctrine of the sacrament was an inexpressible bond to saving communion with Christ, he thought he was bound to allow both of them to exist in the Church. But when the doctrine of the omnipresence of Christ's body (ubiquity, q.v.) was proposed as the only saving basis of the Holy Supper, and made by Brent (see BRENTZIUS), the law of the Church in Wurtemberg, he expressed disapproval of the doctrine of the 'immaterial body being introduced into the symbols of faith' (Church History, § 350). Melancthon and Luther never quarrelled on the subject; but the controversy, even during Melancthon's lifetime, began to be bitter. He did not live, however, to see the fierce strife which finally arose on the subject within the bosom of the Church (died 1560).

2. But the controversy, as such, began in the year 1559, when Joachim Westphal, a preacher in Hamburg, proclaimed the Calvinistic doctrine of the Lord's Supper heretical. The controversy was especially violent at Tilsit (1560), between Heshuusius and Albert Hardenberg, cathedral preacher, who acted for the Calvinistic doctrine, and it went on until Hardenberg was dismissed from his position. Shortly after Heshuusius shared a like fate. In 1568 Heshuusius was made general superintendent at Heidelberg, and he soon detected "Crypto-Calvinism" in a dean of Wilhem Kitchen in Hesse, and finally expelled, and Frederick III, elector of the Palatinate, went over to the Reformed Church. In Wurtemberg Brentz urged the ultra-Lutheran doctrine (see above); but Christoph, duke of Wurtemberg, endeavored to lay the strain, and finally succeeded, in 1561, at the Freiburgtag (Vest of Princes) at Naumburg, in obtaining the recognition of the altered Augsburg Confession, the elector Frederick III of the Palatinate withdrew from the controversy, and introduced, in 1568, in his dominions a mixed doctrine of Melancthonian tendency, by the incorporation of the Heidelberg Catechism into the state law.

In the Saxo electorate the Wittenberg and Leip- zig theologians undertook a like combination of the doctrines. Kaspar Peucer, son-in-law of Melancthon, Cracow, Schütz, and Stössel; G. Major, P. Eber, Paul Crell, and, later, P. Cruciger, Pezel, Moller, and others, in their writings, and also in the well-known Katechismus, favored the view, and these Melancthonian theologians were called Philippists. The Thuringian theologians in Jena, especially Flacius, also Wiegend, Cölestin, Kirchner, and others, were strict Lutherans, and bitterly opposed the electorate Saxons. A conference between the Wittenberg and Jena theologians was held at Altenburg (October, 1568, to March, 1569), in which very intemperate accusations were made against the Philippists. The rupture was widened. The electoral duke Augustus of Saxony called his theologians together in Dresden on the 7–10th of October, 1571. They agreed upon the Consensus Dresdensis, and the Wittenberg Catechism, which opposed the doctrine of ubiquity, but used Lutheran language in moderate terms. Melancthonian theologians were also thought that the strife was ended. But in 1574 appeared an anonymous work entitled Exequies perspicuus et ferme integra controversiae de sacra com, which strongly advocated the Calvinistic view of the Supper. (It has been shown by Hepper, Geschichte des deutschen, Prot. ii. 469, that this work was written by the physician Joachim Carens (died 1578), and was not originally intended for publication.) The work caused a bitter renewal of the controversy, and the elector determined to suppress Calvinism, and he deposed or imprisoned the leaders, and commanded submission to the Consensus, on pain of excommunication. Peucer was imprisoned for twelve years, and in 1586 the elector died, and his son, Christian I, succeeded him. Chancellor Nicolas Crell (q.v.) and others influenced him to favor the Calvinistic view. After his death, the duke Frederick William of Saxo-Weimar, who was regent, put down Philippism by brute force, even executing Crell in 1601. See Lässer, Histor. motu- um, 1728; Hepper, Geschichte des deutschen Protestantismus, 1862, 2 vols.; Zeitschr. f. d. hist. Theol. 1865, iv; Giselaer, Church History (Smith's), iv, §§ 37, 38; Gass, Geschichte d. prot. Theol. i, 63 sq.; Hagenbach, History of Doctrines, § 215; Herzog, Real-Enzyklop. vii, 127. Crystal. These medieval words which appear to have this meaning in the Bible. See Isa. Par. 1, n. 11.

1. ιρα, ιρά "properly ice, as it is rendered Job vi, 16; xxxii, 29; "frost." Gen. xxxi, 40; Job xxxvii, 10; Jer. xxxvi, 80;Sept. κρύσταλλος," occurs in Ezek. 1, 22, where the epithet "terrible" seems to be used by way of distinction from the ordinary signification of the word.

2. ιαπής, ιαπίς (proper ice; Sept. γαλάς), occurs only in Job xxxvii, 18, where it is rendered "pears" in our version.

3. ιαςίτιστς, ιαςίκις (lit. what is pure or transpa- rent; Sept. ἀητός), occurs only in Job xviii, 17, where some regard it as denoting glass.

4. Κρύσταλλοσ (prop. ice) occurs in Rev. iv, 6; xxi, 11; xxii, 1, evidently in the sense of crystal, and in such connections as to identify it in a good degree with the preceding terms.

5. Crystal. The word may be held to be only pure water, conveyed by great length of time into ice harder than the common (Didot, Sic, ii, 62; Plin. Hist. Nat. xxxvii, 2), and hence the Greek word for it, in its more proper signification, also signifies ice. From this it necessarily followed that crystal could only be produced in the regions of perpetual ice, and this was accordingly the ancient belief; but we now know that it is found
CUBIT

In the warmest regions. Theophrastus (54) reckons crystal among the pellucid stones used for engraved seals. In common parlance we apply the term crystal (as the ancients apparently did) to a glass-like transparent stone, commonly of a hexagonal form, which, from being found in rocks, is called by mineralogists rock-crystal. It is a stone of the flint family, the most refined kind of quartz." See GLASS.

Cubit (in Heb. פִּקְדֵּשׁ, ammah', lit. mother, i. e. of the arm, the fore-arm; Greek πυχές, an id) is a word derived immediately from the Latin cubitus, the lower arm. The length of the cubit has varied in different nations and at different times. Derived as the measure is from a part of the human body, and as the human stature has been of very dissimilar length, the cubit must of necessity have been various. The lower arm, moreover, may take in the entire length from the elbow to the tip of the third or longest finger, or it may be considered as extending from the elbow merely to the root of the hand at the wrist, omitting the whole length of the hand itself. If the definition of Celsus (viii, 1) is taken, and the cubit is identified with the ulna, the under and longer of the two bones of which the arm consists, still a fixed and invariable measure is not gained. That the cubit among the Hebrews was derived as a measure from the human body is clear from Deut. iii, 15—"after the length of a man.

(From Prof. Böttcher, Proben allerzeiten. Schrift., p. 288.) But it is difficult to determine whether this cubit was understood as extending to the wrist or the end of the third finger. As, however, the latter seems most natural, since men, when ignorant of anatomy, and seeking in their own frames standards of measure, were likely to take both the entire foot and the entire forearm, the probability is that the longer was the original cubit, namely, the length from the elbow to the extremity of the longest finger. The Egyptian cubit, which it is likely the Hebrews would adopt, consisting of six hand-breaths, is found on the ruins of Memphis (Journal des Sciences, 1829, Nov., Dec., comp. Herod. ii, 149). The Rabbis also (Mishna, Chidin, xxvii, 9) assign six hand-breaths to the Mosaic cubit. By comparing Josephus (Ant. iii, 6, 6) with Exod. xxvi, 10, it will, moreover, be found that the weight of his authority is in the same scale. According to him, a cubit is equal to two spans. Now a span is equal to three hand-breaths (Schmidt, Bibl. Mathemat. p. 117; Eichrodt, Poen. Zool., p. 68). A cubit, therefore, is equal to six hand-breaths. The hand-breath is found as a measure in 1 Kings vii, 26; comp. Jer. iii, 21. In the latter passage the finger-breath is another measure. The span also occurs Exod. xxviii, 16. So that, it appears, measures of length were, for the most part, borrowed by the Hebrews from members of the human body. Still no absolute and invariable standard presents itself. If the question, What is a hand or finger-breath? be asked, the answer can be only an approximation to fact. If, however, the palm or hand-breath be taken at 6¾ inches, then the cubit will amount to 21 inches. In addition to the common cubit, the Egyptians had a longer one of six palms, or 44 inches. The Hebrews also have been thought to have had a longer cubit, for in Ezek. xi, 5, we read of a cubit which seems to be an ordinary "cubit and an hand-breath;" see also Ezek. xiii, 13, where it is expressly said, "the cubit is a cubit and an hand-breath."

The prophet has been supposed to refer here to the then current Babylonian cubit, a measure which it is thought the Jews borrowed during the period of their captivity. The Rabbins make a distinction between the common cubit of five hand-breaths and the sacred cubit of six hand-breaths—a distinction which is held to be insufficiently supported by De Wette (Archäologie, p. 178). Consult Lamy, De Talmudica, c. 8; Carpzov, Apparat, p. 676.—Kitto, s. v. An ancient Egyptian cubit now in the Royal Museum of Paris measures 20.684 inches. The Hebrew cubit, according to Bishop Cumberland and M. Pelletrier, is twenty-one inches; and the Talmudists observe that the Hebrew cubit (meaning probably the longer or sacred measure) was larger by one quarter than the Roman, which would make it contain 21.848 inches. Many writers fix it at eighteen inches, confounding it with the Greek and Roman measure of a foot and a half. The most approved computation assigns each kind of Jewish cubits the same length as the corresponding Egyptian, namely, 20.24 inches for the ordinary one, and 21.888 for the sacred, which is confirmed by the mean length of several ancient cubits marked on the Egyptian monuments (Wilkinson's Anc. Egyptians, 2d series, i, 80), by a comparison of the dimensions of the Pyramids with those given in ancient authorities (Vitry's Pyramids of Geth, iii, 104, 105), and which we shall find to correspond remarkably with the Talmudical statement of the circuit of the Temple. In a later edition of his Ancient Egyptians, however ("Popular Account," ii, 296), Wilkinson makes the ordinary Egyptian cubit to have consisted of seven palms or twenty-eight digits, and gives exact computations of its length, varying from 20.4729 to 20.7488 inches, which yield an average of 20.6180 inches; and he states the cubit on the Nilometer at Elephantine, from actual measurement, to be 20.625 inches. This last is perhaps the most accurate dimension attainable for the standard cubit. (See Böckh, Ativoll. Unternehm. Berl. 1858, p. 12; Thenius, in the Stud. u. Krit. 1846, i, 272, ii, 229; Lepsius, Die alt-aegyptische Eile, Berl. 1865.) See MEASUREMENT.

In Judg. iii, 16, the term translated "cubit" is in the original תְּנֶקֶד, go'ed (literally, a cut), a rod or staff, as the measure of a cubit. In the New Testament our Lord characteristically employs the term cubit (Matt. xxvii, 5; Luke xii, 25) for the enforcement of a moral and spiritual lesson. The term also occurs in John xxii, 8, and in Rev. xxi, 17; and in the Apocalypse (2 Macc. xiii, 5). See MEASUREMENT.

CUCUMBER. See KAUTZ.

CUCOOS (קַכָּפָ, shach'kaph, prob. from its leesness; Sept. and Vulg. seco-gall; A.V. "cuckow") occurs only in Lev. xi, 16; Deut. xiv, 15, among birds of prey not clearly identified, but declared to be unclean. None of the various ancient or modern versions of this word give a bird possessing any affinity with the other species enumerated; and although the cuckoo is a winter and spring bird, distinctly heard, it appears, by Mr. Buckingham, early in April, while crossing the mountains between Damascus and Sidon, at that time covered with snow, it could scarcely deserve to be included in the prohibited list, for the species is everywhere scarce. The identifications proposed by late writers on the subject all equally lack a sufficient foundation. Bochart (Hieroz. vol. ii, c. 18) thinks the seco-gall is meant. Upon the whole, while so much obscurity still remains on the subject, the interpretation of "cuckoo" may as well remain undisturbed. (See Penney Cephalopoda, s. v.) The word shachkaph was a

Common Cuckoo (Cuculus canorus)
good imitation of the dissyllable voice of this bird, as our word cuckoo, variously repeated in all European languages, and yakoob, which is the bird is supposed by the Arabs to utter. The latter, indeed, call it tar el-yakub, or "Jacob's bird," on this account (Kittto, Phys. Hist. of Pales. p. ceculii). The common cuckoo (Cuculus canorus) is a bird of considerable size, unfit for food, because habitually feeding on reptiles and large insects. It is spread over the whole of Asia and Africa as well as Europe, migrating northward in spring, and probably not breeding in Palestine, although passing the winter there. The American cuckoo (ErythropsiaAmericana), often called "cow-bird," is a different species of the family of the Cuculidae, all the members of which are distinguished by laying their eggs in the nests of other birds, and rearing no young themselves.

Eastern Black Cuckoo (Budorcanus Orientalis).

Cucullus. See Cowl.

Cucumber is the translation of מַקְפָּל, mikhaša, (so called probably from its difficulty of digestion; Sept. siexou), in our Auth. Vers., and the correctness of this rendering has been almost universally admitted. It occurs in Num. 12, 5, where the Israelites, when in the desert, express their longings for the melons and the cucumbers of Egypt. The Heb. is so similar to the Arabic kisna, that it can be very little doubt of their both meaning the same thing. Celcus (Hierob. ii, 247) gives beta, kast, and kinsia as different pronunciations of the same word in different Oriental languages. It does not follow that these names always indicate exactly the same species, since in the different countries they would probably be applied to the kinds of cucumber most common, or perhaps to those which were most esteemed in particular localities. Thus, in Egypt (see Prosp. Alpin. Plant. Ec. c. 38, p. 54), the name beta appears to be applied to the species which is called Cucumis chathe by botanists, and "queen of cucumbers" by Hasselquist, who describes it as the most highly esteemed of all those cultivated in Egypt (Trav. p. 258). See Melon. In India the name kinsa is applied by the Mohammedans to the Cucumis sativus, or the common ashke of the natives, while in Persia and Syria the same name would probably be applied only to the common cucumber, or Cucumis sativus, as the two preceding species are not likely to

CUDWORTH

be much known in either country. The Talmudists (Matt. 1, 4; T.umoth, i, 6; vi, 6; Baba Mes. vii, 5) have נָפַל, and the Phoenicians had the word Konaljcaup (Disoc. iv, 152), which is probably נָפַל סיָנָה, "cucumber of Egypt." It is also a name for the same plant. (For an account of the cucumbers of Syria and Egypt, see Forskal, Flora Egypt. p. 103; Celsi Hierob. ii, 243.) See Botany.

All travellers in the East notice the extensive cultivation and consumption of cucumbers and other vegetables of the same tribe, especially where there is any moisture of soil, or the possibility of irrigation (see Burchardt, Arabic Proverbs. No. 660). Thus, even in the driest parts, the neighborhood of a well is often occupied by a field of cucurbiteous plants, generally with a man or boy set to guard it from plunder, perched up on a temporary scaffolding, with a slight protection from the sun, where he may himself be safe from the attacks of the more powerful wild animals. That such plants appear to have been similarly cultivated among the Hebrews is evident from Isa. 1, 8, "The daughter of Zion is left like a cottage in a vineyard, like a lodge in a garden of cucumbers" (מַקְפָּל, mikhaša, Sept. σκυπήνα, as well as from Baruch vi, 70, "as a scarecrow in a garden of cucumbers (σκυπήνα) keepeth nothing, so are their gods of wood." See Garden; Cottage.

Cud (ינָה, gera'h; rumination), the pellet of half-chewed food brought up from the first stomach of ruminant animals to be thoroughly masticated (Lev. xi, 5-7; Deut. xiv, 6-8). See Clean (Animals).

Cudworth, Ralph, an eminent English divine and philosopher, was born at Aller, Somersetshire, in 1617, and entered Emmanuel College, Cambridge, in 1639, became M.A. 1639, rector of N. Cadbury 1641, and master of Clare Hall 1644. In 1645 he became professor of Hebrew; in 1654, master of Christ Col-
CUDWORTH 600

CULEES

lege; in 1662, vicar of Ashwell; and in 1678, prebendary of Gloucester. He died in 1688. Cudworth was a R. Birch, Life of Cudworth (prefixed to most editions of his works); Engl. Cyclopædia; Mackintosh, Ethical Philosophy, p. 78.

Cujaciu (properly De Cujcius), Jacques, a distinguished teacher of canon law, was born in 1522, at Toulouse. He became in 1554 a professor of law at Cahors, in 1556 at Bourges, in 1567 at Valence, and in 1579 again at Bourges. The civil war in France induced him in 1576 to go to Paris, where he also received permission to give lectures on law. In 1577 he once more returned to Bourges, where he thenceforth remained, notwithstanding the most profitable offers from the University of Bologna. He died Oct. 4, 1590. Cujacius was the most famous teacher of the Roman law in the sixteenth century, and his reputation attracted large numbers of students from all countries of Europe. He corrected numerous passages of the Roman law-books from the more than 500 manuscripts which he had collected, and a great many obscure points were by him for the first time elucidated. He gained the love of the thousands of his pupils to a rare degree, and his affectionate attention to their comfort was paid to the welfare of each. From the theological controversies of his time he cautiously abstained, though he was always a steadfast adherent of the cause of Henry IV. In his will he referred his wife and his daughter to the letter of the pure Bible, without note or commentary, as the rule of their faith. He published himself a collection of his works (Paris, 1577), which, however, is not complete. The editions by Colombe (Paris, 1617 and 1684) does likewise not contain all the works of Cujacius. A complete edition was prepared by Fabroti (Paris, 1658, 10 vols.), which has several times been reprinted, with some additions (latest edition, Prato, 13 vols. 1886). A life of Cujacius was published in 1690 by Pappius Masson, but the best account of Cujacius is by Saint Priest (appendix to his work Histoire du droit Romains, Paris, 1821; an extract from this, in German, by Spangenberg, Cujacius u. seine Zeitgenossen, Leipzig, 1822).—Broekhaus, Conversations-Lex. s. v.; Wetzer u. Weite, Kirch.-Lex. ii. 938.

Culbertson, Matthew Simpson, D.D., a Presbyterian minister and missionary, was born at Chambersburg, Pa., Jan. 18, 1819, and was educated at the Military Academy, West Point. While serving as lieutenant of artillery he made a religious profession, and went to the theological seminary at Princeton, where he graduated in 1844. In that year he was licensed and ordained as missionary to China. He labored, togethe with Bridgegam, for several years in preparing a revised translation of the Scriptures in Chinese; and wrote Darkness in the Far East, or Religious Notions and Popular Superstitions in North China (N. Y. 1857, 19mo). He died of cholera, Aug., 1862.—Wilson, Presb. Almanac, 1863, p. 168.

Culees. The name Culees is variously derived and explained by several different authorities. Eubard gives "Kile De"—a man of God; Dr. Braun, "Gille De"—"servant of God." But the latest, and perhaps beat authority, gives us Culeakk as the only name of the Culees known among native Celta. This word means "a secluded corner"; a "Culees" is "the man of the reasess." This accurately enough describes the Culees' mode of life; though not monks, they were in a certain sense recluse.

The Scottish Church, when it first meets the eye of civilization, is not Romish, nor even prelatical. When the monk Augustine, his forty sons in the time of the Saxo Heptarchy, came over to Britain under the auspices of Gregory, the bishop of Rome, to convert the barbarian Saxons, he found the northern part of the island already well-nigh filled with Christians and Christian institutions. These Chris-
tians were the Culdees, whose chief seat was the little island of Hi or Iona, on the western coast of Scotland. An Irish presbyter, Columba, feeling himself stirred with missionary zeal, and doubtless knowing the most blessed condition of the Western Scots and Picts in the year 656, took with him twelve other missionaries, and passed over to Scotland. They fixed their settlement on the little island just named, and from that point became the missionaries of all Scotland, and even penetrated into England. Before the end of the 6th century they had filled the country with their influence. Their apostle and bishop, they said, was Christ. Invited to England by Oswald, king of Northumberland, to preach the Gospel to his people, they sent Cormân, who failed because of too great austerity of behavior, and then Aidan, who, without knowing the people's language, succeeded, and proved himself one of the noblest of missionaries. The people in the south of England converted by Augustine and his assistants, and those in the north who had been won by Culdee labor, soon met, as Christian conquest advanced from both sides; and when they came together, it was soon seen that Roman and Culdee Christianity differed in many respects. The Culdees, for the most part, had a simple and primitive form of Christianity, while Rome presented a vast accumulation of superstitions, and wasarrayed in her well-known pomp. The result was, that in England the Culdee soon gave place to the Roman, and he became the home. Columba did not doubt that he chose the little island of Iona as a place of safety from barbarian attack, as also because it was near to Ireland, whence he had brought his divine message. Besides, the loneliness of a small island in the sea was favorable to meditation, and accorded with the ascetic tendencies which at least touched the best men of those ages. The institution of Iona has been called a monastery, but, in truth, it had no claim to that name. True, the members of the community lived in cells, to which they retired for devotion and study, but this no more made them monks than a similar life makes monks of theological students of our own day. The Culdees recluse were not pledged to celibacy; many of them were married; many of them were succeeded in office by their own sons; they were not dedicated for life to their calling, but were free at any time to change it for another. Their families did not live within the sacred enclosure, but the husbands, the wives, and the children, shared the same house and spent the rest of their time with their families. Nor, indeed, was the aim of the institution at all kindred to that of monachism. The monk generally retires for his own improvement solely; he is weary of the world, and will have no more contact with it. He renounces it. The Culdee went to Iona that it might, with meditation, study, and prayer, he might fit himself for going out into the world as a missionary. Indeed, Iona was a great mission institute, where preachers were trained who evangelized the rude tribes of Scotland in a very short time. To have done such a work as this in less than half a century implies apostolic activity, but it must be admitted that the principal men, they must have been much more out of their cells than in them. Traces of the schools and churches they established are found all over Scotland. The reason of this freedom from Romish asceticism may be found, at least in part, in the doctrines of these men. They held to the one Godhead, to the sainthood, to workship, to no works of supererogation, to no auricular confession, or penance, or absolution; no mass, no transubstantiation, no "chrism" in baptism, no priesthood, and no third order (bishops). They knew nothing of any authoritative rule except the Holy Scriptures. The Scriptures, as a rule, were made by the missionaries a subject of close and constant study. Columba's own home work and that of his disciples was transcribing the Scriptures. These early missionaries were thoroughly Biblical. Columba's life by Adamnan represents him in almost every page as familiar with the Word of God, and ready to quote it on all occasions as of supreme authority. . . . The greatest exponents of the truth of the Gospel of salvation. It was "terebinth Domi," the Word of God. Adamnan says of Columba that from his boyhood he was instructed in the love of Christ. "The spirit of the Culdean Church may suitably and rightfully be described as an evangelical spirit, because it was free and independent of Rome; and when it was summed up in the statements of the Creed, it always and obstinately repudiated its authority, under appeal to the single and supreme authority of holy Scripture; but, above all, because in its inner life it was penetrated throughout by the main principles of the evangelical Church. The Culdees read and understood the Scriptures in their original texts. Wherever they came they translated them orally and in writing into the language of the country, explaining them to the inhabitants, exhorting them to diligent and regular Bible reading. But the Scriptures were more to them than a codex of authoritative doctrines of faith. With them, the life of Christ was lived in the most earnest manner they reached the natural, inborn inability of man for good; the atoning death of Christ; justification without all merit of works; the worthlessness, especially, of all meretricious works; and the necessity of the new birth" (Ebrard). These views of life and thought explain why the Culdees were missionaries rather than monks. The truths of the Gospel, pure and simple, just as they warmed the hearts of the apostles, had possession of them, and all their work was to make men feel and accept them. Their theory of Church government was very simple. The institution at Iona was under the presidency of a presbyter called a presbyter abbot, who had associated with him twelve other presbyters. In case of a vacancy in the headship, these brethren elected their abbot. That he was a presbyter simply there can be no doubt. Bede, who belonged to the Romish Church, himself mentions it as a very strange thing that a man who is merely a presbyter should govern a diocese, and have even bishops under him." The truth is, that the missionaries sent out from these Culdee seminaries were appointed and ordained pastors of the churches they founded, and the pastor of the church was the overseer of it, i.e., the bishop, who was at the same time a presbyter. He ordained an elder, but, by appointment to a parish, had made him a bishop. They evidently knew nothing of the distinction between the order of presbyter and that of bishop. After the success of Augustine and his monks in England, the Culdees had shut themselves up within the limits of Scotland, and had resisted for centuries all the efforts of Rome to win them over. At last, however, they were overthrown by their own rulers. Margaret, the daughter of William the Conqueror, the queen of Malcolm Canmore, devoted to the cause of Rome, notable for piety, of powerful mind and skillful in the management of others, set her heart upon converting the Culdees for the Romish Church in Scotland. She got the Culdee presbyters together, and for three days discussed the matter with them in person. She succeeded by persuasion and artifice. This was in the latter part of the 11th century. It was not, however, till the 18th century that Culdeism was completely extinguished. In the eleventh century it was, and is, more than probable that Culdeism, with its simple and powerful Gospel influence, continued to live in the hearts of the people long after its forms and public ministrations had been buried beneath the finery of triumphant Romanism. There was a readiness among the people, in that early age, to accept anything that came, which, together with their sturdy evangelical character, reminds the historical reader of Culdeism. Literature.—McLauchlan, The Early Scottish Church.

Culon (Κολύών v. r. Κούλον, Jerome Coulon), the fifth named of the group of eleven cities added by the Septuagint to those in the mountains of Judah (between ver. 59 and 69 of Josh. xv); thought to be the modern Kalwnek, a trace of which appears in the notice of the Crusades (Wilken, *Gesch. der Kreuz.*, iv. 560), a village with ruins about 1½ W. of Jerusalem towards Jaffa (Van de Velde, *Memoir*, p. 805); but, as this lay beyond the border of Judah (Schwarz, *Palest.*, p. 118), the authenticity of the names in the Sept. being, moreover, dubious (Wilson, *Edde Lands.*, ii. 266 n.), the place perhaps only represents some station or *Colonia* of the Romans (Robinson, *Later Rec.* p. 158).

Cultus. See Worship.

Culverwell, Nathaniel, M.A., a pious and learned writer. He was fellow of Emmanuel College, Cambridge, and died about 1650. We have of him an *Elegant and Learned Discourse on the Light of Nature* (on Prov. xx. 27), with several other treatises (Lond. 1661, 4to). The *Light of Nature abounds in striking thoughts, and has passages of rare eloquence*.

Cumans, Ventidius, procurator of Judaea immediately next to Alexander (a short time after Fadus), and partly in conjunction with Felix (q. v.), B.C. 49-53; under his administration the commotions broke out that led eventually to the final war with the Romans (Josephus, *Ant.* xx. 5, 2 and 8; 6, 1-3; *War*, i. 12, 1-7).

Cumberlard, Richard, D.D., bishop of Peterborough, a learned divine and archaeologist, was born in London in 1632, and was educated at St. Paul's School, and Magdalen College, Cambridge. He was made rector of Brampton, and in 1667 vicar of All Hallows, Stamford. In 1681 he was raised to the see of Peterborough without any solicitation on his part. He was previously the author of a treatise on *The Eulogia of the Church* (Lond. 1672, 4to), and five learned treatises on *The Jewish Weights and Measures* (Lond., 1686, 8vo). He was indefatigable in performing his episcopal duties. Being advised, on account of his age and infirm state, to relax a little, he replied, "It is better to wear out than rust out." After his death appeared his *Origines Gentium* (Lond. 1724, 8vo), and his translation of *Stanchronicoz's Phenomenic History* (Lond., 1720, 8vo). At the age of eighty-three, Dr. Cumberlard, having been presented by Dr. Wilkins with a copy of his Coptic Testament, then just published, commenced, like another Cato, the study of Coptic. "At first," says Mr. Payne, "he mastered the language, and went through great part of this version, and would often give me excellent hints and remarks as he proceeded in reading of it." He died Oct. 9, 1718.

Cumberland's theory of morals is set forth in his treatise *De Legibus Nativis*. Tendency to effect the greatest good of all and the standard of morality. To endeavors to effect the greatest amount of general good is the one great duty, or the one great "law of nature," and we know, according to Cumberland, that it is a duty or law of nature, or law of God, because we know that an individual derives the greatest happiness from the exercise of benevolence, and that God desires the greatest possible happiness of his creatures. Carrying out the fundamental principle that the greatest general good is to be sought, he deduces the several particular duties or particular "laws of nature." He founds government upon, and tests it by the same principle. An abridged translation of the work was published by Tyrell in 1701. Maxwell, an Irish clergyman, published a translation in 1777. Barbyras published a French version in 1744. A third English translation, by the Rev. John Towers, D.D., appeared in 1780. On Cumberland as a moralist, see Mackintosh, *Hist. of Ethical Philosophy*, p. 70; Bewell, *Hist. of Moral Philosophy*, p. 52.

Cunni (κούννι), a mode of Greece the Heb. imperative "κυννί" (κυνί), signifying rise, as it is immediately explained (Mark v. 41).

Cuminia (κούμινα), lit. a condiment, from its use; Greek *κυμινάρι*; and names of similar sound in all the Oriental dialects) is an umbrelliferous plant, mentioned both in the Old and New Testaments, and, like the dill and the coriander, continues to be cultivated in modern as it was in ancient times in Eastern countries (Pliny, xix. 47). These are similar to and used for many of the same purposes as the anise and caraway, which supply their place, and are more common in Europe. All these plants produce fruits commonly called seeds, which abound in essential oil of a more or less grateful flavor, and warm, stimulating nature; hence they were employed in ancient as in modern times both as condiments (Pliny, xix. 8; Apicius, l. 52; iii. 18; *Polyaen. iv. 8, 32*) and as medicines (Mishna, *Sabb.* xix. 2). A native of Upper Egypt and Ethiopia, it is still extensively cultivated in Sicily and Malta. It would appear to have been a favorite herb among the Hebrews, and as late as the last century it retained a place of some importance in pharmacy (see Ehrmann, *De cumino*, Argent. 1783), Cumin is first mentioned in Isaiah (xxviii. 25); "When he (the ploughman) hath made plain the face thereof, doth he not cast abroad the fitches, and scatter the cumin?" showing that it was extensively cultivated, as it is in the present day, in Eastern countries, as far even as India. In the south of Europe it is also cultivated to some extent. In the above chapter of Isaiah (ver. 27) cumin is again mentioned; "For the fitches are not threshed with a threshing instrument, neither is a cart-wheel turned about upon the cumin; but the fitches are beaten out with a staff, and the cumin with a rod." This is most applicable to the fruit of the common cumin, which, when ripe, may be separated from the stalk with the slightest stroke, and would be completely destroyed by the turning round of a wheel, which, bruising the seed, would press out the oil on which its virtues depend (see Dioscor. II,

Cumming, Alexander, a Congregational minister, native of Freehold, N. J., was born 1726. He entered the ministry 1747, and was made colleague pastor of the Presbyterian Church in New York, Oct. 1736. Owing to troubles in the Church, both pastors requested to be dismissed by a committee of the Synod in 1753, and Mr. Cumming was relieved Oct. 25, 1758. He was ordained colleague pastor with Dr. Sewall, of the Old South Church, Boston, Feb. 25, 1761, where he remained until his death, Aug. 25, 1783. He published his ordination sermon at Boston (1761), and Assemblies on Rev. Mr. Crowninshel's late Letter, etc. (1763).—Sprague, Annals, i, 462.

Cuneiform (wedge-shaped) or Arrow-headed Inscriptions, is the name now generally applied to those angular letters first found engraved on Persepolitan relics (see Ker Porter's Travels; Rich's Memoir), and lately in great abundance stamped on Babylonian bricks (see Buck) and carved on the Assyrian monuments. See Assyria. The monosyllabic collections of these legends are contained in the great works on the Ninevite antiquities by Botta and Flandin (Monuments de Ninive, Par. 1847, sq.), and by Layard (Assyrian Inscriptions, Lond. 1851), and more lately those of Loftus (Inscriptions from the Ruins of Nineveh, Lond. 1862); a considerable collection is also given by Rich (Memoir on Bab. Lond. 1869). The character is the simplest and earliest known, and was in common use by the Medes, Persians, Assyrians, and Chaldeans in the most ancient times. Like the Egyptian hieroglyphics, or rather cuneiform, it seems to have been chiefly employed in monumental inscriptions, there being doubtless another form (like the demotic) better adapted to common use. It appears to have fallen into disuse when, on the fall of Babylon under Alexander, these mighty empires ceased to have any great national annals to record. Within the past eighty years the first specimens found their way into Europe from the fragments of Persepolis, and at length engaged the attention of several German philologists, especially Tyschen; but Dr. Grotefend, of Hanover, was the first who obtained any clue to their decipherment (see Vaux's Nineweh and Persepolis, p. 301 sq.). According to him, this mode of writing is formed of two radical signs, the wedge and the angle, susceptible, however, of about thirty different combinations; and consists of three varieties, the Persian, the Median, and the Assyrian, distinguished from each other by a greater or less complication of the characters, the last being the most elaborate: others make still further subdivisions, e. g. the Achemenian, Babylonian, Medo-Assyrian, Elamite, Scythian, Armenian, etc. The whole of each alphabet, however, is obviously reducible to a single element, the wedge, which is found either singly or in groups of two, three, or more, and placed vertically, horizontally, or obliquely, in the several characters. It is evidently of Asiatic origin, is written from right to left, and is alphabetic. (See an elucidation of the process of deciphering these letters by Layard, Nineweh, ii, 184 sq.) The other great laborer in this field of discovery is Col. Rawlinson, of England, who has so completely succeeded in confirming and extending the results arrived at by others, that the meaning of these inscriptions, with the exception of a few corrupting of some of the proper names, may now be said to be established beyond dispute. (See his Commentary on the Cuneiform Inscriptions, read before the Roy. As. Soc., and published in a separate form, Lond. 1850.) Dr. Hincks has also successfully prosecuted these inquiries. (See his papers in the Transactions of the Roy. Irish Acad. vol. xxii.) The inscriptions are usually trilingual as well as trilingual, the alphabets and entire structure differing in each version. See Behistun. The language is Semitic, but corresponds with neither the Hebrew, Chaldee, Syrian, nor Arabic, as they have come down to us. The inscriptions of various periods and at different places differ considerably in their form and diction.
The following specimens of identification of names mentioned in the Old Test. with those occurring in the Assyrian inscriptions are given by Layard (Nin. and Bab. p. 534-6). Other instances will be noted under the several kings and deities in their proper places. e. g. Arataxeres, Cyrus, Darri, Xerxes. Cunigunda, wife of Henry of Bavaria, who afterwards became emperor. She was crowned with her husband by pope Benedict VIII. A.D. 1014. According to the Roman Acts of the Saints she had made a vow of virginity, and her husband suspecting her fidelity, she "walked over red-hot ploughshares without being hurt," and thus vindicated her innocence! She died March 10, 1040, and was canonized in 1260 by Innocent III. The Romish legends tell of many miracles wrought at her tomb.—Butler, Lives of Saints, March 3.

Cunningham, William, D.D., an eminent minister of the Free Church of Scotland, was born in October, 1805, and was fully identified with all the movements and controversies which led to the disruption of the Church of Scotland. He received at the hands of the Free Church all the honors in their gift, and was moderator of the Assembly in 1858. At the time of his death he was principal college of the Free Church of Scotland. After the disruption he visited America, where his eloquence and intellectual power enabled him to enlist the sympathies of a large portion of the churches, and to secure an
amount of material aid at that time greatly needed by the Free Church. He died at his house in Edinburgh, Scotland, December 14, 1861. His principal writings were collected after his death by his literary executors, as follows, viz., The Reformers, and the Theology of the Reformation (Edinb. 1862, 8vo); Discourses of Church Principles (Edinb. 1868, 8vo); Historical Theology (Edinb. 1864, 2 vols. 8vo). The first two works consist chiefly of Dr. Cunningham's Review articles; the last, of his lectures in the Free Church College. They manifest large learning, great grasp of theological science, both historical and doctrinal, and a thoroughly evangelical spirit. In regard to Church government, Dr. Cunningham was a Presbyterian, "believing that Christ has committed the government of His Church, not to congregations, nor to prelatical bishops, but to presbyters or elders, otherwise called bishops. But, above all, he was a Calvinist, maintaining that man is by nature helpless and lost, and can be saved only by the free and sovereign love of God, giving salvation to whom He will, in what manner He will, because He wills it. He will be recognised in history, not as a Free Churchman, nor as a Presbyterian, but as a great Calvinist, occupying a place in his generation such as Calvin and Turretine occupied in theirs. The Calvinistic system of Dr. Cunningham holds not provisionally, as a half-way house to some more comprehensive system in posses, ' looming in the future,' but definitely, as what has been ascertained to be the system revealed in God's Word, the only possible exhibition of all the Scripture facts regarding God and man, the only scriptural description of what God actually is, and has done, and is doing, in his relation to rational creatures, and specially in order to man's salvation. He therefore immovably rests in the conviction that no new discovery can be made in theology; that any pretended novelty is either Calvinism under a new form, or some of the old errors in disguise which have been advanced against Calvinism, and which, as opposed to Calvinism, are, ipso facto, shown to involve a lie."—Brit. and For. Evangelical Review, Jan. 1863, p. 198 sq — Wilson, Presb. Alumniæ, 1863, p. 163; Lond. Quarterly Review, April, 1863, p. 256; N. Brit. Rev. Feb. 1863.

Cup (usually δυσ, koš. prop. a receptacle; N. T. ρωζόν, a drinking vessel) denotes originally a wine-cup (Gen. xi, 11-21), various forms of which, of different materials, are delineated on the Egyptian and Assyrian monuments. See WINE. The cups of the Jews, whether of metal or earthenware, were possibly borrowed, in point of shape and design, from Egypt and from the Phoenicians, who were celebrated in that branch of workmanship (II. xxiii, 743; Od iv, 615, 618). Among the Egyptians the forms of cups and vases were very varied, the paintings upon the vases representing many of most elegant design, though others are equally deficient in the properties of form and proportion. The forms used during the fourth and other early dynasties (1700 B.C.) continued to be common to a late date (Kenrick, Egyptian Dates of Pharaohs, Lond. 1857, p. 48). There are not any representations of cups like the head of an animal (Bonomi, Nineveh and its Palaces, 3d edit. p. 215, 216). Many of the Egyptian vases, cups, and bowls were of gold (Herod. ii, 151) and silver (Gen. xlviii, 2; comp. Num. vii, 84), some being richly studded with precious stones, inlaid with vitreous substances in brilliant colors, and even enamelled. In Solomon's time all his drinking-vessels were of gold, none of silver (1 Kings x, 21). Babylon is compared to a golden cup (Jer. li, 7). Asyrian cups from Khorsabad and Nimroud were of gold and bronze (Layard, Nineveh, ii, 286; Nim. and Bab. p. 161; Bonomi, Nineveh, p. 167), as well as of glass and pottery. They were perhaps of Phoenician workmanship, from which sources both Solomon and the Assyrian monarch possibly derived both their workmen and the works themselves. The cups and other vessels brought to Babylon by Nebuchadnezzar may thus have been of Phoenician origin (Dan. v, 2). See BANQUET. On the bas-reliefs at Ninevah many figures are represented bearing cups or vases, which may fairly be taken as types of the vessels of that sort described in the book of Esther (Esth. i, 7; Niuehur, Travels, ii, 106; Chardin, Voyages, viii, 268, pl. lviii). The great laver, or "sea," was made with a rim like the edge of a cup (cos), "with flowers of lilies" (1 Kings vi, 29), a form which the Persopolitan cups resemble (Jahn, Arch. §144). Similar large vases have been found represented at Khorsabad (Botta, pl. lxvi). The use of gold and silver cups was introduced into Greece after the time of Alexander (Athen. vi, 222, 230; xi, 446, 456; Birch, Anc. Pott. ii, 109). The cups of the N. T. (τρυπά) were often, no doubt, formed on Greek and Roman models. (See Smith, Dict. of Greek Antiquities, s. v. Patara.) They were sometimes of gold (Rev. xvii, 4).—Smith, s. v.; Fairhain, s. v. The common Eastern drinking-cup is of brass, and frequently has devices and sometimes sentences from the Koran engraved on the inside (Lane, Mod. Eg., i, 222). As the Moslem law, however, forbids the drinking of wine to good Mohammedans, the common beverage in its place is coffee, which is invariably offered to visitors. The coffee (košee, i. e. the drink) is made very strong, and without sugar or milk. The coffee-cup (which is called finca) is small, generally holding not quite an ounce and a half. Ancient Assyrian Cups: 1 and 2. Lion-headed (the latter with handle); 3. Sculptured; 4. Red pottery; 5. Painted; 6, 7. Bronze.
of liquid. It is of porcelain or Dutch-ware, and, being without a handle, is placed within another cup (called zurf) of silver or brass, according to the circumstances of the owner, and both in shape and size nearly like an egg-cup. In a full service there are ten "glasses" and surfs of uniform kinds, and often another "goblet" and zurf of a superior kind for the master of the house or for a distinguished guest. In the accompanying sketch, the coffee-pot (bakery or bakery) and the surfs and zurf are of silver, and are represented on a scale of one eighth of the real size. Below this set are a similar zurf and "glass", on a scale of one fourth, and a brass zurf, with the "glass" placed in it. Some surfs are of plain or gilt silver filigree, and a few opulent persons have them of gold. Many Moslems, however, religiously disallow all utensils of gold and of silver (Lane, Mod. Fig. 1, 199). See CUP-BAKER.

The practice of divine by means of a cup ("gabal", gabla', Gen. xliv, 2-17; a goblet, distinguished from the preceding or smaller cups used in drinking: rendered "pot" in Jer. xxxv, 5; spoken of the caliph-crown "bowl" of the golden candlestick, Exod. xxx, 31-34; xxxviii, 17-20) was a practice of great antiquity in the East. We read in early Persian authors of the mystical cup of Jemshid (Bonomi, Nineveh, 3d ed. p. 306), which was imagined to display all the occurrences on the face of the globe (Tieroff, De Socrate Jovishi, Jen. 1657; Tittel, id. Tor. 1727). See DIVINATION.

The bronze cup, with the sacred beetle engraved in the bottom, found by Layard among the ruins of Nimroud, may have been used for such a purpose (Nineveh and Babylon, p. 157). Kérén, the word used in Gen. by the Sept., occurs in Hipparchus (ap. Athen. p. 478, A., and is curiously, like the Indian kandi, a sacred Indian cup (Bohren on Gen. p. 408; for religious drinking after public exploits (Bonomi, Nineveh, p. 252). In the Apocalypse we find the sacred vessels of Jehovah called σμοκίνα, gobleta (1 Ed. ii, 13). In their cups' 1 Ed. iii, 22, is a rendering for ὑπο δίνειν, when they drink). See BASIN; BOWL; DUGH; VASE; VIAL, etc.

"The word 'cup' is used in both Testaments in some curious metaphorical phrases. Such are the cup of salvation (Psa. xxvi, 18), which Grotius, after Kimchi, explains as 'poculum graetissimum actionis,' a cup of wine lifted in thanksgiving to God (comp. Matt. xxii, 27). That it alludes to a paschal libation cannot be proved; and that it was understood by the Jews to be expressive of gratitude we may see from 3 Macr. vi, 27, where the Jews offer 'cups of salvation' in token of deliverance. In Jer. xi, 7 we have the term 'cup of consolation,' which is a reference to the wine drunk at the ἱπποδρόμον, or funeral feasts of the Jews (9 Sam. iii, 25; Prov. xxx, 13; Psalms of the Ass. ii, 1). In 1 Cor. x, 16, we find the well-known expression 'cup of blessing' (μανατον της ἱλαρόν), contrasted (ver. 21) with the 'cup of derision.' The sacramental cup is called the cup of blessing because of the blessing pronounced over it (Matt. xxvi, 27; Luke xxii, 17; see Lightfoot, Hor. Hebr. in loc.). No doubt Paul uses the expression with a reference to the Jewish 'cup of blessing' (μανατον της ἱλαρόν), the third of the four cups drunk by the Jews at their Paschal feast (Schöttgen, Hor. Hebr. in 1 Cor.; Jahn, Ebb. Arch. § 533), but it is scarcely necessary to add that to this Jewish custom our Lord, in his solemn institution of the Lord's Supper, gave an infinitely nobler and diviner significance (Baxter, De Sacra Com. § 46, p. 310). Indeed, of itself, the Jewish custom was liable to abuse, and similar abuses arose even in Christian times (Augustine, Ser. cxxxii, de tempore; Carpzov, App. Crítica, p. 380 sqq.). See PASSOVER. In Psa. xi, 5; xvi, 5; the portion of the cup' is a general expression for the condition of life, either prosperous or miserable (Psa. xxiii, 5). A cup is also in Scripture the natural type of sensual allurement (Job. 1, 7; Prov. xxiii, 31; Rev. xvii, 4; xviii, 6). See BANQUET.

"But in by far the majority of passages, the cup is a 'cup of astonishment,' a 'cup of trembling,' the full red flaming wine-cup of God's wrath and retributive
CUP-BEARER

Indignation (Psa. lxxv. 8; Isa. ii. 17; Jer. xxxv. 15; Lam. iv. 21; Ezek. xxxii. 32; Zech. xii. 2; Rev. xvi. 19, etc.). There is, in fact, in the prophets no more frequent or terrific image; and it is repeated with a mystic force in the language of our Lord and his apostles (Matt. xxvi. 39, 42; John xvi. 11; Mark x. 38). God is here represented as the master of a banquet, dealing the madness and stupor of vengeance to guilty guests (Vitrins in Isa. ii. 17; Wixhamnassuah, De ira et tremoris Dei, in Theol. Philol. ix. 188 sq.). The cup thus became an obvious symbol of death (Matt. xxvii. 37 ... sanguis et ius vivendi, Eym. M.); and hence the Oriental phrase, to 'taste of death,' so common in the N. T. (Matt. xvi. 28; Mark ix. i; John viii. 52; Heb. ii. 9), in the Rabbin (Schöttgen, Hor. Heb., in Matt. xvi, in the Arabic poem Antar, and among the Persians (Schleusner, Lex. N. T., s. v. τιποτιοιον; Jahn, Bibl. Arch. § 290). The custom of giving a cup of wine and myrrh to condemned criminals (Otho, Leg. Rabb. s. v. Mors) is alluded to in Matt. xxvii. 34; Mark xv. 22. See Wemyss, Clausi Symboli s. v.; Siller, Words of Jesus, p. 378 sq. See Crucifixion.

CUP. See Lord's Supper.

CUP GIVEN TO THE LAYST. See Lord's Supper.

Cup-bearer (πρεσβύτερος, μαστάχτε, one who gives to drink; so Gr. οἰκογεύς, wine-pourer; Vulg. pascendaris), an officer of high rank with Egyptian, Persian, Assyrian, as well as Jewish monarchs. The cup-bearer, or butler, to the king of Egypt was the means of raising Joseph to his high position (Gen. xl. 1-21; xlii. 9). Ribashak, who was sent by Sennacherib to Hezekiah, appears from his name to have filled a like office in the Assyrian court (2 Kings xix. 17; Gesen. Theassar. p. 1225), and it seems probable, from his association with Rab-saris (chief of the eunuchs), and from eastern custom in general, that he was, like him, a eunuch (Gesen. p. 973). See Rabbah (chief of the eunuchs). Herod the Great had an establishment of eunuchs, of whom one was a cup-bearer (Josephus, Ant. xvi. 8, 1). Nehemiah was cup-bearer to Artaxerxes Longimanus, king of Persia (Neh. iv. 11; ii. 1). Cup-bearers are mentioned among the attendants of Solomon (1 Kings x. 5; 2 Chron. ix. 4; so Achiaschar, Tobit, i. 22). They are frequently represented on the Assyrian monuments (Bonomi, Nin. p. 250), always as eunuchs (Layard, Nin. ii. 255).

Cupboard (cothelos), a place of deposit for vases, dishes, etc. (so Athen. Deipn. c. 2, p. 48; Zonaras, Lex. col. 1298, e. g. for the royal plate (1 Macc. xv. 32).

Curate, literally one who has the cure (Lat. cura, care) of souls, in which sense is the title of England Prayer-book, "all bishops and curates." In the Church of Rome it was originally appropriated to assistants and vicars appointed by the bishops. It is now generally used to denote the humblest degree of ministers in the Church of England. A curate, in this sense, is a minister employed by the incumbent of a church (rector or vicar), either as assistant to him in the same church, or else in a chapel of ease within the parish belonging to the mother church. He must be licensed and admitted by the bishop of the diocese, or by an ordinary having episcopal jurisdiction, who also usually appoints his salary. Any curate that has no fixed estate in his curacy, not being instituted and inducted, may be removed by the bishop or incumbent. But there are perpetual curates as well as temporary, who are appointed where tithes are improper and no vicarage was ever endowed: these are not removable, and the impropriators are obliged to maintain them. In general, the salaries of curates, certainly are no work and not the least devoted of the English clergy, are shamefully small, and reform in this matter is urgently required. "This large class of men are absolutely at the disposal of the bishops; they have no security whatever, no rights, no powers; public opinion may protect them to a certain extent, but any bishop who chooses to set public opinion at defiance, can remove any one of them,"—Church of England Quarterly Review, April, 1855, p. 25; Chambers, Encyclop. s. v.; Hook, Church Discipline, s. v.

Curcellaeus, Stephanus (Étienne de Courcelles), an eminent and learned divine, was born at Geneva in 1568. He was educated under Beza at Geneva, and afterwards at Heidelberg. In 1614 he was appointed pastor at Fontainebleau; in 1621, at Amiens; but, on his refusal to subscribe to the canons of Dort (q. v.), he was compelled to resign his pastoral charge. But, yielding to the importunity of friends, he afterwards gave a most zealous assent to the decree of Dort, and became pastor at Verree, in Flanders, where he remained until 1634. Becoming satisfied that he could not, with a good conscience, serve in a Church which held the doctrine of absolute predetermination, he removed to Amsterdam, where he acquired a great reputation among the followers of Arminius. He read lectures in divinity, and succeeded Episcopius (1634) in the professorship of theology in the Reformed College. He had great skill in Greek, as appears by his translation of Comenius's book, Jamaica lingua rum, into that language. He applied himself particularly to a critical examination of the Greek of the New Testament, of which he gave a new edition, with many various readings drawn from different MSS. He prefixed a large dissertation to this edition, in which he treats of various readings in general (Amst. 1638 and 1675, 2do). His large culture and tolerant spirit connected him to his great contemporaries in Holland, Grotius and Uitendam, both of whom he was intimately connected. In the discussion between Amyraut and Du Moulin he intervened, as a sort of arbiter, by his Adés des un personnage dein teressés relativement à la dispute sur la prédetermination (Amst. 1638, 8to). Later he published Vindictae Arminii ad M. Amyruat at (1645, 8vo), and Vindictae ad M. Blandelii ad Maresci Criminalines (Amst. 1667); Dissertations (Amst. 1659, 8vo). These, and other of his writings (translated into Latin), are given, together with his Institution Religionis Christianae (an incomplete system of Theology), in Courcelles Opera Theologica (Amstelod. 1675, 2do), with preface by Limborch, and with prefatory essays on Courcelles by Arnold Poelenburg. Courcelles died at Amsterdam in 1659. Poelenburg thus characterizes him: "He first of all directed his mind to a search after divine truth; for he thought that this treasure, descending from heaven, should be preferred to all other acquirements. Next he had all the thoughts of his mind directed to religiousity, because he believed that not even truth could be of benefit to us, unless it brought some strikingly advantageous aid to our piety. Finally, this especially he wished, and for this peculiarly he labored, to unite the Christian body; torn in many and terrible schisms; to compose an agreement among them, which should have expressed feelings of various minds; and to teach that not all the doctrines which were alleged as a pretext for causing or cherishing a schism were vital for salvation, and at the same time to show that those things
which had not the weight of necessity by no means sufficed for dividing the Church of Christ. To all this all things were added, that he was crucified, dead, and buried; for he declined to subscribe to the famous canons of the synod, because we, whose opinions ought not to be, were condemned; for this he abandoned his loved country, France, and endured many hardships for the sake of mutual toleration; and for this he determined to contest, as if for some divine honor; he contended for the rights as much as he thought should be equally granted to him; demanded that nothing should be conceded to himself from others except what justice, and right reason, and the sacred writings require should be admitted. What is more holy than this proposition, what more salutary, what more necessary for the times? For many contended concerning the truth, and so contend that they never obtain truth, but lose charity. Hence the many disputes in Christendom on slight causes. But what is more disgraceful to us as members of Christ, what more ignominious to Christ as our Head and Leader, than that his seamless coat, and his body, which ought to be united by the closest ties of love, should be torn into a thousand fragments? This, indeed, is the distinction of Remonstrantism; this our crown of glory, because we neither caused this schism, nor consented to any other, nor cherished nor approved any; but we invite and exhort all who love Christ and desire to enter this client Company of peace' (see translation of Poelemburg's eulogy in the Methodist Quarterly Review, January and April, 1865).

The theology of Curcellaes was a modified Arminianism. He held the Grotian view of the atonement, but (as ATONEMENT) set special emphasis upon the sacrificial character of the death of Christ in its reference to God as well as to man, asserting that Christ made satisfaction for sin, but not by enduring the whole punishment due to sinners (Inst. lib. v. chap. xviii. xix.). As to the Trinity, he held that Christ and the Holy Spirit are divine, but that both Son and Spirit are subordinate to the Father, from whom they receive both existence and divinity (Inst. Relig. Christ. lib. ii. cap. xix.).

Curcellaes, Opera (as cited above); Hagenbach, History of Doctrines, ii. 235, 292; Doerner, Doctrine of the Person of Christ (Edinb. transl.), div. ii. vol. ii. 590 sq.; Bull, Defence of the Nicene Creed (Lib. of Ang. Cult. Theology), i. 81 sq.

New Testament (Jer. xxxvi. 6) ınc (Luke xiii. 32). Even the same herb, root, and leaf, ropula, to "heal" or cure, is derived :ramphi, which, the art of healing, curing (Prov. iii. 9); KEPH, remonstrances, remedies, medicines (Jer. xxvii. 12; Ezek. xxx. 27). The Scriptures make no mention of physicians before the time of Joseph, and then it is Egyptian, not Hebrew physicians that are spoken of. Indeed, it does not appear that physicians were ever much resorted to among the Hebrews, especially for internal maladies. For wounds, bruises, and external injuries, they had physicians or surgeons who understood the proper dressing and binding them, with the application of medicaments (Jer. viii. 22; xlii. 11; Ezek. xxx. 21); and the Levites, it seems from Lev. xiii. 14; Deut. xx. 2, had peculiar duties assigned them, which rendered it necessary they should know something of the art of medicine.

The probable reason of king Amen's not seeking help from God, but from the physicians, was, that they had not recourse to the simple medicines which nature offered, but to certain superstitious rites and incantations; and this, no doubt, was the ground of the reflection cast upon him (2 Chron. xvi. 12). The balams, or balas, was particularly celebrated as a medicine (Gen. xxxvii. 25; xlii. 11; Jer. viii. 22; xvi. 11; ii. 8). That mineral baths were deemed worthy of notice, and perhaps from ancient times, we know from Josephus. See CALLIRHOE. Although there can be no doubt that there were physicians in the coun-

try when our Saviour appeared in Palestine, it is evident that the people placed but little confidence in them (Mark v. 21, 22; xii. 41). Magicians, on the other hand, were highly esteemed. We first read of them as being commanded by Joseph to embalm the body of his father Jacob (Gen. i. 2). Pliny states that, during the process of embalming, certain examinations took place, which enabled them to study the nature of the disease, and the deceased for the times. As Pliny observes (Ann. Egypt, 2d ser., ii. 490 sq.), "These examinations appear to have been made in compliance with an order from the government, as, according to Pliny (xix. 5), the kings of Egypt had the bodies opened after death to ascertain the nature of their diseases, by which means alone the remedy for putrid or putridal complaints was discovered. We are not unreasonable to suppose that a people so far advanced as were the Egyptians in knowledge of all kinds, and whose medical art was so systematically arranged that they had regualted it by some of the very same laws followed by the most enlightened and skilful nations of the present day, would not have omitted so useful an inquiry, or have failed to avail themselves of the means which the process adopted for embalming the body placed at their disposal. And nothing can more clearly prove their advancement in the study of human diseases than the fact of their assigning to each his own peculiar name, and adding to the beauty of the art. Physicians, dentists, those who cured diseases in the bays that confined themselves to intestinal complaints, and those who attended to secret and internal maladies. Their knowledge of drugs, and of their effects, is sufficiently shown by the preservation of the mummies, and the manner in which the intestines and other parts have been removed from the interior. And such is the skill evinced in the embalming process, that every medical man of the present day, who witnesses the evidence derived from such an examination of the mummies, willingly acquiesces in the praise due to the ability and experience of the Egyptian embalmers." See EMBALMING. There is reason to believe that the ancient Egyptians encouraged, or at least profited by, the growth of many wild plants of the desert, which were useful for medicinal purposes. Many of them are still known to the Arabs, as the Salvadoria Persica, Hippo-

tryum tuberosum, Lycium europaeum, Scilla maritima, Cassia religiosa, Peganum harmala, Zizania exilis, Linaria Aegyptica, Spartium monopetens, Hesperium Alhagi, Salsolins fragrantissima, Artemisia judaica (monopetens and inculata), Inula undulata et crispata, Cucumis Coccus, etc.; and many others have probably fallen into disuse from the ignorance of the modern inhabitants of the country, who only know them from the Arabs, by whom the traditions concerning their properties are preserved.

From what Homer tells us of "the infinity of drugs produced in Egypt" (Odys. ii. 229), the use of "many medicines," mentioned by Jeremiah, ch. xlv. 11, and the frequent allusion by Pliny to the medicinal plants of that country, we may conclude that the perfumers (where those herbs mostly grew) were particularly prized. See MEDICINE. The art of medicine was very ancient in Egypt, and some writers have supposed that Moses, having been instructed in all the learning of the Egyptians, must have known the chief secrets of medicine, a fact which they value highly in favor of the recovery of health, and is never referred to till this means has failed. Roberts informs us, "Physicians in England would be perfectly astonished at the numerous kinds of medicine which are administered to a patient in India. The people themselves are unwill-
ing to take one kind for long together, and I have known a sick woman swallow ten different sorts in one day. Should a patient, when about to take his medicine, scatter or spill the least quantity, nothing will induce him to take it. If it be a liquid, he must have the nostrum changed. The people of the East give a decided preference to external applications; hence, when they are directed to 'eat' or 'drink' medicine, they ask, Can they not have something to apply outside? For almost every complaint a man will smear his body with bruised leaves or saffron, or ashes of certain woods or herbage. If these medicines which are taken internally; at all events, he knows they cannot do him so much harm. It ought to be observed that they do not attach any miraculous effects to the being 'anointed with oil.' See Diseases; Physician.

Cureton, William, D.D., an eminent English divine and Orientalist, was born in 1688, and educated at Christ Church, Oxford. He was ordained priest in 1834, and was for a time sub-librarian of the Bodleian. In 1837 he became assistant keeper of the MSS. in the British Museum, which post he retained till 1849, when he was appointed to a canonry of Westminster and to the attached rectoryship of the parish of St. Margaret's. Two years later that date he was appointed chaplain in ordinary to the queen. He was also a fellow of the Royal Society, an honorary D.D. of Halle, corresponding member of the Institute of France, and member of the Asiatic Society of Paris, the Oriental Society of Germany, and many other continental societies. These honors he owed to his great reputation as an Orientalist, and especially as a Syriac scholar. This reputation was formed by his publications while an official in the British Museum. His Corpus Ignatiani, an edition of an ancient Syriac version of the Epistles of St. Ignatius, with commentaries thereon, was published in 1845, and gave rise to an interesting controversy. Among his subsequent works were an edition of a palimpsest of parts of Homer found in an Eastern manuscript, and his Splugheim Syriacum, published in 1855. He was understood to be engaged on some work connected with St. Matthew's Gospel at the time of his death, June 17, 1864.

Curia Romana, in the narrower sense, a collective appellation of all the authorities in Rome which exercises the rights and privileges enjoyed by the pope as head of the Church. In a wider sense, the collective appellation of all officers and authorities which assist the pope both in his secular and spiritual rule, or belong in any way to his retinue. In the following article we speak only of those authorities which assist the pope as supreme bishop, and in the papal court.

I. Judicial Authorities.—They are the following: 1. The Rota Romana (Italian, Ruota Romana), the supreme Court of the Roman Catholic Church, and in particular the highest court of appeal. See ROTA ROMANA. 2. The Siguratura Justiniana. It decides on the administrative duties of the bishop, and consists of a cardinal as president (presbitero), twelve voting prelates, some referendaries who prepare the reports on law cases, and have, with regard to them, a decisive vote. An Auditor of the Rota decides what matter may be brought before the Rota, and decides various preliminary questions; but appeal may be taken from his decision to the full court of the Signatura. The decisions of the Signatura are signed by the pope with the word Fiat, or, in the presence and by order of the pope, by a cardinal, with the formula Concessum in praexista Domini nostri Papa. The Signatura gratiae decides on those cases on which a decision of a Roman pontiff is expected from the personal grace of the pope, and which on that account must be expeditied more promptly. The pope himself presides in this.

II. Boards of Administration.—These are as follows: 1. Secretaria Apostolica. To it belong the cardinal secretary of memorials, who has to receive and report on all memorials not belonging to any other board, and the council of cardinals (consilium cardinale), who has to draw up certain papal briefs, which he signs and seals with the fisher's ring. This office is now part of the bureau of the cardinal secretary of state, and the leading officer of the papal government, who conducts the negotiations on Church affairs with all foreign governments. The nuncios and other diplomatic agents of the papal government are the subordinates, receive from him his instructions, and have to report to him on the condition of the Church in those states to which they have been sent. The office employs a large number of clerks. The most important question is the extraordinary "congregations," and even the regular congregation of ecclesiastical affairs. It reports to the pope on indulgences, on dispensations from the defec tors estatis, natalium, interstitium, and on holy days.

3. The Dataria Apostolica was formerly a board of expedition, but in the course of time has become an independent board of administration. The president is called dacearius, and if he is—as is usually the case—a cardinal, proto-dacearius. It has its name from the common subscription, Datum apostolico Sanctum Petrum. Within the jurisdiction of the Dataria belong the granting of certain privileges, of dispensations from certain cases, of ecclesiastical immunity, etc. Among the officers of the Dataria is the officia ad obitum, to whom belongs the management of those ecclesiastical benefices which become vacant in consequence of the deaths of their occupants. The Dataria, after obtaining the consent of the pope, signs Annuas Sanctissimas.

4. The Camera Apostolica (the Apostolical Chamber) has the administration of the papal revenues. Its president is a cardinal chamberlain (camerarius or camerlengo). The ecclesiastical revenues having been greatly reduced in the course of time, the chief business of the Apostolical Chamber is the administration of the finances of the papal territory. 5. The Penitentiaria Romana (Penitentiary) acts in all cases of absolutions and dispensations which are reserved to the pope; as regards dispensations, however, only in the most important cases, or in foro interno. The president of the board is a cardinal, who has the title Penitentiarius Major. 6. The Papal Court, or the so-called "Papal Family" (Famigia Pontificia). It comprises the officers on service who live in the palaciate (pallatina), besides a large number of honorary members. Among them are varied persons of the papal secretory of state, the cardinal secretary of briefs, and the cardinal proctor. 7. The proselitare pallatini, embracing a court marshal, a master of ceremonies, a master of the sacred palace (always a Dominican monk, who is also censor of the books published in Rome), the superintendent of the palace (a Roman cardinal, who directs the work in the private chapel), an auditor sanctissimi (a lawyer who is consulted
Curtain

by the pope), a large number of privy chamberlains and of honorary domestic prelates (prelati domestici), and bishops assistant of the throne (consocci assistentes al sopio). These latter titles are conferred on a large number of cardinals of the court and of the world. Among the earlier writings on the papal curia, the best is that by the chevalier Lunardon, Relazione della Corte di Roma (Padua, 1641; many ed. since, latest edition, with all the necessary additions, Rome, 1830, 2 vols.). See also Dr. O. Mejer, Die heutige römische Curie, in Jacobson's Zeitschrift für das Recht der Kirche (Leips., 1847); Wetzer and Wolte, Kirchen-Lex. iii, 944.

Curtin (or Curion), Colom Secundus, one of the Italian Reformers of the 16th century, was born at Chirico, near Turin, in 1508. He took an active part in the reformatory efforts made in Italy, and, in consequence of his teaching, was persecuted by the Roman Catholic priesthood at Milan, Pavia, and Lucca. He finally fled to Lausanne, where he became rector. Subsequently he was appointed professor of elocution at the University of Basel, in which city he died in 1569. He wrote, among others, the following works:—Pugniulli ecstatici (first edit. without year; again printed under the title of Pugniullorum icones et descriptiones, Editiones Latinae et Basileae, 1544); Christianae religione institutum (Basel, 1549); De perforato grammatico (Basel, 1555); Forum Romanae (Basel, 1661, 3 vols., fol.); Logia Elementa (Basel, 1560); De bello Mediolanensi (Basel, 1567). He also published editions of several Roman classics.—Pierer, Univ.-Lex. iv, 590.

Curtius (qu'a parens, literally the sedulous things, but the term is applied to an over-efficacious person, e.g. a "busy-body." 1 Tim. v, 18; prop. overworked, hence magico (see Iren. adv. Heres. i, 20; Isidor. iii, 129; comp. curious, Horace, Epod. xvii, 77); spoken of the black art as practised by the Ephesian conjurors (Acts xix, 19; see Kuhnöl, in loc.). The appropriateness of the term is shown by Deyling (De sacratis. Sac. tr. iii, 272 sq.). The allusion is doubtless to the famous Ephesian spells (Σαὶνας γραμμάτα), i.e. charms or scraps of parchment (originating or most used at Ephesus) whereon were written certain marks and formulae, which, like amulets, were worn upon the person as a safeguard against diseases, demons, and other dangers. Eusebius, Vita Constantini, p. 30; Ursinus, Analect. ii, 46; Dietric, Not. Biblic. in loc.; Cellarius, Diag. Academ. in p. 441; Wolburg, Ober. S. Sacr. in p. 470; Laur. Ranniers, in Tent. ecclesi. in p. 214). See Divination. They are frequently referred to in ancient writings (see Wetzstein, Kyne, etc. in loc.; e.g. Ptolemy, Math. Astron. ii, 35; Olym. p. 394 sq.; 260, 259, and Ephesian letters: some say these were incantations which were of very great assistance to Crassus when used by him at the stake; in the Olympic games, however, it is said that a certain Milesian failed to outstrip an Ephesian till the charm worn by the latter was discovered and removed" (comp. Erasmus, Adag. Cent., ii, 675). The phrase appears to have been applied to any talismanic inscription (Köster, ad Suidam, i, 919; Gaeb, ad Jamblanchim, p. 296). Ortlob, however, in his Dias. de Ephesirom nbris combinitis (Lips., 1708), § 9, contends that the arts in question were rather methods of promoting the worship of the patron goddess of the city (see Wolf, Curt., in loc.). The other and usual view is maintained by Siber (Disputatio de pauperia Ephesiorn, Vittemb. 1665; also in Theur. Dissertationen super N. T. i 484 sq.), and Schurfschies (Disertatio de libris Ephesiorn, Vittemb. 1698). See Ephesians.

Curtus (the rendering of various Heb. and Greek words). God denounced his curse against the serpent which had enticed Eve (Gen. iii, 14), and against Cain who had imputed his hands in his brother Abel's blood (iv, 11). He also promised to bless those who should bless Abraham, and to curse those who should curse him. The divine maledications are not merely imprecations, nor are they impotent wishes; but they carry their effects with them, and are attended with all the miseries they denounced or foretold. (See Zachary, Threats of Scourge, Imprecations, or Vengeance, and the times prophetically cursed particular persons (Gen. ix., 25; xlix, 7; Deut. xxxvii, 15; Josh. vi, 26), and history informs us that these imprecations had their fulfilment, as had those of our Saviour against the barren fig-tree (Mark xvi, 21). But such curses are not consequences of passion, impatience, or revenge; they are predictions, and therefore not such as God condemns. See Imprecation. No one shall presume to curse his father or his mother (see Coran), on pain of death (Exod. xxvi, 17); nor the prince of his people (xxvi, 28); nor one that is dead (Lev. xix, 14); whether a man really dead be most here or one who is absent, and therefore cannot hear what is said against him. Blasphemy, or cursing of God, is punished with death (Lev. xxiv, 10, 11). Our Lord pronounced bless those disciplines who are (falsely) loaded with curses, and requires his followers to bless those who curse them; to render blessing for cursing, etc. (Matt. vi, 11). The word is not to be used by the Christian to excommunicate a sinner, who dwelt near the brook Kishon, but who came not to assist Israel against Jabin. Wherefore Barak excommunicated him by the sound of four hundred trumpets, according to Judg. v, 23. But Meron is more probably the name of a place.—Calmet. The curse was more frequently cursed by the Jews for rejecting the Messiah (Mal. iv, 6; see on this the dissertation of Hen, de Anathamata, etc., Bren. 1749). See ANATHEMA; OATH.

On the passage in Job (ii, 9), "Curse God and die," Mr. Roberts makes the following remarks: "Some suppose this ought to be, 'Bless God and die' (the Heb. is 'אש והיה); but Job would not have reproved his wife for such advice, except she meant it ironically. It is a fact, that when the heathen have to pass through much suffering, they often ask, 'Shall we make an offering to the gods for this?' that is, 'Shall we offer our devotions, our gratitude for afflictions?' Job was a servant of the true God, but his wife might have been a heathen; and thus the advice, in its most literal acceptance, might have been in character. Nothing is more common than for the heathen, under certain circumstances, to curse their gods. Hear the man who has made expensive offerings to his deity, in hope of gaining some great blessing, and who has been disappointed, and he will pour out all his imprecations on the god of his fathers; if his offices have, as they believe, been prevented by some superior deity. A man in reduced circumstances says, 'Yes, yes, my god has lost his eyes; they are put out; he cannot look after my affairs.' 'What! said an extremely rich devotee of the supreme god Siva, after he had lost his property, 'shall I serve him any more?' What! make offerings to him? No, no; he is lowest of all gods. With these facts before us, it is not difficult to believe that Job's wife actually meant what she said." See Job.

Curtain, the rendering in the Auth. Vers. of three Hebrew terms.

1. ἐντάλμα, yeridah (from its tmmduu: mode motion, invariably thus translated), the ten "curtains" of fine linen, etc., each twenty-eight cubits long and four wide, and also the eleven of goats' hair, which covered the Tabernacle (Num. vii, 1; Exod. xxv, 1; Heb. viii, 1-8; 17). The charge of these curtains and of the other textile fabrics of the tabernacle was laid on the Gershonites (Num. iv, 25). Having this definite meaning, the word came to be used as a synonym for the tabernacle—the TRANSPORTABLE and its TRANSITORYNESS and SLEIGHTNESS—and is so employed in the Auth. Vers. of the LXX. in the sense of the tent. Thus in the Authorized Version, where "curtains" should be "the curtain," and 3 Chr. vii, 1. In a few later instances the word bears the more general meaning of the sides of a tent, as in the
beautiful figure of Isa. liv, 2 (where "habitations"
should be "tabernacles," ἡ ἱερατική, poetic word for "tents"); Jer. iv, 20; x, 20 (here "tabernacle" and "tent" are both one word, בֵּיתוֹן, tem); Ps. civ, 2
(where "stretch," מָעַק, is the word usually employed for extending a tent). Also specially of nomadic people,
Jer. xlil, 29; Hab. iii, 7 (of the black hair-cloth of
which the tents of the real Bedouin are still composed);
but Cant. i, 5 rather refers to the hangings
of the palace. See Tent.
2. מְצָאָק, the "hanging" for the doorway
of the tabernacle (Exod. xxxvi, 86, 87; xxxv, 15; xxxvi, 87; xxxix, 38; xl, 5; Num. iii, 22; iv, 22); and also
for the gate of the court round the tabernacle (Exod.
xxvii, 16; xxxvii, 17; xxxviii, 18; xxxix, 40; xli, 83;
Num. iii, 26; iv, 25). Among these the rendering "curtain" occurs but once (Num. iii, 26), while "hanging"
is shared equally between מְצָאָק and a very dif-
f erent word—בָּנַח, kedav. See HANGING. Besides
"curtain" and "hanging," מְצָאָק is rendered "covering"
in Exod. xxxv, 12; xxxix, 34; xl, 21; Num. iv, 5; 2 Sam. xvii, 19; Psa. cv, 39; Isa. xxii, 8. The
idea in the root of מְצָאָק seems to be that of
covering or protecting (נָעַק, Gesenius, Thes. Heb. p. 951). If this
be so, the object denoted may have been not a curtain
or veil, but an awning to shade the entrance—a thing
natural and common in the fierce sun of the East
(see Ferguson’s Mincipia and Parapatia, p. 181).
S. V. See TABERNACLE. The sacred curtain separat-
ing the holy of holies from the sanctuary is design-
ated by an entirely different term, בְּנִיצָר, perak/nith
(Exod. xxvi, 81 sq.; Lev. xvi, 2; Num. xviii, 7, etc.).
See VAT.

Curtius, Valentin, a prominent Lutheran minis-
ter of the sixteenth century, was born at Lebus
Jan. 6, 1498. He studied at the University of Ros-
tock, and early entered the order of Franciscans.
He was one of the earliest adherents of the Reforma-
tion of Luther, and became its leader, first in the city
of Rostock, and subsequently in that of Lubeck. In
1564 he was appointed superintendent of all the
churches of Lubeck, and in this position exercised a

CUSA

most beneficent influence upon the religious life of the
city. He also took a prominent part in many of the
theological conferences of the Lutheran Church. Thus
he was present at the "convent of Brunswick" in
1557, which was to settle the adversities concerning
the Augsburg Confession, and in 1561 at the "convent of Luneburg," when
the "Luneburg Articles" were drawn up, which were
incorporated with the symboical books of Brunswick.
Curtius is also the author of the so-called "Lubeck
Formula" (Formula consensus, etc.), which he drew up
in concert with the secular authorities and the entire
clergy of the city. By it the ministers pledge them-
selves to abide by the doctrine of the prophets and the
apostles, the Apostolic Creed, the Augsburg Confes-
sion, the Apology, and the Articles of Schmalkald.
It was signed by Curtius and all the other ministers
of Lubeck in 1569, and afterwards by all ministers ap-
pointed in Lubeck until 1583, when the signing of it
was no longer required. Curtius also drew up, in the
name of the clergy, a "Protestatio contra Synodum
Tridentinum." He died Nov. 28, 1573.—Herzog, Real
Enzyk. xix, 573; Starko, Lich. Kirch.-Hist. (Hamburg,
1724, 2 vols., where both the "Formula Consensus" and
the Protestatio are printed).

Cusa, Nicholas de, or Cusanus, a cardinal
of great learning. His name was properly Nicholas
Khryppes (Crebus), but he was named Cusanus or De
Cusa from Cuse on the Mosel, where he was born in
1401. He was the son of a poor fisher, who wished
him to learn the same trade. Rather than comply with
this request, Nicholas left the paternal home and
found employment with the count of Manderscheid,
who, having discovered the eminent talent of his serv-
ent, sent him to the school of the Brothers of Common
Life at Detweler, and subsequently to the University
of Padua. At the age of 28 Nicholas became doctor of
law, but when he lost his first lawsuit he left the pro-
fession of law for the study of theology. Possessing a
thorough knowledge of the Greek, Latin, and Hebrew
languages, and a rare degree of eloquence, he soon
attracted attention. After holding several ecclesiasti-
cal benefices at St. Wendel and Coblenz, he was pres-
ent as archbishop of the cathedral church of Liege at
the Council of Basel, where he presented to the assem-
bled bishops the celebrated work De Concordia Cat-
tholica. This is one of the ablest works published dur-
ing the Middle Ages in fa-
vor of the opinion that the pope is subordinate to an oc-
cumenical council; it at-
tacks the pretended dona-
tion of Constantine, and the authority of the false se-
crets, and insists on the reformation of the Church
and the Germanic empire. Cusa was opposed to the dis-
solution of the council which was attempted by Eu-
genius IV, and showed himself favorable to the reforms
which the council decreed. But soon after he left the
reformatory party and became an adherent of the pope,
who added him to the legation which was sent over to
Constantinople to dissuade the Greeks from going to
Basel, and to induce them to go to Ferrara. After
the rupture between the pope and the council, Cusa ac-
companied the papal legate, Thomas de Sarzana, on his
missions to Germany where he became pope, under the name of Nicholas V. Cusa was
made a cardinal (1449), and bishop of Brixen, in the
Tyrol, in 1459. He was also sent on important mis-
sions to Germany, England, and Prussia. Being
charged with the re-establishment of ecclesiastical
discipline in Holland, he acquired himself of this task
with great firmness, and his reform measures in his own
diocese involved him in a quarrel with the archduke
Sigismund of Austria. Cusa excommunicated the
archduke, who, in his turn, imprisoned the cardinal,
and compelled him to agree to a compromise. The
matter was not fully settled when the cardinal died at
Lodi in 1464.

The transition of Cusa from the reform party to the
adherents of the court of Rome has by some writers been
charged to ignoble motives; but, in view of the
purity of his life, and the honesty of his purposes ex-
hibited in all his public acts, most of the writers con-
sider it as an honest change of opinion. It is thought
that Cusa himself discovered the inconsistency of
some of his views on the unity of the Church, the pa-
pal prerogatives, and the authority of the councils, as
laid down in the work De Concordantia Catholica, and
that, finding it necessary to discard the one or the
other, he laid greater stress on the monarchical gov-
ernment of the Church than on the representative con-
ccepts with which he was attached, which Cusa shows to the monarchical principle in
general. See Brockhaus, Nicolai Cusmi de concilii
universali potestas sententia explicantur (Lpzg. 1867).

As a philosopher, Cusa was among the first to aban-
don the scholastic creed. "He arranged and repub-
lished the Pythagorean ideas, to which he was much in-
clined, in a very original manner, by the aid of his math-
ematical knowledge. He considered God as the uncon-
ditional Maximum, which at the same time, as Absolute
Unity, is also the unconditional Minimum, and begets
of himself and out of himself equality and the com-
imination of equality with modes (Son and Holy Ghost).
According to him, it is impossible to know directly and
immediately this absolute unity (the Divinity), because
we can make approaches to the knowledge of him only
by the means of number or plurality. Consequently
he allows us only the possession of very imperfect no-
tions of God, and those by mathematical symbols. It
must be admitted that the cardinal did not pursue this
thought very consequently, and that his view of the
universe, which he connected with it, and which repre-
sented the universe as the maximum condensed,
and thus become finite, was very obscure. Nor was he more
successful in his view of the oneness of the Creator and
cerections of his attempt to explain the mysteries of the
Trinity and Incarnation by means of this panthe-
istic themis. Nevertheless, numerous profound though
undeveloped observations on the faculty of cognition
are found in his writings, interspersed with his pre-
vailing mysticism. For instance, he observes that the
principles of knowledge possible to us are con-
tained in our ideas of number (ratio explicita) and
their several relations; that absolute knowledge is
unattainable to us (proposio veritatis intuitibilis,
which he styled docta ignorantia), and that all which
is attainable to us is a probable knowledge (c-nuctura).
With such opinions he expressed a strong discontent
for the scholastic method of the schools...

The works of Cusa were published in 1514 at Paris (3 vols. fol.), and again in 1665 at Basel (3 vols. fol.). The latter edi-
tion is the more complete. See Tennesmann, Manuat.
Hist. Phil. § 298; Scharpf, Der Cardinal und Bischof
Nic. von Cusa (vol. i, Mainz, 1845; the 2d vol. has
not appeared); D'Anx, Der deutsche Cardinal Nic.
von Cusa (Ratisbon, 1847, 2 vols.); Clemens, G. Bruno und
N. von Cusa (Bon in, 1847); Zimmermann, Cusa als Vor-
läfer Leibnitz's (Vienna, 1862).

Cush (Heb. Kūd, צ'וע, deriv. uncertain; A. V.
"Cush," Gen. x, 6, 7, 8; 1 Chron. i, 8, 9, 10; Psa.
vi, title; Isa. xi, 11; "Ethiopia," Gen. ii, 13; 2 Kings
xix, 9; Esth. i, 11; ii, 9; Job xxvii, 12; Psa. Ixviii,
31; lxxvii, 4; Isa. xviii, 1; xx, 3, 5; lxxviii, 9;
xiii, 3; xiv, 14; Ezek. xxix, 10; xxx, 4, 6, xviii, 5;
Nah. i, 9; Zeph. iii, 10; "Ethiopians," Isa. xx, 4;
Jer. vii, 9; Ezek. xxvii, 9, the name of two men,
and of the territory or territories occupied by the de-
scendants of one of them.

1. (Sept. Χούσ, Vulg. Chus.) A son (apparently
the eldest) of Ham. B. C. cir. 2510. In the genealo-
gy of Noah's children Cush seems to be an individual,
for it is said "Cush begat Nimrod" (Gen. x, 8; 1 Chron.
i, 10). If the name be older than his time, he
may have been called after a country allotted to him.
The following descendants of Cush are enumerated:
his sons, Seba, Havilah, Sabath or Saba, Raamah,
and Sheba (or Sabtechah or Sabtecha); his grandsons,
the sons of Raamah, Sheba and Dedan; and Nimrod, who,
as mentioned after the rest, seems to have been a re-
moter descendant than they, the text not necessarily
proving him to have been a son. See Ham.
The only direct geographical information given in this pas-
sage is with reference to Nimrod, the beginning of
whose kingdom was in Babylonia, and who afterwards
went, according to the reading which we prefer, into
Assyria, and from thence into Ninevah and the cities.
The reasons for our preference are: (1) that if we read
"Out of that land went forth Asshur," instead of "he
went forth [into] Asshur," i.e. Assyria, there is no account
given but of the "beginning" of Nimrod's kingdom;
and (2) that Asshur the patriarch would seem here to be quite out of place in the genealogy.

See Nimrod. See NIMROD.

LAND OF CUSH.—From the earliest son of Ham (Gen.
x, 6; 1 Chron. i, 8) seems to have been derived the
name of the land of Cush, which is commonly rendered
by the Sept. Αἰθίοπια, and by the Vulgate Αθηηοπια;
in which they have been followed by almost all other
versions, ancient and modern. The German transla-
tion of Luther has Μορηνλαν, which is equivalent to
Negroland, or the Country of the Blacks. A native
was called Cushi (ךוושיע, Αθηηοπις, Αθηηοπις, Jer. xii, 28),
the feminine of which was Cushith (ךוושית, Αθηηο-
πις, Αθηηοπις, Num. xii, i), and the plural, Cushim,
ךוושים, Αθηηοπιοι, Αθηηοπιοι, Amos ix, 7). See
Ethiopian.

2. Of the four sons of Ham," says Josephus
(An. i, 6, 2), "time has not at all hurt the name of Cush;
for the Ethiopians over whom he reignes are not even
even considered by themselves, nor by any other race
in Asia, called Chassites. The Peshito Syriac version
of Acts viii, 27, styles both queen Candace and her
treasurer Cushana. See Candace.

The locality of the land of Cush is a question upon
which eminent authorities have been divided; for
while Bochart (Phileg. iv, 2) maintained that it was
exclusively in Arabia, Gesenius (Lex. in voce) held,
with no less pertinacity, that it is to be sought for
nowhere but in Africa. In this opinion he is supported
by Schultheiss of Zurich, in his Paradiese (p. 11, 101).
Others again, such as Michaelis (Spieg. Geogr. Hebr.
Exe. cap. 2, p. 167) and Rosenmüller (Bibl. Geogr. by
Morren, i, 307, 310), have supposed that the same
name Cus was applied to tracts of country both in Asia
and Africa—a circumstance which would easily be ac-
counted for on the very probable supposition that the
descendants of the primitive Cushite tribes who had
settled in the former country emigrated across the
Red Sea to the latter rejon of the earth, carrying
with them the name of Cush, their remote progenitor.
This idea had been developed by Eichborn (De Cu-
uchia, Oabyrinth, 1774). The term Cush is generally ap-
p lied in the Old Testament to the countries south of the
Israelites. It was the southern limit of Egypt (Ezek.
xxx, 10), and apparently the most westerly of the provinc-
s in which the rule of Ahasuerus ex-
tended, "from India even unto Ethiopia" (Esth. i, 1;
vi, 9). Egypt and Cush are associated in the major-
ity of instances in which the word occurs (Psa. lxviii,
CUSH 613  
CUSH

51; Isa. xviii. 1; Jer. xlvi. 9, etc.), but in two passages Cush stands in close juxtaposition with Eram (Isa. xi. 11) and Persia (Ezek. xxxviii. 5). The Cushite king, Zerah, was utterly defeated by Ana at Marashah, and pursued as far as Gerar, a town of the Philistines, from which he never returned, which was apparently under his sway (2 Chron. xiv. 9, etc.). In 2 Chron. xxii. 16, the Arabians are described as dwelling "beside the Cushites," and both are mentioned in connection with the Philistines. The wife of Moses, who, we learn from Exod. ii., was the daughter of a Midianite chieflain, is in Num. xii. 1, denominated Cushite. Further, Cush and Seba (Isa. xxxii. 8), Cush and the Sabaeans (Isa. xlv, 14), are associated in a manner consonant with the genealogy of the descendants of Ham (Gen. x, 7), in which Seba is the son of Cush. From all these circumstances it is evident that under the denomination Cush were included both Arabia and the country south of Egypt on the western coast of the Red Sea. It is possible also that the vast desert tracts west of Egypt were known to the Hebrews as the land of Cush, but of this we have no certain proof. The Targumist on Isa. xi. 11, sharing the prevailing error of his time, translates Cush by India, but that a better knowledge of the relative positions of these countries was anciently possessed is clear from Esth. i, 1.

Some have sought for another Cush in more northern regions of Asia, as in the Persian province of Chusistan or Susiana, in Cuthah, a district of Babylonia, etc.; and some, Nimrod, the youngest son (or descendant) of Cush, spread his conquests in that direction, it is no doubt possible that his father's name might be preserved in the designation of some part of the territory or people. But here again the data are not very satisfactory; in fact and in the comparisons which led to the supposed mention of the city, in the description of the site of Paradise (Gen. ii. 14), of a land of Cush, corruption, of the southern border of Palestine which, though the name of Cush were more variously applied in Scripture than it really is, it would not be more than was the corresponding term Ethiopia among the Greeks and Romans, which comprised a great many nations very distant, as well as wholly distinct from each other, having nothing in common with them, but their swarthiness, sun-burnt complexion — ἀθληστός ο. ἀθετος ῥωξ ἰμφυς, i. e. "burnt-black in the face." Homer (Odysseus, i, 22) speaks of them as "a divided race — the last of men — some of them at the extreme west, and others at the extreme east." Strabo (i, 60) describes them as "lying people — lazy, living in a long tract from the rising to the setting sun." Herodotus (vii, 69, 70) distinguishes the eastern Ethiopians in Asia from the western Ethiopians in Africa by the straight hair of the former and the curly hair of the latter. The ancients, in short, with the usual looseness of their geographical definitions, understood by Ethiopia the extreme south in all the earth's longitude, and which, lying, as they thought, close upon the fiery zone, exposed the inhabitants to the sun's scorching rays, which burned them black. It is the mistaken idea of the Scriptural term "Cush" being used in the same vague and indeterminate manner that has led to so much confusion in connection with this subject. The true writer (Ruttmann, Alt. Erikk. d. Morget. p. 40, note), in his desire to carry out the parallel between Ethiopia and Cush, derives the latter word from the root צו (צוז, קם, קן), "to burn;" but that is opposed to all the rules of etymological analogy in the formation of Hebrew proper names (comp. Ritter's Erdkunde, i, 222; Heeren's African Nations, Engl. transl. i, 289). See CUSH.
