"It is difficult to determine the exact species or variety of mint employed by the ancients. There are numerous species very nearly allied to one another. They usually grow in moist situations, and are herbaceous, perennial, of powerful odor, especially when bruised, and have small reddish-colored flowers, arranged in spikes or whorls. The taste of these plants is bitter, warm, and pungent, but leaving a sensation of coolness on the tongue; in their properties they are so similar to each other, that, either in medicine or as a condiment, one species may safely be substituted for another. The species most common in Syria is Mentha sylvestris, found by Russell at Aleppo, and mentioned by him as one of the herbs cultivated in the gardens there. It also occurs in Greece, Taurus, Caucasus, the Altai Range, and as far as Cashmere. M. arvensis is also a widely-diffused species, being found in Greece, in parts of Caucasus, in the Altai Range, and in Cashmere." (See Celati: Hierob., i, 543 sqq.) Lady Calcutt ("Script. Herb., p. 280") makes the following ingenious remark: "I know not whether mint were originally one of the bitter herbs with which the Israelites eat the Paschal lamb, but our use of it with roast lamb, particularly about Easter time, inclines me to suppose it was." The same writer also observes that the modern Jews eat horseradish and chervil with lamb. The wood-cut represents the horse mint (M. sylvestris), which is common in Syria, and, according to Russell ("Nat. Hist. of Aleppo," p. 99), found in the gardens at Aleppo: M. sativa is generally supposed to be only a variety of M. arvensis, another species of mint; perhaps all these were known to the ancients. The mints belong to the large natural order Labiatae.

MINERT, Peter, a Dutch theologian, flourished for many years at Heerle, in Holland, about the beginning of the 18th century. He was noted for his erudition, teaching as a Biblical scholar and theologian. His principal work was the Lexicon Graeco-Latinum in Novum Testamentum Jesu Christi; cum Prefatione J. G. Prüllii (Francof. 1728, 4to). There was no better lexicon than this of Minteri previous to the publication of Schleusner's Novum Lexicon. It is more valuable for its numerous references to the Hebrew Scriptures and the Septuagint; and is helpful as a concordance as well as a lexicon to the student of the N.-T. Scriptures in the original version.

MINTURN, Robert Browne, an American philanthropist, who was born in New York City Nov. 16, 1805, and with a good preparatory education entered business and became a successful merchant, deserves a place here as one of the founders of the celebrated St. Luke's Hospital, one of the noblest of New York charities. Minturn also labored for the poor and the sick in many other ways, and his name deserves to be remembered by society. He was one of the first commissioners of emigration, and an originator of the association for improving the condition of the poor. He died Jan. 9, 1866.

MINUCIO, or Minucio, a learned Roman Catholic prelate, was born at Serravalle, Italy, in 1551. After having been prevost at Ottening, Germany, he became counsellor to the duke of Bavaria. He was next secretary to the Pope, to pontificate under Clement IX and Clement VIII. The latter appointed him in 1596 archbishop of Zara, in Dalmatia. He was appointed by the republic of Venice to negotiate a peace with the Ugoceques (adventurers), fugitives from Dalmatia, who availed themselves of the difficulties existing between Austria and Venice to rob and massacre the inhabitants of the borders of both countries. Minuccio died in Munich in 1604. He wrote in Italian the history of these filibusters up to 1602; it was published at Venice (1676, 4to) under the title of Storia degli Ugocechi, with a continuation as far as 1610 by Paolo Sarpi. He also wrote "Vita sacra Augustae de Serravalle," in the Bollandists (of March 27), and in the Supplément du Surtius. See Ughelli, "Italia Sacra," vol. v.; Hoefer, "Novo. Bibl. Générale," s. v.

MINUCIUS FELIX, Marcus, one of the most celebrated apologists of the early Latin Church, flourished in the 3d century. But little is known of his early history beyond the fact that he was a native of Africa, but removed to Rome, and there successfully exercised the profession of advocate until his conversion to Christianity. Lactantius (\textit{Inst. Diu.}, i, c. 9, l. v., vi) and Jerome are loud in his praise, and assure us that Minucius was much admired for his eloquence. He is ever to be remembered by the Christian Church as one of her ablest defenders in a work of his entitled \textit{Octavius}, which is a dialogue between a Christian called Octavius and a Heathen called Cecilius, concerning the merits of the two religions which were then striving for supremacy. In this dialogue, Octavius repels the absurd imputations of the heathens against the early Christians, whom they accused of all sorts of impurities and crimes in their religious meetings. Through fear of persecution these meetings took place mostly at night and in concealed places, which circumstances exposed them to the obloquy of vulgar ignorance. At the same time Octavius retorts upon his co-disputant by exposing the notorious licentious practices of the heathens. The style of this work is unexampled and highly polished; the language is animated, and the mode of treating the subject attractive, being mixed up with mythological learning and much information concerning the customs and opinions of that interesting period. "It is," says Neander, "a felicitous and dramatic representation
seized from life, repulse with good-sense, and prevailed by a lively Christian feeling. As an apology of Chrissianity, the work of Minucius Felix is a companion to those of Clemens Alexandrinus, Athenagoras, the Theophilius of Antioch, Justin, Tertullian, and other early advocates of the Christian faith in its times of trial and depression, and forms a link between them and those of Augustine and the other fathers of the 4th century. Octavius was at one time attributed to Artemius, and was inserted as the eighth book of his disputations Adversus Gentes; but Balduin published a Dissertation on Minucius (Kiel, 1865), which unquestionably places the authorship where it belongs—with Minucius Felix. Octavius is now extant only in one MS. copy, which had remained unhonored in the Vatican library until the pontificate of Leo X, who gave it to Francis I of France. It has gone through many editions, among which those by James Gronevius (Leyden, 1709), by Davis (Cambridge, 1712), and by Orelli (Turici, 1836), deserve notice. The latter is accompanied by numerous notes by Dr. Davis and others, and a dissertation, or commentary, by Baldwin. It has been translated into French by the abbé De Gourcy, into German by R. Wurtz (Turici and Lüttbek, 1836), and into English also, in Reeve's Apologies of Justin Martin, vol. ii. The best and largest edition of the original is by Carl Hahn (Vienna, 1867).

Another work, entitled De Fato, against astrologers, is mentioned by Jerome as being ascribed to Minucius, although Jerome expresses doubts concerning its authorship. This work is not known to be extant now. See Schaff, Ch. Hist. vol. i.; Hagenbach, Beiträge zur Geschichte der Geschichte, i. 63 sq.; Du Pin, Biblioth. des aut. Eccles. i. 117 sq.; Schröck, Kirchen. i. 420 sq.; Jahrb. d. deutschen Theol. 1867, Oct.; Meier, De Minucio Felix (Zurich, 1824, 8vo.). (J. H. W.)

Minution is a term applied by monastics of the Middle Ages to phobotomy, which was much in fashion in those times. In some abbeys a bleeding-house, called Phobotomaria, was sustained. For details on the practices of the monastics in minution, see Poskebro, Brit. Monacism (Lond. 1817, 4to.), p. 821.

Minzocchi, Francesco, a renowned painter of the Bolognese school, sometimes called Il vecchio di San Bernardino, was born in Florence in 1518. In his youth he studied the works of Dalmagin in his native city, and from him he acquired a weak style, as is evident in his picture of the Crucifixion at the Pardi Observanto. Afterwards he changed his manner, assuming a more correct and beautiful style; and his subsequent productions are marked by a beauty and grace rivalling nature herself. Among his most careful works may be mentioned the pictures in the cathedral of Loretto, in a chapel of S. Francesco di Paola. They represent the Sacrifice of Melchisedech and the Miracle of the Mann, in which the prophets and principal characters are given with great dignity and nobleness. Scannelli extols a specimen of his works in fresco on the ceiling of S. Maria della Grazia in Forli, representing the Deity surrounded by a number of angels: figures full of spirit, majestic, varied, and painted with a power and skill in foreshortening which entitles him to greater celebrity than he enjoys. He left, also, a number of productions in the cathedral at S. Domenico. He was so much admired that upon the demolition of the chapels he least celebrated frescos were carefully cut out and preserved. He died in 1574. See Lanzi's History of Painting, trans. by Roscoe (London, 1847, 8 vols. 8vo.), i. 56.

Miph'khad (Heb. Mikhkhad, מְפִּחָּד, review or census of the people, as in 2 Sam. xxiv, 5, etc.; or mandate, as in 2 Chron. xxxi, 13; Sept. Mas.) is, the name of a gate of Jerusalem, situated opposite the residence of the Nethinim and the bazaars, between the Temple Mount and the older part of the city. It is identical with the Prison-gate (Neh. xii, 39), under the middle of the bridge spanning the Tyropoeon (see Strong's Harm. and Expos. of the Gog. Appendix, ii. p. 15). Barclay (City of the Great King, p. 156) identifies it with the Highgate of Benjamin (Jer. xx, 2), and locates it at the west end of the bridge; but that gate was probably situated elsewhere. The name may refer to some memorable census of the people, as, for instance, Cist of David (2 Chron. xxiv, 26). The name also is almost the same as the Hebrew word used for 'number' is mykhakad), or to the superintendents of some portion of the worship (Pekidim, see 2 Chron. xxxi, 19). See Jerusalem.

Mirabaud, Jean Baptiste, a French philosopher of some celebrity, was born in Paris in 1675, and died in 1760. He was at home in the literature of Italy and of Spain. He wrote several treatises on various subjects; among others, he rendered Tasso's Jerusalem Delivered into the Orlando Furioso. He also wrote several philosophical treatises, which in 1726 secured him admission to the French Academy. His most important works are, Le Monde, son origine, son antiquité; and Sentiments des Philosophes sur la nature de l'âme. Mirabaud was for a long time regarded as the author of the Systeme de la Nature, now known to have been written by Baron D'Holbach. See D'Alembert, Histoire des Membres de l'Academie Francaise; Hoeft, Nouv. Biog. Generale, s. v.; Ueberweg, Hist. of Philosophy, vol. ii.

Miracle Plays. See Mysteries.

Miracles. In every age there are certain great movements of human thought, which more or less influence the convictions of men in the mass, and carry them on to conclusions which, but a few years before, would have seemed altogether improbable. Sometimes it is very difficult to account for these movements. There has often been no master-mind leading the way: whatever works have been written have rather been the result of the wave of thought passing over that small portion of the world which thinks that the cause of the delusion can be explained by this or that new movement, a reaction, a recall of the mind, from that which has gone before, whether in the way of dissatisfaction at the sloth and inactivity of the previous age, and at its being ignobly content to have no high aspiration, no high sense of the nobleness of man's mission, or of being constrained from a duty enjoined by the principles of the union and principles urged on to an extent which made them practically a burden and wearisomeness too great for men to endure.

The latter is perhaps the more common origin of new developments of thought, and is a power larger and more active than that which moves the men as apt to imagine. But the explanation of the movements of the mind in our own time is rather to be sought in the meanness of the last century. Upon the whole, it was not a time of high purposes, though the War of Independence on the one side of the Atlantic, and the resistance to the despotism of Napoleon on the other, show that it was not wanting in great practical results. But as the present century advanced, the old lethargy which had enveloped the minds of the English-speaking race gave way. Some men became intensely active in working for practical reforms; others set new modes of thought in motion, and everywhere there was a eager desire for thoroughness, and for probing the principles of things to the very bottom. The old argument of "continuation"—that a thing should still exist because it had existed—gave way to an intense realism, which would let nothing exist unless it could prove its right to existence. Utilitarianism became the order of the day, and that poetry which often gilds a sleepy age, and makes it dwell at peace in a dreamland of repose, vanished before the energy of men keenly alive to the necessities and imperfections of the present. It is this intense realism that has made men restless and ill at ease at being, or to be, in transition. A miracle stands out clearly different from the whole present order of things, and is out of harmony with the main
current of our thoughts. There have been ages when men lived for the future, when the present was neglected, and things unseen were the realities which engrossed their thoughts. When we read the accounts of the trials for witchcraft in New England a century or two ago, we not find the accusers only, but the accused full of ideas of the preternatural. What they saw had but slight influence upon them; what they imagined had almost no power over their thoughts. We, on the other hand, must live in the present. The turn of our minds is to verify everything. We call for proof, and whatever cannot be proved we reject. It is not merely miracles which we treat thus, but most of what the last century regarded as historical realities. The intense historical activity of the present day, which has rewritten for us the stories of Greece and Rome, of the Church and of England, of the great ages of Spain and the Netherlands, besides special studies of great value, has its origin in that same spirit for searching and proving which leads so many to reject miracles.

It is altogether unfair to lay the rejection of miracles to the charge of physical science. The leaders of science are as thoroughly realistic as our historians and men of letters, but not more so. They are themselves phenomena of an age which perpetually asks What is? They inquire into the conformation of the earth and its constituents; into the motions of the heavenly bodies, and of the planets. They inquire into the social and moral efficiency of individuals. They do not stop there. They inquire into the present, with the same eagerness to find out present facts, and the explanation of them, as animates the historian and the practical reformer. Old beliefs in our day can no more stand their ground than old laws and old customs, unless they can prove their right to stand by an appeal to present usefulness. It is of no use to appeal to anything else. In the present state of man's minds, if a thing does not fit in to the present, it seems to have no right to exist at all. But if the progress of physical science has little to do with the dislike to miracles and the supernatural, the rapid increase of material wealth, and the advance made in everything which tends to present comfort and enjoyment, have much to do with it. We are living in an age when the present is full of enjoyment. By our large ascendency over the powers of nature, the earth yields us its treasures with a bountifulness never known before. Our homes are replete with comforts and luxuries little dreamed of by those who went before; and the secret forces of nature are pressed into our service, and do our bidding. Side by side with this subjection of nature there has grown up a greatness of material enterprise unknown before. Vast projects are undertaken and persevered in, before which the greatest mercantile obstacles, which has rewritten for us the story of this, is a grandeur of conception, a nobleness of purpose, an unflinching courage in many of the commercial undertakings of the present day, which, though gain may be their final object, yet give them a dignity and a poetry that make them for the time enough to conceal the deep cravings which are man's peculiar endowment, and which mark him out as a being destined for no common purposes.

Yet this present greatness of material things dwarfs many of man's higher gifts. Its influence begins early. Even in education it makes men aim chiefly at utilitarian ends, and at too early results. Parents do not care for anything which does not lead directly and at once to profit and pay. Whatever develops man's thinking powers, and aims simply at making him better and nobler in himself, is thrust aside. It would take too much time; defer too long the quick harvest of gains; might make men even indifferent to worldly prosperity. And yet as the course of history might lend a distinguishing mark to material wealth. Or, at all events, it lies out of the circle of men's every-day thoughts. Life is an eager race, with boundless prizes for all who press onwards and upwards. In so active a contest, with every energy on the stretch, and every exertion rightly rewarded, it is no wonder if the present is enough; and in its enjoy-
Miracles

made known to us in revelation itself; knowledge of man, both as regards his present state and his future hopes; more exact knowledge, too, of right and wrong, the appeal now lying not to the varying codes of human morality, nor even to the inner conscience, which, as a faculty capable of education and development, is no rigid rule, but one which binds to every state of things, and adapts itself to every stage and degree of human progress. That natural religion is in a stage of transition is to an unchanging law of God. Morality has at last a settled basis, and man a fixed standard by which to judge his actions.

Now it seems almost supererogatory to show that natural religion does not suffice for man's wants. We know men to be essentially religious beings. Even Kant, though he appears to think that Christianity might now be dispensed with, yet distinctly holds that natural religion, without the teaching of Christianity, would not even now have been enlightened enough, or pure enough, or certain enough, to guide man's life. But the whole state of the heathen world before Christ came, and now wherever Christianity is unknown, is proof sufficient of the utter powerlessness of natural religion. The Greek world, with its marvellous taste in art and appreciation of the beautiful, was yet intensely wicked. The state of things at Rome under the empire was so foul that modern pens would blush to describe it. What natural religion is where civilization does not exist, the condition now of savage tribes proves clearly enough. We will touch therefore only upon one point, that of progress. Apart from Christianity, there are at most in the world the very faintest indications of progress; usually none at all. In no form of natural religion, in no heathen religion, was there anything to lead man onward, or to make him better. At best, as under Mohammedanism, or the religion of Confucius, there was stagnation. And when, as in the case of so many of the older civilizations of the world, decay set in, there was no recuperative force. Man sank steadily and hopelessly. In the Old Testament alone do we find the thought of progress. A nation is there formed for a high and unique purpose; and to shape it for its end it is placed in a special and immediate relation to God, and is taught by messengers sent directly by him. Under this special dispensation, its one business was to grow fit for the work prepared for it; its one motto, progress. In the New Testament, progress is the central thought everywhere present; but no longer now for one nation—it is progress for all mankind. It is a new kingdom that is proclaimed, and all who enter it are required to put away old things, and become new. It belongs to men who have left their previous condition far behind, and are not content with the realization of the new life forth unto those things which are before. And special stress is laid everywhere upon the duty of bringing all men into this new kingdom, and of Christians being the purifying salt which is to preserve the whole world. The means by which Christianity thus renovates mankind, and the motive force of all modern and real progress, is partly that it alone proposes to us principles so perfect that at the utmost our approach to their realization is a very distant one. The complete abnegation of self, the treatment of others with that justice, liberality, and love with which we would wish ourselves to be treated, and a holiness as absolute and entire as that of God himself—such principles, while practically aiding us in our upward course, yet set us a standard which, as a matter of fact, is unattainable. How often this is misunderstood! Men contrast our Christianity with what is set before us in the Gospels, and then measure it by our own, and condemn it as having no principle that our state is practically a mere heathenism. But while there is ample room for lamentation that we

Christians are content to remain so very much below the standard set us, yet, so far as there is progress towards it—so far as it can be truly said that this generation is in a higher stage than the last was, and is training the youth to attain in the next to a still nearer approximation to Christian perfection, so far Christianity is doing its work; not merely its work on individuals—these constantly, even where the general state of things is worse than it was to the last, is beginning to make the subdued effort to create a social holiness—but its work on the mass. If nationally we are making no progress, then our Christianity is not having its proper work, and, in an age which judges by results, is not proving its right still to exist. But even at the worst no Christian nation is hopeless; heathen and Christian nations have again and again risen from the lowest degradation.

But Christianity tends to progress not merely by the high ideal it sets before us, but by its power over men's sympathies. This power resides mainly in the human nature of Christ, but only when viewed in its relation to his Godhead. As the great proof of the Father's love to man, it does encourage our feelings of sympathy, our imagination, and inspire our conduct with motives such as no other supposed manifestation of the Deity to man has ever produced. Christ incarnate in the flesh is not merely the realization of the highest standard of Christianity, and the model for our imitation, but acts also as a motive power; he inspires and encourages the attempt to put into practice the principles of the religion which Christ taught.

If there be a God—and the man who denies it contradicts the intuitions of his own nature—it is religion, and revealed religion only, that gives us adequate knowledge of his nature and attributes. If there be a future—and the very instincts of our nature testify that there is—a revelation religion only that tells us what the future life is, and how we may attain to it. Yet necessary parts as both these beliefs are of our nature, men may bring themselves to deny them. For a time they can put away from them both the future and a God. But if there be a present—and this is just the one thing in which the 19th century does thoroughly believe—even then, granting only this, if this present is to have any progress, and is to move onwards to anything better; if there is to be in it anything of healthful and vigorous life, this, too, is bound up with the one and the other. It has said to us both power and proof that it is revealed; proof that it did come really from God; and proof that it is the one motive power of human progress. If the light of nature hitherto has been insufficient to secure virtue or raise men towards it, that light will not suffice now, even though it has been fed and strengthened by constant and fruitful industry. In asserting this, Kant asserted too much. Neither Christians nor Christian communities have as yet risen to anything like a high general standard of morality; to say nothing about holiness; remove the high ideal and the strong motives supplied by the religion of Christ, and there would result, first stagnation, then decay. An "enlightened self-love" never yet successfully resisted any carnal or earthly passion. Christianity has effected much; the contrast between heathen and Christian communities is immense; but it has not raised men yet to its own standard, nor even to a reasonably fair standard of moral excellence.

Now, grant but the possibility of there being a God; grant but the possibility of there being a future, as there must necessarily be a connection between man's future and his present, and as our idea of God forbids our excluding any existent thing from connection with him, then his revelation and existence must be true. God must be good, there is no antecedent improbability in his bestowing upon man what would be of use and benefit to him. You must get rid of God—must resolve him into a sort of nebulous all-pervading ether, with no attributes or personal force or knowledge (the Pantheists do this beautifully, and call God cosmic force)—you
must get rid of a future life, and account yourselves simple phenomena, like the monkey, and asocial jelly-bags, from which you are supposed to be descended, with no connection with the past, and your present existence, mere shifting-stars in the realms of space, coming from nowhere, and going nowhere, and so only, by the extirpation of these two ideas from your nature, can you make a revelation improbable. Even then your position is open to grave doubt. We can understand the nature of evolution; and if the law be proved, though as yet it be not, it will prove it, and it would involve the no religious difficulties, provided that evolution really worked towards a solid end. Acustomed everywhere else in nature to see things fitted to their place, and all things so ordered that there is a use for everything, I could understand the meanest thing in creation rising upwards in the scale through multitudinous forms and infinite periods of time, if finally there were some purpose for all this rising. The plan is vast and marvelous. It can be justified only by some useful end. And such an end would be if, after vast ages of development, the tiny atom ended in becoming a reasonable and responsible creature, with some purpose for this vast preparation, because capable of still rising upwards, and of "becoming partaker of the divine nature." But if the law of evolution stops at man without a future, then its product is not worthy of it, and so purposeless a law, ending in so mean a result—for what is there meaner than that the little things that falls down would be too grand in its design for so bare and worthless a result.

Yet even this is but part of the argument; the evidence in favor of Christianity have a collective force, and it is upon them as a whole that one fain rests secure. But we may well contend that if Christianity is necessary for our present life-being; if the advance of society; if the removal of the bad, the evil, and the sorrowful in our existing arrangements; if the maintenance and strengthening of the noble, the earnest, the generous, and the pure, is bound up with Christianity, and by the same the sure basis and motive towards progress, then, at all events, religion can show cause enough for existence to make it the duty of man to examine the evidence which it offers in its proof. Nineteenth-century men may decline to listen to arguments which concern only things so remote as God and the future. Have they not built railways, laid the Atlantic telegraph, found out the constituent elements of the sun, traced the history of races, found them and distinguished them on the stock exchange? What can men want more? Well, they want something to bind society together; even the worst want something to control in others those passions to which they give free play in themselves. No man wants society to grow worse, however much he may be prone to corrupt it. By the one salt of society, the one thing that does purify and hold it together, is religion.

Now antecedently there is no reason why God might not have made natural religion much more mighty and availing. As it is, nothing is more powerless in itself, though useful to an evil end. Religion or no religion, means revelation or no revelation. Reject revelation, and the only reason for not rejecting natural religion is that it is not worth the trouble. If religion, then, is a necessity of our present state, this means that revelation is a necessity. We are quite aware that even revealed religion does not explain all the difficulties of our present state. There is very much of doubt suggested by our philosophy to which Christianity gives only this answer, Believe and wait. It is, in fact, rigidly careful in refusing to give any and every explanation of things present except a practical one: in the most marked way it is silent as to the cause of our being what we are, and as to the nature of the world in which we come. It tells us that we do not now see the realities themselves, but only reflections of them in a mirror, and even that only in a riddling way (1 Cor. xiii, 12). Hereafter it promises that we shall see the things themselves, and understand the true nature and exposition of the enigmas of life. Meanwhile it gives us every practical help and necessary guidance for the present. Judged by such a test it is thus highly serviceable to our lower powers, it is a thing indispensable. Without it man would perish, and society has nothing to arrest its dissolution, or arouse it to a struggle after ascendency. Reformation is essentially a Christian idea. That a state should throw off its ignoble past and start on a new quest after excellence and right is possible only where there is a religion which strengthens it, and which, if at all, would offer it a high ideal. Reform movements have therefore been confined to Christian states; and for the individual, his one road to perfection has been a moving forwards toward God.

Upon this, then, we base our argument for miracles. The universal instincts of men prove the necessity of the existence of religion. Without it the promptings of our hearts, compelling us to believe in a God and to hope for a future, would be empty and meaningless; and this no human instincs are. There is no instinct whatsoever which has not in external nature which that exactly corresponds to it, and is its proper field of exercise. And, in the next place, natural religion, though in entire agreement with revealed, is, as we have shown, insufficient for the purposes for which religion is required. And, finally, there is the phenomenon that the revealed religion which we profess does act as a motive to nature, and makes us earnest, industrious, in art, in science, in literature, in the arts, and in all that adorns or beautifies society and human life—hold undoubtedly the foremost place, and are still moving forward. And in proportion as a Christian nation holds its faith purely and firmly, so surely does it advance onwards. It is not content with nothing to which it has attained, but sees before it the ideal of a higher perfection (Phil. iii, 13, 14).

Now a revealed religion can be proved only by that which involves the supernatural. What our Lord says to the Jews, that "they would not have sinned in rejecting him but for his works" (John xxxv, 24), commands itself at once to our reason. No proof can rise higher than the order of things to which it belongs. And thus all that can be proved by the elaborate examination of all created things, and the diligent inquiry into their constitution and uses and instincts, and the purposes for which each organ or faculty was given us, are all matters for the search of the natural philosopher, all the psychological problems which suggest so very much to us as to the purposes of our existence—all this can rise no higher than natural religion. They are at best but guesses and vague conjectures, and a feeling and groping after truth. Nothing of this sort could prove religion. It cannot be known that it is revealed before we can accept a religion as revealed.

We shall see the more clearly if we reflect upon the nature of the obedience which we are required to render to a revealed religion. Its authority is summary, and knows no appeal. It is God who speaks, and there is no higher tribunal than his throne. Take, for instance, the Ten Commandments. Essentially they are a republication of the laws of nature religion, excepting perhaps the fourth commandment. But how different a footing do they stand! The duty of not killing is in natural religion counteracted by the law of self-preservation, and in heathen communities has been generally very powerless, and human life but little valued.
Even in fairly-civilized communities murder was not a crime to be punished by the state, but to be avenged by the relatives of the murdered man. This even was the state of things among the Jews when the Ten Commandments were promulgated, and Moses, by special enactments against murder and adultery, made it evident which he found prevalent, and which did not distinguish between wilful murder and accidental homicide. Natural religion, therefore, gave no special sanctity to human life, but regarded only the injury done to the family of the sufferer. The divine commandment has gone home strongly to the conscience. It has made the shedding of blood a sin, and not merely an injury. Accordingly, Christian states have recognised the divine nature of the law by punishing murder as a public offence, instead of leaving it to be dealt with as a private wrong.

A revealed religion therefore claims absolute power over the conscience as being the direct will of God. No question of utility or public or private expediency may stand in its way. It must be obeyed, and disobedience is sin. But plainly we ought not to yield such absolute obedience to anything that we do not know to be the law of God. Man stands too high in the scale of existence, and is too composed of free-will, to be thus en- dowed with a conscience, and thereby made responsible for his actions, it is impossible for him to give up the control over his own actions to any being of less authority than that One to whom he is responsible. But a revelation claims to be the express will of that very Being from whom we have derived our sufficient knowledge, and who has manifested it to us out of his tribunal. Surely, before we trust ourselves to it, we may fairly claim adequate proof that it is his will. The issues are too serious for less than this to suffice.

But, besides this, when we look at Christianity, the nature of its doctrine brings the necessity of supernatural proof before us as an imperative force. It teaches that God took our nature upon him, and in our nature died in our stead; and, as we have pointed out before, the strength of Christianity, and that which makes it a religion of progress, is this union of the divine and human natures in Christ. He is not merely the "man of sorrows," the ideal of suffering humanity—and a religion that glorifies a sinless sufferer may do much to alleviate sorrow and sweeten the bitter cup of woe—but he is much more than this. It is only when that sinless sufferer is worshipped as our Lord and our God that we reach the main-spring which has given Christianity its power to convert the world.

But how could such a doctrine be believed on any less evidence than that which directly pledged the divine authority on its behalf? The unique and perfect character of the Jesus of the evangelists; the pure and spotless nature of the morality he taught; the influence for good which Christian doctrines have exercised; the position attained by Christian nations, and the contrast between the ideals of heathenism and of Christianity—all this and more is valuable as subsidiary evidence. Some of it is absolutely necessary to sustain our belief. Even miracles would not convince us of the truth of a Revealed Religion. The faith whichisa principle, and coherence to our consciences. For nothing could make us believe that the voice of God in nature could be opposed to his voice in revelation. It is a very axiom that, however it reaches us, the voice of God must be ever the same. But these subsidiary proofs are but by-works. They are not the cited, and can never form the main defence. A doctrine such as that of God becoming man must have evidence cognate to and in pari materia with the doctrine itself. Thus, by a plain and self-evident necessity, revelation offers us supernatural proof of its reality. This supernatural proof is twofold, prophecy and fulfilled prophecy. After these two, miracles may support us, but are absolutely not necessary to our belief.

Now these two not merely support one another, but are essentially connected. They are not independent, but correlative proofs. It was the office of the prophet gradually to prepare the way for the manifestation of the Immanuel upon earth. In order to do so effectually he often came armed with supernatural authority. But a vast majority of the prophets had no other business than to impress on the consciences of the people truths already divinely vouched for and implicitly accepted; and thus these prophecies needed the seal of which the office of Christianity do at the present day. But among the prophets there were here and there men of higher powers, whose office was to advance onwards towards the ultimate goal of the preparatory dispensation. Such men offered prediction and miracle as the seals which validated them mission. In general men could be prepared to receive so great a miracle as that set forth in the opening verses of John's Gospel only by a previous dispensation which had brought the supernatural very near to man. If the Old Testament had offered no miracles, and had not taught the constant presence of God in the disposal of all human things, the doctrines of the New Testament would have been an impossibility.

But we shall understand their connection better when we have a clearer idea of the true scriptural doctrine of miracles. The current idea of a miracle is that it is a violation of the laws of nature, and as the laws of nature are immutable, a miracle is therefore a violation by God of his own laws. This is not the teaching of the Bible itself, but an idea that has grown out of the Latin word which has supplanted the more thoughtful terms used in the Hebrew and in the Greek Scriptures. A "miracle," miraculum, is something wonderful; it is something that is marvelous. Now, however, what is wonderful; but when the word is applied to his doings in the Bible, it is his works in nature that are generally so described. In the Hebrew, especially in poetry, God is often described as doing "wonders," that is, miracles. But the term is not merely applicable to works such as those wrought by him for his people in Egypt and the wilderness (Exod. xxxiv. 10; Num. xi. 21, 22; Deut. ii. 11), but to a thunder-storm (Pss, lxviii, 14), and to his ordinary dealings with men in providence (Pss. ix, 1; xxvi, 7; xxv, 5), and in the government of the world. But this term wonder is not the word in the Hebrew properly applicable to what we mean by miracles, and in the New Testament our Lord's works are never called "miracles" (Sap. vii) at all. The people are often said to have "wondered" (Matt. ix, 39; xii, 31) at Christ's acts, but those acts themselves were not intended simply to produce wonder; they had a specific purpose, indicated by the term properly applicable to them, and that is "wonderful." This is the sole Hebrew term for what we mean by miracle; but there are other words applied to our Lord's doings in the New Testament which we will consider previously. And, first, there is a term which approaches very nearly to our word miracle, namely, ἄγνωστον, portenta, defined by Liddell and Scott, in their Greek Lexicon, as a "sign, wonder, marvel, used of any appearance or event in which men believed that they could see the finger of God." But, with that marvellous accuracy which distinguishes the language of the Greek Testament, our Lord's works are never called ἄγνωστον in the Gospels. The term means something far more than even a barely possible probability to our reasoning faculties. For nothing could make us believe that the voice of God in nature could be opposed to his voice in revelation. It is a very axiom that, however it reaches us, the voice of God must be ever the same. But these subsidiary proofs are but by-works. They are not the cited, and can never form the main defence. A doctrine such as that of God becoming man must have evidence cognate to and in pari materia with the doctrine itself. Thus, by a plain and self-evident necessity, revelation offers us supernatural proof of its reality. This supernatural proof is twofold, prophecy and fulfilled prophecy. After these two, miracles may support us, but are absolutely not necessary to our belief.

In the Acts of the Apostles our Lord is said to have been approved of God by portents as well as by powers and signs, the words literally being "Jesus of Nazareth, a man displayed of God unto you by powers, and portents, and signs;" but the portents refer to such things as the miracles, and the earthquake at the crucifixion. Exactly parallel to this place are the words in Heb. ii, 4, where God is said to have borne witness to the truth of the apostles' testimony "by signs, and portents, and manifold
powers, and diversified gifts of the Holy Ghost," the description being evidently intended to include every manifestation of God's presence with the first preachers of the Gospel, ordinary and extraordinary, in providence and in grace, and not merely the one fact that from time to time they wrought miracles. Now had our Lord been merely man, any and every work beyond the compass of man's powers would have been a miracle. It would have transcended the limits of his nature; but whether it would necessarily have violated the laws of that nature is a question of some difficulty. Supposing that man is an imperfect being, but capable of degrees, the limits of his powers may be indefinitely enlarged. Those who hold the theory of evolution concede this, and therefore concede that there is nothing miraculous in a remarkable individual being prematurely endowed with capacities which finally and in due time will be the heritage of the whole species. It is the decree of the Bible that the spiritual man lives a great future before him, and the prophets of old, and the apostles and early Christians, endowed with their great charismata, or gifts, may be but an anticipation of what the spiritual man may finally become. Still, among the "works" of our Lord and his apostles, there is one which seems distinctly divine, namely, the raising of the dead. Gifts of healing, of exciting dormant powers, such as speech in the dumb, of reading the thoughts of others' hearts, may be so heightened in man as he develops under the operations of the Spirit that much may cease to be astonishing which now is highly so. But the very idea of a soul passing to another sphere; nor can we imagine any human progress evolving such a power as this. We cannot imagine man possessed of any latent capacity which may in time be so developed as naturally to produce such a result. So, too, the multiplying of food seems to involve powers reserved to the Creator alone. But the Gospel of John does not regard our Lord as a man prematurely endowed with gifts which finally will become the heritage of the whole species; it is penetrated everywhere with the conviction that a higher nature was united in him to his human nature. It shows itself not merely in formal statements like the Gospel of John, but in the open expression of a spiritual mind in speech or in the book. Now in a brute animal articulate speech would be a miracle, because it does not lie within the range of its capacities, and therefore would be a violation of the law of its nature; it does lie within the range of our faculties, and so in us is no miracle. Similarly, the healing of the sick, the giving sight to the blind, the raising of the dead—things entirely beyond the range of our powers, yet lay entirely within the compass of our Lord's capacities, and were in accordance with the laws of his nature. It was no more a "miracle" in him to turn water into wine than it was for the Creator when he made it all. John does not call it so, though his word is rendered miracle in our version (John ii, 11). His language, as becomes the most thoughtful and philosophical of the Gospels, is deeply significant. He does not use the term δώρος, a gift, but has two words, one especially his own, namely, εὐσίμα, a work (yet used once by Matthew, xi, 2, who has so much in common with John); the other, the one proper term for miracle throughout the whole Bible, σημεῖον, a sign. Our Lord's miracles are called εὐσίμα, works, by John some fifteen or more times, besides places where they stand alone. In the acts of God (ix, 31; x, 26). Now this term stands in a very close relation to the preceding word, δώρος, a gift. A faculty, when exerted, produces an εὐσίμα, or work. Whatever powers or capacities we have, whenever we use them, bring forth a corresponding result. We have capacities of thought, of speech, of action, common to the species, the powers in the human soul, just as in a natural man. freed from all visible limitations, rather in one class of agents is simply natural in another class, because it is in accordance with their powers.
cally is it used in the Old Testament of some mark or signal confirming a promise or covenant. Such a sign (or token) (Dr. God) gave to Cain in proof that his life was safe (Gen. iv, 15). So (Dr. God) was the rainbow to Noah, certifying him and mankind throughout all time that the world should not be again destroyed by water (Gen. i, 13). And here learn we incidentally that God's signs need not be miraculous. The laws of refraction probably were the same before as after the flood, and the fact of the rainbow being produced by the operation of natural laws does not make it a less fit symbol of a covenant between God and man relative to a great natural conveyance. So, again, circumcision was a sign (or token) of the covenant between God and the family of Abraham (Gen. xviii, 11). It was to recall the past to the present and give an obligation to the third, and not merely that they stood in a covenant relation to God, but that that covenant implied personal purity and holiness. In the same way the Sabbath was a sign (Exod. xxxi, 13; Ezek. xx, 12) of a peculiar relation between the Jew and his God.

But there are places where it distinctively means what we call a miracle. Thus Azaz is told to ask a sign, and a choice is given him either of some meteor in the heavens, or of some appearance in the nether world: "Make it deep unto Hades, or high in the vault of heaven above" (Isa. vii, 11). And when the unbelieving king asks him that of the Immanuel, the virgin's son. So the sign unto Hezekiah of his recovery was the supernatural reversion of the shadow upon the sundial of Azaz, however significant it might also be of the hand of time having gone back as regards Hezekiah's own life (Isa. xxxviii, 7). Elsewhere the divine foreknowledge is the sign (Exod. iii, 12; Isa. xxxviii, 8), and generally signs of God's more immediate presence with his people would either be prophecy (Psa. lxxiv, 9) or miracle (Isa. cv, 27; Jer. xxxiii, 20; Dan. iv, 2).

Very much more might be learned by a fuller consideration of the manner in which the word sign is used in the Old Testament, but what is said above is enough to explain the reason why John so constantly used the term to express our Lord's miracles. The water changed into wine at Cana he calls "the beginning of signs" (ii, 11), and the healing of the centurion's son is "the second sign" (iv, 54), as being the first and second indications of God's special power, speaking to God as the Creator and Author of nature, and which therefore pledged the God of nature, as the sole possessor of these powers, to the truth of any one's teaching who came armed with them (iii, 2, where again the Greek is σημεῖον). So he tells us that the people assembled at Jerusalem believed the teaching of John because they saw the σημεῖον which he did" (ib. ii, 23). It was, in fact, the very thing they had asked (Matt. xii, 38; xv, 1; John ii, 18; vi, 30), and candid minds confessed that they were a sufficient ground for belief (ib. vi, 14; vii, 31; ix, 16; xii, 18); in fact, they were wrought for that purpose (ib. xx, 30, 31), though men might and did refuse to accept them as proof conclusive of the Saviour's mission (xi, 47; xii, 37), and vulgar minds saw in them nothing more than reason for astonishment (vi, 2, 26). To them they were simply miracles—wonders.

A sign is more and means more than a miracle, for it does not stand alone, but is a token and indication of something else. Thus John's word shows what our Lord's works had a definite purpose. They were not wrought at random, but were intended for a special object. What this was is easy to tell. The Old Testament had always represented the Jews as holding a peculiar place in the purpose of God, as having been a chosen people endowed with high privileges and blessings, but so endowed because they were also intended for a unique purpose. They were the depositaries of revelation, and in due time their Torah, their revealed law, was to go forth out of Zion (Isa. ii, 5) to lighten the whole Gentile world (ib. iii, 5). This promise of

a revelation extending to the whole world was further connected with the coming of a special descendant of Abraham (Gen. xxii, 18; Deut. xviii, 15), and prophecy had already filled up the intimation that this sketch had been given of the person, the office, the work, and the preaching of the great Son of David, to whose line the promise had subsequently been confined (Isa. xi, 1; Jer. xxiii, 5; Hos. iii, 5; Mic. v, 2, etc.).

But how were people to know when he had come? The prophets had indeed given some indications of the time, especially Daniel (ix, 24-27), and so clear were their words that all the world was expecting the arrival of some mighty being, in whom magnus ab integro sanctuariorum musculi ordo, and an entire transformation of the world should take place. But who were these many claimants, was he to be known? He might come, perhaps, as a conqueror, and by force of arms compel men to submit to his authority. But no! Prophecy had described him as the Prince of Peace; nor was his kingdom to be of this world, but a spiritual empire. Now, if we hesitate a little, we see that there is no obligation incumbent upon men to accept, or even examine, the claims of any and every one professing to be the bearer of a revelation from God. Before this duty arises, there must at least be something to call our attention to his claims. Mere self-assertion importance of his own person or of his cause would not be substantial to back it up. Life is a practical thing, with very onerous duties, and few, like the Athenians of old, have the taste or the leisure to listen to and examine everything new. The herald of a divine dispensation must have proof to offer that he does come from God, and such proof as pledges the divine attributing to the truth of his teaching. This is the reason why the Old Testament dispensation was one of σημεῖα. On special occasions justifying the divine interference, and in the persons of its great teachers, the prophets, supernatural proof was given in two ways of God's presence with his messengers in a manner superior to and beyond his ordinary and providential presence in the affairs of life. The divine omnisicience was pledged to the truth of their words by the prediction of future events; and their omnipotence by their working things beyond the ordinary range of nature. The two Old Testament proofs of a revelation were prophecy and miracle. We can think of no others, and nothing less would suffice.

As we have said, the whole of the Old Testament looked forward to the manifestation of a divine person, in whom revelation would become, in the first place, perfect; in the second, universal; and, thirdly, final. As before, the distinction of prophecy and miracle. As before, a distinctive element of the preparatory dispensation, holds in it no longer an essential place, though it is present in the New Testament in a subordinate degree. But miracle must, in the bearer of such a revelation, rise to its highest level; first because of the superiority of his office to that of the prophets. For he was him-
is the possession by the bearer of it of prophetic and miraculous powers.

For a revealed religion claims authority over us. If it be God's voice, speaking to us, we have no choice but to obey. Our reason might not approve; our hearts and wills might detest what we were told; yet if we knew that it was God's voice, we must sadly and reluctantly submit to it. But it would be wrong in the highest degree to yield us to anything requiring such complete obedience unless we had satisfactory proof that God really was its author. And no subjective proof could be satisfactory. The purity of the doctrines of Christianity, their agreement with the truths of natural religion, their ennobling effects upon our characters, and the way in which they enlighten the conscience, are such strong arguments for it; and for the impossibility in Christianity being a divine revelation: the perfectness of our Lord's character, the thoroughness with which Christ's atonement answers to the deepest needs of the soul, the way in which Christianity rises above all religions of man's devising—all this and more makes it probable that it is God's gift. But at most these considerations only prepare the mind to listen without prejudice to the direct and external proofs that Christianity is a revelation from God. The final proof must pledge God himself to its truth. But what are the divine attributes which would bear the most decisive witness? Surely those which most entirely transcend the powers of mankind in their acts of omnipotence. Now these are pledged to Christianity by prophecy and miracle.

The first had performed its office when Christ came. All men were musing in their hearts upon the expected coming of some Great One. His miracles, his works, the products of his power, were the signs that prophecy was in course of fulfillment. The two must not be separated. Our Lord expressly declares that but for his works the Jews would have been right in rejecting him (John xv, 24). His claims were too high for any less proof to have sufficed. But the nature of his works did put men under a moral obligation to inquire into his claims; and then he sent them to the Scriptures (John v, 39). The miracles were thus the final proof of Christ's mission. Had they been such, we might have expected that they would still be from time to time vouchsafed, as occasion required, even to the end of the world. The signs of Christ's mission and death were, as the scriptures tell us, what had been foretold of the Messiah is the leading proof of his mission, and, having this, we need miracles no more. Christ's works called men's attention to this proof, and made it a duty to examine it. They also exalt his person, and give him the authority of a messenger accomplishing a sacred mission; but the Old Testament prophesies for all ages the proper truth of the proof of the New. Miracles were signs for the times; prophecy is for all time, and as Christianity no longer requires anything especially to call men's attention to its claims, prophecy is proof enough that it is a message from God.

The more clearly to set this before our readers, we repeat that prediction was the distinctive sign of God's presence under the Old-Testament dispensation, and miracles subordinate. Revelation was then a growing light, and was ever advancing onward; and thus the prophets were ever preparing for the future. It was only on special occasions that miracle was needed. But when revelation became perfect and final in the person of One who, according to the terms of prophecy, transcended the bounds of human nature, it was necessary that miracle should rise in him to his highest level, both because of the dignity of his person, as one invested with all power, human and divine, and also the proper proof at the time of his being the Son, the last and greatest therefore whom the Father could send; and, finally, to call the attention of men to his claims, and compel them to examine them. For this reason they were called signs. But as soon as the dispensation thus given could force its claims on men's attention by other means, and its divine founder had withdrawn, miracles necessarily ceased, as being inconsistent with man's probation. Look over the list of Scripture names for miracles, and you will see who would be appropriate now? Of what would they now be signs? Of what person would they be the proper faculties? For whom now would they be suitable works? The whole scriptural theory of miracles is contravened by the supposition of miracles being continued after Christianity had once been established. What history teaches us, namely, that they were rapidly withdrawn, is alone consistent with what we gather from Scripture concerning them.

They were an essential part of the proof at the time, and have an essential use now. For we could not believe of God what he has not vouchsafed to believe. God is not credited by miracles. But the proper evidence for the truth of Christianity now is that of prophecy, not as existing any longer in living force, but as manifested in the agreement of the long list of books forming the Old Testament with one another; and still more in the fulfillment of the Old Testament in the New. It is a proof in everybody's hands, and open to every one to examine. The proof of miracles requires, of course, large historical evidence, and not every one possesses bishop Stillingfleet's Origenes Causer, or even Paley; but every Christian has his Bible, and in it will find the proper proof now of its truth.

Agreeably with this, dean Lyall, in his Propedia Prophetica, has well remarked that the apostles "scarcely allure to Christ's miracles at all, and never in the way of proof" (p. 4). Miracles, he shows, now hold a disproportionate place in the argument from that ascribed to them in the New Testament; and, in fact, it is very remarkable that Peter but twice refers in his speeches to Christ's miracles, and never but once to those wrought by himself. Paul, in his thirteenth epistle, only thrice appeals to his own miraculous powers, and never mentions Christ's miracles, or even directly alludes to them. The key of this we have in the names applied to them by the apostles, and especially by John. They were the natural works of one such as was Christ, but also signs that in him the long preparation of the Old-Testament dispensation had reached its final purpose, and that the new and lasting dispensation had begun.

In their proper place and degree, however, they were and still remain essential to the proof of a divine revelation. We could not accept a revelation, or give it the authority over our conscience due to the direct voice of God, unless we had indubitable proof that it was God's voice. The supernatural can only be proved by the supernatural. But then the dispensation is a preparation for the present progress of mankind as for their future perfection. The miracle was also necessary, and the believer in revelation cannot possibly discard it from its place among the evidences.

Necessarily, therefore, from first to last, the Bible is a book of miracle. Miracle is present not as an accident, separable from the main theme but is itself the very essence of the narrative. The facts of the Old Testament were the basis of the faith of the Jew. They were so as being miracles, and because, as such, they involved certain dogmatic propositions concerning the divine being and his relations to himself. So as regards ourselves. When we repeat the Apostles' Creed, we acknowledge our belief first in the existence of a God—an instinct, as we have shown, of our nature—but upon this follow certain historical facts recorded in the New Testament, which are either directly miraculous, or become dogmatic because of being based upon miracles. Without miracles Christianity is absolutely nothing. All that distinguishes it from simple Thesm is miraculous.

Miracles in the present day are at a discount. Our men of science have so well studied the laws of the material universe, and shown us so clearly the existence
there of a calm, unbroken, unvarying order, that our minds, enamored of so grand a truth, are impatient of any truth or theory rising above these material laws. Thus the controversy whether Christianity is true or not really turns upon miracle. The close and exact examination of all the facts of holy Scripture which has marked our days has served only to confirm men's be-

lief in the authenticity of the sacred writings. Our in-
creasing light upon the universally true and
uniform inscriptions corroborative of the Old-Testa-
ment history, and from similar unquestionable autho-
rities contemporaneous with the New-Testament records,
has well-nigh swept away every so-called historical dif-
culty; while subjective criticism has not merely failed in subestimating these matters against the books of the Bible, but has done very much to place them upon

a surer basis. At no time was the external evidence in favor of Christianity, or the argument drawn from prophecy, so clear and so little liable to objection as at the present day. And this is no slight matter. A host of eager and competent critics have examined with unfavorable intentions the whole line of our defences, and the result of their operations has been to show how thoroughly tenable it is in every part.

Thus the whole attack is now thrown upon miracle. Miracle is roundly asserted to be contrary to the whole course of nature, and to be a violation of that grand law of the universe. But we find the same doctrine elsewhere throughout the universe. In this way a sort of induction is drawn against miracle. Wherever we can examine into the causes of phenomena, we always find them the products of forces acting according to unchanging laws. Whole regions of phenomena, which were once sup-
posed to be under the sway of chance, have now been reduced to order, and the causes of them made manifest. Men of science have entered one field after another, and have added it to their domains, by showing what laws govern it, and how those laws work. With some show of reason therefore they affirm that law prevails every-
where, and that wherever it does not prevail, we may yet be sure of its presence, and con-

vinced that the patient investigations of science will in due time demonstrate its sway. And therefore miracle, as being a violation of these universal laws, is not mere-
ly, they say, contrary to that experience of men of which Mr. Hume spoke, and upon which he founded an argument repeatedly shown to be untenable, but because an induction drawn from a vast field of observation and scientific inquiry. In miracle, and miracle alone, sci-

ence finds something which contradicts its experience. The examination of this most important objection will completely answer our inquiry.

The proposition contained in this objection, when we consider it, seems a most true conclusion as regards the material universe. All material things apparently are governed by general laws, and it is probable that scientific men are quite right in endeavoring to show that even in chemical things were produced by law. For our own part, we cannot imagine a perfect Being like the Deity working except by law, and therefore we read all theories about evolution and selection, and the formation of the solar system by slow degrees out of a vast nebula, and the like, with no prejudice regard-

ing them, however intended, simply as attempted an-
swers to the question, In what way—by what second-
ary processes—did God create and shape the world? If, after reading the arguments, we conclude by think-
ing them often ingenious rather than true, and put the book down with the Scotch verdict, "Not proven," we do not therefore think that science is on the wrong track, and that when all present it cannot be shown to

give us juster views of God's method of working. But miracle seems to us to belong to another field of thought, and to be outside the domains of science. For we venture to ask, Is the material universe everything? Is there nothing but matter? nothing but dull, inert parti-

cles, acted upon by material forces—attraction, repulsion, affinity, and the like? What is force? What is law? If there be a God—a perfect, omnipotent, omnipresent Being—then law has to us a meaning. It is his work, working permanently and unchangeably because he is a perfect and omnipotent worker. We can understand force. It is his presence, acting upon and controlling all things, but always in the same way, because he changes not. To believe in universal order without a Creator was an absurdity, universally that all things from the laws without a universal lawgiver, is to us an absurdity. Ex nihilo nihil fit. In a world where every effect has a cause, who and what is the cause of all? Who but God? And who sustains the world now but he who first made it?

But what of the office of science to inquire into the being and attributes and nature of this First Great Cause. Science is solely occupied with the secondary processes. When it has reached the law, it has done its work. It is not the business of science to examine into the law as such, but only into the mode of its opera-

tions. Whose is the law, what power sustains it, how it came into being—all this lies outside the domain of science. Thus science never rises above material things; and by remembering this—by remembering that, after all, the field of science (of course we mean physical science) is limited—we see that an induction made in its proper field does not justify any conclusions in the physical limits.

Let us take the case of man. Science, looking at him in his physical aspect, tells us that he consists of several pounds of salts and earths, combined with a larger number of gallons of water. It tells us by what chemical affinities these commonplace materials are held together, how they operate upon one another, by what processes the waste is renewed, and by what a mass of curious mechanical contrivances man's body, considered as a machine, performs its operations. If we ask how it comes to think, science tells us much about the

brain; how like it is to a galvanic trough, and by what

an elaborate, threefold apparatus of nerves it sends its com-

mands to every part of the body. But when we ask how it is that the brain does consciously what the vol-
taie battery does unconsciously; how it is that these

earth and salts, when combined into a man, know that

they are a man, we get only the unmeaning answer that it is the result of organization. But give science all the

bottles in a chemist's shop, and it cannot organize a sentient being out of them. In fact, it owns itself that

life is a mystery. It can tell how life works, but not what

life is. Life is as much beyond the reach of sci-

ence as it is God. It knows the laws of life, but no more. Man therefore, when considered in his physical

condition, is the same as a machine can master. But life is the only mystery in man? Why does man think? Why does he speculate upon his own actions? Why must upon the purpose of all things here below? Of all beings upon this earth, man alone is self-conscious. He alone knows that he exists; he alone feels that he exists for a purpose, and can and does consciously interfere with other things in order to shape them to his own ends. He alone has not the mere rudiments, but the full gift

of a conscience, which is always interfering with him, and giving him endless annoyance, because it will pass judgment upon his actions, and condemn much that he does.

Now it is in connection with this higher world that miracle has its proper place. It distinctly has reference to man as a being in whom there is more than mere material forces at work. Prove that there is nothing more in man than salts and earths and water, and you can place him in the same position as all other inorganic forms, and give us juster views of God's method of working. But miracle seems to us to belong to another field of thought, and to be outside the domains of science. For we venture to ask, Is the material universe everything? Is there nothing but matter? nothing but dull, inert parti-

cles, acted upon by material forces—attraction, repulsion,
MIRACLES

We want some science therefore which can examine man while he is alive, and report upon him. For physical science is not the sole science. There are other sciences, and one of them is natural science, the science of man's own domain.

The psychologist, who examines into the workings of man's inner nature, is quite worthy of a hearing as the physicist, who examines into the materials out of which he is composed. Neutor ultra cepidam—a homely but wise motto, which a rising and progressive study, such as is physical science, in the bounds of the first triangle of knowledge, has no place. After all, a man of only one science tries to see with only one eye, and to walk with only one leg. Before we can form a true estimate of the question that so deeply concerns us—What is man's place and work and purpose in the world?—we must include a far wider induction than that offered by physical science.

If, as the instincts of our nature teach us, there be a God; if man be more than a highly-organized machine; if within him there be an immortal soul, and before him a future life, then miracle is essential to his well-being. It is the sole possible proof of conscious relation between man and God. Man cannot but see that God had spoken to him, had revealed to him any knowledge requisite for his use, had entered into covenant relation with him, without miracles. We know nothing in physical science to disprove this relation.

Suppose that we find a stage elaborately constructed and arranged, and then throw true on a further true scene, which this stage was constructed, and no examination of the mechanical laws by which it is still kept in being, will justify us in concluding that it was not intended for some further purpose. Nor, because the boards are all safely nailed in their place, does it follow that actors may not enter upon it, higher in nature than the boards, and capable of ascending without further means.

Nor, because we have never seen the builder, does it follow that he did not erect the stage on purpose that these actors might play upon it their parts. Geology, chemistry, astronomy, so far from proving that the world had no purpose, and that the actors upon it have no freedom and no responsibility, rather suggest the contrary. They teach us what a vast amount of skill, patience, wisdom, and goodness has been expended in forming the stage.

Quorum hae? What was the object of all this? What the end? Oh! but some physicists answer, We reject teleology. That is, we reject something which lies deeply imbedded in the well-taught methods of science, and which convinces us that it is necessary. And therefore we feel no difficulty in the belief that God, in creating the world such as it is, and placing man upon it such as he is, and under such circumstances as those in which we find ourselves, did from the first purpose this reasonable and beautiful universe was meant to be, by which he grants man the only sufficient proof that he is willing to enter into covenant relations with him. If the physicist reply that such action on God's part is inconceivable, we answer that he also must conceive of some such action. Students of physical science deal in long volumes, but these numbers are as nothing compared with the eternity past. Work back with the geologist, and you come at last to a first beginning of matter. Looked at by the light of mental science, the eternal existence of matter is impossible. To the metaphysician, matter is but a phenomenon of mind. Confining ourselves then, to our universe, what a tremendous change was that in God when he passed from the passive state of not willing it to the active state of willing the existence of our system! Grant that by his fiat he only called into existence an atom, out of which by evolution all things here below have sprung, what a stupendous act it was! And though it takes place in relative time, if regarded, to speak with all respect, under obligations from which he was free before! For the Creator is under the obligations of justice and love to his creatures. He made us, and not we ourselves. But he neither was nor is under any moral obligations to his
MIRACLES

material laws. They abide in power and might because he abideth continually. And miracle simply means that he, the Creator, has from time to time, under certain conditions, intervened in the natural order, and so produces an unusual event. In the Bible, this is a general principle of a new order of things, and it is an assertion of the same, that if we make certain assumptions about the nature of God, and follow necessarily from the perfection of the divine nature; they must therefore be eternal and immutable, and must extend to all possible events. Therefore, to admit an exception to these laws is to suppose that God's order is broken, and that the divine work is but an imperfect expression of the divine will. Moreover, it is infinitely intelligible in the mouth of a pantheist, with whom God and nature are convertible terms, and a divine supernatural act is a self-contradiction; but it is untenable in any system which admits a personal God distinct from nature, and only partially manifested in it. In such a system nature is not infinite, as Spinoza makes it, but finite. There is a distinction between the actual and the possible; between the visible world as a limited system, with limited laws, and the whole mind of God, embracing all possible systems as well as the present. From this point of view, nature, as actually existing, does express a portion, and a portion only, of the divine perfection, and it expresses another portion belonging to a different and more comprehensive system. But in addition to this consideration, even the actual world furnishes us with an answer to the objection. God's order, we have too much reason to know, actually is broken. His will is not carried out. Unless we make God the author of evil, we must admit that sin is a violation of his will, a breach made in his natural order, however impossible it may be to give an account of its origin. The pantheist evades the difficulty by denying that evil has any real existence; but to the theist, who admits its existence, it is conclusive evidence that, as a fact, however little we may understand how it can be, the world, as it exists, is not a perfect expression of God's law and will. The miracle, as thus viewed, belongs to a spiritual system appointed to remedy the disorders of the natural system; and against the self-contradictory theory which tells us that disorders in the natural system are impossible, the truth of the divinity of a melancholy experience which tells us that they are actually there. Thus viewed, the miracle is in one sense natural, in another supernatural. It is natural as forming a part of the higher or spiritual system; it is supernatural as not forming a part of the lower or material system. In the same way, the natural law which may serve to obviate another form of the same objection—a form in which it is likewise suggested by Spinoza, though developed by other writers in a form more adapted to the language of theism. We are told that it is more worthy of God to arrange a plan which shall provide by its original laws to call po- sible contingencies than one which requires a special interposition to meet a special emergency. We know so little about the process of creating and governing a world, that it is difficult for us to judge what method of doing so is most worthy of God; but this whole objection proceeds on the gratuitous assumption that the plan of the world, as it exists in the counsel of God, must be identical with the plan of the world as it is contemplated by man in relation to physical laws. Doubtless the miracle, like any other event, was fore- seen by God from the beginning, and formed part of his eternal purpose; but it does not therefore follow that it is included within that very limited portion of the purpose which is apprehended by man as a system of physical laws. To Omniscience no one event is more diffi- cult than another; to Omnipotence no one event is more wonderful than another. The distinction between miracles and ordinary events, as has already been ob-
served, is a distinction, not in relation to God, but in relation to man. Moreover, even from the human point of view, the miracle is not wrought for a physical, but for a moral purpose; it is not an interposition to adjust the machinery of the material world, but one to promote the moral level of mankind, as a class that was regarded as willfully evil, negatively, placing as its standard-bearer the celebrated Schleiermacher, who advanced a doctrine as incompatible with any belief in a real miracle as was that taught by Hume. "A miracle," says Schleiermacher, "has a positive relation, by which it extends to all that is future, and a negative relation, which in a certain sense affects all that is past." In so far as it asserts that which would have followed, according to the natural connection of the aggregate of finite causes, in so far an effect is hindered, not by the influence of other natural counteracting causes belonging to the same series, but notwithstanding the concurrence of all effective causes to the production of the effect. Everything, therefore, which from all past time contributed to this effect is in a certain measure annihilated; and instead of the interpoilation of a single supernatural agent into the course of nature, the whole conception of nature is destroyed. On the positive side, something takes place which is conceivably possible from the mere recurrence of the proper combination of finite causes. But, as much as this event itself now becomes an actual link in the chain of nature, every future event must be other than it would have been had this one miracle not taken place." On this and other grounds, Schleiermacher is led to maintain that there is no difference between the two classes of causes, the supernatural; the miracles being only miraculous relatively to us, through our imperfect knowledge of the hidden causes in nature, by means of which they were wrought. "This observation," says manuel, "proceeds on an assumption which is not merely unwarranted, but actually contradictory, and which is a common mistake of common-sense and the truths of religion, and not rather in a spirit of hospitality to philosophy itself, by representing the results of its analysis as equally probable in favor of and against two opposite directions of thought. The form of dialogue which is adopted by Hume in this discussion favors somewhat this construction; but it cannot be reconciled with the impression left upon the unbiased mind that Hume had no confidence in speculation of any kind when applied to super-sensual or spiritual beings and relations (comp. Ueberweg, Hist. Philos. ii. 571). The ablest replies to Hume's arguments were those found by Principal Campbell in his Dissertation on Miracles; Hey, Norriasion Lectures, i, 127 sq.; Elrington, Donellan Lectures (Dublin, 1796); Dr. Thomas Brown, On Cause and Effect; Paley, Evidence of Christianity (Introduction); Archbp. Whately, Logic (Appendix); and Historic Doubts respecting Napoleon Bonaparte; Dean Ryall, Prophecy and Prophetic (reprinted, 1854); Bp. Douglas, Criterion, or Miracles Examined, etc. (London, 1754); Farrar, Critical Hist. of Free Thought, p. 150 sq. See Hume. Within the last few years the controversy has been reopened by the late professor Baden Powell in the Unity of Worlds, and some remarks on the study of evidence published in the now-celebrated volume of Essays and Reviews. See Goodwin, in Am. TheoL Rev. July, 1861; Christian Remembrancer, July, 1861.

From England the controversy shifted again to the Continent, and finds its ablest representatives against the supernaturalists now not only in the camp of the atheistic and pantheistic, but also among theologians, and dean Trench therefore adopts as his next or fifth class the most remarkable class, that of Schleiermacher, negatively, placing as its standard-bearer the celebrated Schleiermacher, who advanced a doctrine as incompatible with any belief in a real miracle as was that taught by Hume. "A miracle," says Schleiermacher, "has a positive relation, by which it extends to all that is future, and a negative relation, which in a certain sense affects all that is past." In so far as it asserts that which would have followed, according to the natural connection of the aggregate of finite causes, in so far an effect is hindered, not by the influence of other natural counteracting causes belonging to the same series, but notwithstanding the concurrence of all effective causes to the production of the effect. Everything, therefore, which from all past time contributed to this effect is in a certain measure annihilated; and instead of the interpoilation of a single supernatural agent into the course of nature, the whole conception of nature is destroyed. On the positive side, something takes place which is conceivably possible from the mere recurrence of the proper combination of finite causes. But, as much as this event itself now becomes an actual link in the chain of nature, every future event must be other than it would have been had this one miracle not taken place." On this and other grounds, Schleiermacher is led to maintain that there is no difference between the two classes of causes, the supernatural; the miracles being only miraculous relatively to us, through our imperfect knowledge of the hidden causes in nature, by means of which they were wrought. "This observation," says manuel, "proceeds on an assumption which is not merely unwarranted, but actually contradictory, and which is a common mistake of common-sense and the truths of religion, and not rather in a spirit of hospitality to philosophy itself, by representing the results of its analysis as equally probable in favor of and against two opposite directions of thought. The form of dialogue which is adopted by Hume in this discussion favors somewhat this construction; but it cannot be reconciled with the impression left upon the unbiased mind that Hume had no confidence in speculation of any kind when applied to super-sensual or spiritual beings and relations (comp. Ueberweg, Hist. Philos. ii. 571). mythical hypothesis of Strauss is found guilty of the logical absurdity of deducing the premise from the conclusion: it assumes that men invented an imaginary life of Jesus because they believed him to be the Messiah, when the very supposition that the life is imaginary leaves the belief in the Messiahship unexplained and unaccounted for. On the contrary, it is a part of the evidences of his own day, to consider the question of miracles from an apologetic point of view, finds himself compelled to dwell mainly on the abstract argument concerning miracles in general, rather than on the distinctive features which characterize the Christian miracles in particular. The latter are the more pleasant and the more useful theme, when the object is the edification of the believer; the former is indispensable when it is requisite to controvert the positions of the unbeliever. There is, however, one phase of the sceptical argument which may be met by considerations of the special rather than of the general kind. It has been objected by Strauss that the testimony furnished for the distinct particular reason for miracles, if the divine purpose can be furthered by them. Under these circumstances the antecedent probability is for the miracles, not against them, and cannot be outweighed by empirical inductions drawn from totally different data, relating to the physical, not to the religious condition of the world. It must, however, be always remembered that abstract and general considerations like the above, though necessary to meet the unbelieving objections which are unhappily rife on this subject, do not constitute the grounds of our belief in the miracles of Scripture. The Scripture itself is the stronghold of scepticism, and to deal with it at all it is necessary to meet it on its own ground. On the other hand, the strength of the Christian argument rests mainly on the special contents of the Gospel narrative, particularly as regards the character of the Saviour portrayed in it, and the distinctive nature of his miracles as connected with his character, and on the subsequent history of the Christian Church. It is far easier to talk in general terms about the laws of nature, and the impossibility of their violation, than to go through the actual contents of the Gospels in detail, and object to the possibility of such a narrative could have been written, and how the events described at the birth and infancy of Christ and have influenced, as they have, the subsequent history of the world, on any other supposition than that of its being a true narrative of real events. Accordingly we find that, while the several attacks on the Gospel miracles in particular, with whatever temporary popularity they may have been conducted, and whatever ability they may have been conducted, with whatever ability they may have been obtained, seem universally destined to a speedy extinction beyond the possibility of revival, the general a priori objection still retains its hold on men's minds, and is revived from time to time, after repeated refutation, as one of the changing aspects of scientific progress appear to offer the opportunity of a plausible disguise of an old sophism in new drapery. The minute criticisms of Woolston and Paula on the details of the Gospel history are utterly dead and buried out of sight; and those of Strauss show plain indications of being doomed to the same fate, though supported on their own. The naturalistic theories of Strauss break down under the sheer weight of its own accumulation of cumbrous and awkward explanations; while the
The alternative lies between accepting that testimony, as it is given, or regarding the Gospels as a fiction, and the Christian faith as founded on imposture. In adopting this argument, we do not, as is sometimes said, reason in a circle, employing the character of Christ as a testimony in favor of the miracles, and the miracles as arguments in favor of the character. This is not the case.

For the character of Christ is contemplated in two distinct aspects: first, as regards his human perfection; and, secondly, as regards his superhuman mission and powers. The first bears witness to the miracles, the miracles bear witness to the second. When our Lord represents himself as a humble servant to be imitated by his human followers, he lays stress on those facts of his life which indicate his human goodness: 'Take my yoke upon you, and learn of me; for I am meek and lowly of heart.' When, on the other hand, he represents himself as divinely commissioned for a special purpose, he appeals to the superhuman evidence of his miracles as authenticating that mission: 'The works which the Father hath given me to finish, the same works that I do, bear witness of me that the Father hath sent me.' It is true that the evidence of the miracles, as addressed to us, has a different aspect, and rests upon a different moral ground, that is, upon the evidence of them at the time when they were first performed. But this change has not diminished their force as evidence, though it has somewhat changed its direction. If we have not the advantage of seeing and hearing and questioning those who were eye-witnesses of the miracles, the deficiency is fully supplied by the additional testimony that has accrued to us, in the history of Christianity, from their day to ours. If we have stricter conceptions of physical law, and of the uniformity of nature, we have also higher evidence of the existence of a purpose worthy of the exercise of God's sovereign power over nature. If the progress of science has made it more difficult to believe in the extraordinary event which would have seemed miraculous to the men of the 1st century, it has also shown more clearly how inimitable and unapproachable are the miracles of Christ, in the maturity of science no less than in its infancy. And when it is objected that-if miracles were, in the estimation of a former age, among the chief supports of a former Christianity, they are at present among the main difficulties and hindrances to its acceptance, we may fairly ask, What is this Christianity which might be more easily believed if it had no miracles? Is it meant that the Gospel narrative, in general, would be less believed by being deprived of either or both miracles? Has it not been shown, on the contrary, that the miracle which is not required by the former, and appears difficult to reconcile with the latter. That there may be such a thing as "the working of Satan, with all power and signs and lying wonders," and that such working will actually be manifested before the last day in support of Antichrist, is the natural interpretation of the language of Scripture. That such a manifestation has as yet taken place, is to say the least, a conclusion not established by existing evidence.

Another question has been raised as to the means of distinguishing between true and false miracles, meaning by the latter phenomena that are spurious, but in fact either natural events or human impostures or fabrications. Various rules for distinguishing between these have been given by several authors, the best known being the four rules laid down in Leslie's Short and Easy Method with the Deists, and the three given in bishop Douglas's Criterion, and to some extent extended by bishop Stillingfleet in Origins Sacro, bk. ii, chap. x, and the very acute observations in a similar kind of work, J. H. Newman's Life of Apollonius Tyanaeus, published in the Encyclopaedia Metropolitana. Yet the practical value of these rules, though considerable as compared with the inquiry previously noticed, is rendered rather uncertain by the multiplicity of phases of controversy than for general and perpetual edification. A more permanent principle in relation to

philosophy; and materialism, the danger of a too exclusive devotion to physical science. Both these, in different ways, tend to deify nature and the laws of nature, and to obscure the belief in a personal God distinct from and above nature; against both these, so long as the Christian religion lasts, the miracles of Christ are a perpetual argument of its truth, and in so far as they remain in the body of the church, a service to religion different in kind, but not less important than that which they performed at the beginning. The miracles of the O. T. may be included in the above argument, if we regard, as Scripture requires us to regard, the earlier dispensation as an anticipation of and preparation for the coming of Christ. Many of the events in the history of Israel as a people are typical of corresponding events in the life of the Saviour; and the earlier miraculous history is a supernatural system preparing the way for the later consummation of God's supernatural providence in the redemption of the world by Christ. Not only the occasional miracles of the O.-T. history, but, as bishop Atterbury remarks, some of the established institutions under the law—the gift of prophecy, the Shechinah, the Urim and Thummim, the sabbatical year—are of a supernatural character, and thus manifest themselves as parts of a supernatural system ordained for the completion of the supernatural in Christ.'
this question is suggested by Leslie in his remarks on the pretended miracles of Apollonius, where he shows that the assumed miracles, even if admitted, had no important connection with our belief or practice. "But now," he says, "to sum up all, let us suppose to the utmost that all this said was true, were this true, what would it add to any religion? Only that Apollonius, in my eyes, could preach things. What then? What if he were so virtuous a person that God should have given him the power to work several miracles? This would noways hurt the argument that is here brought against the deists, because Apollonius set up no new religion, nor did he pretend that he was justified by any revelation from heaven, or to introduce any new sort of worship of God; so that it is of no consequence to the world whether these were true or pretended miracles; whether Apollonius was an honest man or a magician; or whether there ever were such a man or not. For he left no law or gospel behind him to be received upon the credit of those miracles which he is said to have wrought." "To this," says dean Mansel, "it may be added that there is an enormous a priori improbability against miracles performed without any professed object, as compared with those which belong to a system that has exercised a good deal of influence in the world. In this improbability can only be overcome by a still more enormous mass of evidence in their favor; and until some actual case can be pointed out in which such evidence exists, the unimportance of a reported series of miracles is a valid reason for withholding belief in them. The absence of miracles in this respect, stands alone and apart from all others as regards the evidence of their reality, combined with their significance, if real."

Among the most important works on Scripture miracles, and not incidentally mentioned in the article on Christian Evidence, are: "Fleetwood, Essay upon Miracles" (1768); Locke, Disquisitions (1701-2); Pearce, The Miracles of Jesus Vindicated [in reply to Woolston] (1729); Smallbrook, Vindication of our Saviour's Miracles [in reply to Woolston] (1729, 2 vols. 8vo); Lardner, Vindication of Three of our blessed Saviour's Miracles [in reply to Woolston] (1739); Sherlock, The Trial of the Witnesses (1732); Stevenson, Conference upon the Miracles of our Saviour (1730, 8vo); Sykes, Credibility of Miracles, etc. (1749, 8vo); Douglas, The Criterion (1754), Claparede, Miracles of the Gospel [in answer to Rousseau] (Lond. 1758, 8vo); Campbell, Dissertation on Miracles (1758); Farmer, Dissertation on Miracles (1771); Bishop Douglas, Criterion of Miracles (1780), a work that contains the ideas of the various writers for both parties (8vo); Schorer, Ausf. Erkld. der Weissagungen d. N. T. (Lpz. 1805, 8vo); The Hulsean Prize Essay for 1814; Collyer, Miracles (1812); Penrose, Evidence of the Scripture Miracles (1826); Le Bas, Considerations on Miracles (1828); Newman, Life of Apollonius Tyana, in Anecd. Misc. [written before his departure to Rome]. The clue, Glaubenswürdigkeit d. evangel. Gesch. MIRACLES EСХAСΙАСТICAL. The Port Royalists taught that "there would never have been any false miracles if there had been none true." Many Protestants, taking hold of this wise adage, set down as incontrovertible the assertion that the so-called "miracles" wrought in the Church since the patristic period are not of God, because they are not prophesied as were those of the apostles, and do not fit into the definition of miracles given by the early Christians. Says bishop Douglas, "If we except the testimonies of Papias and Ireneus, who speak of raising the dead . . . we can find no instances of miracles mentioned by the fathers before the 4th century" (Criterior, p. 228-232); and if we come down to the fathers of the 4th century, we find that they freely speak of the age of miracles as past; that such interpositions, being no longer necessary, were no longer to be expected. Whatever may appear to the contrary in the more oratorical and panegyrical writings of the fathers, whenever they address themselves theologically to the question of miracles, they admit clearly and unreservedly the truth that this kind of evidence has ceased in the Christian Church. The miracles of divine power (according to St. Augustine) are now to be sought in the works of nature, in the wonders of its ever-recurring changes, and in the regular course of the divine providence. After enumerating the miracles of Christ, he says: "Our (Jesus') ista sunt non mirabilia quae sunt? Quia non moventer nisi mira essent; at si solita essentia mira non essent" (De Utilitate Credendi), which he only so far qualifies in his retraction as not absolutely to deny the possibility of a modern miracle. In another place he speaks of "miracles not being permitted to last" (De Veritate). But the question of Christian Christiinity over the world (De vera Religione, c. 35, § 47). St. Chrysostom bears the same testimony to the
cessation of miracles in his beautiful sermons on the Resurrection of Christ, in his Discourses on the Feast of Pentecost (xxiii and xxxvi), where he solves the same question—"Why are no signs and miracles intrusted to us now?"—by claiming those higher miracles of grace and inward change which enable us to use the prayer of faith, and to exclaim, "Our Father, which art in heaven!" Chrysostom says himself: "Ni aique ex eo, quod nunc sigillum sua profetiae ingressus est in easce, sed in easce lingua; et鹰enim tunc utiliter fiebat, et nunc utiliter non funt." (In Epistolam i, ad Corinthi. Homil. vi, 2; comp. Augustine, De Civitate Dei, xxii, viii, 1.) Yet these fathers also supply us with accounts of deeds wrought by Christian believers, which the Roman Catholic Church regards as miraculous, but which were not written down by these early writers of the Church mark out clearly as natural results. If indeed they pleased to call them miracles, they yet betray that even in their own view there was a vast difference between the scriptural and ecclesiastical miracles, and that they did not count them as of the same category. St. Augustine, referring to the wonderful deeds wrought by the faithful of the Church in his day, concedes also that they were not wrought with the same lustre as in the apostolic days, nor with the same significance and authority for the whole Christian world (comp. Fr. Nitzsch, jan., A Synagoge, xxvi, 81). Bishop Douglas says that these miraculous workings were confined to "the cures of diseases, particularly the cures of demonsiacs, by exorcising them; which last indeed seems to be their favorite standing miracle;" and Prof. Newman, one of the richest prizes gained by the Romanists from the Church of England in this generation, is candid enough to admit the contrast between the scriptural and what he calls ecclesiastical miracles. He says, "The miracles of Scripture are, as a whole, grave, simple, and majestic: those of ecclesiastical history often partake of what may not unfitly be called a romantic character; and of that wildness which we call the 'romantic element' in the imaginative, or 'romantic', notion of romance." It is obvious, he says elsewhere, "to apply what has been said to the case of the miracles of the Church, as compared with those in Scripture. Scripture is to us a garden of Eden, and its creations are beautiful as well as 'very good'; but when we pass from the apostolic to the following ages, it is as if we left the choicest valleys of the earth, the quietest and most harmonious scenery, and the most cultivated soil, for the luxuriant wilderness of Asia or Africa, the natural home or kingdom of 'brute nature uninfluenced by man' (Two Essays on Scripture Miracles and on Ecclesiastical, 2d ed. London, 1840, p. 366)." In the accounts of the Roman Catholic miracles, quotes these words of Prof. Newman, and says of them, "A more felicitous illustration can hardly be imagined. The contrast between the Gospels and the legends of the saints is that between the divine and the human, and even the animal; between Christ (with reverence be it spoken) and St. Anthony" (iii, 455).

The Roman Catholic Church, notwithstanding the want of any trustworthy patriotic testimony, asserts that the power of performing all manner of miraculous works remains with the Church since the days of its first founding, henceforth and forever. "Roman Catholics," says Butler, "relying with entire confidence on the promises of Christ [quoting Acts ii, 38; John xiv, 12; Mark xvi, 18, 18], believe that the power of working miracles was given by Christ to his Church, and that it never has been, and never will be withdrawn from her" (Lives of the Saints, iv, 276). Lee (Lives of the Saints, also p. 46 sqq.). Another, even greater celebrity, the learned Bellarmine, goes so far as to prove from this continuity of the miraculous power in the Church of Rome that the Protestant Church, lacking this, is manifestly not of God. He argues that miracles are necessary to evince any new and extraordinary mission; that miracles are efficacious and sufficient. By the former, he then tells us, may be deduced that the Church is not to be found among the Protestant churches; but that it is most assuredly among Catholics: "Unde scientia est gloria miraculorum; sunt autem duo fundamenta praemittenda. Unum quod miracula sint necessaria ad novum fidem vel extraordinarium missionem persuadendum. Alterum, quod sint efficacia et sufficientia; nam ex priore ducimur non esse apud adversarios verum esse scire, ducimur in magnum, in mentem nostram. Quod igitur miracula sint necessaria, probatur primo Scriptura testimonio, Exod. iv, cum Moses mitteretur a Deo ad populum, ac diceret: 'Non credent mihi, neque audient vocem meam.' Non responderit Deus, 'Debet credere, velint nolunt,' sed dedit illi potestatem faciendi mirabilia, ut in sanctissima Domini, ut in sancto, sanctissimum Dominus,' etc. Et in Novo Testamento, Matt. x., 'Evangelist, predicate, decertes: Appropinquovit regnum colorum; infirmos curatet, mortuos suscitaret, leporos munda, demones ejicere.' Joan. xvi, 'Si opera non fe-ciscem in eis quae nemo alius fecit, peccatum non habe-runt' (Opere, vol. ii; De Nota Ecclesiast. lib. iv, cap. xiv, col. 206 D [Col. 1619]). Even the liberal-minded Dr. Milner, who displayed learning in almost every department of science; who possessed experience, intelligence, and taste; who wrote well and reasoned acutely; teaches, in a letter devoted to the subject of miracles, that "if the Roman Catholic Church, as it would have it, did not possess any miracles, God would not have given any attestations in its favor. . . . Having demonstrated the distinction," by which he means the exclusive holiness of the Roman Catholic Church, he professes himself "prepared to show that God has borne testimony to that holiness by the many and incontestable (? of miracles he has wrought in her favor, from the age of the apostles down to the present time" (Lett. xxvi, p. 168 sqq., et al.).

The reasoning of Dr. Milner brings us to reconsider the statement made in the early part of this article that "no miraculous events mark the history of the Church after the apostles." The Church may depend on the authority of the patriotic writers. Frequently refer us to what St. Ignatius, who flourished in the 1st century after Christ, relates about the wild beasts which were let loose upon the martyrs being frequently restrained by a divine power from hurting them, and also to the miracle which dethroned the apostate Julian (this, however, brings us to the 4th century) from rebuilding the Temple of Jerusalem. As to the first of these miraculous workings, a single observation must suffice. The words of Ignatius are: "Ne sicut in alis, terrisa sint et non eos tegulatium," implying that the fierce animals did not behave as in ordinary cases, but were restrained at that time. Ignatius, in the face of his detractors, refused to fight. Ignatius himself considered the occurrence purely accidental and natural; otherwise he would have given the glory to God, and have besought him to repress their fury. As to the second miracle, it must of necessity have occurred, or the prophecy which related to it could not be fulfilled (Dan. ix, 27). Says Elliott: "In its exact completion I perfectly agree with Dr. Milner, and for the very reason assigned by Gibbon himself, that if it were not verified, 'the imperial sophist would have converted the success of his undertaking into a specious' (he should have said solid) 'argument against the faith of prophecy and the truth of revelation' (Decline and Fall, iv, 104). But I am not equally disposed to admit that there were other as extraordinary miracles, besides the one mentioned, since the apostolic age; or, if there were, that they were performed for the purpose alleged by his reception of Revelation, nor was it then, as Dr. Milner, bishop Kaye, Dr. Schaff, and others, hold to the gradual cessation theory. That is to say, they teach that "there is an antecedent probability that the power of working miracles was not suddenly and abruptly, but gradually withdrawn, as the necessity of such outward and extraordinary attestation of the divine origin of Christianity diminished and gave way to the natural operative..."
of truth and moral suasion.” They also hold that “it is impossible to fix the precise termination, either at the death of the apostles, or their immediate disciples, or the conversion of the Roman empire, or the extinction of the Arian heresy, or any subsequent era, and to sit sFHABLY instruct in each particular case the truth from leg-

ardly fiction.”

- Most of the statements of the apolo-
gists are “in the name of Schaff, who

refer to extraordinary cures from demoniacal pos-
session (which probably includes, in the language of
that age, cases of madness, deep melancholy, and epi-
lepsy) and other diseases, by the invocation of the name
of Jesus. Justin Martyr speaks of such cures as a fre-
quently recurring fact in mankind, and Origen

refers to a personal observation, but

speak in another place of the growing scarcity of
miracles, so as to suggest the gradual cessation theory.
Tertullian attributes many, if not most, of the con-
versions of his day to supernatural dreams and visions, as
does also Origen, although with more caution. But in
such psychological phenomena it is exceedingly difficult
to draw the line of demarcation between natural and
supernatural causes, and between providential interpo-
sitions and miracles proper. The strongest passage on
this subject is found in Irenaeus (Ad. haer. I, 51, § 2,
and II, 52, § 4), who, in contending against the heretics,
makes use of prophetic visions and prophecies of demons,
even the raising of the dead among contempor-
ary events taking place in the Catholic Church; but
he specifies no particular case or name; and it should
be mentioned also that his youth still bordered almost
on the Johannean age” (Ch. History, i, 206, 207).

In another place, referring to the testimony of Ambrose,
Augustine for belief in a continuation of miracles,
Dr. Schaff, while himself advocating the gradual cessa-
tion theory, and also the possibility of miraculous power
dwelling in the Church of to-day, teaches, nevertheless,
that even the best of patriarch testinonies may be im-
peached of being mere subterfuges to support the

wishes of the men who may call themselves be-
than one of miraculous deeds wrought in the Church in post-

apolectic days: “We should not be bribed or blinded
by the character and authority of such witnesses, since
experience sufficiently proves that even the best and
most enlightened men cannot wholly divest themselves
of superstition and of the prejudices of their age.” Re-
call, e.g., Luther and the apparitions of the devil,
the Magna Graecia of Cotton Mather, the old Puritans and
the period with witchcraft, as well as the modern superstitions
of spiritual rappings and table-turnings, by which many
eminent and intelligent persons have been carried away” (III, 207).

But, differ as we may regarding the cessation or non-

cession of miraculous power in the Church of Christ,
there is, nevertheless, one point on which Protestants
unite in opposing the pretensions of Rome; some betray-
ing an undue dogmatic bias, but all agreeing to the
remarkable that the genuine writings of the ante-Nicene
Church are more free from miraculous and superstitious
elements than the annals of the Middle Ages, and even, spor-

adically of monasticism. Indeed, it would appear that
the Nicene age is the first marked as one of miracles,
and that miracles rapidly increased in number from henceforth until they became matters of everyday oc-
currence. Dr. Isaac Taylor adds: “No such miracles as
those of the 4th century were pretended in the preceding
era, when they might seem to be more needed. If, then,
these miracles were genuine, they must be re-

garded as opening a new dispensation” (Anc. Christian-
ity, ii, 257). This new dispensation, no doubt, they her-

alded, for it is manifest that the miracles of the Nicene
age and post-Nicene age “were always intended to prop-
gate the belief of certain rites and doctrines and prac-
tices which had crept into the Church; to advance the
reputation of some particular chapel or image or relig-
ious occurring in Rome and all over the world, and

the Virgin Mary lived in her own spiritual terms, moral feelings and states, repentance and con-

version, of which no trace appears in the N. T. 2. They

serve not to confirm the Christian faith in general, but
for the most part to support the ascetic life, the magical
virtue of the sacrament, the veneration of saints and relics, and other superstitious practices, which

are not more or less offensive to

Says Dr. Taylor: “Whereas the alleged supernatural occurrences related, or appealed to by the earlier Chris-
tian writers, are nearly all of an ambiguous kind, and
such as may, with little difficulty, be understood with-
out either the assumption of miraculous interposition,
or the imputation of deliberate fraud, it is altogether
otherwise with the miracles of the Church of the 4th,
5th, 6th, 7th, 8th, and 9th centuries. Eastern Councils and onward miracles of the most astounding
case were alleged to be wrought from day to day, and
openly, and in all quarters of the Christian world.
These wonders were solemnly appealed to and seriously
narrated by the leading persons of the Church, Eastern
Western, and in many and manifold forms. It is the

great men now set up in opposition to the

leaders of the Reformation—were themselves the won-
der-workers, and have themselves transmitted the ac-

counts of them. But then these alleged miracles were,
almost in every instance, wrought expressly in support
of those very practices and opinions which stand for-
ward as the points of contast distinguishing Romanism
from Protestantism. We refer especially to the ascetic
life—the supernatural properties of the eucharistic ele-
ments—the invocation of the saints, or direct praying
to them, and the efficacy of their relics; and the rever-
ences directed to any collation of marks to certain visible and palpable religious symbols” (ii, 255).

Dr. Hodge, commenting upon these Romish miracles, says, “they admit of being classified on different prin-
ciples. As to their nature, some are grave and impor-
tant; others are trifling, childish, and even babihish;
others are indecorous; and others are irreverent, and
even blasphemous. . . . Another principle on which
they may be classified is the design for which they
were wrought or adduced. Some are brought forth as
proofs of the sanctity of particular persons or places or things; some to sustain particular doctrines, such as
purgatory, transubstantiation, the worshipping of the
churches, and the Virgin Mary; and on the other hand,
identification of relics. It is no injustice to the authorities
of the Church of Rome to say that whatever good ends
these miracles may in any case be intended to serve,
they have in the aggregate been made subservient to the
accumulation of money and to the increase of power. . . .
The truth of Christianity depends not on the verified
historical truth of the account of the miracles recorded in the N. T. The truth of Romanism depends on the truth of
the miracles to which it appeals. What would become
of Protestantism if it depended on the demonology of
Luther, or the witch-stories of our English forefathers?
The same may be said, in assuming the continuance of
the ecclesiastical miracles, has taken upon itself a bur-
den which would crush the shoulders of Atlas” (iii, 456;
And Dr. Schaff, who, as we have already seen, inclines
to the belief that miracles may have been wrought in
post-apolectic days, and may continue to be wrought
from day to day and hereafter, yet ventures to say that “the
four principal considerations rise against the miracles
of the Nicene and post-Nicene age; not warranting, in-
 deed, the rejection of all, yet making us at least very
cautious and doubtful of receiving them in particular.
They were far more frequent than those of the Bible, while in some cases they far exceed them in outward pomp, and make a stronger appeal to our faculty of belief. Many of the monkish miracles are not so much supernatural and above reason as they are unnatural and against reason, attributing even to wild beasts of the desert, panthers and eyasses, which had been miraculously brought into the battlements of the dominion, moral feelings and states, repentance and con-
version, of which no trace appears in the N. T. 2. They
serve not to confirm the Christian faith in general, but
for the most part to support the ascetic life, the magical
virtue of the sacrament, the veneration of saints and relics, and other superstitious practices, which

are not more or less offensive to
the healthy evangelical mind. 3. The further they are removed from the apostolic age, the more numerous they are, and in the 4th century alone there are more miracles than in all the three preceding centuries to- gether. St. John Chrysostom, of course, is the big exception, and that of the heathen world, was less. 4. The Church fathers, with all the worthiness of their character in other re- sights, confessedly lacked a highly-cultivated sense of truth, and allowed a certain justification of falsehood ad majorem Dei gloriæ, or frans pia, under the misnomer of publicans and sinners, or (so especially Augustine, Epistol. ad Parmachium); with the single exception of August- ine, who, in advance of his age, rightly condemned falsehood in every form. 5. Several Church fathers, like Augustine, Martin of Tours, and Gregory I, them- selves concede that in their time extensive frauds with the relics of saints were already practiced; and this is confirmed by the fact that there were not rarely nu- merous copies of the same relic, all of which claimed to be genuine. 6. The Nicene miracles met with doubt and contradiction even among contemporaries, and Sul- pitius Severus makes the important admission that the miracles of St. Martin were better known and more firmly believed in foreign countries than in his own (Dialog. i, 18). 7. Church fathers, like Chrysostom and Augustine, contradict themselves in a measure in some- times paying homage to the prevailing faith in miracles, especially in their discourses on the festivals of the mar- tyr, and in other moments, and in the calm exposi- tions of the Scriptures, the secret possibility of the miracles, at least in the Biblical sense, had long since ceased (comp. Robertson, Hist, of the Christian Church to Gregory the Great [London, 1854], p. 334). We must, moreover, re- member that the rejection of the Nicene miracles by no means justifies the inference of intentional deception in every case, nor destroys the claim of the great Church teachers to our respect. On the contrary, between the proper miracle and fraud there lie many intermediate steps of self-deception, clairvoyance, magnetic phenom- ena and cures, and unusual states of the human soul, which is full of deep mysteries, and stands nearer the invisible spirit-world than the every-day mind of the multitude suspects. Constantine's vision of the cross, for example, may be traced to a prophetic dream; and the frustration of the building of the Jewish Temple under Julian, to a special providence, or a historical judgment of God. The mytho-poetic faculty, too, when not selfishly prostituted by pride or fraud, may have been at work among credulous monks in the desert, and may magnify an ordinary event into a miracle. In judging of this obscure por- tion of the history of the Church we must, in general, guard ourselves as well against shallow naturalism and acceptances against superstitious mysticism, remembering that

"There are more things in heaven and earth
Than are dreamt of in our philosophy"

(Ch. Hist, iii, 463-465).

If we institute a direct and careful comparison be- tween the apostolic age, the primitive Church, the healthy evangelical mind, the ancient miracles, ecclesiastical miracles, modern miracles, even find, besides matter of fact, as to the certainty of the thing and the reasons of credibility, there is a great difference in the force and efficacy of the former and a confirmation of that for which it is produced, while it is not so in the case of the latter. "Those Biblical miracles," says Butler, "were generally very beneficial to human nature, doing mighty offices of kindness towards those who were the subjects of them, such as healing the sick, raising the dead, restor- ing the deaf, the lame, and the blind, etc.; all which bore an excellent proportion to the great design of re- discerning, and that, too, in a manner as to make it manifestly evident that there were any mixture of severity in the very act, such as striking some dead by a word spoken, or putting others in the immediate possession of the devil by ex- communication; yet was even this done either in kind- ness to posterity, by fixing, in the first institution of things, one or two standing pillars of salt, that might be for example and admonition to after-ages, against some practices that might otherwise in time destroy Christianity; as, in the first instance, of Ananias and Saphira, in the second, if he were the single instance, of good purposes for the persons themselves, as in the last instance of excommunication; so in the case of the in- cestuous person, it was adjudged by Paul, 'to deliver such a one unto Satan for the destruction of the flesh, that the spirit may be saved in the day of the Lord Je- sus' (1 Cor. v. 5). None of these miracles were useless, ludicrous actions as the Romish authors have filled their histories with; such as that of St. Berinus, who, 'being under full sail for France, and half his voy- age over, finding he had forgot something, walks out upon the sea, and returns back dryshod;' such as St. Mo- crinus, by his prayer and staff hindering the poor lambs from sinking their dams, when they were running to- wards them with full appetites; such, again, as St. Francis bespeaking the ass in the kind compellation of brother, 'to stand quiet till he had done preaching, and not disturb the solemnity;' and such as St. Fulturans keeping the calf from the cow, that they should hinder of them move towards one another; such, in a word, as St. Frimianus and St. Ruananus, sporting their miracles with each other, as if they had the power given them for no other end but mere trial of skill, or some pretty diversion of bystanders' (Notes, p. 252-258). The Bre- vitory (q. v.) teems with descriptions of all manner of mi- croscopical performances, but is as much at a loss to enumerate others here, and must refer the reader to it and to Elliott (Delineation of Romanism, p. 527-543). On the most important so-called miracles claimed by the Church of Rome in modern days, see the articles St. Francis; Holy Coat of Thess.; St. Januarus; Lourdes; Xaviers, etc. See also Superstition; Vis- ions.

It appears, moreover, from the writings of many dis- tinguished Roman Catholic authors that the post-Ni- cene miracles are not generally accepted. Thus Peter, abbot of Cluny, as far back as the 13th century, says: "You know how much those Church somnets grieve me" (lib. v, Epist. xxix). He mentions one of Benedict which he declares contained no less than twenty-four liea. Ludovicus Vives, speaking of the Legenda Aurea, observes: "How unworthy both of God and man is the story of their saints, which, I do not know why, was called by the most pious pope, and learned by the children of the Pope, and in the presence of one who had an iron mouth and a leaden heart" (lib. ii, De Corrupt. Artih, in fine). And Espinencius declares: "No stable is fuller of dung than their legends are of fables" (in 2 Tim. it, Divagens, 21). These authorities might be multiplied to a great extent. We must con- tent ourselves here with a few of the leading facts. As the reformatory ideas took root in the Church of Rome, First among these must we place the learned French chancellor Gerson, of Paris University, who, when, in the Council of Constance, the canonicity of St. Bridget (q. v.) was proposed, thus spoke out: "It cannot be said of these stories, miracles, as for the apostles, what our children, and for seeing miracles and performing them, hath deluded most persons, and constantly turned away from true religion. Hence all those supersitious among the people which destroy the Christian religion, while, like the Jews, they only seek a sign, exhibiting to images the worship due to God and attached their faith to men yet uncanonized, and to apocryphal writ- ings, more than to the Scriptures themselves."

In the 15th century the appearance of a rival to the Franciscan visionary in the person of St. Catharine of Sienna as the champion of the more powerful Dominics, following in the steps of St. Dominic, Cajetan, utterly nullifying the former declarations of the Church in her favor: "It is alleged," he writes, "that St. Bridget had a revelation that the Blessed Virgin was preserved from original sin. But the probability of this opinion is very slender, for it is opposed to
very many saints, and none of those alleged were them-
selves canonized. To St. Bridget, moreover, we may
oppose St. Catherine of Sienna, who said that the
intradenting of miracles had been revealed to the
archbishop of Florence relates in the first part of his
Summa. And St. Catherine would seem to deserve greater credit,
because she was canonized like the other saints, while
St. Bridget was canonized in the period of the schism,
during the obedience of Boniface IX, in which there
was no certain and undoubted pope." Further on he
adds the fatal words: "New revelations against so many
saints and ancient doctors must seem to the wise to bring
in an angel of Satan transformed into an angel of light,
to bring in fancies, and even figments. These, truly,
with the so-called miracles which are cited in this cause,
are not miracles. But in order for the holy synd, whence
I do not deem them worthy of mention." "There is
need of great caution," writes this great diviné, "first
on account of the miracle itself, inasmuch as Satan
transforms himself into an angel of light, and can work
many signs and wonders, such as we might deem that
none but God could work—as works of healing, power
over the elements, and the like. Hence it is said that
Antichrist will perform so many miracles in the sight
of men that, if it were possible, he would deceive the
very elect themselves. Secondly, there is need of cau-
tion on the ground of illusions, as happens in the case
of prophesying. Thirdly, it may be useful to us (according
to 1 Cor. xiv, and St. Gregory, Hom. x) are
given to the unbelieving, and not to believers; while
to the Church as faithful, and not unfaithful, are given
the prophetical and apostolical revelations. Hence
the way of signs . . . unless not merely a wonder, but
a true and indisputable miracle, is wrought before
the Roman Church in the most evident manner, ought
not to determine any doubtful doctrine; and the reason is,
because we have from God an ordinary way for the
termination of matters of faith; insomuch that if an
angel from heaven were to say anything contrary to this
ordinary way he ought not to be believed (Gal. i, 8).
Add to this that the miracles received by the
Church in the canonization of saints, which are most
authentic of all, are not, inasmuch as they rest on hu-
mankind testimony, absolutely certain (for it is written,
"Every man is a liar"); although they may be certain
after a human manner. But the certainty of the Chris-
tian faith ought not to be certain after a human man-
ner, but ought to have altogether an infallible evidence
such as no human being, but only God, can produce.
Hence the apostle Peter, after giving his own testimony
to the heavenly voice heard by him in the transfigura-
tion of our Lord, as a human evidence, subjoins: "And
we declare to you the promise made to the fathers by
prophetic writings, the Prophecy came not by the will of man.' Wherefore
certainty in the judicial determination of the things
of faith must be obtained by divine and not by human
testimony" (De Conceptione B. V. M. cap. i).

We can even go to the chair of St. Peter and learn
from some of its incumbents a like disposition to ignore,
or even to reject the miraculous manifestations in
the Church. Thus pope Gregory XI, having been persuad-
ed by the prophecies of St. Catharine of Sienna to re-
turn to Rome from Avignon, "when on his death-bed,
and having in his hands the sacred body of Christ, pro-
tested before all that they ought to beware of human
beings, whether male or female, speaking under pretence
of religion the visions of their own brain. For by these
(said he) he was led away; and, setting aside the rea-
sonable advice of his own people, had drawn himself
and the Church to the verge of an imminent schism,
unfortunately. Aristidus, tertiary of the Order of Can-
nonists, Jesus, whose dreadful result too clearly proved (Gerson.
De Exam. Doctrinarum, pt. ii, consid. iii). Nor need
pope Benedict XIV be forgotten. His utterances
are clearly laid down in his great work on the
Canonization of the Saints (lib. i, ch. xxxi, § 21-25).
If from these celebrated Roman authorities we come
down to our own day, we find bishop Milner, who is
himself an advocate of the doctrine, yet admitting "that
these were very numerous miracles, which, as if
other fables, have been forged by some and believed
by other Catholics in every age of the Church, includ-
ing that of the apostles. I agree . . . in rejecting the
Legend a Aurea of Jacobus de Voragine, the Speculum
of Vincentius Bellinciamus, the Saintes Aves of the
patrician Metaphrastes, and scores of similar legends,
stuffed as they are with relations of the miracles of every
description" (End of Controversy, Lett. xxvii, p.175, 176).
It is, however, by no means to be inferred from what
we have said that these miraculous exhibitions are con-
finned to the Church of Rome. The Protestants have
now and then prophets and visionaries who claim su-
preme authority. But when the Church, which has always discarded the authors, or at least, under the
most favorable circumstances, has refused to accord to
such exhibitions any divine origin, the Church of Rome
clearly teaches that these things are so to be. Hence,
occasionally, sects departing from the Church of Rome
have tried to establish their authors by various means,
signs and works. Thus some of the persecuted Jansen-
ists availed themselves of the utility of modern miracles
for the purpose of propagating a new doctrine or declin-
ing a controverted one, and had recourse to the same
weapons of defence against their implacable adversaries.
In the year 1696, the son of a French priest, possessed
by a delusion of the spirit of Parsifal, became in this sense the apostle of the
Jansenist doctrine, and the prophet against the famous
bulk Unigenitus. His holiness and mortification of life,
and the reaction of public opinion after the cruel perse-
cutions of the Jesuits, greatly favored the success of his
claim to work miracles, which, according to his biogra-
phers, was proved both in his life and at his tomb after
death, in a degree that few canonized saints have at-
tained to. The learned reviewer of his life, in the Acta
Erditorum of Leipsic, merely concludes from his his-
tory that the city of Paris was filled at the time with the
followers of this enthusiast, and that they were con-
pelled to appeal thus to the popular superstition in or-
der to lessen the persecutions of the Jesuits, and in a
manner to attack them with their own weapons. These
miracles chiefly involved powers of healing and restora-
tion of outward faculties, and bore (if true) a much
closer resemblance to the healing gifts which inaugu-
rated Christianity than to the senseless, senseless
wonders of medieval miracle-working. But the conte-
ption which was thus spread over the Church, and
throughout almost every age, was by no means con-
fined to the Roman Church, its orders or disorders.
Though the churches of the Reformation, in their
bolder and more liberal views of late years, have as a
rule treated the visions and miracles upon which the
inner power of Rome had been built with as little cere-
mony as they treated the forged decreals on which her
external power had been carried up in the darkness of
the Middle Ages, it was not long before the old love
of the marvellous, and the inexpungible longing after
the forbidden fruit of visions and revelations which had
been so abundantly enjoyed but a little before, extended
into the churches of the Reformation. But the occa-
sion of their appearance was different altogether from
that which had evoked it in the Roman Church, though
by a singular coincidence the scene of the Protestant
and of the Romish revelations was the same. The
province of Dauphiny, which gave a birthplace to the
peasant visionaries of La Salette, was also, in an earlier
day, the native country of Isabel Vincent, whose mira-
culous preachings in her sleep and ecstatic visions en-
livened the life of the South of France; and the Parlia-
ment, and of the Romish revelations was the same.
The province of Dauphiny, which gave a birthplace to the
peasant visionaries of La Salette, was also, in an earlier
day, the native country of Isabel Vincent, whose mira-
culous preachings in her sleep and ecstatic visions en-
livened the life of the South of France; and the Parlia-
ment, and of the Romish revelations was the same.
Saxon, in Dauphine, who ever since February last hath sung Psalms, prayed, preached, and prophesied about the present Times in her France; as also upon the wondering strange and truly extraordinary stories that were heard by thousands in the air in many Parts of France in the Year 1686. Not nourished into life in the bosom of Rome, and nourished as the visions of Lourdes and La Salette by a priesthood too deeply interested in the success of the imposture, the Protestant wonders sprang up in a curious and stately extent out of the terrible hot-bed of cruelty and persecution which the revocation of the Edict of Nantes had produced in every province of France, and which, in the more imaginative region of the south, bore strange and exotic fruits. The visions of the poor shepherdess and her companions was by our heroes, in his heart more, in his head less, and wild recollections of the Protestant services then so cruelly prohibited—prophecies of future trials or deliverances being intermingled with her sermons in the same manner as they had doubtedless been by the exiled and often martyr-dedicated preachers of that period of bitter persecution, whose judgment, "though of a long time," was read in the dreadful anarchy of the first Revolution, and seems hardly fully ended in our own day.

The crushing out of a rational faith was followed by the rise of the school of Voltaire and Diderot, and it well might shame the advocates of the Church of Rome in every age to find that the proscribed infidel was the first who, with the power of the understanding, the judges who, at the instigation of the Jesuits, so horribly tortured and murdered the poor silk-mercer of Toulouse, Calas, whose only crime, like that of the victims of Thorn in a somewhat earlier day, was his firm and consistent Protestantism. The wonderful sounds in the air—which were testified by so many thousands, and described in a public letter by M. de Besse, a pastor who had contrived to escape from his prison to Lauzanne—might perhaps be referred, without charge of scepticism, to the effects of this dreadful persecution upon the minds and the nerves of its wretched and homeless victims, of whom it might well be said, in the words of Paul, "They were slain with the sword; they wandered about in sheep-skins and goat-skins; being destitute, afflicted, tormented, they wandered in deserts, and in mountains, and in dens, and in caves of the earth."

Indeed, some even imagined, as M. de Besse tells us, that the hearth-sounds and voices heard by so many were but the singing of the poor exiles met together in woods or in caves; but the variety of places in which he himself heard these mysterious harmonies soon convinced him that so simple a solution of them was erroneous. In vain the ear-witnesses of these phenomena were taken to prison for declaring them, and from that position of authority, to public-reverence, in the day (Jurieu, Reflections, p. 36). "The trumpet always sounds as if an army were going to charge, and the harmony is like the composition of many voices, and of an infinite number of musical instruments." "I do believe," adds the good pastor, who found it more easy to interpret the sign than to account for it, "that the trumpet is a sign of a cruel war that will be made in a little time, and that the harmony comes from the mouth of angels, who, to put our enemies to the last confusion, thunder out the praises of God at a time when these wretched men forbid it to reformed Christians." The outbreak of the French Revolution, and the overthrow of the Church just a century after, would seem to verify, though at a later date, the interpretation of the poor exile, whose fellow-witness was a "Sieur Calas," probably one of the family of the martyr of a later day; while the testimony to the authenticity of his letter is given by an exiled minister, bearing the equally suggestive name of Murat.

Pursing over to Germany, we find that the contagion of new and strange prophecies had spread its influence to the eastern part of the empire at an earlier period in the 17th century. Temporarily with the mystical and hieroglyphical system of Jacob Böhme, there sprang up in Silesia and Saxony the cognate revelations of Kotter, Drabitz, and Christina Pontiatovia, all having a political rather than spiritual or religious tenor, and depicting the final triumph of Protestantism in the empire, and the regeneration of Christianity, by the overthrow of the Roman power. Kotter, fortunately for his head, escaped into Lusatia, where some noblemen of influence became his adherents. Drabitz, not so fortunate, lost his head at Breslau, by order of the emperor, to whom his visions had had a somewhat unreasonable appeal; and Christina Pontiatovia, more fortunate than either, closed her revelations by marrying the tutor of the son of the king of Bohemia, and the threefold revelations, though introduced with much pomp and circumstance, and with a vast number of curious illustrations of the dreams and visions in which they were disclosed, by the famous Amos Comenius, fell still-born on the world, and have now a place on the shelves of the curious, on the ground of their rarity and of the grotesque ingenuity of their pictorial representations. (Two editions of these revelations, both in 4to, appeared under the editorship of Comenius, the title of the latter being Luz e Vernonia.) A copy of one of these was burned with Drabitz after he was beheaded at Breslau. Both editions are very rare.) In Western Germany they were almost unknown, and it is memorable that almost all the prophets and mysteries of Central Europe belonged to that mixed Teutonic and Slavonic race which peoples the eastern frontier lands of the empire. But, though Germany contributed so little to the visionary lore of Europe at this period in a direct manner, it had produced a system of mystical divinity which laid the foundations of many future visions and ecstasies. The wild theology of theosophy, or whatever else it might be called, of Jacob Böhme, was a fruitful soil for the growth of new revelations and prophecies, and might well prepare the mind it obstructed for the most startling apparitions of the beings of another world. The writings of this celebrated enigmatic and obscure prophet and headstrong visionary, found vent in Holland and England. The mysticism of Jane Leade (q. v.), her followers, the Philadelphia (q. v.), the Quietism of Molina (q. v.), are subjects for consideration in the article MYSTICISM. But it may not be amiss, in this place, to call attention to the singular contrast between the Roman Catholic miracles, visions, and apparitions, and those of the Protestant world. While the former are always invoked in order to found some new and undiscovered system of worship or object of superstitution, the latter have a very practical end, and stand in close connection with holiness of life, which modern Roman revelations tend so little to promote. Even Jane Leade's revelations had a really Christian moral, which cannot in any sense be affirmed of the wonders of Lourdes or La Salette, and of the miracles with which, as Dr. Newman affirmed, the Roman Church is hung about on every side. "The Anglo-Saxon nature," says a writer in the British Quarterly Review (July, 1874, p. 97), "does not often indulge in visions, but when it does they seem to partake of that practical character which belongs to the race. No doubt some good may have arisen even from Mrs. Leade and her Philadelphia Society in its various branches in that age of spiritual deadness in which her lot was cast. Possibly even now we may be deriving some advantage from the example and the labors of this aged enthusiast, even as the decayed vegetation of an earlier year may have contributed to the fruitfulness of our own. The Philadelphia Society seems but a short time to have survived its foundress, though the ramifications
Miracles, Ecclesiastical. 326

Miracles are the supernatural formation of the human nature of Jesus Christ, i.e. that it was brought forth not in the ordinary method of generation, but out of the substance of the Virgin Mary, by the immediate operation of the Holy Ghost. The evidence upon which this article of the Creed is founded rests in I, 18-22. For the more particular narrative which Luke has given in the first chapter of his Gospel. If we admit this evidence of the fact, we can discern the emphatic meaning of the appellation given to our Saviour when he is called "the seed of the woman" (Gen. iii. 15); we can understand the main idea of a promise introduced into the genealogy of Jesus (Luke i. 23), "being (as was supposed) the son of Joseph," and of which, otherwise, it is not possible to give a good account; and we can discover a peculiar significance in an expression of the apostle Paul (Gal. iv. 4), "God sent forth his Son, made of a woman." The conception of Jesus is the point from which we date the union between his divine and human nature; and, this conception being miraculous, the existence of the Person in whom they are united was not physically derived from Adam. But, as Dr. Horsley says in his sermon on the Incarnation, the union with the uncreated Word is the verity and individual existence in the Son of Mary. According to this view of the matter, the miraculous conception gives a completeness and consistency to the revelation concerning Jesus Christ. Not only is he the Son of God, but, as the Son of man, he is exalted above his brethren, while he is made "the image of God and the express image of his person, . . . a figure of the things to come." He is preserved from the contamination adhering to the race whose nature he assumed; and when the only-begotten Son, who is in the bosom of the Father, was made flesh, the intercourse which, as man, he had with God, is distinguished, not in degree only, but in kind, from that which any prophet ever enjoyed; and it is infinitely more intimate, because it did not consist in communications occasionally made to him, but arose from the manner in which his human nature had its existence. See Incarnation; Jesus Christ.

Miradoro, Luigi, a noted Italian painter of the school of Cremona, was born at Genoa about the commencement of the 17th century. He is immediately distinguished from his countrymen of the same native city, from whose works, after being initiated into the rudiments of his art, he appears to have gone to Cremona, where he began to study the works of Filippo Nuvolone. Afterwards he painted in the manner of the Caracci—bold, large, correct in coloring, and productive of fine effect. While he appears to be little known in his native city, he nevertheless enjoyed a high reputation in Cremona and in parts of Lombardy. His S. Gio. Donato, in the church of S. Clemente, at Cremona, is highly commendable. The Merchants' College at Piacenza possesses likewise a beautiful Pietà from his hand, representing the Dead Christ at the Lap of the Virgin. He appears to have been remarkably successful in the treatment of all subjects, but especially so in compositions of a terrific or tragic nature. The exact time of his death is unknown: but one of his works in S. Imerio bears the date 1651; therefore his demise must have been subsequent to this date. See the Catalogue Hist. of Painting (transl. by Hosoe, Lond., 1847, 3 vols. 8vo), ii, 451; Spooner, Bibl. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo), ii, 568.

Miraeus, Albert (Albert le Mire), a Roman Catholic theologian of Belgium, was born at Brussels in 1573, and was educated for the Church at the high-schools of Douai and Louvain. Shortly after taking orders he was appointed canon at Antwerp; in 1606 he became also prebendary of the Church of his native city, and in this capacity conducted missions to the Moors; afterwards he became court preacher and librarian to Popery, p. 90; Brownlee, Letters in the Roman Catholic Controversy; Brand, Popular Antiq.; Hone, Anc. Mysteries.

Miraculous Conception, a term used to denote the supernatural formation of the human nature of Jesus Christ, i.e. that it was brought forth not in the ordinary method of generation, but out of the substance of the Virgin Mary, by the immediate operation of the Holy Ghost. See Incarnation.
the archduke Albert of Austria; and in 1624 dean of the cathedral at Antwerp, where he died in 1640. Most of his life was consecrated to the good of his Church and country. Mirsus was also a multifarious writer. Many of his works are on ecclesiastical history. We will mention here Bibliotheca Ecclesiastica (Antwerp, 1629-1649, 2 vols. fol.; a new edition of this work was published at Hamburg in 1718 by Joh. Alb. Fabricius, who says in the preface, "Vir et loco et tot aliis monumentis in lucem editis non minus de veteri memoria quam de postieritate omni insigniiter promeritus") —

De statu religiosity Christianae per totum orbem (Holmst. 1671):

—Notitia episopatuum orbis Christiani (Antwerp, 1613): — Chronicon Cisterciense (Cologne, 1614):

—Geographia Ecclesiastica: — Codex regularum et constitutionum clericorum: — Originals canonorum Benedictinorum, Carthusiorum, etc.; — Opera historia et diplomatica, Eligia illustrium Belgii scriptorum, Chronicon rerum Belgicorum, Chronicon rerum totius orbis gentium, etc. All his works were collected and published at Brussels in 1733, in 4 vols. fol.

**Miras**, the French name of an optical illusion common in the East, and directly referred to by Isaiah (yyyy, shorah), "arid ground," XXXV, 7; "heat," xlix, 10, and perhaps indirectly by Jeremiah (xx, 18, "winds that fail," literally, that cannot be trusted). It is still known by the name of shorah, the Arabic equivalent of the above Heb. term. This phenomenon is as simple in its origin as it is astonishing in its effects. Under it are classed the appearance of distant objects as double, or as if suspended in the air, erect or inverted, etc. The cause of mirage is a diminution of the density of the air near the surface of the earth, produced by the transmission of heat from the earth, or in some other way; the denser stratum being thus placed above, instead of, as is usually the case, below the rarer. Now rays of light striking a distant object, traverse a denser medium (i.e. a little above the earth's level), coming in a direction nearly parallel to the earth's surface, meet the rarer medium at a very obtuse angle, and, instead of passing into it, are reflected back to the denser medium, the common surface of the two media acting as a mirror. Suppose, then, a spectator to be situated on an eminence, and looking at an object situated like himself in the denser stratum of air, he will see the object by means of directly transmitted rays; but, besides this, rays from the object will be reflected from the upper surface of the rarer stratum of air beneath to his eye.

(See fig. 1.) The image produced by the reflected rays will appear inverted, and below the real object, just as an image reflected in water appears when observed from a distance. If the object is a cloud or portion of sky, it will appear by the reflected rays as lying on the surface of the earth, and bearing a strong resemblance to a sheet of water. (See fig. 2.) This form of mirage, which is most common in sandy, desert countries, is an illusive appearance of pools and lakes of water, in places where water is most needed and least likely to occur. This
phemonen offers so perfect a delusion in all its cir-cumstances that the most forewarned and experienced travellers are deceived by it, as are even the natives of the country whenever they supply to the supply upon which they are obliged to carry with them upon their camels is nearly or quite exhausted. (See fig. 3.)

"Still the same burning sun! no cloud in heaven! The hot air quivers, and the sultry mist Flows like a cloud across the desert with a show. Of distant waters mocking their distress."—Scottish.

Major Skinner, in his Journey Overland to India, describes the appearances of the ser'd in that desert, between Palestine and the Euphrates, which probably supplied the images employed by Isaiah: "About noon the most perfect deception that can be conceived exhilarated our spirits and promised an early resting-place. We had observed a slight mirage before, but this day it surpassed all I had ever fancied. Although aware that these appearances have often led people astray, I could not bring myself to believe that this was the case. The Arbour rays were so brilliant, and so real, and so constant, that I was not able to see a cloud move over it. It was in the state of a cloud, and not a cloud, so that we had no water yesterday, it was not improbable that we should find some to-day. The seeming lake was broken in several parts by little islands of sand, that gave strength to the delusion. The dromedaries of the sheiks at length reached its borders, and appeared to us to have come from the desert, as they advanced of a much greater size than the moment before, the river was surrounded by the savanna. I thought they had got into the deep water, and moved with greater caution. In passing over the sand banks their figures were reflected in the water. So convinced was Mr. Calmam of its reality that he dismounted and walked towards the deepest part of it, which was on the right hand. He followed the delusive lake for a long time, and to our sight was strolling on its bank, his shadow stretching to a great length beyond. There was not a breath of wind; it was a sultry day, and such a one as would have added dreadfully to the disappointment if we had been at any time without water."—Pardies Ground.

Miramion, Marie Bonneau, Lady, a very estimable French female philanthropist of the 17th century, was born at Paris Nov. 2, 1629. She was the daughter of Jacques Bonneau, lord of Rubelles, and of Maria d'Isay, both very wealthy. She married (March, 1645) Jean Jacques de Beaumhain, lord of Miramion, who died the same year. Many desirable parties solicited her hand, but she preferred to consecrate herself to God and to the care of the poor and sick, and took religious vows Feb. 2, 1649, when only two years of age. Every hour of her life was devoted to some charitable or pious act. In 1660 she collected twenty-eight poor monks driven from Picardy by the war, and nourished and cared for them for six months. Her zeal and liberality prompted her to found at Paris the House of Refuge and that of Sainte-Palge; she drew up the rules for these two houses, destined to serve as asylums for widows and repentant women. She contributed largely for the establishment of the Seminary of Foreign Missions. On this she had increased the misery of the people of Paris; Madame de Miramion sold her heirlooms, estimated at 34,000 pounds, and her plate, and distributed the proceeds in alms. In 1661 she established a society of twelve girls to teach country children how to dress wounds and succor the sick. This little community was named "Saincte-de-Miramion." The Abbé de Miramion subsequently united it to the daughters of "Saincte-Genevieve." She bought for them a large house on the wharf of the Tournelle, sufficiently endowed the establishment, and consented to become superior. She gave more than 70,000 pounds to her parish of Saint-Nicolas de Chardonnet, the seminary of which she endowed with a sum of 35,000 francs. The hospital for foundlings was also greatly indebted to her. She died March 24, 1696.

See Abbé de Cholosy, Vie de Madame de Miramion (Paris, 1707), 12mo, and 8vo; by Richard and Giraud, Bibliothèque Sacrée; Hoefer, Nouv. Bist, Générale, s. v. See GÉNÉVIEVE, ST., DAUGHTERS OF.

Mirandula, Giovanni Francesco della, a noted theological and philosophical writer of the 16th century, was born about 1469. He cultivated learning and the sciences, after the example of his uncle. (See below the article ARANDO, GIOVANNI BALESTRO, S. L. A.) Upon the death of his father, in 1499, he succeeded, as eldest son, to his estates, and thus became involved in great trouble, which finally cut short not only his literary labors but also his life. His brothers Lewis and Frederick combined against him, and, by the assistance of the emperor Maximilian I and Hercules I, Duke of Ferrara, succeeded in driving him from his principality in 1502, and he was forced to seek refuge abroad, until at length pope Julius II, invading and becoming master of Mirandula, re-established him in 1511. After the pope's defeat at Havenna (April 11, 1512), Giovanni Francesco became a refugee a second time, and so continued for life the sharp and frequent warfare between the Ferrara family and the triumphs of the emperor. He was restored to his possessions. He died in October, 1533, when Galicto Picos, his nephew, i. e. the son of his brother Lewis, entered his castle by night with forty armed men, and assassinated him and his eldest son Albert. He seems to have been a more voluminous writer than any of his family. His principal works were published in the Strasbourg edition of his uncle's, in 1504, and continued in those of Basle, 1573 and 1601. Among these are: (1) De studio divina et humana philosophia libri duo: in this he compares profane philosophy with a knowledge of Holy Scripture, and shows how preferable the latter is to the former. (2) De imaginatione liber. (3) De imitatio ad Petrum Beminum epistolae duae, et eius reponsum. (4) De verum promitio libri ii: in this book of the Prescience of things, it treats of the divine prescience, and of that knowledge which some pretend to have of things future, by compacts with evil spirits, by astrology, chiroiogy, geomancy, and the like means, which he confutes at large. (5) Examen vanitatis doctrinae gentium et veritatis disciplinae Christiana, etc., wherein he opposes the errors of philosophers, Aristotle particularly. (6) Epistolae libri quattuor. (7) De reformandis moribus orat. ad Leonem X. These are the most prominent of his writings. The books are enumerated in the editions above mentioned of his uncle's works; but there are other works, which have never been collected together, but have always continued separate, as they were first published: such are—Via Hieronymi Saccuroli: De veris calcamatum temporum nostrorum causis liber:—De animae immortali:—Dialogus eui nomen Striz, nico de ludificatione daemonum:—Hyemae heroici tres ad Trinitatem, Christum, et Virginem:—De Venere et Cupidine expellendae carnem heroicam:—Liber de Providentia Dei contra philosophos:—De auro tum asimiando, tum conficiendo, tum utendo libri tres, etc. That is, the "Three Books to the Trinity, Christ, and Virgin."—"so much truth, wisdom, subtlety, and elegance in the works of Francis Pico as in those of his uncle; no, nor yet so much learning; but there is more evenness and solidity." See the books referred to in the article following.

Mirandula, Giovanni Pico della, an Italian philosopher and theologian, one of the writers of the days of the Renaissance, noted for his attempt to reconcile Christianity with the ideas of paganism, was one of the most learned of the literary men of his time. He was born Feb. 24, 1468. Even as a youth, the prince of Mirandula was noted for his precociousness, and remarkable for his memory and intelligence. He challenged disputations on abstract subjects with the learned of his day, as if one of their number. In 1477 he entered the University of Bologna, to study canonical law, be-
the sweet charity of providing marriage dowries for the peasant girls of Florence.

Short as his life was, Mirandula composed a great number of works, which have often been printed separately, especially in France. They have been preserved, for the most part, at Bologna (1496), at Venice (1498), at Strasbourg (1504), and at Basle (1557, 1575, 1601)—all in folio. The principal works in the collection are, Hephaistus, id est de Dei creatoria opere sec auctum libri septem (Strasbourg, 1574, fol.; translated into French by Nicolas le Fevre de la Salle, under the title Ulises, ou les sept fagon es de sauvant de tiere est expose l'histoire des sept jours de la creauion du monde [Florence, about 1498; Paris, 1578, fol.]).

Paul of Mirandula," says Matter, "convinced that the books of Moses, interpreted with the aid of the Cabala and of Neo-Platonism, would appear as the source of all speculative science, wrote an exposition of Genesis according to the seven meanings given to it by some of the exegeses of that period. But this work, rather short for such a subject and such a purpose, is really but a weak imitation, even in regard to its title, of the works of some of the fathers. Here is a specimen of his manner of interpretation. The words 'God created the heavens and the earth,' are used by him to signify that God created the soul and the body, which can very well be considered as represented by heavens and earth. The waters under the heavens are our sensitive faculties, and their being gathered together in one place indicates the gathering of our senses in a common receptacle. The terrestrial matter, and the vital soul, or rather from Philo, is probably anterior even to the latter; and it is evident that this could not afford the means of reconciling philosophy and theology. Generally speaking, Mirandula, whose genius was so precocious, so brilliant, and so comprehensive, wrote too young and too fast, and with too much depth, for second-hand learning, while his imagination was too vivid not to prevent his giving full satisfaction to the claims of reason. All his works bear the marks of that general kind of knowledge one possesses in leaving the schools, but nowhere do they evince that depth and originality which are the fruits of meditation and of patient research. He was a prodigy of memory, of elocution, of dialectics; he was neither a writer nor a thinker."

The reader may do well to compare with this estimate of Mirandula, Pater's enthusiastic tribute to the author of the "Heptaplen:"—Conclusiones philosophiae, cabalisticae, epi sti et theologiae (Paris, 1486, fol.), which contains the fundamental tenets of Cabalist philosophy, or rather, of Cabalist the blank of such a sensation at the time, but are now looked upon only as curiosities.—Apologia J. Pici Mirandulani, Concordis comit (1489, fol., very scarce); it is Mirandula's defence against the charge of heresy; the writer corrects some singular instances of the part of his documents, and expresses in all of them, for instance, took Cabala for the name of a man, and asserted that it was a sounder word which had written against Christ:—Disputationes adre h tos astronomici di vinicicm libri ii (Bologna, 1495, fol.); Aurea ad fam iliare epitole (Paris, 1499, 4vo; Venice, 1526, 8vo; reprinted by Celsarius, 1582, 8vo); Elegia deprecatoria ad Deum in honorem beati Joannis Pici, qui pari locis in Moise, in Patrone et Aristotele explicantur—De hominie dignitate (Basle, 1580, 8vo)—Commento del signor Giovanni Pico sopra una canzone di amore, composta da Girolamo Benivieni, cittadino fiorentino, secondo la mente ed opinione dei Platonici (Florence, 1519, 8vo; Venice, 1522, 8vo), which contains a translation of Plato's Banquet, and very readable. "With an ambitious array of every sort of learning, and a profusion of imagery borrowed indifferently from the astrologers, the Cabala, Homer, Scripture, and Dionysius the Areopagite, he attempts to define the stages by which the soul is passed from the earth to the realms of the immor talities." It has been well said that the Renaissance of the 15th century was in many things great rather by what it designed than by what it achieved. The same may be appropriately applied to Mirandula's efforts.
"He sought knowledge, and passed from system to system, and hazarded much; but less for the sake of positive knowledge than because he thought he was a spirit, and not a creature of knowledge, which would come down and unite what man's ignorance had divided, and renew what time had made dim. And so while his actual work has passed away, yet his own qualities are still active, and he himself remains, as one alive in the grave, 'cæsis et vigilibus oculis,' as his biographer describes him, and with that sanguine clear skin, 'decerti rubore interspersa,' as with the light of morning upon it; and he has a true place in that group of great Italians who fill the end of the 16th century with their names" (Pater).

Seemly dread of losing her influence and position, and led her into complaints of and dangerous reflections upon Moses, in which Aaron joined (see Kitt. Daily Bible Illustr. 19:12). See also Exod. The expression, "Hath Jehovah spoken by Moses? Hath he not spoken also by us?" (Num. xii, 1, 2), implies that the prophetic gift was exercised by them; while the answer implies that it was communicated in a less direct form than to Moses.

"If there be a prophet among you, I, Jehovah will make him known unto you in a vision, and will speak unto him in a dream. My servant Moses is not so. . . . With him will I speak mouth to mouth, even apparently, and not in dark speeches" (Num. xii, 6–8).

A stern rebuke was administered in front of the sacred tent to both Aaron and Miriam. But the punishment did not fall on them alone: for the Egyptian leprosy, of which for a moment the sign had been seen on the hand of her younger brother, broke out over the whole person of the proud prophetess. How grand was her position, and how heavy the blow, is implied in the cry of anguish which goes up from both the brothers—"Alas, my lord! . . . Let her not be as one dead, of whom the flesh is half consumed when he cometh out of his mother's womb. . . . Heal her now, O God! I beseech thee." And it is not less evident in the silent grief of the nation: "The people journeyed not till Miriam was brought in again" (Num. xii, 14). The sign, for some time, was reflected, though in a strange and distorted form, in the Egyptian leprosy of the drying up and reflowing of the marvellous well of the Wandering. See Besz. This stroke, and its removal, which took place at Hazeroth, form the last public event of Miriam's life. She died towards the close of the wanderings at Kadesh, and was buried there (Num. xxx, 1). B.C.1695. Her tomb was shown near Petra in the days of Jerome (Onomast. s. v. Cades Barnea).

"He sought knowledge, and passed from system to system, and hazarded much; but less for the sake of positive knowledge than because he thought he was a spirit, and not a creature of knowledge, which would come down and unite what man's ignorance had divided, and renew what time had made dim. And so while his actual work has passed away, yet his own qualities are still active, and he himself remains, as one alive in the grave, 'cæsis et vigilibus oculis,' as his biographer describes him, and with that sanguine clear skin, 'decerti rubore interspersa,' as with the light of morning upon it; and he has a true place in that group of great Italians who fill the end of the 16th century with their names" (Pater).

Seemly dread of losing her influence and position, and led her into complaints of and dangerous reflections upon Moses, in which Aaron joined (see Kitt. Daily Bible Illustr. 19:12). See also Exod. The expression, "Hath Jehovah spoken by Moses? Hath he not spoken also by us?" (Num. xii, 1, 2), implies that the prophetic gift was exercised by them; while the answer implies that it was communicated in a less direct form than to Moses.

"If there be a prophet among you, I, Jehovah will make him known unto you in a vision, and will speak unto him in a dream. My servant Moses is not so. . . . With him will I speak mouth to mouth, even apparently, and not in dark speeches" (Num. xii, 6–8).

A stern rebuke was administered in front of the sacred tent to both Aaron and Miriam. But the punishment did not fall on them alone: for the Egyptian leprosy, of which for a moment the sign had been seen on the hand of her younger brother, broke out over the whole person of the proud prophetess. How grand was her position, and how heavy the blow, is implied in the cry of anguish which goes up from both the brothers—"Alas, my lord! . . . Let her not be as one dead, of whom the flesh is half consumed when he cometh out of his mother's womb. . . . Heal her now, O God! I beseech thee." And it is not less evident in the silent grief of the nation: "The people journeyed not till Miriam was brought in again" (Num. xii, 14). The sign, for some time, was reflected, though in a strange and distorted form, in the Egyptian leprosy of the drying up and reflowing of the marvellous well of the Wandering. See Besz. This stroke, and its removal, which took place at Hazeroth, form the last public event of Miriam's life. She died towards the close of the wanderings at Kadesh, and was buried there (Num. xxx, 1). B.C.1695. Her tomb was shown near Petra in the days of Jerome (Onomast. s. v. Cades Barnea).

According to the Jewish tradition (Josephus, Ant. iv, 4, 6), her death took place on the new moon of the month Xanthicus (i. e. about the end of February), which seems to imply that the anniversary was still observed in the time of Josephus. The burial, he adds, took place with great pomp on a mountain called Zin, i. e. the wildness of Zin); and the mourning—which lasted, as in the case of her brothers, for thirty days—was closed by the institution of the purification through the sacrifice of the heifer (Num. xix, 1–10), which in the Pentateuch immediately precedes the story of her death.

According to Josephus (Ant. iii, 3, 4; 6, 1), she was married to the famous Hur, and, through him, was grandmother of the architect Bezaleel. In the Koran (ch. iii) she is confounded with the Virgin Mary; and hence the Holy Family is called the Family of Amram, also the Beloved of Jesus or Serkool, s. v. Zakaria). In other Arabic traditions her name is given as Kotkum (see Weil's Bibl. Legenda, p. 101).

The first named of the sons of Mered (the son of Ezra, of the family of Caleb) by Bithiah, the daughter of Pharaoh (1 Chron. iv, 17). B.C. prob. cir. 1538. See Mered.

Mirkhond, Mohammed Enn· Emir Khoward Shah, a noted Eastern historian, a native of Persia, was born in 1434, and died in 1498. He is the author of a work containing legends concerning Persian kings and sages, extracts of which were first published by Davty (États, empires, royautés du monde). He also wrote a history of the Sassanians, published in 1663 by Willem (Nationen, sozialen, vormen des staates, at Göttingen, in 1809, and in French by Defremeny (Paris, 1845).

Mirmah (Heb. Mirmah, מִרְמָה, deceit, as often; Sept. Māpa), the last named of the sons of Shaharaim by Hodesh, and a chieftain of the tribe of Benjamin (1 Chron. viii, 10). B.C. post 1612.

Miron, Charles, a French prelate, was born in 1659. At eighteen, holding already the abbotship of Corneri and Airvaux, he was appointed by the king bishop of Angers. Of the different parties which then divided
France, Miron espoused the cause of Henry IV. He was also one of the preachers who pronounced a funeral eulogy upon the king when assassinated by the hand of Ravaillac. Miron, upon removing from Angers to Paris, continued to hold his relation to the Church at Angers, and thereby provoked a grave dispute between the bishop and his chapter. The chapter, insisting upon the pope's appointment, declared themselves free from Miron's episcopal jurisdiction, to which the bishop took decided exception, and the disputes called forth by this affair finally led Miron to vacate his bishopric. He transmitted his insignia to Guillaume Fouquet de la Varenne, and became, by exchange, abbot of Saint-Lomer de Blois. This transaction took place in 1615. But in 1621, Guillaume Fouquet having died, Miron reclaimed his bishopric, obtained it a second time, and entered Angers April 23, 1622. Very soon the discussions between the bishop and the chapter were resumed, and only terminated by the papal appointment of Miron to the archbishopric of Lyons, Dec. 2, 1626. This nomination was denounced by Salon as detrimental to the liberties of the Gallican Church. He died, however, before much could come of the opposition, Aug. 6, 1628.

See Gallia Christiana, iv, col. 192; xiv, col. 584, 585; Hoefer, Notice, Étude, xxxvi, 668.

MIRROR. Although this word does not occur in the Auth. Vera, except in the Apocrypha (Wisd. vii, 26), it is the proper representative of at least two Heb. and one Gr. term, for which our translators employ the less correct rendering "LOOKING-GLASS" (יוֹנֵר, marah), a vision, as often, Exod. xxxviii, 8; Sept. κατάρτιον, Vulg. specularum; אִילֶית, a spectacle, Job xxxvii, 18, Sept. ἑσπερίαν, Vulg. as; ἵππον, galgon, a tablet of wood, stone, or metal on which to inscribe anything, so called as being made bare, Isa. viii, 1; in Isa. iii, 23 the plural refers, according to the Chalde, Abarbabel, Jarchi, and others, with the Vulg. specular, and the Auth. Vera. "glasses," to mirrors or polished plates of metal, see Gesenius, Comment. ad loc., but Kinchi and others under-stand, with the Sept., διαφανὴς ἀποκάλυξα, transparent gar-ments, such as show the body, comp. Schröder, De Fest. med. Heb. p. 311, 312). In the first of the foregoing passages the mirrors in the possession of the women of the Israelites, when they quitted Egypt, are described as being of brass; for "the laver of brass, and the foot of it," were made from them. In the second, the firmament is compared to "a molten mirror." In fact, the mirrors used in ancient times were almost universally of metal (the passage in the Mishna, ḥekhot, xxx, 2, does not allude to glass mirrors); and as those of the Hebrew women in the wilderness were brought out of Egypt, they were doubtless of the same kind as those which have been found in the tombs of that country, and many of which now exist in our museums and collections of Egyptian antiquities. These are of mixed metals, chiefly copper, most carefully wrought and highly polished; and so admirably did the skill of the Egyptians succeed in the composition of metals that this substitute for our modern looking-glass was susceptible of great utility, and has been observed at the present day in some of those discovered at Thebes, though buried in the earth for so many centuries. The mirror itself was nearly round, and was inserted in a handle of wood, stone, or metal, the form of which varied according to the taste of the owner (see Wilkinson's Ancient Egyptians, iii, 384-390). In the New-Testament are mentioned (ἱατρός, James i, 29; comp. I Cor. xiii, 12; see Harenb erg, in Hase et. Iena. nov. theolog., ii, 829 sq.). They are alluded to in the Rabbinical writings (נויָנִיּי תָּחָשׁ, l.e. specularia, Targ. Jon. in Exod. xix, 17; Deut. xxxiii, 19; Mishna, Chelih, xvii, 15; Edyoth, ii, 7; see Lightfoot, Hor. Heb. p. 379). See generally, Th. Carpoz, De speculari Hebraeeorum. (Rostock, 1702); Jahn, i, 155 sq.; Hartmann, Hebr. ii, 240 sq.; iii, 245 sq. It appears from these positive statements that mirrors anciently were of metal, namely, of copper (יוֹנֵר, Xenoph. Symp. vii, 4) or tin, also of an alloy of both these metals, answering to brass, and sometimes even of silver (Phiny, xxxvi, 45; xxxv, 48; comp. Rosell. Monum. ii, i, 528 sq.; Becker, Gallus, iii, iii). Occasionally they were of great size (Senec. Nat. Quest. i, 16, 17, p. 185, Bip.; Quintil. Inst. ii, 3, 68). Finally, according to some authors (see above), these are alluded to in Plautus (Monsell, i, 4, ver. 101) and Philostratus (Icon. i, 6); and one of steel is said to have been found. They were even made of gold (Eur. Hec. 925; Senec. Nat. Quest. i, 17). According to Beckmann (Hist. of Ins. ii, 64, Bohon's trans.), a mirror which was discovered near Naples was tested, and found to be made of a mixture of copper and regulars of antimony, with a little lead. Beckmann's editor (Mr. Francis) gives in a note the result of an analysis of an Etruscan mirror, which he examined and found to consist of 67.12 copper, 24.93 tin, and 8.13 lead, or nearly eight parts of copper to three of tin and one of lead; but neither in this, nor in another similar analysis made by M. Klaproth (Novitates. Hymn. in Loc. Pell. 21). Convex mirrors of polished steel are mentioned as common in the East in a manuscript note of Chardin's upon Ecclus. xii, 11, quoted by Harmer (Observ. iv, c. 11, obs. 50). The metal of which the mirrors were composed being liable to rust and tarnish, resulted to be constantly kept in vessels to be constantly kept in water (Wis. vii, 26; Ecclus. xii, 11). This was done by means of pounded pumice-stone, rubbed on with a sponge, which was generally suspended from the mirror. The Persians used emery-powder for the same purpose, according to Chardin (quoted by Hartmann, Die Hebr. am Putsatiscbe, ii, 24). In this imperfect mirror appears to be alluded to in 1 Cor. xiii, 12. On the other hand, a polished mirror is among the Arabs the emblem of a pure reputation. "More spotless than the mirror of a foreign woman" is with
MIRTH

them a proverbial expression, which Meldani explains of a woman who has married out of her country, and polishes her mirror incessantly, that no part of her face may escape her observation (De Sacy, Chrêst. Arub. iii. 399). In the Egyptian temples, says Cyril of Alexandria, it was the custom for the women to worship in linen garments, holding a mirror in their left hands and a sistrum in their right; and the Israelites, having fallen into the idolatries of the country, had brought with them the mirrors which they used in their worship. This is a practice to which one of the above Scripture passages (Exod. xxxix, 8) appears to allude (see Gesenius, Comment. on Isr. i. 215; on the contrary, B. F. Qütendorf, Die specula labri anci, Gryph. 1778).

Mirth, the expression of joy, gayety, merriment, as thus distinguished from its synonym, cheerfulness: Mirth is short, cheerful as an expression of the mind. Mirth is short and transient; cheerfulness fixed and permanent. Those are often raised into the greatest transports of mirth who are subject to the greatest depressions of melancholy; on the contrary, cheerfulness, though it does not give such an exquisite gladness, prevents us from falling into any depths of sorrow. Mirth is as it were a kind of light that breaks through a gloom of clouds, and glitters for a moment; cheerfulness keeps up a kind of daylight in the mind, and fills it with a steady and perpetual serenity. Mirth is sinful, 1. When men rejoice in that which is evil. 2. When unreasonable. 3. When tending to commotion. 4. When a hindrance to duty. 5. When it is blasphemous and profane.

Misăáíl (Μισαίλ), the Greek form (a, I Eadrix, ix., 44; comp. v. 16, Song of the Three Child, 66; comp. Dan. i, 6 sq.) of the Heb. name Michael (q. v.).

Misanthropist (from the Greek μισειν, to hate, and ἄγωρος, man), a hater of mankind; one that abandons society from a principle of discontent. The consideration of the depravity of human nature is certainly enough to raise emotions of sorrow in the breast of every man of the least sensibility; yet it is our duty to bear with the follies of mankind; to exercise a degree of candor consistent with truth; to lessen, if possible, by our exertions, the sum of moral and natural evil; and by connecting ourselves with society, to add at least something to the general interests of mankind. The misanthrope, therefore, is an ungenerous and dishonorable character. Disguised with life, he seeks a retreat from it; like a coward, he flees from the scene of action, while he increases his own misery by his natural discontent, and leaves others to do what they can for themselves.

The following is his character more at large: "He is a man, says Saurin (Sermone), "who avoids society only to free himself from the trouble of being useful to it. He is a man who considers his neighbors only on the side of their defects, not knowing the art of combining their virtues with their vices, and of rendering the imperfections of other people tolerable by reflecting on his own. He is a man more employed in finding out and inflicting punishments on the guilty than in devising means to reform them. He is a man who talks of nothing but banishing and executing; and, who, because he does not wish his countrymen to be too proficiently employed by his fellow-citizens, or, rather, because they know his foibles, and do not choose to be subject to his caprice, talks of quitting cities, towns, and societies, and of living in deserts or deserts.

Misciroll, Tommaso, a painter of the Bolognese school, was born at Faenza in 1586. He gained consid-erable reputation, and executed several works for the church of the Martyrdom of St. Cecilia, an altar-piece in the church of St. Cecilia at Faenza, which is said to have consisted of great pieces, and it is said that in one of his works Misciroll equaled the best Vi-ennese painters, but accuses him of plagiarism in many instances, notably in the picture above alluded to, in which he introduced an executioner stirring up the flames, a feature copied almost entirely from Lionello's grand picture of the martyrdom of St. Domenico in the church of San Domenico in Bologna. See Lanzi's Hist. of Painting, trans. by Rococo (Lond. 1847, 3 vol. v. iii; 1841; Spooner, Biog. Hist. of the Fine Arts (Phila. 1865, 2 vol. v. ii, 569).

Miser (Lat. unhappy), a term formerly used in refer- ence to a person in wretchedness or calumny; but it now denotes a parochioous person, or one who is cov- enous to extremity; who denies himself even the com- forts of life to accumulate wealth. "Avarice," says Saurin, "may be considered in two different points of light. It may be considered in those men, or rather those public bloodsuckers, or, as the officers of the Roman emperor Vespasian were called, those sponges of society, who, infatuated with this passion, seek after riches as the supreme good, determine to acquire it by any meth- ods, and do not stop to consider how they lead or illegal, as the only road for them to travel. Avarice, however, must be considered in a second point of light. It not only consists in committing bold crimes, but in entertaining mean ideas and practicing low methods, In- compatible with such magnanimity as our condition ought to inspire. It consists not only in omitting to serve God, but in trying to associate the service of God with that of mammon. How many forms doth avarice take to disguise itself from the man who is guilty of it, and who will be drenched in the guilt of it till the day he dies! Sometimes it is prudence, which requires him to provide not only for his present wants, but for such as he may have in future. Sometimes it is charity, which requires him not to give society examples of prodigality and parade. Sometimes it is parental love, obliging him to save something for his children. Sometimes it is cir- cumpection, which requires him not to supply people who make ill use of what he gives them get. Sometimes it is necessity, which obliges him to repel artifice by artifice. Sometimes it is conscience, which convinces him, good man, that he hath already exceeded in compassion and alms-giving, and done too much. Sometimes it is equity, for justice requires that every one should enjoy the fruit of his own labor, and those which are ascended. Such, alas! are the awful pretexts and subterfuges of the miser." (Sermone, vol. v, ser. 12.) See AVARICE; COVETOUS- NES.

Miserere (Lat. have compassion), the name of a lit- urgical prayer, set to music, and used in Roman Catholic worship. It is a sort of paraphrase on the 51st or 57th Psalm, and is used on penitential occasions, and particularly in Passion-week. It is therefore not only set to a regular Gregorian melody (see Keller, Die archt Psalmen- töw, etc., Aix-la-Chap. 1856, p. 18), but has also become a theme for compositions to the most eminent masters, such as Palestrina, Orlando di Lasso, Allegri, Scarlatti, Leonardo Leo, Thomas Bai, Zingarelli, Percogolo, Jomelli, Fioravanti, Fodius, Vogler, Stadler, etc. The most renowned among these compositions is that by Gregorio Allegri (a descendant of Correggio, born at Rome in 1590, t 1640), in which two choirs, one of four, the other of five parts, sing alternately until the finale, where all join in pianissimo, the measure also becoming gradually slower. This piece, from the time it was composed, has always been sung on Wednesday and Friday in Passion-week in the Sistine Chapel at Rome. One writer says: "Never by mortal ear was heard a strain of such powerful, such heart-moving pathos. The accentual tones of a hundred human voices, and one which seemed more than human, ascended together to heaven for mercy to
MISERERES

maskind—for pardon to a guilty and sinning world. It had nothing in it of this earth—nothing that breathed the ordinary feelings of our nature. Its effects upon the minds of those who heard it were almost too powerful to be borne, and never can be forgotten. One gentleman fainted and was carried out; and many of the ladies near me were in agitation even more distressing, which they vainly struggled to suppress. It was the music of Allegri; but the composition, however fine, is nothing without the voices which perform it here.” Another writer says: “At the conclusion of this portion of the service, and when the darkness is complete by the concealment of the last light, commences the Misereere. This is the 51st Psalm. And as it is breathed by the choir—the most perfect and practiced choir in the world—as it is heard in all the stillness and solemnity of the scene, wrapped in darkness, and leaving nothing to distract the eye where all looks dim and shadowy, it has a strange and wonderful effect. It is designed to express, as far as music can express, the deep and mortal agonies of the dying Saviour; and certainly there never yet was heard, except among the shepherds of Bethlehem on the night of the nativity, such sounds, so unearthly, and unlike the music of the world. It is plaintive, intensely melancholy, and has a powerful effect under the peculiar circumstances of the scene.” It was formerly the exclusive property of the Sixtine Chapel, the partition being jealously kept there; Mozart succeeded, however, in writing it down after hearing it twice. It has since been repeatedly published. While the Misereere is sung, the pope kneels at the altar, the cardinals at their desks, and as it proceeds the lights at the altar are extinguished one by one, which is explained by Gavanti, Thes. ii. 99: “Ad unum quoque psalmum (there are other psalms sung before the Misereere) exanguit urinary, una candela, una post aliam, quia apostoli paulatim defecerunt a Christo.” In fact, the whole use of this psalm in Passion-week is intended ad designandum apostolorum timorem. The word misereere has in modern days come to be applied to any sacred composition of a penitential character. See Herzog, Real-Encyclopädie, ix, 547; Eadie, Eccles. Cyclop. s. v.; Siegel, Christliche Alterthümer (see Index in vol. iv).

Misereare. Elbowed stalls, often found in cathedral, collegiate, and monastic churches, with seats that may be turned up, so as to give an opportunity of kneeling in those parts of the service in which supplication ("misereere") occurs. They were allowed in the Roman Catholic Church as a relief to the infirm during the long services that were required to be performed by the ecclesiastics in a standing posture. They are always more or less ornamented with carvings of leaves, small figures, animals, etc., which are generally very boldly cut. Examples must be found in almost all English churches which retain any of the ancient stalls; the oldest is in Henry the Seventh's Chapel at Westminster, where there is one in the style of the 15th century.

Miserere

Miserere in Henry the Seventh's Chapel, Westminster.

Misericord is a term used to denote various offices and articles. (1) Subsidia—Spanish subsilia—the folding seat of a stall. See Misereres. (2) A compassion in mitring the patient. (3) According to Lyndwood, a custom in certain monasteries of relieving

MISHAM

a number of monks, in alternate weeks, from attendance in choir and clerical duties. (4) A hall for eating flesh. (5) A very unusual custom. Some convents, at Canterbury and Westminster, had country hospitals for convalescents. (5) The word also implied stated indulgences and allowances, according to circumstances, of food, drink, wine or beer, or clothing or bedding, beyond the rule. And, finally, some writers, misled by the glossaire of Matthew Paris, have called a misericord a guzzle of wine, an imperfect definition taken from the refreshment of that liquor granted during the above period. See Walcott, Sacred Archæology, s. v.; Fosbrooke, Brittish Monachism, ch. xlviii.

Misericordia Domini is the name of the second Sunday from Easter, so called from the opening lines of the mass read on that day in the Romish churches. In the Greek Church the day is frequently called St. Thomas's Sunday.

Mis'gab (Heb. Misgab, מִסְגַּב, height, as often; Sept. 'Aμωδ ὁ αἰγούσται τ. μακάριος, and τὸ δίψωμα Μισγὰβ, Vulg. fortis), a town in Moab, situated on the descending track of the invading Babylonians (Jer. xliii, 1), probably so called from being located on an eminence. De Sauley (Narrative, i, 391) suggests a connection with the present Wady el-Mujeb, the ancient Arnon; but this is materially less than 1 mile near the associated localities of Kirjathaim and Heshbon; perhaps it is only an appellative (as it usually has the article) for the older locality Ba'moth (q. v.). Others think it may be the Mizpeh of Moab (1 Sam. xxiii, 3), or a general name for the highlands of Moab, as in Isa. xxxv, 12 (without the art. A. V. "high fort"). See Moab.

Mish'ael (Heb. Mišă̂a, מִשָּׁא, who is like God? Sept. Μισαήλ), the name of three men.

1. The eldest of the three sons of Uzziel (the son of Kohath and grandson of Levi), and consequently the cousin of Aaron (Exod. vi, 22). He, with his brother Elizaphan, at the command of Moses, carried out the bodies of Nadab and Abihu to burial (Lev. x, 4). B.C. 1637. They may thus have been two of those whose defilement by a dead body prevented their keeping the passover at Sinai on the regular day (Numb. ix, 6; see Blunt, Coincidences, ad loc.).

2. The second named of the three Hebrew youths (Dan. i, 6) trained along with Daniel at the Babylonian court (Dan. i, 11), and promoted to the rank of magi (Dan. vii, 28). Under Daniel he solved the dream of Nebuchadnezzar (Dan. ii, 17), they were advanced to civil dignities (Dan. iii, 12); but were afterwards cast into the blazing furnace for refusing to worship the royal idol; and, being miraculously delivered from it, they were still more highly honored by the king (Dan. iii, 19-30). His Chaldean name was MSNAH (Dan. i, 7). B.C. cir. 580.

3. One of those (apparently chief Israelites) who supported Ezra on the left hand while reading the law to the people after the captivity (Neh. viii, 4).

Mish'ahal (Heb. Mish'āḥal, מִשָּׁהalian, prob. entry; Sept. Μισαήλ), a city of the tribe of Asher (Josh. xix, 26, where it is Anglicized "Mishahal"), assigned to the Levites of the family of Gereshom (Josh. xxi, 30), elsewhere called Mishathal (1 Chron. vi, 74). It is doubtful whether the Masaian referred to by Eusebius (Onomast. s. v. Masaia) as situated on the Mediterranean, near Carmel, a position with which the text (Josh. xix, 26) agrees (see Keil, Comment, ad loc.). It is probably the modern ruined village Masaian, near the shore about three miles north of Athlit (Van de Velde, Memoir, p. 385).

Mish'ah (Heb. Mish'ā, מִשָּׂא, according to Genesis, their cleansing or their beholding; according to Fürst, name; Sept. Mereth, Vulg. Masaian), one of the sons of Elpaal, of the tribe of Benjamin, mentioned as
of Israel's history there were always some pure and holy men, who kept up the study of this tradition, and handed it over unbroken to their successors. Moreover, it was inferred from Deut. xvii, 9 that the supreme judges for the time being might make authoritative decisions on facts as they arose; and that these decisions must serve as precedents for the future, unless reversed by a court of three members, the majority of whose members had a greater number. The words "priests and Levites" in that verse were construed by the Pharisees merely to indicate the place at which the supreme judges must hold their sessions. The rules of

construction of the Pentateuch are stated as thirteen, among which the foremost is לְיָרָשָׁה, Kol ve-komer, a minor κατὰ μικρότατα, và jisr, Gesenius shakhar, "like decision." The latter, however, rests generally on the arbitrary comparison of the same word in two wholly disconnected passages, and is only allowed on that construction itself sanction it. Besides these rules of construction, certain ceremonies in their full form were also believed to have thus been handed down, while the letter of the law only hinted at the manner of performing them. Thus Exod. xii, 9; Deut. vi, 10: xi, 18, command the treading of those respective passages to the hand and the feet of the eyes of the beholder; but tradition supposed the manner of doing it, that is, the construction of the phylacteries. The second section of the above-quoted chapter proceeds: "They (the men of the great synod) said three things: ... make a fence to the law." That is, put around the law a wall of restrictions and injunctions, so that greater wisdom and greater number, a "greater wisdom and greater number." The words of the people were thus so phrased that they would have to be fulfilled so that he could not feel tempted to break the law itself. This was, in fact, done to a great extent by the teachers whose sayings are recorded in the Mishna. Many of their so-called לְיָרָשָׁה (decisions)—a name given to the extra-Mosaic laws—refer to a stricter observance of the Sabbath, and these are comprehended under the name of לְיָרָשָׁה, which decisions Selden renders Sabbathusim: forbidding, for instance, the handling of the Sabbath by anything that has been made on that day; the causing a Gentile (unless in case of necessity) to work on the Sabbath for the Israelite; to play musical instruments on that day, etc. Others refer to Levitical cleanness; among these are numberless rules about the washing of hands, of cups, etc., at the ordinary meals, which the Sadducees (q.v.), but also from the indifferent mass, who are known in the Mishna as לְיָרָשָׁה בָּע (people of the land), and are often spoken of with a great deal of bitterness. The writers of the Mishna never seek to make their readers believe that a rabbinical ordinance, which is intended only as a part of the fence around the law, is of divine origin; but where doubt can arise about the meaning, they expressly show what is intended for a construction of the law, and what is their own addition, often by the words נְעָרִים (free; that is, not liable to stripes if a hand be used, etc., or a sufferer for fence through ignorance or forfenseness); yet נְעָרִים (forbidden). In the very first section of the first chapter of the Mishna—where the question arises how late at night the passages Deut. vi, 10—xi, 13—21, may be read in fulfillment of the command to speak of them "when thou liest down," we find: "The learned (לְיָרָשָׁה—as opposed to any one rabbi by name) say until midnight; and rabbi Gamaliel said until the morning dawn; in fact, when his sons came home from a feast, and told him We have not read the Shemah (Hear, O Israel), he told them. As the morning has not dawned, you should read it; not this only, but wherever the wise have said
untill midnight, the command reaches to dawn, etc.; and why have they said till midnight? in order to keep man from transgression."

The style of the Mishna is, with very few exceptions, dry and crowded, with not a word to spare; and the book is written for men who already know the great principles of which they only seek the details. Historical, geographical, and etymological notices are rare, and the few dogmatic passages—for instance, the chapter about a future life—run in the same style as if they were given for the guidance of an ordinary court of justice; the chapter, Who has no share in the world to come? follows naturally upon the chapters, Who are to be stoned? Who are to be stoned?

The language of the Mishna is in the main not Aramaic, but Hebrew; stripped, however, of all that is idiomatic about Hebrew, such as the use of the conversive vav, and filled with many Aramaic forms, such as the masculine plurals in the truly Hebrew מ. That the people of Palestine generally spoke pure Aramaic as early as the days of Christ, and even long before, is well enough known from other sources; but the Mishna attests it by quoting terse sayings in that language, e. g. ע"ש ר"ג כמשנה (ees bovghi) is always put for "sickly;" הנפש (Areni) for "robbers." Latin words also occur, but not so frequently, and generally in a somewhat corrupt form, with the Greek words rendered as exactly as the Hebrew alphabet will allow. (Comm. Bondy, ע"ש empez, ב. ד. ע' ספרא דבriere, etc.)

We proceed to give an analysis of the Mishna, keeping strictly to it, and leaving out of view anything that may be taught by the Tannaim, but which is regarded as כיית ר' י_Product, i. e. "outside," although known to be sayings of these teachers, because they are not collected in the Mishna, and simply occur either in quotations in the Talmud or elsewhere.

The Mishna is divided into six parts (סוד-רinerary, arrangement), which contain 621 treatises (ג תריים), Massakoth, and 514 chapters (פרוקין). The latter, again, are divided into numbered sections, each of which is called a Mishna. The great parts and the treatises are named after their contents, the chapters after the opening words. (The figures set after each treatise show its number of chapters.)

i. The first part—ד' ר' יصلاة, Zera'im, seeds—contains eleven treatises. The first of these—_tensors, Berakah, benedictions (9)—treats of the reading of the Shemah (see above), daily prayers, and grace before and after meals, the purgations to be made as a preparation for prayer, and like subjects. The ten other treatises refer to the laws of the field and of its produce: Zerek, Peah, corner (8), treats of the field corners, gleanings, etc., to be left to the poor; דמוא, Doubtful (7), of corn or fruits coming from the indifferent, who might have failed to tithe it; קילוקין, mixtures (9), of the prohibited mingling of fruit and grain crops on the same field or vineyard, and incidentally of the forbidden mixture of wool and flax in garments (Lev. xix, 19); ל' ר' י_Ilah, seventh (10), of the Sabbath year; ל' ר' יתרש, Terumoth, tributes (11), of the tributes from the crop, which were due to the Aaronitic priests, including the tithe of due them from the Levites; ל' ר' יApril, Maaseroth, tithe (5), of the tithes due to the Levites; ל' ר' יApril, Maaser Sheni, second tithe (6), of the tithe which was eaten or otherwise spent in the joy of the yearly feasts, but which in the third year was given to the poor; ל' ר' יApril, Orenah, dough (4), refers to the tribute from the baking-crouches, which was given to the priests; ל' ר' יApril, Orlah, literally foreskin (3), of the forbidden fruit of the trees in Palestine during the first three years of their growth (Lev. xix, 23); ל' ר' יApril, Bikureim, first-fruits (4), treats in its first three chapters of the first-fruits which were to be brought to the tabernacle and given to the priests (Deut. xxvi, 5), while the fourth chapter is only added to it to bring it to the close of one of the six great parts, and is called אספומומום, omdurais, spelled in Hebrew קריך וס, the man-woman, and contains a few laws to persons of doubtful sex.

ii. The next great division, ל' ר' יApril, Moed, season, contains twelve treatises. The first, ל' ר' יApril, Sabbath (24), treats of the duties of that day; remarkable for the enumeration of thirty-nine different kinds of work, by each of which, separately, the guilt of Sabbath-breaking may be incurred. Of each kind a type is given, to which many other actions may be compared as falling within the same reason. A very great proportion of the treatise is taken up with the laws of mere "Sabbath-things" (see above). The next treatise, ל' ר' יApril, Erusim, miscellaneous chapters deals with those ceremonies by which the Sabbath boundary was extended, so that the law of the Sabbath made a whole town into one fictitious yard, so that carrying within it should not be unlawful; or how the Sabbath boundary of a town, within which one might walk on the Sabbath-day, can be extended. Then comes ל' ר' יApril, Pesahim (10), which relates to the Passover, and all things connected with its celebration: ל' ר' יApril, Shekalim, shekel-pieces (8), about various tributes, going to the Temple, and various rites in the different seasons of the year; ל' ר' יApril, Yoma, the day (8), on the service of the day of Atonement; ל' ר' יApril, Sukkah, but (5), about the hut and festival banch of the Feast of Tabernacles, and the rules about reading the Psalms of Praise (cxvi-cxviii) on that and other feasts; ל' ר' יApril, Rit- sak, egg (5), so called from its first word. An egg laid on a feast-day, the school of Shammay may be eaten; the school of Hillel they may not be eaten (i. e. on the same day)—this being one of the very few cases in which the latter school is stricter than the other. It is not pretended that "guilt" under the law is lessened by eating fresh-laid eggs on holidays. The treatise deals mostly with what may or may not be done on the great holidays in the preparation of food, actions which on the Sabbath would be clearly unlawful. Next, ל' ר' יApril, Rohk Hush-shanah, New-year (4), gives the laws of the feast which goes by that name among the later Jews, but which in the Bible (Lev. xxiii, 24) is called the first of the seventh month; it also teaches how to fix the days of new moon. The treatise ל' ר' יApril, Tuwah, fast (4), refers principally to the prayers for rain, and to the fasts, private and public, that were kept in years of drought; ל' ר' יApril, Megillah, the scroll (4), refers to the feast of Purim, the reading of (the scroll of) the Book of Esther, then of the reading of the Pentateuch and Prophet lessons, and denounces as heretical certain variations in the liturgy and certain spiritual modes of construing passages of the law; for instance, "He who takes the law of incest figuratively directed against the, that is, he who extends it to the disgraceing his father or mother. This passage is evidently directed against the early Christians, and their modes of teaching. The treatise ל' ר' יApril, Moed Katan, small holiday (8), treats mainly of the mourning rites, these being forbidden to all feasts, even on the half-holidays between the first and last of Passover and of Pentecost; while the last treatise, ל' ר' יApril, Chagigah, feasting (3), speaks of the voluntary sacrifice—other than the Pass
chall lamb—offered by the individual Jews on the great feasts.

iii. The third part of the Mishna is called מבנה נשים, women, and embraces seven treatises. The first of these, מבנה נשים, Yehebruth, Levine (16), discusses the law found in Deut. xxxv, 5-9. Its first section may give a good idea of the manner of the Mishnah: “Fifteen women free their rival wives and their rival’s rivals from the ‘shoe-pulling’ (Deut. xxxv, 9) and brother’s marriage to the world’s end: his daughter (the dead brother’s wife being the daughter, or the living brother of the dead brother’s wife) or daughter’s daughter; his wife’s daughter, wife’s son’s daughter, or wife’s daughter’s daughter; his mother-in-law, mother-in-law’s mother, father-in-law’s mother; his sister on the mother’s side, mother’s sister or wife’s sister, and the wife of his brother by the mother’s side, and the wife of his brother, who was not alive at the same time with him, and his daughter-in-law: all these free their rival wives,” etc. (that they are free themselves is taken for granted).

The treatise מבנה נשים, Kethuboth (18), discusses the prescribed marriage contracts and marital rights in general, and shows a much higher regard for the rights of wives and daughters than most, if not all, ancient codes of law: ישן נשים, Nedarim (11), treats of vows, and contains some of that harsh casuistry which meets with reprobate in the New Testament: נצר, the crowned (9), of the special vow of the Nazarite (Num. vi, 2); יסוד, the erring woman (9), of the ordeal for wives suspected of faithlessness (Num. ch. v). The last chapter of this treatise relates the gradual decay and downfall of national and religious life in Israel from the time of the Maccabees; it foretells the signs of the approaching Messiah, and winds up with setting forth the qualities that lead upward to eternal life. The next treatise, גיטין, divorce-bills (9), is set apart to the law of divorce; and Kiddushin, betrothals (4), the last of this great division, to the laws of the marriage ceremony. But a great part of it is taken up with counsels as to the trade or profession in which an Israelite should bring up his son; and many occupations are named which unmarried men should not follow, on account of the great facilities they offer for unchaste practices.

iv. The fourth grand division is styled לו, Nezkin, injuries, and most of the ten treatises contained in it deal with the principles and the practice of civil and criminal law. The first three treatises, each of ten chapters, are called by Aramaic names—רעה נשים, רעה נשים, רעה נשים. Baba Kamma, the first gate, i.e. court; רעה נשים, רעה נשים, Baba Batra, last gate—and discuss the laws between man and man in matters of property, that are deducible from the Pentateuch, or that had been suggested by experience. In the “first gate” the law of baimnt is taught, without being involved in the obscurities of the degrees of negligence which the Roman lawyers have thrown around it; the only principle recognised is, What was the intent of the bailor when he made the loan, or pledge, or deposit of his goods? against what dangers did he intend to secure them? what risks did he intend to take? The text in Exod. xxii, 6-14 shows that even a depositary without hire is liable for theft, though not for forcible robbery; for that the goods should not be stolen was the very object of the deposit. The same general doctrine prevailed in the English law, till lord Holt, chief justice during the reign of queen Anne, disturbed it by views imported from Roman jurisprudence. The measure of damages for assault and bodily injuries is also given, and the “eye for eye” of the sacred text is construed as meaning only damages in money for the last injury; while an additional allowance must be made for loss of time, cost of cure (Exod. xxii, 19), pain and disgrace—this last element of damages being derived from the “cutting off the hand” in Deut. xxxv, 21, which is taken figuratively only. The fourth treatise is named מבנה נשים, Sanhedrin (i.e. אריסות), courts of justice (11). The first two chapters set forth the constitution of the Jewish commonwealth, rather as the Pharisian party would have wished to see it, than as it ever was, with all the great powers, political and judicial, in the hands of the supreme court of seventy-one learned judges; and both the high priest and king are figure-heads of the law. It is said, “The king does not judge, and none judges him; does not testify, and none testifies concerning him.” The practice in criminal cases is minutely set forth; while cases of baillaments or trepasses, arising under the peculiar Mosaic law, were to be tried by three judges. The supreme court composed criminal cases; the judge; criminal charges must be tried before courts composed of twenty-three members. The forms were analogous to those of England and America—that is, based on the idea of accusation and defence, not of inquiry and confession. No person once acquitted could be tried for the same crimes. The accused were given a promise of safety of the person, to establish the innocence of the convicted, either on points of law or fact. The modes of capital execution are also given—stoning and burning in such a way as to cause instant death. Among the chapters which begin, “The following are stoned,” “The following are hung,” we find also one which begins thus, “The following have no share in the world to come: he who says...” The natural method of the book is divided into four parts, not from heaven, and the Epicurean (materialist).

The next treatise, יבש מרק, Makkot, stripes (8), treats of the punishment of false witnesses, and of crimes punishable by stripes; then comes גאנה, Shabbath, oaths (8), about the decisive oath in civil causes; there was no other oath, as witnesses always testified without oath under sanction of the command not to bear false witness. The admission and forms of testimony are then discussed in יבש מרק, Eduth, testimonies (8). Then comes יבש מרק, Abodah, fathers (5), contains the collected wisdom of the fathers, which name hence, but nowhere else, is bestowed upon the sages of the Mishna. The whole of it, with a good English translation, can be found in the common (orthodox) Jewish prayer-book [see LITURGY], where a sixth chapter of somewhat later origin is added. The treatises are as above stated, by bringing the tradition down from Moses to the Great Synod; it then carries it from (1) Simon the Just, one of its last survivors, to (2) Antigonus of Socho, who taught to despire reward, and is said to have given rise to the Sadducean heresy; (3) Judge of Zeredath and Joseph of Jerusalem; (4) Joshua, son of Posthum, whom later usurpers, by an anachronism, describe as the teacher of Jesus, and Nittai the Arbelite; (5) Jehudah, son of Tabbai, and Simeon ben-Sheerah, the reformer of the criminal and civil law, and defender of religion and liberty against the tyranny of king Jannaeus; (6) Shemahiah and Abtalyon, said to be of convert descent; (7) Hillel and Shammua, the founders of the Gezer; (8) John, the son of Zaccai; (9) Gamaliel, known as the teacher of Paul, and seemingly a son or grandson of Hillel; (10) Simeon, his son; (11) Gamaliel, the son of Simeon: (12) Jehudah Hakkodosh, the compiler of the Mishna. The “couples” in this chain are generally thought to consist of the president and vice-president of the Sanhedrin for the time being, called respectively נサ (prince) and נサ נサ (father of the court). The treatise contains the favorite moral and dogmatic sayings of
these and other rabbins. Many of them are merely practical rules of life; some address themselves to judges; but more of them exhort to the study of the law, and still more to good works. The future world is much referred to; and one rabbai Jacob (ch. iv, § 21) says, in the spirit of the early Christians. "This world is the abode of the coming world; prepare in the anteroom, that you may enter the banquet hall." (see p. 468.)

But the study of the law and good works (רמב"א, Mitzvoth, commandments), and not faith, is recommended as the road to future happiness. Elsewhere unbelief is denounced as forfeiting the world to come; but it seems that in the present treatise this tenet was not insisted on. A very remarkable point is the endeavor to reconcile the philosophic view of unchangeable laws of nature with the Biblical miracles.

"Ten things were created in the twilight of the eve of Sabbath (of creation week)—that is, the mouth of the earth (which swallowed Korah), the mouth of the well (in the wilderness), the mouth of Balaam's ass, the rainbow, the manna, the rod (of Moses), the diamond worm (said to have cut the stones for the Temple), the alphabet, the writing (on the tables), and the tables." the last treatise of this part is ר"מ, Horeqoth (9), concerning forms of trial.

v. The fifth grand division, ע"ד, Kodashim, with its eleven treatises, relates mostly to sacrifices, and was obsolete when the Mishna was composed. The very full treatise, however, as it gives this subject shows how strong are the hopes of a speedy restoration. We have here ד"ה, Zebachim, slaughtered offerings (Torah); Menachoth, offerings made of flour (13), whose subject is indicated by their title, though somewhat more is comprised in them. But the next treatise, ק"ב, COHAN, unsanctioned things (12), treats of the food allowed or disallowed to the Jew; especially of the mode of slaughtering beasts and fowls, and of the marks of disease, which render the eating of their flesh unlawful. We have then ד"ה, Bekeroth, (sacrifices of) first-born animals (9); ו"ב, Erakhin, estimates (9), i.e. for redeeming consecrated men or beasts in money, according to the standard laid down in Leviticus (ch. v and xxvii); ו"ב, Tarnirah, exchange (7), referring to the exchange of tithe beasts; ו"ב, Kritoth, excisions (9), which teaches what sins are threatened with the punishment, "That soul shall be cut off from its people." Thus the law is put in this connection because most of the sacrifices dealt with in this division are pawns for sin. It is followed by ד"ע, Meilah, the sacrifice for embezlement (6), see Lev. v, 15; and ד"ע, Tamid, daily sacrifice (7), whose titles express their main subjects. The latter closes with the list of the psalms that were sung by the Levites in the Temple on the seven days of the week: Sunday, Ps. xxiv; Monday, Ps. xxviii; Tuesday, Ps. lxxxi; Wednesday, Ps. xciv; Thursday, Ps. lxxi; Friday, Ps. xciii; on the Sabbath, of course, Ps. xcvii.

The next treatise, ד"ה, Kiddush, measures (6), gives an exact description of the Herodian temple, and of all its appointments. The division closes with the rather mystical treatise, מ"ש, Kinnim, flies (8), which discusses the law on birds' nests (Deut. xxii, 6).

vi. The last grand division, ה"כ, Tohoroth, cleanliness, is the largest of all, though it was also in most of its parts useless when the Mishna was written: as to right to enter the Temple, or to eat of sanctified food (respectively to be eaten as sanctified food) are the main tests of technical cleanliness. We find here twelve treatises: ב'"ד, Kelim, vessels (30); ב"ד, Okaloth, tents (18), the latter of which treats of the communication to a house and to its contents of uncleanness by the presence of a dead body in it. This remained of interest to the Aaronid priests, who must not defile themselves with a dead body other than that of their next blood relations; which law is supposed to remain in force notwithstanding the disuse of sacrifices. Then come ב"ד, Nega'im, plagues (14), about leprosy; ב"ד, Tullaim, ashes of which were used to purge the defilement by the touch of the dead (Num. xix, 2); ב"ד, Tohoroth, here in the sense of purification (10); ב"ד, Misrachoth, bathing-cisterns (10), which retain an interest beyond the Holy Land, and beyond the times of the Temple, in connection with the next treatise; ב"ד, Niddah, the separated, i.e. the menstruating woman (10). Then we have מ"ש, Makshirin, what renders fit (to receive uncleanness) (6); ב"ס, Zobim, spermatourhea (5); ב"ס, יבש, Tamid, dipping of the (same) day (4), the ablation of vessels in cisterns, which, as a shadow of Levitical cleanness, was kept up in post-templic times: ב"ס, Yadagim, hands (4), which refers to the washing of hands, an avowedly rabbinic institution. The last treatise of this collection is ב"ס, Uktatim, fruits (8), with some important laws about Levitical cleanness; among others, those that relate to fruit-stems.

This treatise, which is placed as a reflection on the blessing of peace, so that the book may close with the favorite verse (Psa. xxix, 11), "The Lord give strength to his people; the Lord bless his people with peace." The principal commentsaries on the Mishna are, of course, the Talmuds—Jerusalem and Babylonian: the former, in the whole work, while the latter omits much of the obsolete parts.

But the book is still further improved by the more appropriate phrase ה"ל, in the plural (see aside the singular form for the single section), is found published, without either Talmud, in six volumes, each of which contains one of the great divisions. It is generally accompanied by two running commentaries, both of which take most of their matter from the Talmud; the one is by R. Solomon, of Bartenora, is explanatory; the other, called the Tosephon, or Tosephoth, or the more appropriate phrase ה"ל, in the plural (see aside the singular form for the section), is found published, without either Talmud, in six volumes, each of which contains one of the great divisions. It is generally accompanied by two running commentaries, both of which take most of their matter from the Talmud; the one is by R. Solomon, of Bartenora, and is explanatory; the other, called the Tosephon, or Tosephoth, or the more appropriate phrase ה"ל, in the plural (see aside the singular form for the section), is found published, without either Talmud, in six volumes, each of which contains one of the great divisions. It is generally accompanied by two running commentaries, both of which take most of their matter from the Talmud; the one is by R. Solomon, of Bartenora, and is explanatory.
MISREPRESATATION

Mis'rep'hoth-ma'im (Heb. Mis'rep'hot-Ma'am 'im, מִשְׁרֵפֹּת מַעָּמִים, burnings of water; according to Kimchi, with allusion to warm baths; but, as Gesenius thinks, from lime-kilns or smelting-furnaces situated near the water; Sept. Μασπρηφός Μαυμ, Vulg. aquae Misrep'-phon), a place between Zidon and the valley of Mispeth, which, though not actually enumerated by the Saviour as one of the twelve cities destroyed by God, is mentioned by the prophet Jeremiah after the defeat of Jabim (Josh. xii, 8); from which passage, as well as from the only other where the place is mentioned (Josh. xiii, 6), it appears to have been a valley (containing springs or a running stream; see Unger, De hermis Sidonis, Lips., 1800), situated in the mountainous region that borders the northern base of Mount Lebanon; probably therefore in the middle portion of the valley of the Leontes—a position that may have given occasion for the name (i.e. glass-houses by the water side, see Keil, Comment. ad loc.) for furnishing facilities for the manufacture of glass (a substance said to have been first invented in this region from the sand washed down by the stream. Dr. Thomson (Land and Book, i, 469) still adheres to a location given by him and Schulz (Bibliotheca Sacra, 1855, p. 826) at a collection of springs called Ain-Meshef, with rains adjacent on the shore near Ras en-Nakura, at the foot of the mountain Akka, on the northern border of the plain of Akka (Van de Velde, Memoir, p. 333); but the locality is entirely too far south of Sidon.

Misrepresentation, the act of wilfully representing a thing otherwise than it is. We ought to be careful not to misrepresent the actions of others; and we should, with equal solicitude, avoid any misrepresentations of their words. Verbal misrepresentations may be more injurious than those of greatest injury, and are indicative of radical malevolence. Words, in themselves, and taken in their insolated state, are capable of diverse meanings; and he who reports any impressions without noticing what went before, or what followed after, may easily pervert the most harmless into the most criminal expressions; and the inferences he draws may be drawn from the most innocent discourse. What confusion and iniquitude in society, what suspensions of confidence, what interruptions of good neighborhood, what bitterness and animosity, are occasioned by verbal misrepresentations! How often has the fondest love been thus blighted, and the warmest friendship turned cold! The perverse construction, the imperfect repetition, or the mutilated statement of what others have said, is one of the common expedients which the artful and treacherous know so well how to employ to serve their own sinister ends, to promote their own interested views, and to produce the most inextinguishable jealousies, and irreconcilable animosities. As the victim of the speech, or the writer of the speech, may thus be misrepresented to serve the most mischievous purposes, it earnestly behooves us, on all occasions, when we repeat the discourse of others, to adhere as closely as possible to the words, and never wilfully to deviate from the sense. We ought to beware of stating that to have been designed as a positive declaration which was intended only as a casual supposition; we are not to represent as a literal affirmation which was meant only as an incidental illustration, or as a figurative ornament; for it is possible in this way to render an exact copy of the words, and yet a malicious perversion of the meaning; when we repeat what we ourselves have said, and particularly when the interest of the individual is in the least degree concerned in the fidelity of the representation, we are not only to repeat the expressions that were used, but the sense in which they were at the time designed to bear, and which was evident either from the context or from the manner of the speaker. See Truth.

By subtle queries, invidious remarks, and treacherous insinuations, the slanderer infuses doubt into the mind of one respecting the integrity or the conduct of another; and thus he often effects his purpose with more safety than he could by a more open and direct attack.
Thus he gradually but surely undermines the reputation of his neighbor, or acquaintances those who seem to stand in the way of his own advancement. As secret is more dangerous than open hostility, so the characters of men are often more irreparably injured by calumnial suggestions than by unresolved and unequalled calamities. Sometimes slander is covered under the garb of praise, but then the praise is never bestowed except when it is likely to provoke injuries to the persons, by the aversion which it occasions, or the jealousy which it inflames. We all have many faults, but the slanderer aggravates them by his description. Regardless of adher- ence to truth, he distorts and magnifies whatever he relates. Where the habit of falsehood, as in the case of Bressus, is joined with a disposition to procures, venial defects are magnified into criminal atrocities; and a trivial speck, almost too small to be noticed, is spoken of as an incurable ulceration. The malevo- lence of the slanderer is never willing to balance the vices to the virtues, the defects with the perfections of the human character; but he censures and condemns without moderation or indulgence. Men cannot insure the effect which they intend, the issue of their actions, or the success of their exertions. We may deserve, but we cannot command success. Good endeavors and honest efforts are in our power, but the ultimate event is in the hands of God. But when men think that when good endeavors are frustrated, and pereculoxious effects issue from good principles or meritorious attempts, which could neither have been prevented nor foreseen, then how apt are men to impute the unexpected effect to deliberate contrivance, and to slander the intention which they ought to praise! Thus, those who are ever ready to caluminate what merits praise, impute the good which follows any particular action to chance, and the evil to design. See Fellowes, Body of Theology, ii. 324-329. See Slander.

MISRI-EFFENDI, a Turkish poet and religious en- tity, is more noted as a voluble advocate under a religious garb, during the reign of Aemat III (1703- 1739). Misri was born in Egypt about 1660. Of his personal history but little is known previous to 1698. At this time he was flourishing at Bressus as mollah, an office both of an ecclesiastical and civil character, corresponding somewhat to our "justice of the peace." See MOLLAH. Dissatisfied with the manner in which the war against Austria was conducted, and believing himself inspired for leadership, he gathered about him three thousand fanatics, and with these crossed the Bosporus, landed at Adriana, and stormed the great mosque, in which the sultan, with his court, was at the time at- tended. He first attempted to crucify Misri, but was at- tempt, and he was arrested with his ringleaders and carried back to Bressus. No other punishment was inflicted, because Misri had gained popular favor by his religious enthusiasm. The occurrence of a large fire and a violent earthquake two days after Misri's re- moval disturbed the popular mind, and it was generally held that Misri had been truthful in his declarations, and he was hereafter regarded as endowed with supernatural visions. The sultan even requested Misri to re- turn; but he refused, declaring his mission finished, as he had accomplished the task of rousing the authorizes to more vigorous action towards the Austrians. Here- after Misri gave himself up to religious studies, and wrote poetry on sacred subjects. The most important of his productions celebrates the incarnation of Christ, wherein it is said, "I am always with Jesus, and united with him." These verses, because Misri's production, were the first of their kind to be written; and they strongly assert that they had official sanction at the advocates also that they be prefaced by these warning words: "Whosoever writes verses like these of Misri shall be committed to the flames; Misri alone shall be spared, for we cannot condemn one who is possessed with enthusiasm."

There is little left of the poetical composition of Misri, and that little is not printed. The patriarch Callinicus, who was in friendly relations with some eminent Protestant members of the German universities, was Misri's intimate friend. Misri died at Bressus in 1710. Missabib. See MAJOR-MISSABIB.

Missa Catechumenorum is the name that portion of the liturgies of the early Church at which catechumens were permitted to be present. It consisted of the Prefatory Prayer, the Hymn, the Little Entrance, the Trisagion, the Epistle and Gospel, and the Prayers after the Gospel. Before the Great Entrance, or procession to the Altar, all who were catechumens were obliged to leave the church, with such words of dismissal as those used in the Liturgy of St. Chrysos- tom: "As many as are catechumens depart; catechu- mens depart; as many as are catechumens depart; let none of the catechumens remain. The catechumens being still unbaptised, it was not considered fitting that they should witness the actual celebration of the holy Eucharist, though they were permitted to take part in the earlier prayers of the liturgy, and to hear the reading of holy Scripture. The Missa Fidelium, a term for the latter part of the liturgy, as distinguished from that portion as which only catechumens were allowed to be present. See Missa Catechumenorum.

Missa Presanctificatærum is the term applied to a eucharistic office, observed by the advocates of the doctrine of transubstantiation, and in which the great oblation is made and communion administered with elements consecrated at a previous celebration. The 49th canon of Laodicea (q. v.), which dates from the 4th century, states that bread ought not to be of- fered during Lent, save on the Sabbath-day and Lord's- day. In the 49th canon of the council in Trullo, or Quini- sext (A.D. 692), renewed the ancient canon, that the use of the rite of the presanctified every day in Lent except on Saturday, the Lord's-day, and the Feast of the Annunciation. The Greek Church has accepted these regulations, and closely followed them, excepting that the Liturgy of Basil is said on Maundy-Thursday and on Easter eve, instead of the presanctified mass (Neale, Hist. East. Ch. pt. i, chap. vii. p. 718). For the rite it- self we refer to Goar, Euchologium; Neale, Hist. East. Ch.; and Renaudot, Liturg. Or. Collecto (ed. 1847), i, 76. We have room here only for its essentials, and in presenting these depend chiefly upon Neale, who says that, in the "small breaking," the office of the presanctified is merely an addition to the usual vespers.

In the prothesis of the Sunday preceding, when res- ervation is to be made, the priest, having as usual cut and stabbed the first loaf, cuts also the other loaves, say- ing for each, "In remembrance," etc., as in the usual of- fice. Then he pours forth wine and water in the holy chalice. When he is about to sign the loaves, he speaks in the singular, "Make this bread," because Christ is one. He elevates all the loaves together, and breaks the first loaf of the oblations, and puts the portion in the holy cup, and pours in the warm water as usual. Then takes the holy spoon in his right hand, he dips it in the holy blood; and in the left hand he takes each loaf by turns, and holding the holy spoon that has been dipped in the holy blood, he moves it crosswise on the part where the cross has been made on the crumb, and puts it away in the arthropos. With the other hand he plucks the broken fragments of the responsibilities and responses of the three antiphons, while the tro- paria are sung, the priest goes to the holy prothesis, and taking the presanctified bread from the arthropo- rion, puts it with great reverence on the holy disk, putting also wine and water, after the accustomed man- ner, into the holy chalice, and saying, not the prayer of prothesis, but only, Through the prayers of holy Fa-
MISSA

MISSAL

MISSA SICCA, or dry service, as it is sometimes called, consists in the recital of the ordinary of the mass without the canon, there being neither consecration nor communion. The rite is described and commented upon by Durandus, Rationale, IV, i, 23; Durandus, De Ritualibus Divini, II, iv; Bona, Exempi, I, xv, 6; Martene, De Ant. Eccl., I, 165; Bings, Augel, Liturgie, I, 15; Bona, Eastern Church, I, vii, 4. "As the canons forbid priests to celebrate the liturgy more than once in the day, except in cases of urgent necessity; and as some covetous and wicked priests were desirous of celebrating more frequently, with the object of receiving oblations from the people; they availed themselves of the Missa Sica, and thus deceived the people, who intended to offer their prayers and alms at a real consecration of the sacrifice of Christ" (Palmer). The earliest mention of this abuse is its condemnation in the Capitularies of Charlemagne (Neale), that is, in A.D. 805: the leading example is the practice at St. Louis, who died in A.D. 1770. Durandus says that the book Liber Sacrutoriales, in which this rite is described, was approved by Leo X; and he finds the Missa Sica in the passage of Socrates, Hist. v, 29, where Leo Allatius finds the rite of the presanctified. The more learned Roman theologians of the 16th century condemned this abuse, and Bona states its general suppression. Neale, however, says that it was common in Belgium as late as A.D. 1780. The rite was never in use in the East, except in Egypt.

Neale has charged the Church of England with deliberately retaining the Missa Sica, but Blunt (Dict. of Hist., and Doctrinal Theol. s. v.) holds that "this charge is without foundation, as there is an essential difference between the use of the eucharistic hymns, without which the rite could hardly be called a Missa, and the use of the prayer for the Church militant only, made real, as far as can be, by the offering of alms. The English custom is not an approval of abstaining from communion, such as was only in question in the case of the Missa Sica, but a practical illustration of the words of the priest's exhortation, 'I for my part shall be ready,' and a protest against the remissness of the people." See Palmer, Origines Liturgiques, ii, 164, 165. (J. H. W.)

MISSAL (Lat. Missale plenarium, or simply Plenarium) is the name given to an office-book of the Roman Catholic Church, containing the liturgy, i.e. all of the

MISSA SICCA, or dry service, as it is sometimes called, consists in the recital of the ordinary of the mass without the canon, there being neither consecration nor communion. The rite is described and commented upon by Durandus, Rationale, IV, i, 23; Durandus, De Ritualibus Divini, II, iv; Bona, Exempi, I, xv, 6; Martene, De Ant. Eccl., I, 165; Bings, Augel, Liturgie, I, 15; Bona, Eastern Church, I, vii, 4. "As the canons forbid priests to celebrate the liturgy more than once in the day, except in cases of urgent necessity; and as some covetous and wicked priests were desirous of celebrating more frequently, with the object of receiving oblations from the people; they availed themselves of the Missa Sica, and thus deceived the people, who intended to offer their prayers and alms at a real consecration of the sacrifice of Christ" (Palmer). The earliest mention of this abuse is its condemnation in the Capitularies of Charlemagne (Neale), that is, in A.D. 805: the leading example is the practice at St. Louis, who died in A.D. 1770. Durandus says that the book Liber Sacrutoriales, in which this rite is described, was approved by Leo X; and he finds the Missa Sica in the passage of Socrates, Hist. v, 29, where Leo Allatius finds the rite of the presanctified. The more learned Roman theologians of the 16th century condemned this abuse, and Bona states its general suppression. Neale, however, says that it was common in Belgium as late as A.D. 1780. The rite was never in use in the East, except in Egypt.

Neale has charged the Church of England with deliberately retaining the Missa Sica, but Blunt (Dict. of Hist., and Doctrinal Theol. s. v.) holds that "this charge is without foundation, as there is an essential difference between the use of the eucharistic hymns, without which the rite could hardly be called a Missa, and the use of the prayer for the Church militant only, made real, as far as can be, by the offering of alms. MISSAL (Lat. Missale plenarium, or simply Plenarium) is the name given to an office-book of the Roman Catholic Church, containing the liturgy, i.e. all of the
MISSAL

MISSAL DOMINICI

liturgy required for the celebration of the Mass (q.v.) or Missa, viz. the fixed Ordinary (q.v.), and Canon (q.v.), with the changeable Introits, Collects, Epicles, Gospaels, etc. In the early Western Church it was called sacra
mentarium, but it then contained only parts of what is now comprehended in the Missal. Some copies, as re
quired in every parish by the bishops, contained the Gospels, the sacramentary, prayers, prefaces, benedictions, and the antiphon, or, in a word, all that was to be sung by the priest at the altar, and by the ministers in the ambon. These books were called Plenaria (q.v.), i.e. complete or full; but usually their contents were dis
tributed into separate volumes— the Gradual, Collectar, Benedicitorum, Hymnale, Prologi, in foro, etc. The ceremonies required when priests, from the 9th century, began to say low masses, and especially for country clergy; as by
laws, by the Capitularies of 789, were forbidden to sing the lessons and alleluias, and the priests were re
quired to sing the Sanctus with the people before the canon was commenced. The earliest Frank, Gothic, or Gallican missals, of the 6th century, contained only the portion of the liturgy recited by a bishop or priest—that is, the canon, prayers, and preces. At a later date, those of small churches comprised the Introit, Gradual, Alleluia, Tract, Offertory, Sanctus, and Communion, where, although there were a deacon and subdeacon, the smallest church had a sub-deacon called the celebrant and his two assistants to chant together.

The Missal was probably compiled near the close of the 6th century, was amplified by Gelasius I, and corrected by pope Gregory I. But, although the Missal was con
tained in the Gregorian rite, it appeared in such varied forms in different churches, and frequently with so many improper additions, that the wish for an emendation be
came general, and, having been expressed at the Council of Basle, and in 1586 at a synod at Cologne, it was suc
cessfully urged at the Council of Trent. During the early part of the council no agreement could be effected. In the eighteenth century the commission was reappointed, which, however, could not bring to an end the work intrusted to it; whereupon the council, in the twenty-fifth ses
sion, resolved upon recommending to the pope the re
form of the Breviary, Missal, and Rituals. As the ques
tion was not to create a new liturgy, but to purify the existing one, to restore it to its original simplicity, etc., the work was recommended to be done in Rome. It was commenced under Pius IV, and completed under Pius V.

The only members of the commission whose names are known are cardinal Bernardino Sossio and Tomaso Gol
duell, bishop of Asaph. Perhaps a great share in the execution of this work was the execution of the revised liturgy of Sir John Bap
tlet and to the learned Giulio Poggi. The new Missal appeared in 1570; it was followed by two revisions un
der Clement VIII (bull of July 7, 1694) and Urban VIII (bull of Sept. 2, 1634). It is composed of an introduc
tion, three parts, and an appendix. The introduction gives the calendar, the general rubrics, a summary of the rite, and instructions about possible deficiencies. The three parts are: 1. "Proprium missarum de tem
pora," with the formularies for the successive solemnit
ies of the year. It treats of all the Sundays, from the first Sunday of Advent to the last after Pentecost. The whole ecclesiastical year pivots around the principal feast-days: Christmas, Easter, and Pentecost—Easter being the centre. Between the Saturday before Easter and Easter Sunday the Ordo Missal is inserted. 2. "Proprium missarum de sanctis" contains the formularies for the celebration of the mass on particular feasts of saints, etc. This part of the Missal is arranged after the liturgical year in the imperfect calendar of the State and the Roman Church, and to make registers and descriptions thereof. To carry out these measures the missal held a kind of diet (placita provinicia), and at these sessions the superior clergy, the counts, and some other fathers, were obliged to appear, under penalty of the heriban. Those who persisted in their refusal were denounced to the king,

within and without the Easter period, for the days of the confessors, the virgins, and of those who did not die in the virginial state. The Appendix is very compre
hensive: it gives the annual mass, different votival masses, and the masses for the deceased, several benedictions, and, lastly, the masses for such feasts or commemorations as are celebrated in certain places with papal approba
tion, and called therefore Missae ex induito apostolico.

In the early times the missal, particularly the Missalis, used varied greatly; and even after the compilation of the Roman Missal, the English missals known as "Sarum Use," "Hereford Use," "Lincoln Use," "Bangor Use," etc., continued to be generally. Near the end of the 16th century, however, the Jesuits succeeded in enacting the Roman Missal through the entire dominions of England. The old missals, before the invention of the art of printing, were generally written in the most sumptu
ous manner, ornamented with beautiful initials, and most splendidly bound. A kind of large Gothic letters (monoschial writing), for the writing of the missals, came into use in the 15th century. After the invention of the art of printing, patterns were cut after these letters, and used for the printing of missals; hence the name of missal letters given to a certain kind of large types. The missal of the Oriental rites differs from that of the Roman Church, each having, for the most part, its own proper form. See Rosarium, Observations; Finart, Ex
sulmissalis; Scotus, Commentaries; Glareanus, Rubricarum; Huelner, Historia Missae; Lewis, Bible, Missal, and Breviary; Maskell, Dissert. ch. iv, p.

MISSAL DOMINICI is the name of a class of extraor
dinary commissions sent by the Carolingian dynasties to different parts of their dominions for various purposes of civil and ecclesiastical government. The importance of these officers was vastly increased by Charles the Great, who employed them as an efficacious means of restraining certain dangerous powers which, however, the importance thus given to these dignitaries having proved under Pepin to be dangerous to royal authority, Charles strove to weaken them, and destroy their power alto
gerther, by transferring their supervisory functions over the jurisdictions of the counts, the administration of the bishoprics, etc., to the missi dominici. The whole empire was accordingly divided into districts (missastic, lega
tiones), coinciding generally with the province of a met
ropolitan. The missi received special instructions re
garding the different points of their mission. So great was the importance the emperor attached to the careful execution of the duties assigned to them, that to every one always given to his travelling representatives, he fre
quently added oral explanation and discussion. Thus the missi became the organ by which the central au
thority managed the administration of the whole em
pire; and there was, in fact, no part of the affairs of gov
ernment entirely removed from their competence. Their principal duties were as follows: (1) To see that the laws, both of the State and the Church, were observed.

(2) To superintend jurisdiction. In whatever cause or suit there was no decision given by the court, the deci
sion was expected from the missal; they also received complaints against the power of the Church. To this end, they held sessions four times every year in different points. They appointed medios et vetereis, whose duty it was to denounced the crimes, transmissions, etc., that had transpired. (3) To superintend the execution of the laws regarding the army, and to exact the fine of sixty solidi (berlauniunum) from the defectors. (4) To generally the first four days of vacancies to the vacancy was pendulum of the State and the Roman Church, and to make registers and descriptions thereof.
The mission were expected to give detailed accounts of their mission at court. In difficult matters, of which they declined to take the responsibility, the decision was left to the king. Every one to whom justice had been done, and the missionaries were sent to report to the king. In order to give the mission sufficient authority, they were allowed the right of imposing the fine of the heribann; and the disobedience were threatened even with death. Compensations were allowed them for the expenses of their travels. See Franc. de Roque, De missione ejusque adaequatione, et de missionibus et reportis. (Leipzig, 1744, 8vo). (J. H. W.)

Mission is the word used by Roman Catholics, Anglicans, and American Ritualists in a sense somewhat synonymous to the word Revival (q.v.). Among Roman Catholics the Mission is a series of special services, conducted generally by representatives, who do not themselves reside over a parish; they are mostly members of a monastic order. The word "Mission" in this sense is of recent use. In the Church of England and the Protestant Episcopal Church the word designates a series of services in which prayer, praise, preaching, and personal exhortation are the main features, and is intended "to promote the union and deepening of the spiritual life in the faithful." The "mission" is conducted in a particular parish, or in a number of parishes at once, directed by the rector, or by some priest experienced in such matters, whom he obtains to aid him. Its themes are heaven, hell, the judgment, sin, and atonement for sin, and the Godhead and eternity. "The purpose is the proclamation of the old foundations of faith and repentance to souls steeped in worldliness and forgetful of their destiny, whether they be the souls of the baptized or the unbaptized." The usual period of the year for the "mission" is the season of Lent (q.v.). In England it has been the practice for years. A correspondent of the New York Church Journal (March 12, 1874), after describing the interest awakened by the mission services in the English metropolis (in 1874), says that the bishops, persuaded by the good results of the propriety of the missions, "have declined to lay down special rules, and trust to the loyalty of the clergy to conduct the mission in accordance with the rules of the Church," and then adds that "the clergy are now too busy with the real work of the mission to discuss the proper pronunciation of 'Amen,' the length ofsurplices, and the color of stoles." Fix, Mission consists of services given as yet without any direction of the Protestant Episcopal churches. A serious obstacle is the Liturgy. In the mission the largest spontaneity and freedom are allowed. Prayers are extemporaneous. The preaching is pungent and personal. The singing is participated in by the whole congregation, and familiar hymns and tunes are selected. The tendency is towards a general introduction of the "mission" into all Protestant Episcopal churches. The Church Journal and Gospel Messenger of Dec. 25, 1873, made a special plea in its behalf, and the Rev. B. P. Morgan has published a book to enlist his Church in revival work. See Retract. (J. H. W.)

Mission, Inner. See Inner Missions.

Mission-Priests is the name by which those priests are designated who have been educated for mission work at home or abroad. There are certain monastic institutions that greatly aid in this work. Indeed, several monastic orders aim particularly at missionary work, e.g. the Congregation of the Oratory, the Congregation of St. Vincent of Paul, or Lazarists (q.v.), the Missionary Fathers of the Sacred Congregation, the Congregation of Jesus and Mary [see Eusteds], etc.

Mission-Schools. These are of two kinds. (1.) The schools aiming to supply the particular want of the missionary before he enters the field, fitting him in his theological studies, and in the knowledge of languages, etc., for the work in view. This class of schools have been but recently organized among the English-speaking people. In Germany they have existed for some time. Usually, however, the course of study is inferior to the university course in theology. English and American schools for missionaries particularly in India and Africa. In the United States there are facilities for missionary training provided at Yale College, Boston University, and Syracuse University. The different theological seminaries have lectures on Missions and on Comparative Religion to aid those preparing for the ministry with a possibility of missionary service. (2.) Institutions aiming to aid the missionary in propagating Christianity, or seeking to prepare the way by educating the minds of the people, in order that they may be more capable of understanding and appreciating the facts and evidences, the doctrines and duties of Scripture. Another reason for such an education is that it procures means and opens ways of access to the people, and opportunities of preaching to them. Ignorant of God and his law, as well as of their own, and the moral character of the world; content with mental inactivity, and indifferent to moral elevation; untaught in the principles of science, and far from living lives of piety and virtue; vicious in their habits, and absorbed in sensual indulgences; accustomed to the profane rites of religious glittering yet grovelling, and degrading yet commanding and terrible—the heathen nations are unprepared to listen to the announcement of glory to God in the highest, and to appreciate the Gospel as preacher delivered from the dominion of sin and death. . . . The stupidity of the Hottentot, the sen-suality of the Hindoos, the prejudice of the Mohammedan, the ancestral pride of the 'son of heaven,' and the sottishness of the South Sea Islander, alike interpose a wall high as heaven between the Christian missionary and the child of ignorance" (Dr. Storr, Germans before the A. B. C. F. M. in 1850). In such circumstances schools become very important as a means of communication with different classes of people, with children and parents, with men and women. Mission-schools, therefore, are a wise and most effective agency in prosecuting the missionary work among the heathen. They are intended to prepare and thus undermine the errors of heathenism; they inspire and foster a love for knowledge, and thus help to overcome the deep debasement of the heathen mind and heart. They conciliate the favorable regards of the heathen, convincing them that the missionary seeks to benefit them, and thus establish an abiding base of the systematic instruction of youth and children in the principles of Christianity. These mission-schools have been of different grades, according to the circumstances and requirements of the case. Boys' schools have usually been found most practical, especially at the commencement of a mission, and most effective for accomplishing the end in view. The heathen usually readily appreciate the value of education for their boys, and both the pupils and their parents are usually found as hearers at preaching services. Girls' schools were of necessity a later supply, for these find the strongest prejudices of the heathen to contend with. Woman is of inferior condition; the heathen conclude, in the heart of a foreigner, surely is to have access to her; hence girls' schools are usually established after other schools have succeeded in winning confidence and making the natives understand the true objects of the mission. Indeed, in heathen communities, whenever an attempt was made to establish female schools at the outset of the mission, great prejudice and misapprehension have been the consequence, often seriously embarrassing the progress of all mission work. There is hardly a field occupied for missionary labor but within its territory schools are located
MISSIONS
and in successful operation. As a rule, female teachers are employed; generally the wives of the missionaries or their lady friends. Many of these workers are Christians, holding a connection with some religious body. The most successful schools are now found in India (see Butler, Land of the Veda). In China and Japan there are several in successful operation. In Constantinople, the American Roberts College may be looked upon as the English military of Christian missionary work. In Beirut also there is an American college greatly aiding the Protestant cause. In Africa, where the people to be converted are in a very abject state of mind, missions have largely availed themselves of educational aids. Many of the most successful mission-workers advocate the building up of schools as a very essential step to the salvation of souls. Besides missions in this direction, many of the leading missionary societies are founding schools in their respective fields. In the heathen world evidently the secular school supplies the same want that is afforded us in the religious school, better known as the Sunday-School. See American Bible Repository, xii., 87.; Christian Ren., v., 580.

MISSIONS. True Christianity is essentially missionary in character. The Gospel has been designed for all nations, and its field being the world, it was from the first associated with means for its own extension. In a highly important sense, the Lord Jesus may be considered as an apostle of the Holy Spirit, for he has been sent by the Eternal Father to set up his own kingdom upon the earth. The patriarchs, and all faithful priests and prophets among the Jews, were agents preparatory to the introduction of that kingdom. Having called disciples and established a Church, the risen Saviour, before his ascension, commissioned his chosen apostles, in the presence of the great body of the disciples, the then existing Church. To them, as the leaders and representatives of the actual and the prospective Church, he addressed the great missionary command, “Go ye into all the world, and preach the Gospel to every creature.” 

Christian missions have been to the Jews. He said, “I am not sent but to the lost sheep of the house of Israel.” The apostles were sent to the Jews and Gentiles. “The Acts of the Apostles” is the first official missionary report—the first volume of missionary history; unless, indeed, it rank second, as it is subsequent to the Gospel history of him “who went about doing good.” So vast has been the expansion of the missionary enterprise since the outpouring of the Holy Spirit on the day of Pentecost, and so voluminous have become its records, that this article is of necessity limited to a very brief sketch of the subject as a whole. Nevertheless, the design of the article is to give, in the briefest practicable space, a judiciously planned view of the principal missionary agencies of successive periods, and some indication of their results, together with references to the sources of more detailed information.

There are two leading modes of studying the subject of missions. The first regards primarily the agencies employed, following them to their different fields of action. The second contemplates in succession the several fields, where necessarily it gives attention to the different agencies employed upon them. Each mode has some peculiar advantages, as well as defects or difficulties, and both are essential to a full comprehension of the subject. They will consequently be followed in the order named. As a natural guide to study and help to memory, the order of time will be followed in the survey of missionary agencies.

1. Apostolic Missions.—It is safe to affirm that no just or adequate comprehension of the New Testament history can be obtained without having studied it from a missionary point of view. But when, in the light of their great commission, the apostles are regarded as Christian missionaries going forth to evangelize the nations, not only the narrative of their Acts or doings, but their epistles to the churches which they planted and trained, become instructive, both as to their modes of proceeding, their difficulties, and their successes.

Paul, as the apostle to the Gentiles, stands forth in deserved prominence as a model missionary. Although originally a relentless persecutor of the Christians, he experienced a thorough spiritual conversion, and thus became “a new man in Christ Jesus.” Having been called of God to be an apostle or missionary of Jesus Christ, he confessed not with flesh and blood, but “he concealed not his life dear unto him,” but went forth preaching the everlasting Gospel wherever he could find hearers, encountering perils of robbers, perils by his own countrymen, perils by the heathen, perils in the city, perils in the wilderness, and perils among false brethren (2 Cor. xi., 23); nevertheless winning souls to Christ, and doing miracles and signs and wonders by the power of the heathen. He was a missionary, being chosen to fill the place of training ministers, and at length finishing his course with joy, having won both the martyr’s crown and the crown of eternal life. Until the consummation of all things, the study of Paul’s missionary character, travels, and labors, will be a standard and profitable topic for all who desire to comprehend the true nature, agencies, and measures of Christian propagation. In the subsequent history of the Church it will be found that all departures from the spirit of his example have been aberrations from the line of true success; whereas efforts put forth from similar motives and in a like spirit have found themselves largely attended by the divine blessing and the salvation of men.

But although prominent as the founder of the infant Church in the principal cities of the Roman empire, and although, for some wise but not easily comprehended reason, his successive missionary journeys chiefly occupy the sacred narrative, yet Paul was only one of the noble band of apostolic missionaries. Peter was the acknowledged leader of the opening mission of the infant Church to Jerusalem, and afterwards of missionary efforts in behalf of Jews throughout the world. Not only was he the chief actor in the scenes of the Pentecost, but he laid the foundation for missions to the Gentiles by baptizing the centurion Cornelius and other Gentiles at Caesarea. According to Origen and Eusebius, he preached to the Jews scattered in Pontus, Galatia, Cappadocia, Asia, and Bithynia. Many scholars have become satisfied that his mission extended to Babylon, on the Euphrates, while the general voice of antiquity ascribes to him a mission to Persia, or even, as赴, to some extent, to Egypt. Whatever may have been true as to his actual presence at those extreme points of the East and the West, his general epistles sufficiently demonstrate his personal acquaintance, as well as ministerial authority, in vast regions intermediate.

Next to that of Peter we recognize the prominence of the apostle John, who, after protracted labors among the Jews in Palestine, took up his abode at Ephesus, from which centre he exercised supervision of the churches of Asia Minor till the period of his exile to Patmos, whence he yet speaks to the churches. As to the other apostles, neither Scripture nor history gives definite information, but early and contradicted tradition assigns them severally to important and widespread mission fields. According to the general voice of antiquity, James the Just remained at Jerusalem. Andrew preached in Scythia, Thrace, Macedonia, Theasaly, and Achaia; Philip in upper Asia, Scythia, and Phrygia, where he suffered martyrdom. Bartholomew penetrated India. Thomas visited Media and Persia, and possibly the coast of Coromandel and the island of Ceylon. Matthew went to Ethiopia, Parthia, and Abyssinia; Simon Zelotes to Egypt, Cyrene, Lybia, and Mau- ro volatility; Judas Thomas to Ionia, as well as to Asia, and to Mesopotamia. Whatever of literal truth is embodied in the traditions quoted, they at least show that the grand missionary idea was associated with the history of the several apostles from the earliest period; and, taken in connection with known results, they leave no doubt that the lives of those chosen men were spent in
seizura and self-sacrificing efforts for the spread of the
Gospel. Nor was this true only of the apostles, but also of
the Christian believers of that period generally, who,
when even scattered by persecution, "went everywhere
preaching the word" (Acts viii: 4). No other hypothesis
than that of universal missionary activity on the part
of both ministers and members of the Church of
the apostles and their immediate successors, attended
also by the divine blessing, is possible to account for
the extensive spread of early Christianity. During the
last six or seven decades the preaching was often so
necessary as to cause the town councils to go forth into
distant lands to propagate the Gospel. It was at the beginning of the 2d century that the
younger Pliny, governor of Bithynia, after official
investigation, made to the emperor Trajan his celebrated
report concerning the customs and prevalence of the
Christians. Said he, "Many persons, of all ages, of
every rank, and of both sexes, likewise are accused, and
will be accused [of Christianity]." Nor has the contumacy
of this superstition pervaded cities only, but the
villages and open country. The allegations of
this persecutor of Christians, in respect to the numbers
accused of Christianity, are corroborated by various state-
ments of historians. Thus, Justin Martyr, writing
about one hundred and six years after the ascension,
says, "There is not a nation, either of Greek or barba-
rian, or of any other name, even of those who wander
in tribes and live in tents, among whom prayers and
thanksgivings are not offered to the Father and Creator
of the world, the King of the heavens, and that these,
combined, under the guidance and blessing of the Head of
the Church, may be expected to triumphant over the most
frigid indifference and the most violent opposition.
In the penury, the obscurity, and the lack of facil-
ities of the early Church, the work of promoting the
salvation of men, and of extending the truth, was one of
individual and personal exertion, supplemented, of
course, by the influence of the Holy Spirit. At first
there were no churches for public assembly, no books
for auxiliary influence, no organizations for the support
of missionaries, home or foreign. Nevertheless, regen-
ereated men went everywhere preaching the word. They
founded churches wherever the word was received by
believers, and the members of the churches were taught
to sustain those who labored among them in the Lord,
and also to let the riches of their liberality abound, even
out of them. Thus the whole Apostolic Church was an
agency for self-extension, and for the propagation of
the truth. Though public preaching was practiced to
the greatest extent practicable, yet the inference is in-
evitable that the extension of Christian truth was ac-
complished largely by means of personal influence in con-
sequence of the power of private persuasion. In this
way all could be "helpers of the truth." In the public
and private means, united and in constant action,
Christianity was diffused, notwithstanding the appar-
etly insuperable obstacles that confronted it on every
hand. There is good reason to believe that had the true
colors of the Apostolic Church been preserved, and
its singleness of missionary aim and action been main-
tained, the development of Christianity in the world
would have been constant, if not rapid, and that long
ere this the remotest nations would have been
Evangelized. The Apostolic Missions. Under this head, allusion
will be made to the aggressive movements of the Church
between the apostolic and medieval periods. That the
2d and 3d centuries witnessed great missionary activity
on the part of Christians in the countries to which ac-
cess could be secured, is proved not only by the multi-
plication of their numbers and influence, but by the
bloody persecutions that were waged against them un-
der successive Roman emperors. Owing to various
causes there have come down to us but few details of
the extent and frequency of the persecution, and, quite
neces.

more or less antagonistic to each other did not relieve their evil effect, but rather increased their power, as multiplied diseases soon reduce the vital energies of the human frame. Had this averted the pernicious tendencies from the true spirit of the Gospel, and had the Christians of the 4th century been content to rely on spiritual agencies for the promotion of Christianity, the advantages which followed the professed conversion of Constantine might in all probability have tended to extend and consolidate a pure type of Christianity. But, unfortunately, insidious influences had already been initiated, which, in the sunshine of apparent prosperity, grew with the rankness and rapidity of noxious weeds. Of these influences, allusion can only be made summarily to doctrinal errors, monasticism, and worldly conformity. It is not our purpose to trace, in detail, the origin of heresies, Arianism, Montanism, and other heresies induced bitter and protracted controversies, thus dividing the Church with partisan strife, but they absorbed the thought and energies of thousands of professes of Christian ministers, who ought to have been exclusively engaged in preaching the Gospel. So when, in the 2nd century, the doctrine of a Christian priesthood began to be developed with an attempted imitation of the Jewish, the evil was not merely the diversion of ministerial talent from the one work of preaching and teaching in the name of Christ to a burdensome routine of ritual ceremonies, but a complete perversion of the Christian unity with certain pagan theories and practices which in later periods were put forward as elements of Christian orthodoxy.

As it has often been asserted, and indeed extensively believed, that the world owes something to monasticism in consideration of certain missionary labors conducted by members of monastic orders, it seems proper to set forth the true bearing of that subject, from which it will appear that monasticism was, in fact, one of the earliest and greatest hindrances to the missionary development of the Church, and that whatever good was subsequently done by missionaries who were monks was done by force of Christian impulse or character, in direct contravention of the spirit and intent of monasticism. It is unnecessary to dwell upon the historic fact that monasticism existed in the far East as a heathen practice antecedent to the Christian era. The first strictly ascetic sect in the Church was that of the Monastians, which arose in Phrygia about A.D. 150, from Montanus, who had been previously a priest of the heathen deity Cybele. During the 2nd and 3rd centuries a growing disposition manifested itself in the Church to exaggerate the virtue of fasting, and to attach special merit to celibacy, specially among the clergy. Vows of celibacy began to be taken by persons of both sexes, in the idea that such a life was also that of the heathen deity Cybele. In A.D. 250 the Decian persecution raged with extreme severity in Upper Egypt, causing many to flee for their lives to deserts and secluded places. Already the minds of many Christians in Egypt had been predisposed to asceticism by the writings of Clement, Origen, and Dionysius of Alexandria. Under a combination of these and similar influences, many persons who ought to have been contending earnestly for "the faith once delivered to the saints" withdrew themselves from society, and wasted their lives in idleness, and in useless struggles with the phantoms of their own excited imaginations. The true spirit of Christianity would have given them courage to face danger, and doubtless have enabled them in many cases to win even their persecutors to the faith. But the impulse of cowardice, whether moral or physical, is contagious; hence multitudes of well-meaning but weak persons abandoned scenes of Christian utility and went into the desert for the sake of the fasts and caves of the mountains. At first they lived as hermits, and sought by means of labor to provide for themselves, and to devote a surplus of their earnings to charitable objects. By degrees the austerities of some won them notoriety, and caused them to become objects of charity, and even of superstitious reverence, among the ignorant. Thus such men as Anthony of Egypt, Paul of Thebes, Hilarius of Palestine, and others, became several times the centres of great communities of monks, and to the publication of their lives, and to the edification of his country, of the Christian Church at the time, who had attained the number of 50,000. From this brief statement as an index let the mind of the reader survey the vast expansion of the monastic idea and of monastic ambition as orders of monks became multiplied and powerful, spreading themselves throughout Europe and to reach the East during the 2nd and 3rd centuries. See Benedictines; Carmelites; Carthusians; Dominicans; Jesuits; Monasticism; Monks; etc. Considering the hundreds of thousands, and even millions, of persons whose lives were by this unscriptural and unnatural system withdrawn from the sphere of Christian influence and utility, and whose lives were often degrading austerities, to say nothing of worse excesses that sometimes followed in its train, it is easy to perceive that monasticism acted as a gigantic and wide-spread antagonist to the evangelization of the world. It may be assumed that the persons embraced within its influence meant well, and as a rule lived up to the theories of which they were the victims. But how different might have been the position and influence of the Christian Church had the lives and sacrifices of all those persons been applied in accordance with the Saviour's precept, "Go teach all nations." While, therefore, monasticism was debasing the Church by the profitless seclusion of thousands of its best members, worldly conformity, on the other hand, came into the Church like a flood, with the elevation of many of the clergy to imperial favor. Thus the ancient Church, instead of remaining a unit in its zeal and efforts for the conversion of the world, became embittered by two opposite and equally injurious systems of error and practice, both alike fatal to its missionary faithfulness and progress. To this day the Greek Church remains under the incumbrance of the monastic system fastened upon it at that early period, while the Latin Church soon after became so closely identified with secular power that it required many centuries to free itself from the vices with which it was once contaminated by the Saviour's precept, "Go teach all nations." While, therefore, monasticism was debasing the Church by the profitless seclusion of thousands of its best members, worldly conformity, on the other hand, came into the Church like a flood, with the elevation of many of the clergy to imperial favor. Thus the ancient Church, instead of remaining a unit in its zeal and efforts for the conversion of the world, became embittered by two opposite and equally injurious systems of error and practice, both alike fatal to its missionary faithfulness and progress. To this day the Greek Church remains under the incumbrance of the monastic system fastened upon it at that early period, while the Latin Church soon after became so closely identified with secular power that it required many centuries to free itself from the vices with which it was once contaminated by the Saviour's precept, "Go teach all nations."
"by their fruits shall ye know them," it is necessary to concede that such much in ecclesiastical history has passed for Christianity is scarcely less than a caricature of the reality. So of missionary propaganda and the conversion of nations, it must be confessed that many familiar and comprehensive phrases, such as the "conversion of the Roman empire," "the conversion of the North nations," "the conversion of Germany," "of Poland," "of Norway," and such outward changes as might take place wholly apart from the influence of that true faith which "works by love and purifies the heart." While, therefore, facts may be mentioned as they are represented to us in history, a careful judgment will discriminate those which are true and those which are invented. Nor must the important consideration be overlooked that God, who can make the wrath of man praise him, and overrule the most untoward events to the accomplishment of his own glory, could, and doubtless did, overrule much that was imperfect, and even censurable, to the promotion of nominally Christian for the ultimate furtherance of the truth.

III. Period and Elements of Transition.—There is no positive line of demarcation between the ancient and the medieval churches. Indeed writers never cease to differ in regard to the limits assigned to each. In point of fact, the former and the latter are so closely blended into the latter; but, in a missionary point of view, we are forced to consider the ancient Church as coming to a close when her purity and her aggressive-ness began simultaneously to decline. During the first three centuries Christianity maintained a complete antagonism to false religions and pagan worship in all its forms. Conversions to Christianity were individual, not national; the new faith made its way upward from the humble strata of society to the higher, from the Catacombs to the palace, till at length the number of converts became so great and so influential to be ignored either by emperors or by senators. In the 4th century we find the emperors of Rome for all intents and purposes as Christian as their subjects, yet unchristianized, taking an active part in preaching and in the councils of the Church; and subsequently the leading missionary efforts were specially addressed to kings and princes, to whom determination their subjects were expected to conform.

One of the saddest aspects of the closing period of the ancient Church appeared in the growing tendency on the part of the clergy to accept nominal instead of real conversions, outward conformity instead of actual faith. Many bishops encouraged this tendency, wishing to make what they called conversion as easy as possible. Hence, those who had been labeled catechumens, and who plainly indicated their purpose to continue in it. Perhaps they imagined that such persons, when once introduced to the Church, would be more easily and certainly reformed, although, for the most part, they merely told them what they would have to believe in order to be Christians, with regard to the obligations of holy life, lest the candidates should decline baptism. "These corrupt modes of procedure originated partly in the erroneous notions of worth attached to a barely outward baptism and outward Church fellowship, and partly in the false notions of what constituted faith, and of the relation of the doctrines of faith and of morals in Christianity to each other" (Neander, Church Hist. ii. 100).

Against such views and measures there were not wanting remonstrances on the part of such men as Chrysostom and Augustine. The former, reproaching bishops animated by a false zeal for increasing the numbers of nominal faith, says: "Our Lord utters it as a precept, 'Give therefore to heathen either ear-vest ye your pearls before swine.' But, through foolish vanity and ambition, we have subverted this command too by admitting those corrupt, unbelieving men, who are full of evil, before they have given us any satisfactory evidence of a change of mind, to partake of the sacraments. It is on this account many of those who were thus baptized have fallen away and occasioned much scandal. Augustine complains: "How can we seek Jesus only that he may benefit the earth? No! man has a lawsuit, so he seeks the intercession of the clergy; another is oppressed by his superior, so he takes refuge in the Church; and still another that he may secure the wife of his choice. The Church is full of such persons. Seldom is Jesus sought for Jesus' sake. Seldom were there noble and eminent exceptions which led to spurious and hypocritical conversions. Many were awakened by outward impressions: some supposed they had seen miraculous effects produced by the sign of the cross; others were affected by dreams, and did little more than exchange one superstition for another. Against these insidious and contemptible practices Augustine uttered faithful exhortations and warnings in his tract De Catechetica Radibus and other writings, but the current of things, and the swelling tide of barbarian invasion, greatly antagonized his influence. Some were doubtless led from poor beginnings to better results, becoming in the end true Christians, although they entered the Church from unworthy motives; but far earlier, and more extensively than is generally supposed, the true spiritual character of the ancient Church, as a whole, had lamentably declined, and with it all genuine zeal for the spiritual conversion of men, for the Church's glory. IV. Journal of the Periods.—It is also certain that the medieval period was one of revolution, and therefore unfavorable to the propagation of true religion; but it is by no means conceded, as is argued by some Protestant writers, including Milman, Guizot, and others of high reputation, that a defective development of Christianity was therefore inevitable, or that the semi-monastic and secular measures employed to civilize and Christianize the barbarians of Europe were "adapted as a transitional stage for the childhood of those races." On the other hand, it is claimed, in the light of Scripture and experience, both among ancient and modern heathen, that the grand desideratum for those times, as for all others, was the undiluted Gospel of Christ and his apostles, which not only would have availed tenfold more than did all worldly and semi-sectarian expedients, but would have remained as a pure, instead of a corrupting, leaven to work in after ages. It is pleasing to observe that in some of the earlier missions, of which brief sketches will now be submitted, there was no inconsiderable mixture of just and appropriate evangelical agencies, such as the translation and circulation of the Scriptures, and self-denying examples of missionary life. Instead of attempting, as has often been done, to sum up by centuries what was done, or said to be done, so much better to present from historic sources a few sample missionary events and characters from successive periods of medieval Church history, illustrating the actual introduction of the Church into different countries and among various races.

1. The Mission of Ulphilas to the Gothic.—"When we proceed to inquire in what way a knowledge of Christianity was diffused among the nations which thus established themselves on the ruins of the Roman empire, we find, at least at the outset, that ecclesiastical history can give us but scanty information. 'We know as little in detail, remarks Schlegel, 'of the circumstances under which Christianity became so universally spread in a short space of time among all the Gothic nations as of the establishment, step by step, of their great kingdom on the Black Sea.' The rapid and universal diffusion, indeed, of the new faith is a proof of their capacity for civilization, and of the national connection of the whole race; but the question whether that was the way of conversion? We have not a record, not even a legend, of the way in which the Visigoths in France, the Ostrogoths in Pannonia, the Suevians in Spain, the Gepide, the Vandals, the followers of Odovacer, and the fiery Lombards, were converted to the Christian faith. We may trace this, in part, to the terrible desolation which
at this period reigned everywhere, while nation warred against nation, and tribe against tribe; we may trace it, still more, for the fact that every one of the tribes above mentioned was converted to the Arian form of Christianity, a sufficient reason in the eyes of Catholic historians for ignoring altogether the efforts of heretics to spread the knowledge of the faith. And till the close of the 6th, and the opening of the 7th century, we must be ignorant of the Arian theology; and when the chief bishop presented himself, and requested aid in the dire necessity of his people, the emperor is reported to have persecuted him with discussions on the hypostatic union, and to have pressed upon him the necessity of repudiating the Confession of Nice, and adopting that of Rimini. Ulfilas was in a great strait; but, being a simple-minded man, and considering the question one of words, and involving only metaphysical subtleties, not worthy of consideration in comparison with the sufferings of his people, he assented to the emperor's proposal, and promised that the Gothic nation should adopt the Arian Confession. From this time forth, the chief aim in the propagation of the faith in the Gothic lands was Mosia, but annexed to this concession two harsh and rigorous conditions: that before they crossed the Danube the Goths should give up their arms, and suffer their children to be taken from them as hostages for their own fidelity, with the prospect of being educated in the different provinces of the empire. But the chief business of the time was the conversion of the countries around. Among the involuntary slaves carried off in the reign of Gallienus were the parents or ancestors of Ulfilas, who has won for himself the title of 'Apostle of the Goths.' Born, probably, in the year 318, he was, at a comparatively early age, sent on a mission to Constantinople, and there Constantine caused him to be consecrated bishop by his own chaplain, Eusebius of Nicomedia. From this time he devoted himself heart and soul to the conversion of his countrymen, and the Goths were the first of the barbarians among whom we see Christianity advancing general civilization, as well as teaching a purer faith.

But his lot was cast in troublous times: the threatened invasion of a barbarous horde, and the animosity of the heathen Goths, induced him to cross the Danube, where the emperor Constantine assigned to his flock a district of country, and here he continued to labor with success. The influence he had already gained, and the name of Christ, were for the benefit of the Goths stowed upon the tribes by procuring for them a more peaceful settlement, rendered his efforts comparatively easy. Rejoicing in the woodlands and pastures of their new home, where they could to advantage tend their numerous flocks and herds, and purchase corn and wine of the richer provinces around, they listened obediently to the voice of their bishop, whom they likened to a second Moses. And the conduct of Ulfilas justified their confidence. With singular wisdom he did not confine his efforts to the oral instruction of his people: he sought to restore to them the art of writing; probably he had been lost during their migration from the east to the north of Germany. Composing an alphabet of twenty-five letters, some of which he was fain to invent, in order to give expression to sounds unknown to Greek and Latin pronunciation, he translated the Scriptures into the native language of his flock, omitting only the four books of Kings, a precaution he adopted from a fear that his own converts might tend to the martial ardor and fierce spirit of a people who, in this matter, to use the quaint language of the historian, 'required the bit rather than the spur.'

After a while he was constrained to act the part of mediator between the Visigothic nation and the Roman emperor Valens. In the year A.D. 374 the barbarous hordes of the Huns burst upon the kingdom of the Ostrogoths, and, having subdued it, turned their eyes to the lands of the Visigoths, where many of them had migrated. Unable to defend the line of the Danube, the latter fell back upon the Pruth, hoping for safety amid the inaccessible defiles of the Carpathian mountains. But, sensible that even here they were not secure, a considerable party began to look for an asylum within the Roman dominions, and the emperor, through the fervid eloquence of Ulfilas among their number, should repair to the court of Valens, and endeavor to obtain a new settlement.

"Valens was an Arian and a controversialist. At this very time he was enforcing at Antioch, 'by other weapons than those of reason and eloquence,' a belief in the Arian theology; and when the chief bishop presented himself, and requested aid in the dire necessity of his people, the emperor is reported to have persecuted him with discussions on the hypostatic union, and to have pressed upon him the necessity of repudiating the Confession of Nice, and adopting that of Rimini. Ulfilas was in a great strait, but, being a simple-minded man, and considering the question one of words, and involving only metaphysical subtleties, not worthy of consideration in comparison with the sufferings of his people, he assented to the emperor's proposal, and promised that the Gothic nation should adopt the Arian Confession. years of his banishment to the remote and wretched little town of Cacacus, among the hills of Mount Taurus, amid the want of provisions, frequent sickness without the possibility of obtaining medicines, and the ravages of the plague. But in the end, at the approach of winter, and with all his possessions, found relief not only in corresponding with churches in all quarters, but in directing missionary operations in Phoenicia, Persia, and among the Goths. In several extant epistles we find him advising the despatch of missionaries, one to this point, another to that, concluding some with a prayer, denouncing all by the example of the great apostle Paul, and the hope of an eternal reward. And in answer to his appeals, his friends at a distance supplied him with funds so ample that he was enabled to support missions and redeem captives, and even had to beg of them that their abundant liberality might be directed into other channels. How far his exertions prevailed to win over any portion of the Gothic nation to the Catholic communion we have no means of judging. Certainly it is that from the Western Goths the Arian form of Christianity extended to the Eastern Goths, to the Gepide, the Alans, the Vandals, and the Suevi; and it has been justly remarked that we ought not to forget 'that when Augustine, in his great work on the "city of God," celebrates the charity and clemency of Alaric during the sack of Rome, these Christian graces were entirely due to the teaching of Oriental missionaries" (Maclean's 'Missions in the Middle Ages,' p. 2).

2. The Conversion of Clovis and the Franks.—In the year 481 Clovis succeeded to the chieftaincy of the Salian Franks. In 493 he married Clotilda, the daughter of the king of Burgundy, who professed Christianity, and sought to persuade her husband to embrace it also; but his efforts at persuasion were without success. At length, on the battle-field of Tolbiac, his incredible victory came to an end. The fierce and dreadful Alemanni, fresh from their native forests, had burst upon the kingdom of his Ripuarian allies; Clovis, with his Franks, had rushed to the rescue, and the two strongest nations of Germany were to decide between them the supremacy of Gaul. The battle was long and bloody; the Franks, after an obstinate struggle, wavered, and seemed on the point of flying, and in vain Clovis implored the aid of his own deities. At length he betook himself to the vaunted omnipotence of Clotilda's God, and he vowed that if victorious he would abjure his pagan creed, and that his heir should be baptized, and the tide of battle turned; the last king of the Allemanli fell, and his troops fled in disorder, purchasing safety by submission to the Frankish chief. On his return Clovis recounted to his queen the story of the fight, the success of his prayer, and the vow he had made. Overwhelmed with joy, she on the spot, in the presence of the venerable bishop of Rheims, and on his arrival the victorious chief listened attentively to his arguments. Still he hesitated, and said he would consult his warriors. These rough soldiers evinced no unwillingness; with perhaps, the same indifferance that he himself had permitted the baptisms of his children, they declared themselves nothing but to accept the creed of their chief. Clovis therefore yielded, and the baptism was fixed to take place at the approaching festival of Christmas. The greatest pains were taken to lend as much solemnity as possible to the scene. The church was hung with embroidered tapestry and white curtains, and blazed with a thousand lights, while odors of incense, 'like airs of paradise,' in the words of the excited chronicler, 'filled the place.' The new Constantine, as he entered, was struck with awe. 'Is this the heaven thou didst promise me?' said he to the bishop. 'Not heavens,' he replied, 'but the beginning of them.' He then repeated the bishop. The service proceeded. As he knelt before the font to wash away the leprosy of his heathenism, 'Sicambrian,' said Remigius, 'gently bow thy neck, burn that thou didst adore, adore that which thou didst burn.' Thus, together with three thousand of his followers, Clovis espoused Clotilda's creed, and became the single sovereign of the West who adhered to the Confession of Nicaea. Everywhere else Arianism was triumphant. The Ostrogoth Theodoric in Italy, Theodoric the Great in the Visigothic kingdom, the bishops of Burgundy, the Suevian princes in Spain, the Vandal in Africa—all were Arians.

'The conversion of Clovis, like that of Constantine, is open to much discussion. It certainly had no effect upon his moral character. The same 'untutored savagery' he wore in his day, as before he became a Christian. In the sense in which he rendered to Catholicism were great, and they were appreciated. 'God daily prostrated his enemies before him, because he walked before him with an upright heart, and did what was pleasing in his eyes.' In these words Gregory of Tours expresses the feelings of the Gallic clergy, who rallied round Clovis to a man, and excused all faults in one who could wield the sword so strenuously in behalf of the orthodox faith. His subsequent career was a succession of triumphs: Gundebald, the Burgundian king, felt the vengeance of Clotilda's lord on the bloody field of Dijon on the Ouche, and the cities on the Saone and the Rhone were added to the Frankish kingdom. A few more years and the Visigothic kingdom in the south felt the same iron hand. The orthodox prelates did not disapprove the fact that this was a religious war, and that the supremacy of the Arian or the Catholic Creed in Western Europe was now to be decided. Clovis himself entered into a thousand of the spirit of the crusade: on approaching Tours, he made death the penalty of injuring the territory of the holy St. Martin; in the church of the saint he publicly performed his devotions, and listened to the voices of the priests as they chanted the 18th Psalm: 'Thou hast guided me, O Lord, with strength; thou didst with God the battle; thou hast subdued unto me those who rose up against me. Thou hast also given me the necks of mine enemies, that I might destroy them that hate me.' Whether he understood the words or not, they seemed prophetic of the subsequent career of the new champion of Catholicism. The orthodox historians exaggerate the treasury of legends to adorn his progress. A 'bird of wonderful magnitude' guided him through the swollen waters of the River Vienne—a pillar of fire blazed forth from the cathedral as he drew nigh Poitiers, to assure him of success. At last the bloody plains of Vouillé witnessed the utter defeat of the Arian Goths, and Alaric, their king, was ministered to of the sword of captive Vandalism. Both Clovis and his wife, Ermentaria of Rovegne, Toulouse, Angouleme, successively fell into the hands of the Frankish king, and then before the shrine of St. Martin the 'oldest son of the Church' was invested with the titles of Roman Patriarch and Consul, conferred by the Greek emperor Anastasiaus.

'We may trace the rise of the Frankish monarchy because it has an important connection with the history of Christian missions. Orthodoxy advanced side by side with the Frankish domination. The rude warriors of Clovis, once beyond the local boundaries of their ancestral faith, found themselves in the presence of a Church which was the only stable institution in the country, and bowed before a creed which, while it offered infinitely more to the soul and intellect than their own superstitions, presented everything that could excite the fancy or captivate the sense. Willingly, therefore, did they follow the example of their king; and for one that embraced the faith from motives of gain, it was adopted from lower motives. And while they had their reward, the Frankish bishops had theirs too, in constant gifts of land for the foundation of churches and monasteries, and in a speedy admission to wealth and power.
The Gospel was planted in Ireland by a single missionary, self-moved—or, rather, divinely moved—and self-supported. His historic name was Patrick, and the Roman Catholics (claiming him, without reason, as their own) call him St. Patrick. He was born about the year 410, and most probably in some part of Scotland. His parents were Christians, and instructed him in the Gospel. Patrick’s first visit to the field of his future mission was in his youth, as a captive of pirates, who carried him away, with many others, as a prisoner. Patrick was sold to a chieftain, who placed him in charge of his cattle. His own statement is that his heart was turned to the Lord during the hardships of his captivity. ‘I prayed many times a day,’ he says, ‘the fear of God and love to him were increasingly kindled in me. Faith grew in me, so that in one day I offered a hundred prayers, and at night almost as many; and when I passed the night in the woods or on the mountains, I rose at daybreak, and kneeled and prayed an hour and a daybreak. Yet I felt no pain. There was no sluggishness in me, such as I now find in myself, for then the spirit glowed within me.’ This is extracted from what is called the ‘Confession’ of Patrick, written in his old age.

Some years later he was again taken by the pirates, but he managed to escape, and returned to his captor, who urged him to remain with them, but he felt an irresistible call to carry the Gospel to those among whom he had passed his youth as a bondman. Many opposed my going,’ he says in his ‘Confession,’ and said behind my back, ‘Why does this man rush into danger among the heathen, who do not know the Lord?’ It was not badly intended on their part, but they could not comprehend the matter on account of my unchangeable position. Many gifts were offered me with tears if I would remain. But, according to God’s guidance, I did not yield to them; not by my own power—it was God who conquered in me, and I withstood them all; so that I went to the people of Ireland to publish the Gospel to them, and suffered many insults from unbelievers, and many persecutions, even unto bonds, resigning my liberty for the good of others. And if I am found worthy, I am ready to give up my life with joy for his sake.”

In the spring of 433, fourteen years after he returned from his mission, about the year 440; not far from the time when Britain was finally evacuated by the Romans.

Patrick being acquainted with the language and customs of the Irish people, as a consequence of his early captivity, gathered them about him in large assemblies at the beat of a kettle-drum, and told the story of Christ so as to move their hearts. Having taught them to read, he encouraged the importation of useful books from England and France. He established cloisters after the fashion of the times, which were really missionary schools for educating the people in the know ledge of the Gospel, and for training a native ministry and missionaries; and he claims to have baptized many thousands of people.

“The people may not have adopted the outward profession of Christianity, which was all that, perhaps, the first instance they adopted, from any clear or intellectual appreciation of its superiority to their former religion; but to obtain from the people even an outward profession of Christianity was an important step to ultimate success. It secured toleration, at least, for Christi ans. It must enable him to plant in every tribe his churches, schools, and monasteries. He was permitted, without opposition, to establish among the half pagan inhabitants of the country societies of holy men, whose devotion, usefulness, and piety soon produced an effect upon the most barbarous and savage hearts. This was the secret of the rapid success attributed to Patrick’s preaching in Ireland. The chief tens were at first the real converts. The baptism of the chieftain was immediately followed by the admission of the clan. The clansmen pressed eagerly around the missionary who had baptized the chief, anxious to receive that mysterious initiation into the new faith to which their chieftain and father had been admitted. The requirements preparatory to baptism do not seem to have been very rigorous; and it is, therefore, not improbable that in Tirlawly, and other remote districts, where the spirit of manliness was strong, Patrick, as he himself tells us he did, may have baptized some thousands of men.”

“When this zealous missionary died, about the year 498, his disciples, who seem all to have been natives of Ireland—a native ministry—continued his work in the same spirit. The monasteries became as long so numerous and famous that Ireland was called Insula Serenus, the ‘Island of Saints.’ It gives a wrong idea of these institutions to call them monasteries, or to call their inmates monks. ‘They were schools of learning and abodes of piety, uniting the instruction of the college, the labors of the workshop, the charities of the hospital, and the worship of the Church. They originated partly for the welfare of the community, and partly out of the necessity of the case, which drove Christians to live together for mutual protection. The missionary spirit, and consequent religious activity, prevailing in the Irish monasteries, preserved them for a long time from the asceticism and mysticism incidental to these monasteries, and made them a source of blessing to the world.’ The celibacy of the clergy was not enjoined in those times. Married men were connected with the cloisters, living, however, in single houses. The Scriptures were read, and ancient books were collected and studied. The missions which went forth from these institutions, as also those from England and Wales, are frequently called ‘Culdee’ missions. See Culdees and Iona.

“The names of Columba and Columbanus are familiar to the readers of ecclesiastical history. Both were Irish missionaries, and both were from the institution at Bangor, in Ireland. Columba’s mission was to the Picts of Scotland, and was entered upon at the age of forty-two, in the year 568. This was thirteen hundred years ago, and about seventy years after the time of Patrick. He was accompanied by twelve associates, and was the founder of the celebrated monastery on Iona, an island lying next to the Hebrides, and a situation somewhat remote from the Hebrides. This school, which had an enduring fame, became one of the chief lights of that age. Continuing thirty-five years after Columba’s management, it attained a high reputation for Biblical studies and other sciences; and missionaries went from it to the northern and southern Picts of Scotland, and into Eng-
land, along the eastern coast to the Thames, and to the European continent.olumbus entered on his mission to the partially Christianized, but more especially to the pagan portions of Europe, in the year 589. That he was an evangelical missionary may be confidently inferred from the tenor of his life, and from the records of his Christian experience. He thus writes: "O Lord, give me the light to my lamp, thy Son, my God, that love which can never cease, that will kindle my lamp but not extinguish it, that it may burn in me and enlighten others. Do thou, O Christ, our dearest Saviour, thyself kindle our lamps, that they may evermore shine in thy temple; that they may receive unceasing light from thee that will enlighten our path; and that, through the merits of Jesus, I pray thee, give thy light to my lamp, that in its light the most holy place may be revealed to me in which thou dwellst as the eternal Priest, that I may always behold thee, desire thee, look upon thee in love, and long after thee." Columbus went first to France, taking with him twelve young men, as Columbus had done, to be his co-laborers—men who had been trained under his special guidance. Here, as a consequence of continual wars, political disturbances, and the remorselessness of worldly-minded ecclesiastics, the greatest confusion and irregularity prevailed, and there was great degeneracy in the moral and religious orders. Columbus preferred casting his lot among the pagans of Burgundy, and chose for his settlement the ruins of an ancient castle in the midst of an immense wilderness, at the foot of the Voges Mountains. There they often suffered hunger, until the wilderness had been in some measure subdued and the earth brought under cultivation. The mission then became self-supporting, but we are not informed by what means the previous expenses were defrayed. Preaching was a part of their duty, though there is less said of this than of their efforts to impart the benefits of a Christian education to the children of the country. The missionaries were at all times subject to persecution and to the reproofs of the world. All the pupils joined in tilling the fields, and such was their success in education that the Frankish nobles were forward to place their sons under their care. It was the most famous school in Burgundy, and there was not room in the abbey for all who pressed to gain admission; so that it became necessary to erect other buildings, and to bring a large number of teachers over from Ireland to meet the demand. Here the eminent missionary pursued his labors for a score of years. As he represents himself to have buried as many as seventeen of his associates during twelve years, the number of his co-laborers must have been large. The discipline under which they labored was severe, but perhaps scarcely more so than was required by the rude spirit of the age; and he took pains to avoid the error, so prevalent in the Roman Church, of making the essence of piety consist in externals. The drift of his teaching was that everything depended on the state of the heart. Both by precept and example he sought to combine the contemplative with the useful. At the same time he adhered, with a free and independent spirit, to the peculiar religious usages of his native land. As these differed in some important respects from what were then prevalent among the degenerate Frankish clergy, he had many enemies among them, who sought to drive him from the country. This they at length effected, with the aid of the wicked mother of the reigning prince. Columbus was ordered to return to Ireland, and to take his countrymen with him. This he did not do, but repaired first to Germany, and then to Switzerland, and finally to the eastern extremity of the Lake Constance, laboring among the Suevi, a heathen people in that neighborhood. This territory coming at length under the dominion of his enemies, he crossed the Alps, in the year 615, into Lombardy, and founded a monastery near Pavia; and there this apostle to Franks, Swabians, Bavarians, and other nations of Germany, passed the remainder of his days, and breathed out his life Nov. 21, 615, aged seventy-two years. Gallus, a favorite pupil and follower of Columbus, remained behind in consequence of illness, and became the apostle of Switzerland. He also was an Irishman, and was characterized, as was his master, by love for the sacred volume. In what was then a wilderness he founded a monastery, which led to the clearance of the forest and the conversion of the land into cultivable soil, and it afterwards became celebrated under his name, St. Gall." Here he labored for the Swiss and Swabian population till his death, in the year 640. This monastery was pre-eminent for the number and beauty of the manuscripts prepared by its monks; many of which, and, among others, the great copies of the Scriptures into the Alleman language, about the year 700, are said to be preserved in the libraries of Germany.

"Neander is of the opinion that the number of missionaries who passed over from Ireland to the continent of Europe must have been great, though of very few is there any exact information. Wherever they went, cloisters were founded, and the wilderness soon gave place to cultivated fields. According to Ebrard, there were more than forty cloisters in the vicinity of the Loire and Rhone, which were governed according to the rules of Columbus, and to which emigrants came from Ireland for the sake of an education. He also affirms that Germany was almost wholly heathen when that missionary entered it. But before the year 720 the Gospel had been proclaimed by himself and his countrymen from the mountains of Switzerland down to the islands in the delta of the Rhine, and eastward from that river to the River Inn, and the Bohemian forest, and the borders of Saxony, and still farther on the sea-coast; and all the really German tribes within those borders were in subjection to the Christian faith as it had been taught by the Irish missionaries. Ebrard's earnest testimony to the evangelical nature of the Irish missions may be overthrown by the fact that they read the Scriptures in the original text, translated them wherever they went, expounded them to the congregations, recommended the regular and diligent perusal of them, and held them to be the living Word of Christ. The Scriptures were their only rule of faith. They preached the inherited depravity of man, the atoning death of Christ, justification without the merit of works, regeneration as the life in him who died for us, and the sacraments as signs and seals of grace in Christ. They held to no transubstantiation, no purgatory, no prayers to saints, and their worship was in the native language. But, though they used neither pictures nor ceremonies, they have been observed to make the use of the simple cross; and Gallus, the distinguished champion of Columbus, is said, when marking out a place on which to erect a monastery, to have done it by means of a cross, from which he had suspended a capsule of relics. Complete exemption from superstition was perhaps among the impossibilities of that age" (Anderson's Foreign Missions, p. 69-82).

4. Similar in interest, though varied in detail, are the stories of Augustine's mission to England, A.D. 596; that of Boniface to Germany, A.D. 715; and that of Anskar to Scandinavia, A.D. 829; together with that of many of their associates and successors. Nor were the missions among the Scalian races during the 9th and 10th centuries without many incidents of great interest. See Maclear's Missions in the Middle Ages; Milman's Latin Christianity; Merivale's Conversion of the Northern Nations; Galt's History of Civilization; etc.; S. T. Coleridge, Mohun's Missionary Journal.

5. A period has now been reached when it is necessary to take note of another important element in the history and character of missions, viz., papal influence. Gregory the Great, A.D. 588-604, was the first of the bishops of Rome who exerted any decided official influence on the propagation of Christianity by means of missions. "His project of sending missionaries to Eng-
land, formed before his attaining the pontifical dignity, was among the first to be carried into execution. In the year 596 he despatched Augustine, with forty assistant monks, to effect the conversion of the Anglo-Saxons. Conversion, in the dialect of Rome, signified nothing more than proselytism; and it was sanguinely hoped that by influencing the chief to renounce idolatry their subjects flocking in would be converted in a short time. The success of Augustine and his brethren was even beyond their expectation. Landing on the isle of Thanet, they applied to Ethelbert, the king of Kent, for permission to preach in his kingdom. Ethelbert had married a Christian princess, and was therefore not unfavorably inclined to the discussions and arguments of his guests. Yet so ignorant was he of the nature of their errand that he insisted that their first interview with him should take place in the open air, lest he should fall a victim to their magical arts. Augustine's eloquence, however, soon inspired the king with confidence, and Ethelbert then granted to the missionaries an old, ruinous church at Canterbury, dedicated to St. Martin, and which had existed from the time of the Romans, as their first station for preaching the Gospel. Ere long the king yielded to the arguments of Augustine or the persuasions of his wife, and his baptism was followed by that of many of his subjects, no fewer than ten thousand being thus nominally received into the Church on a single day. Thus Gregory was overjoyed at the success of his mission, and needed no solicitations to send a re-enforcement of preachers, all of whom were monks. He next divided the whole island into two archbishoprics, appointing Augustine to be archbishop of London, and constituting York the metropolitan city of the north when Christianity should have penetrated so far. As London had not yet, however, embraced the new religion, and was not within the domains of Ethelbert, Augustine made Canterbury his abode and see. In the true spirit of Roman arrogance, Augustine assumed to himself the right to look upon this church in Britain, whether it had been planted by the recent laborers or existing from earlier times. But the ancient British churches were indignant at such an encroachment on their independence and liberties. 'We are all prepared,' said Deynouch, abbot of Bangor, on one occasion, 'to hearken to the Church of God, to the pope of Rome, and to every pious Christian, so as to manifest to all, according to their several stations, perfect charity, and to uphold and aid them both by word and deed. What other duty we owe to him whom you call pope, or father of fathers, we do not know; but this we are ready to exercise towards him and every other Christian that you please to name in your presence.' Augustine was now in the full possession of his see, and he was heard to say to his Anglo-Saxon followers, 'Well, then, since they will not own the Anglo-Saxons as brethren, or allow us to make known to them the way of life, they must regard them as enemies, and look for revenge.' The horrible spirit which dictated such a speech is too apparent to need comment, and shows how little of real Christianity the Roman missionaries mingled with their zeal for the papal see. In the contests which the new Church thus waged with the old, the influence of Augustine and his followers with the Saxon kings generally enabled them to triumph; and although the British churches long persevered in maintaining their freedom, they gradually became absorbed in the Anglican hierarchy; and, long before the Norman invasion, those who ventured to dissent from the Roman forms of worship were only to be found in the extreme parts of the island.

"During the pontificate of Gregory, the Spanish Church also became subject to the primacy of Rome. Before this period the Goths, who had established their power in Spain, were of the Arian party; but on their king, Reckared, professing his belief in the doctrine of the Trinity, the bishops in a body requested the pope to undertake the supervision of their affairs—a request with which Gregory was only too happy to comply. He attempted, moreover, to obtain the submission of the French clergy, but in this he could only partly succeed. Nevertheless, he formed alliances with the French princes, nobles, and bishops; and, considering their Church as subject to his inspection, did not hesitate to interfere on many occasions both with advice and with admonition. "At the request of the pope and the zeal of Gregory for multiplying nominal converts to Christianity that led him to introduce alterations in the forms of worship, which were so exaggerated by succeeding pontiffs as to change the solemn service of God into a ridiculous show. Observing the influence which the harmonies of music and the beauty of paintings and illuminated manuscripts exerted upon the minds of the Lombards and other half-civilized tribes, he resolved to employ the arts as handmaidens to religion" (Lives of the Popes, p. 78-81).

For more than one hundred years following, although the papacy was constantly making advances towards temporal sovereignty, no one of the popes possessed the character of Gregory. In 715 Gregory II came to the papal chair. It was he that sent Corbinian as missionarv to France and Boniface to Germany. Gregory III, about 741, sent the first ambassador of Rome to France. From the middle of the 8th century the popes laid claim to a temporal sovereignty, and from A.D. 800, when the bishops of Rome were recognized as supreme in the West, that monarch assumed the protectorate of Christendom, and stood ready to the extent of his power to promote the interests of the Roman see, which he chiefly did by means of conquest. From that time, more than before, missions were made an agency for the propagation not merely of a ceremonial Christianity, but of the power of the popes. Monasticism, already widely extended, became an auxiliary of great power, that could be wielded for any special object contemplated by the Roman see. The popes wielded the prerogative of establishing and controlling the various orders of monks, and it was from them exclusively, whether in the local supervision of bishops, were able always to hold them in the most direct subservience to their own ambitions. From the middle of the 9th century onward there was a vast increase of monasteries in various parts of Europe. The Benedictine order was in the ascendency, but, notwithstanding repeated reformation of its rule in Germany, many of the monks were dissolute, and, as the clergy of various countries were chiefly taken from the monasteries, anarchy, simony, and concubinage largely prevailed. This was the sacram opludocum, the darkest of the dark ages; and, in the general stagnation which prevailed, there was no organized effort against its tendencies. Europe was considered Christian, and there were no elements at work to improve the type of Christianity it had received, while, on the contrary, many germs of evil that had been sown as tares were springing up to choke whatever of wheat was left to grow.

6. The Crusades.—About this period rumors of violence and insult to Christian pilgrims in the East began to excite attention, and the certainty that Christians were greatly oppressed by the Moslems at Jerusalem and throughout Palestine became the pretext for the crusades. The idea of rescuing by force the Holy Sepulcher, satisfaction of the indignant feelings that have been excited as a duty of the Church under pope Sylvester II, A.D. 999-1008. It took form and action in eight successive crusades or wars of the cross, extending through two centuries and a half. These so-called holy wars scarcely differed in principle from the wars of Clovis, Charlemagne, and others, by which the Church had been used among the nations and tribes of Northern Europe; and also of Cortez and Pizarro, made after the discovery of the New World, to Christianize (?) the nations of Mexico and Central and South America. The peculiarity of the crusades consisted in the remoteness of the land they aimed to conquer, the resistance offered by the Moslem races, and the defeat and disasters that befell the crusaders in one form or another of eight successive
sue crusades, until, by the loss of millions of men and treasure, all Europe was exhausted.

The only proper view to take of these wars is to regard them as great ones, in which the Christian missionary expeditions. As such they were sanctioned by the popes, preached by the monks, sustained by the people, and entered by the warriors, who went forth prepared to sacrifice treasure and life, but confident of winning heaven as a result. Mark the history and language of pope Innocent III, A.D. 1215: "The event of the crusades might have crushed a less lofty and religious mind than that of Innocent to despair. Armies after armies had left their bones to crumble on the plains of Asia Minor or of Galilee; great sovereigns had perished or returned disconsolate from the Holy Land. The great cities of the East, in which the Moslem spirit in days of splendor and brilliance was dissension, jealousy, hostility. The king of Antioch was at war with the Christian king of Armenia. The two great orders, the only powerful defenders of the land, the Hospitallers and the Templars, were in implacable feud. The Crusaders of Palestine were in morals, in character, in habit the most licentious, most treacherous, most ferocious of mankind. But the darker the aspect of affairs the more firmly seemed Innocent to be persuaded that the crusade was the cause of God. In every new disaster, in every discomfiture and loss, the popes had still found unailing refuge in ascribing them to the sins of the Christians, and their sins were darker than the crusades of the Crusaders, and as hard to bear. It needed but more perfect faith, more holiness, and one believer would put to flight twelve millions; the miracles of God against Pharaoh and against the Philistines would be renewed in their behalf. For the first two or three years of Innocent's pontificate, address after address, rising one above another in impassioned eloquence, enforced the duty of contributing to the holy war. This was to be the principal, if not the exclusive theme of the preaching of the clergy. In letters to the bishop of Syracuse, to all the bishops of Apulia, Calabria, and Tuscany, he urges them to visit every city, town, and castle; he exerts not only the nobles, but the citizens, to take up arms for Jesus Christ. Those who cannot assist in person are to assist in other ways, by furnishing ships, provisions, and money. Somewhat later came a more energetic epistle to all archbishops, bishops, abbots, priors, and princes and barons of France, England, Hungary, and Sicily. The vicar of Christ himself would claim no exemption from the universal call; he would, as became him, set the example, and in person and in estate devote himself to the sacred cause. He had therefore himself invested with the cross two cardinals of the Church, who were to precede the army of Christ's soldiers in their undertakings, give them support, but at the expense of the holy see. After the pope's example, before the next March, every archbishop, bishop, and priors, and was to furnish a certain number of soldiers, according to his means, or a certain rate in money for the support of the crusading army. Whoever refused was to be treated as a violator of God's commandments, threatened withcondign punishment, even with suspension. To all who embarked in the war Innocent promised, on their sincere repentance, the remission of all their sins, and eternal life in the great day of retribution. Those who were unable to proceed in person might obtain the same remission in proportion to the bounty of their offerings and the devotion of their hearts. The estates of all who took up the cross were placed under the protection of St. Peter" (Milman, Lat. Christianity, v, 75 sq.).

Had such language been used, such influence exerted, and such sacrifices made in modern times, the Savonarola plan of evangelizing the world, who can tell what happy results might not have been attained as the issue? But bad efforts in a good cause, no less than well-mean efforts in a bad cause, can only be expected to result disastrously. Hence true Christianity, instead of being promoted, was perverted and antagonized, till the hope of its very existence had well-nigh fled the earth. Nevertheless, some fragments of the true leave still remained, sometimes in the Church, and sometimes in small and obscure sects, in the Waldenses. A specimen of the better and higher aspirations cherished by individuals is illustrated in the history of Raymond Lull (see LULLY), but the difficulties in their way were insuperable. It need not be denied that the terrible evils of the crusades were in a subsequent period in many respects overruled for the good of humanity. But as Christ does not enter into the scope of providential action to avenge the crimes of men or the errors of Christians, the world and the Church are destined to suffer perpetual loss as a result of the milito-missionary fanaticisms of the medieval Church. What was needed to bring about the triumph of the Spirit in the Church was the discipline of centuries under consideration was the simple, earnest Gospel, accompanied by the pure Word of God, and illustrated by the lives of its teachers. But a long period was destined to elapse before that most desirable summation was to be realized. Indeed, it was only by slow degrees, and through long and painful struggles, that the Church again recovered the apostolic idea of missions.

7. Roman Catholic missions assumed a new and, in some respects, an improved phase during the 13th and 14th centuries, chiefly through the mendicant and preaching orders of Dominic and Francis d'Assisi. By them all the sense of the importance of faith in the salvation of mankind was restored, as well as the inarticulate, later the articulate, faith in all the countries of Europe, and even to extend it by peaceful foreign missions among pagans and Mohammedans in various parts of Asia and Africa. "In one important respect the founders of these new orders absolutely agreed—in their entire identification with the lowest of mankind. At first amicable, afterwards enmious, eventually hostile, they, or rather their orders, rivalled each other in sinking below poverty into beggary. They were to live upon alms; the coarsest imaginable dress, the hardest fare, the narrowest cell, was to keep them down to the level of the humblest. Both the new orders differed in the same manner, and greatly to the advantage of the hierarchical faith, from the old monastic institutions. Their primary object was not the salvation of the individual monk, but the salvation of others through him. Though, therefore, their rules within their monasteries were strictly and severely monastic; bound by the common vows of poverty, chastity, and obedience, seclusion was no part of their discipline. Their business was abroad rather than at home; their dwelling was not like that of the old Benedictines, or others, in uncultivated swamps and forests of the North, on the dreary Apenines, or the exhausted soil of Italy, or the gloomy grandeur of their barren and astonishingly GPS imaginary, beautiful, or savory, or high, or any other place, merely, at times of necessity, as a secondary consequence, to compel the desert into fertile land. Their work was among their fellow-men, in the village, in the town, in the city, in the market, even in the camp. Monastic Christianity would no longer live the world; it would subjugate it, or win it by gentle violence" (Milman, Lat. Christianity, v, 238).

But, being monastic, this form of Christianity lacked the vital elements of evangelical power, and soon ran into fearful excesses. Dominic himself personally took part in the bloody crusade against the Albigenses, whose era long was followed by the establishment of the Spanish Inquisition, with 

Dominican friars as its generals and chief inquisitors. See Inquisition. The pretext in both cases was the conversion of heretics, for which confiscation, torture, and murder were as relentlessly applied to praying and Bible-reading Christians as to Jews and Moors. Thus the world had still to wait long centuries before the apostolic idea of Christian missions returned to the Church.

V. Modern Missions. — I. Roman Catholic.— Prior to the close of the 15th century, the zeal of the Church of Rome had been roused to a fervid state of excitement by the reported successes of the missionaries of the men-
diocesan orders who had followed in the train of Portu-
guese discoveries along the coast of Africa and beyond
to the Cape of Good Hope to India. At that period New
York, the capital, and the Hudson River, the source of the
fields that as a consequence were opened to conquest
and adventure a flamew the zeal of Protestantism.
The idea of planting the cross upon the islands and con-
tinents of America was deemed sufficient to justify if
not to hallow any violence necessary to subjugate the
native inhabitants. Missionaries sailed in every fleet, and
every new discovery was claimed by the Church in
the name of some Christian sovereign. About the same
period the order of the Jesuits was founded, which by
its rapid increase and decisive influence soon rivalled
all preceding orders, sending forth its missionaries to
India and China. There were new fields to conquer,
and exciting impulse was given to agencies which suc-
cceeded in planting Latin Christianity throughout re-

gions of vastly greater extent than it had ever before
occupied.

No unprejudiced mind can become reconciled with
the vast extent of the missionary operations undertaken
and maintained by the missionaries of the Church of
Rome during the 16th, 17th, 18th, and 19th centuries
without according to the actors in them the meed of
high admiration for their devotion and self-sacrifice,
however he may lament the defects and errors of the
system, and the means by which they achieved, and the
low grade of Christian life they promoted.

"In the East, missions were founded in Hindustan,
the East India Islands, Japan, China, Tonquin, Abyss-
sinia; in America, the half-civilized natives of Peru and
Mexico were converted, and their descendants now form
the mass of the people, and the Church of Rome has
enrolled two of Indian blood among her canonized saints.
The nomadic tribes from Labrador to Cape Horn were
visited; many were completely gained, in other parts
reductions were formed, and such as could be persuaded
were entered into instruction alike in the truths of Chrishi-
ity and the necessities of a civilized life. Close on these
discoveries came the religious feuds of the 16th century,
and the defection of nearly every prince in Northern
Europe from the Roman see. State churches were
formed in many of the German states, the Scandinavian
kings, Holland, England, and Scotland, based on
the doctrines of Luther and Calvin. This led to a new
species of mission: colleges were established in Catholic
countries for the education of their fellow-believers in
the northern countries, and the training of such as
wished to enter the priesthood; and from these semina-
rIES missionaries proceeded to their native country to
minister to their brethren, and to gain back such as
sought admission to the Latin Church to the same change,
and to the penalty of death; but this, as usually happens,
only raised up others to fill their places. From this
period the Catholic missions were either home missions for
instructing the ignorant and neglected in Catholic coun-
tries, or those in which the exercise of religion is per-
mitted (comp. Nitzsch, Praktische Theologie, vol. iii,
pt.1); missions in Protestant countries to supply clergy
for the Catholic portion; missions among schismatics to
reunite them to Rome; missions to pagan nations.

These missions became at last so important a part of the
Church government that Gregory XV (1621-23) insti-
tuted the Congregation de Propaganda Fide (see Propa-
ganda), which gave a new impulse to the zeal and
fervor of missionaries, and all interested in the mission-
ary cause. This congregation or department consisted
of thirteen cardinals, two priests, a religious, and a
secretary; and to it exclusively was committed the direc-
tion of missions in all the parts of the Christian coun-
tries. Considerable sums were bestowed by public and
private munificence on this department, and under Ur-
ban VIII a college, usually styled the Urban College, or
the Propaganda, was erected and richly endowed. Here
candidates for the priesthood and the missions are re-
flected from all quarters of the globe, and a printing-
press issues devotional works in a great number of lan-
guages. Besides this college, there soon rose the Arme-
nian college in Venice, the German, English, Irish, and
Scottish colleges at Rome, the Belgian colleges of Rheims and Douay, the Irish and Scotch at Paris, the
Irish colleges at Louvain and Valladolid, and some oth-
ers, all intended to train the missionaries for their own
countries; and at a later date the Chinese college at
Naples was founded in the same view, and of late years
it has assisted in the education of the Jesuits, priests,
and religious houses of various orders were also
founded on the Continent for natives of the British Isles,
and from these also missionaries annually set out for
the missions in the English dominions. Most of these lat-
ter have, however, since disappeared, swept away by
the French Revolution; and a new and more useful plan
was proposed in the United States" (Newcomb, Cyclopedia of Missions, p. 299 sqq.). See English Review, xvi. 421 sq. We also extract from Newcomb a detailed account of the results of these missionary operations; for still later particulars we refer the reader to the articles on the several coun-
tries in this Cyclopedia.

"1. Missionary Societies. — There are, properly speaking,
no missionary societies in the Catholic Church similar
to those among Protestants. Three societies, of quite recent
origin, are engaged in the propagation of the Gospel:
the Propagation of the Faith at Lyons; the Leopoldine
Society, at Vienna; and the Society of the Holy Child-
hood, in France — raise funds by a direct appeal to the
people, which, however, are only to be applied to mis-

tory to various missions, as they think proper, but over
the missionaries and stations they exercise no control.
The work of these societies is conducted entirely upon
the plan of this aid, relying, in default of it, on other
resources. The last-named society is made up of children
and has a special object — the education of the money
raised by its means to free children exposed to death by
their unnatural parents in China and Ammon. Besides the aid thus given, some
missions have funds established before the present cen-
tury, and formerly French, Spanish, and Portuguese mis-

ionary societies were supported from government funds.
The great mass of the missions at present are individual
efforts, supported by the zeal and sacrifices of the bishops
and clergy of the various countries.

"11. Receipts. — The amount raised in 1529 by the Society
for the Propagation of the Faith was $656,000; by the
Society of the Holy Childhood, $117,000, total, $1,763,000.

"III. Missionary Stations. — A. Europe. — 1. Among the
Protestant states of Europe, the only countries where
the Catholic Church is still a mere mission are Denmark,
Norway, and Sweden. Here the number of Catholics is very
small; and no details are published, as there are no civil
penalties that are enforced against members, and espe-
cially converts of the Roman Church. The whole number
does not exceed 250,000. According to recent estimates,
the United Armenians have an archbishop at Constantinople; the Latins, several bishops and vicars apostolic, and about 50,000 Catholics are scattered among the
subdivisions of the Roman Catholic Church in Moldavia, Hungary, and Roumania, and Lazariats of
Constantinople and Salonica — the latter aided in their
labors by the Greek bishops of Chalced, Sarpi. The number of Latins living in Russia is estimated at 615,000, and is constantly on
the increase.

"2. Asia. — In this kingdom there are constant acces-
sions to the Latin and United Greek churches, especially
in Athens, Piraeus, Patras, Nauplia, Navarino, and Holo-
clia. There are in this kingdom and the Indian republic
flourishing missions of the Capuchins and Jesuits.

"2. Africa. — 1. In the Near East the Franciscans have
had missions to the Holy Land since the crusades, which,
more or less active at times, are now pushed with energy.
The Jesuits there, their original home, and the Eastern
Christians, won many back to Rome, established
school-house, and raised the standard of clerical instruc-
tion there, and so disposed the Maronites, the Syrian,
and Syrian patriarchs, and elsewhere an Armenian
and a Chaldean patriarch, all in communion with Rome; and
the number of Catholics who acknowledge the supremacy
of Pius IX is about a million.

"2. In the Indian Ocean there is a mission directed by
the Lazarists and protected by France, as well as a
United American Church well established and tolerated.

"There are in India missions in many of the countries
dated back to the days of St. Thomas, as in the
mission of Goa by the Portuguese in 1501, and was at first
conducted by the Franciscans, Dominicans, and secular

directors, of whom there were more than 2,500 about
the arrival of Francis Xavier in 1542. By his labors, and
those of other fathers of the Society of Jesus, numbers were
converted, and the preaching of the Franciscans, the

domestic settlements of the Order of St. Paul, and
and Ceylon, and Travancore, while the former mis-

sions in the latter parts of the country were engaged in
missionary enterprise to Rome all the Chaldaic Christians who had fallen into

Nestorianism. The Jesuit mission is, however, the most
celebrated, and, after Xavier, owed its chief progress to

Robert de Nobili, a Jesuit, of Portuguese and Indian birth, arrived in China in 1542. He was the first European to make a serious attempt to bring Christianity to China. He is known as the 'Apostle of the Chinese' because of his tireless efforts to spread the Gospel and his dedication to the faith. He is also known as the Father of the Chinese Church. He is remembered for his efforts to adapt the teachings of Christianity to the cultural and religious traditions of China, and for his role in establishing the first Christian mission in China. He is also known for his efforts to establish educational institutions and to promote the study of Chinese language and culture.

In China, the Jesuits played a significant role in the spread of Christianity. They worked to establish schools and universities, and to establish a network of churches and missions. They also played a role in the development of Chinese literature and culture, and in the promotion of education and social development.

The Jesuits were also involved in the politics of the Chinese Empire. They worked to establish contacts with Chinese officials and to promote the interests of the Catholic Church. They also played a role in the development of Chinese Christianity, and in the establishment of a Chinese Catholic hierarchy.

The Jesuits were expelled from China in 1644, and remained absent from the country for over two centuries. During this time, the Catholic missions in China continued to develop, and to adapt their teachings to the cultural and religious traditions of the Chinese people. The missions were also involved in the development of Chinese literature and culture, and in the promotion of education and social development.

In the late 19th and early 20th centuries, the Catholic missions in China were re-established, and the Catholic Church continued to grow in China. The Chinese Catholic Church is now one of the largest in the world, with over 12 million members.

In recent decades, the Catholic Church in China has faced significant challenges, including government interference and persecution. However, despite these challenges, the Church continues to grow, and to play a significant role in the cultural and religious life of China.
"Congregation of the Sacred Hearts of Jesus and Mary," at the Sandwich Islands. They began it in 1856, and continued it till their expulsion by the government in 1862. It was the last of the religious vicariates, and missions began at Gambier, Tahiti, and, for a second time, at the Sandwich Islands. They were divided by the vicar, and the vicarates were directed by priests of the Society of the Propagation of the Faith and the Missions.

Other stations began in New Zealand, at Fittuna, in the Missions of the South Pacific, and in the Sandwich Islands. Missions extended so rapidly that several new vicariates were formed; and, in spite of martyrdom, disease, and shipwreck, they still advanced. On the coast now number 8 bishops, 10 vicariates, and 350 missionaries.

2. South America.—1. Spanish Missions.—Missions were established in Mexico, Central America, and South America; they were converted, especially in Mexico and Peru, where their descendants reside. In Peru, Florida, while a Spanish province, the Indians were converted by Franciscans, and formed villages on the Apalachee peninsula. In the city of St. Augustine, the English drove these Indians from their villages, and their descendants, now called Seminoles, or wanderers, have lost all the marks of their identity. In Florida, the missions were conducted by Franciscans, and till a recent period were in a very flourishing state, but are now destroyed. The missions were established by Don Juan de Jesús, in Nova Scotia and Maine, about 1612. The Recollects followed, succeeded again by the Jesuits. This mission converted the Abenakis of Maine, now forming two villages in the state of Maine and two in Canada; the Hurons of Upper Canada, of whom the famous Lorette, near Quebec, is a part; the Iroquois, or Five Nations, who form the three Catholic villages at Caughnawaga, on the Mohawk river; the five Catholic bands of the Lake Superior, the Algonquins, who form a mission village with the last-named band of Iroquois; the Micmacs of Nova Scotia, now attended by the secular clergy; the Montagnais, at Chicoutimi and Red River, under a bishop and missionaries; the Ottawa of Lake Superior, who, with the Ojibwas and Menomonees, are now under the care of the Catholic clergy; the Illinois and Miami, whose descendants are now on Indian Territory and in Louisiana; the Chippewas and their descendents, until the year 1867, at Kuperas, are also there. The Catholics of Maryland began missions among the neighboring tribes, but tribe and mission have been incorporated into the United States. Since the establishment of a Church hierarchy in the United States, attention has been gradually turned to the Indian missions. Many of these states are yet to be visited. The missions of Upper Michigan consist of 1 bishop, 6 priests, 5 schools, and a large number of Catholic Ottawas and Ojibwas; the Ohio missions, a bishopric, a bishopric in Kentucky, 6 schools, 5000 Catholics of the Pottawatomies, Osages, Miami, Illinois, Kansas, and Kappas. Besides these, there are in the diocese of Milwaukee a Menomonee and an Ottawa mission; in that of St. Paul's, Minnesota, a Sioux, a Winnebago, and a stock of Jesuits; and in Oregon, there are missions among the Wascos, Cayuses, Pollock Indians, and Flatheads—the Indian Catholics of the territory of Idaho.

3. Protestant Missions. (1.) Beginnings and Gradual Development. The 16th century covered the period of the great Reformation, in which, by severance from the Church of Rome, an effort was made to escape from the accumulated errors and abuses of more than ten centuries, and to establish Christianity on a Scriptural basis. See Reformation. On the part of the Reformers, it was a struggle for a larger religious freedom and everywhere present necessity was the establishment of churches as the nuclei of future action. Unhappily a lack of unity, combined with the inherited spirit of intolerance, for a time led to strife among themselves, which greatly retarded the development of the Protestant churches, and postponed the day of their active efforts for the conversion of the world. Nevertheless the Church of Geneva, as early as 1556, inaugurated foreign missions by sending a company of fourteen missionaries to Rio de Janeiro, in hope of being able to introduce the Reformed religion into Brazil; but the mission was de
terminated by the capture of the chalcery with religious and political opposition (see Kidder, Sketches of Brazil, i. ch. 1). In 1559 a missionary was sent into Lapland by the celebrated Gustavus Vasa, king of Sweden. Early in the 17th century the Dutch, having obtained possession of Ceylon, attempted to convert the natives to the Christian faith. About this time, many of the Nonconformists, who had settled in New England, began to attempt the conversion of the aborigines. Mayhew in 1648, and the laborious Eliot in 1646, devoted themselves to this apostolic service. In 1649, during the protectorate of Cromwell, there was incorporated by act of parliament the "Society for the Propagation of the Gospel in New England." In 1660 the Society was solved; but, on urgent application, it was soon restored, and the celebrated Robert Boyle was appointed its first

MISSIONS

go-vernor. The zeal of this distinguished individual for the diffusion of the Gospel in India and America, and among the native Welsh and Irish; his munificent donations for the translations of the sacred Scriptures into Malay and Arabic, Welsh and Irish, and of Eliot's Bible into the Massachusetts Indian language, as well as his numerous translations of the Four Odes of the Psalms for the Massachusetts Indians, in the form of the Indian tongue, and of the Catechism, of which the title is, "Religions;" and, lastly, his legacy of £5400 for the propagation of Christianity among the heathens, entitle him to distinct attention. Besides these incipient efforts to diffuse the Gospel, glowing sentiments on the subject are to be found scattered through the sermons and epistles of such of the early missionaries as are mentioned in the present work. A Christian heart was laboring and swelling with the desire of greater things than these. Still the century closed with witnessing little more than individual and unendured enterprises. The "Society for Promoting Christian Knowledge," which will be noticed hereafter, whose objects, to a certain extent, embrace the labors of missionaries, was organized in England in 1698; but it was not till the early part of the 18th century that what has been denominated the age of missionary association fairly began to dawn. It opened very faintly and slowly, but nevertheless it has since been growing brighter and brighter, until it has come to the present generation. (2.) Present Extent.—To convey some faint idea of what has subsequently been accomplished, and put in the way of accomplishment, it is deemed proper now to submit a brief sketch of the principal missionary organizations and agencies of the Protestant world. In this extensive grouping is included every missionary body, primarily the countries in which the several societies originated and have been sustained; secondly, the date of their origin, and a summary view of their character and early history; and, thirdly, the fields of their operation, the amount of their income, and the present condition of their enterprises. For further particulars, consult the articles on each country and society in this Cyclopaedia.

The principal Protestant missionary societies may be classified as—1. Continental; II. British; III. American.

1. Continental Missionary Societies. — Danish College and Mission.—As early as the year 1714 the Danish College of Missions was opened in Copenhagen by Frederick IV, king of Denmark, for the training of missionaries. Danish missions to the heathen had been commenced even before this period, agents having been obtained from the University of Halle, in Saxony. On July 8, 1706, two missionaries landed upon the coasts of the Cape, in India, and settled at Tranquebar. They immediately commenced the study of Tamil, the language spoken in the southern part of Coom and Malabar, although this was but a part of the Danish empire, and were patronized by royalty, the missionaries encountered great opposition from the Jesuits, the Huguenots, and the German, government, who on several occasions arrested and imprisoned them for months together. Privation, as well as persecution, was the lot of the mission staff at an early period of their labors. The first remittance sent from Europe, which at that time was very needed, was lost at sea, but friends were raised up in a manner unexpected, and loans of money were offered them till they could establish themselves from the society at home. When their borrowed stock was nearly exhausted, remittances reached them, along with more missionary agents, but the latter were received with different cordialities, for shortly afterwards the London Society for Pro- moting Christian Knowledge became the patron of their mission, giving them not only an edition of the Por- tuguese New Testament for circulation among the people, but also a larger part of the new English, paper, and a Swedish printer. When opposition to the mission subsided, and the cause expanded somewhat, a type-founders and paper mill were established, and the work of translation and printing was prosecuted with vigor. In 1716 the Tamil New Testament was completed, and eleven years later the first edition was published. Several of the elder missionaries were called away by death; but zealous young men were sent out from Europe from time to time, and the mission has been very successful in the conversion of the heathen world. Within ten years from their first departure the missionaries landed at the coast of Kandy, in Ceylon, and St. Croix, in the West Indies; to the Indians in North and South America; to Lapland, Tartary, Algiers, West- ern Asia, and Syria; to the Polynesians in New Zealand, and to the Sandwich Islands. The British missionary body in the year 1831 an association was formed in London, which raised about £20000 annually in aid of Moravian missions, and sent a large body of men and women to help to the work, and consequently the United Brethren sent out agents to other Western Islands, including Jamaica, Bolivia, Antigua, Barbade, Barbados, Trinitas, Surinam, Brazil, Goer- rador, Greenland, Egypt, Persia, and India. The first mis- sion of the Moravian Brethren was undertaken, after the British society had suffered numerous difficulties, privations, and sufferings, through which they had been well tried and for a long time on the verge of total extermination. The success of the enterprise has been more than gratifying, and the ultimate result has been very gratifying. 2. Statistics of Moravian Missions.—A recent publication shows that the number of members of the Missionary Society in 1835 was 856, comprising 8664 communicants, 268 missionary stations; 286 missionary agents; 1683 native assistants and overseers; 14,701 communicants, 18,950 non-com-

MISSIONS

missions under regular instruction. £21,908 are raised from contributions in the United States annually from all sources. A "Leader Home" at Jerusalem is under their care. In the year 1877 five Christian women were sent to the South Sea Islands to present the Gospel to the people of that terrible disease. Alaska is the scene of their latest missionary enterprise. It was commenced in 1888 and is directly under the North American Board. In the year 1890 the chief number of members in the entire field has increased from 6,967 to 18,561.

"Netherlands Missionary Society."—This institution was formed at Rotterdam in 1794, mainly through the influence of the Rev. John Vermij of Zutphen, who had been barked for his distant sphere of labor in South Asia, to which he had been appointed by the London Missionary Society. The Rev. Mr. Vermij, after having taken up his post in the Dutch East Indies, and while there he found leisure to publish a Dutch version of an earnest address which had emanated from the London Missionary Society, which was placed in the hands of the Netherlands Missionary Society. For some time the financial aid offered to the enterprise was very slender. In 1800 the Rev. Mr. Vermij retired from the field, for reasons of health, and went to Paris, to take into consideration the best means of propagating the Gospel in heathen lands. There were present four missionaries from the Board, the Rev. Mr. Bulmer, the Rev. Mr. Longmore, and the Rev. Mr. Guerriere, as well as many of the ministers of these churches, and others of different persuasions then in the French capital. A committee was appointed to consider the field on which, in its commencement, contemplated two objects: the one to employ the press as a means to enlighten the public mind on the nature and character of the friendly missions, and the other to educate young men, who had been duly recommended, in a knowledge of the languages of the East. The Rev. James King was then in Paris, and received an invitation to go to the Holy Land with the Rev. Mr. Fisk, the new society changing itself with his support for a certain period. Subsequently the society devoted all its efforts to South Africa, where its agents and missionaries had been sent to the Cape of Good Hope and the interior of the country among the scattered tribes of natives. In 1859 three missionaries were sent by the society to the Cape of Good Hope, where two of them remained one of the Rev. Mr. Gwinn, and the Rev. Mr. Verbruggen. They were enabled the missionaries to extend their labors to various parts of the interior and build two or three places of worship for the Natives. The mission was under the care of the Rev. Dr. Luen, A.D.D. The church was built at Bethulia, Morija, Beernaards, Thaba, Basotho, Mokatang, Friederich, Bethesda, Beres, and Carmel. At several places the society had a good organization and brought to a saving knowledge of the truth, and united in Church fellowship, although the notorious chief M. Couette is believed to have had a hand in its organization by his superior intelligence. The French mission in South Africa has repeatedly suffered from devastating wars among the natives and settlers, but the greatest blow to its prosperity was the war which raged in France in 1870-71, through which the supplies of the missionaries were in a great measure cut off. Providence, however, raised up friends in the time of need, and the work still goes on.

"Ethiopian Missionary Society."—The society now known as the Rhenish Missionary Society was organized in 1826 by the amalgamation of three other associations, the Rhenish Missionary Society of the Rev. Dr. Middendorp, Elberfeld, Barmen, and Cologne. The society was afterwards further strengthened by the incorporation of several other associations, the English, Danish, and Westphalia. In 1859 three missionaries were sent out to South Africa. These were followed in after-years by several others, and among these were the Rev. Mr. Holstein, at Stellenbosch, Worcester, Tulbagh, Saron, Scheltoft, Ebenhaezer, and other places of residence. The missionaries of the Cape Colony; and at Bethany, Berseba, Rehoboth, Rood-Volk, Wesley Vale, and Barnem in Namaqualand, and Damaraeland. Some of these stations were originally commenced by Wesleyan missionaries who had for many years labored on the south-western coast of Africa. In 1850 an annual statement was made by which they were given over to the Rhenish Society, as was also the station at Niebelt Dath a few years afterwards, the Wesleyans having then it under their care. The number of natives in other localities. In 1854 the Berlin Missionary Society were in South Africa, where several baptisms were held. The Berlin Missionary Society were immediately consequently, when nearly 5000 baptisms were reported, when comparatively few of the number could be regarded as communicants, or Church members. The number of native members can therefore be accounted for by the Lutheran type of theology which the agents generally seem to have espoused.

"Dutch Missionary Society."—This society was formally organized in 1824, but it arose out of efforts which had been in operation since 1800. In 1828, being, as the year 1890 an institution was formed in the Prussian capital by members of the Lutheran Church to educate mission missionaries, and after the following twenty-five years forty students were so educated. In 1854 the Berlin Missionary Society sent out four missionaries to South Africa; these were followed by others.
missions during successive years, and arrangements were made for carrying on the work on an extensive scale. One of the first stations occupied by this society was at Beaufort, nearly opposite to the city of Paramaribo, in Berbice, and at Paramaribo and Kassif. Subsequently the work was extended to Zongor, Bethel, Emmans, Bethany, Priet, New Germany, and several other places, some of which have been abandoned. In the boundaries of the Cape Colony, others in the Orange Free State, the Trans-vaal Republic, Kaffria, and the Transvaal. At present the society has about 88 stations in the Southern Province, which give forty-seven stations in South Africa, with sixty-four laborers and 971 communicants. China was entered in 1851, and is in three districts, with 12 laborers, and 466 communicants. The number of scholars for both missions was 5824; native contributions were £21,664.

Scotch Missionary Society. - The Swedes made vigorous efforts, in the present century, to carry on missions in heathen lands as early as the year 1586. The sphere of their operations was Lapland, and their work was conducted by the Swedish Lutherans. Gustavus Adolphus, the ablest of the missionary movement of his country for the enlightenment of the Laplanders, and succeeding monarchs threw the weight of their influence into the Christian enterprise. In 1775 the New Testament, translated into Laplandic, was published. The mission was far from prosperous, however, and, after a promising beginning, it was abandoned. Nor is this to be wondered at, if one half of what has been recorded in reference to the drinking and other immoral habits of both priests and people is true. After an interval of nearly three centuries, Lapland again entered the field of missions. In 1845 the Scotch Missionary Society was formed, and sent forth a young man named Carl Ludovic Tellstroem, the fruit of the mission's labors. In Stockholm he was received into the church in Lapland. He had many difficulties to encounter from the migratory and diseased habits of the people; but by following the advice of his fathers and reading the Bible, to instruct them in the truths of the Gospel, there is reason to hope that his labors were productive of some good results. He labored forwards in behalf of the church, in training the rising generation, and the children were taught to read, and clothed at the expense of the society, and at the end of two years were sent home with tracts and books to instruct and their parents, families, and friends, and to supply the school in Lapland. The results did not long warrant the continuation of this work.

North German Missionary Society. - This institution was established in 1850, with its head-quarters at Dresden. The work has been opened in the Gothenburg, Sweden, and Finland, and the church was organized in 1858. In the years from 1850 to 1864, efforts have been chiefly turned to Southern India, to the occupation of those fields of labor which had been previously cultivated by the Danish missionaries. From a report published some time ago, it appears that they had in their employ 94 missionaries, with 15 native candidates, in 11 different stations, counting 1,814 church members and 2,953 scholars under their pastoral care. They have also provided a society in New Jork, which, however, did not long warrant the continuance of this work.

Norske Missionærer. - This society was formed in 1842, and soon afterwards sent out missionaries to labor among the wildlike Zulus in South-eastern Africa. The aim of the institution is to supply agents who are able and willing to instruct the people in the arts of civilized life, and to dispel the ignorant enmity which has been generated towards them. This object an estate was purchased in Natal, and an industrious and industrious work begun, which has already been productive of much good, reporting 20,000 readers in various languages.

Scotch (Lund) Mission. - In 1846 this society was established in connection with the Swedish Missionary Society, and the missionaries were sent to China, where they labored for five years, and then were transferred to Japan. The object of the society is to supply agents who are able to spread the Gospel in the Chinese, with a hopeless prospect of success.

Berlin Missionary Union for China. - This society was established about the year 1854, with its first station at Hamburg and afterwards at Bremen. The scene of its earliest labors was in India, one station being in the Telegoo country, the other in the city of Mysore. The object of the society is to diminish the financial receipts led to the transference of the mission for some years to the United States Lycceum in the southern states. However, the responsibilities connected with carrying on the work were increased, and the field of effort has recently called forth a large amount of sympathy in Germany. In the year 1896-1900, 19 missionarees, 400 communicants, and 2,000 scholars were under the pastoral care of the society.

Norwegian Missionary Society. - This society was formed in 1842, and soon afterwards sent out missionaries to labor among the wildlike Zulus in South-eastern Africa. The aim of the institution is to supply agents who are able and willing to instruct the people in the arts of civilized life, and to dispel the ignorant enmity which has been generated towards them. This object an estate was purchased in Natal, and an industrious and industrious work begun, which has already been productive of much good, reporting 20,000 readers in various languages.

towed their countrymen in all their wanderings, ministering to their spiritual necessities, and bringing home to their recollections the tender associations of the 'old country' which they had been taught to listen to with pleasure to the sound of the 'church-going bell.' Nor have the dark, besiegled heathen population within the territory of the Church Missionary Society been neglected. Their temporal distress has been remedied by this time-honored institution. Many poor wandering Indians in the north-western valleys of Africa, and in the wilds of the African Interior, and warlike Kaffirs in Southern Africa, to say nothing of the aborigines of other lands, have been favored with the means of grace, and have been instructed through its agents instrumentally, especially of late years, since attention was more particularly directed to this department of the work."

"The Society for the Promotion of Christian Knowledge. —The most extensive of its kind, and one of the most important, this was at a very early period an auxiliary to Christian missions, and is at this day a most powerful help to the Church in its work of evangelization, and to the converts as missionaries. It was founded in 1698, mainly by a private clergyman, Dr. Thomas Bray, who, subsequently acting as commissioner in Maryland, and seeing the great necessity for some further effort at home for the advancement of religion in the colonies, happily succeeded in rousing public attention to the matter. Having afterwards been the chief instrument in the formation of the Gospel Propagation Society, Dr. Bray may be fairly considered the founder of both the societies, and in a sense of many of the other noble societies which followed them, by initiation or imitation, he may be said to have 'died for the work.' The Society for the Promotion of Christian Knowledge established a connection with the Danish mission to the Hindoos in 1774. The Rev. Mr. Trunck, one of the last of the missionaries sent to India, had the support of the work. The Tansure mission originated in 1829, and the one at Trichinopoly in 1849, which, with its numerous stations, is considered as the original seed from which was taken up five years afterwards by the Christian Knowledge Society, and prosecuted with vigor and success. When other religious societies were in the Church of England, and were organized for the express purpose of propagating the Gospel in foreign lands, the Christian Knowledge Society was the first to engage in this work. There are many societies of this kind in various parts of the country, and persons are constituted members by subscribing annually, and the society is conducted by the general assembly, and at public meetings: and hitherto the institution has been supported in a very liberal manner."

"The principal spheres of labor entered upon and efficiently worked by the agents of the Church Missionary Society have been in Western Africa, Continental India, and in the United States of America. In all these countries, but especially in the one first named, the missionaries, catechists, and teachers of this institution have been established, and have been permitted to remain in the field, and have been favorably received by the inhabitants, and have been permitted to see the fruit of their labor on a large scale. The missionaries to the United States have been employed by the society; in 1792 there were only 138 communicants; in 1797 only 1,105. Only 58 missionaries were employed in 1836, and 253 in 1850. In 1870 there were 1,250 communicants. It was in these years that the society was first established. The Missionary Year-Book, for 1900, gives the statistics of the society as follows: 594 stations, 289 ordained, 40 lay, and 40 licensed missionaries; 618 ordained, 906 female native workers; 185,535 adherents, 47,451 communicants, 95,222 schools, 17,451 scholars. The total income of the society in the year 1899 was $1,380,194. The society has given more than $1,000,000 for the support of nearly 300 missionaries and 1,250 native communicants."

"The Church Missionary Society was included in the list of the Christian mission societies united, at the meeting of the British and Foreign Evangelical Alliance held at London in 1838, as being 'the only auxiliary mission society,' and in the list of missions acknowledged by the British and Foreign Bible Society, the great, but often broken, bond of union between the churches of the British and Foreign Bible Society, the great, but often broken, bond of union between the churches of the British and Foreign Bible Society, the great, but often broken, bond of union between the churches of the British and Foreign Bible Society, the great, but often broken, bond of union between the churches of the British and Foreign Bible Society, the great, but often broken, bond of union between the churches of the British and Foreign Bible Society, the great, but often broken, bond of union between the churches of the British and Foreign Bible Society.
the next Assembly, in 1866, the committee reported in favor of Missionary South America. This mission was the establishment of a great central seminary, with auxiliary district schools for the instruction of Hindoo children and young men. These schools were established in 1867. Thomas Duff sailed for Calcutta as the head of the educational institution. The ship was wrecked on the Cape of Good Hope, and the missionaries had to travel overland through many dangers. Mr. and Mrs. Duff arrived at Calcutta on May 25, 1868, having lost a valuable library, and being most unkindly treated by the civil authorities. They remained in Calcutta for the month of August, and met with remarkable success. With the help of the British and India Mission in London, they held a public meeting, and got an audience. Both the elementary and collegiate sections of the institution prospered. The English language was charged as being only fit for the vernacular and native dialects, but as soon as qualified teachers and suitable school-books could be obtained, due attention was paid to the vernacular. The work was thus carried on in two languages, as John Wilson, and Robert Nieboer were transferred from their own desire from the Scottish Missionary Society to the General Assembly's mission; and in 1870 further changes were made by the dismission of the General Assembly, which issued in the formation of the Free Church of Scotland, to which all the missionaries in India adhered, with the buildings, furniture, and property of the respective stations. After laboring in connection with the Indian Mission for nearly thirty-five years, Dr. Duff finally returned to his native land in 1885, having meanwhile made but a brief visit to England and the United States in 1850 and 1855.

"The Free Church of Scotland's Foreign Mission."—This Church, independent in its organization and government, is making big movements for carrying on the missionary work both at home and abroad. The educational establishment at Calcutta, under the supervision of the Missions, is one of the most famous in India, and the stations at Bombay, Puna, Nagpore, Madras, and other places in India, as well as those in Southern Africa, the colonies, Canada, New Zealand, the West Indies, Madeira, the Mediterranean, Australia, and New Zealand are carried on with vigor and success under the new administration.

The Free Church of Scotland also assumed the responsibility of supporting and carrying on missions for and to the Jews which had been organized a short time before the dismission. The history of this branch of the work, so far as the United States are concerned, is of much more than ordinary interest. Pesth was the scene of a remarkable awakening among the scattered seed of Abraham. Here the work began, and slowly and surely the movement became simultaneously interested inquirers into the truth of Christ who, as the result of the revolution in Hungary caused the suspension of the mission for a time, and the despotism of Austria well-nigh extinguished it. Of late years there have been considerable changes in the scene of its operations, and Frankfort, Amsterdam, Brussels, Pesth, Galatz, and other places are mentioned in the society's report as places where its agents are now laboring for the conversion of the Jews to the faith of the Gospel.

United Presbyterian Synod's Foreign Mission.—In the United Presbyterian Synod's Foreign Mission in the West Indies is by the agency of the Revs. William Paterson and James Niven. In the course of a few years several stations were opened in and about St. John's and the Grand Caymanas. The progress of the mission to the present time is very favorably reported, and the dates when the work was commenced at each place respectively: Jamaica—Stirling, 1838; New Broughton, 1838; Spanish Town, 1839; Montego Bay, 1848; Kingston, 1848. Trinidad—Port of Spain, 1838; Aratus, 1842. The Great Caymanas—Georgetown, 1844. In 1844 a mission was commenced at Old Calabar, in Western Africa, intended to be worked chiefly by converted negroes from Jamaica. The synod also sent several missionary agents to Canada, who have since succeeded in forming self-sustaining congregations, and even in organizing large and influential presbyteries. The Rev. Dr. Hawes, who was sent on this mission in May, 1847, was to accept of the transference of the stations and congregations in the islands to the British Mission. The Synod of the Glaswegian Missionary Society in Kaffraria, which it has since conducted with vigor and success, is aided also by a Jewish mission to Algeria, Aleppo, and other places.

English Presbyterian Synod's Foreign Mission.—This Church, independent in its organization and government, was formed in 1844. The principal scene of its labors is in China, and although the work has not as yet been conducted on a large scale, the Mission has already given much encouragement. The funds of the society were considerably augmented a few years ago by a loan of £1,000 from the Rev. Mr. Sundeman, to whose benevolence and general Christian character a grateful tribute is paid in the annual report for 1853. The Synod has also raised a fund of £9,660 for Amoy and Swallow, where a few converted natives have been united in Church fellowship, and an additional mission has been opened by the Synod at Kowloon, which strengthens the bonds of the brethren who have been some time in the field.

Irish Presbyterian Church Mission.—Foreign missions.

VI.—12.
ship was purchased, and freighted with a suitable cargo; and twenty-five agents who had volunteered their services embarked for their distant sphere of labor. These were the Revs. Samuel, Henry, and Zephaniah Lord, and twelve others, who were made the first church in Congensia, forming thereby an independent church at Polygoen. After some detention at Portsmouth, the ship went to sea on Sept. 23, followed by the earnest prayers of the people of this country, and on Oct. 8 the vessel reached its destination in safety, notwithstanding a severe storm which she encountered off the Cape of Good Hope.

The missionary ship arrived at Tahiti on March 6 and was at once prepared for its mission work. Among the first fruits was the establishment of a district of about three quarters of a mile from the shore. In the afternoon the captain and a member of the mission land-ed the first bag, brought by four of the natives of the district, who welcomed them to the country, and offered them a large native house for their accommodation. It was arranged that to the four ordained ministers and fourteen of the unmarried brethren should be conscripted to the establishment and prosecution of the mission at Tahiti; that ten should endeavor to effect a settlement in Tonga, one of the Friendly Islands; and that two should proceed to the Marquesas. The agents were distributed among these districts, and commenced their labors, no doubt, with the best intentions. It would be an engine of destruction to the heathen, and to those who, proved altogether deficient in mental power, moral courage, and other necessary qualifications for the work. Consequently, their labors were not very successful. One of the entries of the first letter was as follows: "The work totally failed, several of the agents being murdered, and the rest having to leave their lives. In after-years, the London Missionary Society learned to select its missionaries with greater care, and remonstrated for their proper training. They were recruited. As the Colony which was to be the nursery for the world was the best possible, a good translation of the Scriptures into the difficult language of the Chinese empire. In this he succeeded; and when the last of the first company of friends of the enterprise. He proved admirably adapted for the peculiar and untried sphere upon which he entered. After the opening of the new mission at Amoy, Can-non was joined by other missionaries, and the work of preaching and teaching was commenced in good earnest. The progress was rapid. The first converts were baptized not till the year 1814 that the first convert was baptized. After that, however, a considerable number of Chinese became believers; and the knowledge of the true God gathered into the fold of Christ, through the united labors of the missionaries.

But the most interesting mission of the London Society was the one which was undertaken to the island of Madagascar, under the direction of Mr. Jones and Mr. Bevan. For the families, whom they had left at the Maur-ritius until they should learn the state of the country, these excellent brethren proceeded to Tananarive in the course of the following year, and commenced their work. Within seven weeks of their arrival five of this little band sickened and died, and Mr. Jones was left alone. He nobly persevered in his laborious work as best he could, and having returned from the Mauritius, whither he was obliged to retire for a season for the recovery of his health, he was joined by other missionaries from England, and their united labors proved very successful. During the first fifteen years of this mission the entire Bible was translated, and the Manuscripts of the London Missionary Society were printed at the press in the capital, and the missionaries frequently preached to a congregation of 1000 persons at a time with unmingled success. The work had continued for a quarter of a century, when, in the order of divine providence, by the death of the king, the way was opened once more for the preaching of the Gospel in Madagascar. The mission was now re-commenced, and it was found that the native Christians who had once flourished had been left to their fate with nothing having been made to their number. Several memorial churches were built to commemorate the death of the martyr, and the work was continued in the hope that the island, with the prospect of still greater good in time to come, might be the means of disseminating the Gospel through the whole sphere of the world.

The report of the London Missionary Society for 1858 stated: 'In China there are connected with the society 39 missionaries, and a number of engaged in the service of Africa; 25; in the West Indies, and in the South Sea dis-trict, 141. The total income of the society amounted to $124,000. These three magazines are published by the society—the Chronicle, the Juvenile Monthly, and Quarterly Journals of Woman's Work. These magazines are published quarterly and are sent free of charge to all who apply for them.'

British Society for the Propagation of the Gospel among the Jews.—This institution was established in London in the year 1792, and has for its object the establishment of Disen-couraged communities in England. Its object is to identify the religious and moral principles of Christianity among the Jews; but, being organized on a more catholic and general basis, it affords an appropriate sphere for the acquisition of a knowledge of the Jewish work for Nonconformists of every name. This society
with establishments for the cultivation and manufacture of indigo. At the same time they studied the language of the natives, held religious meetings with the people, and opened primary schools under the supervision of a special missionary, the Rev. Mr. F. M. Trowbridge, at Paramaribo, and the extent to which he succeeded was perfectly mar-
velous. As the prospects of success improved, additional men were sent out, and quarters of the mission were occupied by them. The quarter of the mission were occupied by them. The twenty-four missionaries employed by this institution are all converted Jews, with the exception of two or three, mostly only for a short time, and the great majority of whom are graduates of Hebrew College. Nor are the religious interests of the rising genera-
tion neglected. The Society has established a Hebrew day school for boys, where Hebrew boys and girls are fed, clothed, and instructed, and when they grow up they are put to useful and
occupations, that they may earn their own livelihood.

Congregational Home Missions.—The report presented to the last anniversary of this association stated that the society consists of Lyceum treasurer, who occupied
central positions composed of four, five, or six villages, with, where, with the help of 121 voluntary lay preachers, the Congregational Church had
lay and colporteur evangelists, 100 of whom are now at work, who had visited 80,000 families during the year, dis-
tributing 20,000 copies of the Bible, and 120,000 periodicals. One thousand members had been added to the churches by means of this agency during the year.

Baptist Missionary Society.—Like most other great and good things, the Baptist Missionary Society had a small and a select beginning, but is now closely connected with the work of that wonderful agency of God. It now supports 788 missionaries, it is supported by a number of laymen, and the attendance in the past ten years had exceeded 105,000 persons. There is not a group of religious workers who are more devoted to the great scheme of diffusing the knowledge of the Gospel among the heathen nations; and, to make himself better acquainted with the wants of the world, and to prepare himself for further action, he constructed maps of various countries, read numerous books, and studied two or three Oriental languages. At length, in 1874, the Not-
tingham Baptist Association, to which he belonged, re-
solved upon holding monthly concerts for prayer. Mr. Ca-
rey's one topic at these meetings was the degraded state of heathen lands; but few entirely sympathized with him in his views. Seven years later, when he had removed to London, he found him in favor of the Guards,' and it was early connected with that of William Carey, who may be fairly regarded as his father and founder, as well as its first mis-
sionary to the heathen world. Although of humble par-
etage and low condition in life, Mr. Carey was a man of great power, and his letters were read with great interest. He is the author of a series of letters to his friends in London, which have been reprinted in the Baptist Missionary Society's "Baptist Missionary Advocate," and have been reprinted in many languages, including the Hindustani, the Bengali, and the Malay; and, in most of the other chief towns on the island.

The Baptist Missionary Society directed at an early period to the West Indies, and in 1841 the first station was established in the island of Jamaica. The first regular missionary appointed to this interesting sphere of labor was the Rev. John Rowe, but the ground was at first very barren, and the work was almost a failure. In 1845, after a long and honorable career, during which he saw the Baptist mission in India greatly extended, and the whole or part of 126 institutions established in the different languages of the East, Dr. Carey died in peace at Serampore, at the advanced age of seventy-three, on Mon-
day, November 30. He is highly esteemed and revered for his zeal and entire devotion to the service of Christ among the heathen.

to the able advocacy of the Rev. J. G. Pike. Regarding the field as wide enough for all the agents that could be sent into it, this society also first turned its attention to India. In 1839, Missionaries were sent to the Rev. Messrs. Bampton and Pegge, called for Cuttach, the principal town in Orissa, the seat of the notorious idol Jupiter, and there they persevered at first with but very little success. The Rev. J. G. Pike had long since finished his course; but other agents followed at intervals, and opened new stations in adjoining districts. They were not content with these. For the best of all reasons, to make frequent changes in their locations and plans of action. Their chief work consisted in combating the prejudice of the people and the influence of the idols. The stations were generally found in the neighborhood of the head-quarters of the wretched-looking idol Jupiter. The agents were at first made the object of revilement and abuse, and an asylum for orphan or destitute children. Many a precious life was spared, and many a soul was rescued who would otherwise have been consigned to the stake, or for the greater part, to the water of the blood-stained altar.

As elsewhere, the great enemy to Christianity in Orissa was caste, change of creed being looked upon as a degradation. On this account, the Missionary Society originated with the late Rev. George Morley. It was not till 1817 that the connectional society was formed.

"The burden of superintending and collecting for the support of the early Methodist missions devolved almost entirely on the Rev. J. G. Pike. He was, therefore, the first general mission committee occasionally sat in London to transact business in his absence. But when the Conferences saw how the connectional society was working, they deemed necessary to make new arrangements for carrying on the work, to which he could no longer attend as formerly. It therefore became the idea of the Methodist Missionary Society originated with the late Rev. George Morley. It was not till 1817 that the connectional society was formed.

"The Wesleyan foreign missions had been successfully carried on for forty years, and the causes for disunion of the foreign Missions were useful employed in foreign fields of labor. Thus it will be seen that Methodist missions do not owe their origin to the Missionary Society, but that, on the other hand, the Missionary Society owes its origin to the mission.

"When the Wesleyan Missionary Society had been fully organized, and auxiliaries and branches established in various parts of the United Kingdom, the early foreign missions of the connection were maintained in the new world, and their wants dictated in good working order, but they were extended in the same way as the home work. The proceedings of the Conferences presented themselves, and men and means were found available for the work. In 1811 a mission was commenced in the Desert, in the colony of the Eastern Sudan in the Eastern Sudan, in the colony of the Eastern Sudan, and in the colony of the Eastern Sudan, in the colony of the Eastern Sudan, and 1815, to Spain in 1815, to Spain 1815, to Spain. missions in the retirement of a lonely glen, and was devoted to the high purpose of training missionary instructors.

"Primate Missionary Society."—Its mission was the education of the Godowns, India, all of which are prosecuted with vigor. Besides supplying many neglected districts in England, Wiles, Scotland, and Ireland, so far as the supplies are available, and the requirements of the district, it has sent forth foreign missionaries to British North America, Australia, Western and Southern Africa, and some other distant colonies. The society was started in 1847 and the efforts of the society is very encouraging, and its funds have tripled in the last three years. The society is keenly interested in the health of home and abroad. The number of missions employed by the society is 92; in Wales, 5; in Ireland, 14; in the United States, 7; in New South Wales, 10; in Queensland, 4; in Tasmania, 4; in New Zealand, 4; and in Canada, 61; in Western Africa, 2; in the Sandwich Islands, 2; in the Cape Colony, 31. The total number of stations is 143, and of members, 13,986.

"Minor British Missionary Societies."—In addition to the leading societies, the United Kingdom which carry on the work of propagating the Gospel in heathen countries on a large scale in various parts of the globe, there are several minor institutions which have been made very useful, notwithstanding the comparatively limited sphere of their influence. These associations have generally been organized for special objects or single missions, and have been conducted with varied results, according to circumstances. Of these the following may be mentioned:

"Welsh Calvinistic Methodist Foreign Missionary Society."—The object of the society is to convert the inhabitants of the Welsh province of the native tribes of the world, and about ten years subsequently, in 1850, another station was commenced at Sibeyh. The missionaries do not consider the work closed, but when they have turned their attention to those literary studies which are so needful for the change of the heathen into citizens of the British Empire. The society was commenced in 1849, and has been in existence continuously since that time. It is a missionary society, and has a mission in the Cape Colony, Madagascar, and in the Sandwich Islands. The society is doubtless much superior to the former in its efficiency.

"Evangelical Continental Society."—The object of this institution is to disseminate the saving truths of the Gospel among the heathen nations of the European continent. Its principal fields of labor are France, Belgium, Spain, Italy, and Bohemia. About £6000 per annum is raised and expended in carrying on this work, and the results have so far been encouraging.

"The Foreign Aid Society."—This society was founded in 1856 with a view to the conversion of the heathen of the world, and has been in existence continuously since that time. It is a missionary society, and has a mission in the Cape Colony, Madagascar, and in the Sandwich Islands. The society is doubtless much superior to the former in its efficiency.

"Missions Aided by the American Board of Foreign Missions."—The society is aided by the American Board of Foreign Missions. This society has been in existence continuously since 1856, and is one of the most efficient in the world. It has been in existence continuously since 1856, and is one of the most efficient in the world.

"III. American Missionary Societies—American Board of Foreign Missions."—This society was established in 1856 as a memorial of the mutiny, and has for its object the providing of Christian vernacular education for India. It has at present, with 5127 scholars, who are instructed in 118 different languages. The society is entirely self-supporting, and is devoted to the education of missionaries. At the same time, the society has no share in the British influence descended upon several of the students, turning them into the Christian faith. One of these, Samuel Mills, called to mind with feelings of deep emotion the words of his beloved mother with reference to the "service of God as a missionary." This young man shortly afterwards engaged with Gordon Hall and James England in conversation and prayer upon the subject of
ported by the Calvinitic Baptists of the Northern States. They were a mixed people, a community of those who had come with the early history of this institution which deserves a passing notice. The Rev. A. Judson and L. Rice, of the American Board, were sent to Banda Island, to open a field of labor and to enlighten the darkness of ignorance. After a change of views with regard to the subjects and mode of baptism when on their voyage to India, and having resolved to join the Baptist denomination, they arrived at the Rev. Mr. Ward at Serampore, soon after their arrival late in the year 1818. The Rev. Mr. Kilburn came also to join them about the end of the year, and thus formed the nucleus of the Baptist ministry in India; and about ten years afterwards Dr. Boone was consecrated missionary bishop, and went out with a large staff of laborers, who were scattered over the whole province, until one by one they were taken home neglected by this institution. Mission stations were opened, and laborers were sent forth to the scattered tribes of Indians: and, notwithstanding numerous difficulties which had to be encountered, arising from the wandering habits of the people, and the hostility of the natives, the work was soon reported as being under Christian instruction. In 1851 bishop Kemper consecrated a new church at Dutch Mission, on the Cobs Creek, which was the third of the kind as pastor over it, whose ministry was a blessing to many of his fellow-countrymen.

**For Introducing the Condition of the Jews.**—The primary object of this society, which was organized in 1830, was the temporal relief of persecuted con-
nexion. It was not expected that anything would be done for the relief of the Jew, but the effort was put forth for the benefit of the lost sheep of the house of Israel. It was found in 1831 that there was a Jewish population stated residing within the United States amounting to 120,000, in addition to which there were hundreds and thousands continually moving from place to place. In this wide field of labor the society at an early period employed ten missionaries and seven col-

ors, who visited forty towns, in which they endeavor-
to sow the good seed of the kingdom, with some vis-
able proofs of spiritual success.

**Foreign Missionary Society.**—The founders of this institution conceived the idea, after the publication of the missionary plans of Dr. Carey, that the work of sending for-mer missionaries to the heathen without any guarantee to succeed, was expediting great avarice to what they called the hiring of soldiers to the system of Christian missions; or, as the Greeks say, Saway of power; but at length the Rev. Amos Sutton, of the En-

lish Baptist Mission in Orissa, succeeded in awakening a few of the members out of their apparent stupor, and this by a letter, and secondly by a personal address while on a visit to the States for the benefit of his health in 1833. (The reader will find a full account of this mission in Mr. Phillips left for Orissa in September, 1835, accompanied by Mr. Sutton, with whom they passed the first six months of their labor. The success of this mission was such that they continued in this one mission; and, although their agents have suffered much from religious persecution, they have been most successful in out success, especially in dispensing medicine and establishing Christian schools. Some time ago there were 17 mission stations, with 15 native preachers, 11 churches, and 684 members.

**Board of Foreign Missions of the Presbyterian Church in the United States of America.**—The Presbyterians of the United States were engaged in missionary work at a very early period. The Scottish Society for Promoting Chris-
tian Knowledge secured a field of labor in 1814, and appointed a minister to the Indians on Long Island. This was followed by the Rev. John Smith, and was continued 

forever, he had been cut down by malignant fever, and the people were left as sheep having no shepherd. Other zealots of the same laborers, and a good work has ever since been carried on in the small republic of Lib-

in this part of the mission field, several converted converts, a number of new churches, schools established, a small newspaper published in English and Grebo, called the Casuia Messenger. In 1834 the Rev. Mr. Ward was sent to Banda Island, to open a field of labor, and he was adopted by the mission council, and the Rev. Mr. Ward at Serampore, soon after their arrival late in the year 1818. The Rev. Mr. Kilburn came also to join them about the end of the year, and thus formed the nucleus of the Baptist ministry in India; and about ten years afterwards Dr. Boone was consecrated missionary bishop, and went out with a large staff of laborers, who were scattered over the whole province, until one by one they were taken home neglected by this institution. Mission stations were opened, and laborers were sent forth to the scattered tribes of Indians: and, notwithstanding numerous difficulties which had to be encountered, arising from the wandering habits of the people, and the hostility of the natives, the work was soon reported as being under Christian instruction. In 1851 bishop Kemper consecrated a new church at Dutch Mission, on the Cobs Creek, which was the third of the kind as pastor over it, whose ministry was a blessing to many of his fellow-countrymen.

**Protestant Episcopal Board of Missions.**—The Missio-
nary Society of the Protestant Episcopal Church of the United States was organized at the Convention of 1800, with the seat of operations in Phila-
delphia. In 1888 an entire change was made in the con-
necting agencies of the church, and the society was adopted by general consent. The first scene of labor en-
tered upon by the missionaries of this institution was Georgia, where the first members of the church were Blinblum, a printer, being sent out towards the close of 1828, and shortly afterwards the Rev. Mr. Ward, who had moved to Athens, where they were very successful in their educational labors. Their principal object was not to pros-
elytize, but to teach the people, and form them for the work of God in the world. Stations were also formed in Syria and Crete, but afterwards abandoned. In 1832 a station was established on the African coast by the commencement of a station at Cape Palmas, among the Jen tribe, known to the Spanish as the Casuia Messenger. In 1834 the Rev. Mr. Ward was sent to Banda Island, to open a field of labor, and he was adopted by the mission council, and the Rev. Mr. Ward at Serampore, soon after their arrival late in the year 1818. The Rev. Mr. Kilburn came also to join them about the end of the year, and thus formed the nucleus of the Baptist ministry in India; and about ten years afterwards Dr. Boone was consecrated missionary bishop, and went out with a large staff of laborers, who were scattered over the whole province, until one by one they were taken home neglected by this institution. Mission stations were opened, and laborers were sent forth to the scattered tribes of Indians: and, notwithstanding numerous difficulties which had to be encountered, arising from the wandering habits of the people, and the hostility of the natives, the work was soon reported as being under Christian instruction. In 1851 bishop Kemper consecrated a new church at Dutch Mission, on the Cobs Creek, which was the third of the kind as pastor over it, whose ministry was a blessing to many of his fellow-countrymen.

**Evangelical Lutheran Church Mission.**—The Evangel-

ical Lutheran Church of Nova Scotia is a religious com-
unity which numbers only four or five thousand mem-
bers, a large part of which live in the island of Corfu and other places on the coast, where it has been carried on with a varied measure of success amid many difficulties incident to the climate and a deeply-debated heathen population. In 1833 the Rev. Mead, Reed and Lowrie were sent out to India, and succeeded in establishing a mission in the city of Calcutta. This mission station was located on the site of the old convent of the Ursin-
nes, one of the tributaries of the Indies—a place far distant from any other scene of missionary labor. The first band of opened several stations, some of them proving and death, but were soon aided or followed by a re-
forcement of laborers, who succeeded in forming a na-

tive Church. Missionaries who worked among the Jeevans came eminently useful as preachers of the Gospel to their fellow-countrymen. As a result of this, the Mission began a mission at Singapore; and after the Chil-

nese war three stations were formed at Canton, Amoy, and Nanking. The work was extended further in the

MISSELS

bers, chiefly of German extraction, and yet it has shown itself most praiseworthy zeal in the cause of missions. This Church entered upon its foreign missionary labors in 1857, and has since maintained an active and efficient mission among the unordained native preachers as engaged in the good work in India, with 86 Church members and 500 scholars under their care.

Seventh-day Baptist Missionary Society.—This institution was organized in 1843, and has been engaged ever since in active and efficient missionary transactions. To date, at least twenty of its four agents have been usefully employed. The Chinese mission was begun in 1847 in Shanghai by the Rev. Messrs. Curran, Winterton, and Kadow, with the understanding that the walls, fitted up a portion of it as a chapel, and commenced their labors, and after some time one of the new convicts have been gathered into the fold of Christ as the result of their evangelistic labors.

Associate Reformed Presbyterian Church.—This society was founded also in 1843, and is connected with the Baptist churches in the south-west, having its executive in London. The most noted work of this society, about thirty, have labored among different tribes of American Indians with a considerable measure of success, notwithstanding the difficulties of the country. They report upwards of 1000 converted natives as united in Church fellowship on their respective stations.

Free Reformed Mission Society. This small but useful institution was organized in 1845 at Utica, in the State of New York, on the broad Christian ground of having no connection with slavery. For several years it has had a successful mission in Hayti, with 1 missionary, 3 female assistants, 1 doctor, and 34 native missionaries. It has also a mission in the Pacific; but we have been unable to gather any very definite information with reference to the history or the results of the new missionaries.

Southern Baptist Convention's Missions.—The Foreign Missionary Society of this Convention was first established in 1845, missionaries having been sent out to Chul on the year before. Important stations were formed at Macassar, Hong-Kong, and Shanghai, which were very prosperous. In 1848 a schooner was cast over the mission by the loss of Dr. and Mrs. James, who were drowned by the British fleet. The vessels beat west on their way to Shanghai, but the places of the dear departed were soon supplied by other laborers, and the good work continued to advance. Then the mission was divided by the Convention into the West African and the Western Missionary Society, with 10 missionaries, 3 native assistants, 125 Church members, and 433 scholars in the mission schools.

American Missionary Association.—This society was formed at Albany, N. Y., in the year 1846, by those friends of missions who declared themselves aggrieved by the connexions given by some other philanthropic institutions to slavery, polygamy, and kindred forms of evil. Their avowed object was to secure a broad, catholic basis for missions, and the adoption of the doctrine of the union of all races, but the organization of the society on its principles, and from their own general all persons living in or conniving at the flagrant forms of guilt referred to. The formation of the society was not without its difficulties. It was joined by other smaller institutions, as the 'West India Missionary Society,' the 'American Evangelical Society,' and the 'Union Missionary Society,' who transferred their influence and their agencies to it, and thus gave to the American Missonary societies a large and powerful, among the North American Indians, and in Western Africa. The labor of the societies were subsequently extended to Siam, the Sandwich Islands, California, and Egypt. In 1867 it supported over 200 missionaries at home and abroad. Since that time the pressing needs of the freedmen of the Southern States have absorbed almost all the attention at the disposal of the board, which they withdrew from other work, and the labor of which it is now chiefly occupied. The society have their schools and churches scattered through the former slave and border states. The whole number of their female and male scholars amounted during the last ten years amount to 4470; and schools have been established in 434 localities, the pupils under instruction number 83,304, who, as a rule, make rapid progress in learning. The interest and zeal of the colored people in urging their children's education increases every year. The number of children who are able to read and write also becomes larger and larger. The society has assisted in the work. In a short time both schools and seminaries have been opened to one another's assistance.

'American and Foreign Christian Missions.' This institution was organized in New York in 1848. It was, in fact, the unlivered portion of the earlier small 'Evangelical Society,' the 'American Protestant Society,' and the 'Phil-Hellenic Society'—which was afterwards called the 'American and Foreign Christian Society.' The principal work of the missions carried on by these associations, both before and after their union, were the papal countries of France, Belgium, Swede, Germany, Russia, and Spain. Among the American missions of the new year of the organization, it numbered 160 missions- 

MISSELS

riers of all grades, one half of whom were ordained, and belonged to seven different nations, and a proportionate number of converted natives united in Church fellowship, and of whom five were enjoyed in England by the following seats. A million in the province of Quebec. It is conducted by a committee in Montreal, and employs a threefold agency—\(^{1}\) a college for native clerks, \(^{2}\) a mission of the seamen, and \(^{3}\) the scholars are supported in whole or in part by the mission; eight small French Protestant churches have been organized, and a portion of the Scriptures are annually circulated, in addition to other religious works which have been translated for the purpose.

Board of Foreign Missions of the Presbyterian Church of Nova Scotia.—The board was organized in 1844 in connection with the foreign mission of the Church. The main object of the society is the extension of the foreign missionary works by the bi-year of Prince Edward's Island. The principal pro-moter of the enterprise, the Rev. John Geddie, was the first missionary who proceeded to Polyneisa, accompanied by Mr. Isaac Archibald as catechist. On reaching their destination, they were kindly received by the agents of the London Missionary Society, and proceeded to establish a station at Anseume, one of the New Hebrides group, where they arrived in July, 1848. The entire pop- 

ulation of the islands for the purpose.
The sympathies of the Christian Church at large are extensively, though as yet far from fully, enlisted in the grand enterprise of Christianizing the human race. In this enterprise unity of idea is to a large extent neutralizing diversity of action, and making even the rivalries of different Christian organizations conducive to a common advantage.

The present period could, especially of Protestant missions within the current century, not only justify all the efforts of the past, but give most hopeful signs of promise for the future. These results comprise not only the conversion and salvation of individuals of every race and condition of humanity, but the actual Christianization of whole nations, and the initial steps by which whole continents are expected to receive it as a distant period to receive the Gospel. Of necessity, a large share of the work of modern evangelical missions has thus far been preparatory; such as the acquisition of languages, the translation and printing of the Scriptures, and the education of native ministers in heathen lands. If, therefore, what has been done shall by the blessing of the Head of the Church be made to act as a lever, according to our Saviour's promise, we may in due time expect the whole mass of human populations to be saved with the influence of Christian truth.

The social and moral advantages which the missions have brought about have been as wonderful as they have been far before the world. What vast tracts has it rescued from barbarism, and with what creations of benevolence has it clothed them! How many thousands whom ignorance and selfishness had branded as the leavings and refuse of the species, if not actually akin to the beasts that perish, are at this moment rising under its fostering care, ascribing their enfranchisement, under God, to its benign interposition; taking encouragement from its smiles to assume the port and bearing of men; and by their acts and aspirations retracing the character and the dignity of the slandered human form? When did literature ever bring for the Church in particular a larger influence than this? When did any written language? or education pierce and light up so vast and large a mass as the human ignorance? When did human dignity save so many lives, or cause so many sanguinary wars to cease? How many a sorrow has it soothed; how many an injury arrested; how many an abyss has it reared amid scenes of wretchedness and oppression for the orphan, the outcast, and the sufferer! When did liberty ever rejoice in a greater triumph than that which missionary instrumentality has been the means of achieving? or civilization find so many sons of the wilderness learning her arts, and agriculture, and commerce, and law and order, so many voluntary helpers from those who but yesternight were strangers to the name? By erecting a standard of morality, how vast the amount of crime which it has been the means of preventing! By asserting the claims of degraded woman, how powerful an instrument of social regeneration is it preparing for the future! And by doing all this by the help and intercessions of all the prayers, and the order of all moral order and excellence—the Gospel of Christ—how large a portion of the world's chaos has it restored to light, and harmony, and peace! But great as are the benefits enumerated, most of whom we have but a slight and shadowy idea, and handled, we venture to affirm that those which are at present comparatively impalpable and undeveloped are greater still. The unseen is far greater than that which appears. The missionary has been planting the earth with principles, and these are of as much greater value than the visible benefits which they have already produced as the trees in the forest are more valuable than the first year's fruit. The trader may take stock and calculate his pecuniary affairs to a fraction; the astronomer may count the stars, and the chemist weigh the invisible element of air; but he who in the strength of God conveys a great truth to a distant region, or puts into motion a divine principle, has performed a work of which futurity alone can disclose the results. At no one for

1. The Continent of Europe presents at this time the interesting spectacle of active missionary labor prosecuted not only by British but also by American Protestants in most of those old countries where a ceremonious or a nominal Christianity has long held sway. In Norway, Sweden, Denmark, and Norway, the missionaries are in many cases natives of those countries, who as emigrants to the United States of America became experimental Christians, and who have returned to preach the doctrines of vital godliness to their fatherlands. Protestant missions were also established in France, Switzerland, Austria, Portugal, Spain, and Italy. In all these countries the Scriptures and Christian tracts are circulated more freely and more numerously than ever before.

With some correspondence to the activity of Protestants in the Roman Catholic countries of Europe, the Church of Rome has become very zealous for the reconversion of England to medieval Christianity. The Jesuits expelled from Germany and the monks disfranchised in Italy are sent there in great numbers. These measures have a tendency to stimulate greater activity among British Christians in home missions, and thus, so long as peaceful measures are employed on both sides, it is to be hoped that mutually good results will follow. Thought will be stimulated, liberality increased, watchfulness will be awakened, and Christ will be preached, even though of contention. As the movements now referred to are for the greater part quite recent, the latest returns respecting these missions are not yet in the current reports and correspondence of the societies engaged in them, inclusive of the Bible and Tract societies. In this field comparatively little has been required in the matter of Bible translations, but much attention has been given to the revision of versions to make them as perfect as possible for popular circulation. See Rule, Mission to Gibraltar; Spain, Spain, Italy to Trans- mission; Scott, Teletröm and Lapland; Reports of Missionary Societies; Toase, Wesleyan Mission in France; Mrs. Peddle, Daem of the Second Reformation in Spain; Ellis, Denmark and her Missions; Henderson’s Life and Labors. See also the articles Baptists; Methodists; Presbyterian; Protestant Episcopalians; Wesleyans.

2. Greece, Turkey, Asia Minor, and Western Asia.—The modern populations of the northern shores of the Mediterranean are greatly mingled. The Moslem races predominate, but nominal Christians are found in every country and under all the governments. They constitute a large proportion of the populations of Constantinople, and are found in every province of the Turkish empire, while in Persia they are supposed to number twelve millions. Hence a wise plan for the conversion of the Mohammedans of those lands involved the primary necessity of evangelical missions to the nominal Christians of the East. To this task, as a republication of the Gospel in Bible lands, the American Board of Foreign Missions has addressed itself energetically and perseveringly. It has in so doing established missions in Greece, in Palestine, in Syria, among the Jews, Mohammedans, and Bulgarians of Turkey, the Armenians, and others. The most interesting history of these missions and their adjuncts has recently been published by Dr. Anderson, from which it appears that, notwithstanding many difficulties, great and encouraging results have been attained, not only in the direct experience of the Christian life, but in the awakening of a general spirit of inquiry, the improvement of education, increased toleration, and the diffusion of the Word of God throughout the various regions that have been occupied and permeated by the influence of the missions. The printing of the board has been on a very extensive scale, including the issue of the Scriptures in other popular languages viz., Italian, modern Greek, Greek-Turkish, ancient Armenian, modern Armenian, Armeno-Turkish, Osmanli-Turkish, Bulgarian, Hebrew, Hebrew-Spanish, modern Syriac, and Arabic. The printing of the whole Bible in Arabic, at the expense of the American Bible Society, was completed in 1865. The great work of its translation and conduct through the press was accomplished by the zeal and energy of sixteen years’ labor on the part of two learned missionaries of the American Board, Dr. Druse, and Dr. Yenus. This translation offers the Word of God to the Arabic reading world, comprising a population (though largely uneducated) of 120,000,000 of people. See Anderson, Oriental Missions; Smith and Dwight, Missionary Researches in Armenia; Hartley, Researches in Greece and the Laced; Perkins, Eight Years in Persia. This edition, among other translations, was brought to our attention in its various forms, such as the Targum, the Syriac, the Laced, the Chaldean, the Punic, and the Judian. The Syriac was translated from the Hebrew, and is highly esteemed by the Chaldean, and even by the Judian, for its sincerity and faithfulness by the endurance of bitter persecution from their kindred; and many who have not identified themselves with the Christian Church are believed to have accepted the vital truths of Christianity, and to have received to their hearts Jesus as the true Messiah. It is said that for the first time in history the Israelite nation has been given the national Bible in its original language, and has been brought into direct contact with the sacred text. (Proprietor’s Report.)
MISSIONS

To Jews has been persecuted in the following countries: Great Britain, Holland, Poland, Germany, France, Italy, Norway, Sweden, Switzerland, Moldavia, Turkey, Egypt, Palestine, Persia, Abyssinia, and the United States of America. While it must be admitted that the results of these efforts have not been as great as might have been hoped, yet they must not be undervalued in their past influence nor in their promise for the future. Great changes are continually taking place among the Jews, especially those inhabiting the more enlightened countries, and although certain forms of rationalism seem to be most popular with many who have relinquished the faith of their ancestors, yet when the insufficiency of these shall have been proved they may be found to have served as stepping-stones to eventual restoration. This being the case, the beginnings of missionary effort in behalf of Israel in so many lands may ere long prove to be of inestimable value in hastening the grand consummation of the world’s conversion.

See Steger, Die Evangelische Judenmission, in ihrer Wichtigkeit u. ihren geeigneten Fortgange (1847); Hausmeister, Die Judenmission (Heidel 1852); an address read at the Paris meeting of the Evangelical Alliance; ibid., Die evangel. Mission unter Israel (1861); Haren, Uber Judenmission (Altona, 1862; Kalkar, Israel u. die Kirche (Hamburg, 1869); Halsted, Our Missions (Lond. 1866); Anderson, Oriental Missions; Reports of societies.

4. Egypt.—A form of Christianity has long existed among the Copts of Egypt. But they, together with the followers of Mohammed, are sunk in a state of deplorable ignorance and moral depravity. The United Brethren were the first to form a mission in Egypt, but, meeting with little or no success, it was relinquished in 1788. The missionary societies now operating are the American Association, United Presbyterian Church, Kaiserswerth Deaconesses’ Institute, and Jerusalem Union, at Berlin. The Bible versions in use are the Coptic and Ethiopic. The mission of the United Presbyterian Church of America has been particularly successful. They have stations both in Cairo and Alexandria, together with a number of minor stations. A Church has been organized with a large and increasing membership. The customs that doom women to a life of seclusion and degradation have been gradually invaded. The Sabbath is more and more sacredly revered, and the vicious and idle laws are to a certain extent among the people are somewhat abandoned. See Booz, Egypt; Lansing, Egypt’s Princes; Thompson, Egypt, Past and Present; Miss Whately, The Huts of Egypt.

5. Northern Africa, with the exception of Egypt, seems abandoned to Moslem predominance. Owing to its vast extent in fact, its sources of communication are limited—indeed only traversed occasionally by tribes of wandering and savage Arabs. The French occupation of portions of Algeria, including the locality of the churches of Tetulituan, Cypriote, and Aigirienne, has done little toward restoring the Christianity taught by those fathers, and for the present the prospects of a re-evangelization of Northern Africa is in no sense promising. See Davies, Voice from North Africa; Cartlage and her Remains.

6. Western Africa.—This title includes Senegambia, the British colony of Sierra Leone, the American settlement of Liberia, and the country of Guinea. In the latter are included the kingdoms of Ashantee and Dahomey. A large proportion of the people are pagans; among the remainder a very corrupt form of Mohammedanism exists. The earliest efforts made by the Protestant Church to Christianize them were made by the English in 1736. The missionary societies now in the field are the Church, Wesleyan, Baptist, North German, Society of Bremen, Evangelical Mission at Basle, Free United Methodist, United Presbyterian Church. American Southern Baptist, American Episcopal Board, American Methodist Episcopal, and American Presbyterian. Some of the Bible versions in use are the Berber, Mandingo, Grebo, Yariba, Haussa, Ibo, and Duallia. In all, twenty-five dialects have been mastered. There are now thousands of hopeful converts to Christianity; above 2,500 self-supporting scholars under instruction. A very important result has been achieved in the success of native agency. See Wilson, Western Africa; East, Western Africa; Mrs. Scott, Day-dawn in Africa; Schön and Crowther, Expeditione de Nijs; Beecham, Ashantee and the Gold Coast; Raleigh, The People of Africa; Tucker, Abes-

kuta; Walkcr, Sierra Leone; Bowen, Central Africa; Cruikshank, Eighteen Years on the Gold Coast; Fox, Western Coast of Africa; Liberia and its Resources; Life of Daniel West; Memoirs of M. B. Cox; Waddell, Twenty-nine Years in the West Indies and Central Africa; Freeman, From the Volga to the Niger.

7. Southern Africa.—The section of Africa now under consideration comprises the six provinces of Cape Colony, British Kaffraria, Kaffraria Proper, the sovereignty beyond the Orange River, Natal, and Amazulu. The ideas of the people about God were very confused and indefinite, and there is no need of particular form of worship among them. The first mission to the tribes of Southern Africa was established by the Moravian Church in 1787. The missionary societies now in the field are the American Board of Commissioners, Propagation, London, Wesleyan, Free Church of Scotland, United Presbyterian, and the English Evangelical Mission Board, with six Continental societies. The Bible versions in use are the Benga, Namaqua, Bechuana, Sesuto, Zulu, Pedi, and Kafr. There are nearly a quarter of a million of communicants. Numerous schools have been opened, with a large average attendance of scholars. As a Hottentot has expressed it, the missionaries have given them a religion where formerly they had none: taught them morality, whereas before they had no idea of morality; they were given up to prodigality and drunkenness, now industry and sobriety prevail among them. See Moffat, Missionary Labors in South Africa; Livingstone, Missionary Travels; Philips, Researches; Campbell, Travels in South Africa; Holden, Kafr Race; Shaw, Memorials of South Africa; Broadben, Martyrs of Namagon in; Taylor, Adventures in South Africa.

8. Abyssinia was formerly divided into three independent states; now, however, there is but one. The Christianity of the Abyssinians is so little developed as to little better than heathenism. Thus far it has proved a discouraging field for missionary effort. The Bible versions in use are the Amharic and Ethiopic. See Salt, History of Abyssinia; Hotten, Abyssinia and its People (Lond. 1868); Gobat, Three Years Residence in Abyssinia (N. Y. 1850); Hitzig, Hebrew Literature; Missionary Journals; Stern, The Captive Missionary; Kraft, Eighteen Years in Eastern Africa. See Any-
sianian Church.

9. Madagascar is one of the largest islands in the world, with a population of five millions. The native religion is idolatrous, but no public worship is offered to the idols. The London Missionary Society introduced the Gospel into Madagascar in the year 1818. The work of that society has been very successful, having largely secured the Christianization of the island. The other missionary societies are the Church and Propagation. The Bible version in use is the Malagasy. The native Church passed through a terrible persecution in 1849. Two thousand persons suffered death rather than renounce Christ. So plentiful has been the ingathering since that Madagascar is now in an important sense counted a Christian country. See Ellis, History of Madagas- car; Report of the Church of Madagascar; Freeman, Persecutions in Madagascar; Reports of the London Missionary Society.

10. Mauritius.—This island has a population of 300,000, three quarters of whom represent the races of India. The missionary societies in this field are the London, Propagation, and Church. An extensive and
promising work is carried on among the Tamils and Bengali-Hindustani-speaking coolies, and also by the London Society among the refugees and other emigrants from Madagascar. See Bond, Brief Memorials of the Bible, in Maryland; Backhouse, Visit to Mauritius; Le Brun, Letters.

11. Ceylon is an island situated off the south-west coast of Hindustan. The inhabitants are divided into four classes: the Singhalese, who are Buddhists; the Tamils, who profess Hinduism; the Moorsmen, and the Western form of Christianity was introduced by his missionary, Ceylon by the Jesuits as early as 1605. Protestant missions were commenced by the Dutch in 1656, by the London Missionary Society in 1804, by the Baptists in 1812, and by the American Board in the same year. The Wesleyans of England commenced their important mission in the same island in 1813. Glorious triumphs have been wrought in this field during the last half-century, and a steady advance now characterizes the work. The Wesleyan mission has been very successful. It reports 1855 members. The missionary societies are the Baptist, Church, Propagation, and American Board. The Bible versions in use are the Pali, Singhalese, and English. In Portuguese-speaking Ceylon the Bible is issued by the London Times; also by lord Napier, Sir William Muir, colonel Sir Herbert Edwards, and others in the civil and military service in India. The general opinion, not only of the missionaries, but of thoughtful and intelligent laymen, is that India is much in the condition of Rome just previous to the baptism of the emperor Constantine. Idolatry now in India, as then in Rome, is falling into disgrace—men are becoming wiser. Truth in its clearness and power is gradually entering their minds and changing their habits and lives. An intelligent Hindū said to a missionary on one occasion: "The story which you tell of him who lived, and pitied, and came, and taught, and suffered, and died—our religion and our country—that story, sir, will overthrow our temples, destroy our ritual, abolish our shastras, and extinguish our gods." The preaching of Christ crucified, and the proclaiming of him who is the way, the truth, and the life, is already accomplishing in some measure what this Hindū said it would do. Much the hope is to see in the near future a great turning of the people unto the Lord, and the utter destruction of all idols. See Thornton, India, its State and Prospects; Duff, India and Indian Missions; Kay, History of Christianity in India; Butler, Land of the Vedas; Hough, Christianity in India; Hoole, Madras and More; Clarkson, India and the Gospel; Massie, Continental India; Tilning, Early Roman Catholic Missions in India; Weitbrecht, Missions in Bengal; Wylie, Bengal; Storow, India and Christian Missions; Stirling, Orissa; Arthur, Mission to Myanmar; Long, Bengal Missions; Mullens, Missions in South India; Memoirs of Carey, Marshman, Ward, and Schweitz; rev. E. J. Robinson, The Daughters of India; Mary E. Leslie, The Zenana Mission; J. F. Carey, India.

12. India has been divided by the British into the following provinces: Bengal, Bombay, and Madras; these are again subdivided into districts. Its entire extent is about 1,357,000 square miles, with a population of 250,000,000. The religious may be divided into four classes: Hindū, Buddhist, Mohammedan, and that taught by Zoroaster. Under their individual and united influence thousands upon thousands of the people was destroyed. Children were thrown into the River Ganges as offerings to imaginary deities; widows were burned with the dead bodies of their husbands, and numbers destroyed themselves by throwing their bodies under the wheels of the cars of their bloodthirsty idols. The pioneers of Protestant missions in this country were two Danes, who arrived in 1706. There are now twenty-seven missionary societies laboring in the field. The following are a few: Church, Propagation, London, Baptist, Wesleyan, Church of Scotland, American Presbyterian, American Baptist, and American Methodist Episcopal. A German, Maclay, has been a missionary in Ceylon for thirty-three years. The native Church has a very large membership. The number of native Christians at the close of 1871 was 224,161. Within the preceding ten years an increase of 85,480 took place. The system of caste, which has proved a great barrier to the triumph of the Gospel, is becoming less and showing signs of its decline. Hinduism is the leading religion. The missionary societies are the American Baptist, American Presbyterian, American Missionary Association, and Gossen's Evangelical. The Bible versions in use are the Burmese, Ighara-Karen, Sgau-Karen, Pwo-Karen, and Siamese. The Baptists have shown the greatest success in these regions. The chief customs are loosened, prejudices are dissolved. The king of Burma sends his son to the mission school. The late king of Siam sought his most congenial associations among European Christians. Evangelization is going on with great vigor among the Karens of Burmah. Though poor, they support their own works. Wylie, in his Mission; Mrs. Judson, American Baptist Mission to the Burman Empire; Life of Judon; Malcom, Travels; Guttaloff, Notices of Siam, Corea, and Laos; Choo; Gammell, Baptist Missions.

14. The Indian Archipelago.—This vast eastward territory is divided into four parts: the British territories, Burmah, Siam, and Cochin China; and the French dependencies, including the island of Ceylon, which is the leading state. The British territories are the largest and the most prosperous. The British possession of Ceylon is the oldest. The number of the native population, however, is very small. The climate is very pleasant, and the soil is of high quality. The people are principally of the Sinhalese and Tamil races. The native Church has a very large membership. The number of native Christians at the close of 1871 was 224,161. Within the preceding ten years an increase of 85,480 took place. The system of caste, which has proved a great barrier to the triumph of the Gospel, is becoming less and showing signs of its decline. Hinduism is the leading religion. The missionary societies are the American Baptist, American Presbyterian, American Missionary Association, and Gossen's Evangelical. The Bible versions in use are the Burmese, Ighara-Karen, Sgau-Karen, Pwo-Karen, and Siamese. The Baptists have shown the greatest success in these regions. The chief customs are loosened, prejudices are dissolved. The king of Burma sends his son to the mission school. The late king of Siam sought his most congenial associations among European Christians. Evangelization is going on with great vigor among the Karens of Burmah. Though poor, they support their own works. Wylie, in his Mission; Mrs. Judson, American Baptist Mission to the Burman Empire; Life of Judon; Malcom, Travels; Guttaloff, Notices of Siam, Corea, and Laos; Choo; Gammell, Baptist Missions.
proportion of the populations. The missionary societies are the Netherland Society of Rotterdam (1879), Java Society of Amsterdam, Separatist Reformed Church, Utrecht, Netherland Society of Rotterdam (1859), Netherland Reformed, Church of England, and Rhenish. The Bible versions in use are the Malay, Javanese, Dajak, and Sundanese. Considerable good has been accomplished among the Sarillos tribes and the Land Dyaks of Borneo. China is a mission field of the civilizing power of Christianity. See Wigger, Hist. of Missions; Memoirs of Munson and Lyman; Hist. of the Missions of the American Board.

15. China.—This is an extensive country of Eastern Asia. Its superficial area is equal to about one third of Europe, and its population is estimated at 434,000,000. This vast area is divided into five provinces. The religions of China are chiefly Buddhism and Confucianism. The first Protestant mission in China was that of the London Missionary Society, founded by Dr. Morrison in the year 1807. The missionary societies now in the field are twenty-two in all, a few of which are the following: London, American Board of Commissioners, American Baptist, American Methodist Episcopal, American Episcopal, American Presbyterian, Baptist, Wesleyan, and Presbyterian. The Bible versions in use are the Chinese, Mandarin, Ningpo, Canton, Hakka, and other local dialects of China. For several years there was little or no visible fruit of the missionary's labor, but at length the tide of success set in, and a large gathering of converts took place. All the open ports are occupied by mission stations, and some places that are not open by treaty stipulations are occupied on sufferance. There are now one hundred ordained missionaries, and one hundred and eighty native catechists and teachers. The result of their united labors is encouraging as to the past and full of promise for the future. A review of the results which have been accomplished in India (see above), and of the spiritual revolution which is in progress there, is in a high degree encouraging to those who are laboring for the conversion of the still more populous empire of China. Missions in China have been established only about half the period that they have in India, and there have been about half as many laborers. When they shall have been continued for as long a time, and with as many missionaries, the prospect is that there will be an equal or greater number of converts, and that proselytes for the utter overthrow of the religious systems of China will be equally bright. The obstacles to the conversion of the Chinese people are many and great, but they are not more numerous or formidable than those which are now successfully encountered in India. If the Chinese are converted, it will be as a result of the work of missionaries, and their leading men more sceptically inclined, there is, on the other hand, an absence of the immense obstacle of caste; nor is there any set of men in China that are looked up to with such awe and reverence, and wield such immense power, as the Brahmins of India. Moreover, there is not the same diversity of races in the Chinese empire, and the number of languages is but about half the number of those in India. There is, too, this advantage in China, that, whatever the mother-tongue may be, all who have received a good education can read books understandably, which are in the general written (unspoken) language. The Chinese also are becoming a ubiquitous people, and of the multitudes who come to our own and other Christian lands, we have good reason to believe that not a few will return to China prepared in head and mind to aid in spreading the Gospel of Christ. The number of Chinese converts at the present time is alone the number there were in India thirty years ago, and the stage of progress of the missions in other respects is about the same as it was in the latter country at that period; but the outlook in China now is much more encouraging than it was in India then, and all those who are seeking the spiritual conquest of the most ancient and most populous nation of the world have abundant encouragement to press forward in their efforts. See Mission; China; Huc, Christianity in China; Turcotte and Tiedel; Morrison's Life; Abel, Residence in China; Kidl, China; Williams, Middle Kingdom; Doolittle, China; William, Journeys in North China, Manchuria, and Mongolia; Lockhart, Medical Missionary in China; Milne, Life in China; Matheson, Presbyterian Mission in China; Harkness, China Mission; Wiley, Fuk-Chau and its Missions.

16. Japan.—This empire consists of three large islands and several smaller ones, which have a superficial area of 90,000 square miles, and a population of 40,000,000. The Japanese are divided into two religious sects, called Sinto and Budhoe, or Buddhists. The missionary societies are the American Episcopal, American Presbyterian, American Reformed (Dutch) Church, and American Methodist Episcopal Church. The Bible version in use is the Japanese. This peculiar country, which, following the expulsion of the Jesuits in the 17th century, could not be brought under missionary influence from being closed to foreign nations, has now been freely opened, and brought into such favorable relations with Christian nations, as to encourage the hope that as a nation it will be entirely Christianized at no distant period. See Smith, First to Japan; Caddell, Missions in Japan; recent Reports of missionaries; Mori, Education in Japan.

17. Australia is the largest island in the world, being nearly the size of the whole of Europe. The aborigines, a race more degraded than either the Hottentot or Bushmen of South Africa, are fast diminishing in numbers. The missionary societies are the Colonial Presbyterian, Gossen's Evangelical, Evangelical Moravian Brotherhood, and Wesleyan Propagation. The migratory habits of the native tribes have stood in the way of any great success of missionary labors. Some, however, have been reached by localizing them on mission reserves. The colonization and occupation of Australia by Great Britain has introduced Christian civilization and English institutions throughout its vast extent, and made it the subject of evangelical labor in modes peculiar to all Protestant Christian countries. See Young, Southern World; Johnson, Australia; Strachan, Life of Samuel Leigh; Memoirs of Rev. B. Carveross, D. J. Dupper, and Nathaniel Tuner; Angus, Savage Life in Australia.

18. New Zealand comprises a group of islands in the Pacific Ocean, the principal of which, three in number, are distinguished as the Northern, Middle, and Southern Islands. The natives were savage cannibals, without any fixed idea of worship, but believers in a great spirit called Atua and an evil spirit called Wairua. The first mission station was opened in 1814 by the Church and Wesleyan missionary societies. The missionary societies now in the field are the Propagation, Church, North German, and Wesleyan. The Bible versions in use are the Maori and New Caledonian. The natives are now chiefly professed Christians. The Christian Sabbath and Christian ordinances are observed all over the islands, and this triumph of Christianity, in rescuing such a nation from the depths of heathenism, and even from the practice of the bloodiest cannibalism, is indeed glorious. See Yate, New Zealand; Thompson, Story of New Zealand; Miss Tucker, The Southern Cross and Southern Crown; Brown, New Zealand and its Aborigines; Memoirs of J. H. Bumbly.

19. Tonga and Fiji.—Although embraced in the generic title of Polynesia, and even in the minor term South Sea Islands, yet the insular groups known as Tonga and Fiji deserve special notice as having exhibited the most remarkable example of successful opposition of wonderful triumphs of Christian labor. The population of the Tonga, frequently called the Friendly Islands, is estimated at 50,000; that of Fiji, 127,000, scattered over not less than eighty different islands. Cannibalism is a characteristic practice of the heathen of Polynesia. In Fiji it was an institution of the people
intertwined in the elements of society, forming one of their pursuits, and regarded by the mass as a refinement. But even this revolting crime has yielded before the mild influence of Christianity, and is for the most part abolished. It is still accredited in practice, if not in theory, by a few in some of the islands. The triumphs of the Gospel in these remote parts of the earth have been in every sense wonderful. Cruel practices and degrading superstitions have given way before Christian teaching. "Thousands have been converted, have borne trial, and maintained their faith and Christian character." This is the result of patient, persevering labor, attended, in many instances, by suffering and deprivation. The missionary societies are the London, Wesleyan, and a few smaller organizations. The Bible versions are the Fijian and Rotuman. See Williams and Calvert, Fiji and the Fijians; Miss Farmer, Tonga and the Friendly Isles; West, Ten Years in South Central Polynesia; Martin, Tonga Islands; Lawey, Visits to the Friendly Islands; Seemann, Mission Life in the Fiji Islands; Turner, Nineteen Years in Polynesia; Waterhouse, King and People of Fiji; Memoirs of Mrs. Cargill.

20. The South Sea Islands.—The above terms is popularly applied to the islands of the Pacific south of the equator, including the Marqueesas, the Austral, the Societies, the Line, the Tuamotus, the Gambiers, the Tuvalu, and the Solomon Islands, as well as the groups above noticed. A mission was begun in that distant and degraded region as early as 1797, but the difficulties were so great that it came near being abandoned. But in 1812 the night of heathenism seemed to be suddenly illuminated by the Sun of Righteousness. It has since been classed followed by a glorious awakening. Up to that time a native Christian in Polynesia was unknown. Two generations later it was difficult to find a professed idolator in all Eastern or Central Polynesia where Christian missions had been established. "The hideous rites of their forefathers have ceased to be practiced. Their heathen legends and war-songs are forgotten. Their cruel and desolating tribal wars appear to be at an end. The people are gathered together in peaceful village communities, and live under recognized codes of law. On the Sabbath a large proportion of them attend the worship of God. In some instances more than half the adults are members of Christian churches. They educate their children, they sustain their native ministers, and send their noblest sons as missionaries to heathen lands farther west." In fact, those islands are no longer to be regarded as heathen. See Ellis, Polynesian Researches; Williams, Missionary Epistles; History of the South Sea Islands; Martyn of Erromanga; Life of John Williams; Gill, Gene from the Coral Islands; Lundie, Mission in Samoa; Pritchard, Missionary's Reward; Murray, Missions in Western Polynesia; History of the London Missionary Society.

21. The Sandwich or Hawaiian Islands constitute the most important Polynesian group north of the equator. They have been the locality of one of the most important missions of the American Board. That mission was commenced in 1820. Its history for forty years following is one of struggle, trial, perseverance, and encouraging success. The report of the mission in 1857 said, "When we contrast the present with the not very remote past, we are filled with admiration and gratitude in view of the wonders God has wrought for this people. Everywhere and in all things we see the marks of progress. Instead of troops of armed men now surrounding the mission station, we see now surrounded by well-clad, quiet, intelligent multitudes, who feel the dignity of men. Instead of squalid poverty, we see competence, abundance, and sometimes luxury. Instead of brutal howlings and dark orgies, we hear the songs of Zion and the supplications of saints." The year 1860 was distinguished for revivals of religion over a large part of the islands. As a result, nearly 1600 were received into the churches during that year, and 900 the year following. So great had been the success of this revival that it was described by Leakey as early as 1848, incepted measures for creating an independent and self-supporting Church in the islands. Carefully and slowly following the leadings of Providence, the native churches were by degrees educated up to this idea, which was happily consummated in 1863, and has been practiced with excellent results. Thus, following about fifty years of missionary labor, not counting the good intermediate accomplished, the world witnesses the grand result of a nation converted from barbarism, and a native Christian community supporting its own pastors and maintaining foreign missions in islands and regions beyond. See Stewart, Missions to the Sandwich Islands; Dibble, Sandwich Islands Mission; Bingham, Twenty-One Years in the Sandwich Islands; Jarves, History of the Hawaiian Islands; Anderson, History of the Mission of the American Board to the Sandwich Islands.

22. North America.—The aboriginal races of the North American continent have, to a greater or less extent, been the subjects of missionary labor almost from the period of the first settlements by Europeans. Elliot's mission to the Indians of Massachusetts was begun in 1646. The French Catholic mission to the natives of Canada dates back to 1613. The same mission was established in Florida in 1668, in New Mexico in 1679, and in California in 1697. The vast extent of the continent, the lack of national affiliation among the numerous native tribes, the imperfection and multiplicity of languages, together with the extreme unsuitability of American Indians to the influences and habits of civilized life, have rendered the results of missions peculiarly difficult. Nevertheless they have been prosecuted by Christians of various denominations with a zeal and perseverance that have been not without encouraging results, both as to individuals and communities. A full history of these missions has never been written, yet many volumes have been filled with sketches embodying material for such a history. In no part of the world have there been greater personal sacrifices or more diligent toil to Christianize savages with results less proportioned to the efforts made. Without enumerating or discussing causes, the fact must be recognized that the mission work in North America is accomplished at an outlay to an extent that leaves little present prospect of any considerable remnant being perpetuated in the form of permanent Christian communities. Still missions are maintained in the Indian territories and reservations, and the government of the United States effectively recognizes their right to accomplish all that may be done for the Christian civilization of the Indian and Indian tribes that remain. The Canadian government also maintains a similar attitude towards the Indian missions within its boundaries. See Tracy, Elliot, and Mayhew, Gospel among the Indians; History of the Independence and Expansion of the British Missionary Society; History of New England; Gookin, Christian Indians of New England; Shea, Catholic Missions; Kip, Early Jesuit Missionaries; Winslow, Progress of the Gospel in New England; Hallet, Indians of North America; Hebewick, Missions among the Delawares and Mohicans; Latrobe, Moravian Missions in North America; Lenox, Moravian Missions in North America; Hawkins, Episcopal Missions in North American Colonies; McCoy, Baptists among the Indians; Finley, Wyanadot Mission; Hines, Indian Missions in Oregon; Fitzek, Mission Life in Lake Superior; Jones, Ojibway Indians; West, Mission to the Indians; Stewart, Mission to the Indians; and some missionary works by Santee, Cree, and Sisseton Indians. See also some missionary works by Negro, Nova Scotia; Churchill, Missionary Life in Nova Scotia; Ryerson, Hudson's Bay Mission; Tucker, Rainbows in the North; De Schweinitz, Life of Zeisberger.

23. The United States and Canada.—In no part of the world is there more enlightened and persevering activ
ity in missionary effort than in these great Christian countries. To them the tide of emigration has been flowing from Europe for a hundred years, and of late it has set in from Asia. Hence, in addition to the provident arrangements of the Roman Catholic Church, there has been a greater attempt to evangelize the Indians of their forests, there has been even a louder call upon them to teach the Gospel to the foreign populations in their midst, including the Afri
can slaves and their descendants. In recognition of this call, missions have been prosecuted with great ef
cfort among the Guarani, the Sacsas, the Cahuas and the Huancas, and the fruits of which are already seen in the American missions to Europe. Missions have also been prosecuted to some extent among the French in America and their descendants, but with less success. But, as the ten
dency is strong towards the mingling of all nationalities in a homogeneous American population, the greatest re
sults have been secured in the normal spreading of the various churches on the ever-enlarging frontier, and in the accumulating masses of our ever-growing cities. In this work of home evangelization, Sunday-schools [see Sunday-schools] have served as a most efficient aux
iliary. In addition to the various general and local home missionary societies, there have been missions to seamen in the ocean ports and along the inland waters of the nation, and also especially, since the extinction of slavery, to the freedmen of the South. Recently effi
cient missions have been established among the Chinese in California.

24. Mexico and Central America.—These countries were favorite fields of the Spanish Roman Catholic mis
sionaries, and by them were pronounced Christianized at a comparatively early period in the settlement of America. The intermediate history of those countries, however, illustrates in a striking manner the defective
ness of that form of Christianization which consists in itself with ceremonious conversion, and the exclusion of the Word of God from the people. Within a recent pe
riod, and more particularly since the extinction of the empire of Maximilian, there has been a reaction in favor of religious liberty, in consequence of which Protes
tant missions have been established in the city of Mexico, and in several of the more important provinces. The Scriptures in the Spanish language are now freely circulated throughout Mexico, and to some extent in the republics of Central America. The greatest obsta
cles to their influence on the public mind are found in the anti-religious superstition of the people. It may be hoped, however, that these will gradually pass away. See Robertson, History of America; Pres
cott, Conquest of Mexico; History of the British and Foreign and American Bible Societies; Bishop Haven, Letters from Mexico; recent Reports of the American Missionary Association; Board of Foreign Missions; and the Missionary Society of the Methodist Episcopal Church; Crowe, Gospel in Central America, Hondurass, and Guatemala; Griffin, Mexico of Today.

25. South America.—With the exception of Brazil, which was settled by the Portuguese, the several coun
tries of South America were colonized by the Spanish. The entire continent was long ago Christianized after the Roman Catholic type. It was in Par
aguay, the centre of the continent, that the Jesuits planted and developed the most remarkable mission known to their history, and yet by Roman Catholic power they were summarily expelled both from Par
aguay and Brazil. The aboriginal races of South Amer
ica have to some extent become mingled with the Eu
ropean and African races that have come to be occupants of their territory, but to a large extent they have de
clined in numbers, giving omen of ultimate extinction. The Catholic missions have not been pronounced. The Christian missions resemble in superstition and their low grade of intelli
gence the native races of Mexico, and their religious aspirations are equally hopeless. Most of the South American governments maintain a limited toleration, under which Protestant missions have been established in Guiana, Guatemala, Brazil, Montevideo, Buenos Ayres, Peru, and Chili. Most of these missions have met with encouraging success, which, although as yet on a limited scale, may prove the beginning of great results among the aborigines. The special effort to keep up by English Christians. See Robertson, History of America; Prescott, Conquest of Peru; Southey, His
tory of Brazil; Kohl, Travels in Peru; Muratori, Mis
sions in Paraguay; Bernan, Missionary Labor in Brit
ish Guiana; Brett, Indian Missions in Guiana; Kidder, Sketches of Brazil; Reports of the Presbyterian Board and of the Methodist Episcopal Missionary Society; Marsh, Memoir of Captain Gardner; Hamilton, Life of R. Williams.

26. West Indies.—The West India Islands are divided into three principal groups: 1, the Bahamas; 2, the Greater Antilles; 3, the Lesser Antilles. The population is estimated at about 3,400,000. Of these, about two thirds are negroes, one fifth white men, and the remain
der mixed races. Through cruel oppression on the part of the early European emigrants to these islands, the native races, with a few exceptions, have long been exterminated, and their places as slaves were imported. The religion of the negroes was a mixture of idolatry, superstitious and fanatical. Obse
ism and myalism, species of witchcraft, were commonly practiced. The first missionary efforts among the ne
groes were made by the Moravian Brethren in 1732. Since then the following missionary societies have en
tered the field: the Wesleyan, American Free Baptist, Propagation, Baptist, American Missionary, London, Church, and United Presbyterian. Since the abolition of slavery in 1838 the negroes have given increasing heed to the precepts and practices of Christianity, and thus secured a higher degree of moral improvement and social elevation. The most prosperous society, the Wes
leyan, numbers 44,446 Church members. See Coke, History of the West Indies; Duncan, Wesleyan Mission to Jamaica; Philipello, Jamaica, Past and Present; Samuel, Missions in Jamaica and Honduras; Horsford, Voice from the West Indies; Candle, Hoyt; Knibb, Me
morial of the Missions of Liberia; Jenkins, Bradbuck; and Mrs. Wilson, Trolley, West Indies.

27. Greenland and Labrador.—The arrival of Hans Egede on the shores of Greenland in 1721 marked an epoch in the history of modern missions, and the whole subsequent history of Moravian missionary effort among the inhabitants of Greenland. The Greenland mission is full of intense though sometimes of melancholy inter
est. In several instances both the missionaries and the people for whom they labored were decimated alike by disease and famine. But, notwithstanding all discourages
ments, the missionaries toiled on. By them it was effectually demonstrated that the same agency adapted to elevating degraded savages was the preaching of Christ and him crucified. By this appointed agency, first one and subsequently many of the Greenlanders were awakened and converted, after which civilization and education followed. From the original nucleus of Christian effort at Disco, Christianity has been effec
tively disseminated by missionary settlements in other parts of the island. Five such settlements are now oc
cupied, and nearly two thousand souls are under the direct care of the missionaries. About one fifth of the population of West Greenland receive Christian in
struction; they have been generally converted, and sanc
crarily any unbaptized Greenlanders on the whole west coast up to the seventy-second degree of north latitude. On the east coast the inhabitants are still heathen; but they are very few in number, and practi
cally inaccessible to foreigners. The peninsula of Lab
rador is sparsely inhabited by Equimaux, a race of natives similar in language and customs to the Greenlanders. To that land, therefore, the Moravians extended their efforts successfully in 1774, since which time they have been extending Christian influence by means of mission stations, of which there are now four—Nain, Okaik, Hopedale, and Hebron. At these stations thirty-five missionary agents are employed, and about twelve hundred natives are under Christian instruction. The Gospel has triumphed in frozen Labrador as well as in Greenland. See Grants, History of Greenland; Egede, Greenland Mission; Holmes, United Brethren; Histories of Moravian missions in Greenland and Iceland.

VIII. Missionary Geography.—From the above survey it may be seen that an important sense the world is already occupied as the field of active missionary enterprise. A few brief statements of results accomplished by it during the current century may serve as a just indication of still greater results that may now be safely anticipated in time to come from its increasing and maturing agencies.

The mission to Tahiti in 1793-4 was the first attempt in modern times to carry the Gospel to an isolated and uncivilized people. It was commenced at a period when the greater heathen nations of the world were wholly inaccessible. In the islands of the southern seas, as upon a trial-ground, all the great problems of humanity have since been wrought out. The densest ignorance has been enlightened, the fiercest cannibalism has been confronted, the lowest conditions of humanity have been elevated, and the most abominable idolatries overthrown and substituted by a pure worship. The various languages and dialects of the islands of the Pacific have been committed to writing. Dictionaries, grammars, translations of the Scriptures, and many other books, have been printed and introduced to the daily use of the populations, a large proportion of whom have been taught by schools to read and write in their own languages. The civil condition of the various communities has also been improved by modifications of their laws and customs adapted to the new and improved state of public feeling and knowledge.

It is hardly possible for the processes of elevating nations from pagan barbarism to Christian civilization to be better stated than in the language of John Williams, the renowned missionary martyr of Eromanga. "I am convinced," wrote he, forty years ago, "that the first step towards the production of a nation's temporal and social elevation is to plant among them the tree of life, when civilization and commerce will en-

---

**INDIA**

twine their tendrils around its trunk, and derive support from its strength. Until the people are brought under the influence of religion they have no desire for the arts and usages of civilized life, but that invariably creates it.” “While the natives are under the influence of their superstitions, they evince an inanity and torpor from which no stimulus has proved powerful enough to arouse them but the new ideas and the new principles imparted by Christianity. And if it be not already proved, the experience of a few more years will demonstrate the fact that the missionary enterprise is incomparably the most effective machinery that has ever been brought to operate upon the social, the civil, and the commercial, as well as the moral and spiritual interests of mankind.” At the present time the mission field of the South Sea Islands presents every variety of communities, from those of the coral islets, just emerging from barbarism and learning their first lessons of Christianity, to those that have been longest taught and most thoroughly tried by intercourse with the outer world, which has sometimes been as destructive as their original paganism. It has been thought by some that the first experiments of modern missions to the heathen were providentially directed to the small islands of Polynesia, among an impressionable people, rather than to the great and ancient nations of India and China; that comparatively the easiest work was given to the churches at first, in the process of which they might solve the great problems of missionary measures and economies preparatory to the greater work awaiting them in larger and in some respects more difficult fields.

The marvellous rise and progress of civilization in Australia during the last half-century is largely due to missionary effort. Three generations ago there was not a civilized man on the Australian continent, nor in the adjacent islands of Tasmania and New Zealand. Now there are two millions of English-speaking Protestants, in the enjoyment of a good government, a free press, and all the immunities of liberty, education, art, and commerce. The influence which the Australian colonies will eventually exert upon Polynesia and the Asiatic nations, from Japan to India, as well as upon the Indian Archipelago and New Guinea, cannot fail to be great. There is, moreover, every reason to hope that it may be both good and Christian. In no communities does there exist a greater desire for the spread of education and the circulation of sound literature. In Sydney, Melbourne, and Adelaide there are excellent public libraries. Whatever disadvantages were fastened upon those regions by the original plan and effort of England to populate them with trans-
ported criminals, have now been largely if not wholly counteracted. Indeed, it is asserted by English writers that there is on the whole a larger proportion of well-informed, educated people in the Australian colonies than among the same number of people in Great Britain, while the religious feeling is fully equal. The proportion of the aboriginal population is now not only small, but, notwithstanding all influences, growing relatively less, so that the missionary activity of Australian Christians may be expected to seek fields in the surrounding countries in the midst of which they are placed.

As the voyage of Columbus, by which America was discovered, and many of the expeditions by which the New World was opened up to settlement, were in a certain sense missionary in their character, so from that day down to the present, missionary effort has been making geographical explorations, and increasing both the extent and thoroughness of geographical knowledge. Of this the expeditions and journeys of Livingstone in Africa are a striking proof and illustration. Moreover, the influence which missions have exerted, and are now more than ever promising to exert over vast portions of the earth, renders the subject of missionary occupation in various countries one of peculiar interest. For a full illustration of this subject nothing less than a missionary map of the world is requisite; nevertheless, very suggestive indications are practicable on a condensed scale, like those here with presented to the reader. Without any attempt to show the island world of the southern hemisphere, to which reference has been made above, a miniature outline of India is first introduced, followed by similar outlines of other important fields, to which, for lack of space, we cannot further allude.

It would be difficult, even with the largest map, to impress the mind adequately with the extent and importance of India. That ancient country embraces a territory twenty-three times as large as England, and, leaving out Russia and Scandinavia, equal in extent to all Europe. It contains twenty-one races and thirty-five nations, while its inhabitants speak fifty-one different languages and dialects. Its population, according to the census of 1872, is 257,562,558, of which number 192,800,000 are directly governed by British rulers, and 46,200,000 by native governments dependent upon the British.

Notwithstanding some praiseworthy efforts to introduce the Gospel into India during the 18th century, all such efforts were opposed, and to a great extent neutralized, by the East India Company, which then practically ruled the country in the name of Great Britain. It was not till 1815 that toleration was obtained for missions in India from the British Parliament. Since that period diligent efforts have been made, both by English and American Christians, to antagonize idolatry, and introduce Christian truth and worship by all appropriate means. Yet the government connection with idolatrous worship was not fully withdrawn till 1849.

A most interesting exhibit of the work and influence of missions in India may be found in a Parliamentary Blue-book ordered to be printed by the House of Commons, April 2, 1872. From it the following facts are abridged and copied:

"The Protestant missions of India, Ceylon, and Canada are maintained by 85 missionary societies, in addition to local agencies. They employ the services of 666 foreign missionaries. They occupy 522 principal stations and 2500 subordinate stations. A great impulsion was given to these societies by the changes in public policy inaugurated by the charter of 1833, and since that period the number of missionaries and the outlay on their missions have continued steadily to increase."
Co-operation of Missionary Societies.—"This large body of European and American missionaries bring their various moral influences to bear upon the country with the greater force because they act together with a compactness which is but little understood. From the nature of their work, their isolated position, and their long experience, they have been led to think rather of the numerous questions on which they agree than of those on which they differ, and they co-operate heartily together. Localities are divided among them by friendly arrangements; and, with few exceptions, it is a fixed rule among them that they will not interfere with each other's converts and
each other’s phases of duty. The large body of missionary

inhabitants, most of whom are professors and students of

institutions, hold periodic meetings, and act together on pub-

lic questions, and have frequently addressed the Indian
government on important social and educational questions

the welfare of the native community, and have suggested val-

able measures. In these respects, the missionaries have

Various Forms of Labor.—The labors of the foreign

missionaries in India assume many forms. Apart

from their educational and religious functions as public

institutions, many of the mission churches constitute a

valuable body of educated people. They contribute

greatly to the cultivation of the native languages and lit-
	erature, and all who are really interested in the welfare of

languages. The missionaries, as a body, know the

natives of India well. They have been

sustained both for schools and for general circulation, in

the fifteen most prominent languages of India, and in several

other languages they have compiled vocabularies, gram-

marians and grammars; they have written important works

on the native classics and the system of philosophy; and

they have largely stimulated the great interest in the

native literature prepared in recent years by native gentle-

men.

Mission Presses and Publications.—The mission press

in India are 35 in number. During the ten years be-

 tween 1850 and 1873 they issued 3410 new works in thirty

languages. They circulated 1,518,508 copies of books of

Scripture, 2,375,040 school-books, and 8,750,129 Christian

books and tracts.

Schools and Training Colleges.—The missionary schools

in India are chiefly of two kinds, purely vernacular and

Anglo-Indian. In addition to the work of these schools, several missions maintain training colleges for

their native ministers and clergy, and training institu-

tions for boys, where many of both sexes are brought to

matured in English and the houses of Hindu gentlemen.

The great progress made in the missionary schools and the

area they occupy will be seen from the following fact:

They have been established in all the provinces within

twenty years. In 1872 the scholars numbered 142,502.

Christian Communities.—A very large number of the

Christian communities scattered over India are small,

and they contain severally fewer than a hundred com-

munity, and they convert them into missionary

Within the same time some of these small congregations consist

educated men, have considerable resources, and are able

are able to maintain a large number of the native clergy and ministers in dif-

ferent churches, who are now taking a prominent place in the

in the instruction and management of the Indian Church.

Christian Church. Taking them together, the rural and

aboriginal populations of India which have received a large

share of the attention of the missionary societies now con-

tain among them a quarter of a million native Chris-

theatricals in India,

General Influence of Missions.—The missionaries in

India hold the opinion that the winning of these converts,

share in the hold of the Indian people or in the internal

portion of the beneficial results which have sprung from

their labors. No statistics can give a fair view of all that

they have accomplished. They consider that the Chinese

teaching, now applied to the country for many years, has

powerfully affected the entire population. The moral

touches the Indian mind, and influences the lives of

by multitudes who do not follow them as converts.

In

moral and intellectual conduct is becoming familiar to the people; the Indian systems are no longer

defended as they once were, many doubts are felt about

the rules of caste, and the great festivals are not attended

by the great crowds of former years. This view of the

general influence of their teaching, and of the greatness

reputation which it acquires, is not derived from

missionaries only. It has been accepted by many

distinguished residents in India and experienced

officers of the Indian Government, and has been

endorsed by the high authority of Sir Bartle Frere. With-

out pronouncing an opinion upon the matter, the govern-

ment has accepted the evidence of this new migra-

tion under which it is laid by the benevolent exertions

made by the missionary societies in India. We believe

example and self-denying labors are infusing new vigor

into the stereotyped life of the great populations placed

under the British sway, and are the cause of per-

ever better. The mission has been able to the

most barbarous scenes. Native churches have al-

ready been formed, and converted Indians are becom-

ing apostles to their countrymen, while a system of ed-

ucation, indirectly under Christian influence, promises
to elevate the general intelligence and character of the

nation at an early day. The effect of Christianity, if not formally, is practically set aside, and a favorable sentiment towards Christianity has be-

come very general in various grades of society.

In South Africa a mission was commenced by the

Moravians as early as 1737; but it was withdrawn in

1744, and not effectively resumed till 1759. The work

of the London Missionary Society entered the field, in 1812

the Wesleyan, and since various others. Although Hot-

entots and Kaffirs are not promising subjects for mis-

sionary influence, yet the Gospel, through missionary

agency, has not been wanting in glorious triumphs

among them, as well as other native tribes of South

Africa, while it has made substantial progress among

sal, which, for extent and rapidity of effect, are far more

common and to be expected than converting you or your fathers

have witnessed in modern Europe.

To the above may be fitly added the following similar

autorial testimonies:

"I believe, notwithstanding all that the English people

have done to benefit India, the missionaries have done

more for it and at less expense than all our public institu-

tions."—Lord Lawrence, viceroy and governor-general.

"In manyplaces an impression prevails that the mis-

sionaries do not make any results adequate to the efforts

which have been made; but I trust enough has been said

by the missionaries to prove that this is not the case. We

are proud of them, and those who hold such opinions know but little of the

truth."—Sir Donald McLeod.

"Lieutenant-governor of the Punjab."}

In the light of such competent and unequivocal testi-

mony it would seem impossible for any reasonable

mind to doubt the grandeur or the beneficence of the

results accomplished by Christian missions during the

current century, or to question their still greater prom-

ise in time to come. The above notices of missionary

work in India may serve as a sample of similar testi-

mony which might be adduced from various other coun-

tries. In nearly all cases the most that has been done is to be regarded as in a large measure preparatory to
greater efforts and successes hereafter.

The great empire of China affords another remarkable example. In twenty years all Christian efforts

in behalf of China had for ages maintained a rigid system of non-inter-

course with the people of foreign nations, whom it in-

discriminantly stigmatized as outside barbarians. Until

within a little more than thirty years all Christian ef-

forts in behalf of China had to be made outside of the

empire, or stealthily if within its borders. On the open-

ing of the "Five Ports" to commerce in 1842 missions

also entered, and, notwithstanding multiplied obstacles,

have since made wonderful progress. Already there are

84,000 native Christians in China. The principal

great cities of the empire have become recognized cen-

ters of missionary effort. ; From Canton on the south
to the old Tartar capital, Peking, on the north, what it

is perhaps most interesting of all is the demonstrated fact

that, notwithstanding the peculiarities of the Chinese

character, the power of the Gospel has proved itself ade-
quate to its complete transformation and renewal after

the New Testament model. Many ministers of the Gos-
pel have already been raised up. The native churches are also developing both the capacity and the dispo-

sition for self-support. Thus all the elements of a successful

and progressive establishment of Christianity through-

out the empire of China seem now to be happily at work.

In Japan, on the other hand, we have very good objective

data upon which to draw the conclusion that Christianity is

enjoying very great favor with the sovereign. In 1868 the

Christian community had long been excluded by the

most barbarous decrees. Native churches have al-

ready been formed, and converted Indians are becoming

apostles to their countrymen, while a system of edu-

cation, indirectly under Christian influence, promises
to elevate the general intelligence and character of the

nation at an early day. The effect of Christianity, if not formally, is practically set aside, and a favorable sentiment towards Christianity has be-

come very general in various grades of society.

In South Africa a mission was commenced by the

Moravians as early as 1737; but it was withdrawn in

1744, and not effectively resumed till 1759. The work

of the London Missionary Society entered the field, in 1812

the Wesleyan, and since various others. Although Hot-

entots and Kaffirs are not promising subjects for mis-

sionary influence, yet the Gospel, through missionary

agency, has not been wanting in glorious triumphs

among them, as well as other native tribes of South

Africa, while it has made substantial progress among
the Dutch and English colonists who now permanently occupy that portion of the African coast.

In 1815 the Church of England Missionary Society first turned its attention to the countries on the eastern border of the Levant. In 1819 the American Board commenced its work in the same regions. The missions in Greece, Turkey, and Persia have been mainly addressed to the new converts of those lands. As a result, though they have been commenced the number of evangelical congregations have been established both in European and Asiatic Turkey. Most interesting and promising also have been the results of the educational efforts made in connection with the Protestant missions in the Orient.

5. Missionary Literature.—Notwithstanding the numerous references in this article to books relating to the several fields of missionary effort throughout the world, the subject of missions as a whole would be but imperfectly delineated without allusion to its general literature, which embraces several classes of valuable works not heretofore named, and which can now be but briefly indicated.

2. Cyclopaedia, Gazettes, etc.—Newcombe, Aikman, Rand, (Prophetically Missionary), Edie, Stowardis (Gazetteer), Hoole (Year-book), Grundemann (Missions Atlas, Gotha, 1827-71); Bliss, Miss. Year-book, 1890.

3. Histories of Missionary Societies.—Annales de la Propagation de la Foi; Lettres Éléments; Anderson, Hist. of the Colonial Church; Allen, Wesleyan Missions; Moister, Wedgman Missionary; Best, Merventz; Cox, Baptist Missionary Society; Gammell, Baptist Missionary Society; Jubbies of the Church Missionary Society; Ellis, London Missionary Society; Kennedy, Accounts of the Society for the Propagation of the Gospel; Jubbies of the Religious Tract Society; Jubbies of the British and Foreign Bible Society; American Missionary Register; American Tract, Hist. of the American Board; Strickland, American Methodist Missions; Green, Presbyterian Missions; Lowrie, Presbyterian Missions; Reid, Missions of the M. E. Church.

4. Missionary Biographies.—Morison, Lives of the Fathers; Veron, American Missionary Memorial; Tarbox, Missionary Patriots; Yonge, Pioneers and Founders; Eddy, Daughters of the Cross; Lives of Schwartz, Carey, Marsham, Coke, Morrison, Phillips, Shaw, Judson, Hall, and many others.

5. Discourses of Missionary Principles. — Harris, Great Commission; Duff, Missions the Chief End of the Church; Gmelin, End and Aim of Missions; Campbell, Philosophy of Missions; Kingsmill, Missions and Missionaries; Müller, On Missions, a lecture delivered at Westminster Abbey, Dec. 3, 1873, with an introductory sermon by dean Stanley; Beecham, Christianity the Means of Civilization; Maitland, Prize Essay; Stowell, Missionary Church; Stowe, Missionary Enterprises; Wayland, Moral Duty of Missions; Liverpool Conferences on Missions; Richard Watson, Sermons; Macfarlane, The World's Jubilee; Seelye, Chr. Missions; the addresses on Missions delivered at the New York meeting of the Evangelical Alliance; and many others. The following periodicals contain valuable articles on the subject of missions: English Rev. v. 42 sq.; xviii, 354 sq.; Western Rev. Jan. 1855; July, 1866; Christian Rev. ii, 320 sq.; ii, 449 sq.; vi, 385 sq.; xiv, 866 sq. Amer. Bibl. Repository, 5d series, iv, 436; vi, 161 sq.; Jan. 1867, p. 38; Bibl. Repos. and Prose. Rev. Oct. 1870, p. 613; New-Englander, viii, 489; ix, 197; Prize Discourse, iv, 449; v, 535; xv, 349; 1858, p. 496; xvii, 61; xxxvi, 324; July, 1876; Christian Examiner, i, 182; ii, 183; iii, 265; 449 sq.; xix, 51; xiv, 416; Bibl. Sacra, Oct. 1867; Bril. and For. Evangel. Rev. Apr. 1871; Evangel. Qu. Rev. Oct. 1870, p. 373; Meth. Qu. Rev. vii, 629; viii, 165 sq. (Longford); Oct. 1870, p. 205 sq.; Oct. 1870, vi; Theol. Mediwm, July, 1873, art. ii; Oct. art. ii; Contribut. to Theol. World, 1870, p. 114. See also Malcom, Theol. Index, s. v.

6. Missionary Periodicals.—Their number is legion. Every country interested in missionary enterprises is publishing one or more. Germany, England, and America have them by the score. Among the most valuable are the Missionary Chronicle (Lon.), the Missionary Magazine (Lon.), and the Missionary Herald (Boston); Missionary Review of the World (N. Y.); also Mission Life (Lon.). A magazine based on mission reading on foreign lands with reference to the scene and circumstances of mission life; the Basle Evang. Missions-Magazin (established in 1816); Burkhardt, Missionsbibliothek. A General Missionary Periodic, a monthly, is just starting at Gutersloh, Germany. Its editors are Schmoller, Grundeman, and Warnack. It is to be published in English, and its contributors are to be of the world at large.

The above outline will serve at least as an indication of the great extent and value of a species of Christian literature which is obviously destined to increase in volume and in interest from year to year and from age to age. Whoever, by means of the authentic information now accessible, will acquire a full and just comprehension of the grand enterprise of missions, as it stands embodied in the active movements and growing successes of Christian missionaries and churches, can hardly fail to recognise with wonder and gratitude the rapid and substantial progress that is now made towards the full accomplishment of the Saviour's great command, "Go teach all nations." (D. P. K.)

Misson, François Maximilien, an eminent French lawyer, distinguished himself by his pleadings before the Parliament of Paris in behalf of the Protestants during the persecution of the Huguenots in the 17th century. He retired to England on the revocation of the Edict of Nantes, and after a fruitful period as a tutor to an English nobleman, he published A Voyage to Italy (8 vols.).—A Tour in England:—and Le Théâtre sacré des Cévennes, in which the author betrayed his credulity and fanaticism by espousing the cause of the French prophets. He died in London in 1701.

Missy, César Th., a writer of French parentage, was born June 2, 1705, at Berlin, and studied theology at Frankfort-on-the-Oder; but for his persistent refusal to sign the official formula of creed he was excluded from the ministry in Prussia. He went to Holland, where he allied with his duties of a minister the pursuits of a literary critic and poet. In 1781 he was appointed minister of the Dutch Church of London. In 1769 he was appointed to the chapel of St. James's Chapel. He died at London, Aug. 10, 1775. His judgment was very good, his taste refined, and his love of study passionate. He numbered among his friends several distinguished men of learning, as Beaussdre, Forney, Jordan. His rich library, together with his manuscripts, went to the library of the duke of Sussex. He left a work in verse, Paraboles ou fables et autres narraisons d'un citoyen de la république Chrétienne du dix-huitième siècle (Londres, 1769, 1770, 1776, 1805) :—Sermons sur divers textes (ibid. 1780, 3 vols. 8vo). Missy was also one of the editors of the Bibliothèque Britannique, of the Journal Britannique, and of the Magazin Français de Londres. Other poetical productions and critical articles of his were published in the Mercure de France and in English periodicals.

Mist (mist, ed. Gen. ii. 6) signifies a rising vapor, a fog, or cloud, which again distils upon the ground (Job xxxvi. 27). The Chaldean paraphrase renders it מַשָּׁל, the cloud.

Mistletoe (Anglo-Sax. misteltan, Ger. mistel; the tan of the Anglo-Saxon name means a tree or prong, a shoot of a tree; mistel is of uncertain etymology, but probably the same, in meaning at least, as the Latin rhus, a bunch (Venus) of small parasitical shrubs of the natural order Loranthaceae. This order is excep-
MITAKSHARA

nous, and contains more than four hundred known species, mostly tropical and parasites. The leaves are entire, almost nerveless, thick and fleshy, and with the flowers of many species are showy. The calyx arises from a tube or rim, which sometimes assumes the appearance of a corolla of the flowers, and is so regarded by many botanists; what others deem the colored calyx being viewed by them as a corolla of four or eight petals or segments. Within this are the stamens, as numerous as its divisions, and opposite to them. The ovary is one-celled, with a solitary ovule; the fruit one-seeded, generally succulent. The stems are dichotomous (i.e., divide by forking); the leaves are opposite, of a yellowish-green color, oblong-spatulate. The flowers are inconspicuous, and grow in small heads at the ends and in the divisions of the branches, the male and the female flowers on separate plants. The berries are about the size of currents, white, translucent, and full of a very viscous juice, which serves to attach the seeds to the branches. When they germinate, the radicle always turns toward the branch, whether on its upper or under side. The mistletoe derives its nourishment from the living tissue of the tree on which it grows, and from which it seems to spring as if it were one of its branches.

Superstitious Use.—The mistletoe was intimately connected with many of the superstitions of the different branches of the Aryan race. In the Northern mythology, Baldur is said to have been slain with a mistletoe. Among the Celts the mistletoe which grew on the oak was in peculiar esteem for magical virtues. Traces of the ancient regard for the mistletoe is said to remain in some old English and German customs, as kissing under the mistletoe at Christmas. The British Druids are said to have had an extraordinary veneration for it, and that mainly because its berries as well as its leaves grow in clusters of three united to one stock, and, as is well known, they had a special veneration for the number three (comp. Vallancey, Grammar of the Irish Language). Stukeley (Medallie History of Cariactus, ii, 163 sq.), speaking of the Druids' festival, the Jul (q.v.), and the use of the mistletoe, relates as follows: "This was the most respectable festival of our Druids, called Yule-tide, when mistletoe, which was called buch (because used to cure disease), was carried in their hands, and laid on their altars, as an emblem of the salutiferous advent of Messiah. . . . The custom is still preserved in the north, and was lately at York. On the eve of Christmas-day they carry mistletoe to the high altar of the cathedral, and proclaim a public and universal liberty, pardon, and freedom to all sorts of inferior and even wicked people at the gates of the city, towards the four quarters of heaven." See Brand, Popul. Antiquities of Great Britain, i, 521-4.

MITAKSHARA is the name of several Sanscrit commentatorial works of the Hindus. One of these is a commentary on the text-book of Suta, the"Compendium of Astronomy: another, a commentary on the Mūnās work of Kumāria; a third, a commentary on the Brihadāranyaka, etc. See VEDA. The most renowned work, however, bearing this title is a detailed commentary by Vijnāneshwara (also called Vijnānānātha) on the law-book of Yājnavalkya (q.v.); and its authority and influence are so great that "it is received in all the schools of Hindu law from Benares to the southern extremity of the peninsula of India as the chief groundwork of the doctrines which they follow, and as an authority from which they rarely dissent" (comp. Two Treatises on the Hindu Law of Inheritance, translated by H. T. Colebrooke, Calcutta, 1810). Most of the other renowned law-books of recent date, such as the Śrīmit-Chandārika, which prevails in the south of India, the Chīvala, mani, Vīramitra-dvādaśa, and Mayūraka, which are authoritative severally in Mithilā, Benares, and with the Mahārattas, generally defer to the decisions of the Mitakshara; the Dāyabhāga of Jīmvātāvāna alone, which is adopted by the Bengal school, differs on almost every disputed point from the Mitakshara, and does not acknowledge its authority.

The Mitakshara, following the arrangement of its text-work, the code of Yājnavalkya, treats in its first part of duties in general; in its second, of private and administrative law; in its third, of purification, penance, death, and the like; but, since it frequently quotes other legislatures, expounding their texts, and contrasting them with those of Yājnavalkya, it is not merely a commentary, but supplies the place of a regular digest. The text of the Mitakshara has been edited several times in India. An excellent translation of its chapter On Inheritance was published by Colebrooke in the work New Commercial Grammar and Explanations of the Sanskrit Language (Calcutta, 1810) and of its entire text in a modern commentary by Nāvavalkya is also followed by the same celebrated scholar in his Digest of Hindu Law (Calcutta and London, 1801, 3 vols.).

Mitchell, Alfred, a Congregational minister, was born May 22, 1790, at Wethersfield, Conn. He graduated at Yale College in 1809; was ordained pastor in Norwich Oct. 18, 1817, and died Dec. 19, 1831. He published five occasional sermons.—Sprague, Amais, ii, 601.

Mitchell, Donald, a Scotch missionary to India, flourished in the first half of our century. Of his early history nothing is known to us. He was the first missionary sent out by the Scottish Missionary Society. He settled at Bombay, where he labored with zeal, and saw his efforts crowned with much success. His plan was to convert the people by influencing the young, and, to secure their confidence, he established schools for their mental training. He succeeded in starting, in connection with his mission, eight schools, which were attended by some three thousand pupils. More fully to fit himself for the important work in which he was engaged, Mr. Mitchell mastered the official languages, and was enabled to address the people, not only in the immediate neighborhood of the station which he occupied, but also for many miles along the coast and in the interior, with very encouraging results for several years, till called to rest from his labors. See The Missionary World (N. Y. 1873, 12mo), p. 498.

Mitchell, Ellaha, D.D., an American scientist in early years, and later a popular preacher, was born at Washington, Conn., Aug. 19, 1798, and was educated at Yale College (class of 1813). From 1810-18 he taught in his alma mater. In 1817 he was elected professor of mathematics in the North Carolina University, whither he removed at once. In 1825 he was transferred to the chair of chemistry, and in this position he greatly distinguished himself. In 1831 he turned towards the ministry, was ordained by the Presbytery of Orange, and became noted as an able preacher and a good Biblical scholar. He died at Black Mountain, N.C., June 27, 1863. Dr. Mitchell contributed frequently to the Journal of Science.

Mitchell, John, a Congregational minister, editor, and author, was born at Chester, Conn., Dec. 27, 1794; was educated at Yale College (class of 1821) and at Andover Theological Seminary; edited the Christian Spectator from 1824 to 1829; was then licensed to preach;
Mitchell, John Thomas, a minister of the Methodist Episcopal Church, was born near the village of Salem, Bonneau County, Va., Aug. 29, 1810, and enjoyed the advantages of a good common-school education. In 1817 the family moved to Illinois, and settled near Belleville, St. Clair County. At a conference camping meeting he was converted, and shortly after united with the Church, but afterwards became careless and indifferent. In 1830 he commenced teaching in a Sabbath-school. About the same time he was appointed assistant superintendent of the Sabbath-school, and becoming deeply impressed with a clear sense of duty, he entered the ministry, April 13, 1831, at Hillsborough. In 1832 he set out for Indianapolis, Indiana; in 1837 preached at Jackson Court House, Ind., and in 1838-39 at New Madrid. In 1840 he was transferred to Rock River Conference, and by the General Conference of 1844 was elected assistant book-agent of the Western Book Concern. He died May 30, 1851. Mr. Mitchell possessed great and growing powers, combining in a very marked manner social, intellectual, and moral qualities. He was well read in theology, and had an excellent knowledge of philology, mathematics, and the classic languages. See Annual Minutes of the M. E. Church, 1863, p. 144.

Mitchell, Jonathan, a Presbyterian divine of note, was born in England in 1624. He came to this country in 1635. Jonathan was afforded all the advantages of education within reach. After due preparation, he was entered at Harvard College, and graduated in 1647. He was ordained at Cambridge, Aug. 21, 1650, and settled as minister in that place. Soon after this president Dunstar embraced the principles of the Baptist. This was a peculiar trial to Mitchell; but, though he felt it to be his duty to combat the principles of his former tutor, he did it with such meekness of wisdom as not to lead to separation. Mitchell's controversy resulted in the removal of president Dunstar from the college. In 1662 he was a member of the synod which met in Boston to discuss and settle a question concerning Church-membership and Church discipline, and the report was chiefly written by him. The determination of the question relating to the baptism of the children of those who did not approach the Lord's table, and the support thus given to what is called the half-way covenant, was more owing to him than to any other man. See Half-way Covenant. Time has shown that the views which this good man labored so hard to establish on this point cannot be his boast about this present purity of the churches. Jonathan Mitchell was eminent for piety, wisdom, humility, and love. He possessed a retentive memory, and was a fervent and energetic preacher. He died July 9, 1668. He published several letters and sermons, for which consult Justin Winsor's Catalogue of the Ministers of New England (Boston, 1870, new series, See Litt., by C. Mather; Magnalia, iii, 158-185; Hist. Soc. viii, 27, 47-52. (J. H. W.)

Mitchell, Orin, a minister of the Methodist Episcopal Church, was born in Granville, Licking Co., Ohio, Jan. 18, 1809; was converted in 1829; licensed to preach in 1832; received on trial in the Ohio Annual Conference in 1834, and appointed to Danville Circuit. He traveled on Plymouth, Grand River, and Lapier circuits, in Michigan. In Ohio he received appointments to the station of Maumee and Perrysburg; to the circuits of Indiana, Missouri, and Arkansas; to those of Clarkfield, Amity, Jeromeville, and Fairfield. In 1854 he took a superannuated relation, and died in August, 1869. Orin Mitchell excelled as a pastor, and his labors resulted in much good for the Christian cause.

Mitchell, Samuel C., a Presbyterian minister, was born in Overton Co., East Tennessee, April 20, 1806. He received a classical and Christian training, early united with the Cumberland Presbyterian Church, and was soon after elected ruling elder. He subsequently left Tennessee and settled in Indiana, and, becoming deeply impressed with a call to the ministry, in 1841 he placed himself under the care of the Wabash Presbytery, and immediately commenced preparation for the ministry. He was licensed to preach in 1843, and ordained at Limestone, Indiana, in 1846. He died Aug. 6, 1862. Mr. Mitchell was a plain, earnest, and impressive preacher. See Wilson, Presb. Hist. Almanac, 1863, p. 415.

Mitchell, Thomas W., a minister of the Methodist Episcopal Church, South, who labored as a missionary among the North American Indians, was born in Indiana, the other remaining child of the pioneer white system of Tennessee when Thomas was but two years old. Here he was educated. He professed religion in his eleventh year; joined the Methodist Episcopal Church; removed to Missouri, with his parents, in 1835; was licensed to preach in 1857; admitted into the Missouri Conference the same year; filled the following charges: New Madrid Circuit in 1857, and Webberville Circuit in 1838. In 1840 he was located; removed to the Cherokee Nation in 1845, and taught a public school until 1846, when he was readmitted into the Indian Mission Conference. From that time to 1851 he filled different appointments and was then transferred to the Creek District. In 1856 he was appointed superintendent of Fort Coffee and New Hope seminaries, and continued until 1858. Then he was transferred to the St. Louis Conference, where he labored until 1862. During the war-storm he retreated to Texas, and, after the opening of brighter days, in 1866 he entered the Trinity Conference, where he labored until 1869, when he took a superannuated relation. In 1871 he obtained a transfer and removed to the Indian Mission Conference, and was appointed presiding elder of the Creek District. He died in the midst of his work, March 17, 1872, in Ozark, Creek Nation. See Minutes of Conferences, 1872, P. 742.

Mitchell, William B., a minister of the Methodist Episcopal Church, was born in 1815. He was converted in 1843, and, though engaged in a lucrative business, turned aside to the ministry, to which he felt called of God. In 1845 he was licensed to preach; in 1846 was stationed at the Delaware Mission, Delaware County, N. Y., under his presiding elder; in 1847 joined the New York Conference, and was successively appointed to Windham, Lexington, Jefferson, Prattsville, and Kortright circuits, and subsequently to Coxsackie and Hyde Park stations. He died Oct. 27, 1858. "His life was useful and consistent; his zeal for the interests of the Gospel; his earnestness; his anxiety for the salvation of souls earnest and abiding." See Smith, Sacred Monuments (N. Y. 1870), p. 99 sq.

Mitchell, William H., D.D., an American divine and educator of the Presbyterian communion, was born Sept. 7, 1812, at Monoghan, Ireland. His early training he received in his native town, and even then distinguished himself by superior abilities and unwearied application. In his early manhood he was a practitioner of law. In his twenty-seventh year, a little more than a year after his marriage, he came to this country, and settled at Montgomery, Alabama. For a number of years after this he was engaged as teacher. In 1845 he was licensed to preach by the presbytery of East Alabama, and
shortly after he was installed pastor of the Presbyterian Church at Wetumpka, Alabama. Possessing abilities of a high order, and being in all respects exemplary and pious, faithful, untiring in his devotion to his ministerial and pastoral duties, he enjoyed the confidence and esteem of all who knew him. In August, 1850, Mitchell removed to Florence, Alabama, and became the pastor of the church in that place. He remained in this pulpit till June, 1871, when the onerous and accumulating duties and cares of the Synodical Female College of that place, of which he had become president, in connection with his pastoral responsibilities, rendered it necessary that he should devote himself more entirely to the care and interests of the college. He died Oct. 3, 1872, after having held the presidency of the synodical college for over thirty years. In his death the city lost a fine, looking man, rather low of stature, pleasing in his address, and courteous and dignified in his deportment; sometimes grave and serious, and at other times humorous and entertaining. When among his most intimate acquaintances and friends, he was free and unrestrained, and abounded in anecdote and wit. In ecclesiastical bodies he was usually a calm and quiet listener, speaking but seldom, and modest and diffident in advancing his opinions, but always wise, prudent, and conservative, yet decided and firm in his convictions. His sermons were written with care, and preached almost always from his manuscript; but his delivery was fluent and easy. He was a man of fine literary attainments, and could write and speak well. He was a man of great liberality, and his sermons were doctrinally sound and Scriptural, and in all the religious and moral duties of life, showed a great zeal and love for the church. His sermons were doctrinally sound and Scriptural, and in all the religious and moral duties of life, showed a great zeal and love for the church.

Mitchell, William Luther, a Presbyterian minister, was born in Maury County, Tenn., July 11, 1828; was converted at the age of twelve; graduated in 1854, with honor, at Jefferson College, Pa., and in 1857 at Princeton Theological Seminary; was licensed in 1857 by the presbytery of Lafayette, Mo.; in 1857 and 1859, supplied the First Presbyterian Church, Burlington, Iowa; and in 1859 was ordained and installed pastor of the church at Hillsborough, Ill., where he died, Feb. 23, 1864. Mr. Mitchell was a minister of more than ordinary ability and attainments. As a Christian, his life was religious exemplified; as a pastor, he was earnest and instructive, and often eloquent and impressive. His sermons were doctrinal, and at the same time intensely practical. See Wilson, Presb. Hist. Almanac, 1864, p. 102.

Mitchell, William W., a minister of the Methodist Episcopal Church, was born in Virginia Feb. 16, 1815. He was educated with a view to the legal profession, but was prevented from pursuing that course by his family circumstances. While a student at Yale he was converted, and he became convinced that his place was in the pulpit. After much opposition at home, he joined the Illinois Conference in 1854, and was appointed to Lebanon Circuit, where he continued about six months, and was then removed to Vandalia Station. He afterwards filled many important appointments on circuits, stations, and districts, all in Illinois, except one year in Kentucky. William W. Mitchell was a good rather than a great preacher. His last appointment was to Edgewater Station. During his second year in this station he became severely afflicted, so as to disable him for pulpit labors. He consequently resigned his charge and removed to Richview, Illinois, where, after severe suffering for almost a year, he died, March 7, 1869. See Minutes of Conference, 1869, p. 204.

Mite is the rendering in theAuth. Vers. (Luke xi, 59; xx1, 2; Mark xii, 42) of the Greek term λεπτός (thm, like a scale), a minute coin (Aelchir, i, 2; Pollux, On. ix, 92), of bronze or copper (see Smith's Dict. of Class. Ant., s. v. Λεπτός), two of which made a quadrans (Mark xii, 42), and which, therefore, was the eighth part of the Roman ass, i.e., equal originally to a little over one mill, but in the time of Christ about half a mill. At Athens it was reckoned as one seventh of the χαλκός (Suidas, v. Λεπτός). From Mark's explanation, "two mites, which make a farthing" (λεπτή δύος, δή ἵπτη κελεμάντης, ver. 42), it may perhaps be inferred that the κελεμάντης or "farthing" was not so large as one supposed to be there spoken of as a money of account, though this might be the case in another passage (Matt. vi, 26). See Farthing.

Cavedoni (Bibl. Num., i, 76) has supposed that Mark meant to say "one lepton was of the value of one quadrans," for had he intended to express that two of the small pieces of money were equal to a quadrans, then he must have written ἵπτη τίνι instead of ἵπτη κελεμάντης; and the Vulg. has also translated quas est, but not quam est. This argument, however, is too minute to be of much force. Another argument adduced is that the word "farthing," used by the English in the parallel passages of Matthew (v, 26) and Luke (xii, 62), proves that the quadrans is the same as the lepton. In the former passage the words are ἰσαχαρον κελεμάντης, and in the latter ἰσαχαρον λεπτόν. This argument, again, hardly merits an observation, for we might as well assume that because we say such a thing is not worth a penny, or not worth a farthing, therefore the penny and the farthing are the same coin. A third argument, deemed by Cavedoni to be conclusive, assumes that the quadrans only weighed 90 grains, and that if the quadrans equalled two lepta, there would be coins existing at the time of our Saviour of the weight of 18.44 grains. This argument is sufficiently answered by the fact that there are coins of the ethnarch Archelaus and of the emperor Augustus struck by the procurators weighing so low as 18 to 15 grains,

and by comparing them with others of the same period a result can be obtained proving the existence in Judea of three denominations of coinage—the semis, the quadrans, and the lepton. There is no doubt that the lepton was rarely struck at the time of the evangelists, yet it must have been a common coin from the time of Alexander II the accession of Antigonus (B.C. 69—B.C. 40), and its circulation must have continued long in use. The extreme vicissitudes of the period may only have allowed these small copper coins to be struck. They were formerly attributed to Alexander Jannaeus, but are now given to Alexander II. They average in weight from 20 to 15 grains. See Money.

It may be as well to notice that Schleuniger (Les. N. T. s. v. κελεμάντης), after Fischer, considers the quadrans of the N. T., of which the lepton was the half, not to have equalled the Roman quadrans, but to have been the fourth of the Jewish ass. The Jewish ass is made to correspond with the half of the half-ounce Roman as, and as, according to Jewish writers, the Παλαιαν ασσία τεταρτήν with the eighth part of the asser, or Jewish ass (Buxtorf, Les. Palm. s. v. Παλαιαν), and as the evangelists have understood this word Παλαιαν as to be the lepton, it follows that the quadrans was equalled to the ass. This theory, however, is quite out of the question, and a comparison of the coins of Judea with those struck at Rome clearly proves that the quadrans in Judea was the same as the quadrans in Rome. Moreover, as the Romans ordered that only Roman coins, weights, and measures should be used in all the provinces of the Roman empire (Dion. Cass. iii, 20), it is evident that there can have been no Jewish as or Jewish quadrans, and that all the coins issued by the Jewish princes, and under the procurators, were struck upon a Roman standard (E. W. Malden, Hist. of Jewish Coinage and of Money in O. and N. T. p. 296—302).

Copper Coin (λεπτόν or "mite") of Archelaus.

(Obverse—H [ΦΩΣΤΟΥ] within beaded circle. Reverse—XX [ΘΡΟΝΟΝ] above. See above.)*
Mitelli, Giuseppi Maria, a noted Italian painter, was born at Bologna in 1634. He received instruction from his father, and as an eminent fresco painter of Bologna, and afterwards entered the school of Flamino Torre. He painted a number of works for the churches of Bologna, among which may be mentioned St. Reniero healing the sick, in S. Maria della Vita, a Pietà, in the Nunziato, and Christ taken in the Garden, at the Cappuccinia. He was more famous for the number of plates of the most celebrated masters, as well as many of his own designs—among the latter the set of twenty-six plates illustrating the Twenty-four Hours of Human Fecility. Bartsch has credited him with one hundred and sixty-two prints, but Nagler increases the list. He died in 1718. See Launay’s History of Painters, trans. by Hosoe (Lond., 1847, 3 vols. 8vo), ii, 138; Spooner, Biog. History of the Fine Arts (N. Y. 1865, 2 vols. 8vo), ii, 569.

Mith'cah (Heb. Mīḥkāh, מִּחְכָּה, sweetness, prob. of the water found there; Sept. Maššēši), the twentieth station of the Israelites in the desert, between Tar rah and Hashmonah (Numb. xxxiii, 28, 29); perhaps at the intersection of Wady el-Ghamr with Wady el-Jer reif. See EXOD.

Mith'nite (Heb. Mīḥnî, מִחְנִי, patrocinous or gentile apparently from מִחְנֶה, Me’nane, firmness; Sept. Maššēši v. v. Baššiši, Vulg. Mathematicos, as if from מַטָדָא, Mattan), an epithet of Josaphat, one of David’s body-guard (1 Chron. xi, 40); either from his ancestor or name, or more of which, however, is not there any other mention, or further means of determination.

Mithra or Mithras (Greek Mīśpoc; Sanscrit. Mitra or Mitra), the highest of the twenty-eight second-class divinities of the ancient Persian Pantheon, is generally regarded as the chief of the Izdes (Zend. Yas zuta), the ruler of the universe. He is spoken of as the god of the sun; but he is more properly the god of day, and, in a higher and more extended sense, the god of light, presiding over the movements and influence of the principal heavenly bodies, including the five planets of the sun and moon. The primary signification of the word Mitra is a friend, and Mithra would therefore convey the representation of light as the friend of mankind, and as the mediator (muṣṭirāq) between heaven and earth. Protector and supporter of man in this life, he watches over his soul in the next, defending it against the impure spirits, and transferring it to the realms of eternal bliss. He is all-seeing and all-hearing, and, armed with a club—his weapon against Ahriman and the evil Deu—he unceasingly “runs his course” between heaven and earth. In this character of mediator, as well as in some other respects, he would seem to approach the character of Zoroaster. From Persia the cultus of Mithra and the mysteries were imported into Asia Minor, Syria, Palestine, etc., and it is not unlikely that in some parts human sacrifices were connected with this worship. In the days of the emperors the worship of Mithra found its way into Rome, and thence into the different parts of the Roman empire, and the mysteries of Mithra (Hierocoraciac, Curatio Socrum), which fell in the spring equinox, became famous even among the many Roman festivals. The ceremonies observed in the initiation to these mysteries—symbolical of the struggle between Ahriman and Ormuzd (the Good and the Evil)—were of the most extraordinary and, to a certain degree, even dangerous character. Baptism and the partaking of a mystical liquid, consisting of flour and water, to be drunk with the utterance of sacred formulas, were among the inaugurate acts. The seven degrees—according to the number of the planets—were, 1, Soldier; 2, Lions (in the case of men) or Hymanas (in that of women); 3, Ravens; 4, Degrees of Perseus; 5, Of Oromios; 6, Of Hesios; 7, Of Fathers—the highest—who were also called Eagles and Hawks. At first of a merry character—thus the king of Persia was allowed to get drunk only on the Feast of the Mysteries—the solemnities gradually assumed a severe and rigorous aspect. Through Rome, where this worship, after many vain endeavors, was finally suppressed in A.D. 378, it may be presumed that it found its way into the west and north of Europe; and many tokens of its former existence in Germany are still to be found, for instance, such as the Mithra monuments at Heidenheim, near Frankfort-on-the-Main, and at other places.

Among the Persians Mithra is pictured as a young man, clothed with a tunic and a Persian cloak, and having on his head a Persian bonnet or tiara. He kneels upon a prostrate bull, and while holding it with the left hand by the nostril, with the right he plunges into the shoulder a short sword or dagger. The bull is at the same time vigorously attacked by a dog, a serpent, and a scorpion. The ancient monuments represent him as a beautiful youth, dressed in Phrygian garb, kneeling upon an ox, into whose neck he plunges a knife; several minor, varying, allegorical emblems of the sun and his course surrounding the group. At times he is also represented as a lion, or the head of a lion. The most important of his many festivals was his birthday, celebrated on the 25th of December, the day subsequently fixed—against all evidence—as the birthday of Christ. In the early days of the Church it was not an uncommon occurrence to find an apostle of the inspired teacher laying undue stress on some points of resemblance between Mithraism and Christianity, and thus the triumphant march of the latter was much re-
MITHREDATH

In modern times Christian writers have been again induced to look favorably upon the assertion that some of our ecclesiastical usages (e.g. the institution of the Christmas festival) originated in the cultus of Mithraism. Some writers, who refuse to accept the Christian religion of supernatural origin, have gone so far as to institute a close comparison with the founder of Christianity; and Dupuis and others, going even beyond this, have not hesitated to pronounce the Gospel simply a branch of Mithraism. The ablest reply to these theories we have from Creuzer and Hardwick.

Among the chief authorities on this subject are Sainte-Croix, Recherches historiques et critiques sur les mystères du paganisme, edited by Sylvester de Sacy (Par., 1817); Burnouf, Sur le Yagna, p. 831 sq.; Lajard, Recherches sur le culte public et les mystères de Mithra (Paris, 1847-8); O. Müller, Denkmäler d. alten Kunst; Creuzer, Mythologie u. Symbolik (2d ed.), i. 298, 301, 341, 714 sq.; id. Das Mithräum (Heidelberg, 1888); Schwenk, Mythologie der Perser (Frankl, 1850); See, Die Mithrausgeheimnisse (Aarau, 1823); Hammer, Mithridatica (Vienna, 1834); Dupuis, Origines de tout les cultes, i, 37; Hardwick, Christ and other Masters, ii, 431-458. See Farsen; Zenda vistat.

Mithredath (Heb. Mithraeth, מיתרְדַת, from the Pers. given by Mithra, see Gesenius, Thesaurus, Heb. p. 892, and comp. the Gr. form of the name Μιθραδάτης, Lat. Mithridates; Sept. Μιθραδάτης and Μιθραδάτης, the name of two Persian officers after the exile.

1. The "treasurer" (בֶּן-יִים) of King Cyrus, commissioned by him to restore the sacred vessels of the Temple to Sheshbazzar, the Jewish chief (Ezra i, 8). B.C. 538.

2. One of the governors of Samaria, who wrote to king Artaxerxes, or Smerdias, charging the Jews with rebellious designs in rebuilding Jerusalem (Ezra iv, 7). B.C. 522.

Mithridates (Μιθραδάτης or Μιθραδάτης), the Greekized form (a. 1 Esdr. ii, 11; b. 1 Esdr. ii, 16) of the Heb. name Mithredath (q. v.).

Mitre is the rendering in the Auth. Vers. of the Hebrew word פִּיָּלִים (Pisnalm, something rolled around the head), spoken especially of the turban or head-dress of the high-priest (Exod. xxviii, 4, 37, 39; xxix, 6; xxxix, 28, 31; Lev. viii, 9; xvi, 4; for its form, see Josephus, Anti. iii, 7, 3; Braun, De Vestiti sacerd. Heb. p. 624 sq.; Töpffer, De turcia summâ et minorum sacerdotum, Vienn, 1722; Funcke, De turcia pontif. Ebr. Ges. 1728), once of a royal crown ("diadem," Ezek. xxvi, 20; also פִּיָּלִים, from the same root), spoken of a turban or head-band, or, according to the Alexandrine tradition, of a diadem, among the Hebrews, bug, of the women (Isa. iii, 23, "hood"), of the high-priest (Zech. iii, 5), and once of the king (Isa. lxii, 8, "diadem," where the text has פִּיָּלִים or פִּיָּלִים See Bonnet; Crown; Priest.

Mitre is the name given also to the head-dress worn in solemn Church services by the pope, the bishops, abbots, and certain of the prelates of the Church of Rome. The name, as probably the ornament itself, is borrowed from the Oriental, although, in its present use, it is not in use in the Greek Church, or in any other of the churches of the various Eastern rites. The Western mitre is a tall, tongue-shaped cap, terminating in a gold point, which is often gilt to symbolize the "clove tongues," in the form of which the Holy Ghost was imparted to the apostles, and is furnished with two flaps, which fall behind over the shoulders.

Roman Catholic Mitre.

Opinion is much divided as to the date at which the mitre first came into use. Eusebius, Gregory of Nazianzus, Epiphanius, and others speak of an ornamented head-dress worn in the church; but there is no very early monument or pictorial representation which exhibits it in any way. It is first seen in the time of Constantine the Great. A statue of St. Peter, said to have been erected in the seventh century, bears this mark of distinction in the shape of a round, high, and pyramidal mitre, such as those which the popes have since worn, and offers, perhaps, one of the earliest instances of its usage in churches. The most ancient mitres were very low and simple, being not more than from three to six inches in elevation, and they thus continued till the end of the thirteenth century. Since the 9th century the mitre is found to have been in use quite extensively. From the time of Leo IX until Innocent IV the mitre was worn by cardinals, and instances are recorded in which the popes granted permission to certain bishops to wear the mitre; as, for example, Leo IV to Abgar, bishop of Hamburg, in the ninth century. In the fourteenth century, when the mitre had come into general use, they gradually increased in height to a foot or more, and became more splendidly decorated; their outlines also presented a degree of convexity by which they were distinguished from the older mitres.

The mitre, as an ornament, seems to have descended in the earliest times from bishop to bishop. Among the Cotentin MSS. is an order, dated July 1, 4 Henry VI, for the provision of the archbishop of Canterbury, which had been worn by his predecessors. It is evident that in some cases a very costly ornament. Archbishop Pecheham's new mitre, in 1288, cost £173 4s. 1d. The material used in the manufacture of the mitre is very various, often consisting of the most costly stuffs, studded with gold and precious stones. The color and material differ according to the festival or the service in which the mitre is used, and there is a special prayer in the consecration service of bishops, used in investing the new bishop with his mitre. The mitre of the pope is of peculiar form, and is generally called by the name of mitra (q. v.). There are four different mitres which are now used by the pope. These are more or less richly adorned, according to the nature of the festivals on which they are to be worn. The two horns of the mitre are generally taken to be allusion to the seven tongues of fire which rested on each of the apostles on the day of Pentecost.

At the time the mitre was by special favor conferred on certain bishops; gradually it became the common right of every bishop to wear the mitre, and later its use was also permitted by special privilege to certain abbots, to provosts of some distinguished cathedral chapters, and to a few other dignitaries. (Compare Walcott, Archeyology, p. 383 sq.; Binterin, Zenswürdigkeiten der Kirche, i, pt. ii, p. 348).

In some of the Lutheran churches (as in Sweden) the mitre is worn; but in the Church of England, since the Reformation, the mitre is no longer a part of the episcopal costume; it is simply placed over the shield of an archbishop or bishop instead of all of a mitre. The mitre of a bishop has its lower rim surrounded with a fillet of gold; but the archbishops of Canterbury and York are in the practice of encircling theirs with a ducal coronet, a usage of late date and doubtful propriety. The bishop of Durham surrounds his mitre with an earl's coronet, in consequence of his ancient palatine of Durham and earl of Sedburgh. Before the custom was introduced of bishops impaling the insignia of their sees with their family arms, they sometimes differentiated their paternal coat by the addition of a mitre.

MITARELLI, NICOLAS-JACQUES (also known as JEAN-BENOIT), an Italian theologian and bibliographer, and a learned historian, was born at Venice Sept. 2, 1707. At an early age he entered the order of the Camaldulles, and prosecuted his theological studies at Florence and
MITYLENE

(at Rome, where he secured the friendship of the cardina-

l Rezzonico, subsequently Clement XIV. Appointed

to the professorship of philosophy, and afterwards to

that of theology, in the convent of Saint-Michel, at

Murano, near Venice, Mattarelli banished from his teach-

ing the scholastic method, and all the idle questions to

which it gives rise. Nine years later, he was sent to

Treviso as confessor to the monastery of Saint-Parisio;

here he was occupied in arranging the archives of that
	house, acquired a taste for ecclesiastical antiquities, and

gave himself to researches in this direction. His nomi-

nation in 1747 to the office of chancellor of his order

gave him the opportunity of visiting the libraries and

archives of a great number of convents. He then con-

ceived the idea of writing a history of his congregation.

The renown which this well-executed enterprise gained

for him caused his election in 1760 as abbott of the

convent of Saint-Michel at Murano, and in 1765 as general

of his order. In 1770 he resigned the government of

the monastery of Saint-Michel, which he kept until his

death. He died Aug. 14, 1777. Endowed with a pro-

digious memory and a nice critical sense, Mattarelli ac-

quired a thorough knowledge of Italian ecclesiastical

history. To all the virtues he united an exemplary

modesty, which many times caused him to refuse the

honors offered him. From his pen date: Memorie

Mitylene). Mirtalpe, Acts xx. 14; written also

Mitlepe, Mitoula, which is the older and more ac-

curate form [see Tachau, ad Mel. II, ii. 484]; one of

uncertain etymology), the capital of the isle of Lesbos

(Plut., iv, 2, 29). In the Egean Sea, about seven and a

half miles S. by E. of the point of the island called

Minor. It was a well-built town, with two harbors, but

unhospitably situated (Vitr., De Architect. i, 6).

It was the native place of Pictius, Theophases, Theoph-

rahtrus, Sappho, Alceus, and Diophanes, and was lib-

erally supplied with literary advantages (Strabo, xii. 617;

Ael. His. xii. 5, 37; Scaliger, Vell. Paten. ii, 18). The
town was celebrated for its buildings ("Mitylene pulchra,", Horace, Epist. I, xi, 17; see Cicero, Rutil. ii, 16).

It had the privileges of a free city (Pliny, N. H. vi, 39).
The apostle Paul touched at Mitylene overnight between Assos and Chios, during his third apostolical journey, on the way from Corinth to

Judaea (Acts xx. 14). It may be gathered from the cir-

cumstances of this voyage that the wind was blowing from the N.W.; and it is worth while to notice that in the harbor or in the roadstead of Mitylene the ship

would be sheltered from that wind. Moreover, it ap-

pears that Paul was there at the time of dark moon, and

this was a sufficient reason for passing the night there

before going through the intricate passages to the south-

ward (see Conybeare and Howson's Life of St. Paul, ii.

210). It does not appear that any Christian Church

was established at this place, and it is said to have been

a place of no importance (Tournon, Prat. ii, 115; Oli-

vier, Voyage, ii, 38; Sommiv, Itinera in Graecia, p. 368).

The town contains about 700 Greek houses, and 40

Turkish; its streets are narrow and filthy (Turner, Tour

in the Levant, iii, 299). See, generally, Paul's Reisen-

cyklop., v, 372 sq.; Anthon's Class. Dict. s. v.; Smith's

Dict. of Class. Geography, s. v.; M'Callough's Gazetteer,

s. v.

Mixed marriages, i.e. marriages between Jews

and Gentiles, were strictly prohibited by the Mosaic law.

The New Testament, if it be to be regarded as ev-

tive prohibition of the intermarriage of Christians and

heathens, yet, to say the least, strongly represents such

a proceeding as inconsistent with a Christian profession

(1 Cor. vii, 39; 2 Cor. vi. 14). The early fathers de-

nounced the practice as dangerous and even criminal

Tertullian, Ad Uxorum lib. ii, c. 2-9; De Coram. Mat. c. 19;

Cyprian, Ad Quirin. lib. iii, c. 62; Ambrosius, De Abru-

hano, lib. i, c. 9; Ep. lib. ix, ep. 70; De Fide et Oper. c.

19; Jerome, In Jobin, lib. i, c. 10); and it was after-

wards positively prohibited by the decrees of councils

and the laws of the empire (Conc. Chalced. c. 14; Arrelat.

i. c. 11; Illecri. c. 13, 15, 17; Aureliam, ii, c. 18; Cod. Ju-

tud. lib. i, tit. 9, 1, 6; Cod. Theodos. lib. iii, tit. 7, 1, 2; lib.

ix, tit. 7, 1, 5; lib. xvi, tit. 8, 1, 6). These prohibitions

extended to the marriage of Christians with Jews, Pa-

gans, Mohammedans, and certain heretics, namely, those

whose baptism was not admitted as valid by the Church.

The first interdiction of marriage with heretics on rec-

ord one which was made about the middle of the

fourth century (Conc. Laodic. c. 10, 31; see also Conc.

Agurh. c. 67; Chalced. c. 14). It does not appear that

such marriages, although prohibited, were declared null

and void whenever they had actually taken place; and

various examples of the breach of the rule, as in the case of

Moses, the mother of Augustine (Augustine, Confes. lib. ix, c. 9), and Clotildis, the queen of Clovis (Gregorius Turon. Hist. Franc. lib. ii, c. 28), who became instrumental in the conversion of their respective husbands to Christianity. See Riddle, Christ.

Antiquitas, p. 745-749. See Divorce, MARRIAGE.

Mixed multitude (גָּםָּה, e'eb; Sept. ἡμείς, Vulg. promiscuum), the designation of a certain class who went with the Israelites as they journeyed from

Rameses to Succoth, the first stage of the exodus from

Egypt (Exod. xii, 88). In the Targum the phrase is

vaguely rendered "many foreigners," and Jarchi ex-

plains it as "a medley of outlandish people." Aben-

 Ezra goes further, and says it signifies "the Egyptians

who were mixed with them, and they called them the mixed multitude" (גָּםָּה, Numh. xi, 4) who were gathered to

them." Jarchi, on the latter passage, also identifies the

"mixed multitude" of Numbers and Exodus. Dur-

ing their residence in Egypt, marriages were naturally

contracted between the Israelites and the natives, and

the son of such a marriage between an Israelitish woman

and an Egyptian is especially mentioned as being stoned

for blasphemy (Exod. xx, 14). The native children were

good for the resident or naturalized foreigner as for

the native Israelite (Josh. viii, 35). This hybrid race is ev-
MIZAR

idently alluded to by Jacobi and Aben-Ezra, and is most probably the term to which reference is made in Exodus. Knobel understands by the "mixed multitude" the remains of the Hyksos who left Egypt with the Hebrews. Dr. Kalisch (Comm. on Exod. xxi, 38) interprets it of the native Egyptians who were involved in the same oppression with the Hebrews by the new dynasty, which invaded and subdued Lower Egypt (from old Kurtz, Hist. of Old Egypt ii, 512, Eng. tr.), while he supposes the mixed multitude to have been Egyptians of the lower classes, attributes their emigration to their having endured the same oppression as the Israelites from the proud spirit of caste which prevailed in Egypt, in consequence of which they attached themselves to the Hebrews, "as herdsmen and herdsmen of wood and drawers of water." That the "mixed multitude" is a general term including all those who were not of pure Israelitish blood is evident; more than this cannot be positively asserted. In Exodus and Numbers it probably denotes the miscellaneous hangers-on of the Hebrew camp, whether they were the issue of spurious marriages with Egyptians, or were themselves Egyptians or belonging to other nations. The same happened on the return from Babylon, and in Neh. xiii, 8 a slight clue is given by which the meaning of the mixed multitude may be more definitely ascertained. Upon reading the story of the Ammonites and the Moabites, it should not come into the congregation of God forever," it is said they separated from Israel all the mixed multitude." The remainder of the chapter relates the expulsion of Tobiah the Ammonite from the temple, of the merchants and men of Tyre from the city, and of the foreign wives of Ashdod, of Ammon, and of Moab, with whom the Jews had intermarried. All of these were included in the mixed multitude, and Nehemiah adds, "Thus cleanse I them from all for- eigners." The Targ. Jon. on Num. xvi, 4 explains the mixed multitude as proselytes, and this view is apparently adopted by Ewald, but there does not seem to be any foundation for it. See MINGLED PEOPLE.

MIZAR (Heb. מִזָּאר, מִזַּאר, smallness, i.e. a little of anything, as in Gen. xix, 20, etc.; Sept. μικρός, Vulg. modicus, Aug. Vers. margin little apparently the name of a summit on the eastern ridge of Lebanon or some contiguous chain, not far from which David lay after escaping from the rebellion of Absalom (1 Sam. xxi, 4). The name appears in the editions of the targums under its root M-F-A, and it merely as an appellation, the small mountain; but this is a more harsh construction, and mention is made in the context of the trans-Jordanic region of Hermon, not very far from which was Mahanaim, whither David retired (see Tholuck's Comment. ad loc., who nevertheless in the sense of mountain the place is intended, it must doubtless be sought in some eminence of the southern part of this general range, perhaps in the present Jebel Ajiam, which may have properly been so styled (i.e. the little) in contrast with the greater elevation of Lebanon, Hermon, and Gilead.

MIZPAH (Heb. מִזְפָּה, מִזְפָּה, Gen. xxxvi, 49; Josh. xi, 3; Judg. x, 17; xi, 11, 34; xx, 1, 5, 8; 1 Sam. vii, 6, 11, 12; x, 17; 1 Kings xxv, 22; 2 Kings xxv, 29, 25; 2 Chron. xxvi, 6; Neh. ii, 13, 15; Jer. xi, 6, 15; xii, 1, 3, 6, 10, 14, 16; Hos. v, 1; always [except in Hos. vi, 1] with the art. מִזְפָּה; Sept. Μασσαφα, Vulg. Mar- pha; but in Gen. xxxvi, 49; Sept. Μασσαφα, Vulg. omit; 1 Sam. vii, 5, 13; 1 Kings xv, 22; 2 Sam. xvi, 2, 6; 2 Chron. xvii, 6; Neh. iii, 19, 20; Μασφα, v. s. v. n. of Massaph; Hos. v, 1, συναγωγή, speculatio); or MIZ- PAAH (Heb. מִזְפָּה, Mitzpa, Josh. vi, 8; Judg. vi, 29; 1 Sam. vi, 5, 6, 7; xxii, 3; with the art. Josh. xvii, 36; 18, 26; 2 Chron. xxiv, 49; Sept. Massaph, but συναγωγή in Judg. xii, 22; Massaph in 1 Sam. xxii, 5; Vulg. Maspach, Massaph; in 1 Kings xxv, 23, 29; Jer. xi, 6 sq.; xili, 1); the name of several places in the Am. Vers. Miz-
Moab

Moab (Heb. Moab, מֶּבּוֹא, number, as often; Sept. Μαβά, one of the leading Israelites who accompanied Zerubbabel on the return from Babylon (Ezra ii, 2), in the parallel passage (Neh. vii, 7) called by the equivalent name MISPERETH. B.C. 586.

Miz'peh. See Mizpah; RAMATH-MIZPEH.

Miz'raim, meaning "two mounds or fortresses" [see MAZOR]; but the word is, perhaps, of foreign [Egyptian or even Aramaic] origin, and in all probability the most conspicuous object in the modern versions, the "Egypt" or "Egyptians"), the name by which the Hebrews generally designated Egypt, apparently from its having been peopled by Mizraim, the second son of Ham (Gen, x, 6, 13). B.C. post 2158. See also ABU-MIZRAIM. The name is in the dual form, double EGYPT, and seems to have originally among the Hebrews at least, denoted LOWER AND UPPER EGYPT by gazza, as we now say the two Sicilies, for Sicily and Naples (Gen. xlv. 29, xlvi. 34, xlvi. 6, 10). This ori- ginal appellation has been perpetuated in the Aramaic name, MOYIL ("the prophet Samuel") as the probable site of Mizpah, especially as in 1 Mac. iii, 46 it is described as "over against Jerusalem," implying that it was visible from that city. This place is now a poor village, seat- ed upon the summit of a ridge, about 900 feet above the plain of Gibeon, being almost cumbrous and in all the vicinity. It contains a mosque, now in a state of decay, which, on the ground of the apparently erro- neous identification with Ramah, is regarded by Jews, Christians, and Moslems as the tomb of Samuel (see SWARZ, Palest. p. 127). The mosque was once a Latin church, built in the form of a cross, upon older founda- tions, and probably of the time of the Crusaders. There are many traces of former dwellings. The modern hamlet clusters at the eastern side of the mosque. The houses, about twelve in number, are either ancient or composed of ancient materials. Their walls are in places formed of the living rock hewn into shape, and one of the little courts are excised to the depth of sev- eral feet. There is thus an air of departed greatness and high antiquity about the place, which, added to its commanding situation, gives it an inexpressible charm (Porter, Hand-book, p. 216; comp. Tobioler, Zwee Ruiher Topographische von Jerusalem u. seinen Umgebungen [Berl. 1853, 1854], ii, 874 sq.). Mr. Williams (in Smith's Dict. of Greek and Roman Geog. s. v.) doubts this location, urging that Jer. xii, 5, 6 appears to require a position more directly on the great route from Jerusalem to Sa- maria; but Neby Samwil is exactly on the route by which Jotham overtook the murderer of Gedaliah (Jer. xii, 12; comp. 2 Kings xi, 20). He was well known to the Christians at Cæsarea, and may have been a friend of Barnabas (Acts iv, 36), but appears not to have been before this acquaintance with Paul. Some think that he was converted by Paul and Barnabas while at Cyprus (Acts xiii, 9); but the designation "an old disciple" (αγάπης τοῦ μάστιγος) has more generally induced the conclusion, that he was converted by Jesus himself, and was perhaps one of the seventy (see KuinöL, Comment. ad loc.).

Mob (Heb. Moab, מֶּבּוֹא, water [i. e. seed] of her father, with allusion to his incestuous origin [see below]; Sept. Monih, the son of Lot and his eldest daughter, and founder of the Moabitish people (Gen. xix, 30-38). B.C. 2063. Moab is also used for the country or territory of the Moabites (Jer. xivii, 4), and also for the plain of Moab (Num. xxii, 3, 14; Judg. iii, 30; 2 Sam. vii, 2; 2 Kings i, 1; Jer. xlvii, 11, 19). The "Plains of Moab," near Jericho, was the last station of the Hebrews in their journey to Canaan (Num. xxxi, 33; xxxii, 11, xxxiii, 48). The proper territory of the Moabites, more fully called the field of MOAB (Ruth i, 1, 6, 6; ii, 4, 9), lay on the east of the Dead Sea and the Jordan, strictly on the south of the torrent Arnon (Num. xxi, 13, 26; Judg. xi, 18); but in a wider sense it included also the region anciently occupied by the Amorites over against Jericho, usually called the plain (deserts) of MOAB (Num. xxii, 1; xxiv, 3, 3, xxxi, 12; xxxii, 46, 50; xxxv, 1; Deut. xxxiv, 1); or elsewhere simply the plain of Moab (Num. iii, 16; iv, 23; xxii, 49; xxxivv, 5); which latter region was afterwards as- signed to the Reubenites, but during the captivity was again occupied by the Moabites (see Isa, xvi, 11; Jer. xlviii). It is now called the district of Kerak, from the name of that town, anciently Kir-Moab. See MOABIT; PALTHER-MOAB.

As to the etymology of the name, various explana- tions have been proposed. (1) The Sept. inserts the words λυσίωνας τοῦ πατρὸς μου, saying 'from my father,' as if Μώμη. This is followed by the old inter- preters; as Josephus (Ant. i. 11, 5), Jerome. Quaest. Hebr. in Genesis, the gloss of the Pseudo-Jon. Targum; and in modern times by Driver (p. 370), and J. D. Michaelis (B. f. Ueberlekt.). (2) By Hiller (Onom, p. 414) and Simon (Onom, p. 473) it is
MOABITE derived from בָּמֹבֶית, ingressa, i.e. coitus, patris. (3.) Rosenmüller (see Schumann, Genesis, p. 802) proposes to treat דַּמֵּס als equivalent for דָּבָר, water, in accordance with the figure employed by Balaam in Numb. xxiv, 7 (as above adopted). This is countenanced by Jerome—sensum, i.e., in consenso, adhibuit auctoritate gensium in sua favor (Thes. p. 775 f ; also of Forst (Hambch. p.707) and Bunsen (Bibelwerk). (4.) A derivation, probably more correct etymologically than either of the above, is that suggested by Maurer from the root בָּמַע, 'to desire'—'the desirable land'—with reference to the extreme fertility of the region occupied by Moab (see also First, Itch. p.707 f.). Nisibin is now a hot and smoky, in the desert, and the city, which had perhaps no attraction for the Amoritic mountain-ears, appears to have remained in the power of Moab. When Israel reached the boundary of the country, this contest had only very recently occurred. Sihon, the Amoritic king under whose command Hebron had been taken, was still reigning there—'the battle commemorating the event were still fresh in the popular mouth (Numb. xxii, 27-30).

Of these events, which extended over a period, according to the received Bible chronology, of not less than 600 years, from the destruction of Sodom to the arrival of Israel on the borders of the Promised Land, we obtain the above outline only from the fragments of ancient documents, which are found embedded in the records of Numbers and Deuteronomy (Numb. xxii, 28-30; Deut. ii, 10, 11).

The position into which the Moabites were driven by the invasion of the Amorites was a bad one, and exposed one, in extent, to so much as half that which they had lost. But on the other hand its position was much more secure, and it was well suited for the occupation of a people whose disposition was not so warlike as that of their neighbors. It occupied the southern half of the high table-land which rises above the eastern side of the Dead Sea. On every side it was strongly fortified by nature. On the north was the tremendous chasm of the Arnon. On the west it was limited by the precipices, or more accurately the cliffs, which descend almost perpendicularly to the shore of the lake, and are intersected only by one or two steep and narrow passes. Last, but by no means least, was the south-eastern circle of hills, which open only to allow the passage of a branch of the Arnon and another of the torrents which descend to the Dead Sea.

It will be seen from the foregoing description that the territory occupied by Moab at the period of its greatest extent, before the invasion of the Amorites, divided itself naturally into three distinct and independent portions. Each of these portions appears to have had its name, by which it is almost invariably designated:

(1) The enclosed 'corner' or canton south of the Arnon was the 'field of Moab' (Ruth i, 5, 6, etc.).
(2) The more open plains of the Zeruiah and Arnon, opposite Jericho, and up to the hills of Gilad, was the 'land of Moab' (Deut. i, 5; xxxii, 49, etc.).
(3) The sunk district in the tropical depths of the Jordan valley, taking its name from that of the great valley itself—the Arabah—was the Arboth-Moab, the dry regions—in the A. V. very incorrectly rendered the 'plain of Moab' (Numb. xxxii, 1, etc.).

The main object of this chapter is to trace the connection of the Moabites with the neighboring peoples

1. Locality and Early History. Zoar was the cradle of the race of Lot. Although the exact position of this town has not been determined, there is no doubt that it was situated on the south-eastern border of the Dead Sea. From this centre the brother tribes spread themselves. Ammon (q.v.), whose disposition seems throughout to have been more roving and unsettled, went to the north and east and took possession of the pastures and waste tracts which lay outside the district of the mountains; that which in earlier times seems to have been known as Haran, was occupied by the tribe of Zobah, whose principal habitat is described in Gen. xiv, 5; Deut. ii, 20). The Moabites, whose habits were more settled and peaceful, remained nearer their original seat. The rich highlands which crown the eastern side of the chasm of the Dead Sea, and extend northwards as far as the foot of the mountains of Gilad, appear at that early date to have borne a name, which in its Hebrew form is presented to us as Shaveh-Kiriathaim, and to have been inhabited by a branch of the great race of the Rephaim. Like the Horim before the descendants of Esau, the Avim before the Philistines, or the indigenous races of the New World before the settlers from the West, this ancient people, the Emim, gradually became extinct before the Moabites, who thus obtained possession of the whole of the rich elevated tract referred to—a district forty or fifty miles in length by ten or twelve in width, the celebrated Belka and Kerak of the modern Arabs, the most fertile on that side of the Dead Sea and the most suitable for the maritime plains of Philistia and Sharon, on the west of Palestine, are for agriculture. With the highlands they occupied also the lowlands at their feet, the plain which intervenes between the slopes of the mountains and the one perennial stream of Palestine, and through which they were enabled to gain access at pleasure to the fords of the river, and thus to the coun-

try beyond it. Of the valuable district of the highlands they were not allowed to retain entire possession.

The whole country was either forced from their original seats on the west, or perhaps lured over by the increasing prosperity of the young nation—crossed the Jordan and overran the richer portion of the territory on the north, driving Moab back to his original position behind the natural bulwark of the Arnon. The plain of the Jordan was planted with the hot and sandy tracts of desert, which had perhaps no attraction for the Amoritic mountain-ears, appears to have remained in the power of Moab. When Israel reached the boundary of the country, this contest had only very recently occurred. Sihon, the Amoritic king under whose command Hebron had been taken, was still reigning there—'the battle commemorating the event were still fresh in the popular mouth (Numb. xxii, 27-30).

Of these events, which extended over a period, according to the received Bible chronology, of not less than 600 years, from the destruction of Sodom to the arrival of Israel on the borders of the Promised Land, we obtain the above outline only from the fragments of ancient documents, which are found embedded in the records of Numbers and Deuteronomy (Numb. xxii, 28-30; Deut. ii, 10, 11).

The position into which the Moabites were driven by the invasion of the Amorites was a bad one, and exposed one, in extent, to so much as half that which they had lost. But on the other hand its position was much more secure, and it was well suited for the occupation of a people whose disposition was not so warlike as that of their neighbors. It occupied the southern half of the high table-land which rises above the eastern side of the Dead Sea. On every side it was strongly fortified by nature. On the north was the tremendous chasm of the Arnon. On the west it was limited by the precipices, or more accurately the cliffs, which descend almost perpendicularly to the shore of the lake, and are intersected only by one or two steep and narrow passes. Lastly, but by no means least, was the south-eastern circle of hills, which open only to allow the passage of a branch of the Arnon and another of the torrents which descend to the Dead Sea.

It will be seen from the foregoing description that the territory occupied by Moab at the period of its greatest extent, before the invasion of the Amorites, divided itself naturally into three distinct and independent portions. Each of these portions appears to have had its name, by which it is almost invariably designated:

(1) The enclosed 'corner' or canton south of the Arnon was the "field of Moab" (Ruth i, 5, 6, etc.).
(2) The more open plains of the Zeruiah and Arnon, opposite Jericho, and up to the hills of Gilad, was the "land of Moab" (Deut. i, 5; xxxii, 49, etc.).
(3) The sunk district in the tropical depths of the Jordan valley, taking its name from that of the great valley itself—the Arabah—was the Arboth-Moab, the dry regions—in the A. V. very incorrectly rendered the "plain of Moab" (Numb. xxxii, 1, etc.).

II. Connection with the Israelites. Outside of the hills, which enclosed the "field of Moab," or Moab proper, on the south-east, and which are at present called the Jebel Uru-Karayeb and Jebel el-Tarfueyeh, lay the vast pasture-grounds of the waste, uncultivated country, or "Midbar," which is described as "facing Moab" on the east (Numb. xxii, 11). Through this latter district Israel appears to have approached the Promised Land. Some communication had evidently taken place, though of what nature it is impossible clearly to ascertain. For at this early date it appears the matter was brought home to the notice of the Moabites by the notice of the invasion of the Amorites, mentioned as friendly, this seems to be contradicted by the statement of xxxii, 4; while in Judg. xi, 17, again, Israel is said to have sent from Kadesh asking permission to pass through Moab—a permission which, like Edom, Moab refused. At any rate, the attitude perpetuated by the provisions of Deut. xxiii, 3—a provision maintained in full force by the latest of the Old-Tes-
tament reformers (Neh. xxiii, 1, 2-23)—is one of hostility. See Nöldeke, Die Amalekiten, etc. (Gött. 1864), p. 8.

1. But whatever the communication may have been, the result was that Israel did not traverse Moab, but, turner from the north, while passing through the mountains, through the “wilderness,” by the east side of the territory above described (Deut. ii, 8; Judg. xi, 18), and finally took up a position in the country north of the Arnon, from which Moab had so lately been ejected. Here the head-quarters of the nation remained for a considerable time while the conquering race was making effect. It was during this period that the visit of Balaam took place. The whole of the country east of the Jordan, with the exception of the one little corner occupied by Moab, was in possession of the invaders, and although at the period in question the main body had descended from the upper level to the plains of Shittim, the Arboth-Moab, in the Jordan valley, yet a great number must have remained on the upper level, and the towns up to the very edge of the ravine of the Arnon were still occupied by their settlers (Numb. xxii, 24; Judg. xi, 26). It was a situation full of alarm for a nation which had already suffered so severely. In his extremity the Moabite king, Balak—whose father Zippor was doublets the chiefman who had lost his life in the encounter with Sihon (Numb. xxii, 26)—appealed to the Midianites for aid (Numb. xxii, 2-4). With a metaphor highly appropriate both to his mouth and to the matter in hand, he stated that “the Midianites were like locusts, and the Midianites were like locusts, and the Midianites were like locusts” (Numb. xxii, 6). He claims that “this people will lick up all round about us as the ox licketh up the grass of the field.” What relation existed between Moab and Midian we do not know, but there are various indications that it was a closer one than would arise merely from their common descent from Terah. The tradition of the Jews (Targum Pseudo-Jonathan on Numb. xxii, 4) is that up to this time the two had been one nation, with kings taken alternately from each, and that Balak was a Midianite. This, however, is in contradiction to the statements of Genesis as to the origin of each people. The whole story of Balaam’s visit and of the subsequent events, both in the original narrative of Numbers and in the remarkable statement of Jephthah’s—whose words as addressed to Ammonites must be accepted as literally accurate—bear out the inference already drawn from the earlier history as to the pacific character of Moab.

The account of the whole of these transactions in the book of Judges is in the first person, and in the form of a narrative. The phrases, perhaps hardly conveys an adequate idea of the extreme in which Balak found himself in his unexpected encounter with the new nation and their mighty Divinity. We may realize it better (and certainly with gratitude for the opportunity) if we consider what that last dreadful threat, which was a successor of the former one (Num. xxv, 6, 7)—a sacrifice from which he was restrained only by the wise, the almost Christian (Matt. ix, 18; xii, 7) counsels of Balaam. This catastrophe will be noticed in its proper place.

The connection of Moab with Midian, and the comparatively inoffensive character of the former, are shown in the narrative of the events which followed the departure of Balaam. The women of Moab are indeed said (Numb. xxv, 1) to have commenced the idolatrous fornication which proved so destructive to Israel, but it is plain that their share in it was insignificant compared with Midian. The women had been Midianitish (Judg. iv, 16, 20), and it was upon Midian that the vengeance was taken. Except in the passage already mentioned, Moab is not once named in the whole transaction. The latest date at which the two names appear in conjunction is found in the notice of the defeat of Midian “in the field of Moab” by the Edomithish king Hadad ben-Bedar, which occurred before the conquest of the monarchy of Israel (Gen. xxxvi, 55; 1 Chron. i, 46). By the Jewish interpreters—e.g. Solomon Jarchi in his commentary on the passage—this is treated as implying, not alliance, but war between Moab and Midian (comp. 1 Chron. iv, 22).

It is probable that Moses should have taken his view of the Promised Land from a Moabish sanctuary, and been buried in the land of Moab. It is singular, too, that his resting-place is marked in the Hebrew records only by its proximity to the sanctuary of that deity to whom in his lifetime he had been such an enemy. He lies in a ravine in the land of Moab, facing Beth-Peor, i.e. the abode of Baal-Peor (Deut. xxxiv, 6).

2. After the conquest of Canaan the relations of Moab with Israel were of a mixed character. With the tribe of Benjamin, whose possessions at their eastern end were separated from those of Moab only by the Jordan, they had at least one severe struggle, in union with their kindred the Ammonites, and also, for this time only, the wild Amalekites from the south (Judg. iii, 12-30).

The Moabish king, Eglon, actually ruled and received tribute in Jericho for eighteen years, but at the end of that time he was killed by the Benjaminite hero Ehud, and the tribute paid to Moab was discontinued. But Jericho, with other fords, a large number were slaughtered, and a stop put to such incursions on their part for the future. A trace of this invasion is visible in the name of Chephar-ha-Ammonai, the “hamlet of the Ammonites, one of the Benjaminitish towns; and another is possibly preserved even to the present day in the name of Mukawara, the modern representative of Midian in this district, which has been the residence of some scholars believed to have received its name from Chemosh, the Moabite deity. The feud continued with true Oriental pertinacity to the time of Saul. Of his slaughter of the Ammonites we have full details in 1 Sam. ii, 13, and among his other conquests Moab is especially mentioned (1 Sam. iv, 47). There is not, however, as we should expect, any record of it during Ishbosheth’s residence at Mahanaim, on the east of Jordan.

But while such were their relations to the tribe of Benjamin, the story of Ruth, on the other hand, testifies to the existence of a friendly intercourse between Moab and Bethlehem. The custom of the tribe of Judah (Targum Jonathan on Ruth i, 4) records the death of Mahlon and Chilion to punishment for having broken the commandment of Deut. xxiii, 3, but no trace of any feeling of the kind is visible in the book of Ruth itself—which not only seems to imply a considerable intercourse between the two nations, but also affords a tolerable ignorance or disregard of the precept in question, which was broken in the most flagrant manner when Ruth became the wife of Boaz. By his descent from Ruth, David may be said to have had Moabish blood in his veins. The relationship was sufficient, especially when combined with blood-door ties between Moab and Benjamin, already alluded to, to warrant his visiting the land of his ancestor, and committing his parents to the protection of the king of Moab, when hard pressed by Saul (1 Sam. xxiii, 3, 4). But here all friendly relations stop forever. The next time the name is mentioned is in the account of David’s war with the Philistines (2 Sam. xviii, 2; 1 Chron. xxviii, 2). The abrupt manner in which this war is introduced into the history is no less remarkable than the brief and passing terms in which its horrors are recorded. The account occupies but a few words in either Samuel or Chronicles, and yet it must have been for the time little less than the termination of the monarchy. Two thirds of the people were put to death, while the remainder became bondmen, and were subjected to a regular tribute. An incident of this war is probably recorded in 2 Sam. xxiii, 20, and 1 Chron. xi, 22. The
spells taken from the Moabish cities and sanctuaries went to swell the treasure acquired from the enemies of Edom, which David was amassing for the future use in the Temple (2 Sam. viii, 11, 12; 1 Chron. xviii, 11). It was the first time that the prophecy of Balaam had been fulfilled—"Out of Jacob shall come he that shall have dominion, and shall destroy him that remaineth of Ar," that is of Moab. So signal a vengeance can only be avenged through some equivalent and serious result, like that which brought down a similar treatment on the Ammonites (2 Sam. x). But as to any such act the narrative is absolutely silent. It has been conjectured that the king of Moab betrayed the trust which David repose in him, and either himself killed Jesse and his wife, or surrendered them to Saul. But this, though possible, is in no way proved, and is not even urged as a point in support of the view that the Moabites, as a people, were constantly engaged in hostilities towards the east (comp. Numb. xxxi, 11—"towards the sun-rising"). Here they remained all night on the watch. With the approach of morning the sun rose suddenly above the horizon of the rolling plain, and as his level beams burst through the night-mists they revealed no masses of the hostile army, but only a blood-red glare on a multitude of pools in the bed of the wady at their feet. They did not know that these pools had been sunk during the night by the order of a mighty prophet who was with the host of Israel, and that they had been filled by the sudden flow of the waters of the distant mountains which had been intercepted by them the conclusion was inevitable: the army had, like their own on the late occasion, fallen out in the night; these red pools were the blood of the slain; those who were not killed had fled, and nothing stood between them and the pillage of the camp. The cry of "Moab to the spoil!" was raised. Down the slopes they rushed in headlong disorder. But not, as they expected, to empty tents; they found an enemy ready prepared to reap the result of his ingenious stratagem. Then occurred one of those scenes of carnage which can happen but once or twice in the existence of a nation. The Moabites were taken in a mob, scattered back in confusion, followed and cut down at every step by their enemies. Far inwards did the pursuit reach, among the cities and farms and orchards of that rich district; nor when the slaughter was over was the horrid work of destruction done. The towns, both fortified and unfortified, were demolished, and the stones strewn over the carefully-tiled fields. The fountains of water, the life of a race, were choked, and all timber of any size or goodness felled. Nowhere else do we hear of such sweeping desolation; the very b是最 of destruction passed over the land. At last the struggle collected itself at Kir-hareseth, apparently a newly-constructed fortress, which, if the modern Kerak is correct, the site of which Jeremiah speaks, is in the eastern part of the territory, and identical—may well have resisted all the efforts of the allied kings in its native impregnable. Here Moab took refuge with his family and with the remants of his army. The heights around, by which the town is entirely commanded, were covered with slingers, who—armed with the ancient weapon of Edom and of the Benjamites, partly with the newly-invented machines shortly to be famous in Jerusalem (2 Chron. xxvi, 15)—discharged their volleys of stones on the town. At length the annoyance could be borne no longer. Then Moab, collecting round him a forlorn hope of 700 of his best warriors, made a desperate sally, with the intention of cutting his way through to his special foe, the king of Edom. But the enemy were too strong for him, and he was driven back. And then came a fitting crown to a tragedy already so terrible. An awful spectacle amazed and horrified the besiegers. The body of the eldest son of the king of Moab was mounted on the wall, and, in the sight of the thousands who covered the sides of that vast amphitheatre, the father killed and burned his child as a propitiatory sacrifice to the cruel gods of his country. It was the same dreadful act to which, as we have seen, Balak had been so nearly tempted in his extremity. But the danger,
though perhaps not really greater than his, was more
imminent; and Meshia had no one like Baalam at hand
to counsel patience and submission to a mightier Power
than Chemosh or Baal-Peor. See Mesha.

Hitherto, though able and ready to fight when neces-
sary, the Moabites do not appear to have been a fighting
people; perhaps, as suggested elsewhere, the Ammon-
itians were the warriors of the nation of Lot. But this
difference, however, is probably due to the fact that these
peoples were subject to the Moab at a different rate for a time.

.Shortly after these events we hear of "bands," that is, pillaging, marauding parties—of the Moabites making their incursions into Israel in the spring, as if to spoil the early corn before it was fit to cut (2 Kings xiii, 20). With Edom there must have been many a contest. One of these Edomite savage
vendettas is recorded in some degree the tragedy of
Kir-hareseth—is alluded to by Amos (ii, 1), where a king of Edom seems to have been killed and burned by Moab.

This may have been one of the incidents of the battle of Kir-hareseth itself, occurring perhaps after the Edomites had parted from Israel, and were overtaken on their road home by the kurban king of Moab (Jere-
nius, Jesaia, ix, 504); or, according to the Jewish tradi-
tion (Jerome, on Amos ii, 1), it was a vengeance still more savage because more protracted, and lasting even beyond the death of the king, whose remains were torn from his tomb, and thus consumed.

The latter is pronounced by Isaiah (ch. xv, 66) we possess a document full of interesting details
as to the condition of the nation at the time of the
death of Ahaz, king of Judah, B.C. 726. More than a
century and a half had elapsed since the great calamity
to which we have just referred. In that interval Moab
had regained all, and more than all, of his former pros-
perity, and has besides extended himself over the dis-
trict which he originally occupied in the youth of the
nation, and which was left vacant when the removal of
Reuben to Assyrue, which had been begun by Puli in B.C.
770, was completed by Tiglath-pileser about the year
743 (1 Chron. v, 21, 26). This passage of Israel, the Moab-
ites, may be considered apart from that of Jeremiah, ch. xviii.

The latter was pronounced more than a century later,
about the year B.C. 600, ten or twelve years before the
invasion of Nebuchadnezzar, by which Jerusalem was
destroyed. In many respects it is identical with that of
Isaiah, and both are believed by the best modern
scholars, on account of the archaisms and other peculiar-
ities of language which they contain, to be adopted from
a common source—the work of some much more ancient
prophet. Isaiah ends his denunciation by a prediction—in his own words—that within three years
Moab should be greatly reduced. This was probably
what happened, as we find the tributary nation of Moab,
and no doubt overran the other side of the Jordan in
B.C. 725, and again in 723 (2 Kings xvii, 8; xviii, 9).
The only event of which we have a record to which it
would seem possible that the passage, as originally ut-
terred by the older prophet, applied, is the above inva-
sion of Puli, who, in commencing the deportation of
Reuben, very probably at the same time molested Moab.

The difficulty of so many of the towns of Reuben being
mentioned as at that early day already in the posses-
sion of Moab may perhaps be explained by remember-
ing that the idolatry of the neighboring nations—and
therefore of Moab—had been adopted by the trans-Jor-
danian tribes for some time previously to the final depor-
tation by Tiglath-pileser (see 1 Chron. v, 26), and that
many of the sanctuaries were probably, even at the date of
the original delivery of the denunciation, in the hands
of the priests of Chemosh and Milcom. If, as Erdweg (Ge-
ographic of Moab) understands it, Jehovah referred to the
Moabites, no less than the Ammonites, were under the protec-
tion of the powerful Uzziah (2 Chron. xxvii, 8), then the
obscene expressions of the ancient seer as given in
Isa. ix, 1, 5—referring to a tribe of lambs (comp. 2
Kings iii, 4) sent from the wild pasture-grounds south
of Moab to Zion, and to protection and relief from op-
pression afforded by the throne of David to the fugitives
and outcasts of Moab, acquire an intelligible sense. On
the other hand, the calamities which Jeremiah describes
may have been inflicted in any one of the numerous
visitations from the Assyrian army, under which these
unhappy countries suffered at the period of his prophecy
in rapid succession.

But the uncertainty of the exact dates referred to in
these reveals the fact that these allusions do not in the least affect
the interest or the value of the allusions they contain to the
condition of Moab. They bear the evident stamp of portraiture by artists who knew their subject thor-
oughly. The nation appears in them as high-spirited,
wealthy, populous, and even to a certain extent civil-
ized, enjoying a wide reputation and popularity. With
a metaphysical and well developed idea of the world's
wealth of the country and its commanding, almost re-
gal position, but which cannot be conveyed in a trans-
lation, Moab is depicted as the strong sceptre (Isa. xvi,
6; Jer. xlviii, 29), the beautiful staff, whose fracture
will be bewailed by all about him, and by all who know
him. In his cities we discern a population of people living in "glory," and in the enjoyment of great
"treasure," crowding the public squares, the houses,
and the ascents and descents of the numerous high
places and sanctuaries where the "priests and princes"
of Chemosh or Baal-Peor minister to the anxious devo-
tees. Our modern pulpits in this town lie the people on the
wane, the prominent entre dit is no longer the mer-
uriant as the renowned Carmel—the vineyards, and
gardens of "summer fruits"—the harvest is in course of
reaping, and the "hay is stored in its abundance," the
vineyards and the presses are crowded with peasants,
gathering and treading the grapes, the land resounds
with the clamber of the vintagers. These characteristics
contrast very favorably with any traits recorded of
Ammon, Edom, Midian, Amalek, the Philistines, or the
Canaanish tribes.

And since the descriptions we are considering are adopted by certainly two, and probably
three prophets—Jeremiah, Isaiah, and the older seer—
which extend over a period of nearly 300 years, we may
safely conclude that they are not merely temporary
circumstances, but were the enduring characteristics of
the people. In this case there can be no doubt that
among the pastoral peoples of Syria, Moab stood next to
Israel in all matters of material wealth and civilization.

It is very interesting to remark the feeling which act-
uates the prophets in these denunciation of the
people who, though the enemies of Jehovah, were the blood-
relations of Israel. Half the allusions of Isaiah and Jer-
emiah in the passages referred to must forever remain
obscure. We shall never know who the "lords of the
heathen" were who, in that terrible night, laid waste
the desolate fields and hills, and brought to the earth and
killed the beasts and Kir-
Moab; nor the occasion of that flight over the Arnon,
when the Moabithite women were huddled together at
the ford, like a flock of young birds, pressing to cross to
the safe side of the stream—when the dwellers in Aroer
stood by the side of the high-road which passed their
town, and eagerly questioning the fugitives as they
hurried up. "What is done?"—received but one answer
from all alike—"All is lost! Moab is confounded and
broken down!" Many expressions also, such as the
"weeping of Jazer," the "heifer of three years old," the
"shadow of Heshbon," the "lions," must remain ob-
scure. But nothing can obscure or render obsolete the
tone of tenderness and affection which makes itself felt
in a hundred expressions throughout these precious doc-
uments. Ardent as the prophet longs for the destruc-
tion of the enemy of his country and of Jehovah, and
carries as we curse the man "that doeth the work of
Jehovah unrighteously," yet he is constrained to bemoan
and lament, such dreadful calamities to a people so near him both in blood and locality. His heart mourns—it sounds like pipes—for the men of Kir-heres; his heart cries out, it sounds like a harp for Moab. Isaiah recur to the sub-
ject in another passage of extraordinary force, and of
fower character than before, viz. xxx, 10-12. Here the extermination, the utter annihilation of Moab is contem- plated by the prophet with triumph, as one of the first results of the judgment in the destroyed city of Sareh, the chief city of Moab. The neighboring nations, including Moab, when the danger actually arrived, probably adopted the advice of Jeremiah (xxvii, 11), and thus escaped, though not without much damage, yet without being carried away as the Jews were. That these nations did not suffer to the same extent as the Judah is evident from the fact that many of the Jews took refuge there when their own land was laid waste (Jer. xi, 11). Jeremiah expressly testifies that those who submitted themselves to the king of Babylon, though they would have bear a severe yoke—so severe that their very wild animals would be enslaved to it—that by such submission should purchase the privilege of being left in their own country. The removal from home, so dreadful to the Semitic mind, was to be the fate only of those who resisted (Jer. xxvii, 10; xxxvii, 14). This is also supported by the allusion of Ezekiel, a few years later, to the cities of Moab, cities formerly belonging to the Israelites, which, at the time when the prophet is speaking, were still flourishing, "the glory of the country," destined to become at a future day a prey to the Bene-kedem, "the men of the East"—the Bedouins of the great desert of the Ephrathas (Ezek. xxx, 8-11).

II. Later History.—After the return from the captiv- ity, there was in Moab Sanballat of Horonaim, who took the chief part in annoying and endeavoring to hinder the operations of the rebuilders of Jerusalem (Neh. ii, 19; iv, 1; vi, 1; etc.). He confined himself, however, to the same weapons of ridicule and scurrility which we have already noticed Zephaniah resented. From Sanballat's words (Neh. ii, 19) we should infer that he and his country were subject to "the king," that is, the king of Babylon. During the interval since the return of the first caravan from Babylon the illegal practice of marriages between the Jews and the other people around, Moab among the rest, had become frequent. So far had this gone that the son of the high-priest was married to an Ammonitish woman. Even among the families of Israel who returned from the captivity was one bearing the name of Pahath-Moab ( Ezra ii, 6; viii, 4; Neh. iii, 11; etc.), a name which must certainly denote a Moabitish connection, though to the nature of the connection nothing is given as a clue. Neither Ezra nor Nehemiah the practice of foreign marriages was strongly repressed, and we never hear of it again becoming prevalent.

In the book of Judith, the date of which is laid shortly after the return from the captivity (iv, 8), Moabites and Ammonites are represented as dwellers in a large number of towns within the country, and as obeying t'a call of the Assyrian general. Their "princes" (διοικηται) and "governors" (ὑγιακυ-ηροι) are mentioned (v, 2; vii, 8). The Maccabees, much as they ravaged the country of the Ammonites, do not appear to have molested Moab proper, nor is the name either of Moab or of any of the towns south of the Arnon mentioned throughout those books. Josephus not only speaks of the district in which Heshbon was situated as "Moabitin" (Ant. xiii, 15, 4; also War, iv, 8, 2), but expressly says that even at the time he wrote they were a "very great nation" (Ant. i, 11, 5). (See 5 Macc. xxix, 18). Nöldeke, in his recent work, Über die Amalkeiter und einige andere nachbarvolker der Is- raeliten (Göttingen, 1864), p. 9, insists that the final extinction of Ammonites and Moabites dates from the appearance of the Yemen tribes Salib and Gassan in the eastern districts of the Jordan. This would bring them down to the year 1290. In the time of Eusebius (Onomast. Magiöf), i.e. c. A.D. 380, the name appears to have been attached to the district, as well as to the town of Rabbath—both of which were called Moab. It also lingered for some time in the name of the ancient Kir-Moab, which, as Chalkombo, is mentioned by Polomen (Reland, Palest. p,
MOABITE 396 MOABITE

463), and as late as the Council of Jerusalem, A.D. 556, formed the see of a bishop under the same title (ibid. p. 558). Since that time the modern name Kerak has superseded the older one, and no trace of Moab has been found either in records or in the country itself.

IV. Geography and Characteristics.—Like the other countries east of Jordan, Moab has until recently been very little visited by Europeans, and beyond its general characteristics nothing much is known. The character of the face of the country travellers only give slight reports, and among these there is considerable variation even when the same district is referred to. Thus between Kerak and Rabba, Irby (p. 141 a) found "a fine country," of great natural fertility, with "reap- ed" fields and orchards. The same locality is described by Burchardt as "very fertile, and large tracts cultivated" (Syri, July 15); while De Saulcy, on the other hand, pronounces that "from Shihan (six miles north of Rabba) to the Wady Kerak the country is perfectly bare, not a tree or a bush to be seen" (Voyage, i, 355); which, again, is contradicted by Seetzen, who not only found the soil very good, but encumbered with wormwood and other shrubs (Seetzen, i, 410). These discrepancies are no doubt partly due to difference in the time of year and other temporary causes, but they are not essentially contradictory; for while the whole region has been denuded of trees and vegetation in general, it is still a rich pasture-ground for the Bedouins who roam in every direction over it, and who likewise till its extensive fields of wheat and barley. In one thing all writers agree—the extraordinary number of ruins which are scattered over the country, and which, whatever the present condition of the soil, are a sure token of its wealth in former ages (Seetzen, i, 412). Some of the most remarkable of these have recently been described by Tristram. The whole country is undulating, and, after the general level of the plateau is reached, without any serious inequalities; and in this and the absence of conspicuous vegetation there is a certain resemblance to the downs of the southern counties of England.

Of the language of the Moabites we know nothing or next to nothing. In the few communications recorded as taking place between them and the Israelites no interpreter is mentioned (see Ruth; 1 Sam. xxi, 3, 4; etc.). From the origin of the nation and other considerations we may perhaps conjecture that their language was more a dialect of Hebrew than a different tongue. This, indeed, would follow from the connection of Lot, their founder, with Abraham. It is likewise confirmed by the remarkable inscription recently discovered. See Massir. The name Moab has in all periods been an Aramaic name, and certainly never appears as a Moabite chronicle, though in its present condition doubtless much altered from what it originally was before it came into the hands of the author of the book of Numbers. No attempt seems yet to have been made to execute the difficult but interesting task of examining the record with the view of restoring it to its pristine form. The following are the names of Moabites as persons preserved in the Bible—probably Hebraized in their adoption into the Bible records; of such a transition we seem to have a trace in Shomer and Shirimith (see below): Zippor, Balak, Eglon, Ruth, Orpah (נְתֵנָה), Mesha (משה), Ithmah (1 Chron. xii, 46), Shomer (2 Kings xii, 21), or Shirimith (2 Chron. xxiv, 26), Sandalat. Add to these—Emim, the name by which they called the Rephaim who originally inhabited their country, and to whom Ammon and Moab were related by Zuzim; Chemosh, or Chemlah (Jer. xlvi, 7), the deity of the nation. Of names of places the following may be mentioned: Moab, with its compounds, Sedo-Moab, the fields of Moab (A.V. "the country of Moab"); Arboth-Moab, the deserts (A.V. "the plains") of Moab, that is, the region between the Arnon and the Arboth, by the ancient name of Mishor, the high undulating country of Moab proper (A.V. "the plain"); Ar, or Ar-Moab (泔), this Gene- nius conjectures to be a Moabish form of the word which in Hebrew appears as Ir (יִרְּ), a city; Arnon, the river (ירון); Bamoth Baal, Beer Elm, Beth-dibla- thaim, Dibon or Dimon, Eglaim, or perhaps Eglath- Sheshibhaya (Isa. xvi, 5), Horonaim, Kiriathaim, Kirjath- huzoth (Num. xxxii, 39; comp. Isa. xxiv, 11), Kir- karaas, Kerem Baal (see Map of Moab), Nimrim, or Nimrah, Nobah, or Nopah (Num. xxxii, 30), hap-Pisgah, hap-Peor, Shaveh-Karaimthaim (?), Zophm, Zoar. It should be noticed how large a proportion of these names end in ʾān.

For the religion of the Moabites, see CHEMOSH; MO- LACH; JASBAH.

Of their habits and customs we have hardly a trace. The gesture employed by Balak when he found that Balaam's interference was fruitless—"he smote his hands together"—is not mentioned again in the Bible, but it may not on that account have been peculiar to the Moabites. Their mode of mourning, viz., cutting off the hair at the back of the head and cropping the beard (Jer. xlvii, 3), is one which they followed in common with the other non-Israelitish nations, and which was forbidden to the Israelites (Lev. xvi, 5), who seem to have been accustomed rather to leave their hair and beard disordered and untrimmed when in grief (see Lev. xvi, 19; Deut. xxiv, 11).

V. Literature.—As above remarked, through fear of the predatory and mischievous Arabs that people it, few of the numerous travellers in Palestine have ventured to explore it (see Busingh's Asia, p. 507, 508). Seete- zen, who, in February and March, 1856, not without danger of losing his life, undertook a tour from Damascu- cus down to the south of the Jordan and the Dead Sea, and thence to Jerusalem, was the first to shed a new and altogether unexpected light upon the topography of this region. He found a multitude of places, or at least of ruins of places, still bearing the old names, and thus has set it in the perfect array upon the charts of them on the old charts (see U. i. Seetzen's Reisen, etc., von Prof. Kruse, etc., i, 405-26; ii, 520-77; also the editor's notes thereon in vol. iv). From June to Sep- tember, 1812, Burchardt made the same tour from Damascus beyond the Jordan down to Kerak; whence he advanced over Wady Mousa, or the ancient Petra (which he was the first European traveller to visit), to the bay of Aila, and thence went to Cairo (Travels in the Holy Land and Syria, Lond. 1822; see also the notes of Gen- senius to the German translation [Weimar, 1824], ii, 1061-64). A party of English gentlemen—captains Irving and Baring, and Mr. Bankes—visited the town through the land of Moab in returning from Petra in 1818 (Travels in Egypt, etc., [1822, 8vo, 1847, 12mo], ch. viii; see also Legg's Supplement to Dr. Macmichael's Journey from Moscow to Constantinople [1817]). The northern parts of the country were visited by Mr. Buckingham, and more lately by Mr. George Robinson and by Lord Lindsay (see also the plates to Laborde's new work, Voyage en Orient). Kerak, the capital of the country, was penetrated by the party in command of Lieut. Lynch (Expeditio ad the Dead Sea [1849]); and the region was partially examined by M. De Saulcy, in January, 1846 (Voyage autour de la Mer Morte, Paris, 1853; also translated into English, Lond. and N. York, 1858). Tristram, however, was the first who really explored it accurately (Land of Moab, Lond. and N. York, 1873), and the American engineers of the Palestine Ex- ploration Society have triangulated the northern portion of it. Several parties of tourists have also travelled it in various parts, and in general see generally General Comment, on Isa. xxi, xxvi, introd., translated by W. S. Tyler, with Notes by Moses Stuart, in Biblical Repos., for 1886, vili, 167-124; Keith, Evidence from Prophecy, p. 158-165; and Land of Israel, p. 279-293; Kittte, Pie- gre de l'Antiquite Biblique, Notes and Mem. de la Bibl. MOABITITES (Heb. Moabiyâh, מואביה, fem. of Moabite; Sept. Menôsîrîm), a Moabish woman (Ruth i, 22; ii, 21; iv, 5, 19; 2 Chron. xxiv, 26). See Moabites.

Moáidh'ah (Neh. xiii, 17). See MAADIAH.

Mobley, William H., a minister of the Methodist Episcopal Church, South, was born in Kentucky in 1859; removed to Missouri in 1852; was licensed to preach in 1854, and shortly after joined the St. Louis Conference; continued to travel and preach regularly till 1861, when the troubles of war compelled his removal to Arkansas, where he remained till 1865. He then returned to Kentucky, his native state, and died in Hickman County, July 27, 1865. Mr. Mobley was a good man and an efficient preacher. See Minutes of the M. E. Church, South, 1866, s. v.

Mocetto, GIBBALO, a painter and engraver of the Venetian school, and sometimes called Hieronymus Mocaeto, was a native of Verona, according to Lanzi, or of Brescia, according to Vasari, and was probably an early disciple of Bellini. Lanzi mentions an altar-piece in the church of S. Nazario-o-Celeo bearing his name, and dated 1498. Mocetto was chiefly known, however, as an engraver, and his works in this line are extremely scarce and valuable. Among others may be mentioned engravings of the Resurrection; the Sacrifice, with many figures; the Virgin and Child, with St. John the Baptist and another saint, which is now in the British Museum; the Virgin and Child seated on a Throne, and a wood-cutt of the Entrance of Christ into Jerusalem. He died about 1500. See Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 3 vols. 8vo), ii, 590; Lanzi, Hist. of Painting, transl. by Rooose (Lond. 1847, 3 vols 8vo), ii, 107; Revue des Beaux Arts, Juni 15, 1859.

Mocha of Tiberias, of Palestine, a noted rabbi, who flourished shortly after the middle of the 8th century, is said to have been one of the world's greatest sages. Unfortunately but little is known of his personal history. He established, or at least simplified, the intercalary system of the computation of the Tiberian, or Palestinian, which has for centuries been generally adopted both by Jews and Gentile in pointed editions of the O.-T. Scriptures, to the exclusion of the superlative system, called the Babylonian, or Assyrian, which was invented or extended by Acha of Ira (in the first half of the 4th century). Like his predecessor R. Acha, the author of the opposite system, R. Mocha also compiled a large and small Masorah, in which are discussed the writing of words with or without the vowel letters (יִהָנָם נָבָא), the affixing of certain accents (יִהָנָם נָבָא), accentuated syllables, Dagesh and Raphe, rare forms, arithmic words, homonyms, etc., as is evident from an ancie text, written by Firkentzen in 1752 following Masoretic gloss frequently occurs: "Rabbi Mocha writes this with and that without the vowel letters." These Masoretic glosses were written in Aramaic, and in the Tiberian dialect—the language of the Palestinian Jews—in order to make his labors both accessible and intelligible to all his people. Not uniformly, however, those Masoretic glosses are intermixed with notes written in Hebrew. See Finsser, Liber Kadosmojtot (Vienna, 1860), p. 62, Appendix; Grätz, Gesch. d. Juden, v. 552; Fürst, Gesch. des Kurdistan, 1, 15 sq., 134 sq.

Moch'me'Tur, the Brook (of χείμαρρος Μοχμωτην), Alex. omits Mox; Vulg. omits, a torrent, t. e. a wady—the word "brook" conveys an entirely false impres-
The learned Sicilian, Paola Ricci, labored there successfully in 1540, and the Roman bishop of the diocese, cardinal Morone, at one time gave the country up as Lutheran. The duchess herself, Renata, is often mentioned as a sister of Francis I of France, greatly distinguished herself as a promoter of the new doctrines. But the Inquisition came, and from its introduction dates the wane of Protestantism in Modena. See Inquisition; Italy.

Modena, Barnaba da, an esteemed Italian painter of the school of Modena, who flourished in the 15th century, was among the first artists who obtained any reputation in Piedmont. Two pictures exist in the Conventuals of Pisa by this master, one in the church and the other in the convent; both portray the Virgin. In the second the coronation is represented, and the Virgin is seen surrounded by St. Francis and other saints of his order. Della Valle speaks in high terms of a third picture of the Virgin, remaining in the possession of the Conventuals of Alba, which he says is in a grander style than any contemporary works; and he states that it bears the date 1507. Morrone extols the beauty of his heads and the delicacy of his coloring, and prefers him to Giotto. Hardly anything is known of his own life. See Lanzi, Hist. of Painting, trans. by Rosee (Lond. 1847, 3 vols. 8vo), ii, 945; iii, 292; Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo), ii, 370.

Modena, Leon da. See Leon.

Modena, Niccolotto da, an old Italian painter and engraver, flourished at Modena about the beginning of the 16th century. He is principally known as one of the first engravers of Italy. His plates are well designed, but are rudely executed. The principal productions are, The Adoration of the Shepherds; St. Sebastian, with Niccolotto on a table; St. Jerome; St. George; a full-length figure of Christ; St. Sebastian, with his arms tied over his head, and his body pierced with arrows; a picture of the Virgin, than the preceding, and pierced with three arrows. Jesus with the head of Goliath; St. Anthony; The vessel Lucca carrying water in a sieve to prove her virginity; St. Catharine, and a Saint bearing a large bag on his back. The date of his death is unknown. See Jameson and Eastlake, Hist. of our Lord (Lond. 1864, 2 vols. 8vo), ii, 571; Lanzi, Hist. of Painting, trans. by Rosee (Lond. 1847, 3 vols. 8vo), i, 107; ii, 346; Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo), ii, 571.

Modena, Pellegrino da, an Italian painter, the most eminent of the Modena school, was born about the middle of the 15th century, and is often called Pellegrino Munari, and sometimes Arcetri, but is commonly known by the title prefixed to this notice. According to Lanzi, he first studied with his father, who was also an artist of considerable reputation, and in 1509 painted an altar-piece for the church of St. Giovanni at Modena, which gained him no little reputation. At this time the fame of Raphael reached Modena, and Pellegrino at once journeyed to Rome, and placed himself under the instruction of that sublime master, who, perceiving the remarkable talent of his pupil, employed him as assistant in the famous works in the Vatican. At first Pellegrino painted in the open galleries, but afterwards executed from the designs of Raphael the History of Jacob and the History of Solomon in the Vatican, which Lanzi says were painted entirely after the manner of his master, and in a style almost incomparable. After the death of Raphael he continued to paint at Rome from his own designs, and executed some admirable works for the churches of the city, and afterwards in the church of St. Giacomo, entitled the History of St. James. After its completion he returned to Modena. Here he painted his most celebrated picture of the Nativity of our Lord, in the church of St. Paolo, which is characterized by Lanzi as "breathing in every part the grace of him of Urbino." Pellegrino met with a tragic death at the hands of some Modenesi, who turned their fury against him because his son had slain an antagonist in a duel. See in Leon, Hist. of Painting (Lond. trans. by Rosee (Lond. 1847, 3 vols. 8vo), i, 397; ii, 350; Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo), ii, 570.

Moderate. To moderate a call, in the Church of Scotland, is, under the presidency of one of the clergy, to publicly announce and give in an invitation to a minister or licentiate to take the charge of a parish; which announcement or invitation, thus given in the hearing of the assembled parishioners, is regarded as the first legal step towards a settlement.

Moderates is a name applied to those theologians of the Church of Scotland who favor patronage (prohibited by the Parliament of 1692, and in the Books of Discipline) and a moderate orthodoxy, i. e. a mitigation of the strictness of the old confessions. The first Moderates flourished in the middle of the last century, under the Robertsonian administration (1752-92). As early as 1720, however, the Moderate party had its influence in the Church, as is apparent from the five propositions which were condemned in a council held at that time to suppress Antinomianism (see Marrow Controversy); and in 1697 we find the assembly of the Nonconformists, invokely by the ascendency of the Nonconformists, afterwards leaders in the party of the Moderates. In many respects the Moderates are the "Latinumarians" of the Church of Scotland. Many of them adopted the ethical principles of Francis Hutcheson (q. v.). The leading pulpit orator among the Moderates—Dr. Hugh Blair—was deficient in evangelical thought and feeling, actually defended Hume against the Assembly; and well might, for had not his party declared (in 1720) that holiness is unnecessary for salvation? There were, however, many Moderates of an evangelical spirit, and these prepared the way for the First Church Movement. See Scotland, Church of (J. H.W.)

Moderation imports a proper government of passion and pleasure, preventing extremes of any kind. The presence of moderation is manifest in the exhibition of a calm and temperate frame of mind. "Moderation," says Blair, "ought to take place in our wishes, pursuits, expectations, pleasures, and passions."

(1) We may be moderate in our wishes. The active mind of man is seldom or never satisfied with its present condition, how prosperous soever. Originally formed for a wider range of objects, for a higher sphere of enjoyments, it finds itself, in every situation of fortune, straitened and confined. Sensible of deficiency in its own state, it is ever pining for more; and this aspiring wish after something beyond what is enjoyed at present. Assuredly there is nothing unlawful in our wishing to be freed from whatever is disagreeable, and to obtain a fuller enjoyment of the comforts of life. But when these wishes are not tempered by reason they are in danger of precipitating us into extravagance and folly. If we suffer our fancy to create to itself worlds of ideal happiness; if we feed our imagination with plans of opulence and splendor far beyond our rank; if we fix to our wishes certain stages of high advance ment, or certain degrees of uncommon reputation or distinction, as the sole stations of felicity, the assured consequence will be that we shall become unhappy in our present state, unfit for acting the part and discharging the duties that belong to it; we shall discompose the peace and order of our minds, and foment many hurtful passions. Here, then, let moderation begin its reign, by bringing within reasonable bounds the wishes that we form. As soon as we become extraordinary, let them be checked by proper reflections on the fallacious nature of those objects which the world hangs out to allure desire.

(2) We should be moderate in our pursuits. When the active pursuits in which we engage rise beyond moderation, they fill the world with great disorders,
MODERATION

often with flagrant crimes. Yet all ambition is not to be condemned, nor ought high purposes on every occasion of men to be rejected. Some men are fitted by nature for rising into conspicuous stations of life. In few cases the impulse of their minds, and properly exerting the talents with which God has blessed them, there is room for ambition to act in a laudable sphere, and to become the instrument of much public good. But this may safely be pronounced, that the bulk of men are ready to reverence their own abilities, and to imagine themselves equal to higher things than they were ever designed for by nature. We should therefore be sober in fixing our aims and planning our destined pursuits. We should beware of being led aside from the plain path of sound and moderate conduct by those false lights which always quickens readiness for evil. By aiming at a mark too high we may fall short of what it was in our power to have reached. Instead of attaining to eminence, we may not only expose ourselves to derision, but bring upon our heads manifold disasters.

(3.) We should be moderate in our expectations. When our state is flourishing, and the course of events proceeds according to our wish, we ought not to suffer our minds to be vainly lifted up. We ought not to flatter ourselves with high prospects of the increasing favors of the world and the continuing applause of men. By want of moderation in our hopes we not only incur the greater disappointment when disaster overtakes us, but we accelerate disappointment; we bring forward with greater speed disagreeable changes in our state. For the natural consequence of presumptuous expectation is rashness in conduct. He who indulges in confident security of course neglects due precautions against the dangers that threaten him; and his fall will be foreseen and predicted. He not only exposes himself unhinged to danger, but he multiplies them against himself. By presumption and vanity he either provokes enmity or incurs contempt. A temperate spirit and moderate expectations are the best safeguard of the mind in this uncertain and changing state. They enable us to pass through the world with most comfort. When we rise in the world they contribute to our elevation, and if we fall they render our fall the lighter.

(4.) We should be moderate in our pleasures. It is an inviolable law of our present condition that every pleasure which is pursued to excess converts itself into poison. What was intended for the cordial and refreshing of human life, through want of moderation, we turn to its bane. No sooner do we pass the line which temperance has drawn than pernicious effects succeed. Could the monuments of death be laid open to our view, they would read a lecture in favor of moderation much more forcible than anything that the most eloquent philosopher or preacher can give. We should behold the graves peopled with the victims of intemperance; we should behold those chambers of darkness hung round on every side with the trophies of luxury, drunkenness, and sensation. So numerous should we find those martyrs of iniquity that it may safely be asserted where war or pestilence has slain its thousands intemperate pleasure has slain its ten thousands.

(5.) We should be moderate in all our passions. This exercise of moderation is the more requisite because every passion in human nature has of itself a tendency to run into excess. All passion implies a violent emotion of mind. Of course it is apt to deform the regular course of our ideas, and to produce confusion within. Of some passions, such as anger and resentment, the excess is so obviously dangerous as loudly to call for moderation. He who gives himself up to the impetuosity of his passions when disappointment comes, but we declare it. Of the insidious growth of passion, therefore, we have great reason to beware. Let us be persuaded that moments of passion are always moments of delusion; that nothing truly is what it then seems to be; that all the opinions which we then form are erroneous; and that all the judgments which we then pass are erroneous.

MODERN QUESTION

travagant. Let moderation accustom us to wait till the fumes of passion are spent; till the mist which it has raised begins to dissipate. On no occasion let us imagine that strength consists in pfanting violence. It is the strength of one who is in the delirium of a fever, or under the disease of madness. True strength of mind is shown in governing and resisting passion, and acting on the most trying occasions according to the dictates of conscience and right reason. See also 2 Pet. 1. 10. ii. ser. 1. 51. 63. 97. 98. 100. 101.

Moderator is the name of an ecclesiastical officer in the Presbyterian churches. His duty is to preside over a meeting or an assembly of ministers, to regulate their proceedings in session, and to declare the vote (see Presbyt. Confession, p. 366 sq.). To moderate in a call is to preside over the election of a minister. When the attempt was made to introduce episcopacy into Scotland, one plan was to have perpetual moderators for presbyteries—a bishop or his vicar to be chosen to the office.

Moderator of Gaders (Moderatus Godihianus), a distinguished exponent of the neo-Pythagorean school of philosophy, surnamed after his native place, flourished during the reign of the emperor Nero (A.D. 64-68). He collected all the MSS. extant on the philosophical views of Pythagoras, and embodied them in his works: Lib. i. de Pythagorio; Lib. ii. de Pythagoricae, and in the tract Pythagorarcum, which are unfortunately no longer extant. (Simply a fragment of his is preserved by Strobus, Elog. p. 8.) According to Porphyry (Vita Pythagor. § 32 et 58), Moderatus sought to justify the incorporation into Pythagoreanism of Platonic and neo-philosophical doctrines, through the hypothesis that the ancient Pythagoreans themselves intentionally expressed the highest truths in signs, and for that purpose made use of numbers. The number one was the symbol of unity and equality, and of the cause of the harmony and duration of all things, while two was the symbol of differentiation, equality, and division, etc. See Neo-Pythagoreanism. Moderatus is reputed to have been a man of considerable eloquence, and not only to have been popular in his day, but to have found an imitator, to some extent, in Lamblinclus (q. v.). See Schoell, Historie de la litterature Greque, vi. 54; Ueberweg, Hist. Philos., i. 232 sq. (J. H. W.)

Modern Question, The, is a term used by some to designate a controversy on the doctrine of salvation. The question raised is, "Whether it be the duty of all to whom the Gospel is preached to repent and believe in Christ?" It is called the Modern question because it is supposed never to have been agitated before the early part of the last century. The following are the circumstances as a statement of the most eloquent preachers, and2 by which he considers as having originated in Northamptonshire, England, in the Baptist churches in which Mr. Davis, of Rothwell, preached; though it does not appear that the latter took an active part in it. Mr. Maurice, his successor, even strenuously opposed the negative side of the question, which had been maintained by some of Mr. Davis's admirers, particularly by Mr. Lewis Weyman, of Kimbolton, to whom Mr. Maurice wrote a reply, which, Mr. Maurice dying before it was completed, was published by the celebrated Mr. Bradbury. This was between 1787 and 1789. Mr. Gutteridge, of Dunsden, also took the affirmative side; and in 1748 Mr. Brine the negative; as did also the learned Dr. Gill, though he did not write expressly on the subject. The question thus started agitated the Baptists down to the time of Andrew Fuller, who very ably supported the positive side, viz., that "faith is the duty of all men, all men are born in sin, and have no ability to do that which is opposed to it, and therefore it will not believe till regenerated by the Holy Spirit." On the other side it was contended that "faith was not a duty, but a grace," the exercise of which was not required till it was bestowed. Mr. Fuller, holding that it is both, published The Gospel worthy of all Acceptation, or the Duty of All Men to believe in Jesus
Christ. "The leading design of this performance (says
Mr. Morris) is to prove that men are under indispensa-
ble obligations to believe whatever God says, and to do
whatever he commands; and a Saviour being revealed
in the Gospel, the law in effect requires the Eu-
rophean to believe it, and judging it insol-
ance upon obedience to the whole will of God; that the
inab-
ility of man to comply with the divine requirements is
wholly of a moral nature, and consists in the preva-
ence of an evil disposition, which, being voluntary, is
in the highest degree criminal." On this subject Mr.
Fuller was attacked by Mr. Button, a supralapserian
on the one hand, and by Mr. Daniel Taylor, an Arminian,
on the other; to whom he replied by A Defense of his
former tract, and this ended the controversy. The late
Mr. Robinson shrewdly remarks that those ministers who
will not use applications, lest they should rob the Holy
Spirit of the honor of applying the Word, should, for the
same reason, not use explications, lest they should der-
ive him of the honor of illustrating it. See Ryland,
Life of Fuller, p. 6-11; Morris, Life of Fuller, ch. ii;
Wilson, Dissenting Churches, ii, 572; Ivimey, English
Baptists, iii, 262. See Salvation.

Modestus (1), S.J., an apostle of the Church in Car-
inthia, flourished in the 8th century. He was one of
six Irishmen, who were invited by Vigilus of Salzburg, sent to Carinthia
to preach the glad tidings. Modestus lived but a short
time after his arrival in Carinthia, but the success of his mis-
ion is manifest in the conversion of the princes of the coun-
try, who are said to have espoused the cause of Christi-
anity at this time. See Carinthia. Modestus is
Commemorated in the Latin Calendar as a saint. (2.)
Another Modestus flourished in the 7th century (616-626)
as patriarch of the Church of Jerusalem. He is reputed
to have been the holy church at Jerusalem, which was
destroyed by the Persians under Chosroes II in 614.

Modesty (Lat. modestia, from modus, a measure) is
sometimes used to denote humility, and sometimes to
express chaste modesty. The Greek word is modestia or
ease, or well arranged. It suggests the idea of simple
elegance. Modesty, therefore, consists in purity of
sentiment and manners, inclining us to abate the least ap-
pearance of vice and indecency, and to fear doing any-
thing which will justly incur censure. An excess of
modesty is called bashfulness or diffidence, and the want
of it impudence or impiety. There is also a false
or vicious modesty, which influences a man to do any-
thing that is ill or indigee; such as, through fear of
offending his companions, he runs into their follies or
excesses; or it is a false modesty which restrains a
man from doing what is good or laudable, such as
being ashamed of the external parts of religion, and to be seen in the ex-
ercises of piety and devotion.

Modi or Mode (i.e. courageous, from a root
cognate with the Danish mod, and the German macht,
"courage") is in northern mythology the name of a son
of Thor, who, the legend goes, is to survive the destruc-
tion of the world at Ragnarök, and in the renovated
world will be a friend and protector of the human
race. His works at Urvino, where he is known under the name of
Francisco da Forlì, are a picture of Christ taken down
from the Cross, in oil, at St. Croce, and some Anges,
in fresco, at St. Lucia. His finest works, however, are in
the churches at Forlì and Rimini, among which are
Augustine and the Virgin of the Assumption, and the Divinities of
Babel. He died suddenly, leaving his work imperfect,
but it was afterwards continued by Arrigoni, who painted
the Death of Abel in the same place. See Lanni,
Hist. of Painting, transl. by Roscoe (Lond. 1847, 3 vols.
v.5o), iii, 57.

Mo'din (Mo'diin v. r. Mo'di'ej, Mo'di'ij, Mo'da-
ij, and in ch. ii Mo'di'ej; Josephus, Mo'di'ij, and
once Mo'di'ej; Vulg. Modin: the Jewish form is, in
the Mishna, פְּדִינֶהּ, פְּדִינָּא, in Joseph ben-Gorion, ch. xx,
פְּדִינָּא; the Syriac version of Maccabees agrees
with the Mishna, except in the absence of the article, and in
the usual substitution of e for i, and hence the name of
Maccabees is mentioned either in the Old or New Testament, though
rendered immortal by its connection with the history
of the Jews in the interval between the two. It
was the native city of the Maccabean family (1 Macc. xiii,
25), and as a necessary consequence contained their an-
cestral sepulchre (רָפָאֵק) (ii, 70; ix, 19). It is stated
that Mattathias removed from Jerusalem hereunto, and to that time
he seems to have been residing, at the commencement of the
Antiochian persecution (ii, 1). It was here that he
struck the first blow of resistance, by slaying on the
heaven altar which had been erected in the place both
the commissioner of Antiochus and a recreant Jew
whom he had induced to sacrifice, and then demolishing the
altar. Mattathias himself, and subsequently his sons
Judas and Jonathan, were buried in the family tomb,
and over them Simon erected a structure which is mi-
nutely described in the book of Maccabees (xxii, 25-30),
and, with less detail, by Josephus (Ant. xiii, 6, 6), but
the restoration of which has hitherto been so difficult
a puzzle as to affect the authenticity of the mausoleum of Artemis.

At Modin the Maccabean armies encamped on the
eyes of two of their most memorable victories—that of
Judas over Antiochus Eupator (2 Macc. xiii, 14),
and that of Simon over Cendebeus (1 Macc. xvi, 4)—the
last battle of the venerable chief before his assassina-
tion. The only indication of the position of the place
to be gathered from the above notices is contained in the
last, from which we may infer that it was near "the
plain" (ῥόδος τοῦ πεδίου), i.e. the great maritime lowland
of Philistia (ver. 5). By Eusebius and Jerome (Onomast.
Μώδινι, Modini) it is specified as near Diospolis, i.e.
Lydda; while the notice in the Mishna (Phasichon, ix,
2), and the comments of Bartenora and Maimonides,
state that it was fifteen (Roman) miles from Jerusalem.
At the same time the description of the monument
seems to imply (though for this see below) that the
spot was so lofty as to be visible from the sea, and
so near that one might see the cliffs of the sea where dis-
permible therefrom. All these conditions, except the
last, are tolerably fulfilled in either of the two sites
called Latrun and Kubb. The former of these is, by
the shortest road—that through Wady Ali—precisely
fifteen Roman miles from Jerusalem; it is about eight
English miles from Lydda, fifteen from a point near
Lydda, and nine or ten from the River Rubin, on which
it is probable that Codorn—the position of Cendebeus
in Simon's battle—stood. Kubb is a couple of miles
farther from Jerusalem, and therefore nearer to Lydtt
and to the sea, on the most westerly spur of the hills of
Benjamin. Both are lofty, and both apparently—Lat-
run certainly—command a view of the Mediterranean.
In favor of Latrun are the extensive ancient remains
with which the top of the hill is said to be covered
(Robinson, Bib. Res. iii, 151; Tobler, Dritte Wand.
p. 186), though of their date and particulars we have at
present no accurate information. The foundation
of the fortress appear to be of the Roman age, or perhaps
earlier, though the upper parts exhibit pointed arches
and light architecture of a much later date. The view
from the summit is commanding, and embraces the
whole plain to Joppa and the Mediterranean beyond.
The name Latron appears to have arisen in the 16th
century, which makes this the birthplace of the penitent
thief—"Castra boni Latronis" (Quaresmius, ii, 12; Porter,
Kubb appears to possess no ruins, but, on the other hand, its
name may retain a trace of the monument. Ewald (Gesch. iv, 350, note) suggests that the name Modin may be still surviving in Deir Ma'in. But this is ques-
tionable, for Philo, in the place of Deir Ma'in, speaks of the two named in the text. The medieval and mod-
ern tradition (see Robinson, it, 7) places Modin at Sobha, an eminence south of Kurit el Enab; but this being not more than seven miles from Jerusalem, while it is as
much as twenty-five from Lydda; and the position of Deir Ma'in is less in accordance with the facts than that
of the two named in the text. The modern city of Modin is lower in the land, and the sea, and also far removed from the plain of Philistia, is
at variance with every one of the conditions implied in the
records. It has found advocates in our own day in M. de Sauley (L'Art Judaïque, etc., p. 577 sq.) and M.
Salzmann (Jerusalem, Étude, etc., p. 37, 88; where the
lively and picturesque, which satisfied me, was less
enlarged with mistakes), the latter of whom
explored chambers there which may have been tombs,
taken it for granted that there was nothing to prove it.
A suggestive fact, which Dr. Robinson first pointed out,
is the want of unanimity in the accounts of the medi-
eval travellers, some of whom, as William of Tyre (vii, 1), place Modin in a position near Nob, and Lydda. M. Mislin also—usually so vehement in favor of the traditional sites—has recommended fur-
ther investigation. It is, if it should turn out that the ex-
pression of the book of Maccabees as to the monument
being visible from the sea has been misinterpreted,
to which the designation of Sobha would give
предел, it is difficult to account for the origin of the tradition
in the teeth of those which remain.

The descriptions of the tomb by the author
of the book of Maccabees and Josephus, who had both appar-
ently seen it, will be most conveniently by
being printed together:

1 Macc. xxiv, 27-30.

"And Simon made a bul-

ley, and his sons, and raised

laid it aloof to view with

Separated from his father

be, and raised it up to a

isms, he built seven pyramids to

pillars he made suits of

be able to have anything more than conjecture.

something has been already attempted under the

Maccabees (q. v.). But in its absence one or two

questions present themselves.

(1.) The "ships" (Nabim, nare). The sea and its

pursuits were so alien to the ancient Jews, and the life

of the Maccabean heroes who preceded Simon was—

it except their usual relations with Joppa and Jamnia

and the battle-field of the maritime plain—so uncon-

nected therewith, that it is difficult not to suppose that

the word is borrowed from the sea, and that it is

used in the sense of a ship. This was the

view of J. D. Michaelis, but he does not pro-

pose any satisfactory word in substitution for πλοῖον

(see his suggestion in Grimm, ad loc.). True, Simon

appears to have been to a certain extent alive to the

importance of commerce to his country, and he is es-

pecially commemorated for having

it is that it will be helpful in the account of

Joppa, and thus opened an inlet for the

seas (1 Macc. xiv, 5). But it is difficult to see the

connection between this and the placing of ships on a

monument to his father and brothers, whose memorable deeds

had been of a different description. It is perhaps more

feasible to suppose that the sculptures were intended to

be symbolic of the departed heroes. In this case it

seems not improbable that during Simon's intercourse

with the Romans he had seen and been struck with

their war-galleys, no inapt symbols of the fierce and

rapid career of Judas. How far such symbolic repre-

sentation was likely to occur to a Jew of that period is

another question.

(2.) The distance at which the "ships" were to be

seen. It is true, when the road was from

Lydda to the Mediterranean as from

Modin from the sea—Latrun, fifteen miles; Kabbah, thir-

teen; Lydda itself, ten—and the limited size of the

sculptures are considered, the doubt inevi-

tably arises whether the Greek text of the book of Maccabees accu-

rately represents the original. De Sauley (L'Art Ju-

daïque, p. 577) ingeniously suggests that the true

meaning is that the sculptures could be discerned from the

vessels in the Mediterranean, but that they were

worthy to be inspected by those who were sailors by

profession. Hitzig (Gesch. der Völker Israels, p. 449)

insists upon it (1869) that Modin is recognised in the

modern little village el-Durj (comp. Robinson, iii, 272),

but the exact point is by was drive away of Aqui-

taine, Charles the Bald divided that kingdom into three
governments, the designated capitals of which were, re-

spectively, Limoges, Clermont, and Angoulême. The

ecclesiastical district of Clermont was then assigned to

bishop Modoin. Later, after the deposition of Abo-

bard, bishop of Limoges, Modoin, as archbishop, was in

the administration of the archiepiscopal see. Flores

reproaches him with undue firmness in his treatment of

the Lyonnais clergy. The reverend Rouvier mentions

Modoin as being numbered among the abbis of Mou-

tier-Saint-Jean, in the diocese of Langres. In the 9th

century it was not uncommon to meet bishops engaged in

the same pursuits with abbis. When Theudulf,

bishop of Orleans, was in prison at Angers, he sent a po-

etical composition to Modoin, begging him to interve-

in his favor. Modoin, in reply, invited a short poem,

his only literary work extant. He died about 842.

See Gallia Christ., vol. iv, col. 859; Hist. Littér. de la

France, 15, 487.

Modious, in ecclesiastical law, signifies an exemption

from the payment of tithes, and is of two kinds: first,

a partial exemption, when it is called a modus decimen-

di; secondly, a total exemption, when it is called a mo-

dus de non decimando. There is a third species of ex-

emption, called a real composition, where an agreement

is made between the owner of lands and the parson or

vicar, with the consent of the patron and ordinary, that

the lands specified shall be exempt from tithes on such

considerations as are contained in the stipulation, such

as land or other real recompense given in lieu and satis-

faction of the tithes to be relinquished. The modus

MODUS. See BIBLIA.
Moebius is that which is generally meant when the term *modeus* is used. It may be defined as a mode of tithe in a particular manner, different from that which the general law prescribes; and the custom must have existed from time immemorial. The modes of tithe established by these customs are exceedingly various: sometimes it is a compensation in work and labor, as that the incumbent shall have only the twelfth part of the land; and nor the tenth, in consideration of the landowner making it for him; sometimes it is a less amount of tithe in a more perfect state, because of a freight in a more perfect state, because of a lighter freight in the tithe; whereas, sometimes, and more frequently, it consists in pecuniary compensation, as two or three pounds an acre for the tithe of land.

The *modo de non decima* is an absolute exemption from tithes. It exists in four cases: 1. The ruler may prescribe that he and his prelates have not paid tithes for ancient crown lands, and this prescription will be good. 2. One Church officer does not pay tithes to another officer his superior, nor the superior to the inferior, according to the rule that *eclensis ecclesiae decimae solvere non debet*. 3. An ecclesiastical person, as a bishop, may prescribe that he will not pay tithes on the ground that the lands belong to the bishopric, and that neither he nor his predecessors have ever paid them. 4. The abbeys and monasteries at the time of their dissolution were possessed of large estates of land, a great part of which was held tithe-free, either by prescription or custom, or because the lands were not within the tenure of the Church. Thus it was, for example, the statute of 31 Henry VIII, c. 18, which dissolved the larger abbeys, enacted that all persons who should come to the possession of the lands of an abbey then dissolved should hold them tithe-free, in the same manner as the abbeys themselves had formerly held them. The lands which belonged to the Order of the Knights of St. John of Jerusalem and to the Order of the Cistercians are within the protection of this statute; and those of them, consequently, which were tithe-free before they came into the hands of the king still continue tithe-free, in whatsoever hands they may now be. Some lands have been made tithe-free by special legislative acts. See Blackstone, *Commentaries*, i. 28; Selmen, *History of Tithes*, ch. xii.; Burton, *Compendium of the Laws of Real Property*, p. 287 sqq.

Moebius (or Möbius), Georg, a Lutheran divine, was born at Lauch, Thuringia, Dec. 16, 1626; studied at Jena and Leipzig; became rector of the gymnasium at Merseburg in 1647; professor of theology at Leipzig in 1658; and died Nov. 28, 1697. He edited and enlarged Crusius's *Grammatica Graeca*, and was the author of numerous essays in Latin on Biblical and theological topics, which were afterwards published in a collective edition (Leips., 1699, 4to). See Jöcher, *Geburten Lexicon*, &c.

Moed. See Talmud.

Moedaginur, in Norse mythology, is the name of the highest class of pigs who dwell in stones.

Moehler. See Möhler.

Moelter, Jacob, a Dutch painter, was born at Dort in the year 1649. He was a pupil of Nicholas Maas, and gained an enviable reputation as a historical painter, though he is better known by his portraits. Soon after two religious works by this artist—*The Church and its Most Venerable Fathers in the Red Sea*, and *Moses striking the Rock*—he died in 1737.

MOGTASILAH 403

MOHAMMED

first symbolic book of the Eastern Church." This work, which remains to this day the text-book of the Russo-Greek Church in dogmatic theology, went through numerous editions in Russian, was translated into Greek (Anastasios, 1628), Latin (Leipsig, 1690), and German (Hameln, 1777, and Breslau, 1791), and has furnished the basis for several catechisms in different Greek churches. See Confessions of Faith. Mogila published also a Catechism (Kiev, 1645), and some pamphlets. A work containing biographical sketches of the saints, in the Slavonic language, he undertook, but did not bring to completion. But Mogila is famed more for his literary work as a poet, and made dramas, which were acted by the pupils of his academy; one of them, on the Nativity of Christ, was for a long time very popular. See Hist. de la Hiérarchie Russe, iii, 735; Dictionnaire des Autres Éclésiastiques Russes, s. v.; Otto, Hist. of Russian Literature (Oct., 1859), p. 321 sq.; Traub, Russische Studien zur Theologie u. Gesch. (Münster, 1857-58); Gebrzef; Essai sur l'Histoire de la Civilisation en Russie; Haag, Hist. des Dogmes Chrétien, i, 408; Kimmel, Libri symbolici ecclesiae Orientalis (Jena, 1845, 8vo), p. 56. See Greek Church; Russia. (J.H.W.)

MOGTASILAH (i. e. those who wash themselves) is a name given to the Aramaic bishops in the 6th century. The first Great Mogul was Baber, the great-grandson of Timur, who founded the Mongol empire in Hindustan in 1526. In 1603 the Great Mogul was deprived of his throne; in 1627, of even the appearance of authority, becoming a mere pensioner of the British; and in 1658, Mohammed Babur. This dynasty, though dynastically undistinguished, was characterized by a great degree of political unity, which enabled it to remain the paramount power in India till the 18th century. See Moguls.

MOHAMMED or Mahomet (written also Mu-
hamed or Mahomet, and Muhammad or Muhammet, an Arabic word meaning the predicted Messiah; applied to him in allusion to Hagg. ii, 7; but formerly called, according to a tradition quoted by Halah, Abū al-'Abbās, a great Arab, who in the 7th century completely changed the face of the world in his own age, but still continues to exercise a powerful influence in the civilization of the Eastern world, being best known as the founder of a religious system which has spread extensively among men, and is denominated Islam, or, more properly, after its founder, Mohammedanism (q. v.).

Sources for his Life.—Arabian literature is very rich in sources for a biography of Mohammed. Besides the Koran, which records the most important events of his life, there exist numerous collections of traditions in which the expressed views of the Arabian prophet on various incidents and relations of life are introduced; then there are biographies proper, some of which extend as far back as the first century of the Mohammedan era. They are, it is true, written with a religious prejudice, and more or less spiced with legends, but in most cases the historical part worthy of credit is easily discerned. It must not be believed that these biographies were allowed too free a rein to fancy, or were permitted to distort facts or pass them over in perfect silence; for they had to fear being convicted of mendacity and negligence by no less an authority than the Koran itself, already collected by the contemporaries of the prophet. See Muhammad by the Persians. The historian in determining truth, namely, that the Mohammedans rarely try to conceal the frailties of their founder, for their judgment is guided by a standard different from that of non-Mohammedans—they praise some of his deeds and words as virtuous which we brand as infamous. They even proceed generally on the principle that Mohammed, as a privileged individual, was exempt from the common laws. Hence, notwithstanding the abundance of historical accounts of his life, we do not know the proper name for the religion established by Mohammed, while its professed are called Muslimes, and the continued lively intercourse between Mohammedans and Christians in Syria and Palestine, as well as in Egypt and Spain, the most perverted opinions on Mohammedanism and its author came to prevail among the non-Mohammedans, even in the Occident. He was represented either as a sorcerer or as an idol; some believed him the Antichrist, others a renegade cardinal. And in proportion as the later Mohammedans—especially the Persians, greedy of mysteries and marvels—rendered the historical Mohammed of the ancient Arabsians scarcely recognizable by overmuch adoration and proximity to the supernatural, and the more Mohammedanism spread in the Occident and threatened to become dangerous to Christianity, hatred and fear exerted themselves to disfigure Mohammed and his creed by ridiculous and absurd calumnies. Even in modern times, after several translations of Arab biographies of Mohammed and his followers had been published, his true character was little understood. As late as 1829 a work appeared in London demonstrating, or rather aiming to demonstrate, that Mohammed was shadowed by the little horn which issued from the fourth beast described by the prophet Daniel. In a still later publication the author, endeavoring at a great expense of learning, to prove that Mohammed was an instrument of the devil's device and handling. But, as observed in Weil's work, Mohammed der Prophet, the advance of knowledge in these days requires the historical characters handed down to us from remote periods to be re-examined by the light of new and of better-classified authorities, and to be recast upon a surer and more truthful basis. See Meth. Review, Jan., 1889.

Among characters of world-wide celebrity, there is none other that calls more loudly for a reinvestigation of the "original sources" than that of Mohammed. Born in an obscure age, among a people whose antecedents are dimly shadowed out to us, in a country of all fathomless regions the least explored, his own career was a series of marvels and contradictions. While searching earnestly for truth, he taught millions of men to believe a gigantic fable; and, while tormented with doubts agonizing to his own breast, contrived to establish a creed in the middle of infallibility. With too little energy or too little ambition to support himself, except by the despised employment of a shepherd, he withstood for years the ridicule, the malice, and the furious opposition of the leaders of his own family and of the nation, and finally vanquished all their efforts. Over this extraordinary and seemingly unfathomable character the disciples and the opponents of his doctrines have alike combined to draw an additional veil of uncertainty. The first Mohammedans piously encompassed their prophet with a cloud of miracles—"the mythology," as Dr. Sprenger calls it, of Islam. Homilis prelates foolishly distorted history to camouflage their system of philosophy, and calumniators, to add lustre to their followings. The ill-will of the Mohammedans was equally unjust, endowed him with crimes of their own invention, such as they thought congenial to the character of an imposter. Thus, while Khadijah beheld him shaded by angels on his journey to Syria, Pvideaux accuses him of robbing orphans of their patrimony, and Voltaire depicts him as having been suspected or even convicted of murder. In truth, Mohammedanism, and the rarity and inaccessibility of the MSS. of early Mohammedan writers, were sufficient of themselves, if not to deter Europeans from undertaking the biography of the apostle.
of Islam, at least to cover the attempt, until a comparatively recent date, with the disgrace of failure. The earliest and most authentic chronicles of the rise of Mohammedanism were not known, even by name, to those who aspired to the Mohammedan opinions and the established government. Gibbon, for example, appeals to Gagnier's translation of Abulfeda, a prince who wrote in the fourteenth century, as his "best and most authentic guide." But to consider so late a historian as Abulfeda an authority at all would convict an Orientalist of the most culpable ignorance in Arabic literature. Yet before we can turn from the Mohammedan as pictured was envious and pusillanimous Musselmans, or the monks of the Middle Ages and their successors among modern writers, to the true historical Mohammed, as he comes before us after a profound and unprofessed study of the original documents, it is necessary that we take a hasty glance at the condition of Arabia, the country that claims him as her own, at the time and previous to the birth of Mohammed.

State of Arabia previous to the Introduction of Islam.

—from time immemorial the aboriginal inhabitants of the peninsula had been divided into a great number of free and wandering clans, limited communities, and petty states, whose peculiarities of character, mode of life, and political institutions, as they were mostly dependent upon local circumstances, were for centuries stamped with the same unalterable features, and had been preserved almost unchanged even from the time of the patriarchs of the book of Genesis. The mountainous tableland, the arid desert, the sandy waste, the barren and fertile valleys, but at the same time intersected and skirted with dreary wastes and sandy plains, was occupied by those roving tribes who, in opposition to the settled inhabitants, are proud of the name of Bedouin, or people of the plains. Most of them were addicted to a wandering life, but from being strongly disposed to war and chivalrous adventures, their peaceable occupations were interrupted, either by conducting a caravan of merchants, or still often by assailing and robbing their fellow-tribes. Every tribe was governed by the most aged or worthy sheik of that family which had been exalted above its brethren by fortune and heroical deeds, or even by eloquence and poetry. For as the heroic bards were at once the historians and moralists by whom the vices and virtues of their countrymen were impartially censured or praised, a noble enthusiasm for poetry animated those Arabs, and at an annual fair at Ochkhad thirty days were consecrated to poetical emulations. However, the true poet was not always as wise as he was learned, as appears from letters of gold and suspended in the temple of Mecca. These meetings, however, formed but a very feeble bond of union among the independent and hostile tribes, who, only occasionally, and in times of danger and warfare, submitted to a supreme chief, or emir of emirs, and had never yet been united into one body. And the tie was still less binding on those inhabitants who, being collected in flourishing towns and cities on the coasts of the peninsula, and mostly employed in trade and agriculture, were regarded with supreme contempt by the free Bedouin as a weak and degenerate race of slaves. Only the converts of these mother-conditions, who, before the promulgation of Mohammed's doctrines, we have but scanty information. The Mohammedans themselves disdained inquiry into the idolatrous worship of their ancestors. For what do we know about it we are indebted to accidental notices of some of their deities mentioned in the Koran, occasionally, and to sundry not always trustworthy accounts diffused through the more ancient works, and not to any connected treatise upon the pagan religions of Arabia. The scanty notices of the Greeks and Romans concerning this topic are very uncertain. We must not, however, fail to mention the genealogical tables, which, according to Arabia, and attribute great importance, as auxiliary sources for the religious faith of the ancient Arabians. From these genealogical tablets we learn the names of some of their idols and the distribution of their worship; for many personal names relate to the worshipped deities or the places where they were worshipped. Thus we are not altogether without some clue respecting Arabic polytheism, and secure the information that no one religious system prevailed throughout all Arabia, or at any given time.

Their religious worship, it would appear, consisted chiefly in the adoration of the heavenly luminaries, which were considered as so many tutelar deities of the different tribes; and among these, after the sun and moon, the planet Venus had acquired such peculiar preeminance that even to the Idolaters of ancient Arabia, who had no fixed calendar, after remained the sacred day of the week. These deities, with many other images of the personified powers of nature, rudely represented by idols of every variety of shape, were principally gathered round the ancient Kaaba—the Pantheon of Arabian idolatry; and their worship was accompanied, not only with the most horrid rites and shocking ceremonies of a degraded paganism, but even with human sacrifices and cruelties of every description. Even children were immolated by some of the ruder clans to the idols, while others, as the Kondites, buried their daughters alive (Sur. vi, 137; xvii, 58; lxvi, 8); and we need scarcely remark that, except a vague belief of the soul becoming transformed into an owl, and hovering round the grave, there is no indication that the Arabian idolaters believed in a future life and final retribution. (Comp. Pococke, Specimen Historiae Arabum, ed. White, 1806.)

Arabian pilgrimage. On the southwestern coast of Arabia, Mecca, whither annual pilgrimages were made by all Arabs. See MECCA. Its temple, which tradition claimed to have been founded by Abraham and Ishmael, was, so to speak, the hotel (khan), where the most diverse idols of the various Arabian tribes were lodged. It was the object of high veneration for the whole Arabic peninsula. Every tribe had its particular deity represented here, as well as its own chief. See KAABA. But there were also many Arabs who acknowledged a supreme being, and regarded all idols as subordinate to this principal being. Some were even convertas to Judaism or to Christianity, especially those who had much intercourse with Jews and Christians. However, religious life occupied but little the minds of the Bedouin, so much engrossed with their material wants and affairs, and to this day religious fanaticism is rarely found among the children of the desert. The particular wishes of the votaries were brought before the idols and their priests. In case of war even the dead were supposed to have been disappointed, the idols were broken to pieces and their priests insulted and maltreated. Besides the idolaters, in a literal sense of the word, there lived in Arabia single tribes, who worshipped the sun, moon, and other celestial bodies, or inclined to the religion of the Magi; vestiges of hero-worship, and worship of trees and stones are also traceable.

Among the foreign settlers in Arabia, we pass over in silence the few adherents of Zoroaster, scattered along the Persian Gulf, and the Sabaeans, on the southern coast of the peninsula, who, even from the time of Davi, stories which have been before the promulgation of Mohammed's doctrines, we have but scanty information. The Mohammedans themselves disdained inquiry into the idolatrous worship of their ancestors. For what do we know about it we are indebted to accidental notices of some of their deities mentioned in the Koran, occasionally, and to sundry not always trustworthy accounts diffused through the more ancient works, and not to any connected treatise upon the pagan religions of Arabia. The scanty notices of the Greeks and Romans concerning this topic are very uncertain. We must not, however, fail to mention the genealogical tables, which, according to Arabia, and attribute great importance, as auxiliary sources for the religious faith of the ancient Arabians. From these genealogical tablets we learn the names of some of their idols and the distribution of their worship; for many
of the Koran. The Jews were at this time in Arabia in great numbers. After the destruction of Jerusalem many of them had retired hither, where, owing to the loose state of society and the excitement of their Jewish tribes, they had gained considerable power. Some of them, adopting the fierce manners of the desert, chose a wandering life, connected with all its dangers and adventurous strife, and a poem composed by a Jewish Bedouin has been preserved in the Hamasa, which breathes the true spirit of Arabian chivalry (Hansard, p. 49, ed. Freytag). But in general the Jews were peacefully settled in towns and fortified castles, principally along the coast, or dispersed among the inhabitants of large cities. (Comp. Krehl, Vorislamische Religiones [Leips. 1868]; Zeitschrift d. deutsch. Morgenl. Gesellschaft, vii. 226, xx. 169, xxii. 168 sqq.) See Arabia.

Early Life.—Since Mohammed was born anything but a prince, nothing certain is known about its time, and even the oldest sources do not agree as to the date. According to the most probable reckoning, he was born in April, A.D. 571, at Mecca. This city was at that time a considerable commercial centre, where caravans from Southern Arabia, Abyssinia, Persia, and India crossed those from Egypt, Syria, and Mesopotamia, and exchanged their agricultural and industrial products. This happened particularly at the time of the pilgrimage. By descent Mohammed belonged to the Banu Hashim of Meccan, but the branch of which he was an off-spring was very much impoverished. His mother, Aminah, possessed, it is said, a peculiarly nervous temperament, and used to fancy, while between sleeping and waking, that she was visited by spirits. It is probable that Mohammed inherited from her his constitutional tendency to epilepsy, as well as his most remarkable mental peculiarities. Mohammedan authors have labored to endow the birth of their prophet with miraculous events, and in consequence many marvelous stories are told. It is related, among other things, that his mother experienced none of the pangs of travail. As soon as her child was born, he raised his eyes to heaven, exclaiming, "There is no god but God, and I am his prophet!" That same night, it is related, also with the same inclination to extravagance, that the fire of Zoroaster, which, guarded by the Magi, had burned uninterruptedly for more than a thousand years, was suddenly extinguished, and all the idols in the world fell down. When only two months old, Mohammed's father died (according to some accounts, he died two months before the birth of Mohammed). Aminah for a short time nursed the infant herself; but sorrow soon dried the fountain of her breast, and the young child, after having wandered with all the idols in the world, was committed to the care of a nurse, with whom he remained about five years. It is related by Mohammedans that when the nurse, who was a shepherd's wife, showed the child to a celebrated soothsayer, who was an idolater, the latter exclaimed, "Kill this child!" Mohammed snatched away her precious charge and fled. Afterwards the soothsayer explained to the excited multitude: "I swear by all the gods that this child will kill those who belong to your faith; he will destroy your gods, and he will be victorious over you." When Mohammed was six years old he lost his mother, and the poor orphaned child fell to the care of relatives. He was taken charge of by his grandfather, Abdul Mutalib, who was then the chief priest of the Kaaba. Upon his decease the care of the child fell to his uncle, Abu-Taib; but he was so indigent that he could not long afford to keep his nephew, and Mohammed was obliged to earn his livelihood as a shepherd—an occupation to which only the poorer classes resorted, while the more opulent engaged in trade. Later (in his twenty-fifth year) he entered the service of a rich widow (Kadijah), attended to her affairs in Southern Arabia, according to some accounts also in Syria, where he is said to have become competent with monks, who gave him information regarding Christianit y. Mohammed soon gained Kadijah's confidence to such a degree that she offered him her hand in matrimony, which, however, she withdrew, manifesting how much she was much his senior—she was forty years old.

Preparation for his Mission.—Placed in affluent circumstances by marriage, Mohammed gradually abandoned commercial enterprises and gave himself up to religious contemplation, to which he may have been inclined, which, indeed, he establised his conversion to a brother of his, a monk, who, like many Arabians, lived a life of austerities, which he had relinquished idolatry, and had been converted first to Judaism, then to Christianity, but had failed to find satisfaction in either. Mohammed was no scholar—it is even doubtful whether he acquired reading and writing in later years—his education had entirely passed away. He began to establish himself in his early circumstances. Chirography had only been introduced into Arabia a short time previously, though poetry was highly cultivated—for this, however, in spite of his oratorical talent, he had little aptitude. On the whole, his visionary character and piety formed a great contrast to the sober and debased tribesmen who indulged in wine, gambling, and sensuality as the main objects of life; while he, though not insensible to terrestrial enjoyments, was more disposed to religious reflection. Retired in solitude, he made God, the future life, and revelation the themes of his thoughts, and reviewed the various systems of religion known to him by oral traditions, which he freely formed in conformity with his own sentiments, and finally adapted to Arabia. There were at this time Ebonish Christians in the country—the Bakari and the Hanifs. To the first belonged, according to Sprenger's conjecture (Leder u. Lehre des Mohammed, i. 43 sq.), Koss, who preached at Mecca the unity of God and the resurrection of the dead, and for this purpose also visited the fair at Oktah, where Mohammed had heard him. The Hanifs were (as Sprenger will have it) Essenes, who had lost nearly all knowledge of the Bible, and had submitted to various foreign influences, but possessed a rigid monotheism. Their religious book was called the "Roll of Abraham." In the time of Mohammed several members of this sect were living at Mecca and Medina, and Mohammed himself, who originally had worshipped the gods of his people, became a Hanif. The doctrine of the Hanifs was "Isam"—i.e. submission to the one God; they were themselves "Moslem"—i.e. men characterized by such submission. Besides his knowledge from such connections, Mohammed enjoyed the instruction of Jewish scholars, among whom are particularly mentioned a celebrated rabbi, Abdullah Ibn-Saalam, and Waraka, the nephew of his wife. (Comp. Abr. Geiger, Was hat Mohammed aus dem Judenhume aufgenommen, ii. 166 ff.) To them he listened attentively, and they were ready for a new faith, and he desired the establishment of a religious system which should embody the essentials of all that his countrymen were acquainted with. Idolatry was already on the wane. The idols were considered as the poets and other intelligent Arabs as powerless beings; at most as mediators between the supreme God (Allah) and mankind; and there were some who even accepted the belief in a future life, as entertained among the Jews and Christians of Arabia. The greatest opposition he had reason to fear was from religious indifference, scepticism, and selfishness. According to the Koran, from which alone we can correctly gather Mohammed's religious views, he laid down the following fundamental doctrines: The existence of a monothestic divinity, a being superior to all; a revelation, but only by special inspiration (by which alone the prophets were distinguished, while in all other respects on an equal footing with mankind); and, finally, a life hereafter, in which the virtuous would be happy, and the vicious punished. In his opinion, this was the religion of Abraham, who, as the Koran says, was neither Jew nor Christian, but a pious, God-fearing man. Moses and Christ were prophets; but their revelations had been distorted by Jews and Christians. He there-
Mohammed having arrived at these results by reflection and tradition, notwithstanding the prejudices of his time, from which he was by no means himself free, and endowed with a nervous constitution and a lively imagination, he determined to be the reformer of the universe, and to compeze with the gospel of his God, and to do all he could to form a new faith. He and his companions and followers, in order to succeed, had to change the ideas and to substitute the new system for the old one. The new doctrine he taught was far more acceptable to the people than the old one, and it soon spread throughout the entire world. The new faith became the religion of the people, and the old one was gradually forsaken. The gospel was translated into the language of the people, and the old gospels were destroyed. The new faith was established, and the old one was abolished. The Mohammedan faith was adopted by all the people, and the old gospels were forgotten. The Mohammedan faith became the religion of the people, and the old one was abolished.
tion of the fugitives, they never suspected that they could be concealed in the cave of Thor, which lay in an opposite direction. While they were in the cave, the legend goes, Abraham pleaded with the strength of his enemies, said, trembling, "We are but two." "No," replied Mohammed, "there is a third: it is God Himself." On the fourth night the prophet and his companion left their hiding-place, and, riding on camels which the servant of Abu-Dekr had brought, arrived safely at Medina sixteen days after their flight from Mecca.

Mohammed's reason for turning his face towards Medina may be found in the sympathy which the Medinans had frequently manifested towards the prophet. They had been moved to this by various causes. Mohammed's youth, his simplicity, his poverty, his innocence, which her clansmen considered themselves under obligation to take sides with. There was another motive still: the Medinans, jealous of the authority of Mecca as a place of pilgrimage, might have hoped to attain the ascendency over Mecca by the aid of Mohammed and his followers. There were, moreover, many adherents to the new cause among the inhabitants of Medina, who had paid homage to the prophet while he was yet at Mecca. There were some who looked to him as the Messiah expected by the Jews. Accordingly a considerable part of Medina was enthusiastic in the new cause, and when Mohammed's approach was made known, a portion of its citizens hastened in procession to meet the coming prophet, welcoming him with loud acclamations; and he who a few days before had left his native city as a fugitive, with a price upon his head, now entered Medina more like a king returning victorious from battle than an exile seeking a place of refuge. This separation or flight of Mohammed from the city of his nativity, called in Arabic Hijrah, or anglicized Hegira (q.v.), formed not only an auspicious turning-point in the prophet's own life, but became the point of departure in the Mohammedan movement.

His earliest attention after his arrival at Medina was given towards the consolidation of the new worship and the minor arrangements in the congregation of his flock. At this time Mohammed endeavoured, by various concessions, to gain the Jews over to his faith. He selected Jerusalem as the point of direction in prayer, appointed the tenth day of the first month as a day of fasting, and allowed the new converts to celebrate the Sabbath. But even then the Jews, notwithstanding these advances, would not acknowledge him as prophet, ridiculed his pretension to be the Messiah, and enraged him by their constant taunts, he soon arrogated his concessions, became their bitterest enemy, sought closer alliance with the heathen Arabs, and substituted public worship for private communion. In September the prophet was now directed to turn towards Mecca, the month Ramadan was henceforth fixed upon as a fasting-time, and Friday as the day of rest.

Gradually Mohammed now appears in a new character. His internal arrangements perfected, his followers increased, and his allies concluding to yield him his armed assistance, he was no longer content to convert his adversaries by words; he was no longer come to give peace, but to make war; where the warnings of the prophet had failed to convince, the strong arm of the conqueror must compel, and the persecuted apostle appears suddenly transformed into the triumphant soldier. He who had formerly insisted upon liberty of conscience for himself, and had opposed religious violence, now maintained that Islam should, if necessary, be defended and propagated by the sword. "The sword," said he, "is the key of heaven and of hell: a drop of blood shed in the cause of God, or a night spent in Mursa, is of more avail than two months of fasting and prayer; whoever falls in battle, his sins are forgiven him, and at the day of judgment the loss of his limbs shall be supplied by the wings of cherubim." This was a sort of manifesto, directed mainly against the Meccans, and he was not long in carrying his new principles into practice. Not powerful enough to warrant an open fight with his enemies, he determined to weaken their strength by attacks and plunder, and to divert them from the Meccans by which on their commercial expeditions to Syria passed in the neighborhood of Medina, and ere long plunder and robbery were sanctioned, even during the sacred months —yes, many an assassination, consequent upon these attacks, was instigated by Mohammed himself.

Herewith Mohammed advances to a conspicuous leader in the eyes of the impartial biographer: he cannot possibly have, at this time, fancied himself inspired of God, and as acting according to divine pleasure; for, aside from the circumstance that some pretended revelations concerned only his own advantage, or even sometimes solely the gratification of his lust, he frequently withheld them, abstained from them for the temptation of his followers to manifest it before they dared to proclaim them. Thus, to mention one instance of his irresolution and trickery, he commanded one of his vassaries to waylay a caravan which he was cognizant could be reached only in a sacred month; and when the order had been complied with, and great dissatisfaction prevailed on account of this desecration of the holy month, he maintained not to have arranged the same, for he had given the order in so ambiguous a manner that he could clear himself of the responsibility of an act executed by all Arabia.

Mohammed as an Impostor.—While at Mecca the prophet had kept unfinishingly in his path, through mockery and persecution. No threats, no injuries, had hindered him from preaching to his people the unity and the rightousness of God, and exhorting to a far purer and better morality than had ever been set before them. He had claimed this temporal power, no spiritual dominion; he had asked but for simple toleration, for free permission to win men by persuasion into the way of truth. He claimed to be sent neither to compel conviction by miracles, nor to constrain outward profession by the sword. He was but a preacher, sent to warn men that there is one God, and that there is no other; that all that He requires is that men should do justice and love mercy, and walk humbly with their God, and as the sanction of all, that there will be a resurrection of the dead, as well of the just as of the unjust. Such had been his teachings at Mecca, and in his own person the great thing, the object of all, was to make him a thoroughly good and righteous man according to his light, with nothing to be alleged against his life, even if judged by a higher morality than that of the Koran. His virtues may have been hypercrites, his mission may have been imposture, but as a resident of Mecca all his actions outwardly had created a presumption in his favor. When his arrival at Medina, however, the scene shifts, and with the days of power and victory of the propagandist opens a dark and bloody page in the history of the East. From the moment when the formerly despised "mailman and impostor" was raised to the position of highest judge, lawgiver, and ruler of Medina, and of the two most powerful Arabic tribes —thus opening a vast theatre to the enthusiasm and ambition of Mohammed —his revelations assumed a much higher claim. He now inculcated as a matter of religion and of faith the waging of war against the infidels: and the sword once drawn at the command of heaven, from that time remained unsheathed until all the tribes of all Arabia and the adjacent countries had joined in the profession that there is no God but Allah, and that Mohammed is his apostle.

Acts of such character, Mohammed, even if not endowed with a very delicate ethic sense, must have been known to be wrong, and could have approved solely for a selfish end. Even before his emigration to Medina he had, in several instances, deviated from the truth, where it seemed to answer his purpose best. Thus he had related the whole history of the Old and New Testament prophets, spiced by Jewish and Christian tradi-
MOHAMMED and had claimed them as communicated to him by the angel Gabriel—an assertion which was of course discredited by the Meccans, who guessed rightly that he owed this knowledge to his conversations with foreign scriptural scholars. Revelations also concerning his own person, and which he can certainly not have believed himself, abound in the Koran. Thus he had restricted the number of legitimate wives to four, but exempted himself from that restraint, and after the death of his first wife married twelve others. Another time he fell in love with a female slave, and when his consorts expressed their displeasure he swore that he would forsake her. A few months subsequently he had himself released from his oath by some verses of the Koran, and threatened his women with divorces if they should continue faithful to him. The second of his marriages was in relation to Zeinab or Zaid, the spouse of his former slave and later adopted son, throws a still worse light on his revelations. Zaid, observing that Mohammed paid undue attention to his wife, caused himself to be divorced from her. Mohammed took her in marriage. But when this marriage was found very reprehensible, because he had shown so little regard to Zaid's feelings, and because an adopted son with the Arabs was deemed equal to a son german, wherefore marriage contracted with his wife, even after divorce, was considered illegal, Mohammed, in the name of God, branded as absurd, first, the usage hitherto in vending as an adopted child of God, his future descendants. Such proceedings are even sinful, by actual proof drawn from the Koran, and announced that, far from having advised Zaid to separate himself from his wife, he had rather tried to dissuade Zaid from such a course; and, in the second place, that he (Mohammed), even after the separation, was afraid of men's judgment, had hesitated to marry her, until God commanded him, in order to demonstrate that he who acted according to the Lord's will need not care for the talk of men, and that he might add, by the force of his own example, more vigor to the law respecting adopted sons.

But to return to the external history of Mohammed and his vassals. First of all our attention is claimed by the first battle proper, fought near Badr, situated between Mecca and Medina, which, though insignificant as to the numbers of the combatants, was of material consequence. The original object was the pillage of a Meccan caravaneer. On the march, the men of Mecca, advised of this intention, despatched succour to their people, and, as was supposed, were thus prepared to meet the Hashemites and Medinans. Yet the Meccans, although superior in number, were nevertheless defeated by Mohammed's adherents. Some Moslem writers will have it that the victory was of no great moment, on which the black steeds, guided and assisted the faithful. The prop of Mohammed during the fight, was engaged in prayer. In most of the later wars, also, Mohammed generally kept at a distance from the melee. He obtained many a victory, to be sure, by skilful disposition of his forces, but he distinguished himself by no means as a brave warrior. This is especially manifest in the expeditions immediately following, and undertaken by the Meccans to take revenge for the defeat, by which they had suffered not only severe loss of lives and property, but had added booty, glory, and increase to the new religionists. Mohammed, namely, when the Meccans, a few thousand strong, advanced against Medina, wanted to retire to the city and to confine himself to its defence, and only when his disciples declared this plan dishonorable, he unwillingly turned out against the enemy, and was vanquished near Mount Ohod. Many of the faithful covered the battlefield with their corpses. Mohammed himself was wounded slightly; he held a double coat of mail and a closed helmet, so that the Meccans did not recognise him, and his companions promptly secured his safety. When the Meccans advanced a second time with a superior force, Mohammed's advice to his own to fortify themselves in the city was promptly complied with, and the Meccans, inexperienced in siege operations, and by Mohammed's intrigues having fallen cut with their confederates, were obliged after a few weeks to retire without accomplishing anything.

We pass over the wars waged by Mohammed against the Jews in Medina and in other parts of Arabia, all of which were marked by great cruelty on his side, also the conflicts which he waged against several Arabian tribes allied with the Meccans, and remark only that, in many a failure, in the sixth year of the Hegira (A.D. 628) he felt sufficiently confident to venture at the head of his vassals on a pilgrimage to Mecca. Yet, though he exhorted to this pilgrimage in the name of God, it was not participated in to the degree expected, and nothing remained to him but the hope that the Meccans would be afraid of his arrival. In the next month, though he himself had violated it long ago by robbery and murder. When he arrived at the boundary of the Meccan territory, he was bidden to stop, and threatened with force in case he should attempt to penetrate into the city. After protracted negotiations, however, many Meccans being desirous of peace on account of their commercial interests, concluded it, and, among other terms, it was fixed that Mohammed should be allowed to partake of the pilgrimage celebration the ensuing year. This treaty of peace, by which Mohammed was recognized as an equal power, increased his authority, and permitted him to despatch his emissaries to all parts of the Arabian peninsula and possesses. Soon he felt strong enough to avail himself of an opportunity to break the peace, and on a sudden surprise Mecca, without any formal declaration of war, at the head of 10,000 men. The chief magistrates of the city were obliged (A.D. 630) to make their submission, and acknowledged him not only as secular ruler, but as a plenipotentiary of the Deity. See Korshat. With this the victory of the new religion was secured in all Arabia. While, however, employed in destroying all traces of idolatry in the heathen city, and fixing the minor laws and ceremonies of the true faith, Mohammed heard of new armies which several warlike Arabic tribes had sent against him, and which were concentrated near Taif (630). He went forth to encounter the enemy, was again victorious, and his dominion and creed extended further and further every day. From all parts flocked the deputations to do homage to their chief. One of them, the Bani Qurayza, to whom he had given the title of messenger of God, or at least as the Prince of Arabia, and the year 8 of the Hegira was therefore called the year of the Deputations.

Even before the capture of Mecca, Mohammed had been bold enough to summon the princes of the countries contiguous to Arabia—Cossroes, the Persian king; the King of Geisime, the king of Abyssinia, and several Byzantine and Persian provincial governors—to be converted to his faith. His letter to the king of Abyssinia has been discovered on a leaf of parchment, which served as a cover to a manuscript, in a Coptic monastery in Upper Egypt, and was found together with what we know from Arabian biographers. It reads as follows: "In the name of God, the all-gracious and all-merciful, from Mohammed, the servant and ambassador of God, to Allucaucus, the prefect of the Copts. Hail to him who follows the divine guidance! I summon thee to confess the Islam. If thou compliest with this summons, thy salvation is secured, and God will give thee a double reward for thy devotion. But if thou refusest, the guilt of the Copts rests on thee. Oh, ye men of the Scriptures! approach and become our equals by professing that we adore only Allah, unassociated with terrestrial beings, and own as Lord none beside him. If you will not agree to this, testify that we are God-resigned and faithful." The governor of Egypt was no more converted than Heraclius and Cossroes. He, however, received the delegates of Mohammed hospitably, and sent him, besides other valuable presents, two Abyssinian female slaves, one of whom (Mariana or
Mohammed charged the prophet to such a degree that he neglected his other wives on her account.

The execution of one of Mohammed's emissaries by Abu-Bekr, chief of the Muslims in Arabia, at the Syrian frontier, occasioned the first war between Mohammed and the Byzantines, terminating unfavorably to the former. Nor had a second campaign the desired success, for he did not secure the wished-for participation of the pagan allies, and he had to be satisfied with the homage of a few minor princes on his way to the frontier, which he returned without having carried out his intention.

Towards the end of the 10th year of the Hegira he undertook, at the head of at least 40,000 Moslems, his last solemn pilgrimage to Mecca, and there (on the Mount Arafat) instructed them in all the important laws and ordinances of the religion; and the ceremonies observed by him on that occasion were recorded in the Koran and fixed for all time. He again solemnly exhorted his believers to righteousness and piety, and chiefly recommended them to protect the weak, the poor, and the women, and to abstain from usury. Among the most important of his ordinances at this time was to be noticed the abolishment of the leap-year, which the Arabs, in common with the Jews, had been accustomed to observe, and in its place introduced the pure lunar year, by which alone the sacred months as well as the pilgrimage and the month of fasting were fixed. Another very important commandment which he gave at this time was that thenceforth the sacred city of Mecca was to be entered only by Mohammedans, and that even outside of it idolaters were to be entirely exterminated. Jews and Christians were to be tolerated, if they would humbly submit and pay a capitation tax. In the caliph—Omar added to the commandment, in order to humble those of another faith, several oppressive restrictions for the nations conquered by him, and the succeeding caliphs, according to the degree of tolerance or fanaticism actuating them, mitigated or aggravated the same. Non-Mohammedans, in order to be easily recognized and distinguished by the color of their turbans, the Jews being enjoined to wear black, the Christians blue ones. They were forbidden to carry arms, were ordered to ride on asses (not on horses), on the streets to yield the way to the Mohammedans, and in public assemblies to rise before them. Their houses were ordered to be whitewashed, and the doors of the buildings to be whitened; so that they permitted to hold public processions nor ringing bells, nor make processions, nor keep any Moslem slaves, nor acquire any captives or other military persons, nor possess any seal with Arabic letters, nor have any intimacy with Moslem females. Jews and Christians should not be allowed to serve in the army. This was executed by Omar, but rarely observed because of the ignorance of the primitive Arabs as also later Turks, who, for want of knowledge of state affairs, found the services of Jews and Christians in various administrative branches indispensable.

After his return from Mecca, Mohammed busily applied himself to the fitting-out of a new expedition against the Byzantines. In the very midst of his warlike preparations he was suddenly taken dangerously ill with fever. One night, while severely suffering, we are told by Mohammedan chroniclers, Mohammed went to that cemetery of Medina, and prayed and wept upon the tombs, praising the dead, and wishing that he himself might soon be delivered from the storms of this world. For a few more days he went about; at last, too weak further to visit his wives, he chose the house of Ayesha, situated near a mosque, as his abode during his sickness. His friends, of course, took part in the public prayers as long as he could; until at last, feeling that his hour had come, he once more preached to the people, recommending Abu-Bekr and Usama, the son of Zaid, as the generals whom he had chosen for the army. He then asked, like Samuel, whether he had wronged any one, and read to them passages from the Koran, preparing the minds of his hearers for his death, and exhorting them to peace among themselves, and to strict obedience to the faith. And so he died on the 23rd of July, 632 A.D., a few days after he was asked for writing materials, probably in order to fix a successor to his office as chief of the faithful; but Omar, fearing he might choose Ali, while he himself inclined to Abu-Bekr, would not allow him to be furnished with them. In his last wanderings he only spoke of angels and spirits, and died in the lap of Ayesha, about noon of Monday, the 12th (11th) of the third month, in the year 11 of the Hegira (June 8, 632). Mohammedan biographers maintain that their prophet died of the consequences of eating roast mutton poisoned by a Jewess, who is said to have sought the revenge of a brother whom the Islamites killed in the campaign of Chaldea. But, as this cannot be an origin of the legend, previous to Mohammed's death, it might have been a difficult task to the contemporary Arabian physicians to prove it, even if the attempt at poisoning were verified. It is much more probable (what also occurred in the case of Abu-Bekr, the later caliph) that such a story was concocted to have him die a martyr's death; for the Arabs regard as martyrs those who perish in a holy war, i.e. in a war carried on against infidels.

Many fictions were resorted to in the first century of the Mohammedan era to glorify their deceased prophet. Fanatic Moslems represent him to have enjoyed special favors from the gods and the devils, and received the confucius or the exclamation he is said to have uttered as he made his appearance in the world; as a man, we are told the desert was covered with shade-trees as he wandered through the same, and even rocks saluted him as the apostle of the Lord. A man created before all created beings, as true as his birth (or those birth were supernatural manifestations). But such a story would be to the contrary of the appearance which in which he did not himself believe. He probably feared the destruction of his whole work—a work which, after naive credulity and religious enthusiasm had been succeeded by sober sense, he cannot possibly have considered salutary for his people, certainly not if his new doctrines were forced on the population. So that they permitted to hold public processions nor ringing bells, nor make processions, nor keep any Moslem slaves, nor acquire any captives or other military persons, nor possess any seal with Arabic letters, nor have any intimacy with Moslem females. Jews and Christians should not be allowed to serve in the army. This was executed by Omar, but rarely observed because of the ignorance of the primitive Arabs as also later Turks, who, for want of knowledge of state affairs, found the services of Jews and Christians in various administrative branches indispensable.

After his return from Mecca, Mohammed busily applied himself to the fitting-out of a new expedition against the Byzantines. In the very midst of his warlike preparations he was suddenly taken dangerously ill with fever. One night, while severely suffering, we are told by Mohammedan chroniclers, Mohammed went to that cemetery of Medina, and prayed and wept upon the tombs, praising the dead, and wishing that he himself might soon be delivered from the storms of this world. For a few more days he went about; at last, too weak further to visit his wives, he chose the house of Ayesha, situated near a mosque, as his abode during his sickness. His friends, of course, took part in the public prayers as long as he could; until at last, feeling that his hour had come, he once more preached to the people, recommending Abu-Bekr and Usama, the son of Zaid, as the generals whom he had chosen for the army. He then asked, like Samuel, whether he had wronged any
in sympathy with sufferers; he was generous and forbearing, if policy did not dictate a contrary course. His benevolence and liberality were especially marked; and in enriching this and other ways, he left no son or daugther of his be poor, rich, or beggar, though the war-booty which he shared, and the presents which flowed to him from all sides, must have placed a large means at his command. Upon the whole, it cannot be denied that Mohammed improved and elevated the political and religious condition of Arabia. He united the dispersed, mutually imitable, hostile Arabian tribes into a great nation, allied by a faith in God and a belief in a future life. In place of bloody vengeance for murder and of rude force, he instituted an inviolable code, which, in spite of deficiencies, still forms the fundamental law of the Islamic kingdoms.

One of his first acts, in spite of the restrictions, many rights which they had not enjoyed before him. He mitigated the lot of the slaves, as far as the spirit of his age permitted, and declared emancipation to be a work agreeable to the Deity. He cared like a father for the poor, the widows, and orphans; condemned the vices which degrade humanity and have a disturbing influence on social life, and exerted to the virtues recommended in the Old and New Testaments.

This, in briefest outline, is the history of Mohammed's career. We have not been able to dwell, as we could wish, at any length, either on the peculiar circumstances of his inner life, which preceded and accompanied his mission; on the rise and career of the Mohammedan Church; on the greatness of the nations—Judaism, Christianity, and his own reflection respectively, bore in the formation of his religion; nor have we been able to trace the process by which his "mission" grew upon him, as it were, and he, from a simple admonisher of his family, became the founder of a faith to which 150,000,000 are said to adhere.

Personal characteristics. — In appearance, Mohammed was of middling size, had broad shoulders, a wide chest, and large bones; and he was fleshy, but not stout. The immediate size of his head was partly disguised by the long locks of hair, which in slight curls came nearly down to the lobe of his ears. His oval face, though tawny, was rather fair for an Arab, but neither pale nor high-colored. The forehead was broad, and his fine and long but narrow eyebrows were separated by a vein, which you could see throbbing if he was angry. Under long eyelashes sparkled blood-shot white eyes through wide arched eyelids. His nose was large, but straight and slender; and the tip of it seemed to be turned up, but was not so in reality. The mouth was wide; he had a good set of teeth, and the fore-teeth were asunder. His beard rose from the cheek-bones, and came down to the collarbone; he clipped his mustaches, but did not shave them. He stooped, and was slightly humped; but his neck was long and straight. His hair was wavy, not curly, nor was it fast but heavy, as if he were ascending a hill; and if he looked back, he turned round his whole body. The mildness of his countenance gained him the confidence of every one; but he could not look straight into a man's face: he turned his eyes usually outward. On his back he had a skin of a turtle; over this, a rich purple robe; its furrowed surface was covered with hair, and its base was surrounded by black mohair. This was considered as the seal of his prophetic mission, at least during the latter part of his career, by his followers, who were so devout that they found an excuse for their slights in drinking the waters in which he had bathed; and it must have been very refreshing, for he perspired profusely, and his skin exhaled a strong smell. He bestowed considerable care on his person, and more particularly on his teeth, which he rubbed so frequently with a piece of wood that a Shi'ah author was induced to consider it as one of the signs of his prophetic mission. He bathed frequently, washed several times a day, and oiled his head profusely after washing it. At times he dyed his hair and beard red with henna, in imitation of his grandfather, who imported this habit from Yemen. Though he did not comb regularly, he did it now and then. At first he wore his hair like the Jews and Christians; for he said, "In all instances in which God has not given me an order to the contrary, I like to follow their example, and have increased in proportion as he became more like my countrymen. Every evening he applied antimony to his eyes; and though he had not many gray hairs even when he died, he concealed them by dyeing or oiling them, in order to please his wives, many of whom were young and inclined to be giddy, and whose hair had been increased in proportion as he became more decrepit. The prophet was usually dressed in a white cotton shirt, or blouse, with pockets, and sleeves which reached to his wrists. He had a skull-cap and a turban on his head, the extremities hanging down the back; and sandals, with two leather straps over the instep, on his feet, because he desired to show that he had not tied round his temples, leaving the crown of the head uncovered. Sometimes he wore, instead of the shirt, a "suit of clothes," which consisted of an apron—that is to say, a piece of cloth tied round the waist and hanging in folds down to the legs, like a woman's petticoat—and a sheet, or square shawl, which was thrown over the left shoulder and wrapped round the body under the right arm. Sometimes he wrapped himself in a blanket. In temperament, Mohammed was melancholic, and in the highest degree nervous. He was generally low-spirited, thinking, and restless; and he spoke little, and never without necessity. His eyes were mostly cast to the ground, and he generally remained silent. The excitement under which he composed the more poetical Surahs of the Koran was so great that he said that they had caused him gray hair; his lips were quivering and his hands shaking while he received the inspiration. Any offensive smell made him so uncomfortable that he forbade any persons who had eaten garlic or onions to come into his place of worship. In a man of semi-barbarous habits this is remarkable. He had a woollen garment, and was obliged to throw it away when it began to smell from perspiration, "on account of his delicate constitution." When he was taken ill, he sobbed like a woman in hysteria; or, as Ayahs and Idris says, he roared like a camel; and his friends reproached him for his unmanly bearing. During the battle of Badr his nervous excitement seems to have bordered on frenzy. The faculties of his mind were extremely unequally developed; he was unfit for the common duties of life. He was not a great talker, and yet, when questions on practical matters came before him, his answers were even practical questions by his friends. But he had a vivid imagination, the greatest elevation of mind, refined sentiments, and a taste for the sublime.

The articles Koran and Mohammdanistan contain some further details on his doctrine and its history.

Mohammed Abd-el-Wahab, the father of the poet, was a native of Nijadh, born in the morning of the 16th of September, 1756, and died in 1806, after a long and useful life. He was born in Nejd or Nijadh, Central Arabia, about the close of the 17th century, in the tribe of Temim, and claimed descent from Mohammed the prophet. Like his prototype, the great Mohammed, he spent the early part of his life in trading expeditions to Bassora, Bagdad, and Damascus. Travelling, he claims for himself the honor of having made several journeys, reaching to India on the east and to Constantinople on the west. He was a prudent and sagacious young man, and greatly devoted to his studies in the law and the Koran, and, like a faithful Moslem, he made a pilgrimage to Mecca and Medina. There he came into contact with the ascetic ascetics that were showers with his return he was compelled to quit his native village for Derajeh, in the central highlands of Arabia, soon to become the capital of the new theocracy. He was a prudent and sagacious young man, and greatly devoted to his studies in the law and the Koran, and, like a faithful Moslem, he made a pilgrimage to Mecca and Medina. There he became fired with such an ascetic fanaticism that on his return he was compelled to quit his native village for Derajeh, in the central highlands of Arabia, soon to become the capital of the new theocracy. Like the prophet of the crescent, when he looked abroad over the degenerate state of his countrymen, Abd-el-Wahab saw that his co-religionists had fallen away from the purity of life and belief which made Islam master of all the civilized world save a corner of Europe, and he resolved to bring them back to the truth. He scouted the traditions which had buried the pure Koran under their mazes, he condemned the idolatry which regarded Mohammed...
as more than a mere man inspired by the one God, and he enforced with a fanatical earnestness fasting, almsgiving, prayer, and the pilgrimage to Mecca, while he forbade idleness, luxury, whatever drinking, gambling, smoking, debauchery, usury, false witnesses, fine dresses, or grand tombs. Being a man of talent and eloquence, he soon gained followers. At first his progress was slow, but gradually his doctrines became popular, and he ultimately succeeded in spreading them widely, and in establishing his power likewise. He died near the close of the 18th century; but the Wahabites have continued to grow in strength and numbers all over Asia, particularly India, until there is now scarcely a city of any size in Northern India in which followers of his are not to be found. For the last ten years, they have been engaged in a most important religious and political movement, which has been attended by a steady and serious searching on the part of the British government, and it would now appear that they have joined to their religious a political creed which is dangerous to the welfare of Western society in the East. See Mohammedan Sects; Wahabis. (J. H. W.)

Mohammed Aben-Kerram, founder of a Mohammedan sect, was born at Serejeh about A.D. 890. After teaching for a time in his native city, he went to Khurasan, where he met a celebrated hermit, Ahmed ben-Harb, who induced him to visit the Kaaba. On his return to Khurasan, after a five years' sojourn in Mecca, he taught his new doctrines in Najafurid. He was imprisoned by Mohammed ben-Thaher, but finally escaped and found asylum in Jerusalem. He is the founder of the Anthropomorphites, or Mohkhabites. He died in Jerusalem in 868.

Mohammed al-Darazi, one of the founders of the sect of the Druses, was born near Bokhara about A.D. 960. In 1010 he came to Egypt, where he was converted to the doctrines of Hakim al-Mokanna. This doctrine admitted incarnation consecutively with divinity in different persons. He was the first to distinguish between al-Mokanna, then ruling in Egypt, as the last of these incarnates. He published a book in which he set forth the successions of incarnation since Adam. The caliph Hakim was so influenced by him as to intrust to him virtually the management of all government affairs. Darazi, having published his work, read it in a mosque at Cairo, whereby the people, greatly displeased with his innovations, attempted to slay him. Hakim appeared to disapprove of the conduct of Darazi, but secretly furnished him with money to quietly advance his cause, and advised him to preach his doctrines in the mountainous part of Syria, where he successfully taught his dogmas, permitting his followers the use of wine, fornication, and incest. Mohammed afterwards returned to Egypt, where he set himself up as the true imam, brought about a revolt against authority, and in the conflict lost his life in 1019. See works referred to in the article Druses; Ismailites.

Mohammed Hakim Isphahani (Ha'ji), a Persian doctor, was born at Isphahan about 1790. He was the molliah of a religious sect known as the Rasomians, or old orthodox Parsees. His writings reveal interesting facts concerning what is left at Bombay of the Parsees, or fire-worshippers. For the good of his sect, Mohammed wrote, in Persian and in English, Khatib fi idlad Ashot al-Kosheh, or Selections of Mohammed from History, forming a perfect Illustration of the present Theological Discussions of the Parsees" (Bombay, fol. 1827), in which he aims to prove that the old Persian intercalary era is of the remotest antiquity, and, in fact, originated in the days of Zoroaster. The believers of other Parsee sects, however, such as the Chabinehchamians, Kodmians, and Churjigarians, would have it date only from Yezdegerd III, the last of the Sassanide kings. In answer to certain books written by his opponents on religious matters, Mohammed wrote Dayfah al-Hali, being a refutation of molliah Firuz's work, entitled Rasomia Mousulmam bostalakhe, etc. (Bombay, 1832, 4to). Mohammedan Hakim Isphahani died at Bombay about 1846. See Zendker, Bibl. Oriental. u. v.; Spiegel, Christomachia Persica.—Hoccle, Nouv. Bibl. Generale, v. 10, 2.

Mohammedanism, called by its professors Islam, meaning "resignation" or "entire submission" (i. e. to the will of God), in accordance with the Koran, which, as we have already seen in the article under that heading, is the Bible of the Mohammedan, and in the days of the Prophet was the only sacred book in use, the sole exponent of duty and privilege to the Moslem, as the Mohammedan calls himself. The Koran, however, being a miscellaneous collection of hymns, prayers, dogmas, sermons, occasional speeches, narratives, legends, laws, orders for the time in which they were given, without any accurate and logical arrangement, besides the imperfections and contradictions, owing to the manner of its collection, which took place subsequent to Mohammed's death, soon proved too disconnected to be continued, even by the most ardent disciple of Islam, as the sole guide of authority. Neither dogmas nor laws are here reduced to a system; they have been preserved by piecemeal just as they had been written down, or even afterwards discovered in the reminiscences of Mohammed's companions. But, aside from these imperfections of contradictions, repetitions, and the want of system, it was manifest also that the Koran was lacking in instruction on many of the most theoretical questions, in which light the Mohammedan accentuated national, dogmatic, and juridical matters. The Moslem therefore resorted, in the first place, to oral tradition, and by the aid of reported expressions of the Prophet, and examples in his public and private life (Hadith and Sunnah), supplemented the deficiencies and elucidated the obscure passages of the Koran (q. v.). When this resource failed to meet all wants, the decrees of the imams, i. e. of the caliphs as spiritual heads, were raised to the authority of divine laws and doctrines. Thus a religious structure, extended by analogy and induction, supported by the Koran, by tradition, and by decrees of the imams, comprising juridical, ritualistic, and dogmatic doctrines, was gradually completed into a systematic whole, sufficient for all purposes as a guide to the Moslem. But we need hardly add that into such a peculiar construct contradictions in theory and practice have found their way, according to the different traditions and decisions of the imams or expounders of the laws, besides the various interpretations put upon the Koran itself within the pale of the different Mohammedan sects that have arisen since the days of the Prophet. See Mohammedan Sects. For the historical and ethical circumstances that conduced to the origin and progress of Mohammedanism, see the article Mohammed. Moslemism consists of a dogmatical or theoretical part, called "Iman" (i. e. Faith), and a practical part, called "Din" (i. e. religion). (See Vambéry, Der Islam im neunzehnten Jahrhundert [Leips. 1872]).

1. Dogmas.—The doctrines of Islam, as originally instituted upon its foundation, may be reduced to three leading propositions, viz.: (1) the doctrine of one Deity, (2) of the revelation or prophetic vision of Mohammed, and (3) the immortality of the soul, the latter being closely interlinked with the doctrine of the resurrection of the dead, of paradise, and of hell, the day of judgment, and the rewards of the good and faithful, as well as the punishment of the wicked and of infidels. Though these doctrines are plain and simple, they became, nevertheless, even in the first century of the Mohammedan era, subjects of the most violent polemics. A man like Mohammed, in whom not the least trace of scholarly education or study was found, was the exponent of a systematic structure of doctrines. True, we find in sundry passages of the Koran that God is the creator and preserver of the world; that he is One, omniscient, omnipotent, eternal, just, and gracious. But the Arabs, after becoming acquainted with Persian religious ideas and ideas, and with Grecian philosophy, would not be satisfied with
such simplicity. Their desire for knowledge led them to further inquiries, for which they found no solution in the Koran, and which therefore gave occasion to discussions, the more irreparable as they were in part connected with differences of opinion. The earliest epoch reflective minds among the faithful took offense and exception to many dogmas, particularly on the essence of the Deity and its relation to mankind, as well as to the irrational doctrines concerning the Koran itself. Thus the orthodox taught that the divine sovereignty was not to be spoken of in terms of the Decalogue, while the Monotrites, i.e. the Separatists, considered the Deity itself as the essence of wisdom, beneficence, power, and other qualities. The doctrine of the justice of God led the latter (i.e. the dissenters) further to accept the dogma of human free will, while the orthodox inclined more or less to the Augustinian doctrine of predestination and grace. This same doctrine induced the liberal Mohammedans to assume a gradation of sin and punishment; while, according to the opinion of the strictly orthodox, every Moslem who commits only one sin, and departs this life without repentance, is consigned to eternal punishment. (See below.) Thus a thorough discussion by the Deity induced the Separatists to maintain that the Koran was created, since otherwise two (things) beings must have existed from eternity; the orthodox, on the contrary, regard the Koran as something uncreated, lest, God being immortal, it be viewed as not belonging to his being, and thereby the highest idea of the Deity be compromised. The latter dogma was strenuously contested under the caliph Manuun, who instituted a formal inquisition, and persecuted to the utmost the adherents of the doctrine of the eternity of the Koran.

Much controversy arose also concerning the dogmas of divine foreordination, and both contending parties found no difficulty in bringing proof from the Koran, which is especially rich in contradictions on this point. In one passage it reads: "To him who wants this world we give directly according to our pleasure; but he will be rejected and derided in the future state, and burned in hell." In another passage it is said: "Follow the most beautiful sent to you from your Lord, before punishment befalls you, and you find no more assistance; before the soul exclames, Woe to me! I have sinned and was of the mockers; or, if God would have guided me, I would have feared him; or, Could I return to the earth, I would practice good and virtuous actions. (My sign, the Koran) have come to thee, thou hast declared them lies, thou wast haughty and unbelieving." While these and similar passages, as well as the continual threats and promises, speak clearly in favor of a dogma of human free will, there are others which make the acts of man dependent on the divine will, and require the human to virtue and vice, a blind instrument of divine arbitrariness. Thus we read: "For those who are unbelievers, it is the same whether thou (God is speaking to Mohammed) admonishest them or not; they believe not. God has sealed their hearts, and over their ears and eyes there is a cover." And further: "The infidels say, Why does God not send any miracles to him (Mohammed)? Say, The Lord leaves in error whom he chooses, and guides those who turn to him who believe, and whose hearts find rest at the thought of Divinity." Very frequently we meet in the Koran with the phrase: "God guides whom he pleases, and leaves in error whom he pleases." These and similar verses, however, if we survey the whole without any bias, can be interpreted as meaning that God in his wisdom appoints at what time and which people he will bless by his revelation, and that he strengthens by faith the men who desire the good and trust in him. He inspirits, while he abandons those in whom the propensity for evil predominates, to their more and more increasing corruption, and thus measurably hardens their hearts. Again: if the doctrine of predestination is stiffly adopted, not to come in conflict with divine justice, the doctrine of original sin—i.e. of an internal corruption of mankind in consequence of the sin of Adam—must also be assumed. But such a dogma is not mooted in the Koran; on the contrary, in several places the idea of accountability for the sins of others is contained. In the narrative of Cain and Abel, in which it is shown how it had nothing to fear and never will know sorrow, but the infidels who declare our signs lies will be eternal inmates of hell." Thus it is evidently taught that the curse which rested on the human race by Adam's sin is averted; divine grace manifests itself by revelation, and every prophet from Adam to Mohammed, who designated himself as the last one for the seal of prophecy, is a Saviour for every one who believes in revelation, and acts according to its precepts. Of a further grace to purify mankind from original sin, and enable them to regain the beatitude of paradise, no mention is made, consequently the idea of being predestinated to damnation would not be compatible with divine justice.

The history of the prophets also occupies a very large space in the Koran. Besides the Old Testament, several other prophets are named, who are said to have been sent to the extinct tribes of Arabia. The history of all these so-called divine messengers is embellished with acts which will not serve to bring revelation into ridicule, and in the Midrash, but by Mohammed fashioned to suit his purpose, in order to inspire his antagonists with fear and his worshippers with consolation. He likes to identify himself with the Biblical prophets, puts into their mouth such words as he addressed to the Maccans, represents also those messengers of God as disregarded by their contemporaries, and that hence God's wrath is inflamed, and infidels are caused to perish with ignominy, until finally, however, truth comes to prevail, and the persecuted prophet triumphs, surrounded by the few who believed in him previous to the divine punishment. In pursuance of this system, Mohammed, to be consistent, cannot accept the crucifixion of Christ; for no man ought to atone for the sins of others, nor ought a prophet to be forsaken by God. Therefore the Koran teaches it was not Christ who was crucified, but an infidel Jew whom God invested with the form of Christ, whom the Jews crucified; "peace be upon the servants of God, those of Mary, is the apostle of God, and his word, which he conveyed unto Mary, and a spirit proceeding from him, honorable in this world and in the world to come; and one of those who approach near to the presence of God. Yet Jesus was a mere mortal, and not the son of God; his enemies conspired against his life, but a phantom was substituted for him on the cross, while he was translated to heaven" (Sur.i, 54; iv, 156, 159). There is also other mention and estimate expressed in the Koran concerning Christ. He is called the living Word and Spirit of God. The miraculous birth of Christ has nothing offensive to Mohammed, for Adam had also been created by God. Mohammed does not believe in the necessity of receiving all miracles related in the Gospels, since similar ones had been performed by Abraham and Moses. Even the ascension is to him neither new nor incredible, as the same is reported of Elijah and Enoch. Besides the crucifixion, he abhors in the Christian dogmas the supposition that angels and other men are placed next to the Deity, and declares the Trinitarian view to be an impious fiction of the priests. The Mohammadian doctrine of God's nature and attributes coincides with the Christian, inasmuch as he is by both taught to be the creator of all things in heaven and earth, who rules and preserves all things in his power, omnipotent, omniscient, omnipresent, and full of mercy. Yet, according to the Mohammadian belief, he has no offspring: "He begetteth not, nor is he begotten." Nor is Jesus called anything but a prophet and an apostle.
although Mohammed goes so far as to say that the birth of Christ was due to a miraculous divine operation. But after all it is taught that, as the Koran superceded the Gospel, so Mohammed superseded Christ, and he is called the Mouthpiece of the Invisible (Sur. xiii., 40). Of particular importance for Mohammed is the annunciation of a Paraclete, which he applied to himself, either pretending or even actually believing it to be himself. Of equal significance for him, and therefore treated by him with great predilection, is Abraham, first, because of his simple doctrines, to which Moham-
med himself adhered in the early period of his prophetic mission; and, secondly, on account of the sacred places and relics in Mecca of which he (Abraham) is called the founder; and, thirdly and finally, because he was the father of Ismael, from whom Mohammed and his race claim descent. The Sunnites look in quite a different light upon the prophets. They regard them, as a class, as the simple carriers of revelation, but in all other re-
spects declare them to be common men, liable to human infirmities; while the Shiites pronounce them perfectly pure and sinless, like the angels, instruments of God, who only execute and always have executed his orders, except Israfil, who on account of his disobedience was rejected, and, as Satan, tries to seduce men. An impor-
tant dogma with the Shiites is that of the Imamat, or hereditary succession of descendants of the Prophet by his daughter Fatima, consort of Ali—a doctrine which the Sunnites do not acknowledge. Many of them see in the Imams merely a political institution, which ought to have the welfare of the nations for its foundation and supreme end.

A prominent dogma in Islam is the belief in angels, whom they thus picture: Created of fire, and endowed with a kind of incorporeal body; they stand between God and man, adoring or walking upon the former, interceding for and guarding the latter. The four chief angels are &quot;The Holy Spirit,&quot; or &quot;Angels of Revelations&quot;—Gabriel; the special protector and guardian of the Jews—Michael; the &quot;Angel of Death&quot;—Azrael (Ra-
phael, in the apocryphal gospel of Barnabas), and Isra-
fil—Uriel, whose office it will be to sound the trumpet at the resurrection. It will hardly be necessary, after what we have said under Mohammed, to point out, in every individual instance, how most of his &quot;religious&quot; notions were taken almost bodily from the Jewish le-
gends; this angelology, however, the Jews had them-
selves borrowed from the Persians, only altering the names and changing the form of the natures, as if they had been the first inventors of the idea. Besides angels, there are good and evil genii, the chief of the latter being Iblis (Despair), once called Azazil, who, refusing to pay homage to Adam, was rejected by God. These Jin are of a grosser fabric than angels, and subject to death. They, too, have different names and offices (Port, Fairies; Div; Giants; Takvis, Fates, etc.), and are, in almost every respect, like the Shedim in the Talmud and Midrash. A further point of belief is that of certain God-given Scriptures, reveal-
ed successively to the different prophets. Four only of the original one hundred and four sacred books, viz. the Psalms, Proverbs, the book of Job, and the Gospel of John, are said to have survived; the three former, however, in a mutilated and false-condition. Besides these, a certain apocryphal gospel, attributed to St. Barnabas, and the writings of Daniel, together with those of a few other prophets, are taken notice of by the Moslems, but not as canonical books. The number of prophets, sent at various times, is stated variously; at between two and three hundred thousand, among whom 313 were apostles, and six were specially commissioned to proclaim new laws and dispensations, which abrogated the preceding ones. These were Adam, Noah, Abraham, Moses, Je-
sus, and Mohammed, in that order. The greater of them all, and the propagator of the final dispensation.

The belief in the resurrection and the final judgment is another important article of faith. The dead are re-
eceived in their graves by an angel announcing the com-
ing of the two examiners, Monker and Naktri, who put questions to the corpse respecting his belief in God and Mohammed, and who, in accordance with the answers, either torture or comfort him. This, again, is the Jew-
ish &quot;Chariot of Wrath&quot; of the Book of the Grave, a hyperbolical description of the sufferings during the inter-
termediary state after death. The soul, awaiting the general resurrection, enters according to its rank, either immediately into paradise (prophets), or partakes, in the shape of a green bird, of the delights of the abode of the bliss (martrye), or—in the form of a common-believers—is supposed either to stay near the grave, or to be with Adam in the lowest heaven, or to remain either in the well of Zewn-Zem, or in the trumpet of the resurrection. According to others, it rests in the shape of a white bird under the throne of God. The souls of the infulled dead will be well in a certain well in the province of Hadramaut (Heb. Courts of Death), or, being first offered to heav-
en, then offered to earth, and rejected by either, become subject to unseparable tortures until the day of res-
urrection.

Mohammedan theologians are very much divided in the regard to the doctrine of the resurrection. Mohammed himself seems to have held both that souls live and that they will be raised, and the &quot;Bone Luza&quot; of the Jewish Haggadah was by him transformed into the bone Al-Aji, the rumpbone, which will remain uncorrupted until the last day, and from which the whole body will spring anew, after a forty-days' rain. Among the signs by which the ap-
apocalyptic prophet will be recognized, is the renewal from the legendary part of the Talmud and Midrash, where the signs of the coming of the Messiah are enu-
merated—are the decay of faith among men, the ad-
vancing of the meanest persons to highest dignities, wars, seditions, and tumults, and consequent dire dis-
aster, so that man passing among the grave shall say: &quot;Would to God I were in his place!&quot; Certain prov-
inces shall revolt, and the buildings of Medina shall reach to Yahâb. Again: the sun will rise in the west; the Beast will appear; Constantiople will be taken by the descendants of Isaac; the Antichrist will come, and be killed by Jesus at Lad. There will further take place a war with the Jews, Gog and Magog's (Jajmu and Ma-
jâjuy) eruption, a great smoke, an eclipse, the Mohammedans will return to idolatry, a great treasure will be found in the Euphrates, the Kaaba will be destroyed by the Ethiopians, beasts and inanimate things will speak, and, finally, a wind will sweep away the souls of those who have lived just as much as if equal to the bestowal of the mustard seed, so that the world shall be left in ignorance.

The time of the resurrection even Mohammed could not learn from Gabriel: it is a mystery. Three blasts will announce it: that of consternation, of such terrible powers that mothers shall neglect the babes on their breasts, and that heaven and earth will melt; that of ex-
amination, which will annihilate all things and be-
ings, even the angel of death, save paradise and hell, and their inhabitants; and, forty years later, that of resurrection, when all men, Mohammed first, shall have their souls breathed into their restored bodies, and will sleep in the graves until the resurrection will pass upon them. The day of judgment, lasting from one to fifty thousand years, will call up angels, genii, men, and animals. The trial over, the righteous will enter paradise, to the right hand, and the wicked will pass to the left, into hell; both, however, have first to go over the bridge Al-Shait, let loose from their chains, being finer than a hair, and sharper than the edge of a sword, and beset with thorns on either side. The right-
eous will proceed on their path with ease and swiftness, but the wicked will fall down headlong to hell below. Paradise is divided from hell by a partition (Orf), in which a great number of holy persons of the most noble birth. The blessed, destined for the abodes of eternal delight (Jannat-Aden; Heb. Gan-Eden)—of which it is, how-
ever, not quite certain whether it is already created—
will first drink of the Pond of the Prophet, which is
supplied from the rivers of paradise, whiter than milk, and more odoriferous than musk. Arrived at one of the eight gates, they will be met by beautiful youths and angels; and their degree of righteousness (prophets, religious teachers, martyrs, believers) will procure for them admittance into the paradise, under a shade. But, in the last state, as already hinted, it may, however, not be superfluous to add that, according to the Mohammedan doctrine, it is not a person's good works or merits which gain him admittance, but solely God's mercy; also that the poor will enter paradise five hundred years before the rich; and that the majority of the inhabitants of the paradise will be women.

As to the various felicities which await the pious (and of which there are about a hundred degrees), they are a wild conglomeration of Jewish, Christian, Magian, and other fancies on the subject, to which the Prophet's own exceedingly sensuous imagination has added very considerably. Feasting in the most gorgeous and delicious variety, the most costly and brilliant garments, odors and music of the most ravishing nature, and, above all, the enjoyment of the Hūr Al-Ūyhn, the black-eyed daughters of paradise, created of pure musk, and free from all the bodily weaknesses of the female sex, are held out as a reward to the commonest inhabitants of paradise. Other rewards remain in store for some (a) their youth and manhood. For those deserving a higher degree of recompense, rewards will be prepared of a purely spiritual kind,—i.e., the "behavior of God's face" (Shechinah) by night and by day. A separate abode of happiness will also be reserved for women; but there is no characteristic in the manner of enjoyment. That they are not of a prominently spiritual nature is clear from the story of the Prophet and the old woman. The latter solicited Mohammed to intercede with God that she might be admitted into paradise, whereupon he replied that old women were not allowed in paradise, and that she was causing her to repent—he further explained by saying that they would first be made young again.

Regarding the punishment of the wicked, the Moslem has received detailed information from the Prophet. According to him, hell is divided into seven stories or apartments, one below another, designed for the reception of as many distinct classes of the damned. The first, which is called Jōkenam, is the receptacle of those who acknowledged one God, that is, the wicked Mohammedans, who, after having been punished according to their demerits, will at length be released; the second, named the "Lake of the Jew," will be given to the Jews; the third, named al-Hotana, to the Christians; the fourth, named al-Bair, to the Sabians; the fifth, named Sakar, to the Magians; the sixth, named al-Jahin, to the idolaters; and the seventh, which is the lowest and worst of all, and is called al-Hāeget, to the hypocrites, or those who outwardly professed some religion, but in their hearts were of none. Over each of these apartments they believe there will be set a guard of angels, nineteen in number, to whom the damned will confess the just judgment of God, and beg them to intercede with him for some alleviation of their pain, or that they may be delivered by being annihilated. Mohammed has, in his Koran, expressly declared that every day and night various torments of hell, which, according to him, the wicked will suffer both from intense heat and excessive cold. We shall, however, enter into no detail of them here; but only observe that the degrees of these pains will also vary in proportion to the crimes of the sufferer, and the aggravation to which he is condemned to: and that he who is punished the most lightly of all will be shod with shoes of fire, the fervor of which will cause his skull to boil like a caldron. The condition of these unhappy wretches, it is taught, cannot be properly called either life or death; and their misery will be greatly increased by their despair of being ever delivered from that place; since, according to that frequent expression in the Koran, "they must remain therein forever." It must be remarked, however, that the infidels alone will be liable to eternity of damnation; for the Moslems, or those who have embraced the true religion, and have been guilty of heinous sins, will be delivered thence after they shall have expiated their crimes by their sufferings. The time which these believers shall be detained there, according to the Moslem divines, will not be less than nine hundred years, nor more than seven thousand. As to the manner of their deliverance, they say that they shall be distinguished by the marks of prostration on those parts of their bodies with which they used to touch the ground in prayer, and over which they will therefore have no power; and that, being known by this characteristic, they will be released by the mercy of God, at the intercession of Mohammed and the blessed; whereupon those who shall have been dead will be restored to life, as has been said; and those whose bodies shall have contracted any sootiness or flux from the flames and smoke of hell will be immersed in one of the rivers of paradise, called the River of Life, which will wash them whiter than pearls.

II. Practical Duties.—Our consideration is next required for an examination of that part of Islam called the "Din," or practical part, which Mohammedian jurisprudence (Sharia) and dogma deal with. This comprises (a) the religious or ceremonial law (parts of which, however, according to our Western notions, belong to the category of state rights); and (b) the civil law, including police and special laws.

(a) The ceremonial law, or Ritual of Islam, contains (1) rules concerning purification, which is to precede, especially, prayer and other religious obligations, or the approach to or touch of sacred things. Here is taught what is to be considered as impure, and requires a purification after touching; what kind of water is to be used for ablution, or how, and in what order of things the washing of the body of the body is to be performed; what conditions of body require a second ablution; how women, after parturition or during menstruation, have to conduct themselves. Religious purifications are of two kinds: the Ḥusul, or total immersion of the body, required as a religious ceremony on some special occasions, and the Wadj, a partial ablution, to be performed immediately before the prayer. This is of primary importance, and consists of the washing of hands, face, ears, and feet up to the ankles—"a proceeding generally accompanied at each stage by corresponding pious sentences, and concluded by the recital of the 78th chapter of the Koran. The Koran itself prescribes only the purifying foundation, it is not sufficient that the believer himself should be purified, but even the ground or the carpet upon which he prays must be clean; hence the use of a special prayer-carpet" (Seghdis).

(2) The precepts which have for their object the performance of prayer,—the key of paradise. They refer to the time at which the five daily devotions are to be held; to the prayers on Fridays and festival days; at eclipses of the sun and moon; or in seasons of drought; and to the position of the body in prayer. They treat further of the prayer of women, of things which invalidate the prayer, or render it unable to be performed, as being on the road or in peril of life, of the direction while praying, and the places where prayers must not be said. In this section the Shafites adduce the prohibition for men to wear silk clothing, or gold and silver ornaments, as well as the various ceremonies to be observed at funerals: how the corpse is to be washed, dressed, and placed in the grave; how the dead is to be prayed for; how the tomb is to be constructed; how the deceased is to be lamented for, the family of the departed to be comforted, etc.

The prayers (Salah) performed by every Mohammedan five times daily consist partly of extracts from the Revealed Book, the Koran (Fati), partly of pieces ordained by the Prophet, without allegation of a divine order (Sunnah). The first time of prayer commences
at the Maghrib, or about sunset; the second at the Eshb, or nightfall; the third at Subh, or daybreak; the fourth at the Duhr, or about noon; the fifth at the Asr, or afternoon. The believers are not to commence their prayer before sunset. The third, fourth, and fifth prayers are called in the morning, afternoon, and evening respectively. The time for the five prayers is determined by the sound of the muezzin (q.v.) from the minarets or madnæas of the mosques. Their chant, sung to a very simple but sol- emn melody, sounds harmoniously and sonorously down the steep streets of the town, or through the narrow, dark, and byzantium-in-barren streets of the city; but its impression is one of the most strikingly poetical in the stillness of night; so much so that even many Europeans cannot help congratulating the Prophet on his preferring the human voice to either the Jewish trumpet-call of the time of the Temple, or the Christian church-bells. The day-call (the Adan) consists chiefly of the confession of faith (God is most great; Mohammed is God's apostle; come to prayer; come to security), repeated several times; the night-call (Ula, the first; Ebed, the second), destined for persons who desire to perform supererogatory acts of devo- tion, are much longer. The believer often changes his pace or direction during the prayer; and a certain number of such inclinations of head and knees, prostrations, etc., is called a Rakah. It is also necessary that the face of the worshipper should be turned towards the Keblah (q.v.), that direction being marked in the exterior wall of the mosque by a niche (Mohrab). All sumptuous and ceremonial acts of worship are attended in a proper manner, and the approach to the sacred place; and the extreme solemnity and decorum, the unaffected humility, the real and al- absorbing devotion which pervades it, have been unani- mously held up as an example to other creeds. The Moslem, it may be remarked here, do not pray to Mo- hammed, but simply invoke his intercession, as they do that of the numerous saints, the relatives of the Proph- et, and the first propagators of Islam. For the particu- lars of the service in the mosque, the reader is referred to that heading. It may be remarked in passing that Mohammedanism has no clergy in our sense of the word, the civil and religious law being bound up in one. See also MOLLAH; MUFTI.

(8) Instructions about the tazeel of property to be paid to the state, and the manner of their application. Taxable articles are fruits of the field, domestic animals, silver, gold, and merchandise, lying with the owner a year or more. The owners of cattle, sheep, and goats are to sell their sura, and apply the money to the payment of the debt of the indigent, for the aid of travel- ers in distress, and in general for purposes pleasing to God; as, for instance, the erection of mosques, schools, hospitals, or charitable institutions.

(4) The precepts about fasting, particularly in the month of Ramadan. Here is specified what is com- manded and forbidden to the one who fasts, how fasting is interrupted, who is entitled to be dispensed from fast- ing, and what must be done in expiation for not fasting. In this section are mentioned also the various regulations for women, and the limitations of the Sabaic and other sects to retire from the world and pass his time in devotion in the mosque, and thus to lead a kind of monastic life. It was Mohammed's special and express desire that no one should fast who is not quite equal to it, lest it might prove injurious to health. But there are very few Mos- lems who do not keep the Ramadan—the Mohammedan Lent—even if they neglect their other religious duti- es; at all events, they all pretend to keep it most stricely, fasting being considered "one fourth part of the faith," nay, "the gate of religion."

(5) The precepts concerning the pilgrimage, an obli- gation which a Moslem has to meet at least once in his life. He who neglects to perform this duty "might as well die a Jew or a Christian." Various preparations are necessary for pilgrimage. Certain holy places are to be visited, mostly such as were sacred even before Mo- hammed, and are connected with legends about Abra- ham and Hagar; certain prayers and ceremonies are to be performed, and sacrifices to be slaughtered, the meat of which is in part to be distributed among the poor. It is forbidden to eat pork or animal flesh; but the practice of the pilgrim is considered interrupted, or as not performed, and how the transgression of any prohibition is to be atoned for.

(6) There are various regulations referring to food. Wine and intoxicating beverages are not allowed; also the drinking of the blood even of clean animals is inter- ddicted. Quadrupeds and birds must be killed according to certain fixed rules, God being invoked before the slaughter; but game shot by a hunter may be eaten. The eating of carnivorous animals of prey, quadrupeds as well as birds, is prohibited; and particularly the flesh of swine, dogs, cats, mice, etc. Of fish, such as have no scales, and those resembling serpents, are for- bidden. As the same laws are in force also among the Jews, a Moslem may partake of a Jew's meal; with Christians he can dine only if he knows that he con- forms to the laws of Islam; but with pagans he must not eat at all, even when the food has been prepared in a Jewish or Christian manner. During the month of Ramadan, begins on the 1st day of the month of Shavul, and lasts three days. The second (Eed Al-Kurban, or sacrifice) begins on the 10th of Dau' Hegghe, when the pilgrims perform their sacrifice, and lasts three or four days. Yet, al- though intended to be the most important of the two, the people have in most places changed the order, and, by way of compensation for the previous fast, they make the lesser festival which follows the Ramadan the most joyful and the longest of the two. The day set aside for the weekly day of rest is Friday—not, as is generally supposed, because both the Jewish Sabbath and the Christian Sunday were onFriday, but because, from times long before Mohammed, the people used to hold public assemblies for civil as well as religi- ous purposes on that day. The celebration of the Mos- lem days of religious solemnity is far less strict than is the custom with the other Semitic religions. Service being done, the people are allowed to return to their worldly affairs, if they cannot afford to give themselves up entirely to pleasure or devotion for the rest of the sacred period.

(7) Among the "positive" ordinances of Islam may also be reckoned the "Sahih," or minor, and the "Kebrı," or great festivals. The first (Al-Fitr, or breaking the fast), following the preceding, begins on the 1st day of the month of Shavul, and lasts three days. The second (Eed Al-Kurban, or sacrifice) begins on the 10th of Dau' Hegghe, when the pilgrims perform their sacrifice, and lasts three or four days. Yet, al-

(8) One of not the least important duties laid upon the Moslem by the Koran is that of giving alms. These are two—legal (Zekab) and voluntary (Sudahak); Hebr. Zekabak, Fr. Richesse. The Sadaakah (Sur, ii, 3), once collected by the sovereign and applied to pious uses, has now been practically abrogated. The Sadaakah, is, according to the law, to be given once every year, of cattle, money, corn, fruits, and wares sold, at about the rate of two and a half up to twenty per cent. Besides these, it is usual to tax a measure of provi- sions upon the poor at the end of the sacred month of Ramadan.

(9) Before we quit this department of Mohammedan law, it may not be inappropriate to mention the procedure against apostates. To prevent the faithful from ever falling away into idolatry, the state attaches to images and pictures have been made very stringent. Whoever makes an imitation of any living being in stone, wood, or any other material, shall on the day of judgment be asked to endow his creation with life and
soul, and on his protesting his inability to do so, shall undergo the punishment of hell for a certain period.

(b) The civil law of the Mohammedans comprises the
following main sections:

1. The corn laws, including rules to govern relations of commerce, of various contracts, of pawn and mortgage, of power of attorney, of debt obligations, and other property rights; excepting, however, hereditary and matrimonial claims. We cannot, of course, enter into details here, but we may remark that the law of trade contains many restrictions very burdensome for modern conditions of society. Thus, for instance, it is not permitted to make a difference whether the price is paid immediately or only in installments. The re-sale of articles not yet in possession of the purchaser is invalid; nor can objects of value which are not the undivided property of single persons be subjects of trade. Further, trade in things whose use is forbidden to the Moslem, e.g., liquors and uncivilized animals, is prohibited. A bargain concluded on a Friday, at the time of the noon prayer, is void. The buying up of merchandise, especially of victuals, in order to produce a rise of prices, is unlawful. In lending money, it is forbidden to receive interest. In case of insolvency, or refusal to pay a debt, the creditor can require the arrest of the debtor's person.

A pledge is not, as according to European law, a means of security for the payment of debt, but only a proof that such a debt exists. Only when a pledge has been given in a condition of declared insolvent the does the creditor have the right to redeem the pledge.

(2) The law of inheritance and the testament. We pass over the details of the first, and only observe that the law of primogeniture does not exist in the Mohammedan code, and that, as a rule, brothers or sons, and male heirs generally, enjoy many advantages over females. A testament, in order to be valid, must not contain allusions to any articles prohibited by law, such as swine, blood, wine, and the like. A legacy in favor of strangers, if persons able to succeed legal inheritance exist, must not go beyond the amount of one third; among the relatives themselves the division is at pleasure. A testament, whether written or oral, must be exec- uted before two witnesses of the male sex. A testament in favor of minors, bondmen, and infidels is not valid in law.

(3) The marriage law. A man is allowed to see but the hands and the face of the maiden or widow whom he intends to wed; then follows the courting in person or through a proxy; a marriage contract, which the nuptial gift is fixed, i.e., what is allotted to the wife in case the husband dies or has himself divorced; and the ecclesiastic consecrates the marriage. A free man can marry four free women; a female slave is only allowed to marry if he has not the means to contract marriage with a free person. Polygamy is allowed among Mohammedans, we see, then, surrounded by a number of restrictions. Hear the Koran on this point: "Take in marriage of the women who please you, two, three, or four; but if ye fear that ye cannot act equitably, one, or those whom your right hand has acquired, and your heart is at ease concerning; and if ye be forced by their father or grandfather to enter into matrimony as long as they are single; if widows, they have their own choice. Marriage of near relatives, among which nieces, nurse, and milk-sister are enumerated, is prohibited. A Moslem may, if urged by excessive love, or if unable to obtain a wife of his own creed, marry a Christian woman or a Jewess, but a Mohammedan woman is not, under any circumstances, to marry an unbeliever. In all cases, however, the child born of a Moslem, whatever the mother's faith, is a Moslem; nor does tile wife, who is an unbeliever, inherit at her husband's death. See also MARRIAGE. Matrimony is annulled by insanity, apostasy from Islam, impotence of the male, or corporeal disability for sexual intercourse of the female. See Divorce. The husband is to treat his wives equally; only newly-married women are privileged for a few days. The Shiites sanction also temporary marriage. The free man can give a divorce to his wife twice and retake her, even without her consent, if three menstruations or three months have not elapsed, and then he means tile same thing also, of course, as if another marriage which has been dissolved by death or divorce. On this point the Mohammedan law differs from the Mosaic law, by which a divorced woman who has contracted another marriage is forever forbidden to the first husband. According to the Mosaic law, the marriage between uncle and niece is permitted, but not between aunt and nephew. Pregnant women are allowed to remarry only after their confinement; if not pregnant, after four months and ten days. If a man accuses his wife of adultery, he must either bring witnesses to confirm his statement, or he must himself swear four times in the mosque before a number of men that he speaks the truth, adding, "The curse of God may strike me if I speak false." The woman is then considered an adulteress, the marriage is dissolved, and can never be renewed. But if the woman afterwards swears four times against the accusation, declaring at the same time that God's wrath may strike her if her husband has spoken true, the marriage is annulled if the woman is not considered an adulteress. Children of divorced wives must be cared for by the mother to the seventh year; later, the child can choose whether it will live with the father or the mother. The woman has a right to ask for divorce if the husband cannot support her. (4) Adultery and murder. Adultery and murder is punished by death; the relatives of the murder, however, possessing the right to avenge his blood, may take a ransom instead. (Modern practices in Turkey deviating from these laws are in harmony with those of Christian countries.) Manslaughter not intentional is punished by a ransom, estimated according to the intent of the slayer to injure the slain. For the murder of a woman only half price is paid; for that of a Jew or a Christian, a third; for that of a pagan, a fifth part. In case of mutilation, revenge or ransom may satisfy. Adultery is punished by death, if the marriage between adulterer and adulteress be forbidden on account of consanguinity; or if the adulterer marry the adulteress without having previously atoned for his crime according to precepts; or if a non-Moslem is the criminal. Other cases of adultery are punished by one hundred lashes and one year of banishment. He who changes another with an adulterer, without being able to prove that the transaction was not against his will. Drinking wine is punished by forty lashes. Pederasty and sodomy are punishable with death, like adultery. He who steals for the first time is to have his right hand cut off; for the second time, his left; for the third time, his right foot; for the fourth time, the left foot. (The Turkish government has substituted the ordinary punishments of imprisonment, hard labor, and the bastinado.) Highway robbers, if they have committed a murder, are to be crucified; if they only threatened to murder, they are to receive corporeal punishment and to be imprisoned. A Moslem apostatizing from his faith, his apostasy from Islam, the apostate, who abandons the obligations of Islam, is to be punished with death.

Of the Mohammedan procedure, we mention only the peculiarity as regards witnesses. In civil suits the testimony of two men, or of one man and two women, or of one man in conjunction with the plaintiff, is required. In suits of tuitio, wherein the warrant for the execution of the mandate, and the like, the testimony of two men only is ac- cepted. In affairs which concern only women, as, for instance, birth, female infirmities, nurses, the testimony of four women is necessary. In crimes of sodomy and pederasty and adultery, four male witnesses are re- quired, in other crimes, as theft, murder, adultery, forbidden food and drink, apostasy from the faith, the testimony of two men is sufficient. Non-Moslems, or Moslems known as hardened sinners, are not admitted as wit- nesses.
(5) War on Infidels.—The Koran abounds in contradictions respecting the right and duty of the faithful to make war on infidels; for Mohammed, while he was the weakest party, had the necessity of going to war against himself and commanding to convert only by the power of the word; but later, when he became more potent, he issued severer ordinances against those who would not submit to his faith. His successors, therefore, have established the following doctrines, and declared null and void the passages of the Koran inconsistent to them. Every major Moslem fit for military service is in duty bound to participate in holy wars against infidels who will not submit to the dominion of Moslems, and against the faithful who refuse obedience to the legitimate prince, or adhere to dogmas contrary to the faith. In a war against Moslemite rebels or heretics, is not allowed to prisoner- ers to attack the wounded or pillage property. As for infidel prisoners of war, who do not adopt the Islam before their capture, women and children are made slaves; men can, according to the pleasure of the prince or political exigency, either be killed, ransomed, or exchanged for Moslem prisoners; or, even, as circumstances may dictate, be released or be made slaves. Children of infidels will be educated as Moslems, if their father or mother have been converted to Islam, if they have been captured without parents, or if they are found on Islamic territory. We omit the direction for the distribution of booty and conquered lands, as we have already indicated how it must be divided among Moslem and Christian. We only remark that, in accordance with the letter of the Koran, as well as the principles of the early imams, war against non-Mohammedans is declared perpetual; if it is carried on against pagans, to extinction; against Christians, to subjection; and that, therefore, in earlier times, when the Islamic powers decided to discontinue hostilities, they simply concluded a truce. In the precepts of this kind, the Moslems come to realize that their sacred scripture contains laws and ordinances not applicable and practicable for all times and circumstances, not to all countries and people; for the most orthodox ulama cannot think of urging the sultan to declare war against Russia or Austria, or to forbid Europeans living in Constantinople to ride on horseback or dwell in palaces surpassing in height the houses of the Moslems. Again, in spite of Koran and Sunnah, the idolaters and fire-worshippers were no more exterminated than the Christians were and may be taxed like pagans. Many fire-worshippers in Persia retained not only their lives, but preserved in several places also their pyres. It even occurred that the Mohammedan government corrected ecclesiastics because they wished to transform temples of the Guebers into mosques. The strict execution of the religious injunctions would occasion many complications and misfortunes, and all, since their character is very tenacious—a proceeding which would prove of great injury to the Islamic state, and apparently be regarded as too cruel even for execution by bloodthirsty Arabs. The government was not unmerciful against those who remained true to their faith, but it drew no bounds against those converted to the Islam who, abhorring it in their heart, conspired secretly against the Islam and the State, and tried to undermine the first by old Parsee doctrines and philosophic speculation, and the latter by the revival of Persian nationality.

(6) Slaves.—According to the fundamental doctrines of Islam, only captives of war made in an infidel country are slaves; in all Moslem countries, however, negroes and Abyssinian slaves also are kept in bondage by rule or force. If slaves of an infidel become converts to Islam, the master is obliged to sell them to a Moslem for a price customary in the country. The Koran enunciates distinctly their equality with the freemen before God; and a tradition worthy of credit says: "He who manumits a faithful slave is delivered from the torments of hell." Female slaves, by whom their master has gotten children, at his death obtain their liberty; provided one of the children is alive; the children are born free, and even over the mother the master has a restricted control; he is not permitted to sell or marry her. A woman who has undergone the least chastity in the body, is most distinctly the mind of its author. It is, to be sure, as disconnected and unsystematically arranged as other matters, but the most beautiful moral principles and precepts permeate like a thread of gold this whole texture of religion, enthusiasm, superstition, and delusion. Death, disease, falsehood, pride, revenge, calumny, mockery, avow, and productivity, do not molest fear and suspicion are inveighed against as ungodly and wicked; while benevolence, liberality, modesty, forbearance, patience and endurance, frugality, sincerity, straightforwardness, decency, love of peace and truth, and, above all, trusting in God, and submitting to his will, are considered as the pillars of true piety, and the principal signs of a true believer. Thus, e.g., the Koran contains passages like the following, which is in a sort of dialogue form: "Speak (thus God addressed Mohammed): Approach! I will read to thee what God has forbidden thee. Thou shalt not associate with him any other god besides Him: thou shalt not be unfaithful to thy wife and children. We only remark that, in accordance with the letter of the Koran, as well as the principles of the early imams, war against non-Mohammedans is declared perpetual; if it is carried on against pagans, to extinction; against Christians, to subjection; and that, therefore, in earlier times, when the Islamic powers decided to discontinue hostilities, they simply concluded a truce. In the precepts of this kind, the Moslems come to realize that their sacred scripture contains laws and ordinances not applicable and practicable for all times and circumstances, not to all countries and people; for the most orthodox ulama cannot think of urging the sultan to declare war against Russia or Austria, or to forbid Europeans living in Constantinople to ride on horseback or dwell in palaces surpassing in height the houses of the Moslems. Again, in spite of Koran and Sunnah, the idolaters and fire-worshippers were no more exterminated than the Christians were and may be taxed like pagans. Many fire-worshippers in Persia retained not only their lives, but preserved in several places also their pyres. It even occurred that the Mohammedan government corrected ecclesiastics because they wished to transform temples of the Guebers into mosques. The strict execution of the religious injunctions would occasion many complications and misfortunes, and all, since their character is very tenacious—a proceeding which would prove of great injury to the Islamic state, and apparently be regarded as too cruel even for execution by bloodthirsty Arabs. The government was not unmerciful against those who remained true to their faith, but it drew no bounds against those converted to the Islam who, abhorring it in their heart, conspired secretly against the Islam and the State, and tried to undermine the first by old Parsee doctrines and philosophic speculation, and the latter by the revival of Persian nationality.

(6) Slaves.—According to the fundamental doctrines of Islam, only captives of war made in an infidel country are slaves; in all Moslem countries, however, negroes and Abyssinian slaves also are kept in bondage by rule or force. If slaves of an infidel become converts to Islam, the master is obliged to sell them to a Moslem for a price customary in the country. VI.—14
ious principle; for he himself, as already mentioned, belonged not to the ruling party in Mecca, and his first adherents were for the most part of the lower class, so that the Meccans retorted on him: "If God had pleased to send a prophet, he would have selected him from a more prominent family." Mohammed was frequently censured for being surrounded by slaves, freedmen, and a promiscuous crowd. It is indeed natural that a man who had come to conflict with all his might prejudices of birth and rank of every description. If, on the other hand, Mohammed is reported to have said: "He who was of the nobility in paganism remains so in Islam, if he bow before true wisdom;" this sentence is probably to be placed in that time when he was inclined to all sorts of concessions and amnesties for the sake of the larger acquisition of classes. At any rate, he revoked it when the Meccan nobility persisted in their opposition against his doctrine; as he retracted, for a similar reason, his opinion which represented the idols as mediators between God and man, and in a measure representatives of spirits or angels, and branded it even as a sentiment of Satan. But however decidedly Mohammed pronounced in favor of equality of all men, i.e. all the faithful, he failed in the attempt to abolish slavery altogether, though he mitigated its lot in many respects. Nor was he more successful in emancipating woman, albeit he protected her against the arbitrary conduct of men, and in many rights which she had not enjoyed in Arabia before his time. While he prescribed to the faithful to take not more than four women, and allowed intercourse with female slaves only to the unmarried, he proclaimed revolutions by which God relieved him of restrictions binding upon others. He had the right to request every faithful to divorce his wife, if he desired marrying herself. He claimed to contract for himself and others any matrimonial connection, without the consent of the girl or her protector. He was permitted to marry as many women as he pleased, and he indeed increased their number till it reached a vast number, of which they then did not differ in the least. The excessive jealousy of the legislator had the most grievous consequences for the women. It extended so far that his women not only remained excluded from all intercourse with other men during his life, but were also prohibited remarrying after his death. Later, all other faithful women were also ordered to wear a close veil, leaving only the eyes free, when going out, and even in the house not to show themselves unveiled except to their nearest relatives. Thus women who, with pagan Arabs, were the spice of public and social life, were by Mohammed's jealousy confined entirely to the home and the family circle. The fair sex, with the Barbarians, remained as the Meccan and Persian Medallions, Occident objects of veneration and worship, was changed by the Islam into a subject of pity and mistrust. The place of their abode was, it is true, called Harem—i.e. sanctuary—but it was understood to be a sanctuary requiring veil and curtain, and finally lock and bolt and enchantment to protect it against violation. This system of close confinement had, of course, the saddest consequences for the male sex. The husband found only sensual, but no cordial and mental enjoyment in his harem, and fell more and more into rudeness and unnatural vices. Mohammed, by his own life and by his ordinances concerning women, has impressed the character of transitoriness and human weakness on himself and his revelations. Here is manifest in the "reformer" himself the want of a strictly moral sentiment, and in his precepts sanctioning polygamy and seclusion of woman he has left a legacy which prevents the professing his faith and who consequently tend to treat it as civilization, and raising themselves by a sound family life to a prosperous life of state. The Jews, on the other hand, to whom the Mosaic law allows a plurality of wives, have found a rabbi from whom they have accepted magistrates as a law, even in countries where polygamy is not forbidden. The Moslem may soon also, like the Jew of our times, learn to make a distinction between eternal truths and laws and ordinances enacted for transient external circumstances. The Moslem in general is not so firmly attached to his faith as the Jew. We observe this in those Arabs and Turks who have lived a few years in Christian countries, and have participated in European civilization. Should the political independence of the Moslems, which owes its existence solely to the mutual strength or weakness of the various powers, cease, their religion, as it is founded on illusion, spread by the sword, and leaning on secular force, will not long survive it. The professors of Islam will then suffer great change. There will be some who will re- lapse into former indifferency to religion, while others will adopt the faith of their conquerors, and probably even the last, the so-called Albigensians, the last remnant of a Mohammedan empire ruled by a head of a supremacy at once spiritual and secular, the necessary elements are lacking—utility of faith and nationality. Shiites and Sunnites are still as hostile towards each other as they were a thousand years ago; and to the old incomparability of the Arabian and Persian elements a third one is added, semi-Mongolian—the Osmanc—considerably increasing the rupture. A new universal blaze of fanaticism, even if it could prevail against rifled cannon and iron-plated frigates, is no more to be apprehended. IV. Mohammedanism and Christianity.—The friends and advocates of Mohammedanism have repeatedly, especially in our day of comparative religious research, urged upon the Christian world a consideration of the claims Islam has in the advance of humanitarian principles and the propagation of civilizing influences. Islam, it is declared, started, as the outpost of all creature-worship; with emphasis proclaimed the superiority and sublimity of God; and, like the Jew and the Christian, the Moslem based his faith upon the revealed book known as the Bible. It is further urged in defence of the Arabian religion that its successes and spread were due only to a vast number of converts then converted. For there is no other reason. fruit. As a matter of history, we have to record that scarcely a century had elapsed after Mohammed's death when Islam reigned supreme over Arabia, Syria, Persia, Egypt, the whole of the northern coast of Africa, even as far as Spain; and, notwithstanding the subsequent struggles and divisions in the interior of this gigantic realm, it grew, and grew outwardly, until the Crescent was made to gleam from the spires of St. Sophia at Constantinople, and the cry "Allah 11 Allah" resounded before the gates of Vienna, and that but for the successful opposition of Charles Martel, that Mohammed's religion would have taken the place of the Romish hierarchy, but even exulted Christianity itself. See SABRECH. If, however, we inquire into the causes of these successes of the Crescent, we find that Mohammed's law was artfully and marvellously adapted to the corrupt nature of man; and, in a particular manner, to the manners and opinions of the Eastern nations, and the vices to which they were naturally addicted: for the articles of the faith which it proposed were few in number, and extremely simple; and the duties it required were neither many nor difficult, nor such as were incompatible with the empire of appetite and passion. It is to be observed, further, that the gross ignorance under which the Arabians, Syrians, Persians, and the greatest part of the Eastern nations labored at this time rendered many an easy prey to the artifice and eloquence of this bold adventurer. To these causes of the progress of Mohammedanism we may add that these nations were not only intellectually, but even physically, in a state of acknowledgment, not by the spread of the Koran, but by armies in hostile array, invading peaceful countries for spoil and devastation. It was an error even to place the first conquests and the rapid spread of Islam to the credit of Arabian religious fanaticism. We must reflect that military glory and poetry to the Bedouins, who formed the flower of the first Arabian armies, were not less en-
tying than the pleasure-gardens with everblooming virgins [see H O U R S] vouch-safed to the faithful. Nor must it be forgotten that the state of the countries and nations conquered by the Arabs was decayed and rotten, full of hostilities and faction, and in such cases as well as in Egypt, in Barbary, in Sicily, and in Spain, the Arabs were victorious because the population was dissatisfied with their governments, and often in secret understanding with the enemy. Persia was weakened by long wars with Byzantium, and divided by the no-bility into two parts, a nest with, besides the greatest inhabitants, of Arabian origin, especially in the Western provinces, sympathized with the kindred troops. A similar condition of things prevailed in Syria, where also the Shemitic population predominated, looking upon the Byzantines as their oppressors. In Egypt, to the antipathy between Copts and Greeks was added an ecclesiastical pressure against the Monophysites by the Byzantine court, which held to the doctrine of the double nature of Christ. For the subjugation of Sicily the Saracens were mostly indebted to the traitor Euphemius, and count Julian made way for the Arabs in the conquest of Spain, the more rapidly accomplished since a part of the maltreated people were indifferent spectators of the struggle, while another part even aided the enemy. Thus it is explained how the Islam, within a short century, victorious raised its standard from the Guadalquivir to the Indus. But thus rapidly it also waned, divided in two parts by the tenacious will of the men who had conquered it, and were controlled by foreign mercenaries: when rude force obstructed every scientific elevation; and internal feuds, in consequence of no appointed succession by Mohammed, consumed its best energies. If undisputed legitimate foundation was formerly wanting to strengthen monarchy, because the adherents of Ali believed only his descendants worthy of succession, this difficulty is still greater under the Osmanlis, who are not looked upon as legitimate dynasts even by the Sumnites, and hence it has happened twice in our day that Christian bayonets have had to defend the sultan against an Arabian army commanded by an ambitious Turk (Ali and Ibrahim Pasha). How long European diplomacy will succeed in nursing the sick empire cannot be predicted; but it is certain that if no other reforms than those hitherto introduced, and these mostly on paper, impart a fresh, vigorous spirit to the Mohammedan states and the Islam faith, both will verge on ruin. It is now a question of renown rather than real credit to Islam as a civilizing influence, because it has failed to prove itself after such a trial of centuries. In the East, as we have already conceded, it has done some good. But let it not be forgotten that it scarcely accomplished as much as Judaism could have secured. Hael Moham-medanism was a religion as little limited as the mission of Mohammed would appear exactly analogous to that of Moses. If the religion of Mohammed was imperfect, so was that of Moses; if the civil precepts of Mohammed were adapted only to a single nation, so were those of Moses also. Indeed, in some respects, Mohammedanism is a clear advance upon Judaism. It more distinctly represents God as the God of the whole world, and not of one nation only; it teaches with more clearness the doctrines of God's general providence, of a resurrection, and of a final judgment. . . . In short, had Mohammedanism only preceded Christianity, it might have changed the history of the world. If the mosque might have been an appropriate and friendly halting-place between the synagogue and the church. As it is, Mohammedanism, coming after Christianity, has proved its deadliest enemy. Its claim to be to Christianity what Christianity was to Judaism is belied by the fact that this supposed reformed and developed Christianity is in fact a regression, denying nearly all those points in which Christianity is a reformed and developed Judaism. . . . Mohammed saw that many of the alleged rejections of the Christians were really the too hastily confounded the worship of Christ with the worship of his mother and his servants. Christianity was distracted and confounded by unintelligible disputes as to the divine nature and attributes of Christ; Mohammed hastily cast them all aside as alike violators of the divine unity. Too many Christians had made themselves many mediators; Mohammed too hastily rejected the one true Mediator, and represented Jesus as a mere preacher like himself" (Freeman, Saracens, p. 60 sq.).

The effects of the Mohammedan conquests on the religion of the conquered have been very various. In Christian countries where the Moslem power has not been lasting, as in Spain, Sicily, and those parts of Eastern Europe conquered by the Turks, no trace of them is left except buildings, and some popular customs and superstitions. But where their dominion has endured, as in Western Asia and Northern Africa, Christianity, once supreme, has now almost perished. This has been caused partially by individual conversions—for no Christian population, except perhaps that of Crete, has ever in a body apostatized—but mainly by the substitution of a Moslem for a Christian population. Baptism and other Christian symbols were turned into idolatries. Moslem women were forced into the harem of Mohammedans; Christian children were forcibly brought up as Moslems; indignities, burdensome taxes, and personal duties were imposed on Christians; from time to time violent persecutions took place. Moreover, in many countries here and there largely proscribed, it was unable to furnish any firm ground of faith. Heretics frequently invited or combined with Mohammedans for the sake of overthrowing their orthodox rivals (comp. on Egypt, Lane, ii, 276; Gibbon, vi, 352, 428; Syria and North Africa, Finlay, Byzantine Empire, i, 159; Asia Minor, ib, i, 186).

One remarkable effect of the Mohammedan spirit of conquest must be noticed. Since it attacked Christianity as a religion, at first defence, and subsequently repri-sals, on the part of the Church became a religious duty. The unwarlike spirit of the early Church entirely passed away, and in its stead appeared that military Christianity of the Crusades (see Milman, Latin Christianity, ii, 224; Goss, Hi. of European Morals, ii, 262–268). In heathen countries the inhabitants usually embraced, after a longer or shorter time, the Moslem faith. Persia, since its first conquest, has undergone many vicissitudes between heathenism (under the Mongols), Sun-nism, and Shiasm, the last of which is now the national faith, and has become in many points assimilated to the ancient Magianism. In India, during the Moslem dominion, Islam was confined to the ruling classes at the various courts, and found little acceptance with the na-tives. But in the Near East Akbar discovered Mohammedan peculiarities, and was a simple desult. In many points Islam has approximated to Brahminism. Persecution has done its work here also, even in modern times, especially by Tippu Saib of Mysore (Dollinger, p. 15, 16).

The sword and persecution have ever been the means of propagating Islam; no missionary organization has at any time existed, and individual efforts for voluntary conversion have been rare and accidental. Yet instances are frequent—the Turks (11th century), the Mongols (13th century)—of whole heathen nations, brought in contact with Mohammedans, having voluntarily ac-ceded to Islam. Astonishing instances were thus made in Central Africa; while in China and the Asiatic islands also it made many converts (Dollinger, Muhammad's Religion, etc., p. 16–20; Möhler, Uber das Verhältniss, etc., 1, 866).

The reasons of the success and rapid extension of Is-
Islam may be thus summarized: (1) The great power over nomadic and Eastern races—as were the Saracens and Turks—of Mohammed's personal character and religion. Even in his faults he nearly corresponds with the ideal of the holy and perfect soul; and was a man of thought. (2) Extension by the sword, as a religious principle, together with the intense and burning religious zeal of the Mohammedans, famed by hopes of immediate bliss—sensual or spiritual, to suit different temperament—to those who died fighting for the faith. (3) While the sword was tolerantly used among the Christians to whom Islam was opposed. In early times this was in great measure the result of widespread heresy, which weakened faith, caused indifference through weariness of controversy, and created numerous divisions and discord; in later times, of discord between the Christian and Eastern churches and Protestants. Christendom was divided; Mohammedanism was, at the time of its successes, absolute unity, spiritual and temporal. (4) The outward character presented by Mohammedanism. The permission in this life, and promises in the next, of sensuality influenced low and coarse minds; asceticism in the long and strict fast, regular prayers and ablutions, almsgiving, abstinence from intoxicating liquors, and other burdensome precepts, and a generally austere and scrupulous spirit, suited higher characters (see Hallam, *Middle Ages* [vol. 1872], ii, 117). (5) The inward truth in the religion, namely, the intense devotion to the rule of God's sole supreme, hatred of idolatry, and of everything that trenched upon his prerogatives. (6) The military skill and wise policy of both Saracens and Turks in dealing with Christians, and the consequent strength of their government as opposed to the weakness and discord among Christian powers.

The cause of Mohammedan decline is mainly that Islam is especially designed for nomad and half-nomad races; hence when they settle they lose the strength which arises from their nomadic life, and their religion loses its purity and power. They degenerate, become luxurious and inactive; internal dissensions and divisions arise; the same doctrine (s. g. fatalism) that strengthened them in their success weakens them in their depression. Moreover, the opposition to progress innate in Islam tends to keep Mohammedan nations stationary, while Christian powers advance in strength and wealth. Says Mr. Palgrave, who has given the latest and most valuable ideas of the Mohammedans in the southern parts of Asia: "Islam is in its essence stationary, and was framed thus to remain. Sterile like God, lifeless like its first Principle and Supreme Original, in all that constitutes true life—for life is love, participation, and progress, and of these the Koranic Dharma concern only intellectual and spiritual results, and all advance, all development. To borrow the forcible words of Lord Houghton, the 'written book' is the 'dead man's hand,' stiff and motionless, and whatever savors of vitality is by that alone convicted of heresy and death. But Christianity, with its living and loving God, begetter and upholder of both spirit and movement; may, more—a Creator made creature, the Maker and maieutic in one; a Divinity communicating itself by uninterrupted graduation and degree from the intimate union far off to the finest irradiation, through all it has made for love and governs in love; One who calls his creatures, not slaves, not servants, but friends, nay, sons, nay, gods; to sum up, a religion in whose real existence 'God in man is one with man in God' must also be necessary a religion of vitality, of progress, of advancement. The contrast between it and Islam is that of movement with fixedness, of participation with stele on syllogism. It is a movement with warmth and perfection. The first vital principle and the animating spirit of its birth must, indeed, abide ever the same; but the outer form must change with the changing days, and new offspring of fresh sap and greenness be continually thrown out as witnesses to the vitality within; else were the vine withered and the branches dead. I have no intention here—it would be extremely out of place—of entering on the maze of controversy, or discussing whether any dogmatic attempts to reproduce the religious part of Islam as a framework to killing it, the doors and windows of a house. I only say that life supposes movement and growth, and both imply change; that to censure a living thing for growing and changing is absurd; and that to attempt to hinder it from so doing, by pinning it down on a written label, or nailing it to a Procrustean framework, is ridiculous. To kill it, to destroy its existence in the name of Christianity, is living, must grow, must advance, must change, and was meant to do so; onwards and forwards is a condition of its very existence; and I cannot but think that those who do not recognise this show themselves so far ignorant of its true nature and essence. On the other hand, Islam is lifeless; and, because lifeless, cannot grow, cannot advance, cannot change, and was never intended so to do."

The effects of Mohammedanism, as shown in life and character, must be briefly noticed. The minuteness of the ritual and social rules, together with the hardness and coldness of the morality taught, produces a great amount of formalism. The name of God and pious ejaculations are constantly on the lips, even in the midst of the most indecent conversation. Mohammedans often say the "Bismillah" before committing a crime (Spen- gler, ii, 206). Hence the most scrupulous observance of the law is not always coupled with the grossest habitual immorality and crime (Dollinger, p. 26-29): religion and morality seem completely sundered. Another great evil results from the minuteness of the laws concerning marriage and divorce. Many volumes have been written to explain them, entering into the closest and most minute details, forming a mass of corruption, poisoning the mind and morals of every Mohammedan student" (Muir, iii, 302), and utterly defiling the very language. Hence arises the prevalence not only of the most indecent language and conduct, but also of extreme profligacy among both sexes. Unnatural vice is fearfully common. The pictures of the joys of paradise contribute in some degree to this profanity; these come to be the object of their thoughts, and are anticipated, as far as possible, on earth. The doctrine of predestination, or, rather, fatalism, produces extreme apathy and want of energy in action; while the notion that all Mohammedans are God's chosen in a special sense, removes from them a common ideal of life, of work and advancement, of progress in themselves, which is fostered by the precepts and almsgiving, leads them to a bitter contempt and hatred of all other religions.

It remains to sum up the good and evil sides of Mohammedanism. On the one hand, it is a rigid foe to idolatry, as it teaches the unity, perfection, providence, and government of God, and hence submission and resignation to his will, together with the great doctrine of a judgment and eternal retribution. It inculcates, moreover, brotherly love and union with fellow-believers, and many social virtues: with almsgiving, temperance, and charity, as the only means of obtaining an eternal reward. On the other hand, it perpetrates the great evils of the East—polygamy, slavery, and absolute despotism; it opposes all political and social progress, while the semi-civilized, arbitrary character of its law and justice renders property insecure. Its doctrine of propagation by the sword leads to constant wars and rebellions, with an utter contempt for human life. It is in fact a semi-barbarous religion. On its religious side it fails to satisfy the natural longing for some mediator between God and man, while yet it bows before God as an irresistible power; its morality, in itself defective, is dry, cold, hard, lifeless, without any amiable traits; and, finally, as substituting Mohammedanism for what is right, it is essentially anti-Christian. While it may be an advance on heathenism, it is an advance which almost excludes the further advance of Christianity, missionary efforts being well-nigh without result.
Christian and Mohammedan Polemics. — The contest of Christianity with Islam, so far as it has been a struggle of argument and not of the sword [see SARA-CENS], offers few remarkable points. In the first sweep of Mohammedan conquests, when the Christians succumbed not only in the East but even in the West, there was no field for a question of truth. But among nations which were removed from the peril, and yet sufficiently in contact to entertain the question of the claims of theMohammedan religion, a consideration of its nature, regarded as a system of doctrine, naturally enough arose. Accordingly in Constantinople, and in Spain and the other parts of Western Europe which came into connection with the Moors, works of this character appeared. The history may be conveniently arranged in three periods, each of which is marked by works of defence, some called forth by danger, a real demand, but subsiding into or connected with inquiries prompted only by literary tastes. The first is from the 12th to the middle of the 16th century; the second during the 17th and 18th; the third during the present century.

1. A notice of the Mohammedan religion exists in a work of John of Damascus (q. v.), who flourished in the 8th century; and Euthymius Zagabenus (q. v.), a Byzantine writer of the 12th: but the first important treatise written directly against it was prepared in 1210 — Richards Conostatio, edited in 1463 by Blidander from a Greek copy. The refutation of Averroes by Aquinas (1278) can hardly be placed as an instance of a work against the Mohammedan religion, being rather against its philosophy. The ablest Christian polemic who waged war against Islam in the 13th century was, however, the well-known Raymond Lully (q. v.), whose zeal could not fail to stir up many laborers for the mission; but especially that braced him at the conversion of Mohammedans. Thus we read of a monk who penetrated the great mosque at Cairo in 1345 to require the sultan himself to become a follower of Christ crucified; and so powerful was his appeal that a renegade who had lapsed into Islam returned into the bosom of the Church. Then we find Etheri, the father confessor of the infants of Aragonia, preaching Christ to the Moors in 1370; and his example followed in 1450 by the papal legate Albert of Lanzana and two assistants, etc.

But if we return to works aimed to defend Christianity against Mohammedanism, we meet with a treatise by John of Damascus written about 674, but which is to be explained probably by the circumstance that the danger from Mohammedan powers in the East directed the attention of a literary man to the religion and institutions which they professed. Thus far the works were called forth by a real demand. A series of treaties, however, commences about the time of the expulsion of the Moors from Spain, the cause of the existence of which is not so easy of explanation. Such are those in Spain by Alphonso de Spinis, 1487, and by Turrencenata (see Eichhorn, Gesch der Lit. vol. vi); by Nicholas de Cuza, published in 1548; in Italy about 1530 — Ludovicus Vivio, and Venetian writers; and by Philip Melancthon in reference to the reading of the Koran; and a collection of treaties, including those of Richardus, Cantacuzene, Vives, and Melancthon, published by Blidander in 1548. Probably the first two of this list may have been a relic of the crusade of Christians against the Moorish religion; the next two possibly were called forth by the interest excited in reference to Mohammedans by reason of their conquests, or less probably, by the influence of their philosophy at Padua. The last two are hardly to be explained, except by supposing them to be an offshoot of the Renaissance, and called forth by the largeness of literary taste and general interest.

2. When we pass into the 17th century we find a series of treaties on the same subject, which must be explained by the cause just named — the newly acquired interest in Arabic and other Eastern tongues. We meet, however, with others, called forth by the missionary exertions which had brought the Christians into contact with Mohammedans in the East.

The treatise by Bleda (De Confess. Christianis, 1610) stands alone, unconnected with any cause. It was partly a defence of the conduct of Christians towards the Mohammedans. A real interest, however, belongs to the work of Guadagnoli, in 1601. A Catholic missionary, Hieronymo Xavier, had composed in 1588 a treatise in Persian against Mohammedanism, in which the general principles of Islam were laid down as opposed to the Mohammedan doctrine of absorption; next, the peculiar doctrines of Christianity was stated; and, lastly, a contrast was drawn between the two religions. (See Lee's Treatise on Christianity and Mohammedanism, Pref. p. 5 sq.) This work was answered in 1621 by a Persian nobleman named Ahmed ibn-Zain Elbekidin. The line adopted by him was — (1) to show that the coming of Mohammed was predicted in the O. T. (Hab. iii, 8); (2) to argue that Mohammed’s teaching was not more opposed to Christ’s than his was to that of Moses, and that therefore both ought to be admitted, or both rejected, particularly the latter, since the former was written in the Gospel; (3) to attack the doctrines of the Trinity and Christ’s deity (Lee, Pref. p. 41 sq.). It was written in golden characters, and sent to pope Urban VIII, with a challenge to refute its contents. A person competent to deal with it was carefully selected, and the work was answered (1623) by a much more elaborate treatise by Guadagnoli, dedicated to pope Urban VIII. It is divided into four parts: (1) respecting the objections about the Trinity; (2) the Incarnation; (3) the authority of Scripture; (4) the claims of the Koran and of Mohammed (Lee, Pref. p. 108 sq.; who also gives references [p. 118] to a few other writers, chiefly in the 17th century.

The further works of defence produced in this century arose, as it were, accidentally. The lengthy summary of the Mohammedan controversy in Hoornbeek’s Summa Controversiarum (1658, p. 75 sq.) was either introduced merely to give completeness to the work as a treatise on polemics, or was called forth by considerations connected with missions, as is made probable by his work De Conversione Gentilium et Infidelium, Le Moyne’s publication on the subject in the Varia Sacra (1686, vol. i) arose from the accidental discovery of an old treatise, Bartholomae Eles. Confutatio Hugeneti. A third writer, Kehm, is associated with the Koran (1586), arose from the circumstance that the pope would not allow the publication of an edition of the Koran without an accompanying refutation of each part of it. This effort remained to our day the chef d’œuvre in Christian polemics against the Koran. The work of Peletier (Hirrt. Orient, bk. i), Feiffer’s Tract. Judaeica et Mahom., and Kortholt’s De Relig. Mahom. (1668), form the transition into an independent literary investigation; which is seen in the literary inquiries concerning the life of Mohammed, as well as his doctrine, in Pococke, Prideaux (1657), Reland (1707), Bouliaris, and the few others of the great Sale (1734). A slightly controversial tone pervades some of them. The materials collected by them were occasionally used by deist and infidel writers (e.g. by Chubb) for instituting an unfavorable comparison between Christ and Mohammed. The great literary historians of that period give a detailed account of the writers connected with the investigation. (See J. A. Fabricius, Bibliotheca Graeca, ed. 1715, vii, 156; Walch, Biblioth. Theol. Sel. vol. i, chap. v, § 9.) A summary of the arguments used in the controversy is given in J. Fabricius, Deletorius Argumentorum, p. 41 sq.; and Stauffer’s Inst. Theol. Orient. ii, 368 sqq.

3. In the present century the literature in reference to Mohammedanism is, as in the former instances, two-fold in kind. Part of it has been called forth by missionary contests in the East; part by literary or historic
tastes, and the modern love of carrying the comparative method of study into every part of history.

The first class is illustrated by the discussions at Shira, in 1611, between the saintly Henry Martyn (q.v.) and the Zoroastrians. The controversy was led by a tract, sophistical but acute, written by Mirza Ibrahim (Lee, p. 1-39), the object of which was to show the superiority of the standing miracle seen in the excellence of the Koran over the ancient miracles of Christianity. Martyn replied to this in a series of tracts (Lee, p. 46-48), and was seconded by Mohammed Raza of Haidar and in a much more elaborate work, in which, among other arguments, the writer attempts to show predictions of Mohammed in the Old Testament and in the New, applying to him the promise of the Paraclete (Lee, p. 161-400). These tracts were translated, with an elaborate preface containing an account of the preceding controversy of Gudagnoli, by Professor S. Lee, of Cambrige (Controversial Tracts on Christianity and Mohammedanism, which is the work so frequently cited above). To complete the history, it is necessary to add that a discussion was held a few years ago between an accomplished Mohammedan and Mr. French, a learned missionary at Agra. Since then a very able defence of Christianity and an attack on Mohammedanism was published by Dr. Pfander, 'a highly respected missionary of the English Church Missionary Society' (1894), which, though forbidden, found its way to Constantinople and to Mohammedan families, and was replied to by several Moslems. In 1865 a Moslem doctor of India, Syed Ahmed Khan, and P. Scudder Amin, actually brought out a biblical commentary on the Holy Bible in English and Urdu, placing the Bible and the Koran upon the same footing, and equally binding on the Moslem conscience. T. G. W. (who was a reviewer of this work, sent from Bareilly, India, September 26, 1866, and published in the Methodist, says: "A résumé of the relative bearings of this book might be interesting; but, as nothing is more baffling than the study of contemporaneous history, I dislike to venture my speculations about what is indicated in such a publication, or the probable influence it will exert. 1. Its bearings on the Mohammedan controversy with Christianity are important. The Mohammedan mind is thoroughly impressed with the belief that the Jewish and Christian Scriptures have been corrupted, and hence are unworthy of credit. Accordingly, when we have urged that the Koran is itself a corruption of the Hebrew and has its basis in the Jewish and Christian Scriptures, Mohammedans were under obligation to regard these, and reconcile with them the Koran, they have always assented to the proposition abstractly, but have charged that interpolations of the Jewish and Christian Scriptures were the cause of the discrepancies. 2. This has always led to this conclusion: Mohammedanism has, however, it is claimed, always had a philosophical school, which ignored many popular beliefs. Syed Ahmed is of this class, and, after examining the Colenso controversy, asserts essential integrity for the record. His book is among the first attempts to popularize this belief; however evidently it may have been held by a school; and as the book has had considerable circulation among the most influential persons in the various communities, it can scarcely fail in time to materially modify the popular notion of the lack of authenticity of the Scriptures. 2. In comparison with the Hindustani, the Mohammedan mind of India has been roused but little from its wonted apathy by its contact with Western civilization. A heavy prize offered in Calcutta recently for the best essay on a subject familiar to the Mohammedan mind called forth less than half a dozen monographs, none of which merited the prize. A like offer of a thousand rupees (about £150) was made to the same effect. But this book is, I hope, a harbinger of a better state of affairs, and may do much to induce it, notwithstanding the fact, which the author assures me in personal correspondence, that the limited sale of this second volume does not justify his completing the series, though he has the matter prepared. It is to be hoped that in this he may prove, to be in error. 3. This volume clearly supports the opinion expressed in advance by me, the course of criticism of Colenso, and the reaction of Colenso and the Rev. Mr. Nelson is about all that the Mohammedan mind disappointed in this, simply because none such expected it to be otherwise than it is. It contains, true to the Mohammedan mind, an amount of mere puerilities, amid a mass of matter that shows a keen appreciation of nice points in a controversy. It adds nothing to European, though it does add much to Asiatic Biblical criticism."

The literary aspect of the subject—nor, however, wholly free from controversy—was opened by White in the Hampton Lectures for 1784, and abundant sources have lately been furnished. Among them are a new translation of the Koran by the Rev. J. M. Rodwell, where the Suras are arranged chronologically. The following ought also to be added: Dr. Macbride's Mohammedan Religion Explained (1857); Arnold, Koran and Bible (1st ed. 1859; 2d ed. 1866); Tholuck, Vermischte Schriften, i, 1-27; Die Wunder Mohammed's (1856); and De Groot, Les Lectures on the History of the Eastern Church (lect. viii., and the references there given); Maurice, Religions of the World; Renan, Etudes d'Histoire Religieuse, ess. iv. The modern study has been directed more especially to attain a greater knowledge of Mohammed life, character, and work. The study is a natural condition of Arabia, and the characteristics of Mohammedanism when put into comparison with other creeds, when viewed psychologically in relation to the human mind. The materials also for a study of the Mohammedan form of philosophy, both in itself and in its relation to the religion, have been furnished by Aug. Schmoller's, Essais sur les Ecoles Philosophiques chez les Arabes (1842). See also Ritter's Christliche Philosophie, iii, 665 sq.; i, 1-181.

V. Statistics.—It remains for us to consider the number of Islam's adherents in our day, and the countries that contain them. There are believed to be over 160,000,000 in the world. There are a number of countries, outside of Turkey and Egypt, in which Mohammedanism is the predominant religion, or at least a great power. Europe contains only 6,500,000 of the Crescent's adherents, but Asia is the home of nearly 80,000,000 Mohammedans, and Africa is almost Asiatic, and so many more are to be found in the various dominions of Islam. The predominant religion of the entire north of Africa, and its rule extends far down eastward, and into the centre of the continent; and it is believed that fully one half, or about 100,000,000 souls, may be set down as Mohammedans. It is a remarkable circumstance, however, that by far the most powerful Mohammedan ruler of the globe—the sultan of Turkey—resides in Europe, for the sultan of Turkey has only a population of about 4,500,000 in the Turkish and 2,000,000 in the Russian dominions. Even the sultan himself has in the European division of his empire more Christian subjects than Mohammedans. In Asia, Mohammedanism strongly predominates in Asiatic Turkey, which has a Mohammedan population of at least 13,000,000. Persia, with its 5,000,000, is an almost exclusively Mohammedan country. The same is the case with Afghanistan, Beloochistan, and the khansates of Independent Tartary. In China the Mohammedans are increasing at a very fast rate, and appear to be extending their dominion north-west and in the south-western provinces. In both places they have endeavored to establish their independence. In the north-west they have so far succeeded that the new Mohammedan empire of Yakoob Kushbegh has for several years successfully maintained
Mohammedanism

its independence, and is still extending its boundaries. On the other hand, the Mohammedan rebels in the south-west, the so-called Panthay, have during the present year espoused victory for the throne.

The death of their sultan and the destruction of their capital, Talifu, and their other principal places, seem for the present to have put an end, not only to their rule in those regions, but even to their political influence. In the vast British empire of India the Mohammedan population is estimated at about 40,000,000, and predominates in the north-western part of the country, which are British dependencies. The Mohammedans also constitute a majority of the population of the large and important island of Java, where they are rapidly increasing; and on the island of Sumatra they control, among others, the kingdom of Achtin, which has recently attracted attention by its conflict with the Netherlands. Russia has in its Asiatic possessions a Mohammedan population of about 4,500,000. In Africa, Mohammedanism has, since the beginning of the present century, made great progress in the negro states, and has in particular become the controlling power of Central Africa, and advanced westward as far as Liberia. Morocco, Algeria, Tunisia, Tripoli, Egypt, Zanzibar, are all Mohammedan states; in the south and south-west they do not anywhere predominate, although they are found everywhere in increasing numbers. But although Mohammedanism, since the beginning of the present century, has made great and rapid advances in Africa, the number of real and thorough believers is infinitely small; and since it has left off conquering, it has lost also that energy and elasticity which promises great things. Its future fate will depend chiefly, we should say, on the progress of European conquest in the East, and the amount of empire and civilization which this will, for good or evil, import into those parts.

Mohammedanism may be said, even in its most successful field—Africa—to be everywhere in a condition of steadily progressing decay. The most intelligent travellers of modern times show a remarkable agreement with regard to this point. H. von Maltzahn, who visited, in the disguise of a Mohammedan pilgrim, all the countries from Timbucto to Mecca, and the Hungarian, Vambery, who in the same disguise travelled from Teheran to Samarcand; Henry Barth, who penetrated into Central Africa as far as Timbucto; and Palgrave, who in 1862 visited Central and Eastern Arabia, and in 1870 the Mahat, who was sent by the Egyptian government to this decay of the Islam. The baron of Maltzahn, in his book of the Pilgrimage to Mecca, which he joined in 1860, under the name of Sidi Abd'ar Rahman ben Mohammed es-Shikli, says: “The Islam has long been undermined, but now it appears to us on the eve of a general collapse. Not that it is entirely without some prospect of recovery—science, scholarship, art, industry—has long left it; its political power has become a laughing-stock, its commerce has been reduced to zero; one thing only seems to stay for a time the impending collapse—religious fanaticism. A remarkable instance of this decline of Mohammedanism is the slow and steady decrease of the population of the large cities. Thus Bagdad, which at the time of the caliphat had 2,000,000 inhabitants, has now only 100,000; the population of Basrah has been reduced from 200,000 to 80,000; that of Aleppo from 200,000 to 90,000; that of Samarcand from 180,000 to 20,000; that of Katsena, which in the 17th century was the first city of Central Soudan, from 100,000 to 8000. Even the population of the holy city of Mecca, the most licentious city of the Mohammedan world which, during the last twenty years, has made real and important progress is Egypt; but its progress has been of a Western civilization, and made earnest efforts to elevate Egypt to a level with it. All the sons of the present khedive have received a European education: one has been instructed in Paris, a second one in England, and a third one is to enter the Prussian army. Industrial departments have been created, as in the constitution of monarchies in Europe, a council of state has been created to advise the khedive in all the important affairs of the state. The most influential among the Egyptian ministers, and for many years the chief adviser of the khedive, is an Armenian Christian, Nubar Pasha. Even an assembly of deputies never elected, which is officially expressed, is to control the administration and to fix the budget. Sweeping reforms have, in particular, been effected in the department of public education. Since 1868 public schools have been established by the government in all the important places of the country. They numbered in 1870 about 4000 pupils, who received from the government not only gratuitous instruction, but their entire support, inclusive of clothing. These schools embrace both the primary and the secondary instruction. The former embraced Arabic reading and writing, arithmetic, drawing, French, or, according to the location of the place, some other foreign language. From the elementary school the pupils pass to the preparatory department of the secondary school. The course lasts three years, and embraces the study of the Arabic, Turkish, French, and English languages; mathematics, drawing, history, and geography. After completing this preparatory course, the pupil enters one of the special schools which are to finish the education of the young men for the service of the state. These special schools are: 1. The Polytechnic School, the course of which lasts four years. As in France, its pupils are permitted to choose between the civil and the military career. In the former case the pupil enters for two years the School of Administration, and afterwards the service of the state; in the latter case he enters the Military Academy of the Abbassieh at Cairo. The Polytechnic School had in 1871 seventy-one pupils. 2. The Law School. The students study the law of the Islam, especially that of Egypt, which is now in the course of a radical transformation, and also the Roman law and the present laws of the European countries. 3. The Philological School. 4. The School of Arts and Industry, founded at Bulak by Mehemet Ali, and greatly perfected by Ismail Pasha. 5. The Medical School, which with is connected a School of Midwifery, the only one which exists in the East. 6. The School of Agriculture. The Egyptian government has called the celebrated German Orientalist, H. Brugsch, of Göttingen, to Cairo, in order to organize there an academy for archeology, and, in particular, Egyptological studies. All these reformation are making wide breaches into the walls by which Mohammedanism has long shut out the glory of the religion of the world. Still more is this the case with the constitution of the canal of Suez, which opens to the civilization of the Christian countries a new and wide road to the intellectuals and minds of the Egyptian Mohammedans, which, it is believed, no obstruction will ever be able to block. The rest of the contact between Egypt and Christian Europe and America are already apparent. The fanciful customs which the Mohammedans, like those of other countries, used to indulge in with regard to Christians begin to disappear one by one. The growth of some of the Egyptian cities is marvelous. Alexandria, which at the beginning of the 18th century had only 6000, in 1820 only 15,000 inhabitants, has now over 200,000. The rule of the khedive has been extended far southward into Central Africa and on the coasts of the Red Sea, and it appears to be highly probable that his ambitious scheme of building up a vast civilizing African empire has good prospects of being realized. In particular branches of Mohammedans are given under the articles of the respecting the countries. In an article under SARACENS we will consider the political history of the Moslems since the days of their great
Prophet to the present, especially their conquests in the Western world and the sacred places of the East.

VI. Literature.—(1) Among the Mohammedan biographies, those of Wackich, Hisham, and Tabeel are in most demand. But it is Wustenfeld who has edited and brought out in a European dress The Life of Muhammad, based on Muhammad Ibn Ishaak, by Abd el-Malik Ibn Ishaq (Lond. 1869, 8vo, pp. 1026), and the Rev. James L. Merrick has brought out in English The Life and Religion of Mohammed as contained in the Five Commentaries of the Khalif Hyal-ul-Kulooost (Bost. 1860, 8vo). Abulfeda's work, formerly considered an authority, is now ignored (see art. MOHAMMED, p. 397). Among European and American biographies of the Prophet of Islam are those of Maracci (Padua, 1688); Gagner (Gibbon's chief dependence, Amsterdam, 1792); Rampoldi (Rome, 1825); Bush (N. Y. 1829); Vergoren (Paris, 1888); Hammer-purgstall (Leips.1873); Green (N. Y. 1840); Well (Stutt-gard, 1845); Caussin de Perceval (1847); Washington Irving (N. Y. 1852). But the three lives which probably present the greatest research are those by Sir William Muir (Lond. 1850), by Dr. Sprenger (Berlin 1846 et seq., 5 vols. 8vo), and by Noldeke (Lond. 1866). The last of these is popular in character, but rests substantially on original investigation, though the labors of Weiz, Caussin, Muir, and Sprenger have been used. These works suggested a series of essays to M. Berthelot, who published Le reviviscence du prophétisme (Lond. 1863), which are considered valuable. But none of these, though liberal in their judgments, are satisfactory to the Syud Ahmed, who has published some essays in English (Lond. 1870) on Mohammed and subjects subserviend to, who explains in his preface the reason why he compiles some controversial accounts that Europeans have less value and he explains with the express purpose of counteracting the effect of Muir upon young Mohammedan students of English. The fifteenth chapter of Gibbon's Decline and Fall (reprinted separately is probably the strongest vindication that Mohammed has received from a European. Carlyle, in his Heroes and Hero-worship, has also taken the palliative side, and he is followed by Kingsley in his Alexandria and her Schools, who assents to Carlyle's "true and just description of a much-calumniated man."

(2) Of the different works treating on Mohammedanism and its founder, or only the former, one of the oldest is the Moslem Book, an essay by Moore (Ruskin's friend, 1840), treating of this faith in the usual derogatory way. Price's work (Lond. 1811-21, 4 vols. 4to), compiled from original Persian authorities, and tracing the history from the death of Mohammed to 1556, is generally commendable. So also is the Rev. T. W. H. Night's History of Mollody's work (Lond. 1815) and likewise Sale's English version of the Koran, prefixed by a dissertation, regarded as "one of the best of the descriptive and historical surveys." De Tassy's works—Doctrines et Devoirs de la Religion Musulmane, tirés du Coran, and his Memoires sur les Particulirés de la Religion Musulmane dans l'Arabie—are valuable. Necle's Islamismes, son Rise and Progress, is an abridgment compilation simply, and Taylor, Hist. of Mohammedanism, treats mainly of the sects; but indispensable to every student of Mohammedanism is Von Hammer-Purgstall's Gesch. des Osmanischen Reiches (Pesth, 1837-55, 10 vols. 8vo). One of the best treatises is by Dillingen—Muhammad's Religion nach ihrer inneren Entwicklung u. ihrem Einfluss auf das Leben der Völker (Ratisbon, 1838). Useful are Renan's Mah. et les origines de l'Islamisme (Par. 1857, 7th rev. ed. 1864), and Arnold's Koran and Bible (Lond. 1866; rewritten and published in 1874, entitled Islam, its History, Character, and Relation to Christianity, by Smith (Lond. 1874, 8vo), and Brown, Mohammedanism, its present Condition and Influence in India (Lond. 1873, 12mo). See also Hardwick, Christ and other Masters; Clarke, Ten Great Religions, ch. xi.; Milman, Hist. of Latin Christianity, ii. 109 sq.; Stanley, Hist. of the Eastern Church, i. 57; Wulff, Lehrbuch der Christenheit in Arabia, p. 150 sq.; Neander, Church History, iii. 84 sq.; Cox, Latin and Teutonic Christendom; D'Herbelot, Bibliothèque Orientale; Malcom, Hist. of Persia (2 vols. 4to); Cazenove, Mohammedanism (Lond. 1855; reprinted from the Christian Remembrancer, Jan. 1860); Deutsch, Litterary Remains (Lond. and N.Y., 1874); containing articles reprinted from the Quarterly Review, Lond. 1869, 1870). In many travels, especially those in Arabia, the condition and history of Mohammedanism are dwelt upon, as in Burchardt; and Warburton gives a chapter to it in his Crescent and the Cross. See also Wellesley, Travels to the City of the Cullips (Lond. 1840, 2 vols. 8vo); Lane, The Moeul Egyptians (5th edition, Lond. 1871); Zinke, Egypt of the Pharaohs and the Khedive; General Daumas, La vie Arabe et la Société Musulmane. See also Harper's Monthly, xlv. 1 sq.; Christian Examiner, 1840, iv. 800 sq.; North American Rev. 1831, p. 357; North American Journal 1831, 294; Christian Remembrancer, Jan. 1855, art. iii.; Five-years' Baptizd Qu. Jan. 1855, art. i.; Edinburgh Rev. Oct. 1857; July, 1866; Nat. Qu. Rev. March, 1861, art. vi.; Sept. v.; Jahrh. deutsch. Theologie, x. 166; 1862, 885; Revue des dix Monde, Sept. 1865; Prospect. Rev. ii. 150; Journ. of Commerce (Lond.) Quarterly Rev. cxvii, 288 sq.; Oct. 1869, p. 169; Bibliothèque Sacre, April, 1870; Meth. Qu. Rev. 1864, p. 141; 1865, p. 288; 1866, p. 602; 1871, p. 62; Westm. Rev. 1868, p. 245; Jan. 1873, p. 124; July, 1875; Brit. Qu. Rev. Jan. 1872, 190 sq. On Mohammedan law are works by MurTaba, D'Oison, Knijfer, Von Tornow, and Perron. See Osborn, Islam (Lond. 1878, 2 vols.).

Mohammedan Sects. "My community," the Prophet of Islam is reported to have said, "will separate itself into seventy-three sects; one only will be saved—all the others shall perish." This prophecy, if it were ever made, has in a large measure been fulfilled. The Mohammedans are divided into two main divisions—Koran and Meccah, each of which is subdivided into eighteen liberal sects. Probably the prophecy was made after the division had taken place. (A very important and instructive treatise on this subject was presented by Silvestre de Sacy to the Institute of France. It is based on the writings of the Mohammedan writer Sherif Bey, on which it is founded.) In many parts of the Koran, the words may, differences of opinion arose among the Prophet's followers even during his own lifetime, and multiplied rapidly after his death. A perusal of the articles KORAN and MOHAMMEDANISM will reveal clearly that the fundamentals of Islam were by no means unequivocal, and that the great variety of interpretation of the Koran has resulted. To add to the poetical uncertainty of the Koranic principles, a vast number of oral traditions accumulated in Islam, and were circulated as an extensive corollary of the Koran. Political causes soon came to assist the conflict and contest, and religion was made the pretext for faction and struggle. In reality, it stood somewhat apart from the others. What makes these sects interesting is the fact that many of them have continued to hold the rich and complex traditions of the Koran. Their history and development form an important part of the history of the Arab world.
chief heads or fundamental bases. The first of these
relates to the divine attributes and unity. Which of
these attributes are essential or eternal? Is the omi-
nipotence of God absolute? If not, what are its limits?
Further, as to the doctrine of God's predestination
and man's liberty—a question of no small purport, and one
which has been controverted in nearly all religions—
How far is God's decree influenced by man's own will?
How is this to be reconciled with the necessity and exis-
tence of a similar kind belonging to this province. The third is,
perhaps, the most comprehensive "basis," and the one
that bears most directly upon practical doctrines—viz.,
the promises and threats, and the names of God, to-
gether with various other questions chiefly relating to faith
and miracles. It is the head and end, or, as some
think, the one that concerns itself with the influence of reason
and history upon the transcendental realm of faith.
To this chapter belong the mission of prophets, the office of
Imam, or Head of the Church, and such intricate
subtleties as to what constitutes goodness and badness;
how far actions are to be condemned on the ground of
reason or the "law," etc.

I. One broad line, however, came to be drawn, in
the course of time, among these innumerable religious divi-
sions—a line that separated them all into orthodox sects
and heterodox sects; orthodox being those only who
adhered to the traditions of the Sunna (q. v.). The
Sunnites, i.e., traditionalists, or believers in the Sunna,
there are four divisions, which, though at issue on most
points, are yet acknowledged by each other as faithful,
and capable of salutrition. They are severally designated
by the names of the men who in leadership attained to
greatest authority. Each of these guides also to this
day continues the exponent of the sect by a manual
which each left to his adherents as a compend of theol-
ogy and jurisprudence.

1. The first of these sects are the Hanafites, founded
by Abu Hanifa, who died 150 years after the Hegira.
They are emphatically called "the followers of reason,"
and are distinguished from the other sects as being
guided exclusively by tradition. They allow reason to have a principal share on
decisions in their legal and other points. To this sect belong chiefly the Turks and Tartars.

2. The second sect are the Malakites, founded by
Malek Ibn Ans, who died about 180 of the Hegira at
Madinah. As one of the chief proofs of his piety and
humility, it is recorded that when asked for his decision
on forty-eight questions, he would only decide on six-
teen, freely confessing his ignorance on the others. In
Barbary and other portions of Africa the greatest part
of his adherents are found.

3. The third sect, or School of the Hanbal, was
born in Palestine in 150 of the Hegira, but educated in Mecca;
its founder is the third sect, Shafiites. He was a great enemy to
the scholastic divines, and seems altogether to have
been of an original cast of mind. He never swore by
God, and always took time to consider whether he should
at all answer any given questions or hold his peace. The
most characteristic saying recorded of him is, "Whoever
pretends to love both the work and the Creator at
the same time is a liar." He is accounted of such im-
nportance that, according to his contemporaries, "he was
as the sun to the world, and as health to the body;" and
all the relations of the traditions of Mohammed
were said to have been asleep until he came and woke
them. He appears to have been the first who reduced
Moslem jurisprudence to a method, and thus made it,
from a number of vague sayings, a science. His follow-
ers are now chiefly found in Arabia and Persia.

4. Ahmed Ibn Hanbal founded the fourth sect, the
Shafiites. His teacher he himself placed in 164 of the Hegira,
and he was a most intimate friend of Shafi. His knowledge of the
traditions (of which he could repeat no less than a
million) was no less famed than was his piety. He
taught that the Koran was not created, but everlastingly
substantiated in the essence of God—a doctrine for which he
was severely punished by caliph Al-Mutassaem. On the
day of his death, the Mohammedans would have us be-
lieve, no less than 20,000 unbelievers (Jews, Christians,
and Magians) embraced the Mohammedan faith. Once
very numerous, the Hanbalites are now but very rarely
met with outside of Arabia.

5. In recent times a new orthodox Mohammedan
sect has sprung up, called Wahabis or Wahabbies,
their founder, Muhommed Ab-el-Wahab (q. v.)
They have been represented as the most rigor-
ous Mohammedanism which they claim does not now
exist under the Turks and Persians, whom they call
idolatrous. The Wahabbies are of a sort of Puritanic
iconoclasts, and their power is fast spreading. But their re-
cent history is so mystified that we defer them for con-
sideration. The Wahabbies, we think, will have
more effect.

II. Much more numerous than the orthodox divisions
are the heterodox ones. Immediately after Mohammed's
death, and during the early conquests, the contest was
chiefly confined to the question of the Imamat. But no
sooner were the first days of warfare over than thinking
minds began to direct themselves to a closer examination
of the faith itself, for which and through which the
world was to be conquered, and to the book which
preached it, the Koran. The earliest germs of a relig-
ious dissection are found in the revolt of the Khare-
gites against All, in the thirty-seventh year of the Hegira
(see Oakley, Hist. of the Saracens, ii. 50); and several
several years afterwards; but in the short
opinions on predestination and the good and evil to
be ascribed to God. These new doctrines were boldly,
and in a very advanced form, openly preached by Waa'li
Ibn Ata', who, for uttering a moderate opinion in the
matter of the "sinner," had been expelled from the rig-
orous school of Bahr. He then formed a school of his
own—that of the Separateists or Mutazilites, who, to-
gether with a number of other "heretical" groups, are
variously counted as one, four, or seven sects.

1. The first of these heretical groups, the Mutazilites
—also called Mohabites, i.e., those who divest God
of all attributes; and Kuduriq, i.e., those who hold that
man has a free will, and deny the strict doctrine of
predestination—is traced back even to Mabod, who, in
the time of Mohammed himself, already began to question
predestination, by pointing out how kings carry on un-
just wars, kill men, and steal their goods, and all the
while pretend to be merely executing God's decrees.
The real founder of the sect, as such, however, is, as we
have already indicated, Waa'li Ibn Ata'. He denied
God's "qualities"—such as knowledge, power, will, life
—as leading to, if not directly implying, polytheism.
As to predestination itself, this he only allowed to exist
as the outward cause of evil; and it was not a free act of God
on the part of man, such as illness or recovery, death or life, but man's
actions he held to be entirely in his own hands. God,
he said, had given commandments to mankind, and it
was not to be supposed that he had, at the same time,
preordained that some should disobey these command-
ments, and that, further, they should be punished for it.
Man alone was the agent in his good or evil actions, in
his belief or unbelief, obedience or disobedience, and he
is rewarded according to his deeds. (a) These doctrines
were further developed by his disciple, Abul-Hudail,
who did not deny so absolutely God's "qualities," but
modified their meaning in the manner of the Greek
philosophers, viz., that every quality was also God's es-
ence. The attributes are thus not without, but within
him, and, so far from being a multiplicity, they merely
designate the various ways of the manifestations of the
Godhead. God's will he declared to be a peculiar kind
of knowledge, through which God did what he foresaw
it to be good, and was necessary to the end. What was
only possible in this world. In the next all will be ac-
cording to necessary laws immutably preordained.
The righteous will enjoy everlasting bliss; and for the wick-
ed everlasting punishment will be decreed. Another
very dangerous doctrine of his system was the asump-
tion that before the Koran had been revealed man had

VI.14*
already come to the conclusion of right and wrong. By his inner intellect, heart, and mind, and does know—without the aid of the divinely given commandments—whether the thing he is doing be right or wrong, just or unjust, true or false. He is further supposed to have held that, unless a man be killed by violent means, his life would neither be prolonged nor shortened by "supernatural" agencies. His belief in the law of nature, by no means an attenuation of the law of God. There was no special security, he said, in a long, unbroken chain of witnesses, considering that one falible man among them could corrupt the whole truth. (b) Many were the branches of these Motazilites. There were, apart from the disciples of Abu-Hudail, the Jobkosians, who adopted Abu-Husain al-Amuli's interpretation of the belief in God that one act be the evidence of a claim to every subsequent act; and this for their own reasons (necessity, i.e., that God preordains everything). The opinions on this point of man's free will are, however, much divided, as indeed to combine a predetermination which ordains every act with man's free choice is not easy; and the old authors hold that it is well to inquire too minutely into these things and all precepts, both positive and negative, be argued away. The middle path, adopted by the greater number of the doctors, is expressed in this formula: There is neither compulsion nor free liberty, but the way lies between the two; the power and being will be both created by God, though the inner spirit of good, the free will to do evil, sin, will be held by this sect that if a believer die guilty of it without repentance, he will not, for all that, always remain a denizen of hell. God will either pardon him, or the Prophet will intercede on his behalf, as he says in the Koran: "My intercession shall be employed for those among my people who shall have been guilty of grievous crimes;" and further, that he in whose heart there is faith but of the weight of an ant shall be delivered from hell-fire. (b) From this more philosophical opinion, however, departed a number of other Sefian sects, who, taking the Koranic words more literally, transformed God's attributes into grossly corporeal things, like the Manifestos, or assimilators, who conceived God to be a figure composed of limbs like those of created beings, either of a bodily or spiritual nature, capable of local motion, ascent or descent, etc. The notions of some actually went so far as to declare God to be "hollow from the crown of the head to the breast, and solid from the breast downward;" he also had black curled hair." (c) Another subdivision of this sect were the Jabarians, who deny to man all free agency, and make all his deeds dependant on God. Their name indicates their religious tendency sufficiently, meaning "Necessitarians." III. The third principal division of "heretical sects" is formed of the "rebels" or "rebel" from the lawful prince—i.e., Ali—the first of whom were the 12,000 men who fell away from him after having fought under him at the battle of Seffain, taking offence at his submitting the decision of his right to the caliphate (against Moawiyiah) to arbitration. Their "heresy" consisted, first, in their holding that any man might be called to the Imamat though he did not belong to the Koreish, nor was even a freeman, provided he was a just and pious man, and fit in every other respect. It also followed that an unrighteous imam might be deposed, or even put to death; and further, that there was no absolute necessity for any imam in the world. IV. The fourth principal sect are the Shiites, or sectaries, so called by the Sunnites, or orthodox Moslems, because of their heretical tendencies. The Shiites, as they are now generally called, were originated by Ali ibn Abi Taleb, and prefer to call themselves Alid, sect, at first, for the distinction is not to be found in the Koran, or for the Motazilites, or for the believers in the strict literal sense, assumed a likeness between God and created things; others gave it a more allegorical interpretation, without, however, entering into any particulars beyond the reiterated doctrine that God had no companion or similitude. (a) The different sects into which they split were, first, the Askarians, so called from Abu Hassan al-Ashari, who, at first a Motazilite, dissa...
earthly kingdom, the mere price of craft or of valor. It was the inalienable heritage of the sacred descendents of the Prophet himself. They therefore consider the caliphate of the Victorious Oman and the Exalted (Ommayad) the incumbents of the caliphate after Mohammed, unrighteous pretenders and usurpers of the sovereign power, which properly ought to have gone to Ali direct from the Prophet. For the same reason the Shites abominate the memory of the Ommayad caliph who executed Huzir, a son of Ali, and still mourn his death at its anniversary. (This most pathetic story is perhaps generally remembered from the pages of Gibbon; it should be read in its full detail in those of Ockley and Price.) The Shites likewise reject the Abbaside caliphs, notwithstanding their descent from Mohammed, because they do not claim him to be their apocryphal prophet, like Mohammed. The latter sent a messenger to him, as soon as he heard of this, to request him to reiterate publicly his profession of Islam. Mosyilim's answer was a request that Mohammed should share his power with him. "From Mosyilim, the apostle of God," he wrote, according to Abulafia, "to Mohammed, the apostle of God. Now let the earth be half mine, and half thine." Mosyilim speedily replied: "From Mohammed, the apostle of God, to Mosyilim, the liar. The earth is God's: he giveth the same for inheritance unto each of such servants as he pleaseth, and the happy issue shall attend those who fear him." Yet notwithstanding this open and avowed compromise by the Moslem powers, the former being upheld by the Persian dynasty, the latter by the Ottomans. This division between Turk and Persian on doctrine dates chiefly from the caliphate of Mothi Lilla, the Abbaside, in A.D. 365 of the Hegira, when political dissensions, which ended in the destruction of Bagdad and the loss of the caliphate of the Moslems, assumed the character of a religious war. But it may be stated here also that the Shites are by no means confined to Persia. They have indeed, in greater or lesser numbers, been dispersed throughout all the countries of the empire of the Mussulmans. They have possessed several kingdoms both in Asia and Africa. They are now dominant, outside of Persia, in half the territory ruled over by the princes of the Uzechs, and situated beyond the river Gabin; and there are some Mohammedan kings of the Indies who make profession of the Shiite faith. Mohammed's life, as presented by Shiite tradition, has been furnished in an English dress by the Rev. James L. Merrick (Bost. 1850).

V. It remains now only to mention a few of the more prominent of the many pseudo-prophets who have arisen in the bosom of Islam, drawing a certain number of adherents in the cities and among the poorer classes, threatening by this decentralization the very life of Mohammedanism, but by the Moslems themselves alleged as a sign of the purity of their creed. Christianity, they say, an improvement on Judaism, can boast of more sects than Judaism; Islam, an improvement on Christianity, can boast of more sects than Christianity.

The pseudo-prophets who have arisen have invariably either declared themselves the great Prophet's legal successors, or, utterly renouncing his doctrines, have sought to build up on the ruins of Islam. The first and most prominent among these was Mosyilim (i.e. little Moslem), who was a rival of the Prophet in his lifetime. Mosyilim belonged to the clan Ddil, a division of the tribe of the Bani Hanifah, of Yamama in Nejd. The traditions about his life and age appear to be extremely legendary. It is, however, tolerably clear that he had risen to a certain eminence in his tribe as a religious teacher before Mohammed assumed the prophetic office. The name he was known by among his friends was Rahim, the Benignant or Merciful; a term which Mohammed adopted as a designation of God himself. This word, which is Aramaic, was a common divine epithet among the Jews, from whom Mohammed took it, together with a vast bulk of dogmas and ceremonies and legends. If, however, as is supposed by some, Mosyilim assumed that name in the meaning of Messiah, "Savior," it is without foundation. Even though founded at all, his claim was denied by Mohammed in the apostleship, which is commonly denied. It was in the ninth year of the Hegira that, at the head of an embassy sent by his tribe, he appeared before Mohammed, in order to settle certain points of dispute. The traditions are very contradictory on the circumstances whether or not Mosyilim was then ready to recognize Mohammed as his spiritual leader, and as his prophet, like Mohammed. The latter sent a messenger to him, as soon as he heard of this, to request him to reiterate publicly his profession of Islam. Mosyilim's answer was a request that Mohammed should share his power with him. "From Mosyilim, the apostle of God," he wrote, according to Abulafia, "to Mohammed, the apostle of God. Now let the earth be half mine, and half thine." Mosyilim speedily replied: "From Mohammed, the apostle of God, to Mosyilim, the liar. The earth is God's: he giveth the same for inheritance unto each of such servants as he pleaseth, and the happy issue shall attend those who fear him." Yet notwithstanding this open and avowed compromise by the Moslem powers, the former being upheld by the Persian dynasty, the latter by the Ottomans. This division between Turk and Persian on doctrine dates chiefly from the caliphate of Mothi Lilla, the Abbaside, in A.D. 365 of the Hegira, when political dissensions, which ended in the destruction of Bagdad and the loss of the caliphate of the Moslems, assumed the character of a religious war. But it may be stated here also that the Shites are by no means confined to Persia. They have indeed, in greater or lesser numbers, been dispersed throughout all the countries of the empire of the Mussulmans. They have possessed several kingdoms both in Asia and Africa. They are now dominant, outside of Persia, in half the territory ruled over by the princes of the Uzechs, and situated beyond the river Gabin; and there are some Mohammedan kings of the Indies who make profession of the Shiite faith. Mohammed's life, as presented by Shiite tradition, has been furnished in an English dress by the Rev. James L. Merrick (Bost. 1850).

V. It remains now only to mention a few of the more prominent of the many pseudo-prophets who have arisen in the bosom of Islam, drawing a certain number of adherents in the cities and among the poorer classes, threatening by this decentralization the very life of Mohammedanism, but by the Moslems themselves alleged as a sign of the purity of their creed. Mohammed's life, as presented by Shiite tradition, has been furnished in an English dress by the Rev. James L. Merrick (Bost. 1850).

V. It remains now only to mention a few of the more prominent of the many pseudo-prophets who have arisen in the bosom of Islam, drawing a certain number of adherents in the cities and among the poorer classes, threatening by this decentralization the very life of Mohammedanism, but by the Moslems themselves alleged as a sign of the purity of their creed. Christianity, they say, an improvement on Judaism, can boast of more sects than Judaism; Islam, an improvement on Christianity, can boast of more sects than Christianity.
may have laid the foundation of the later Karmathian creed. See KARMATHIANS. It is extremely difficult to come to any clear notion of Mosaylima's real doctrines, as all the accounts that have survived of them come from opponents—adherents who have not hesitated to invent the most scandalous stories about him. Thus a love-adventure between Mosaylima and the prophetess Sahajah, the wife of a soothsayer of Yamīma, who is supposed to have stayed three days in his tent, is told with great minuteness, even to the ob-scene conversations that are supposed to have taken place between them during that time; the fact being that this story, which is still told with much relish by the natives, is without the slightest foundation. From the same source we learn that Mosaylima tried to deceive his followers by conjuring tricks. It seems, on the con-trary, that he was of much higher moral standing than Mohammed himself. For it is said that Mosaylina enjoined the highest chastity even among married people: unless there were hope of begetting children, there should be restriction of conjugal duty. Even the nickname "Little Molemen" given to him seems to indicate that he never preached the unity of God, or Islam, as the fundamental doctrine of faith. How far his reli-gion had a socialistic tendency, and offered less show of dignity and outward morality to its followers, or whether it rejected formalism, contained an idea of incarnation, and invested its preachers and teachers with a semi-medita-torial character, as the latest explorer of the Nejed, Mr. Patric, has shown, is without further doubt; but we must receive these conclusions, probably drawn from the information of the natives, with all the greater cau-tion, as that story of the prophetess Sahajah, whom he re-porta, after his informants, not only to have been prop-erly married to Mosaylima, but to have become, after his death, a devout partisan of Islam, and to have entered an "orthodox alliance," does not, as we have said be-fore, according to the best European authorities on Mo-saylimanism, deserve the slightest credence.

Next to Mosaylima figures prominently Al-Aamoud, originally called Alhaih, of the tribe of Aus, of which, as well as of that of a number of other tribes, he was gov-ernor. He pretended to receive certain revelations from two angels, Sabaik and Shoraik. Certain feats of leader-dom and a natural eloquence procured him a number of followers, by whose aid he made himself master of several provinces. A counter-revolution, however, broke out in 224 H, when the chief of the well-known Al-Aamoud's head was cut off: whereby an end was put to a rebellion of exactly four months' duration, but already assuming large proportions.

In the same year (11 of the Hegira), but after Mo-hammed's death, a man named Taziyah set up as a prophet. He, like his predecessor, had a very small tribe, and followers were met in open battle by Khalid; at the head of the troops of the Faithful, and, being beaten, had all finally to submit to Islam. A few words ought also to be said regarding the "Yelled Prophet," Al-Mokanna, or Borkai, whose real name is Ibrahim. He was a friend of Ibn Haaib, and Mohdi the third Abbaside caliph. He used to hide the deformi-ty of his face (he had also but one eye) by a gilded mask, a circumstance which his followers explained bythe splendor of his countenance being too brilliant (like that of Moses) to be borne by ordinary mortals. Being a proficient in jujub prestigious, which went for the power of working miracles, he soon drew many disciples and followers around him. At last he arrogated the office of the Deity itself, which, by continual transmigra-tions from Adam downwards, had at last resided in the body of Abu Moaem, the governor of Khorasan, whose secu-ence was also the last prophet. By this means, finding him growing more and more formidable every day, sent a force against him, which finally drove him back into one of his strongest fortresses, where he first poi-sozed and then burned all his family; after which he threw himself into the flames, which consumed him completely, except his hair. He had left a message, however, to the effect that he would reappear in the shape of a gray man riding on a gray beast, and many of his followers for many years after expected his re-appearance. His apperances were at first distinguished by nothing but white garments. He died about the middle of the 2d century of the Hegira. See MOKAAN.

Of the Karmathians and the Ismaelians we have spoken under their respective headings. We can scarcely enumerate among the prophets Abu Teyeb Ahmed and the Prophet of Shemtabbi, one of the most famous Arabic poets, who mistook, or pretended to mistake, his poetical in-spiration for the divine afflatus, and caused several tribes to style him prophet, as his surname indicates, and to acknowledge his mission. The governor of his province, Lafi, took prompt steps to stifle any such pretensions in the best by impressing him, and mak-ing him formally renounce all absurd pretensions to a prophetical office. The poet did so with all speed. He was richly rewarded by the court and many princes for his minstrelsy, to which thenceforth he clung exclu-sively; but the riches he thus accumulated became the cause of his death. Robbers attacked him while he was returning to his home in Kufa, there to be upon the treasure bestowed upon him by Addo10ddawia, sultan of Persia.

The last of the new prophets to be mentioned is Babi, who appeared in Amasia, in Natolia, in 1221 of the Hegira, and who had immense success, chiefly among the common people. With his own hands, he said, he would murder those who should kill him; and he found himself at the head of nearly a million men, horse and foot. Their war-cry was, God is God, and Babi—not Mohammed—in his prophet. It was not until both Christians and Mohammedans combined for the purpose of self-defence that this new and most for-midable power was annihilated. It is said that an "orthodox alliance" was entered into, and put to the sword, while the two chiefs were decapitated by the executioner. See BAABA. See WEIL, Geschichtc der Khailjien; and his Geschichte des Mo-hammademmin; Taylor, History of Mohammedanism; and the works referred to in the article MOHAMMED-

ANism.

Moharram, anything sacred or forbidden by the Musulman law. It is likewise the name of the first month of the Arabic year, before the time of Moham-medanism, and was so called because the ancient Arabs were forbidden to make war against one another during this month. The first ten days of the month Mohar-ram are called by the Mohammedans Al'mam al-niladhat, that is, the days of excommunication, because the last ten days during these ten days the Koran was sent down from heaven to be communicated to man. The last of these ten days is called Ashur. See Broughton, Biblio-th. Histor. Sura, ii, 116.

Mohdi (i.e. the Director) is the title among the Mohammedans for that descendant of Mohammed whose coming is to be one of the signs of the general resurrec-tion. Concerning this person, Mohammed prophesied that the world should not have an end till one of his own family should govern the Arabians, whose name should be like his own name, and whose father's name should also be like that of his own father. The Mohdi is to fill the earth with righteousness. The law, the Moahdi, to be now alive, and concealed in some secret place till the proper time of his manifestation; and they suppose him to be none other than the last of the twelve imams, named Mohammed Abulkasem, and the son of Hassan al-Ashkeri, the eleventh of that succession. See Broughton, Biblio-th. Histor. Sura, ii, 116. See MOHD.

Mohdi, Julius von, an eminent German Oriental scholar, was born at Stuttgart in 1800. After hav-ing studied at the gymnasiurn in that city, he entered the Protestant seminary in the University of Tubingen in 1818, received his diploma as doctor of philosophy in 1820, and won the prize in theology in 1822. His taste
for Oriental languages, which he had pursued diligently amid all the duties of his college life, induced him to remove to Tübingen, where he studied under Sylvestre de Sacy and Remusat. In 1826 he was appointed professor of Oriental literature at Tübingen, but he never occupied that chair, preferring to continue his studies, which he pursued in 1826-7 and 1830-1 at London and Oxford. In 1840 he became assistant secretary of the Academy of Inscriptions at Tübingen, and in 1843 became a member of the Academy of Inscriptions; the same year was installed professor of the Persian language and literature at the College of France; and in 1852 succeeded Burnouf, jun., as inspector of Oriental typography at the imperial printing-house. He died in 1874. More completely sought after the interests of Oriental philology. His philosophical views on the subject, together with his warm enthusiasm, have contributed not a little to facilitate and extend recent investigations in that science. His principal works are: Fragments relatifs à la religion de Zoroaster (Paris, 1829, 8vo), published anonymously. — Confœcti Chi-King, ex Latino P. Lacharme interpret. (Stuttgart, 1830, 8vo). — Y-King, antiquissimum Sinarum liber, ex Latinis interpret. P. Ropia (ibid. 1834-9, 2 vols. 8vo). — Livre des Rois, par Abdoul Kasim Firdousi (Paris, 1836-55, 4 fol.). — Firdousi's Shahnameh (ibid. 1838-66, 6 vols. 8vo); and many contributions of great value to different Oriental societies held in Paris, London, and Oxford, of which he had the honor to be a member. See Hefoer, Nouv. Biog. Générale, xxxv., s. v.; Brockhaus, Conversations-Lexikon, s. v.; Vareper, Dict. des Contemporains, s. v. (J. H. W.)

Möller, Johann Adam, one of Germany's most distinguished Roman Catholic theologians—the Schleiermacher, as he has aptly been called, of his branch of the Christian Church—was born of humble parentage, May 6, 1796, at Igersheim, near Mergentheim, in Württemberg. He received his preparatory training at the gymnasium in Mergentheim, and in his seventeenth year removed to Ellwangen and there studied at the lyceum until, in 1815, the faculty was transferred to Tübingen, and he repaired to that well-known high-school to continue his theological studies. He completed his course at the episcopal seminary in Rottenburg, and in 1819 was made priest, and became vicar of Ridlingen. He continued, however, but a short time in the pastorate. In 1820 he returned to Tübingen University, and there lectured and studied. Professed a permanent position in the university, he decided, in fact to fit himself the more thoroughly for it, to spend some time in making himself acquainted with the routine of theological courses in the universities of Göttingen, Berlin, Prague, Vienna, etc., and in consequence of this thorough preparation, so successfully that his engagement that in 1826, though still very young, he was made extraordinary professor, and only two years later, shortly after receiving his doctorate in divinity, was honored with the full or ordinary professorship in Church history and patrology. This position afforded him a controlling influence over the Roman Catholic young men studying with a view to the priesthood, and he aimed to awaken among them, by the description of great ecclesiastical characters of the early Catholic Church, such as Athanasius and Anselm, a spirit of speculative inquiry in the sphere of faith and in connection with ecclesiastical fellowship; and he also renewed the old confessional controversy on the principles of the Protestant and Roman Catholic creeds by the publication of a work on Symbolism, in which the Reformation, though much of the Protestants' labor is stamped with the stamp of error by unjustly stamped, in contrast with an ideal Roman Catholicity, as a mistake. This book came not only to be regarded as a remarkable work, but actually fixed the attention of the whole theological world upon him; and it has been well said that "his reputation, both posthumous and among his own contemporaries, rests mainly on his Symbolik" (in English entitled Symbolism; or the Doctrinal Differences between Catholics and Protestants, as represented by their Public Confession of Faith, translated by J. R. Robertson, 2 vols. London, 1843; New York, 1844; and since republished). D'Aubigné pronounced it "one of the most important writings produced by Rome since the time of Bossuet" (History of the Ref., iv, 325). It was first published in 1822, passed through five editions in the year it appeared, and was circulated into all the leading European languages, and drew forth numerous criticisms and rejoinders from the Protestant world, of which the most important are: Bauer, Gegenstand des Katholizismus u. Protestantismus, nach den Prinzipien u. Hauptsagen der beiden Lehrgründe (Tub., 1834, 8vo); and Protsantismus und Catholicismus der Móläber (in Studien u. Kritiken, 1834-55, and later separately reprinted); Marheineke, Rezension der Möllerschen Symbolik (in Jahrb. für wissenschaftl. Kir. Berlin, 1889). To these—particularly, however, the attack by Bauer—Möller replied in his Neue Unter- suchungen der Lehrgesetzsäte (München, 1834; 2d edit. 1835). The polemical bitterness evoked by these controversies made it desirable that Möller should leave Tübingen, where Bauer then also lectured; and after refusing various positions proffered him by different celebrated German universities, he accepted in 1856 a professorship at Munich, where he lived in the reign of King Louis. Möller's first appointment was nominally the chair of Biblical exegesis, but he really devoted himself to the department of Church history, in which his opening course was eminently successful. His uninterrupted and severe labors, however, had taxed him to the utmost, and, after refusing to accept a renewed and very tempting offer from Rome, he reluctantly consented to change his place at the university for the deanship of Würzburg, which the king had urged upon him. Shortly after appointment to this new position he was completely prostrated, and died of consumption April 12, 1858. Möller is not only generally acknowledged to have been a good and honest man, but is universally recognised as the greatest theologian the Roman Catholic Church has produced since Bellarmine and Bossuet. He was certainly the most acute and the most philosophical of the modern controversialists of his Church. He helped Romanism again to self-consciousness, and breathed into it a new polemical zeal against Protestantism; although he betrayed the influence which the study of Protestant theology, especially that of Schleiermacher, and of modern culture generally, had exercised on his own idealistic apprehension and defence of the Roman dogmas and institutions, instead of attempting to discuss the scholastic or original traditions of the peculiar doctrines of Roman Catholicism, but rather devoted himself to the exposition of the points and the grounds of the doctrinal differences of modern sects; yet all his writings have more or less to do with the historical sphere, particularly with the history of doctrines, and are remarkable for their freshness of spirit and a vigorous and animated style. Says Hagenbach (Ch. Hist. of the 18th and 19th Cent., ii, 440), "Whatever vital vigour is possessed by the most recent Catholic theological science is due to the labors of this man, who was cut off early in the midst of his labors." He sent rays of his spirit," says Kurz (Ch. Hist. from the Reformation, p. 891), "deep into the hearts and minds of hundreds of his enthusiastic pupils by his writings, addresses, and by his intercourse with them; and what the Roman Catholic Church of the present possesses of living scientific impulse and feeling was implanted, or at least animated, by his hand. In the "Symbolik" combats Protestant doctrines with the weapons of Protestant science, and silently ennobles and sublime the doctrinal differences of the Roman Catholic Church. Did the Protestants up to this time generally despise or ignore the contributions of Roman Catholic theologians, here a scientific power of the highest significance approached
them, to despoil which would have been a sign of weakness, for in the long run the opposition had existed between both churches, no work from the camp of the Roman Catholics produced as much agitation and excitement in the camp of the Protestants as this. Yet no work produced by a Romanist has been of greater service than this polemical. Written after a thorough study of the subject, it has gathered a mass of material invaluable to the Protestant student, and in this Cyclopedia we have not unfortunately referred to Moll’s "Symbolic" with great pleasure. The other principal works from Moller’s pen are: Die Einheit in der Kirche oder das Prinzip des Katholizismus (Tubing, 1855, 8vo; translated into French by Ph. Bernard):—Akhamasius d. Grose v. d. Kirche seiner Zeit im Kampfe mit dem Ariannismus (Mayence, 1827: 2d ed. 1844, 8vo; translated into French, Paris, 1841, 3 vols. 8vo) :—Patrologie oder christliche Literaturgeschichte (Ratisb, 1839, 2 vols. 8vo; translated into French by Cohen, Paris, 1842, 2 vols. 8vo). His Nachgelassene Schriften were published by Döllinger (Ratisb, 1839-40), and his Patrologie oder Christl. Literaturgesch. by Reithmayer (Regensburg, 1869). See Beda Weber, Charakterbilder (Frankf, 1853): D. F. Strauss, Kleine Schriften etc. (Leipsic, 1862); Hare, Vindication of Luther, p. 167-189; Schaaff, Hist. of the Apostol. Ch. p. 60; Fouilhoux, Divisions in Christendom, vol. 1, § 58, &c.; Gough, Polemic; Gesch. of Katholizismus; and particularly the biographical sketch preceding the 5th edition of the "Symbolic." See also Hoefer, Nouv. Biog. Générale, xxxv, 734; Herzog, Realenzyklop., lx, 662; Bibli. Socr., Jan., 1850, p. 61; English Rev., ii, 7; Christian Examiner, xxxvii, 119; Brit. and Am. Rev., July, 1865, p. 591.

Mohini, Gottlieb Christian Friedrich, a German clergyman, of note, was born in Grünem, in Pomerania, in 1781; studied theology at Greifswalde and Jena; in 1811 became rector of the city school at Greifswalde: in 1813 entered the pastorate, and gained a name universally honored and revered. He was made councillor of the Consistory after having removed to Stralsund about 1830, and died July 6, 1841. Besides several secular publications, we have from his pen Ulric Hufthen’s Jugendleben (Greisf, 1816) :—Hymnologische Forschungen (ibid, 1831-32, 2 vols.).

Moine, Étienne le, a very learned French Protestant minister, was born at Caen, in October, 1624, and became well skilled in the Oriental and classical languages, besides attaining great distinction as a theologian even while yet a student at the celebrated Bibli-

nary Semi and the University of Leyden. After his graduation he was appointed pastor at Rouen, and rapidly rose in favor with his brethren. For political reasons he was imprisoned for a short time, and upon his release negotiated for an appointment at his Dutch alma mater, where he was finally appointed a professor, and successfully taught for some time. He was honored with the rectorate, and in various other ways, and his learning was acknowledged even in England. Oxford University conferred the doctorate of divinity on him in 1677. He died at Leyden April 4, 1689. Several dissertations of his are printed together, and entitled Oeuvres complètes (Leyden, 1685, 1686, 1691). He also wrote other works, but none of them are now of any value. See Hoefer, Nouv. Biog. Gén. s. v.

Moira (Μοίρα, a share), the classical personification of that mysterious yet irresistible power whose invincible sceptre controls and directs human events, and assigns to each individual his fate or share. Homer, with a single exception (I. xxiv, 29), speaks of but one Moira, the personification of fate, whose function it was to spin the thread of each man’s life, and though counselling with the other gods, yet as having supreme authority in directing and controlling the fate of each individual, and yielding obedience only to Zeus. Hesiod, liv- ing a little later, distinguishes three Moires, and names them as Clotho, or the spinning fate; Lachesis, or the spinning fate; 

MOIRA •

out who assigns man his fate; and Atropos, or the fate that can be told, or who assigns man his fate. But the whole system of Zeus and Thetis, a genealogy from which later writers differ. Other mythographers picture Clotho as holding the distaff, and ever furnishing the present; Lachesis, twirling the spindle, lays out the future; and Atropos severs the past by cutting the thread with her fatal scissors. The representations of the character and nature and manner of the Moires, as well as their power, appear curious, may, for our purpose, be classed in two divisions: 1st, those in which the Moire are but allegorical representations of the duration of human life; 2d, those in which the Moire are considered strictly as divinities of fate. As used in the first sense, it is supposed that the Moire, by their peculiarly connected and sublimated character, put on further consideration of her nature and attributes adopted the idea of two, representing life’s two boundaries of birth and death. Ultimately the number became three, and personified past, present, and future. Considering the Moire as strictly divinities of fate, they are viewed as independent, meting out individual destinies in accordance with eternal laws which show no variations or exceptions. The gods as well as mortals are subject to their authority, and even Zeus is sometimes represented as powerless to annul their decrees. Often, however, Zeus is pictured as in the background, looking out power to them, and interfering with their decrees; and it is said that his fate is confined to those with whom he is angry. This twofold view of the Moire, considering them sometimes as possessed of supreme power, and issuing irrevocable decrees, and at other times as interfered with and overruled by Zeus, is easily accounted for in the vain attempts of uninspired man to harmonize the seemingly inconsistent meting out of fate. By this means the ancients were enabled to interpret, satisfactorily to themselves, the varying freaks of fickle fortune, and account for apparent favoritism and injustice. It proved a magic key to open the mysteries of the dealings of Providence, and shifted the burden of human complaints from the shoulders of their beloved Zeus to those of the hated Moire, while all the praise for sudden prosperity or escape from danger and death was given to Zeus for his kindly interference with the will of the fates. Without the aid of this double view of the relationship existing between Zeus and the Moire, the Greeks could see in the strange events of national and personal history naught but the workings of an imperfect divinity; but with this explanatory means they were enabled to clothe Zeus with a robe interwoven with threads both of justice and mercy. For the sake of conceiving a blameless divinity, they were willing even to admit the occasional absence of supreme authority. Like the Etherei who with whom they are often confounded, the Moire differ singularly from all the other gods in that they have no sympathy whatever for man, their iron scepters never being wielded by the hands of mercy. Yet they were worshipped in many parts of Greece, and had sanctuaries at Corinth, Sparta, Olympia, and Thebes. The ancient artists and poets give us many fanciful pictures of the Moire. The earliest of the former represent them as goddesses holding staffs or sceptres in their hands as emblematic of their dominion. In later works of art they form a tripod of grave thought beautiful maidens: Clotho holding a spindle or a roll (the book of fate); Lachesis pointing with her staff (to the globe; while Atropos holds a pair of scales, a sun-dial, or some cutting instrument. By the poets they are sometimes pictured as aged and decrepit women, typical of the slow and often sorrowful march of fared events, and the various epithets applied to them are not so much the outbursts of human hate as poetical pencillings of the severity, inflexibility, and sternness of fate. See Vollmer, Mythol. Wörterbuch, s. v.; Smith, Dict. Greek and Roman Biog., and Mythol. s. v.; Wright, Classical Mythol. s. v.; Grote, Hist. of Greece, iv, 187 sq. (H. W. T.)
MOISE, FRANÇOIS XAVIER, a French theologian, was born at Arès, in Franche-Comté, in 1742. He was professor of theology at Dôle before the revolution broke out, and took the oath of loyalty to the civil constitution, in 1791 was elected bishop for the Jura district. During the reign of terror he had to conceal himself in the mountains. But being a learned canonist, and conversant with theology and the Levantine languages, his country needed his services, and he was called out to take a prominent part in the disputes which marked the national councils held in Paris during the years 1797 and 1801. At the expiration of the latter year he resigned his sacerdotal functions, together with abbe Grégoire, with whom he was intimately acquainted, left Paris soon thereafter, and retired to his first Séminaire at Besançon. Bishop Lecoz de Metz having prepared upon him the title of honorary canon of Besançon. Moise died at Morteau in 1813. He wrote: Réponses critiques à plusieurs questions proposées par les incrédules modernes sur divers endroits des Écritures Saints (Paris, 1788, 1801).—De l'Opinion de M. Grégoire dans le procès de Dôle (1797), together with some articles in the Annales de la Religion, La Chronique Religieuse, etc.

Mokanna (i.e. the Concealed) is the name of a Mohammedan prophet who flourished about A.D. 778. He was so called because, as the Mohammedans say, "he shrouded from his followers the excessive glory of his human face divine with a golden mask." He was the first who introduced into Islam the doctrine of the transmigration of souls. Mokanna taught that God had assumed a human form, had commanded the angels to adore the first man, and from that time the divine nature had descended from prophet to prophet to Abu Molem, the founder of the Abasesides, and finally to himself. He afterward declared the Incarnation of the Logos to be the incarnation of the human and divine nature, as well as the metempsychosis adopted by the Ghullats. See Maden, Hist. of the Turkish Empire, ii, 163. See Mohammedan Sects.

Moket, Richard, an English theologian, was born in Dorsetshire in 1578, and was educated at Oxford University, of which he finally became fellow and doctor, distinctions that opened to him several prominent positions, of which he finally accepted that of provost of All-Souls' College, Oxford. He was also appointed one of the royal commissioners to supervise ecclesiastical affairs. He translated into Latin the Liturgy, sundry catechisms, the constitution, and several other instruments of the church, and a document relating to the Church of England. In order to distribute them as models worthy of imitation by foreign Church establishments. The collection was printed at London (1616, folio). But it had hardly been given to the public when theologians and schoolmen raised such a hue and cry against the work as finally consigned it to the fire. According to Heylin (Life of Laud, p. 70), this proscription was due solely to the unintentional omission on the part of the hapless translator of one of the prerogatives of the English Church. The whole edition of his work was utterly destroyed. One of the treaties which it contained—De Potestate Montis Aeterni Lucem loco subcomitum London, 1683, 8vo. Moket died at Oxford in 1616. See Wood, Athenae Oxoni.; Hoefer, Nouv. Biog. Générale, s. v.; Allibone, Dict. of British and American Authors, s. v.

Möl, Peter van, a Flemish painter, was born in Antwerp in 1590. He was a pupil of Rubens, and painted, in the style of his master, many noted works for the churches of Flanders and Brabant. In the cathedral of Antwerp is his Adoration of the Magi, which is a superior work. Another remarkable work by him was in the gallery of the Louvre, representing Christ after the Crucifixion, with the Marys, Joseph of Arimathea, and John. The time of his death is unknown. See Spooner, Biographical Hist. of the Fine Arts, ii, 594.

Mola, a term derived from the monumental immolation of Christ, alludes to the middle of an altar, signed with the dedication cross, and covering the sepulchre of relics.

Mola, Giovanni Battista, a French painter of the Bolognese school, was born about 1629, and was a scholar of Albano. He copied a vast work of Paul Veronese for cardinal Bichi. Lanzi gives but one example of his works from the collection of the marchese Rinuccini, at Florence, the Reposo in Egypt. Mrs. Jameson mentions by him the Louvre, in which the Virgin watches with upturned eyes while Joseph and the Child sleep. Mola died in 1651. See Lanzi, Hist. of Painting, transl. by Roscoe, iii, 92; Mrs. Jameson, Legends of the Madonnas, p. 241.

Mola, Pietro Francesco, an eminent Italian painter and architect, was born in the diocese of Como in 1612. He studied successively under Giuseppe Albano and Guercino. In his earlier life the works of the latter master were greatly admired by him, but subsequently he went to Venice, where he devoted himself to Titian and Veronese. From the result of this course of study he formed a style peculiar to himself, combining parts of all those from whom he had studied, and his fame spread all Italy. He was brought to Rome in the pontificate of Innocent X, by whom he was immediately employed in executing numerous works, among which are St. Peter delivered from Prison by the Angel and the Conversion of St. Paul, in the chapel of the church of Del Gesù. He was also patronized by pope Alexander VII, for whom he painted a pontifical throne of Monte Cavallo, his most celebrated work, Joseph making himself known to his Brethren. At Milan are two of his most admired productions, in the church of St. Maria della Vite, St. John in the Wilderness and St. Paul the Hermit. Mrs. Jameson mentions several works by this artist, among which are Jacob wrestling with the angel, the Marriage of King David and Rachel, and the Baptism of Christ, in which an angel is disrobing the Saviour. Mola died suddenly at Rome in 1668, while preparing to set out for Paris, whither he had been invited by the king of France, who had appointed him court-painter, with a liberal pension. See Lanzi, Hist. of Painting, transl. by Roscoe, i, 402; ii, 553; iii, 92; Spooner, Biographical Hist. of the Fine Arts, ii, 574; Jameson and Eastlake, History of our Lord, i, 151, 153, 297.

Mola'dah (Heb. Molodah', מולם), מֹלְדָּא (in Nehemiah 7:55, birth; Sept. Molada; v. r. Mola'ad, etc.), a city in the southern part of the tribe of Judah towards the Edomitic border (Josh. xv, 26), which fell within the portion set off to Simeon (Josh. xix, 2; 1 Chron. iv, 26). It was also occupied after the exile (Neh. xi, 26). Rehob (Palest. p. 901) thinks it was the Molod (Mølod in 2 Chron. ii, 6) as a castle of Iudæa, to which Agrippa retired in chagrin after his return from Rome. Eusebius and Jerome (Onomast. s. v. Αργόνη) allude to it (Μαλονή) as a place four Roman miles distant from Arad, which latter they describe as an ancient city of the Amorites situated in the wilderness of Kadesh, and twenty miles from Hebron, on the road to Aila (see Reelast, Palest. p. 985). At a later period Malatha became a Roman colony (Reeland, p. 231). Dr. Robinson (Researches, ii, 621) finds the locality in the present el-Milk, first observed by Schubert, POT. und SYR., i, 194; consisting of three or four huts with a well, situated at the required distance from the site of Arad (comp. Schwartz, Palest. p. 100). The present name, signifying "salt," has little affinity with the Heb. appellation, but may be a corruption of it (Wilson, Lands of the Bible, i, 346; Van de Velde, Memoir, p. 358; Ewald, Gesch. der Volker, ii, 55). Tristram, History of Israel, p. 869 sqq.; Stewart, Tent and Khan, p. 217.

Molana, Philebert de, founder of the Order of St. George, was born at Molana, France, and flourished
in the 14th century. He belonged to one of the oldest families in the country. The duke of Burgundy, Philip the Good, who had made him his private secretary in his service as equerry, later followed his master to the Holy Land, and was very useful to him. In return for his efficiency, the duke appointed him general inspector of the ducal arsenals. Molanus afterwards went again to Palestine, and is said to have brought back the remains of one St. George, par excellence of St. George, relics to the church of St. George, which instituted special services in honor of them. In 1390 Molanus established an order under the inspiration of the alleged martyr. In order to become a member of this association one had to be a native of the duchy or county of Burgundy, and show not less than sixteen quarters on his shield. Each cheerfully undertook that George had to take a vow to devote his life and fortune to the vindication of the Roman Catholic religion, and the protection of the oppressed, the virgins, and the orphans. The distinctive badge of the order was a gold image, suspended from a blue ribbon, and representing St. George slaying a dragon to the ground. Although this society had a purely moral aim, the Besançon Parliament persistently declined to legalize it. The Order of St. George continued in France until the Revolution. Historians are not agreed as to the place and date of Molanus's death. The latter part of his life was shrouded in mystery and legend. Great Latin, Greek, and Russian have each, in turn, created an Order of St. George. See Thomas Varin, Ente de l'illustre Confé- dération de Saint-Georges en 1663; Pointier de Gouelans, Statuta de l'Ordre de Saint-Georges, with the list of the Chevaliers de 1850 (Besançon, 1768, 8vo); John Miller, Historical and Critical Inquiry into the Existence and Character of St. George; Heylin, History of St. George.

Molanus, Gerhard Welcher, a German Lutheran theologian, was born at Hameln, on the Weser, Nov. 1, 1633. He studied at the University of Helm- stadt under Calixtus (q. v.). In 1659 he became pro- fessor of theology in the University of Rinteln, but in 1664 was made extraordinary, and soon after ordinary professor of theology in the same university, which position he retained until 1677. In the mean time he published various works, partly mathematical, partly theological. Among the latter we notice De communicione ac distributione sacramentorum, qua intus alia ostentatur humanam Christi naturam extrinsecus omnipotentem appellari possit (Rinteln, 1665), quite in the manner and method of Calixtus. In 1674 duke John Frederick of Hanover appointed him director of the consistory for that province, and in 1677 he became abbot of the convent of St. George, where he held the office until his death in 1698. The conclave union conferences with the Reformed and Roman Catholic theologians, and, although without success, he acquired the well-earned reputation of a peace-maker. This was especially shown in his efforts in behalf of the French Reformed, whom the revocation of the Edict of Nantes had driven to seek refuge in Germany. But John Frederick, who had himself returned to Romanism, wished to induce Molanus to follow his example, but the latter withstood all his offers. Having, in his efforts for a union with the Romish Church, come in contact with Bossuet, Molanus conceded that the Eu- charist and other sacraments properly did sacrifice: also that "de conciliis ecumenicis legitime celebratis dico: Christus nuncuparetur permitted us ecclesias universalis in concilio aliquid fidei contrarium pronuntiat," etc. Yet he would not recognize as "legitimum celebratum" the Council of Trent, which had condemned the Protestants without a hearing, and which was not universally recognized in the churches. Molanus was accused of having gone over to Romanism, and therefore published in his defence Mijn eenele z. & refstal. coloni- man. (etc.) (1698). He died Sept. 7, 1722. See J. v. Esen- nem, Leben G. W. Molami (Magdeburg, 1724, 8vo); Kapp, Sammlung einzige Briefe über d. Vereinigung d. luth. u. vorg. Theol. (Leips, 1746, 8vo); Schlegel, Kirchengech.
d. 19th Jahrh. i, 559 sq.; ii, 218 sq; Schröck, Kirchen- geschicht. viii, 63, 108 sq. (J. N. F.)

Molanus (Vermeulen), John, a Belgian theologi- cian of some note, was born at Lille in 1538. He was educated at Louvain, and there obtained the doc- torate in 1570, and then taught theology for several years. By different publications he called attention to his learning, and gradually gained favor at the court and at Rome. He was made a canon of the church of St. Peter, and director of a seminary then founded at Louvain. He died Sept. 16, 1585. Baronius pays him great honors in the preface to his Monarchica Romana. Molanus published: De Pictoria et Imaginibus sacris (Louvain, 1570, 1574, 1595, 8vo): — De Historia sacrarum Imaginum et Picturarum, lib. iv; Thesaurum de peintres, sculpteurs, et dessinateurs (Paris, 1765, 12mo): — Annales urbis Louvainae ac obitiorum illius historia (Louvain, 1572, 4to): — Calendarium Ecclesiasticum (Anvers, 1574, 1570): — De foed ereticar servandis, lib. iii: quarum item de fide rebellivus servandis, et quin- tua de fide ac Juramento qua e tyrannis exiguatur (Colo- gnum, 1584): — De pissa Testamentis (Cologne, 1584, 1661, 8vo): — Thesaurum praecipue Compendium (Cologne, 1585, 1590). Molanus also published: II. de aegri Dei, de decernis damalis et de decernis recipiendo (Cologne, 1587, 8vo): — De Cononicis, lib. iii (Cologne, 1587, 8vo): — Militia sa- crae Dacum ac Princium Brobantia cum annotat. Petri Loureii (Anvers, 1592, 8vo): — Medievalium ecclesiastici- cum Diarium (Louvain, 1595, 8vo): — Bibliothece materiariae Thesaurorum quae quibus angustiorium, quam antiquius, tam antiquioriorum, et pertinaciorum (Cologne, 1618, 4to).

Molay, Jacques de, the last grand-master of the Knights Templars, was born about the year 1244 in Burgundy, of the family of Longvic and Raon. He was admitted to his order at Baune, in the diocese of Au- tum. Of his subsequent history but little is known unti- l he was promoted to the grand-mastership about the middle of the 14th century. In the year 1307, during the invasion of France by the English, it was said that he did not obtain his election by his own merits, but through the intrigues of the nobility of France. If this were true it might account for the suspicions and fears which animated Philip IV, against the establishment of the Order of the Temple in France just at this time, when monarchy was endeavoring to reassert itself on the political abasement of the Church and the feudal lordships. But there is nothing to prove this assertion, for it is difficult to conceive how the nobility of France could influence an election contested at such a dis- tance. The affairs of Christianity in the East were at this time in a grievous condition. Most of the great towns had fallen into the hands of the Mohamme- danos. Many of the last defenders of the Cross had perished. One of the most illustrious grand-masters of the order had recently died. Syria was lost to the Chris- tian arm, and the Templars and Hospitallers had taken refuge in Cyprus and Tortosa, whence they invoked the aid of the Holy See, the princes and people of Europe. All Europe being engaged in great internal contests — monarchy and feudalism and the Church arrayed against each other — help was looked for in vain by the poor Christians of the East. Besides, the Cross had not fallen in Palestine without embit- tering numbers against the cause, leading many to say: that men should not persist in a contest which God himself had abandoned. Jacques de Molay, however, had no sooner been put at the helm than he went for- ward with his task. He did not wait for succor from Europe, but endeavored to derive some benefit from the project. He sent the last of the Templars to seek the aid of the king of Italy, France, and Syria; so that in the spring of 199, when the grand khan assembled a powerful force, Jacques de Molay commanded one of the wings of the Tartar army. With the troops confided to him he invaded Syria, and subsequently, under the conduct of the Tartar general, recovered Jerusalem from the infidels. This unexpected
ed event was received with delight by the Christian world. The Mogul Tartars, counselled doubtless by some of the Christian chieftains, sent ambassadors to Europe, in the person of the kings of France and England, urging them to engage in a new crusade, which should strike a final blow at the Mohammedan power in the East. But the Tartar messengers had scarcely returned before reverses and treason had destroyed the army of the grand khan. Jerusalem was lost in 1099, and the Templars under Jacques de Molay were engaged to re- tire to the island of Tortosa, near Tripoli, whence they could simply watch and harass the movements of the enemy. But in 1302 they were finally surprised and defeated, and the grand-master, with those that re- mained of the order, took refuge in Cyprus, now and then in Egypt, by sufferance of the Mohammedans. The brother and successor of the grand khan still looked for aid from Europe, and even approached the pope, but the replies were evasive. Philip IV, in his attempt to check the feudal power and all ecclesiastical control, feared that the papacy might recover, in an institution like that of the Temple, the military force it needed to defend its theocracy. He dared leaving to the nobility an order so entirely filled with its members and benefits, and an organized constit- ution as a means of rallying and defence; for the Temp- lars had become in almost every kingdom of the West a formidable republic, governed by their own laws, ani- mated by the passion of the spirit, by the sacred spirit of javelin internal discipline, and an all-pervading organization; independent alike of the civil power and of the spiritual hierarchy; possessing fifteen thousand of the bravest and best-trained soldiers in the world, armed and ac- counted in the most splendid fashion of the time, ready at the summons of the grand-master to embark on any service, their one aim being the aggravishment of the order. Philip, fearing the strength and the wealth of the order, claiming allegiance only to the pope, as the supreme head of the Church, and greatly desirous of possessing their lands, munitions, arms, ships, and treas- ures, determined upon its destruction; but, lest his in- fluence might be overpowered in an open contest, he re- solved to make the pope his instrument. A new crus- ade, he saw clearly, would only revive religious pas- sions favorable to the Holy See, and render necessary, inviolable, more important, and more powerful still, the recognition as a definite order, not only in the pope, and the opening of a new crusade. June 6, 1306, Clement V summoned the grand-masters of the Tem- plars and Hospitallers to Europe, under pretext of con- sulting them in regard to the proposed crusade, and some previously advanced plans for uniting the two or- ders of Templars and Hospitallers. Promptly Molay re- fused to come; the grand-master was, in his opinion, was not of a nature to stifle the ambitious designs of his enemies. With sixty of the most distinguished knights of the order and a vast amount of treasure, he made an ostentatious entry into Paris, August, 1306, where he was received by the king with great courtesy. In the Molay had been of a less generous and unsus- picious character, he would have understood that every motive that influenced Philip was concentrated in great intensity against his order. The grand-master, lured into security by the apparent kindness of the French king, proceeded to Poitiers to pay his allegiance to the pope, and to present two memorials drawn up by him- self, relative to the state of affairs in the East, and the projected union of the different existent military orders, which he opposed on the ground that by such act their power would only be augmented, and thus consequently provoke greater envy, of which even now there was more than enough; and, so far from suppressing pre- vailing jealousies among the knights, it would only emblitter the strife among the brethren, and cause more frequent collisions. He begged the pope to examine into the sinister rumors which had spread abroad concern- ing the faith, morals, and secret mysteries of the order; for they had been accused of treachery, murders, (dola- tory, Islamism, and many other) villainies; and demanded an inquiry. In order to accomplish this, they might receive public absolution; if culpable, suffer condemnation. Under these pretenses, Philip strongly urged the pope to proceed against the Temple, and the latter, finally yielding to the king's importunity and threats, inaugurated the investigation, and sent to Philip for all possible information. Philip affected to take the request for information as a permission to proceed against the order himself. Accordingly, on Oct. 13, 1307, every Templar in the realm was made a prisoner. Jacques de Molay was seized in the house of the Temple, and summoned before the Inquisition of France, Oct. 24, 1307. According to the report of his interrogatory, he was accused of having been guilty of other crimes. Confession was bribed out of some by offers of indulgence; wrung from others by the dread of torture, or by actual torture. The pope, enraged by the king's liberty, suspended the powers of the inquisitor, and forbade the bishops to con- tinue their proceedings against the Temple. Philip IV simulated ready and complete submission; but at the same time he urged all the princes of Europe to follow his example, endeavored to embitter the French against the Templars, and finally invented a circular letter from the grand-master to all the brethren and subjects in prison, advising them to change the order. Aug. 20, 1308, Jacques de Molay himself was subjected to a second examina- tion by a special commission of cardinals and agents of the king; but as the commission proved very treacher- ous in their conduct towards him, he finally tired of the proceedings, and demanded that he be brought before the Roman pontiff; "for," said he, "to the pope alone belongs the power of judging the grand-master of the order, and to his judgment I refer." March 2, 1310, he was again summoned by the papal commission, but per- sisted in his determination to be judged by the pope only. While the papal commission was still in session, Philip IV, tiring of their slow progress, and fearing that the power of the Temple was not yet crushed, sum- moned fifty-four more of the Templars before a council at Paris, and caused them to be burned the same day, May 11, 1310. The pope now became anxious for his own authority, appointed a new commission to hasten the proceedings, and by a decree of Innocent IV, June 23, 1243, the order was by it condemned to death. Just as the final sentence was about to be pronounced, De Molay arose, and in a calm, clear voice thus addressed his judges: "Before heaven and earth, on the verge of death, where the least falsehood bears like an intolerable weight upon the soul, I protest that we have richly deserved death, re- cognizing that our crimes have not been without the benevolence of any heresy or sin of which we ourselves or our order have been guilty, but because we have yielded, to save our lives, to the seductive words of the pope and of the king; and so by our confessions brought shame and ruin on our blameless, holy, and ortho- dox brotherhood. The cardinals stood confounded, the people could not repress a profound sympathy, and the assembly was hastily broken up to meet another day. But the king, who had been informed of all, or- dered the grand-master to be burned immediately. He was led forth to the flames, a feeble old man, loaded with fetters, bent and whitened by age and captivi- ty. He sustained his sufferings with perseverance and resolution, protesting to the end in favor of the innocence of his order, and persisting bravely — the last champion of Christianity against the Orient, the last liberator of Jerusalem, the last grand-master of the Temple. MOLCHO

MOLCHO, SOLOMON, or DENG P'IN-shæ, as he was called when a Marano. He was *Christening" born about A.D. 1501 in Portugal. He not only received a liberal education, which enabled him to hold a state office as "escrivão aos ouvidores na casa da suplicação," but was probably also made acquainted in his childhood with Hebrew and Talmudic lore, as he is the author of a Hebrew work and a synagogue poem written in the Amharic tongue. Molcho, or Dunggoz, Poetar (p. 534). About this time a man named David Ruben appeared in the court of the king of Portugal. He announced that he had come from India, and was sent by his brother, the king of the Jews, to propose an alliance in order to recover the Holy Land from the Mohammedans. He was received with great kindness and believed in him. He passed through Spain, where he was made many prosetyes; into France to Avignon, and into Italy. He inscribed banners with the holy name of God. In many cities—Bologna, Ferrara, Mantua—numbers believed that he was commissioned to be the leader of the army of Israel. He even had an interview with pope Clement VII. Coming to Portugal, Molcho sought his acquaintance in order to find out whether his visionary revelations, which had all Messianic background, were in harmony with Ruben's commission. The latter treated Molcho very coolly, and told him that his military commission had nothing to do with his message. He was a prophet of a new branch of science. Molcho, however, misunderstood Ruben, believing as he did that this prince and would-be Messiah would have nothing to do with him since he had not the seal of the covenant, and he thus apostatized to Judaism, performing the rite of circumcision himself, which operation became to him the cause of a severe sickness. When Ruben was acquainted with this fact he was very angry, and feared that he might be suspected as the author of Molcho's apostasy. The Jews relate that Molcho was utterly ignorant while he was a Christian; but immediately on his circumcision "the Lord gave him wisdom, and he became wiser than all men in a very short time, and many wondered at him." His preaching was of such an inspiring eloquence that the Jews believed it to be dictated by angels. He preached Judaism before kings; even pope Clement VII admitted him to an audience, and gave him the privilege to dwell wherever he would. Solomon Molcho seems to have been penetrated by his apocalyptic rhapsodies (pages of them may be read in the Chronicles of R. Joseph ben-Joashua ben-Meir, the Sephardi, ii, 152-189) without restraint. Bishops and princes—the bishop of Ancona and the duke of Urbino, Francesco Maria della Rovere I—from credulity, curi-osity, and fear, came to see him and hear him. Two of his prophecies, inundations of the Tiber in Rome and earthquakes in Lisbon, could hardly fail of accomplishment (the former took place October 8, 1580; the latter, January 26, 1581). But he came to a woful end. He attempted to convert the emperor Charles V. at Ratisbon; but Charles was hard-hearted, and ordered him to be put in prison with his friend Ruben, whom he met after he was obliged to leave Rome. When peace was restored with Solymann the Turk, the emperor bestowed himself to Italy, and both prisoners were con-veyed to Mantua. Molcho, who was an object rather for a lunatic asylum than the stake, was condemned to be burned as an apostate Christian. "With a bridle on his jaw-bones to prevent his speaking to the people," as the Jewish chronicle relates, "they brought him out, and all the city was moved about him, and the fire burned before him. And one of the nobles of the em-peror said, 'The bridle which you have put about my neck, I have a message unto him from the king;' and they did so. And he said unto him, 'The emperor hath sent unto thee, saying, 'If thou turn from thy ways, shalt thou not be accepted and live?' And he will maintain thee, and thou shalt be accepted; and if not, evil is determined against thee.' But he answered like a saint, like an angel of God, and said, 'Because I walked in that which is my heart is bitter and grieved; and now what is good in your sight do, and thy soul shall return unto the Father's house as in its youth, for then it will be better with it than now.' He was cast into the fire, and the Lord smelled the sweet savour, and took to him his spotless soul, and is with him as one brought up with him, rejoicing always before him. The Church of the Sephardi, p. 178. And the Jews believed that the fire had no power over him, and that he departed—God only knows whither. Comp. MOLDAVIA and WALACHIA, two states forming the so-called Danubian Principalities, but since December 23, 1861, united under one prince and administration, are now officially bearing the name Roumania. We here treat them separately in this article, as this is the custom generally among geographers.

1. MOLDAVIA (Ger. Moldau, Tur. Bogdan or Kera-Eladak) is bounded on the N. and E. by Russia, on the S. by Wallachia and the Danube, and on the W. by the Austrian empire. Greatest length from north-west to south-east, 290 miles; greatest breadth, 182 miles; area, 20,118 square miles; population about 1,500,000. The country forms, geographically, part of the great undulating pastoral plains or steppes of South Russia, except towards the west, where spurs from the Carpathians give it a somewhat mountainous character. It is watered by the Pruth, the Serech, and the Danube, and is almost everywhere fertile. The forests of Moldavia are also of great extent and importance. But the riches of the country consist mainly in its cattle and horses, of which immense numbers are reared on its splendid and far-stretching pastures. Swine and sheep are also numerous; and the rearing of bees, owing to the multitude of lime-trees, is extensively carried on. The great plagues of the land are locusts and earthquakes. Minerals and precious metals are said to be abundant, but they have not as yet been worked. The capital is Jassy, but the great centre of trade is Galatz. The principal exports are wool, lambkins, hides, furs, wax, timber, sulfur, and salt (in blocks); the imports are chiefly the manufactured products of Western Europe.

2. WALACHIA, the larger of the united Danubian Principalities, is bounded on the N. by the Austrian empire and Moldavia, on the E. and S. by Russia, and on the W. by the Austrian empire and the Danube. Length from the western frontier to Cape Kaliakra on the Black Sea, 365 miles; greatest breadth, 130 miles; area, 27,380 square miles; population about 4,000,000. The greater part of Wallachia is quite flat; but in the north, where it borders on Hungary and Transylvania, it gradually rises up into a great mountain, tall, impassable in all but five places. It is destitute of wood throughout almost its whole extent, and (especially along the banks of the Danube) is covered with marshy swamps miles upon miles in breadth. The principal river flowing through the country is the Aluta, which joins the Danube at Bucharest. For the climate, the Danube is for the most part very cold, and the effects of the floods are intense, while in winter the land lies under deep snow for four months. The soil is rich, and would leave nothing to be desired, were it not for the ravages of locusts and the calamitous summer droughts. The principal products are corn, maize, millet, wine, flax, tobacco, and olive-oil. The vast treeless heaps afford
sustenance to great herds of cattle, sheep, and horses. As in Moldavia, agriculture is an important branch of industry. In minerals—especially gold, silver, copper, and rock-salt—the soil is rich, but only the last of these is extensively worked. The imports and exports are the same as in Moldavia. In both countries they might be more than doubled, as scarcely one half of the soil, which is said to be everywhere good, is under cultivation.

3. History.—In ancient times what now constitutes Roumania formed an important part of Dacia. At the period of the migration of nations, and in the following centuries, it was the scene of the struggles between the Gothic, Hunnic, Bulgarian, and Slavic races, who left their traces among the Romanized Dacian inhabitants, and helped to form that composite people, the modern Wallachs, who in the 11th century were converted to the Christianity of the Eastern or Greek Church. Their incursions, however, frightfully devastated the country. In the 11th century the Kuman, a Turkish race, established in Moldavia a kingdom of their own. Two centuries later the great storm of the Mongols broke over the land. It now fell into the hands of the Nogar Tartars, who left it utterly wasted, so that only in the forests and mountains was an armistice left of the native Wallachian population. In the latter half of the 13th century a petty Wallach chief of Transylvania, Radu Negru of Fogarasch, entered Wallachia, took possession of a portion of the country, divided it among his nobles, founded a senate of twelve members and an elective monarchy, and founded the wallachian state. Rather less than a century later (1564) a similar attempt, also successful, was made by a Wallach chief of the Hungarian Marmarosh, of the name of Bogdan, to repeople Moldavia. In the beginning of the 16th century both principalities placed themselves under the protection of the Turks, and gradually the nobles or boyars lost the right of exercising authority. In 1567 the Turks attached Wallachia to Constantinople. After 1711 the Turks governed the country by Fanariot princes, who in reality only farmed the revenues, enriched themselves, and impoverished the land. In 1822 the Russians wrested Turkey the right of surveillance over the principalities. A great number of the nobles, through family marriages with the Fanariots, were now of Greek descent, the court tongue was Greek, and the religious and political sympathies of the country were the same; hence the effort of the principalities in 1821 to emancipate themselves from Turkish authority, which was only the prelude to the war which was so disastrous to Wallachia. In 1822 Russia forced Turkey to choose the princes or hospodars of Wallachia and Moldavia from natives, and not from the corrupt Greeks of Constantinople, and after 1829 to allow them to hold their dignity for life. The principalities were united, as has been already mentioned, under one ruler in 1858, and under one administration in 1861. In 1866 the Wallachians refused to endorse the reign of Cusa, and, with the consent of Turkey and the great Powers, prince Charles of Hohenzollern was called to govern the united principalities. He was the first to call the country Roumania. To this day (1875) he remains king.

4. Social Condition.—The Roumanians, claiming to be the descendants of the ancient Dacians, betray that origin largely in their language, which is a Latin dialect, three fourths of the words being Latin (the Dacian has disappeared), the other fourth being made up of words indicating a Greek, Gothic, Slavonic, or Turkish origin. A Grammatica Dacica-Rumana was published by Johann. Alexi (Vienna, 1886), and a Historia Lingo Dacico-Rumana by Laurianus (Vienna, 1849). A large Latin-Romanic-Hungarian Dictionary was carefully executed by the bishop of Fogarasch, Joh. Bob (Klausenburg, 1865, 8 vols.). The nobility of the land generally prides itself in being Roumanians, and French customs are in favor with the Roumanians, particularly the young. There is no middle class. The common people, though very poor, are on the whole good-humored, frugal, sober, and cleanly; murder and larceny are almost unknown. Their dwellings, however, are, as may be supposed, of the most wretched description; composed chiefly of interlaced willow-withes, covered with mud, cane, and straw; and, often, even in the large towns, a shelter for cattle; a close of vegetables, and the whole house-furniture is comprised in a few kitchen utensils. The education of the country is not in a very forward condition, but promises under the present administration to take advanced ground. The trade of the country is largely in the hands of foreigners, especially Jews, who are badly governed. Gypsy communities are an important element in the population; upwards of 150,000 of this mysterious race are serfs belonging to the rich boyars and the monasteries. In 1844 about 30,000 were emancipated, and settled in colonies in different parts of the land; they are ruled by a Batteff, or king, of their own choice, of which every gypsy village has one: they call themselves Romuchinzel or Romani. 

5. Religion.—(1) Ecclesiastical Status.—The established religion of "Roumania" is that of the Greek Church, but all forms of Christianity are tolerated, and their professors enjoy equal political rights. Under the old Greek clergy stands a metropolitan archbishop chosen by the general assembly of the different estates, confirmed in his office by the prince, and serving 4,275,000 members. Every bishop is assisted by a council of clergy, and has a seminary for priests; the superintendence of which is fixed on the king of Roumania. A Church at Constantinople.

In Moldavia there are 1795 churches, 9268 priests, and 491 deacons; also 7622 married secular clergy and 60 monasteries, of which the richest is that of Niamitz, with 1300 monks. In Wallachia there are 4171 churches (of which 2587 are wooden), 36,838 persons belonging to the families married to the clergy, priests, monks, nuns, and 202 monasteries and nunneries. The property belonging to the priesthood of the principalities is immense, and at present (1875) efforts are being made by the government to have it secularized. The Roumanians are very superstitious, and care little for human life. The catechism of their morals contains scarcely anything more than fasting and hospitality. They hate all foreigners except the Latin races, and are especially severe against the Jews, who are there in large numbers, and are invaluable for the commercial interests of the country. They number over 400,000. Public persecutions against Jews have at various times continued; and at present, the pressure of the great powers has threatened armed intervention. The United States has pursued a humane policy in selecting a Jewish representative. (2) Evangelism.—Christianity must have early made its way to these parts, and been strengthened during Gothic invasion. St. Nicetas, who flourished about 400, is regarded as the apostle of Roumania. The barbarians in part removed Christian influences, and in 861 Cyril attempted anew the Christianizing of the people, especially the Bulgarians. In consequence the Slavonic language secured a foothold, and in the conflict between Constantinople and Rome the country sided with the latter. At the head of the Church, Rome made repeated efforts to regain her hold, but ineffectually. For political reasons princes now and then favored Rome, but in the 15th century, when it became a dependency of the Turks, the Greek Church gained absolute adherence. In the days of the Reformations Wallachia and Moldavia were of the Greek Church, and in Moldavia John Herculases (Jacob Basilius), an adventurer who had gained the throne, favored Protestantism (1561-68). Twenty years later the prince was again Protestant—Janked Sass, "the Lutheran" (+ 1584). From that time little but heard was said for Protestantism, and even when the reformers were favored by a prince, there were only 1 Protestant for 6 Armenians, 50 Hebrews, 4500 Moldavians, 1450 Greek Catholics, and 280 Jews. Protestant societies exist at Bucharest (one Lutheran and one Reformed), at Craiova, in Wallachia, and at Jassy and

the walls of houses, probably the rat, a creature common in every habitable part of the world.

Many scholars consider the derivation of the Greeks to be the creature intended by at least the first of the above Hebrew words. Whether this was what modern zoologists would call a mole is, however, rather doubtful. Aristotle, in his history of the apalax, evidently derived from personal and careful examination, describes it as absolutely blind. Now the eyes of our common mole (Talpa europaea), though they are very minute, and so imbedded in the fur as to be readily overlooked by a cursory examiner, are distinctly open, and could not escape the detection of so accurate a physiologist as Aristotle. Hence it has been supposed that the apalax could not have been a Talpa; and another animal has been found to inhabit the east of Europe and west of Asia, which, while possessing much of the form, and even the peculiar structure of the moles, together with their burrowing powers, is absolutely and totally void of sight, the eyes, which are rudimentary specks, being completely covered by the skin of the face, which is quite imperforate. For a while it seemed certain that this was the creature intended; and accordingly the genus was technically named Apalax by Olivier, the species receiving the appellation of typhlus. But still more recently a species of true mole, now called Talpa coco, has been discovered inhabiting Greece, in which the eyes are as minute, and as useless, because as completely covered by the skin, as in the apalax. As the apalax is larger and more conspicuous than the blind talpa, which, moreover, appears to be rare, on the assumption that the former is the tineskethem we here devote a few words to its appearance and habits. It belongs to the family MURIDAE among the Rodents, and is in fact a rat under the guise of a mole. Hence it has been called the mole-rat. The animal is from eight inches to a foot in length, with a great round head, no external ears or eyes, the nostrils opening beneath, the limbs very short, with strong nails formed for digging; the body clothed with a short, thick, soft fur of an ashly hue, and the naked skin of the muzzle white. It is particularly abundant in the south of Russia, excavating the surface of the vast steppes or level plains, and forming long burrows beneath the turf, with many lateral ramifications. The object of its pursuit is not earthworms or subterranea larvae, which form the prey of the true mole; for the mole-rat is exclusively a vegetable feeder, and it drives its runs solely for bulbs and roots, especially for the fleshly root of an umbelliferous plant, the chorophyllum. At frequent intervals the burrow comes to the surface of the soil, and here hillocks are cast up a couple of yards in circumference, and of proportionate height. Altogether its work closely imitates that of the mole, but on a somewhat larger scale. It is said to work energetically and rapidly, and on the approach of an enemy, of which it is warned probably by an acute sense of smell, it instantly turns downward and penetrates the earth perpendicularly. It is said to devour corn,
MOLE

and to gather large quantities, which it lays up in its deeper galleries for winter supply, in this respect agreeing with many other of the Muridae. Like the mole, it can proceed forward or backward in its burrow with equal celerity; and the same may be said of the weasel, which may be often seen near the entrance of a hole, basking in the sun, but instantly disappearing on alarm. The least noise excites it; though it cannot see, it lifts its head to listen, in a menacing attitude, and if its retreat is cut off, it becomes animated with rage and ferocity, morose and gnashing its teeth, and biting severely, yet not biting to wound, but to drive away his enemy. It is often seen skulking about near the houses of the people, and may be in the texts referred to, as “the king,” in Isa. xxx, 88, to that deity: “For Tophet is ordained of old; yea, for the king it is prepared.” Again, of the Israelitic nation, personified as an adulteress, it is said, “Thou wentest to the king with oil” (Isa. xlvii, 9); Amaziah, the priest of Bethel, forbade Amos to prophesy there, “for it is the king’s chambers” (Amos vii, 13); and in both these instances Dr. Geiger would find a disguised reference to the worship of Molech (Urechrib, etc., p. 299-308).

Traces of the root from which Molech is derived are to be found in the Miščas, Malîca, and Molóðær of the Phoenicians; with the last mentioned may be compared Aдрómónelch, the fire-god of Sepharvaim. The fire-god Molech, as the tutelary deity of the children of Ammon, was essentially identical with the Moabitic Chemosh. The Hebrew form, as an undoubted proper name, likewise occurs with some variety, as seen above, Solomon had in his harem many women of the Ammonite race, who “turned away his heart after other gods,” and left a legacy of these abominations, to high places to Molech, “the abomination of the children of Ammon,” were built on the “mount that is facing Jerusalem”—one of the summits of Olivet (1 Kings xi, 7). Two verses before the same deity is called Milkom, and from the circumstance of the two names being disinguished in 2 Kings xxiii, 10, 18, it has been inferred by Movers, Ewald, and others, that the two deities were essentially distinct. Phénicien, i, 528 is probably correct in regard to the latter as merely an Aramaic pronunciation. It is true that in the later history of the Israelites the worship of Molech is connected with the valley of Hinnom, while the high place of Milcom was on the Mount of Olives, and that no mention made of human sacrifices to the latter deity it is impossible to resist the conclusion that in 1 Kings xi, 5, “Milcom the abomination of the Ammonites,” in ver. 5, is the same as “Molech the abomination of the children of Ammon,” in ver. 7. To avoid this Movers contends, not very convincingly, that the latter verse is by a different hand. De be it as it may, in the reformation carried out by Josiah, the high place of Milcom, on the right hand of the mount of corruption, and Tophet in the valley of the children of Hinnom were defiled, that “no man might make his son or his daughter to pass through the fire to Molech” (2 Kings xxiii, 10, 18). In the narrative of Chronicles these are included under the general term “abominations,” and the apostasy of Solomon is not once alluded to. Tophet soon appears to have been restored to its original uses, for we find it again alluded to, in the reign of Zedekiah, as the scene of child-sacrifice and sacrifice to Molech (Jer. xxxix, 35). Kimm, following the Targum, takes the word Milcom as not an appellative, and not a proper name, while with regard to sikkuth (סיקוק, A.V. “tabernacle”) he holds the opposite opinion. His note is as follows: “Sikkuth is the name of an idol; and (as for) molachem he speaks of a star which was made an idol by its name, and he calls it ‘king,’ because they thought it a king over them, or because it was a great star in the host of heaven, which was a king over his host; and so to burn incense to the god of heaven, or to jśmie, as explained in the book of Jeremiah.” Genesius compares with the “tabernacle” of Molech the sacred tent of the Carthaginians mentioned by Diodorus (xx, 65). Rosenberg, following the Targum, understands by the image was carried in processions, a custom which is alluded to in Isa. xlv, 1; Epist. of Jer. 4 (Selden, De Desyr. symt. i, c. 6).

There remains to be noticed one passage (2 Sam, xii,
MOLEC 438 MOLEC

31) in which the Hebrew written text has יִֽפּּוֹקָ֣ה, mal-קֶּנֶּ֣ה, while the marginal reading is יִֽפּוֹקָ֣ה, mal-קֶּנֶּ֣ה, which is adopted by our translators in their rendering "brickkiln." Kimchi explains mal-קֶּנֶּ֣ה as "the place of Mo-lec," where sacrifices were offered to him, and the children of Ammon made their sons to pass through the fire. Molech and Mal-קֶּנֶּ֣ה, being an "idol," are translated "burning-tree" (Jer. xxxi, 27; Amos i, 11). On the other hand, Mal-קֶּנֶּ֣ה, the name of the place, reads יִֽפּּוֹקָ֣ה, "our king," which he explains as the title by which he was known to the Ammonites.

2. Biblical Account of this Deity.—There is some difficulty in ascertaining at what period the Israelites became acquainted with this idolatry; yet four reasons render it probable that it was before the time of Solomon. The first is the custom observed that they should burn their children as sacrifices. First, Molech appears—if not under that name, yet under the notion that we attach to it—to have been a principal god of the Phenicians and Canaanites, whose other idolatries the Israelites confessedly adopted very early. Secondly, there are some arguments which tend to connect Molech with Baal, and, if they be tenable, the worship of Molech might be essentially as old as that of the latter. Thirdly, if we assume, as there is much apparent ground for doing, that wherever human sacrifices are mentioned in the Old Testament, we are to understand them as being offered to Molech—the apparent exception of the gods of Sepharvaim being only a later distortion of their original character—then a remarkable passage in Ezek. xx, 26 (comp. ver. 81) clearly shows that the Israelites sacrificed their first-born by fire when they were in the wilderness. Fourthly, the rebuke contained in Amos v, 28, as quoted in Acts vii, 45, appears to imply that some idol similar to this was secretly worshipped as early as the exodus. See CHI-NeUR. Moreover, those who ascribe the Penta-teuch to Moses will recognise both the early existence of the worship of this god and the apprehension of its contagion in that express prohibition of his bloody rites which is found in the Mosaic law. The offender who devoted his offspring to Molech was to be put to death by stoning; and in case the people of the land refused to inflict upon him this judgment, Jehovah would himself execute it, and cut him off from among his people (Lev. xviii, 21; xx, 2–5).

Nevertheless, it is for the first time directly stated that Solomon erected a high place for Molech on the Mount of Olives (1 Kings xi, 7); and from that period his worship continued uninterruptedly there, or in Topheh, in the valley of Hinnon, until Josiah deposed both places (2 Kings xxii, 10, 13). Jeboahaz, however, the son and successor of Josiah, again "did what was evil in the sight of Jehovah," and probably the same sacrifice was also offered in Samaria (2 Kings xxiii, 32). The same broad condemnation is made against the succeeding kings, Jeho-akim, Jehoiachin, and Zedekiah; and Ezekiel, writing during the captivity, says, "Do ye, by offering your gifts, and by making your sons pass through the fire, pollute yourselves with all your gods until the day, and shall I be inquired of by you?" (xx, 31). After the restoration, all traces of this idolatry disappear.

Molech, "the king," was the lord and master of the Ammonites; their country was his possession (Jer. xlix, 1), as Moab was the heritage of Chemosh; the princes of the land were the princes of Malcham (Jer. xlix, 3; Amos i, 15). His priests were men of rank (Jer. xlix, 3), taking precedence of the princes. So the priest of Hercules at Tyre was second to the king (Justin, xviii, 4, § 5), and like Molech, the god himself, Baal Cham-aman, is Mal-kar, "the king of the city." The priests of Molech, like those of other idols, were called Chemarim (2 Kings xxi, 6; Hos. x, 5; Zechar. i, 4). Most of the Jewish interpreters, Jarchi (on Lev. xviii, 21), Kimchi, and Maimonides (Mor. Neb. iii, 38) among the number, say that in the worship of Molech the children were not burned, but made to pass between two burning pyres, as a purificatory rite. But the al-
foes which the Phoenicians and their colonies offered to their principal god, in whom the classical writers have almost always recognised their own Κριδός and Saturn. Thus we are again brought to the difficulty [see BAAL] of whether to write Κριδός or Κρόνος, for the Sun-god Baal, the Sun-god and Jupiter. In reality, however, this difficulty is in part created by our association of classical with Semeitic mythology. When regarded apart from such foreign affinities, Molech and Baal may appear as the personifications of the two powers that give and destroy life, which nearly resemble them as not incompatible phases of the same God of nature.

3. Information from other Sources.—Fire-gods appear to have been common to all the Canaanites, Syrian, and other tribes, who worshipped the destructive element under an outward symbol, with the most inhuman rites. Among these were human sacrifices, purifications, and ordeals by fire, devoting of the first-born, mutilation, and vows of perpetual celibacy and virginity. To this class of divinities belonged the old Canaanite Molech, as well as Chemosh, the fire-god of Moab, Urolat, Daures, Sair, and Thyantrides, of the Edomites and neighboring Arab tribes, and the Greek Dionysus, who were worshipped under the symbol of a rising flame of fire, which was imitated in the stone pillars erected in their honor (Movers, Φόν, i, c. 9). Tradition refers the origin of the fire-worship to Chaldea. Abraham and his ancestors are said to have been fire-worshippers, and the Assyrian and Chaldean armies took with them the same superstition and the pollution of their magi.

As the accounts of this idol and his worship found in the Old Testament are very scanty, the more detailed notices which Greek and Latin writers give of the bloody rites of the Phoenician colonies acquire peculiar value. Münster has collected these testimonies with great completeness in his Religion der Krschtker. Many of these notices, however, only describe late developments of the primitive rites. Thus the description of the image of Molech as a brazen statue, which was heated red hot, and in the outstretched arms of which the child was laid, so that it fell down into the flaming furnace beneath—an account which is first found in Didascalus, as referring to the Cretan Molech Kriōs, but which was subsequently adopted by Jarchi and others—is not admitted by Movers to apply to the Molech of the Old Testament.

According to Jewish tradition, from what source we know not, the image of Molech was of brass, hollow within, with an upper seat in the form of the temple (on 2 Kings xxiii, 10) describes it as "set within seven chapels, and whose offered fine flour, they open to him one of them; (whoso offered) turtle-doves or young pigeons, they open to him two; a lamb, they open to him three; a ram, they open to him four; a calf, they open to him five; an ox, they open to him six; and to whosoever offered his son, they open to him seven. And his face was (that of) a calf, and his hands stretched forth like a man who opens his hands to receive (something) of his neighbor. And they kindled it with fire, and the priests took the babe and put it into the hands of Molech, and set it up head downward toward the seat, and it was called Tophem and Hinnom; because they used to make a noise with drums (tophim), that the father might not hear the cry of his child and have pity upon him, and return to him. Hinnom, because the babe went up (γενήθη, menahem), and the noise of his wailing went up." Another opinion (is that it was called) Hinnom, because the priests used to say—"May it profit (γενήθη) thee! may it be sweet to thee! may it be of sweet savor to thee!" All this detail is probably as fictitious as the etymologies are unsound, but we have nothing to supply its place. Selden conjectures that the idea of the seven chapels may have been borrowed from the worship of Mithra, who had seven gates corresponding to the seven planets, and to whom men and women were sacrificed (De Día Syr. syn. i, c. 6). Ben-}

jamin of Tudela describes the remains of an ancient Ammonite temple which he saw at Gebal, containing a stone image richly gilt seated on a throne. On either side sat two female figures, and before it was an altar on which were offerings of incense, and the sun-god Baal, the Sun-god and Jupiter. In reality, however, this difficulty is in part created by our association of classical with Semeitic mythology. When regarded apart from such foreign affinities, Molech and Baal may appear as the personifications of the two powers that give and destroy life, which nearly resemble them as not incompatible phases of the same God of nature.

A legend is told in Jerome's Questions Hébraïques (1 Chron. xx, 2) that, as it was unlawful for a Hebrew to touch anything of gold or silver belonging to an idol, Itai the Gittite, who was a Philistine, snatched the crown from the head of Milcom, and gave it to David, who thus securely held thepollution.

Many instances of human sacrifices are found in ancient writers, which may be compared with the descriptions in the Old Testament of the manner in which Molech was worshipped. The Carthaginians, according to Augustine (De Civ. Dei, vii, 19), offered children living and dead to Saturn, and by the Gauls even grown-up persons were sacrificed, under the idea that of all seeds the best is the human kind. Eusebius (Prep. Ev. iv, 16) collected from Porphry numerous examples to the same effect, from which the following are selected. Among the Rhodians, a man was offered to Kronos on the 6th of July; afterwards a criminal condemned to death was substituted. The same custom prevailed in Salamis, but was abrogated by Diophilius, king of Cyprus, who substituted an ox. According to Manetho, Amosis abolished the same practice in Egypt at Heliopolis sacred to Juno. Sanchoniatho relates that the Phoenicians, on the occasion of any great calamity, sacrificed to Saturn one of their number, but the custom of sacrificing to the Bull, but the custom was abolished, according to Pallais, in the reign of Hadrian. At Laodicea a virgin was sacrificed yearly to Athene, and the Dumatii, a people of Arabia, buried a boy alive beneath the altar each year. Didodiacus Siculus (xx, 14) relates that the Carthaginians, when besieged by Agathocles, tyrant of Sicily, offered in public sacrifice to Saturn 200 of their noblest children, while others voluntarily devoted themselves to the number of 300. His description of the statue of the god differs but slightly from that of Molech, which has been quoted. The image of brass, with its bronze stretching towards the ground in such a manner that the child, when placed upon them, fell into a pit full of fire.

MOLESWORTH
440

MOLINA.

Molesworth, Sir William, an English statesman and celebrated writer on philosophy and political economy, was born in Surrey in 1810. He was at an early age ready for college and sent to Cambridge University. In 1835 he became prominent in the political affairs of his native country, and soon rose to distinction in English parliamentary society. He also largely identified himself with literary labors, and in 1834 founded the London Review, shortly after merged into the Westminster Review, of which he was for many years an editor and the associate of John Stuart Mill (q.v.). Sir William was also the intimate friend of James Mill and of Bentham, and was generally regarded as the parliamentary representative of the "philosophical Radicals." He is, however, of particular interest to us as the student of Hobbes, whom Sir William greatly admired. He accumulated material for the "Philosophy of Malmesbury," which remain in MS. unfinished. He was more successful in the publication of an edition of Hobbes's works—which he commenced in 1839, and carried to completion at a cost of many thousand pounds—consisting of a reprint of the entire miscellaneous and voluminous writings of Hobbes (London 1843-45, 11 vols, 8vo), and constituting a valuable contribution to the republic of letters. By Sir William's munificence the works of Hobbes were placed in most of the university and provincial public libraries. The publication, however, did him great disservice in public life, his opponents endeavoring to identify him with the deistic and atheistic opinions of Hobbes on religion, as well as with the great philosopher's conclusions in favor of despotic government; yet he continued a parliamentary career of the greatest energy and usefulness. Indeed, even for his political connections he deserves our notice. He was the first to call attention to the evils connected with the transportation of criminals, and as chairman of a parliamentary committee brought to light all the horrors of the convict system, and by uniting labors remedied this abuse, as well as the disorders generally in colonial administration. In 1855 he became secretary of state for the colonies, and no doubt would have greatly distinguished himself in his work of ten years, but he died suddenly on June 22, 1855. The London Times called him the "liberator and regenerator of the colonial empire of Great Britain." See English Cyclop. s.v.; Fraser's Magazine, xvii, 388; Lond. Gentleman's Magazine, 1845, pt. ii, p. 645; Blackwood's Magazine, xxxvii, 568; xliii, 519; xliiv, 626. See also Homers (J. H. W.)

Mo'lid (Moo'lid, Vulg. Moladi), given (1 Esdr. viii, 47) instead of Ma'hili (q.v.), the son of Levi (Ezra viii, 18).

Mo'lid (Heb. Molid, מְלוּד, begetter; Sept. Mōlīd v. r. Molādē, Molāil, and Mu'li), the last named of the two sons of Abishur, of the tribe of Judah, by Abihail (1 Chron. ii, 29). B.C. 1261 long after 1212.

Molières, Joseph Pruvat de, a French philosophical writer of some note, was born at Tarascou in 1577. He was a member of the French Academy of the Oratory; but, having embraced the philosophical doctrines of Malebranche, he quitted the society after the death of Malebranche to devote himself wholly to physics and mathematics. He was made professor of philosophy at the royal college, and became a zealous advocate of the Cartesian philosophy. He was prominent in the schism which divided the range within the departments of mathematics, physical science, and philosophy. In the last-named field he published Philosophical Lectures (Paris, 1782, 4 vols. 8vo). See Saveriens, Hist. des Philosophes Modernes, vi, 217 sq.; Revue Chrétienne, 1869, p. 725.

Molin, Laurent, a Spanish theologian, who flourished towards the close of the 17th century as a professor at Upsala, was born in 1657, and died Sept. 19, 1724. He published De Claudius Veterum (Upsala, 1684, 4to); and this last work was the foundation of his criticism of the translation of the Bible in the Swedish language (Stockholm, 1729, 12mo).

Molina, Antonio de, a Spanish theologian, was born at Villa-Nueva-de-los-Infantes, Castile, about the middle of the 16th century. He became a member of the Order of the Augustines, among whom he taught theology, and was promoted to the position of superior. The death of his colleague still more forced his shoulder to forsake his official connection, and take refuge in a small convent at Miraflores, where he died, Sept. 21, 1612. He wrote many works which have a considerable reputation; among others, Instrucción de acreditar (Barcelona and Madrid). This book had already passed through seven editions when it was translated into Latin by Fr. Nicolás Jansenboy (Anvers, 1618, 8vo). There existed also a French (1639), an English (1652), and an Italian version—Exercitios spirituales de las excelencias proce- rreco (Burgo, 1615, 4to; Madrid, 1658); also translated into Italian.

Molina, Luís, a distinguished Spanish theologian, was born at Cuenca, in New Castile, in 1555. In 1578 he entered the Order of the Augustines; was professured at Coimbra, and afterwards served for twenty years as professor of theology in the University of Evora, in Portugal. He died at Madrid, Oct. 12, 1601. In his writings, which treat especially of grace and free-will, he propounded a system of doctrine which has since been called Molinism, after him. While it was a continuation of Thomas Aquinas (7th ed. of Cui- ca, 1598, 2 vols. fol.) that he was led to attempt the old Pelagian Controversy by a conciliation of free-will in man with the divine foreknowledge, and with predestination, and he finally advocated his system in his De liberi arbitrii concordia cum gratia donis, Divina Prae- scripta, Predestinationis, et Reprobationis (Lisbon, 1598, 4to). This book, dedicated to the grand Inquisition of Portugal, at once gave rise to a violent controversy. Molina rejects the sufficiency of grace, asserting that grace is sometimes sufficient, sometimes insufficient, according as the will is co-operating with or resisting it. According to his theory, the efficacy of grace is the result of the consent of the human will; not that this consent gives it any strength, but because this consent is requisite in order that grace should be efficient. He therefore says that man requires grace in order to do good, but that God never fails to grant this grace to those who ask it with fervor; he also asserts that man has in his power to answer or not to the calling of grace. These opinions, which had found many followers, were first attacked by the Spanish Dominicans as being of a Pelagianizing tendency, while they themselves were firmly attached to the doctrine of Thom. Aquinas, and hence he became named Thomistae (q.v.). The innovation was afterwards at- tacked also by the Calvinists as opposing the theology of Augustine, and also by the Jansenists. Indeed, so much opposition had been encountered by the Molini- stae, as the propagators of this peculiar doctrine were called, that it was thought wise in 1594 to bring the matter to the consideration of pope Clement VIII, who enjoined silence on both parties, and promised to commit the decision of the dispute to a congregation of theologi- ans. Upon this the Dominicans used their influence with Philip II to induce the pope to reopen the question at once; and, the king's persuasion prevailing, the pope summoned the Council of Trent in the fall of 1549. This congregation called De Auril, consisting of a presi- dent, cardinal Malincz, the bishop of Trent, of three other bishops, and seven theologians of different frazer-
MOLINA

nities. It was made their task to inquire into the nature of the assistance derived from grace, and its mode of operation. On Jan. 16, 1598, the opinions of Molina were thus summarized: (1) A reason or ground of God’s predestination is to be found in man’s right reason with the free will; none other. (2) It is plain that the grace of God bestows to enable man to persevere in religion may become the gift of perseverance, it is necessary that they may be foreseen as consenting and co-operating with the divine assistance offered them, which is a thing within their power. (3) There is a mediate presence, which is neither to free nor natural knowledge of God, and by which he knows future contingent events before he forms his decree. (4) Predestination may be considered as either general (relating to whole classes of persons), or particular (relating to individual persons). In general predestination there is no reason or ground for it beyond the good pleasure of God, or none on the part of persons predestinated; but in particular predestination (or that of individuals) there is a cause or ground in the foreseen good use of free-will. In 1601, finally, the decision of the congregation was rendered. It pronounced in favor of the Thomistic opinions. But notwithstanding this decision, the Jesuits, who were almost en masse with the Molinists, succeeded in prevailing on Clement VIII to reopen the case; and a new congregation was appointed, consisting of fifteen cardinals, five bishops, and nine doctors, over whom the pope himself presided on seventy-eight different occasions, from March 29, 1603, to December 10, 1605, but when about to pronounce sentence he died, and the congregation’s sittings had to be continued under his successor, Paul V, from September, 1605, until March, 1606. Yet even after the expiration of such a long period of deliberation, covering over two hundred sittings, a settlement of the question seemed less likely ever; and perhaps Paul, not wishing to condemn or to approve either party, public policy requiring that the pope should not make an enemy of France by deciding against the Jesuits, nor of Spain by deciding against the Dominicans, quietly concluded to discontinue the sittings, simply announcing that he reserved to himself the right of giving his verdict when he should see fit. Only, in dismissing the contending parties, in 1607, he forbade their publishing anything more on the subject. This command, however, was but little regarded, and the Scienza media of Molina came to be substantially adopted by Jesuit theologians, while all his adversaries, the upholders of the æronymous grace, considered this system as semi-Pelagianism. Jansenius, for instance, accuses Molina of disregarding St. Augustine, and of misrepresenting his opinions, etc. Bossuet says, in answer to this reproach of semi-Pelagianism (see his answer to Jutius, Apostematum ex Protestantiis, etc.) As for M. Jutius’s objection of our Molinists being semi-Pelagians, if he had only opened their books he would have seen that they recognised in all the elect a gratuitous preference on the part of divine grace—a grace ever predisposing, ever necessary for all pious deeds. This we never find among the semi-Pelagians. Going from one extreme to the other, we are not led, by regarding grace as purely human acts with which it is then connected, I do not hesitate to assert that no Roman Catholic will contradict me when I say that this would be a fearful mistake, which would take away the very foundation of humility, and that the Church would never tolerate it, after having so often decided, and lately in the Council of Trent, that everything good, even to the first disposition of the sinner to be converted, comes from an impelling and predisposing grace, which is preceded by no merit. Molina wrote also De Justitia et Jure (Cuenca, 1592, 6 vols. fol.; Mayence, 1659). See Antonio, Nova Bibliotheca Hispana; Alegambra, De Script. Soc. Welte (Roman Catholic), Kirchen-Lexicon, vii. 199 sqq.

Molinism. See MOLLIN, DR.

Molinari, Antonio, a Venetian painter, who flourished in the early part of the 18th century, was a pupil of Antonio Zanchi, whose maxims he afterwards renounced, creating a style of his own. Molinari painted some excellent works for several of the Venetian churches, but his pictures were very unequal in merit. In 1757 he settled in Venice, where he died. See Lanzi, Hist. of Painting, trans. by Roscoe, ii. 225; Spenser, Zig, Hist. of the Fine Arts, ii. 575.

Molinari, Giovanni, an eminent painter of the school of Piedmont, was born at Savigliano in 1721. He was a pupil of Cavaliere Beaumont, and executed a number of works of art for the various churches at Turin and adjacent cities. A picture in the church of St. Bernardino, in Vercelli, representing a number of saints, is, according to Lanzi, "well disposed, with good action, and conducted with great care." In Turin there is an Addolorata by him at the Regio Albergo della Virtù; in other places in the state are numerous religious works, among which a St. John the Baptist, in the Abbey of St. Benigno, is worthy of mention. His character was naturally timid, reserved, and modest; and Lanzi says he did not paint history as much as he should. Lanzi does not give the date of his death, but Spenser places his death in 1798. See Lanzi, Hist. of Painting, trans. by Roscoe, iii. 815; Spenser, Hist. of the Fine Arts, iii. 575.

Moulinet, CLAUDE DU, a French ecclesiastical antiquary, was born at Chalon-sur-Marne in 1620, and during the greater part of his life occupied the position of canon regular and procurator general of the Congregation of St. Genevieve, Paris. He was the author of several works, based mainly upon his researches in ecclesiastical antiquities, the most prominent of which are an edition of The Epistles of Stephen, Bishop of Tournay, with notes, and The History of the principal Popes, as taken from Medals. The latter work extends from Martin V to Innocent XI, and includes a description of medals from 1417 to 1678. In addition to his labors in numismatics, he collected a great many rare curiosities and relics, and some very remarkable Greek and Oriental MSS. The library of St. Genevieve owes much to him for its present renown on account of its great collection and careful preservation of antiquities, which have not only proved of public interest, but of great historical character. He died Sept. 16, 1687. (H. W. T.)

Molinier, Étienne, a French Roman Catholic, born at Toulouse about the latter part of the 16th century, began life with the study of law, and became councillor to the parliament of his native city; but subsequently took orders, and became doctor of theology and of civil and canon law. He preached with great
success in the principal churches of Provence and Paris, and even preached before Louis XIII, when that monarch was crowned in 1610. He died in 1650.

Molinier wrote *Sermons pour les dimanches de l'Annee* (Toulouse, 1651, 2 vols, 8vo); *Sermonts & dieu de l'Annee* (1655, 8vo); *Sermonts de l'Octave de Sainte Suzanne* (Toulouse, 1640, 4vo); *Sermonts de la Croix* (Rouen, 1650, 8vo). These sermons evoke much depth of thought as well as vast erudition. See *Histoire Toulousaine; Dictionnaire portatif des Préclo- cuteur.*

Molinier, Jean-Baptiste, a French divine, was born at Arles in 1625, began his studies in his own country, and was afterwards sent to Rome, where the fathers of the Oratory had then entered the army, and finally quitted the sword to take holy orders. He taught theology at Arles, and entered the Congregation of the Oratory in 1700. He was subsequently sent to the seminary of Saint-Magloire of Paris, and to Macon and Grenoble. He excelled remarkable talent for preaching, and was very successful at Toulouse, Lyons, Orleans, and at Paris. Massillon, hearing him, was impressed by his eloquence, but at the same time surprised at the inequality of his talent, which sometimes rose to the sublime, and again sank heavily to the obscure and complicated. Some biographers say that Molinier devoted much labor to his discourses, he equaled the most celebrated French orators; but he relied too much upon his talent, and did not sufficiently moderate the impetuosity of his imagination. His discourses are the production of a happy genius, which expresses itself with much fire, energy, force, dignity, and ease. He only lacked taste; his style is incorrect, unequal, and marred by common phrases, which form a strange contrast to many parts full of life and grandeur. Molinier left the Oratory in 1720, and retired to the diocese of Sens, whence he returned to Paris to resume his preaching, but was prohibited from doing so by the Vindictives. No longer permitted to preach, Molinier wrote. He left the following works: *Traduction nouvelle of the Imitation of Jesus-Christ* (Paris, 1725, 12mo); *Sermons Choisis* (1722-34, 3 vols, 12mo); the sermon *Du Ciel* is considered his principal production: *Pamphlets* (1722-34, 3 vols, 12mo); *Discours sur la religion de la Croix* (1722-34, 2 vols, 12mo); *Instructions et Prières pour soutenir les âmes dans la voie de la pénitence, etc.* (12mo); a sequel to the *Directeur des âmes penitentes de Vaugue.*——Exercice du pénitent, with an Office of the pénitence (18mo): Les Pauvres, translated into French, with some notes *écrits de la vie des pauvres par la pénitente* (18mo).——Sur l'Amour de Dieu (1718, 4to); very rare. He retired from public life but a short time before his death, which occurred in Paris, March 17, 1735. See Bouguerel, Histoire des Hommes Illustres de Provence; Chaudont and Delandine, Dict. hist. s. v.

Molinism, the name given to the system of grace and election taught by Louis Moliné (q. v.). The kind of prescience demanded by the Rods in the schools of the *Scien- tia media* is that foreknowledge of future contingencies which arises from an acquaintance with the nature and faculties of rational beings, of the circumstances in which they shall be placed, of the objects that shall be presented to them, and of the influence which their circum- stances must have in determining their actions. This system has been commonly taught in the Jesuit schools; but a modification of it was introduced by the celebrated Spanish divine, Suarez (q. v.), in order to save the doctrine of special election. Suarez held that although God gives to all men grace absolutely sufficient for their salvation, (2 vols, 8vo), it is given to the elect a grace which is not alone in itself sufficient, but which is so atten- pered to their disposition, their opportunities, and other circumstances, that they infallibly, although yet quite freely, yield to its influence. This modification of Molin- ois's system is called Congrégation. Molinism must not be confounded either with Pelagianism or semi-Pela- gianism, inasmuch as Molinism distinctly supposes the inability of man to do any supernatural act without grace (q. v.). See Thomist; Will, Free.

Mollina, Don Antonio de, a Spanish Franciscan, founder of the Quietists, was born of noble parentage near Saragossa, December 21, 1627. He studied at Pamplona, and, after finishing his studies at the University of Coimbra, took holy orders, and in 1669 went to Rome, where his pious conduct and the purity of his life caused many to believe for the first time in the existence of a spiritual director. He acquired great reputation, but steadily refused all ecclesiastical preferment. In 1675 he published his *Way or Guide to what the Mystics call a spiritual or contemplative life* This book, written in Spanish, was supported by the recommendations of some of the greatest and most respectable men. In 1681 it was published in Rome in Italian, though it had appeared in that language some time before in other places. Afterwards it was translated into the Dutch, French, and Latin languages; and was very often printed in Holland, France, and Italy. The Latin translation, under the title of *Manuscripto Spiritualitatis,* was published by A. H. Franke (Halle, 1687, 2mo). In Italy it bore the title of *Guida Spirituale.* But though the work added greatly to Molinio's celebrity, it also became the subject of bitter opposition. It was soon attacked. There were not wanting many who in the specious but visionary principles of this author, perceived the seeds of a very seductive error. Among these the celebrated preacher Segneri was the first who ventured publicly to call its orthodoxy into question; but his stricures were by Molinio's friends ascribed to jealousy of the influence which Molinio had acquired with the people. By degrees, however, reports spread of the practical results of this teaching, and even to the personal conduct and character of its author, or of his followers, began to find circulation; and eventually the Jesuits took decided ground against him, and he was accused of heresy. The substance of his system, which his friends interpret in one way and his opponents in another, amounted to this: Christian perfection consists in the peace of the soul, in renunciation of all external and temporal things, in the pure love of God, free from all considerations of interest or hope of reward. Thus a soul which desires the supreme good must renounce not only all sensual pleasures, but also all material and sensual things; silence, and renunciation of the world are the means by which the mind and will of man can become con- trast and absorb itself in God. Molinio's enemies ac- cused him and some of his disciples of reviving the abuses of the Gnostics, and of teaching, both by their precepts and their example, the most objectionable principles of Quietism. According to the propositions which were declared to be heretical, the Ignorantia, by means of an extreme the contemplative repose which is the com- mon characteristic of Quietism as to teach the utter indifference of the soul, in a state of perfect contempla- tion, to all external things, and its entire independence of the outer world, even of the actions of the very body in which it animates; inasmuch as this internal perfec- tion is compatible with the worst external excesses, since these are of no importance so long as the soul remains in communion with God. See Quietism. It is very probable that the opposition to him, especially that of the Jesuits and others who watched over the interests of the Roman cause, was provoked because they perceived that Molinio's system tacitly accused the Roman Church of a departure from true religion, Molinio, though he had a vast number of friends, and though the pontiff himself, Innocent XI, was partial to him, was in 1686 cited before the Inquisition, and sub- mit his manuscript, which accused him of heresy. In addition to the opinions contained in his book, a prodigious mass of papers and letters, to the number, it is said, of 20,000, found in his house, were produced against him, and he was himself rigorously examined as to his opinions. The trial lasted two years; and in 1687 sixty-
eight propositions contained in his book were solemnly condemned. By a decree of Aug. 28, 1687, he was declared to have taught false and dangerous dogmas, contrary to the doctrine of the Church and to Christian piety. On Sep. 6, 1696, or the 20th of the month, in a yellow capua or the red cross before and behind, made to kneel on a scaffold in front of the church of the Dominicans, and there compelled to recant all he had taught in his books; after which he was compelled to pass the remainder of his life in prison. A bull of Innocent Xi., of Nov. 19, 1696, annulled the Inquisition's condemnations, in globo, the sixty-eight propositions. A refutation of Molino's doctrine is to be found in Fénelon's works (Versailles, 1820), and in Bouquet, États d'Oraison. Molenbergh, Marcullin, a German Roman Catholic theologian, was born at Munster, Sept. 1, 1741, and was educated in the convets of the Rhenish country. In 1758 he entered the Order of St. Francis at Hanau, but was ordained to holy orders Oct. 27, 1764, and for nine years taught philosophy and mathematics, and for two years divinity and moral theology at Pader- born. He was then retired to the convet of St. Francis at Munster; but in 1811, when it was abolished, he lived for a while privately. In 1815 he re-entered monastic life in the convet of St. Francis at Paderborn, and died there in 1831. Some of his most important works are: Das Zeitalter der Vernauf herausgegeben von Thomas Paare, wiederg. (Paderborn, 1787, 2d edition; Munster, 1809). — Neue Auslegung des alten Testament von Becklin, Prof. zu Munster, wiederg. (Dorsten, 1806). — Neue der Gottheit Jesus nachtheilige Auslegung des I. Capital des Evangel. Joh. van Muth, Prof. in Erfurt, wiederg. (ibid. 1807). — Wo ist die allzügige und vernarbte bischöfliche hineingezogenen in unseren Christen eine Wirtschaft geworden oder bei den Lateinern? (Paderborn, 1810). — Urber die Ansichten des b. Apostel Petrus nach Rom und Antio- chia, and einige vorgeschriebene alter Streitigkeiten mehrvor Bischöfe wider die Päpste (ibid. 1816). — Anmerkungen über die neuen deutschen Übersetzungen des N. T. durch Carl und Leander vom Eau, auch besonders über den be- straften Cephas (ibid. 1817). — Historia religionis Chris- tiana in compendio et ordine chronico exhibita, tom. i, ab anno i-326 (ibid. 1818). See Waizteneger, Gelehr- ten-und Schriften-lexicon der deutschen katholischen Geistlichkeit, ii, 18 sq.

Mollah (Arab. mula, Turk. mulu, i, e. ruler) is the name of a Turkish superior judge, who is an expounder of civil and criminal law, and of the religion of the state; he is therefore necessary both a lawyer and an ecclesiastic. Under him is the cadi or judge, who administers the law, and superior to him are the kadihashki and the mufti (q. v.). They all are, however, subject to the Sheik el-Islam, or supreme mufti. In Persia, the title of mulla is similar to that of mollah in Turkey; but his superior there is the "sadir," or chief of the mollahs. In the states of Turkestan, the mollahs have the whole government in their hands. See Mullah.

Möller, Heinrich, popularly known as Henry von Zülpich, one of the early Protestant martyrs, was born in 1488, in the county of Zülpich, in the Netherlands. In 1504 he joined the Augustinians, and in 1515 went to the newly-established University of Witt- tenberg. Here he became intimate with Luther. In 1516, or the 20th of the month, he was ordained to the priesthood, and in his youth, made prior of the Augustinian convent of Dort, but was finally obliged to leave it in 1520 on account of his reformatory opinions, went to Antwerp, and there became sub-prior of the Augustinian convent. This place also he was obliged to leave in December, 1520, his favorite retainers of the Reformers having made him many enemies in the body, and in March, 1521, we find him back at Wittenberg, occupied in studies. But when, in consequence of the Edict of Worms, the evangelical party began to be persecuted in the Netherlands, he returned, in 1522, to Dort and to Antwerp, and there by his example encouraged the Augustinians to spread the principles of the Reformation. Inquisition quickly recognised him in a leading spirit, and he was marked as one whose head should fall. On Sept. 29 he was arrested, but the people rallied and re-leased him. Satisfied that safety could be found only in flight, he then bade adieu to his Christian friends, and went successively to Amsterdam and Zülpich, with the expectation of making his way back to Wittenberg. But he was stopped in Bremen, and entreated by the people to stay there and preach the new doctrines. Consenting, after much urgent solicitation, he was made pastor, and by his preaching soon gained the greater portion of the consistory of the place in account of his martyrdom. In November, 1524, when his friends felt satisfied that the cause had been so efficiently served as to make a falling away to Romanism well-nigh impossible, he left for Meldorf, in Denmark, where he was desired to introduce the Reformation. He encountered great opposition, and, though the authorities of the place were in his favor, he was seized on the 10th of December by the Roman Catholic clergy and their dupes, and burned the next day as a heretic. The news as it reached the different German Reformers caused great sorrow. The loss sustained seemed irreparable. Melancthon wrote a hymn of praise over him, Luther a letter of sympathy to the Christians of Bremen, and an account of his martyrdom. In the cemetery of Meldorf, where Möller's remains had been deposited after a severe struggle with the drunken rowdies who, fired by religious fanaticism, had caused his death, a monument was erected to his memory, June 25, 1830. See Luther, Von Reformation, etc., Wech, etc. (3d and 4th, or 2d and 3d, and the smallest and up-to-date, or the smaller, or imperial, or 4to, or the most modern and up-to-date, or the newer, or the latest, or the latest edition; Heckel, Die Märtyrer in der evang. H. W.)

Moller, Henry, a Lutheran minister, noted for his valuable labors in the Lutheran interests in the United States, was born in Hamburg, Germany, in 1749. When only a youth of fourteen he migrated to this country, and went to Philadelphia. There he was one day, shortly after his arrival, met in the street by the celebrated Dr. Muhlenberg, who knew him, and who recognised in the young man so striking a family resemblance as to induce him to stop and inquire his name. Identified by the doctor, Henry, was at once giv- en a place in his own house, and everything was done to promote his welfare. The doctor also gave him an ap- pointment in school work in a secondary school where he was then teaching, while Möller's leisure hours were devoted to the study of theology, under the direction of his patron. Möller was licensed to preach the Gospel by the Synod of Pennsylvania, and was willing to share
the privations and sufferings incident to those early days, when the members of churches were scattered through the wilderness, like sheep without a shepherd. He engaged in preaching the Gospel to the poor, in collecting contributions for the church treasury, and in advertising the principles of the Lutheran faith, and promoting the interests of the Redeemer's kingdom. During the Revolutionary War he was chaplain of a German regiment in the army commanded by general Washington. Möller's first regular pastoral charge was Reading, Pa. There he remained for two years, and later became pastor of Albany, N.Y., where he built the first Lutheran church, and promoted the interests of his sect. In 1788 he received and accepted a call to New Holland, Pa., and labored there until, in 1795, he was induced to take the Lutheran flock at Harrisburg, and he served them most acceptably for seven years. In 1802 Möller returned to Albany, and for six years more served the people to whom he had in his first connection so greatly endeared himself. He next accepted a call to the united churches of Sharon and New Rhinebeck, N.Y., where he labored until physical infirmities rendered him unable to attend to the active duties of his profession. Cheered by domestic affection and Christian hope, the last six years he lived were spent in retirement, "although," says a contemporary, "his whole life was devoted to the interests of his divine Master. Until the end he sought opportunity to do good, and to make himself useful around him. He lived, full of faith, calm and confident in the great truths of that blessed religion which he had faithfully preached, Sept. 16, 1829. As a preacher, Möller's talents were not brilliant, yet he accomplished greater things than the more highly gifted. As a man, his whole life was marked by integrity, truthfulness, and a contempt of everything mean or dishonorable. See [Lutheran Evangel., Qu. Rev. (memoirs of deceased ministers), 1865, p. 273 sq.; Sprague, Annals of the Amer. Pulpit, vol. ix (Lutherans).] (J. H. W.)

Mollusus or Mollusc, Giovanni, a distinguished Italian martyr in the Protestant cause, was a native of Montalto, in the territory of Siens, and the descendant of a very respectable family. He was born near the opening of the 16th century. When only twelve years of age he was placed in the monastery of Gray Friars, where he made rapid progress in arts, sciences, and languages. He entered the order of Minorites while yet a youth, and was of that order when only nineteen years of age. Every minute was improved in study of polite letters and theology, and he came soon to be noted for his learning and industry. After having pursued his studies six years longer at Ferrara, he was made theological lecturer in the university of that city. He subsequently lectured for the universities of Brescya and Parma, and was appointed professor of theology in the University of Bologna about 1583. There, on reading several treatises of the Reformers, he became at heart a zealous Protestant, and began to expound in its purity the Epistle to the Romans. Immense crowds soon attended his sermons, and at one point so numerous were they that he was seized by order of the pope, and, being denied a public trial, gave an account of his opinions in writing, confirming him by scriptural authority. Mollusus defended himself with such ability and address that the judges appointed by Paul III. to try the case were forced to acquit him, in the way of declaring that the sentiments which he had maintained were true, although they were such as could not be publicly taught at that time without prejudice to the apostolic see. He was therefore sent back to Bologna, with an admonition to abstain for the future from explaining the same doctrine (i.e. justification by faith). But continuing to expound the epistles of the apostle Paul, as formally, and with greater applause from his hearers—even the monks of different convents, many of the nobility, and individuals of ecclesiastical orders, attending them—cardinal Campeggio procured an order from the pope to remove him from the university (Pontefallium, Rerum in Ecl. Gest. lib. ix, fol. 263). Mollusus did not remain idle when relieved of his duties at the university, but continued his studies, and grew in strength among his fellow-sufferers. He finally became lecturer to the monastery of St. Lorenzo, Rimini, and it is said even here he was persecuted; and in 1542 the opposition grew so decided that he was frequently in great danger. He was several times imprisoned, but always escaped until the time of the ascension of pope Julius III., when he was hunted down at Ravenna, and transported to Rome. On Sept. 9, 1553, a public assembly of the Inquisition was held with great pomp, and Mollusus was brought before that body, attended by six cardinals and their episcopal assessors. All the prisoners brought forward in this session recanted and performed penance except Mollusus and another, a native of Pergium named Tisserano, who refused to do violence to their conscience. When the articles of accusation against Mollusus were ready, permission was given him to speak. He defended the doctrines which he had taught respecting justification, the merit of good works, auricular confession, and the sacraments; pronounced the power claimed by the pope and his clergy to be usurped and antichristian; and addressed his judges in a strain of bold and fervid invective, which silenced and chained them to their seats, at the same time that it cut them to the quick; and when he had finished his address, he threw the flaming torch which he held in his hand on the ground in contempt of the court; but it is, through educating the accusers that he would rather extinguish life than suffer them to force a lie from him. Of course mercy to such a criminal was not within the gift of Rome, and he was consequently condemned, together with his companion, to instant death. They were at once conveyed to the place of execution, first hung, and then burned to ashes. See Huet des Martyrs, p. 264, 265; Gerdesium, Ital. Reform., p. 103; M'Crie, Ref. in Italy, p. 95, 124, 261; Young, Life of Patericus, ii, 113 sq. Fox, Book of Martyrs, p. 184, gives Mollusus's history inaccurately. (J. H. W.)

Molloy, Francis, an Irish divine of some celebrity, flourished in the College of St. Isidor at Rome, Italy, in the second half of the 17th century, as professor of theology. He wrote Sacra Theologia (Rome, 1656, 8vo)—Lucerna Fidelium (1676, 8vo), a Roman Catholic Cathe- chism in Irish—Grammatica Latino-Hibernica com- pendiata (1677, 12mo). Shingle, who gives an abstract of the last work in his Archaeologic Britannica, says that it is "the most complete Irish grammar then extant, although imperfect, as to syntax, etc. See Wars, Writers of Ireland, vol. ii.

Mo'loch (Heb. Melekh, מְלֶ֑כָה, king, as often; Sept. and N. T. Mol'och), the name of an Ammonian idol (Amos iv, 26; Acts vii, 43); usually called Moloch (q. v.).

Molokans. See MALAKANS.

Molten Image. See IDOL.

Molten Sea. See Ska, MOLTEN.

Molten Islands, or Royal of these islands of the Malay Archipelago in the Indian Ocean. The term comprehends, in its most extensive sense, all the islands between Celebes and New Guinea, situated to the east of the Molucca passage, in long. 120°, particularly those of Globo; but, in a more restricted sense, only the greater islands:—

1. Ternate, the most important, lies in 0° 48' N. lat. and 127° 2' E. long., and is 25 miles in circumference. It has a population of 9000, of whom only about 400 are Europeans. Its natives are mainly Mohammedans. It was formerly the residence of sultans, who ruled over large territoriy and controlled about 10,000 fighting-men. The island is fertile and well watered. Rice, cotton, tobacco, etc., are cultivated, and a trade is supported with the adjacent islands. (2) Tidore, south of Ternate, in 0° 40' N. lat. and 127° 25' E. long., is 18 miles in circumference, and rises towards the interior.
Of its population of 8000, the natives are less gentle but more industrious than those of Ternate, and diligently cultivate the soil, weave, and fish. They are also Mohammedi. The town of Ceru is situated to the south-west of Neira, south-east from Amboyna, in 4° 38' S. lat. and 130° E. long., separated by narrow straits from Goenong-API on the west, and Great Banda on the east. The coast is steep, and surmounted by several forts and batteries, which command the straits and roadstead. The town of Neira, on the south side of the island, is the capital of the Dutch residency of Banda. It has a Protestant church, school, and hospital. The Banda Islands have a rich soil, and are planted with nutmeg-trees, producing upwards of a million pounds of nuts and over a quarter of a million pounds of mace. Pine-apples, the vine, coffee, and tobacco, and bananas and other tropical fruits, are abundant. Ay is the prettiest and most productive of the group. Goenong-API is a lofty volcano. The climate is not particularly healthy. The east monsoon begins in May, and the west in December, and both are accompanied with rain and storms. The Ulissiers, which, with Amboyna, produce clove-nuts, are Sarapoura, Oma or Haroukou, and Nousa-Laut. They lie to the east of Amboyna, in 3° 40' S. lat. and 128° 33' E. long., and have an area of 1074 square miles. Sarapoura is the largest, and is formed of two mountainous peninsulas, joined in the middle by a narrow strip of land. The population amounts to 11,655, of which 7,750 are Christians. They have several schools, with a very large attendance of scholars. Oma, separated from Sarapoura by a strait in a league in width, has eleven villages, of which Harouka and Oma are the chief. It is mountainous in the south, and has several rivers and sulphurous springs. The beautiful village of Harouka, on the west coast, is the residence of the Dutch postholder, who is president of the council of chiefs. Here is the head office of the clove produce. There are two forts on Oma, several churches, and six schools, with 700 pupils. Population 7188; one half Christians, the other Mohammedans. Nousa-Laut lies to the south-east of Sarapoura. It is planted with clove-trees, which in 1858 produced 120,283 pounds. There are upwards of 30,000 cocoa-nut-trees. The inhabitants, who were formerly pirates and cannibals, amount to 8479 souls, are all Christians, and have schools in every village—in 1859 they were attended by 670 pupils.

The Moluccas or Spice Islands, in the broad use of the term, lie to the east of Celebes, scattered over nearly eleven degrees of latitude and longitude, between 3° S.—8° N. lat. and 126°—155° E. long., including all the territories or islands, large or small, mutually rularably by the Dutch government, and Tidore. They are now tributary to Holland, and are virtually under the jurisdiction of the governors appointed by the Dutch, and are divided into the residences of Amboyna, Banda, and Ternate; a fourth residency, under the governor of the Moluccas, being Melada. Over the northern groups of the Spice Islands the Netherlands exercise an indirect government, the sultans of Ternate and Tidore requiring to have all their appointments of native officials ratified by the resident. The southern groups are directly under European rule. The residency of Amboyna contains that island—sometimes called Ley-Timoa, or Hitu, from the two peninsulas of which it is formed—Buru, the Ulissiers group, and the west part of Ceram. That of Banda includes the Banda, Keeling, Key, Arru, and other islands; also the eastern part of Ceram. Under the residency of Ternate are placed the Moluccas proper, Gibolo, the neighboring islands, and the north-west of Papua. The possession of Banda is ceded by the governor of the Moluccas to the Dutch, and is 767,000, Amboyna, the Banda and Ulissiers islands, chiefly supply the cloves, nutmegs, and mace which form the staple exports. The Banda Islands are Neira, or Banda-Neira, Great Banda, Ay or Way, Rhan, Ronggai, and Goenong-API, containing an area of 888 square miles. Of the population, which is about 6000, 400 are Europeans; in the whole residency, the inhabitants number about 110,000, including the eastern part of Ceram. These are divided into two classes, the Neiras, south-east from Amboyna, in 4° 38' S. lat. and 130° E. long., separated by narrow straits from Goenong-API on the west, and Great Banda on the east. The coast is steep, and surmounted by several forts and batteries, which command the straits and roadstead. The town of Neira, on the south side of the island, is the capital of the Dutch residency of Banda. It has a Protestant church, school, and hospital. The Banda Islands have a rich soil, and are planted with nutmeg-trees, producing upwards of a million pounds of nuts and over a quarter of a million pounds of mace. Pine-apples, the vine, coffee, and tobacco, and bananas and other tropical fruits, are abundant. Ay is the prettiest and most productive of the group. Goenong-API is a lofty volcano. The climate is not particularly healthy. The east monsoon begins in May, and the west in December, and both are accompanied with rain and storms. The Ulissiers, which, with Amboyna, produce cloves, are Sarapoura, Oma or Haroukou, and Nousa-Laut. They lie to the east of Amboyna, in 3° 40' S. lat. and 128° 33' E. long., and have an area of 1074 square miles. Sarapoura is the largest, and is formed of two mountainous peninsulas, joined in the middle by a narrow strip of land. The population amounts to 11,655, of which 7,750 are Christians. They have several schools, with a very large attendance of scholars. Oma, separated from Sarapoura by a strait in a league in width, has eleven villages, of which Harouka and Oma are the chief. It is mountainous in the south, and has several rivers and sulphurous springs. The beautiful village of Harouka, on the west coast, is the residence of the Dutch postholder, who is president of the council of chiefs. Here is the head office of the clove produce. There are two forts on Oma, several churches, and six schools, with 700 pupils. Population 7188; one half Christians, the other Mohammedans. Nousa-Laut lies to the south-east of Sarapoura. It is planted with clove-trees, which in 1858 produced 120,283 pounds. There are upwards of 30,000 cocoa-nut-trees. The inhabitants, who were formerly pirates and cannibals, amount to 8479 souls, are all Christians, and have schools in every village—in 1859 they were attended by 670 pupils.

The Spice Islands generally are husbanded by Europeans and Asiatics; and, though the plains are sometimes very hot, mountains are always near, where it is pleasantly cool in the mornings and evenings. Besides the spice-trees, the bread-fruit, sago, cocoa-nut, bananas, orange, guava, papaw, also ebony, iron-wood, and other are also cultivated. The natives of some of the islands are Aflers; of others, Malaga on the coasts, and Aflers in the interior. In Ceram are also Papuan negroes, brought originally from Bali and Papua as slaves. These are harshly treated and poorly fed. The governor of the Moluccas has a salary of 4000 guilders, and, with the secretary and other officials, resides in a city of Amboyna, the streets of which are broad, planted with rows of beautiful trees, and cut each other at right angles. There are two Protestant churches, a town-house, orphanage, hospital, and theatre, besides a useful institution for training native teachers, with which is connected a printing-press.

History, etc.—The Moluccas were first discovered by Europeans in 1511, when the Portuguese, under Antonio de Abreu and Francisco Serrao, landed there. They found, however, that the Arabians had already been there, and had made converts of the natives along the coast—the Malayas. In the mountains they found the Papuans (q.v.), but these Oriental negroes were savages, and in a large measure remain so to this day. The king of Portugal claimed the island, and held undisputed sway until 1598, when the Netherlanders took Tidore. In 1823 they drove out the English from these
islands, of which they had taken possession, and in 1658 the Netherlanders alone remained to lord it over the country. Though for a time the British got a hold in the island, the Dutch finally became its possessors.

The islanders have frequently attempted to throw off the Dutch yoke, but have failed thus far. The wars with the Aloers of Ceram, in 1859 and 1860, have brought them more fully under Dutch rule. Recently new suits of Twelve Houses have been instituted, with less power than their predecessors. The natives along the coast speak a dialect of the Malay tongue, mixed with many foreign words; but the ancient Molucca or Ternata language appeared to the eminent Asiatic linguist, Dr. Lysden, to have been an original tongue. They have adopted many of the tenets, or ritual of the Church of England, and have been converted to Christianity. Many of them, named Sheriffs, boast of their descent from Mohammed, and are held in great respect, especially if they have performed the pilgrimage to Mecca.

The Papians have been rapidly decreasing, and have wholly disappeared in most of the smaller islands. But they still exist in many of the more eastern islands, and hold undisturbed possession of New Guinea. The houses on these islands are generally raised on pillars eight or ten feet high, on account of the moisture, and are entered by means of a ladder, which is afterwards drawn up. The color of the natives is a deep mahogany brown, and yellow, and they are naked and unclothed.

They subsist chiefly on sago. The men wear little covering, except a hat of leaves, and a piece of cloth round the middle: and the women are dressed in a large white garment like a sack, with a remarkably broad hat on their heads. Their arms are a kind of light tough wood, arrows of reeds, pointed with hard wood, and bucklers of black hard wood, ornamented with designs in relievo, made with beautiful white shells.

The Moluccans have themselves but little intercourse with natives of civilized countries; indeed they know considerately less of them than others in the archipelago.

They seldom see a European vessel.

Misionary Labor.—The native tribes of the mountains remain very largely in heathen ignorance. Many of the Moluccans were made converts to Mohammedanism even before the appearance of Christians on the soil. Islam is gaining new adherents daily. Christianity, on the other hand, has thus far secured but few in number, as the first impression made by the Portuguese did not result very favorably. The Inquisition at Goa extended its power to these parts, and tried hard to carry the Moluccans into the Christian fold, but failed utterly.

The exchange of ownership imported the Protestant doctrine into the islands; but they have failed to see much difference between Romanism and the Reformed faith, and Islam is still all. Efforts until 1815 made by Protestants are hardly worth mentioning. In that year J. C. Kasse, in the employ of the Rotterdam Missionary Society (Zendinggenootschap), inaugurated successful efforts for the conversion of the Moluccans, and for fourteen years apostolic labors were performed there. In 1819 missionary Jungmichel inaugurated successful labors at Ternate and in the Sangur Islands. At the same time valuable enterprises were inaugurated also at Timor and Ambon. To the formerly Lebrun went. He settled at Capung, the seat of the Dutch governor, on the south coast of Timor. For twenty years there had been no Christian minister among the natives there, who profess Christianity. With so much greater eagerness did they now crowd to the missionary's preaching; and in the very year first ninety pagans were admitted to the Church, which already consisted of one hundred and fifty Christians. Since that day, however, the rajah of Rotti submitted himself to Christ crucified; and in 1823 Lebrun baptized in Little Timor, Kissor, Lett, and Moa, 496 persons. The Friendly Society which he established was subscribed to even by some of the pagan princes. He everywhere formed schools, and to the remote churches he addressed pastoral letters, after the manner of the apostles, of the good effect of which there are pleasing testimonies.

A few years before his death, the centre, however, of missionary labors in the archipelago is, and always has been, Amboyna. Its inhabitants have since 1850 been regarded as Christians. The Rotterdam Society has a number of stations there, and a seminary for the education of native teachers. These stations are now under the Bishop of Brabante, and it is anticipated that the Dutch government will recognize the missionaries as stationed pastors, and contribute for their support. Molyneux, William, an Irish mathematician and philosopher, who was born at Dublin April 17, 1656, was educated at the university of his native place, and afterwards studied as a mathematician at the University of Dublin. He was a founder of the "Dublin Philosophical Society," of which he was the first secretary (1688), and then president, and the author of twenty-seven papers on miscellaneous subjects inserted in the "Philosophical Transactions" between 1694 and 1716, and of a Translation of the six Metaphysical Dissertations of Descartes, together with the Objections against them by Thomas Hobbes (London, 1671). Molyneux was a devoted Protestant, and during the political disturbances was obliged to seek refuge in England in 1688. After the battle of the Boyne he returned again to Ireland. Among the many persons of literary eminence with whom Molyneux maintained a correspondence, Locke was held by him in particular esteem, and in the last year of his life he went to England for the purpose of visiting that philosopher. Molyneux died in Dublin Oct. 11, 1698. (J. H. W.)

Mom'dis (Μομ'dis v. r. Μύμ'dis), given (1 Esdr. ii, 4) in place of Μαδαδ (q. v.) of the Heb. (Ezra x, 24).

Moment (πτολ.), re'ya, the wink of an eye, i.e. an instant; στρατ., a point of time, Luke iv, 5).

Momiers or Mummer's (from the French word mommes) is a hypnotic drug taken by a hypnotist to induce a hypnotic trance given to a sect of Calvinistic Methodists in French Switzerland. In the first part of the present century we find in Switzerland, as in Germany, a conflict between the old confessional faith and Rationalism. The Genevan school had broken loose from rigid Calvinism, and the heresies of Arminianism and Socinianism were taught and believed. But after the great political events of the years 1813-15 we see the old evangelical faith beginning once more to assert itself, young theologians in Geneva and the canton Vaud declaring in favor of orthodox preaching, and avowing the ten almost Calvinistic doctrines. What had once been total human depravity. Their preaching caused great bitterness of feeling. Empyazatat, generally recognized as the first preacher of the Momiers at that time, was in 1816 obliged to quit Geneva, and in 1817 the "Venerable Company of Pastors" (i.e. the Presbytery of Geneva) issued an formal prohibition against preaching on the old Calvinistic grounds which had so long held the fundamental doctrines of the Reformed Church. This arbitrary action led to an open rupture between the evangelical and rationalistic parties. A number of preachers—among them, Malan (q. v.), Empyazat, Gausen, Boet, Galland, and Drummond (a British Method-

MONACO, LORENZO, a Genoese painter, sometimes called the "Monk of the Isle d'Oro," flourished in the 14th century. He was a favorite of the king and queen of Aragon, to whom he presented several illuminated missals. A beautiful Angel, with arms crossed over his bosom, and floating in the air, is credited to him in the Florence gallery of pictures in Egypt, in the Arena at Padua, in which picture Mary and Joseph are attended by Salome and three youths. But very little is known of this artist. He died, according to Lanzi, in 1408. See Lanzi's History of Painting, trans. by Roscoe (London, 1847, 8 vols. 8vo), iii, 283; Mrs. Jameson, Legends of the Madonna (ibid. 1857, 8vo), p. 201; Sacred and Legendary Art (ibid. 1857, 2 vols. 8vo), i, 129; ii, 796.

Monodology (from Gr. μονοδησία, unity, and λόγος, discourse) is the term applied to the doctrine or science of Monads, which was fully developed by the German philosopher Leibnitz. "He conceived the whole universe, bodies as well as minds, to be made up of monads, that is, simple substance; each one of which comprehends in its own, in the form of a soul, in the form of an act, in the form of a subject, in the form of a subjectivity, in the form of an existence, endowed with certain active and perceptive powers. A monad, therefore, is an active substance, simple, without parts or figure, which has within itself the power to produce all the changes it undergoes from the beginning of its existence to eternity. The changes which the monad undergoes, of what kind soever, though they may seem to us the effect of causes operating from without, are only the gradual and successive evolutions of its own internal powers, which would have produced all the same changes and motions although there had been no other being in the universe" (Reid, Intell. Powers, essay ii, ch. 15). "Monodology," says Cousin, "rests upon this axiom: every substance is at the same time a cause, and, every substance being a cause, has therefore in itself the principle of its own development; such is the monad—it is a simple force. Each monad has relation to all others; it corresponds with the plan of the universe; it is the universe abridged; it is, as Leibnitz says, a living mirror which reflects the entire universe under its own point of view. But every monad being simple, there is no immediate action of one monad upon another; there is, however, a natural relation of their respective development, which makes their apparent communication; this natural relation, this harmony, which has its source in the wisdom of the super-sensible pre-established harmony" (Hist. de Mod. Philos. ii, 86). See Ueberweg, Hist. Philos. ii, 92 sq., 107 sq.; also p. 27, 54, 130, 145, 312, 816, 336, 507. See also LEIBNITZ; NEO-PATRISTIC.

Monarchia was the title occasionally bestowed in the Christian churches, especially in those of the East, instead of the more familiar metropolis (q. v.). In the 6th canon of the Council of Sardice, which was held in 344, we find metropolitans distinguished by the title princeps provinciae (Ἀρχιερέας τῆς ἐπαρχίας); but elsewhere, in references of those days, they are entitled monarches. See Riddle, Christian Antiquities, p. 224.

Monarchia is the term by which is designated the leading or opening statement of the dogmas and the entire system of the doctrine of the Trinity (q. v.), i. e. the doctrine that there is one and only one Αρχή, principle or fountain of Divinity, God the Father, the first person in the Trinity, who only is Άρχος άρχων, "God of and from himself" (Pearson [Expos. of the Creed (1741, fol.)], p. 59) is very particular on the form of the designation makes exception to Bull, who uses the word "from"—"of and from himself," which Pearson considers a contradiction). The doctrine of the Trinity assumes that the Son and the Holy Ghost derive their divinity from the Father.
as the one Ἁρχή. The scriptural and only true idea of God involves in its development the idea of the triune; and the doctrine of the Monarchia may be apropos to the idea of God, or from the side of the trinity of persons. Coming to it on the side of the unity, there is presented to the mind, first, the existence of God, then the unity of God, then the underived nature—that is, his self-existence. Coming to the doctrine on the side of the trinity of persons, Scripture is well the standard, who has it interred by an apostolic generation; and God the Holy Ghost, who is Θείς ἐς Θεόν by an eternal procession. This refers us to the first person of the Trinity, as him from whom the second and third persons derive their divinity. The doctrine of the Monarchia, flowing as it does directly from the unity of God, in its expression guards that unity in which at the same time it renders it possible that the Son is God, and the Holy Ghost God, by a derivation of Godhead; the full doctrine of the Godhead of the second and third persons being maintained by the further doctrine of the perichoresis. It is to be remarked that as Ἀρχή has the meaning of "beginning" with reference to time, as well as the meaning of "principle" with reference to origin, so with regard to the former meaning the Son and the Holy Spirit are Ἀρχή as well as the Father. Ἀρχή, cause, is also used in the enunciation of this doctrine: the Father himself, ἀρχή, is Ἀρχή; the Son and the Holy Spirit are ἀρχήν and Ἀρχήν. And the Churchadeshis appearancetotrihemism by tracing back (if we may so say) the infinite perfection of the Son and Spirit to him whose Son and Spirit they are. They are, so to express it, but the new manifestation and repetition of the Father; there being no room for numeration or comparison between them. The same is true of the contemplative mind, till they are referred to him in whom they centre. On the other hand, in naming the Father, we imply the Son and Spirit, whether they be named or not. This is the key to much of the language of holy Scripture which is otherwise difficult to understand, as, e.g. 1 John v. 20; 1 Cor. xiii. 4-6; John xiv. 16-18 (Newman's A. R., p. 192). Viewing this doctrine on the side of the second and third persons of the Trinity, it becomes the doctrine of their subordination to the Father. In nature, in perfection of substance, equal to the Father; in authority, in origin, the Son and Holy Spirit are subordinate. Bull expresses it thus: "Pater igitur Dominus praecordiorum, quia a Deo; a Deo vero est Patri Filus καθά φώς. Deus ac Dominus est Filius sicut a Pater; et in hoc solo discrepant a Patre Filius, quod Deus et Dominus sit a Patre Deus ac Domino: hoc est, Deus licet de Deo sit, de vero tamen Deo Deus versus ets, ut definitivum synodus ipsi Nicena." (Bull's Works, Book xii. c. 4.) 1615. It is the same thought as that of the Holy Spirit. This subordination, and the ministrations of the Son and of the Holy Spirit in executing the counsels of the individual society of the Godhead, is styled the economy of the Holy Trinity. See PROCESSION.

Monarchia is a name given to those Christians of the early Church who denied the distinction of persons in the divine nature. They insisted on the divine unity, which they thought was infringed by the common and orthodox doctrine of the Trinity. "Monarchia tenens" was their frequent assertion when comparing themselves with the orthodox fathers, whom they accordingly charged with Tritheism. Yet it is apparent that the Monarchians did not properly use the term μοναρχία—at least not in the catholic sense, as maintaining that there is only one Ἀρχή, source or fountain of Deity, the Father, which sense implies the existence of two, or three, or distinct Persons; nor in the sense of unity, for unity can only be asserted when there is plurality (in which lies the misuse of the term by the Unitarians); nor, again, in the sense of God's sole government, which affirms nothing concerning the existence or non-existence of a distinction of Persons in the Godhead; but they used it in the sense of simple oneness, from which oneness they argued that the Godhead is so simple a being as to be governmentless. Nevertheless, this was the meaning in which they used the term μοναρχία is apparent on the very face of the controversy. Thus Tertullian goes on to assert that monarchia means nothing else than "singular et unicum imperium." The Monarchians are generally credited as the adherents of this doctrine, but this is not so. They were sometimes called Patriformians because their ideas led to the conclusion that, if the union between God the Father and his Son Jesus was so intimate as they affirmed, then the former must be supposed to have suffered with the latter all the afflictions of his life and death. Praxeas held that the Word of God (Jesus Christ) was not the same as the God in the world,—the emissions of his voice, to which that distinct agency had been metaphorically ascribed. These heresies considered that the doctrine of the Church with respect to the personality of the Son was a disparaging representation of Christ, whom they held to be the supreme God himself, and who, in a way he had never done before, had revealed himself in human nature, and had appeared in a human body. They taught that God was to be considered in two different relations: 1, the hidden Being, as he was before the Creation—the Father; and, 2, in so far as he revealed himself, the Son of the Logos; and so the Son, just as the Logos and the Father were one, and the Son and Father were one. But the Logos was Christ, as the most perfect revelation of God the Father, was called the Son of God. They maintained that this doctrine was most eminently calculated to dignify Christ. (See, however, below.) The Monarchians received both the Old and New Testaments, and held doctrines somewhat resembling the Unitarianism. This general class, however, comprised many who differed more from each other than they did from those reputed orthodox, and who, indeed, had nothing in common but a great zeal for Monotheism, and a fear lest the unity of God should be endangered by the hypostases of the Alexandrian fathers. Thus Theodotus, Artemon, and Paul of Samosata were placed by the side of Praxeas, Noetus, Beryllus of Bostra, and Sabellius, between whom and themselves, on every essential point of Christian doctrine, there was an unmistakable opposition.

Monarchianism is generally supposed to have originated about the end of the 2d century. It seems to us, however, that this heresy may be traced to the very earliest times of Christianity. Justin Martyr expressly denounces it, and his notice guides us to its source, for he finds the heresy to exist both among Jews and Christians. He condemns the Jews for thinking that, when God delivered the life to Adam, God died of the life, as if the Son of God was the God the Father who appeared. Such, he says, are justly convicted of knowing neither the Father nor the Son; for they who say that the Son is the Father are convicted of not understanding the Father nor of knowing that the Father of the universe has a Son, who, being the first-born Logos of God, is likewise God (First Apol. ch. lxiiii.). In the Dialogue with Trypho he handles the same topic, and extends the charge to Christians. "I am aware that there are some who wish to meet this by saying that the power which appeared from the Father of the universe to Moses, or Abraham, or Jacob, is called an Angel in his coming to men, since by this the will of the Father is made known to men; he is also called Glory, since he is sometimes seen in an unnoticeable appearance; sometimes he is called a Man, since he appears under such forms as the Father pleasure; and they call him the Word, since he is also the bearer of messages from the Father to mankind; they say that this power is unseparated and undivided from the Father, in the same manner that the light of the sun when on earth is unseparated and undivided from the sun in heaven, and when the sun sets the light is removed with it, so the Father, they say, when he
MONARCHIANS

MONARCHIANS

wishes, makes his power go forth, and when he wishes he brings it back again to himself" (Dial. c. Tryph. cc. 127, 128). It appears, then, there were persons in Justin's time who called themselves Christians, but who believed that the Son was merely an unsubstantial en- criptio of the Father nourished from the paternal urine in the synagogues of Greece (see Mill. Pasch. Prin., pt. ii., p. 22 sq.). The cause of this declension in doctrine was, that opposition to the Incomparate Word, when he really appeared, seemed to have predisposed them to accept a heathen philosophy, and to represent the Logos as Philo did— as the manifest God not personally distinct from the concealed Deity. This error found its way into Christianity through the Gnostics, who were largely indebted to the Platonic school of Alexandria. It appears as the foundation of the system of Simon Magus, who taught that the originating principle of all (which he asserted to be Fire, for "God is a consuming fire") is of a twofold nature, having a penultimate term, a name, and a substance. Thus he accorded to Hippolytus remarks, to the potentiality and energy of Aristotel. If this be nothing else than Philo's representation of the Logos, there is some sure ground for the notion that Simon held the heresy afterwards called Sabellian. Burton rejects the notion, inasmuch as the doctrine of the Sabellian writers to be confounded in the theory of Sabellius; but Hippolytus (whom Burton did not possess) shows that the Logos, in Simon's theory, employed certain portions of the divine fulness, which portions he called Eons; and that the Logos, although Simon uses the word Begotten, is really the manifest God not personally distinct from the concealed Deity (see Burton, Hampton Lect. note 46). Although, therefore, the doctrine of emanations is not to be confounded with the doctrine of Sabellius, it had in its original form, as constructed by Simon, a foundation of Sabellianism. Traces of Sabellianism are found even in the later schools of Gnostics, and the later Sabellianism approached to an emanation theory. A resemblance has been noticed between the tenets of Valentinus and those of Sabellius (Peturius, Dogm. Theol. ii. 6; Wurmian, Hist. Sab. ii. 3), and Neander is inclined to think that Marcion may have adopted some of the Patriscylian doctrines (Churck, Gesch. d. Relig., p. 119; Hampton Lect. note 103). The leading tenets of the Monarchians thus appears to have been introduced into Christianity principally through the Alexandrian Jews and the Gnostics. It may also have been derived immediately from heathen philosophers, as in the case of Noetus it is ascribed by Hippolytus immediately to Heraclitus (see Noetians). But whatever its origin in its development, Monarchianism must be carefully distinguished among two opposite classes claiming to be Monarchians: the rationalistic or dynamic Monarchians, who denied the divinity of the Logos, and declared him a mere power (Δύναμις); and the patristic Monarchians, who declared the Son to be the Son with the Father, and admitted at most only a modal trinity, a threefold mode of revelation. "The first form of this heresy," says Schaff, "is identified in the abstract Jewish monothelism, deistically sundened the divine and human, and rose little above Ebonism. The second proceeded at least in part, from pantheistic preconceptions, and approached the ground of Gnostic docetism. The one prejudiced the divinity of the Son, the other the divinity of the Father; yet the latter was by far the more profound and Christian, and according to the Romans was the greater distance. 1. The Monarchians of the first class saw in Christ a mere man, filled with divine power; but conceived this divine power as operative in him, not from the baptism only, according to the Ebionitian view, but from the beginning; and admitted his supernatural generation by the Holy Ghost. To this class belong: (1) The Alogians, a heretical sect in Asia Minor about A.D. 170, of which very little is known. See Alogians. (2) The Theodoreotes, so called from their founder, Theodore, who flourished in the last quarter of the 2nd century. He denied Christ in a persecution, with the apology that he only denied a man; but still held him to be the supernaturally begotten Messiah. He taught that Jesus was born of the Virgin according to the will of the Father, and that at his baptism the higher Christ descended upon him. But this higher Christ Theodoreus conceived as the Son of him who was at once the Supreme God and the Creator of the world, and not (with Cerinthus and other Gnostics) as the son of a deity superior to the God of the Jews. See Theodoreotes. (3) The Armonites, or adherents of Artemon, who came out somewhat later at Rome with a similar opinion, declaring the doctrine of the divinity of Christ an innovation, and a relapse to heathen polytheism. They asserted that until the time of Victor, bishop of Rome, their doctrine was the reigning one in the Roman Church. It was first proscribed by Victor (2nd cent.) in the center, Zephyrinus (after A.D. 200). This was an unreasonable charge, but may have been made possible by the indefiniteness of the earliest formulas of the Christian Church. The Armonites were charged with placing Euclid and Aristotle above Christ, and esteeming mathematics and dialectics above the Gospel. See Armonites. (4) Paul of Samosata, bishop of Antioch in the second half of the 3d century, who denied the personality of the Logos and of the Holy Ghost, and considered them merely powers of God, like reason and mind in man; but granted that the Logos dwelt in Christ in greater measure than in any other person of the number of messengers of God; and taught, like the Socinians in later times, a gradual elevation of Christ, determined by his own moral development, to divine dignity (διονύσιος και προσωπικ). His overthrow by the emperor Aurelius in 272 decided the fall of the Monarchians, though they still appear at the end of the 4th century as condemned heretics, under the name of Samosataeans (q. v.), Pualianistes (q. v.), and Sabellians (q. v.). 2. The second class of Monarchians, called by Tertullian Patrispassians (as afterwards a branch of the Monophysites called Theopaschites), together with others, and their leaders, and their followers, were called Holders of the Monarchians, to hold fast the divinity of Christ; but they sacrificed to it his independent personality, which they merged in the essence of the Father. (1) The first prominent advocate of this class of Monarchians, rather than the founder of Monarchianism, was Praxeas, of whom we have already spoken above. Noetus of Smyrna, who differed but little from Praxeas, is frequently recognised as the leader of a branch of this class; and Callistus (pope Callistus I), who adopted and advocated the doctrines of Noetus, as the leader of a third branch. Those who strictly followed him were called Callistitans, and distinguished from the followers of Noetus, who were called Noetians (q. v.). Noetus taught (according to Hippolytus, Philos. ix. 7 sq.) that the one God who created the world, though in himself invisible, had yet from most ancient times appeared from time to time, according to his good pleasure, to righteous men; and that the same God had himself constructed the Son, when he pleased him to submit to being born; he was consequently his own son, and in this identity of the Father and the Son consisted the "monarchia" of God. An associate and disciple of Noetus was Epiphon, who brought the doctrine he professed to Rome; and his pupil, again, to Alexandria, where the doctrine of Noetus in the time of bishop Zephyrinus, the successor of Victor. With this Cleomenes, according to Hippolytus, Callistus, the successor of Zephyrinus, was on terms of friendship, and was of
like opinions. Callistus declared the Son to be merely the manifestation of the Father in human form; the Father animating the Son, as the spirit animates the body (John xiv, 11), and suffering with him on the cross. The Father, however, made it God, uniting it with himself, and made it one. Father and Son were therefore the name of the one God, and this one person (πρωτόσων) cannot be two; thus the Father suffered with the Son. After the "death of this pope, Patristicism virtually disappeared from the Roman Church.

(2) The stepping-stone from simple Patristicism to what we shall presently deal with as Sabellian modalism constitutes the doctrine advanced by Eusebius of Bostra, in Arabia. From him we have only a somewhat obscure and very variously interpreted passage in Eusebius (H. E. vi, 38). He denied the personal preexistence (Ιεως υαριας περιγραφας, i.e. a circumscribed, limited, separate existence), and in general the independent divinity (Ιεως Φωρηας) of Christ, but at the same time asserted the indwelling of the divinity of the Father (H πατρικη Φωρηας) in him during his earthly life.

(3) The Sabellian modalism had its starting-point in the views evolved by Sabellius (q. v.), who flourished in the beginning of the 2d century. He differed from the orthodox standard mainly in denying the trinity of essence and the permanence of the trinity of manifestation, maintaining that the Father, Son, and Holy Ghost only temporary phenomena, which fulfil their mission and return into the abstract man. He differed from the other Monarchians by embracing the Holy Ghost in his speculation, and thereby received a trinity; not a simultaneous trinity of essence, however, but only a successive trinity of revelation. He starts from a distinction of the monad and the triad in the divine nature. His fundamental thought is that the unity of God, without distinction in itself, unfolds or extends itself (H μονας πλανωδηγες γενων τρας) in the course of the world's development in three different forms and periods of revelation (Ουαμαρα, πρωταωμα—not in the orthodox sense of the term, however, but in the primary sense of mask, or part [in a play]), and, after the completion of redemption, returns into unity. The Father reveals himself in the giving of the law or the Old-Testament economy (not in the creation also; this, in his view, precedes the trinitarian revelation); the Son, in the giving of the law and the Spirit; the Holy Ghost, in the work of the Spirit. Thus he illustrates the trinitarian relation by comparing the Father to the disk of the sun, the Son to its enlightening power, the Spirit to its warming influence. His view of the Logos, too, is peculiar. The Logos is not identical with the Son, but is the monad itself in its transition to trinity. He is not conceived as rational谟, but is created and becoming, a state of being. This and creating principle—the speaking God (Διως αλοω), in distinction from the silent God (Διως σωω). Each πρωτωτων is another διαληες, and the three πρωτως together are only successive evolutions of the Logos or the worldward aspect of the divine nature. As the Logos proceeded from God, so he returns at last into him, and the process of trinitarian development (Διως τας) closes (comp. Baur, Gesch. d. Dreinteiligkeitslehre, on this point). Athanasius traced the doctrine of Sabellius to the Stoic philosophy; and it must be confessed that in the Pythagorean system also, in the Gospel of the Egyptians, and even in the pseudo-Clemensine homilies, there are kindred ideas. But, notwithstanding these, it is now generally conceded that Sabellius was in all respects original in the propounding of his theory of the Trinitarian doctrine. Says Schaff (Ch. Hist. i, 293): "Sabellius is by far the most original, ingenious, and profound of all the Monarchians. His system is developed to us only from a few fragments, and some of these not altogether consistent, in Athanasius and other fathers. It was very fully developed, and has been revived in modern times by Schleiermacher (Euler den Gegenstaat der Sabellianischen u. Athanasianischen Vorstellung v. d. Trinitati in a peculiarly modified form)." Since the writing of the above by Dr. Schaff, the general Monarchian view of the incarnation has been presented by the Rev. Henry Ward Beecher, who in his Life of Christ (N. Y. 1847, 1850), vol. i, denies the union of the human and divine nature in Christ, and asserts that he was God dwelling in and subject to the infirmities and limitation of the human flesh—a view which he supports largely from ch. ii of Hebrews. See Arianism; Incarnation; Monophysites; Patrismicism; Arius; Eusebius; Athanasius.

From this curious glance at the history of Monarchianism, there is apparent an endeavor to escape from the revolting tenet of Patristicism, and to retain or supply that which the nature of man almost instinctively requires—a superhuman mediation and atonement. The working of these two motives, as the Monarchians adopted either the Arian or the Patristic alternative, is very remarkable; inasmuch as the return to Catholicity appears to be much easier in the school which adopted the former alternative. Where Patristicism was at once and decisively rejected, it was open to the Monarchian to satisfy the need for a mediator by magnifying the divine element in our Lord, which at first was considered to be only the highest degree of prophetic grace, and passing through stages of Arianism and semi-Arianism to approach nearer and nearer to the truth. Whereas, when Patristicism had been adopted, and the need was felt for freeing the mind from a tenet at which one shudders, the danger of diminishing the face of God in Christ, through the stages of supposing it to be a portion of the divine fulness, then an emanation from the Godhead. The result was a deliberate Pælthropism. Regarding the heresy itself of pseudo-Monarchianism, the main points for consideration are the following: First, an eternal-mindedness needs to be seen in it from eternity an ιννυα or ληφος, a notion or conception of itself, which the schools term verbum mentis: nor can it be conceived without it. "This Word in God cannot be, as it is in us, a transient, vanishing accident, for then the divine nature would indeed be compounded of substance and accident, which would be repugnant to its simplicity: but it must be a substantial, substantiating Word" (Bull, Cath. Doct. concerning the blessed Trinity). The Monarchians denied this (Εισαιατον και ζωντα και σαντο καινομουν τον πρωτον τος λογος ιννυα) Denying this, they denied also that substantial incarnation came after the Word was sent to be in the world. Thus it has been called Παινημα. Secondly, thus is denied that aταιρεος which we attribute to God, i. e. his self-sufficiency and most perfect bliss and happiness in himself alone, before and without all created beings. For this we cannot well conceive without acknowledging a distinction between the Godhead and the Godhead as used in the Trinity. This is also clear, denied this individual society of the Trinity (comp. Blunt, Dict. of Sects, Heresies, etc., p. 382). See Möhler, Athanasius der Große (Mainz, 1827), bk. i (Der Glaube der Kirche der drei ersten Jahrh. in Betreff der Trinitats., etc., p. 1—116; Baur, Die christl. Lehre von der Dreiteiligkeit Gottes in der Orth. und der ird. Entwickelung (Tub. 1841—43, 3 vols., i, 129—341; Mein, Die Lehre von der Trinitat in ihrer hist. Entwickelung (Hamberg, 1844, 2 vols., i, 45—84; Dorner, Entwickelungsgeschichte der Lehre von der Person Christi (1849; 2d ed. Stuttgart, u. Berlin. 1845—56, 2 vols., i, 1, 122—74; Lange, Gesch. d. Lehrbegriffe im Unterricht der irdischen Synode (Leips. 1851); Schleiermacher, Werke, i, 2, p. 458—574; Vogt, Lehrb. des Athanasius von Alexandria (Bremen, 1861); Hagenbach, Hist. of Doctrines, i, 62 sq., 116 sq., 131 sq.; Mosheim, Comment. Monarchy, ISRAELITISH (see KALE, De potestate regia ingesta Hebr. Havn. 1749). According to the sense of the Mosaic constitution, the Hebrews were erected into a kind of republic under the immediate dominion of Jehovah, for the purpose of illustrating the law of the kingdom (Deut. xvi, 14-20) being partly expanded by the Pentateuch itself, which alludes to it as a future institution, and partly organized on a permanent basis by Solomon, largely independent of the Mosaic law (see Stuttlein in Bethold's Theol. Journ. iii, 272; ii, 79; iii, 277). The institution was inaugurated by Samuel in compliance with a general request of the people, which had grown out of the bitter experience of many years, rendering it an inevitable necessity sooner or later (Ewald, Israel. Gesch. ii, 140 sq.), as the order of judges was but a temporary and precarious safeguard against total anarchy. The king, however, was only empowered to administer the theocratic government as a viceroy of Jehovah, the heavenly sovereign (I Sam. ii, 2), and was bound to this law as the highest authority, so as to exclude the idea of an independent and absolute monarch. In particular cases the Urim and Thummim, or a prophet, or some other medium of divine communication (1 Sam. xxvii, 6; xxx, 7 sq.; 2 Sam. ii, i; 1 Kings xxii, 7 sq.; comp. John x, 51), might be referred to in order to direct and confirm the theocratic regent as to the will of Jehovah, so that in this way the monarchical administration still retained the character of a divine government, and the kings were only the viceroys of God's design and their dependency as a domain of Israel, God's pious regency, in his Verhandling van het Hooglede Genootschap, etc., ii, 3 sq.). But in practice the Israelitish kings assumed the right of declaring war and concluding peace (1 Sam. i, 5 sq.), as well as of exercising judicial functions in the highest cases (2 Sam. xv, 2; 1 Kings iii, 16 sq.; comp. Jer. xlii, 12), and of pronouncing amnesty (2 Sam. xiv). The king was also the patron of the religious cultus (1 Kings viii, 2; 2 Kings xii, 4 sq.; xxvii, 4 sq.; xxii, 1 sq.), and in war he was likewise the usual leader of his troops (1 Sam. viii, 20). Despotism was held in check sometimes by a sort of coronation-oath—a Magna Charta, as it were (1 Sam. x, 23; 2 Sam. iv, 3; 1 Kings i, 4 sq.; 2 Kings xi, 17; comp. Josephus, War, ii, i, 2)—and sometimes by a mass meeting of the tribes (1 Chron. iv, 41 sq.; the heads of families formed a kind of popular representatives, 1 Chron. xxiv, 1 sq.; comp. xxii, 2); and there existed also a sort of popular institution (at least amid the common people (1 Sam. xiv, 45 sq.); but especially the prophets, who from the time of Samuel were set to guard the theocracy, and constituted a species of continually self-renewing order, often made the most unsparing opposition to the prince, either by introducing themselves officially, as the prophet Samuel, or as the royal censors (Neh. iii, 5 sq.; by demanding a special audience (1 Kings xx, 22 sq., 35; 2 Kings i, 15, etc.), and even went so far as open resistance, by their severe invectives at least, to unlawful measures of government (compare 1 Sam. xxiii, 17 sq.). See PROPHECIES.

The regular succession was confined to the house of David. Usually the first-born son was as a rule, as Genealogies, 2 Kings xi, 21—there is found no provision for a guardian or regent (Yet see the Sept. at 1 Kings xii, 24); the queen-dowager, however, seems to have a position as counsellor in such cases ( Jer. xii, 18; comp. 2 Kings xxiv, 12) appears to have as a matter of course assumed the reins of government, but occasionally the father is stated to have designated a particular son to the throne (1 Kings i, 17, 20; 2 Chron. xi, 22); sometimes the people themselves interfered (2 Kings xxiii, 24; xxiii, 30), and even foreign powers at length imposed rulers as their vassals upon the nation (2 Kings xxiii, 19; xxiv, 17.) In the kingdom of Israel the first king was inducted into office by a prophet (1 Kings xi, 31 sq.), and the succession was thenceforth hereditary (descending to the son, or, when the direct line failed, to the brother, 2 Kings ili, i); but the brief dynasties followed each other with many interruptions through extinction, conspiracy, or deposition (1 Kings xvi, 9, 16, 21), and several interregnas occurred. An association in the throne, or rather viceroyship, of the successor in consequence of the disability of the reigning monarch is mentioned in 2 Chron. xxvii, 21; and numerous other instances are rendered probable by the discrepancies in the regnal years. See CHRONOLOGY. In the election of a king, ancient nations had great regard to personal size (1 Sam. x, 23) and beauty (1 Sam. xvi, 12; Ezek. xxviii, 12; comp. Psa. xi, 3; Homer, II. iii, 186 sq.; Herod. iii, 20; Strabo, xvi, 699; xvii, 822; Athen. xii, 566; Barhebr. Chron. p. 884; see also Douceul Antiqu. i, 131); and Hebrew kings were required to be native citizens (Deut. xvii, 15). Those who instituted a new dynasty sought to strengthen their power by the ex- tension of the reigning family (1 Kings xi, 11; 2 Kings xi, 11, 17; xi, 1; comp. Josephus, Ant. xvi, 7, 10), as is customary still in the East (Tavernier, Voyage, i, 258). The first kings, Saul (1 Sam. ix, 16; x, 1; xv, 1, 17) and David (1 Sam. xii, 1 sq.; 2 Sam. ii, 4; v, 3; xii, 7), also Solomon (1 Kings i, 38, 39; v, 1—so likewise Absalom unlawfully, 2 Sam. xix, 11), were regularly anointed by a prophet or the high-priest; but in later times the king was only indirectly anointed by the Sons of Jehosafat, whom the priesthood restored to the throne in place of the usurping Athaliah (2 Kings xi, 12), and Je- hoahaz his son, whom the people raised to the throne (2 Kings xxiii, 30), besides Jehu of the house of Is- rael, who established a new dynasty (2 Kings ix, 29 sq.); the prince, however, was expected to be a native citizen, and to comply with the lack of the hereditary right. The Anointed of Je- hoah (גְּדוֹלֵי יְהוָה יְהוָה), or simply the Anointed, accord- ingly appears (in the sacred style) as the official title of the regular sovereign (1 Sam. ii, 10, 35; xvi, 6; xxiv, 6; xxvi, 16, 23; 2 Sam. xix, 22; xxii, 51; Psa. ii, 2; Lam. iv, 20, etc.). No other ceremony of investiture seems to have been enjoined; although we occasionally find a popular assembly (1 Sam. x, 24; 1 Kings i, 25, 22; 2 Kings ix, 13; xi, 13; 2 Chron. xxii, 11; comp. Josephus, War, i, 38, 9), a coronation (2 Kings xi, 12), music (1 Kings i, 40), and thank-offerings (1 Kings i, 24). The royal beat of burden is also mentioned (1 Kings i, 98). See Fort. Scacchi Dissert. de inaugurat. regum Israel. in Ugolini Theaurur. vol. xxxii. Regal costumes, consisting of costly and elaborate garments, were already in use, as was also the sword. The crosier (Neh. iii, 5 sq.) by the pontiff, or the sceptre (2 Kings ii, 19; 1 Mac. x, 62; xi, 5; xiv, 48), in accomplishment with the simple diadem (72, 2 Sam. i, 10; 2 Kings xi, 12), jeweled crown (7722, 2 Sam. ii, 80; Cant. iii, 11; comp. Ezek. xxxii, 26; 1 Mac. x, 29), the sphere (2522), and the throne (2828). See each word. Later occurs the purple mantle (1 Macci, vi, 15; x, 50, 62; xiv, 48; comp. Acts xii, 21).

The income of the Israelitish kings, with which they defrayed the expenses of their court and administration, was derived from voluntary but (as still in the East; see Kämper, Ammon, p. 235) valuable presents from their subjects in kind and the dependencies (1 Sam. x, 27; xv, 20; 2 Sam. vi, 2, 11; 1 Kings x, 55; comp. Herod. iii, 87, 97; Êlian, V. H. ii, 31; Heeren, Ideen, i, i, 225 sq., 483), from public domains and royal possessions, consisting of lands, vineyards, and olive-yards (1 Sam. viii, 14; 1 Chron. xxvii, 26 sq.; 2 Chron. xxvi, 10; comp. Josephus, Ant. vi, 10, 6), which sometimes fell to the crown by confiscation of private property (1 Kings xxix, 16 sq.; comp. Ezek. xliii, 18; see Kämper, ut sup. p. 96), from monopolies (1 Kings x, 11 sq., 26 sq.; Amos vii, 1), from public services (1 Kings v, 19; ix, 21; 1 Sam. vii, 18), and from their temporary visits (comp. 1 Sam. xiv, 10, which were performed by head collectors (Isa. xvi, 1; Eo- cleas, ii, 8). At times there is mention of an extraor- dinary levy upon personal property (2 Kings xxiii, 35); and the king also claimed a share of the booty ob-
MONARCHY

MONASTERY

tained in war (2 Sam. viii, 11 sq.). See ASSESSMENT. Hence came the at times so considerable royal treasures (1 Kings x, 21; xiv, 26; 2 Kings xiv, 4), the rich war-booty, the palaces, and the perfumes (1 Kings vii, 9; xii, 2; 2 Kings xx, 18; xxv, 4; Jer. xxxiii, 4; lli, 7; Cant. viii, 11), the sumptuously served table (1 Kings iv, 22 sq.; comp. Dan. vi, 1 sq.; Esth. i, 3 sq.), to which it was esteemed a great distinction to be invited as a regular guest (2 Sam. ix, 7; see Morier, Second Journey, 148; Rosenmuller, Morgenl. iii, 163; comp. 2 Kings xx, 29; Dan. i, 5; Herod. iii, 182; Heeren, Ideen, i, 1, 217). An especial mark of royal luxury was a well-stocked harem (2 Sam. vi, 13; 1 Kings xi, 1 sq.; xx, 3; comp. Quint. Curt. iii, 24, 24; Athen. xii, 514; Flutur, Artiz. c, 43), which was guarded by slaves. A special portion descended to the succeeding king (2 Sam. xii, 8; comp. Herod. iii, 68; the marriage in Deut. xvii, 17 was interpreted as a limit of eighteen wives, Schickard, Jus. reg. p. 75). See HAREM. To aspire to a connection with this was equivalent to being a pretender to the throne (2 Sam. xvi, 22; 1 Kings ii, 21 sq.; comp. Movers, Phön. i, 461). See ABSALOM. Among the holidays, the day of the king's birth or accession was prominent (Hos. vii, 6; Matt. xiv, 6; comp. Gen. xl, 20; Herod. i, 183; ix, 109; Josephus, Ant. vii, 3, 1). Music at court and table is early mentioned (2 Sam. xiv, 35; Eccles. ii, 8). Kings expressed their favor by rich presents, especially of arms and apparel (see Giff. 275). On royal feasts the days of the week were parceled or their punishment was postponed (1 Sam. xi, 13; 2 Sam. xiv, 22 sq.; comp. Gen. xl, 20; see Philo,<i> Macc. i</i>, 519). It was, however, a still more distinguished honor when the king invited any one to sit at his right hand (2 Kings ii, 19; comp. Sueton. Nero, 13; Wattenstei, N. T. i, 436). The reverence paid the monarch was very great (Prov. xxiv, 21): persons fell prostrate in his presence, so as to touch the forehead to the earth (1 Sam. xxiv, 9; xxv, 23; 2 Sam. i, 6; xii, 18; even females of royal rank did the same, 1 Kings i, 16), dismounted in the street on meeting him (1 Sam. xxv, 23), and greeted him with salves in the streets and at audiences (Dan. ii, 4; iii, 9; comp. Josephus, War, ii, 1, 1; see Rosenmuller, Morgenl. iii, 350). A high notion was entertained of his sagacity (2 Sam. xiv, 17, 13, 27; comp. Rosenmuller, Morgenl. iii, 142 sq.). His entrance into a city was signalized by pomp (2 Kings ix, 13; xoi, 6; comp. Josephus, Ant. xvi, 2, 1).<ref>
Of the rank of the early Hebrew kings nothing can be particularly said; but in later times those created by the Romans held the honor of the senatorial order (comp. Josephus, Ant. xiv, 10, 6). Whether in their edicts the Israelitish monarchs, like the Persian (Ezra iv, 18, 27, 24), Syrian (1 Macc. x, 19; xi, 31; xvi, 19), or Attic (4 Macc. i, 3, 4) emperors, adhered to their edicts in the plural number (see Frommann, Opusc. ii, 209 sq.), is uncertain (comp. Theodoret, Quast. in Genes. 19). Any infringement of the regal majesty was followed by the death penalty (1 Kings xxii, 10), or by perpetration by a member of the royal family, it incurred an igno-
munious expulsion from court (2 Sam. xiv, 24, 25). In general Hebrew kings were quite as popular as other Oriental monarchs (Esth. i, 14; iv, 11; Herod. i, 99; ii, 140; Diod. Sic. ii, 21; iii, 47; Agatharch. ed. Hud. i, 63; Strabo, xvii, 821; Harmer, ii, 55; Lüdecke, Beitr. d. türk. Reichs, p. 276), often exhibited themselves in the midst of their subjects (2 Sam. v, 8; 1 Kings xx, 9, 22; xxxii, 10; 2 Kings vi, 26; vii, 17; Jer. xxxii, 7, 26), and were affable with them (1 Kings iii, 15; 2 Kings vi, 26 sq.; viii, 3 sq., etc.), even to the extent of personal intercourse (1 Kings xxi, 2 sq.; for later indica-

MONARCHY

tions, see the Mishna, Sukkoth. ii, 2 sq.). After their death the kings were laid in royal sepulchres (those of Judah in Jerusalem) (1 Kings ii, 10; xi, 43; xiv, 31, etc.), but the wicked ones were sometimes de-

MONARCHY

Med. 1, 22). The consorts of deceased kings remained in high honor, and even held the title of queen-mother (mistress, 1 Kings xv, 18; 2 Kings x, 13; Jer. xxiii, 18; xxxii, 2). The title "king" was applied to the successor of a deceased monarch; hence well (Jer. xxvi, 9; 2 Chron. xxxii, 4). Monarchs expressed their regard for each other by rich presents (1 Kings x, 2) and dip-

MONARCHY

lomatic embassies, the latter to convey especially their well-wishes and complaints (2 Sam. xx, 2; 2 Kings xx, 12 sq.; comp. Herod. vi, 89). See SALUTATION.

The following official courtesies are mentioned: (1) Chief major-domo or head palace-marshal (גֵּרֵשׁ מָרָשָׁל, 1 Kings iv, 6; xviii, 3; 2 Kings xxiii, 18; xix, 21; 2 Sam. xxiii, 15), who directed the court state (Kämpfer, p. 78), but was also occupied with civil duties. Among his subordinates were the palace doorkeepers (던ִּים), 2 Kings vii, 11). (2) Chief butler (לבָּן, 2 Sam. xxv, 24; 1 Kings iv, 6; xii, 18; comp. xi, 28). (3) Chief warden of the wardrobe (תֶּרֶםוֹן, 2 Kings xx, 23, or פֹּסֵף הַשִּׁמְעָה, 2 Kings xxiii, 14; 2 Chron. xxxiv, 24). (4) Superintend-

MONARCHY

ent of the exchequer and lands (מִזְרָךְ, 1 Chron. xxvii, 25 sq.), who had the oversight of the royal herds and domains (perhaps the ἱπποτάμων of Luke vii, 3). Similar were the financial officers of Sol-

MONARCHY

omon in the twelve districts (יוֹבָּא, 1 Kings iv, 7 sq.). The chamberlains proper were usually eunuchs (2 Kings ii, 6; Jer. lii, 22): among whom probably was the cup-bearer (חֵן), 1 Kings x, 5; comp. Josephus, Ant. xv, 17, 4, xiv, 11, 4; xvi, 8, 1; see Kämpfer, p. 81 sq.). A kind of chamberlain or valet is apparently designated in Jer. lii, 25; 2 Kings xxv, 19 (דָּוִד בַּעַל), unless the expression indicates generally the highest officers of the court and state. What official is denoted in Jer. ii, 60 (תַּנּוֹ קָדוֹשׁ) is doubtful; Hitzig has perhaps conjectured rightly, the field-marshall. Fi-

MONARCHY

nally, here belong the royal life-guard, who had to keep watch of the castle or palace (2 Kings x, 5), but also saw the royal mandates executed in cases of capital punishment (2 Sam. x, 11). See CHETHETHE.

MONARCHY
MONASTERY

To one or other of the four leading orders a monastery was usually referred: (1) The Order of Bazi, including all the Greek monks and Carmelites; (2) the Order of Aaugustine, in its three classes—canons regular, monks, and nuns; (3) the Order of Benedict, with its various branches, male and female; (4) the Order of Francis, with its numerous ramifications.

The common appellation of monasteries are the following: (1) Monasterio, monastery, as being the residence of monks. (2) Monasterium, monastery, of religious nuns. (3) Claustrum or claustro, cloister: literally, a place of confinement. This was the prevailing name in the West, and the choice of the name indicates the strict seclusion which prevailed. (3) Conventium, a common dwelling-place. (4) Laura, lauris or lauris, which is the old name for the residence of the anchorites. It appears to denote a narrow, confined, and inconvenient abode. According to Epiphanius (Hores, p. 69), it was the name of a narrow, dirty street in Alexandria, whence it was applied to the wretched habitations of anchorites in the Thebaid, Palestine, and Syria. By Latin writers laura is usually employed in connection with cenoic. (3) Syrène, which is the name applied by Philo to the abodes or places of rest of the Therapeutae, and hence it was sometimes given to monasteries. The Latins retained the word suumnum (simium, or simicum). (6) Δακτυλία, i.e. δακτυλιά σκαρφαλωτή, a place of religious exercise. (8) Vajer, called in some societies a cultivator of silence and virtue. (9) Conventus, a convenant, in reference to the common life of the inmates. (10) Hystyvel, denoting properly the residence of the president (Synyusos or synyusos), was used for the whole building. (11) Mabota, a word which means a pen, or sheepfold, and refers to the residence of the anchorites in remote districts, or to their congregating together in flocks. Hence the president was sometimes called archimandrite.

(12) Lastly, the Syrians and Arabsians, almost without exception, styled their monasteries and churches, and uniformly denote a monastery. The word is derived from another, which is especially applied to the tents and other habitations of the nomadic tribes (see Du Cange, in the Glossarium medii et infima Latinisatis, under the respective words).

This word monastery, in most strict acceptance, is confined in its modern and Western application to the residences of monks, or of nuns of the cognate orders (as the Benedictine), and, as such, it comprises two great classes, the Abbey and the Priory. The former name was given only to establishments of the highest rank, governed by an abbot, who was commonly assisted by a prior, sub-prior, and other minor functionaries. An abbey always included a church, and the English word Minister, although it has now lost its specific application, has its origin in the Saxon and German Minister (Lat. monasterium). A Priory supposed a less extensive and less numerous community. It was governed by a prior, and was generally, although not always, one of the monastery uniform, at least in later times, subject to the jurisdiction of an abbey. Many priories possessed extensive territorial domains, and of these not a few became entirely independent. The distinction of abbey and priory is found equally among the Benedictine nuns. In the latter denomination the name of Commandery and Preceptory corresponded with those of abbey and priory in the monastic orders. The establishments of the Mendicant, and, in general, of the modern orders, are sometimes, though less properly, called monasteries. Their

more characteristic appellation is Friary or Convent, and they are commonly distinguished into Professed Houses (called also Residences, Novitiates, and Colleges, or Scholastic Houses. The names of the superiors of such houses are varying, and depend upon the denomination of the order and the name Rector, but in some orders the superior is called Guardian (as in the Franciscaん), or Master, Major, Father Superior, etc. The houses of females—except in the Benedectine or Cistercian orders—are called differently Convent and Nunnery, the head of which is styled Mother Superior or Abbess. The name Cloister properly means the enclosure; but it is popularly used to designate, sometimes the arched ambulatory which runs around the inner court of the building, sometimes in the more general sense of the entire building, when it may be considered as synonymous with Convent.

2. During the persecutions in the early ages of Christianity many believers sought shelter in the mountains and deserts, where they gradually acquired a taste for solitude and devotion. In process of time disorders arose among the various monastic orders, and it was found expedient to collect the monks into large societies, living under a common government, and to erect the walls of separate buildings, appropriated to the purpose. In the year 340 Pachomius built a large cenobium, or monastery, on an island of the Nile, and the example was soon extensively followed. In these establishments, which in some places were very large, the members lived in strict connection with one another.

The monastery was divided into several parts, and directors were appointed over each. Ten monks were subject to one who was called decanos, or dean, from his presiding over ten; every hundred had another superior, called centenarius, from his presiding over one hundred. Above these were the regents or fathers of the monasteries, called also abbates, abbots, from the Hebrew Greek word abot, a father; and hegymen, presidents, and archimandrites, from mandra, a sheepfold, they being, as it were, the keepers or rulers of these sacred folds in the Church. The business of the deans was to exact every man's daily task, and bring it to the economists, or steward of the house, who himself gave a monthly account to the father of them all (Bingham, Origines Ecclesiastica, bk. vii, ch. iii, § 11).

The rules and regulations of these houses varied according to the difference of the founders, and other circumstances. Some gave more weight to the spirit of a monastic house, we recite the rule of St. Benedict as in operation: "The abbot represented Christ; called all his monks to council in important affairs, and adopted the advice he thought best: he required obedience without delay, silence, humility, patience, manifestation of secret faults, concert with the bishops and their proceedings, and employment. Abbot selected by the whole society; his life and prudence to be the qualifications, and to be addressed dominus or pater. Prior appointed by the abbot; deposable for disobedience. A dean set over every ten monks in larger houses. The monks to observe general silence; no scrimmery, idle words, or exciting to anger; to rise at daybreak, and, after having washed, to rise to church two hours after midnight; to leave the church together at a sign from the superior. No property; distribution according to every one's necessities. To serve weekly, and by turns, at the kitchen and table. On leaving their weeks, both he that left it and he that began it to serve the feet of the others; and on Saturday to clean all the plates and the linen which wiped the others' feet. To render the dishes clean and whole to the cellarer, who was to give them to the new hebdomary. These officers to have drink and food above the common allowance, that they might serve cheerfully. Daily routes—Work from seven to near ten o'clock, from Easter to October; from ten till near twelve, reading. After refraction at twelve, the meridian or sleep, unless any one preferred reading. After none, labor again till the evening. From October to
Lent, reading till eight A.M., then retire, and after wards labor till none; after refection, reading or psalmody. In Lent, reading till tierce; doing what was ordered by the Abbot, and no other recreations made. Senior to go around the house, and see that the monks were not idle. On Sunday, all reading except the offi cers. Workmen in the house to labor for the common profit. If possible—to prevent evaporation—water, a mill, garden, oven, and all other mechanical shops, to be within or attached to the house. Refectory to be clean, and reading Scripture during meals: what was wanted to be asked for by a sign. Reader to be appointed for the week. Two different dishes at dinner, with fruit. One pound of bread a day for both dinner and supper. No meat but to the sick. Three quarters of a pint of wine to be given in the meal, and three glasses at none; in Lent, till Easter, at six o'clock; from Easter to Pentecost at six; and all summer, except on Wednesday and Fridays, then at none. Collation or spiritual lecture every night before compline (after supper); and compline finished, silence. [See BRevity; Compline.] Particular abstinence in Lent from meat, drink, and sleep, and especial gravity. Rule mitigated to children and the aged, who have liberty to anticipate the hour of eating. Dormitory, light to be burning in. To sleep clothed, with their girdles on, the young and old inter mixed. Monks travelling to say the canonical hours wherever they are. Whence rule not to be out of the abbot's house a day, not to eat abroad without the abbot's leave. Before setting out on a journey to have the previous prayers of the hour, and upon return to pray for pardon of excesses on the way. No letters or presents to be received without the abbot's permission. Precedence according to the time of profession. Elders to call the juniors brothers; the seniors to call the elders monastic. When two monks met, the junior was to ask benediction from the senior; and when he passed by the junior was to rise and give him his seat, and not to sit down till he bade him. Impossible things ordered by the superior to be humbly represented to him; but if he persisted, the assistance of God to be relied upon for the excution of them. Not to defend or excuse one another's faults. No blows or excommunication without the abbot's permission. Mutual obedience, but no preference of a private person's commands to those of the superiors. Prostration at the feet of the superiors as long as they were angry. Strangers to be received with prayer, the kiss of peace, prostration, and washing their feet, as of Christ, whom they represented; then to be led to pray; the Scripture read to them; after which the prior might break his fast (except on a high fast). Abbé's kitchen and the visitors' separate, that guests coming in not to be disturbed. Priests not to be allowed to Porter to be a wise old man, able to give and receive an answer; who was to have a cell near the gate, and a junior for his companion. Church to be used only for prayer. Admission—Novices to be tried by denials and hard usage before admission. A year of probation. Rule to be read to them in the interim every fourth month. Admitted by a petition laid upon the altar, and prostration at the feet of all the monks. Parents to offer their children by wrapping their hands in the pall of the altar; promising to leave nothing to them (that they might have no temptation to quit the house); and if they gave anything with them, to reserve the use of it during their lives. Priests requesting admiss ion to be tried by delays; to sit near the abbot; not to exercise sacerdotal functions without leave, and conform to the rule. Discipline—Upon successess admission and public reprehension, excommunication; and, in failure of this, corporal punishment. For light faults, the smaller excommunication, that is, eating alone after the others had done. For great faults, separation from the table, prayers, and society, and neither himself nor his food to receive the benediction: those who joined him or spoke to him to be themselves excommunicated. The abbot to send seniors to persuade him to humility and making satisfaction. The whole congregation to pray for the incorrigible, and if unsuccessful, to proceed to excommunication. No person expelled to be received after the third expulsion. Children to be confounded with discretion, by fasting or whipping" ("Sanctorum Patrum Regula Monasticorum," in Fosbrooke's Britzish Monachism, p. 199). By the strict law of the Church, calling the law of cloister or enclosure, it is forbidden to all except members of the order to enter a monastery; and in al most all the orders admission of females to the monasteries of men is denied. Yet must they have been at times admitted, if we may believe the accusations brought against the chastity of monastics, especially since the Middle Ages. In the Greek Church the law of enclosure is far more rigidly enforced than in the West. Thus the monasteries of Mount Athos are closed to all women, but all masculine females in the monasteries of the East are rigorously excluded.

3. In the East monasteries are supposed to have existed about the time of Christ's stay on earth. See MONASTICISM. In the West the first monasteries were founded by St. Martin of Tours, about 350, at Piaci, near Poitiers, and at Marmoutier. The chief of these monasteries was in orders, and women who entered the monasteries were permitted to relinquish the monastic state and marry down to the 6th century. See CELTIC. The regular life of the community was introduced by St. Benedict of Nursia. His rule is considered to mention a large number of monasteries, both in the East and West, some founded by St. Basil about 358, others by St. Augustine in Africa about 390, and some by St. Ambrose at Milan in 377. On British soil St. Patrick is supposed to have started the first monasteries about the opening of the 6th century, when he flourished as bishop of Ireland. During thirty-three years he worked at the conversion of the people to the Christian faith, and filled the island with schools and monasteries, the sites of which are still to be distinguished by the round towers that served as bellfries for the conventual churches. The prefix "khill" is the Latin cella, and marks the "religion loci" of innumerable localities in Ireland; and well has Macanlay said that "without these Christianizing institutions the population would have been made up of beasts of burden and beasts of prey." A missionary spirit has always distinguished the Irish Church. Its monks, as hardly navigators, established themselves in the Hebrides, with Iona for their capital, and passed over to the western districts of Britain; whence they settled upon the coasts of Brittany, together with the British population expelled by Saxon invasion in the 4th and 5th centuries. It was a province of Gaul that had remained comparatively free from Roman influence to the time of Vercingetorix. The Gallic Church of Gaul was Romanized. The missionary spirit of his race impelled Columban to settle in Gaul, and to found the monastery of Luxeuil, in Burgundy, the mother of numerous conventual establishments, and the capital of Monastic Gaul (Mulian, Latins Christianity, iv, 5). He has been termed the Irish Benedict, and various legends are connected with his name, which are only reproductions of Benedictine fable. Though he treated the Roman see with respect, he never sacrificed his own independence of opinion to its authority; and he gave to the see of Jerusalem precedence in point of honor (Ep. v, sec. 18). He made his monks a rule: but its absence prevented its extended use; and it was superseded by the Benedictine rule, which finally became the universal law of monasticism. The County Down monastery, on the north-west coast of Ireland, and Clonfert were towns of monks rather than monasteries. The former contained more than three thousand under religious vows; in the latter at least six hundred. The foundations of the latter having been accompanied by learned monks from Gaul and Lin, these monasteries soon became renowned for their sound learning, as well as for their pure faith. In England all the most ancient sees have been established upon pre-existing monastic foundations.
the close of the 5th century Dubricius, bishop of Cae- 
ileon, founded Llandaff monastery. St. David built his sub-
montastery, his tomb, on the site of St. David's, a 
site indicated to him by St. Patrick, the wild promon-
tory on which the cathedral now stands. He also re-
built the convent at Glastonbury; and it was in honor 
of St. David that the privilege of asylum was indulged 
to sites in any way connected with his name—a privi-
lege not so much against oppression and wrong, but which became in-
tolerable from abuse in later years. St. Asaph, in its or-
igin, was a convent of nine hundred and sixty-five 
monts, founded at the end of the 7th century by Ken-
tigern, himself a monk and missionary bishop among 
the northern Scotts of Britain. The De Dietr. Vita 
Leg was founded by Ittud, a fellow-disciple of St. David at 
St. Germain of Auxerre. It contained within its “
wide precincts” a whole army of monks. Yet it was 
only a little more than half the size of the Irish estab-
lishment of the same name. The diocese of Bangor 
owes its origin to the foundation of Daniel, a disciple 
of Dubricius, at the commencement of the 6th century. 
Winchester, first established as a monastery by Cen-
vwalch, king of Wessex, under a promise to his dying 
father, was made an episcopal see by the same king 
about the middle of the 7th century. Ripon was a 
monastery at the first of Ethelred, king of Northumber-
land, having Wilfrid for its first abbot. He repaired and 
beautified the cathedral at York, of which see he be-
came bishop, and built the priory of Hexham in the 
most elaborate style; the church was said to have been 
the most beautiful on this side of the Alps. Wilfrid 
was the first of a series of clerical and monastic archi-
tects who for several centuries made Anglican ecclesi-
asical buildings the glory of Europe. It is curious to 
find that the churchwarden’s sovereign cure for all de-
fects was also introduced by him: “Parictes lavans... 
alba caele miracile dealbavit.” (Montalembert, iv. 235.) 
Ethelred, king of Northumber-land, founded the 
monastery of the foundation of Ethelreda, queen of Northumber-
land: “virgo bis nupta.” Columba, like Pelagius, is 
the classical equivalent for a Celtic name. He is not to 
be confounded with Columban, the Celtic founder of 
Luxeuil. Columba (born A.D. 521, died A.D. 597), after 
founding thirty-seven monasteries in Ireland, passed 
over to the Hebrides, selected Iona, the most desolate of 
those desolate islands, flat-lying and sandy, as the 
site of a monastery, and made it the “glory of the 
West,” and the cradle of the civilization of North Brit-
in. See Iona. From Iona, Aidan went forth as the 
angel of the Northumbrian and Northmen, having 
found a site as desolate and unattractive as Iona. Iona 
Lindisfarne (since called Holy Island), founded a monas-
tery, which became the mother-church of all the prov-
cences north of the Humber. The character of sanctity 
implanted upon it by St. Aidan long distinguished it; 
and its abbot, like himself, mostly became bishops of 
the northern provinces. His great and benevolent char-
acter has been nobly drawn by Bede (H. E. iii. 5, 17.). 
Hilda, foundress (A.D. 658) and abbess of Whitby, re-
ceived the veil from him. The feminine love of what-
ever is beautiful in nature led to the selection of a most 
noble site for her abode; and contrasts strongly with the 
mascule austerity and contempt for aesthetics that led 
the Celtic monks to choose Iona and Lindisfarne. The 
influence of Hilda was everywhere felt: kings and 
princes sought her counsel; she was a “mother” by en-
deavour to the very poorest who received alms at the 
abbess’s gate. Bede (H. E. iv. 29) speaks in enthusiastic 
terms of her tenderness and admiration of St. Aidan. 
She was noted for her ability to arrange a convenant for monks as well as nuns was under her rule, 
and Bede notes that six prelates, eminent for their piety 
and learning, received their training at Whithby under 
her eye. To Hilda also we are indebted for having 
drawn the greatest Saxon poet, Ceidmon, from his ob-
scurity. He was a common herdman, but at her per-
suasion became a monk. He anticipated Milton in 
taking as a theme for poetic song the fall of Satan and 
the sin of our race. According to Wren, the foundation 
of Westminster Abbey by Benedict Biscop, a monk of Lindis-
farne (A.D. 665), was remarkable for the introduction of 
painted glass. Workmen were brought from the 
Continent, who instructed the Saxon monks in the mys-	ery of their craft. (Milman, Latin Christianity, iv. 4.) 
The sister-foundation, Jarrow, endowed with a domain 
granted them by the public benefactors of the venerable 
Bede had his cell. In South Britain the most ancient monastery was that founded by Augustine 
at Canterbury, and placed under Benedictine rule. The 
deed of gift whereby king Ethelbert conveyed the site 
(A.D. 668) is, according to Pagiare, the earliest exist-
ing deed of the public conveyance of land. A Biscop 
followed up the mission with a colony of monks, who 
also imported all that could be required for the ob-
servation of the Romish ritual. Thus the subjugation 
of England to the see of Rome was the work of the 
Benedictine monks. One of their number, Mellitus, 
first bishop of London, founded Westminster Abbey. 
The first metropolitan recognised by all England was 
Theodore, an Oriental monk, a native of Tarassus, and 
placed in the see of Canterbury by pope Vitalianus, 
A.D. 668. The council held at Whitby on the subject of 
Easter (A.D. 664) showed that strong traces still re-
mained of the Oriental tendency, that the English 
monks and an African monk, Adrian, was sent with the bishop 
elect as a safeguard and trustworthy envoy: “ne quid ille 
contrarium veritati et fidei, Graecorum more, in ecclesie 
cui processset, introduceret” (Bede, H. E. iv. 1). 
To him is due the creation of the parochial system, by 
persuading the territorial proprietors to build and endow 
churches, retaining the advowson in their own 
hand. The Church-rate is of co-ordinate date. The-
odore was a laborious student, and, with the assistance 
of Adrian, he gradually made the monasteries of 
England schools of sound learning. The principal sees 
were founder by monks; other monasteries were naturally 
seeks. After the Conquest disputes arose between 
the secular and the regular, i.e. between the 
parochial and monastic clergy; and an attempt was 
made by Walkelin, bishop of Winchester, to supersede 
the monastic chapter by a body of forty secular clergy. 
Lawrance, however, vigorously opposed the changes, 
and obtained from pope Alexander a constitution in 
confirmation of the capital rights of the monasteries affected 
(Mercy, H. E. ixi, 53; comp. also Soames, Latin Ch. 
during the Anglo-Saxon Times [Lond. 1848, 12mo]; and 
Soames, The Anglo-Saxon Ch. [Lond. 1850, 12mo, 4th 
ed.].

4. In 550 the rule of St. Basil, followed by all Greek 
monasteries, was introduced at Rome; but St. Benedict 
gratually absorbed all other monks into his great rule. In 
585 St. Columban’s rule of prayer, reading, and man-
ual labor was founded in Gaul. In 649 the Monothelite 
persecution in the East transferred many monks to the 
Western Church, and in the 8th century the Iconoclasts 
were the cause of a still larger assimilation. In the 
13th century St. Dominic prevailed on women to observe 
a stricter rule. The first written rule—that of St. 
Basil, bishop of Cesarea in the 4th century, who em-
braced the traditional usages, was derived from that of 
Pachomius, and aimed at the combination of prayer and 
manual toil; it was modified by St. Benedict, the pa-
triarch of Western monks, but in the 11th century was 
still vigorous in Naples. Polydore Vergil says that in 
378 St. Basil first enacted the triple vows of chastity, 
poverit, and obedience. In 410 Liberius recognized 
The new rule rapidly in Italy before 
his death in 548. Maurus and Placidus extended it in 
France and Sicily; others introduced it into Spain, 
where monasteries are said to have existed in 380; 
and in less than two centuries all the monastic orders 
in the West were affiliated to it. St. Columban built 
the first abbey in England in 563, as he had done in 
Ireland; in the latter instance it was preceded only by
MONASTERY

the St. Bridget's cell at Kildare, which was famous in 521, being established probably by a pupil of St. Patrick. In 802 the Council of Aix-la-Chapelle decreed that the Benedictine rule should be universally adopted. From the 10th century it put forth branches: Clugny in 910, under its abbots, embraced the rule; so did the Camaldolese in 1038, from St. Romuald; the Cistercians in 1098 under St. Bernard; the Carthusians in 1105, under St. Bruno; the Valombrosans in 1060, from John Gualberte; the Celestines in 1224, from Peter di Merona; and the Olivetans in 1319. At Bangor in 683 there was a monastery with seven portions, each consisting of three hundred monks, with their provosts or rectors. Benedict Biscop founded the monastery at Wearmouth and Yarrow of stone; and in 1085 Lanfranc united all the English abbeys into one congregation. St. Maur in 1261 was the last instance of its reform. The lands possessed by monasteries were held under the same tenure as all other land; and, till a comparatively late period, the abbots themselves led their quota of troops into the field. In the time of Charlemagne fourteen monasteries of the empire furnished their proportion of soldiers. In 982 the bishop of Augsburg and the abbot of Fulda were killed in the same battle. Charles Martel was opposed by troops collected and headed by the same ecclesiastics. Monasteries were called inopinus if exempt from their foundation, or libera if the grant or privilege had been made subsequently. Those who were not exempt were compelled to render to the bishop obedience; annual fees called jus synodale, or circulada, procurations, or the provision of canons or religious men; some processions, and the right of celebrating masses in their manses. All abbots, however, despite their repugnance, certainly after the 9th century, were compelled to make the profession of canonical obedience to the diocesan when receiving his benediction, and this implied his right to give holy orders, consecrate churches, altars, and cemeteries, and to establish religious foundations; and in the whole, and the right of celebrating masses in their manses. All abbots, however, despite their repugnance, certainly after the 9th century, were compelled to make the profession of canonical obedience to the diocesan when receiving his benediction, and this implied his right to give holy orders, consecrate churches, altars, and cemeteries, and to establish religious foundations; and in the whole, and the right of celebrating masses in their manses.

6. In their first institution, and in their subsequent uses, there can be no doubt that monasteries were among the most remarkable instances of Christian munificence, and they certainly were, in the so-called Dark Ages, among the beneficial adaptations of the talents of Christians to pious and charitable ends. The foundation of the monastery was the dictate of religious motives in the youth of the Church, but the reward of piety was temporal also; the estates of the founder were improved, the vassals educated, order introduced, the sick and aged tended, and the monks and nuns performed services, " says Blunt, "that monasticism has rendered to civilization in the transition of society from ancient times to the Middle Ages have been most important. Monks were the skilled agriculturists of the period; and many terms in rural life, and in the fauna and botany of all Northern Europe, may be traced back through them to Greek and Latin terms; e. g. 'hawky,' olea, harvest-home; and 'ranny,' ostonea, a shrew-mouse; 'cherell,' chermofleu. The belladonna, which is now found indigenous, was introduced first among the pharmaceutical herbs of the convent-gardens, for the monks were the physicians of the period. As men of war, also and energetic missionaries they kept the lamp of knowledge and civilization from expiring in the very darkest periods; and whatever was done in the way of educating the young was carried on within the walls of the monastery. Monasteries, indeed, were the sole preservers of learning in the Dark Ages. The Benedictines, bound by the rules of their order as much as by bodily labor, performed a work that has been of priceless value. That anything at all has come down to us from classical antiquity is owing in great part to their diligence as transcribers. Gerbert, an abbot, and afterward pope Sylvester II (996), speaks of his care in collecting books and of the most rare books that were found in every town: "Tu sai que quantas premuem insculturdua de partiis: te saii quanta scriptura est in civitatibus et in villis Italiae in aliquo loco s'incontrav" (Muratori, Lit. It. III., i. 29). Desiderius, abbot of Monte Casino, and subsequently pope Victor III, employed many copyists, "antiquarii," as they were called (Muratori, Stor. IV., ch. xxviii; Mabillon, Act. Bened.). Three offsets from the Benedictine stock have also rendered the English society. First, the monks, dating from the early part of the 10th century; the Carthusians (1084); and the Cistercians (1090). They created a craving for the luxury of books, beautifully written and sumptuously illuminated; and libraries, gradually increasing in size, soon grew up from the confraternities; "I was in their books," says Blunt, "their business to transcribe books" (Hallam, Literature of the Middle Ages, i. 82); and their collections were the "gern whence a second and more glorious civilization should in due time spring (Macaulay, Hist. of England, ch. i.) But the evils which grew out of these societies more than counterbalanced the good. Being often exempted from all civil or foreign ecclesiastical authority, they became hotbeds of insubordination to the state and of corruption to the Church. The temptations arising out of a state of celibacy, too often enforced in the first instance by improper means, and always bound to find means of effecting an escape; the secretiveness of the nunnery, the occasional breach of it, and the outward show of faith, were the occasion of great scandals. Moreover, the enormous wealth with which some of them were endowed brought with it a greater degree of pride and ostentation and luxury than was becoming in Christians; and still more in those who had vowed a life of poverty. This was the means by which the intrigues of the friars, the accumulation of wealth, and the decay of discipline worked the fall of the monasteries. See MONASTICISM; MONK. The monasteries of England were the first to feel the displeasure of the outside world. Corruption had become so apparent in the 8th century as to call for the founding of the Cluniac order in 910. The order spread like wildfire in England, in turn coming in the 10th century with a strict rule, sank into luxury in the 12th; the Cistercians then started to shame them, but soon lost all moral vigor; next the Franciscan mendicants appeared, but they degenerated more completely in the first quarter of a century after their introduction into England than had ever been there in the three or four centuries (comp. Matt. Paris, A.D. 1248; see Brake- lond, Chron. Abb. S. Edmundi, Tho. Elvmham. Hist. Mon. St. Aug. Cantuar. ; Hugh de Pottiers, Monastère de Ve- selai). No wonder, then, that an opposition found ready utterance and prompt organization, and, led successively by the English Benedictine and the Cistercian, the Cluniacs were driven from the land. "The abbots of Wykeham, Fisher, Alcock, Chichely, Beckettington, the countess of Salisbury, and cardinal Wolsey, claimed the monastic endowments for university foundations. "What, my lord," said Oldham to Fox in 1518, "shall we build houses and provide livelihood for a company of bousing monks, whose end and fall we may have to see?" See REFORMATION, ENGLISH. Thus it was not reserved for the period of the Reformation to inaugurate opposition to monasteries. Their dissolution was commenced in England as early as 1312, when the Order of Templars was suppressed, and a portion of their possessions given to the Knights of St. John of Jerusalem. During the 15th century many other houses were dissolved, and their revenues transferred to the universities of Oxford and Cambridge. Henry VIII obtained an act of Parliament for the dissolution of the monasteries, and the transfer of their revenues to the crown. Rome itself had furnished a precedent for Henry's attack on the monastic institutions. About the year 1517 cardinal Wolsey was desirous of building and endowing two splendid colleges—one at Ipswich, the place of his birth; the other at Oxford, the place of his academic education. For this purpose Clement VII granted him a bull, which empowered him to visit and suppress certain monasteries. A number of St. John's were obviously stated at from nineteen to forty, were consequently
MONASTERY

Monasteries dissolved, and their revenues applied by Wolsey to the purpose contemplated.

The following calculation has been made as to the number and wealth of the religious houses in England dismantled and scattered at the period of the Reformation: "The number of monastic and religious houses suppressed from this list, lost in England, so far as my calculations appear to have been made, seems to be as follows:

- Of lesser monasteries, of which we have the valuation:
  - In the counties of
    - XII.
    - Belonging to the Hospitalarians: 48
    - Colleges: 90
    - Hospitals: 21
    - Chapels and free chapels: 2074
  - Total: £189

These are in addition to the friars' houses, and those suppressed by Wolsey, and many small houses of which we have no particular account. The sum total of the clear yearly revenue of the several houses at the time of their dissolution, of which we have any account, seems to be as follows:

- Of the greater monasteries:
  - £104,919 18 3
- Of all those of the lesser monasteries of which we have any reliable data:
  - 29,709 1 10
- Knights Hospitallers, head house in London:
  - 8,888 19 8
- We have the valuation of only twenty-eight of their houses in the country:
  - 3,690 9 5
- Priories, which we have the valuation:
  - 751 2 0
- Total: £149,784 19 3

If proper allowances are made for the lesser monasteries and houses not included in this estimate, and for the plate, etc., which came into the hands of the ecclesiastics at the time of the Reformation, and for the valuation of money at that time, which was at least six times as much as at present, and also consider that the estimate of the lands was generally supposed to be much under the real worth, we must conclude their whole revenues to have been immense. It does not appear that any exact computation has been made of the number of persons contained in the religious houses.

Those of the lesser monasteries dissolved by Henry VIII were reckoned at about 10,000 if we suppose the colleges and hospitals to have contained a proportionable number, these will make about 5,000.

If we reckon the number in the greater monasteries according to the proportion of their revenues, they will be about 30,000; but as, probably, they have been greatly reduced in importance in number than those of the lesser monasteries, if we abate upon their houses, they will then be 20,000.

Of such each chantry and free chapel: 2,874

But there was probably more than one person to officiate in several of the free chapels, and there were other houses which were not included within this calculation, perhaps they may be computed in one general estimate at about 30,000. As there were pensions paid to almost all those of the greater monasteries, the king did not immediately come into the full enjoyment of their whole revenues; however, by means of what he did receive, he founded six new bishoprics—viz. those of Westminster (which was changed by queen Elizabeth into a deanery), and of London, Rochester, Winchester, Durham, and Newcastle upon Tyne. These bishoprics, with Chapels, were erected in the counties of Oxford and Trinity in Cambridge, and finished King's College there. He likewise founded professorships of divinity, law, physic, and of the Hebrew and Greek tongues, in both the said universities. He gave the house of Gray Friars and St. Bartholomew's Hospital to the city of London, and a perpetual pension to the poor knights of Windsor, and laid out great sums in building and fortifying many ports in the channel" (Baxter, Hist. of the Church of England). Compare Hook, Lives of the Archbishops of Canterbury, vol. i (Lond. 1868, 8vo); Fuller, Church Hist., i, 115 sq.; Burnet, Hist. of the Reformation; Soames, Ref. C. of England, vol. i, especially the Intro.; Forster, Brit. Monachism, ch. 1-7, and lxxi; Hill, English Monachism, its Rise and Influence (Lond. 1867, 8vo), p. 515.

It is hardly necessary to state that all the Reformed churches in the 16th century discarded the practice of monachism, and suppressed monasteries as useless. In some of the German states, however, the temporalities of the suppressed monasteries were retained, and were granted to princes by the sovereigns, together with the titular dignity. In Roman Catholic countries also, as, e.g., France, Spain, Austria, and Italy, the suppression of monasteries has been more or less general in more recent times. See MONASTICISM. But, as count Montalembert has well put it in his celebrated work on the Monks of the West (Edinb. 1861-7, 5 vols. 8vo), "this work of spoliation, which may be said to have fairly set in with the Reformation, is now proceeding with methodical gravity." In the five years from 1830 to 1883 no less than 8,000 monasteries have disappeared from the soil of Europe. In Portugal some 2,000 were destroyed, 200 in Spain, and the number annihilated in Hungary and in the Austrian provinces of Switzerland, Germany, and Italy has never been estimated, was certainly not much smaller than in Poland. The destruction, however, has proved greater in the recent reforms in France, and especially in Italy. The great monastery of Clairvaux, which once held St. Bernard and his five hundred monks, has never been visited for five hundred years, not by a monk, much less by the abbot. The celebrated abbey at Cluny, which figures so largely in the history of the Middle Ages, has been turned into stud-estables, and in 1844 the place of the high-altar was "the starting-post of the stallions." The abbey of Le Bec, in Normandy, from which Lanfranc and Anselm came, northensively to fill the see of Canterbury, has been utilized in the same fashion, and horses fatten where monks once fasted and prayed. A China manufactory is carried on in the Chartreux of Seville, and swine have taken possession of the cells in the Cistercian abbey of Cadouin. Everywhere, as the count informs us, the work of ruin proceeds. Sometimes, says he, "the spinning-wheel is installed under the roof of the ancient sanctuary. Instead of echoing night and day the praises of God, these disdained arches too often repeat only the blasphemies and obscene cries, mingling with the shrill voice of the machine, the harsh rasping of the iron, and the shrill clack of the piston." Nor is this all. John Knox has been sometimes stigmatized as a barbarian for the encouragement which he is said to have given the populace in demolishing Christian edifices where the relics of idolatry were enshrined; yet even where the excited rabble did their worst, the ivied ruin still remains to tell of a grandeur which has passed away, and to mark, for the present and other generations, the spot where their fathers prayed. But in France, it appears, the work of demolition is done much more scientifically and thoroughly. They are not content there with confiscation, plunder, proscription; they overthrow, raze from the foundations, and not a single fragment to another. "The empire of the East," says the count, "has not been ravaged by the Turks as France has been and still is by the band of insatiable destroyers who, after having purchased these vast constructions and immense dominions at the lowest rate, work them like quarries for sacrilegious profit. I have seen with my own eyes the capitals and columns of an abbey-church which I could name employed as so much material for the neighboring road." And again: "What remains of so many palaces raised in silence and solitude for the products of art, for the progress and pleasure of the mind, for disinterested labor? Monks, monks! mountains of monkish rats and owls and rats, shapeless remains, heaps of stones, and pools of water. Everywhere desolation, filth, and disorder" (Introduction, ch. viii). The young and free
kingdom of Italy has not been slow to perceive that a sacerdotal class, with interests alien, if not antagonistic, to society and to the family, is necessarily and logically a foe to civil and political liberty. By a law enacted June 28, 1866, all monasteries and similar religious foundations in the kingdom were suppressed, their members pensioned, and their property sold and funded for the maintenance of public schools. Monte Casino and San Marco, of Florence, were alone exempted. The former is left as a venerable monument of the past; the latter is spared in honor of Savonarola and two beautiful frescoes on the Angiolini and the Fiesole. This law has been executed with great rigor: and in spite of allocations, excommunications, and all the bruten fulmen of the Vatican, the work of secularization is already finished. Some of the monks have gladly seized the opportunity of bettering their condition by marriage; others have returned to their homes or accepted the refuge offered by charity; but the great majority of these unfortunate, whose only crime consists in having been misplaced in chronology by being born several centuries too late, and whose habits are too fixed and inerterate to be easily changed, hire houses and become agents of the various trades and industries of the kingdom. While in Italy and France, the two most Catholic nations, the monastic system is thus rapidly disappearing, the tendency to introduce similar institutions in Protestant countries, especially the effort of the Ritualists of the Anglican communion, under the pretense (more or less house) of promoting Christian charities, can only be viewed as a false retrogression and dangerous degeneracy.

In 1870 revelations of corruption, bestiality, and cruelty in a Polish convent contributed more than all else to quicken the Protestant, and we may well say general dislike for monastic institutions. The story of Barbara Ubrzyk, the Polish nun, however exceptional, could not but raise a sense of horror throughout Europe, and it is not to be denied that the prejudice such an instance excites is in a great degree just. It is one thing to hear of an exceptional instance of individual cruelty; it is another thing to know that such cruelty can be practiced in the name of religion, and in institutions which, under its shelter, claim peculiar immunities. There is great force in the plea that one such case substantiated justifies the public control of all similar establishments. In England, the famous trial of "Sister v. Stair" revealed what spiritual tyranny and moral degradation lie concealed in certain monastic institutions under the most harmless exterior. The convent which Miss Saurin entered was one of those for which the plea is advanced that they do practical service in the cause of education and charity. It is not difficult to imagine that a hotheaded Protestant might have been there for the time confused if he had been taken to see Miss Saurin and her fellow-sisters patiently devoting themselves to the instruction of their scholars. Yet, whatever the technical result of the trial, it left all impartial readers with a most painful impression of the degrading and demoralizing atmosphere of the convent. And it is in this light that the recent report of the Select Committee, March 29, 1870, a select committee to make inquiries concerning conventual or monastic institutions in Great Britain. The result of such investigation was unfavorable in that country, and has turned popular opinion against their existence. In Poland also the Russian government has in very recent times found itself faced with a mere explosion of treason and corruption generated and fostered in monasteries, and the days of monasticism may be said to be numbered even there. As what is said of English Christianity is so well applicable to all other Protestant countries, we quote Mr. Macaulay's half-exaggerated version of the subject: "The day of monasticism has forever set. ... There is no longer any need for its existence, even if it could be set up again in its best condition. More than Benedictine learning sheds a ray of glory on our colleges. Our Poor-laws render unnecessary the alms for the monasteryl wicket; and such doles would become a positive evil now as an encouragement to idleness and sloth. Our clergy are welcome visitors at the cottage fireside, where the monk of later days was not, with his contrived distance, the father of the household. The same fidelity with which it dispensed its earlier mission; the self-sacrifice with which it taught men to rise superior to the trials and calamities of life; the unfeigned piety with which the monk resigned every earthly advantage that he might win a heavenly reward. But it would all its reputation and there is no hope of recovering to life the carcass around which the eagles have gathered than of renovated mondkon. The ribaldry of Boccaccio and Rabelais, the spurious, the 12mo., and the more measured terms of Flers Ploughman and Chaucer, were mainly instrumental in bringing about the downfall of monasticism; but this was after it had already been aorn of its splendid, and when scarcely a ray remained to it of its former glory" (comp. Murphy, Terra Incognita, or the Convents of the United Kingdom [Lon., 1853, 8vo]; Pauli, Pictures of Old England [Lon., 1861, 12mo], chap. iii.).

6. Architecture of convents, monastic establishments, whether abbeys, priories, or other convents, followed nearly the same plan. The great enclosure (varying, of course, in extent with the wealth and importance of the monastery), generally with a stream running beside it, was surrounded by a wall, the principal entrance being through a gateway to the west or the east. The central building was a considerable structure, and often contained a chapel, with its altar, besides the necessary accommodation for the porter. The almery, or place where alms were distributed, stood not far within the great gate, and generally a little to the right hand: there, too, was often a chapel with its altar. Proceeding onwards, the west entrance of the church appeared. The church itself was always, where it received its due development, in the form of a Latin cross; i.e., a cross of which the transepts are short in proportion to the nave. Moreover, in Norman churches, the eastern limb never approached the nave or western limb in length. Whether or not the reason of this preference of the Latin cross is found in the domestic arrangements of the monastic buildings, it was certainly best adapted to it; for the nave of the church, with one of the transepts, formed the whole of one side and part of another side of a quadrangle; and any other than a long nave would have a small and an unbecoming transept. A long transept would leave too little of another side, or none at all, for other buildings. How the internal arrangements were affected by this adaptation of the nave to external requirements we have seen under the head CATHEDRAL, to which also we refer for the general description of the conventual church. Southward of the nave of the church, and parallel with the south transept, was carried the western range of the monastic offices; but it will be more convenient to examine their arrangement within the court. We enter, then, by a door near the west end of the church, and passing though a vaulted and arch-shaped passage in the cloisters. In the nave of the church forms the northern side, the transept part of the eastern side, and other buildings, in the order to be presently described, complete the quadrangle. The cloisters themselves extended around the whole of the quadrangle, serving, among other purposes, as a cover before the weather from the effect of the weather on the convent to every other part. They were furnished, perhaps always, with lavatories, on the decoration and construction of which much cost was expended; and sometimes also with desks and closets of wainscot, which served the purpose of a scriptorium. Commodities on the whole beside the chapels of the north corner, and turning southward, we have first the donitory or dorter, the use of which is sufficiently indicated by its name. This occupied the whole of the western side of the quadrangle, and sometimes had a
Says one, "The older the religion, the older its ascetic practices; for they were among the first forms assumed by the religious impulse, and not among the later and better ones. They belong to the religion of the passions and emotions, and not to the religion of reason." And it seems a problem for the religious to believe in it as old as religion itself; for it does not gain favor with the progress of new ideas, but is gradually falling in the estimation of all." We are far from believing that monasticism is a primitive institution, and is forsaken by modern civilization. Quite the contrary, we hold that ascetic practices prevail largely among semi-civilized or un-civilized nations, or among those whose old conception of a great and laudable care was always taken. The stream also turned the abbey mill, at a small distance from the monastery. Other offices, such as stables, brewhouses, bakehouses, and the like, in the larger establishments usually occupied another court, and in the smaller were combined with the chief building in the only quadrangle. It is needless to say that, in so general an account, we cannot enumerate exceptional cases. It may, however, be necessary to say that the greatest difference of all, that of placing the quadrangle at the north, instead of the south side of the church, is not unknown; it is as at Canterbury and Westminster, for instance (Church Dict. p. 414, 415). This branch of the subject may be followed out in the several plans of monasteries scattered among topographical works, and especially in Parker, Glossary of Architecture, p. 146 sq.

Monasticism (fr. μοναχή, to dwell apart in solitude; whence μοναχός, a monk), a state of religious retirement, more or less complete, accompanied by contemplation and by various devotional, ascetic, and penitential practices, is in truth Asceticism (qv.), with the elements of religious solitude superadded. Monasticism, until the beginning of the study of comparative religion, was regarded as a strictly Christian institution, but recent researches reveal it as having entered into various religious systems, both ancient and modern. Indeed, it is now clearly apparent that the Western theory of the ascetical life travelled from the East to the West, but the question of the time when it originated in the East is still clouded in mystery. "The origin of monasticism," writes Mr. Johnson in his little work on the Monks before Christ, "will always be enveloped in mystery. "Its history is shrouded in the same obscurity as the source of the mighty streams, of which the banks of which the first ascetics commenced the practice of their austere practices" (p. 51, 52). The probability is that monachism is a strictly Asiatic institution, and originated among heathen nations. We certainly do not think that monasticism can prove a characteristic which has been confined to any nation or any sect, only, but earthly. Yet do we not desire to have our development theorists infer that we agree with them that it is one of the early religious forms of man.
Sonnerat, and others.) The manner of the construction of these caves of India and Arabia leads to the supposition that they were originally intended for monkish abodes, and if the early periods of the ascetic life of monasticism can no longer be doubted. These temples and caves are the oldest monuments of the countries in which they are found.

2. Earliest written History of Monachism.—If from these monuments we descend to an examination of the written books of the ancients, and search in "The Nabatman Agriculture," which is believed to have been written about the time of Nebuchadnezzar (or B.C. 600), we find in this history of Chaldea, reaching back several thousands of years before the beginning of the Christian era, that in the very earliest history of which the chronicle of the nations is preserved, there is the name of of an apostle of Saturn, who founded the religion of renunciation or asceticism, and that his partisans and followers were the subjects of persecution by the higher and cultivated classes; but that to the mass of the people, on the contrary, they were the objects of the highest esteem and veneration.” Another ascetic whom it mentions flourished about B.C. 2000. He is said to have inveighed against the godliness of those who believed it possible to preserve the human body from decay, after death, by the employment of certain natural agents. “Not by natural means,” warmly replies Dhagrit, “can man preserve his body from corruption and dissolution after death; he must exhume it and worship, and offer sacrifices by invoking the gods by their great and beautiful names—by prayers during the night, and fasts during the day.” Then Dhagrit goes on, in his monkish zeal, to give the names of various saints of Babylonian antiquity whose bodies had long been preserved, and, after death, from corruption and change, and says: “These men had distinguished themselves by piety, by abstemiousness, and by their manner of life, which resembled that of angels; and the gods, therefore, by their grace, had preserved the bodies of these men from corruption; whereby those of later times, in view of the same, were encouraged in piety, and in the imitation of their holy modes of life.” See Chwolson, Uber die Uberreste der aldbabilonischen Literatur (St. Petersburg, 1859); M. le Baron de St. Croix, Recherches Historiques et Critiques sur les Mysteres du Paganisme (Paris, 1817).

Turning from these written sources, still the subjects of much discussion as to their authenticity, to the well-established records of India, Persia, and China, the oldest written records in existence aside from the sacred Scriptures (viz. the Veda [q.v.], and the Laws of Manu [q.v.]), the sacred books of the Brahmins; the Zend-Avesta [q.v.]; or of the Christian Church and the Non-Christian Church and the Shu-King (see CONFUCIUS) the sacred book of China), we find the hoary parent of monastic rule dwelling in the far East, and gathering obedient millions under her ample folds, long before the introduction of Christianity, even if we should trace Christian monasticism back to St. Bartholomew and St. Thomas.

Among the Hindus (q.v.), we learn from the Brah- minical writings—especially the Rig-Veda, portions of which are assigned to a period as far back as B.C. 2400, the Laws of Manu, which were certainly completed before the rise of Buddhism (that is, six or seven centuries before our era), and the numerous other sacred books of the Indian religion—that there was enjoined by example and precept entire abstraction of thought, secession from the world, and a variety of penitential and meritorious acts of self-mortification, by which the devotee assumes a proud superiority over the vulgar herd of mortals, and is absolved at last into the divine fountain of all being. Says Spence Hardy, “The practice of asceticism is so interwoven with Brahminism, under all the phases it has assumed, that we cannot realize its existence apart from the principles of the ascetic.” (Compare Wilson, Asiatic Researches, xvi, 38; Pavie, in Rerue des deux Mondes, 1854; Hardwick, Christ and other Masters, i, 351.)

3. Probable Origin of Eastern Monachism.—“At an early period of the ancient era of Brahminic manifestation,” the legend goes in the Rig-Veda, “Dhrurya, the son of Uttanapada, the son of Manu Swayambhuvah, who was ‘born of and one with Brahma,’ began to perform penance, as enjoined by the sages, on the banks of the Yamuna. While his mind was wholly absorbed in meditation, the mighty Hari, identical with all nature, took possession of his heart. Vishnu being thus present in his mind, the earth, the supporter of elemental life, could not sustain the weight of the ascetic. The celestial called Yamas, being excessively alarmed, then took counsel with Indra how they should interrupt the ascetic, and they devised a complex plan termed Kushmandas, in common with their king, commenced anxious efforts to distract his meditations. One, assuming the semblance of his mother, Suniti, stood weeping before him, and calling in tender accents, ‘My son, my son, desist from destroying thy strength by this fearful penance! What hast thou, a child but five years old, to do with rigorous penance? Desist from such fearful practices, that yield no beneficial fruit. First comes the season of youthful pastime, and when that is over it is the time for study; then succeeds the period of worldly enjoyments; and, lastly, that of austere devotion. This is thy season of pastime, my child. Hast thou desired to sin, or to perplex thyself with in- cense? Thy chief duty is love for me; duties are ac- cording to time of life. Lose not thyself in bewildering despair—desist from such unrighteous actions. If not, if thou wilt not desist from these austerities, I will terminate my life before thee.” But Dhrurya, being wholly intent on seeing Vishnu, beheld not his mother weeping in his presence, and calling upon him; and the illusion, crying out, ‘Fly, fly, my child; the hollow-spirits of ill are crowding into this terrible forest with uplifted weapons,’ quickly disappeared. Then advanced frightful rakshasas, wielding terrible arms, and with countenances emitting fiery flame; and nocturnal thunders thronged around the prince, uttering fearful noises, and whirling and tossing their threatening weapons. Hundreds of jackals, from whose mouths gushed flame as they de- voured their prey, were howling around to appell the boy, wholly engrossed by meditation. The goblins called him, ‘Eat me! Mon! Kill him!—eat him! eat him! Eat him! eat him! and monsters, with the faces of camels and crocodiles and lions, roared and yelled with horrible cries to terrify the prince. But all these un- couched speeches, appalling cries, and threatening weap- ons made no impression upon his senses, whose mind was so completely engrossed on the object of his devotion. He was considered as the son of the monarch of the earth, engrossed by one idea, beheld un- interruptedly Vishnu seated in his soul, and saw no other object.” How like the legends of Christian mon- achism are these pagan descriptions! The desert has always been the abode of asceticism, whose devotees, in their struggle against the flesh, peopled its sands with horrible monsters of every kind—devils, holgeb- lijas, and giants, who (in the minds of the people) have held possession ever since. The Vedas also command that the tonsure be performed, but, so far as known, they prescribed no rules with regard to the monastic life. Their teachings seem to be confined solely to asceticism. On the other hand, in the Laws of Manu there are given for the conduct of monastics; and, as these rules were in the possession of the people of India long before they were committed to writing, it is no wonder that monas- ticism is believed to have been practiced for thousands of years before the time of Christ. Hardwick, by no means a superficial student, is led to believe that such are the conditions, to say that “India was the real birth- place of monasticism” (Christ and other Masters, i, 351).

A large portion of the Laws of Manu are taken up by regulations to be observed by those who wish to attain to the ultimate good by the practice of monastic ob-

ervances. The rule of St. Benedict itself does not afford a more decided proof of the existence of the ascetic life. The work is divided into twelve books. The sixth book is entitled "Duties of the Anchorite and of the Ascetic Devotee." The subject of the eleventh book is "Penitences and Expiations." The Dwijas, for whom these rules are principally laid down, are described as a sort of monks, who practiced tonsure, wore girdle, carried staff, asked alms, fasted, lacertated the body, and devoted themselves to the desert of the country. We have space but for a few illustrations, which will suffice, however, to show the character of this work. From the sixth book, "Duties of the Anchorite and of the Ascetic Devotee," we quote as follows:

"4. The Dwijas, who dwell alone, should deliver himself from vain discourses, and from such discourses as raise conceits, increase their severity, that he may withdraw up his mortal substance.

"5. Let him receive from the Brahminical ancestors, who live in houses, such alms as may be necessary to support his existence. (The case was similar in early Christian times: Simon the Syllite, and a host of others, were thus fed.)

"6. Meditating with delight on the supreme soul, seated, wanting nothing, inaccessible to all sensual desire, without other society than his own soul, let him live here below in the constant expectation of the eternal be

"7. In subduing his organs, in accomplishing the pious duties prescribed by the Vedas, and in submitting ourselves to the most severe and most virtuous practices, let us attain here below to the supreme end, which is to become identified with Brahma. ("Their whole doctrine of after-life, of Heaven and Hell, of the reward of good and the punishment of evil, are founded on this."")

"8. The novice, the married man, the anchorite, and the ascetic devotee form distinct orders, which derive their names from the color of the robe by which they are distinguished.

"9. The Dwijas, who belong to these four orders, ought always to practice with the greatest care the ten virtues, which compose their duty.

"10. Resignation, the act of rendering good for evil, temperance, probity, purity, the subjugation of the senses, the subjugation of the mind, the subjugation of the body, and abstinence from choler—such are the ten virtues in which their duty consists.

From the eleventh book, "Penitences and Expiations," we take the following extracts:

"11. The Dwijas, who undergo the ordnary penitence called Prajapatiya, ought to eat during three days only in the morning; during the next three days, only at night. Let these days be followed by three days only of such food as persons may give him voluntarily, without his begging for it; and, finally, let him fast three days more strictly.

"12. A Brabhin, accomplishing the severe penitence (Talimarika), ought to swallow nothing but warm water, warm milk, cold changed better, and warm vapor, employing each of them three days in succession.

"13. The ordnary penitence of his senses, and perfectly attentive, supports a fast of twelve days, the ordnary penitence called Perakas, which expiates all of his faults.

"14. A Brabhin, accomplishing the severe penitence (Talimarika), ought to swallow nothing but warm water, warm milk, cold changed better, and warm vapor, employing each of them three days in succession.

"15. The ordnary penitence of his senses for the day of the full moon, diminishes his nourishment by one mouthful each day during the fifteen days of observation which follow, in such a manner that on the fourteenth day he shall eat but one mouthful, and then let him fast on the fifteenth, which is the day of the new moon; let him augment, on the contrary, his nourishment by one mouthful each day during the next fifteen days, commencing the first day with one mouthful.

"16. Great criminals, and all other men guilty of divers crimes, are released from the obseruations of their sins by austerities practiced with exactitude.

"17. By reciting the Vritiya or the Nataraj in the ascetic manner for a month, or by repeating inaudibly the hymn Purusha, who has defiled the bed of his spiritual master is absolved from all fault.

The ascetic system," says Schaaf, "is essential alike to Brahminism, to Buddhism (see HINDUISM) and Buddhism (q. v.), the two opposite and yet antagonistic, the incommensurable, the Indian religion, which in many respects are similarly related to each other as Judaism is to Christianity, or as Romanism to Protestantism. Buddhism is a later reformation of Brahminism. . . . But the two religions start from opposite principles. Brahminic asceticism proceeds from a pantheistical view of the world—the Buddhist asceticism from an atheistic and nihilistic, yet very earnest view; the one is controlled by the idea of the absolute but abstract unity, and a feeding of contempt of the world in the name of the idea of the absolute but unreal variety, and a feeling of disgust of the world in the name of the absolute but abstract nothingness of all existence; the one is predominantly objective, positive, and idealistic—the other more subjective, negative, and realistic; the one aims at absorption into the universal spirit of Brahma—the other conception of an absorption into non-being. "Brahmanism," says Watzik, "looks back to the beginning of Buddhism to the end; the former loves cosmogony, the latter eschatology. Both reject the existing world; the Brahmin despises it because he contrasts it with the higher being of Brahman; the Buddhist bewails it because of its unrealness; the former sees God in all, the other emptiness (Dharma, Buddhism, Japanese, and Indier, 1855, p. 593, constituting pt. ii of his History of Heathenism)." "Yet," adds Schaaf, "as all extremes meet, the abstract all-entity of Brahminism and the equally abstract non-entity or vacuity of Buddhism come to the same thing in the end, and may lead to the same ascetic practices. The asceticism of Brahminism takes more the direction of anchoritism, while that of Buddhism exists generally in the social form of regular convent life. The Hindu monks, the Yanaprastra, or Gymnosophists (q. v.), as the Greeks called them, are Brahminical ancestors (q. v.), who live in woods or caves, in deep solitude, meditate, keep fast, perform their devotions, contemplate: sleeping on straw or the bare ground, crawling on the belly, macerating the body, standing all day on tip-toe, exposed to the pouring rain or scorching sun with four fires kindled around them, presenting a savage and frightful appearance, yet greatly revered by the multitudes, expecting, as a procurer of at least one child is strictly enjoined by Brahminism, some take their wives along, but never have intercourse with them except at such times as they are most likely to conceive. They are reputed to perform miracles, and not infrequently complete their austerities by suicide on the stake or in the waves of the Ganges. Thus they are described by the ancients and by modern travellers (see Dubois, Description of the Character, Manners, and Customs of the People of India [Philadelphia, 1818]).

The Buddhist monks are less fanatical and extrava
garian. They start from the Hindu Yoga (q. v.) and FKktus (q. v.), and from mystical speculations, and from intense contemplation, and the use of the whip, to keep their rebellious flesh in subjection. See BUDDHISM; GOTAMA. They have a fully developed system of monasticism in connection with their priesthood, and a mass number of convents; also numeraries for female devotees. The order of Gotama is of Indian birth, and is purely moral, and they do not profess to be the transcript of a higher than a human mind. Yet they aimed at reducing the entire company of the faithful to strictly monastic rule, to the mortification of all human passion, to the separation and isolation of the sexes, to mendicancy, and to the renunciation of all personal and individual rights. Hence India, though she expelled Buddhististic rules, and princes and professors from her soil, yet shows at a hundred points the deep furrow which Buddhist monasticism has drawn across the more hoary superstitions and more agonizing ascetism of Hindu philosophy; her representatives and literature bear witness to the brave, self-sacrificing devotion of these sons and daughters of Buddha, and to the fact that they went into all Eastern lands to preach the faith of their sires, to build monasteries, to organize worship, to multiply their sacred books, to perform pilgrimages to holy shrines of their faith, and spread the relics of saints and martyrs, and work miracles by their aid, and to adapt themselves to such varying populations as the cultivated philosophers of Nepal, the ingenious and susceptible Japanese, the Cingaleses, and Burmese, to say nothing of the pontifical empire of Thibet (q. v.).
where, to the present day, the monks still grasp a mighty sovereignty, where whole cities are filled with monastic populations, and where the temples, ritual, incense, tonsure, and vestments resemble the mediæval worship of the Romish Church so strongly as to deceive the unway. At the present day the canonization of departed clergy and literati are regarded as a matter of importance and the Benevolents of the neighborhood of his: and thus arose the second form of life corresponding to the Christian Conventicles (q.v.). Sometimes the community was assembled under one roof; at other times, as in the Theatines (see the knights and ladies of the olden time) were assembled in the shrines of the great saints of the church, and the order of life was by no means settled or uniform. Now was the time for a lawgiver; and the people of India found theirs in the person of Buddha (the Enlightened), who was born B.C. 544. He early manifested a love for contemplation, and was determined to the ascetic mode of "in the wilderness and fasted forty days, and was tempted by the wild beasts and serpents."

Buddha commenced this mighty strife six centuries before Christ. Indeed, Buddhist monasticism bears such a remarkable resemblance to that of the Roman Catholic Church that Romish missionaries believe it necessary to brand the older as a diabolical imitation. But, as has been well said, "The original always precedes the caricature." (See the older accounts of Roman missionary efforts in India.) 1

Travels, vol. vii, and also the recent work of Huc, a French missionary priest of the Congregation of St. Lazarus—Souvenirs d'un Voyage dans la Tartarie, le Thibet, et la Chine, pendant les années 1844-1846, translated into English, and published by the Harpers [N. Y. 1856, 2 vol.], is a comp. account of the whole subject of the two works of R. S. Hardy—Eastern Monachism, and A Manual of Buddhist in its modern Development, translated from Cingalese MSS. [Lond. 1850]. The striking affinity between Buddhism and Romanism extends, by the way, beyond monasticism and the hagiæ that follow. The ritual of the great Rites of the Pope and to the worship, with its ceremonies, feasts, processions, pilgrimages, confessional, a kind of mass, prayers for the dead, extreme unction, etc. The view is certainly at least plausible, to which the great geographer Carl Ritter [Erkundung, ii, 288-299, 2d ed.] has given the weight of his name, that the Lamasites in Thibet borrowed their religious forms and ceremonies in part from the Nestorian missionaries. But this view is a mere hypothesis, and is rendered improbable by the fact that Buddhism in Cochin China, Tonquin, and Japan, where no Nestorian missionaries ever were, shows the same striking resemblance to Romanism as the Lamaistic in Thibet. The North Chinese and Japanese are perfecting the singular tradition of Prester John, or the Christian priest-king in Eastern Asia, which arose about the 11th century, and respecting the Nestorian missions, see Ritter, l. c. See also Johnson, Monks before Christ, p. 100-108).

4. Organization and Development of non-Christian Monachism.—(1) Indian. — What St. Benedict became to the monks of Christendom, Gotama Buddha was to those of India. At least a thousand years before the former enunciated his law from the top of Mount Cassino—that Sinai of Western monasticism—Buddha, the Benedict of Eastern monasticism, flourished at Kapilavastu. Up to this time Eastern asceticism appears to have been without a settled rule or organization. The Laws of Manu, it is true, specified the manner of conducting many austere observances, and contain rules for nearly all the monastic observances, such as the tonsure, fasting, celibacy, mendicancy, novitiate, tons for men but monasteries was accustomed to arrange its own inner life, and stood quite independent of any other. The growth of monasticism must have been somewhat after this manner: First came austere practices without separation from society; then the devotee sought the mountain hill; then the man of fashion, already a monk, one who was particularly celebrated for the holiness of his life, or more inventive than others in methods of bodily torment, soon began to gather admirers and imitators about him. They came and dug their caves or built their huts in the neighborhood of his: and thus arose the second form of life corresponding to the Christian Conventicles (q.v.). Sometimes the community was assembled under one roof; at other times, as in the Thespians, there was a sort of settlement.
intentions, the young prince said, 'Let us turn back: I must think how to accomplish deliverance.' A last meeting put an end to his hesitation. He was driving through the northern gate, on the way to his pleasure-gardens, when he saw a mendicant, who appeared outwardly calm, subdued, looking downwards, wearing a saffron garment and carrying a staff. The prince called him an alms-bowl. 'Who is this man?' asked the prince. 'Sir,' replied the coachman, 'this man is one of those who are called bhikṣus, or mendicants. He has renounced all pleasures, all desires, and leads a life of austerity. He tries to conquer himself. He has become a devotee, has put away the passions, without ever a second word about asking for alms.' 'This is good and well said,' replied the prince. 'The life of a devotee has always been praised by the wise. It will be my refuge, and the refuge of other creatures: it will lead us to a real life, to happiness and immortality.' With these words, the young prince turned his chariot, and re-entered the city' (translated in Müller's Essays on the Science of Religion).

Buddha then declared to his father and wife his determination to become a recluse, and soon after escaped from his palace in the night while the guards had fallen asleep. The religion which he established was now, after a lapse of many years, brought to the inhabitants of the entire globe. One king is said to have founded 84,000 monasteries for his order, that being the number of discourses which Buddha pronounced during his lifetime. The 'Law' which he gave to his order is contained in the first of the three Pitakas, and was orally handed down until about AD 100, when it was committed to writing in the Sanscrit and of Ceylon. It is called the Winaya Pitaka, and contains rules for every conceivable monastic observance. It is composed of 42,200 stanzas. To alms-giving Buddha attached an extraordinary importance. He declares that there is no reward either in this world or the next for him who does not alms-giving.' Ten centuries later, Chrysostom wrote, 'Hast thou a penny? purchase heaven. Heaven is on sale, and in the market, and yet ye mind it not! Give a crust, and take back paradise; give the least, and receive the greatest; give the perishable, and receive the imperishable; give the corruptible, and receive the incorruptible. Alms are the redemption of the soul. . . Alms-giving, which is able to break the chain of thy sins. . . Alms-giving, the queen of virtues, and the readiest of all ways of getting into heaven, and the best advocated there' (comp. Taylor, A. C. Christianity). According to the Pintaka, 'the wise priest never asks for anything; he desidainst to beg: it is a proper object for which he carries the alms-bowl; and this is the only mode of solicitation.' Celibacy, poverty, the tonsure, a particular garb, confession of sins, etc., are made compulsory. The vows, however, are not taken for life; and a monk may retire from the order if he finds it impossible to remain continent. A novitate is provided for; and there are 'nuns' or 'sisters' who live in houses by themselves. The novice usually begins her connection with the order in the school, where she is sent while yet young. Foundlings were often given by the early Christian missionaries, whom they were reared for the ascetic life. No Buddhist is allowed to touch the body—Nagama. —Miśinda. No. —Miśinda. Then why do they take so much pains to preserve it? Do they not by this means say, 'This is me, or mine?' —Nagama. Were you ever wounded by an arrow in battle? —Miśinda. Yes.—Nagama. Was not the wound anointed? Was it not rubbed with oil? And was it not covered with a soft bandage? —Miśinda. Yes.—Nagama. Was this done because you respected the wound, or took delight in thinking of your health? No; it is Nagama. In like manner, the priests do not preserve the body because they respect it, but that they may have the power required for the keeping of the precepts.

(2) Persia Monasticism.—The Zend-Avesta, written, it is generally agreed, about B.C. 500, contains no allusion to ascetic rites; but this fact would go no further to disprove the existence of monastic life among the Persians than the absence of such allusion from the N.T. would disprove the existence of Jewish monks. The Avesta is not of a historical character; and what was said about the Veddus is particularly true of it—prayers and hymns make up almost its entire contents. Zoroaster originally dwelt with the Brahminical or Sanscrit branch of the Aryan family; and we know that monasticism was rife among them before the separation took place. It is not likely that they ever shook off this institution, which is very old in Persia as in many other countries. We are told that there was a class of "soldiers" among the Zoroastrians, according to the Desair, the Dobistan, and the old Iranian histories, "there was a great king of that branch of the Aryan people known as Khi-Khuero, who was a prophet and an ascetic. He had no children; and, after a 'glorious reign of sixty years,' he abdicated in favor of his son. But, in a short time, this son killed the young prince, and entered upon the throne of his own right, resigned his throne to his son Guhastap. It was during the reign of Guhastap that Zoroaster appeared. Guhastap was succeeded by Bohman, his grandson." These were not kings of Persia, but they reigned at Balkh, and lived many centuries before Persia became an independent kingdom. As a very ancient form of asceticism anterior to Zoroaster, who lived, the Greeks said, 5000 years before the Trojan war, or 6000 before Plato—an antiquity greater than that assigned to it by the "Nalasitine Agriculture." 

(3) Chinese Monachism.—An examination of the Chin-Tsong, the sacred book of the sage of China, is without fruit for our purpose. It is a significant fact, however, that the word "priest" is written in Chinese "Cha-men," or "Sang-men," which mean, respectively, one who exerts himself, or one who restrains himself. The Chin-King was transcribed by Confucius, and the Confucian and Taoist Confucius, by the same Legge, D.D. (Phil. 1867) about B.C. 480, and to him we owe its preservation. It is only one out of a large number of books upon religious topics which must have existed in his time. Lao-Kitun, who lived several generations before Confucius, was a great ascetic, advocated perfect freedom from passion, and passed much of his time in the mountains. Of Confucius, it is known that he taught no new doctrines, but insisted upon a more faithful observance of the ancient law. He flourished in the 5th century B.C. (651-479). At nineteen years of age he divorced himself from his wife, after she had given birth to a son, to devote himself to study and meditation; and his last days were passed in a quiet valley, where he retired with a few of his followers. He fasted quite frequently, and advocated many other monkish observances: such as retirement, contemplation, and agricultural employment. (See Schott, Werke des chinesischen Weisen Kung-Fu-Dsi [Halle, 1830]. Comp., also Mencus, ed. Stanislaus Julien, lib. i, c. 6, par. 29; c. 6, p. 29; and article Confucius.) Mencius, an apostle of Confucius, who flourished in the 3d century B.C., says, "Though a man may be wicked, yet, if he adjust his thoughts, fast, and bathe, he may sacri-

* There is a remarkable similarity between the derivation of the Chinese ascetic (from aascetic, to exercis, or practice gymnastics).
MONASTICISM

fe to God." (Compare Johnson, Monks before Christ, their Spirit and their History [Bost. 1870, 18mo], ch. i.)

(4) Greek Monachism.—The Hellenic heathenism was less serious and contemplative, indeed, than the Oriental. The first monastic society of which we have any knowledge are the Pythagoreans (q. v.), who, no doubt, are to be classed from Egyptian sources, enjoyed contemplation, long-protracted silence, etc. Moreover, it is probable that Pythagorians found here many of those ascetic observations which he afterwards introduced into his own order" (Johnson, Monks before Christ, p. 87). Bunsen says that the rules for the conduct of Egyptian priests, as described by Chremes and preserved by Porphyry, remind one of the Laws of Manu and the Vedas; so that if the conjectures of this Egyptologist be accepted, we are forced to conclude that Hellenic monasticism came from the Hindus through the Egyptians, unless the theory be accepted that the Greeks borrowed it directly from the Indians during their intercourse in the 5th and 6th centuries B.C. But whatever our opinion on this point, it is certain that it is more than 2000 years before Ignatius Loyola assembled the nucleus of his great "society" in a subterranean chapel in the city of Paris there was founded at Crotona, in Greece, by a man of whose principles of constitution, aims, method, and final end nothing is to be called "the Pagan Jesus" (see Zeller, Pythagoras u. die Pythagor-Saga, in his Vorträge u. Abhandlungen [Leips. 1865]; Johnson, Monks before Christ, p. 87, 88).

The extinction of the Pythagoreanism (soon after B.C. 400) by no means was not asceticism in Greece. The philosophy of the Pythagoreans, as who the Pagan Jesus founded upon a new school, among whom Epimenides and Plato are usually reckoned; and the Platonic view of matter and of body not only lies at the bottom of the Gnostic and Manichean asceticism, but had much to do with the ethics of Origen and the Alexandrian school.

(5) Jewish Monachism.—The origin and extent of Jewish monasticism is shrouded in much uncertainty and doubt. Yet it is clearly manifest from the records that have come down to us that Judaism was not altogether alien to asceticism. As far back as the days of Moses, while the Israelites were yet in the wilderness, a special law was given which the people should observe: "And the Nazarites (q. v.), though they did not separate themselves from the other people, yet did set themselves apart for special divine worship (Numb. vi. 1–21; Judg. xiii. 5; 1 Sam. i. 11; Luke i. 15). Later, in Palestine, the Jews had their Essenenses (q. v.), and in Egypt their Therapeutae (q. v.), though it must be confessed that these betray the intrusion of foreign elements into the Mosaic religion, and so receive no mention in the New Test., unless the allusion in Matt. xix. 22 refers to these ascetics, which is believed, however, by only a few Biblical scholars. (See, besides the works quoted in the article Essenenses, Zeller, Grieche Philos. vol. iii., pt. ii., p. 589; and Theol. Johann. 1856, iii. 538; Keim, Der Geschichtliche Christus [Zurich, 1865], p. 16; Langen, Das Judentum in Palästina zur Zeit Christi [Freib. 1866], p. 183.)

(6) Mohammedi Monachism.—"The two most successful religious impostures, says Cunningham, which the world has yet seen are Buddhism and Mohammedanism. Each creed owed its origin to the enthusiasm of a single individual, and each was rapidly propagated by numbers of zealous followers. But here the parallel ends; for the Koran of Mohammed was addressed with the same kind of moral and religious enthusiasm and gratification of human desires both in this world and in the next; while the Dharma of Sâkya Muni was addressed wholly to the 'intellect,' and sought to weaken mankind from the pleasures and vanities of this life by pointing to the transitoriness of all human enjoyment. . . . The former propagated his religion by the merciless edge of the sword; the latter by the persuasive voice of the missionary. The sanguinary career of the Islamite was lighted by the lurid flames of burning cities; to the monks of the Buddhist order was contributed by the cheerful faces of the sick in monastic hospitals [for the crippled, the deformed, the destitute], and by the happy smiles of travellers reposing in Dharmasalas by the road-side. The one was the personification of bodily activity and material enjoyment; the other was the genius of corporeal asceticism and intellectual contemplation" (Bhásas Topes, pp. 53, 54). These words of Cunningham may apply to the early history of the two religions, but they are hardly in place in their history of more modern times. It is true, indeed, that Mohammedanism was the religion of the sword, but, its conquests over, it has studied the religions of the world, and to-day Islam embodies much from every creed in the universe. Its founder had been especially careful to rigidly exclude monasticism, and himself declared "no monachism in Islam," yet to-day the survivals of the East are to be met almost wherever Muslim inhabitants present. Certainly it is not likely to get a great hold in Mohammedan nations, but ascetic practices, hermitage, and mendicancy prevail to a large extent among them. Mr. Ruffner, in his Fathers of the Desert (N. Y. 1850, 2 vols., a work popular in form, and full of valuable and curious information), has furnished an extended description of Mohammedan monasticism, and goes so far as to assert that the Christians derived it largely from them, who, in turn, borrowed from the Buddhists (see vol. i, ch. ii—ix); but such a view can hardly be reconciled with the great place of the phenomenon in history, and would, moreover, stamp as heretics many of the Christian fathers who as ascetics have left the world, and gone to make both East and West. (See below.) The probability is that monachism, so far as it exists in the Mohammedan world, was introduced either direct from the heathen world around it, or came from the Christians of the Post-Nicene age, especially the churches of Africa, and Egypt in particular.

II. Christian Monachism.—1. Origin of Monachism in the Church.—The advocates of Christian monasticism claim for it an evangelical origin. They think they find at once its justification and primitive form in the Gospel exhortation to voluntary poverty (the instance in the parable which Jesus urged) and all the primitive asceticism that he had, that, as a follower of his, he should receive a hundred-fold more, "with persecution," Matt. xix. 21. "But this monastic interpretation of primitive Christianity," as Dr. Schaff has well said, "mistakes a few incidental points of outward resemblance for essential identity, measures the spirit of Christianity by some isolated sect customs, instead of explaining the latter from the former, and is upon the whole a miserable emaciation and caricature. The Gospel makes upon all men virtually the same moral demand, and knows no distinction of a religion for the masses and another for the few." Monasticism, as it has existed at all, is at best and best representative of Christianity, inasmuch as it impels men, instead of remaining as a salt to the corrupt world in which they live, outwardly to withdraw from it, and to bury the talent which otherwise they might use for the benefit of the many. "Jesus, the model for all believers, was neither a charism nor an anchorite, but he was a man of God, the perfect pattern man for universal imitation. There is not a trace of monkish austerity and ascetic rigor in his life or precepts, but in all his acts and words a wonderful harmony of freedom and purity, of the most comprehensive charity and spotless holiness. He retired to the mountains and to the solitude, but only temporarily, and for the purpose of renewing his strength for his public work. Amidst the society of his disciples, of both sexes, with kindred and friends, in Cana and Bethany, at the
MONASTICISM

as little as we find in the life of Christ nor in the apocryphal life of the apostles any authority for the monastic life. In such cases it will be found in the monastic life of Christians generally. It is true in the true Church, for a time, all things were in common, but even in this community of life, certainly the oldest, or, rather, earliest phase of Christianity, monasticism finds no authority; for if it has not authority, it is of no use. But has it been perpetuated? It failed because it was a social impossibility. "It gives a beautiful picture of what Christianity might be, when all are of one mind and one spirit;" but it was incompatible with the general course of human affairs, and it ceased to be. While, therefore, not even in the Christian primitive community can there have been the germ from which monachism in the Church started, the theory of the monastic institution may possibly have been thereby suggested. Not even the asceticism of the infant Church can be made to account for this institution. Severe asceticism, it is true, was the religion of thousands throughout the Christian world, but the asceticism of the Church as a whole was not that from the world nor from its social and political duties. They were simply a standing memorial of the solemn nature of the Christian baptismal vow in the heart of the families of the people. The most rigid monastic rule could have added neither severity to their self-discipline nor higher temper to their chastened spirit (see Neander, Ch. Hist., ii. 232 sq.).

But though monasticism was not a form of life that sprang originally and purely out of Christianity, yet there can be no doubt that by Christianity a new spirit was infused into this foreign mode of life, whereby with many of the most abstruse and contrived elements of monasticism, it was of such a nature to be effectual to some extent, and to have been effected by any such mode of living. Unless this view is taken, it would, as Dr. Schaff has well said, "involve the entire ancient Church, with its greatest and best representatives both East and West—its Athanasius, its Chrysostom, its Jerome, its Augustine—in apostasy from the faith." And, as he aptly adds, "no one will now hold that these men, who all admired and commended the monastic life, were antichristian, and that the few and almost exclusively negative opponents of this asceticism, as Jovinian, Helvidius, and Vaglantius, were the sole representatives of pure Christianity in the Nicene and next following ages" (comp. Kingsley, Hermitas, p. 14, 15). We shall come to consider the good and evil influences in another part of this article. Here we have to deal simply with its origin and relation to primitive Christianity. In the article ASCETICISM it has been shown that a distinction must be made between it and the monastic life, which was not known until the 4th century. That class of ascetics known as Hermita flourished probably as early as the age succeeding Christ's stay on earth; indeed, it is barely possible that its origin may have been traced to John the Baptist and to the Hasmonean Judaism. The reasons are not doubtable, many in the early Church who, with a view to more complete freedom from the cares, temptations, and business of the world, withdrew from the ordinary intercourse of life, and took up their abode in natural caverns or rudely formed huts in deserts, forests, mountains, and other solitary places. The pagan depravation of manners must have in no small degree contributed to it. Then there must naturally have been multitudes of outwardly professing Christians, especially in large cities, who, without being so fully emancipated from the world as to be hermits, moved in societies whose spirit and disposition led to a nearness with Christ. Hence we find that hermits are generally spoken of as emanating from large cities, which were seats of corruption, whereby indicating clearly that in the primitive Church the ascetic desire was prompted by man's noblest impulses, and that the abstinent and holy life of the Church fathers we can trace these germ of Christian monachism back to the middle of the 2d century. Thus writes Riciat, when speaking of Mount Athos (Present State of the Greek and Armenian Churches, A.D. 1678), p. 218: "Though St. Basil was the first author and founder of the order of Greek monkos, so that before his time there could be none who professed the strict way of living in convents and religious societies—[I mean in Greece—yet certainly, before his time, the convenience of the place, and the situation thereof, might have invited Hermits, and persons delighting in solitary devotions, to live in the desert, and to the extent of which a 'wild ass may be about'" (comp. Origen, Ep. ad Rom. c. iii; Möhler, Gesch. d. Mönchhums in d. ersten Entstehung, etc., in Vermischte Schriften, ii, 165 sq.). Yet it is as late as the middle of the 4th century, in which falls the Decian persecution (A.D. 249-251), that there are first brought to light numerous instances of a retirement of devout Christians to the desert (comp. Sozomen, Hist. Eccles., lib. vi, cap. 48). But even these hermits were not monastics in the modern sense of the word. They were accustomed to live singly, each according to his own inclination, without any specific form of union, and that within the precincts of the Church to which they severally belonged. Practically, they were but the most secluded of the more distant parts. It was reserved for the 4th century—the very age which gave state aid and perpetuity to Christianity—to develop that branch of asceticism which has ever since continued to flourish in a part of the Church, and to this day figures in the history of Christian civilization, sometimes to advantage, and oftentimes to great disadvantage.

2. Development of Monachism. In what has preceded it is clearly foreseen that the historical development of the monastic institution was neither sudden nor rapid, but that it passed through several stages before it could possess the stability it has now attained. Four stages are known to us. Dr. Schaff distinguishes four stages—the first three complete in the 4th century; the remaining one reaches maturity in the Latin Church of the Middle Ages. (a) The first stage covers the ascetic life, neither organized nor separated from the Church. It comes down from the ante-Nicene age, and is noticed in the article ASCETICISM (q. v.). In the 4th century it took the form, for the most part, of either hermit or comonobe life, and continued in the Church itself, especially among the clergy, who might be called half-monks. (b) The second stage, which is hermit-life or anchoritism [see ANACRONOMAS], arose in the beginning of the 4th century, gave asceticism a fixed and permanent shape, and pushed it even to external separation from the world. It took the prophets Elijah and John the Baptist for its models, and went beyond them (comp. Lact. Qu. Resp. April, 1655, p. 164). Not content with partial and temporary retirement from common life, which may be united with social intercourse and useful labors, the consistent anchorite secluded himself from all society, even from kindred ascetics, and came only exceptionally into contact with human affairs, either to receive the visits of admirers of every class, especially of the higher orders, or to pass the time of the decorations (in the case of the more celebrated monks), or to appear in the cities on some extraordinary occasion, as a spirit from
MONASTICISM. 466

MONASTICISM

another world. His clothing was a hair shirt and a wild-beast's skin; his food bread and salt; his dwelling a cave; his employment prayer, affliction of the body, and conflict with satanic powers and wild images of fancy. They were, as Montalembert says, "naifs comme des enfants, et forts comme des géants"; though Villeneuve, forming a more unpassionate estimate of monasticism and its results, says, "De cette rude école du desert il sortait des grands hommes et des foucs;" heroes and madmen (Melanges Eloq. Chrét. p. 356). The anchorites maintained from choice, after the cessation of the persecutions, the seclusion to which they had originally recourse as an experiment of monasticism, and a later development of the same principle is found in the still more remarkable psychological phenomenon of the celebrated Pillar Saints (q. v.).

The founder of the anchorite mode of life is supposed to have been one certain Paul of Thebes, but St. Anthony is generally looked upon as "the father of monasticism" (Neander, ii, 229); and though this is perhaps going a little too far, he must certainly be regarded as the principal influence in the anchorite movement. Says Neander (Ch. Hist. ii, 228, 229), "In the 4th century men were not agreed on the question as to who was the founder of the anchoritic life of one Paul or Anthony. If by this was to be understood the individual from whom the spread of this mode of life proceeded, the name was unquestionably due to the latter; for if Paul was the first Christian hermit, yet he must have remained unknown to the rest of the Chris
tian world. The influence of the anchoritic movement has found no followers. (Before Anthony, there may have been many who, by inclination or by peculiar outward circumstances, were led to adopt this mode of life; but they remained, at least, unknown.) The first whom tradition—which in this case, it must be confessed, is entitled to little confidence, and much distrust—has connected with any fa
culty, was the anchorite is the novel and the novel of Paul. He is said to have been moved by the Decian persecution, which no doubt raged with peculiar violence in his native land, the Thebaid, in Upper Egypt, to withdraw himself, when a young man, to a grotto in a remote mountain. By degrees he became attached to the mode of life he had adopted at first out of necessity. Nour
ishment and clothing were supplied him by a palm-tree that had sprung up near the grotto. Whether everything in this legend, or, if not everything, what part of it, is historically true, it is impossible to determine. According to the tradition, Anthony (q. v.) . . . having having been cast by the devils into the desert, lived for a time in a grotto, and was greatly admired and visited by others. But as Athanasius, in his life of Anthony, is wholly silent as to this matter, which he certainly would have deemed an important circumstance—though he states that Anthony visited all ascetics who were experienced in the spiritual life—the story must be dismissed as unworthy of credit."

It was really Anthony who gave to his age a pattern, which was seized with love and enthusiasm by many hearts that longed after Christian perfection, and which excited many to emulate it. Like Paul, Anthony was a native of Egypt, and being himself of a noble family, his influence was considerable, and he persuaded many members of the Old Egyptian families to join him, and spread his ascetic views and practices throughout all Egypt; even the deserts of this country, to the borders of Lybia, were sprinkled with numerous anachoretic so

"The land where Orien
tal and Grecian literature, philosophy, and religion, Christian orthodoxy and Gnostic heresy, met both in friendship and in hostility," was in every way adapted to be "the native land of the monastic life. We may add also that "monasticism was favored and promoted here by climate and geographic features, by the oasis-like seclusion of the country, by the bold contrast of barren deserts with the fertile valley of the Nile, by the supererogation, the contemplative turn, and the passive endurance of the national character, by the example of the Therapeutae, and by the moral principles of the Alexandrian fathers; especially by Origen's theory of a higher and lower morality, and of the merit of voluntary poverty and celibacy." Even back in the days of Azlan we are told by him that the Egyptians bear the mark of their forefathers. They loved a fast, a toil, and a death to the greatest degree; and would rather be tormented to death than compromise truth. Such natures, once seized with
religious enthusiasm, were certainly very eminently qualified for saints of the desert. No wonder, then, that the monastic life soon gained general favor. Pachomius (292-348), a disciple of Anthony, is recognized as the founder of this peculiar ascetical life. Palaadius, himself a convert in these early days to this institution, furnishes an account of its progress in connection with several crises in the Christian Church; and thus presents: "Pachomius, at the beginning of the 4th century, when a young man, after having obtained his release from the military service, into which he had been forced, attached himself to an aged hermit, with whom he passed twelve years of his life. Here he lived a life of poverty, labor, and prayer. He was driven from him that he ought not to live merely so as to promote his own growth to perfection, but to seek also the salvation of his brethren. He supposed—unless this is a decoration of the legend—that in a vision he heard the voice of an angel giving utterance to the call in his own breast—it was the divine will that he should be an instrument for the good of his brethren, by reconciling them to God (Vita Pachom. § 15). On Tabennese, an island of the Nile, in Upper Egypt, dwelt the Nomes of Tethyba and Thebes, he founded a society of monks, which during the lifetime of Pachomius himself numbered three thousand, and after his death attained to ten thousand. Their numbers were on increasing until, in the first half of the 5th century, it could reckon within its rules fifty thousand monks (Lauriace, vi, 1, c. 909; also c. 36, fol. 937; Hieronymi Prefat. in regulam Pachomii, § 7)." We are told that when Athanasius visited Pachomius three thousand monks passed before him in procession, chanting hymns, and exhibiting practical proofs of direct piety under the monastic rule. Nor was the new movement confined to the Tabennese region. The development in the Nitrian and the Thebaid deserts was equally rapid; so that Rufinus (V. Pari. ii, 7) affirms that the monastic rule was not only in evidence in the towns. In the single district of Nitria, we are told, there were no fewer than fifty monasteries (Sozomen, Eccles. Hist. vi, 81), and the civil authorities even found it expedient to place restrictions on their excessive multiplication. Neither was the movement confined to Egypt. Arabia, Syria, Palestine, and more especially the region of Mount Sinai, soon swarmed with reclusees, and were thickly studded with monasteries. "We daily receive monks," says Jerome (346-420), writing at Bethlehem, "from India, and Persia, and Ethiopia." The entire Eastern Church gave this practice conformance. It was in great part due to the labors of the Eastern monks. Gregory Nazianzen (329-389), Basil the Great (329-385), and the golden-tongued Chrysostom (342-407)—became its enthusiastic admirers and promoters. Nor did the desert remain the home of the new life. Monastic institutions were soon transplanted to the towns, and in agitated times these places became safe houses of refuge from the troubles of the world. Indeed, it must be conceded by all honest students of early ecclesiastical history that the example of the monasticism of the early Eastern Church had a powerful influence in forwarding the progress of Christianity; although it is also certain that the ambition which it excited occasionally led to its natural consequence among the members, by eliciting a spirit of pride and ostentation, and by provoking, sometimes to fanatical excesses of austerity, sometimes to hypocritical simulations of rigor. The abuses which arose, even in the early stages of monachism, are deplored by the very fathers who were in favor of Egypt in their praises of the institution itself. These abuses prevailed chiefly in a class of monks called Sarabatites (q. v.), who lived in small communities of three or four, and sometimes led a wandering and irregular life. Yet though many took exception to any abuses growing out of the institution, but few were found, like Jovinian, to assail the principle. And even emperors, as e. g., Valens and his successors, sought in vain to arrest the too rapid increase of monachism. A picture is drawn by Theodoret, in his Religious Histories, of the rigor and mortification practiced in some of the greater monasteries, which goes far to explain the ascertion of Protestant writers that the monks were commonly zealous in religion; and that much of the bitterness of the religious controversies was due to the monastic, and that the opinions which led to these controversias originated for the most part among the theologians of the cloisters. (Most famous among these was an order called Acaceta [Gr. sleepless], from their maintaining the public services of the Church day and night. See H. W. Mapleson, Monophysites; Monothelites; Nestorians.) Under the growing influence of the Byzantine emperors, the Eastern Church, and with it Eastern monachism, lost all vitality and became petrified. No attempts were made to revive its declining vigor by creating new organizations, and though there have indeed been occasional examples of splendid devotion in Oriental monachism, these are after all isolated instances. "As a general rule," says Stanley, "there has arisen in the East no society like the Bene-dictines (see below), held in honor wherever literature or civilization has spread; no charitable orders, like the Sienites, who comforted the cancers, or, in the darkest haunts of suffering humanity" (Eastern Church, p. 114). Traditionally all the Eastern monks have followed up to the present day the so-called rule of Pachomius, or, as they prefer, of St. Anthony. They remain numerous in all the Eastern churches, and some of their establishments, as the convents of Mount Athos, are still celebrated for their literary treasures or political influence [see Monks, Eastern]; but they have ceased to be powerful agencies of religious influence. This is of course easily to be accounted for on general principles. The Eastern Church is by us of Egypt. It is thus a question whether our own motto is progress and flexibility. Hence active life is, on the strict Eastern theory, an abuse of the system. And while the monastic life, as we shall presently examine it in detail, in the Western world is characterized by literary and agricultural activity, the Eastern monks, whether in holy cities or in monasteries, always passed a passive life, turning aside, and that only occasionally, simply to secure the necessities for their subsistence. Some monks, it is true, devoted a portion of their time to mechanical trades, among which we find ship-building, and to agriculture; but all their endeavors were secondary, and the mystics have become the desires of the body, and to make it a willing servant and instrument of the soul in its excessive religious aspirations. Annihilation of individualism was aimed at, in order to be wholly possessed and owned by God. The wildest individual excesses of a Bruno or a Dunsan seem poor beside the authorized national, which we may almost say, in the case of the religious ascetics of the East. Thus also, e. g., amid all the controversies of the 5th century, on one religious subject the conflicting East maintained its unity—in the reverence of the hermit on the pillar. The West certainly has never had a Simeon Skylite (q. v.). It is clearly apparent, then, to the careful student of ecclesiastical history that monachism proper, in its first stage, was developed in the Eastern Church. But we shall see presently that monachism was early transplanted to the West also. We will see it, however, in a modified form, really constituting the fourth stage of asceticism of which the preceding three are stages of monochism proper. Before we pass to its consideration, it may not be amiss to regard here the third stage in its relation to the other two that preceded it. Pachomius himself, as we have seen, was originally a hermit. It will be found upon examination that all other ascetics who are marked as the most celebrated order-founders of later days were also originally her.
MONASTICISM

Monasticism, indeed, is a regular organization of the ascetic life on a social basis, recognizing as it does, at least in a measure, the social element of human nature, and representing it in a narrower sphere secluded from the larger world. Hence hermit life led to cloister life, and the cloister life became not only a refuge for the spirit weary of the world, but also in many ways the school of monastic life of the Church.

We must certainly confess that it formed the transition from isolated to social Christianity; for it consists in an association of a number of anchorites of the same sex for mutual advancement in ascetic holiness.

The cemobites, living somewhat according to the laws of civilization, under one roof, and under a supernumerary administration, devoted their time to their devotions and manual labor, and devote their surplus provisions to charity; except the mendicant monks, who themselves live by alms.

In this modified form monasticism became available to the female sex, to which the solitary desert life was utterly impracticable; and with the cloisters of monks there appear at once cloisters also of nuns. Anthony and Pachomius, we are told by their biographers, were tended by their sisters; Ammonius by his wife; and crowds of heroic women confided their honor to the wilderness rather than to the caprices of fortune in their metropolis. Tiberius, one of the most renowned of these, developed their growth even as rapidly as the monasteries, and, though the cause no longer exists, cloisters for female ascetics abound to this day in the East and in the West.

(2) Fourth Stage of Monasticism.—The ascetic impulse, finally, which produced monastic congregations, led afterwards to monastic orders, unions of a number of monks under one rule and a common government. In this, the fourth and last stage, monasticism presents itself in the West, and played no little part, we gladly confess, for the diffusion of Christianity, the spirit of learning, becoming in one sense even the cradle of the German Reformation (comp. Schaff, Ch. Hist, ii, 158, 170).

We have seen above that Athanasius, one of the Western Church fathers, was in the East, and enjoyed a personal association with Anthony and Pachomius. When Athanasius returned to Rome (about A.D. 341), he determined to introduce the practice of the monastic life into the Western Church. He brought home with him some Egyptian monks for the purpose of initiating the Romans, and in order to exhibit to them living evidence of the sanctifying principles of the new “religion.” Their uncoch and savage appearance, however, did not deter them from their time of the effort failed. But Athanasius, in nowise discouraged, published a biographical account of St. Anthony, which, being early translated into Latin, had great influence on the people. Besides, respectable bishops of the West, who had been banished to the East during the Arian controversies, brought back with them on their return, an enthusiasm for the monastic life.

In Rome especially the feeling of ridicule gave way to enthusiastic admiration, and men and women of rank were impelled by the ascetic spirit which was spread by Jerome (346-420) during his residence in that city to retire from the great world, in which they had shone, and devote themselves to the monastic life. Patriots, rich merchants, and men of letters adopted the distinctive dress of theanchorite, and with it the three self-denying vows of the ascetic life. Senators and matrons transformed their palaces and country-seats.

Vir, the bishop of Gaza, the pine of Grecian Islam, and Marcellus, were converted by the representatives of these great names into monasteries (the ruins of the Anican palace, of vast extent, were still to be seen in the middle of the 8th century at the gate of Nursia (comp. Montalembert, II, 8); and the family from whence it had its name is renowned in the annals of monasticism as the stock of which Benedict and Gregory the Great were descendants). From Rome the movement spread through the provinces and established itself in the isles of the Mediterranean; chiefly through the energetic action of Eusebius of Vercelli, who, like Athanasius, had obtained a temporary resting-place in the Thebaid when driven from his see. Men possessing such great influence as Ambrose of Milan, Jerome (q.v.), also contributed subsequently, in the course of the 4th century, still further to awaken and diffuse this tendency of the Christian spirit in Italy and in Gaul.

When the institution now spread rapidly, in the manner before described, in which the monasteries were built up in the East, Pachomians had still more obtained these and given them monastic shape, but it was reserved for Basil the Great (329-374) to give perfect organization to the vast army of monks, and to bind them by a formal vow of chastity, poverty (involving the duty of self-support by manual labor), and obedience to authority. But even Basil’s work was vague and desultory, and St. Augustine was not a little tried in his endeavors to diffuse monasticism in North Africa and Italy. He condemned the idleness of the monks, ever fearing the danger which would spring from affording too great freedom to men who had been accustomed to a more corporeal labor and to rigid restraint. Many there were who would be right well disposed to exchange a needy, sorrowful, and laborious life for one free from all care, exempt from labor, and at the same time enjoy the pleasure of being looked up to with universal respect. Those who discared the obligation to manual labor ventured, in defending their principles, to pervert many passages of the New Testament. When that precept of the apostle Paul in 2 Thess. iii, 12 was o’jected to them, they appealed, on the other hand, to those misconceived passages in the Sermon on the Mount in which all care for the wants of the morrow are forbidden. In the same way for the fear of the morrow, were forbidden. Christian perfection was made to consist in this—that men should expect, without laboring for their support, to be provided for by the hand of God, like the fowls of the air. This precept of Christ, they contended, Paul could not mean to contradict; the laboring, accordingly, as well as the eating, in those words of Paul, must be understood not in the literal, but in a spiritual sense—as referring to the obligation of communicating the nourishment of the divine Word, which men had themselves received, to others also—an example of the perversion of Scripture worthy to be noticed. But not only Augustine—this monastic spirit was slowly diffused, as time passed, over the obstacles likely to face Christian activity, and a Church Council, that of Chalcedon (A.D. 451), found it necessary to pass canons for the regulation of monks. Yet these changes could affect only the East, the West having no part in its deliberations, and having as its representatives only four papal legates. Hence, while in the East some provisions were made for the safety of Christian asceticism, in the garb of monasticism, the Western Church was constantly and considerably modifying the Eastern practices, until the relaxations of Western monasteries threatened apostacy and heresy unlimited. The inmates of different cells under the same head varied in their observance, each reclus retaining his accustomed usage when admitted into the community. And, in truth, no rule could well be universal. In Gaul the monks declined against the severe rule of fasting imported from the East. A discipline confirmable in the mind, though unattainable in the practice, required modification to suit the colder latitude of Gaul. Discontent and laxity were taking hold everywhere, and monachism would perhaps have been unable to withstand the destructive influences which, in this and the following times, were spreading far and wide; and the irregularities prevailing in the spiritual order would have become more widely diffused in
Western monachism, which had a still laxer constitution, had not a remarkable man introduced into the monastic life a more settled order and a more rigid discipline, and given it the shaping and direction of a hierarchical religious order, by which it became so individual and so ecclesiastical to Christianity, particularly for the conversion and the culture of rude nations (Neander, ii, 299). This remarkable man was Benedict, an Italian monk of the early part of the 6th century. His religious rules were at first intended and framed merely for the government of the convent Monte Cassino (q.v.) over which he presided, but they were successively adopted by or forced upon a very great number of monasteries. His rule was founded on that of Pachomius, though in many respects it deviated from it. His great object seems to have been to render the discipline of the monks milder, their establishment more solid, and their manners more regular than those of the other monastic establishments. "Benedict," says Neander, "aimed to counteract the licentious life of the irregular monks—who roamed about the country, and spread a corrupting influence both on manners and on religion—by the introduction of a severer discipline and spirit of order. The dominant principles of Benedict's rule are obedience and labor; being administrative rather than creative in its origin, and presupposing the existing rules of chastity and poverty. The founder speaks of his rule as merely a beginning, a tentative ordinance—"Hanc minimum inchoationem regendi regularis ordinis principium legimus; sed omne regularis institutum et institutum quod velut sanctificationis, vel laboris vocatur, vel contemplationis, vel meditationis laborem imposuerunt."

Benedict, however, was not considered as a portion of the monastic establishment, but as merely attached and subordinate to it; but in course of time both the order and the Church acknowledged them to be, in the strictest sense of the word, professed religious. All other religious orders, both men and women, following the example of the Benedictines, have admitted lay brothers and sisters. In 1322 the Council of Vienna ordered all monks to enter into the order of priesthood. The monks of Valprespas, in Touraine, are the first among whom lay brothers are found under that appellation. See Lay Brother; Priesthood. One of the most important modifications of monachism in the West, it will be noticed by the careful reader, regarded the nature of the occupation in which the monks were engaged. The principle of labor being enjoined to take counsel, either of the whole house in capitationary, or of the decanal body chosen from the different decades of the community. A candidate for the novitiate was long kept within the walls to try his constancy. When admitted within, he was placed for three months under the tuition and surveillancy of the experienced monk, and was daily with the whole house in capitationary, or of the decanal body chosen from the different decades of the community. The sixty-three heads under which the rule is arranged refers to the relative duties of the principal and subordinate members—divine worship, discipline, household economy, and various ordinances relating to the government of the convent, the monks, the prescribed dress was in all probability that which had always been adopted by recluses, for it is almost the same coarse garb as that which Columella (De Rur. Rust., xi, 1) recommends for the farm-servant in all kinds of weather. The whole time of the monks of his order he directed to be divided between prayer, reading, the education of youth, and other labors, and learned laborers. All who entered his order were obliged to promise when they were received as novitiates, and to repeat their promises when they were admitted as full members of the society, that they would in no respect and on no occasion, make use of any privileges which he had instituted. Doubtless aware that the ascetic severity of many of the monastic orders in the East was unsuited to the rude men of the West, and also to the more unfriendly climate, Benedict did not require of his monks many of the mortifications which were sometimes imposed upon those of the East, and allowed them several indulgences which were there sometimes forbidden. His rule was consequently embraced by nearly all the monks of the West. In some of the more isolated churches, as, for instance, that of Britain, it would seem that the reformations of St. Benedict were not introduced until a later period; and in the churches of the British isle, as in Ireland, they were a subject of considerable controversy. Benedict admitted both the learned and unlearned into his order; it was the duty of the first to assist at the choir, of the latter to attend to the household economy and temporal concerns of the monastery. At this period, it may be observed, the recitation of the divine office at the choir (as it is called by the Roman Catholics) was confined to the monks; afterwards it was established as the duty of all mutual help, deacons, and sub-deacons. The Benedictines at first admitted none into their order who were not well instructed how to perform it; but it was not necessary that they should be priests, or even in holy orders. Afterwards many were admitted who were ignorant of the duty of the choir; they were employed in manual duties: hence the introduction of Lay Brothers into the Benedictine order. When first introduced, they were not considered as a portion of the monastic establishment, but as merely attached and subordinate to it; but in course of time both the order and the Church acknowledged them to be, in the strictest sense of the word, professed religious. All other religious orders, both men and women, following the example of the Benedictines, have admitted lay brothers and sisters. In 1322 the Council of Vienna ordered all monks to enter into the order of priesthood. The monks of Valprespas, in Touraine, are the first among whom lay brothers are found under that appellation. 8. Degeneracy of Monachism, and its Extension.—The irritation of the Lombards into Italy and of the Saracen invasions, the Great Schism, and the political changes which followed the death of Charlemagne, as well as the many favors received from the Church, which had come to regard recluses as a higher class of Christians, having facilitated the growth of moral corruption among the monastics, and having introduced great disorder among the Benedictines, a general plan of reform was made, and for many centuries the history of monachism now comes to present a continual struggle of reformers with the laxity, indifference, or immorality obtaining in a larger or lesser number of the convents of those times. The first and most noted of the reformers of the Benedictines, according to Anmurs (p. 621), whose commentary on the rule of Benedict of Clonard, proved a guide for the establishment of those orders which afterwards became known as the Black and Yellow Orders (q. v.). The first and most noted of the reformers of the Benedictines, according to Anmurs (p. 621), whose commentary on the rule of Benedict of Clonard, proved a guide for the establishment of those orders which afterwards became known as the Black and Yellow Orders (q. v.). The first and most noted of the reformers of the Benedictines, according to Anmurs (p. 621), whose commentary on the rule of Benedict of Clonard, proved a guide for the establishment of those orders which afterwards became known as the Black and Yellow Orders (q. v.).
St. Odo. Several monasteries adopted Odo's reforms; but it was Cluny alone that enjoyed the greatest privileges, and it was generally looked upon as the main pillar of the reformatory party. It controlled most of the English convents of men and women. In the 11th century the Benedictine order again fell from its original purity and strictness. This gave rise to many attempts to restore it to its pristine form and object; hence arose the Curbisianas, the Canaillulek, the Celestines, the Cistercians, the monks of Grammont, the Cloisters of St. Maur, and the celebrated monks of La Trappe.

In the 8th century a kind of middle order between the monks and the clergy had been formed, called the canons regular of St. Augustine. Their dwellings and table were in common, and they assembled at fixed hours for the divine service. In these respects they resembled the monks; but they differed from them in taking no vows, and they often officiated in churches committed to their care. Having degenerated in the 12th century, pope Nicholas II introduced a considerable reformation among them. At this period they seem to have divided into several branches of the original order; some forming themselves into communities, in which there was a common dwelling and table, but each monk, after contributing to the general stock, employed the fruits of his benefices as he deemed proper. At the head of another union was the bishop of Chartres. They adopted a more rigid way of life; they divided their nights into prayer and reading, held frequent assemblies, all private property, and lived exactly as the strictest order of monks did. This gave rise to the distinction between the secular and regular canons. The former observed the decrees of pope Nicholas II; the latter followed the bishop of Chartres, and were called the regular canons of St. Augustine, because they were formed on the rules laid down by St. Augustine in his Epistles. They kept public schools for the instruction of youth, and exercised a variety of other employments useful to the Church. A reform was effected in the Augustines by St. Norbert; and, as he presided over a convent at Prémontré, in Picardy, those monks who adopted his rule were called Premonstratensians. They spread throughout Europe with great rapidity.

Other orders also arose, mainly devoted to special benevolent or religious purposes. Thus, e.g., the Order of the Templars and the Hospitalers. They adopted themselves to the nursing of the sick, the Order of Fontevraud (994) to the correction of woolen women, the Fratres Minorum (1199) to the redemption of Christian prisoners. Even the warlike tendencies of those times sought a union with the monastic spirit by the establishment of several monastic orders of knights, such as the Knights of St. John, the Templars, the Teutonic Knights, the orders of St. Jago, Calatrava, Alcantara, Avis, and St. Maurice. See KNIGHTHOOD. During this period convents of nuns were also established, the institutes and regulations of which were similar to those adopted by the Benedictines and Augustines, or to those formed branches springing from those two great orders.

We see in all this that in the remarkable religious movement which characterized the Church of the 12th century the principle of monachism underwent considerable modification; and yet, however active and consistent these different orders might be, they were still too imperfectly adapted to the wants of the fast approaching 13th century. There was yet too much indulgence in the hardships of the cloister, and too little for the general want in the semi-monastic orders of the knights. The latter were too much confined to special wants in life only; the former, as men who had renounced the business of this world to make themselves another in the cloisters where they lived and died, kept too far aloof from secular concerns; and even where they had been most assiduous in the duties of their convent, theirattachment to it often indisposed them to stand forward and do battle with the numerous sects that threatened to subvert Christianity itself. Something ruder and more practical, less wedded to monastic order and the conventional life, was needed. The monastic property, if the Church was to retain its rigid and monastic form (comp. Hardwick, Ch. Hist. M. A. p. 230). The want was made peculiarly apparent when the Albigenses began to lay unwonted stress on their own poverty and to decry the self-seeking life of monks, and the Church itself, fearing for its safety, declined against the further extension of the monastic power in the Lateran Council of 1215.

At this juncture arose the mendicant orders, (1) the Minor or Franciscans (q. v.), and (2) the Preachers or Dominicans (q. v.), both destined for two centuries to play a leading part in the fortunes of the Church. See MENDICANTS. They aimed at being the best soldiers of the Church militant, and they had therefore a marked influence on subsequent Church history. They renounced every kind of worldly goods, and founded what was termed an "order of penitence" (the third estate of friars), composed of the laity (especially the women and classes), who, while pledged to do the bidding of the pope and to observe the general regulations of the institute, were not restricted by the vow of celibacy, nor compelled to take their leave entirely of the world. We thus see that the spiritual episcopate, so to speak, of the early monachism, which in some respects was the end of the ancient ecclesiasticity of the Sanctoral, of the peculiar sanctification of the individual, gave place to the more comprehensive range of spiritual duty, and made the spiritual and even the temporal necessities of one's neighbor, equally with if not more than one's own, the object of the work of the cloister. But more than that. Many mendicants thus created for themselves a numerous and influential party among the laity by these territories, and the Church, prizing this hold on the community, stood ready to give place to such aids. They wandered over all Europe, instructing the people, both old and young, and exhibiting such an aspect of sanctity and self-denial that they speedily became objects of universal admiration. Their churches were crowd- ed, while those of the regular parish priests were almost wholly deserted; all classes sought to receive the sacraments at their hands; their advice was eagerly courted in secular business, and even in the most intri cate as well as in the most trivial matters. Lowering dignities of the mendicant orders generally, but more especially the Dominicans and Franciscans, were intrusted with the management of all matters both in Church and State. They also secured many of the chairs of the theological schools in spite of the secular clergy, and the most illustrious representatives of the 13th and 14th centuries (Thomas Aquinas, Bonaventure, Albertus Magnus, Alexander of Hales, etc.) were either Dominicans or Franciscans. Several of their number filled the highest ecclesiastical positions, even the papal chair. They certainly raised monachism to the zenith of its power, influence, and prosperity. Besides the Franciscans and the Dominicans, there were the Carmelites and the Hermits of St. Augustine, but both of these were much inferior in number, reputation, and influence to the Franciscans and Dominicans. Having thus become both important and powerful, the mendicants rapidly multiplied, and the most seri ous results were like to arise. As the mendicants were generally independent of episcopal jurisdiction, and were rivals to bishops and priests. The high estimation, moreover, into which monachism had risen, more particularly through the wide-spread influence of the begging friars, awakened a spirit of bitter hostility, not simply in all orders of the clergy, but, as we have seen, in the universities. In England the University of Oxford, and in France the University of Paris, ardently labored to overthrow its now spreading power. Pope Gregory X, with a view to check the overgrown evil, went so far as
to issue a decree prohibiting all the orders which had originated since the time of Innocent III (A.D. 1290), and reduced the mendicants to four orders—the Dominicans, Franciscans, Carmelites, and Augustinians. The Church of Rome, says Butler, "has acknowledged only these four orders to be mendicant," and the reason given is that "it was considered as essential to the very existence of the Church that the proper import of that word, when it has no fixed income, and derives its whole subsistence from the manual, mendicant, and uncertain bounty, obtained by personal mendicity. To that St. Francis did not wish his brethren to have recourse till they had endeavored to earn a competence by the labor of their hands, and had found their earning was inferior to the demands of their lives. St. Francis, the ejection, equity, incessant and laborious, of his disciples for the spiritual welfare of the faithful appeared, in the universal opinion of the Church, to be both incompatible with manual labor and much more than a compensation to the public for all they could possibly obtain from it by mendicity. This opinion was unequivocally expressed by St. Thomas Aquinas, and sanctioned by a bull of pope Nicholas III; since that time the friars have not used manual labor as a means of subsistence, but resorted in the first instance to mendicity. Mendicity seems to have made no part of the fraternity of the Dominicans, the Carmelites, or Hermits of Augustine; and, in consequence of the evils attendant on it, the Council of Trent confined mendicity to the Observantines and Capuchins, allowing the other Franciscan establishments, and almost all the establishments of the three other orders, to acquire permanent property.

In the 14th century, though partly checked by the mendicant orders, a general degeneracy of monachism commenced, and the corruption, from which hardly a single order kept itself entirely free, became so overwhelming that towards the close of the Middle Ages the name monk was often used by writers as synonymous with vice and lewdness. The ecclesiastical councils, solemnly enjoined the faithful to raise up from them a pious clergy, so that they soon became fruitful nurseries for monks. This activity, and the respect in which the brethren were held by the people, excited powerfully the envy of the mendicants, but they gradually slackened their opposition when they found their own numbers increasing through the labors of these Fratres communis cives. The most remarkable of the new orders established in this period was that of the Minimi. Their founder, Francis of Paula, a small town in Calabria, after having lived for a short time in an unreformed Franciscan convent, established the first fraternity of the Minimi in the neighborhood of his native city, and from 1457 gathered around him a society of those who shared his views. The fame of his miraculous power soon extended his society, which was confirmed by Sixtus IV (1474), under the name of the Eremite s. Francisci, first in Italy, and afterwards in France, where the superstitious Lousi XI had summoned the founder of the order to his aid in the last extremity (1482); and at a later period in Spain. The order, distinguished always from the rest of the Franciscans by the observance of the vita quadragesimales, received afterwards a rule from its founder, and, to distinguish them from the Fratres Minoræ, and to go one step beyond them, assumed the name of "Ordo miminorum fratrum eremi- tarum Fratres Francisci de Paula." See MINIMI.

The Reform movement of the 16th century may well be called the Revolutionary period in the history of monachism. The deep decline which this institution had suffered for many centuries is thus remedied by the immediate forerunners of the Reformation were as infamous for vice as their predecessors had been renowned for piety. Reformation was frequently attempted, and many new orders arose, professing at first great zeal for purity, and adopting the strictest modes of discipline, verging sometimes to the extremity of human endurance. But these also soon shared the general fate, and sank to the same low level of shamless sensuality" (comp. Concil. Labbe et Cossart, ed. Mansi, tom. xviii, 270; Gieseler, Eccles. Hist., i. 120). The councils of Constance (A.D. 1415) and Basle (A.D. 1431), in their endeavors to brace up monastic discipline afresh, devised reformatory measures; but they produced only transitory changes, and those only in few places. As a whole, it was daily more apparent that monachism was growing into something irrecoverable, and was ripening daily for the scythe. One of the strongest evidences of such a tendency was the formation of four spiritual associations to take the place of the monastic orders. Thus Bnifished, in spite of the indiscriminate denunciation of pope and priest and persecution by the Inquisition. The Bemardines or Bervinines, who must be regarded as an offshoot of mo- nasticism, though they exhibited a freer and less hierarchical spirit. They flourished mainly in Germany and the Netherlands; but other groups, in which the Bemardine influence was apparent, began to spread rapidly throughout the West. They were religious brotherhoods and sisterhoods, distinguished for their zeal in visiting the sick, or, as in the case of those to whom the name of Lollards (q. v.) was popularly given, for singing at funerals, and for otherwise assisting in the burial of the dead. This associational principle was further developed by the Inquisition into a confraternity which owed their origin to Gerhard Groot (middle of the 14th century), and who for some time seemed to be preparing the way for an entirely new phase of monachism. In their reformatory labors they frequently came into collision with the highest Church authorities, especially the Inquisition, though this did not prevent their spread. Their numerous so- cieties were equally distinguished for their mysticism and their usefulness. Some of the brethren were engaged in instruction, others employed themselves in various kinds of handicraft for their livelihood. One of their chief objects was always to advance the religious and moral improvement of society. The community paid the expenses of the confraternity by the private charity raised up from them a pious clergy, so that they soon became fruitful nurseries for monks. This activity, and the respect in which the brethren were held by the people, excited powerfully the envy of the mendicants, but they gradually slackened their opposition when they found their own numbers increasing through the labors of these Fratres communis cives. The most remarkable of the new orders established in this period was that of the Minimi. Their founder, Francis of Paula, a small town in Calabria, after having lived for a short time in an unreformed Franciscan convent, established the first fraternity of the Minimi in the neighborhood of his native city, and from 1457 gathered around him a society of those who shared his views. The fame of his miraculous power soon extended his society, which was confirmed by Sixtus IV (1474), under the name of the Eremite s. Francisci, first in Italy, and afterwards in France, where the superstitious Lousi XI had summoned the founder of the order to his aid in the last extremity (1482); and at a later period in Spain. The order, distinguished always from the rest of the Franciscans by the observance of the vita quadragesimales, received afterwards a rule from its founder, and, to distinguish them from the Fratres Minoræ, and to go one step beyond them, assumed the name of "Ordo miminorum fratrum eremi- tarum Fratres Francisci de Paula." See MINIMI.

The Reform movement of the 16th century may well be called the Revolutionary period in the history of monachism. The deep decline which this institution had suffered for many centuries is thus remedied by the immediate forerunners of the Reformation were as infamous for vice as their predecessors had been renowned for piety. Reformation was frequently attempted, and many new orders arose, professing at first great zeal for purity, and adopting the strictest modes of discipline, verging sometimes to the extremity of human endurance. But these also soon shared the general fate, and sank to the same low level of
gradually most of them also became disorderly and worldly; and a leading feature in the corruption of the Church was perceived to be in those very orders founded to promote apostolic simplicity in the Christian Church. The third was most injurious to the Church cordially joined in the demand for a thorough reformation; they willingly and frankly admitted that the crisis had been in part occasioned by the corruption of the clergy, secular as well as monastic, and they urged, in particular, the imperious necessity of a reformation of the religious orders (cap. 16, 17, 18). The protest of the Reformers met with a cordial response in the breasts of multitudes whose attachment to the Church of Rome was warm and almost inextinguishable. In Italy attempts were made to renovate their youth; but on the Continent, especially in Germany and the Netherlands, the people would be satisfied with nothing short of the dissolution of monasteries (Rankne, Papacy, i. 129, 384): they were determined that no monasteries or convents should longer subsist. This opposition had been engendered partly by a gradual alienation of all monastics from the people, but even more by the attacks that had been made upon it by many of the leading Reformers, who sought reformation within the Church. Foremost among them was that declared foe of all superstition, the immortal Erasmus (q. v.). In his early days he had tasted, by constraint, something of monkish life, and his natural abhorrence of it was made more intense by reflection, and the thought of it cost him, after he had become famous, to release himself from the thraldom to which his former associates were inclined to call him back. He was very competent, therefore, to bear testimony for or against the monkish life, and when he became its opponent his opinions commanded universal attention, and all the thoughtful and learned. And not only became he now an opponent, but a lifelong warfarer against the monks and their ideas and practices. His tongue and his pen also were used freely. His Praise of Folly, and, in particular, the Colloquies, in which the idleness, illiteracy, self-indulgence, and artificial and useless austerities of "the religious" were handled in the most diverting style, were read with infinite amusement by all who sympathized with the new studies, and by thousands who did not calculate the effect of this telling satire in abating popular reverence even for the Church establishment as a whole. It is not to be wondered, then, that popes, bishops, and monks, and the people who were attached to these religious orders, on the religious orders to speed the day of transformation. Indeed, the internal history of nearly every order records, at this point of time, strong resolutions in favor of an enforcement of the rigorous primitive rules. "As early as 1520," says Rankne, "and since, in proportion to the advances made by Protestantism in Germany, there arose in countries which had not yet been reached by it, a feeling of the necessity of a new amelioration of the hierarchical order. This feeling made its way even in the religious orders themselves; sometimes in one, sometimes in another of them." Even the Order of the Carthusians, as they were already themselves implicated in the general corruption, and instituted reforms, by founding in 1522 a new congregation, that of Monte Corona (comp. Holyot, Hist. des ordres monastiques, v. 271). Its leader, Giustinianni, held, in order to the attainment of Christian perfection, three things to be essential, viz., solitude, vows, and the separation of the monks into separate cells. Those small cells and oratories, such as are yet to be found here and there, on the highest hills, in charming wilds, such as seem to conduct the soul at once to sublime flights and to more profound tranquillity, are spoken of by him in some of his letters with special satisfaction. The reforms of the hermits of Monte Corona extended to all parts of the world. But not only in the smaller orders did this spirit of reform bear fruit. In the most numerous and powerful order, that of the Franciscans, who had perhaps become the most profoundly corrupt of any, yet another new effort at reformation was attempted, in addition to the many that had been made before. The more rigorous party of such men as John of Monticelli, in short, the whole severe rule of life laid down in the original institution. One cannot but smile at the importance which they attached to things of no consequence; but, setting that aside, it must be acknowledged that they again behaved with great courage, as, for example, during the visitation of 1526.

Besides the reformation of the old orders, the Church showed itself most prolific in producing new ones, and the character of the times is clearly apparent in many of these new organizations. The monastic institutions of former days had been, as religious communities, essentially contemplative; the new ones were predominantly operative, the mendicant orders forming, so to speak, a connecting link between the two. Preaching, teaching, visiting the sick and poor, and similar objects, formed the chief occupations of the new orders, to which the greatest energy was directed. Thus arose the Theatines (q. v.) in 1524, started by Ca- talan monks in Spain. For a time they were known to be a well-upswept, quiet, and soft temper, of few words, and prone to indulge in the ecstatics of a spiritual enthusiasm; of whom it was said that he wanted to reform the world, but without its being known that he was in the world" (Papacy, ii. 101). The Theatines did not call themselves monks, but regulars, as they were priests bound by monkish vows, but expressly declared that neither in life nor worship should any more customs oblige the conscience. Their desire, no doubt, was to prevent the spread of reformatory opinions leading to alienation from the Church of Rome; and, themselves Italian, they sought, in the resumption of clerical duties under the monastic vow, to raise up a new supply for the priesthood free from the objections of the times. They became pretty numerous, not only in Italy, but also in Spain, South Germany, and in France. Another of these orders was that of the Barnabites (q. v.), also founded in Italy in 1516, suggested at Milan by enterprise of the religious of the people, which the order was intended to mitigate by active beneficence, as well as to remove the disorderly habits which it had brought in its train, by instruction, preaching, and good example. Somewhat later, St. Philip Neri, an active and remarkable devo- tee of the papacy at Florence, founded the order Fathers of the Oratory, which was confirmed by pope Gregory XIII in 1577, and spread not only in Italy, but to this day continues to flourish, especially in France.

But whatever might be accomplished by all these congregations in their own circles, either the limited extent of their object, as in the instance we have last mentioned, or that circumscription of their means, which was involved in the nature of the case, as on the part of the Theatines, hindered their exercising a general and thoroughly efficient influence. They are remarkable as signaling an extremely powerful tendency of their origin, a powerful tendency, which contributed immensely to the restoration of Roman Catholicism; but other forces were requisite in order that the bold advance of Protestantism might be effectually withstood. These forces developed themselves in a similar, but in a very different and especially pleasing manner, and as heretofore, so even now, monasticism proved Rome's strongest ally, and the papacy once more leaned on the new-born babe of the monastic spirit. Leo X had died, leaving the fierce flame of insubordination
MONASTICISM

untrammeled, and Paul III had vainly tried to subdue the indomitable will of that fierce monastic, the Reformation, when suddenly there arose in the Iberian peninsula at a later period a religious organization so wild and eccentric as to be a sort of counterpart of the heresy growing out of the Capuchin order, laid the foundation for the strongest religious society the world has ever known. The Society of Jesus, or Jesuits, as it is generally called, took a middle rank between monks and the secular clergy, approaching nearer to the regular canons than to any other order. They lived separate from the multitude, and were bound by religious vows; but they were exempt from stated hours of worship, and other strict observances, by which the monks were bound. In short, instead of spending their time in devotion and penance and fasting, they gave themselves to learning. The Jesuits' Church did not exist for its own sake, but was a branch of the University. Their duty was to direct the education of youth and the consciences of the faithful, and to uphold the cause of the Church by their missions, and their pius and learned labors. They were divided into three classes, the first of which were the professed members. These, besides the ordinary vows of poverty, chastity and obedience, bound themselves to go, without murmur, inquiry, deliberation, or delay, wherever the pope should think fit to send them: they were monastics without property. The second class comprehended the scholars: these were possessed of large revenues; their duty was to teach in the colleges of the order. The third class consisted of lay men: the laymen of the order had their own schools, and were devoted to the service of the poor, and the propagation of the faith. (See, however, the article Jesuits.) The constitution of the Jesuits was controlled, more than that of any other order before or after, by the principle of an absolute submission to the Church and the pope. The order was to be an instrument in the hands of the Church; the individual, therefore, was advised to become, with regard to the commands of his superior, as a machine, as a cæcum in the hands of an old man.” No order ever carried out its fundamental principle more faithfully, and in subsequent battles of the Roman Catholic Church the Jesuits stood in the front rank. Other orders also were founded which proved more or less valuable supports of the papacy. There arose even several female orders, among them the Elisabethines (q. v.), the Ursulines (q. v.), and the Sisters of Charity. See Charity, Sisters of. One of the strongest orders which arose in the 17th century was the Opus Dei.

The presence of literature, against which in the Middle Ages some founders of monastic orders had expressly warned their members, showed itself, after the 16th century, so great a necessity that it was practically observed by all orders, though but few gave it special attention. Among those who did give it special attention were the French Oratorians and the Benedictines of St. Maur hold by universal consent not only the most prominent position, but they are even assigned a distinguished place among the great literary societies of the world. Indeed, the cause of education, especially the cause of primary instruction, became gradually a subject of more or less interest to all the religious orders. Many congregations, both male and female, were instituted for the special purpose of controlling primary instruction, especially in France, and a large number of schools have ever since been under the direction of monastics.

If the Roman Church sought to strengthen itself by the new measures adopted by monasticism in providing such education for the coming generations as the Church could endure, another measure was still needed to give the Church strength abroad. Great loss of territory and numbers had been suffered in consequence of the Reformation. This want also the monastics soon provided for. They became very extensively missionary organizations. Instead of confining their labors, as was their wont to do, to the home work, they now directed their attention to the foreign missionary cause. Most of the larger orders, especially the mendicants and the Jesuits, engaged in it with great zeal and emulation. The latter even took, besides the usual three vows, a fourth obligation, viz., to go without their profession to one of the countries where it might please the pope to send them. In consequence, the extent of their missionary operations in Europe, Asia, Africa, and America excelled anything the Roman Catholic Church had done in this field before. See Missions. Indeed, the great majority of the Roman Catholic missions in all pagan countries have ever since been conducted by the members of religious orders (see Harper’s Monthly for February, 1875).

4. Present Condition of Roman Catholic Monachism.

In the 17th century the attention of many monastics was more specially directed towards the necessity of bringing back their institutions, as far as possible, to the rules and laws of their order, and the Roman Catholic churches now became divided into the Reformed and the Unreformed, and some real effort to restore the monasteries and nunneries to their original state was attempted. But whatever necessity existed for these institutions in an age of barbarism and violence, it had now ceased. The printing-press was proving a more powerful preservative of the Bible and religious literature than the cells of the monks, and long experience had demonstrated that to shut one’s self out from the world was but a sorry way to keep unspotted from it. Such a time was not likely to give existence to such an institution as the monastic, and the productivity of the Church as regards monachism very greatly decreased. In the 18th century only one larger order, the Redemptorists, or the Congregation of the Most Holy Redeemer, founded by St. Alfonso di Liguori, sprung up. Most of the orders, indeed, in the second half of the century, relapsed either into torpor or corruption, and made but a very feeble resistance when the rationalistic views which became so prevalent among the educated classes in every European country, Catholic as well as Protestant, declared against them a war of destruction. Hence in many countries the state authorities interfered anew to destroy conventional life. In Austria, Joseph II suppressed as useless all convents of monks not occupied in education, pastoral duties, or the nursing of the sick; and many Roman Catholic writers demanded the extirpation of monasticism altogether, after stamping it as both an outgrowth and a danger to fanaticism. Even the papacy was influenced, and the incumbent of St. Peter’s at Rome had no other alternative left him than to yield to the general pressure. The consequence was the abolishment of the most powerful of the orders, the Jesuits. The French Revolution threatened the very life of monachism, and that movement proved successful the monastic institutions would have passed out of existence probably in all Europe.

The downfall of the Napoleonic rule gave brighter prospects to the friends of monasticism, and as an evidence of its revival may be cited the re-establishment of the Jesuits by Pius VII in 1814. These now rapidly rose again to considerable strength and influence wherever they were not forcibly suppressed. See Jesuits. In the countries of the Latin races, both in Europe and America, the fate of monachism was closely allied with the political strife of the conservative and the liberal or progressive parties, the former patronizing it, together with all other ecclesiastical institutions; the latter subjecting it to prohibitive rules, or suppressing it altogether. In consequence of the successes of the liberals, monachism was greatly reduced in South America, and in Italy (in 1848, and again in 1860, 1866, 1868, and 1870, until it is now on the eve of complete suppression by law of the state, 1875). See Monastery. It was also wellnigh extinguished in Spain (1835), and especially in Portugal (1834). In France alone the vicissitudes of political rule have thus far failed to affect monasticism—indeed, the rapid growth of monastic institutions in that country
MONASTICISM

have not been in point of zeal, activity, and general prosperity behind what they had been during the golden age of the monasteries, and under Louis Philippe, the liberal party occasion- ally demanded coercive measures against them; but since the establishment of the republic in 1848 even the liberals, having given a wider interpretation to religious liberty than Americans have ever dared to give, have accustomed themselves no longer to the free right of association to the members of religious orders. Nearly every one of the old orders estab- lished itself in France, and a number of new congregations were formed, and there is at present a greater variety of monastic institutions in that country than any state has possessed at any previous period. In 1846 a law was passed in a special act of the senate of France, that there were then in the country 4932 authorized and 2870 unauthorized establishments, and since then their number has somewhat increased. Next to France, they are most numerous, wealthy, and influential in Belgium, where, as in France, public in- struction is very largely under their control.

Among the Teutonic nations the monastic establish- ments have, throughout the British possessions, Hol- land, and North America (see below; see also Sisters of Charity), partaken more or less of the blessings of liberal institutions, and can hardly be accused of de- parting from their rules except in isolated instances. Public opinion, however, has provided for one measure in their constitution not known elsewhere, viz., that any member wishing to leave their establishments shall have liberty to do so. Austria protected mo- nasticism, but kept the inhabitants of convents under a bureaucratic guardianship until 1868, when it was changed into a zealous support and encouragement. Since 1866, however, the monasteries have been under a shadow, and it is more than likely that ere long monastic institutions will be done away with in that Ro- man Catholic country. In many of the other German countries, the revolution of 1848 has procured for mo- nasticism a favorable position; and in lands where for- merly it was either proscribed or but barely tolerated, it has since flourished. Even those states whose codes re- tain laws against their admission in general, as Sax- ony and the neighboring countries of Sweden and Denmark, have admitted the Sisters of Charity. See DEACONESSES and SISTERSHOODS. In Russia the mo- nastics suffered severe losses, but in Turkey they have as missionaries done much to build up the Chris- tian faith.

The number of monastic associations founded in our century is so considerably in advance of any former period, that it is impossible to give any comprehen- sive idea of their extent or their number. They would indicate a growth of the monastic spirit. This is, however, due solely to the concentration of Romanism in this direction, the papacy finding these its best and perhaps only never-failing support. A peculiar feature which characterizes them as the offspring of the present age, and distinguishes them from the preced- ing orders, is easily discovered in all of them; the marks which externally distinguish them from the non-monastic world are less visible, and the social wants of ecclesiastical and civil society stand pre-emi- nently forth as the primary cause of their origin and the chief object of their labors. A large number of them are devoted to the instruction of youth. Such are several congregations of school-brothers and school- sisters, Brothers and Sisters of St. Joseph, Brothers and Daughters of the Holy Cross, etc. Many others bind themselves to the service of the sick and the poor, as the Daughters of Charity do in France; and many are numerous and popular among them. Not a few cultivate the mission field; either the foreign missions, as the Pecus Society, the Oblates, the Brothers and Daughters of Zion (both for the conversion of the Jews, the latter consisting exclusively of converts), and the mission houses, as the Paulists.

In the United States, monachism, because modified to suit the nature and exigencies of the times, is a flourishing and important institution, and serves as a great feeder of the Roman Catholic Church. Most of the Roman Catholic schools are more or less directly connected with these institutions, and under the care of "fathers" or "sisters." The rigor which charac- terizes the monasteries and nunneries when they are not devoted wholly or chiefly to education seems rather relaxed here, and they are simply working institu- tions. "In the schools connected with these mo- nastic establishments, especially in those for girls," says a contemporary, "several branches are taught, but commingled with the Roman theology; and the pupils are brought under influences, both strong and various, which, in the aggregate, form the special teaching of the Roman communion; while the effect of the educa- tion (we speak of the result both of personal observ- ation and of inquiry among pupils in these schools) is to divert the mind from the more solid to the more superficial branches—from mathematics and the sciences, to painting, dramatic, and musical art; and to base such studies as are taught rather upon author- ity than upon any habits of personal and individual investigation. It is impossible to obtain the statistics of these conventual schools, for they are carefully concealed; we have, however, instituted some inquiries and the result of the researches is the following: there are in the United States to-day, at the very least, 300 nun- neries and 128 monasteries, besides 112 schools for the education of girls, and 400 for the education of boys. Of the nunneries and monasteries (as such) we have found it impossible to obtain any trustworthy informa- tion, either as to discipline or number of inmates; but the 112 girls' schools acknowledge the charge of 22,176 young women, and this we have excellent reasons for believing to be far below the real number, for the dis- position to conceal the actual work done is so marked that even their own official organs admit the impossi- bility of obtaining statistics. Thus, there are known to be 400 Roman Catholic schools for boys; but there are only returns from 178 procurable. The archdio- cese of Baltimore alone contains 21 convents—one of colored sisters—in all of which is carried on. Besides these, there are in Baltimore at least a dozen colleges and young girls' seminaries under Ro- man Catholic spiritual direction; also 50 pay and free schools taught by the "brothers and sisters of Chris- tian schools," "Sisters of Notre Dame," "Sisters of Mercy," etc., who also have charge of 13 orphan asy- lums, and various other charitable and pious socied- ties. And the archdiocese of Baltimore only represents what is being done all over the country. These figures —and they are far from complete—certainly under- rate rather than overrate the work." The Rev. Sam- uel W. Barnum, a learned and careful writer, and the latest Protestant author on Romanism in this country (Romanism as it is, p. 352), has brought together the scattered and incomplete statistics of monasticism in the United States of America, and comes to the conclusion that there are "about 30 religious orders and congregations for men, and about 50 for women, the whole numbering more than 2500 males (including Jesusites) and more than 8000 females, and having un- der their care considerably more than 200,000 children and youth in the process of education. More than one half of the male religious are priests, and more than 300 Jesusites."

In a literary point of view monasticism do not at present share the reputation of their predecessors in former ages, and are not found in the leading works of Rambaut, Gratry, and Hysainthe in France, Rosmini and Secchi in Italy, and Haneberg in Germany, occupy a high place in the annals of contemporaneous literature. In respect to their present moral condition, Roman Catholics admit the existence in some places, particularly in Central and South America, of considerable
MONASTICISM

Corruption and ignorance in many convents of the older orders. In some of them, also, the ancient constitutions have fallen more or less into disuse. The regular con

connection of the general superiors with their subordin

ates has become uncertain, and the holding of general assemblies has ceased. The present pontiff at the commencement of his reign proclaimed it as one of his chief tasks to carry out a thorough re

form of monastic orders; and in some orders, as the Dominicans, an extensive reformation has since taken place.

Among the monastic institutions in the Roman Catholic Church throughout the world was established by the Catholic Almoeac for 1870 to be 8000 establishments for males, with an aggregate of 117,500 members, and 10,000 for females, with an aggregate membership of 189,000, making a grand total of 389,500 members. It is beyond the scope of this work to give in this place a list of all the monastic organ

izations; they are severally treated under their respective names. It may not be of place, however, to call the reader’s attention to the fact that the most important monastic institutes of the West are almost all offshoots or modifications of the Benedictines (q. v.), of whom the most remarkable are the Carthusians, Cistercians, Grammariens, Cluniaces, Premonstratensians, and above all the Maurists, or Benedictines of St. Maur (q. v.). Among the eremitical orders are the Hermits of St. Augustine, who trace their origin to the early father of that name, but are subdivided into several various branches in the 13th centuries; also the Camaldolese, founded by St. Romuald in 1112; the Celestines, a branch of the Franciscans, established by Peter Martyr, afterwards pope Celestine V; the Hieronymites (q. v.), established first in Castile in the 14th century, and thence introduced into other parts, and thence to Italy by Lope d’Olmeda in 1424; and the Paulites, so called from St. Paul, the first hermit, but an institute of the 13th century, which had its origin in Hungary, and attained to a wider extension and a greater popularity than perhaps any other among the eremitical orders.

5. Monasticism in the Protestant Church. The Reformation of the 16th century rejected monachism, as supported by the papacy and the patriarchate, as being based on the false principle of the meritoriousness of good works. One small denomination, the Dunkers, have retained nearly the whole of the monastic organization. Several of the monasteries of the Protestant theological colleges, 16th, 17th, and 18th centuries, of our own more advanced age, have expressed a regret that, with the monachism of the old churches, the principle of forming religious communities of men and women for the more efficient fulfilment of the duties of charity had been altogether discarded. Since the beginning of the century both the “Evangelical” and “High Lutheran” schools of Germany have approved the establishment of houses of drcanos (q. v.) and deaconesses (q. v.), also called brother-houses and sister-houses, the inmates of which associate for the purpose of teaching, of attending the sick, of taking charge of public children, and of providing for the welfare of charitable institutions of this kind are rapidly spreading in Germany and the adjacent countries. In the Church of England and the Protestant Episcopal Church of the United States, sisterhoods (q. v.) have been formed at various times, and have recently greatly multiplied. They have also started in England, under the auspices of what is commonly called the High-Church party, several male monastic organizations, but they have not found favor generally, and are not likely to continue long in existence. The principal leader in this Protestant monastic establishment in Britain is Mr. Lyne, better known as Father Ignatius, who assumes the monkish dress, and, with shaved crown and sandalled feet, reminds one of the monastics of the Middle Ages (see St. James’s Magazine, March, 1870).

6. Nature and Effect of Monasticism. We have all ready indicated in some measure the character of monachism, as we have traced its origin and progress. It remains to consider briefly the spirit as well as the results of monasticism. In surveying monasticism as an institution down to the holiness of spirit which will, even after the Reformation, we freely admit that, in the circumstances in which the world found itself placed during that period of time, it was far from being an unmitigated evil. In its origin, at least, it was a great human effort to remedy the moral disorder by which society was afflicted, and an attempt to raise the holiness of general assemblies has ceased. The present pontiff at the commencement of his reign proclaimed it as one of his chief tasks to carry out a thorough re-form of monastic orders; and in some orders, as the Dominicans, an extensive reformation has since taken place.

Among the monastic orders are the Hermits of St. Augustine, who trace their origin to the early father of that name, but are subdivided into several various branches in the 13th centuries; also the Camaldolese, founded by St. Romuald in 1112; the Celestines, a branch of the Franciscans, established by Peter Martyr, afterwards pope Celestine V; the Hieronymites (q. v.), established first in Castile in the 14th century, and thence introduced into other parts, and thence to Italy by Lope d’Olmeda in 1424; and the Paulites, so called from St. Paul, the first hermit, but an institute of the 13th century, which had its origin in Hungary, and attained to a wider extension and a greater popularity than perhaps any other among the eremitical orders.

In the Church of England and the Protestant Episcopal Church of the United States, sisterhoods (q. v.) have been formed at various times, and have recently greatly multiplied. They have also started in England, under the auspices of what is commonly called the High-Church party, several male monastic organizations, but they have not found favor generally, and are not likely to continue long in existence. The principal leader in this Protestant monastic establishment in Britain is Mr. Lyne, better known as Father Ignatius, who assumes the monkish dress, and, with shaved crown and sandalled feet, reminds one of the monastics of the Middle Ages (see St. James’s Magazine, March, 1870).
ideal of the divine life which was set before the young and crude converts was impressive, and upon the whole beneficial, even though it lacked the freedom and natur

nal inspiration. But once the monastic tradition was

grace of God. Dean Milman tells us that the calm

easy example of the domestic virtues in a more polished, but often; as regards sexual intercourse, more corrupt

state of morals, is of inestimable value, as spreading

around the personage an atmosphere of peace and hap

piness, and offering a living lesson to the citizens of

conquered Christianity. But such Christianity would have

made no impression on a people who still retained

something of their Teutonic severity of manners, and

required, therefore, something more imposing—a stern

er and more manifest self-denial—to keep up their re

ligious veneration. The detachment of the clergy from

earthly ties left them at once more unremittingly devoted

to their unselfish life as missionaries. It is probable

that the isolation and the self-torture of the monks did

produce a deep impression on those who had neither moral energy nor mental concentration

equal to such a task. It is possible that the claims of a

hierarchy were more readily introduced by these means,

so that it became more easy to create new insti

tutions, to organize Christian worship, to build vast ec

clesiastical edifices, to promote literature, to divide the

labor of Christian workmen, as soon as the available

strength of young Christendom was all brought under

seemingly inexhaustible discipline, to dispense with

graces, and invested with preternatural powers. In old feudal
times, when the strong were so ready to dominate over

the weak, and society had so little thought of provid

ing for the unfortunate, in the monastery, spirits

bruised and bleeding found advice, the sick found

medicine, the hungry poor found bread, and the

sickened and sun-burnt traveller entertainment and

rest. It would be uncondist not to admit, with very

little exception indeed, the statement of count Monta

lumbert that the monasteries "were for ten centuries

and more the schools, the archives, the libraries, the

hostelries, the studios, the penitentiaries, and the hos

pitals of Christian society."

But while acknowledging the great services which the

monks have rendered to the world in the mediaval

time, there is another view of the case to which we

cannot close our eyes. Monasticism, instead of being

"one of the greatest institutions of Christianity," has

not unfrequently been the great misfortune of the church and its objects. If the means

it is aimed at the end, we indignantly repudiate the posi

tion that, in order to teach men to become Christians,

to recommend the law of Christ, convert the unru

ted savage, stem the fierce passions of a pagan

world, recreate the springs of national and social life,

are not, in the true sense, adapted to the purpose, as monasticism employed in

its missionarry work. The Western monks accepted,

as the Eastern monks had done before them, an anti

social theory which strikes at the very heart of the

provinciation of God, and which sprang first of all, and

springs still, from a dualistic system of the love of

the false and the good, a jaundiced estimate of the

world, from a grievous mistake as to the seat of evil

and the nature of sin. They enabled the theory;

they consecrated it to higher issues than any of which

paganism ever dreamed; they hallowed as it they hal

lowed other things, hiding its evil root with the glori

ance of their virtues but they did not seek to change the char

er of the root. It always had led to spiritual pride,

and fostered the very propensities it professed to hold in

abeyance. True, it provided for ages an asylum for

broken hearts; it stood in its corporate capacity and

strength between forces of the state; it furnished op

portunities for great intellects to the gla

tions of the over-meritorious works of man. It measured

virtue by the quantity of outward exercises instead of

the quality of the inward disposition, and disseminated

self-righteousness and an anxious, legal, and mechan

tical religion. Monasticism, indeed, lowered the stand

ard of general morality in proportion as it set itself

above it, and claimed a corresponding higher merit;

and yet, during the course of ages, it was a benefactor of

the people, who came to consider themselves the pro

fessi genius mundi, and to live accordingly" (comp .

Neander, ii, 255-257). Grant that the cloister has often

sheltered the helpless and unfortunate; it has often

sheltered, too, the ignorant, the superstitious, the crim

ninal, the polluter, the driftwood, the harlot. Bragging

has been known to use abbeys as the storehouse of

their plunder, and kings have used their rich revenues

for pensioning their mistresses, supporting their bas

tards, and rewarding the most unscrupulous of their

tools. The education received in the cloisters was es

sentially of a narrow kind, dwarving the intellect, and

robbed it of that expansiveness and freedom essential

to high culture and to real progress. If they opened its

doors to the feeble and innocent in days of oppres

sion and danger, it cannot be pretended that there is

the same need for them now, when law and order are

established, when society provides ample means for

alleviating every want and woe that it is possible to

relieve, when the printing-press has given a perpetuity

to literature which neither Goth nor Vandal can de

stroy, and when the claims of the poor and the defence

less meet with favorable consideration from every gov

ernment in Christendom. For the words of St. John damon

monasticism, as such, which has proved a blessing to the Church and the world ; for

the monasticism of India, which for three thousand years has

pushed the practice of mortification to all the ex

cesses of delirium, never saved a single soul, nor pro

duced a single benefit to the race. It was Christianity

in monasticism; which has not done all the good, and used

the abnormal mode of life as a means for carrying for

ward its mission of love and peace. In proportion as

monasticism was animated and controlled by the spirit

of Christianity, it proved a blessing; while separated

from it, it degenerated and became a fruitful source of

evil. Monasticism, moreover, seems even to have lost

its power of propagating Christianity in any type;

there is no instance since the Reformation of any pa

gan nation being Christianized by monks. Indeed

we cannot concede that it should be the aim of the Christian missionary to create a well-organized society

under the dictation of one great ecclesiastical rule,

which, if it existed, if it existed at all, would be the

object and end. We indignantly repudiate the posi

tion that, in order to teach men to become Christians,

to recommend the law of Christ, convert the unru

ted savage, stem the fierce passions of a pagan

world, recreate the springs of national and social life,

is not, in the true sense, adapted to the purpose, as

monasticism employed in its missionarry work. The Western monks accepted,

as the Eastern monks had done before them, an anti

social theory which strikes at the very heart of the

provinciation of God, and which sprang first of all, and

springs still, from a dualistic system of the love of

the false and the good, a jaundiced estimate of the

world, from a grievous mistake as to the seat of evil

and the nature of sin. They enabled the theory;

they consecrated it to higher issues than any of which

paganism ever dreamed; they hallowed as it they hal

lowed other things, hiding its evil root with the glori

ance of their virtues but they did not seek to change the char

er of the root. It always had led to spiritual pride,

and fostered the very propensities it professed to hold in

abeyance. True, it provided for ages an asylum for

broken hearts; it stood in its corporate capacity and

strength between forces of the state; it furnished op

portunities for great intellects to the gla

MONASTICISM

It perished finally, not from sacrilegious hands nor from its own inherent vices. M. de Montalembert, the latest and perhaps ablest defender of monachism, breaks ground with a vindication of contemplative life, and the那里 he was the author of volumes of broken hearts; for weak, exhausted, and disappointed energies; for men and women tired of the world, and unfit for the strife and battle of life; maintaining that they were peoples rather by the young and the brave, and by those who, as far as this world is concerned, had everything to lose by assuming monastic vows; by those who had a large surplusage of dauntless energy for the conquest of nature, for industrious grappling with the barreness of the desert, or the riotous prodigality of the primeval forest. He also asserts that these mysterious precursors of civilization and order, these men of prayer and faith, solved the mystery of life, and showed to a barbaric and selfish world the secret of real happiness; and urges that, so far from wishing to escape from their vows, or from the fellowship of the cloister, they conceived a passionate attachment for each other and to their self-imposed restraints; that their mutual affection was stronger than death; and that, instead of morose and hopeless abnegation of humanity—benignitas, simplicitas, hilaritas—gayety and songs of joy transformed their exile from the world into the paradise of God. But "monasticism," Dr. Schaff has well said, "is not the normal form of Christian piety. It is an abnormal phenomenon, a curious and refined heresy. It had its own Colossi. ii. 16-23), and not rarely a sad eradication and repulsive distortion of the Christianity of the Bible.

It is to be estimated, therefore, not by the extent of its self-denial, nor by its outward acts of self-discipline (which may all be found in heathenism, Judaism, and Mahomedanism, as well as by the Christian spirit of humility and love which animated it. For humility is the groundwork, and love the all-ruling principle of the Christian life, and the distinctive characteristic of the Christian religion. Without love to God and charity to man, the severest self-punishment and the utmost abandonment of the world are worthless before God (comp. 1 Cor. xii, 1-8). Even in the most favorable case monasticism fails short of harmonious moral development, and of that symmetry of virtue which we see in perfection in Christ, and next to him in the apostles. It lacks the finer and gentler traits of character, which are ordinarily brought out only by life in the world, and which tend to diminish the worship of God.

Monasticism is a failure, not of the principle of asceticism, but of the practice of it. The Church of the Roman Empire was almost as much a failure as that of the Reformation. The Church of the Middle Ages was almost as much a failure as that of the Reformation. The Christian spirit generated by the contact of Christianity with modern thought was too strong to be retained in the crisp and worn-out skins of monastic orders; and when these burst, neither the spirit nor the fragrance was lost. New life demanded new institutions, and it is too late in the day for the return of the old. The civilization is only a feeble parody on that which we readily allow took its origin in the cloister. Grand and even worthy attempts, to be sure, have been made at various times to recover the ancient prestige of monasticism, and there is a kind of work that none perhaps can do so well as the Society of Jesus; but the fuel which even now promotes the flame of monastic piety is that morbid view of the nature of the human will which is fostered by materialistic science, that mischievous estimate of human life which proceeds from the scepticism of the Fatherhood of God, and that neo-Platonic or Gnostic repudiation of the true brotherhood of all men. Monasticism was a failure, not of the principle of holy life, but of the spirit of Jesus Christ. We do not wonder that in the light of these truths a celebrated English savant writes that the continued violation of the most distinctive attributes of human nature is the recorded secret of the failure of monachism.

Its principle of poverty has ever enshrined man's original conception of property; as a celibate, it is directly opposed to the social nature of man; and its law of solitary striving for religious perfection is antagonistic to the first principle of Christian communion and spiritual intercourse. The profession of poverty frequently ended in the most insatiable avarice, and the most rapid accumulation of goods. The collection ofprobable statements is history. The highest forms of self-surrender are those of which the world knows nothing, and whose beauty is derived not from the halo of sacrosant sentiment, but from the quiet discharge of unromantic and, it may be, irksome duties.

Montalembert also makes light of the charges brought against monasticism, even in its decline, and repudiates the right of any layman to cast a stone at the accumulations of wealth and luxury under which at length it succumbed. In an introductory chapter on the decline of monastic institutions, he admits that the funds of the monks were derived by the monks themselves, that the shield which religion had thrown over them was pierced and shattered from within, and that the most effective instrument in their downfall was what he terms the infamous "commende" by which the title of abbots was conferred on those who were ignorant of monastic institutions; albeit this step, so loathsome in his judgment, was the work of infallible popes and Catholic kings. Catholic institutions are often the work of great dignitaries of their own Church to blame for the most conspicuous illustrations and examples of spoliation and robbery. The enormous wealth accumulated by these monasteries was too tempting a prize to be resisted, first by rapacious abbots, then by bishops hungering for temporal power as well as ecclesiastical influence, then by needy kings, and at last by treacherous and popes. They turned from one to the other for protection, and found the spoiler rather than the friend. The utter and ignominious fall of more than three thousand monasteries in Europe, and the ruthless destruction even of their ruins in countries which had never repudiated the authority of the Roman See, is a startling fact, which, although our author recounts, he fails to explain on his own theory of the supreme and God-given claims of the Church; while the Jeremidian that he walls over the base uses to which these gorgeous buildings have returned is out of harmony with his vivid appreciation of modern ideas of progress. One might suppose that on the fall of the monastery the spirit of humanity, all care for the sick and dying, all science, art, and literature, all brave adventure, all satiugation and replenishing of the earth, and missionary enterprise had utterly vanished; while, on the other hand, the decay of the Church cannot be accounted for by a failure of the spirit generated by the contact of Christianity with modern thought was too strong to be retained in the crisp and worn-out skins of monastic orders; and when these burst, neither the spirit nor the fragrance was lost. New life demanded new institutions, and it is too late in the day for the return of the old. The civilization is only a feeble parody on that which we readily allow took its origin in the cloister. Grand and even worthy attempts, to be sure, have been made at various times to recover the ancient prestige of monasticism, and there is a kind of work that none perhaps can do so well as the Society of Jesus; but the fuel which even now promotes the flame of monastic piety is that morbid view of the nature of the human will which is fostered by materialistic science, that mischievous estimate of human life which proceeds from the scepticism of the Fatherhood of God, and that neo-Platonic or Gnostic repudiation of the true brotherhood of all men. Monasticism was a failure, not of the principle of holy life, but of the spirit of Jesus Christ. We do not wonder that in the light of these truths a celebrated English savant writes that the continued violation of the most distinctive attributes of human nature is the recorded secret of the failure of monachism.

Its principle of poverty has ever enshrined man's original conception of property; as a celibate, it is directly opposed to the social nature of man; and its law of solitary striving for religious perfection is antagonistic to the first principle of Christian communion and spiritual intercourse. The profession of poverty frequently ended in the most insatiable avarice, and the most rapid accumulation of goods. The collection ofprobable statements is history. The highest forms of self-surrender are those of which the world knows nothing, and whose beauty is derived not from the halo of sacrosant sentiment, but from the quiet discharge of unromantic and, it may be, irksome duties.

Montalembert also makes light of the charges brought against monasticism, even in its decline, and repudiates the right of any layman to cast a stone at the accumulations of wealth and luxury under which at length it succumbed. In an introductory chapter on the decline of monastic institutions, he admits that the funds of the monks were derived by the monks themselves, that the shield which religion had thrown over them was pierced and shattered from within, and that the most effective instrument in their downfall was what he terms the infamous "com-
with which they have by their own consent submitted to be encaged" ([Brit. and For. Rev. 1868, p. 460).}

**Monboddo**

**Literature.**—(1) Greek writers: Socrates, H. Ecles. lib. I, 9; Proclus, De mysteriis, lib. II, 14, vii, 28-34; Palladius, Historia Lausiaca (Ierono[πις τοῦ Λαυδίου], a court-officer under Theodosius II, to whom the work was dedicated), composed about 421, with enthusiastic admiration, from personal acquaintance, of the most celebrated contemporaries of Egypt; Theodorus (†407), Historia Eusebia, or sex aecistica connectione (παρακολουθία ἐκ τῆς ἱστορίας, biographies of thirty Oriental orientals and monks, for the most part from personal observation; Nilus the elder (+ about 450), De vita aecistica, De exercitazione monast., Epistolas 355, and other writings. (2) Latin writers: Rufinus (+ 410), Hist. Eremitana, b. IV, Patrum; Sulpicius Severus of Tours, Historia aevi VII (b. 400), Dioecesis III (b. 256). The dialogue contains a lively and entertaining account of the Egyptian monks, whom he visited; the two others relate to Martin of Tours); Cassianus (+ 492), Institutiones conobiasticæ, and Collationes Patrum (spiritual conversations of Eastern monks). Also the aecistic writings of Athanasius (Vita Antonii), Basil, Gregory Nazianzen, Chrysostom, and Isidore of Pelusium among the Greek; Ambrose, Augustine, Jerome (his lives of anchorites, and his letters), Cassiodorus, and Gregory the Great among the Latin fathers. (3) Later literature: Holstenius (a Roman convert), Codex Siniaticus (Cod. Reg. 216, 1671); the older Greek Menologia (Μενολογία) and Menapi (Μεναπη), and the Latin Calend. and Martyrologia.—i.e. Church calendars or indices of memorial days (days of the earthly death and heavenly birth) of the saints, with short biographical notices for liturgical use; Hieronymus, De situ, Vita Patrum, sive Historiae Eremitici, lib. x (Antwerp, 1628). Acta Sanctorum, quae sunt auxilium. (Antwerp, 1643-1786, 58 vols. fol.) begun by the Jesuit Bollandists, continued by several scholars of his order, called Bollandists, down to October 11 in the calendar of saints' days, and resumed in 1843, after long interruption, by Theiner and others); D'Archey and Mabillon (Benedictines), Acta Sanctorum ordinis B. Benedicti (Paris, 1688-1701, 9 vols. folio [to 1100]); Helyot (Franciscan), Histoire des ordres monastiques religieux et militaires (Paris, 1714-19, 8 vols. 4to); new ed., with an appendix, on the history of monasticism, by Migne, 1849, 4 vols.; Butler (R. C.), The Lives of the Fathers, Martyrs, and other principal Saints, arranged according to the Catholic calendar, and completed to December 81 (1745), and often since; best ed. Lond. 1812-13, 12 vols.; another, Baltimore, 1844, 4 vols.; Gibbon, chap. xxxvi ("Origin, Progress, and State of the Religion of the Middle Ages", and written in lofty philosophical contempt); Henrion (R. C.), Histoire des ordres religieux (Paris, 1835); Biedenfeld, Uebertraum sämtlicher Mönchtum in Orient u. Occident (Weimar, 1837, 5 vols.); Schmidt (R. C.), Die Mönche, Nonnen, u. geistlichen Ritterorden welche in dem Mittelalter und in der Renaissance (Amst., 1839 sq.); Paul Lacriot, Military and Religious Life in the Middle Ages and at the Period of the Renaissance; D. Monastic Institutions: their Origin, Progress, etc. (Lond. 1846, 2d ed.); Milman (Anglican), History of Ancient Christianity (bk. iii, chap. xi), and his Latin Christianity; Ruffner (Presbyterian), The Fathers of the Desert (N. Y., 1850, 2 vols.), full of curious information, in popular form; Montlembert (R. C.), Les Moines d'Ocident depuis St. Benoît jusqu'à St. Bernard (Paris, 1869 sq.); translated into English, The Monks of the West, etc., Edinb. and Lond. 1861 sq.); another extensive work has been in preparation for some time by the Benedictine Dom Gueranger, of France; Zöckler, Kritische Geschichte der Askese (Frankfurt-am-Main, 1863); comp. also Hefele, Conciliengeschichte (the several volumes); Wessenberg, Kirchenverwaltungen, i, 119 sq. [See index in vol. iv]; Osann, Etudes Germaniques; Guizot, Hist. Civisation, ii, 279 sq. and the relevant sections of Tillemont, Fleury, Schröck (vols. v and viii), Neander, Schaff, and Gieseler. Regarding Christia n monasticism, see Hosianus, De origine et progressu monachatu, lib. vi (Tig. 1588; enlarged, Geneva, 1669, folio); Möhler (R. C.), Geschichte des Mönchtums in der Zeit seiner Entstehung u. ersten Ausbildung (1836); collected works, Regensburg, vol. ii, p. 165 sq.; Taylor (Independent), Monasticism (Lond. 1844), i, 226 sq. Von dem Mönchtum (Berlin, 1858), in the Deutsche Zeitchrift f. christl. Wissenschaft, etc.; Schaff, "Ueber den Ursprung und Charakter des Mönchtums," in Donner's, etc., Jahrbücher fur die theologische Geschichte (1861), p. 555 sq.; Croopy, Origins et Conus monasticus (Gott. 1860); Lea, Hist. Sacrotdoly Colobia (Chap. iii, 396 sq.), and in the Consecration of the Hierarchical; id., Hist. European Morals (see Index); Gould, Ori- giun of Religious Belief (N. Y., 1871, 2 vols. 8vo), i, 389 sq.; Edinburgh Review, Jan., 1849; Eclectic Magazine, April, 1849; English Review, ii, 77, 424; [Lond.] Quar. **Monboddo, James Burnet, Lord, a Scotch writer, noted for his eccentric speculations of primitive history, was born at the family seat of Monboddo, in Kincardine, Scotland, in 1714. Paris, 1714; was educated at the University of Aberdeen, and at Groningen, Holland. On his return to Scotland in 1737, he was admitted to the bar, and succeeded in gaining considerable practice. In 1767 he was promoted to the judicial bench, and became titled as Lord Monboddo. But he by no means confined himself to the legal profession. He employed his pen in various departments of speculative philosophy, in which he displayed a profound rather than a useful learning. He was thoroughly versed in Greek literature, of which he became such an enthusiastic admirer as almost to scorn modern learning. His great work, Origins and Progress of Languages, first appeared in 1778. In this he affirms, and endeavors to demonstrate, the superiority of his favorite ancients over their present degenerate posterity, and discourses at large on the hogar the Greek language. This work met with no very marked success, being read more for account of its eccentricities than for its practical value, and it was in a measure too fantastic to be entertained by the public. But Monboddo's Strictures on the History of the Human Race, by an author who calls himself, The Sceptic, was a book remarkable, however, the forerunner of the now so well-known English naturalist, Charles Darwin. Like the latter, Monboddo expressed his belief in the theory that men were originally monkeys, and he went even so far as to insist that a nation still exists possessed of tails. His peculiar view of atavism was published in 1785, and was the work of a Dr. Johnson, who represents lord Monboddo as asking Sir Joseph Banks, who had made a visit to Botany Bay, whether he had met this strange race in his travels. On receiving a negative answer, he was much disappointed. Lord Monboddo's pen furnished the public also with a work on Ancient Metaphysics, in 6 vols, and the first part of which appeared in 1778. In this he endeavors to dissect the philosophy of Sir Isaac Newton; and, as in the former work, he shows an extravagant fondness for Grecian learning and philosophy. He seems to lack the ability of placing these ideas within the easy grasp of modern thought, though he proves himself an thorough knowledge, of Aristotle particularly. In this work he further explains and supports his Darwinniean ideas. Sir James Edward Smith draws a pen-picture of this eccentric genius, and represents him as "a plain, elderly man, wearing an ordinary gray coat, leather breeches, and coarse worsted stockings, conversing with great affability about various matters—lamenting the decline of classical learning, and claiming credit for having adopted the Norfolk husbandry." Lord Monboddo resided in Edinburgh until his death, May 25, 1739. See Edinburgh Review, ivi, 45; Cooper, Elop. Dia. 
MONCADA, LOUIS-AUGUSTE DE BELLUGA DE, a Spanish prelate, was born at Motril, in the kingdom of Granada, Nov. 30, 1662. He entered the ecclesiastical state, distinguished birth placed many ecclesiastical honors within his power, but, with pious modesty, he refused them all. Philip V appointed him bishop of Cartagena and Murcia in 1705. Soon after the archduke, who disputed the crown with Philip, invaded Spain. Moncada remained faithful to his sovereign, and, in his devotion that Philip rewarded him with the titles of viceroy of Valencia and captain-general of Murcia in 1706. But, notwithstanding these royal favors, his zeal did not degenerate into servility, and he resisted the court when he thought the interests of the Church were compromised. Thus he obstinately opposed a duty placed on the property of the clergy. At the height of his quarrel with the king's party, he was included in a promotion of cardinals; but, believing in faithful submission to the administration of his country, though a prelate, he declared that he would not accept the purple. He renounced his kingdom's consent to his elevation, which had only been delayed to test the bishop's constancy, and, according to Saint-Simon, "the affair ended with an unqualified glory for Belluga." Subsequently, adds Saint-Simon, "Belluga, who had more zeal than discretion, wished to institute some reforms, which the bishops of Spain could not permit. The reception of his plans, with great success, and Belluga, not being able to procure for his country the advantages he proposed, became greatly disgusted, and entreated the king to release him from the bishopric of Murcia, and permit him to retire to Rome. He was there, in Murcia, a very faithful subject to his king, and still presented at anxious moments in his affairs, as it were, to lift him above all politics, acquired for him a veneration and consideration during the whole course of his long life. He died at Rome, Feb. 22, 1743. See Moret, Grand Dict. Hist. a. v.; Saint-Simon, Mémoires, xi, 157-199 (edit. Chérétel).

MONCEHUT (Monceau, François de, a French writer noted for his studies in comparative lexicography, was a native of Arras, and flourished in the second half of the 16th century. He took quite an active part in the political affairs of France and Italy, but nevertheless found time to write: De porta cicistae Judae et fori judiciarium in eis exercendarum prisci ritus (Paris, 1587, 4to); Bucolica Sacra, sive Contici Consolatio, in which he endeavored to prove the true text of the hexameters and in which he defends and vindicates de Bèza, lib. ii (ibid, 1587, 1798, 8vo); Apparitius dictaminium quae de Robo et quae in Aegypto recutriori in diversis Moysi facta Historia (Arras, 1593, 12mo; 1597, 4to); InPlanetis sive Paraphrasis poëtica (Douai, 1608); Amor purgatus, et virgilio aureo, lib. ii (Arras, 1608, 8vo); Lepeic, 1689, in Americae Scriptorum, and in the dictionary of Pearson's Critica Sacra. The Church of Rome expurgated it in 1609) Responsio pro vitulo aureo non aureo (Paris, 1608, 8vo), a reply to Vischer's Destruction du "Vieux d'or pur" (ibid, 1608, 8vo). See André, Bibliotheque Belgique, and in the指数 of Pearson's Critica Sacra. The Church of Rome expurgated it in 1609.

MONCLAR, JEAN-PIERRE-FRANCOIS DE RIFERT, Marquis de, a French writer, noted as a defender of the Huguenots, was born Oct. 1, 1711, at Apt, Provence. He was descended from the family of the dauphiness, and was the son of a magistrate whom the chancellor Daguesseau had surnamed L'Anvouer du bien. Dec. 19, 1732, he succeeded his father as procurator-general of the Parliament of Provence; he was then twenty-one years of age. He was a brilliant lawyer, and profoundly versed in public law. From 1749 he energetically declared himself in favor of the Protestants, and endeavored to obtain for them civil rehabilitation and liberty of conscience. In his article on the clandestine marriages of the Reformed, he raised his voice, in the name of justice and humanity, against the inhuman laws which condemned to ignominy and illegitimacy the fruits of their union; and at the same time he had the courage to say that it was greatly to the interest of the state to facilitate the progress of population. In 1752 the republic of Geneva, a prey to civil dissensions, rendered homage to the integrity of the magistrate by choosing him as arbiter for the two parties in conflict. At this time, says M. Villemain, an event occurred which developed the talents of several men in the party of the Romantics and the others; this was the trial and expulsion of the celebrated societé of the Jesuits. Monclar took a lively and active interest in this affair, and his exposure of their doctrines was a masterpiece of method and clearness, without exaggeration, and without false eloquence. In the remonstrances that he was charged to draw up in the name of those opposed to the Jesuits, Monclar knew how to unite a dignified firmness with the respect due to the sovereign, and to avoid that rather republican severity with which Voltaire reproaches Malesherbes. He was instrumental in restoring Venaisin to France (1769), and received for his services from Louis XV a pension and the title of marquis (October, 1769). Monclar, after forty years of active life, withdrew to his estate of Saint-Saunin, where he died, Feb. 12, 1773. Romansians claim that Monclar in his dying hour made known to his confessor a regret for what he had said against the Holy See and the Jesuits. But, according to Vigny, he was to be no ground for the declaration, as the whole life of the marquis speaks against any such change. He wrote Mémorial théologique et politique au sujet des mariages clandestins des Protestants en France (1758, 8vo); at the time of its appearance it aroused a warm discussion: more than twenty pamphlets were published for or against: Voir le rendu des Constitutions des Jérusalem (1762, 2 vols. 12mo); reprinted since with the Regulaire du 4 Janvier, 1768, and the Conclusions du 5 Mars, 1776, on the bull Apostolicum pacendi (Paris, 1769, 2 vols. 4to and 8vo). The complete works of Monclar, comprising 8 vols. 8vo, were published in 1856. See Borely, Éloge de Monclar, prononcé November, 1849; Achard, Dict. de Provence, s. v.; Villemin, Tableau du dix-huitième siècle, 5e leçon; Hoefer, Nouv. Biog. Générale, s. v.

MONCON, JEAN DE, a Spanish theologian, who advanced heretical opinions on the doctrine of the immaculate conception, was born at Montescos, Aragon, about 1580. He joined the brotherhood of St. Dominic, taught theology at Valenlta, and in 1683 went to Paris, where he received the degree of doctor four years later. Having in his theses advanced some propositions contrary to the belief of the immaculate conception of the Virgin, he saw them condemned by the faculty, and Pierre d'Oegmont, then bishop, forbade their maintenance under pain of excommunication. This quarrel led to great trouble in the university; those partisans of the Spanish monk who refused to retract were thrown into prison, and he himself was excluded from all the Dominican courts. Moncon thereupon appealed to Clement VII, schismatic pope, residing at Avignon; but, perceiving that the sentence was given him was not favorable to him, he took flight (January, 1589), and was found in Aragon, where he was excommunicated. In order to revenge himself for the persecution, he entered the service of pope Urban IV, and wrote against Clement VII. Peace was not concluded until 1596, and only by the intervention of many princes and of the pope of Avignon, Benedict XIII. In 1412 he was instructed by the duke Alfonso to sustain his right to the crown of Aragon. His works have never been printed. See Echard and Quelet, Script. ord. Prædictorum.

MONCONYS, BALTHASAR, Dr., a French traveller, noted for his Oriental studies, was born at Lyons near
the opening of the 17th century. After receiving a lib-
eral education at the University of Salamanca, he vis-
it the East, for the purpose of tracing the remains of
the philosophy of Trismegistus and Zoroaster; but re-
turning without accomplishing the object of his mis-
tion, and died in 1665. His travels were published by
his learned friend, Jean Berthet, of the Society of Jesus
(Paris, 1665-6, 3 vols. 4to; reprinted in Holland, 1696,
952.

Moncrieff, Sir Henry, Bart., D.D., a Scottish div-
ing, son of the Rev. Sir William Moncrieff, was born
in Blackford, Perthsire, Feb. 6, 1750. After receiving
an elementary education in his native place, he repaired
to the University of Glasgow for the purpose of fitting
himself for the pulpit. In the midst of his collegiate
course he had the misfortune to lose his father. The
patrons of the charge thus left vacant, moved by ever
strong affection for Sir William, and a confidence in the
more than ordinary talent displayed by his son, reserved
the pastorate for "Sir Harry," as he was familiarly
called. He repaired to Edinburgh, and there entered
upon a theological course, which he completed in Au-
gust, 1771; and then ordained a minister of the Church
of Scotland, and installed as successor to his father.
His talents were too remarkable to allow of his remain-
ing long in this humble position, and the attention he
attracted soon caused him to be called to Edinburgh,
where, in 1775, he became the officiating minister of St.
Clement, the second largest and most opulent church in
the Scotch capital.

Though the numerical strength of his parish prevented him from coming into frequent personal con-
tact with all, still he seems to have been dearly beloved
as a pastor and friend. He had a commanding appear-
ance, was gifted with a powerfully argumentative or-
atory, and was zealous and active as a preacher. In the pulpit,
his style was characterized by force more than by elo-
geance. Avoiding flights of fancy and displays of rhe-
torical talent, he used his cultured intellectual strength
to make truth strike the heart rather than please the
brain. In his time the moderate party held the major-
ity in the Scotch Church, but his hatred of intolerance
and love of freedom led him to take a stand with the
liberal and evangelical party, while his natural in-
dependence of character made his position one of bold-
ness and prominence. The deliberations of the General
Assembly, which met yearly at Edinburgh, were of a
mixed political and religious nature. In these meet-
ings, Sir Harry took an active part in every discussion as a
debater soon ranked him among the ablest of Scotland's
platform orators. In 1785 he was unanimously chosen
as moderator of the Assembly, an honor which was con-
ferred on him several times thereafter. In these religi-
ous discussions he showed great abhorrence of every-
thing savouring of bigotry or intolerance, and was ever
ready to listen to and engage in any argument which
aimed at the discovery of truth. Yet his religious be-
liefs were tenaciously adhered to and boldly advocated.
Politically also he was active, and, to use his own ex-
pression, as "the Whig of 1788." He earnestly opposed
everything tending to increase the oppression of the
people, and heartily supported "the constitution as founded upon the rock of lawful resistance by the patriots of the first James
and Charles's time, and as finally purified by those of
the Revolution." Indeed, it has been truly said that
"in him Scotland found a warm-hearted lover of man-
kind, a strong advocate of political and religious free-
dom, and a zealous party leader." He continued to la-
bor in this wide field of usefulness as pastor of St. Cuth-
bert's and leader of the liberal party until the time of
his death, June 14, 1827. In the latter part of his life he
adopted the additional surname of Wellwood; but he is
better known as "Sir Harry," being in his days "the
only man of noble rank who ministered in the Church
of Scotland. He published several treatises concerning
the ecclesiastical discussions of his time, also Discourses
on the Evidences of the Jewish and Christian Revelations
(1815), and an Account of the Life and Writings of Dr.
John Erskine (1818). His Sermons, with a memoir by
his son, have also been published in three volumes
(1829-31). "Those who read these sermons," says a critic,
"will not only be gratified by the beauty of the words,
turbid with the author's admiration of himself or his
misconception of the subject; nor will their impiance
be excited by anything puerile, declamatory, verbose,
or inaccurate. They will find everywhere indications
of a vigorous and independent understanding; and,
tho' they may not always be graceful, have yet all the
graces of fancy or gravity of composition, by which they
can scarcely fail to be attracted by the unexpressed effect
of goodness and sincerity which runs through the whole publica-
tion." See Edinburgh Review, xxvii, 422; Encyclopedia
Britannica, s. v.; Chambers, Biog. Dict. of Eminent Sectmen, iv,
465; Blackwood's Magazine, xxiii, 389; Smith's Dict.
of Brit. and Amer. Authors, s. v. (H. W. T.)

Mondoville, Jeanne Julliard, Dame, Téules de, a French Roman Catholic woman, called as
the foundress of a pious order, was born at Toulouse in 1626.
The daughter of a president of the Parliament of Tou-
loose, Jeanne Julliard was distinguished for her mind
and her beauty. In 1646 she married Mardus, lord of
Mondoville, who left her a widow while still young,
but endowed with a considerable fortune. Refusing
marriage to a noble and she desired marriage to a noble
she desired marriage to a noble
ne, she determined to devote herself to the instruction of the poor and the rel-
ief of the sick. In order to more completely effect
her object, she founded in 1652, with the approbation of
Marca, archbishop of Toulouse, the congregation called
Les Filles de l'Espérance. This institution was au-
thorized in 1663 by pope Alexander VII, and approved by
letters patent of eighteen bishops and many doctors
in theology. The congregation was progressing finely,
and already counted many chapels, when it was sud-
denly and violently attacked by the Jesuits, on the
ground that the constitution of the new congregation
was dangerous to religious orders and morals.

They obtained the nomination of commissioners to ex-
ine the crinated points, and exerted themselves so
effectively that the congregation of the Filles de l'Es-
fance was suppressed by a decree of council in 1668.
Madame de Mondoville was imprisoned at the Hospi-
taliers of Coutances, where she died in 1703, after
twenty years of the most rigorous confinement.
The Jesuits did not wait for that event before they con-
fronted the property of the dissolved congregation,
and established in its stead seminaries and houses of their
own order. An old Jesuit and lawyer, Rebool, in his
Histoire des Filles de la Congregation de l'Espérance (Avignon,
1794), accuses Madame de Mondoville of having given an
asylum to men of treasonable views towards the state, that she had furnished some of them
with means of leaving the kingdom, and that she had
printed in her house many libels on the conduct of the
king and his counsellors; and the Jesuits in an order fought
these unfortunate women as if they had been redbud-
table enemies, and very soon despoiled them of all
their goods. But when, subsequently, circumstances
changed, and the credit of the Jesuits declined rap-

dily, the Parliament of Toulouse, at the request of
the archbishop, in a proposition of Madame de Mondon-
ville, condemned Rebool's work to the flames as calamitous and false. See Notice de Basile de la
Vie et les

Monegondé, Sainte, a French Roman Catholic woman, noted as the foundress of a religious order, was
born at Chartres in the early part of the 6th century.
She was the descendant of a noble family, and was mar-
rried, contrary to her own wishes, in obedience to her
parents' wishes and had two children. Only one of the
children died at an early age. The period of mourning having passed, she withdrew to a narrow cell, with no other opening than a
shutter, where she received a little barley-flour, which
she kneaded into bread. This was her sole nourish-
ment, and even in this she indulged only when pressed by extreme hunger. After a considerable period, Sainte Monégone left the city of Chartres in order to continue the same kind of life at Tours, near the tomb of St. Martin. The sensation produced by the miracles attributed to her aroused her husband and many of her friends, who took her back to Chartres; but, convinced by her urgent solicitations, they permitted her to return to Tours, where she formed a small religious order of women, called Les Filles sainte-Monégone, with whom she continued her austerities until her death. St. Gregory of Tours refers to her so-called miracles, and aided her in building a monastery, called Saint-Pierre-le-Puellier. This edifice became a collegiate church for secular canons. It was burned in 1652 by the Calvinists, and Sainte Monégone's body was burned in the flames. She died at Tours, July 2, 570, and this day is still observed in her honor. See St. Grégoire, De Gloria Confessarum; Martyrolog. Rom. (July 2); Bailleul, Vie des Saints, vol. ii (July 2); Richard and Giraud, Bibliothéque Sacrée.

Monergism (from μονος, sole, and έργον, work) is a term used to designate the doctrine that in regeneration there is but one efficient agent, viz. the Holy Spirit. It is generally held that "the grace of God that bringeth salvation hath made us free from the law, not unto works, but unto righteous acts, which are of faith." The doctrine of Monergism, which teaches that there are two efficient agents in regeneration—the human soul and the divine Spirit—co-operating together, a theory which accordingly holds that the soul has not lost all inclination towards holiness, nor all power to seek for it under the influence of ordinary motives. See Syncretism.

Monestier, BLAISÉ, a French philosopher, who did great service in combating the evil influences of the infidel schools which abounded in France towards the close of the 18th century, was born April 18, 1717, at Antezaet, diocese of Clermont. After belonging to the Jesuits for some time, he abandoned that order to allow himself more liberty for the cultivation of his taste for study. He taught mathematics at Clermont-Ferrand and philosophy at Toulouse, where he died in 1776. He is the author of Dissertation sur la Nature et la Formation de la Grêle (Bordeaux, 1769, 12mo), which won a prize at the Academy of Bordeaux—Dissertations sur l'Étologie du Sole et la Lumière, et sur le Temps, which also drew a prize at the Academy of Nancy, and was pronounced the best scientific work of the year. He also wrote: Précis pour l'Éducation des Princes de la Piété Chrétienne (Toulouse, 1766, 2 vols. 12mo)—La vérité Philosophique, par l'Abbé M (Bruxelles and Paris, 1774, 8vo), a work directed against the philosophy of the Encyclopedists, and particularly against Le Système de la Nature, and published by Neetham. "In order to gain an idea of La viole Philosophie," says a reviewer, "we should not permit ourselves to be repelled by the violent declamations and bad taste presented by each page, above all in the preface, nor by the incoherence of the plan and the disorder in the succession of ideas which result from it. The doctrine which it contains is an experimental and ecclesiastical spiritualism, equally distant from the theory of innate ideas and from the system of transformed sensation, but where Cartesianism occupies the greatest place." After having placed sensations and sentiments in the heart, Monestier analyzes reason, which he divides into pre-judgment (ethical, moral, affirmation, negation), with the axioms of geometry and morals), the faculty of generalizing and abstracting, the idea of the infinite, and the faculties of induction and reasoning. The idea of the infinite, imprinted as it is on all nature's work, attests to us the existence of God and the immortality of the soul, at the same time that it instructs us in regard to our own destiny. The author closes by a discussion of free will. See Dict. des Sciences philos., iv, 289-291, a. v.

Moneta, an Italian theologian and member of the order of the Dominicans at Cremona, flourished in the 18th century. He was, before entering the order, professor of philosophy at the University of Bologna. He was noted for his sense and his zeal against the false teachers of his time. He died about 1740. Moneta left a Summa contra Catharos et Waldenses (Rome, 1649). He is also supposed to be the author of Compendium logicorum in qua de rerum rationis et praerum eruditos. See Arisius, Cremona litterata; Richard, Bibliotheca Practicorum (Paris, 1719-21, 2 vols. fol.), i, 122.

Money (Heb. מזון, keosph, silver, as often rendered, Chald. מזון, bezosph, Gr. δραχμα, silver, or a piece of silver, as often rendered; also κορος, coin, q. v. νησίμια, lit. a standard of valuation; χρυσός, brass, so sometimes rendered; and χρυσα, lit. whatever is used in exchange). In the present article we shall confine our attention to the consideration of the subject in general, leaving the discussion of particular coins for the special head of Numismatics. The value of the coins is a relative thing, depending, with respect to the several pieces and kinds of metal, in part upon the ascertained weight (i.e. intrinsic value, for which see METALLOGRAPHY), and in part upon the value of the coinage in the eyes of the people, varying with different ages and countries prevalent in Palestine (i.e. current value; see Coin); but, in point of fact, still more upon the depreciation of the precious metals as a standard of value in comparison with purchasable articles, arising from the fluctuating balance of supply and demand (i.e. mercantile value). In the following discussion we give a general view of this extensive subject, referring to other articles for subsidiary points.

I. Non-metallic Currency.—Different commodities have been used as money in the primitive state of society in all countries. Those nations which subsist by the chase, such as the ancient Russians and the greater part of the North American Indians, use the skins of the animals killed in hunting as money (Storch, Traité d'Economie Politique, tome i). In a pastoral state of society cattle are chiefly used as money. Thus, according to Homer, the armor of Diomedé cost nine bullocks, and the places once occupied by the Trojan horse were bought with oxen. The etymology of the Latin word pecus, signifying money, and of all its derivatives, affords sufficient evidence that cattle (pecus) were the first money of the Romans. They were also used as money by the Germans, whose laws fix the amount of penalties for particular offences in cattle. Heifers and oxen were used by the Brahmans, and in the early ages of the Roman empire. Agricultural corn was used in remote ages as money, and even at the present day it is not unusual to stipulate for corn rents and wages. Various commodities have been and are still used in different countries. Smith mentions salt as the common money of Abyssinia (Wealth of Nations, i, 4). A species of cypress, called the coqj, gathered on the shores of the Maldives Islands, and of which 6400 constitute a rupee, is used in making small payments throughout India, and is the only money of certain districts in Africa. Dried fish forms the money of Ireland and Newfoundland; sugar of some of the West India Islands; and among the first settlers in America corn and tobacco were used as money (Holmes' American Anecdote). Smith mentions that at the time of the publication of the Wealth of Nations there was a village in Scotland where it was customary for a workman to carry nails as money (ibid). The same thing is known to have been the case in New South Wales.

II. Bullion as a Circulating Medium.—1. A long period of time must have intervened between the first introduction of the precious metals into commerce and their becoming generally used as money. The peculiar qualities which so eminently fit them for this purpose would only be gradually discovered. They would prob-
ably be first introduced in their gross and unpurified state. A sheep, an ox, a certain quantity of corn, or any other article, would afterwards be bartered or exchanged for pieces of gold or silver, in the same way as they would formerly have been exchanged for iron, copper, cloth, or anything else. The merchants would soon begin to estimate their proper value, and, in effecting exchanges, would first agree upon the quality of the metal to be given, and then the quantity which its possessor had become bound to pay would be ascertained by weight. This, according to Aristotle and Pliny, was the manner in which the precious metals were originally exchanged in Greece and Italy. The same practice is still observed in different countries. In many parts of China and Aylousia the value of goods is assessed in weight (Ogget, De L'Origine des Lœis, etc.). Iron was the first money of the Lacedemonians, and copper of the Romans. See Metal.

In the many excavations which have been made in Egypt, Assyria, and Babylonia, no specimen of coined money has yet been discovered. Egyptian money was composed of rings of gold and silver; and in Assyria and Babylonia only clay tablets commemorating grants of money specified by weight have been found in considerable numbers; while in Phoenicia no pieces of an antiquity earlier than the Persian rule have yet come to light (Rawlinson, Herod. App. i., 694). Gold money was found in the time of Homer, but traffic was pursued either by simple barter (Iliad, vii, 472; xxii, 702; Odys., i, 430); or by means of masses of unwrought metal, like lumps of iron (Iliad, xxii, 826; Odys., i, 184); or by quantities of gold and silver, especially of gold (Iliad, ix, 125, 279; xix, 247; xxii, 209, Odys., ix, 129; viii, 253; ix, 202, etc.), which latter metal, called by Homer τάλαντον χρυσόν, seems to be the only one measured by weight. Before the introduction of coined money into Greece by Pheidon, king of Argos, there was a currency of ὀξύντα, "spits" or "skewers," six of which were considered a handful (Σκεύας). Colonel Leake thinks that they were small pyramidal pieces of silver (Num. Chron., xxii, 203; Num. Hellen., p. 1, appendix), but it seems more probable that they were nails of iron or copper, capable of being used as spits in the Homerice fashion. This is likely, from the fact that six of them made a handful, and that they were therefore a considerable size (Rawlinson, Herod. App. i., 688).

See Weights.

It is well known that ancient nations which were without a coinage weighed the precious metals, a practice represented on the Egyptian monuments, on which gold and silver are shown to have been kept in the form of bars. We have seen that the gold rings found in the Celtic countries have been held to have had the same use. It has indeed been argued that this could not have been the case with the latter, since they show no monetary system; yet it is evident from their weights that they all contain complete multiples or parts of a unit, so that we may fairly suppose that the Celts, before they used coins, had, like the ancient Egyptians, the practice of keeping money in rings, which they weighed when it was necessary to pay a fixed amount. We have no certain record of the use of ring-money or other coined money in antiquity excepting among the Egyptians. With them the practice mounts up to a remote age, and was probably as constant, and perhaps as regulated with respect to the weight of the rings, as a coinage. It can scarcely be doubted that the highly civilized nations of the Egyptians—the Assyrians and Babylonians—adopted, if they did not originate, the practice. We have already found specifying grants of money by weight (Rawlinson, Herod., i, 684); and there is therefore every probability that it obtained also in Palestine, although seemingly unknown in Greece in the time before coinage was there introduced. There is no trace in Egypt, however, of any different size in the rings represented, so that there is no reason for supposing that this further step was taken towards the invention of coinage.

2. The first notice in the Bible of the flood, of uncoined money in the form of ingots, of property and medium of exchange, is when Abraham came up out of Egypt "very rich in cattle, in silver, and in gold" (Gen. xxii, 2; xxiv, 85). In the further history of Abraham we read that Abraham gave the patriarch "a thousand [pieces] of silver," apparently to purchase veils for Sarah and her attendants: but the passage is extremely difficult (Gen. xx, 16). The Sept. understood shekelas to be intended (χιλια διδραχμια, L. c. also ver. 14), and there can be no doubt that they were right, though the rendering is accidentally an unfortunate one, their equivalent being the name of a coin. We next find "money" used, as the Arab. جمع, in the plural, in the names of things. "The spoil of the temple of the Lord is mine," saith the prophet (Ezra, vi, 12, 3). It is also said, "And Abraham weighed (מָכָּת) to Ephron the silver which he had named in the audience of the sons of Heth, four hundred shekels of silver current with the merchant ("אָסָמָאָס נְבָאָס; №.םְנָבָא נְבָאָס), see Gen. xxiii, 16). Here a currency is clearly indicated like that which the monuments of Egypt show to have been there used in a very remote age; for the weighing proves that this currency, like the Egyptian, did not bear the stamp of authority, and was therefore merely a private money. A record of the purchase is recorded of Jacob, who bought a parcel of a field at Shalem for a hundred kesithas (xiiii, 19, 19). The occurrence of a name different from shekel, and, unlike it, not distinctly applied in any other passage to a weight, favors the idea of coined money. But what is the kesithas קיסית? The old interpreters supposed it to mean a lamb, and it has been imagined to have been a coin bearing the figure of a lamb. There is no known etymological ground for this meaning, the lost root, if we compare the Arabic kaanut, "he or it divided equally," being perhaps connected with the idea of division. Yet the sanction of the Sept. and the use of weights having the forms of lions, bulls, and geese, by the Egyptians, Assyrians, and probably Persians, must make us hesitate before we abandon a rendering so singularly confirmed by the relation of the Latin pecunia and pecus. Throughout the history of Joseph we find evidence of the constant use of money in preference to barter. This is clearly shown in the case of the famine, when it is related that all the money of Egypt and Canaan was paid for corn, and that then the Egyptians had recourse to barter (xiiii, 13–26). It would thence appear that money was not very plentiful. In the narrative of the visits of Joseph's brethren to Egypt, we find that they purchased corn with money which was, as the word then meant, coin or money. The Pharaoh gave them by them as having been restored to their sacks in "its [full] weight" (xiiii, 21). At the time of the exodus money seems to have been still weighed, for the ransom ordered in the law is stated to be half a shekel for each man—half a shekel after the shekel of the sanctuary, [of] twenty gerahs the shekel" (Exod. xxxx, 13). Here the shekel is evidently a weight, and of a special system of which the standard examples were probably kept by the priests. Throughout the law money is spoken of as in ordinary use; but only silver money, gold being mentioned as valuable, but not clearly as used in the same manner. This distinction appears at the time of the conquest of Canaan. When Jericho was taken, Achan embezzled from the spoils 200 shekels of silver, and a wedge ( Heb. tonge) of gold (γυάςαν μιν χρυσο&thgr;) of 50 shekels' weight (Josh. vii, 21). Throughout the period before the return from Babylon this distinction is maintained: this is the common and principal acter of money is mentioned the usual metal is silver, and gold generally occurs as the material of ornaments and costly works. Thus silver, as a medium of commerce, may be met with among the nations of the Philistines (Gen. xx. 16; Judg. xvii, 5, 18; xviii, 2 sq.), the Midianites (Gen. xxxvii, 29), and the Syrians (2 Kings
MONEY

v, 5, 23). By the laws of Moses, the value of laborers and cattle (Lev. xxvii, 5 sq.; Num. iii, 45 sq.), houses and fields (Lev. xxvii, 14 sq.), provisions (Deut. ii, 6, 28; xiv, 26), and all fines for offenses (Exod. xxii, 22), were determined on a medium of exchange. The payment of the first-born (Num. iii, 45 sq.; xviii, 15 sq.), the payment to the seer (1 Sam. ix, 7 sq.)—in all these cases the payment is always represented as silver. It seems probable that it was a medium of exchange. The case of Rehabeam, to whom the servant of Abraham gave 'a golden ear-ring of half a shekel weight, and two bracelets for her hands of ten shekels' weight of gold' (Gen. xxiv, 22), proves that the ancients made their jewels of a specific weight, so as to know the value of the ornaments in employing them as money. That the Egyptians kept their bullion in jewels seems evident from the plate given by Sir Gardner Wilkinson, copied from the catacombs, where they are represented as weighing rings of silver and gold; and is further corroborated by the fact of the Israelites having, at their exodus from Egypt, borrowed "a golden ring of value and a cord of gold and jewels of Egyptians" (Exod. xii, 33, 36). According to the ancient drawings, the Egyptian ring-money was composed of perfect rings. So, too, it would appear that the money used by the children of Jacob, when they went to purchase corn in Egypt, was also an annular currency (Gen. xxvii, 9). Money was "the measure of money" (Sept. Exod. xiii, 19), and when returned to them, was found to be of "full weight" (Gen. xxxii, 21). The account of the sale of Joseph by his brethren affords another instance of the employment of jewell ornaments as a medium of exchange (Gen. xxxvii, 28); and that the Midianites carried the whole of their bullion wealth in jewels seems improbable from the account in Numbers of the spoiling of the Midianites—"We have therefore brought an oblination for the Lord what every man hath gotten (Heb. found), of jewels of gold, chains, and bracelets, rings, ear-rings, and tablets, to make an atonement for our souls before the Lord. And Moses and Eleazar the priest took the gold of those who gave it, even all wrought jewels" (Num. xxxi, 50, 51). The friends of Job, when visiting him at the end of the time of his trial, each gave him a piece of money (גזרה) and an ear-ring of gold (גזרה) and the ring-money, thus suggesting the employment of a ring-money. (For this question, see W. B. Dickinson in the Num. Chron. vol. vii to xvi, passim.) A passage in Isaiah has indeed been supposed to show the use of gold coins in that prophet's time: speaking of the makers of idols, he says, "They lavish gold out of the bag, and weigh silver in the balance" (xlv, 6). The mention of a bag is, however, a very insufficiency for the supposition that the gold was coined money. Rings of gold may have been used for money in Palestine as early as this time, since they had long been familiar to the Egyptians. The name Marmar, probably refers to the people of Babylon, who may have had uncoined money in both metals like the Egyptians. Supposing that the above-quoted passages relative to a gold medium of exchange be not admitted, there is a passage recording a purchase made in gold in the time of David. The threshing-floor of Ornan was purchased by David for 600 shekels of gold by weight (1 Chron. xxii, 25). Yet even this is rendered doubtful by the parallel passage mentioning the price paid as 50 shekels of silver (2 Sam. xxiv, 24). It seems then apparent, from the several authorities given above, that from the earliest time silver was used by the Hebrews as a medium of commerce, and that a fixed weight was assigned to single pieces, so as to make them suitable for the various articles presented in trade. Unless we suppose this to be the case, many of the above-quoted passages (especially Gen. xxiii, 16; comp. 2 Kings xii, 4 sq.) would be difficult to understand rightly. In this latter passage it is said that the priest Gehazi "took a chest and bore a hole in the lid of it, and set it beside the alms-box" and "the priests that kept the door put in all the money that was brought into the house of the Lord." These passages not only presuppose pieces of metal of a definite weight, but also that they had been recognized as such, either in an unwrought form or from certain characters inscribed upon them. The system of weighing (though the Bible makes mention of a balance and weight of money in many places—Gen. xxxii, 16; Exod. xxii, 17; 2 Sam. xvii, 12; 1 Kings xx, 39; Jer. xxxxi, 9, 10) is not likely to have been applied to every individual piece. In the large total of 665,500 half-shekels (Exod. xxxviii, 26), accumulated by the contribution of each Israelite, each individual half-shekel could hardly have been weighed out, nor is it probable that the scales were continually employed for all the small silver pieces which men carried about with them. For instance, that there were divisions of the standard of calculation is evident from the passage in Job, iv, 16, where the very use of the "peculiar word is to be paid as the atonement money," and "the rich shall not give more, and the poor shall not give less" (ver. 15). The fourth part of the shekel must also have been an actual piece, for it was all the silver that the servant of Saul had at hand to pay the seer (1 Sam. ix, 8, 9). If a quantity of pieces of various weights were carried about by a merchant or a private person (2 Kings v, 23; xii, 10; Gen. xlii, 35), without having their weight marked in some manner upon them, what endless trouble there must have been in buying or selling, in paying or receiving. From these facts we may safely assume that the Israelites had already, before the exilic time of the priests, a definite weight and, and used them in trade. By this is not meant coins, for these are pieces of metal struck under an authority. A curious passage is that in Ezekiel (xvi, 36), which has been supposed to speak of brass money. The Hebrew text has נכורות נכס באזע, which has been rendered by the Vulg. "quia effusum est aezum," and by the A.V. "because thy filthiness was poured out." As brass was the latest metal introduced for money into Greece, it seems very likely that the use of a definite weight was current at this period in Palestine: it has, however, been supposed that there was an independent copper coinage in farther Asia before the introduction of silver money by the Seleucids and the Greek kings of Bactria. The terms נכס נכס (Psal. lxviii, 80) and נכס נכס (1 Sam. ii, 86) are merely expressive of any small denomination of money. See Silver.

III. Coined Money.—I. The Antiquity of Coinage. There are two generally received opinions as to who were the inventors of the coining of money. One is that Phidon, king of Argos, coined both gold and silver money at Ægina at the same time that he introduced a system of weights and measures (Ephor. ap. Strabo, viii, 876; Pollux, ix, 83; Ëlian, Var. Hist. xii, 10; Plutarch, Mor. 321, c. 7). The Parian marble, B.C. 895, but Grote places him between 770 and 780, while Clinton, Böckh, and Müller place him between 785 and 744 (Grote, Hist. of Greece, iv, 419, note). The other statement is that the Lydians were the first nation to introduce the use of gold and silver coins (Herod. vii, 106), and that the practice of the Lydian coins was also made, according to Pollux (ix, 6, 88), by Xeraphanes of Colophon, and is repeated by Eustathius (ap. Dionys. Perieg. vi, 840). The early coins of Ægina and Lydia have a device on one side only, the reverse being an incuse square (quadratum incusum). On the obverse of the Æginetan coin is a torc, a symbol of the Lydian the head of a lion. The reverse, however, of the Æginetan coin soon shows the incuse square divided into four parts by raised lines, the fourth quarter being again divided by a diagonal bar, thus forming...
four compartments. Apart, however, from the history relative to these respective coinages, which decidedly is in favor of a Lydian origin (Rawlinson, Herod. i. 688; Grote, Hist., iv. 283) against the opinion of the late colonet Wace (Num. Hel. App.), the Lydian coins seem to be ruder than those of Eginia, and it is probable that while the idea of impress may be assigned to Lydia, the perfecting of the silver and adding a reverse type, thereby completing the art of coinage, may be given to Eginia (W. B. Dickinson, Num. Chron. iii. 128). It may be remarked that Herodotus does not speak of the coins of Lydia when a kingdom, which coins have for their type the heads of a lion and bull facing, and which in all probability belong to Cressus, but of the electrum states of Asia Minor. If we conclude that coinage commenced in Asia Minor and Asiatic Greece about the same time, the next question is whether we can approximately determine the date. This is extremely difficult, since there are no coins of a known period before the time of the expedition of Xerxes. The pieces of that age are of so archaic a style that it is hard, at first sight, to believe that there was any length of time between them and the rudest, and therefore earliest, of the coins of Eginia or the Asiatic coast. It must, however, be recollected that in some conditions the growth or change of art is extremely slow, and that this was the case in the early period of Greek art seems evident from the results of the excavations on what we may believe to be the oldest coinage in Greece. The lower limit obtained from the evidence of the coins of known date may perhaps be conjectured to be two, or at most three, centuries before their time; the higher limit is as vaguely determined by the negative evidence of the Homeric writings, of which we cannot guess the age, excepting as being before the first Olympiad. On the whole, it seems reasonable to carry up Greek coinage to the 8th century B.C. Purely Asiatic coinage cannot be taken up so early a date. The more archaic Persian coins seem to be of the time of Darius Hystaspis, or possibly of Cyrus, and certainly not much older, and there is no Asiatic money, unless of Greek cities, that can be reasonably assigned to an earlier period. Cressus and Cyrus probably originated this branch of the coinage, or else Darius Hystaspis followed the example of the Lydian king. Coined money may therefore have been known in Palestine as early as the fall of Samaria, but only through commerce with the Greeks, and we cannot suppose that it was then current there. The earliest coined money current in Palestine is supposed to be the Daric (see below).

2. The principal Monetary Systems of Antiquity.—This subject has already been ably treated by Mr. K. S. Poole (Incognitopsia Britannica, n. v. Numismatica), and in the present article it will be sufficient for our purpose to mention briefly the different talents (q. v.).

i. The Attic talent was that employed in most Greek cities before the time of Alexander, who adopted it, and from that time it became almost universal in Greek coinage. Its drachm weighed about 67.5 grains Troy, and its tetradrachm 270 grains. In practice it rarely reached this standard in coins after the Punic War; at Alexander's time its tetradrachm weighed about 294 grains.

ii. The Eginetan talent, which was used at an early period as the Attic, was employed in Greece and in the islands. Its drachm had an average maximum weight of about 96 grains, and its didrachm about 192 grains. When abolished under Alexander, this weight had fallen to about 180 grains for the drachm.

iii. The Alexandrian or Ptolemaic talent, which may also be called the Earlier Ptolemaic, and also Macedonian, as it was used in the earlier coinage of the cities of Macedon, and by the Macedonian kings before Alexander the Great, was restored during the sway of the Ptolemies into the talent of Egypt. In the former case its drachm weighed about 112 grains, and its so-called tetradrachm about 224, but they gradually fell to much lower weights. In the latter case the drachm weighs about 50 grains, and the tetradrachm about 220.

Tetradrachm of Archelaus, king of Macedon.

iv. The later Phocian or Carthaginian talent was in use among the Persians and Phocicians. It was also employed in Africa by the Carthaginians. Its drachm (or hemidrachm) weighed, according to Mr. Burgon (Thomas, Sela Cut. p. 57), about 59 grains, and its tetradrachm (or didrachm) about 236.

v. The Euboic talent in Greek money had a didrachm of 129 grains; but its system of division, though coming very near the Attic, was evidently different. The weight of its didrachm was identical with that of the Drachm, showing the Persian origin of the system. The order of origin may be thus tabulated:

Respecting the Roman coinage, we may here state that the origin of the weights of its gold and silver money was undoubtedly Greek, and that the denarius, the chief coin of the latter metal, was under the early emperors equivalent to the Attic drachm, then greatly depreciated. The first Roman coinage took place, according to Pliny (Hist. Nat. xxxiii, 3), in the reign of Servius Tullius, about 500 years before Christ; but it was not until Alexander of Macedon had subdued the Persian monarchy, and Julius Caesar had consolidated the Roman empire, that the image of a living ruler was permitted to be stamped upon the coins. Previous to that period heroes and deities alone gave currency to the money of imperial Rome. In the British Museum there is a specimen of the original Roman as, the surface of which is nearly the size of a brick, with the figure of a bull impressed upon it.

3. Cœined Money mentioned in the Bible.—The earliest mention of coined money in the Bible refers to the Persian coinage. In Ezra (ii, 60) and Nehemiah (vii, 70) the word érique occurs, and in Ezra (viii, 27) and 1 Chron. (xxxii, 7) the word érique, both rendered in the Sept. by χρυσός, and in the Vulg. by solidus and drachma. Many opinions have been put forward concerning the derivation of the words adarkon and darkemon; but a new suggestion has recently been made, which, though ingenious, will not, we think, meet with much support. Dr. Levy (Jiid. Mincken, p. 19, note) thinks that the root-word is ἄθρα, "to stretch," "tread," "step forward," from the forward pacing of
MONEY

one foot, which a man does in bending the bow, and that from this word was formed a noun, מַעֲלֶה, "archer," which is the type upon these coins, especially as the ancients called the old Persian coins רָצוֹרָה. That the more extended form רָתוֹרָה could have been formed from the simple מַעֲלֶה is very possible, as the Mem could easily have been inserted. All, however, agree that by these terms the Persian coin Daric is meant. This coin was a

Daric. (Obverse: King of Persia to the right, kneeling, bearing bow and javelin. Reverse: Irregular lacing square. British Museum.)
gold piece current in Palestine under Cyrus and Artaxerxes Longimanus. The ordinary Daric is not of uncommon occurrence; but Levy (l. c.) has given a representation of a double piece, thereby making the ordinary Daric and the double Daric at the price of one piece, he says, only three are known. In this he is mistaken, as Mr. Burrell, the coin-dealer, has a record of not less than eight specimens (F. W. Madden, Hist. of Jewish Coinage, etc., p. 272, note 4). Besides these gold pieces, a silver coin also circulated in the Persian kingdom, named the siglos. See Daric. Mention is probably made of this coin in the Bible, though no passages which treat of the Persian times (Neb. v, 15; comp. x, 32). Of these pieces twenty went to one gold Daric (Mommsen, Geschichte des Röm. Münzwesens, p. 13 and 855), which would give a ratio of gold to silver of one to thirteen (Herod. iii, 95). These coins also have an archer on the obverse. After the Jews lived under Persian domination, they made use of Persian coins. and had no struck coins of their own. In these coins also were probably paid the tributes (Herod. iii, 89).

On the overthrow of the Persian monarchy in B.C. 334, by Alexander the Great, Palestine came under the dominion of the Greeks. During the lifetime of Alexander the country was governed by a vice-regent, and the high-priest was permitted to remain in power. Jaddua was at this time high-priest, and in high favor with Alexander (Josephus, Ant. xi, 8, 5). At this period only Greek coins were struck in many cities of Palestine. The coinage consisted of gold, silver, and copper. The usual gold coins were stater, called by Pollux Αληθινοὶ. The silver coins mostly in circulation were tetradrachms and drachms. There are two specimens of the tetradrachms struck at Scythopolis (the ancient Bethshan), preserved in the Gotha and Paris collections. There are also tetradrachms with the initials IΩI struck at Joppa, which, being a town of considerable importance, no doubt supplied Jerusalem with money. Some of the coins bear the monograms of two cities sometimes at a great distance from each other, showing evidently some commercial intercourse between them. For instance, Syccamira (Hier. and Scythopolis (Bethshan), Ascalon and Philadelphia (Rabbath-Ammon) (Müller, Numismatique d'Alexandre le Grand, 1464, pl. xx).

Shortly after the death of Alexander the Great, in B.C. 324, Palestine fell into the hands of Ptolemy I Soter, the son of Lagus, from whom Antigonus wrested it for a short time, until, in B.C. 301, after the battle of Ipaus, it came again into his hands, and afterwards was under the government of the Ptolemies for nearly one hundred years.

The same system of coinage was continued under the Seleucids and Lagiids, and we find the same and other mints in Palestine. The history, from that time to B.C. 193, will be found under Antiochus, Maccabees, and other names, and would be out of place in an article which more especially treats only of money.

The next distinct allusion to coined money is in the Apocrypha, where it is narrated in the first book of Maccabees that Antiochus VII granted to Simon the Maccabee permission to coin money with his own stamp, as well as other privileges (Kepi iπαρθενος σου ματαιοθετημεν ιπι μενο ευερατεια τη μορφη σου, v. 6). This was in the fourth year of Simon's pontificate, B.C. 140. It must be noted that Demetrius II had in the first year of Simon, B.C. 143, made a more important decree granting freedom to the Jewish people, which gave occasion to the dating of their contracts and covenants—"In the first year of Simon, the great high-priest, the leader, and chief of the Jews" (xiii, 34-42), a form which Josephus gives differently—"In the first year of Simon, benedict of the Jews, and ethnarch" (Ant. xiii, 6). This passage has raised many opinions concerning the Jewish coinage, and among the most prominent is that of M. de Sauley, whose classification of Jewish coins has been generally received and adopted. It has been fully treated upon by Mr. J. Evans in the Numismatic Chronicle (xx, 8 sq.). See Numismatics. The Jews, being the worshippers of the one only true God, idolatry was strictly forbidden in their law; and therefore their shekel never bore a head, but was impressed simply with the almond rod and the pot of manna. Later shekels of copper bore likewise other devices. See Shekel.

Early Jewish Shekel.

with the almond rod and the pot of manna. Later shekels of copper bore likewise other devices. See Shekel.

Hebrew-Samaritan Copper Coin, in the Cufco-Borgian Museum.

4. Money in the New Testament.—The coins mentioned by the evangelists, and first those of silver, are the following: the stater is spoken of in the account of the miracle of the tribute money. The receivers of the drachmae demanded the tribute, but Peter found in the fish a stater, which he paid for our Lord and himself (Matt. xvii, 24-27). This stater was therefore a tetradrachm, and it is very noteworthy that at this period almost the only Greek imperial silver coin in the East was a tetradrachm, the didrachm being probably unknown, or very little coined. The drachma is mentioned as a money of account in the passage above cited, as the equivalent of the Hebrew shekel.

The denarius, or Roman penny, as well as the Greek drachma, then of about the same weight, is spoken of as a current coin. There can be little doubt that the latter is merely employed as another name for the former. In

Roman Denarius (from the British Museum).
the famous passages respecting the tribute to Cæsar, the Roman denarius of the time is correctly described (Matt. xxii, 15–21; Luke xx, 19–20). It bears the head of Tiberius, who has the title Cæsar in the accompanying inscription, most later emperors having, after their ac-
cession, the title Augustus: here again therefore we have an evidence of the date of the Gospels. See Den-
arius; DRACHM.

Of copper coins the farthing and half the mite, are spoken of, and these probably formed the chief na-
tive currency. See FAITHING; MITRE.

From the time of Julius Cæsar, who first struck a liv-
ing portrait on his coins, the Roman coins run in a con-
tinued succession of so-called Cæsars, their queens and

Crown-princes, from about B.C. 48 down to Romulus Augustus, grand-nephew of the Emperor Constantine, whom he deposed about A.D. 475 (Quarterly Review, lxxii, 538). See COIN.

MONEY-CHANGER (κολλυβιστής, Matt. xxii, 12; Mark xi, 15; John ii, 15). According to Exod. xxxi, 13–15, every Israelite, whether rich or poor, who had reached or passed the age of twenty, must pay into the sacred treasury, whenever the nation was numbered, a half-shekel as an offering to Jehovah. Maimonides (Shahih, cap. 1) says that this was to be paid annually, and that even paupers were not exempted. The Talmud exempts priests and women. The tribute must in ev-
ery case be paid in coin of the exact Hebrew half-
shekel, about 150₉. sterling of English money. The

MONEY-CHANGER (κολλυβιστής, Matt. xxii, 12; Mark xi, 15; John ii, 15). According to Exod. xxxi, 13–15, every Israelite, whether rich or poor, who had reached or passed the age of twenty, must pay into the sacred treasury, whenever the nation was numbered, a half-shekel as an offering to Jehovah. Maimonides (Shahih, cap. 1) says that this was to be paid annually, and that even paupers were not exempted. The Talmud exempts priests and women. The tribute must in ev-
ery case be paid in coin of the exact Hebrew half-
shekel, about 150₉. sterling of English money. The

money for obtaining by exchange of other money the
half-shekel of Hebrew coin, according to the Talmud, was a κολλυβία (collus), and hence the money-broker who made the exchange was called κολλυβιστής. The

collus, according to the same authority, was equal in
value to a silver obolus, which has a weight of 12 grains, and its money value is about 1₉. sterling. The money-

money changers (κολλυβιστίς) whom Christ, for their impie-
ty, avarice, and fraudulent dealing, expelled from the Temple, were the dealers who supplied half-shekels, for such a premium as they might be able to exact, to the Jews from all parts of the world, who assembled at Je-
rusalem during the great festivals, and were required to pay their tribute or ransom money in the Hebrew coin; and also for other purposes of exchange, such as would be necessary in so great a resort of foreign residents to the ecclesiastical metropolis. The word πρατείνησις (trapeitises), which we find in Matt. xxv, 29, is a gen-

eral term for banker or broker, so called from the table (πρατείνης) at which they were seated (like the modern "bank," i.e. bench). See EXCHANGE. Of this branch of business we find traces very early both in the Orien-
tal and classical literature (comp. Matt. xvii, 24–27; see Lightfoot, Hor. Heb. on Matt. xxi, 12; Buxtorf, Lex. Rabbin. col. 2020).—Smith. It is mentioned by Volney that in Syria, Egypt, and Turkey, when any considera-
ble payments are to be made, an agent of exchange is

sent for, who counts parsa by thousands, rejects pieces of false money, and weighs all the sequins either sepa-
rate or together. It has hence been suggested that the "current money with the merchant" mentioned in Scripturc (Gen. xxiii, 15), might have been such as was approved of by competent judges, whose business it

was to detect fraudulent money if offered in payment. The Hebrew word לְכַלָּא, rocketh, signifies one who goes about from place to place, and is supposed to answer to the native exchange-agent or money-broker of the East, now called shroff. See MERCHANT. It appears that there were bankers or money-changers in Judea, who made a trade of receiving money in deposit and paying interest for it (Matt. xxv, 27). In the Life of Avutus, by Plutarch, there is mention of a banker of Sicyon, a city of Peloponnesus, who lived 240 years before Christ, and who whose whole business consisted in exchanging one species of money for another. See MONE

MONEY, LOVE OF (φιλαργυρία, 1 Tim. vi, 10, or-
caries or cupidity). See COVETOUSNESS.

MONEY, PIECE OF (ῥήπαντζ, kistlach', Gen. xxxiii, 19; Job xlii, 11: "piece of silver," Josh. xxxii, 32; πα-

τρίπατς, Matt. xvii, 27). See KISTLACH; STATER.

MONEY, ECCLESIASTICAL. See Nu

IMITATIONS; USURY.

Money-stone is, in ecclesiastical lan-
guage, the upper slab of a tomb, on which payments were made by or to ecclesiastics. There is one at Carlisle, at York, and at Dundry, in England.

Monfort, David, D.D., a Presbyterian divinity, was born in Adama Coun-
ty, Pa., March 7, 1790. His ances-

Monfort, David, D.D., a Presbyterian divinity, was born in Adama Coun-
ty, Pa., March 7, 1790. His ances-
tors were the Huguenot De Monforts of France, who were driven to Holland, and afterwards emigrated to this coun-
try about 1640. David Monfort was ed-
located at Transylvania University, in Lexington, Ky., and graduated in the theological seminary at Princeton, N. J., in 1817; was licensed by Miami Pres-
bytery in 1818, and continued all his life a missionary preacher, acting at different times as the stated supply of Bethel Church, in Oxford Presbytery; Terre Haute Church, Ind.; Ebenzer Church, at Wilmington, Ohio; and a church in Franklin, Ind., where he labored for twenty years. In 1854 he became stated pastor of the church at Knightstown, Ind.; and in 1857 he removed to Macomb, Ill., where he remained until his death, Oct. 18, 1860. Dr. Monfort was a thoroughly trained minister, an able expositor, an excellent linguist, and an eloquent preacher. He published a volume called Original Sermons by Presbyterian Divines in the Mississippi Valley. See Wilson, Pref. Hist. Al-

manac, 1862, p. 104.

Monfort, Peter, a Presbyterian minister, was born in Adams County, Pa., March 14, 1784. He was, like the above, descended from the Huguenot De Mon-
forts. He attained his education through great effort, pursuing his course with much difficulty for want of teachers and books. After several years of private tu-
ition in the classics and theology, he was licensed in the spring of 1818, and ordained in 1814 by Miami Pres-
bytery; was pastor four years at Yellow Springs, Ohio, and eleven years in Unity and Fisgah, near his early home; subsequently he undertook the establishment of an ecclesiastical missionary at Findlay, Ohio, where he labored for three years. In 1836 he transferred his relations from the Presbyterian to the Associate Reformed Church, and in that connection preached at Syracuse, in Hamil-
ton County, Ohio; Jacksonburg, Quincy, and Middle-
burg, Ohio; and at College Corner. He died Nov. 15, 1865.

Mr. Monfort showed much ability as an expos-
itor of the Scriptures, and as an advocate of sound doc-
trinal theology. He was a man of deep religious expe-

Mongin, Edmond, a French Roman Catholic

preacher, noted for his pulpit oratory, was born in 1668 at Baroville, diocese of Langres. At the age of nine-

teen he gave proofs of his talent for the pupil, and in
after-years the Fracah Academy successively awarded
him three different prizes for his ins-
tructions on the education of Louis-Henri de Bourbon
and of Charles de Charolais, princes of the house of
Condé. Elected a member of the Academy in the place
of the abbe Gallois, he was received March 1, 1708, and
it was in this capacity he pronounced in the chapel of
the Louvre the funeral oration of Louis XIV. He was
appointed in 1711 abbe of Saint-Martin d’Autun, and,
became bishop of Bazas Sept. 24, 1724, devoting him-
self entirely to the administration of his diocese. In
the midst of the unfortunate quarrels which troubled
the Church of France he was as remarkable for his
moderation as for his wisdom. “Believe me,” said he
to his priests, “you are not wise enough to write little.”
Mongin died at Bazas, May 5, 1746. He has left some
sermons, some panegyrics, some funeral orations
(among others, that of Henri de Bourbon, prince de
Condé), and several different academical pieces, collected into one volume (Paris, 1745, 4to).

D’Allemont says that “his works evince more taste
than warmth, more thought than emotion, more wis-
dom than imagination; but there is found through-
out all a noble and simple tone, a sweet sensibility,
an elegant and pure diction, and that sound instruc-
tion which should be the basis of Christian elo-
quency.” (Hist. des Membres de l’Académie Francaise,
vol. 24.)

Mongitore, Antinonio, an Italian ecclesiastic, noted
mainly, however, for his literary labors, was born at
Palermo, May 1, 1655, entered the priesthood, and was
made dean of the cathedral of his native place, and
finally became one of the papal censors. He died
June 6, 1743. Besides his Bibliotheca Sicula (Palermo,
1708–14, 2 vols. fol.), which contains a history of Sicily
and its writers, secular and ecclesiastical, we should
note Breve Compendio della Vita di S. Francisco di
Sales (1695, 12mo) — Vite de due Santi Milisimili,
arcivescovi di Palermo (1701, 4to); and the biogra-
phies of other celebrated ecclesiastics, and also a his-
tory of the Teutonic order of knighthood. See Du
Pin, Biblioth. des Auturs ecclésiast. du xii–xviième
siècle.

Mongolia, an Asiatic country, now a part of China,
situated between lat. 35° and 92° N. and long. 83°
and 12° E., is bounded by the Russian government of
Irktusk in Siberia, N.E. by Manchuria, S. by the Chinese
provinces of Chili and Shan-si and the Yellow River,
S.W. by Kansu, and W. by the Cobi-do and Ili, and has
an area of 1,400,000 square miles, with a population
of 26,000,000.

Geographical Features. — It is chiefly a high plain,
3000 feet above the sea, almost destitute of wood and
water. In the central part is the great sandy desert of
Gobi, which stretches from N.E. to S.W., with an area
estimated at 690,000 square miles. The chief moun-
tain ranges of Mongolia are the Altai and its various
subordinate chains, which extend eastward, under
the names of Tangn, Khangai, and Kenteh, as far as
the Amur; and the Alashan and Ighan ranges, which
commence in lat. 42° N. and long. 107° E., and run N.E.
and N. to the Amur, in lat. 56° N. The rivers of Mon-
golia are chiefly in the north. The Selenga, Orknon,
and Tula unite their streams and flow into Lake Bai-
kal. The Kerlon and Onon rise near each other, on
opposite sides of the Kenteh range, and flow in a N.E.
direction to the Amur. In the south, the Siremuren
and its branches unite in the Lian River. Lakes are
numerous, and some of them are large. South of the
desert of Gobi are the Oling and Dzoring, and the Ko-
konor or Blue Sea, which, according to the Chinese ac-
counts, is 190 miles in length and 60 in breadth. In
the N.W. part of the country the lakes abound, the largest
of which are the Ups-nor, Aliai-nor, Alak-nor, and the
Iki-ural. Mongolia is divided into four principal re-
gions: 1. Inner Mongolia, lying between the great wall
and the desert of Gobi; 2. Outer Mongolia, between
the desert of Gobi, the Altai mountains, and reaching from
the Inner Hingan to the Tien Shan; 3. Koko-nor; 4. Uliasutai and its dependencies. Inner

Mongolia is divided into 6 corps and 24 tribes, which
are again divided into 49 standards, each comprising
about 2000 families and commanded by hereditary
princes. The Korchin and the Ortsu are the prin-
cipal tribes. Another large tribe, the Tashkurs, occupies
the region immediately north of the great wall. Outer
Mongolia is divided into 4 circles, each of which is gov-
erned by a khan, or prince, who claims descent from
Genghis Khan. The Khalkas is the principal tribe,
and their 4 khantas are divided into 86 standards, each
of which is divided into 24 sub-standards, over which
no distinct authority is exercised, by the khanta, by
which it is not allowed to wander. The country about
Lake Koko-nor is occupied by Turguths, Hoehoits, Khalk-
as, and other tribes, arranged under 29 standards.
Uliasutai is a town of 2000 houses, in the western part of
Mongolia, and lies in a well-cultivated valley upon the
River Iro. Its dependencies are inhabited by a tribe of
Khalkas, divided into 81 standards (Amer. Cyclop.).

But little is accurately known of the natural history
of Mongolia, except that its immense plains and gloomy
forests are inhabited by multitudes of wild animals.
The camel, double-humped or Bactrian, exists in both
the west and the north. In the latter condition it is the cow
and horse of that region. It gives

milk excellent in quality, and from it butter and cheese
are prepared, and at the same time it is the camel
which serves the Mongolian frequently as a beast of
burden, etc. Very little of Mongolian soil is fit for cul-

ivation, rain or snow rarely falling in sufficient

quantities, except in the vicinity of the mountain ranges.
It is noticed, however, that wherever agriculture has
been attempted the climate has been more or less

influenced, and changes have been wrought; as e. g. in
Southern Mongolia, where the Chinese, far advanced
beyond the Mongol proper in culture, introduced agri-
culture, with the cultivation of cereals, which formerly
did not grow. As a rule, the winter lasts nine months,
and is suddenly succeeded by three months of intense

heat.

Inhabitants. — The natives of Mongolia are a part
of the Mongolian race, a division of mankind numerous
and widely spread — according to Prof. Dietrich’s esti-

mate, in 1859, counting as many as 529,000,000 souls,
or about half the human race; the second in the classifica-
tion of Blumenbach, and corresponding in almost every
respect with the branch designated as Turanian by
more recent ethnologists. See Origin of Man. Under
the old and present names, the Mongols are divided into
two great divisions, the Mongol proper, but the Chinese
and Indo-Chinese, Thibetans, Tartars of all kinds, Burmes, Siamese, Japanese, Esquimaux, Samoedas, Finns, Lapps, Turks, and even

Mongolians. Collectively, they are the great nomadic
people of the earth, as distinguished from the Aryans,
Shemites, and Hamites. The physical characteristics
of the Mongolians in their primitive state are thus
described by Dr. Latham in his Descriptive Ethnology:
"The face of the Mongolian is broad and flat. This

is because the nasal bones are depressed and the cheek-
bones stand out laterally; they are not merely project-
ing, for this they might be without giving much breadth
to the face, inasmuch as they might stand forward. .

The distance between the eyes is great, the eyes them-
selves being oblique, and their canucule being concealed.
The eyebrows form a low and imperfect arch, black and
scanty. The iris is dark, the cornea yellow. The

complexion is very fair, and the skin, standing out from the head; the lips thick and fleshy rather than thin, the teeth somewhat oblique in their

insertion, the forehead low and flat, and the hair lank
and thin." Of course, such a description as this cannot
be understood as applying to the more civilized nations
of Mongol origin, such as the Turks and Magyars, ex-
The Mongol tent, for about three feet from the ground, is cylindrical in form; it then becomes conical, like a pointed hat. Its wood-work is composed below of a trestle-work of oak, on which is fastened the dried skins, which are laid out in a circular form, andaste at pleasure. Above these a circle of poles, fixed in the trelis-work, meets at the top, like the sticks of an umbrella. Over the wood-work is stretched a thick covering of coarse felt. The door is low and narrow, and is crossed at the bottom by a beam which serves as a threshold. At the top of the tent are curtains, not of linen, but of sheepskin on which can be at any time closed by a piece of felt hanging above, to which is attached a long string for the purpose. The interior is divided into two compartments—that on the left being for the men, while that on the right is occupied by the women, and is also used as a kitchen, the utensils of which consist of large earthen vessels for holding water, wooden pails for milk, and a large bell-shaped iron kettle. A small sofa or couch, a small square press or chest of drawers (the top of which serves as an altar for an idol), and a number of goats' horns fixed in the wood-work of the tent, on which hang various utensils, arms, and other articles, complete the furniture in this primitive habitation. The odor pervading the interior of the Mongol tent is, to those not accustomed to it, disgusting and almost insupportable. "This smell," says M. Huc, "so potent sometimes that it seems to make one's heart rise to one's throat, is occasioned by the mutton-grease and butter with which everything on and about a Tartar is impregnated. It is on account of this habitual filth that they are called Tsao-Ta-Dze ("stinking Tartars") by the Chinese, themselves not altogether inodorous, or by any means particular about cleanliness." Household and family cares among the Mongols are assigned entirely to the women, who milk the cows, make the butter and cheese, draw water, gather fuel, tan skins, and make cloth and clothes. The occupation of the men consists chiefly in conducting the flocks and herds to pasture, which, as they are accustomed from infancy to horseback, is an amusement rather than a labor. They sometimes hunt wild animals for food or for their skins, but never for pleasure. When not on horseback, the men pass their time in absolute idleness, sleeping all night and squatting all day in their tents, drinking tea or smoking. Their education is very limited. The only persons who learn to read are the lamas or priests, who are also the painters, sculptors, architects, doctors, and judges. The training of the men who are not intended for priests is confined to the use of the bow and the matchlock, and a thorough mastery of horsemanship. M. Huc says: "When a mere infant, the Mongol is weaned, and as soon as he is strong enough he is stuck upon a horse's back behind a man, the animal is put to a gallop, and the juvenile rider, in order not to fall off, has to cling with both hands to his teacher's jacket. The Tartars thus become accustomed from a very early age to the movement of the horse, and by degrees and the force of habit they identify themselves, as it were, with the animal. There is perhaps no spectacle more exciting than that of Mongol riders in chase of a wild horse. They are armed with a long, heavy pole, at the end of which is a running-knot. They gallop—they fly after the horse they are pursuing, down rugged ravines and up precipitous hills, in and out, twisting and turning in the air, and being tried to the utmost of their powers, and finally absorbed by the Persians and Uzbeks; but an offshoot of Timur's family founded in the 16th century the great Mogul empire of Delhi. After the decline of Timur's empire, the Turkish branch maintained the glory of the race, and spread terror to the very heart of Western Europe. In the 9th century the Magyars, a
tribe of Ugrians, also of Mongol extraction, under their leader Arpad, established themselves in Hungary, where in process of time they became converted to Christian- ity, and founded a kingdom famous in European history. See Georgia; Hungary; Turkey.

Religion.—(a) Heutanism.—The primitive religion of the Mongolians was no doubt largely influenced by the Animism of the Tungus, Finno-Ugric, and other products of the same race, among whom they lived for some time. The earliest traces reveal them as mostly adherents to Shamanism (q. v.). There, however, are among them, according to the different countries in which they reside, and to the several names of the religion which has been referred, various other religions, such as ancient Buddhism, Tengrism, Tseten, and the post- Mongolian religions of different kinds, Mahomedanism, and Christianity. In Mongolia proper, that species of Buddhism known as Lamain (q. v.) was introduced in the 13th century of the Christian era, and, like the Buddhists of Thibet, they recognise as their spiritual head the grand lama at Lassa. The people are very devout, and generous to a fault in their support of religious in- stitutions, and hence the country abounds in well-en- dowed lamasaries, constructed of brick and stone with elegance and solidly, and ornamented with paintings, sculptures, and carvings. "The most famous of these monasteries is that of the great Kun-khur, on the banks of the river Kalka, near the town of the same name in Kalka. Thirty thousand lamases dwell in the lamassary, and the plain adjoining it is covered with the tents of the pilgrims who resort thither from all parts of Tartary. In these lamassaries a strict monastic discipline is main- tained, but each lama is at liberty to acquire property by practising as physician, by casting horoscopes, or by working as sculptor or painter, or in any occupation not inconsistent with his priestly character. Almost all younger sons of the free Mongols are devoted from infancy to the priestly task, and this tendency to monasticism is encouraged by the Chinese government, in order to keep down the vast population of the free Mongols. Almost every lama of the first class possesses a living Buddha, who, like the grand lama of Thibet, is worshipped as an incarnation of the deity. The influence of these personages is very great; and the Chinese emperors, who are constantly in dread of the Mongols, watch the living Buddhas with constant care, and spare no pains to conciliate them and win over to their interest those who manage these deities."

(b) Christianity.—The Nestorians (q. v.), who dwelt in large numbers among the Mongolians, seem to have exerted but little if any influence on this heathen peo- ple. The conversion of the Chinese by Christian missions as an indication of their leaning towards the religion and culture of the Christian dispensation, proves to have been only a temporary accommodation. The Western or Roman Church has made repeated attempts to convert the Mongols. In the 18th century, when their in- vasion threatened to overthrow European society and civilization, the Western pontiff, Innocent IV (1245), sent two embassies, to charge these sanguinary warriors to desist from their desolating inroads, the other to win them over to Christianity. The first of these, consisting of Dominicans, headed by one named Ascelin (Neander, Kirchenhistorie, ii. 284), approached the command-in-chief of the Mongol forces in Per- sia, but was unsuccessful. The other, consisting of Franciscans, headed by an Italian, Johannes de Polo Carpini, a disciple and devoted friend of Francis d'Asis, pushed quite to the Tartar court, and approached the khan in person (1240); but though they secured a hearing, they finally met with no success. The Mongol chief replied to accomplish more than the Mongol chief, like Vla- mir of Russia, gave a patient hearing to Romanist, Nes- torian, Buddhist, and Mohammedan, who each in their turn sought his conversion and influence. In 1238 Louis IX, hearing of the Mongolians' tendency towards Christianity, dispatched an other Franciscan, William de Rubriquis (Neander, vii. 69); but he reported that the

Mongolian chief listened patiently to Christian emissa- ries, "filled with the idea that the Mongol conquests would come to an end unless the gods of foreign coun- tries were propitiated." Only one Christian Church had been founded. Rubriquis, however, succeeded in bap- tizing about sixty persons; yet, after all, Rubriquis's success was not flattering, and he finally returned to Europe. The missionaries to the Mongols of the 13th century were of the capital of the Mongol empire to China (q. v.), fur- ther obstructed the progress of Christianity in Mongol- lia. There developed, however, among its simple pas- toral tribes an article of belief which promised much for the final establishment of Christianity, viz, the belief in the existence of an almost Almighty power. In their heathen views, of course, they could not consider this God, acknowledging an earthly ruler unless a supernatural orig- in could be assigned to him, and they made the khan the son of this almighty power, an earthly ruler whom all men were bound to obey. While thus there was room for the most comprehensive toleration, there was room also for every kind of superstition; and the desire to bring the one supreme, living apart in awful isolation, into nearer communion with his feeble wor- shipper—to bridge over the awful chasm between them —pre-disposed the people to a composite religion of Buddhism and Lamaism (see Hardwick, Christ and other things, pp. 204, 205, 206; Mathers, Transactions, 1897, p. 293). Still, "the son of Heaven" entertained a respect for all religions, and not least for Christianity. Marco Polo, who had been sent there by Gregory X in 1274, reports Kubi-khan as saying: "There are four great proph- etesses who are revered by the different classes of man- kind. The Christians regard Jesus Christ as their God, the Saracens, Mohammed; the Jews, Moses; the idol- ators, Sakamuni Buddha, the most eminent among their idols. I honor and respect all the four" (Tract. p. 167, ed. Bohn, 1854). One of the most successful of the early Christian laborers from the West was John de Monte-Cristo, who went there as missionary for the Mongolians in 1293 and during eleven years kept alive the flickering spark of Christian- ity in the Tartar realm. He translated the Scriptures for their people, educated their youth, and trained a na- tive ministry. Yet even his labors bore fruit only while he was on earth; for soon after the close of his life, in 1330, "every vestige of his work was effaced" (Gies- elser, Eccles. Hist. iv. 259, 260; Hardwick, Ch. Hist. M. A. p. 235, 237). This was caused no doubt in a large measure by the termination of the Mongol rule in China, and the accession of the Ming dynasty in 1670, which, fearing everything foreign, banished Christian- ity and all who believed in it. The Jesuits were ordered by the emperor T'ai-t'ao in 1720 never to attempt to plant Christianity anew. The missionary work performed in Persia, and in the border lands of the Caspian Sea and in Middle Asia, was so insignificant that it is not even worth mentioning. See Maclear, Hist. of Christian Missions in the M. A. (Lond. 1868, 12mo), p. 370-77; Assemani, Bibl. orient. iii. 8 sq.; Hue, Journey through the Chinese Empire; Recollections of a Journey through Tartary and Thibet; Schmidt, Forschungen im Gute der älteren religions-, politischen, u. literarischen Bildungsgeschichte der Mongolen u. Monheim, Johannes, a follower of the great Des- siderius Erasmus, and a noted teacher of the 16th cen- tury, was born of humble parentage at Claussen, near Elberfeld, in 1509. His father was a linen-traper, and Monheim entered his business when quite young. But his superior mental endowments soon led him into a different course, and, though not privy in what advantages of a careful training, he yet managed to ac-
quire a good classical education. It is said that he studied with Erasmus, but Hamelmann's assertion that Monheim studied at Münster and Cologne deserves more credit. When but twenty-three years old, he was elected rector of the school at Essen, and four years later he received a call to Cologne as rector of the schola metropolitana ecclesiae Colonensis. Here he enjoyed important connections with the leaders of the Erasmians, and in a short time became so popular as a teacher that he attracted students from every direction. In 1454 he received and accepted a very flattering call from duke Wilhelm of Cleve to take the rectory of the newly founded institute at Düsseldorf, and only five years after he was made bishop of this new diocese. Monheim wrote to a friend that his scholars outnumbered most German universities, more than two thousand young men being just then matriculated (see Fr. Reifenberg e Soc. Jean Presbyteri Hist. Societatis Jesu, i, 89). Monheim, in opposition to other humanists, insisted on a religious instruction, and published numerous catechisms, the best known of which is his Catechismus in quo Christiana religiosis elementa sincere simpliciterque explicator (Düsseldorf, 1560), with an introduction; and, edited and revised, it was recently published by Dr. Sack, Bonn, (1847). Though, outwardly at least, Monheim belonged to the Church of Rome, his catechism proves beyond doubt that he was a firm believer in the dogmas as set forth in the teachings of Calvin. The book was severely attacked. The theological faculty of the University of Cologne issued a Censura et doctrina explicatio errorum Catechismi Johannis Monheini (Cologne, 1580); and a number of other essays, partly in defence, partly in opposition to Monheim, were published. Monheim, however, himself remained quiet; but Martin Chemnitz, enraged at the open and secret attacks of the Cologne Jesuits on the learned man, edited his Theologia Jesuistaeurum praecepta capta, ex quod censura, qua Colonie anno 1580 edita est (Lips. 1583), which, together with his Examen Concilii Tridentini, so eminently expresses a Paul IV that he requested duke William to depose and banish “that arch-heretic” Johannes Monheim. Monheim was cited before the duke, and obliged to sign an agreement in which he promised to abstain from teaching Protestant doctrines, either openly or secretly (see Zeitschrift d. berichten Geschichtsvereins, ii, 226). The pope, however, was not satisfied even with this. He insisted upon an open judgment on Monheim, especially as the pontifex of a heretic was not within the duke's jurisdiction—"nee præcanis hereticis publico quicquam ignoscere potuit." Further steps of the papal court were most embarrassing by Monheim's sudden death, Sept. 9, 1564. Monheim wrote few great books, but his most valued work is the above-mentioned catechism, which Thee, Strack calls Catechismum orthodoxum, in quo Reformatorum doctrina, qua hodie Lutheri-Catholic was nomine olimo traductur, accurate confirmatur. Monheim lacked strength of character to take a decided position in the great struggle of the Reformation. He preferred, although thoroughly Protestant in all his views, to remain in the Church of Rome. "He belonged," said one, "to that class of actors on the stage of life who have always appeared as the harbingers of such great social gifts, gifted with the power to discern and the hardihood to proclaim truths of which they want the courage to encounter the infallible result." Moniales. See NUNS.

Monica, Sr., the mother of St. Augustine, "counted," says Schaff, "among the most noble and pious women who adorn the temple of Church history," was born, according to tradition, of Christian parents, in Africa, near Carthage, in the year 322. From the age of womanhood she was married to Patrice of Tagaste, a heathen of Numidia, by whom she had two sons and one daughter. She was instrumental in the conversion of her husband a year before his death, after having spent with him years in hardship and sore trial. He was of violent temperament, and unfaithful to her in conjugal duties, yet she met all his shortcomings by a Christian spirit of forgiveness and love, and thus at last conquered in the name of her Saviour, whom she adored in a spirit of fervent devotion. Her life was a model of the virtues she taught. So Schaff, "was to win him over to the faith—not so much by words as by a truly humble and godly conversation, and the most conscientious discharge of her household duties" (Life of St. Augustine, p. 10). The same earnestness which she displayed for the conversion of her husband she manifested also for the spiritual safety of her children. She was especially anxious for her son Augustine, who in his youth was given to dissipation, having inherited from his father strong sensual passions, and who had embraced the Manichean heresy, which she feared would ultimately ruin his spiritual life. For thirty years she therefore uninterruptedly prayed for his conversion. "A son of so many prayers and tears," says Schaff, "could not be lost, and the faithful mother, who travelled with him in spirit with greater pain than her body had in bringing him into the world (Augustine, Confess. i., c. 8), was permitted, for the encouragement of future moments, to receive, at the time of his death, her son's answers to her prayers and expectances, and was able to leave this world with joy without revisiting her earthly home." Augustine had embraced Christianity at Milan, whether he had gone in 384. Hitherto his mother followed him, and together they worshipped under the ministration of St. Ambrose. In the spring of 387, shortly after his baptism, they had quitted Rome to return to Africa, and it was on this homeward journey that Monica died, in Ostia, at the mouth of the Tiber, in 387, in the arms of her son, after enjoying with him a glorious conversation that soared above the confines of space and time, and was a foretaste of that immortal communion in the bosom of our God. She was not regretted not to die, sappy, not even in a foreign land, because she was not far from God, who would raise her up at the last day. "Bury my body anywhere," was her last request, "and trouble not yourselves for it: only this one thing I ask, that you remember me at the altar of my God, wherever you may be." After this, in his Confessions, has erected to Monica the noblest monument, and it can never perish. The Roman Catholic Church keeps May 4 in commemoration of her. Pope Martin V gives an account of the translation of her remains to Rome in 1450. See St. Augustine, Confessions; Godwin, History of the Church, ii, 314; A. F. Pirot, Traditio (1846); Petet, Histoire de Socie-Cotiere (1848); Schaff, Life and Labors of St. Augustine (N. Y. 1854), ch. i., iv., viii.; Mrs. Jamieson, Legende (see Index); Schaff, Ch. Hist. iii, 991, 992; Neander, Ch. Hist., ii, 227. See Augustine. (J. H. W.)

Moniglia, Tommaso-Vincenzo, an Italian theologian, was born August 18, 1686, in Florence. Having received his education at the University of Pisa, he returned to Florence, and entered the Orde of St. Dominic. Very soon after he contracted a close friendship with the English ambassador, Henry Newton. Seduced by his promises, he fled from the convent and returned to London. His pecuniary resources being thus exhausted, he was forced to support himself by teaching. After an absence of three years he succeeded, by the favor of the grand duke, in returning to his own country, where he was kindly received and his errors pardoned. From that time he devoted himself to preaching and teaching in Fiesole and Tuscany, and taught at Florence and Pisa. Moniglia had an extensive knowledge of nearly all the sciences, and was well versed in sacred and profane literature. He was one of the first among the Italians to refute the opinions of Locke, of Hobbes, of Helvettius and of Bayle, but not always to advantage. He died at Pisa, Feb. 15, 1767. He is the author of De Origine sacrarum præ cis romanæ B. M.
MONITIS

MONITIS, SEE MONADIS.

Monita Secreta Societatis Jesu, or secret instructions for the Jesuitic order, is a work which has been the cause of much dispute, both as to its authenticity and as to the veracity of its contents. In Europe the book has attracted some attention, and, in consequence, some controversy; but in America it has been the subject of a very animated discussion, and we are therefore warranted in giving a detailed account of the book, and the position of the acknowledged authorities in such difficulties.

1. History of its Origin, Editions, etc.—The Monita was first printed in Latin, from the Spanish, at Cracow, the capital of Poland, with this title: "Monita Secreta Societatis Jesu, Notobrigae, Anno 1612, by an unknown editor, with various "Testimonies of several Italian and Spanish Jesuits" confirming the truth of the Monita. The "Constitutions of the Society," though printed as early as 1556, had never been published. Everything connected with the rules of the order had been carefully concealed from the public eye. The Monita, therefore, was rapidly bought and everywhere circulated, not only in Poland, but in Germany, Italy, and France. It gratified an intense curiosity, and was generally recognised at once as a faithful portrait of Jesuitism. "Viva! Viva!" was the cry of the most profound politician of his time; and "the beau ideal of Jesuitism," was the general of the order, exercising over it a complete control. The Monita was regarded then, as it has since been by Van Maastricht and many other judicious scholars, as the product of his pen. The book certainly does not misrepresent him. The tactics are his, and may well have derived their inspiration from his wily brain. It does not appear that he ever denied them. He took no steps to prove the publication a forgery. Down to the day of his death (January 31, 1615), nearly three years, the book passed unchallenged, though the Jesuits were all-powerful in Poland. In 1615, King John Casimir appointed the commission, July 11, 1615, by Peter Tylick, bishop of Cracow. His confessor was a Jesuit, as was the king's. Tylick admitted that "nothing is certainly known of its author; but," he affirmed, "it is reported, and the presumption is, that it was edited by the venerable Jerome Zaborowski, pastor of Godzicze." The commission were instructed October 7th to inquire whether "at any time or place Zaborowski had been heard to speak approvingly of such a famous libel, or to affirm that the contents were true, or to say anything of the kind from which it can be gathered that he is the author, or, at least, an accomplice in the writing of this libel." The papal nuncio, Diostallienus, a few weeks after (November 14), added his sanction to the investigation. Yet the author was not found, and there remained no other step for the Papists than the condemnation of the book to prevent its circulation. In 1615 the Jesuits published an Index: "May 10, 1615," by professor of Ingolstadt, the learned Greter, commissioners to prepare a refutation of the Monita's disclosures. This refutation, entitled Libri Tres Apologeticis contra Fasannum Libellum, was published August 1, 1617, and a second decree was issued by the "Index" in 1621 to make sure of supressing the circulation of the Monita.

Notwithstanding these efforts on the part of the Jesuits to disguise the authenticity of the work, their opponents continued to assert its genuineness. In 1633 Caspar Schopppe (Scioppius), a German scholar, himself a Roman Catholic, but a genuine hater of the Jesuits, published his Anatomia Societatis Jesu, in which, among other things, he presents a critique on a book that had come into his hands, which he calls "Instructio Jesu pro Superiore Societatis Jesu." His analysis of the book is trustworthy, and it is a book of the same line, with slight differences, as the Monita Privata. But his copy could not have been of the 1612 edition, for he attributes the discovery of the work to the plundering of the Jesuit college at Paderborn, in Westphalia, by a Christian, duke of Brunswic. That was in February, 1622, and this copy could not have been made so gross a mistake. This, then, was another source, independent of the first, from which the book was derived. It was credibly reported that another copy had been found at the capture of Prague in 1631, only two years before. The Jesuit Lawrence Forer thereupon pointed out the apparent anachronism in his Anatomia Anatomiae, but he failed to convince Schopppe, nor could he shake the popular belief. This position now seems reasonable, indeed, for there is in the British Museum Library a volume printed at Venice in 1596, and containing, at the end of the book, the accessories of the title-page of the Monita. The name of the Monita Secreta is inscribed, the writing being evidently of ancient date. The remote date would rather lead to the conclusion that this work came from some convent, probably Jesuitical, in which the Monita had been introduced for service. The book had now attracted the attention of people everywhere; not only all over the Continent, but even in England the Monita was sought after, and so great was the demand that an edition appeared in England in Oliver's time (1658). On the Continent several editions were sent forth. A French version, entitled Secreta Monita, ou Advea Secreta de Jesu Christo, was published in 1651 at Paderborn, under the care of the Jesuit college. A second edition of Schopppe's Anatomia appeared in 1668. To aggravate the difficulty, the next year Henry Compton, canon of Christ Church, Oxford, and afterwards bishop successively of Oxford and London, published, in 9 sheets 4to, The Jesuits' Instructive with the Private Instructions of that Society to their Emisaries. The latter had been "lately found in MS. in a Jesuit's closet after his death, and sent, in a letter, from a gentleman at Paris to his friend in London." This, too, was the Monita Secreta, entirely independent of the others.

At Strasburg, in 1710, Henri de St. Ignace, under the pseudonym of Tiberius Libero, published a fourth edition of the Carmelite order, published his Tuba Magna, addressed to the pope and all potentates, on the necessity of reforming the Society of Jesus. In the appendix the Monita Secreta is reproduced in full. In proof of its authenticity, he gives these three reasons: 1. Common fame. 2. The character of the document—wholly Jesuitical. 3. Its exact conformity with their practices. Besides, its having been found in the Jesuit colleges. The Jesuit, Alphonsio Huylenbroek, published his "Vindications" of the society in the following year. De Ignacce could not be shaken from his belief in the authenticity of the book, and issued a second edition in 1714, in which he says that "nothing, or next to nothing, is contained therein that the Jesuits have not reduced to practice." A third edition of the Tuba Magna was published in 1717, and a fourth in 1760. In 1717 the Monita was published by John Schipper, at Amsterdam, in 4to, with an index. May 10, 1717, professor of Ingolstadt, the learned Greter, commissioners to prepare a refutation of the Monita's disclosures. This refutation, entitled Libri Tres Apologistici contra Fasannum Libellum, was published August 1, 1617, and a second decree was issued by the "Index" in 1621 to make sure of suppressing the circulation of the Monita.

Notwithstanding these efforts on the part of the Jesu-
After the suppression of the order in 1773, several MSS. of the work were found in Jesuitic hands, particularly in their colleges. A MS. was even found in Rome which was printed in 1782 under the title Monita Secreta Patrum Societatis Jesu, "nunc primum typis expers." Evidently its editor had never heard of a published copy of the Monita. It contains numerous excerpts, some not anterior to the 16th century, from the correspondence of the New York Union Theological Seminary possesses a copy of this printed edition: The early restoration of the order to power, in 1814, prevented the unearthing of copies direct from Jesuitic hands.

II. Defenders of its Authenticity; recent Editors, etc.—As we have seen, the first intimation of the Monita had been a matter of dispute for more than a hundred years, in which we find that the Lutheran theologian Dr. Johann Gerhard, whose familiarity with poli- eminence was perfectly marvellous, make mention of Schopp's *Anatomia* in his great work *Confessio Catholica* (Frankfort and Leipsic, 1679), and refer to the Monita Secreta as a work of undoubtedly authenticity. This opinion has been generally quoted and endorsed by ecclesiastical historians, especially of the Protestant Church, with only one exception (Gieseler, *Kirchengesch*. vol. III, pt. ii, p. 1556 sq). In 1861, after a "careful investigation," an edition, which was published at Princeton, N. J., by Dr. and Rev. Dr. W. C. Proctor, appeared in the *Amer. Antiq.* of the "American Protestant Society," containing the original, an English translation based upon that of Walhouth (1728), and a "Historical Sketch." Dr. Hodge, in reviewing the case in the *Biblical Repository* (iv, 188), takes occasion to say that the authenticity of the work has never been disproved. "Attempts he says, "have been made to cry down this work as a forgery. . . . We cannot imagine that these doubts can be seriously entertained by those who peruse the historical essay which is prefixed to it. Facts and authorities are there adduced which we cannot help thinking ought to settle beyond the shadow of a doubt the authenticity of the work, but also of the entire justice of the representations which it gives of the society whose official instructions it professes to exhibit." In 1843, shortly after an edition of the Monita had been issued by Seeley, Mr. Edward Dalton, the secretary of the "Protestant Association of Great Britain," took occasion thus to comment on it in his *The Jesuits: their Principles and Acts*: "If we weigh well the evidence which has been handed down to us by historians; if we peruse the writings of the Jesuita themselves, and maturely consider the doctrines therein promulgated, and their practical tendency, we shall be convinced that the Secreta are the genuine productions of the Monita Secreta. In 1844 an edition was again published in the United States, this time under the auspices of the "American and Foreign Christian Union." It then became the subject of considerable agitation, several Protestant writers of note taking the ground that the work had not a real basis in Jesuitism, and had been manufactured. In consequence, the learned professor Henry M. Baird, of the New York University, contributed the following additional testimony: "In proof of the authenticity of the 'Secret Instructions,' we have the testimony of a gentleman who as a historical investigator has scarcely a peer—certainly no superior. I refer to M. Louis Prosper Gachard, the 'archiviste général' of the kingdom of Belgium, to whose rare sagacity, profound erudition, and indefatigable industry our own distinguished historians, Prescott and Motley, pay such frequent and deserved compliments; the latter, in the preface to his *Dutch Republiek,* remarking: 'It is a source not only to add to the history of the nation, but also to the history of the Church.' In the preface to the *Archives et Correspondance* of the *Orange Namsu family,* edited by the learned and distinguished Groen van Prinsterer—have been my constant guides through the tortuous labyrinth of Swiss and Netherlands politics. In M. Gachard's *Anecdotes Belges,* a volume from which Mr. Prescott draws much of the material of the first chapter of his *Philip the Second,* I find a short article devoted to 'The Secret Instructions of the Jesuits' (p. 68). 'When the Monita Secreta Societatis Jesu were published, a few years since,' says M. Gachard, 'many persons disputed the authenticity of this book; others boldly maintained that it had been forged, and still others professed itself to create no doubts.' Some of the most modern and profound writers on the principles which it did not possess. Here are facts that will dissipate all uncertainty in this respect: At the suppression of the order in the Low Countries in 1773, there were discovered in one of its houses, in the College of Kuremonde (everywhere else they had been carefully destroyed) the first intimation of the handwriting of Clement XIV, the most important and most secret papers, such as the correspondence of the general with the provincial fathers, and the directions of which the latter alone could have had cognizance. Among these papers were the Monita Secreta. A translation of them was made, by order of the government, by the "substitutus procurator-general" of Brabant, De Berg. It still exists in the archives of the kingdom, and I am bold enough to say that it is found from which has been rendered public.'"

In 1869 the Rev. Dr. Edwin F. Hatfield ably reviewed the Monita Secreta *in the New York Observer*, and since that time but little has been vanced either pro or con. Prof. Schem, well known for his ecclesiastical learning, and himself educated at the Jesuitical college in Rome, now a Protestant in theology, in the article *Jesuita* in this *Cyclopaedia* took ground against the authenticity of the Monita, and, as he is entitled to a hearing, we did not desire to dissent from his article. Our own judgment, however, is to accept the *Encyclop. Britan.*, Dr. Isaac Taylor, its author, states that the Monita is "believed to be a spurious production." The inferences mean that a man who himself believed it spurious; on the contrary, it is more than likely that he held it to be genuine.

**Monition**, a term in ecclesiastical law, used now only in the Church of Rome and the Church of England and its dependencies, and the Protestant Episcopal Church. It designates a formal notice to one of the subordinate clergy requiring the amendment of some ecclesiastical offence. The general admonition was anciently made publicly and solemnly, so that it could come to the knowledge of the person in fault, and when it expressed his name it was called "nominal,* or "by name." The modern custom is to require three or more proclamations, or one for a proper interval of time allowed. The name of the person should be distinctly mentioned, where law or custom demands it; this is called monition "in specie," a general monition being known as "in genero." A public monition in synod by the bishop is equivalent to three monitions otherwise given. If the offender did not comply after the third monition, he was formally subjected to excommunication; because the term, distinctively named, gave to the monition the character of an introductory sentence, and after its expiration no offer of explanation was admitted. No monition is required when the superior gives sentence of excommunication; or when an inferior does not submit to his superior in the discharge of his special right, as in the office of visitation; or, after he has been visited, when he refuses to pay procurations which are due, as these are cases of positive and manifest contumacy. But if the superior gives sentence of excommunication, and the offender does not comply after the third monition, it is necessary before the fulmination of the ecclesiastical censure. Although three monitions were held to be fair, yet one would suffice, provided a suitable delay elapsed between it and the sentence. Any incumbent or cure that allowing unauthorized persons to officiate in his church is liable to be called before the bishop in person, and to be publicly or privately moni-
When a living has been for one year sequestered, the person who holds it, if he neglect the bishop's monition to reside, is deprived; and so also for drunkenness or gross immorality, after monition. Sentence of monition ought not to be given without a previous admonition; rather, it is the function of the bishop: as to require immediate suspension; and if in ordinary cases suspension should be given without monition, there may be cause of appeal. See Lea, Studies in Church History, p. 417, 443.

MONITORE or MONITORY, the technical term for ecclesiastical censure, explained under MONITON, s. v.

MONK (derived from the Latin monachus, and that from the Greek monaχos, i. e. solitary, which in its turn is derived from the word μονή, Lat. solus, designating a person who lives sequestered from the company and conversation of the rest of the world) is a term applied to those who dedicate themselves wholly to the service of religion, in some building set apart for such asetics, and known as a monastery (q. v.) or religious house, and who are under the direction of some particular statute or rule. Those of the female sex who live in monastic life are known as nuns.

Riddle (Christian Antiquities, p. 777 sq.) furnishes the following as the chief names by which monks have been designated: (1) ἀσέρης, i. e. ascetic. This name, borrowed from the Greek profane writers, was originally given to athletes, or prize-fighters in the public games. In early Christianity it was applied equally to heretics, continent, and Tertullian renders both words alike by continent (in a technical sense). Sometimes they use ἀσέρης in the sense of ἄγιος, celeb., unmarried. (2) Μοναχος, or (more rarely) μοναχή, i. e. solitary, is a term which denotes generally all who addict themselves to a retired or solitary life; it is usually applied, not merely to such as retired to absolute solitude in caves and deserts, but also to such as lived apart from the rest of the world in separate societies. Since the 3d and 4th centuries this name has been almost universally employed as the common designation of religious solitaries, or members of religious societies, and has passed into various languages of Europe. The Syrians translate it by Ἰχοδίῳ (solitarius). (3) The term ἀγωγῶντας, anachoreta or anachorite, Engl. anchorite, is used in the rule of Benedict as synonymous with ἱππότας, eremite, hermit. Other writers observe a distinction in conformity with the etymology of the two words, restricting the application of the term anachoreta to those persons who led a solitary life, without retirement to a desert, and of eremitei to those who actually retired to some remote or inhospitable region. The Syrians contrived the word anachoreta into ancierite; they translated eremite into madorepite. (4) The term coenobites, coenobites, is evidently derived from the Greek κοινωνία (vita communis), and refers at once to the monastic custom of living together in one place, hence called κοινωνία, coenobium, and to that of possessing a community of property, and observing common discipline (Cod. Theodos. lib. xi, tit. 31, I. 57), has the same signification, being derived from κοινωνία; so that it may be rendered commonitulans. The Syrians express the same by the words dariope and ummajo. (5) In the rule of Benedict we find mention of γροσαγος, certain wandering monks, who were charged with having occasioned great disorders (Cod. Theod. lib. i, tit. 31, I. 57), and that to possess a community of property, and observing common discipline (Cod. Theodos. lib. xi, tit. 31, I. 57), has the same signification, being derived from κοινωνία; so that it may be rendered commonitulans. The Syrians express the same by the words dariope and ummajo. (6) In the rule of Benedict we find mention of γροσαγος, certain wandering monks, who were charged with having occasioned great disorders (Cod. Theodos. lib. i, tit. 31, I. 57), and that to possess a community of property, and observing common discipline (Cod. Theodos. lib. xi, tit. 31, I. 57), has the same signification, being derived from κοινωνία; so that it may be rendered commonitulans. The Syrians express the same by the words dariope and ummajo. (6) Dehrent, styliarae, pillarists, a kind of monk so called from their practice of living on a pillar. Seeon Styleites and a few others made themselves remarkable by this mode of severe life, but it was not generally adopted (Evagri. Hist. Eccle. lib. i, c. 13; lib. vi, c. 29; Theodor. Lect. lib. ii). (7) We find also large numbers of hermits, monks, and ascetics, which are worthy of remark only as furnishing a proof of the high esteem in which a monastic life was held in the early Church. Such are: L. Stov-
man felicity ought to come in competition with their fidelity to Christ, and diffident of their own ability to persevere in resisting the temptations with which they were incessantly harassed by their persecutors, took the resolution to abandon their professions and worldly prospects, and, while the storm lasted, to retire to unfrequented and far from the haunts of men (the married with or without their wives, as agreed between them), that they might enjoy in quietness their faith and hope, and, exempt from the temptations to apostasy, employ themselves principally in the worship and service of their Maker. The cause was reasonable and the manner noble; but the reasonableness arose solely from the circumstances. When the latter were changed the former vanished, and the motive could no longer be the same. When there was not the same danger in society, there was not the same occasion to seek security in solitude. Accordingly, when persecution ceased, and the profession of Christianity was rendered perfectly safe, many returned without blame from their retirement and resumed their stations in society. Some, indeed, familiarized by time to a solitary life, at length preferred, through habit, what they had originally adopted through necessity, and made it a life. Others, however, waste their time in idleness: they supported themselves by their labor, and gave the surplus in charity. But they never thought of flattering themselves by vows or engagements, because by so doing they must have exposed their souls to new temptations and perhaps greater dangers. It is a very different thing from that system of monkery which afterwards became so prevalent, though in all probability it constituted the first step towards it.

Egypt, the fruitful parent of superstition, afforded the first example, strictly speaking, of the monastic life. The first and most noted of the solitude was Pachomius, born in A.D. 293, son of Athanasius, distributed his patrimony, deserted his family and house, and took up his residence among the tombs and in a ruined tower. After a long and painful novitiate, he at length advanced three days' journey into the desert, to the eastward of the Nile, where, discovering a lonely spot which possessed the advantages of shade and water, he fixed his last abode. His example and his lessons infected others, whose curiosity pursued him to the desert; and before he quitied life, which was prolonged to the term of one hundred and five years, he beheld a numerous progeny imitate his example. The novices multiplied with rapid increase on the sands of Lybia, upon the rocks of Thesis, and the cities of the Nile. But there were no bodies or communities of men embracing this life, nor any monasteries built, until Pachomius, who flourished in the peaceable reign of Constantine, caused some to be erected. The anchorites, who were called hermits, originally retired to the desert for the sake of solitude, but afterwards they were driven thither by persecution, and from thence a numerous colony was dispersed among the barbarians of Ireland, where St. Patrick is regarded as the founder of monasticism; and so readily did the monasteries multiply there that it was called the Island of Saints.' Thus, one, also of the eastern isles of Scotland, which was planted by the Irish monks, diffused over all northern regions a ray of science and superstition.

The ancient monks were not, like the modern, distinguished into orders, and denominated from the founders of them; but they had their names from the places which they inhabited, as the monks of Scetis, Tabennius, Mina, Canopus. In the East, Asia, Egypt, etc., or else were distinguished by their different ways of living. Of these, the most remarkable were: 1. The anchorites, so called from their retiring from society and living in private cells in the wilderness. 2. The cenobites, so denominated from their living together in common. All monks were originally monks of the solitary life, whether they lived in solitude or in communities; but whether they could they well be otherwise, being confined by their own rules to solitary retreats, where there could be no room for the exercise of the clerical functions. Accordingly, St. Jerome tells us the office of monk is not to teach, but to mourne; and St. Anthony himself is reported to have said this: 'the wilderness is natural to a monk as water to a fish, and therefore a monk in a city is quite out of his element, like a fish upon dry land.' Theodosius actually enacted that all who made profession of the monastic life should be obliged by the civil magistrate to betake themselves to the wilderness, as their proper habitation. Justinian also made laws to the same purpose, forbidding the Eastern monks to appear in cities except to defend Christianity from heretics (as was done e.g. by Anthony, to confute Ariianism), and to despatch their secular affairs, if they had any, through their aposcript or responsibility—that is, their procurator or synods, which every monastic church was allowed for that purpose. The Council of Chalcedon (A.D. 451) distinctly distinguishes the monks from the clergy, and reckons them with the laymen. Gratian (A.D. 1150) himself, the noted Benedictine writer, who is most interested for the moderns, owns it to be plain from the history that the monks of Sirion (A.D. 324-388) and Zosimus (died 418) the monks were only simple monks, and not of the clergy. In some cases, how-
MONK 495

ever, the clerical and monastic life were capable of being conjoined—as, first, when a monastery happened to be at so great a distance from its proper church that the monks could not ordinarily resort thither for divine service, which was the case with the monasteries in Egypt and other parts of the East; in this case, some one or more of the monks were ordained for the performance of divine offices among them. Then it also happened that some of the clergy, and even bishops themselves, embraced the monastic life by a voluntary renunciation of property, and enjoyed all things in common. This was, however, as late as the middle of the 4th century; until that time it was generally understood that not only should monks never enter the priesthood, but also that priests should never turn monastics. This appears clearly from the letters of St. Gregory [see below]. Eusebius of Vercellensis (A.D. 315–380) was the first who brought this way of living among the clergy of Hippo, and thus constituted what may be denominated the monastico-clerical condition.

The Church however, in her early days, recognised only one style of monasteries, i.e. the cenobites, and for them alone were certain laws and rules of government specially provided. They were in substance that every one should not be allowed to turn monk at pleasure, because there were certain classes so conditioned that they could not enter that state without damaging the interests of others. Thus, e.g., the civil law forbade any of those officers called curiales to enter the order of monks, less they perturb their estates to others, who might serve their country in their stead. For the same reason servants were not admitted into any monastery without their masters' leave. Justinian, however, afterwards abrogated this law by an edict of his own, which first set servants at liberty from their masters under pretence of betaking themselves to a monastic life. The same precautions were observed in regard to married persons and children; the former were not to embrace the monastic life unless with the mutual consent of both parties. This precaution was afterwards set aside by Justinian, but the Church never approved of this innovation. As to children, the Council of Gangra (about the second half of the 4th century) decreed that if any such, under pretence of religion, forsook their parents, they should be anathematized; but Justinian enervated the force of this law likewise, forbidding parents to hinder their children from embracing the monastic or clerical life. This was not the case with the consent of their parents, so neither could parents oblige their children to embrace a monastic life against their own consent—at least not until the fourth Council of Toledo (A.D. 633), which set aside this precaution, and decreed that whether the devotion of their parents, or their profession, made them monks both should be equally binding, and there should be no permission to return to secular life again.

The manner of admission to the monastic life was usually by some change of habit or dress, not to signify any religious mystery, but only to express gravity and consecration. Long hair was always thought an indecency in men, and savoring of secular vanity; and, therefore, they polled every monk at his admission, to distinguish him from seculars; but they never shaved any, for fear they should look too like the priests of Isis. This, therefore, was the ancient tonsure, in opposition to being the extreme. As to their habits, the bishop's clothing, the rule was the same: they were to be decent and grave, as became their profession. The monks of Tabenneseus, in Thlebas, seem to have been the only monks, in those early days, who were confined to any particular habit. St. Jerome, who often speaks of the habit of the monks, intimates that this was a matter of choice, not of necessity. They were not always the same: cheaper, coarser, and meaner raiment, expressing their humility and contempt of the world, without any singularity or affectation. That father is very severe against the practice of some who appeared in chains or sackcloth; and Cassian blames others who carried wooden crosses continually about their necks, which was only proper to excite the laughter of the spectators. In the West, the monastic habit, the philosophal pallium, as many other Christians did. Salvan seems to give an exact description of the habit and tonsure of the monks when, reflecting on the Africans for their treatment of them, he says, "they could scarce ever see a man with short hair, a pale face, and destitute in a pallium, without reviling and bestowing some rude reproach upon him." We read of no solemn vow or profession required at their admission; but they underwent a three years' probation, during which time they were inured to the exercises of the monastic life. If, after that time was expired, they chose to continue the same exercises, they were then admitted without any further ceremony into the community. This was the method prescribed by Pachomius. No direct promise of celibacy was at first made; nay, there appear to have been married monks. Nor yet was there any vow of poverty, though, when men renounced the world, they generally sold their estates for charitable uses, or keeping them in their own hands, made a distribution regularly of all the proceeds. The Western monks did not always adhere to this rule, as appears from some imperial laws made to restrain their avarice. But the monks of Egypt were generally just to their pretensions in this respect, and would accept of no donations but for the use of the poor.

As the monasteries had no standing revenues, all the monks were obliged to exercise themselves in bodily labor to maintain themselves without being burdensome to others. Monks therefore labored with their own hands at a great variety of occupations, and their industry is often commended. "A laboring monk," said they, "was tempted by one devil, but an idle monk by a legion." The Church would tolerate no idle mendicants. Sozomen tells us that Serapion presided over a monastery of 10,000 monks, near Arnin, in Egypt, who all labored with their own hands, by which means they not only maintained themselves, but had enough to relieve the poor. To their bodily exercises they joined others that were spiritual, viz., penitence, fasting, and prayer—all supposed to be more extraordinary in intensity and frequency than could be practiced in the world. The most important of these ascetical exercises was the standing without intermission of Jerome that the life of a monk is the life of a mourner. In allusion to this, the isle of Canopus, near Alexandria, formerly a place of great lewdness, was, upon the translation and settlement there of the monks of Tabenneseus, called Insula Miseriae, the Isle of Repentance. Next in importance they ranked fasting. The Egyptian monks kept every day a fast till three in the afternoon, excepting Saturdays, Sundays, and the fifty days of Pentecost. Some exercised themselves with very great austerities, fasting two, three, four, or five days together; but this practice more usually applied to such excessive abstinence of any use, but rather a disservice to religion. Pachomius's rule, which was said to be given him by an angel, permitted every man to eat, drink, and labor according to his bodily strength. Thus fasting was a discretionary thing, and matters of choice, not of necessity. To some of them were accompanied with extraordinary and frequent returns of devotion. The monks of Palestine, Mesopotamia, and other parts of the East, had six or seven canonical hours of prayer; besides which they had their constant vigils, or nocturnal meetings. The monks of Egypt met only twice a day for public devotion; but this did not arise in the origin of it, for that they were always repeating psalms, and other parts of Scripture, and intermixing prayers with their bodily labor. St. Jerome's description of their devotion is
very lively: "When they are assembled together," says that father, "psalms are sung and Scriptures read; then, prayers being ended, they all sit down, and the father begins a discourse to them, which they hear with the greatest application and delight. Was it not a high word which the Lord said, 'Let those things which are said make a deep impression on them; their eyes overflow with tears, and the speaker's commendation is the weeping of his hearers. Yet no one's grief expresses itself in an indescribable strain. But when he comes to speak of the kingdom of heaven, of future happiness, and the glory of God, then one may observe each of them, with a gentle sigh, and eyes lifted up to heaven, say within himself, 'O that I had the wings of a dove, for then would I fly away and be at rest!'" In some places they had the Scriptures read during their meals at table. This custom was first introduced in the monasteries of Cappadocia, to prevent idle discourses and contentions. But in Egypt they had no occasion for this remedy, for they were taught to eat their food in silence. Palladius mentions one instance more of their devotion, which was only occasional; namely, their psalmody at the reception of any brethren, or conducting them with singing of psalms to their habitation.

The laws forbade monks to participate in public affairs, either ecclesiastical or civil; and those who were called to any employment in the Church were obliged to quit their monasteries thereupon. Nor were they permitted to encroach upon the duties or rights of clergy. Thus the two principal elements of clerical and monastic life were united, as when the bishops took monasticism for the service of the Church, which did not happen until the monasteries had become schools of learning. Such monastics when removed were by the Greeks styled ἰστρομυκοὺς, i.e. clergy-monks.

As the monastics and the clergy were the mainstay of the ancient Church, while under no solemn vow or profession, they were at liberty to betake themselves to a secular life again. Julian himself was once in the monastic habit. The same is observed of Constantes, the son of Constantine, who usurped the empire in Britain. The rule of Pachomius, by which the Egyptian monks were governed, has nothing of any vow at their entrance, nor any punishment for such as deserted their station afterwards. In process of time it was thought proper to inflict some punishment on such as returned to a secular life. The civil law excluded deserters from the privilege of ordination. Justinian added another punishment; he set forth, that, if he who had been professed of any substance, it should be all forfeited to the monastery which they had deserted. The censures of the Church were likewise inflicted on deserting monks in the 5th century. Thus when a monk deserted and married, he was declared incapable ever after of holy orders. After the establishment of monasteries under the rule of St. Basil, the actions of a monk, his words, and even his thoughts, were determined by an inflexible rule and a capricious superior; the slightest offences were corrected by disgrace or confinement, extraordinary fasts or bloody flagellations; and disobedience in any matter not included in the catalogue of the most heinous sins. Whenever monastics were permitted to step beyond the precincts of the monastery, two jealous companions were the mutual guards and spies of each other's actions; and after their return they were condemned to forget, or at least to suppress, whatever they had seen or heard in the world. Strangers who professed the orthodox faith were hospitably entertained in a separate apartment; but their dangerous conversation was restricted to some chosen elders of approved discretion and fidelity. Except in their presence, the monastic slave might not receive the visits of his friends or kinsfolk; and it was declared highly meritorious if he afflicted a tender sister or an aged parent by the obstinate refusal of a word or look. By their special addiction to an ascetic life, indicating superior sanctity and virtue, the monastics secured great favor with the multitude, and speedily acquired for themselves such popularity and influence that the clergy could not but find in them either powerful allies or formidable rivals. When they began to form large religious foundations and regular institutions, the members of their body should be ordained, in order to secure the regular performance of divine worship; and at length, not only was it usual for many members of a monastery to be in holy orders, but it came to be regarded as an advantage for the clergy to possess the character of monasticism. From the 8th century, in the West, at the request of the people or their abbot, the monks very frequently took orders; and in the East at the instance of the bishops, the archimandrites being sometimes elevated to the episcopate, or acting as bishops' deputies at councils, and their monks ranking after priests and deacons, they frequently went to study in the cloister. It was not until the 6th century that the cononibites left the desert for the suburbs of cities and towns, but as early as the close of that century they were known as monastics, having come to be distinguished from the populace, and endowed with much opulence and many honorable privileges, found themselves in a condition to claim an eminent station among the pillars and supporters of the Christian community. The fame of their piety and sanctity was so great that bishops and presbyters were often chosen out of their order; and the passion for erecting edifices and convents, in which the monks and nuns served God, was so great that, in some places, the manner was at that time carried beyond all bounds. So much was the world infatuated by the sanctimonious appearance of the recluses that men thought they could not more effectually purchase heaven to themselves than by beggaring their offspring, and giving all they had to erect or endow monasteries; that is, to supply all the luxuries of life those who were bound to live in abstinence, and to enrich those who had solemnly sworn that they would be forever poor, and who professed to consider riches as the greatest impediment in the road to heaven. Large monasteries, both commodious and magnificent, more resembling the palaces of princes than the rude cells which the primitive monks chose for their abode, were erected and endowed. Legacies and bequests from time to time flowed in upon them. Mistaken piety often contributed to the evil, but oftener superstitious profligacy. Oppression herself commonly judged that to devote her wealth at last, the king himself no longer dared to contract a marriage was full atonement for all the injustice and extortion by which it had been amassed. But what set in a stronger light the pitiable brutishness to which the people were reduced by the reigning superstition, was that men of rank and eminence, who had shown no partiality to anything monastical during their lives, gave private orders, when in the immediate view of death, that their friends should dress them out in monkish vestments, that in these they might die and be buried, thinking that the sanctity of their garb would prove a protection against a condemnatory sentence of the omniscient judge. This is the most common error. Nevertheless, although many monastics greatly distinguished themselves, and established such a popular interest in monasticism as to cause eminent ecclesiastics to adopt the monastic life, yet it was not the custom to place monks, as such, on an equal footing with the clergy. They indeed were called clerics regulares, or seculars, but were distinguished by the name of religiosi or regulares (canonici), and they were first regarded as part of the clerical body in the 10th century; but even then a distinction was carefully made between clericis secularibus, i.e. parish priests and all those who were chiefly charged with the cure, who were not seculars, i.e. those belonging to monastic orders; and the former vehemently protested against the right of the latter to interfere with their own peculiar duties. In fact, no complete amalgamation of the two bodies
ever took place; and all monasteries continued to include a certain number of lay brethren, or conversi, who, without discharging strictly spiritual functions, formed, as in the ancient Church, a middle order between the clergy and the laity. In the 9th century these monasteries numbered during the 15th and 16th centuries. The members of these fraternities formed a class between the laity and clergy. However, their licentiousness, even in the 6th century, became a proverb; and they are said to have excised the most dreadful tumults and sedition in various places.

The monastic orders, as we have already indicated, were at first under the immediate jurisdiction of the bishops, but they were exempted from them by the Roman pontiffs about the end of the 7th century (Boni face IV); and the monks, in turn, devoted themselves wholly to advancing the interests and to maintaining the authority and dignity of the pope for monastic orders,” says Cramp, “is easily accounted for. They constitute a peculiar and distinct body, so estranged from society that they can give undivided attention to the care of their person that is presented to their notice. That object has uniformly been the aggrandizement of the church; that is, the Holy Roman Church. Incorporated by pontifical authority, exempted to a degree from episcopal jurisdiction, and endowed with many privileges and favors from which the rest of the faithful are excluded, they are bound in gratitude to make the pope’s interest their own. History records that they have ever been ready to come forward in support of the most glorious enigmas of the popal system, and to sanctify under the influence of force or fear, or before the age appointed by law, they should not be heard, except within five years after their profession—if they laid aside the habit of their own accord, they should not be permitted to make the complaint, but be compelled to return to the monastery, and be punished as apostates, being in the mean time deprived of all the privileges of their order. Finally, with regard to the general reformation of the corruptions and abuses which existed in convents, the council lamented the great difficulty of applying any effectual remedy, but hoped that the supreme pontiff might understand the necessity of the discipline and severity of the case as far as the times would bear” (Text-book of Popley, p. 559). However, the Reformation had a manifest influence in restraining these excesses, and in rendering monasteries more circumspect and cautious in their external conduct. See MONASTERY and MONASTICISM; also Monks, Eastern.

Monk, George, Duke of Albermarle, a noted British general of the days of the Commonwealth, celebrated for the services he rendered, first to the Protectorate and afterwards to the crown, causing the restoration of King Charles, was born in the parish of Merton, Surrey, Dec. 6, 1608. He devoted himself to military life, and had a considerable experience in the wars on the Continent when the war broke out (1638) between Charles and the Scotch. Monk enrolled in the English service, and was made lieutenant-colonel. In 1641 he served against the Irish rebels; and in the following year, upon the outbreak of the war between Charles and Parliament, he obtained a full colonelcy. He was very popular with his soldiers, and the last remained their idol. For a while his loyalty to the king was questioned; but he soon regained the confidence of the throne, and was suffered to take the field. He rapidly acquired reputation as an able officer. He now acquired a large fortune by Nantwich in January, 1644, by the Roundheads, and confined in the Tower of London more than a year. While himself immured, matters outside turned very
much against the king, who was finally taken prisoner, thus terminating the civil war. Efforts were now made by Parliament to secure his restoration. His known ability and favor with the soldiers made him a desirable acquisition. Clarendon insists upon it that Monk was bought by Parliament (vii, 389) ; but there is no proof for such an assertion, though his final acts in the scene of Restoration would point that way. In the king's flight to the Dutch ship, a few days after, he was thus persuaded to serve Parliament. The silence which he ever after preserved would confirm such a belief. This seems reasonable also when it is considered that originally Monk must have been in sympathy with the people's cause, for he was suspected by the Royalists. Moreover, for too long a time he had been by his influence a friend of affairs. He liked to be with the winning side, and, though he had come to be an admirer of the splendor and attraction of court, he would yet fail resign all these rather than serve the minority. He finally in 1647 consented to take a commission in the Parliamentary army. He first commanded for his new masters in Ireland, where he distinguished himself greatly. He afterwards acted as lieutenant-general under Cromwell in Scotland, where he aided much in gaining the victory of Dunbar. Cromwell finally left him with 6,000 men to complete the subjugation of Scotland, a work which Monk effectually performed. He continued in the supreme command of the Commonwealth's fleet, and shared in the perils and the glories of the desperate struggle with the Dutch navy, which Blake so successfully conducted. After being rewarded with many honors at the hand of Cromwell and the Parliament, Monk was sent back to his command in Scotland, where fresh troubles had broken out. He was at this time in a very embarrassing position, and yet he discharged himself of his task with satisfaction to all. His own soldiers were the most restless and fanatical of the army. Besides, he had to contend with lord Middleton, with whom the Royalists had risen in the Highlands, and the people generally, who were discontented and ready for rebellion. His vigilance, activity, and good sense in this position were remarkable. "The country," writes Gis- zot, "submitted; the army did not quit it till it had, by means of a certain number of garrisons, secured the payment of taxes, which the Highlanders had hitherto thought they could not feel the importance of. An order was established in those sanctuaries of plunder with such effect that the owner of a strayed horse, it is said, recovered it in the country by means of ariter" (p. 80). He was also instrumental in bringing about the union which was established under the Protectorate in Scotland; and that union strengthened the Cromwellian efforts. Indeed, it is generally conceded that Monk was always attached to Cromwell from the moment he openly espoused the popular cause, and was never suspected of disloyalty while the Protector lived. This is manifest also from Monk's prompt action when importuned by Charles for his cause. The king sent Monk a letter express- sive of confidence, and, instead of reply, Monk turned the letter over to Cromwell. In 1656 Monk was made one of the commissioners for the government of Scot- land, and he largely, if not wholly, controlled the action of the council of state. That in this position also he pleased Cromwell is evident from the way in which he was remembered in the Protector's last hour. Crom- well on his death-bed is said to have recommended him to his son and successor, who as soon as installed likewise received Monk's support. But Richard's fail- ure turned Monk away. Monk soon discovered the weakness of the new regime, and determined to follow that policy by which he would both connect himself with the strongest party, and also lay that under the greatest possible obligation to him. He temporized for some months; listening to the advances of all sides, and saying little in return. He had, no doubt, made up his mind that the Royalist cause was the strongest, and that Richard was not fitted to give sta- bility to Parliament; and though circumstances compelled him to act he declared for the Parlia- ment against the army and decided upon marching to London, there were many, even at the time when he thus declared himself, who altogether discredited his sincerity, and believed him to be at heart a Royalist, in the keeping of the king's interest, and thus was thus pernicious to serve Parliament. The silence
ately acknowledged and proclaimed. On the 29th of May, Monk received him on the beach at Dover, was embraced by him, and addressed with great affection. Monk obtained many offices and titles, of which the principal was the duke of Albemarle. As such he was addressed by all the ecclesiastical as well as in turn worshipped as Independent and Presbyterian, and by this change forever set at rest all hopes for the disestablishment of the Episcopal Church. The failure of the Independent and Presbyterian cause may thus be truly laid to Monk, and he therefore figures in no inconsiderable degree in the ecclesiastical as well as political history of England, and even of Great Britain. From this time forth but little influence remained to him except as he wielded it through the king. He went to sea again in 1666, against his old enemies the Dutch, and maintained his reputation for courage and conduct. He died in 1670. "Monk," says one of his biographers, "had strong nerves, strong common-sense, a cold heart, an accommodating conscience, a careful tongue, an unchanging countenance, and an imperceptible temper. He showed considerable skill in civil government as well as in military affairs. He had shrewdness enough to see what was best for the nation and its interests, and the public knew that he had ability and vigor enough to bring it to pass. He was never unsettled by enthusiasm in determining his ends, and he was never checked by principle in choosing his means." M. Guizot would hardly concede all this. He acknowledges that Monk "was a man capable of great things, but possessed of a profound contempt for what is called greatness of soul." Certainly it was not to England's interest to restore Charles, but he only brought him back because he was disappointed in Richard Cromwell, and dared not himself assume the reins of the government. See Clarendon, Hist. Rebellion and Civil Wars of England, vii. 392; Skene, Life of Monk; Guizot, Memoirs of Monk, ably edited by the late lord Wharncliffe; Massere's Tracts; Pepys and Evelyn, Memoirs; Stoughton, Eccles. Hist. Church of England (Restoration), i. 44 sq.; Hallam, Const. Hist. p. 393-406; Macaulay, Hist. of England, i. 145-146, 296; Stephen, Hist. of the Church of Scotland, ii. 550, 570, 576, 880; State Papers of Charles II ( Lond. 1886); Retrospective Review, vol. xiii. (1826). (J. H. W.)

Monk, James Henry, D.D., an English prelate, was born at Huntingford, Herts, in the early part of 1788. His preparatory education was received at the Charterhouse, and he then entered Trinity College, Cambridge, where he was knighted. A few years later he occupied the position of assistant tutor, and in 1808 succeeded Porson as regius professor of Greek in this chair. He applied himself faithfully to critical analyses of various Greek texts. He published, in conjunction with C. J. Bloomfield, D.D., The Parallel Passages of the New Testament, and during his professorship an exciting dispute arose concerning the occupancy of the chair of botany, and Sir James Edward Smith, president of the Linnean Society, London, being disappointed in not securing the position, made bitter use of his pen concerning it. In reply, Monk published a Vindication of the Offices of the University of Göttingen (1818), which, from the prominence of both parties, caused considerable stir in literary circles (Lond. Quart. xix. 434-446). In 1822 he resigned his professorship to accept the deanship of Peterborough, and eight years later was made bishop of Gloucester. During this year (1829) he published a Life of Shakespeare, D. D. This work is highly praised by literary critics and biographical interest, but also comprises a large portion of the literary annals of the last half of the last century, besides valuable historical facts concerning the University of Cambridge. "The style is generally plain and masculine, and if sometimes negligent, and at others elliptical, is always that of strong sense and of elegant and scholarlike accomplishment" (Lond. Quart. xvi. 120). Many minor inaccuracies having been justly and severely criticised (Edinb. Rev. ii. 821), but its general merit caused it to receive a hearty welcome by the literati. In 1836 Bristol was added to Gloucester, and he became the bishop of the united dioceses. This office he held until his death at Stapleton, near Bristol, July 6, 1856. Remarks by Bishops Backhouse, Sorci, and het Brit. and Amer. Authors, s. v.; Hallam, Hist. Lit. ii. 275, and the Reviews quoted. (H. W. T.)

Monk-god is a divinity of the Hindoos, very common in the temples of the Deccan. He is said to have been a favorite general of the god Rama, and was named Hanuman, but, being an aboriginal, the Puranas transformed him into a monkey. See Trevor, India, its Natives and Missions, p. 92.

Monks, Eastern. The Oriental Church differs in many respects from the Latin or Western, but in no particular more than in its paucity of monastic orders. In the early ages of the Church, these flourished especially in the East; indeed, that part of the world, as may be seen in the article MONASTICISM, was the home of Christian monks. But the downfall of the Roman empire despoiled the Church more or less of its monastic instinct, and the institution became a part of the Western Church, while in the East it gradually degenerated and declined.

I. Oriental Monks.—The conflict with the Saracens contributed to the weakening of the monastic orders; and though there are remains of ancient monastic institutions in all the provinces of European Turkey and Greece, especially in Bulgaria, Thrace, Macedonia, Thessaly, the Morea, the islands of the Aegean, and the sea-borders of Asia Minor, those used as such in our day are comparatively few.

Among the monasteries still existing, the most remarkable is that of St. Catherine, founded by a king of Servia in the 12th century, and are occupied by Bulgarian monks, using the Slavonic tongue in religious worship. Most of the monasteries, however, were founded and richly endowed by the Greek emperors. There are about one hundred and twenty monasteries in the Peloponnesus. The number of monastic shrines, in a space not exceeding ten leagues in diameter, is estimated at nine hundred and thirty. The monasteries of Princes Islands were formerly the most flourishing in Turkey, but they are now nearly abandoned by monks, and have become places of pleasure and recreation in the summer months. "The empty cloisters of one or two," says a recent visitor, "are trodden by a few pale and wretchedly poor monks, some deposed patriarchs and disgraced priors, or other subordinate of theirs, fitting through the sombre porches and gliding along the deserted church- 

The rule of the Oriental monks has continued to be
that of Pachomius or of Basil. They are divided into two classes—conobites, or ordinary communities, and anchorites (idiortimes), who live separately, unless on certain festivals (in recent times) when they eat in common. Each monastery is governed by a prior (hegumenos), whose office is for life, or in his absence (or the non-existence of one) by a prior or steward (epipotes), who is appointed by the brethren. The brethren are divided into ordinary monks (monachoi) and consecrated monks (hieromonachoi); the latter are the learned portion of the community—but these are few indeed. In 1545, when Belon visited Mount Athos (less than a century after the coquest), he found six thousand monks, out of twenty-six in the greatest monasteries, and of that number, he states, "it would be difficult to find more than two or three in each monastery who can read or write." Recent travellers find no change. Madden says: "This was the state of things in all the monasteries I have visited in the Greek islands, in European Turkey, in Syria, and in Egypt. But among the few—the very small minority of monks who could read and write in the monasteries I visited—there was generally one monk, sometimes two of the brotherhood, who were addicted to study, were acquainted with the ancient Greek, had a knowledge of ecclesiastical history and of the writings of the Greek fathers, and, in some cases, the accounts of principal works or rare MSS. of their several libraries" (Turkish Empire, ii, 83). The time of Oriental monasticism is divided between religious duties and manual labor, providing food and other necessities, tending cattle, and domestic affairs.

Down to the period of the Greek revolution and its termination in the Hellenic kingdom, but especially till 1821, the monasteries were unmolested by the Turks, and consequently the literary treasures remained uninjured, except by the ignorant members of their communities. But the successes of the Greeks in the Morea gave a stimulus to the monastic libraries of several parts of Greece, and particularly of the monasteries of Mount Athos, at the hands of the infuriated Turks, and vast numbers of rare books and still more valuable and irreplaceable MSS. were destroyed. It is to be hoped that ere long the treasures still remaining will be in the hands of European scholars, and their contents become the possession of the world of letters.

II. Russian Monks.—Russian monasticism is so unlike that of the other Christian countries in which the institution has gained a footing, that we devote a special chapter to it. In this chapter we must dismiss from our minds all the Western ideas of beneficence, learning, preaching, etc., such as we attribute to the Benedictines or Franciscans; of statecraft, subtlety, and policy, such as we ascribe to the Jesuits. In the dark forests of Muscovy is carried out the same rigid system, at least in outward form, that was born and nurtured in the burning desert of the Thebaid. There is no variety of monastic orders in Russia. The one name of the Black Clergy is applied to all alike; the one rule of St. Basil (q. v.) governs them all. For convenience' sake they might be divided into two classes: with the Hermits and the Monks.

1. The Hermits.—Even at the present day the influence of a hermit in Russia is beyond what it is in any other part of the world, and in earlier times their sanctity had acquired the strongest hold over all who came within their reach. Anthony and Theodosius, in the caves of Athos, were known far and wide for their pieté and ascetical life, and their devoted followers, pilgrims from the utmost bounds of Kamchatka. The pillar-hermits never reached the West, but were to be found in the heart of Russia. Fletcher, in his Russian Commonwealth (p. 117), describes them thus: "There are countless monks who use to go stark naked, save a cloak about their middle, with their hair hanging long, and wildly about their shoulders, and many of them with an iron collar or chain about their necks or middles, even in the very extremity of winter. These they take as prophets and men of great holiness, giving them a liberty to speak what they list without any controlment, though it be of the very highest himself. So that if he reprove any openly, in what sort soever, they answer nothing but that it is 'Po Grecum' (for their way of speaking is very peculiar) because they are as pasquis [pasquins] to note their great men's faults, that no man else dare speak of. . . . Of this kind there are not many, because it is a very hard and cold profession to go naked in Russia, especially in winter." Of the numerous hermits, we mention Basil of Morea, "thrice consecrated" to the service of God, who reproved the old emperor, the terrible Ivan, for all his cruelty and oppression done towards the people. His body they have translated into a sumptuous church near the emperor's house in Moscow, and have canonized him for a saint." That sumptuous church remains a monument of the mad hermit. It is the cathedral immediately outside the Kremlin walls, well termed "the dream of a diseased imagination." Hundreds of artists were kidnapped from Lubeck to erect it, and of all the buildings in Moscow it makes the deepest impression.

2. The Monasteries.—The Russian monasteries spring mostly out of the neighborhood of hermitages, like their Egyptian prototypes. Russian monachism was a modification of the Eastern system. In Russia, as in the East, the monks lived a solitary life, but in their own cells, which they themselves had built within the immediate surroundings of the monastery. With their own hands they worked for the maintenance of subsistence, devoting the rest of their time to solitary spiritual exercises, and assembling only twice a day for common prayers. This solitary way of living was the original system of Russian monachism, while living together in convents was introduced in the 14th century. In the 16th century, the two modes of life were tolerated, both modes of living are practiced to this day. The Russian monasteries are controlled either by an archimandrite (q. v. i.e. abbot), a hegumen (i.e. prior), or aistroit (i.e. superior). Convents with aistros, or superiors, are usually under the care of a larger monastery. At first the monks elected their own superiors, but afterwards the bishop or regent nominated them. All monasteries were originally under the control of the bishop in whose diocese they were. This strict superstition, however, soon became onerous; and already in early times, but especially in the 16th century, when we first hear of the monasteries, we find that they were exempted from episcopal jurisdiction, and under the immediate care of the patriarch of Constantinople or of the Russian metropolitan. Those monasteries which are exempt from episcopal jurisdiction, and which are nowadays under the superintendence of the Synod of St. Petersburg, are called lavra or laura; while those under episcopal jurisdiction are named cenobia, monasteria, or eremika.

Monachism in Russia has three degrees. The first degree comprises the novitiate. The novice does not take any vow upon himself, but has to live according to the monastic regulations, his dress is a tunic or a cloth, or, at a Cape. After a preparation of three years the novice enters the second degree, and becomes a monk. He takes the solemn vows before the archimandrite, changes his name, and receives the tonsure. Men are not allowed to take these vows until they are thirty years old, and women are not admitted until they have reached their fifteenth year. The third degree comprises the perfect ones. They are dressed in a long black coat, with a wide hood which conceals the face entirely. The peculiarities of this class consist in very strict spiritual exercises, restraining of all bodily appetite for the purpose of mortifying the sensual nature, and all that is liable to be absorbed in the contemplation of divine things only.
They are not allowed to leave the convent, and must renounce all and every connection with the world. They are very highly esteemed, exempt from episcopal jurisdiction, and stand under the immediate care of the Synod of St. Petersburg. Monks of this third degree are very rare. Different from Western monks both in road and customs, they are very strict in the discipline of the Russian monks. Many very enter the monasteries, not for inclination or piety’s sake, but simply to gain clerical influence and position. For the monks, although their learning is small, are looked up to as of superior education, and the monastery is therefore the only place in Russia to a saintly character and religious life.

The income of the monasteries, which often was enormous, was at first under the care of the archimandrite. His administration, however, was subject to the inspection of the bishop. Ivan IV Vasilyevich was the first regent who seized the property of the monasteries at Novgorod in 1500. Peter the Great obliged the monasteries to take care of the invalids and poor. The empress Catharine I deprived the archimandrites of their ancient rights, and put the administration of monastic goods into the hands of a special committee (1725). This committee was subsequently abolished (1742), and the empress Elizabeth transferred the administration of monastic goods to the state.

In 1702 Peter III tried to secularize all convents and monasteries; but the plan was not executed until 1764, when Catharine II secularized all monasteries with their pecuniary income and vessels, and thereby secured to the crown more than 900,000 peasants and enormous sums. The Russian monasteries at present are most of them very poor, and the monks live in apostolical poverty and simplicity. But though this be the rule, there are some remarkable exceptions. The St. Petersburg Gazette, late in 1871, furnished some interesting statistics as to the revenues of the most important monasteries in Russia, from which it is clearly apparent that some of them are still exceptionally well provided for in a temporal sense. The Gazette says that the receipts of the priors of the monasteries of the first class (lauras) vary from 40,000 to 60,000 rubles (£5000 to £7500), and of the other priors from 1000 to 10,000 rubles. The income of the monastery of Troitzi-Sergiev, near Moscow, which formerly contained about 100,000 persons, now amounts to 500,000 rubles (£52,500). That of the Kief monastery is even greater, as it derives a considerable profit from the sale of wax-lights. The Alexander-Neviski monastery at St. Petersburg has a special source of revenue, besides its income from the sales of the wax-lights, in the rents paid by a share of all the corn imported into the capital. How large this revenue is may be inferred from the fact that a short time ago the city wished to compound for it by a yearly payment of a million rubles, and that the monastery declined the offer. Next to the monasteries of the first class in the wealth of the Russian synod are the monasteries of the second order, which have the right to receive a rent of 740,800 rubles.

The monasteries have really been a great help and advantage to the Russian nation, as all its bishops, artists, and scholars were educated in them. No schools or educational institutions were to be found outside of them until very recently. Their mission in Russian history was peculiar. Not only were they the custodians of Christendom, transmitting to all time the laws and traditions of the Koran, but they were also the custodians of the religious institutions, the mission of Christ, and the custodians of the religious institutions of the East.

3. Russian numerals existed in a very early period of

that Church. The nuns are either virgins or widows. They adopt the rules of St. Basil. They mostly live together in a convent under the control of a hegumen, or prior, elected by them. Their habit is a long black woollen dress, made after the Oriental fashion, a long black tunic or mantle, and a black veil. Formerly both monks and nuns sometimes lived together in the same monastery; but as this gave rise to great immorality and disorder, it was strictly prohibited by the council in 1503.

4. Monastery of Troitsa.—There is no more celebrated monastery in Russia than this monastery of Troitsa (i. e. the Holy Trinity). It was founded A.D. 1338, when during the Turkish domination the Tartar clergy showed themselves the deliverers of their country. About sixty miles from Moscow, in the midst of a wild forest, rises the immense pile of the ancient convent. Like the Kremlin, it combines the various institutions of monastery, university, palace, cathedral, and churches, planted within a circuit of walls. Hither from all parts of the empire stream innumerable pilgrims. No emperor comes to Moscow without paying his devotions there. The office of archimandrite, or abbot, of it is so high that for many years it has never been given to any one but a metropolitan of Moscow; and the archimandrite is by law the hegumen, or chief of the hegumen, is of the highest dignitaries of Russia.

The founder of it was St. Sergius (A.D. 1315-1392), whose career is circumscribed with a halo of legend. When the heart of the grand-duke Demetrius failed in his advance against the Tartars, it was the remonstrance, the bleeding foes, and the prayers of this hegumen that supported him to the field of battle on the Don (1880). No historical picture or sculpture in Russia is more frequent than that which represents the youthful warrior receiving the benediction of the aged hermit.

Monlesun, Jean-Justin, a Swiss ecclesiastical and historian, was born at Sar动员, near Auch, in 1806. He studied at the College of Auch, continued his first labors to the instruction of youth destined for the service of the altar, and was subsequently appointed to the parish of Castelnaud'Aubrie, near Lictoure, and in 1838 to that of Barran (canon of Auch). The archbishop of Auch appointed him in 1847 titular canon of his metropolitan see. He died in 1853. Besides some articles published in different journals and historical collections, Monlesun wrote, Histoire de la Gascoigne, depuis les temps les plus recules jusqu'a nos jours (Auch, 1840-50, 7 vols. 8vo); this begins with the 8th century before the Christian era, and closes at the end of the last century:—L'Eglise angloise, ou Histoire de l'Eglise de Notre-Dame du Puy, et des établissements religieux qui l'entourent (Clermont, 1854, 18mo):—No- tice historique sur la ville de Mirande (1856, 8vo):—Vie des saints Evêques de la diocèse d'Auch (1857, 8vo).

Monmorel, Charles le Bourg de, a French preacher, was born at Pont-Audemer about the middle of the 17th century. In 1662 he became the companion of Father Bouillet, the director of Bonnet, and was provided with the abbey of Lannoy, in Flanders, by the influence of Madame de Maintenon. He died in 1719, and left a highly esteemed collection of Homilies on the évangiles des dimanches, sur la passion, sur les mystères, et sur tous les jours du carême (Paris, 1698, 12mo, 2 vols.).

The method of writing is very similar to that of the monks of the Church, who familiarly explain the Holy Scrip-

men. His father, Jean Monod, who was a native of Switzerland, born about 1790, was at the time pastor of a French Protestant church; but in 1808, having received a call from a church at Paris, he removed thither with his family, and there enjoyed much distinction. He was president of the Reformed Consistory until 1834, and died in 1836. Adolphe was educated at the College Bonaparte at Paris, and after the completion of his studies there he pursued a course in theology in the University of Geneva, where he remained until 1824. In 1825 he made a journey to Italy, during which he felt drawn nearer to God, and decided to preach the Gospel to the little Protestant congregation of Naples. There he resided until 1827. On his return he was appointed pastor of Lyons; here, however, his earnest Christian exhortations proved distasteful to a worldly congregation, and his removal was asked for and granted. Strengthened and encouraged by the spirit of the Lord, he now continued to preach and to teach. The Church of the state was locked for him. His congregation met in a private room, which was, however, soon exchanged for a spacious chapel, where numerous people were fed with the bread of eternal life. Thirty years have passed since, and at present the Evangelical Church of Lyons is a great association, with four pastors, many deacons, and five chapels. In his second sermon chapel—either touched by the religious activity of Monod, or wishing to make good the wrong it had done to him—appointed him professor of theology at Montauban, where he remained eleven years. During this time he held prayer-meetings every Sunday, and in the vacatiomime he founded the Society for the propagation of the truth among the untouchable. Wherever he appeared, multitudes of people followed him, attracted by the spiritual power of his orations. In 1847 the Consistory of Paris appointed him minister of the Reformed Church there, the government confirming the selection and he accepting. He labored there with remarkable success for seven years. The first year after his consecration, 3000 persons, including 200 of the Oraist oratoire, were filled every Sunday by pious people. In the smaller room of the Oraist he gave Bible-lessons every Sunday; and a great many of his hearers, surprised by his beautiful, practical remarks on the Word of God, by his great knowledge of the Scriptures, and by his spiritual experience, preferred the Bible-lessons to his greater sermons. In 1850 he was suddenly stricken down by disease; but, with his Christian resignation, he acknowledged in sickness also the voice of God to his servant—"Lo, I come quickly." The physicians pronounced his disease incurable; Monod quietly heard the sentence, and the next evening withdrew himself, according to his Master. His faith grew stronger daily; not only a full resignation to the will of God, but a great joy filled his soul even in his greatest pain. Every Sunday, in the afternoon, his friends gathered around his bed. One of them read the Scriptures, preached, and prayed; after this he himself began to speak to them, teaching them, and bearing testimony to the Word of God. Never were his words so impressive as just before his death, occurring April 6, 1856, which was Sunday, while in all the churches of Paris prayers were ascending to the throne of God for his recovery, the Protestant Church of France fairly trembling under the great loss that was befiling it.

Adolphe Monod was possessed of more than ordinary intelligence, a kind, sympathizing heart, and a lofty imagination. He had allied to these a great taste for the beautiful, and a mind aspiring after Christian perfection in wisdom. His knowledge of the German, English, and other languages, and vast acquaintance with the treasures of the literature of those nations, which he esteemed very much. Concerning his theological knowledge, his earlier studies might have been imperfect; but this imperfection was afterwards fully repaired, especially in the eleven years of his professorship. The Bible, which he daily read in the original languages, was the fountain from which he drew most of his theological know-

edge. His Christian character was the foundation of his activity and his oratorical power. Of many a celebrated man it is said, "He was a perfect man;" all those who knew Monod say, "He was a perfect Christian." Since the moment when his heart was touched by Jesus, his whole life belonged to him. He saw and felt what he believed, and so he preached to others. Gifted with so many talents for the Christian ministry, he was a perfect model as a preacher of the Gospel. One principle characterizes all his speeches—that is, to save immortal souls from destruction. His noble appearance, kind looks, classic style, combined with the purest pronunciation—his high seriousness, which impressed everybody—his own honest and deep touched by the feelings which he wished to awaken in them—his humility in confessing his own doubts and struggles, for the purpose of seeking together with his hearers the way of salvation and true happiness—all these qualities were combined for the one purpose, to gain souls for His Lord Jesus Christ.

The literary works of Adolphe Monod are few, being mainly sermons. In 1830 he published three of them, which bear evidence of his great talents. In the first of these sermons he speaks with a divine power about the relation of error and sin and that of virtue and truth, and, in his third sermon, which is deep touched by the feelings of the Orator, he expressed the deepness of sin and the great mercy of God. In 1844 he published a volume of sermons, the first of which (La crédulité de l'incrédule), covering 68 pages, is considered the most excellent apologetic of modern days. Before, as after his death, many other sermons of his were published, the chief among the duties of Christian women (La femme), and five about the apostle Paul, especially celebrated. In these Monod answers the question, often heard, "Why has the preaching of the Gospel so little success in our century in comparison with the time of the apostles?" thus: "The Word of God is as living and powerful now as then, but our sinful and broken life does not allow us to appreciate our preaching. The life of the ancient Christians was the world-conquering power of their witness. Restore that life in the Church of Christ, and she will be able to perform wonders as of old." The apostle Paul was to him witness of this truth, which he unfolded in five sermons, entitled The Work of God, His Church, The tears, His Conversion, His Weakness, and His Example for us. In the days of his sickness Monod gathered all his writings. Three volumes of sermons were published after his death, namely, two volumes containing those preached at Lyons and at Montauban, and a third containing the sermon preached at the great lecture on Charity Qu. Oct. 1879, p. 565; New-English, July, 1879, p. 594; Herzog, Real-Encyklopädie, s. v.; Hase, Ch. Hist., p. 609; Vaperere, Dict. des Contemporains, s. v. (J. H. W.)

Monod, Frédéric, D.D., brother of the above, and, like him, celebrated for his great attainments as a divine, was born at Monnaz, Canton de Vaud, Switzerland, May 17, 1794. He entered the ministry in 1820, and was a pastor of the Reformed Church in Paris until 1849. In 1824 he began the publication of the Archives du Christianisme, a leading organ of the evangelical portion of French Protestantism, and remained its editor while he lived. At the time of the French Revolution, in 1848, Frederic Monod was the leader of a movement which resulted in the establishment of the union of free evangelical churches. The original intention of the movement was to restore the synodical constitution of the Reformed State Church, and to re-adopt a plan of union which he believed was the ideal of the ancient church fathers. When this attempt failed, Monod, count de Gasparin, and some of their friends, left the State Church (1849) and organized independent congregations, which soon after formed the "Union of Evangelical Free Churches." See FRANCE. Monod was constantly re-elected president of the different synods, and always retained one of the leading spirits of this new denominational organization.
tion, which, although small in comparison with the two
Protestant state churches (the Lutheran and the Re-
formed), contains some of the best and most influential
men of French Protestantism—as count de Gasparin, E., de Privas, and, above all, the late Abbé Lecuq, who attended the last
general session of the Evangelical Alliance held in New
York City in 1873. The hope of bringing over the ma-
jority of the French Protestants to the evangelical free
churches was not realized; but the existence, spiritual-
ity, and prosperity of the Free Church greatly strength-
ened the evangelical movement within the Church, which
has since steadily gained in influence, and appears to
be at present in undisputed ascendency. (Comp. Zeit-
chrift für historische Theologie [1851], No. III.) Mon-
od, like all the members of the free evangelical church-
es, was an ardent admirer of American institutions. He,
with his friends, pointed to the separation of Church and
State as it exists here, and to the great amount of
civil liberty which Americans are enjoying, as model
institutions which the people of Europe, and especially
of France, would do well to follow as much as lies in
their power. The favorable opinion which he had al-
ways held of the United States was greatly strength-
ened by a journey he made through this country about
1855. After the outbreak of the American rebellion, he
showed himself one of the warmest European friends of
the Northern cause. He took a prominent part in all
the demonstrations which the Protestant clergy made
in favor of the Union, and in which they manifested a
greater sympathy for the northern than for the southern
States. Monod was himself one of the originators of the
addresses—signed by the great majority of Protestant French
ministers—and objected to by not a single one—in which
Protestant France, through her clergy, recorded her opinion that “the tri-
umph of the rebellion would throw back for a century
the progress of Christian civilization and of humanity,
would cause angels in heaven to weep, and would re-
voice demons in hell; would throughout the world
probably raise the hopes of the favorites of slavery and
the slave-trade, quite ready to come forth at the first
signal, in Asia, in Africa, and even in our refined cities
of Europe; would give a sad blow to the work of evan-
gelical missions; and what a terrible responsibility
would it impose upon the Church which should remain
mute while witnessing the accomplishment of this tri-
umph.” The address is noted for the change of opinion it
affected. A few months after the death of the Reforma-
tion, Frederic Monod died Dec. 30, 1863, mourned not only
by his own country, but by the Protestant world, which
recognised in him a zealous champion of the evangelical
cause the world over. He was so busy with his pen for
all humanity that he found but little time for extensive
conferences or writings. Few of his sermons or
Archives which he edited. He published, besides, a
few pamphlets and several of his sermons. See Archives
du Christiamite, Jan. 1861; and Dr. Mc Clintock in the
N. Y. Methodist, Jan. 30, 1864. (J. H. W.)

Monod, Jean. See MONOD, ADOLPHE.

Monod, Pierre, a learned Savoyard Jesuit, was
born at Bonneville in 1586. He entered the Order of
Jesuits in 1603, taught belles-lettres and philosophy in
different colleges of his order, and finally became prin-
cipal of that of Turin. Appointed confessor to the
duchess Christine, sister of Louis XIII of France, he
exercised much influence over that princess, and shared
largely in the direction of political affairs. In 1586 he
was sent to Paris to reclaim the honors of royalty for
the house of Savoy, but he was unable to obtain an in-
terview with Richelieu. Irritated by having his de-
motion rejected, he allied himself with the enemies of
the ministry, especially with Causing, the companion of
Louis XIII, with the object of overthrowing the cardinal.
Richelieu, partly divining these intrigues, sent Monod
back to Turin, when the latter endeavored to withdraw
Christine from the French alliance. Then the cardinal
attempted to remove him from the service of the duch-
eas; but Monod knew how to preserve his authority
over her. In 1640 he was arrested by the order of
Richelieu, imprisoned first at Fignerol, and subsequently
at Couray, but found means to escape, and was finally
retaken and transferred to Miolans, where, in spite of
the intercession of the pope, he remained until his
death, March 81, 1644. He is the author of Recherches
historiques sur les alliances de France et de Savoie (Ly-
ons, 1621, 4to);—A medes pacificus, seu de Eugenius IV
et Antonio Niolu, in saevo Sedentia Vaticanv vuncupati, controversia (Turin, 1624, 4to; Paris, 1626,
8vo);—reproduced in the seventeenth volume of the An
nales of Barouius:—Apologia pour la Maison de Savoie
contre les soudaines injustice de la Premiere et Se-
conde Servagienne (Chambery, 1631, 4to); followed by
a Second Apologia, which, translated into Italian by the
author, appeared at Turin (1632, 4to)—Trattato del titolo
regio donato alla casa di Savoia, with a ristretto
version of the revolution of the Reame of Cipry and raeions of the casa
di Savoia sopra di esso (Turin, 1633, fol.); this work,
published at the same time in Latin, was the cause of
a quarrel between Savoy and Venice; it was at-
tacked with violence by Grasswinkel:—Il Capricor-
no ossia l'Occasione d'Augusto Cesare (Turin, 1633,
8vo); fictitious,—Estirpation de l'Ilsieue, ou Décla-
rations des motifs que le Roi de France a d'abandon-
ner la protection de Geneve; the second part remains
unpublished, as the first part of the work was reserved in MS.
in the university library of Turin:—Amores nova,
ti ci et ciclis Sabaudia; Vita B. Margarita Sabau-
dian, murckianissis Monis ferruiti; etc. See Rosetti,
Scrittori Pedemonti, p. 470; Richelieu, Memoirs,
vol. x; Le Vassor, Hist. de Louis XIII; Botta, Storia
d'Italia.

Monogamy. See Marriage.

Monogamia (Greek μοιας, single, and γαμής, let-
ter), a character composed of two or more letters of
the alphabet, often interlaced with other lines, and used
as a cipher or abbreviation of a name, is found to be of fre-
quency occurrence in the annals of early ecclesiastical
history, and seems to have been introduced into the
early Church from the heathen nations.

I. The use of monogamias began at a very early date.
They are found on Greek coins, medals, and seals, and
are particularly numerous on the coins of Macedon
ian, Boeotia, Thessaly, and Sicily, and on a medallion of
Augustus, to represent the names of states and cities by
monograms, of which above 500 are known, but some have
not been deciphered. Monograms occur on the family
coins of Rome, but not on the coins of the earlier Roman
emperors. Constantine placed on his coins one of the
letters of his name in monogram form, and the one in
the recesses of the catacombs, composed of the first
and second letters of ΧΡΙΣΤΟΣ (Christus), a monogram
which also appeared on the Labarum, and was contin-
ued on the coins of the succeeding emperors of the East
down to Alexander Comnenus and Theodore Lascaris.
We often find it combined with the first and last letters
of the Greek alphabet (Rev. 8.). Another well-known
monogram is that of the name of Jesus, IHS, from the
first three letters of 'ΙΗΣΟΥΣ. (See below, Monogram
of Christ.) Popes, emperors, and kings, during the
Middle Ages, were in the practice of using a monogram,
frequency replacing by it their signature. Painters and
printers used it; and, unintentionally or not, many
of its authors, the monogram has frequently served
in modern times to determine the age of a MS., and even
of early printed works. See Horne, Introduction to Bib-
liography, vol. ii; Bruliot, Dict. des Monogrammes (Mu-
nich, 1822-34). See also Iconography; Illumina-
tion; Apocalypse.

II. Monogram of Christ.—The sign used to represent
the name of Christ. This name is usually given to the
combination of the first two letters forming his name in
Greek; but there is also a monogram of the name of
the
Jesus, which is of great antiquity, and of both names together. We will examine them successively.

(1) For the name of Christ. The monogram used in the primitive Church is communicated to us by the ancient writers, and also by numerous Christian monuments of that period which are still extant. We find it generally formed by one of the two combinations of the letters XP, the P being set inside of the X, which latter is either an erect X or reversed, giving the forms Χ and Π. The first is the form described by Eusebius (Vita Constanti, 81) and Paulinus of Nola (Poem. xix, de Fécit. Nat. xi, c. Orig. Opp. ed. Muret, p. 461); the latter is described by Lactantius (De mort. persoeul. c. 44), for we can hardly make out his expression concerning the transversa X, the point of which is bent, to signify anything else than the Π, the upright part of which is made into a P. These two forms give rise to two others, by merely turning the P the other way, thus, Χ and Π. There are also instances of other less usual combinations. For a description of all the various forms, see, besides the special works on the monograms of Christ, Mamachi, Orig. et antq. Christ. iii, 62 sq.; Münzer, Simbolder, pt. v, p. 84-87; Didron, Iconogr. Chrét. p. 401 sq.; Letronne, Évans. archél. de deux quest, sur la croix enseigne Egypt. (Mém. de l’Acad. des Inscrip. vol. xvi, pt. ii, p. 284); Twinning, Symbols and Emblems, pt. i, iii, iv. If we now inquire into the further significance of these two forms of the monogram, it appears that on a classic, and to some extent, a further meaning of importance, we must first consider whether it is indeed always a distinctive mark of Christian monuments. Here we find that the form Χ is exclusively used by Christians, and is the sign of the name of Christ. Yet it must be observed that it closely resembles the Egyptian hooped cross, the symbol of life, which is often represented in the hand of the Egyptian deities, and then, in consequence of little irregularities on both sides, the two monograms happen sometimes to be exactly alike; even the Egyptian Christians sometimes used the Egyptian sign for that of the cross (see Letronne, Évans. archél. in Mémoires de l’Acad. des Inscrip. xvi, 285 sq.). The other form, a combination of XP, is essentially of heathen origin. We find it on Greek money greatly anterior to Christ, namely, on the Attic tetradrachmas (Eckhel, Doct. numm. ii, 210), as also on the coins of Potinneas, a specimen of which is found in the hands of Jesus Anagyros on the side, and on the other an eagle holding the monogram ΧΕ in his claws, is to be seen in the collection of coins at Berlin (No. 428). It is also found in an inscription on a monument erected to Isis, in Egypt, in the year B.C. 137-8 (see Böckh, Corp. Inscr. Gr. n. 4718, b). At the same time such heathen monuments are very scarce; and where the sign is found on tombs, it may generally be taken for granted that it is there as the Christian emblem. In after-times the significance of this sign was altered, especially among the Greek writers, where we seldom find Χ used to designate Christ. It most generally stands for Χριστός, and in the construction Παλαθοντος; it is also used as an abbreviation for γραβην (see Montfaucon, Palæogr. Gr. p. 344).

On the other hand, in the Greek calendar, since the 11th century, ΧΡΑΣΙΜΑ is used for Χριστιανόν πάταγα, in opposition to ναμαθαμα πάταγα (see Piper, Karl. des Grossen Kalendarium u. Osterfæl, p. 130 sq.). It has long been a much controverted point to know whether this monogram was introduced only by the emperor Constantine, or whether it was in use anterior to his reign. It seems, however, pretty much established that the monograms which have been referred to in order to prove its greater antiquity are either spurious or doubtful (see Mamachi, Orig. et antq. Christ. c i, p. 54, n. 8); and the oldest monument of ascertained date which bears it is a grave-stone at Rome of the year 381, where the monogram ΧΡΑΣΙΜΑ stands between branches of palm, and preceded by the words ΙΝ ΣΙΓΝΟΙ, which recall the apparition of Constantine (Piper, Über den Christlichen Bildekkeris, p. 4, 65, with a plate, fig. 1). Yet another inscription, lately discovered in the catacombs of Melos, and containing the monogram, is considered as of the 2d century (see ΧΡΑΣΙΜΑ in subscript. Gr. insc. laci. iii, n. 246, b., p. 8). It is further probable that, since in the early part of the 2d century the first two letters of the name of Jesus were already used in that manner, as we shall see hereafter, the same was already done also with the name of Christ; it may be supposed that the monogram, when adopt a general sign, he would more likely have adopted one previously in use than invented a new one. After Constantine it became very numerous in private monuments, and especially on the graves, and that in most Christian countries.

In Germany we find many such inscriptions, with either the ΧΡΑΣΙΜΑ or the ΧΕ at Trèves (Hersch, Centralmuseum, pt. iii, Nos. 56, 61; Le Blant, Inscr. du St. Ét. de Trèves, vol. i, No. 260, 244), and at Cologne (Hersch, p. i, No. 55, 96; Le Blant, vol. i, No. 355, 359). They are also found on things deposited in the graves, as, for instance, on lamps and glass vessels, and, finally, on things used in daily life, as on stones, rings, etc. (D’Agincourt, Scult. pl. ix, fig. 1, 24). Under Constantine the Great the monogram came to be used for coins and medals. He caused it to be inscribed on the Labarum (q. v.), doubtless in the form (Eusebius, Vit. Constanti, i, 28, speaks only of the cross; but the cross seen by Constantine was this very monogram), as also on his helmet, and on the shields of his soldiers. His vision is recalled in the Labarum by the monogram in the hand of the emperor, who is crowned by victory, and by the legend hic signo victor eris on the coins of his son Constans, and of the contemporary (Venetian) Gellone (Santini, 351-354). In Egypt, which was the seat of the labarum, there is a celebrated coin with the monogram of the Labarum, placed on and piercing a snake, with the legend APES PUBLICA (Eckhel, Doctr. numm. viii, p. 88). Coins show it also on the helmet of Constantine, and on the shield of the emperor Majorianus (457-461). In the coins of the emperor Honorius, the monogram is repeated, and it is generally agreed that its two principal forms is quite common until the time of Justinian I, with an interruption during the reign of the emperor Julian. Under Justinian (565) the sign of the cross took the place of the monogram. Soon after Constantine, in the second half of the 4th century, we find the first public oldest monument which indicates that kind of which the date is an inscription of the year 877 at Sitten, in Switzerland, probably by the praetor of that place, and relating his restoration by the praetor Pontius (Monemasc. Inscr. Heret. Ltat. pl. 8, No. 10; Le Blant, Inscr. Chr. p. 496, pl. 58, No. 281; Gelpeke, Kirchengesch. d. Schles. pt. i, p. 86 sq.). It was especially used in church architecture. The oldest, from the time of Constantine, is to be found in the mausole of S. Constantia at Rome, where it is on a roll in the hand of Christ. In the Middle Ages it was especially placed on the top of the pulpit, as in the churches of St. Francesca Romana and of St. Maria Maggiore at Rome, both built in the 13th century. In the Lateran it is placed in the gable end, according to the orders given by Clement XII in 1735. This monogram, in funereal inscriptions, where it occurs at the beginning, in the middle, and at the end, may be considered in general as confessing Christ. It is sometimes used in connection with the words quia seminum in ΧΕ (Marini, Hist. Allian. p. 57). In the images on the graves it is especially used to designate the person of Christ, particularly where there are any representations of him. Thus a lamb standing on a mountain, as rep-
presented in Rev. xiv, 1, pictured on a coffin in the Vat-
ican grottoes, bears on its head the Π (Bottari, Seul.
and sacre, vol. i, tav. xxi). It is also used with the
bodily representations of Christ, either simply over his
head, or in the nimbus around him, or on one side of
his head, as in a lately discovered painting in the
crematory of Praestabulus (Perr. Les Catacombes de
Rose, ib. L.). There is a gem of heathen origin
representing the heads of Jupiter, Apollo, and Diana,
with the inscription Vieux in des ref., in which the
head of Jupiter is surmounted by the sign Π. This
was probably added to it in after-times by a Christian
owner, either to give it a sort of Christian consecration,
or, more probably, to transform the head of Jupiter into
a likeness of Christ (Piper, Mythol. u. Symb. d. christl.
Kuns., i, p. 115-117). Sometimes the monogram also
appears alone in carvings, and is then intended to
represent the person of Christ; for instance, on glass
vessels, where it is placed between two persons, to sig-
nify that Christ is with them. An especially interest-
ing instance of that kind recurs on several coffins, where
a cross is represented, with those who watched at the
grave at the foot of it, and on the cross the monogram
Σ, in a wreath, borne by a soaring eagle. While the
lower part is indicative of the crucifixion and burial,
the crowned monogram held aloft is the emblem of the
crucifixion and ascension. A drawing and explanation
of it are to be found in the Evang. Kalendar for 1857, p.
37, 46 sq. Finally, we find also the monogram used
with a light and obvious meaning. On a grave-stone of the
year 355 the ΠΣ is placed by the side of the figure of a
person who, with the outstretched right hand, holds
hold of the name (Aribnli, Roma subterr. lib. iii, 28,
t. ii, p. 570).

(2) For the name of Jesus Christ we have, first,
in Greek, the monogram IXC. This is the usual abbrevi-
ation of the two names found in the oldest MSS. of
the N. T., as in the Codex Alexandrinus of the 5th and
the Claramontanus of the 6th century, and which is
contained in the Minusss MSS. It appears also on mon-
uments, namely, in the inscription ICXC,
found in the catacombs of Naples, in a niche, at the place of an old
well (Pelliccia, De eccles. christ. polit. ii, 414, ed. Bonn;
Bellermann, Uber d. ältesten christlichen Begräbnis-
stätten, p. 81), and is still used in the Greek Church,
namely, on the broken edge of the vase of the oriental
community (Goar, Encyclopaedia, p. 29). In sculptures and carv-
ings, we find this monogram accompanying the figure of
Christ; as in the Byzantine coin, first under J. Zim-
issaco (963-978), whence it remained in use until the
fall of the Byzantine empire. There is yet extant a
fine gold medal of the last emperor, Constantin XIV
Palaeologus, on the reverse of which is the figure of
Christ standing, with the inscription IC XC (a speci-
men of it is to be seen in the imperial collection of coins
at Vienna) (see Eickel, Doctri. numm. viii, 275). It is
also found on ancient Greek monuments, and on the an-
cient doors of the church of St. Paul at Rome of the
year 1070. Byzantine paintings in which it is repre-
sented are found in the royal gallery of Berlin (Nos. 1044, 1048). The introduction of this monogram into the Latin Church is especially remarkable. The ancient church of St. Peter at Rome contains mosaics of the time of Innocent III, which represented Christ enthroned between the apostles Peter and Paul, with the inscription IC XC (see the Evang. Kalendar for 1851, p. 50). The same is found to this day in the same church. Philip Dusul of 1800, in the church of S. Maria Mag-
giore at Rome (Valentini, Basil. Liber, pl. clii). There are
also numerous easel pictures of Italian origin of the
14th and 15th centuries, which contain the likenesses of
Christ, together with this monogram, as, for instance,
the crucifixion of Taddeo Gaddi, of 1354, in the royal
gallery at Berlin, No. 1080, and an apparition of Christ to
Magdalena after his resurrection, by Donatus Bizama-
nus, in the Christian Museum at the Vatican (D'Agin-
court, Peint. pl. xxiii). Secondly, we have in Latin the
monogram IHS XPS. The Latin Church has also a
special abbreviation of both names, which we find in
the oldest Latin MS. copies of the Bible; for instance,
in the Greek and Latin Codex Claromontanus. It is occa-
sionally preserved in the Minusss MSS., as in the
Sacramentarium of Gellone at Paris, in the 8th century,
where the Gospel of Matthew begins with the words
"Liber generationis iihu xpi" (face-similar in Silvestre,
Palearg. t. iii). This mode of writing gave rise to nu-
umerous researches in the French Church in the 9th century.
Amalarius, from Metz, author of the book De
Officia Ecclesiasticis, asks, in a letter to Jeremiah, abchos-
bishop of Sens, in the year 827, to know why the name
of Jesus is written with an asperate, an H, and expresses
the opinion that, according to the Greek, it should be
written with Χ, and C or S (D'Achery, Specul. c. lxi, 350);
and the other answer is that it is not an aspi-
rate, but a Greek Χ. He asked also bishop Jonas
whether it were more correct to write IHS or IHS,
and was answered that the latter form was preferable,
the first two letters being taken from the Greek and
not from Χ. Sometimes it had been given also in the
Greek Christ, XPS. The formula IHS XPS (and IHS XIS) REG
REGMA TIVM occurs on Byzantine coins, according
to the example of Justian II, from Basillus Macedo
(De Saulcy, Essai de classification, des suite monét.
Byzantine, pl. xix, 1), down to Iumanus IV Diogenes (1068-
1071); and it is only there that the other monogram,
IC XC, remained in use. In the West, we find the
monogram IHS XPS in use at a very early period, both
in inscriptions, carvings, and paintings, as, for instance,
miniatures in the Carolingian MSS., and in pictures of
the Middle Ages.

(3) For the name of Jesus alone, we find in Greek the
monogram IH. It is the first form of which we have
any knowledge, and occurs as early as in the Epistle
of Barnabas (q. v.) c. p., where the number 318 of the
men circumcised by Abrahom (resulting from a com-
parison between Gen. xxvii, 23 and xiv, 14) is found to
be a sign of the name of Jesus and of the cross, for 318
is written with Greek letters, ap'. This meaning was
generally received, as also by the Latin Church (Cote-
tier). This abbreviation, however, occurs but seldom on
the monuments. In the West, the monogram
IHS XPS (q. v.) obtained great popularity in the Mid-
dle Ages through the preaching of Bernard of Sienna,
who in divers cities, and especially at Viterbo, in 1427,
was in the habit of exhibiting a tablet on which that
monogram was painted in golden letters, surrounded by
a halo of golden rays, and to which he directed their de-
votions. He was accused of innovation indeed, but suc-
ceded in satisfying pope Martin V (Wadding, Annal.
minor. T. V. a. 1427, p. 183 sq.). This monogram, to which the cross is sometimes added, remained in use in small Latin
texts, and sometimes in Gothic. Thus, in the picture of
the adoration of the three kings, by Raphael, in the royal
gallery at Berlin, it is found in the upper angle, and on the upper edge of a golden sun, written in golden letters,
which, however, must not be understood, as
some have made it out, to signify in hoc signo. The Jesus
appropriated that monogram to their use. On the
election of the first general of the order, in 1451, which
resulted in the elevation of Ignatius, the latter had
heard him speak with the name IHS, and the sign IHS
was engraved on his seal, the same with which the elec-
tion of the generals since Jacob Laynez has always been
sealed (Acta Sact. d. xxxi, mns. Jul. t vii, 582 s). See,
besides the authorities already referred to, Herzog,
Real-Encyclopädie, t. ix, 788 sq.; Müller, Sinibildcr u.
and that particular and rarely recognised monomaniacs are invariably associated with the same structural alteration. The unhealthy elevation of the sentiment of cautiousness, for example, especially where it amounts to fear and hypochondriasis, or hypochondria, is a symptom of disease of the heart and large blood-vessels, while the monomania of ambition (or optimism, as it has been styled) is the concomitant of the general paralysis of the insane. It will be obvious, from the definitions previously introduced, that the species or varieties of monomaniac disturbances, as to the faculties or phases of the human mind, and to their combinations. Several great divisions, however, have been signalized, both on account of their frequency and of their influence upon the individual and upon society.

1. Monomania of suspicion, comprehending doubts in the fidelity and honesty of friends and those around, belief in plots and conspiracies, the dread of poison; and where, as is often the case, it is conjoined with cunning, the propensity to conceal, mystify, and deceive. This malady has frequently been observed in intimate connection with cancer and malignant growths. 2. Monomania of superstition and unseen agencies, where credulity, mingled with religious awe, peoples the external world with spectres, omens, mysteries, magnetism, and the imagination with horrors or eccentric reveries. Insensibility to pain, or indifference to external injuries, has been observed as a characteristic of individuals affected with this disease. 3. Monomania of delirium or euphoria, where sleep and delirium are indulged, with a sort of reference to the sensation and means of the patient. 4. Monomania of fear. 5. Monomania of pride and ambition. 6. Kleptomania (q.v.). 7. Dipsomania, or Oinomania (q.v.). If it can be proved that such morbid tendencies as have been here mentioned, and others still less prominent, are merely salient points of a great breadth and depth of mental disease, the plea of insanity may justifiably be employed more frequently in the consideration of criminal acts.—Chambers, s. v. Dr. Forbes Winlow, in The Pall Mall Gazette, holds that what is called partial insanity, or monomania, is not sufficient to prove of itself a testamentary incapacity. "I have often," he says, "witnessed among the insane the possession of delicate, just, and honorable ideas respecting their own social position, and the pecuniary claims of those most near and dear to them." He approves the action of ecclesiastical judges in former times, who, when a will was brought before them and a testator proved, first, if the testator, second, inspected, if possible, the visible evidence in the wording, arrangement, etc., of the will that its author was insane; and, next, whether the testator's lunacy were visible in the distribution of his property. If neither of these points was established, the will generally stood against unquestionable evidence of mental unsoundness or competency in all other respects. He quotes a case where the testator left a large fortune to his housekeeper, and directed in the same will that his executors should make fiddle-strings of part of his bowels and smelling-salts of others, and that the rest of his body be vitriolated into lenses for optical purposes. He did not feel safe in entrusting his most precious fiddle to a general pump. It appeared that he had conducted his affairs with great shrewdness and ability. See Esquirol, La Monomanie; Bayle, Maladies du Cerveau; Stephens, Criminal Law of England, p. 92.

Monophysics (Greek, Monophoyxias, from μονός, single, and φυσις, nature) is the name of a Christian sect which took form under that name in the year 451, when the Eutychian heresy was condemned by the orthodox Eastern Church in the Council of Chalcedon. But though the name of the Monophysites first occurs in the acts of the Council of Chalcedon, Monophysitism, as such, had not come into existence even to that date, and is to be traced to Eutychianism (q. v.), from which it sprang, though by no means identical with it. Eutyches not only attributed but one nature to Christ after his incarnation, but held that Christ's body, being the body of God, was not identical with the human

Various forms of the Constantinian Monogram. (Figs. 1. 4, 5, with a and α, as symbols of eternity; 5, with olive-branch, as an emblem of peace.)

Kunstvorsstellung d. alten Christen (Altona, 1825); Piper, Mythologie u. Symbolik d. christl. Kunst, vol. i (1847) and ii (1851); Withrow, Catacomb of Rome (N.Y. 1874), p. 264 sq. See Christ, MONOGRAPH of.
body. The Monophysites, in distinction, held that the two natures were so united that, although the "one Christ" was partly human and partly divine, his two natures became one and the same (Hélas, 380). This modification of the Eutychian doctrine was taught by Dioscorus, the successor of St. Cyril as patriarch of Alexandria. He presided at the Council of Ephesus (A.D. 449), which considered the opinion of Eutyches, and from the murderous violence shown by his Egyptian partisans was called "Latrocinum," or "Robber Synod." Under the influence of Dioscorus, who wished to gain a victory over the patriarchs of Antioch and Constantinople, the chief opponents of Eutyches, the assembled bishops were persuaded to give their decision in favor of Eutyches, the error of which is now generally called "the Passy" exclamation of Dioscorus: "Will you endure that two natures should be spoken of after the incarnation?" (Mansi, Consil. vi, 583). "Partly thus terrified, partly ignorant, partly, perhaps, persuaded," says Neale, "the assembled fathers set their hands to the acquittal of Eutyches, and thus the Monophysite heresy was born in the Church." (Patriarchate of Alexandria, i, 295). The decision so given was not, however, accepted by the patriarchs of Antioch and Constantinople, nor by the bishop of Rome, and another council was called by the new emperor Marcian in the following year, which assembled first at Nice, then very gradually at Chalcedon, where the controversy ended. This council condemned the doctrine of the Eutychians and Monophysites, and it was stated "that Christ was really divine and really human; in his divinity co-eternal, and in all points similar to the Father; in his humanity, son of the Virgin Mary, born like all others, and like unto us in all things except sin; that after his incarnation his person contained two natures unmixed (ἀνειμμένοις) and unaltered (ἀληθεύονται), yet at the same time completely (κατακομματικώς) and intimately (κοινωνικά) united." The adherents of the Alexandrian school saw themselves overpowered and withdrew from the council, and thus "stared those violent and complicated Monophysite controversies which confused the Oriental Church, from patriarchs and emperors down to monks and peasants, for more than a hundred years, and which have left their mark even to our day." Dioscorus himself was deposed from the patriarchate, and a certain Proterius placed in his stead. The people, however, sympathized with the persecuted, and the Monophysites increased very rapidly. They spread especially in Palestine, mainly through the agency of the monk Theodosius, who was instrumental in the expulsion of the patriarch Juvenal for a short time. He was, however, reinstated and given the patriarchate of Antioch. The conflict between the two parties was only quelled by force of arms. Egypt, and in particular Alexandria, proved, however, the greatest stronghold of Monophysite views, and constant troubles were there the result. The patriarch Proterius was frequently banished by his opponents, and public quarrels were a common occurrence. Finally, in the spring of passion, a few Monophysite partisans attacked the house of Proterius, and, driving him from it, followed him to the church, and there stabbed him to death, and disposed of his body in a most cruel manner. In Proterius's place was put a Monophysite, the presbyter Timotheos "Elurus, and henceforth there reigned in Alexandria an unbroken succession of Monophysite patriarchs. Under Elurus's rule all who accepted the decisions of the Council of Chalcedon were excommunicated, especially pope Leo. But complaint being made agains Elurus to the emperor, he was banished to Gaeta in Italy. He opposed the rule of Elurus was a profitable one to the Church, and had fanatics only stood aside the best results would have been assured. He was conciliatory in his nature, as may be seen from his acts. He evidently intended to draw his flock back into the orthodox fold. Thus Dioscorus had followed Eutyches in denying Christ's human nature to be of the same kind as that of ordinary men; but when Timothy was on a visit to Constantinople, and Eutyches was condemned (449), Timothy took the opportunity of disclaiming this part of their belief, and declared the conviction of himself and his followers to be that the Saviour became consubstantial with men according to his human nature, as he had ever been consubstantial with the Father according to his divine nature. In this particular the Monophysites and the followers of Timothy, who were hence called "Timotheans," as the opposite party were called "Dioscorians," returned to the creed of St. Cyril, which his deacon and successor Dioscorus had forsaken.

Another patriarchate which the Monophysites appropriated was that of Antioch. John Philoponus (387-450), an adherent of Eutyches, who had been driven out of both convents of Constantinople, having gone to Antioch with Zeno, a relation of the emperor, connectcd himself there with the remaining Apollinarians, and opposed the orthodox bishop Martyrius; the latter fled to ask help of the emperor, and in the meantime Fuller was appointed patriarch. He condemned the Council of Chalcedon, excommunicated all who held that God was not crucified, and introduced into the liturgy the formula Σταυρωθηκήν του θεοῦ, which became subsequently the shibboleth of the Monophysites. He was finally excommunicated and deposed by the emperor.

The usurper Basiliscus, who succeeded Zeno on the throne in 476, protected Monophysitism, declaring it the religion of the state, and condemning the Council of Chalcedon and the epistle of Leo in an εγκλήματος. But Acacius, bishop of Constantinople, having in the mean time organized a dyophysite counter-revolution, and gradually gaining strength, the orthodox succession was revived after the death of Elurus (477), when Zeno, who had recovered the throne, appointed Timothy Salophakios as patriarch of Alexandria. At the death of the latter, who had ruled for twelve years, the Catholic party nominated John Talaias, and the Monophysites Peter Mongus, as his successor; the latter succeeded through the influence of the emperor. In 482 Zeno issued his Henotikon for the purpose of uniting the two parties: it aimed at satisfying both parties, but it did not please either. The stricter Monophysites of Egypt, who insisted on an unvarnished rejection of the Council of Chalcedon, were excluded from the others to form a Monophysite society of their own, which received the name of Αποστολικά. See ACERIAL. The dyophysites also split into two parties, one of which accepted the Henotikon, while the other rejected it. At the head of the latter party stood Felix II of Rome, the second of the Henotics. A short time after this attempt at conciliation resulted only in making four parties instead of two, and in creating a schism between the Latin and the Greek churches which lasted thirty-five years (484-519). Zeno's successor, Anastasius, adhered strictly to the Henotikon, and even inclined somewhat to Monophysitism. In 513 Severus, one of the principal men among the Apollinarians, was appointed patriarch of Antioch. His attempt to introduce the formula Σταυρωθηκήν του θεοῦ in the churches of Constantinople created fresh troubles; the patriarch Macedonius, who opposed the innovation, was deposed, and the disorders which followed were hard to redress. But in consequence of the revolt of the general Vitalianus (514), the orthodox party were finally restored to the possession of their rights, and in 510 the unity with Rome was fully established. The partisans of the Henotikon were taken off the church lists, and all the Monophysite bishops deposed. Most of these withdrew to Egypt. Here they were soon divided among themselves. Julian, formerly bishop of Halicarnassus, affirmed that the body of our Lord was rendered incorruptible in consequence of the divine nature being blended with it. See ARCHITHEODOTUS. Others maintained that it was corruptible. See AGNOSTES and
The leader of the last named was Severus, the deposed patriarch of Antioch, who maintained the corruptibility of Christ's human nature, or its identity with that of ordinary pain-suffering, weak, and mortal manhood. This theology eventually became that of the Monophysites at large, hence he deserves special attention in this connection. With him Monophysitism receded another step from Eutychianism, for it was now the doctrine of the Church, after his incarnation, was of one nature only, the doctrine came to be held in such a way as not to be extremely divergent from the Church. For "in the theology of Severus, the qualities of human nature were all retained in Christ after the incarnation, although there was no union of the two in him save as the divine Being that it could not be said to possess any being or identity of its own. Thus the Monophysite conception of Christ's person settled thus into that of a Theandric, or composite nature, analogous to that composite action of his person which later divines have called a Theandric operation (ζωτική ἑνσωματωση). Yet belief in such a composite nature is inconsistent with the Nicene Creed, which asserts that Jesus Christ is 'of one substance with the Father,' and since the Father is not of such a composite nature, to declare the Son to be so is to declare him to be of a different substance from him. Thus the intellectual form with which the monophysites came to escape from the charge of heresy any more than that earlier form of opinion which was condemned at Chalcedon. The instability of opinion, when disassociated from the safeguard of the Nicene Creed, was also strikingly illustrated in the case of this later monophysite school as it had been in the earlier. Severus himself held views respecting the soul of the united natures of Christ which were not logically consistent with the theology respecting their oneness, and thus it was only one step forward for Theodotus, his deacon, to invent the tenet of the Agnoite, that the human soul of Christ was like ours in every way, even in the want of omniscience or ignorance." When, again, Severus maintained that the divine and the human wills in the united natures were also so united that there could be no volition of the one nature one way and of the other nature in the other direction, he was preparing the way for that development of his opinion which was mainly the basis of the Eutychianism v. v., which maintained that "there was only one will in Christ, as well as only one nature." After the death of Severus, his followers divided—the men of wealth and the clergy choosing as successor to Timothy a certain Theodosius, and the monks and lower classes choosing Galanus, the leader of the simple monks. Galanus adopted the tenet of the Galoites [see Galantik] ; the latter, viewing the body of Christ as created (ɛστεροιο), were also called Kirisoteles (comp. Dorner, ii, 159 sqq.; and Ebrard, Kirchen- u. Dogmengesch., i, 266 sqq.). This division, and the energy of the emperor Justinian in supporting the orthodox cause, finally led to a revivification of the orthodox patriarchate in the person of Paul (A.D. 538), and for a hundred years there were two lines in the patriarchate—one monophysite, the other orthodox. Many other sects arose also, such as the Tritheists, the Philonists, the Conistas, the Damasitans. Indeed, the 6th century was an age of as great turbulence in the Church on account of monophysitism as any that preceded. Justinian was even moved to call a council, which, convening at Constantinople in A.D. 558, constituted the fifth ecumenical council, the result of whose deliberations was a partial victory for the Alexandrian monophysites, as it appeared to reconcile with the definitions of Chalcedon. But, notwithstanding the concessions of the fifth ecumenical council, the Monophysites remained separated from the orthodox Church, refusing to acknowledge in any manner the dyophysite Council of Chalcedon. Another effort of Justinian to gain them, by sanctioning the Aphthar- todocetic doctrine of the incorruptibility of Christ's body (566), threatened to involve the Church in fresh troubles; but his death soon afterwards, in 565, put an end to these fruitless and despotical plans of union. His successor, Justin II, in 565 issued an edict of toleration, which exhaled all Christians to glorify the Lord, without contending about persons and syllables. Since that time the history of the Monophysites has been one of the bitterest of the Church, the Christians in Armenia and Georgia, among whom also monophysitism had early gained acceptance, openly declared themselves in favor of this doctrine; and thus the Armenian and Georgian churches continue at this time, separated from the other monophysite churches merely by peculiar customs. In Syria and Mesopotamia the Monophysite and Nestorian, in consequence of persecution and the want of ministers, when Jacob Baradaeus, an obscure monk, was the instrument of reviving them: after him the Syrian Monophysites are called Jacobites (q. v.). An attempt to reconcile the Monophysites with the orthodox party was made by the emperor Justin II, who wished to conciliate the Nestorians, and a new sect, the Monothelites, who attempted to compromise between the two factions by the hypothesis that after the union of the divine and human natures in Christ, though there continued to be two distinct natures, yet there was but one will. The only effect of this was to increase the controversy. See MONOETHELITES. Monophysitism still continued to be held in some parts of the East, and even by the Maronites (q. v.) until their final reconciliation with the Church of Rome in 1182, when it was renounced by them. The doctrine that Jesus Christ possesses only one simple nature, being not truly man, but the divine Spirit in a human body, has recently been revived by Henry Ward Beecher in his Life of Christ, and is also maintained by the Swedishborgians. See New Jerusalem Church. The union of the divine and human natures in Christ is maintained by Dr. Hovey (God With Us). See the Acta, in Mansi, vol. vii.; Mai, Scriptores, chs. vii.; ed. Paris. Hist. of John, Bishop of Ephesus (Oxf., 1853), pt. iii. See CHURCH-TEOLOGY; INCARNATION. MONOCHASM (from μόνος, one, and σχήμα, form, God) is the belief and worship of one God, in opposition to polytheism, which acknowledges a plurality of gods. All the different mythologies have, among the host of gods with which they people heaven and earth, some superior or supreme deity, more or less defined, but in every case distinguished above the others; and in the
MONOTHEISM

MONOTHEISM

The history of all the different nations where polytheism has obtained we may trace a period when the idea of one God was more or less prevalent. The most ancient tradition among the Hebrews, and of the early Christian Church, is in representing this as the primary and uncorrupted religion of mankind. M. Rénan, in his Histoire Générale et Système comparé des Langues Semitiques (Par. 1868, 2d ed.), and Nouvelles Considerations sur le caractère général des Peuples Semitiques et en particulier sur leur tendance au Monothéisme (Par. 1869), takes the ground that the Semitic nations of the world are the propagators of the doctrine of the unity of God,—indeed, that "of all the races of mankind, the Semitic race alone was endowed with the instinct of monothelmism—a religious instinct analogous to the instinct which led to the creation of the "image of God."" (p. 73.) Max Müller, however, takes exception to this position, and insists upon it that the primitive intu- tion of God was in itself neither monothelistic nor polytheistic, but consisted solely in that simplest article of faith—that God is God. "This must have been the faith of the ancestors of mankind previously to any division of race or confusion of tongues. It is too often forgotten by those who believe that a polytheistic worship was the most natural unfolding of religious life, that polytheism must everywhere have been preceded by a more or less conscious theism. In no language does the plural exist before the singular. No language ever has a word for the idea of god except without having previously conceived the idea of a god. . . .

There are, however, in reality two kinds of one-ness which, when we enter into metaphysical discussions, must be carefully distinguished, and which for practical purposes are well kept separate by the definite and indefinite articles. . . . If an expression had been given to that primitive intuition of the Deity, which is the mainspring of all later religion, it would have been, 'There is a God,' but not 'There is but one God.'" The latter form of faith, the belief in one God, is properly called monothelmism, whereas the term monothelism would best express the faith in a single God" (Chips, i, 348-50).

This kind of monothelism, according to Müller, "forms the birthright of every human being. . . . In some form or other, the feeling of dependence on a higher power breaks through in all the religions of the world, and explains to some extent the belief in a God. Paul, therefore, in many times past he suffered all nations to walk in their own ways, nevertheless left not himself without witness, in that he did good, and gave us rain from heaven and fruitful seasons, filling our hearts with food and gladness. This primitive intuition of God, and this in-escapable feeling of dependence on God, could only have been the result of a pre-existing, primitive, and natural, truest sense of that word" (p. 346-8; see also p. 388, 374; comp. Gould, Origin of Religious Belief, i, 267-277).

In this respect Judaism, Christianity, and Mohammedanism agree.

"Two facts," says Gould, "arrest our attention . . . the prevalence of monothelism, and the tendency of civil- ization towards it. Monothelism is at present the creed of a large section of the human race. The Chris- tian, the Jew, and the Mohammedan hold the unity of the great cause with varying distinctness, accord- ing to their powers of abstraction" (Origin of Religious Belief, i, 298).

But in regard to the Trinity they se- riously differ, the Mohammedan and the Jew reject- ing with vehemence the least approach to a trinitarian conception of the Deity. "The monothelism of the Mohammedan," says J. F. Clarke, "is that which makes of God pure will; that is, which exaggerates personality (since personality is in will), making the divine One an infinite Free Will or an infinite I. But will divorced from reason and love is wilfulness, or a purely arbitrary will. The monothelism of the Jews differed from this in that it combined with the idea of will the idea of justice. God not only does what he chooses, but he chooses to do only what is right. Righteousness is an attribute of God, with which the Jewish books are saturated. Both of these systems in spite of God cut adrift the moral sense of the Creator and Ruler, above all as its Judge; but not through all and in all. The idea of an infinite love must be added and made supreme, in order to give us a Being who is not only above all, but also through all and in all. This is the Christian monotheism. . . . Mohammed teaches a God above us; Moses teaches a God above us, and yet with us; Jesus teaches God above us, God with us, and God in us" (Ten Great Religions, p. 481-83).

See Jahrb. deutsch. Theol. (1860), iv, 669; Evrl. Quart. Rev. (April, 1873), art. ii; Lond. Quart. Rev. vol. xxxviii. See also Unity of God.

God and the Development of Monothelism. Recognising a Jewish, Mohammedan, and Chris- tian monotheism, he traces first the development of the Jewish, which, under Moses, received "its final and complete form as a system, and embraced four leading doctrines: (1) the absolute being of God; (2) the absolute unity of his being; (3) the difference in kind of matter from God; (4) the subjection of mat- ter to God" (i, 262; comp. Moses). The Moham- medan's monotheism he recognises as "the offsprings of Jewish monotheism. Yet has the pure deism proved inferior to the Jewish, for "as a working sys- tem it annihilates morality. Before the almighty God, man is a creature. The whole system of gods and goddesses is on a level; and if the notion be humbling to him, he may recover a little self-respect when he remem- bers that the archangels are in no better plight. Be- tween man and God is a profound and wide abyss, and no bridge spans it. Too far above man to sympathise in any way with him, God can yet touch him with his jealousy. If man attempt to attribute to himself anything that is of God, and appear to encroach on his all- engrossing majesty by ever so little, the wrath of God is kindled and man is levelled with the dust" (i, 265).

"It is," says Palgrave, "his singular satisfaction to let created being feel that they are nothing else than his slaves, tools, and contemptible tools also, that thus they may the better acknowledge his supe- riorty, and know his power to be above their power, his cunning above their cunning, his will above their will, his pride above their pride; or, rather, that there is no will, no power, no pride at all, but that he himself, in his inaccessible height, neither loving aught save his own and self-measured decree, without son, companion, or counsellor, is no less barren for himself than for his creatures, and his own barrenness and lone egoism in himself is the cause and rule of his indifferent and unregarding despotism around" (Ara- bia, p. 241; comp. all the Political departments).

Christian monotheism Gould excludes from com- parison with the Jewish and Mohammedan, because "its doctrines of the Trinity and the incarnation re- move it from the class to which Mosaic and Islamism . . . belong" (i, 277). See, however, God; Tri- nity. See besides Gould; Clarke, Max Müller, and Rénan; Hengstach, Hist. of Doctrine, i, 330; Christ- lieb, Modern Doubt and Christian Belief (N. Y. 1875, 8vo), lect. iii and iv; Lewes, Hist. Philos. vol. ii (see Index); Liddon, Divinity of Christ, p. 67, 76, 95, 270, 307; and the literature appended to the article The- ology.

Monothelism (from μονός, single, and θηλής, will), the doctrine of a Christian sect, maintains that Christ, though possessed of two natures, was yet subject only to one will; the human will being merged in the divine, or absorbed by it. The doctrine was given shape in an attempt on the part of the emperor Heraclius to unite the different factions of the Catho- lic Church, and to bring back to the fold the Etchis- tians and the Monophysites. There was near the begin- ning of the 7th century much controversy in the Eastern Church respecting the two wills in Christ,
MONOTHEISM

kindred to that concerning his nature. The Monophysites were at that time a most powerful sect, and the movement, especially in Egypt, threatened to assume a political character. In this difficulty the emperor Heraclius, hoping to reconcile the two parties, adopted the doctrine that there was in Jesus the Christ, after the union of the two natures, only one divine-human energy and one will (μόνον Δύναμις) and which was the will of the Father and the Son. Heraclius passed through Armenia and Syria, he came to an understanding with the Monophysite leaders of the Severians and Jacobites, and induced Sergius (q.v.), the orthodox patriarch of Constantinople, to give his assent to the doctrine of ινέν Θειματικόν και μίαν ινενίαν, or of an ινενία ξενάγητη (Monophysitism, it will be perceived, was not accepted by the emperor or the Jacobites, nor did he do anything to encourage it). It consisted in maintaining that, although Christ has two natures, yet these natures possessed or are actuated on by only a single will, the divine will superseding or supplying the place of a human will. It will be observed also that in this way the controversy was removed from the province of pure metaphysics into the moral and practical sphere; and although the assertion of an independent nature without independent action was a contradicatio in adjecto, it was yet hoped that the doctrine might be adopted by the Monophysites. The author of this doctrine was Sergius, who had probably been induced by the arguments of the Eutychians, or the emperor's personal preference of the doctrine. The progress of the doctrine was materially forwarded by the relation which, by the instance of Sergius, and under his representations, pope Honorius (q.v.) was induced to maintain regarding the question. The Monophysite Cyrus, whom the emperor had promoted from the episcopate of Phasis to the patriarchate of Alexandria, promptly called a synod (A.D. 638), by which the seventh canon of its decrees solemnly approved of the monothelite doctrine (in the words τῶν αὐτῶν ἔναν Χριστόν καὶ τὸν ἑνεχριστόν ἑνώσαντα, Μασί, Concili. xi, 563), thereby bringing to effect permanently a union between the different parties (Mansi, Concili. xi, 564 sq.; Letters of Cyrus, ibid. 561). As Cyrus was the principal mover in this attempt, he has been generally esteemed the founder of the Monothelites. The work of the council certainly proved salutary, at least for a time. By bringing the doctrine of the Council of Chalcedon nearer to the Eutychian system, numbers of the Eutychians, who were dispersed throughout Egypt, Armenia, and other remote provinces, returned to the bosom of the Church. The only dissenting leader proved a certain Sophronius, a monk of Palestine, who from the first opposed the doctrine of Monothelitism. He was excommunicated, and when elevated to the vacant patriarchate of Jerusalem (636) was thus afforded ecclesiastical position and power, and now came forward to contest the question, notwithstanding that the patriarch of Constantinople adhered to the Alexandrian decision, and the pope at Rome offered no remonstrance. Sophronius (q.v.) endeavored to show that this doctrine was inadmissible, since the doctrine of two natures set forth by the Synod of Chalcedon (q.v.) necessarily implied that of two wills (see Sophronius Epistola Synodica, which is given in Mansi, xi, 481). He finally summoned a council, and condemned monothelism as a branch of the Eutychian heresy. In order to terminate, if possible, the commotions to which this division was giving rise, the emperor Heraclius in 638 issued an edict, Ἐξάδες (so named because it contained an exposition of the faith), in which he confirmed the apostles' tradition, and proclaimed the preservation of ecclesiastical union, and in which all controversies upon the question whether in Christ there was a double operation were prohibited, though the doctrine of a unity of will was implicated. A considerable number of the Eastern bishops declared their assent to the Edict, and above all Pyrrhus, who succeeded Sergius in the see of Constantinople. A similar acceptance was obtained from the metropolitans of the Eastern Church: but at Rome the Exarch was not differently received. John IV assembled a council, in which that exposition was condemned. See Euchesis. Neither was the monothelite system maintained in the Eastern Church any longer than during the life of Heraclius. In 648 the emperor Constans II issued the edict, and on the exchange of the legates, the province was suppressed, and the contending parties were prohibited from resuming their discussions on the doctrine in question (see Mansi, x, 992, 1029 sq.; Neander, Church Hist. [Torrey] iii, 186-192). Pope Honorius, as we have seen, appeared in favor of the union, and was probably himself inclined to monophysitism; but his successor, St. John V, was more resolute, and held the position differently. The latter condemned the doctrine of the Monothelites, and Theodore excommunicated Paul, patriarch of Constantinople, till the doctrine of two wills and two energies was at last adopted at the first synod of the Lateran, held under Martin I, bishop of Rome, in the year 649. "Si quis secundum scolemos hereticos cum una voluntate et una operatione, quae habet ecclesiis impious confinitor, et duas voluntates, pariterque et operationes, hoc est, divinam et humanam, quae in ipso Christo Deo in uniate salvantur, et a sanctis patribus orthodoxis in Ecclesia sancta praebetur, proscriptus sit" (see Giseler, c, i, 129, note 11; Münch v. Colla, i, 78 sq.). The emperor was so indignant at this daring of Martin that he had him secured, carried to Constantinople, there treated for a time as a criminal, and then banished him to the Crimea, where he died in 655, to be numbered among the martyrs of the Western and the confessors of the Eastern Church. His great intellectual supporter at the council had been a Greek abbot named Maximus, and he, too, underwent a long persecution, being scourged, having his tongue cut out, and at last dying a death little short of martyrdom just as he had reached his place of exile, A.D. 662. The final and authoritative condemnation of the monothelite dogmas took place at the sixth general council held at Constantinople in the year 680, where it was decided that there are in Christ "two natural wills and two natural operations, without division, without confusion or change, with nothing like antagonism, and nothing like concurrence; but at the same time the human will of Christ could not come into collision with his divine will, but is in all things subject to it." An anathema was also pronounced on Theodore, Sergius, Honorius, and all who had maintained the heresy, this anathema being confirmed by Leo II, and on the death of the emperor Theodore, by Arbo, his successor in the see of Rome: "Anathematizamus . . . necnon et Honorium qui hanc apostolicam ecclesiam non apostolices traditionis doctrina lustravit, sed profana proditione immaculatum subvertere consatus est" (Mansi, Concili. xi, 651-657, 761). This anathema of pope Honorius was repeated by his successors for three centuries. See Honorius; Infallibility. The council (also called the First Trullan) was summoned by Constantius Pogonatus. The decision of the synod was based upon the epistle of Agatho, the Roman bishop, which was itself founded upon the canons of the above-mentioned Lateran synod (Agathenis Epist. ad Imperatorum, in Mansi, xi, 253 sq.). Baur says of this controversy (Dogmengesch. p. 211): "Its elements on the side of the Monothelites were the unity of the person or subject, from whose one will (the divine will of the incarnate Logos) all must proceed, since two wills are in contradicito in adjecto, of which there is no guarantee, and on the other hand, an argument of bishop Theodore of Cara, in Mansi, xi, 567); on the side of the Dyothelites, the point was the fact of two natures, since two natures cannot be conceived without two natural wills, and two natural modes of operation. How far now two wills can exist without two persons willing was the point from which
MONROE

514

MONROE

Monroe, Andrew, a minister of the Methodist Episcopal Church, South, of Missouri, was born in Hampshire County, Va., Oct. 29, 1792; was converted and joined the Church when but a youth. In March, 1815, he was licensed to preach, and sent to labor on the Fairfield Circuit. In the following year he was admitted on trial to the Ohio Conference. In 1829, he was transferred to Missouri, and stationed at St. Louis; he returned the next year, and was then placed over the St. Louis District, which embraced the entire state. He was a member of eleven General Conferences, and took an active part in the establishment of the Church, South. He died in Mexico, Mo., Nov. 18, 1911. His several appointments were: 1815, Jefferson Circuit; 1817, Franklin Circuit; 1818, Fountain Head Circuit; 1819, Bowling Green. In the Kentucky Conference: 1820, Hopkinsville; 1821 and 1822, Mayesville; 1823, presiding elder of Augusta District. In the Missouri Conference: 1824 and 1825, St. Louis Station; 1835 and 1836, presiding elder of Missouri District; 1828 and 1829, St. Louis Station; 1830, St. Louis District; 1831, left, by request, without an appointment; 1832 to 1835, presiding elder of St. Louis District; 1836 and 1837, Missouri District; 1838, Columbia District; 1839 and 1840, agent of St. Charles College; 1841 and 1842, St. Charles Station, and agent of the college; 1843, presiding elder of St. Charles District; 1844 and 1845, presiding elder of St. Charles District, and agent of the college; 1846 to 1849, presiding elder of Columbia District; 1850 and 1851, Fayette Circuit; 1852 and 1853, presiding elder of Hannibal District; 1854, transferred to the St. Louis Conference, and appointed superintendent of Kansas Mission District; 1855, transferred back to the Missouri Conference, and appointed presiding elder of Fayette District; 1856 to 1859, presiding elder of St. Charles District; 1860, agent of Central College; 1861 and 1862, Fayette Circuit; 1863 and 1864, Brunswick District; 1865, Fayette District; 1866 and 1867, Conference missionary; 1869 to 1870, St. Charles District; 1871, Conference missionary. It is not within the scope of this sketch to enter into any exhaustive analysis of a life so protracted, aims so single and sublime, purposes so pertinaciously adhered to through a long, eventful course. His name is history, his life a book. Methodism appeared within half a century past that does not contain it. See McFerrin, *Hist. of Meth. in Tenn., ii, 473; Minutes of Conference of Meth. Episc. Ch., South (1872); Elliott, *Hist. of the Meth. Episc. Ch. in the South-west*, p. 74 and sq.

Monroe, Jonathan, an American Methodist minister, was born in Annapolis, Md., June 11, 1801; joined the Baltimore Conference, and was appointed to Allegheny Circuit in 1825; in 1826, to Concord; in 1827 he was ordained deacon by bishop Soule, and appointed to Shamokin; in 1828, to Lewistown; in 1829 he was ordained elder by bishop M'Kendree, and appointed to Conoco; in 1830, to Gettysburg; in 1831, to Shrewsbury; in 1832, to Philadelphia; in 1833, to Calvert; in 1837, to Lewistown; in 1839, to Warrior's Mark; in 1841, to Huntington; in 1843, to Bedford; in 1845, to Westminster; in 1847, to Liberty; in 1849, to Montgomery; in 1850, to Gettysburg; in 1852, to Mechanicsburg; in 1854, to Mercersburg; in 1856, to East Hartford; in 1858, to Great Falls; in 1859, to Herndon; in 1861, to Westminster; in 1863, to Emmitsburg; and in 1864 he became supernumerary, and retired to Westminster, Carroll County, Md., where he died, Dec. 4, 1869. His Christian virtues, uniform piety, and devotion to his calling demonstrated the power of divine grace in his life, and endeared him to all who knew him. See *Minutes of Baltimore Conference for 1870.*

Monroe, Samuel Yorke, D.D., an eminent minister of the Methodist Episcopal Church, was born at Mount Holly, New Jersey, July 1, 1816. He enjoyed the advantages of a thorough English training, and after his conversion, which occurred in 1838, decided to devote himself to the work of the Christian ministry. He labored for several years as a local preacher; was admitted on trial into the New Jersey Conference in 1843, and quickly rose to distinction among his brethren. His first appointment does not appear in the minutes. In 1844 he traveled the Swampedoch and Scotia, Pennsylvania, Conference held in Mount Holly in 1845 he was admitted into full connection, and stationed at Salem, N.J. He was returned to the same appointment in 1846. In 1847-48 he preached in Paterson; in 1849-50, in Newark; in 1851, at Princeton. He was next successively stationed at New Brunswick, Cambridge, West Amsterdam, and Trinity Church, Newark (located in Newark Conference, to which he had been transferred). He served as presiding elder several years, first in the Bridgeton District, after he had preached at Camden; and in the Camden District after he had labored in Trenton. He was a member of the General Conference in 1856, 1860, and 1864, at which last time he was prominently named for the episcopacy. He was by this body then elected a member of the General Missionary Committee, and shortly afterwards was appointed by the bishops of the Church as recording secretary of the newly organized "Church extension." The work he entered with his usual vigor and zeal, and was meeting with success beyond the highest expectation of the friends of the enterprise. On Sunday, the 27th of January, 1867, he had preached in St. Paul's Methodist Episcopal Church in New York City, for the cause of "Church extension;" and was on his way from Camden, New Jersey, to New York, with the intention of occupying one of the city pulpits for some object, when he was lost overboard a train, no one has ever found how, and was killed in the fall, February 9, 1867, as was declared by the verdict of a coroner's jury. Few men have labored more zealously for the Church than Samuel Yorke Monroe. After his appointment to the secretarship, beside attending to an extensive correspondence, he visited and addressed some fifty Conferences upon the subject of "Church extension;" preached once or twice nearly every Sabbath; organized his work almost over the whole Church; was raised, and conducted about $60,000 during the first year of the society's existence. During this period his labors were undoubtedly extensive; and, in the opinion of those who had the best opportunity for knowing, were beginning sensibly to impair his health and vigor. "Dr. Monroe," says the *Vere- ronian* (April 15, 1867), "was a most remarkable man. As a Christian, he was conscientious, without being morbidly sensitive; fervent in spirit, without being boisterous or fanatical; faithful, without being severe or censorious; and spiritual and pure in heart, without a profession of extraordinary religious attainments. His success in winning souls to Christ proved that wherever he labored God was with him. As a preacher he was able, evangelical, and edifying; and as a pastor diligent, sympathetic, and faithful. But that which distinguished him more than anything else was his remarkably clear perception of the relations of things, his rapid mental comparisons and judicious and consistent thinking, which have made his words an eminently wise and safe counsellor in everything pertaining to the kingdom of God." The *New York Me- dian* (February 16, 1867), commenting on his death, says: "Dr. Monroe was one of the leading representatives of the American Methodist Church. . . As secretary of the Church Extension Society, he displayed his characteristic good sense, rare executive ability, labo-
MONROE 515  MONTAGU

rousness, and eminent pulpit power. In all these ele-
ments of character he excelled." See also Ladies' Re-
portory, March, 1860; 1 N. C. Christian Advocate, February 8, 1872 (M. G. Sermons of the late Dr. Monroe). (J. H. W.)

Monroe, William, a minister of the Methodist
Episcopal Church, was born in Alleghany County, Ind.,
Sept. 8, 1858. He was converted when but a youth;
was licensed to preach in 1889, and entered the Balti-
more Conference in 1810. He was ordained deacon by
bishop M'Kendree, and elder by bishop Asbury. His
active ministerial life extended over a period of thirty-
three years, during which time he labored on some of
the most difficult circuits in the Baltimore Conference.
Mr. Monroe was a man of Christian virtues and great
piety, and his true devotion to the Methodist Church has
endured to him to the whole Church. His appointments
were—Lyttonton Circuit, Huntington Circuit, Greensville Cir-
cuit, Randolph Circuit, Georgetown, D.C., Redstone Cir-
cuit, East Wheeling, Monongabia, Rockingham Cir-
cuit, Va.; Alleghany, Va.; Ebenezer, Washington, D.C.;
Chambersburg; Winchester, Va.; Stafford, Va.; Rock-
ingham, Va.; Staunton, Va.; Bealeton; Va.; Jefferson:
Berkeley, Va.; South Branch; and Hillsborough. After
this for two years (1879 and 1888) he was superin-
tendent; in 1889—40 he was stationed at Boonsborough,
and in 1841 at Codorus Mission. In 1844 he was again
superintendent; in 1844—44, Mercersburg; and in 1845,
Greencastle. This year closed his active service, and
in 1846 he asked for and obtained a superannuated
relation, which he sustained until removed to the Church
triumphant. He died in Washington County, Md.,
May 29, 1871. See General Minutes of the M. E. Church,
1872, p. 17.

Monseigneur (my lord), a French title, once ap-
p lied to saints, and subsequently to princes, nobles, cer-
tain high dignitaries of the Church, and other titled
personages, is now only given to prelates. The Italian
monsignore has a similar signification.

Monsignore. See Monsigneur.

Monster. See Sea-Monster.

Monstrance. See Monstrantia.

Monstrantia (Monstrum, Ostenborium) is a
vessel used for the preserving of relics, and particularly
for the consecrated host (eucaristarium, venerable; eucha-
risticus), and in which they are presented to the adoration
of the people. When, in the 13th century, the doctrine of
transubstantiation was established by the Church, the
calvoration of the host followed, as also its special exhi-
bition, for instance, in the procession of Corpus-Christi Day (c. 1264). This was placed on a stone, or mounted on a
curved surface (tunula), and introduced in a transap-
parent vessel (monstrantia, in qua sub vico crystallo
crior inclusa (Du Fresne, Glossary, a. h. v.)). This case
(phylacterium, arcula) is enlarged by the addition of rays,
forming an image of the sun, or the like, and pro-
vided with a stand. It is placed on the altar. Thus
the monstrantia becomes a movable shrine for the sac-
rament (tabernaculum pectoratum), generally made
of costly material, and richly decora-
ted. "At first," says Walcott
(Sacred Archeology, p. 590),
"it took the shape of an ordina-
tory reliquary, but after length was
made like a tower of crystal, of
cylindrical form, and mounted on
a foot like that of a chalice, and
covered by a spike-like can-
opy. In the 11th century, on the
side the cylinder was a crescent
held by an angel, in which the
host was set; in some cases the
cylinder was replaced by a quar-
terfoil, or was surrounded by a
foliage like a jesse-tree, and at a
later date by the sun, a lumina-
disk, with rays alternately straight and wavy, set
upon a stand. Upon the vessel itself the Doom was
often represented, and relics were placed in it. The
monstrance did not become common till the 15th, and
is probably not earlier than the 14th century. It bore
different forms: (1) a little tower, jewelled, and hav-
ing aperture of glass or crystal; (2) the figure of a saint,
or the Holy Lamb, with St. John the Baptist pointing to
it; (3) a figure of the Lamb, on a pedestal of precious metal,
and covered with a canopy in the 15th century; (4) a sun,
with rays, containing in the centre a kind of pyx (this is found as early as the 16th century)." The ecclesiastical laws now regulate
its construction. The statutes of the archbishopric of
Prague confirm the 18th, xviii, command, for instance, " Mon-
strantia ad exponentem vel in processionibus deberrant
hostiam magnum, si non ex uro, aut argentum, saltem ex
aurichalcio bene aurato refugiat, et velo vel peplo con-
gruo ornata sit." The monstrantia is a sacred vessel,
and not to be touched by an unconsecrated person; hence
any one who stole it was to be burned to death. The
high altar is always provided with a monstrantia, and
often the side altars also. All evangelical churches
have rejected the prayer De venerabile of the Romish
Church, and Luther declared, "It is insulting and dis-
honoring to the holy sacrament to carry it about, and
to make it an instrument of idle idolatry." See also Her-
zog, Ritus, § 106; Scaliger, Cod. 9, 169.

Montagioi, Cassiodoro, a learned Italian ec-
lesiastic, was born at Modena Feb. 5, 1598; entered the
Benedictine Order in 1717. and successively filled se-
veral prominent offices in the order. He gave himself
largely to the study of philosophy. His principal works
are, Exercitii de legis et retinere, tractati dal libro de Satismi
(Rupre, 1717); Trattato pratico della cura cristiana
in quae amor verso Dio (Bologna, 1751, and Venice,
1761);—Exordio eccevico (Mod. 1755):— Munera
facile di mediare con frutto le massime Cristiane
(Bologna, 1769, 2 vols.):— Detti pratici e ricordi di S.
Andrea Acelino (Venice, 1771) ;—Paradiso del liguil
di Dio (Flaviane, 1772)—Il divino sermo nel monte
(Rome, 1778).

Montaguoli, Giovanni Domenico, an Italian
theologian, was born at Batignano (territory of Sienna)
in the first half of the 17th century. As a Dominican
monk, he was distinguished for his austere piety,
as well as for his attachment to the doctrine of St.
Thomas. He was the author of Defensiones philosophicie
un-pelce (Venice, 1602, fol.). He was later enlarged and revised,
appeared again under the same title at Naples in 1610). See Échard et Quétif, Script. Ord.
Predicat. ii, 337.

Montagu, Walter, a Roman Catholic divine
of note, was born at London in 1604. He was the son
of Sir Henry Montagu, who afterwards became earl of
Manchester. After being educated at Sidney College,
Cambridge, he traveled abroad, and became a convert
in Romanism, though opposed by his nearest friends.
On returning to his native land, he attracted the at-
tention and secured the favor of his queen, who appointed
him her confessor. She also honored him by sending
him on a confidential mission to Rome, where he met
with a gracious reception by pope Urban VIII. The
breaking out of the Civil War clouded his prosperity,
and in 1643 he was imprisoned in the Tower, where
he remained confined for several years. As soon as he
was released he retired into France, where he became
abbot of the Benedictine monastery at Nanteuil. He
later returned to England. In the civil war he was placed
on a practice in a book of his, The Shepherd's Paradise, a pas-
torial comedy possessing some merit, though ridiculed
severely by Sir John Suckling in his "Sessions of the
Poets"— _Miscellanea Spiritualia_, published in two parts (1648-54), a series of religious essays or tracts.— A _Letter from Paris to his father_, in which he justifies the Church of Rome, and states his personal reasons for changing his belief. This letter was printed with lord Falkland's _Discourse on Infidelity_ (1661). He also made an English translation of Bossuet's _Exposition of the Dogmas of the Catholic Church_ (1672). (H.W. T.)

Montague, Richard, D.D. See Mountagu.

Montaigne, Michel, Seigneur de, a distinguished French moralist, remarkable for his deep insight into the principles of our common nature, was born Feb. 28, 1533, and was a youngest son of a nobleman, whose estate, poorness which the family name once was, was situated in the province of Perigord, near the river Dordogne. His father, an eccentric, blunt, feudal baron, placed him under the care of a German tutor who did not speak French, and the intercourse between tutor and pupil was carried on entirely in Latin; and even his parents made it a rule to address him in that language, of which they knew a sufficient number of words for common purposes. The attendants were enjoined to follow the same practice. "They all became Latinized," says Montaigne himself; "and even the villagers in the neighborhood learned words in that language, none of which we mark in their faces and have the least concern about the people." Thus, without the aid of scholastic teaching, Montaigne spoke Latin long before he could speak French, which he was afterwards obliged to learn like a foreign language. He studied Greek in the same manner, by way of pastime more than as a task. He was sent to the college of Guinette, at Bordeaux; and at the age of thirteen he completed his college education. He then studied law, and in 1554 he was made "councillor," or judge, in the Parliament of Bordeaux. He repaired several times to court, and enjoyed the favor of Henri II, by whom, or, as some say, by Charles IX, he was made a gentleman-in-waiting of the king, and a knight of the Order of St. Michael. When he was thirty-three years of age Montaigne married, to please his friends rather, as he says, than himself, for he was not inclined to a married life. He, however, always lived on good terms with his wife, by whom he had a daughter. He managed his own estate, on which he generally resided, and from which he derived an income of about 6000 livres. In 1569 Montaigne translated into French a Latin work of Raymond de Sebonde or Sebon, a Spanish divine, on _Natural Theology_, at the request of his then recently deceased father, who had feared for his son's soul in the Protestants; but, according to Motier, _Histoire de la Langue et des Peuples_, p. 1, note 2. France was at that time desolated by civil and religious war, and Montaigne, disapproving of the conduct of the court towards the Protestants, and yet being by education a Roman Catholic, and by principle and disposition loyal to the king, was glad to live in neutral France, and take no part in public affairs except by exhorting both parties to moderation and mutual charity. By this conduct he became, as might be expected, obnoxious to both sides. The massacre of St. Bartholomew plunged him into a deep melancholy, for he detested cruelty and the shedding of blood. It was about this time (1572) that he began to write his Essays, which were published in March, 1580, and met with great success. (See below.)

With a view to restoring his health, which was not good, Montaigne undertook a journey to Germany, Switzerland, and lastly to Italy. At Rome he was well received by several cardinals and other persons of distinction, among whom were his old friends. He also received the freedom of the city of Rome by a bull of the pope, an honor of which he appears to have been very proud. Montaigne was delighted with Rome; he found himself at home among those scenes and monuments which were connected with his earliest studies and the first impressions of his boyish years.

He wrote a journal of his tour, evidently not intended for publication; but the manuscript, when discovered after nearly two centuries in an old chest in the house of his son, was published (in 1774) under the title of _Journal du Voyage de Michel de Montaigne en Italie, par la Suisse et l'Allemagne_, in 1580-81. It is one of the earliest descriptions of Italy written in a modern language. While he was abroad he was elected mayor, or city judge, of the city of the citizen, in which he would have declined had not the king, Henri III, insisted upon his accepting the office. At the expiration of two years Montaigne was re-elected for an equal period. On his retiring from office he returned to his patrimonial estate. The war of the League was then raging in the country, and Montaigne had some difficulty in saving his family and property from the violence of the contending factions. At this time the plague also broke out in his neighborhood (1588), and obliged him to leave his residence and wander about various parts of the country. He was at Paris in 1588, busy with a new edition of his Essays. It appears from De Thou's account that about this time Montaigne was employed in negotiations with a view to conclude a peace between Henri of Navarre, afterwards Henri IV, and the duke of Guise. At Paris he became acquainted with Mademoiselle de Gournay, a young lady who had conceived a kind of sentimental affection for him. She came as a companion to his mother she visited him, and introduced herself to him, and from that time he called her his "fille d'alliance," or adopted daughter, a title which she retained for the rest of her life, as she never married. Montaigne was then fifty-five years of age. This attachment, which, though warm and reciprocal, has every appearance of having been of a purely Platonic nature, is one of the remarkable incidents of Montaigne's life. At the time of his death, Mademoiselle Gournay and her mother crossed one half of France, notwithstanding the civil troubles and the insecurity of the roads, to be present at his funeral. The Ordinaries of the church of St. Michael were reduced to tears with those of his widow and daughter. On his return from Paris in the latter part of 1588, Montaigne stopped at Blois with De Thou, Pasquier, and other friends. The States-General were then assembled in that city, in which the duke de Guise and his brother the cardinal were treacherously murdered, on the 22d and 24th of December of that year. Montaigne had long foreseen that the civil dissensions could only terminate with the death of one of the great party leaders. He had also said to De Thou that Henri of Navarre was inclined to adopt the Roman Catholic faith, if his position allowed of the proposal being made, but that, on the other side, Guise himself would not have been averse to embracing the Protestant religion, if he could thereby have promoted his ambitious views. After the catastrophe Montaigne returned to his chateau. In the following year he became acquainted with a notable French lawyer of considerable reputation, and formed an intimate friendship with him. Charron, in his book _De la Sagesse_, borrowed many ideas from Montaigne's _Essais_. Montaigne by his will empowered Charron to assume the coat of arms of his family, as he himself had no male issue. Montaigne's health was in a declining state for a considerable time before his death; he was afflicted with the gravel and the colic, and he obstinately refused to consult medical men, of whom he had generally an indifferent opinion. In September, 1592, he fell ill of a malignant quinsey, which kept him speechless for three days, during which he was reduced to course by his household. He invited several gentlemen of the neighborhood, in order that he might take leave of them, and when they were all assembled in his room, a priest said mass, and at the elevation of the host, Montaigne, while half raised up in his bed, with his hands joined together as in prayer, expired, Sept. 18, 1592. His body was buried
at Bordeaux in the church of the Feuillants. The character of Montaigne is amply delineated in his *Essais.* They contain much that an advanced Christianity can hardly approve, yet, notwithstanding these inconsistencies, it is impossible to avoid admiring the continued benign and genial influence which they have on the temper. The amiableness of his private life is attest- ed by the fact that, under the five monarchs who dur- ing his time successively swayed the sceptre of a king- dom torn with fanatical divisions, his person and property were always respected by both parties; and few men of advanced age can say, like him, that they are yet untainted with a quarrel or a lawsuit.

Montaigne's *Essais* have been the subject of much conflicting criticism. If we reflect upon the age and the intellectual condition of the country in which the author lived, we must consider them a very extraordinary production, not so much on account of the learning contained in the work, although that is very con- siderable, as for the clear good-sense, philosophical spir- it, and frank, liberal tone which pervades their pages, as well as for the attractive simplicity of the language. Literature was then at a very low ebb in France, the language was hardly formed, the press was扰乱ed by feudal turbulence, ignorant fanaticism, deal- ing intolerance, and civil factions, and yet in the midst of all this a country gentleman, living in a remote province, himself belonging to the then rude, fierce, feudal aristocracy, composed a work full of moral max- ima and precepts, conceived in the spirit of Aristotle, his teacher, while the schools of Greece and Rome founded on a system of natural ethics, on the beauty of virtue and of justice, and on the lessons of history; and this book was read with avidity amid the turmoil of factions, the din of civil war, and the cries of persecution and mur- der.

*The Essais of Montaigne,* says Hallam, "make in several respects a very important book, and hold the ac- count of their real importance than of their influence on the taste and opinions of Europe. . . ." No prose writer of the 16th century has been so generally read, nor, probably, given so much delight. Whatever may be our estimate of Montaigne as a philosopher—a name which he was far from arrogating—there will be but one opinion of the felicity and brightness of his genius" (*Introduction to the Literature of Europe*, ii, 29).

"The author of these *Essais,*" says Leo Joubert, "is certainly the most independent spirit that ever ex- isted—indeed, independent without revolt, and detached from the advanced spirit of his country, who has made the subject, not his own. . . . We recognise in his *Essais* a nature well endowed, not heroic, perhaps, but generous, exquis- itely sensible, not aspiring to the sublime, capable of de- votion, and incapable of a base act—in fine, a model of what we may call average virtue* (its *vera mosse*) (*Nombrille Biographiques Générales* s. v.). Sprightly hu- mor, independence, *sévreté,* and originality are the characteristics of his mind; and his style is admired for its graceful simplicity. His works are highly season- ed with his own individuality, and afford much insight into his character. The *Essais,*" says Emerson, "are the soliloquy of a man in good health, on a topic that came into the author's head—treat- ing every- thing without ceremony, yet with masculine sense. There have been men with deeper insight, but, one would say, never a man with such abundance of thoughts: he is never dull, never insincere, and has the genius to make the reader care for all that he cares for. . . . This book of Montaigne the world has endorsed by translating it into all tongues and printing seventy-five editions of it in Europe—and that, too, a circulation somewhat chosen, namely, among courtiers, sol- diers, princes, men of the world, and men of wit and knowledge. Yet Montaigne, in the years of his life, the eminent English writer and most recent biographer of Jean Jacques Rousseau (Lond. 1873, 2 vols. 8vo), fre- quently turns aside to pay a tribute to Montaigne, and acknowledges that the author of *Essais* had read Mon- taigne's *Essais* "with that profit and increase which attends the dropping of the good ideas of other men into fertile minds" (ii, 198; comp. i, 144).

The morality of the *Essais* has been called—and not unreasonably, though not correctly in the expres- sion—"it is not for doctrine or instruction, it is not for册temper. The amiableness of his private life is attest- ed by the fact that, under the five monarchs who dur- ing his time successively swayed the sceptre of a king- dom torn with fanatical divisions, his person and property were always respected by both parties; and few men of advanced age can say, like him, that they are yet untainted with a quarrel or a lawsuit.

Montaigne's *Essais* have been the subject of much conflicting criticism. If we reflect upon the age and the intellectual condition of the country in which the author lived, we must consider them a very extraordinary production, not so much on account of the learning contained in the work, although that is very con- siderable, as for the clear good-sense, philosophical spir- it, and frank, liberal tone which pervades their pages, as well as for the attractive simplicity of the language. Literature was then at a very low ebb in France, the language was hardly formed, the press was disturbed by feudal turbulence, ignorant fanaticism, deal- ing intolerance, and civil factions, and yet in the midst of all this a country gentleman, living in a remote province, himself belonging to the then rude, fierce, feudal aristocracy, composed a work full of moral max- ima and precepts, conceived in the spirit of Aristotle, his teacher, while the schools of Greece and Rome founded on a system of natural ethics, on the beauty of virtue and of justice, and on the lessons of history; and this book was read with avidity amid the turmoil of factions, the din of civil war, and the cries of persecution and mur- der.

*The Essais of Montaigne,* says Hallam, "make in several respects a very important book, and hold the ac- count of their real importance than of their influence on the taste and opinions of Europe. . . ." No prose writer of the 16th century has been so generally read, nor, probably, given so much delight. Whatever may be our estimate of Montaigne as a philosopher—a name which he was far from arrogating—there will be but one opinion of the felicity and brightness of his genius" (*Introduction to the Literature of Europe*, ii, 29).

"The author of these *Essais,*" says Leo Joubert, "is certainly the most independent spirit that ever ex- isted—indeed, independent without revolt, and detached from the advanced spirit of his country, who has made the subject, not his own. . . . We recognise in his *Essais* a nature well endowed, not heroic, perhaps, but generous, exquis- itely sensible, not aspiring to the sublime, capable of de- votion, and incapable of a base act—in fine, a model of what we may call average virtue* (its *vera mosse*) (*Nombrille Biographiques Générales* s. v.). Sprightly hu- mor, independence, *sévreté,* and originality are the characteristics of his mind; and his style is admired for its graceful simplicity. His works are highly season- ed with his own individuality, and afford much insight into his character. The *Essais,*" says Emerson, "are the soliloquy of a man in good health, on a topic that came into the author's head—treat- ing every- thing without ceremony, yet with masculine sense. There have been men with deeper insight, but, one would say, never a man with such abundance of thoughts: he is never dull, never insincere, and has the genius to make the reader care for all that he cares for. . . . This book of Montaigne the world has endorsed by translating it into all tongues and printing seventy-five editions of it in Europe—and that, too, a circulation somewhat chosen, namely, among courtiers, sol- diers, princes, men of the world, and men of wit and knowledge. Yet Montaigne, in the years of his life, the eminent English writer and most recent biographer of Jean Jacques Rousseau (Lond. 1873, 2 vols. 8vo), fre- quently turns aside to pay a tribute to Montaigne, and acknowledges that the author of *Essais* had read Mon-
light sur le stat de marners et society en France en son time. Le Esaisa has gone through very many editions, and been translated into most European lan-
guages: the edition of Paris (1725, 3 vols. 4to) was perhaps the most complete until the appearance of the recent edition by Hazlitt is pronounced a superior work. Very recently an edition of the Complete Works of Montaigne, etc., was brought out at London (1873).

Vernier published in 1810 Notices et Observation pour faciliter la Lecture des Essais de Montaigne (Paris, 2 vols. 8vo). It is a useful commentary.

Menier de Querlon published his journal under the title Journal du Voyage de Michel de Montaigne (Rome, 1774, 4to).

Extracts from the Essais have at various times been published, as Pensees de Montaigne, progres a former l'esprit et les mœurs, par Artaud (Paris, 1700, 12mo); L'Esprit de Montaigne, ou les maximes, penses, jugements et réflexions de ce great maître, par G. de Matteis, par Pessler (Berlin (Paris), 1758, 2 vols. 12mo); Christianisme de Montaigne, ou penses de ce grand homme sur la religion, par M. l'Abeille L. (Labou-
derie) (Paris, 1819, 8vo). See De Thou, Historia seu temporis; E. Pasquier, Lettres; La Croix du Maine, Bibliographie Françoise; J. Bouhier, Memoires sur la vie et les lettres de Montaigne; A. d'Epinette et de Montaigne (by B. Pascal); Talbot, Eloge de Mich. de Montaigne (Paris, 1775, 12mo); Dom Devienne, Eloge historique de Mich. de Montaigne (Paris, 1775, 12mo); La Dizierro, Eloge analytique et histo-
rique de Montaigne (Paris, 1781, 8vo); Mme. de Bour-
die-Victo, Eloge de Montaigne (Paris, 1800, 8vo); Joy, Eloge de Montaigne (1812, 8vo); Droz, Eloge de Mi-
chel Montaigne (1812, 8vo); Villemain, Eloge de Mon-
taigne (Journal des Savans, July and October, 1855); Payen, Notice bibliographique sur Montaigne (new ed. Paris, 1856, 8vo); Documents inédits ou peu connus de Michel Montaigne (1847, 8vo); Nouveaux documents (1850, 8vo); Documents inédits (1855, 8vo); Recherches sur Montaigne (1856, 8vo); Grüner, La vie publique de Michel Montaigne (Paris, 1855, 8vo); Vinet, Essais de Philo-
"..."
tion, at London, March 10, 1810. He was the descend-
ant of one of the oldest noble families of France. One of his ancestors played an important part in the reign of Francis I. His own father served in the army of Condorcet, and in 1793 he married a Scottish lady, entered the English service, and fought in Egypt and Spain against Napoleon, returning only to his native country after therestora-
tion of the Bourbons in 1814. Charles was left in Britain in charge of his grandfather on his mother’s side, an old gentleman who was said to have loved the child when yet only a one-year-old babe by dedi-
cating to him a great work (Oriental Memoirs, 42 vol-
s. 4to), by which the name of Forbes was to live for ages to come. Mr. James Forbes watched over his young charge with the fondest affection, training and edu-
cating the boy himself, until, at the age of eight, it was thought best to place him at school in Falmouth. Charles remained there, however, only one year, for, his grandfather dying in 1819, he was sent for by his parents, who were then residing in Paris, and leading a most fashionable and gay life. This was hardly a proper sphere for a boy who had been accustomed to spend his childhood reading in the well-filled library of his grandpa’s retreat at Hammore, near Harrow, or in intellectual conversations with his accomplished ancestor, for whom, if we may believe Mrs. Oliphant, Montalembert’s biographer, this boy, with his early and precocious intelligence, had become a frequent companion. His father’s death at the age of twenty-one, however, removed him from the circle of his friends, and he was not sufficiently strong to bear the loss of this time. Then, during the year (1829) with great regret, for he knew that before he lay much more of frivolous gayety than delight-
ful interchange of heart and mind. Far, then, from looking forward with fervent expectations of enjoy-
ment to his approaching introduction to society, he was in it, for he foresaw in his youth the rude un-friendly world in which he found himself. The question of his education was thrown into the crowd: "I can imagine Pitt or Fox coming out of the House of Commons, where they had struck their adversaries dumb by their eloquence, and enjoying a dinner-party. I can imagine Grattan amusing him-
self, after fifty years of glory, playing hide-and-seek with children. But for an obscure and unknown ind-
ividual, lost in the crowd of other men, or at the best numbered only among the élégants who feel themselves obliged to wander every evening into three or four houses where they are half stifled under pretense of enjoying themselves, I see neither pleasure nor honor in it. I see only a culpable loss of time, and mortal weariness." In the meantime his studies went on, and his fa-	her, then French ambassador at Stockholm, via Bel-
gium and Holland, lingering on the way to every thing worth seeing, and duly recording his impressions as they arose. Received at once into the gay circles of the Swedish capital, he was with difficulty induced to lay aside his dress coat, his fine horse and other accou-
trums, but at last a sufficient number of his friends and ac-
trums gave offence to the light-hearted and haply frivolous companions who were forced upon him; he was voted a prig; and it was not till some time that his really gentle and unassuming nature began to be recognised. But if Charles was formal on the surface at this time, in his letters and memoirs, he was really a young man of remarkable promise, a child of the gran-
deur of his youthful aims, he was yet sharply observ-
ent, as he always was, and his journal contains "an extremely lively sketch" of the Swedish court and its surroundings. He studied also carefully the institu-
tions of Sweden, as may be seen from the article he published on the subject shortly after. He besides devoted himself to the study of philosophy, and by advice of Cousin spent much time in the reading of Kant, whom he found "terrifying difficult," as he him-
self tells us, and not by any means a congenial study. On August 4, 1828, he records in his private note-
book, "God and liberty—these are the two principal motive-
powers of my existence. To reconcile these two per-
fec tions shall be the aim of my life." "We call es-
special attention to this phenomenon," says the re-
viewer of Mrs. Oliphant’s work, "for it is the best
answer to the imputations so frequently levelled at his consistency. His probable liability to them even then
awakened upon him: "What shall I do? What will
become of me? How shall I reconcile my ardent pa-
triotism with religion?" He would neither have found
nor feared any difficulty of the kind, if he had been
innocent religion in the broad sense of the term. He was clearly sus-
cpicuous on the delicacy of reconciling love
of country with ardent, uncompromising devotion to the
Catholic Church. In August, 1828, he records a fixed
resolution to write a great work on the politics and
philosophy of Christianity, and, with a view to its com-
pletion, to waste no more time on the politics or history
of his own time. Three notes of admiration in red
ink are set against this entry in the original journal.
He attended the debates in the Chamber of Peers, and
found them d’une médiocrité effrayante. In fact, his
thoughts, his plans, his subjects of interest were those of
a matured intellect, of a formed man, who felt "cab-
lin’d, crib’d, confined" within the walls of a lecture-
room. "We have been disposed," says his biographer,
"to address him, a few years after his return to Paris,
year (1829) with great regret, for he knew that before
he lay much more of frivolous gayety than delight-
ful interchange of heart and mind. Far, then, from
looking forward with fervent expectations of enjoy-
ment to his approaching introduction to society, he
was in it, for he foresaw in his youth the rude un-
friendly world in which he found himself. The ques-
tion of his education was thrown into the crowd: "I can imagine Pitt or Fox coming out of the House of Commons, where they had struck their adversaries dumb by their eloquence, and enjoying a dinner-party. I can imagine Grattan amusing him-
self, after fifty years of glory, playing hide-and-seek with children. But for an obscure and unknown ind-
vidual, lost in the crowd of other men, or at the best
numbered only among the élégants who feel themselves obliged to wander every evening into three or four
houses where they are half stifled under pretense of enjoying themselves, I see neither pleasure nor honor
in it. I see only a culpable loss of time, and mortal weariness." In the meantime his studies went on, and his fa-
ther, then French ambassador at Stockholm, via Bel-
gium and Holland, lingering on the way to every thing worth seeing, and duly recording his impressions as
they arose. Received at once into the gay circles of the Swedish capital, he was with difficulty induced to lay aside his dress coat, his fine horse and other accou-
trums, but at last a sufficient number of his friends and ac-
trums gave offence to the light-hearted and haply frivolous companions who were forced upon him; he
was voted a prig; and it was not till some time that his really gentle and unassuming nature began to be recognised. But if Charles was formal on the surface at this time, in his letters and memoirs, he was really a young man of remarkable promise, a child of the gran-
deur of his youthful aims, he was yet sharply observ-
ent, as he always was, and his journal contains "an extremely lively sketch" of the Swedish court and its
surroundings. He studied also carefully the institu-
tions of Sweden, as may be seen from the article he published on the subject shortly after. He besides
devoted himself to the study of philosophy, and by advice of Cousin spent much time in the reading of
Kant, whom he found "terrifying difficult," as he him-
self tells us, and not by any means a congenial study. On August 4, 1828, he records in his private note-
book, "God and liberty—these are the two principal motive-
powers of my existence. To reconcile these two per-
fec tions shall be the aim of my life." "We call es-
special attention to this phenomenon," says the re-
viewer of Mrs. Oliphant’s work, "for it is the best
answer to the imputations so frequently levelled at his consistency. His probable liability to them even then
awakened upon him: "What shall I do? What will
become of me? How shall I reconcile my ardent pa-
triotism with religion?" He would neither have found
nor feared any difficulty of the kind, if he had been
innocent religion in the broad sense of the term. He was clearly sus-
cpicuous on the delicacy of reconciling love
of country with ardent, uncompromising devotion to the
Catholic Church. In August, 1828, he records a fixed
resolution to write a great work on the politics and
philosophy of Christianity, and, with a view to its com-
pletion, to waste no more time on the politics or history
of his own time. Three notes of admiration in red
ink are set against this entry in the original journal. He attended the debates in the Chamber of Peers, and
found them d’une médiocrité effrayante. In fact, his
thoughts, his plans, his subjects of interest were those of
a matured intellect, of a formed man, who felt "cab-
lin’d, crib’d, confined" within the walls of a lecture-
room. "We have been disposed," says his biographer,
"to address him, a few years after his return to Paris,

Montalembert 520

Justly calls the most fatal of all maladies. Do not despair of the cause which you have adopted, or give up sound principles, because a generation without faith and without soul seem to dishonor them by pretended attacks. On the contrary, it is by being a Christian that he was finally convinced for Roman Catholic Ireland, and resolved to make a journey to that country in order to fit himself properly as historian of the Green Isle; this, however, was prevented by the sudden illness of a sister, who died at Beacons, Oct. 29, 1829, in his arms but a few hours after he had resolved to set out. His passion for the missioneer was unresisted, and this sudden removal threw him into a deep melancholic state. He was now more than ever interested in religious subjects, and was even inclined to take holy orders. But he finally forsook this plan, thought of studying law, and, under a passing impulse, even of joining the army of Algiers, a folly to which in after-life he thus pleasantly alluded: "Je suis le premier de mon sang qui n'ai guéroyé qu'avec la plume." He had no real military ardor, and the pen in his hand proved a far more trenchant weapon than the sword.

In this restless state, utterly unable to make a choice for life, he wrote an article on Sweden, and presented it to the learned Protestant Guirot for publication in the Revue Française, of which Guirot was editor. Though exception was taken to parts, and much erased that the young would-be littérateur thought best, the article was printed, and at once established his fame as a writer. His editors, found his new literary friends rapidly multiplied, and he counted among his most intimate associates Lamartine, Saint-Beuve, and Victor Hugo, "then the poet of all sweet and virtuous things," continuing the hope of "a universal religious restoration and rebirth of the world." He now also became correspondent to the Correspondance des amis de l'Église, a well-known Roman Catholic periodical, for which he continued to write all his life. But, restless as he was, he could not give up the plan of writing on Ireland, and at length, in the end of July, on the very eve of the Revolution, he set out for that country. The news of the re-overthrow of the Bourbons met him at London, and he went back to Paris; not to stay, however, for his father insisted upon his quitting the scene, and he resumed his journey. We cannot touch upon his Irish visit in detail, but we must at least allude to his call at Maynooth, for the scene he there beheld had no doubt a wonderful influence on his life afterward. His horror for the oppression suffered by the clergy, the women, and the children, and that he would pass the night in it unless he was dragged out by force. "Leave me," he said to us, sitting himself on a mattress he had brought there: "I remain here alone with the law and my right." He did not give way till the police laid hands upon him; after which the seals were affixed, and a prosecution was forthwith commenced against the schoolmaster.

Montalembert's father having died soon after the commencement of these proceedings, he was entitled, by successionship in the peerage, to trial before the Chamber of Peers; and before them he appeared on Sept. 19, 1831, and there made the event memorable by one of the most brilliant and eloquent arguments in its favor, and a clear foreshadowing, not alone of the eloquence, but of the bold and uncompromising earnestness in the cause of his Church and of the common interests of religious liberty which constantly characterized his later career. After a touching allusion to his great heroine, Madame de Stael, and his expostulation on several reasons which induced him to claim the judgment of his peers, he said: "It is sufficiently well known that the career on which I have entered is not of a nature to satisfy an ambition which seeks political honors and places. The powers of the present age, both in government and in opposition, are, by the grace of God, enemies to Catholics. There is another ambition, not less devouring, perhaps not less culpable, which aspire to reputation, and which is content to buy that at any price; that, too, I disavow like the other. No one can be more
confident that the Church of Rome owed no more to absolute power than the primitive Church of Christ, or would rise the higher if cut free from its temporalities, they were not dissuaded from anything so small as an organ like L'Avenir. But they would have been unaccountably wanting in the sagacity for which Maucaluy gives them credit "had they not penetrat-
ed to the fallacy of such arguments at a glance, and
drawn a widely different moral from the history. They
could not shut their eyes to the fact that several
prophetic utterances of the Old Testament, and
has everywhere declined in proportion to the
spread of knowledge." The three apostles of the new
era, which they hoped to inaugurate with the direct
approval of an infallible guide, knocked at the gate
of the Vatican, were admitted into the presence of
"his holiness," but completely failed in their mission.
See LACORDAIRE; LAMENNAIS. The very Church they
wished to serve—to whose cause they had consecrated,
with such touching earnestness, all their gifts—repu-
dated their aid. The court of Rome understood its
own mission better than they did. It admitted "their
good intentions, but at the same time silenced them
as inspired by a zeal without discretion in the treat-
ment of "supremely delicate questions!" Indeed, this
was but the only consistent course for Rome to take.
It could not suffer severely orthodox followers to
pro-fess to hold upon essential points the doctrines of ad-
vanced modernism, and still with no declaration of
fratricideism with the teaching and practice of the
Church in all ages; hence the encyclical of pope Greg-
ory XVI, declaring the conviction of the writers of
L'Avenir "abominable," and fulminating anathemas
against the most sacred liberties, declaring that "free-
dom of conscience is a mortal pest." This was every-
thing but a flattering and brilliant solution, yet the
triumvirate meekly submitted. Outwardly three
were equally actuated by that sense of duty which Ro-
man Catholics are wont to place as highest—of bowing
reverentially and unqualifiedly before the wisdom of
the papal incumbent, as "the voice of God in the
flesh," but in the inner camp there was a terrible
struggle. -To Montalembert the whole case was a mat-
ter of but little moment after all—certainly of much
less moment than to the other two. True, his faith
was not less sincere or ardent than theirs, but he was
as yet merely a young writer; the other two were
labourers in the vineyard, priests of the cross who had
already reached through the whole Catholic world, and
had brought him back many distinctions. In vain did
Lacordaire offer to submit quietly, and argue that they
should act consistently, as there was only one alterna-
tive from the first—"Either we should not have come,
or we should submit and hold our peace." Montalem-
bert and Lacordaire forever after acted on this plan,
and held their peace; but Lamennais's submission
was hollow and formal, and it wanted only (as
was afterwards apparent) an opportunity to be dis-
dainfully ignored. See LAMENNAIS. We as Protes-
tants, unaccustomed to such Catholic submission,
did not appreciate the true worth of the process of
reasoning these men contrived to reconcile absolute submission to the Romish Church with the
defence of that which she has again and again emphati-
dally denounced and condemned. "The conduct of
Lamennais," as the Brit. and For. Rev. Res. (October,
1863, p. 726) has well said, "is always as serious and con-
sistent than that of his two disciples. They, proclaiming
themselves the faithful and obedient followers of an
infallible Church—which says to its disciples, 'I am
the truth; it is in me, in me alone; to seek it else-
where is heresy and rebellion'—accepted a part of her
doctrine and rejected a part. They had but this at-
tempt to reconcile the Church with the tendencies of
the age, to unite Republicanism and Romanism, was
condemned by Rome herself, and that he must choose
between the two, broke with Rome, and proclaimed
VI.—17*
himself ready to combat and to suffer for what he deemed, however erroneously, the cause of justice and humanity. He broke with a Church which had lost to him the meaning of regeneration, and of the means of regenerating mankind, while they professed implicit submission. But his schism was at least logical and consistent; their submission partial and absurd. He and the Church were thenchored in direct antagonism; while they, its submissive sons, for the rest of their days, set on each other the plan which Lamennais had traced in the columns of L'Avenir, which Rome had emphatically condemned, and which its author had abandoned as impracticable. He gave up Rome because he found her claims inconsistent with those of humanity; they attempted to save her in spite of herself—to reconcile her with the wants and aspirations of the age—to put new cloth into old garments, new wine into old bottles. Yet we cannot but believe that both master and disciples were sincere and disinterested in their conduct: the former in his schism, the latter in their submission. No one certainly can be believed to have known anything of either Lacordaire or Montalembert who would suppose for a moment that these men were influenced by any mere personal considerations. No men probably ever acted under a higher sense of duty, only they never thought of duty in the case apart from the pope. When they saw what the result was likely to be, they were not surprised that the pope should lose his knee. "The position," says a writer in Blackwood (Nov. 1872, p. 603), "is intelligible, but hardly great or magnificent. Submission may be heroic in a grave practical crisis which admits of no argument, but it is hardly so in questions of truth and right, which have roused the conscience as well as the judgment to vigorous action. We confess to following Lamennais in his disdainful retirement with far more interest than we contemplate the Catholic submission of his colleagues. Duty loses its higher heroism when it loses individuality, and passes into blind self-surrender." Lamennais's publication of Paroles d'un Croyant caused Lacordaire to step forward in defence of the papacy, and this left Montalembert, who had stood by Lamennais through good and evil report, no alternative but to concur with Lacordaire in separating from him. Hereafter the three men stand apart, Lamennais the propagator of a socialist theory, Lacordaire the convert of Christ, and Montalembert the student of mediæval institutions.

His journalistic career being cut short by papal disapproval, and himself unable to enter political life for lack of age (the peerage begins at twenty-five), Montalembert now went abroad to travel, mainly in Germany, to study the preservation of Roman Catholicism as well as monuments of its history in that country. It was during one of his frequent tours of inspection of mediæval buildings and monuments that he was inspired with the conception of his first sustained and eminently successful effort in literature, the history of St. Elizabeth (Histoire de Ste. Elisabeth de Hongrie [1861]; translated and adapted by Mrs. St. Hildreth, 1865). The opening sentences of the introduction to this work are so characteristic that we quote them here: "On the 19th of November, 1833, a traveller arrived at Marbourg, a town in the electorate of Hesse, situated upon the beautiful banks of the Lahn. He passed to examine the church, which was celebrated at once for its pure and perfect beauty, and because it was the first in Germany where the pointed arch prevailed over the round in the great renovation of art in the 13th century. This church bears the name of St. Elizabeth, and it was on St. Elizabeth's day that he found himself within its walls. In the church itself (which, like the country, is devoted to the Lutheran worship) there was no trace of any special solemnity, except that in honor of the day, and, contrary to Protestant custom, it was open, and children were at play in it among the tombs. The stranger roamed through its vast, desolate, and devastated aisles, which are still young in their elegance and airy lightness. He saw a peaceful and a pretty young woman in the dress of a widow, with a gentle and resigned countenance, holding in one hand the model of a church, and with the other giving alms to a lame man. . . . The lady is there depicted, fatter than in all the other representations, stretched on her bed of death to weep over priests and nuns; and, lastly, bishop exults, according to the Pharaoh of ancient Egypt, who perceived in the death of his own. The traveller was told that these were events in the life of St. Elizabeth, queen of that country, who died on that day six hundred years ago in that very town of Marbourg, and lay buried in that very church."

After his first visit to the church, Montalembert with great difficulty sought out a copy of "Life of St. Elizabeth," of which he possessed himself as a prize; and though he found it "the cold, lifeless composition of a Protestant," the sympathetic chord was struck, and he set about the study of her career with hourly increasing eagerness, consulting traditions, visiting every place that she had bellowed by her presence, and ransacking all the books, chronicles, and manuscripts in which mention was made of her, or which threw light on her contemporaries or her age. He spent his days and his nights in the preparation of the work, and it need not surprise us, therefore, that the book came at the most opportune time—just when the most valuable and most characteristic in the book is that which elucidates her age, especially the Introduction (135 pages royal 8vo), in which he seeks to prove that the 13th century, in which she flourished, has been shamefully calumniated; that it was not merely the age in which the papacy attained its culminating point of power and glory, but the age in which Christian literature and art—that is to say, what he deems the best and purest literature and art—approached nearer to perfection than they have ever approached since or are likely to approach again. This clearly manifests that though his historic insight was fine, minute, and picturesque, he yet lacked depth of historic judgment, and strength and range of sympathy. Here as everywhere fact, with its complex variety of association and breadth of human interest, was not so attractive to him as sentiment, and the curious personation with which it can invest the most obvious realities.

With great success in the acceptance of outline and charm of portraiture, Montalembert's life of St. Elizabeth does not gainay this judgment.

On his return from Germany, Montalembert married, in the celebrated Flemish family De Merode, a sister of the now greatly renowned Monsignore de Merode, and subjected his wedding-trip to a tour of Switzerland and Italy. He then settled at Paris, and having succeeded to the peerage in 1885, he now fully entered upon his distinguished political career. Though not entitled to the right of voting until thirty, Montalembert was yet entitled to a seat, and in consequence to a participation in the debates, and in these he took a lively and flourishing part. He was a power in the opposition of no common rank, as well as a man of principle. He broke ground as a debater in September, 1885, in behalf of the liberty of the press, followed by other speeches, all of a liberal tendency. But his great aim at this time was the successful issue of the work which he had intended to bring before the people of France—viz., the liberty of the Church; struggling mainly in behalf of an educational system free from the state and in alliance with the Church. In its behalf he dared to say anything which he felt to be the truth. "He could," says Sainte-Beuve, "utter with all freedom the most passionate pleadings for the truths of his own creed and only the excess of his youth. He could develop without interruption those absolute theories which from another mouth would have made the Chamber shiver, but which pleased them from his. He could even give
free course to his mordant and incisive wit, and make personal attacks with impunity upon potentates and ministers. . . . His bitterness—and he was sometimes bitter—from him seemed almost amity, the harsh-ness of his language being disguised by the refinement of his manner and his perfect good grace. "It was a sight full of interest," says another, "to see this ardent, enthusiastic, impetuous young man rise in the midst of the Chamber of Peers, composed almost entirely of the relics of past conditions of society—men grown gray in public business, conversant with politics, and anxious with experience to destroy enthusiasm—and disturb with the accents of an impassioned voice the decent calm, the elegant reserve, and the polite conventionalities of their habitual discussions, as he vindicated the rights and interests of that religion which was said to have no partisans but old men, and no life but in the past." Montalembert did not, indeed, shine by lofty sustained imagery, like Burke and Grattan, the objects of his early admiration; nor by polished rhetoric, flights of fancy, or strokes of humor, like Canning. His strength lay in earnestness, ready command of energetic language, elevation of thought and tones, rapidity, boldness, conviction, passion, heart. His vehemence, his vie vivace, was power: when he warmed to his subject, he carried all before him with a rush. He had all, or almost all, that is comprised in the action of Demoiselles.

But as an author also Montalembert was now greatly enriched by the publication of a large share of his Mediall Art (Du Vandalisme et du Catholique dans les arts [1840]) and a "Life of St. Anselm" (Saint Anselme, fragment de l'Introduction à l'Histoire de St. Bernard [1844]). In 1845 he began to develop an un-usually great activity in the debates of the Chamber of Peers, and he delivered some masterly speeches on such general questions as the liberty of the Church, Instruction and education, the theory and constitution of the monastic orders, and the affairs of Poland, in which he always took a deep interest. Towards the close of the same year, while staying at Madeira for the sake of his health, he published Du Devois des Catholiques dans la Question de la Liberte d'Enseignement. This was followed by his celebrated Letter to the Cambridge Camden Society, designed to dispose the attempts made by that society to identify the Reformed Church of England with that of the continental Church of the Roman Catholicism of continental Europe. In 1847 he delivered his celebrated speech on the affairs of Switzerland, in which he distinctly foretold the revolution which broke out among the continental nations in the year following; and his brilliant Discours sur les affaires de Rome, delivered in 1848 after the popular peak, was received with a triple salvo of applause by an audience which sympathized but coldly with his views. After the revolution of February, 1848, the department of Doubs, in which he held property, elected him its representative to the National Assembly, from which he proceeded to the Legislative Assembly, where he uniformly acted true to his professions as well as the views and interests of the Roman Catholic Church. He worked hard as a member of the commission which, under many difficulties and compromises, prepared the new law of education known as the "Loi Falloux" (and which he might have excused from thinking ought to have been the "Loy Montalembert"); but his influence was even at this time due in the main to his powers as an orator. Like many other men of the oratorical temperament, he was not fitted for parliamentary diplomacy and intrigue, or the many acts behind the scenes by which political power is often acquired and maintained. It is thus that the estrangement of the extreme section of the clerical party from him after the passage of the educational law is to be accounted for. He called this settlement of the question the "Concordat d'Enseignement," and believed himself a valuable servant of Rome. But the Ultramontanes designated it as a base compromise of the best interests of the Church. The very paper which he had been mainly instrumental in raising up—L'Univers—denounced it as the most dishonorable law in the most virulent language. Thus it is evermore in the Church of Rome. Her most devoted members, if happily they do the bidding of the Ultramontanes, are applauded, and they who, while seeking earnestly to serve the Church, should yet fail to accomplish all that is demanded, are condemned and ignored. See M.A.V.R.C. 211.

Although Montalembert lost the support of those upon whom he had reason to lean, he now found, as every honest man is sure to find, support from all classes, and he enjoyed further successes. Yet none of these elated or even satisfied him. He had dedicated himself to the interests of the Church, and failing to gain that support from the source to which he believed himself entitled, he finally in 1852 determined to close his political life. He was notsuperseeded in the Legislature until 1857, yet his political activity may be said to have closed in 1852. And now that he was free to consider past and the part he had played, the bitter truth broke upon him that he had been acting for Romanism against liberty, and for the remainder of his life he determined to struggle manfully to repair or atone for his mistake. That he failed utterly it will not be necessary to state here. He lived in his defeat. He labored the rest of his life in the striving for truth and right, as we shall see presently. At the outset of his political career under the republic he had avowed democratic sentiments, and voted against Napoleon's admission to the Assembly; but when the Bonapartists turned defenders of Rome, Montalembert reformed his position, was wavered, and he for some time favored the Imperialists. After the confiscation of the Orleans property he ignored the Bonapartists, and it was therefore no small mark of distinction which he received at this time from the Academy by election to its membership. In 1854 he was engaged in the publication of L'Avenir politique de l'Angleterre (transl. in 1856), which aims to show that the future prospects of England would be improved by a resumption of intercourse with Rome; and this leading idea he pursues through an infinity of digressions and speculations, interspersed with various particulars which exhibit the riches and power of his mind, and his political institutions. He was bitterly assailed on both sides of the Channel, especially for what he said about the churches; and in a letter dated La Roche-en-Breny, Jan. 8, 1856, he wrote, "This act has been, and deserves to be, looked upon as an act of folly. There is nothing to be done but to contend against Bonapartist Europe in the New World with the whole weight of religious prejudice against Protestant England, and of political prejudice against English freedom or English ambition." What turned out an act of still greater foolhardiness was an article in the Correspondant of October, 1856 (published separately in England), entitled Un Despotisme l'Inde ou le Despotisme l'Amérique, which he pronounced the very essence of such exaggerating allusions to the Imperial régime which it provoked a prosecution. In brilliant and enthusiastically admiring pictures he drew the social and political institutions of Britain, for the purpose mainly of covertly contrasting them with the condition of his own native land. He was defended by Bouveret, and gave his own evidence as to the exact meaning of the inculcated passages, which no English judge or jury could have held libellous, but he was found guilty, and the sentence on him was six months' imprisonment with a fine of 3000 francs: one month's imprisonment and a fine of 1000 francs was imposed. The sentence, after being confirmed on appeal, was gladly remitted by the emperor; so that the prosecution proved a signal triumph to Montalembert in all respects, and had the singular advantage of presenting him for the
last time before the world in the attitude which above all he would have probably most desired—of an advocate for the freedom of the press.

The first volumes of his work are replete with his man’s life was entirely devoted to literary labors. He had for twenty years earnestly inquired into the medieval institutions and characters, and in 1869 brought out the first two volumes of Les Moines d’Occident depuis Saint Benoît jusqu’à Saint Bernard (transl. into English by Mrs. Olliphan, Edinb. 1861 and sq.). The whole Western world, Protestant and Catholic,Romanianism in his oration before the Roman Catholic Council held at Mechin, and afterwards published in a separate form under the title of L’Eglise Libre dans l’Etat Libre (Paris, 1868, 8vo). As in the Chamber of Peers and in the Assembly, so also at this time count Montalembert’s orations proved highly interesting, both on account of their eloquence and the force of their sentiments, as well as because they contain so strong an advocacy of the principles of religious toleration. Yet it was inappropriately said by a Protestant journal in 1864 that in these discourses he appeared not as the exponent of the doctrines of the Church of Rome, but rather as an opponent and impugner of her teaching and authority. No doubt this was not his intention; quite the contrary. Yet in these speeches we Protestants can only see that he praises what she condemns. He affirms what she denies. He claims as a right for every man what she refuses to accord to any. He, a devout Roman Catholic, defends doctrines which the head of the Church denounces as ‘fatal,’ and as ‘works of Satan;’ and, so far at least as these doctrines are concerned, distinctly and unequivocally despises and denies the authority of the Church. In short, in these speeches count Montalembert has shown himself a real ‘Protestant’ (Brit. and For. Rev. April, 1864, p. 337).

The foolhardy move of 1869 to establish the infallibility dogma was the first occasion on which Montalembert rose in direct antagonism to the papacy. He clearly saw that the Jesuits were scheming the plot, and he boldly descended into the lists, and dealt vigorous swats and volleys all around. Perhaps in his whole long and illustrious career Montalembert never committed a more courageous act, nor ever clothed lofty and noble thoughts in nobler and loftier language, than he did in his letter of Feb. 28, 1870, addressed to a friend in England, and published in the London Times, March 7, 1870, in which he declared himself against the absolute tendency in the Church; yes, he even boldly and uncompromisingly declared that he ‘gloried’ in counting as his colleagues in the Académie Française two such great and good champions of truth as the bishop of Orleans and father Gratry. Count Montalembert denounced the dogma of infallibility as ‘idolatrous,’ quoting in support of the word ‘idol,’ as applied to the pope, a most remarkable letter written to him seventeen years ago by the (then) archbishop of Paris, Mgr. Silbou. “Nothing,” said a correspondent of the N. Y. Nation, under date from Paris, March 7, 1870, “is stronger or more decisive in this as in other serious questions of the day, than what has yet appeared on this terrible Roman question as this letter of count Montalembert. It will be read wherever the French tongue is spoken, and it will support and console all right-thinking, high-minded Catholics—but the obloquy that will be cast upon M. de Montalembert will be an open and public one. He perceived the bare truth when he says that the ‘Tyrant of Abuse’ will be lavished upon him. It will be so unlimitedly, and it will require all the genuineness of his faith and all the chivalry of his nature to bear what will be his inevitable fate.” Of course such an act was enough to eclipse all the services of a lifetime. He had dared to go to the ground with a look of distraction on the last worldly appearance of a dearly beloved daughter or sister.” Yet it never once occurred to this warm-hearted, noble-minded man that a system which inflicts such agony on so many innocent sufferers, which condemns to the chill gloom of a cloister what the world calls life—that which runs counter to the whole course of nature—may be wrong.
to have given in his unconditional adhesion to what confessedly he did not understand. "And God does not ask me to understand. He asks me to submit my will and intelligence, and I will do so."

This concession even failed to satisfy Rome. The atonement was not sufficient for the crime he had committed; and the highest tribute of ecclesiastical respect which the Church accords to a faithful son was denied to his memory, and his name was blotted out of the Church's whole life to her cause, who had dared impossibilities for her sake, who had given up to her what she was meant to be for mankind, and thereby abdictated that place among practical statesmen and legislators which, apart from her blighting influence, his birth, his personal gifts, his high and rare quality of intellect, and eloquence, his elevation of purpose, his nobility of mind and character, must have won for him (comp. Italian correspondence of the N. Y. Tribune, under date of March 25, 1870).

No wonder that we are told by the Tribune correspondent that "the feelings awakened in society were very strong both among the clergy and laity, one of the former, a bishop, saying, 'I would have gone to Paris to attend a service,' and another, speaking of prohibition, observed, 'Ce n'est pas un crime, mais c'est une faute.' And well might the Tribune editorial add that "count de Montalembert filled too large a space in the esteeem and admiration of his co-religionists, and of the world, of the political and literary; not to be accorded a special chapter of remembrance."

Montalembert was a man whom title, gifts, accomplishments, fortune, united to make illustrious. The opposite in many respects of his great contemporary, Sainte-Beuve, who preceded him a little while before the tomb, he laid down his life, with all its brilliancy and all its latter suffering, upon the altar of his faith.

"We are dying of the same disease," Sainte-Beuve is said to have remarked: "only I trace it to nature, while Montalembert will ascribe it to Providence." The man was not shallow who saw in life religion and in death Providence; and it will not be difficult to say which of the two great men has left the most earnest example. Well has it been seen that "a brave or more chivalrous spirit never passed from earth. He was a veritable "miles Christi"—Chevalier de l'Eglise—as he liked to describe his monastic heroism. He was much besides a picturesque historian, a eloquent orator, a keen and in many respects enlightened politician; but his religious chivalry was the essence of his nature. No monk of old ever consecrated himself with a more cordial devotion to the service of God and the Church. No knight ever fought more gallantly for the cause of his heart and conscience. Shall we say, in his view especially of his last words on the doctrine of infallibility—which he struggled against to the last, and yet was prepared to accept when once proclaimed—no hero of the cloister ever offered as the sacrifice and service of his faith higher powers or a more entire sacrifice?

Montalembert knew how to be modest. He was not too much the picture of a saint. He was a man of the world, irrespective of religious difference of opinion, can unite in praise of Montalembert. "He was the very personification of candor. He had not a shadow of bigotry; he hated intolerance; he shuddered at persecution; he had none of the arrogance or unbecoming harshness of the dogmatist; he was singularly indulgent to what he deemed error; the utmost he would accept from the temporal power, from the state, was a fair field and no favor; the Church, he uniformly maintained, far from having any natural affinity with despotic power, was to be thrown into an atmosphere of freedom; while liberty, rational liberty, was never safer than under the protecting shadow of his branches."

- Naszam Libertas gratior ezstat
Quam sub rege plus

If he waved the consecrated banner of St. Peter with the one hand, he carried La Charte, the emblem and guarantee of constitutional government, in the other; and St. Peter's key and the key of the Church. Speaking of his death in thezbilding if no higher or more useful moral could be drawn from them than that it is possible to reconcile a dogmatic, damnable, exclusive system of belief with generosity, liberality, Christian charity, patriotism, and philanthropy" (Lond. Qu. Rev. April, 1878, p. 219, 229).

Among publications of his not yet mentioned deserves to be alluded to his Des Intérêts catholiques au dis-neuvième siècle (Paris, 1852, 8vo), which gives a rapid and brilliant, though one-sided, review of Catholicism throughout the whole of Europe in that day as compared with what it has been in the fifty years, maintaining that upon the whole the progress made is deep, sound, and likely to be lasting; in the same work he expresses himself strongly on the political changes that had taken place in France, and on the language of the French press in their regard, and thus this publication largely resembles the Political Future of England spoken of above. It was translated and published in English in 1855. He also republished two articles from the Correspondant—Pie IX et Lord Palmerston and La Paix et la Pâtrie, and a review of the memoir of the duke of St. Simon. He was a frequent contributor to the Revue des deux Mondes and the Encyclopédie Catholique.

The catalogue in the Bibliothèque Nationale, and his other writings, including his pamphlets and contributions to reviews, in the Revue Bibliographique Universelle, fills five closely printed pages of small type.

Montalto, Elias, a Jewish savant, was born in Portugal in the second half of the 16th century, and professing Christianity, went under the name of Felipe or Filofeo. About 1598 he went to Italy, where his medical skill and fame attracted the attention of Constanza de Castilho. He was appointed as principal physician to Mary de Medici, queen of Henry IV of France, and this obtained for him the free exercise of his religion. He was subsequently physician and counsellor to Louis XIII, and died at Paris in 1616. The queen caused his body to be embalmed, and it was conveyed into Holland by some of his Jewish relations who had about him. Montalto not only wrote some esteemed medical works, but also a theologico-apologetical book in the Portuguese language, wherein he defends Judaism against Christianity—a Lire Foyato, ii, 388 sq. He also wrote a tract on Isa. Ili, and on Daniel, which is still in MS. See Fürst, Bibl. Jued., ii, 388 sq., and über Judaica, 1867, p. 233; Collin, Dictionnaire des Juifs, Gesch. u. Literatur (Berlin, 1872), p. 100; Basnage, Histoire des Juifs (Engl. transl.), p. 676; Lindo, Hist. of the Jews in Spain, etc., p. 382 sq.; Grütz, Gesch. d. Juden, ix, 251, 524; x, 10; Kayserling, Gesch. d. Juden in Portugal (Leipzig, 1867), p. 274 sq., 268, 399; Stopf, D. Jüden in Portugal, 1867, p. 527, 201; his essay, "Drei Controversen," in Frankel's Monatschrift, 1858, p. 923 sq.; Zunz, Die Montatage des Kalendariums (Berlin, 1872), p. 9; Geiger, Jüd. Zeitung für Wissenschaft u. Leben, 1867, p. 184 sq.; 1868, p. 158 sq. (B. P.)

Montani, Giovanni-Giuseppe, an Italian theologian, was born at Pesaro about 1655. He was descended from a noble family; joined the Society of Jesus at Rome, and taught in the schools of that order moral the-
ology with so much success that persons came from distant parts to consult him. He revised and corrected a work of P. Felici, and read many additions to it, that he drew mostly from the decrees of the sacred congregation and from the bulls of Benedict XIV, and published it under the title **Vetuste de Montalban** (Rome, 1755, 4to; 2d ed. Venice, 1761). He died in 1760. See Richard et Giraud, **Bibliothéque Sacrée**.

**Montanists.** See Montanists.

Montanists, a Christian sect, is now generally believed to have arisen in Asia Minor about the middle of the 2d century A.D. But little if anything is known of their earliest history. It is apparent, however, that as a sect they embodied all the ascetic and rigoristic elements of the Church of the 2d century. As Christianity had gradually become settled in humanity, "its supernatural principle being naturalized on earth," prophecy and miraculous manifestations were believed to be past. The Montanists, however, came forward to declare a continuance of the miraculous gifts of the apostolic Church, and proclaimed that the age of the Holy Ghost and the millennial reign had been established in the village of Perga, in Western Phrygia (Ephesus), and that the New Jerusalem was to be built in New Jerusalem. Those who followed the Holy Ghost, speaking through these new prophets, were held to be the only genuine Christians, and were to form the Church. They were the **pneumatici**, the spiritually-minded; and all the opponents of these new revelations were the **psycchi**, the materialistically-minded. As a sect they condemned the second marriage, considering wedlock a spiritual union, sanctified by Christ, and intended to be renewed beyond the grave. They expelled from the Church all that were guilty of notorious crimes, imposed rigid fasts, advocated celibacy, encouraged martyrdom, allowed of divorce, and held it unlawful to fly in time of persecution. Such a principle of third-rank revelation, while they did not directly separate from the rest of the Church, they esteemed others very imperfect Christians, and deemed themselves a spiritual Church within the carnal Church. The Christian life was by them not merely referred to a miraculous beginning, the intervention in history of a reparative and saving power, inaugurating a new and final historical development. No, there must be nothing less than a perpetual miracle; everything would be lost if the concurrence of natural activity, of patient labor, were for a moment admitted, if the conditions of a slowly progressive development were not recognized. The Montanists thus conceived religion as a process of development, which they illustrated by the analogy of organic growth in nature, distinguishing in this process four stages: (1) natural religion, or the innate idea of God; (2) the legal religion of the Old Testament; (3) the Gospel during the earthly life of Christ; and (4) the revelation of the Paraclete; that is, the spiritual religion of the Montanists, and accordingly they called themselves the **vivifiacorii**, or the spiritual Church, in distinction from the psychical Catholic Church. This is the first instance of a theory of development which assumes an idea which is later declared to be primary. The Montanists, however, conceived religion as a process of development, which they illustrated by the analogy of organic growth in nature, distinguishing in this process four stages: (1) natural religion, or the innate idea of God; (2) the legal religion of the Old Testament; (3) the Gospel during the earthly life of Christ; and (4) the revelation of the Paraclete; that is, the spiritual religion of the Montanists, and accordingly they called themselves the **vivifiacorii**, or the spiritual Church, in distinction from the psychical Catholic Church. This is the first instance of a theory of development which assumes an idea which is later declared to be primary.

"The unconscious organ through which a peculiar mental tendency, which had developed itself in various parts of the Church, expressed itself with clearer intelligence and greater strength" (Antigone). Indeed, there was much in the system which their pretended revelations were employed to establish, not only well adapted to take root and flourish among such a people as the Phrygians, but also sure to find in every country persons prepared to receive it by previous habits of mind. "It was attractive to the more rigid feelings, by holding out the idea of a life stricter than that of the Christians; to weakness, by offering the guidance of precise rules where the Gospel had only laid down general principles; to enthusiasm and the love of excitement, by its pretensions to prophetic gifts; to pride, by professing to realize the pure and spotless mystical Church in an exactly defined visible communion; and by making the mothers of nations" (Quidor, p. 105). Such was the fundamental error of Montanism; it did not recognize the supernatural as taking possession of the natural order, penetrating and transforming it; it marked out the two domains as in direct and constant opposition. The Montanists, then, believed in the constancy of supranatural phenomena within the Church. The miraculous element, particularly the prophetic ecstasy, was not removed; on the contrary, the new revelation was greater, and they considered those only to be true or perfect Christians who possessed the inward prophetic illumination of the Holy Spirit—they, indeed, were the true Church; and the more highly gifted were to be looked upon as the genuine successors of the apostles. They thus asserted a claim to universality, which the Church which they considered for her own interest to reject; since she left the effort after extraordinary holiness to the comparatively small circle of ascetics and priests, and sought rather to lighten Christianity, than add to its weight, for the great mass of its professors.

According to Apollinaris of Hierapolis (quoted by Eusebius in his *Ecclesiastical History*, ch. xvi), the earliest Montanists were exclusively Phrygians; but this is not correct, though it is easy to see, from what we have said in the article Montanus, why his views should have laid strong hold on that race of exiles from Galatia (Phrygia, Asia Minor). A correspondent of the Church who was conversant, for her own interest, to reject; since she left the effort after extraordinary holiness to the comparatively small circle of ascetics and priests, and sought rather to lighten Christianity, than add to its weight, for the great mass of its professors.

MONTANISTS

curred about A.D. 200, and the treatises which he wrote after that important period in his life give us the clearest picture of the spiritual character of Montanism; for he carried the opinions of the sect to their utmost length of rigid and uncompromising severity, though at the same time on the great fundamental points in which the Montanists did not differ from the Church he continued, as he had before been, one of the ablest champions of scriptural truth, and one of the mightiest opponents of every form of heresy.

Montanism, it is apparent, then, must be treated as a doctrinal development of the 3d rather than of the 2d century; for though the history of the sect may be dated back to the middle of the 2d century, it remained for Tertullian to give definite shape to Montanism, and it is he who has left us the words through which the Montanists (or Tertullianists, as they were also called in Africa) in the 3d century, continuing to flourish as a sect until the close of the 6th century, and all this time being the subject of legal enactments under all the successors of Constantine down to Justinian (A.D. 580).

As a doctrinal system, Montanism in its original inception agreed in all essential points with the most catholic teachings, and held very firmly to the traditional rule of faith. This was acknowledged even by those who were opposed to Montanism (compare Epiphanius, *Her. xxviii, 1*). Nor is this to be wondered at. "For Montanism," he says, "does not essentially differ from the Christian faith; it is not a departure from the faith, but a morbid overstraining of the practical morality of the early Church. It is the first example of an earnest and well-meaning, but gloomy and fanatical hyperchristianity, which, like all hyperspiritualism, ends again in the flesh... Its views were rooted neither (like Ebionism) in Judaism nor (like Gnosticism) in heathenism, but in Christianity, and its errors consist in a morbid exaggeration of Christian ideas and demands." It is true also that the Montanists combated the Gnostic heresy with all decision, and, through Tertullian, contributed to the development of the orthodox doctrine of the Trinity, in asserting against the pantheism the personal distinctions in God, and the import of the Holy Ghost. Yet this orthodoxy in the substance of its doctrine did not give Montanism the right to claim its place in evangelical Catholicism, for it was itself a principle of implacable and irreconcilable exclusion. Though first seen and felt only in the field of practical life and discipline, this Montanist movement, coming then into conflict with the reigning Catholicism, finally and consistently carried out, broke to some extent into the province of doctrine, and thus proved true the theory that "every schismatic tendency becomes in its progress more or less heretical" (Schaaff).

The Montanists were especially distinguished from the Church catholic as its assertion of the contumacy of prophecy, and hence it went generally under the name of *nora prophetia*. Now there was nothing heretical in the simple doctrine that charismata had not ceased in the Church; but there was heresy in the doctrine, which the Montanists espoused, that these charismata introduced a new dispensation superior to that of Christ and his apostles. That Christ, who came to fulfill the law and the prophets, and promised his Holy Spirit to his apostles to guide them into all truth, bequeathed to his Church only an insufficient morality, and a dispensation which needed to be supplemented by the Paraclete of Montanus, is utterly inconsistent with a true reception of the doctrines of the Church catholic and of the Holy Ghost, who spake by the prophets. This distinction in Montanism between the Paraclete and the Holy Ghost is not a distinction (or difference, rather) of person or nature, but of the dispensation it was calculated to uphold. The Paraclete was a new dispensation following a partial bestowal for an imperfect and temporary revelation. It may be compared, and is virtually compared by Tertullian in the passages cited above from the treatises *De Monog.* and *De Virg*, *Vel.*, to the distinction drawn by St. John when he says, "The Holy Ghost was not yet given." It was the same Spirit in the Mosaic and the Christian dispensations, yet might a new dispensation be called characteristic of the larger grace of the Christian dispensation. So the Paraclete is in person and being identified with the Holy Ghost, but the larger measure of the Spirit given for the completion of Christianity introduces a distinction by which the Holy Ghost bestowed on the apostles is inferior to the Paraclete. The Paraclete is undoubtedly identified with the promised Spirit of Truth—i.e. the promised Christ, which the Church believes to have been fulfilled on the first Pentecostal day, was not fulfilled until the Spirit came on Montanus. Mosheim (cent. ii, pt. ii, ch. v, sect. 23, note), we must take the liberty of saying, entirely mistakes the nature of the distinction if his statement, "we can see no words can be found other than the third person of the Christian Trinity. This heryesy gave a character to the new disciplinary rules. It introduced also schism in its most aggravated form, asserting that the party of Montanus alone was the true Church, the pneumatici, all other nominal Chris- tians being psychics.

Montanism manifestly claimed for itself a position above the organization and regular powers of the Church, asserting as its own monopoly the continuity of revelation. Anterior revelations, to be sure, are not set aside; they are, however, regarded simply as in- complete. The Old Testament is still retained, but not with the claims, but the New Testament suffers depression, insignificance as it is no longer the final utterance of the divine teaching. It has not brought revelation to perfection; it has made, especially in the teaching of the apostles, more than one concession to human weakness, and, like Moses, it has allowed certain practices because of the hardness of men's hearts. "The Lord," says Tertullian, "has sent the Paraclete, because human weakness was not capable of receiving the truth at all once; it was necessary that the discipline should be regulated and progressively ordered, until it was carried to perfection by the Holy Spirit" (*De Virg., Velosiam*, pt. 1.). Paul gave certain instructions rather by permission than in the name of God; he tolerated marriage because of the weakness of the flesh, in the same manner as Moses permitted divorce. "If Christ has abolished that which Moses had commanded, why should not the Paraclete forbid that which Paul allows?" (*De Monog.*, i, 4). "In fine, the Holy Spirit is rather a restorer than an innovator (ibid.). Was not the new development of the revelations given foreseen and declared by Jesus Christ? The final and glorious economy of the Paraclete may, indeed, have commenced at Pentecost, but it only reached its culminating point with the appearance of Montanus; the Montanist was the heir of the apostles, and where its developments may end. Such were the principles of Montanism. Surely it were impossible to make a more serious assault than this upon apostolic Christianity. It clearly enough regarded revelation not as a fact, but rather as a doctrine or a law, and in consequence religion lost the definitive character which belongs to that which is absolute. "Inspiration," says Presseux, "which thus had power to change everything, was exempted from the restraint of all the rules of reason, as well as from the authority of the Holy Scriptures. It was admitted to be a sort of ecstasy, and its great merit, according to the sect, consisted in its bringing man into a state of complete passion. Ecstasy seized the inspired man; this is the power of the Holy Spirit which produces prophecy" (*Tertullian*, *De Anima*, pt. ii). It is a sort of God-sent madness, which constitutes the spiritual faculty called us prophecy. The sect was no longer self-possessed when it prophesies; it is in a state of ecstasy; its power is one of the Harpies. Dreams and visions occupy the principal place in the inspiration of the Montanists. Inspiration is only the harp which vibrates as it is touched by the player's finger (*Epiphanius*, *Her. xxviii, 4*). 'Man sleeps; I alone am walking,' says the Paraclete (ibid.). In such a con-
pection of inspiration, flexible natures, susceptible of keen and rapid impressions, were the chosen organs of revelation... Ambiguous and lying oracles could thus be submitted to, and must be viewed and examined by the sacred books. It is obvious that the whole of Christianity was imperilled by this doctrine of the Paraclete (q.v.). This was the fundamental heresy of Montanism, and infinitely more serious than the particular errors into which it might be led" (Heresy and Doctrine, p. 119).

The view which the Montanists took of divine inspiration led them to ignore the demands of the ecclesiastical order, and to assert the universal prophetic and priestly office of Christians—even of females. They found the true qualification and appointment for the office of teacher in direct endowment by the Spirit of God, in distinction from outward ordination and episcopal succession. They everywhere proposed the supernatural element, and the free motion of the spirit, against the mechanism of a fixed ecclesiastical order. Now they were undoubtedly right in their resistance to the encroachments of the hierarchy, and to the relaxation of discipline; but they went too far on this point, as on every other—insisting upon a Church of saints and perfect men, a standard applicable only to the invisible Church. "The Church," said Tertullian, "is not constituted by the number of bishops; it is the Holy Spirit in the spiritual man" (De Pudicitia, p. 21)—a false and dangerous doctrine, directly against the Church, where the secrets of the heart can never be judged of—where, as Presernas has aptly said, "the tares grow with the good wheat, and their separation is impossible. For the evil is not excluded by making a profession of the faith the personal condition of membership; there is no guarantee that this profession will be in all cases sincere, and, even were it so, there is no religious community in which it is not incomplete. It follows that no one such community can claim to be itself, to the exclusion of all others, the temple of the Holy Ghost; else it becomes an exclusive sect like the Montanists, who called themselves the perfect, the spiritual men, speaking scornfully of all other Christians as carnal. Their conception of inspiration, as never final and complete, moreover rendered any fixed order impossible, and destroyed ecclesiastical authority. All the elements of the faith were daily liable to change. It was impossible to divine what strange answers to spiritual questions might fall from the lips of the Paraclete (q.v.).")

The Montanists reached the point where they necessarily assumed a schismatic character, and arrayed against themselves the episcopal hierarchy. They only brought another kind of aristocracy into the place of the condemned distinction of clergy and laity. They claimed for their prophets what they denied for the bishops. The conflict of opinion between the true spiritual Christians and the merely psychical, and thus induced spiritual pride and false piety. Their affinity with the Protestant idea of the universal priesthood is clearly more apparent than real; they go on altogether different principles. (Compare Schaff, i. 267.)

As to its matter, the Montanistic prophecy related—
(1) to the approaching heavy judgments of God, a sort of visionary millenarianism; (2) the persecutions; (3) fasting and other ascetic practices, which were to be enforced as laws; and (4) as to the distinction to be made between the true and false of all sorts.

One of the most essential and prominent traits of Montanism was its visionary millenarianism, founded, indeed, on the Apocalypse and on the apostolic expectation of the speedy return of Christ, but giving them extravagant weight and a materialistic coloring. The Montanists lived up to this vivid impression in a great calamity, and looked therefore with contempt upon the present world, and directed all their desires to the second advent of Christ, which they believed to be near at hand. "After me," exclaimed one of its prophets, "there is no more prophecy, but only the end of the world" (Epiphanius, Hær. xivii, 2). The failure of these predictions weakened, of course, all the other pretensions of the system; though, on the other hand, it must be considered to the credit of the sect, a feature of their near approach of the Lord was certainly accompanied with an increase of worldliness in the Catholic Church.

But besides the prominent traits of Montanism already indicated, there remain those themes of discipline and morals which were the subject of special notice: we refer to the order and the essence of the moral character. The distinction between the two covenants was lost sight of. "The Church," says Tertullian, "blends the law and the prophets with the Gospel and the writings of the apostles" (De Præscript. § 6). The Gospel was a code, no less than the Mosaic, especially with the amplifications given to it by the Paraclete. "The law of liberty," says Presernas, "is replaced by precepts of the minutest detail. All that was not permissible was laid under a stern interdict (Tertullian, De Corona Mīsīl. p. 2), and thus vanished that noble Christian liberty which enlarges the domain of the moral principle instead of narrowing it, and takes possession of the entire life, to bring it all under its direction, and to animate it with the inspiration of love as with the breath of life" (Heresy, p. 117).

Montanism, indeed, tended to a system of growing severity; and Tertullian, moreover, gloried in that the restoration of this rigorous discipline was made the chief office of the new prophecy (De Mamm. c. 4). Nor is it to be wondered at that the Montanists raised a zealous protest against the growing looseness of the Catholic penitential discipline, which in Rome particularly, under Zephyrinus and Callistus, to the great grief of earnest minds, established a scheme of indulgence for the grossest sins, and began, long before Constantine, to absolve between the Church and the world; but, on the other hand, it must be remembered also that Montanism certainly went to the opposite extreme, and fell from evangelical freedom into Jewish legalism. It turned with horror from all the enjoyments of life, and held even art to be incompatible with Christian sobriety and humility. Above all, it laid stress upon three points: first, it exalted martyrdom with solemn fervor. It courted blood-baptism, and condemned concealment or flight in persecution as a denial of Christ: "For if persecution proceeds from God, it is in no way their duty to flee from what has God for its author; it ought not to be avoided, and it cannot be evaded." (De Mamm. c. 4.) Tertullian was perhaps not quite so clear and perfectly expresses these ideas, and they were the ideas of the Montanists. The Church had given to martyrdom no niggardly honor, but in the spirit of its founder's teachings (Matt. xix, 28) flight was considered proper. Montanism, however, severely condemned, not only the proscription of persons (comp. Eusebius, Hist. Eccles. v, 16; Tertullian, De Fugis, § 4, iv. p. 691-697).

The same extreme severity characterizes their practice of fasting. Kaye (in his Tertullian, p. 416) sums up the differences between the orthodox and Montanists on the subject of fasting thus: "With respect to the jejunium, or total abstinence from food, the orthodox thought that the interval between our Saviour's death and resurrection was only the period during which the apostles observed a total fast, and consequently the only period during which fasting was of positive obligation upon all Christians. At other times, it is reserved with themselves to determine whether they would fast or not. The Montanists, on the contrary, contended that there were other seasons during which fasting was obligatory, and that the appointment of these seasons constituted a part of the revelations of the Paraclete. With regard to the fasts, the Montanists gave a great name to the first fast after Christmas, which they only pronounced the fast obligatory on all Christians, but prolonged it until evening, instead of terminating it, as was the custom, at the ninth hour. In the observance of xerophagia (q.v.), the Montanists abstained not only from flesh and wine, like the orthodox, but also from..."
richer fruits, and omitted their customary ablutions." (Apollonius (in Eusebius, H. E. v. 18), in this particular, simply disbelieved. This is what was lacking in the law of fasting, pointing out in these words that Montanus's offence was not the changing of one law for another, but the imposition of a law where there had been liberty. Tertullian has written an entire treatise in defence of fasting, and the objections brought against Montanism on this point show clearly the exaggerated legalism by which it was estranged from the true Christian tradition. The law and the prophets, it was said to the Montanists, were until John; fasting therefore should be a voluntary, not an enjoined act. The apostles themselves observed it, without laying it as a yoke upon any: we must not return to legal prescriptions. The command in the great text of the law is merely outward observance. Tertullian (De jejunio, c. 2 and 3) replies that nothing is more adapted to give large license to the flesh than the reducing of the law to the great commandment of love. He maintains the necessity of fasting—first, on the ground that self-indulgence led to the fall. "It is necessary," he says, "that man should give satisfaction to God with the same element by which he offended, and that he should deny himself food, which caused his fall." That fasting is agreeable to God is proved by the words full of tender- ness addressed to Elijah when he was fasting in the desert of Horeb: "behold, I have appointed a young boy, who has broken out in the mouth of the Lord," accordingly calculated for the satisfaction of the flesh. Fasting facilitates holy visions, as is proved by sacred history from Daniel to Peter, and it prepares for martyrdom; while the neglect of such ablutions leads to apostasy, by fostering the love for material pleasures. To the objections drawn from Holy Scripture, Tertullian replies by the revelations of the Paraclete, which legitimately give expansion to its obligation, and refuses to recognise any distinction between the O. and N. T., as might be naturally expected from his strictly legal stand-point (comp. De jejunio, c. 3 and 6). In his strongest protests, however, Montanism, like all ascetic doctrines, entered against the union of the sexes. It not only prohibited second marriage as adultery, for laity as well as clergy, but even went so far as to distinguish impugn all marriage, urging its faithful ones to absolute continence. Tertullian does not hesitate to compare the conjugal union to adultery, forgetting his own beautiful words about the perpetuity of marriage after death (Ad. Marc. i, c. 29, p. 639, and brands the union of sexes as caused by an impulse of lust. "Thus, then," he says, as an objection urged, "you set a brand even on first marriages." "And rightly," he replies, "for to him some is given the gift of celibacy. Thus it is good for a man not to touch a woman; virginity is the highest holiness, since it is furthest removed from adultery" (De Virg. Veland. p. 16). In his treatise on monogamy, however, Tertullian contents himself with prohibiting second marriages, taking his stand on Scripture, when he can make it sustain his view, appealing to the higher power of the Paraclete when he has to deal with the exact texts of St. Paul. The apostle, according to him, gave sanction to second marriages, but with a marked tone of antipathy, and simply in consequence of his knowledge and prophecy having been only in part. The Paraclete, however, in his new revelation, always acts in conformity with Jesus Christ and his promises. "We acknowledge," said Tertullian, "only one marriage, as we acknowledge only one God. Jesus Christ has had only one bride, which is the Church. By his example, and by the explicit command given by the Paraclete, he has restored the true nature; for monogamy dates from Eden. The priests were to have only one wife. Now, under the new economy, every Christian is a priest of Christ. No difference should be made in a moral point of view between the clergy and the laity, for the former are taken from among Christian people. Besides, how can marriage, which makes of the man and woman one flesh, be renewed? Is such an assimilation capable of repetition? Besides, the bonds between them are made and wife continue in death; they have only become married, but are becoming more spiritual." Yet Tertullian's views, though extreme, do not in this instance clearly set forth the views of all Montanists. Indeed some of them insisted that their founder taught ἀπειλωμένως—dissolution of marriage—and that Priscus and Maximilla, as soon as they recognised the spirit, abandoned their husbands. It is true Wernsdorf (see Bouth's note, Rel. Sac., i, 478) observes that Montanus's teaching was on this point not by precept, but by the example of his two prophetesses, and yet the extreme asceticism must have had a far-reaching influence even for Tertullian to advocate celibacy of the clergy. At the same time, if he has in mind Chastity he comes to recognise a morality of perfection which rises above the ordinary standard. "Permanent virginity is its highest point; abstinence from the sexual relations in marriage is akin to it in virtue." In an extreme ascetic tendency Montanism forbade women all ornamental clothing, and the wearing of shoes. Religion, it held, was even more than a vocation. Thus Tertullian urges that it be done so as not to kindle the flame of passion. "I entreat thee, O woman, be thou mother, daughter, or virgin, veil thy head: as mother, veil it for the sake of thy son; as sister, for thy brother; as daughter, for thy father. For thou dost not leave it even to the seven years of age. Compare the custom of modesty; encircle thee with a rampart of chastity. Set a guard over thine own eyes, and over those of others. Art thou not married to Christ?" (De Virg. Veland. p. 16).

The perversion of the doctrine of redemption, which is the source of all such legalism, casuistry, and extreme asceticism, as the Montanists taught, is more especially notable in the arbitrary disposition made by Montanism of various kinds of sins. In the same manner as it recognises two orders of perfection, and thus does violence to the true idea of good, so does it tamper with the idea of evil. In accordance with the words of John—"a sin not unto death"—it made a difference between sins venial and mortal, and denied that the Church had power to pardon the latter, because, as it taught, there is no possibility of a second repentance for mortal sins, and therefore no power in the Church to restore the lapsed into fellowship. Tertullian's treatise on Modesty, cast by the decree of the bishop of Rome, who had assumed the right to pardon the gravest sins, expresses the Montanist theory with perfect clearness. He does not dwell for an instant on the real difficulty of obtaining proof of true repentance, but speaks only of the comparative gravity of some sins. "Some," he says, "are beyond remission; some merit punishment, others damnation. From this difference in the offences comes the difference in the punishment, which varies according as it is exercised on account of a pardonable or unpardonable sin." He held all mortal sins (of which he numbers seven) committed after baptism to be unpardonable (De Pudicit. c. 2 and 19), at least in this world; and a Church which showed such lenity towards gross offenders, as the Roman Church at that time did, according to the corroborating testimony of Hippolytus, he called worse than a "den of thieves," even a "spelunca moechorum et fornicatorum." At the head of the black catalogue of unpardonable or mortal sins the Montanists placed adultery and apostasy. They did not deny that God could pardon them directly, or through the medium of an exceptional revelation; but on this side the grave no restoration was possible for those who had been guilty of these things. At the same time they gave the strongest pledges of their repentance. Here we have a clear departure from the grand Christian doctrine of the fulness of God's mercy, irrespective of the proportion of sin, and that the Church must suffer all to enter its fellowship who manifest "a desire to flee from the wrath to come." If Montanism taught
truly, it follows that the work of redemption is insufficient and that, in addition to repentance, a certain satisfaction is demanded of the sinner. We have hence unquestionably reached the root of the error of Montanism, from which grows its legalization and its asceticism.

The religious earnestness which animated Montanism, and the fanatical extremes into which it ran, have frequently reappeared in the Church after the destruction of its heretics. Thus, as in Novatianism, Donatism, Anabaptism, the Camisard enthusiasm, Puritanism, Pietism, Irvingism, and so on, by way of protest and wholesome reaction against various evils in the Church. And what may appear perhaps more strange, several of those very doctrines of the Montanists which in their earliest rise were pronounced heretical gradually made their way into the Church of Rome, and, with slight modifications, remain to this day a part of her creed. Thus it is to Montanism that it owes the idea of the infallibility of its council, which attempt in the same way to add to revelation. From the same source, too, it has derived its "counsels of perfection," and the distinction between venial and mortal sins. Says Dr. Newman, in his Essay on Development, a work which he would hardly care to own now, "the prophets of the Montanists prefigure the Church's doctors, and their inspiration her infallibility; their revelation, her development. and though this was written a new significance has been given it by the proceedings of the last Vatican Council (1869), which has lodged in the individual head of the Church the infallibility formerly attributed to the Church as a whole. See, however, Infallibility; Popacy."

A return to the original history of Montanism. We have stated that it probably originated in Phrygia about the middle of the 2d century, and that it spread rapidly during the bloody persecutions under Marcus Aurelius. In Asia Minor, however, it met with opposition, and the bishops and synods almost universally declared against the new prophecy as the work of demons. The same thing occurred in Syria and Egypt, and because the Montanists were prominent in the Ammonian revision of the Scriptures, as mentioned Claudius Apollinaris of Hierapolis, Miltiades, Apollonius, Serapion of Antioch, and Clement of Alexandria. The Roman Church likewise, during the episcopate of Eleutherus (177-190) or of Victor (190-202), after some vacillation, set itself against it at the instigation of the presbyter Caius and the confessor Praxeas. Yet the opposition of Hippolytus to Zephyrinus and Callistus, and the later Novatian schism, shows that the disciplinary rigorism of Montanism found energetic advocates in Rome till after the middle of the 3d century. Indeed it was some time before the Montanists formed themselves into an independent church. This was done, we are informed, by the 3d Montanist, who announced new revelations, Tertullian, and who for the publication of his, "Praelectiones," was excommunicated by the Church (comp. Gieseler, Eccles. Hist. i, 125, note 6). The Gallic Christians, Trenaeus at their head, took, it is now generally believed, a conciliatory posture, and sympathized at least with the moral earnestness, the enthusiasm for martyrdom, and the chiliasm hopes of the Montanists. The bishop of Trenaeus, Trenaeus to bishop Eleutherus at Rome to intercede in their behalf, and this mission may have induced him or his successor to issue letters of peace, which were, however, soon afterwards recalled. In North Africa they met with exten- sive sympathy, as the Punic national character leant naturally towards gloomy and rigorous asceticism. Here it secured Tertullian, who helped the gropers in the dark towards a twilight of philosophy. He is its proper and only theologian. Through him, too, its principles acted in many respects on the Catholic Church; and that not only in North Africa, but also in Spain, as we may see in the parallel development of the Church of Elvira in 306. It is singular that Cyprian, who, with his successors, upheld High-Church tendencies and abhorrence of schism, was a daily reader of Tertullian, makes no allusion to Montanism. Augustine (De haeresibus, § 6) relates that Tertullian left the Montanists and founded a new sect, which was called after him, but was through his (Augustine's) agency reconciled to the Catholic congrégation at Carthage. As a sect, the Montanists run down into the 6th century; but, as has been remarked with much truth, though the actual number of the Montanists was at one period very considerable, the importance of the sect is really to be estimated by the extent to which their character became infused into the Church. Neander attributes much of this to the great influence which Tertullian exerted through the relation in which he stood to Cyprian, who called him his teacher. As the same time it is to be noticed that there was some tendency in the opposite direction in the introduction of a prophetic order superior in rank and importance to the order of bishops. The first order among the Montanists was that of patriarcs, the second that of cenobites, and the third that of deaconesses. The patriarch resided at Pepuza, in Phrygia, the anticipated seat of the millenial kingdom, and at that time almost exclusively inhabited by Montanists.

Montano, Leandro, a Spanish theologian, a native of Murcia, flourished in the 17th century. He was also known under the name Leandro de Murcia. He was a Capuchin monk, ecclesiastical inspector of Castile, qualificator of the Inquisition, and preacher to the king. Among his works may be mentioned Constitutiones regulares et regla de los menores, (Madrid, 1645, 4to):—Commentaria in Esther (ibid. 1647, fol.):—Ex- pliication de los bulas de Inocencio X (ibid. 1650, 4to):—Disposiciones morales in primam S. Thomam (ibid. 1665-70, 3 vols. fol.). See Antonio, Bibl. Nova Historia; Saint-Antoine, Bibl. unive. Franciscana, ii, 279.

Montanus, a celebrated heresarch of the early Christian Church, the supposed founder of a sect named after him Montanism (q. v.), was a Phrygian by birth, and, according to Eusebius (Hist. Eccles. v, 16), made his first public appearance about A.D. 170, in the village of Ardatar, on the confines of Phrygia and Lydia, of which place he is believed to have been a native (comp. however, the bishop of Lincoln's [Kay's] Tertul- lian, p. 13 sq.). He was brought up in heathenism, but appears to have embraced Christianity (about 170) with all the fanatical enthusiasm for which his countrymen were noted. Neander endeavors to explain his char- acter and tendencies on the supposition of his possessing an extraordinary physical endowment; but little we know concerning him renders this highly probable. The frenzy, the paroxysms, the fierce belief in the supernatual, that marked the old Phrygian priests of Cy- bele and Bacchus, are repeated under less savage, but not less abnormal conditions, in the ecstatics, somnam- bulism, and passion for self-immolation of the Monta-
According to some of the ancient writers, Montanus was believed by his followers to be the Para-
clete, or Holy Spirit. But this is an exaggeration,
for the following tendency seemed to have invaded the Parac
clitic church the practice of appealing to visions in favor of
opinions and actions, of which practice Cyprian and
others availed themselves to a great extent (comp.
Middlele, Free Inquiry, p. 98, etc.). His principal asso-
ciates were two prophets, named Prisca, or Priscilla,
and Maximilla. The denominations which were as-
to them all as a leader of a sect, disseminated are now
clearly seen to have been in general agreement with
those of the Church catholic of the 2nd century, and
the fact that Tertullian at one time became the most bril-
lant exponent of the Montanists would go far to con-
firm such a position. But the austerity of manner, the
strictness of discipline, and the doctrine of a permanent
extraordinary influence of the Paracletic, manifesting
itself by prophetic ecstasies and visions, opened wide
doors to all manner of fantastical extravagances, and
brought reproach upon the name of founder and sect
alike. Ecclesiastical writers of succeeding centuries
have in consequence been obliged to reproach
upon the name of Montanus by accusations of immoral-
ity and crime, and he is even said to have ended his
days violently. But there is no authority for such
statements, if we may believe Schlegel, Der Mon-
tanismus u. die christliche Kirche des zweiten Jahrh.
(Th. 1941, 8vo). He insists upon it that "there is
nothing of historical value in the life of this man at
our command" (p. 242), and believes that "the person
Montanus is of no significance in the examination and elu-
cidation of what is known as Montanism," and would
goes even so far as to "doubt the historical existence of this
apocalyptic character" (p. 243). There is certainly
ground for such a position in the fact that in their ear-
liest days the Montanists were never spoken of under
that name, but were generally called, especially by Ter-
tullian and Eusebius, after the name of the country in
which they originated, Catochrypiana, or after the name
of their first bishop, who was assigned to them, Ep-
puzianus (comp. Epiphani. Her. xlviii, 14). Bishop Kaye,
in his Tertullian (p. 28 sq.), takes it for granted that
Montanus was a historical character, and awards to
him the dignity of founder of the Montanists. The learned
bishop even believes, depending upon Tertullian's work,
"that, at the time of the composition of his book, he
had been committed to writing," and that "Tertul-
lian, believing that Montanus was commissioned to
complete the Christian revelation, could not deem him
inferior to the apostles, by whom it was only obscurely
and imperfectly developed." See references to the
article Montanus.

Montanus, Benedict Arias. See Arias.

Montanus of Toledo, a noted Spanish prelate of the early Christian Church, flourished in the 6th cen-
tury, and is said to have been personally known by his
successor. He succeeded Celsus in the see of Toledo A.D. 531; he was
presided at the council held in Toledo, and died in the year 540.
There are two letters of his extant, one to the brethren of Palantia, and the other to Theodorius, bishop of Palantia.
See Clarke, Sacred Hist. ii, 306.

Montane, Thomas B., a Baptist minister, was
born in New York in 1759. He began preaching
when quite young, and was in 1788 ordained pastor of
the Baptist society in Warwick, N. Y., where he remained
until 1801, when he accepted a call from the Church in
Southampton, Bucks County, Pa., which situation he
held until his death, Sept. 27, 1829. He was a truly
popular preacher, and on account of his talents and piety
his services came to be much sought after for ordina-
tions, councils, and especially religious anniversaries, yet
none of his works have been published. See Sprague,
Annals, vi, 283.

Montargon, Robert François de (Hypothèse de l'Assomption, a French preacher and theologian, was
born at Paris, 7th May, 1707. He assumed the habit of the Augustines of the street Notre Dame of the Victoires
at Paris (les Petits Pères), and very soon became
remarkable for his oratorical talent. He was made court
preacher by Louis XV, and received the title of almoner
to Stanislaus I (ex-king of Poland), duke of Lorraine
and Tuscany, and was confirmed in his office by
attack by paralysis, he resorted in 1770 to the waters of
Plombières for relief. An inundation of the Aronne
destroyed that city, and Montargon found only death
where he had expected recovery.—July 25, 1770. He
is the author of Dictionnaire apostolique à l'usage de mes-
sieurs les curés de la ville et de la campagne qui se de-
stinent à la claire (Paris, 1752-58, 18 vols. 8vo); this
work has remained the vade mecum of the ecclesiastics.
It has often been reprinted, and translated into different
languages. The first six volumes treat of morals, the
seventh and eighth of the mysteries of Jesus Christ, the
ninth of the Virgin, the tenth of the sainted, the eleventh
of the pains of Hell, the twelfth of different subjects,
and the thirteenth a general table of the subjects
in the other twelve volumes. See Recueil d'Éloquence sainte ; Histoire de l'Institution de la fête du
Saint-Sacrement (1758, 12mo); Dictionnaire portatif des
prédateurs, s. v.

Montazet, Antoine de Malvin de, a French
prelate, was born Aug. 17, 1718, in the castle of Quissac,
near Agen. He belonged to a good family of the Age-
nais, and, embracing the ecclesiastical profession,
became, among other benefices, the abbots of Saint-Vic-
tor of Paris and of Monstier in Aronne. At the close
of 1742 he became almoner to the king, and in 1748
was appointed bishop of Autun. March 31, 1759, he
was raised to the archbishopric of Lyons in the place of
Cardinal de Tencin. "Zealously opposed to the philoso-
phys," says Feller, "an ardent defender of the preroga-
tives of his see, which he claimed privileged even to
the reformation of metropolitan judgments, a successful
adversary to the customs and privileges of his chapter,
which he succeeded in suppressing by civil authority,
this prelate holds a distinguished place in the history
of the Gallican Church of this century." He had nu-
merous debates with M. de Beaumont, archbishop of
Paris, relative to the religious quarrals of the time.
He felt much inclined to side with the Jansenists, and
died at Lyons, April 3, 1780. Yet, however more than
one of the number of the Appellants, and avoided any formal
proceedings of opposition against the bull Unigenita.
He died May 2, 1788, at Paris. Montazet had a happy
memory, a brilliant imagination, an active mind; his
eloquence was lofty, energetic, and copious. In 1757
he was admitted to the French Academy. His prin-
cipal writings are, Lettre à l'archevêque de Paris (Lyons,
1769, 4to); he there takes the title of Primate of France:
—Mandement contre "L'Histoire du Peuple de Dieu" de
Berruyer (Lyons, 1762, 12mo);—Instruction pastorale
sur les sources de l'incurabilité et les fondements de la ré-
ligion (Paris, 1775, 4to); this work was given up to the
year 1782, when it was reprinted under the title of
Hypothèse de l'Marchevêque, and with the passages
drawn from the Principes de la foi chrétienne de Daguet;
but there is reason for believing that the composition
of the Instruction pastorale is by P. Lambert.—Catechisme
(Lyons, 1698);—Rituel de diocèse de Lyon (Lyons,
1768, 3 vols. 12mo);—Catechisme de l'Instruction Theologi-
ces (Lyons, 1782, 1784, 6 vols. 12mo); and the Institutiones Philosophicae (Lyons, 1784,
5 vols. 12mo); this system of theology, proscribed in
France, was introduced into Italy and Spain, where it
was held in esteem for a short time. See L'Ami de l'
MONTEBAS

Montbas, Jean Barton de, a French Prelate, a native of Guéret, flourished in the 15th century. He was abbot of the Dorat in 1446, and on April 1, 1457, was made bishop of Limoges, and counsellor to the Parliament. In 1465 he resigned his functions in favor of his nephew, Jean Barton de Montbas II, who put into prison the Breton Brevarium Lemorogiacum (Paris, 1800, 8vo) and the Brevarium dei causa Lemorosianum (1654), Maguercit de 1638, in the library of Limoges. He died in the castle of Isle, March 4, 1497, with the honorary title of archbishop of Nazareth. We owe to him the construction of the magnificent nave in the cathedral of Limoges, and the adoption of the Musulm to usum Lemorosian Ecclesiae: Paris, 1486, 4to. See Gallia Christiana nova, vol. ii, col. 356, 551; Bonaventura, 111, 166, 718, 729, 731.

Montboissier. See Peter the Venereable.

Montbray, Geoffroi de, a French Prelate, was born at Montbray, near Saint Lô, in the early part of the 13th century. Descended from Normandy, he was early devoted to the Church, and on April 10, 1049, was consecrated bishop of Coutances. He was present at the assembly held in 1066 by William, duke of Normandy, at Lillebonne, in which it was resolved to invade England. One of the principal promoters of the war, he financed the enterprise of his friend, the conquest, and acquitted himself very courageously at the battle of Hastings. He accompanied William to London, and in the ceremony of the coronation at Westminster acted as chamberlain for the states of Normandy. When the Conqueror was recalled to his duchy, he left Geoffroi de Montbray at the head of his soldiery. In 1067, when he had defeated the two Anglo-Saxon princes, Edmund and Godwin, Geoffroi entered Domes and Somerset, and there destroyed all who rose in arms, or who were suspected of having taken up arms. Some years after the ears of Northumberland, Norfolk, and Hereford, having rebelled against the Conqueror, Geoffroi powerfully aided in the victory of Fosgen, obtained over them in 1074, and forced them to take refuge in Norwich, where he besieged and took them by capitulation. As a reward for these noble and numerous deeds, William gave to him in feoff 280 manorial lands. After the death of that prince (1087) he was elected bishop of Coutances, a last cast in which he died, Feb. 2, 1084. See Ordericus Vitalis, Historia Ecclesiatamia; Gallia Christiana, vol. vii; Thierry, Hist. de la Conquête de l’Angleterre par les Normandus; Le- canu, Hist. des Évêques de Coutances; Fisquet, France post-Montbray.

Montbrun, Charles de, a Huguenot warrior, and a zealous Protestant, was born in the diocese of Gap in 1530. He took an active part in the civil wars of his time, and rendered the Huguenot great service, performing several very daring deeds, and showing his bravery in an especial manner at Jarnac and Montbrun. He was last cast in 1572, where he died, January 25, 1575. See Allard, Vie du brave Montbrun (Grenoble, 1675, 12mo); Martain, Hist. de Charles Dupuy (2d ed. Paris, 1816, 8vo); Hoefer, Noue. Biogr. Générale, xxxvi, 141-43; Smiles, Huguenots.

Montbrun, Guillaume. See Brignonnet.

Montchal, Charles de, a French Prelate, was born in 1593 at Ammonay (Vivarais). His mother was Anne de Guiraud. At first abbot of Saint-Ouen-le-Boisaise, in the diocese of Angoulême, and of Saint-Sauveur-le-Vicomte, in the diocese of Coutances, he became archbishop of Toulouse in 1627 by the resignation of Louis de Nogaret, cardinal of La Villette. The cardinal of La Villette had not received holy orders, and was not even a simple cleric. As for Montchal, he had not only been ordained, but he was that rare thing among ecclesiastics of quality, a theologian, and even an erudite theologian. He was consecrated in Paris Jan. 9, 1598, and in the same year he was made archbishop of Toulouse then had a prelate who, clothed in his sacerdotal robes, officiated and preached, which was a great novelty. Charles de Montchal returned to Paris in 1635, and assisted at the assembly of the clergy, where he was one of the principal orators. In 1641 he was present at the assembly of Mantes, the history of which he wrote. In 1645 he again took his seat in the assembly of Paris, where he energetically pleaded the cause of ecclesiastical franchise. Sept. 4, 1648, he consecrated the church of Sorèze. Under his administration the Church of Toulouse prospered greatly, and became enriched by a considerable number of monasteries and convents. He died at Carcassonne Aug. 22, 1651. The zeal of Montchal for religion was that of an enlightened mind. He thought that the Church should be powerful, and was sensible enough to seek for the elements of that power in the example of good morals, the progress of ecclesiastical studies, and the noble triumphs of eloquence. He was the patron of a multitude of learned men, who dedicated their works to him; among them may be mentioned Etienne Molinier, François Combès, Innocent Cironius, Casanova, Ravel, etc. He is the author of Mémoires (Rotterdam, 1716, 8 vols. 12mo); in these Mémoires is the Journal de l’Assemblée de Mantes. See Gallia Christ. vol. xiii, col. 61; Du Mége, Hist. des Institut. de la ville de Toulouse, iii, 126, 127.

Mont de Piété. See Monts d’Eptat.

Monte, Cardinal del. See Julius II.

Monte, Andrea de (Μοντέ) a celebrated Jewish convert to Christianity, so named after he had embraced the new faith (before his conversion he was called R. Joseph Tsrpathi Has-Alphahi, Ἰωάννης Μοντεῖος Περί Χριστού), was born in the early part of the 10th century at Fez, in Africa (hence his second surname, Φεζίς), of Jewish parents, who were natives of France, which is indicated by his first surname (Περί, Gallus). He emigrated to Rome, where, after exercising the office of chief rabbi for many years, and distinguishing himself as an expounder of the Mosaic law, he embraced Christianity about the year 1552, during the pontificate of Julius III. He is distinguished for the vast knowledge of Hebrew and rabbinical literature to the elucidation of the prophecies, with a view to bringing his brethren into the fold of the Romish Church, and wrote—(1) A voluminous work, entitled Ἀποκάλυψις τοῦ Ιησοῦ Χριστοῦ, The Perplexity of the Jews, demonstrating both from the Scriptures and the ancient rabbinical writings all the doctrines of the Christian religion. Bartholoci, who found the MS. in loose sheets in the Neophyte College at Rome, carefully collated it and had it bound. He did not know that it ever was printed, but Furius (Bibliotheca Judica, iii, 544, s. v. Zarfati) states that it was published in Rome, 16—, 4to. However, Fabiano Fiocchi, in his work called Dialogo de l’espediente della morte di Monte, executed upon the occasion of his death, has the Biblical student may derive all the advantages from it for Christological purposes. (2) An epistle to the various synagogues, written both in Hebrew and Italian, and entitled Lettera de Pace, dated Jan. 12, 1581. It treats of the coming of the true Messiah, and shows from the prophecies of the O.T., as well as from the works of the ancient rabbins, that he was to come from the person of Jesus Christ (Rome, 16—, 4to). This learned work and the former one are very important contributions to the exposition of the Messianic prophecies, and to the understanding of the ancient Jewish views about the Messiah. Gregory XIII appointed Monte in 1576 preacher to the Hebrews of Rome in the oratory of the Holy Trinity; he
was afterwards made Oriental interpreter to the pope, in which capacity he translated several ecclesiastical works from the Syriac and Arabic. He died in the beginning of the 9th century. See gravity, Magno Lociet, Bibliotheca Hebraica, iii, 848 sq.; Wolf, Bibliotheca Hebraica, iii, 856 sq.; Ginsburg, in Ktisto, Cepheus, Bibl. Litt. a. v.; Kalkar, Israel u. die Kirche, p. 71; Förster, Bibl. Jud., i, 45 (a. v. Andreas).

Monte Cassino, the first Benedictine convent ever established, of remarkable sanctity, in Italy, the "temple of monasticism," and for a thousand years the spot especially dear to the great Benedictine order, was so named after the place in which it was located.

Benedict of Nursia (q. v.) having been induced by the representations of the priest Florentius to settle in the Campania, near Naples, found on a mountain near Cassino, called Cassinum, a temple of the shrine of Venus, which were still resorted to by the hermit.

He converted them, destroyed the temple and shrine, and in their place erected a chapel dedicated to St. Martin, and soon after commenced building a convent for himself and his followers, which subsequently received the name of Monte Cassino. The undertaking succeeded in spite of difficulties of all kinds (it is said the devil made the stones so heavy that it was impossible to lift them, etc.), and it was terminated in 529.

The convent was, of course, subject to the rule of Benedict, who remained its abbot until his death, March 21, 547. He died the year after the successes obtained by the barbarians, continued to prosper, owing chiefly to the miracles performed by the relics of its founder. In 580 Monte Cassino was stormed by the Lombards. The abbot and monks, taking with them their most valuable ornaments, and the original copy of their rule, fled to Rome, where they were well received by pope Felix II. They soon built a new convent by the side of the Quirinal Palace, and remained in possession of it during 140 years. Gregory the Great proved particularly well-disposed towards the order, inflicting on them their attention towards missions, and particularly to England, from whence they spread to Scotland, Ireland, and Germany. St. Willibrord introduced the order in Friesland, and under St. Boniface it acquired supremacy throughout Germany. In 720 pope Gregory II appointed the Benedictines to build a abbey on the ruins of Monte Cassino, which was then only inhabited by hermits, and the church was consecrated by pope Zacharias himself in 748. Petronax was appointed abbot, and the pope confirmed all the donations made to the convent, exempting it at the same time from episcopal jurisdiction, and restoring to it the lands of Benevento. He died in the mean time the convent had met with an irreparable loss: a French monk, Aiguil de Fleury, had in 638 taken from the ruins the remains of the saint, and carried them to his own convent, which henceforth had the name of St. Benoît sur Loire. Abbot Petronax died May 6, 740. Under his successors Monte Cassino became a centre of learning. Prof. Leo, in his Gesch. v. Italien, says: "Benevento and the convent of Monte Cassino must be considered as having been for a time, in the beginning of the Middle Ages, the most important abode of scientific activity. Africa, Greece, and the Western German countries met there; and from the meeting of the distinguished men of these different countries resulted naturally a higher intellectual life than could be found anywhere else; for there neither trade nor the coarse enjoyments of immediate eating or drinking, which engross all in the sea-towns and on the northern shores, were the adversaries of science" (ii, 21). Among such distinguished men we may mention Paulus, the son of Warnefried, the historian of the Lombards, whom, after in sorrow at the fate of his country he had retired to Monte Cassino, Charlemagne repeatedly invited to his court, and who wrote the Historiaarianum, and taught Greek to the cler-
Montenegro.

**General Description.**—The country is very mountainous, and agriculture is therefore prosecuted to a moderate extent only, and in a very rude and primitive manner. The products are like those of other European lands of the same latitudes. "The general aspect of Montenegro," says Wilkinson, the celebrated English traveller, "is that of a succession of elevated ridges, diversified here and there by a lofty mountain-peak, and in some parts looking like a sea of immense waves turned into stone. Trees and bushes grow amid the crags, and in the rugged district of Cezo the fissures in the rock are used for additional shelter, which the inhabitants pass over without breaking its legs. The mountains are all limestone, as in Dalmatia; but in no part of that country do they appear to be tossed about as in Montenegro, where a circuitous track, barely indicated by some large loose stones, calling itself a road, enables a man on foot with difficulty to pass from the crest of one ascent to another. Some idea of the rugged character of the country may be formed from the impression of the people themselves, who say that 'when God was in the act of distributing stones over the earth, the bag that held them burst, and let them all fall upon Montenegro.' The chief productions cultivated there are Indian corn and tobacco, who, in quantity, are also grown in great quantities, and vegetables are among the principal exports of Montenegro. Potatoes, indeed, have been a most profitable acquisition to the poor mountaineers, as well for home consumption as for exportation, since their introduction in 1766" (Dulmutha and Montenegro [London, 1842, 2 vols. 8vo.], 411-418). Besides agriculture, the chief occupation of the Montenegrins is fishing. There are few who exercise any trade, though some perform the offices of blacksmiths, farriers, or whatever else their immediate wants may require. They are knit together in clans and families, and have many feuds among themselves, which are perpetuated by the hereditary obligation of avenging blood. In their disposition towards strangers they are, like most mountaineers, hospitable and courteous, and bear a friendly feeling for those who sympathize with their high notions of independence and devotion to national honor. They are cheerful in manner, and though very rude, yet by no means uncouth. Education among them is at a very low ebb; in fact, it is held in contempt, and many, even among the priests, are unable to read or write. In 1841 several schools were established, and the art of printing introduced; but the unsettled state of the country has hitherto prevented its universal diffusion. They have a very pure Servian dialect, called by Krajiniski "the nearest of all the Slavonic dialects to the original Slavonic tongue; that is, that into which the Scriptures were translated by St. Cyril and Methodius in the 9th century," and which still continues to be the sacred tongue of all the Slavonian nations who follow the Eastern Church.

There are no towns in Montenegro, and the largest village contains only 1200 inhabitants. Cettigne or Tzet tinie, the seat of government, contains between twenty and thirty well-built houses, besides a convent and the palace of the prince of Montenegro. The villages are unwalled; the houses, or rather huts, which compose them are very rarely provided with chimneys, and in the elevated districts are more wretched in appearance than even the mud-hovels of Ireland. "The houses," says Wilkinson, "are of stone, generally with thatched roofs, but many are covered partly or entirely with wooden shingles, a mode of roofing very common in Slavonic countries. Some of the better kinds are roofed with tiles, on which large stones, the primitive nails of Montenegro, are ranged in squares, to keep them from being torn off by the wind. Each house generally contains one or two rooms on the ground-floor, with a loft above, occupying the space between the gables, where they keep their Indian corn and other stores. The ascent to it is in a ladder, which projects from a window of the ground floor, calling itself a door; and this floor, which performs the part of ceiling to the lower room, is frequently of wicker-work, laid on rafters running from wall to wall. The lower room is at once the parlor, the sleeping-room, and the kitchen; but in the small villages there is no such subdivision, the whole being one large room, which passes over without breaking its legs. The mountains are all limestone, as in Dalmatia; but in no part of that country do they appear to be tossed about as in Montenegro, where a circuitous track, barely indicated by some large loose stones, calling itself a road, enables a man on foot with difficulty to pass from the crest of one ascent to another. Some idea of the rugged character of the country may be formed from the impression of the people themselves, who say that 'when God was in the act of distributing stones over the earth, the bag that held them burst, and let them all fall upon Montenegro.' The chief productions cultivated there are Indian corn and tobacco, who, in quantity, are also grown in great quantities, and vegetables are among the principal exports of Montenegro. Potatoes, indeed, have been a most profitable acquisition to the poor mountaineers, as well for home consumption as for exportation, since their introduction in 1766" (Dulmutha and Montenegro [London, 1842, 2 vols. 8vo.], 411-418). Besides agriculture, the chief occupation of the Montenegrins is fishing. There are few who exercise any trade, though some perform the offices of blacksmiths, farriers, or whatever else their immediate wants may require. They are knit together in clans and families, and have many feuds among themselves, which are perpetuated by the hereditary obligation of avenging blood. In their disposition towards strangers they are, like most mountaineers, hospitable and courteous, and bear a friendly feeling for those who sympathize with their high notions of independence and devotion to national honor. They are cheerful in manner, and though very rude, yet by no means uncouth. Education among them is at a very low ebb; in fact, it is held in contempt, and many, even among the priests, are unable to read or write. In 1841 several schools were established, and the art of printing introduced; but the unsettled state of the country has hitherto prevented its universal diffusion. They have a very pure Servian dialect, called by Krajiniski "the nearest of all the Slavonic dialects to the original Slavonic tongue; that is, that into which the Scriptures were translated by St. Cyril and Methodius in the 9th century," and which still continues to be the sacred tongue of all the Slavonian nations who follow the Eastern Church.

There are no towns in Montenegro, and the largest village contains only 1200 inhabitants. Cettigne or Tzet tinie, the seat of government, contains between twenty and thirty well-built houses, besides a convent and the palace of the prince of Montenegro. The villages are unwalled; the houses, or rather huts, which compose them are very rarely provided with chimneys, and in the elevated districts are more wretched in appearance than even the mud-hovels of Ireland. "The houses," says Wilkinson, "are of stone, generally with thatched roofs, but many are covered partly or entirely with wooden shingles, a mode of roofing very common in Slavonic countries. Some of the better kinds are roofed with tiles, on which large stones, the primitive nails of Montenegro, are ranged in squares, to keep them from being torn off by the wind. Each house generally con-

dom inclined to carry anything, or take any trouble that they can transfer to the women, who are the beasts of burden in Montenegro; and one sees women pulling up the steepest hills under loads which men seldom carry in other countries. They are therefore very muscular and strong, and the beauty they frequently possess is soon lost by the hard and coarse complexion they acquire, their youth being generally exhausted by laborious and incessant occupations. Dishes of Indian corn, the bundles of wood, and everything required for the house or the granary are carried by women; and the men are supposed to be too much interested about the noble pursuits of war or pillage to have time to attend to menial labors. As soon as the villaggio of the land is performed, they think they have done all the duties incumbent upon men; and the inferior drudgery is the province of the women, and the Montenegrin toils only when his inclination demands the effort. The men therefore (as often is the case in that state of society), whenever active and exciting pursuits are wanting; instead of returning to participate in or lighten the toils necessity had imposed on the women, are contented to smoke the pipe of idleness or indulge in desultory talk, imagining that they maintain the dignity of their sex by reducing women to the condition of slaves. The men wear a white or yellow cloth frock, reaching nearly to the knees, secured by a sash around the waist; under it is a red cloth vest, and over it a red or green jacket without sleeves, both richly embroidered, and the whole covered by a jacket bordered with fur. They wear a red Fez cap, and white or red turban, below which protrudes at the back of the neck a long lock of hair. The women wear a frock or pelisse of white cloth and open in front, but much longer than that of the men, and trimmed with various devices, and with gold ornaments in front as well as around the neck. The red cap of the girls is covered with Turkish coins arranged like scales. The red cap of the married women has, instead of coins, a black silk border, and on gala days a bandanna of gold or ornaments. Women may wear opanche (sandals), the soles of which are made of untanned ox-hide, with the hair taken off, and that side outward, and these enable them to run over the steepest and most slippery rocks with facility. The marriage ceremonies are celebrated with great signs of rejoicing. Eating and drinking form a principal part of the festivity, with the noisly discharge of guns and pistols, and the duration of the entertainment depends on the condition of the parties. When a young man resolves on marrying, he expresses the wish to the oldest and nearest relation of his family, who repairs to the house of the girl, and asks her parents to consent to the match. This is seldom refused; but if the girl objects to the suitor, he induces some of his friends to join him and carry her off; which done, he obtains the blessing of a priest, and the matter is then arranged with the parents. The bride only receives her clothes, and some cattle, for her dowry.

Political Divisions and Government.—Montenegro is divided into the districts of Montenegro Proper and Breda or Zjeta, each of these being subdivided into four “nahies” or departments, and these are further subdivided, each subdivision having its own hereditary chief. Some islands in the Lake of Scutari also belong to Montenegro. Until 1852 the head of the government was the Vladika (“metropolitan,” or “spiritual chief”), who, beside his proper office of archbishop and ecclesiastical superior, was at the same time chief ruler, lawgiver, judge, and military leader. This theocratic administration became (1857) hereditary in the Petrovic family, but, in the meantime the vladikas cannot marry, the dignity is inherited through brothers and nephews. (See below.) Since 1862 the two offices have been disjoined, and the vladika is restricted to his ecclesiastical office, while the cares of government devolve upon the “Gospodar” (“hospodar”) or lord, though the common people still apply to him the title “sveti gospodar,” which properly belongs to the vladika alone. The vladika Petro II (1890–91) established a senate of sixteen members, elected from the chief families of the country, and in this body the executive power is vested. The public officers, local judges, and public representatives are appointed by popular election. From time to time an Assembly of all the adult males of the country takes place in a grassy hollow near Cettigne, the capital; but the powers of this assembly are very undefined. For defraying the expenses of government, taxes are levied on each household. The prince also receives from Russia a subsidy of 8000 ducats (£3783), and from France one of 50,000 francs (£1980). As the Montenegrin, even when engaged in agricultural operations, is always armed with rifle, yataghan, and pistols, an army of 26,000 men can be summoned on the shortest notice, and in desperate cases 14,000 more troops can be raised. Their intense love of independence and heroism in defence of their country are worthy of the highest respect; but out of their own country they are savage barbarians, who destroy with fire and sword everything they cannot carry off.

Historical.—Montenegro belonged in the Middle Ages to the great Servian kingdom, but after the dismemberment of the latter, and its conquest by the Turks at the battle of Kossovo (1389), the Montenegrins, under their prince, who was of the royal blood of Servia, maintained their independence, though compelled to relinquish the level tracts about Scutari, with their chief fortress of Zabljak, and confine themselves to the mountains (1485). In 1516 their last secular prince resigned his office, and transferred the government to the vladika. The Porte continued to assert its claim to Montenegro, and included it in the pachalic of Scutarri; but the country was not conquered till 1719, and on the withdrawal of the Turks soon afterwards, it resumed its independence. In 1710 Montenegro sought and obtained the protection of Russia, the czar agreeing to grant an annual subsidy on condition of harassing the Turks by irruptions, and this compact has, down to the present time, been faith-
fully observed by both parties. Another part of the agreement was that the vladioka be consecrated by the czar, and this continues to be done even now, though this officer is at present only an ecclesiastical ruler. In 1790 the prince-bishop, Pietro I, defeated the pasha of Scutari, who had invaded Montenegro, with the loss of 30,000 men; and for the next quarter of a century we hear no more of Turkish invasions. The Montenegrins rendered important aid to Russia in 1808 against the French in Dalmatia, and took a prominent part in the attack on Ragusa, the capture of Curzola, and other achievements. Pietro II, who ruled from 1830 to 1851, made great efforts to civilize his people and improve their condition. He established the senate, introduced schools, and endeavored, though unsuccessfully, to put an end to internal feuds and predatory expeditions into the neighboring provinces. Some Turkish districts having joined Montenegro, the Turks attacked the latter in 1832, but were repulsed. A dispute with Austria regarding the boundary resulted in a war, which was terminated by treaty in 1840. In 1851 the last prince-bishop died, and his successor, Danilo I, separated the religious from the secular jurisdiction, retaining the latter under the title of gospodar. This step caused the czar Nicholas to withdraw his subsidy (which was renewed, and the arrears paid, by the czar Alexander II), and the imposition of taxes thus rendered necessary caused great confusion. This was taken advantage of by the Turks, who, under Omer Pasha, invaded the country and in the first instance compelled the Turks to sign and in vain endeavored to obtain the recognition of Montenegro as an independent power, though he repaired to the Paris Conference in 1857 for this purpose. He, moreover, greatly improved the laws and condition of the country. In 1860 the Montenegrins expelled an insurrection against the Turkish rule in the Herzegovina, which was soon suppressed, and in return they themselves were so hard pressed by the Turks that they were glad to agree to a treaty (Sept. 13, 1862) by which the sovereignty of the Sublime Porte over Montenegro was recognized, though the word itself constituting such authority is not stated in the compact. The present ruler of the country is Nikita, a man of good education, secured in Paris and Berlin, and an excellent politician, who has been actively engaged in seeking support from Austria, Russia, and Germany to establish the complete independence of his realm. Since the commencement of the Pan-Slavic movement he has enjoyed many favors from Russia, and received from its emperor in 1869, while on a visit to St. Petersburg, a historical award, with the Servian inscription "God save the king." In 1874 new complications arose with Turkey on account of murders committed on the Albanian borders, and Montenegro declared war in January, 1875; but a compromise was effected towards the end of the month. Since 1871 a political weekly has been published at Cetinje, and there are now telegraphic connections in the Montenegrin possessions. There is also a post-office and telegraph, the latter under the control of the Austrian government in 1872. The most recent improvements are of a character indicating a very rapid progress in culture.

**Religion.**—The Montenegrins are members of the Non-united Greek Church, excluding only a few Roman Catholics and Jews. The czar of Russia is recognized as the highest authority, for to him belongs the ordination of the Vladioka, the spiritual head of the Montenegrin Church. As we have seen above, the vladioka was formerly both temporal and spiritual ruler. He is now prisc-bishop, and next to him in authority stands the archimandrite of the convent of Ostrok. Priests, of whom there are about 200, are ordained by the vladioka, and are charged thirty dollars for admission to holy orders, the money going to the state. They join in war and in the other occupations of the people. The priests must also be married before they can come up for consecration, but the vladioka is not allowed to marry; and as the office must be kept within the family to which it has descended since 1516, the succession always falls to a nephew, or some other male relative. The vladioka has an annual revenue of $10,000. The Montenegrin Greek Christians, who number, according to the Statistic Year-book of the Russian Empire (vol. ii, 1871), 125,000, hate the pope equally as the Turks. They reject images, crucifixes, and pictures, and will not admit a Romanist without repudiating him. Monasticism exists to a small extent. Their principal convents are those of Tastinie, Ostrok, and St. Stefano. See Wilkins, Dalmatia and Montenegro, vol. i, ch. vi; Krausinski, Montenegro and the Slavonians in Turkey (Lond. 1855); and the same author in the Brit. and For. Rev. July, 1849; Valacil, La Souverainete du Montenegro (Leipsic, 1858); Ubicini, Les Serbes du Turquie (Paris, 1865); Nos, Montenegro (Leipsic, 1870); Nightingale, Religious Ceremonies, p. 89-112; Daniels, Geographie, ii, 61 sq.

Montenses seems to have been a local name of the Donatists. Aug. Augusti, says distinctly that in his time those heretics were called "Montenses" at Rome (Aug. 4. lxxxi). Epiphanius and Theodoret both associate the name, on the other hand, with the Montenses (Epiph. Hier. lix; Theod. Hier.-sac. ii, 5). In the early list of heresies which goes under the name of St. Jerome it is said that the Montenses were found chiefly at Rome, and that they were so named because they had concealed themselves in the hill-country during a time of persecution. This author speaks of them as distinct from the Donatists and Novatians, but as adopting the heresy of the one as to the rejection of penitents, and of the other as to baptism (Pseudo-Hieron, Indicul. de Hieros, xxxiv). In one of the canons of the African code, which directs the mode of receiving a person into the Church when coming "de Donatistas vel de Montenses," the two names seem to be used as synonymous.

Monteurn, Bernardus, a learned Jesuit, was born in Paris in 1569, and died there in 1646. But little is known of his personal history. He is, however, distinguished for his works, of which A History of the early State of the Church and A Life of Jesus Christ are highly esteemed.

Montesa. See Moncon.

Monteux, Anthony, a noted Spanish Dominici, flourished in the 16th century. He entered the order at Salamanca, and died as a martyr in the West Indies in 1645. His only work is, Informatio juridica in Judeorum defensionem. See Echard, Biblioth. Praedicatorium (Par. 1719-21, 2 vols. fol.), ii, 123.

Montespan, Francois Athennais, Marquise de, one of the mistresses of Louis XIV: noted for her prof-
ligency and vices, deserves a place here because of the influence she exerted on the fate of the religion of France. She was born in 1641, married to the marquis de Montespan in 1665, but, supplanting the duchess de la Vallière in the favor of the king, she drove the marquis into banishment from court. The Marchioness, freed from the authority of her husband, became the mistress of a ruler who claimed to be a faithful servant of the Church of Rome. In 1667 she accompanied him to Flanders, and unblushingly revealed her real position at court. The king made her his lady-in-waiting, but the queen was the real monarch of the whole kingdom. But, what is stranger still, she endeavored to reconcile imperious vice with humble piety, and formed a set of morals for herself which Christians would hardly care to endorse. She did not disdain to work for the poor, and, like many others, brought herself to believe that frequent alms and exterior practices of devotion would purchase a pardon for everything. She even presented herself at the communion-table, favored by absolutions, which she either purchased from mercenary or procured from ignorant priests. One day she endeavored to obtain absolution from the curate of a village who had been recommended to her on account of his flexibility. "What!" said this man of God, "are you that Marchioness de Montespan whose crime is an offence to the whole kingdom? Go, madam, renounce your wicked habits, and then come to this awful tribunal." She went, not indeed to renounce her wicked habits, but to complain to the king of the insult she had received from the priest. The king, however, was not in a hurry to pass sentence upon Madame de Montespan. The king, naturally religious, was not sure that his authority extended so far as to judge of what passed in the holy sacraments, and therefore consulted Bossuet, preceptor to the dauphin and bishop of Condome, and the duke of Montausier, his governor. The minister and the bishop both supported the curate, and tried upon this occasion to detach the king from Madame de Montespan. The strife was doubtful for some time, but the mistress at length prevailed. In 1675 she met her hold on the king, who had fallen in love with Madame de Maintenon (q.v.), and she never regained her former position in the reign of her master and former lover. She retired to Paris for the winter, and in the summer visited watering-places. In 1707, while away at one of these places (Bourbon), she died, neither regretted by the king, her children, nor the nation. One half of her life was spent in grandeur, and the other half in contentment and obscurity. She is not rather celebrated for her patience than for her piety, and she was a model of the most virtuous virtues. In a word, her reign was so intolerable and so fatal that it was looked upon in France as a judgment from heaven. See General Biographical Dictionary, a. v.; Saint-Simon, Mémoires; Voltaire, Œuvre de Louis XIV; Huyssaux, Mém de la Vallière et Mme. de Montespan (q.v.); see also Louis XIV (q.v.); H.W.C.)

Montespiétatis (Fr. Mont de Piétat, Ital. Monte di Pieta) is the name of charitable institutions, though Christian in origin and purpose, the object of which is to lend money to the very poor at a moderate rate of interest. They date from the close of the middle ages when the high taxes and the large plate tax were such as to reduce the King's revenue to the hands of usurers, to whom the necessities of the poor were but an inducement to the most oppressive extortion. The principle was to advance small sums, not ordinarily exceeding 100, on the security of pledges, but at a rate of interest barely sufficient to cover the working expenses of the institution, any surplus to be expended for charitable purposes. The earliest of these charitable banks is believed to have been that founded by the Minorite Barnabas at Perugia in 1464, and was confirmed by pope Paul III. Another was founded at Padua in 1491, and a third (the first in Germany) was established at Erfurt in 1494. The institution was known as the "Academy," though he had even levied his attacks against it. It is supposed that the Sciamois of Dufresny, or the Espion Turc, suggested the plan of this work, but, be this as it may, its execution is entirely original. "The delineation of Oriental manners," says D'Alemb.
bert, "real or supposed, of the pride and the dullness of Asiatic love, is but the smallest of the author's objects; it serves only, so to speak, as a pretext for his delicate satire of our customs, and for other important matters which he, in some way or other, and partly through moral indigestion of his Ptolemaic and Christian Letters bestowed upon the conduct of Louis XIV caused the work to be regarded with an evil eye at court; and one or two sarcasms levelled at the pope awakened the zeal of such as were rigidly devout Romans, or found it convenient to seem so, and Montesquieu, like his contemporaries, was no less hostile to the interest of religion and the peace of society. Those calumnies reached the ear of cardinal de Fleury; and when Montesquieu, sustained by the public opinion of his talents, applied for the place which M. Sacy's death had left vacant in the French Academy, that learned body was made to understand that his majesty would never give his consent to the writer of the Lettres Persanes; because, though his majesty had not read the work, persons in whom he placed confidence had pointed out its poisonous tendency. Without feeling too much anxiety for literary distinction, Montesquieu perceived the fatal effect that such an accusation might produce in the circumstances. In spite of everything, going to D'Alembert, Montesquieu waited upon Fleury, therefore, and signed that, although for particular reasons he had not acknowledged the Lettres Persanes, he was very far from wishing to disown that work, which he believed to contain nothing disgraceful to him, and which was, he declared, ready before his death. Struck by these remonstrances, the cardinal persuaded the work, the objections were removed, and France avoided the disgrace of forcing this great man to depart, as he had threatened, and seek among foreigners, who invited him, the security and respect which his own country seemed little inclined to give. This story of D'Alembert is by some discredit, and, instead of it, Voltaire's version is accepted. According to him, "Montesquieu adopted a skillful artifice to regain the minister's favor: in two or three days he prepared a new edition of his book, in which he retracted or softened whatever might be condemned by a cardinal and a minister. M. de Montesquieu himself carried the work to Fleury—no great reader—who examined a part of it. This air of confidence, supported by the zeal of some persons in authority, quieted the cardinal, and Montesquieu gained admission to the Academy" (Écrivains du Siècle de Louis XV, vol. IV). The authenticity of this statement, however, appears to rest solely on Voltaire's evidence, not altogether exceptionable in the present case. D'Alembert's account is generally preferred. Shortly after his admission to the Academy, Jan. 24, 1728, Montesquieu set out for a journey to qualify himself for the arduous task of investigating and appreciating the different political or civil constitutions of ancient or modern times, and in order to study, as far as possible, the manners and character, the physical and moral condition, of the European nations by actual inspection. He first visited Vienna, along with lord Waldegrave, the English ambassador. From this city, after conversing with the celebrated prince Eugene, and surveying all that seemed worthy of notice, he passed into Hungary, and afterwards to Italy, where he met with lord Chesterfield, and travelled in his company to Venice. While examining the singular institutions of this republic, and canvassing the subject with eager frankness in places of public resort, he learned that he had incurred the displeasure of the authorities, and was in danger of persecution. He instantly embarked for Florence, next visited Rome, and, having surveyed Switzerland and the United Provinces, he repaired in 1730 to Great Britain. Newton and Locke were dead, but the philosophical school of the age in England qualified to estimate his talents. He was respected and patronized by queen Caroline, and enjoyed the intimacy of Pope, Bolingbroke, and many other eminent characters of that period. He spent there two years, and collected much material for his future literary labors. He was made aware of the great esteem in which the English held him by being chosen a fellow of the Royal Society. After his return to Brède, Montesquieu published his first book, Considérations sur les Causes des Décadences des Romaines (Paris, 1734), a masterly view of Roman history, expressed in a sententious, oracular, and vigorous style. "In attempting to derive the grandeur and downfall of Rome from the admitted principles of human nature, he gave a new turn to such investigations. Some of the elements of a problem so old and obscure have been omitted, and others rated too high or too low, the work must be allowed to exhibit views of political society, at all times specious, often equally just and profound: the vivid pictures, the acute and original thoughts, with which it everywhere abounds, are to be traced in many succeeding speculations. It deserves praise also for the many and liberal tone of feeling that pervades it." But by far his greatest work, on which he had been engaged for twenty years, the Esprit des Lois, he published in 1748 (Geneva, 2 vols.). In it Montesquieu attempts to exhibit the relation between the laws of different countries and their local and social conditions. It was immediately attacked, and more than twenty-two editions were published in eighteen months, and it was translated into various European languages. "The Esprit des Lois," says a contemporary, "is a wonderfully good book, considering the age in which it appeared. Without adopting Voltaire's hyperbolical theory that 'wherever there are charters, Montesquieu rediscovered and restored them,' it may be said that it was the first work in which the questions of civil liberty were ever treated in an enlightened and systematic manner, and to Montesquieu, more than to any other man, is owing that the science of politics has become a favorite subject of study with the educated public." "The Esprit des Lois," says another, "is one of the most laborious books ever written. It had an immense influence on the literature of the age, and founded that method of philosophizing and finding out facts to justify opinions which characterized his followers of the French school, and entered in a great measure into the spirit of the Scottish school of philosophy. Like most original-minded men, he brought to his work a degree of genius and knowledge which his imitators could not cope with, and which concealed, in his hands, the defects of the system." "Notwithstanding his errors," says Voltaire, "some of his ideas are inexact, according to our ideas, from their very materialism, the character of his writing is generally metaphysical. Succeeding the light and brilliant epicureanism and scepticism of the 18th century, the Esprit des Lois began the spiritualist reaction which Rousseau carried on" (Cours de Littérature, vol. I, ch. iv). The work rendered great service to humanitarianism by the respect it paid to human life. Pascal, indeed, in his letter on homicide, had preceded him in this, but we know how indifferent on this subject were the courtly and elegant Frenchmen of that day; how little they troubled themselves about the rights and duties of man, how weary and tired of being hanged." Montesquieu did not wish absolutely to restrain the utmost penal power of the law; but he recommended clemency and equity, and in his own country Tuscany abolished capital punishment. As Dr. Vinet has well said, we may further commend the author of the Spirit of Laws for his zeal for human nature, and his love for justice; his true philosophy; his reverence for all the virtues which ennoble man and his destiny; and, in short, for his attachment to the principles which form the basis of human society. But, though the work found many friends, there were yet some who, to their own disadvantage, overpraised it. Thus the editor of the Gazette Ecclesiastique, long deeply engaged in the Jansenist quarrels which then agitated France, assailed the author of the Esprit des Lois in two pamphlets with the charge of
Montfaucon, Bernard de, one of the learned Benedictines of Saint-Maur, noted for his valuable antiquarian labors, was born Jan. 17, 1655, of a high family of Souillac, in Languedoc. He early evinced great facility for acquiring languages, and a remarkable love of study. He was a student at the Collège de Laval, but when he became a priest, he abandoned his studies, and entered the army, and served in several campaigns under Turenne. After the death of his parents, he joined the Benedictines at Toulouse in 1675. His time was largely employed in correcting the Latin translations of the Greek Church historians. Dom Claude Martin, in his Life of Montfaucon, pointed out to him, on account of his manifold talent, and particularly fitted to take a part in the publication of the Greek fathers contemplated by the Congregation of St. Maur. He was consequently called to Paris in 1687. The following year he published his Abscetica sive varia opuscula Graeco (Paris, 1684, 4to), which contains also some lives of saints. In 1690 he published La vérité de l'histoire de Judith (2d ed. Paris, 1692, 12mo), in which, with a great deal of historical talent, and genius, he attempts to establish the authenticity of the facts related in that narrative against the opinion of those who consider it a fable or a part of the apocryphal literature of the Old Testament. In another part he took in the publication of the works of the fathers. He first gave Athanasius (Paris, 1698, 3 vols. folio), revised by means of the MSS. of Paris and of the Vatican, with a new Latin translation; the third volume contains the doubtful and spurious works. This is connected with the Collectio nova patrum et scriptorum Graecorum (Par., 1707, 2 vols. folio). In this work Montfaucon gives, beside an excellent biography of Athanasius, some newly discovered works of that father, those of Eusebius of Cesarea, and the Topographia Christiana of the Egyptian monk Cosmas Indicopleustes. The original work is extended, and the thorough linguistic knowledge which Montfaucon evinced in these works, led his superiors to intrust him also with the publication of the works of Chrysostom. As the MSS. at Paris were insufficient, he was sent to Rome to consult the codices of that city. Innocent XII showed him the greatest regard, while one of the librarians of the Vatican, out of jealousy, defamed and persecuted him. He refused high offices which were opened to him at Rome, and devoted himself exclusively to his studies. The pope and cardinals were lavish in their attentions, and Montfaucon, during the intervals of his extensive labors, was elected frequently, general, or conciliar, proofs of the learning which he possessed and was anxious to augment. It is related that Zaccagni, then librarian of the Vatican, feeling his vanity wounded by the praise bestowed on this accomplished foreigner, laid several schemes to lower him in the public estimation. One day while Montfaucon, among a crowd of distinguished persons, happened to be sauntering in the library, Zaccagni, with affected politeness, requested the antiquary to favor him with the date of a Greek manuscript which he spread out before him. Montfaucon replied that apparently it was written about 700 years ago. His antagonists, with a triumphal air, desired him to observe the name of Basil, the Macedonian, written at the top. The Frenchman asked if it was not Basil Porphyrogenitus, later by 150 years; and as this, upon examination, proved to be the case, Zaccagni retired with his manuscript, and then, resolved not to appear at the another day. After his return to Paris Montfaucon published the Hexapla of Origen (1713, 2 vols. folio.), with variations, notes, and introductory remarks not only on the work itself, but on the general history of the Greek versions of the Bible. His next publication was an edition of the works of Chrysostom (Par., 1718 sq., 8vo.), which appeared in 1718, 14 vols. (4to). Montfaucon had consulted the French, Roman, English, and German codices; the text was accompanied by a new Latin translation, a biography of Chrysostom, numerous notes, and an introduction to each separate work. The edition was formally pronounced one of the chief-d'œuvres of the Maurines, and the best edition of this Church father. Some time previous to this Montfaucon had published another valuable work, Le Dicre du Phalon de la Vie Contemplative (Par., 1709, 12mo), with notes, and an attempt to prove from the documents of Lascaris of Nicomedia, that the Christians; and in 1710 an Epistola on the fact mentioned by Rufinus that St. Athanasius baptized children when himself a child. In 1719 he gave to the world a great work on the history of art, entitled, L'Antiquité expliquée et représentée en figures; and in 1729 Les Monuments de l'Histoire de France et de ses/Image 0x5 to 406x692/
Montfort, Simon, a bold, merciful, and superstitious, but devoted follower of the papacy, was descended from the counts of Montfort, near Paris. He was born about the middle of the 13th century. His career dates from 1218, when he appears as a leader in the Crusade of Cergy, where he was associated with Rainald de Montmirail, Garnier, bishop of Troyes, Walther of Brienne, and the marshal of Champagne, Geoffroy of Villehardouin, and others. The crusade set forth Oct. 8, 1202. A bargain had been previously made with the Venetians, by which the latter agreed to furnish "ships and other conveniences to pass the sea." When the time for embarkation arrived, the Crusaders were lacking 34,000 marks of the stipulated price. The "wise old doge" saw his advantage, and proposed that Venice would fulfill her part of the treaty if, in discharge of the 34,000 marks of silver, the Crusaders would lend their fleet to the Zara. Simon, however, refused. Zara was captured, the plan was acceded to by all but De Montfort.

"We are Christians; we war not against our brother Christians," said he. "His object in assuming this position," says Villehardouin, "was to break up the misguided army." After the capture of Zara, the Crusaders advanced without a guide for the purpose of placing young Alexius on the throne. The pope denounced the design. He excommunicated the Venetians; but of this no one took the slightest heed, except De Montfort. He, with his brother and a few French knights, separated themselves from the camp of the Crusaders, passed over to Hungary, and, amid many difficulties, made for the Holy Land to fulfill his vows to the Church. He finally, however, returned home, and after a short rest took up arms again at the summons of pope Innocent III, and in the summer of 1209 he was made leader of the crusade against the Albigenses. Under his guidance and that of the pope's legate, Amnary, abbot of Citeaux, the crusading army marched into Languedoc and besieged the town of Beziers, which was stormed July 22, 1209. A horrible massacre ensued. One of the superior officers inquired of the abbot of Citeaux how they were to distinguish the heretics from the true believers. "Let us do our best," answered the savage Countsman, "for the Lord knoweth those that are his." Not a living soul was spared. It is said that fifteen thousand people were thus mercilessly slaughtered in this one place. Carcassone was scarcely better treated; and at Lavaur the ferocious deeds of Montfort gave his name a by-name of tyranny and cruelty. In 1210 De Montfort was invested by Peter of Aragon with the vicariate of Beziers and Carcassonne. Peter designed, no doubt, in this way to conciliate De Montfort, and protect his (Peter's) kinsmen from the rapacity of the army of De Montfort. He was, however, disappointed, and in 1215 Peter crossed the Pyrenees with a force superior to that of Simon to protect his own. Yet Simon, impressed with a fanatic zeal for Christ and the God of God, would give him the victory, confessed his sins, made him his priest, placed his sword upon the altar, and declared that he took it back from God to fight his battles, and at the battle of Muret deposed the new Peter and the larger part of his army. After the battle of Muret, the progress and success of the Crusaders were uninterrupted. Toulouse was taken in 1215. De Montfort was chosen prince of the whole subdued territory; a strict inquisition after heretics was ordered, and the Church of Rome, pleased with the faithfulness of her servant Simon, at a Council of the Lateran, November, 1218 (styled the twelfth General Council), confirmed him in all his conquests. On his return to Northern France, he was received with the greatest honor as the champion of the faith, and hailed with acclamations: "Blessed is he that cometh in the name of the Lord!" The remaining years of the life of De Montfort were consumed in a bloody struggle to maintain his ascendant over the territory he had subdued. During the year 1216, under the leadership of the younger count Raymond, broke out in general insurrection. But success still followed De Montfort. He with his army sacked Toulouse, and plundered the inhabitants to the very last piece of cloth or measure of meal. "Oh, noble city of Toulouse!" exclaimed the troubadour, "thy very bones are broken!" The ensuing year the war with the young count Raymond continued to the advantage of De Montfort, till suddenly the old count Raymond appeared before Toulouse. The city received him with the utmost joy. New walls were built about the fortifications, and in the siege of this place that De Montfort lost his life, June 25, 1218; when heeding an attack, a stone from an engine struck on the head the champion of Jesus Christ (as he was called by his admirers), and he died on the spot. His fanatical followers reproached God with his death. A young historian adds that he received five wounds from arrows; and in this respect likens him to the Redeemer, "in whose cause he died, and with whom we trust he is in bliss and glory." A daring and skilful leader; chivalric, affable, and popular; enthusiastically devout and fanatically attached to Romanism; ambitious, unscrupulous, and remorseless, he naturally rose to the position of guiding spirit in the turbulent times in which he lived and the cruel war in which he engaged.

See Milman, Hist. of Latin Christianity; Chronique de Simon, Comte de Montfort (printed in Guiza's Mémoires relatifs à l'Histoire de France); Hoeffer, Nouv. BIOG. GÉNÉRALE, t. xiv, pp. 246-250; and the histories of the Albigenses (q. v.).

Montfort Manuscript (Codex Montfortianus, known as MS. 61 of the Gospels, 34 of the Acts, 40 of the Pauline Epistles, and 92 of Revelation), so named from a Cambridge divine of the 17th century, who gave it to archbishop Usher, by whom it was presented to Trinity College, Dublin, in the library of which it still remains (there designated as G. 97); an octavo cursive Greek MS. of the entire N. T., written in the 15th or 16th century, on 455 paper leaves, and famous as containing the text of the "three heavenly witnesses" (1 John v, 7), that leaf being preserved to it from in-
MONTGAILLARD 543
MONTGOMERY

jury). An earlier owner was William Clap, once a fol-
low of Cambridge, who derived it from Thomas Clem-
ent, and originally it belonged to one Froy, a Franciscan
friar. It is apparently the work of three or four suc-
cessive scribes, perhaps in part at first independent of
each other; and the Apocalypse bears marks of having
been copied from the Codex Leicestrensis. It is dubi-
ously attributed to Montfaucon and Arnauldinus as his
sole authority for inserting the above disputed text in
his edition of 1522, in accordance with a promise he
had made to his detractors that if a single Greek MS.
could be found containing it he would add it. See Wit-
nesses, the Three Heavenly. It has the Ammonian
sectional division of the manuscript. A number of verses
had been inserted at the end of the MS., with the Latin
division of chapters. There are many corrections by a more recent hand, erasures of the pen, etc. An imperfect
collation of it, while in Usher's hands, was printed in Walton's Polyglott. Dr. Banet collated the
remainder for his edition of the Dublin pal-
limpsest Z, and more recently Dr. Dobbin has pub-
lished a complete collation (The Codex Montfauconius,
etc., Lond. 1854). See Tregelles, in Horne's Intro. iv,
218 sq.; Scrivener, Intro. to N. T. p. 149. See Man-
uscripts, Biblical.

Montgaillard, Bernard de, also known as Petit
Feuillant, a Roman Catholic ecclesiastic noted for his
great talent in pulpit oratory, but especially for the part
he bore in the Roman Catholic intrigues against the
Huguenots. He was born at Montpellier, in 1563. He
commenced as a Feuillant, or mendicant friar, in 1579, and began to preach im-
mediately, though he had not studied divinity. He
preached at Rieux, Rhodes, and Toulouse with so much
success that they applied to him this passage in Holy
Writ, "Happy is the womb which bare thee." He
went to France at the time when Henry III drew the
Feuillants thither, and so charmed the French court
with his sermons that the king and queen-mother ap-
pointed him to preach upon several particular occasions. Here he acquired the reputation of the most eminent
preacher that had been known in the memory of man
—so great were his talents for the pulpit, especially
in moving the passions and subduing the heart. He
condemned himself to so austere a way of life among
the Feuillants that the pope commanded him to quit
that order, lest he should shorten his days by it. He
behaved himself so curtly in supporting the interests of
the League, and bore a considerable part in the horrible
crimes of that villainous combination, "The preachers,"
says Maimbourg (Hist. de la Ligue, liv, iii, 295), "of
whom most were noted father Bernard de Montgail-
lard, known as the Petit Feuillant, and the famous Cor-
delier Frémiard, who preached in the parishes of Paris
during the Christmas holidays, changed their sermons
into invectives against the sacred person of the king,
"etc. Montgaillard was charged with having been instru-
mental in inflaming the rebellious elements of his day,
and with having suborned an assassin to murder Henry IV.
Montgaillard died in 1628. He was at that time
abbé of Orval. Such a saint as Montgaillard, and one
who had done such singular services to the holy Church
must needs have possessed qualities above the usual
standard, and therefore the writers of his life have not
hesitated to assert that God performed great miracles
both before and by his means. See Bayle, Dict. Hist.
s. v.; Gen. Biog., Dict. s. v.

Montgaillard, Jean Jacques de, a French
monastic, noted as a writer on religious topics, was born
in 1633 at Toulouse, and early entered the Dominican
order in his native place. He died there March 21,
1711. He is the author of a curious work entitled, Mon-
umenta Conventu Tolosani ordinis F. P. Pracdicatorum
(Toul, 1695, fol.), which contains much valuable mate-
rial for the inquisition of the Dominican order in
France. Himself a devoted Romanist, and believing
the harshest measures of the Inquisition justifiable in
behalf of religion, he does not withhold anything,
however barbarous or outrageous, and his work con-
tains many a page presenting a most ghastly spec-
tacle of inhumanity perpetrated by misguided sa-
natics.

Montgaillard, Pierre Jean François de, a
French prelate, brother of the preceding, was born at
Toulouse, March 29, 1633, and was educated at Paris,
where he became a canon, by which rank he was created
doctor. He entered holy orders, and soon rose to positions of ecclesiastical distinction. In
1664 he was made bishop of Saint-Pons, and dis-
tinguished himself by great liberality of sentiment as well
as religious devotion. He was one of the nineteen bish-
ops who were punished by the pope Clement XI, for the
pardon of the bishops of Alet, Plassas, Beauvais, and
Angers, who had opposed the doctrines espoused in the
papal bull issued by Alexander VII to defend the Jesu-
ts and their tenets and practices. He also afterwards
defended persecuted ecclesiastics against the Jesuits,
whose immorality he unhesitatingly denounced. He
was so severe that he was branded as a Jansenist, but
there is proof extant that he freed himself from the im-
putation of disloyalty to the Church of Rome. He
died March 18, 1715. He was well versed in archaeo-
logical studies, and noted for his valuable attainments
in ancient ecclesiastical history. His works are of a
contrary nature, and his value to those interested in the
Jansenist controversy. A list of them is given by Hoofer,

Montgomery, Alexander, a Presbyterian mi-
ster, was born in Westfield, N. Y., in 1808. He
graduated at Amherst College, Mass., in 1827; studied theol-
gy first in Union Seminary, New York City, and
afterwards in Auburn Seminary, N. Y.; licensed by the
New York Presbytery in 1834. He was ordained in
1839 as pastor of Maryville Church, N. Y.,
where he remained until he removed West, and joined the
Presbytery of Chicago, and was agent for some time.
He finally settled at Beaver Dam, Wisconsin, where
he labored until his death, Feb. 18, 1859. Mr. Montgom-
ery was an earnest Christian, a good theologian, and a
fervent preacher. See Wilson, Preb. Hist. Almanac,
1868, p. 121.

Montgomery, Henry Eglinton, D.D., a noted
clergyman of the Protestant Episcopal Church, was
born in Philadelphia Dec. 9, 1820; was educated at the
University of Pennsylvania, class of 1843; studied law
for two years; travelled in Europe, and then continued his studies at Union College, in Schenectady.
Remaining there two years, he entered the general theo-
logical seminary at New York. He was ordained for
the holy ministry by bishop Alonzo Potter, and in 1846
assumed charge of All-Saints' Church of Philadelphia,
then a small organization. His labors were very suc-
cessful; the Church-membership rapidly increased, and the pastor became highly respected and beloved.
In 1855 he received and accepted a call to the Church of
the Incarnation of New York, which was an offshoot of
and dependent upon Grace Church, and which worship-
ped in the edifice at the corner of Madison Avenue and
Twenty-eighth Street. During the earlier years of his
ministry in New York he was able to separate his church
from Grace Church; and so efficient and satisfac-
tory was his work that in 1864 a new church build-
ing was erected at Madison Avenue and Thirty-fifth
Street. His labors were identified with it until his sud-
den death, Oct. 15, 1874. Dr. Montgomery was a man of
acknowledged ability, and of more than ordinary en-
durance. He was always a hard worker; he had no
assistant in his ministry, and, besides the constant de-
mands upon his strength made by a growing Church,
he had for years been a prominent member of nearly all
the modern congregations where home membership is
an important element of the content of the Gospel. The Missionary Society, which was in
session when his death occurred, paid him a very warm

Montgomery, James (1), D.D., a clergyman of the Protestant Episcopal Church, was born in Philadelphia Nov. 25, 1787, and was educated at Princeton College, where he graduated in 1815. After practicing law for a short time, he prepared for holy orders; was ordained in 1816, and elected rector of St. Michael's, N. J. In 1827 he was appointed rector of Trinity Church, New York, and subsequently removed to St. Stephen's, Philadelphia, where he held several important offices, and devoted himself to his ministry with much earnestness till his death, March 17, 1834. His works are five Sermons, issued at different times. See Sprague, Annals of the American Church, iv, 266.

Montgomery, James (2), one of the greatest of English hymnologists, was born in Irvine, in Ayrshire, Scotland, Nov. 4, 1771. His parents were Irish—his father a Moravian preacher. James was designed for the same office, and in his sixth year was placed in the Moravian establishment at Fulneck, near Leeds, England. While here his parents went as missionaries to the Indians, where they soon died. To their fate he thus beautifully alludes: "My father—mother—parents, are no more! Beneath the lion-star they sleep, In the West, in the deep; And when the sun's noon glory creases the waves, He shines without a shadow on their graves."

Left to himself, he refused to study for the ministry, and the Brethren placed him as an apprentice to a grocer in Mirfield. He disliked the trade of draper, wrote verses, and at length ran away, with three shillings and sixpence in his pocket. He was soon compelled by necessity to engage as a shopboy in the village of Wath, in Yorkshire. He remained there but a year, and then, intent upon publishing a volume of verses, went up to London, and himself took the books from the printer in Paternoster Row, and gained employment as clerk and general assistant; but he could get no one to undertake publishing his poetry. In eight months we find him back again at Wath. In his twenty-first year he went to Sheffield as clerk to the editor of the Sheffield Register; and when, two years afterwards, a political prosecution was instituted against the editor, Montgomery succeeded him in the management of the paper, changing its name to that of The Iris. The tone of his paper was very temperate, but firm. At that time the quailing cause of arbitrary power and divine right was making its last struggles against freedom and common sense. Five years after the modern post-editor, it was not long before the hands of the officers of the law were upon him. The publication of a song written by a clergyman to commemorate the destruction of the Bastile, which had been printed in half the newspapers in the kingdom, was made the pretence of fines Montgomery £20 and imprisoning him three months in the Castle of York. On his deliverance from his incarceration he resumed his editorial labors, and avoided every extreme in politics; but in giving a narrative of the circumstances attending the death of two men killed in a riot in the streets of Sheffield by the military, a volume of verses, which was also the magistrate's feeling his honor wounded by the statement, presented him for libel. The result was another fine of £30, and imprisonment for six months. During his confinement, in 1796, he wrote his poems entitled Prison Amusements. He now became a regular contributor to magazines and newspapers. He was at this time a critic of the magazine The Revive (Jan. 1807, p. 347—355; comp. however, July, 1835, p. 473), established his right to rank as a poet. (See the defence by Southey in [Lond.] Qu. Rev. vi, 405 sq., and by Wilson in Blackwood's Magazine, Sept. 1831, p. 476.) In 1805 he issued The Ocean; in 1806, The Blackwood's Magazine, and other Poems; and the next year The West Indies—this last meeting in its various editions with a most extraordinary patronage. In 1818 appeared The World before the Flood; in 1824, Greenland; and in 1827 The Pelican Island, the most original and powerful of Montgomery's works. He now also collected two volumes of his sketches from periodicals, entitled Pros and a Poet. A Poet's Portfolio appeared in 1835. In 1860-61 he delivered a course of lectures on the laws and general literature, which were afterwards published in one volume. His collected works appeared in 1861 (1 vol. 8vo).

But it is with the poet as a writer of hymns and sacred songs that we have most to do, as it is by these that he has most endeared himself to his age, and will be longest and most favorably remembered. In 1822 he enlarged Psalms, beginning with "Father, let not this cup," and including the Psalms. This work consisted of sixty-seven pieces, being versions of fifty-nine Psalms, closely as well as beautifully rendered. In 1828 he published his Christian Psalms, containing 103 original hymns; in 1858, Original Hymns for Public, Private, and Social Devotion. Judged by the use made of these hymns by the Christian world, Montgomery takes his place next to Watts and Wesley, in company with Doddridge. This place we think he has well earned. What Advent song surpasses for comprehensiveness, appropriateness of expression, force, and elevation of sentiment, this one begins the reign of angels from the realms of glory? What a glorifying of God and his work from eternity to eternity is found in this hymn, "Songs of praise the angels sang!" Will the time ever come on earth when the Church will not respond to "Stand up and bless the Lord, ye people of his choice?" or cease to look forward with anticipations of victory in the "Hallelujah song of jubilees?" or forbear to encourage one another with "Daughter of Zion, from the dust?" or fail to use "O, where shall rest be found?" What a spirit of Christian love, mingled with hope drawn from the deepest truths of our faith, flows through the invitation, "Come, all ye that love the holy mountain," and a reaching out of the right hand of fellowship in this, "Come in, thou blessed of the Lord!"

In a letter written in 1807 Montgomery gives us the history of his hymnological efforts. "When I was a boy," he says, "I wrote a great many hymns; indeed, the first-fruit of my mind were all composed to hymns to Him who never despises the day of small things, even in the poorest of his creatures. But as I grew up, and my heart regenerated, I directed my talents, such as they were, to other services; and seldom indeed, since my fourteenth year, have they been employed in the delightful duties of the sanctuary. Many criticisms and adverse remarks that have occurred, afflicted, and discouraged me, have also compelled me to forbear from composing hymns of prayer and praise, because I found that I could not enter into the spirit of such divine themes with that humble boldness, that earnest expectation and ardent feeling of love to God and truth which were so long to influence me when I was an uncorrupted boy, full of tenderness and zeal and simplicity."

We have indicated here the main ground of the excellence and usefulness of his hymns. They are the offspring not only of a heart naturally sensitive to religious themes, but of a deep, rich, and varied Christian experience. They were lived before they were sung. From the experiences of the Christian life came their expression in Christian song; hence they are applicable to every believer's feelings, and touch unexpectedly the most secret springs of joy and sorrow, faith, fear, hope, love, despondency, and triumph. This was the reason for their great success given by Montgomery himself. When advanced in life and seriously ill, he placed in the hands of his friend, Dr. Holland, transcripts of his original hymns to be read to him. But as the poet was much affected, the doctor was about to desist, when Montgomery said, 'Read on; I am glad to hear you. The words recall the feelings which first suggested them, and it is good for me to feel affected and humbled by...
The terms in which I have endeavored to provide for the expression of similar religious experience in others. As all my hymns embody some portion of the joys or sorrows, the hopes and fears of this poor heart, so I cannot doubt but that they will be found an acceptable vehicle of grace in heaven, to the comfort of those who resemble in character and experience the persons of the Collect and the Communion." Montgomer y's hymns "are the result of a long experience of the pain and suffering of the Christian life."

"From the fact that he was a layman in active and laborious business, he was less likely than some of his clerical brothers in song to make the hymn simply a doctrine in rhyme. While evangelical in faith, his hymns are always far more than doctrinal statements in verse. The rules which he laid down in the "Introductory Essay" to his "Christian Psalms," which should be adhered to in writing hymns, he has seldom failed to regard. "There should be," he says, "unity, gradation, and mutual independence in the thought, a conscious progress, and at the end a sense of completeness," and he insists that hymns ought to be easy to understand. It may be said of his hymns without exception that there is nothing in them to offend the taste, and much to gratify it. The most precious truths of Scripture and the Church's doctrines the Christian find in them simple but poetic expression; and they are suitable and available for the use of congregations by a poet who was quite familiar with the requirements of an assembly of worshippers. As expressive of how important Mr. Montgomery's hymns were to the religious life of his time, we may quote part of the closing paragraph of an address by James Ogilvie, "Having on three former occasions expatiated freely on hymnology and sacred poetry, I close this eulogistic preface to the most serious work of my literary life (now passing four-score years) with a brief quotation from what may be esteemed a sealed authority on such a subject. Bishop Milner somewhere says, beautifully, humbly, and poetically: 'And should the well-seaworn song I leave behind With Jesus' lovers some acceptance find, 'Then may the Nearer Home of Heaven show That in my verse salute almighty God's praise below.'"

His last years were passed in ease and comfort, he enjoying, besides the frugal earnings of an industrious life, from 1850 a pension from the government of £150 per annum. He died at his own residence near Sheffield, April 23, 1854. The London Athenæum says: "He lived the like of his death, thus spoke of him:--Montgomery held a place in the eyes of the English public—universal as well as sectarian—not far behind Campbell, by the side of Sisle Bowles and Milman, and before such lesser lights as Carrington and Crowe. This generation knows less than the immediate successors of James Montgomery, of Sheffield. Some have adopted Puseyism as their spiritual guide; others have taken Keble as their bosom friend. But the author of 'The West Indies,' 'The World before the Flood,' and 'Greenland,' is still not forgotten, in spite of these shifts of the shrine at which religious fashion chooses to burn its incense; and his vogue may one day return—the sooner because it was merited by the genuine gifts of the poet as well as by the eloquence of the class-preacher."

Memories of the Life and Writings of James Montgomery, with extracts from his correspondence, etc., were published in 1855–6 (7 vols. 8vo) by two of his friends, John Holland and James Everett. An abridgment of these Memoirs was published by Mrs. Helen C. Knight at Boston in 1857 (12mo, 416 pages). See British and For. Ev. Rev. vol. xxi.; xliii., 248; [London] Qu. Rev. vol. xii., ari., ix.; North Amer. Rev. (Oct. 1857) p. 563; Living Age, 1857, Feb. 292; Howitt, Homes and Haunts of British Poets; Wilson, English Gaelic Imagery (1856) ii., 238; and especially the excellent article in Allibone's Dict. of Brit. and Amer. Auth. ii., 1345–9.

Montgomery, Robert, an Anglican clergyman, very noted especially as a writer of sacred poetry, was born at Bath, England, in 1607, and was educated at Lincoln College, Oxford, where he secured his A.B. in 1833, and A.M. in 1888. He took holy orders in 1883; became curate of Whittington, subsequently (1886) re- moved to London as minister of Percy Street Episcopal Chapel; afterwards went to Glasgow, where he preached for four years, and then returned to London. His residence at Percy Street Chapel in 1843, and there preached until his death, December 8, 1855. Montgomery's works comprise a large number of volumes in prose and verse, on themes more or less sacred. He is best known by his poem, The Omnipresence of the Deity (1828), which has passed through twenty-eight editions, and The Christian Life: A Manual of Sacred Verse (1848, 12mo; 6th edition, 1858, 24mo). The former of these provoked unusual severity of criticism— even Lord Macaulay unmercifully poured his invectives against it:— "His works have received more enthusiastic praise, and have deserved more unmixed contempt, than any which, as far as our knowledge extends, have appeared within the last three or four years. . . . The circulation of this writer's poetry has been greater than that of Southey's Roderick, and beyond all comparison greater than that of Cary's Dante, or of the best works of Coleridge" (Macaulay, Essay, 268, 267, 276). Nevertheless, as has been well said, the book must have pleased, or people would not have bought it in the face of such unfavorable comments. It must be stated also that the work on its appearance met with the high commendations of those illustrious writers, Southey, Wilson, Allston, and Sharon Turner. Montgomery's Christian Life was generally condemned; and of his other works were most enthusiastic in its praise. The Church of England Quarterly (April 9, 1849, No. 50, p. 286) pronounced it "far superior to anything else from the author; and, of all the uninspired collections of religious poetry which any poet has ever produced in any Church or age or country, there is none which, in our opinion, can venture a comparison — intellectual or poetical — with Montgomery's Christian Life." A writer in the Scottish Magazine goes even further: "To eulogize this divine now as a successful Christian poet would be to offer an indignity to all who have the slightest knowledge of what is passing in the literary world. His Omnipresence long ago stamped him as one of our greatest poets. . . . We must, however, express our honest conviction that the present volume manifests higher and more intrinsic beauties and excellences than any one of his previous poetic works. And what will be very much esteemed by all the opinion of the Church is the fact that it is a thoroughly Church volume—breathing and inculcating her scriptural and catholic virtues, exhibiting her in the thrilling and beautiful expression of a fond and sacred mother, who lovingly cares and unceasingly provides for the spiritual wants and comforts of her children. While all these poems are fraught with deep truth and lofty sentiments, portraying in poetical form the Church's creed and character, the duties and dangers the hopes and fears, the faults, privileges, and final destinies of a believer in the religion of Christ. . . . we must declare that we have not read and do not read a more beautiful and beautiful and eloquent and pathetically the poems on Baptism, 'Visitation of the Sick,' 'Burial of the Dead,' 'Communion,' and the 'Eucharist.' Nothing like this volume has appeared since the 'Christian Year,' whether we consider its style and tone, its sentiments, the variety of its metres, or the heaping of its eulogiums. It is 'the Voice of the Church,' a kind of second 'Christian Year.'" A list of all his works is given by Allibone (Dict. of Brit. and Amer. Auth. ii., 1348–9). We have room only for mention of his other religious works. Of those in verse: A Universal Prayer, Death, Heaven, Hell (1839, 488), The Lamb of Christ (1839); for Intromissions:—The Messiah (1838);— Luther; or the Ideal of the Reformation (1842);—The Sacred Gift: a Series of Meditations upon Scripture Subjects (1842);—The Sanctuary: a Companion in Verse for the English Pray-
er-book (1855). Of those in prose: The Gospel in Advance of the Age: a Homily for the Times, with an Introduction on the Spirit of the Bible and the Spirit of the Church (1845); Three Parts (1846) — The Scottish Church, the English Church, the Catholic Church (with additional matter, ed. 1848, and often since) — The Ideal of the English Church (1845) — Christ’s All in All (1845) — Eight Sermons: being Reflective Discourses on some Important Texts (1845, 8vo) — The Great Salvation, and our Sinn in Neglecting it: a Religious Essay, in Three Parts (1846) — The Scottish Church, the English Church, the English Church, Schismatics (1846; 3d ed. with documentary evidence, 1847, 12mo). A collected edition of his poetical works (in 6 vols, 8vo) was published in 1839-40, and his Christian Poetry, ed. By F. P. in 1854 (12mo). Selections from them were also made under the title, Religion and Poetry, and Three Essays on the New Church (1847, 8vo), and Lyra Christiana (1851, 32mo). See Fraser’s Magazine, i, 55, 721; iv, 672; Westmin. Rev. xii, 355; Lond. Monthly Rev. xxvii, 30; cxxi, 313; Blackwood’s Magazine, xxiii, 701-71; xxvii, 241 sq.; Lond. Gentleman’s Magazine, 1856, pt. I, 813; [Lond.] Athenaeum, 1852, 1:340; South. Qu. Rev. ii, 290; N. Y. Lit. and Theol. Review, i, 688; Brenn., Mod. Eng. Lit.: its Blemishes and Defects (1857), p. 296; Koenen, Von der Entwicklung der englischen Dichter der Montgomery (Amst. 1835, 8vo), and the excellent and very full article in Allibone’s Dict. of Brit. and Amer. Authors. a. v. (J. H. W.)

Montgomery, William B., a missionary to the Osage Indians, who flourished in the early half of this century, and was one of the first to publish in the Osage language of various portions of Scripture.

Month (usually בְּשָׁנָה, cho’deth, i. e. new moon; later also בְּשָׁנָה, pa’rach; Chald. בְּשָׁנָה; gerach; Gr. παρα, etc.). The terms for “month” and “moon” have the same close connection in the Hebrew language as in our own and in the Indo-European languages generally; we need only instance the familiar cases of the Greek πα, and μισθί, and the Latin mensa; the German mond and monat; and the Sanscrit maha, which answers to both month and moon. The Hebrew chodesh is perhaps more distinctive than the corresponding terms in other languages; for it expresses not simply the idea of a lunation, but the recurrence of a period commencing definitely with the new moon; it is derived from the word chadash, “new,” which was transferred in the first instance to the “new moon,” and in the second instance to the “month,” or, as it is sometimes more fully expressed, בְּשָׁנָה, “a month of days” (Gen. xxix, 14; Numb. xi, 20, 21; comp. Dent. xxxi, 13; 2 Kings xv, 13). The term gerach is derived from gerach, “a heavy stone,” and occurs only in occasion of the passover (Exod. ii, 2; 1 Kings vi, 37, 38; viii, 2; 2 Kings xv, 13), but more frequently in the poetical portions of the Bible.

1. The most important point in connection with the month of the Hebrews is its length, and the mode by which it was calculated. The difficulties attending this inquiry are considerable, in consequence of the scantiness of the data. Though it may fairly be presumed from the terms used that the month originally corresponded to a lunation, no reliance can be placed on the mere verbal argument to prove the exact length of the month in historical times. The word appears even in the earliest times to have passed into its secondary sense, as describing a period approaching to a lunation; for in Gen. vii, 11; viii, 4, where we first meet with it, equal periods of 30 days are described, the interval between the 17th days of the second and the seventh month (1st ed. 1847; 3d ed. revised and enlarged 1851; 3, 5). We have therefore in this instance an approximate basis for the solar month, and as, in addition to this, an indication of a double calculation by a solar and a lunar year has been detected in a subsequent date (for from vii, 14, compared with vii, 11, we find that the total duration of the flood exceeded the year by eleven days; in other words, by the precise difference between the lunar year of 364 days and the solar one of 365 days), the passage has attracted considerable attention on the part of certain critics, who have endeavored to deduce from it arguments prejudicial to the originality of the Bible narrative. It has been urged that the Hebrews themselves knew nothing of a solar month, that they must have derived their knowledge of it from more easterly nations (Ewald, Jahrb. 1854, p. 9), and consequently that the materials for the narrative and the date of its composition must be referred to the period when close intercourse existed between the Hebrews and the Babylonians (von Bohlen’s Intro’d. to Gen. ii, 155 sq.). It is unnecessary for us to discuss in detail the arguments on which these conclusions are founded; we submit in answer that the data before us render it impossible to decide opinion on all the matter, and that a more obvious explanation of the matter is to be found in the Egyptian system of months. To prove the first of these points, it will be only necessary to state the various calculations founded on this passage: it has been deduced from it (1) that there were 29.5 months of 30 days each [see Chronology]; (2) that there were 12 months of 30 days, with 5 intercalated days at the end to make up the solar year (Ewald, l. c.); (3) that there were 7 months of 30 days, and 5 of 31 days (von Bohlen); (4) that there were 5 months of 30 days, and 7 of 29 days (Koehler, Gen. Lect., ii, 1-5); or, in other words, that it was possible to lay down the foundation of any calculation whatever by assuming that a period might have elapsed between the termination of the 150 days and the 17th day of the 7th month (Ideler, Chronol. i, 70). “The year being lunar, the interval is, in fact, but 148 days; the discrepancy, however, is of no account” (Burton, Ondo Secularum, p. 282); but both extremes are included, as is usual in Hebrew computations. See Deluge. But, assuming that the narrative implies equal months of 30 days, and that the date given in viii, 14 does involve the fact of a double calculation by a solar and a lunar year, it is unnecessary to refer to the Babylonians for a solution of the difficulty. The month of 30 days was in use among the Egyptians at a period long anterior to the period of the exodus, and formed the basis of their computation either by an unintercalated year of 360 days or an intercalated one of 365 (Rawlinson’s Her. ii, 283-286). Indeed, the Bible itself furnishes us with an indication of a double year, solar and lunar, in that it assigns the regulation of its length indifferently to both sun and moon (Gen. i, 14). See Year. From the time of the institution of the Mosaic law downward the month appears to have been a lunar one. The cycle of religious feasts, commencing with the Passover, over the whole of the ancient Hebrew nation migrated over the lunar month (Josephus, Ant. iii, 10, 5); the 14th of Abb was coincident with the full moon (Philo, Vit. Mos. iii, p. 686); and the new moons themselves were the occasions of regular festivals (Numb. x, 10; xxvii, 11-14). The statements of the Talmudists (Mishna, Rosh HaZ. i-iii) are decisive as to the practice in their time, and the lunar month is observed by the modern Jews. The commencement of the month was generally decided by observation of the new moon, which may be detected about forty hours after the period of its conjunction with the sun; in the later times of Jewish history this was effective according to a strict rule the appearance of the new moon being reported by competent witnesses to the local authorities, who then officially announced the commencement of the new month by the twice-repeated word “Mekedudah,” i.e. consecrated (see Cudworth’s Intellectual System, ii, Append. p. 528). According to the rabbinical rule, however, there must be at all times a little uncertainty before the evidence is given to the exact day on which the month would begin; for it depended not only on the appearance, but on the announcement: if the important word Mekedudah were not pronounced until after dark, the following day was the first of the month; if before dark, then that day (Rosh

MONTH

Hah. iii), 1). But we can hardly suppose that such a strict rule of observation prevailed in early times, nor was it in any way necessary; the recurrence of the new moon can be predicted with considerable accuracy by a calculation of the interval that would elapse either from the last new moon or the first full moon (it is only detected by a practiced eye), or from the disappearance of the waning moon. Hence David announces definitely "To-morrow is the new moon," that being the first of the month (1 Sam. xxv, 5, 24, 27), though the new moon could not as yet have been observed, and still less announced. James (Avic. iii, 3 § 359) regards the discrepancy of the dates in 2 Kings xxv, 27, and Jer. iii, 31, as originating in the different modes of computing by astronomical calculation and by observation. It is more probable that it arises from a mistake of a copist, substituting 14 for 11, as a similar discrepancy exists in 2 Kings xxv, 19 and Jer. iii, 25, without admitting a similar explanation. The length of the month by observation would be alternately 29 and 30 days; nor was it allowed by the Talmudists that a month should fall short of the former or exceed the latter number, whatever might be the state of the weather. The months containing only 29 days were termed in Talmudical language 127, or "deficient," and those with 30 malé (127), or "full."

The usual number of months in a year was twelve, as implied in 1 Kings iv, 7; 1 Chron. xxiv, 1-15; but inasmuch as the Hebrew months coincided, as we shall presently show, with the seasons, it follows as a matter of course that an additional month must have been inserted about every third year, which would bring the number up to thirteen. No notice, however, is taken of this month in the Bible. We have no reason to think that the intercalary month was inserted according to any exact rule; it was sufficient for practical purposes to add it whenever it was discovered that the barley harvest did not coincide with the ordinary return of the month of Abib. In the modern Jewish calendar the intercalary month is introduced seven times in every 19 years, according to the Metonic cycle, which was adopted by the Jews about A.D. 860 (Prideaux's Connection, i. 209, note). At the same time the length of the synochal month was fixed by R. Hillel at 29 days, 12 hours, 44 minutes, and 33 seconds, which accords very nearly with the truth.

2. The usual method of designating the months was by their numbers, e. g., "the second month" (Iren. vii, 11), "the fourth month" (2 Kings xxv, 8); and this was generally retained even when the names were given, e. g., "in the month Zif, which is the second month" (1 Kings vi, 1); "in the third month, that is, the month Sivan" (Esth. vii, 9). An exception occurs, however, in regard to Abib in the early portion of the Bible (Exod. xiii, 4; xxiii, 15; Deut. xvii, 1), which is always mentioned by name alone, inasmuch as it was necessarily coincident with a certain season, while the numerical order might have changed from year to year. We doubt indeed whether Abib was really a proper name; it is mentioned only once in the Scripture, -- the article, "the Abib," as an appellation (= the season of the new ears of grain); in the second place, it appears almost impossible that it could have been superseded by Nissan if it had been regarded as a proper name, considering the important associations connected with it. The second moon of the Babylonian new year is called in the Talmudic period in this respect varied: Ezra, Esther, and Zechariah specify both the names and the numbered order; Nehemiah only the former; Daniel and Haggai only the latter. The names of the months belong to two distinct periods: in the first place we have those peculiar to the Babylonian system, which were abandoned by the Persians; in the second, those four only, even including Abib, which we hardly regard as a proper name, are mentioned, viz.: Abib, in which the Passover fell (Exod. xii, 4; xxiii, 15; xxxiv, 18; Deut. xvi, 1), and which was established as the first month in commemoration of the Exodus (Exod. xii, 2); Zif, the second month (1 Kings vi, 1, 87); Bul, the eighth (1 Kings vi, 88); and Ethanim, the seventh (1 Kings viii, 2) -- the three latter being noticed only in connection with the building and dedication of the Temple, probably, in order to confer a consecration on the moon (as the Passover was). The names thus restricted to the official documents of the day, and that they never attained the popular use which the later names had. Hence it is not difficult to account for their having been superseded. In the second place we have the names which prevailed subsequently to the Babylonian captivity; and of these there were six in the Talmud: Nisan, the first, in which the Passover was held (Neh. ii, 1; Esth. iii, 7); Sivan, the third (Esth. viii, 9; Bar. i, 8); Ethel, the sixth (Neh. vi, 15; 1 Macc. xiv, 27); Chislev, the ninth (Neh. i, 1; Zech. vii, 1; 1 Macc. i, 54); Tebeth, the tenth (Esth. ii, 16); Shebat, the eleventh (Zech. i, 7; 1 Macc. xvi, 14); and Adar, the twelfth (Esth. iii, 7; viii, 12; 2 Macc. xv, 36). The names of the remaining five occur in the Talmud and other works: they were Eterin (Targum, 2 Chron. xxx, 2), Tamuz, the fourth (Mishna, Taun. iv, 5); Ab, the fifth, and Tisri, the seventh (Rosh Hash. i, 3); and Marchesvan, the eighth (Taun. i, 8; Josephus, Ant., i, 3, 3). The name of the intercalary month was Yeavar, i.e. the additional Adar, because placed in the calendar after Adar and before Nisan. The opinion of Balaam (Num. xxiii, 15; Deut. ii, 30) that the first three months regarded as the intercalary month, because the feast of Purim was held in Yeavar in the intercalary year, has little foundation.

The first of these series of names is of Hebrew origin, and has reference to the characteristics of the seasons -- circumstance which clearly shows that the months returned at the same period of the year: in other words, that the Jewish year was a solar one. Thus Abib (אֵיבִּי) was the month of "ears of corn," Zif the month of "blossom" (אֶזֶר) or, more fully, as in the Targum, נְצֵרָה, "the bloom of flowers," another explanation is given in Rawlinson's Herodotus, i, 622; viz. that Ziv is the same as the Assyrian Giš, "bull," and answers to the zodiacal sign of Taurus); and Bul the month of "rain" (בּעָל; the name occurs in a recently discovered Phenician inscription (Ewald, Jahrb. 1856, p. 185). A cognate term, בּעַלְוָה, is used for the "dew" (Gen. vi, 17, etc.; but there is no ground for the inference of an original order, and it is certain that there is an allusion to the month Bul). With regard to Ethanim there may be some doubt, as the usual explanation, "the month of violent or, rather, incessant rain," is decidedly inapposite to the seventh month. Thenius, on 1 Kings vii, 2, suggests that the true name was אֶתְנָמֶר, as in the Sept. Αἰθέναι, and that its meaning was the "month of gifts," i. e. of fruit, from מַמְלֵךְ, to give." There is the same peculiarity in this as in Abib, viz. the addition of the definite article (אֶתְנָמֶה). In the second series, both the origin and the meaning of the terms are connected, the opinion of the Talmudists that the names were introduced by the Jews who returned from the Babylonian captivity (Jerusalem Talmud, Rosh Hash. i, 1), and they are certainly used exclusively by writers of the post-Babylonian period (see Beney and Stern, Montane names; and J. E.der.) in that there may be perhaps natural to seek for their origin in the Persian language, and this was done some years since by Beney (Monthamen) in a manner more ingenious than satisfactory. The view, though accepted to a certain extent by Gesenius in his Theozaurus, has since been practically abandoned by all philologists; it is true that it meets with no confirmation from the monumental documents of ancient Persia. The names of the months, as read on the Behistun inscriptions, Garmapeda, Bogayadash, Aratapeta, etc., bear no resemblance to the He-
brew names (Rawlinson's Herodotus, ii, 598-6). The names are probably borrowed from the Syrians, in whose regular calendar we find names answering to Tisri, Sebtab, Adar, Nisan, Iyar, Tammuz, Ab, and Elul (Ileder, Chronol, i, 480). The names of the Syrian months appear to have been in use in local sects for the calendar. For instance, the calendar of Heliopolis contains the names of Ag and Gelon (Ileder, i, 440), which do not appear in the regular Syrian calendar, while that of Palmyra, again, contains names unknown to either. Chisleu and Tebeth appear on the Palmyrene inscriptions (Geismayr, Theauran, p. 709, 549). The resemblance of sound between the Biblical Egyptian Tobi, as well as its correspondence in the order of the months, was noticed by Jerome (ad Execk. xxxix, 1). Sirvan may be borrowed from the Assyrians, who appear to have had a month so named, sacred to Sin or the moon (Rawlinson, i, 615). Marchesvin, coinciding as it did with the rainy season in Palestine, was probably a purely Hebrew term. Von Bohlen connects it with the root ráducation, "to boil over" (Introtd. to Gen, ii, 157). The modern Jews consider it a compound word, mar, "drop," and Cheshvan, the former betokening that it was wet, and the latter being the proper name of the month (De Solis Mishna, p. 168, note). With regard to the meaning of the Syrian names we can only conjecture from the case of Tammuz, which undoubtedly refers to the festival of the deity of that name mentioned in the Bible (ii, 14). Still, we cannot suppose that some of them have been derived from the names of deities. We draw attention to the correspondence between Elil and the Arabic name of Venus Urania. Allah (Herod, iii, 8); and again between Adar, the Egyptian Athor, and the Syrian Atargatis. Hebrew roots are suggested by Geismayr for some of them, but without much confidence. The Hebrew forms of the names are  dedicating,  dedicating,  dedicating,  dedicating,  dedicating,  dedicating,  dedicating,  dedicating. 

Subsequently to the establishment of the Syro-Macedonian empire, the use of the Macedonian calendar was gradually adopted for the purpose of literature or intercommunication with other countries. Josephus, for instance, constantly uses the Macedonian months, even where he gives the Hebrew names (e.g. in Ant. i, 3, 8, he identifies Marchesvin with Dius, and Nisan with Xanthicus, etc., in Lev, 7, 6, Chisleu with Appelleius). The only instance in which the Macedonian names appear is in the Septuagint, xix, 23, etc. (an 455). We have no information on Xanthicus in combination with another named Dioscorinthius (ver. 21), which does not appear in the Macedonian calendar. Various explanations have been offered with respect to the latter. Any attempt to connect it with the Macedonian Dios fails on account of the interval being too long to suit the narrative. Dioscorinus was probably simply the first and Xanthicus the sixth month. The opinion of Scaliger (Emend. Temp, ii, 94) that it was the Macedonian intercalary month rests on no foundation whatever, and Ideeler's assertion that that intercalary month preceded Xanthicus must be rejected along with it (Chronol. i, 392). It is most probable that the author of 2 Mac. or a copyist was familiar with the Cretan calendar, which contained a month named Dioscurus, holding the same place in the calendar as the Macedonian Dystrus (Ileder, i, 426), i.e. immediately before Xanthicus, and that he substituted one for the other. This view derives some confirmation from the Vulgate rendering, . We have further to notice the reference to the Egyptian calendar in 3 Mac. vi, 88, Pachon and Epiph in that passage answering to Pachons and Epeh, the ninth and eleventh months (Wilkinson, Anc. Epp. i, 14, 2d ser.). It is clear that the date of Moses with our own cannot be expected with precision on account of the variations that must inevitably exist between the lunar and the solar month, each of the former ranging over portions of two of the latter. It must therefore be understood that the following remarks apply to the general identity on an average of years. As the Jews still retain the names Nisan, etc., it may appear at first sight needless to do more than refer the reader to a modern translation, and this would have been the case if it were not for the fact that the modern baths do not correspond to the ancient one. We are indebted to J. D. Michaelis for discovering the true state of this case, after the rabbinical writers had so universally established an erroneous opinion that it has not yet died out of our popular books. His dissertation, "De Mensibus Hebræorum" (in his Commentaries, p. 121), ammós 1768-66 oblates [Bremen, 1769], p. 16; translated by W. Bowyer, Lond. 1773: also in the Crítica Biblica [London, 1827], iii, 324-340), proceeds on the following chief arguments: First, that if the first month began with the new moon of March, as was commonly asserted, the climate of Palestine would not in that month permit the oblation of the sheaf of barley, which is ordered on the second day of the Paschal Feast (Lev. xxiii, 10); nor could the harvest be finished before the Feast of Weeks, which would then fall in May; nor could the Feast of Tabernacles, which was after the gathering of all fruits, according to Josephus, be kept in September, as is common in our Western. Thus the dates of the feasts depend on certain stages in the agricultural year, which, as he shows from the observations of travellers, solely coincides with the states of vegetation which are found, in that climate, in the months of April, June, and October. This has been confirmed by later accounts of the harvest. The barley harvest does not take place in the warm district about Jericho till the middle of April, and in the upland districts not before the end of that month (Robinson's Researches, i, 551; iii, 102, 145). Secondly, that the Syrian calendar, which has essentially the same names for the months, makes its April absolutely parallel with our April. Lastly, that Josephus (Ant. ii, 14, 6) synchronizes Nisan with the Egyptian Phraum, which commenced on the 27th of March (Wilkinson, l, c.), and with the Macedonian Xanthicus, which answers generally to the early part of April, though considerable variation occurs in the local calendars as to its place (comp. Ideeler, i, 435, 442). He further informs us (iii, 5, 5) that the Passover took place when the sun was in Aries, which it does not enter until near the end of March. Michaelis concludes that the latter Jews fell into this departure from their ancient order either through some mistake in the intercalation, or because they wished to imitate the Romans, whose year has its first month of March. We are thus led to suppose that in the time of Moses the month of ears cannot have commenced before the first days of our April, which was then the period of the vernal equinox" (Handbuch der Chronologie, i, 490). As Nisan, then, began with the new moon of April, we have a scale for fixing the commencement of all the other months with reference to our calendar; and we must accordingly date their commencement one whole month later than is commonly done: allowing, of course, for the circumstance that, as the new moon varies in its place in our solar months, the Jewish months will almost invariably consist of portions of two of ours. For the details of each month, see Calendar, Jewish. See, in addition to the treatises above noticed, Langenberg, De mensae veterum Hebraorun lunarii (Jen. 1718). Compare Chronology.

Monthly Meeting. See Meeting.

Montholon, JEm DE, a French ecclesiastic, was born at Autun near the middle of the 15th century. At an early age he received the degree of doctor of laws, and was registered among the regular canons of St. Victor, at Paris. His theological learning and his superior attainments were rapidly advanced among his fellows, and he was finally promoted to the cardinalship by pope Clement VII. Montholon died in Paris in 1528. His works are: Promptuarium.
MONTH'S MIND

MONTLUC

sex Breviarium Juria diei et utrque hominum (Pa-
ris, 1526, 2 vols. fol.) — De sacramento altaris (ibid, 1517, 8vo).

Monton MIND is the name by which is design-
atized an office performed for the period of one month, in the Romish Church, for her dead. “Mind” in that case is used in its old sense of memory, as in the phrases “to call to mind,” “time out of mind.”

Monthyon (or Montyon), Antoine Jean Baptiste Robert Auger, a French Baron, celebrated for his great philanthropic labors and munificent endow-
ments of the Catholic Church, was born at Paris Dec. 23 or 26, 1738. He was successively intendant of the provinces of Provence, Auvergne, and Anjou; and, as a member of the royal council, opposed the unlawful proceedings resorted to in the case of Lachalotais, and protested against the dissolution of ancient parliaments decreed by chancellor Mauppe. In consequence of the latter act he was deprived of his office. Soon after the accession of Louis XVI he was appointed councillor of state; became, in 1780, chancellor of the court d'Artois (afterwards Charles X); emigrated to England on the breaking out of the French Revolution, and did not re-
turn to France until the second restoration. He pos-
sessed a large fortune, and devoted the large pro-
portion not only of his income, but also of his capital, to
philanthropic purposes. He generously assisted his ex-
iled countrymen, and bequeathed to French hospitals
over 3,000,000 francs. As early as 1782 he had founded a prize for virtue, and several other prizes, to be award-
ed by the French Academy and the Academy of Sci-
ences. These having been suppressed by order of the Convention, were renewed by the donor on his return to France in 1816, and afterwards increased. Every year the French Academy distributes two Monthyon prizes of 10,000 francs each: one to the poor person who has performed the most meritorious deed of virtue, the other to the author of the work which has been judged the most useful for the improvement of public morals. Two others, of equal amount, are awarded by the Academy of Sciences: one to him who shall have found during the year some means of improvement of the medical and surgical art, the other to him who shall have discovered the means of rendering some mechanical art less unhealthy. Monthyon died in 1820.

Monti, Filippo Maria, an Italian prelate, was born March 23, 1675, at Bologna, of an illustrious and noble family; studied at the high school of his native city, and by the advice of the Bollandists became a Jesuit. After a superior talent and acquisitions he quickly rose to eminent favor with papa Clement XI and XII. In 1743 Benedict XIV created Monti a cardinal. He died Jan. 17, 1754, at Rome. His library of over 12,000 volumes was given, by his request, to the library of his native place; also other valuable treasures, among them a fine collection of paintings. He wrote: Romae latrice delle belle arti, scultura ed architettura; —Prose degli Avanzi; — Elogia cardinaleum pietate, doctrina, legitimorum ac rebus pro Ecclesia gestis illustrant a postulatio a Alexandri III ad Benedictum XIII (Rome, 1731, 8vo).

Monti, Vinzenzo, a noted Italian ecclesiastic, who wrote poetry of a superior order, and only used his position in the Church as a general passport into society, flourished in the second half of the 18th century. He was a native of Ferrara (born in 1758), and studied in the university of that place. He was made abbe in 1776, and became secretary to the pope's nephew. He soon attracted the notice of the literary world, and was generally noticed by prelates and cardinals as a fit subject for promotion in the Church. He was especially popular when, in 1792, he wrote a poem commemorating the efforts of Pius II against the Austrian court, which then, in the person of Joseph II, was fast breaking away from the papacy. The poem which Monti wrote on this occasion of Pius's visit to Vienna is entitled Il Pellegrino Apostolico. He died at Milan, October, 1792.

Montignot, Henri, a French ecclesiastic, was born about 1715, at Nancy. He was a doctor of theology, canon of the cathedral, and member of the academy in his native place, where he died about the close of the 18th century. He wrote: Remarques théologiques et cri-
tiques sur l'Histoire du Peuple de Dieu du P. Berruyer (1756, 12mo); — Dictionnaire diplomatique, ou Épigraphie des termes de la basse Latinité pour servir à l'Intelligence des archives, des chartes, etc. (Nancy, 1787, 8vo); — Ré-
flexions sur les inimmunités ecclésiastiques (Paris, 1788, 8vo); —Etat des Etoiles fixe au second siecle par Cl. Ptolémée, comparé à la position des mêmes étoiles en 1786, avec le texte Grec à la traduction Française (Nancy, 1786; Saver (1787, 4to).

Montigny, Jean de, a French prelate of some note, was born in Bretagne in 1637, of parents highly esteemed in the best social circles of France; and thus, surrounded with superior advantages, was especially fitted for the highest literary culture. He entered the ecclesiastical life, and soon attained to eminence. In 1670 he was made a canon of Léon, and in the same year was admitted to membership in the French Academy. He died Sept. 28, 1671, at Vitré. He wrote: Lettre à Erneste pour repousser à son libelle contre La Pucelle de Chapelain (Paris, 1656, 4to); —Oraison funèbre d'Anne d'Autriche (Rennes, 1695, 4to); —Lettre contenant le voyage de la cour en Angleterre; dans le Recueil de plusieurs pieces nouvelles et galantes.

Montjoy is the name given to mounds serving to direct the travellers on a highway, probably often originally tumuli, or funeral-mounds of an elder people— heaps of stones, overgrown with grass, which have been piled over a dead chieflain. They often were crowned with a cross, as at Monjoie St. David in Lemo-

cr; Montjoie St. Andrew, that of Burgundy; Montjoie Notre Dame, of the dukes of Bourbon; and Montjoie St. George, of England.

Montlaur, Jean de, a French prelate, was born near Montpellier about 1120; entered the ecclesiastical life while yet quite a youth, and rapidly advanced to positions of prominence and responsibility. He was made bishop, and everywhere gained friends by his generous and open-hearted life. He was particularly devoted to his diocesan work, and built up the people in holy and consistent living. He died Feb. 24, 1190, in his native place, with whose history his whole life was interwoven. His works remain in MS. See Histoire littéraire de la France, vol. xiv, a.v.; Gallia Christiana, vol. vi.

Montluc, Blaise de, a French marshal, noted for his cruelty towards Protestants; one of the “two personages who obtained by their enormities a notoriety so hideous that the history of cruelty would be imperfect if they were passed over in silence” (Smedley, i, 211). He was a brother to the succeeding, and was born in Gasco-

gny in 1501. When only a youth of twenty, he entered military life, and soon distinguished himself by his braver-

ey as well as his brutality. He was universally severe with his enemies, and would give no quarter. In the contest with the Huguenots, he advised their absolute extermination, and actually wrote a memoir (in 1562) showing how easily it might be done (see Mémoires de Condé, iii, 184 sq.). Placed in charge of his native province, he used his unlimited power to destroy every one who appeared to be tainted with the heresy, and instituted a strict inquisition “into the strange names of heresiarchs, heresies, consciencies, synods, and confraternities,” “food of which kind,” he adds, “never yet had furnished me with a breakfast” (Comment. lib. v, tom. ii, p. 3). The number of persons who fell victims to his rage is legion, and he appears to us in the role of a modern Nero. We have not room to enter here into detail, but refer to Smedley (Hist. of the Ref. Religion in
Crime d'apostasie: lettre d'un religieux à un de ses amis (1790, 8vo).—Vie édifiante de Benoît-Joseph Labre, mort à Rome, en odeur de Sainteté, le 16 Avril, 1748. (1754, 8vo).—Exposition des prédications et des promesses faites par M. M. (Maronv), lecteur du collège Romain, confesseur du serviteur de Dieu; traduit de l'italien (Paris, 1784, 12mo).—Préservation contre le fanatisme, ou les nouveaux millénaires rappelés aux principes fondamentaux de la foi Catholique (Paris, 1806, 8vo).—De la Règle de vérité et des Causes du fanatisme (1808, 8vo).

Montmorency is the name of one of the oldest noble families of France, which figures both in secular and ecclesiastical history, though oftentimes its celebrity was purchased at the expense of all humanitarian principles. The name of the family was derived from the village in which its several members lived, and dates from the 10th century. Oftentimes the house of Montmorency has been styled "the first barons of France," and in recognition of their services to Romanism, "the first Christian barons." They furnished officers of state and generals for the French army, distinguished ecclesiastics for the Church of Rome, some of whom rose even to the cardinalate, besides a number of grandees and knights of the order of the Holy Spirit and of other military orders. One of the branches established in the Netherlands furnished count of Horn (Philip II de Montmorency-Neville), who, together with Egmont, was executed in Brussels during the bloody reign of the Spanish general Alva. But we have room here only for those chiefly concerned in the Huguenot movement.

1. Anne, first duke of Montmorency, marshal and grand-constable of France, noted for his alliance with the Guises [see HUGUENOTS], was born in March, 1493. His Christian name, Anne, it is said, he received from his godmother, Anne of Brittany. He distinguished himself by his gallantry and military skill in the wars between Francis I and the emperor Charles V, and was taken prisoner along with his sovereign in the battle of Pavia, which was fought against his advice. He afterwards became the leader of the French government, showing great ability in matters of finance and diplomacy, and was made constable in 1540. In rough manners made him an object of dislike to many; and the suspicions of the king having been aroused against him, he was suddenly banished from court in 1541, and passed ten years on his estates, till the accession of Henry II, when he came again to the head of affairs. In 1547 he was irreparably censured. He was but less successful in 1557 in his contest with the celebrated general of Philip II, duke Philibert Emmanuel of Savoy, which resulted in the, to France, disadvantageous peace of Chateau-Cambresis; and, hence, with the accession of the youthful king, Francis II, there came a decline of the power of the house of Montmorency, and the ascendancy of the house of the Guises, which had Francis entirely under their control. Fortunately for Montmorency, the widow of the late king, Catharine de Medici, ambitious to rule the kingdom, cast her influence with constable Montmorency, who had retired from court, though apparently she coveted the friendship of the Guises (Mont, viii, 362). An alliance was now formed among disaffected courtiers, bourgeoisie, and Protestants against the Guises, and him who, ruling over the nation, had submitted to their guidance; and though it is not believed that Montmorency had any share in this alliance, he was elected a brother of the house of Chatillon (Obet, cardinal of Chatillon, admiral Coligny, and Dandelo, colonel of the Cisalpine infantry), sons of Louis of Montmorency, the sister of the constable—were more or less intimately associated with all Protestant movements in France, and that possibly two of these three had actually a part

France, i, 211 sq.; ii, 25). Montluc fought also against the imperialists, commanded by Charles V, and assisted at the siege of La Rochelle and Calais. For his services and valour, his name was inscribed in the "Grand Mar- shal" by Henry III. Montluc died in 1577, leaving the Mémorais of his military life (1592), which are not an honor to any man's memory nor to any man's country. See Brantôme, Vies des HOMMES illustres Fransais; Mémoires, Abridgé de l'histoire de France; Sainte-Beuve, in the Moniteur (Paris, Oct. 1854; Browning, "Huguenots," i, 118, 136, 280; ii, 4. (J. H. W.)

Montluc, Jean de, brother of the preceding, a distinguished French prelate, noted both for his attain- ments in ecclesiastical and political life, was born about 1508. He entered in boyhood days the Dominican Or- der of Gray Friars, and soon made himself the favorite of his associates. The outer world also took a liking to him, and even at court he had many friends. Fran- cis I reposed much confidence in him, and he was in- trusted with diplomatic missions. He was successful especially in efforts for a peaceful solution of the differ- ences between his native country and the Ottoman power, concluding for Francis an advantageous peace with Soliman. In 1550 he was made bishop of Valence and in 1553 archbishop of Paris, and in that capacity entered the service of Henry II, as a diplomat and counselor. He was not unfrequently invited to preach at court during the rule of Catharine de Medicis. How- ever, after the Conference of Poissy (1561), Montluc seems to have fallen into disrepute at court, for he was believed to have been one of the bishops whom Beza's sentiments of the papal system had almost persuaded to espouse Protestantism. (Browning, Huguenots, i, 108); and two years later he was one of the Prelates excommunicated by pope Pius IV (Browning, i, 180). Montluc was finally restored to his former influence and position by the French Parlia- ment; but he never thereafter exerted himself much in ecclesiastical labors, and because of his shrewdness, wis- dom, and learning, he was selected by the government of his country for several diplomatic missions, the most important of which was to Poland (in 1572), where he zealously exerted himself to secure the crown for the duke of Anjou. It is generally conceded that Montluc's conduct in this affair was anything but honorable and manly. He persuaded the Poles to believe that the duke had had no part in the massacre of St. Bartholomew. On his return to France he lived at Tou- house, on which he died April 18, 1579. His theological writings are: Deux instructions et deux éprêtres au dergé et peuple de Valence (Avignon, 1557, 8vo).—Cursus Vertetti et Diemar Reformat Paris, et formulées dans des lieux de l'Ecriture servant à découvrir les fautes contre les dix commandements de la loi (ibid. 1559, 8vo).—Sermone (ibid. 1559, 8vo).—Familier Explication des articles de la foi (ibid. 1661, 8vo).—Sermone sur les articles de la foi et de l'Orison dominicale (ibid. 1561, 8vo).—Deo De Thou, Hist. aux tempora; Siemondi, Hist. des Fransais, chap. xvii, xviii, xix; Smedley, Hist. of the Ref. Religion in France, i, 122 sq., 189; ii, 82; De Felice, History of the Protestant, of France, p. 142 sq. (J. H. W.)

Montmignon, Jean Baptiste, a French theologian, was born at Lucy in 1737, prepared in his studies for holy orders, and finally became successively secre- tary of the college of Soissons, canon of Saint-Germain, grand-vicar, and archdeacon. In 1786 he accepted the editor- ship of the Journal Ecclesiastique; but as early as January, 1798, abandoned this work, and took part in the publications which were preparing at the outbreak of the Revolution under the bishop of Soissons. Obliged to quit the latter in 1799, he went to the metropolis, and remained there until the government of the Directory made his return possible. He was then nominated grand-vicar of Poitiers; in 1811 was made canon of the metropolis, and then grand-vicar of this diocese. He was also made censor of all ecclesiastical publications at Paris. He died at Paris Feb. 21, 1824. He wrote:
in, or at least a knowledge of, the conspiracy of Amboise (see Huguenots; and comp. Banke, Franci neck, i, 147; Mrs. Marsh, The Prot est. Ref. in France, i, 142; Brantôme, Vie des Hommes illustres, iii, 20). The sudden termination of the reign of Francis II (1560) brought forward the minor, Charles IX, and with him the regency of Catharine. Her object was to effect a fusion of parties, or, rather, to hold the balance evenly between the queen regent and her under- sect, to preserve the paramount authority in her hands. By the advice of the sagacious counsellor Hôpital (q.v.), the king of Navarre was made lieutenant-gen eral, and Montmorency was again given the direction of military affairs, while the Guises kept their places in the council, and duke Francis retired to the monas- ten of his order (Mare de Dieu). The Guises, perceiving the intent of the queen, now denominated "spatoula" (see above), labored earnestly for an alliance with Montmorency, in order to foil the queen in her designs. The controllable finally separated from his nephews, who had reappeared at court, and were enjoying many favors, and allied himself with the duke of Guise and the marshal St. Andre, composing the famous triumvirate which resisted Catharine de Medicis, and proceeded in most stringent measures against the Huguenots (q.v.). The colloquy at Poissy had softened the heart of Catharine, and the Protestants were given many privileges. The triumvirate next obtained the cause of the Protestants, and denounced guilty of high treason, and marshal Schomberg being sent against him, defeated him at Castelnaudary, and took him prisoner. Although almost mortally wounded, Montmorency was carried to Toulouse, sentenced to death by the Parliament, and notwithstanding his expressions of penitence, and the most powerful intercession made for him—for example, by king Charles I of England, the pope, the Venetian republic, and the duke of Savoy—was beheaded, Oct. 30, 1632. He was dis tinguished for amiability and courtesy of manners, as well as for his valor. His life was written by one of his officers (1659, 4to). See also the works cited above.

Montolivettes, a name given to the monks of Mount Olivet, because living in a residence so called. The Montolivettes dress in white serge, and profess the rule of St. Benedict. They sprang up in the 14th century, were approved by pope John XXI, and confirmed by Gregory XI in 1371. They trace their origin to St. Bernard of Fossanova, and their first monastery was founded by St. Benedict; but the order now spreads through Italy and Sicily. See Monks, Eastern.

Montorsoli, Fra Giovanni' Angelo, a celebrated Italian sculptor, largely engaged on sacred and ecclesiastical subjects, was born about the beginning of the 16th century at Montorsoli, near Florence. His first instruction in art he received from Andrea de Firenze, with whom he lived three years. He then found employment at Rome, at Perugia, and at Volterra. He was next employed by Michael Angelo on the church of San Lorenzo at Florence, and gained the admiration and lasting friendship of the great Florentine. In 1527 Montorsoli had a strong disposition to turn, as it appeared to him, to the only life in which peace was to be obtained; but after trying in vain several convents, he fixed in 1539 upon the brotherhood of the Nunziata at Florence, and became a friar of the Order Dei Servi della Nunziata. Shortly after he had taken up his abode in this convent, having been recommended to the pope by Michael Angelo, he was called to Rome by Clement VII to restore several ancient monuments, much to the dis satisfaction of his brothers of the Nunziata. When the tasks assigned him by the pope were finished, he returned to Florence with Michael Angelo to complete the statues and other sculptures of the sacristy and library of San Lorenzo. After the death of Clement, Montorsoli again joined Michael Angelo at Rome, and assisted him in the works of the monument of Julius II; but
while engaged on this work he was invited by cardinal Turenne, and advised by Michael Angelo to go to the cardinal to Paris. Owing, however, to difficulties with the treasury and servants of the French court, Montorsoli left Paris and returned to Florence. After completing several works, he went by Rome to Naples, and there constructed the tomb of Jacopo Sanazzaro. He next went to Genoa, and ornamented the church of San Giorgio alla Loggia. On his return to Florence, his tomb was completed. In 1571, his masterpiece, the Medici Chapels, were begun, and upon their completion returned to Michael Angelo at Rome; but departed again soon afterwards, in 1547, for Messina, where he was employed to make a grand fountain for the place in front of the cathedral, and designed the church of San Lorenzo, etc. In 1567, by a decree of pope Paul IV, all religious persons, of whatever rank, taken holy orders and were living at large in the world without respect to their religious character, were ordered to return to their convents and assume their religious habits; and Montorsoli was accordingly obliged to leave many works unfinished, which he intrusted to his pupil Marini, and he returned to his convent at Florence. He was, however, shortly afterwards called to Bologna to construct the high altar of the church of his own order, Dei Servi, which he completed with great magnificence in twenty-eight months. He returned to Florence in 1581, and being rich he built a common sepulchre for his own and the chapter-house of the convent of the Nunziata, with the requisite endowment for regular masses at appointed times, and gave the whole sepulchre, chapter, and chapel to the then almost decayed society of St. Luke, or company of painters, etc., which, upon the completion of the sepulchre, was at a solemn feast celebrated by forty-eight of the principal artists of Florence, re-established by the consent and authority of the duke Cosmo I upon a firmer and permanent basis, and the society still subsists as the Academy of Florence, though since that time it has been considerably enriched and endowed by successive dukes of Tuscany. Montorsoli died, says Vasari, on the last day of August, 1585, 'and being carried to the church of Valery, Voyages historiques et littéraires en Italie ; Spooner, Biographical Hist of the Fine Arts, s. v.; English Cyclop., s. v.

Montpellier (Lat. Monpessulanum or paullorum; a city of France, in the department of Hérault, in 34° 36' lat. and 4° 50' E. long., with a population (1881) of 52,678, is noted as the seat of several church councils held there in the 12th and 13th centuries. At the first of these, held in 1162, by pope Alexander III, assisted by ten bishops, the antipope Victor (Octavianus) was excommunicated (Labbé, Conc. x., 1410). At the second, held in 1194, indulgences were granted to those who marched into Spain to fight against the infidels (Moore), and interdicts were intrusted to the bishops in whose dioceses the Albigensians were gaining ground (Labbé, Conc. x., 1796). At the third council, held in 1215, by the papal legate, Peter of Beneventum, the question of the union of the city of Toulouse, and the other cities conquered by the Crusaders, count Simon of Montfort claiming them. Montfort (q. v.) was granted his demand. There were also forty-six canons passed relating to the dress of monastics and the clergy (Labbé, Conc. xi., 188, and Append, p. 2380). At the fourth council, held in August 1224, and composed of all the bishops of the province, under the archbishop of Narbone, the propositions of peace made by Raymond, count of Toulouse, and the Albigensians were considered. Raymond promised to keep the Catholic faith, and to cause it to be held throughout his dominions, to purge himself from the errors of the Albigensians, to restore the Church to her rights, to preserve her liberties, and to pay within three years 15,000 marks as an indemnification for what she had suffered, upon condition that the count of Montfort should relinquish his pretensions to the lands of the county of Toulouse; but Alphonse, who pretended to the county of Toulouse, in virtue of a decree of Innocent III in the Council of Lateran, wrote to the bishops, and represented to them that, as he hoped to be able to bring the Albigensians to subjection, it would be a scandal to the whole Church should they enter into any agreement with Raymond. The council appear to have acquiesced in his view of the matter, and the offer of Raymond was rejected (Conc. xi., 289, and Append, p. 2384). The fifth council was held September 6, 1236, by James, archbishop of Narbonne. Eighteen beatitudes were proclaimed, and the council communi- cates ipso facto all who usurp the property of the Church and insult the persons of the clergy; 2, forbids bishops to give the tonsure or holy orders to persons not of their own diocese; 3, declares that clerks not living as clergymen ought to do, or carrying on any business, and to those who lend them their property: 5, that clerks are not to receive holy orders; 6, forbids bishops to give letters to mendicant friars to authorize their begging before the friars have obtained leave of the metropolitan (Labbé, xi., 778). See Hefele, Conciliengeschichte, vol. v and vi (see Index); Landon, Manual of Councils, v. v.

Montpelhériens, a fanatical sect which, under the religious garb, committed all manner of excesses, and became guilty of most immoral conduct; but this, fortunately, was only short-lived, the people soon becoming disgusted with the licentiousness of its members. It arose at Montpellier, France, about the year 1728. Its founder, master, and high-priest took the name of Jacob Prophetus, and designated his meeting as the New Church, etc. He afterwards used to preach in a语言 which the grossest licentiousness was indulged in under cover of religion. Their place of assembly contained numerous apartments, carpeted with white, and furnished with beds and mattresses. In the farthest apartment, considered as the sanctum sanctorum, stood an altar, a pulpit, and a candlestick with several branches, and a gæspaladiion. There were also some priests dressed in the garb of the Hebrew priests. They circumcised and baptized their children, but in the latter ceremony brandy was used instead of water. Louis XV commissioned the marquis de Bouque lure to put an end to their abomina- tion, and the sect was speedily suppressed. See P. I. von Huth, Versuch einer Kirchengesch. d. 18ten Jahrh., i, 543 sq.

Montredon (also called Montroind), Raïmond de, a French prelate of some note, was born at Nîmes near the beginning of the 12th century. He was in 1190 archdeacon of Beziers, when he was promoted to the bishopric of Thézan, which he made archbishop of this city in 1145. He died about 1155. He figured prominently in the civil affairs of France, but gave little time to theological studies, and left no works of value in that field of knowledge. See Gallia Christiana, i, col. 560; Hist. litt. de la France, xiii, 256.

Montreuil, Hugues de, a French cardinal, was born at Montreuil, near Aincenis, about 1515. He early entered the service of the Church, and was made cardinal, and later archdeacon, of St. Peter's at Nantes. In 1534 he was elected bishop of Nantes, but the year after he was transferred by pope Innocent VI to the see of Trèguier, and in 1558 to that of Sainte-Brienne. Devoted to Charles the Bald, Hugues accompanied that prince on his escape from Paris in 1482. He was also present at the diplomatic conferences. He also performed other diplomatic ser- vices. The troubles which agitated Brittany in 1317 caused Hugues's retirement to Avignon, where pope Gregory XI created him cardinal (Dec. 20, 1375). He died there, Feb. 28, 1384. See Gallia Christiana, vol. iv, col. 206. Montreuil, Bernard de, a French theologian, was born in Paris in 1556. He joined the Jesuits in 1624, and taught philosophy and moral theology. He died in Paris in 1646. His works are: Vie de Jésus-Christ, tirée des quatre Évangélistes (1637, 4to)—La Vie gloreuses de Jésus-Christ et l'établissement de son Église par le ministère des Apôtres, ou les Actes des Apôtres et l'histoire de l'Église (Paris, 1640).
MONTROCHER

and 1799, 2 vols. 12mo):—Les derniers Combats de l'Eglise, dans l'explication de l'Apocalypse (Paris, 1845, 4th edition). MONTROCHER (Guil de Monte-Recher), Gui de, a Spanish theologian of some note, who flourished in the first half of the 14th century at Valencia, is noted as the author of Manipulus Curatorum, a work regarded of so much value that it was among the very first books issued after the invention of the art of printing, and passed through over fifty editions in the first thirty years of the 16th century. The title reads Manipulus Curatorum, liber utilissimus, per Christophorum Bugamum et Johannem Glum (Savigniano, 1471). See Du Pin, Biblioth. des Auteurs Ecles., du quatorzieme siecle; Fabricius, Biblioth. Graeco, x, 786; Biblioth. Hispana vetus, ii, 155, 156.

MONTROSE, James Graham, Marquis of, a Scotch soldier, noted for the part he took in the contests between the Covenanters and king Charles I., was a member of a celebrated noble family, and born at the family estate of Auld Montrose in 1612, and on the death of his father in 1638 became earl of Montrose. He was educated at the University of St. Andrews; and after having married a lady who lived only four years before death separated them, leaving him a child, he went abroad and resided chiefly in France, and was latterly devoting much of his time to study in general literature and army tactics. Introduced on his return to England to King Charles, he was so coldly received that he at once left for his native country, and there allied himself with the Covenanters, who were just then arrayed against the king. It was the year 1637 when the tumult broke out in Edinburgh on the pretense to introduce the Prayer-Book. Montrose, to all appearances, became heart and soul enlisted in the movement to resist the introduction of episcopacy in the Scotch Church, and was one of the four noblemen selected to compose the so-called "table" of the nobility, which, along with the other two, Craigmillar and Atholl, and the Earl of Argyll, ministers, drew up the famous National Covenant [see Covenant and Covenanters] sworn by all ranks at Edinburgh in the spring of 1638. He was likewise sent on a mission to Aberdeen, to secure the support of its citizens also; was instrumental in bringing many of them to join the national cause, and in 1639 went there with an army to overawe those who had refused to join his side. Encountering finally the army of king Charles, he gave it battle at Mearag Hill, near Stonehaven (June 15), and obtained a complete victory. When the temporary peace of Berwick was made, Charles invited several of the Covenanting nobles to meet him at Berwick, where he was then holding his court, and to consult with him about Scottish affairs. Among those who went was Montrose, and his party dated what they regarded as his apostasy from that interview. Be that as it may, his political position was certainly much modified after this. In the general Assembly which met August 13, 1639, under the presidency of the earl of Traquair as royal commissioner, he showed symptoms of toleration towards the Royalists, and was the object of much popular obloquy. One night he is said to have found affixed upon his chamber-door a paper bearing these words, Iniquitus armis, curvar virgilius. The dissolution of the Parliament, in June, 1640, led to an open rupture between the king and the Covenanters, and both parties prepared to decide their quarrel by force of arms. The former assembled at York an army of 21,000 horse and foot; the latter another of 26,000, which was called the London and Leicestershire Army. August 21, 1640. Montrose was the first man who forced the stream. The successes of the Scots, as is well known, soon forced Charles to summon a new Parliament for the settlement of the national grievances. But though Montrose had fought, he had, along with several other influential nobles, entered into a secret engagement at Cumbernauld for the purpose of fraternizing what they regarded as the factious designs of extreme Covenanting leaders. His conduct in England, too, had many of his friends anxious. It was said he was about to leave the country, and it was rumored that he had been communicating with the king; and when the Parliament assembled (November, 1640), he was cited to appear before a committee. The affair of the Cumbernauld Bond, discovered by the ingenuity of Argyre, was brought up; but Montrose defended his conduct of himself and his colleagues, and, in order to hide the fact of it, though some fiery spirits among the clergy, says Guthrie, "pressed that their lives might go for it." In the following June, Montrose and some others were accused of plotting against Argyre, and were confined in Edinburgh Castle, where they remained till the beginning of 1642, when they were set at liberty in return for the concessions which Charles had made his Scottish subjects. Although they had frequently been examined, nothing definite had been proved against them. The accusation that Montrose had proposed to the king to assassinate Argyre is not historically substantiated, and is intrinsically improbable. During the next year or two Montrose kept aloof, at least outwardly, from public affairs, and became alienated from the Covenanters. He went to York to wait on the king some time in 1645, but failed to meet him. He finally joined the queen, but did not secure any open alliance with the king; the Covenanters were trying to form a party in the north of England, and he thought it necessary to stay on the south side again. The civil war which had broken out in England determined Charles and his advisers to crush the Presbyterian leaders in Scotland, who were abetting the efforts of the English Parliamentarians. In the spring of 1644 Montrose finally entered into the king's service, and was raised to the rank of marquis. He left Oxford, where he had been residing with his sovereign, and proceeded to Scotland to raise the Royalists in the North. The battle of Marston Moor for a moment paralyzed him, but his resolution speedily returned. He threw himself into the Highlands, and, after skulking about the hills for some time in disguise, met at Blair of Atholl on the 25th, a table of the church, of which he was a member, and there, as he had forced their way thither from the Western Isles in hopes of joining him, and with these enforcements he marched south, fell suddenly (September 1) on the Covenanting army commanded by lord Elcho at Tippermuir, near Perth, and gained a complete victory. Not a single Royalist was slain. After a three-days' stay at Perth, he set out for the North, defeated a force of Covenanters under lord Burleigh at Aberdeen (September 18), and took possession of the city, which was abandoned for four days to all the horrors of war. The approach of Argyre, at the head of 4000 men, compelled Montrose to put his forces on the field of battle. He was a man of great personal courage and discipline, to retreat into the wilds of Badenoch, whence he recrossed the Grampians, and suddenly appeared in Angus, where he wasted the estates of more than one Covenanting nobleman. With fresh supplies, he then once more returned to Aberdeen, with the view of raising the Gordonians; narrowly escaped defeat at Fyvie in the end of October, and again withdrew into the fastnesses of the mountains. Argyre, baffled in all his attempts to capture or crush Montrose, returned to Edinburgh and threw up his commission. His opponent, receiving large accessions from the Highland clans, planned a winter campaign, marched south-westward into the country of the Campbells, devastated it frightfully, drove Argyre himself from his castle at Inverary, and then wheeled north, intending to attack Inverness, where the Covenanters were posted in strong force under the earl of Seaforth. The "Estates" at Edinburgh were greatly alarmed, and, raising a force, marched towards Edinburgh. Two Natural Bailie, a natural son of Sir William Bailie of Lamington. After consulting with Argyre, it was arranged that he should proceed by way of Perth, and take Montrose in front, while Argyre should rally his vast array of vassals and attack him in the rear. The Royalist leader was in the great glen of Albyn—the basin of the Caledonian Canal—on his way
MONMOUTH

MONUMENTAL THEOLOGY.

to Inverness, when he heard that Argyle was following him. He instantly turned on his pursuer, fell upon him unexpectedly at Inverlochy, February 2, 1645, and utterly routed his force. From then hence until the Cow- bellas were slain, and only four of Montrose's men. He then resumed his march northwards, but did not venture to assault Inverness—his wild mountaineers being admirably fitted for rapid irregular warfare, but not for the slow work of beleaguerment. Directing his course to the north, he burned the fire and smote north-west through Elgin and Banff into Aberdeen-shire, which suffered a similar fate. On the 9th of May he attacked and routed Hurry at Auldearn, near Nairn; and after enjoying a short respite with his fierce veterans in Badenoch, again issued from his wilds, and inflicted a still more disastrous defeat on Baillie himself at Alford, in Aberdeen-shire (July 17). There was now nothing left but his march south, and about the end of the month he set out with a force of from 5000 to 6000 men. He was followed by Baillie, who picked up reinforcements on his way, and on the 15th of August again risked a battle at Kilsyth, but was defeated with frightful loss—5000 of the Covenanters being slain. The cause of Charles was for the moment triumphant, and Montrose, who was virtually master of the country, was made lieutenant-governor of Scotland, and commander-in-chief of the royal forces. All the principal cities in the west hastened to proclaim their fidelity, and laid the blame of the recent troubles on the Presbyterian element, and military affairs took a turn. Great numbers of the Highlanders, having become restless, returned home, and Montrose was obliged to seek safety near the borders. On the 4th of September he broke up his camp at Bothwell, and marched for the eastern counties, where Charles had informed him that the earls of Argyll, Home, and Roxburgh were ready to join him. In this he was disappointed, and on the 15th of the same month he was surprised at Philiphough, near Selkirk, by David Leslie, who fell upon the rebel's army and his raw levies with 6000 cavalry, and completely annihilated them. Escaping from the field of battle, he made his way to Athol, and again endeavored, but in vain, to arouse the Highlanders; and at last Charles, now beginning to get the worst of it in the civil war, was induced to order him to withdraw from the kingdom. On the 2d of September, 1646, Montrose sailed for Norway, whence he proceeded to Paris, where he endeavored, but in vain, to see the queen, Henrietta Maria, in aid of her husband; and at last Montrose, in despair, took himself to Germany, in hope of service under the emperor. He soon after returned to Holland, and entered into communication with the prince of Wales, afterwards Charles II. It was here that news of Charles I's death reached him. Montrose failed in his receipt of the dreadful intelligence, and gave way to the most passionate regrets. Charles II reinvested him with the dignity of lieutenant-governor of Scotland, and Montrose undertook a fresh invasion on behalf of the exiled monarch. In March, 1650, he arrived at the Orkneys with a small force, and after the lapse of three weeks proceeded to Caithness; but neither the gentlemen nor the commons would rise at his call. He forced his way as far south as the borders of Ross-shire, where his dispirited troops, not over 1500 strong, were attacked and cut to pieces at a place called Corbiesdale, near the pass of Inverconram, by a powerful body of cavalry under colonel Strachan. Montrose fled into the wilds of Assynt, where he was nearly starved to death, when he fell into the hands of M'Loud of Assynt, who delivered him up to general Leslie, by whom he was brought to Edinburgh. Condemned to death as a traitor to the Covenant, he was executed May 21, 1650. His demeanor in his last moments was dignified, but that of the Covenanters open to condemnation, for they were cruel, and heaped indignities upon him even on the gallows. His head was placed on the Tolbooth, and his limbs were sent to different parts of Scotland. After the Restoration his remains were collected and given a public funeral. See Napier, Montrose and the Covenanters (London, 1808, 2 vols. 8vo); Grant, Life of Graham, Mar. Duke of Montrose (1853); Wishart, Memoirs of Graham, etc.; Sir Edward Cant, Lives of the Warriors of the Civil Wars (1867); Clarendon, Hist. of the Rebellion, vol. ii; Hetherington, Hist. Ch. of Scotland, p. 175, 178, 191; Russell, Hist. Ch. of Scotland, vol. ii, chap. xii, xiii; Stephen, Hist. Ch. of Scotland (Aulicnian view), i, 576, 641 ii, 6, 17, 34, 44, 58, 61, 68, 91, 111, 144, 156, 167, 316, 317; and the works referred to under Covenanters.

Monseirrat, one of the smallest of the West India Islands, belonging to Great Britain, situated 43 miles N.W. of Guadeloupe, and at a similar distance from Antigua and St. Kitts, about 11 miles in length and 7 in breadth, contains an area of 47 English square miles, with a population of a little over 6000, the females exceeding the males by 735. About two thirds of the surface is mountainous and barren; the rest is well cultivated. The chief products are sugar, rum, and molasses; but cotton, arrow-root, and tamarinds are also exported. The island forms a portion of the government of the Lee- ward Islands, and is directly ruled by a president, aided by a council of persons annually appointed. The principal city is Plymouth, on the south coast. The revenue of Monseirrat in 1869 amounted to £2393, and the expenditure to £2343. In the same year 203 vessels of 7725 tons entered, and 194 vessels of 7450 tons cleared its port; and the total values of imports and exports were respectively £20,900 and £17,415. The government of the country is Christian, Protestants predominating now; though many Roman Catholics have sprung from those Irish settlers who entered the island in 1622, and the French, who owned it from 1712 till 1746.

Montyons. See MONTYON.

Monument is the incorrect rendering in Isa. lxxv, 4 of יnic ינת, a guarded place ("hidden thing," as in Isa. xlviii, 6; elsewhere "besieged," etc.), such as aver (as the Sept. στρατιον), or the adytos or shrines of heathen temples (so the Vulg. delubra), as places of idolatrous or illicit devotion. It was anciently a prac- tice in most nations for persons to resort to sepul- chres for the purpose of magic or necromancy, and this still holds its ground in India and other Oriental countries. See SUPERSTITION.

In the Apocrypha, "monument" is the correct render- ing in Wisd. x, 7, for νυμαθον, but incorrectly in 1 Macc. xiii, 27 for φαγοαμα, and in 2 Macc. xxv, 6 for εραιαν- ιον. See SARCOPHAGUS.

For the monuments of Egypt and Assyria, see those countries respectively.

Monumental Theology, a term of late em- ployed to designate the scientific presentation of the notions and doctrines of theology as they are found in and taught by monuments. It aims to interpret the life and thought of the Christian Church as these are unconsciously recorded in monumental remains. It goes out of the ordinary course of historic investigation, and searches for the isolated and fragmentary. Indeed, wherever Christian peoples have left a monumental trace of their life this discipline directs its inquiries.

Relation to other Departments.—Since these monu- mental remains are mostly of the nature of works, monumental theology is very intimately connected with Art Criticism, Art History, Archaeology, Epigraphy, and Numismatics. What have usually been regarded as only auxiliaries to Historical Theology have been re- cently elevated to an independent science. Art and written history are conceived as deriving from their place in their modes of expression. Art appeals to the whole race; not, indeed, through the faculty of the under- standing, but through the higher faculty of the intu- ition, to which physical sight is only a medium or instrument. The difference is this: while in thought
MONUMENTAL THEOLOGY

555 MONUMENTAL THEOLOGY

the subject under consideration is resolved into its constituent elements by the discursive faculty, and, therefore, such knowledge is connected with a series of elements that are apprehended successively, an art-work, as an object in space, may be understood at once in the totality of its elements, without division and without succession. In this respect the theology of art differs from dogmatics, for example, since the former would have to do chiefly with intuitive truth, the latter with results of the exercise of the discursive faculty.

But since the Christian Church was founded in the midst of two opposing systems of religion and philosophy—viz. Heathenism and Judaism—these so-called Christian monuments will often appear of a mixed character. Likewise, in the course of the history of the Church she has been subjected to various attacks of error from within and without. Herself within the Church, the hostile spirit of philosophy, and the persecuting spirit of the temporal powers, have been potent moulding influences. Hence the complete discussion of "Monumental Theology" would demand a careful estimate of the reciprocal influence of these opposing elements. It would therefore include the examination of those historical monuments that testify, by their monolithic character, either of lingering traces of an original divine revelation, or of an expectation of an approaching deliverance, as well as that class of monuments that clearly show the presence and influence of heretical systems in the Church itself.

C. The Principles of Christianity, from its institution to the present time, have evidently exerted a most powerful influence on human thought and life. Art has likewise been affected. While at different periods (e.g. in the Western Church during the invasion of the Northern tribes, and in the iconoclastic struggle of the East) art has suffered terrible catastrophes, it has, nevertheless, ever had a more or less intimate connection with the Christian Church. Hence it is with no sufficient reason that a class of writers (Bingham, Rheinwald, Böhmer, Guericke, and Neander) have limited ecclesiastical monuments and Christian archaology to the chronological bounds of Patristics, i.e. to the first six centuries. More scientific is the view of another class of writers (Baumgarten, Augusti, etc.), who regard the Reformations of the 16th century as a modern boundary; since by the revival of classical studies, and the introduction of new elements of life, art was able to borrow itservitude to the Church, and found its subjects and inspiration in the sacred and the affairs of common life. Nevertheless the highest art must ever find its truest inspiration in the Christian religion, and therefore art monuments must continue to embody much of the Christian thought and spirit of an age. Hence the more recent writers on Theological Encyclopedia (Hagenbach, Rosenkranz, etc.) extend the study of Christian monuments to the present time.

Synoptical View of the Science.—Piper, the chief defender of monumental theology as an independent discipline, presents the following scheme in his Einleitung in die Monumentaltheologie: Since inscriptions and art monuments are the subject-matter of monumental theology, these demand a twofold treatment: (a) An ontological; (b) a historical. In other words, the subject must be discussed partly according to its essence, as it is a product of intellectual activity exerted on a given material; and partly according to its historical development. And since Christianity is recognised as the chief inspiring motive of these Christian art monuments, another closely related division is necessary, viz. the systematic arrangement and representation of the ideas that have found expression in Christian monuments. Expanded, there would result the following outline.

A. Of the essential nature of Christian art.

1. Of the Art Faculty.
   a. The relation of the Church to art per se.

b. Relation of Christian art to the art of classical antiquity.
   c. Emulation of art from the Church at the end of the Middle Ages.
   d. Relation of Protestantism to art.

2. The Art.
   a. Relation of the artist to the Church office:
      (1) In Christian antiquity; (2) in the Middle Ages:
      (a) since its reconstruction in the Middle Ages.
   b. The training of the artist:
      (1) His relation to the antique; (2) his relation to nature;
      (3) to schools and guilds.
   c. The individuality of the artist.

3. Art works.
   a. The synthetic division: (1) The material and its treatment; (2) the idea and its embodiment.
   b. The analytical division: (1) Anticipations; (2) Definitions; (3) Criticism and hermeneutics of art-works.

   a. The historical division: (1) Anticipations; (2) Definitions; (3) Critical and hermeneutic of art-works.
   b. History of the graphic arts.

5. Art monuments.
   a. Civil monuments with Christian characters:
      (1) Coins; (2) consulular diplomas.
   b. Private monuments: (1) Monuments of domestic life—memorial tablets, etc.; (2) sepulchral monuments.
   c. Historical monuments: (1) Architecture, buildings, churches, cloisters; (2) monuments of the church; (3) commemoration of churches—memorial tablets, etc.
   d. Monuments of ideal or free creative art.

   a. In architecture: symposium of architecture.
   b. In the graphic arts.
   c. In the development of the scope and range of Christian representation.
   d. The content of Christian representation: (1) Monumental details; (2) monumental history of the kingdom of God; (3) monumental dogmatics and ethics.
   e. Practical utility of Christian representations.

Explanation and Justification of the foregoing Synop sia.—(1) In the first branch. 1. If we discuss the harmony of art with the Christian Church, and its realization therein, the first thing to be examined is the essence and character of art itself, both generally as a necessary subject of the activity of the human mind, as well as especially how it accords with the genius of Christianity itself. However, the problem here is not the same as in the art archaeology of classical antiquity, since early Christianity holds an entirely different relation to art in general. Neither art nor philosophy was originated by the Church, but both had already passed through all stages of a great development. The Church found art already occupying human thought, and its rise and history are presupposed. By this art the early Christians were as much affected as repelled. This conditions the dependence of the earliest Christian art on the antique—most especially in technical treatment, but also to some extent in spirit and motive; so that this comes to be a constitutive element in the discussion, just as in the earliest history of doctrines we must carefully note the influence of the Gnostics especially (1) Platonic philosophy. On the other hand, the independence of Christian art is shown even in the presence of the antique. Specifically those peoples who subsequently appeared upon the stage of history, and received contemporaneously their culture with Christianity, have developed from the first a characteristic artistic form; the final grounds of art antiquity are found in the nature of man itself, and to these we must at last return. This art activity likewise takes direction among a people to that extent that the period of the perfection of Christian art may be delayed by means of its connection with a development that is influenced by the modern culture. At the same time another sphere of art life of universal interest will be liberated, and attain to an independent value. According to this view, the subjects that pertain to the essence of Christian art, as springing from a
general art susceptibility, demand a preliminary discussion.

2. The essential nature of art from its objective side discussed, it is necessary to pass to the subjective element, to study the man who was the channel of personality—especially the gifts and endowments—of him who devotes himself to the service of art and the Church. In this connection, the first question that meets us is the personal and official relation of the artist to the Church. At the beginning we find the strange contrast, the art of the Middle Ages became Christian works of art, while also Christian artists became martyrs. After a period of untrammeled art development had elapsed, at length, during the Middle Ages, both science and art fell under the exclusive superintendence of monks and priests, until the transference of art to the laity introduced the new era. In this connection must also be discussed the question of the culture of artists, and the diffusion of those important guilds, partly industrial, partly ecclesiastical, by whose means the flourishing period of art in the later medieval period was ushered in. Here, as elsewhere, progress is connected with the individual and his work, and the measure of this progress is determined by investigation of the condition of the individual. In the study of the development of doctrines and the organization of the early Church an acquaintance with the Christian fathers is of fundamental importance. In monumental theology, the history of artists corresponds to patristics in its importance. In the field of ecclesiastical art, moreover, we find an inverse chronological order, since the most noted names of the Christian fathers are found at or near the organization of the Church, while the names of the most renowned masters of art are associated with the conclusion of the Middle Ages and the dawning of the modern epoch. With the exception of a few noted architects, the names of artists hardly appear at all in Christian antiquity. So completely was art merged in the general interest of the Church that individual service is almost forgotten. In the later Middle Ages the guilds effected a like result, so that the names of the architects of those most wonderful works that stand at the very acme of perfection are entirely wanting. Subsequently to the 13th and 14th centuries, however, in the departments of sculpture and painting, the individuality of the artist again asserted itself, and art pursued its high mission in a most noteworthy union of free enjoyment and the super-sensuous. In the 15th century, the humanism of the Renaissance, which led to the discussion of the laws of Technics. On the other hand, there is the projection of the idea into form—its embodiment in the material. This gives rise to questions of art composition. This latter involves the laws of the grouping in space of art representations. The first begins with the expression of the idea in space, to the successive stages of the transition from spiritual life to corporeity; or, according to the language of art, through what means, and by what law, art expresses thought and feeling. If we examine painting and sculpture, we find this occurs in part directly through historic composition; in part, indirectly through symbolic composition. In symbolic representation, the entire visible world is laid under contribution to aid in this transition to the unseen. When this method is practiced, as in delineations within the sphere of the Church, such means are perfectly legitimate. But in the expression of the conception of an art symbol, that occupies so wide a field, and, theologically considered, is of such vast significance.

Here is also naturally connected a department to which no certain and well-defined position has hitherto been assigned (since notice has only been taken of it in connection with the art archaeology of classical antiquity); we refer to Christian archaological criticism and hermeneutics. This is the very reverse of art composition: the latter treating of the transition from the thought to the work of art, this from the work of art back to the thought, purpose, and character of the artist, and to the discovery of the circumstances under which the work was produced.

(II) The second chief division of the subject—the historical proof of the distribution of the monuments. It remains an open question whether the subject of monuments should be connected directly with this division of the subject or receive an independent treatment. Authorities are divided. To both, however, must there be a preliminary section that shall describe art as a whole in its chronological development. With this the subject is naturally connected an account of the geographical distribution of monuments. This would include a description of those in situ, as well as of those that have been artificially distributed or gathered into art collections, both public and private.

(III) The third division, that treats of art ideas, corresponds essentially to that which is embraced in the archaological of classical art, under the head "Subjects of Formative Arts." For theological purposes this is the chief difficulty, and to illustrate this all the other portions are preliminary and subordinate. Architecture, from its very nature, furnishes to this department but a small amount of contribution; but art is not a wide range or application. Much more copious in materials are painting and sculpture, inasmuch as since the 16th century the history of images has been a subject of theological literature.

For a methodical treatment of this subject we must carefully observe the distinction between the historical course that the representation of images has generally taken (in which connection would be discussed the questions what, by what means, and in what spirit such representation has taken place), and the content of such representation (in which latter case the whole range of image representation is to be canvassed and carefully estimated). This subject, being Christian in its nature, has reference partly to the sacred history in its entire extension with Church history, and partly to the super-sensuous subjects of faith, as well as the phenomena and motives of moral life. Hence would arise two further sections: 1, the monuments of the kingdom of God; 2, monumental dogmatics and ethics. For the illustration of these two departments the whole wealth of monuments that have been preserved would be useful, and their connection as well with the course of history as of dogma would be shown.

At this point another and additional division of the subject arises: 1, the influence of the Holy Scriptures upon art; 2, the influence of art upon the Holy Scriptures. The influence of the Prophets and Evangelists upon art. The influence of art upon the Bible. The influence of art upon the Bible.

(2) The other theme has reference to practical theology. Through the contemplation of a sacred subject present to the beholder, and through the interpretative genius of a gifted artist, there is doubtless in Chris-

556 MONUMENTAL THEOLOGY
ian art representations a grand power to enkindle and exalt devotional feeling. An art-work, equally with the fleeting word, has its language of eloquence, and is able to convince and to inspire. Hence there is in monu-
ments a practical power that has been used by the Church in all ages for purposes of moral and religious-training. The "Lay-Bible," for example, illuminated as it was most copiously, became a most efficient means of the moral education of the masses, who were unable to read the text of the Scripture; and even the cultured have not wholly relinquished this means of instruction.

Practical theology, however, does not receive such helpful and constant illustration from monuments as the other chief divisions of theology. The foregoing are among the chief reasons urged by Piper in justification of the term "Monumental Theol-
y"; and for regarding it as an independent discipline equally with "Patriotics," "the History of Doctrines," etc. This claim to independence of treatment has been controverted by many eminent modern encyclopedists, and the question must be regarded as still unsettled.

Literature.—Since "Monumental Theology" includes under it archaology, art history, epigraphy, and num-
ismatic, its literature would include the literature of those subjects. Specially, see Piper, Einleitung in die
Monumentale Theologie (Gotha, 1867, 8vo), who gives the literature from the earliest time; also his article in Herzog's Real-Encyclopädie, xv, 782 sq., which is a co-
petitive, if not superior, treatise. See also Bennett, in the Methodist Quarterly Review (Jan. 1871), p. 5 sq., for a brief esti-
mate of some of the most important works on this sub-
ject. One of the most interesting fields of monumental theology is found in the early Christian catacombs of Rome, and the results of explorations have been suc-

Moody, Joseph, an American divine of some note, was born in Newbury, Mass., Jan. 4, 1855, was educ-
ated at Harvard College, where he graduated in 1877; then entered upon the special study of theology, and Dec. 29, 1879, was ordained to the sacred ministry in the Congregational Church at York, Me., where he died, Nov. 13, 1877. Like his namesake, Joseph, who flour-
ished very near his time, he was eccentric, though also a very pious and devoted man. He also suffered from a nervous complaint, and died of it. He was a man of great literary and musical ability, and depended altogether upon voluntary contributions, many of which were spent upon the poor and the needy. He published, The Doeful State of the Damned (1710):—

Moody, Samuel S., a minister of the Methodist Episcopal Church, South, was born in Powhataan Coun-
ty, Va., May 1, 1810; was converted in 1826, joined the ministry in the Tennessee Conference, and held the following appointments: 1831, Lebanon Circuit; 1832, Sandy Circuit; 1833, Nashville Station; 1835, Elk Station; 1836, Montgomery Circuit; 1837, Lebanon Station; 1839, Murfreesbor-
ough District; was transferred to the Memphis Confer-
ence in 1841, and appointed to Jackson District; in 1842 to Memphis Station; in 1843 to Jackson Station; was transferred back to the Tennessee Conference in 1844, and appointed to Murfreesborough Station; in 1845, 1846, and 1847, to Huntsville District, and in 1848 to Nash-
ville District. In the fall of 1850 failing health obliged him to take a supernumerary relation, and, after years of wasting affliction, he died May 5, 1863. "The older members of our Conference will long cherish the mem-
ory of his many virtues, and class him among the brightest and best and most beloved of its members. Perhaps no man of our Conference was more universally beloved; indeed, the virtues of this holy man will live in the memories of thousands as long as life shall last. He never had an enemy. Our Church was made the repro-
duct of the principal of our holy religion." See Min. Am. Conf. M. E. Church, South, ii (1858-65), 546.

Moon, [1772], was 'a'c, so called from its pola-

tial. Chal. 'y, y, 'a; Ezra vi, 15; Dan. iv, 26; poetical 'y, lebanon; the white, Cant. vi, 10; Isa. xiv, 28;
It is worthy of observation that neither of the terms for the sun in which it is most designated the moon contains any reference to its office or essential character; they simply describe it by the accidental quality of color. Another explanation of the second term is proposed in Rawlinson's Herodotus, i, 615, to the effect that it has reference to lebanah, "a brick," and embodies the Babylonian notion of Sin, the moon, as being the god of architecture. The strictly parallel use of yarēchā in Joel ii, 81 and Ezek. xxxii, 7, as well as the analogy in the sense of the two words, seems a strong argument against the view. The Greek ἀλβή, from οἶνος, expresses this idea of brilliancy more vividly than the Hebrew term, as from gā'ārēchā, or even on the ground, without in all cases sufficient precautionary measures for protecting the body, we see no difficulty in understanding whence arose the evil influence ascribed to the moon. In the East Indies similar effects result from similar exposure. The connection between the moon's phases and certain forms of physical injury or illness, disease, or the loss of life, is strikingly shown in the Greek Μιστραίας (Matt. iv, 24; xvii, 15), in the Latin derivative "lunatic," and in our "moon-struck," The various influences apparently attributed to the moon in her different phases (Pliny, ii, 102), not only in changes of the weather (Varro, R. R. i, 87; Virgil, Georg. i, 275, 427; comp. Hes. vii, 17; Is. xxvii, 18), but also in physical effects upon the human system (Macrobi. Sat. vii, 16; comp. Psa. cxxiii, 6), is a superstition (Horat. Ars Poet. iv, 545; Virgil, Æn. iv, 512) still very prevalent in the East (Rosenmiller, Morgentl. iv, 108), and has not even ceased among modern Occidentals (comp. Hon. Every-day Book, i, 1509; Shakespeare, Mal. ii, 2, 1; and Mal. iii, 19). Although the moon of this planet has no specific influence either upon meteorology or climate. See Hygin, De Planetar. in Corp. hum. Infl. (Frctk. 1805); Kretschmar, De Astror. in Corp. hum. Imperio (Jena, 1820); Rascich, De luna imperio in valettud. corp. hum. nullo (Vit. 1876); Krazenstein, Eben- fels des Mondes in d. Körn. (Halle, 1874); Reil, Archiv. f. Physiol. i, 138 sq. See LUNAR.

The clearness of the Oriental atmosphere early led to the worship of the heavenly bodies (Herod. ii, 47; Strabo, xii, p. 557; Pliny, viii, i, etc.), among which the moon received special honors (Job xxi, 26; comp. Julian, Orat. in Salern. p. 90), as the most conspicuous object of the nocturnal firmament (comp. Deut. iv, 19; xviii, 3; 2 Kings xxiii, 5; Jer. viii, 2; see Selden, Dii Syr. 1, 299 sq). If the sun "rules the day," the moon has the throne of night, which, if less gorgeous than that of the sun, is more attractive, because of a less oppressive, less pressuring light, while its light shining on the earth seems to give a sort of truth to her regal state, and certainly adds not inconsistently to her beauty. There is to the same effect a remarkable passage in Julian (Orat. in Salern. p. 90): "From my childhood I was filled with a wonderful love for the rays of that moon in its golden splendor; when the sun was closed to her ethereal light, I was quite beside myself. By night especially, when I found myself under a wide, pure, cloudless sky, I forgot everything else under her influence, and was absorbed in the beauties of heaven, so that I did not hear if addressed, nor was aware of what I did. I appeared solely to be engaged with this divinity, so that even when a beatrdy boy I might have been taken for a star-gazer." Accordingly the worship of the moon was extensively practiced by the nations of the East, and under a variety of aspects. In Egypt it was honored under the form of Isis, and was one of the only two deities which commanded the sun and, under the name of Sin, received the honored titles of "Lord of the month," "King of the gods," etc. (Rawlinson's Herodotus, i, 614). There are indications of a very early introduction into the countries adjacent to Palestine of a species of worship distinct from any that
we have hitherto noticed, viz. of the direct homage of the heavenly bodies—sun, moon, and stars—which is the characteristic of Sobekkma (q.v.), in John x. 36, 27), and it is observable that the warning of Moses (Deut. iv. 19) is directed against this nature-worship, rather than against the form of moon-worship which the Israelites must have witnessed in Egypt. At a later period, however, the worship of the moon in its grosser form of idol-worship was introduced from Syria, and the first instance of which indeed that the Asherah of the Zidonians, whom Solomon introduced (1 Kings xi, 5), was identified in the minds of the Jews with the moon, but there can be no doubt that the moon was worshipped under the form of an image in Manasseh's reign, although Movers (Phai. i, 66, 164) has taken up the opposite view; for we are distinctly told that the king 'the Wilderness (A. V. ' grove'), i.e. an image of Asherah, and worshipped all the host of heaven' (2 Kings xxi, 8), which asherah was destroyed by Josiah, and the priests that burned incense to the moon were put down (xxiii, 4, 5).

At a somewhat later period the worship of the "queen of heaven" was practiced in Palestine (Jer. vii, 18; xlv, 17). The title has generally been supposed to belong to the pagan goddess of the Carthaginians, Ashtoreth or Astarte (Metam. ii, p. 254), but some think it more probable that the Oriental Venus is intended, for the following reasons: (1) the title of Urania "of heaven" was peculiarly appropriate to Venus, whose worship was borrowed by the Persians from the Arabs and Assyrians (Herod. viii. 41), and in the times of the Persian kings, whose chief function was to preside over births, were women; and we find that in Palestine the married women are specially noticed as taking a prominent part; (2) the peculiarity of the title, which occurs only in the passages quoted, looks as if the worship were a novel one; and this is corroborated by the term karaa (καρα) applied to the "cakes," which is again so peculiar that the explanation of the word (i.e., bread for Venus), determining it to be, as it not improbably was, a foreign word. Whether the Jews derived their knowledge of the "queen of heaven" from the Philistines, who possessed a very ancient temple of Venus Urania at Ascalon (Herod. i, 105), or from the Egyptians, whose god Astarte was of the same character, is uncertain. See Queen of Heaven.

The moon was regarded in the old Syrian superstition as subject to the sun's influence, which was worshipped as the active and generative power of nature, while the moon was revered as the passive and producing power. The moon, accordingly, was looked upon as feminine. Herein Origen's usage agrees with our own. But this usage was by no means universal. The rendering of moon in German is an exception in modern days, which may justify the inference that even among the Northern nations the moon has masculine qualities ascribed to it. By the people of Carran, in Mesopotamia, the moon was worshipped as a male deity, and called Lamas. Spartan tells us these people were of the opinion that such as believe the moon to be a goddess, and not a god, will be their wives' slaves as long as they live; but, on the contrary, those who esteem her to be a god will ever be masters of their wives, and never be overcome by their artifices. The same author tells us that there were remaining several medals of the Myce- ans, Magnesians, and other Greek nations, which represented the moon in the dress and under the name of a man, and covered with an Armenian bonnet. The Egyptians also represented their moon as a male deity, Ithot, and Wilkinson (Anc. Egyp. v, 5) remarks that "the same creature is here retained to the present day, while the sun is considered feminine, as in the language of the Germans. Ithot, in the character of Lamas, the moon, has sometimes a man's face, with the crescent of the moon upon his head supporting a disk." Plutarch says the Egyptians "call the moon the mother of the world, and hold it to be of both sexes: female, as it receives the influence of the sun; male, as it scatters and disperses through the air the principles of fecundity." In other countries also the moon was held to be hermaphrodite. Another pair of dissimilar qualities was ascribed to the moon—the destructive and the generative faculty—whence it was worshipped as a bad as well as a good power. The Egyptians sacrificed to the moon when she was at the full. The victims of this worship were animals, which the Egyptians were forbidden to sacrifice to any other deities but that planet and Bacchus. When they sacrificed to the moon, and had killed the victim, they put the end of the tail, with the spleen and fat, into the cauld, and burned them on the sacred fire, and ate the rest of the flesh on the day of the moon. Those that very would not admit of the expense of this sacrifice moulded a bit of paste into the shape of a hog, and offered up that (Herodotus, i, 9). In India this goddess bore the name of Ma; among the Syr- ians, Mytia; among the Phoenicians, Astarte or Ash- trough; among the Greeks, Artemis; and among the Romans, Diana (see Brit. and Ind. i, 436 sqq, 478; ii, 222, 223). In these nations, however, the moon was usually the representative of the benign or prolific power of nature. See Carpos, Appar. p. 510; Frischmuth, De Menelethi Coeli (Jen. 1665); A. Calov, De Selenastris (Vit. 1680); See Astralology.

In language also the moon has been, and continues even now to be worshipped or superstitiously regarded. In Europe there are several countries in which untold superstitious acts are performed, depending upon the moon's rotation (see Brand, Popular Antiquities of Great Britain, Index in vol. ii). In Great Britain and the Northern wilds the moon is placed highest in the scale of nature-worship. In America the wild man, like other heathen, both of civilized and barbarous races, has long been accustomed to the thought that all the heavenly bodies are possessed of animation, and even gifted with some measure of intelligence. To each, accordingly, has been ascribed an independent, vitalizing soul. The sun-god, for example, is the living sun itself, and worship is never paid to it symbolically, as if it were the representative of some invisible or absent spirit, but because it is an actual depository of the superhuman, an embodiment of the divine. As the sun stands for the Creator, so the moon is connected, as in Babylonian mythology, with the thought of some evil principle. Says Miller (Americanische Ueberredungen), "The rude American was haunted by the thought of some co-equal and co-ordinate array of hostile deities, who manifested their malignant nature by creating discord, sickness, and pestilence in every sphere of the material world. This theory held in numerous cases to obey the leadership of the moon, which, owing to its changeable aspects, have become identical with the capricious, evil-minded spirit of American Indians" (p. 58; comp. 170, 272; comp. also Brinton, Myths of the New World, p. 180-140). In Africa the moon-worship prevails to a considerable extent, and is spoken of by Living- stone (Travels in South Africa, p. 235).

4. In the figurative language of Scripture the moon is frequently noticed as presaging events of the greatest importance through the temporary or permanent withdrawal of its light (Isa. xiii, 10; Joel ii, 9; Matt. xxiv, 29; Mark xiii, 24): in these and similar passages we have an evident allusion to the mysterious awe with which eclipses were viewed by the Hebrews in common with other nations of antiquity (comp. Jer. xiii, 16; Ezek. xxvii, 7, 8; Rev. viii, 12). With regard to the symbolic meaning of the moon (see Rev. xii, 1), we are to observe that the ordinary explanations, viz. the sublunar world, or the changeability of its affairs, seem to derive no authority from the language of the O. T. or from the ideas of the Hebrews.
MOORE, Michael, a Roman Catholic divine, who flourished in England from 1640 to 1725, was a native of Dublin, Ireland, and spent some time in New York. He was, at one time filling the post of principal of the College of Navarre. In England he was regius professor of philosophy, Greek, and Hebrew. He wrote, De Existentia Dei et Humanae Immortalitatis (Paris, 1692, 2 vols.)—Horatio ad Studium Linguarum Graecam et Hebraicam (1700, 12mo.)—Horatio de Prædicationi Sacri Palæstinae et Togatae (1701, 12mo.)—An Essay against the philosophy of Des Cartes. See Harris's Ware's Ireland, &c.; Allibone, Dict. of Brit. and Amer. Authors, s. v.

MOORE, Thoroughgood, a missionary of the Anglican establishment to the "Iroquois or Praying Indians," flourished near the opening of the 18th century, in the vicinity of the place now known as Albany, the capital of New York. He was graduated at New York from England in 1704, and, after a stay at Albany long enough to acquire the Indian tongue, he at once set out upon his work, and for many years labored among the Iroquois. His success was limited because of the opposition manifested by lord Cornbury, at that time governor of New York and New Jersey. For some time braved all opposition, but, encountering the ill-will of the governor, he was incarcerated, and after his escape from prison went to sea, and was lost on his homeward voyage. See Anderson, Hist. Col. Ch., iii. 415 sq.; Hawkins, Hist. p. 264 sq. 217, 281.

MOORE, Aaron, a minister of the Methodist Episcopal Church, South, was born in Ohio April 2, 1818; joined the Established Church without being admitted into the Louisville Conference in 1843, and remained a regular minister of the Gospel, filling many important appointments with great acceptability until the fall of 1859, when, his health failing him, he accepted a superannuated relation, and retired it till the time of his death, which occurred in Madisonville, Ky., Oct. 15, 1863. See Min. Ann. Conf. M. E. Church, South, ii (1858-65), 481.

MOORE, Benjamin, D.D., a bishop of the Protestant Episcopal Church, was born at Newton, N. J., and was educated at King's (now Columbia) College, New York, where he graduated in 1768, and then devoted his time to the study of theology, supporting himself by private instruction. In May, 1774, he went to England to enter into holy orders, and in June of that year was ordained deacon and priest by the bishop of London, and on his return to America officiated in Trinity Church, New York, of which he became rector, Dec. 22, 1809. The extent of Dr. Moore's labors, and his position in his diocese, was above his predecessor, and when, in 1801, the diocese needed a bishop, he was elected and consecrated. He was also made president of Columbia College in this year, and so remained until 1811, continuing all the while the duties of his ministry, and even until his death, Feb. 27, 1816. From 1811 to the hour of his death, Dr. Hobart, who afterwards succeeded him, acted as his assistant bishop, bishop Moore having been struck with paralysis, and thus disabled from discharging any longer the duties of his office. Bishop Moore was an accomplished scholar and an able pulpit orator. He was, with one single exception, the last of the venerable men in the diocese of New York who had derived their ordination from the parent Church of England. He published two sermons in the American Preacher (vols. i. and ii. 1794) — A Sermon before the General Convention (1804) — A Pamphlet in Vindication of Episcopal Services (2 vols. 1805). His posthumous works were collected at his request in the possession of his son, Clement C. Moore, LL.D. (N. Y. 1824, 2 vols. 8vo.). See Sprague, Annals of the Amer. Pulpit, v. 299; White, Bishop Memoirs of the Episcopal Church (1836), p. 82; Moore, Hist. of Columbus College; Anderson, Hist. of the Colonial Church, iii. 011 sq.; Drake, Dict. of Amer. Biog., s. v. (J. H. W.)

MOORE, Charles, a clergyman of the English Establishment, eldest son of archbishop Moore, was educated first at Westminster School, and next at Trinity College, Cambridge, where he took his degree and obtained a fellowship. He flourished in the second half of the last century, first as rector of Cuxton, in Kent, then as vicar of St. Nicholas at Rochester, and later as one of the six preachers of the cathedral of Canterbury. He wrote, A Vindication Sermon preached before his Fa- ther's Body held in the Church of All Hallows in the Field (1790, 2 vols. 4to.) —The Good Effects of a United Trust in the Arm of the Flesh and the Arm of the Lord, a Sermon (1804, 8vo.) — Female Compulsion illustrated, a Sermon (1806, 8vo.) — Personal Reform the only effectual Basis of National Reform, a Sermon (1816, 8vo.). See Bio-g. Dict. of Living Authors ( Lond. 1816, 6vo.), p. 299.

MOORE, Clement Clarke, LL.D., an American scholar, noted for his knowledge of exegetical theology, son of Benjamin Moore, was born in New York July 15, 1779; was educated at Columbia College, class of 1798; then entered on the special study of Hebrew, and after a while secured the appointment as professor of Biblical literature in the Protestant Episcopal Seminary, New York. He was transferred to Hebrew and Greek literature, and later to Oriental and Greek literature. While in connection with the "General Seminary" of his Church, as it came finally to be known, he donated to it the large plot of ground upon which its buildings now stand. In 1856 he received the title of emeritus professor, and lived to take an interest in the progress of learning in his college, which has, in all, accep,ably, until July 10, 1868, his death occurring at Newport, R. I., whither he had gone to spend the summer recreating. To Dr. Moore belongs the honor of having published the first American contributions to Hebrew philology, viz., a Hebrew Lexicon, with Notes, a Grammar of the Hebrew Language, with Notes, and a Comparative Grammar of the Hebrew and Greek Languages, (N. Y. 1809, 2 vols. 8vo.). He also published his father's sermons, and contributed valuable works to the department of belles-lettres (for which see Allibone, Dict. of Brit. and Amer. Authors, s. v.). See Drake, Dict. of Amer. Biog., s. v.

MOORE, Franklin, D.D., a minister of note of the Methodist Episcopal Church, was born Feb. 14, 1822, in Beaver, Pa. In quite tender years he was converted, and through his father, who was a law clerk at the bar, wished him to choose the legal profession as his life-calling, his mind drifted beyond all persuasion towards the ministry. In preparing for this work he studied at Washington College, in Washington, Pa., and also at the Presbyterian Theological Seminary in Allegheny, Pa., graduated from both institutions with honor. In 1845 the Pittsburgh Conference held its annual session in the place of his nativity, and during the session he, having shortly after his conversion joined the Methodist Church, was received into the travelling connection, and appointed to Charters Circuit. The next year he was sent to Steubenville, and in 1847 he was received into full connection and ordained deacon. He was stationed at New Lisbon, Ohio. In 1849 he was ordained elder, and stationed at Uniontown, Pa.; in 1851 and 1852 he was in Washington, Pa.; and in 1853 and 1854 on Uniontown District. He was transferred in 1855 to the West Virginia Conference, then called Western Virginia Conference, and stationed for two years at Fourth Street, in Wheeling. At the close of his term of service in that station he was transferred to the Philadelphia Conference, and there filled the following appointments: in 1857 and 1838, Trinity Church, Philadelphia, in 1852 and 1860, Wharton Street Church, Philadelphia; in 1861 and 1862, Harrisburg; in 1863 and 1864, Union Church, Philadelphia; in 1865 a super-numerary, but doing work a part of the year; in 1866 in Thirty-eighth Street Church, but still a super-numerary; in 1866 and 1867, Pottsville; and in 1869 he was finally placed on the superannuated list, his failing health mak-

MOORE

ing further duties in the ministry impossible. He was suffering from dyspepsia, and was counselled by physician Dr. George. He visited Florida, but finding no relief, he went to California, and died there Jan. 22, 1870, in the city of Sacramento. Dr. Moore was widely known among Methodists for his sweetness of spirit, his devout and genial life, and his earnest services in the ministry of the Church. “His life,” says the Pittsburgh Christian Advocate, “embraced more of excellences than usually falls to the lot of man. Unassuming, gentle, loving, true as steel, thoroughly conscientious, he moved through society and a centre and source of the very best Christian influences. Around him grew up, as one result, some of the most enduring affections.” During his travels he wrote for the Church papers, and the place of the Editorial Department of the Methodist Home Journal. His letters were largely circulated, and much admired for their beauty of description. His love of nature was such that he revelled in woodland scenes, in quiet dells and unbroken forests, in towering hills and mountains, in broad and picturesque valleys, in the changing hues of foliage and flowers; and no weariness did he ever seem to know in descending upon these themes. See Minutes of Annual Conferences, 1870, p. 48; Methodist Home Journal, Jan. 29, 1870; Pittsburgh Christian Advocate, Feb. 5, 1870. (J. H. W.)

Moore, George C., a Presbyterian minister, was born in Barre, Vt., in 1862. He was educated in the State Normal School, at Burlington, Vt., and was a member of the legal profession. In 1885 he removed to Texas, commenced teaching at Golliard, and soon after was called to take charge of Aranama College in that city. Becoming very much impressed with the spiritual desolation of Texas, he removed to Clinton in that state, and entered upon the study of theology under the care of the Rev. Joel T. Case; was licensed and ordained in 1865, and became pastor of the churches in Victoria and Lavaca, Texas. He was a member of the General Assembly which met in Memphis, Tenn., in 1866. On his return he continued his labors until his death, Sept. 3, 1867. Mr. Moore was remarkable for his piety, general intelligence, and impressive manner of preaching. His sermons were rich in thought and unctious, and he was quite as successful as an educator. See Wilson, Prep., Hist. Almanac, 1866, p. 345.

Moore, George W., a minister of the Methodist Episcopal Church, South, was born in Charleston, S. C., Sept. 23, 1855. He was converted at thirteen years of age, and in 1876 he was licensed to preach in 1828, and continued in the ministry until about 1855, when he entered the mission-field, and labored among the colored population of South Carolina. He died in the Anderson District, S. C., Aug. 16, 1863. See Min. Amm. Conf. M. E. Church, South, ii (1865-66), 449.

Moore, Hannah. See More, Hannah.

Moore, Henry (1). See More, Henry.

Moore, Henry (2), a Wesleyan preacher and writer of considerable note, and an associate of the founder of Methodism, was born in Dublin, Ireland, in 1751. He had heard Wesley in his childhood, and had at once become impressed with the preacher’s bearing and earnestness. On removing to London he often attended the preaching of the Rev. John Wesley, though he was not converted. The religious impressions of his early childhood were renewed; yet he failed to identify himself with the Methodists until, after his return to Ireland, he heard Smyth, a nephew of an apologist, who had left friends and position to preach the simple Methodist theology. This “good man,” as Moore himself delighted to call him, persuaded him from time to time to cast his lot with the Methodists. His family opposed the step, but Moore persisted, and he was even permitted to introduce domestic worship among them. He at once gave himself to the work. He visited the prisons, braving fever and pesti- lence, and the still harder trial of agonizing sympathy with felons condemned to the gallows. After a while he was induced to exhort, and in a short time to preach. His audience gathered in a deserted weaver’s shop, which was furnished for the purpose with seats around a table. He soon gathered the masses, and in a very brief period had an organized society of twenty-six members. He was zealous in good works, and rich in his personal religious experiences. Wesley’s attention was called to Moore, and in 1780 he ordered him to take the field as an itinerant preacher. Moore’s zeal and industry were im- pressed in his work, and finally Wesley called him to London, where he became the constant companion of the great religious reformer of the 18th century. The two men of God met together in the morning at five o’clock to answer letters; they travelled together, and Moore became the counsellor of the Connexion. Wesley said, “Moore’s high work has been the highest reproduction of the Methodism of that country. Indeed, one of the principal Methodist chapels in Dublin now stands a monument of his successful labors in the Irish capital. Like the other Methodist preachers, Moore frequently addressed the people in the open air, and shared the usual persecutions of the ministers of the Gospel. When charges were brought against him, it was Moore’s custom to confer with the ministers of the Wesleyan Connection on Church polity, Moore proved himself worthy of the trust reposed in him by Wesley. Conservative by nature, he had so carefully cultivated his judgment as to make a competent counselor for the Methodist body, and to his untiring efforts the success of the issue of the controversies and differences arose in the Wesleyan Connection on Church polity, Moore’s estimate of Moore is especially high, in the fact that he caused Moore to be a witness to his conference with the lady of his early affection, who, when the Christian laborer in his eighty-fifth year happened to be near her, had sent word for his presence (Stevens, Hist. of Methodism, ii, 406); and also in his appointment of this companion of his youth as one of the trustees of his manuscripts and books. Moore’s love for Wesley is manifest in the biogra- phy which he furnished of the founder of Methodism in conjunction with Dr. Coke (q. v.). Henry Moore lived to be the last survivor of the men whom Wesley had ordained; and by his pen and his preaching “promoted Methodism through nearly seventy years, and died in the most exalted position April 27, 1843, aged 83, as an em- eritable patriarch” (Stevens). Besides a Life of John and Charles Wesley and the Family (1824, 8vo), Moore published, Private Life and Moral Rhapsody (1795, 4to), —Reply to a Pamphlet entitled “Considerations on a Separa- tion of the Methodists from the Established Church” (1794, 8vo)—Memoir of Henry Fletcher. See Life of Rev. Henry Moore, by Mrs. Richard Smith (daughter of Adam Clarke) (Lond. 1844, 8vo); Stevens, History of Methodism, i, 190 sq.; iii, 52, 56, 75; Smith, History of Wesleyan Methodism, i, b. ii, ch. v—vii; Tyerman, Life of Wesley, vol. iii (see Index). (J. H. W.)

Moore, Henry Eaton, an American composer of music, both sacred and secular, was born at Andover, N. H., July 12, 1808, and took up the study of the American music while engaged in the printing business. In 1826 he began to teach, and then published several valuable contributions to the science of this fine art, among which are of interest the Code of Practice in Sacred Music, Theos- thema, Choruses, and Set Pieces:—The Northern Harp, a Collection of Sacred Harmony. He died at East Cam- bridge, Mass., October 22, 1841. A brother of his, John Weeks Moore, who was born at Andover April 11, 1807, has published A Cyclop. of Music.—Sacred Minstrel, etc. See Drake, Dict. of Am. Biog., a. v.
Moore, Humphrey, D.D., a Congregational minister, was born in Princeton, Mass., about the year 1779; graduated at Harvard College in 1798; in 1802 was ordained pastor of the Congregational Church in Milford, where he preached for a period of more than thirty years. He died April 8, 1871. Dr. Moore was a man of more than ordinary ability, and his influence extended widely throughout the southern portion of New Hampshire and eastern Massachusetts. He was a man of considerable celebrity in his day, but now better remembered for his connection with the fortunes of Dr. Samuel Clarke and Bentley than for his once famous discourses from the pulpit." His Sermons, which were published after his death by his chaplain, Dr. Samuel Clarke (London 1716–16, 2 vols. 8vo; 2d ed. 1724) and a Discourse on the Dutch Reformed Church, which was a very valuable collection, was purchased by king George I and presented to the University of Cambridge. See Burnet, Reformation; Id. His Own Times; Benton, 8ly; Birch, Life of Titus; Blackwood's Mag. xxviii., 455; Hook, Eccle. Biog. s. v. (J. H. W.)

Moore, John (3), a noted prelate of the Church of England, was born at Scambique parish, Gloucester, in 1738, and was educated at Pembroke College, Oxford. He took holy orders; and after filling various minor appointments in the Church, he became chaplain to the duke of Marlborough, and tutor to one of his sons, and obtained by that interest a prebendal stall in the cathedral of Durham; in 1771 he was installed into the deanery of Canterbury; in 1776 was awarded the bishopric of Bangor; and in 1783 was raised to the metropolitan see, recommended to this great distinction by bishops Lowth and Hurd, both of whom had been offered the place, but preferred that it be assigned to him because he was "a superior man, particularly fitted by his business-like habits and affable manners." It does not appear, says Perry (Hist. of Ch. of Engl. iii, 444, 445), that he possessed any special literary or theological claims, nor yet can it be believed that his advancement was due to strong family interest, for he had none to commend him. He died in 1804 or 1806. He published several Sermons (Lond. 1777, 4to; 1781, 4to; 1782, 8vo). (J. H. W.)

Moore, John (8), a clergyman of the Church of England, who flourished about the opening of this century, was minor canon of St. Paul's, lecturer of St. Sepulchre's, rector of St. Michael Barringham, London, and of Langhills Hill, Essex. He was in vain endeavored to secure public aid for the publication of an edition of bishop Waldon's Ecclesiastical History of London. He was a learned man and an excellent preacher. He published, Case of the London Clergy (1802, 8vo):— Attempt to Recover the Reading of 1 Sam. xiv. 1, with Inquiry of the Duration of Solomon's Reign (1797, 8vo).—Prophecies of L. X.X. (London, 1799).—Daniel and the Chariots of Fire (1802, 8vo).—Prophecy of Isaiah xii. 14, 15 (1809, 8vo). See Biog. Dict. of Living Auth. s. v.

Moore, John Weeks. See Moore, Henry Eaton.

Moore, Martin, a Congregational minister of some note as a religious journalist, was born at Sterling, Mass., April 22, 1780; was educated at Brown University, where he graduated in 1810; and for nearly thirty years served in the ministry at Natick, Mass., and afterwards at Cohasset; and then was for some twenty years editor of the Boston Recorder. He was also from 1861 to 1866 vice-president of the "New England Historical and Genealogical Society." Moore died at Cambridge, Mass., March 10, 1886, and was buried at North Chelmsford (1849). His Hist. of Natick (1817). See Drake, Dict. of Am. Biog. s. v.

Moore, Nathaniel F., L.L.D., an American educator, was born at Newton, L. I., Dec. 25, 1782, and was the nephew of bishop Benjamin Moore (q. v.). Educated at Columbia College, class of 1802, he turned to the business of an attorney, in which he was admitted in 1807. Two years later he was presented by William and Mary (to whom he was then chaplain in ordinary) to the rectory of St. Andrew's, Holborn, vacated by Dr. Stillingslee's promotion to the episcopate; and in 1819, on the deposition of the bishop of Norwich, Dr. Moore was appointed to that see, from which he was in 1827 transferred to the see of Ely. He died in 1714. Debarby (Hist. of Ch. of Engl. from the Accession of James I (1806, 8vo), p. 285 speaks of Dr. Moore as "a man of considerable celebrity in his day, but now better remembered for his connection with the fortunes of Dr. Samuel Clarke and Bentley than for his once famous discourses from the pulpit." His Sermons, which were published after his death by his chaplain, Dr. Samuel Clarke (London 1716–16, 2 vols. 8vo; 2d ed. 1724) and a Discourse on the Dutch Reformed Church, which was a very valuable collection, was purchased by king George I and presented to the University of Cambridge. See Burnet, Reformation; Id. His Own Times; Bentham, 8ly; Birch, Life of Titus; Blackwood's Mag. xxviii., 455; Hook, Eccle. Biog. s. v. (J. H. W.)

Moore, John (3), a noted prelate of the Church of England, was born at Scambique parish, Gloucester, in 1738, and was educated at Pembroke College, Oxford. He took holy orders; and after filling various minor appointments in the Church, he became chaplain to the duke of Marlborough, and tutor to one of his sons, and obtained by that interest a prebendal stall in the cathedral of Durham; in 1771 he was installed into the deanery of Canterbury; in 1776 was awarded the bishopric of Bangor; and in 1783 was raised to the metropolitan see, recommended to this great distinction by bishops Lowth and Hurd, both of whom had been offered the place, but preferred that it be assigned to him because he was "a superior man, particularly fitted by his business-like habits and affable manners." It does not appear, says Perry (Hist. of Ch. of Engl. iii, 444, 445), that he possessed any special literary or theological claims, nor yet can it be believed that his advancement was due to strong family interest, for he had none to commend him. He died in 1804 or 1805. He published several Sermons (Lond. 1777, 4to; 1781, 4to; 1782, 8vo). (J. H. W.)

Moore, John (8), a clergyman of the Church of England, who flourished about the opening of this century, was minor canon of St. Paul's, lecturer of St. Sepulchre's, rector of St. Michael Barringham, London, and of Langhills Hill, Essex. He was in vain endeavored to secure public aid for the publication of an edition of bishop Waldon's Ecclesiastical History of London. He was a learned man and an excellent preacher. He published, Case of the London Clergy (1802, 8vo):— Attempt to Recover the Reading of 1 Sam. xiv. 1, with Inquiry of the Duration of Solomon's Reign (1797, 8vo).—Prophecies of L. X.X. (London, 1799).—Daniel and the Chariots of Fire (1802, 8vo).—Prophecy of Isaiah xii. 14, 15 (1809, 8vo). See Biog. Dict. of Living Auth. s. v.

Moore, John Weeks. See Moore, Henry Eaton.

Moore, Martin, a Congregational minister of some note as a religious journalist, was born at Sterling, Mass., April 22, 1780; was educated at Brown University, where he graduated in 1810; and for nearly thirty years served in the ministry at Natick, Mass., and afterwards at Cohasset; and then was for some twenty years editor of the Boston Recorder. He was also from 1861 to 1866 vice-president of the "New England Historical and Genealogical Society." Moore died at Cambridge, Mass., March 10, 1886, and was buried at North Chelmsford (1849). His Hist. of Natick (1817). See Drake, Dict. of Am. Biog. s. v.

Moore, Nathaniel F., L.L.D., an American educator, was born at Newton, L. I., Dec. 25, 1782, and was the nephew of bishop Benjamin Moore (q. v.). Educated at Columbia College, class of 1802, he turned to the business of an attorney, in which he was admitted in 1807. Two years later he was presented by William and Mary (to whom he was then chaplain in ordinary) to the rectory of St. Andrew's, Holborn, vacated by Dr. Stillingslee's promotion to the episcopate; and in 1819, on the deposition of the bishop of Norwich, Dr. Moore was appointed to that see, from which he was in 1827 transferred to the see of Ely. He died in 1714. Debarby (Hist. of Ch. of Engl. from the Accession of James I (1806, 8vo), p. 285 speaks of Dr. Moore as "a man of considerable celebrity in his day, but now better remembered for his connection with the fortunes of Dr. Samuel Clarke and Bentley than for his once famous discourses from the pulpit." His Sermons, which were published after his death by his chaplain, Dr. Samuel Clarke (London 1716–16, 2 vols. 8vo; 2d ed. 1724) and a Discourse on the Dutch Reformed Church, which was a very valuable collection, was purchased by king George I and presented to the University of Cambridge. See Burnet, Reformation; Id. His Own Times; Bentham, 8ly; Birch, Life of Titus; Blackwood's Mag. xxviii., 455; Hook, Eccle. Biog. s. v. (J. H. W.)
life. His works are of a secular character, and do not concern us here; but his life-work was eminently Christian, and greatly enriched American Christian culture. He died April 27, 1872. Dr. Moore was a man of rare scientific attainments and was greatly beloved for his gentle nature and purity of character. See Duyckinnck, Cyclopaedia of American Literature, i. 380-383.

Moore, Philip, a clergyman of the Anglican communion, noted for his pious oratory and his scholarship, flourished in the second half of the 18th century. He was born about 1705, was for some time rector of Kirk-bridge, and chaplain to the ships of the Island of Man, and died Jan. 22, 1783. He is noted as the reviser of the translation of the Bible into Manks, in which task he had the counsel of bishop Lowth and Dr. Kemmott, and also as the translator of the Book of Common Prayer, and several theological works. See Butler, Memoirs of Sp. Hildesly, p. 190; General Biog. Dict. (Lond. 1788), xi. 61.

Moore, Richard Chauncing, D.D., an early bishop of the Episcopal Church in America, was born in New York Aug. 21, 1762; was educated at King's College, and then practiced medicine for four years, when he suddenly turned towards the ministry, and was or- dained by bishop Provost of New York in 1787. He presided at the session of synod in 1790, N. York, N. Y., and at St. Andrew's, Richmond, Staten Island (the parish embracing the whole of the island), where he labored successfully for twenty-one years. In 1808 he represented the diocese of New York at the General Conference in Baltimoor, and aided in making a selection of hymns for the Church. He died Nov. 2, 1809. He was ordained to St. Stephen's Church, New York; in 1814, to the rectorship of the Monumental Church at Richmond, and to the episcopate of Virginia, for which he proved himself pre- eminently qualified. "Bishop Hobart hesitated not to express the conviction of his thankful heart that the 'night of adversity' had passed, and that a long and splendid day was dawning on the Church" (Andersen, Hist. Ch. of Engl. in the Colonies, iii. 277). The efforts of bishop Moore were "unremittingly exerted to build up the nearly exhausted diocese committed to his care; and so well directed were his labors, and so beneficial his example and influence, that at the time of his death the number of the Episcopal clergymen in Virginia had increased to upwards of one hundred. During the last twelve years of his life his episcopal duties were shared by bishop Meade, who had been appointed his assistant, and who succeeded him in office. He was a prominent leader in the Anglical branch of the Church." He died Nov. 11, 1841. He published many works, including: Memoir on the "Doctrines of the Church" (1820). A Memorial appeared shortly after his death, by Rev. J. P. K. Henshaw (1845, 8vo). See also Sprague, Annals of the Amer. Pilgrm., v. 587; Bishop Wilberforce, Hist. A.m. Ch. p. 286, 287; Hawks, Ecc Hist. of Virginia, p. 251- 290. (J. H. W.)

Moore, Sir Thomas. See Moore, Thomas.

Moore, Thomas Jefferson, a minister of note of the Methodist Episcopal Church, South, was born in Franklin, Ky., March 2, 1824. His parents were useful and devoted members of the Methodist Church. His father died when Thomas was but twelve years of age, and he was obliged to shift for himself. He learned the art of printing, and thus earned a livelihood. In his eighteenth year (1841) he was ordained and joined the Methodist Episcopal Church, and, soon after felt that his calling was to preach the Gospel. He was licensed, and appointed to the Owensboro' Circuit in 1843. In 1846 he was ordained deacon, and appointed to Litchfield, and the next year to the Portsmouth Circuit. In 1847 he was ordained elder, and appointed to the Frankfort Circuit. In 1847 he was ordained elder, and appointed to the Frankfort Circuit. In 1847 he was ordained elder, and appointed to the Frankfort Circuit. In 1848 he was ordained elder, and appointed to the Litchfield Circuit. In 1849 he travelled on the Lafayette Circuit, and the following year on the Hopkinsville Circuit. After a year's rest he resumed his labors on the Lebanon Circuit, where he remained for two years; he then went to the Jefferson Circuit for one year, and afterwards preached two years with great success on the Logan Circuit. He was next appointed agent of the Southern Methodist Book Concern and Tract Society, and he so ably discharged the obligations of his office as to largely increase the circulation of the concern, and with great success — preaching, raising funds, or circulating books. The next year he was appointed to the Frank- lin Circuit, and the following year he was made presiding elder of the Glasgow District. His last work was on the Logan District. He died Sept. 14, 1867. Mr. Moore was one of the most delightful and talented of the Methodist clergy, a great and diligent student, possessing a clear perception and a re- tentive memory. He was well versed in the doctrines and history of the Bible and of the Church. See Min. Am. Conf, M. E. Church, South, 1867, p. 163.

Moore, Zephaniah Swift, D.D., a noted American educator and Congregational minister, was born Nov. 20, 1770, in Palmer, Mass.; graduated at Dart- mouth College in 1783; entered the Harvard Divinity School, 1783, and was made pastor at Leicester, Mass. He was elected professor of languages at Dartmouth College in 1811, and president of William's College in 1815. In 1821 he was chosen first president of Amherst College, then just founded, and he occupied this position until his death on July 29, 1826. He was born April 5, 1792, in Worcester, July 5, 1802:—An Address to the Public in respect to Amherst College (1823); and two occasional Sermons. See Sprague, Annals of the Amer. Pilgrm. p. 392; Drake, Dict. of Amer. Biog. s.v.

Mooring, Christopher S., an early Methodist Episcopal minister, was born in Surrey County, Va., in 1767; entered the Virginia Conference in 1789; and died Sept. 9, 1843, at the age of 76, with the reputation of being the most useful until called to his future home. He was distinguished for modesty, gravity, and faithfulness; always ready to teach and to preach, and many souls were converted through his labors. See Minutes of Annual Conferences, i. 507.

Moors (Lat. Mauri, meaning dark; Span. Moros), the original designation of the inhabitants of the ancient Mochirobi, or Mauritania (q.v.). The Arabs, who entered and conquered this country in the 7th century, denominating the native population Moghrebins, i.e. "Westerners," or "men of the West," but they called themselves Berbers, while to the Europeans they were known as Moors. The Arabic language, customs, and manners, the ruling power of the Arab invaders, the Arab conquerors, who gave them the Mohammedan faith, freely amalgamating with them, their charac- ter was totally changed, and they became hardly distin- guishable from their conquerors; and under Moors we now generally understand the mixed races that now exist in the 15th century, who are called Moors in North Africa from the Byzantine empire, and incorpo- rated it with the caliphate of Damascus. The Moors were distinguished by the warlike spirit which was then common among the Mohammedan nations, and at an early period began to make inroads for plunder into Spain. A battle with the Visigoths of that country took place in A.D. 672, in which they were defeated with considerable loss; but an opportunity which fa-avored their designs occurred when, during a rebellion which in A.D. 710 placed Roderick, duke of Cordova, on the Spanish throne, the defeated party called in the aid of the Moors. A force of them, led by Tariq, entered in the following year, and at the battle of Xeres de la Frontera, near Cadiz, July 11, 711, the army of the Goths, under king Roderick, was almost entirely de- stroyed, while the death of Roderick himself, who was killed in the battle, put an end to the dominion of the Goths. The allies of Tariq, the Moors, began to extend great success to Tariq, now advanced with a new army, and took Cordova and Toledo, and within five years subdued the greater portion of the peninsula to his power. Receiving re-enforcements from Africa, he even crossed the Pyrenees, twenty years later, and advanced
as far as Bordeaux and Tours. Here, however, the invaders were defeated by Charles Martel in the battle of Poitiers, and they retired beyond the Pyrenees. The Visigoths, not desirous to carry their war to the Continent, but forever after confined them to the Iberian peninsula; and even here the inhabitants of Asturias, Galicia, and the Basques successfully resisted their dominion. Also in the parts in which the African invaders had successfully established themselves, internal divisions, which soon ate among the chiefs, together with insubordination towards the caliph of Africa, often brought them near an overthrow, until after the extinction of the family of the Ommiades, when Abderrahman I, the last representative of the Ommiade caliphs, who had escaped from Damascus on the subversion of that dynasty, appeared in the west. He took the caliphate of Cordova, and annulled its previous dependence on the caliphate of Damascus. Under this new government order and prosperity revived. Abderrahman changed the laws, regulated the administration, built a fleet, and provided for the instruction of the people. His residence was established at Cordova, where he built a magnificent mosque. His successors, and particularly Abderrahman III and Alhakem II, followed his example; and under the dynasty of the Ommiades Spain became the equal in civilization and learning of any country in Europe. In all the arts and sciences the Arabs had already transplanted to Spain to enable them to acquire the high intellectual culture which was unknown in the East. But while they advanced in civilization, they gradually lost the warlike qualities which had enabled them to make their conquest, and the oppressed Spanish Chris- tians came to look forward to the time when they could throw off the yoke and regain their nationality. The flourishing period of the reign of the Ommiades lasted until the 10th century, the whole period covering the brightest page of Moorish history. After holding for 287 years the caliphate of Cordova, the Ommiade family became extinct in 1014 in the person of Hisham III, who, on account of the insubordination of his sub- jects, retired from the government in 1014, to devote himself to science and literature. With his retirement the caliphate of Cordova also ended; and the territory was divided into a number of little states, the governors erecting themselves into hereditary and independent princes, and they severely wasted their strength in in- termediate wars, interrupted only occasionally by an alli- ance for mutual defence when the Christians threatened their very existence. The latter had not in the mean- time remained stationary. By A.D. 801 Charlemagne had definitely incorporated the territory north of the Ebro in the Frankish dominions and driven the Moors out of Catalonia. They then retired simply the provinces of Leon and Castile. But even there the Arab population was greatly diminished; and when in 1065 the Castilians succeeded in taking Toledo, and the Tagus became the frontier of Christian Spain, the Arabs clearly saw their situation seriously threatened, and, for centuries broken up and scattered, now became more united, and finally resolved to call Jusuf, of the family of the Almoravides, who had established a great empire in Africa, to assist them against the king of Castile. Jusuf arrived in 1086 with a numerous army, and promptly defeated the Christians at Zalaz, but was obliged to return to Africa to defend his possessions there. He came back soon afterwards, however, and all the Moors of Spain remained united under his govern- ment. After his death, in 1106, a second period of internal ruptures followed. Abdelmenem, chief of the Almohadites, a family opposed to the Almoravides, came from Africa with a large army, and took Seville. A little later Granada in 1157, established for a while its supremacy. Whenever the Arabs were at peace with each other, the surrounding Christian princes thought it their duty to attack these enemies of the cross. Unity having been in a measure restored by the Almoravides, the archbishop Martin of Toledo invaded Andalusia in 1194, and laid the country waste; the following year King Alfonso III of Castile sent his forces under the governor, Jacob Almanзор, who, in return, came to Spain with a large army, and defeated Alphonso, July 19, 1195. Thirty thousand Christians, including the most disting- guished Spanish knights, were left slain on the field of battle. Almanзор fortunately died soon after, and his successor was not successful nor the means to follow up his advantage. The Christians now perceived the necessity of combined action on their part also, and pope Innocent III caused a crusade to be preached against the Moors, both in Spain and in France. In the wars which ensued the Christians proved successful, and completely routed their adversaries in the battle of Las Navas de Tolosa, in Lusitania, on August 22, 1212, and by this result brought about the termination of the rule of the Moors in Spain; so that a tract of land, comprising 480 square miles, in the vicinity of Granada, alone remained free from Christian rule. The Arago- nians took Valencia, a part of Murcia, and the Balearic Islands; the Castilians conquered Estremadura, and the remaining part of Murcia; even Granada was com- pelled in 1246 to surrender to king Ferdinand of Castile. Yet this province retained a sort of independence on account of its position, and its almost completely Moorish population. The position of the Arabs varied considerably in different counties; but it is to be observed that the name of the so-called Christians of the Iberian peninsula be it said that generally it was much worse than it had been that of the Christians under the rule of the Moors. The Goths, after the conquest, under Moorish rule, had remained in possession of their lands; their taxes were made no higher than those which were ex- acted on the Moors subject to military services; they retained their religion, their worship, their laws, and their judges. The bishops, with their chapters, occupied their former position, and were allowed to call to- gether councils. They were only forbidden building new churches, ringing bells, and having processions. The civil government was intrusted to a civil magis- trate appointed by the people, who was to act with the bishop. Lawsuits between Christians were to be ad- justed by the cadi according to the Gospel and the Gothic laws, and only disputes between Christians and Arabs were judged by the Koran. The Christians who under these circumstances had endured the Mooram- rule received the name of Mosarabic Christians. See MOSARABIC LITURGY. The military classes ever re- mained entirely distinct, and in constant communication with their brethren at the north, acting secretly as their allies whenever they invaded the Moorish provinces. The Christians were not allowed to possess land in quite different conditions, and even the concessions granted them were seldom conscientiously observed. They were generally allowed to follow their own mode of worship, but often excessive proselytizing zeal created exceptions, and converted the mosques into churches. They were allowed to retain possession of their estates, but were seldom permitted to sell them, or to change their residence. They were suffered to elect their own judges, and only disputes with Christians were decided by Christian judges. They were obliged to pay tithes of all their income to the state, besides the poll-tax levied by their feudal lords. They were forbidden having slaves or Christian servants; but this was the fate only of those who had submitted to the Christians. Those whose cities had resisted and been conquered were all reduced into slavery in its severest form. The master could sell, punish, or kill them at his pleasure, and all their earnings were his by law. They could not marry nor could their children even be given in marriage to Christian women; but in after-times even this was restricted to the case when the master was either a Mohammedan or a Jew. By their conversion the Arabs were indeed en- dowed with all political rights, but by no means could they attain to the same social position as the old Chris-
tians; they were everywhere despised, and could seldom enter into other Christian families. A relapse into Islamism was punished with the greatest severity, the penalty being, according to the edict of 1336, death by fire, spoliation, and inability to inherit. Occasionally, however, the relations between Moors and Christians were more friendly, especially in the country, where landowners fully appreciated the skill and activity of the Arabs as agriculturists. Among the nobility, the Arab nobles, by their courage and skill, as well as by their learning—much superior to that of their Spanish conquerors—knew also how to command respect.

All the Arab learning, art, industry, and fortune gradually centred in Granada, which succeeded in maintaining its political autonomy until about the end of the 15th century. A small sea-coast principality, of 630 square miles, it arrived at its great political position partly owing to its situation, and more particularly to the zeal and industry of its inhabitants—at a degree of prosperity which other and larger countries might well have envied. But its principal glory was the city of Granada, its capital, which in the 14th century counted 200,000 inhabitants. It contained the world-renowned palace of the Alhambra—a sort of fortress in which 40,000 people might find refuge. (See a popular and accurate account in Prime, Alhambra and Kremelin, 1874, 12mo.) Its principal feature is the so-called Lions' Court, built in 1213-38, which is considered as the finest specimen of Moorish architecture. The most opulent members of the Roman Chida, which vied in splendor with those of the most favored European monarchs, and where many a Christian prince was entertained with bountiful hospitality. Next in rank to Granada were the sea-towns of Almeria and Malaga, distinguished for their manufacturing and commercial importance as well as for the beauty and richness of their palaces. There the finest kinds of silken fabrics and steel-work were produced as far back as the 12th century, and from thence exported to Italy and to the East. But its very prosperity only increased the greed of the neighboring Christian princes, and especially of Ferdinand and Isabella; and, unfortunately for the Moors, one of their own rulers—the reigning king of Granada, Muley-Abul-Hakem—himself voluntarily broke the peace with Castile by refusing to pay the tribute. At first he haughtily declared that the mint of Granada no longer coined gold, but only steel. A few months later he sent a huge army, partly composed of Christian mercenaries, to storm the frontier fortress of Zahara by treachery, and took the whole population as slaves to Granada. In reprisal, a Spanish knight, with a determined band of warriors, stormed the city of Alhama, the summer residence of the king of Granada. The king of Granada himself left the city of Granada to save himself from the fury of another prince, showing a courage which he had not exhibited in the defence of his own country. In the mean time a revolution broke out in Granada, occasioned by the jealousy of the queen against a rival, and resulted in Muley's oldest son being called to the throne, while Muley himself was obliged to retire to Malaga. A younger brother of his, El Zagal (the courageous), having surprised the Christian army in a narrow pass and destroyed it entirely, king Ferdinand now determined to wage war for the extermination of both. He improved this opportune moment of their discontents, and first marched against Granada, subduing with all his forces, and in 1487 besieged Malaga, which was compelled by famine to surrender on the 18th of August, El Zagal, looking upon the fall of Malaga as an omen, surrendered Almeria, and left for Africa. The young king, Abdullah (generally named Boabdil), had promised to the queen Almogara, who had taken, but the inhabitants of Granada would not hear of surrendering; they trusted to the strength of their fortifications, consisting of strong walls and 10,000 towers. The summer of 1491 was spent by both armies in single combats, which have been the subject of numerous romances and tales. But Granada was destined to fall—the more after the Christians had erected opposite Granada a rival fortified city, Santa Fe. The king, certain of being unable to resist, began secretly to negotiate with the Spaniards, desirous of surrendering the city of Granada, and signing Nov. 25, 1491. The conditions were such as might have satisfied the inhabitants of Granada had they been observed. They were to retain possession of their mosques, and to be allowed to follow their own religious worship; their own laws were to be administered by their own califs, under the oversight of the Spanish governor; they were to retain their own customs, language, and dress, and to have the free and unlimited use of all their property; those who preferred leaving the country were to be furnished with ships to take them to Africa. The taxes to which they would be subjected should not exceed those which they paid under the Moslem government. King Abdullah was to retain his estates, and in return subject them under the supervision of the Spanish authorities. The city was on these terms surrendered (Jan. 2, 1492) to the Spaniards, who made a triumphal entry; but shortly after the capitulation the Moors found that they had surrendered their rights to the conquerors, and were in danger of losing much more than they had granted. The finest houses in Granada were occupied by the Spanish noblemen; a converted Moor (such, according to the terms of surrender, were not to hold any official situation) was made chief alguazil, and the largest mosque was changed into a church. The most zealous and frequent murmurings of the Romish Chida, which were in the Moors should be made to choose between baptism and banishment. But this unwise counsel did not at first prevail. Count de Tendiolla and the archbishop Fernandez de Talavera, who were at the time governors of the province, sought by mild treatment to unite the Moors with the Spaniards; the archbishop especially was so successful with them by his kindness that large numbers consented to be baptized by him.

This system of conversion, however, appeared too slow to the fanatical party, and the archbishop of Toledo, cardinal Ximenes (q. v.), obtained from the grand inquisitor an authorization to establish an inquisition among the Elches (Christians who had embraced Islamism; most of them were baptized Moors), and this gave him the means of gradually monopolizing the work of converting the Moors. He set to work, not only by preaching, but also by bribery, and he was at first so successful on the Moors that he caused the opposition of another prince, showing a courage which he had not exhibited in the defence of his own country. In the meantime a revolution broke out in Granada, occasioned by the jealousy of the queen against a rival, and resulted in Muley's oldest son being called to the throne, while Muley himself was obliged to retire to Malaga. A younger brother of his, El Zagal (the courageous), having surprised the Christian army in a narrow pass and destroyed it entirely, king Ferdinand now determined to wage war for the extermination of both. He improved this opportune moment of the dissentions, and first marched against Granada, subduing with all his forces, and in 1487 besieged Malaga, which was compelled by famine to surrender on the 18th of August, El Zagal, looking upon the fall of Malaga as an omen, surrendered Almeria, and left for Africa. The young king, Abdullah (generally named Boabdil), had promised to the queen Almogara, who had taken, but the inhabitants of Granada would not hear of surrendering; they trusted to the strength of their fortifications, consisting of strong walls and 10,000 towers. The summer of 1491 was spent by both armies in single combats, which have been the subject of numerous romances and tales. But Granada was destined to fall—
entirely inhabited by Moors, proved dissatistrous to the Spaniards; one of their best generals, Alonso de Aguilar, was killed, and his army destroyed. The Moors, however, to those Moors remaining, was allowed a little more liberty. Yet, in spite of oppression and watching, the Moriscos after a few years began to contemplate again a revolt—the more as Spain was then weakened by her war in the Netherlands, and threatened both by France and England. They opened negotiations with France, and in 1609 a vast conspiracy was organized, relying on the assistance of the French. It was, however, betrayed, and the grand inquisitor now clamped that the Moriscos should either be sent out of Spain or destroyed by the sword. Although Philip III, who was then on the throne, did not wish to accede to the French bargain, so great was the force of the national pride that no favor it, yet, as this step seemed to be the only possible means of securing tranquility to the state, the king issued a proclamation (Aug. 4, 1609) banishing the Moriscos of Valencia to Africa. The landed nobility, who foresaw the loss of their best farmers, and the clergy that of their tenants, protested, and representations were made to secure the execution of the edict. A delay was granted the Moors for the regulation of their affairs; they were not allowed to sell their land, and could only take away so much of their personal property as they could carry off themselves. At first they were not allowed to pay encomienda rent, till the recall of that edict; but afterwards, when they had time to reflect, and saw that nothing was to be done, their sorrow changed to joy; they looked upon their exile as a liberation from slavery, in which they could cast aside their mask of Christianity. The emigration proceeded well at first, the nobility even helping the poor people by purchasing their property at a fair price. But this did not suit the viceroy, who forbade such purchases being made. The Moors now became again frightened, and those of the south of Valencia, who had not yet emigrated, rose in arms. Many were killed, the others very cruelly treated. The emigration from Murcia and Andalucia succeeded better, most of the Moriscos from those provinces taking refuge in Fez. Those of Aragon, Castle, and Estremadura were ordered to Navarre, but on the frontiers were informed by the French that they had strict orders not to allow them to penetrate into the country. Exasperated, they either fought their way through or purchased permission to enter. Those of Catalonia were directed to Africa. A small remnant of about 30,000, who had been permitted to stay on exhibiting certificates from their bishops testifying to their sound Christianity, were also driven away a few years later, and left Spain in 1612 and 1613. The remainder of the Moriscos, however, soon increased by natural increase, and the number generally reckoned at about a million, and consisted largely of the most active and industrious among the inhabitants of Spain. Those who had emigrated to Africa were at first well received, but subsequently persecuted also by their own coreligionists, whom their European views and habits displeased, and who were jealous of their skill as workmen; so that they were driven out of Algiers and Fez. Only at Tunis, whose inhabitants, being mostly descendants of the Moors of Granada, found themselves a really hospitable shelter. A small remnant of Moriscos, some 90,000 in number, remained concealed by purchasing their property at a fair price. In the valleys of the Alpujarras, and have to this day retained their peculiar manners and customs, but they have long since become part of the Roman Catholic Church. MORAL LAW

Moral Agency. See WILL.
Moral Attributes. See GOD.
Moral Faculty. See MORAL SENSE.
Moral Inability. See INABILITY.
Moral Intuitions. See MORAL SENSE.
Moral Law may be contemplated under three aspects: first, as a branch of the Decalogue [for this, see LAW]; secondly, as a practical code [see ETHICS]; and, thirdly, in a metaphysical light, as a department of theology or theosophy, which is the only relation under which we here propose to treat it. Under the head MORAL SENSE, we suggest that a law emanating from a benevolent Creator for the government of fragmental intelligences can be essentially no other than a transcript of his own benignant nature, hence the deep philosophy as well as cogent value of the Gospel axiom that love is the one essential requirement of the law (Matt. xxii, 36-40; Rom. xiii, 8-10; 1 John iv, 21); and this applies no less to angelic than to human creatures, and extends through time and through eternity. It is proper to consider more distinctly these questions of the origin, universality, permanence, and sanction of the divine law.

1. **Its Source.**—Some philosophers have been in the habit of representing—either expressly or by implication—that moral law is essentially the morality as independent of, if not prior to, and external to the will of the being himself. They have used such expressions as "the eternal principles of right," "God was absolutely bound to do so and so," "he could not have done otherwise," etc.; and although these phrases are usually accompanied with some cavets of reverence or disclaimer of limiting the Almighty's perfection, they yet imply, or at least of dualism, and do not attribute the moral system of the universe to its precise cause. That origin is no other than God himself, simply and purely. To his sovereign will everything that exists owes its being, with all the qualities that relate to it; and this grand postulate of cause, by Deity himself, ally of the laws that he has promulgated and now administers. He is self-existent, the "I am," the "one that is, and was, and is to be;" and he is what he is and as he is merely because he pleases it himself. In the same absolutely autocratic yet unconstrained manner he has produced the substance, mechanism, organic forces, and mutual relations—which we call laws—of the material and spiritual creation; and they are all, therefore, intrinsically copies of his own nature. This view differs essentially from pantheism, which confounds the universe with God himself; and at the same time from atheism, which denies it and leaves being to chance. But this is the true doctrine of Scripture may be easily and abundantly proved (Gen. 1, 1; Isa. xiv, 6; John i, 3; Col. i, 16, 17, etc.). Both sides of this universal proposition—the self-constitution of the Infinite, and the extremity of the finite—are necessarily and imperceptibly mysteries to our mind; yet we are not commonly surprised thereby one a comparison with our own microscopic nature—in which our wills are self-conditioned, and our bodies are extrinsic to our spirit—to enable us to receive them as intelligible truth. There is, therefore, no essential difference between the "moral laws" of God and the so-called laws of nature: they are both neither more nor less than the will of man as expressed in the material and spiritual departments of his dominion. Human nature, in so far as it is a just reflection of this will, is a correct transcript of these laws; and is generally recognized as such, wherever not perverted by the effects of free agency. This is the state of those who live in a state of grace, adding merely—and a very important increment it is—the godlike productive power, to be exercised within a certain range ever subordinate to the divine agency. It is thus that God retains full jurisdiction, without incurring the responsibility of human conduct. The moral law continues its influence over the accountable creature, whether he acknowledge or sub-
mit to them or not; for it would be the height of absurdity to make his puny rebellion or insolent disregard operate their abrogation. The penalty may be suspended at the governor's discretion, but is to be exacted by law for every transgressor with a complete vindication.

2. Its Extent.—This likewise is self-evident. As the "natural" laws of God are coextensive with the universe, so his "moral" laws are obligatory upon all his moral creatures, i.e. those endowed with the capacity for understanding the relations of right and wrong. Hence the enactments of the Decalogue have been essentially accepted in all ages and countries as the foundation of the civil code, and religious usages have generally conformed to the prescriptions of the first table (those related to charity, the second table (those related to chastity). Hence the apparent absurdity in accepting even the seeming conventionality of a stated day of rest. But the two fundamental principles underlying these Mosaic statutes, so admirably summed up in the New Testament as "faulty to God and equity to man, have never failed to be admitted, theoretically at least, as the only secure basis of social organization. How it is with other worlds, if such exist, we are not called upon to speculate; but this fact of the universality of the divine law on the globe is so emphatically attested by all history and legislation that we need dwell no further upon it.

2. Duration.—It follows from the above views of the cause and character of moral law that it must forever remain essentially the same, and of permanent obligation on all its legitimate subjects throughout their being. It is a peculiar trait of the divine creations that while their form changes to suit the varied circumstances of diversified beauty and harmonious co-operation, their substance ever remains, imperishable except by the flat which first called it into existence. Annihilation is not God's method; he never absolutely extinguishes any light of his own kindling. Man's works, as they are not real creations, pass away into a non-entity that leaves only their memory; but God builds for eternity. Especially is this true of the divine administration: amid all the variety of his different and successive dispensations the same fundamental principles, as we have seen, prevail; and even in the future world the obligations of supreme allegiance to God and mutual regard for each other will be as necessary to the inhabitants of bliss by their spontaneous and full discharge, or torment the denizens of hell by their relentless and irksome grasp. The joy of conscious rectitude is the greatest bliss of which a rational soul is capable, and the remorse for an irremediable violation of clearly known duty we may well imagine to be the most poignant of all pains. A careless waste of mercy, a disaster, and even death, in a community. The same takes place to a certain extent with regard to the temporal results from a violation of moral laws, as in cases of inherited disease, murder, and crimes generally, in which the family or victims innocently suffer. Nor is this all: a continued course of impenitent sin is sometimes propagated through successive generations, and often, no doubt, by the force of vices example and defective or erroneous training, but partly also perhaps by a certain congenital taint or bias to the same vices. With regard to social sins, these forms of retribution are especially illustrated—for national sins the peoples, and crimes are as certain to be visited by the appropriate penalties as personal ones. But the punishment that falls upon the nation is of course shared by its individual members in common, some of whom, however, and frequently those most guilty, escape in whole or in part by reason of their exalted position and peculiar advantages (2 Sam. xxiv, 17), while others are made to fall the heaviest blows most heavily upon eminent individuals as representative characters (2 Sam. xxi, 1-9). Nor does the retribution always come upon the same generation or the same portion of the community that has sinned (Matt. xxviii, 38). These are but specimens of that inequality in the penalty of
MORAL OBLIGATION

MORAL PHILOSOPHY

wrong-doing that prevails in the present life (Jer. xxxi, 29); but they do not extend to the other world. There the account will be strictly personal, and the settlement rests upon the fact that human guilt and self-consciousness is determined. It is this final award that vindicates the sentence of the supreme Judge. The vicarious sufferings of the Redeemer as a ransom from this ultimate adjudication have been considered under the article MISSION.

(8) We thus finally reach the conclusion of the alleged disproportion between human guilt and endless punishment. We do not seek, with many, to justify the everlasting doom of the wicked by magnifying their crime as having been committed against infinite authority, majesty, and forbearance, however much we may conceive these features as aggravating its enormity. We believe that the justice of God is infinitely higher than the perfection of the world, namely, the continued and hopelessly incorrigible sinfulness of the damned themselves. We may presume that none are cut off from probation till they have evinced a desperate moral condition (Lk. xiii, 8); but whether this be so or not, it follows inevitably from the above line of reasoning, and from the character of the depraved heart bereft of the probationary aids to reform, that the impenitence, unbelief, and rebellion for which the sentence is at first pronounced will but harden and intensify as the ages of eternity advance. Unless the fable of purgatory be true—and its absurdity is not less than its mendacity—there is no warrant, and the consequence in the fate of the finally lost, because there can be no amendment in their moral character. Their destiny is eternally fixed, not so much by the arbitrary decree of omnipotent vengeance as by their own determined resistance of sovereign law. Perdition is but another name for self-destruction (Rom. viii, 19, in the middle voice). See Pye-Smith, First Lines of Christian Theology, p. 177 sq.; Müller, Christian Doctrine of Sin; Howarth, Abiding Obligation of the Moral Law; Watts, Uses of the Moral Law; Cobb, View of Moral Law; Cudworth, Eternal and Immuttable Morality; Underhill, Pref., Qu. 1 Jan., 1878, art. ii.; New-Eng., July, 1873; Academy, Sept. 1, 1873, p. 226.

Moral Obligation. See MORAL LAW; MORAL SENSE.

Moral Philosophy. Nearly every system of philosophy broached in ancient or modern times has imposed more or less closely upon the development of morals. Indeed, this part of the field has usually been the most hotly contested, as the theoretical problems which it presents have afforded more occasion for philosophical as well as theological polemics than all other themes. The paramount importance of the subject mentioned—the intrinsic value or the intrinsic necessity of the frequent duties and destiny of man at the hands of God—have given the most intense interest to the reasonings, teachings, and controversies respecting them. But as these have been so commonly mentioned in the intellectual or metaphysical branches of the investigation, we will here content ourselves with referring to PHILOSOPHY in general for the history of their development, and to the article ETHICS for their more systematic classification. We shall therefore in the present article discuss, in a brief and practical manner, only a few points upon which every scheme of moral philosophy worthy of the name must hinge.

1. Human Responsibility.—Were men a mere animal, endowed with locomotion, instinct, and perception, or could we conceive of him as possessing simply emotion and will, such as brutes seem to evince—nay, even as capable of the boldest stretch of reason and the highest flights of fancy—there can be no improvement of the power of appreciating the difference between right and wrong, and therefore unable to recognize the fundamental relation of allegiance subsisting on his part toward his Maker, and the common bond of brotherhood between himself and his fellows, we could not justly hold him amenable for his moral conduct, since this entirely depends upon a due ob- service of these twofold claims. It is the faculty of con-science, sitting as a vicegerent of heaven and a representa-tive of earth within his breast, urging the right and the self-abasing the evil, that is the essential being; and though this interior light may become dim through the mists of passion and the clouds of ignorance, it yet shines sufficiently clear to show him his essential duties, or, if utterly eclipsed, the fault will generally be found to be his own—the few cases of congenital paraly-sis being thereby removed from the category of responsi-bility. See MORAL SENSE. His first obligation, therefore, and his prime measure of safety, is to cultivate this faculty by information and prompt obedience, that it may the more surely guide him through the labyrinths of life to the portals of endless day. The beginning of his duties consists in the simple reflection that he as well as its boundaries on either hand throughout his mortal pilgrimage, are exactly marked by the development of this faculty—one peculiar to him of all the occupants of the globe. This accountability is, in the nature of the case, an individual one, each for himself alone, and it is due in the third place to the several classes of beings with whom he has here to do in the order and degree named below. This sums up all his duty, even under the perfect code of Christianity, and is the staple—the core of substance—of every ethical system devised for human conduct.

2. Duty to God.—This is the supreme duty. In this the Holy Scriptures do but enforce, by an authoritative mandate, what all pagan religions have more feebly demanded—namely, the unconditional and primary obligation of obedience to the divine behests. These have been promulgated in different ways—sometimes more expressly, at other times more enigmatically and imperfectly; but when once fairly understood, the common-sense of mankind has declared that they must be un-finching and peremptorily obeyed. This claim is universally grounded on an admitted creation, supported by the avowed dependence of the creature; the Bible adds a third most touching argument to these of natural religion, namely, redemption, thus forming a triple cord—paternity, providence, and grace. The foremost and generic duty that grows out of this obligation is that of reverence—so all the older dispensations conceive it, but Christianity terms it love, taking a nearer and more privileged position. See ADOPTION. This reverential regard is chiefly expressed in sacrifice, which accordingly occupies the prominent place in all religions, standing at the very head of the Decalogue. The devotion thus due is unique as well as supreme, because no other being can possibly occupy this relation, nor any higher; worship is therefore due exclusively to our Maker. Idolatry is a sin which immediately reverts to the interest of the Damned, because it virtually overthrows the throne of heaven itself, and thus destroys the very basis of all moral law. Jehovah brooked every transgression of his chosen people but this; and when the captivity had burned away its exterior manifestation, the final exclamation affirmed his detestation of its still cherished spirit, which incited Israel to the culminating apostasy of the Crucifixion. The same crime in essence has reappeared in the munificences of Christian churches; and even Professants may be guilty of it under another name, for any undue love of earthly objects is tanta-mount to idolatry (Col. iii, 5; 1 John ii, 15). Under the Christian economy, again, the worship due to God is to assume a purely spiritual form, in distinction from the typical and ceremonial guise of Mosaism (John iv, 24); but this, of course, does not exclude all exterior observances—it rather requires them, at least for con-flict and instruction. See Worship. Worship includes but one other specific duty under this head, because it is inclusive of all others—namely, regard for God's re-vealed word. The respect we show to any one naturally extends to his communications; and in the case of an invisible sovereign or an absent friend, our reverence is often measured chiefly by this mark. How much more
highly should we prize and cheerfully heed the words of our God and Saviour! Nor is the Bible to be fondly cherished merely as a monument of dying love, or as a token of kindly concern, nor yet is it to be valued simply as a useful guide-book in ancient lore, but still more as a practical directory to regulate our hearts and our lives: it must become our rade-mecum in every-day concerns of the most vital moment, for by it shall we be found, and therefore be accounted a part of true, act of divine worship, so is searching the Scriptures the most direct method of ordering our behavior aright in all respects; the two are the complete counterparts, internal and external; one fortifies and purifies the heart, the other moulds and directs the life. The soul-sufficient cannot fail of becoming a strong, earnest, consistent fulfiller of all the claims of God upon him.

3. Duties to one's Fellow-beings.—These spring immediately out of the above relation of the common fatherhood of God, and they can never be successfully met except by bearing this thought constantly in mind. Selfishness, the most common and baleful besetment of every association of life, is most effectually counteracted by this consideration; and Scripture, no less than conventional politeness, and even statute law, everywhere holds forth teachings grounded on this principle. We have already observed that the ordinances of the church have their root in a violation or neglect of this truth—the universal brotherhood and consequent essential equality of all human beings. We may therefore be spared, after the enunciation of this one general rule to the multiform and complex duties of life, from entering upon a discussion of these in detail, simply observing that they may all be classified under two divisions: 1. the domestic, including the relations of parent and child, of husband and wife, of brother and sister, and of near consanguinity or affinity; 2. the social, embracing the relations of neighbor, fellow-citizen, church-member, and voluntary association for literary, benevolent, or commercial bent in. For all these, see the appropriate titles in this Cyclopedia. We here dismiss this branch of the subject, with the remark that our duty in all these respects is not fully discharged by the mere rendering of justice to these various classes of persons connected with us; we owe them likewise the offices of courtesy, charity, and sympathy. This is true, not only in the family and the Church, but also in the community and the world at large; the twofold obligation extends to every ramification of the social fabric.

The question of Cain, "Am I my brother's keeper?" expresses the first and most widespread heresy against the mutual rights and duties which we have here so clearly stated as a matter of universal truth; but nowhere else, that the doctrine of the Gospel shows its transcendent excellence—as wise as it is beautiful—doctrine appropriate to the lips of him who was both God and man; namely, the inculcation of love for all mankind as such, and as the common offspring of the one Being to whom all is one supreme allegiance. The sublime extension of this to our very enemies (Rom. xii, 14) is a peculiar trait of Christianity (Matt. v, 44-48): not a mere fancy sketch (Matt. xviii, 22-35), as an offset to our own shortcomings (Matt. vi, 14, 15), or as a noble revenge (Rom. xii, 20), but a life-likeness (1 Pet. ii, 19-24) of the heroism of the faultless Master (Luke xxii, 34), realized (Acts vii, 60) by saints (1 Cor. iv, 12): so faithfully are the divine lineaments (Exod. xxxii, 18-23; xxxiv, 5-7) mirrored (Heb. i, 8). In the enduring (1 Pet. i, 25) Word (Rev. xix, 19), whose command (Luke vi, 36) is a promise of performance (1 Thess. v, 24). This is the only effectual motive, as well as the only certain rule, for the progress of society in this world. The natural instincts of home affection, and the ties of mutual advantage, may go far to soften the asperities of intimate association; but a wide-reaching and generous philanthropy can never be attained, nor can even the sweetest amenities of closest domestic and social intercourse be steadily secured, without the habitual recognition of this fellowship in the divine night.

4. Duties towards one's Self.—These are properly and advisedly placed last, although in the perversity and suicidal folly of human nature they are usually promoted to a front rank, and, indeed, enhanced almost to the exclusion of all the preceding. But no maxim was ever more profoundly true in its application to this subject, than the saying of our Lord's parable of the sower: A man shall have an end of his life, [i.e. personal gratification as his foremost aim], shall lose it." There is no joy equal to that of making others happy; and he who is willing to forego his own ease, comfort, and emolument for the sake of blessing, consoling, and enriching his fellow-creatures, will find himself repaid a thousand-fold even in the satisfaction he experiences in this life, to say nothing of the rewards of that life which is to come. Selfishness always misses its mark, and is therefore sure to be miserable, whereas generosity invariably succeeds in its noble purposes. We need not here enter upon the metaphysical question of purely disinterested benevolence; God has not required us to scan our motives so closely as to detect and eject a thought of the reflex influence of our philanthropy upon our minds in the bliss of doing good and the retrospect of usefulness. On the contrary, he encourages us to a beneficent course by such considerations as these: and the Son of God himself did not disdain, in his lowly experience of self-devotion for the fallen world, to contemplate the fruit of his redeeming love (Isa. lxi, 11; Heb. xii, 2). We may preliminarily remark, as a confirmation and parallel of this secret of the most successful happiness, that all the propinquitous and unhealthy delights of this life are the most insipid and unprofitable to the man who is content with the meagre and imperfect powers and happiness of his own life, and whose happiness consists in mere self-gratification; but he who is always ready to aid others, and who is in truth a brother to all, will enjoy an endless and unchangeable reward for all his labors and sacrifices. For this reason, all the more do we need to keep the love and pursuit of self in the background, till our nobler sentiments have acquired such strength and discipline that we may securly give to self-love the rein, and guide it to its most successful and harmonious results; otherwise we shall be likely to grasp only the present shadow, and lose the more remote substance. It is precisely this most egregious and irreparable folly of which the mass of mankind are guilty, in pursuing the pleasures of time and sense to the hazard of spiritual and eternal joys. We are too often the sufferer under the seductive suggestions, under the head of personal duties to one's self, specifically calculated to guard against so lamentable an error, and secure the highest accomplishment of each one's destiny as a subject of moral government.

(2.) The harmonious development of all one's native faculties.—The gift of reason, and still more of a moral faculty, carries with it the obligation to exercise and improve it; we owe this no less as a debt of gratitude to the Giver than as a means of extracting the full value for ourselves. Hence, while a sense of self-preservation naturally and justly leads us to care for and cultivate our physical powers, the neglect of our interest in any of its glorious capacities is a self-stultification that entitles one to the contempt of his fellows; but the crushing out of conscience or the drowning of any of our godlike moral capabilities is a literal suicide of the soul. Such a delirium defeats the very end of probation, drives man to a futile existence, and is surrounded by and filled with temptation in this scene of trial, all the more diligent do we need to be in rousing and confirming and intensifying every moral power that may aid us in the life-long struggle with our desperate inward and outward foes. Most of all have we occasion to lay hold on the alliance with almighty grace
which is proffered us as a restorer to the full image of Deity (Phil. ii. 11).

(2.) The careful culture of any particular aptitude that each may possess.—Variety within certain limits of a man's God-given talents and his God-directed nature, and the same rule is observed in the human constitution—bodily, mental, and spiritual. Hence the obvious propriety, and indeed necessity, of noting and turning to account the peculiar genius of every individual, in order to its perfection by judicious practice. In this way we may avoid the false economy and merely external contrivance the "division of labor" have their higher results. The idea that all are reduced by piety to the same Procrustean bed, either here or hereafter, is preposterous. The facile dexterity of the expert, as compared with the clumsy slowness of the tyro in art, is but a type of the excellence of one saint above another (1 Cor. xv. 41), or of even the same in successive stages of growth (Luke xviii. 18); and this superiority on earth furnishes a vantage-ground by reason of which the moral distance must be forever widening in heaven.

The same is true in this life of all the human powers, especially of the mind and heart; and doubtless a like peremptorily increasing pre-eminence in these endowments, so akin with the spiritual, will hold good in the other world. From this we see the transcendent importance of cultivating in the present state of existence every power of the soul, before eternity shall fix the place of due condition that pertains to probation.

This thought again suggests, on the part of the mistaken policy of altogether neglecting even the less marked talent; for a feeble indication may lead to the discovery of a precious treasure, many unpromising beginnings having eventuated in brilliant eminence. And it is the common virtues—like the ordinary acquirements—that are most generally useful, as we approve the necessity of teaching every child, however dull, at least the simple rudiments of education, while we deem it worth while to expel years at the piano or the easel only upon those who evince extraordinary artistic taste. Once more, let no one excuse himself from the everyday duties of life on the ground of his small natural ability (Luke xix. 13-26), nor plead his peculiar indisposition or special hindrances to any form of morality, for all really experience the same difficulties and insufficiency in one form or another; this very reluctance, arduousness, opposition, calls for redoubled zeal and effort. For example, a man is an actor or rather symptom, of moral death the more imminent and total.

Moral Sense. See Morals.

(3.) The earnest and constant application to practical results of all one's talents, powers, and resources.—It is not enough to possess, enlarge, and employ wealth, influence, learning, skill, health, or longevity; we have not yet reached the last standard of moral excellence till we fully direct them towards useful ends—till they positively redound to the glory of God and the benefit of mankind. We should not be so absorbed in the luxury of their acquisition, increase, or exercise as to forget their ultimate design. In short, we must everywhere, at all times, and in every relationship, be just stewards in the occupancy of these endowments, and hold ourselves constantly in readiness to give to the great Proprieter a satisfactory account of their appropriation (1 Cor. vi. 20).

(4.) The sober but cordial and devout enjoyment of whatsoever blessings Providence has conferred upon us.—Asceticism and epicureanism are equally removed from sound godliness (Eccles. xi. 9, 10). A morose piety is next to none at all, but a cheerful moderation is the best recommendation of saintliness, and thankfulness sweetens the homeliest meal. Stoicism can never teach anyone to be a blessed lot. For, after all, the sorrows and mercies is as atheistic as their abuse. The moral philosophy of the Bible is alike guarded against all extremes, because it begins, centres, and ends in a true theism (Eccles. xii. 15): "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" (Mic. vi. 8). In our lapsed estate, to regain the lofty completeness we must trace our way back by the same steps; for piety is the fit condition to which a man's heart is to be brought by due obedience through divine clemency and fidelity (1 John i. 9).

MORAL SENSE.—One of the earliest treatises on the subject in English is Paley's Moral Philosophy (Lond. 1783; often reprinted with extensive modifications by later editors); but it essentially ignores conscience, and has generally been reprobated. But a more modern work, Blackley, Hist. of Morals (4 vols. 1810); and of course, Different Principles of Moral Philos. (from Aristotle to 1798); Channing's Jouvroy, Intro. to Moral Philos. (includes a critical survey of modern systems); Dodridge, Lectures; Delaham, Moral Philos.; Gisborne, Principles of Moral Philos. (1798); Grove, Moral Philos.; Pearson, Theory of Morals (1840); Beattie, Moral Science (Edinbourgh, 1816, 2 vols.); Taylor (J.), Sketch of Moral Philos.; Turnbull, Principles of Moral Science; Smith (J. S.), Lectures on Moral Philos.; Stewart, Outlines of Moral Philos.; and his Act and Moral Powers, and Progress of Ethical Philos. in Europe; Merviale, Boyle Lectures, 1664; Calderwood, Hand-book of Moral Science (Lond. 1872, 8vo); Gillett (R. E.), The Moral System (N. Y. 1874, 8vo), the latest and best work on the subject. Among express treatises on the general subject, we may name, as being best known and most accepted in the country, W. E. Gladstone, Moral Science (Bost. 1885, 12mo); Whewell and Henry, Morals (Bost. 1839); Alexander, Outlines of Moral Science (N. Y. 1852); Hickock, Moral Science (N. Y. 1853); Upham, Moral Philos. (N. Y. 1857, 12mo); Winslow, Elements of Moral Philos. (N. Y. 1857, 12mo); M. Hopkins, Lectures on Moral Science (Bost. 1862, 12mo); and Law, Losses (N. Y. 1869, 12mo). The periodicals which contain valuable articles on this topic are: Christian Examiner, viii., 265; xviii., 101; xii., 1, 25; xxviii., 137; xxix., 135; xxx., 145; xlii., 97; xliii., 215; liii., 188; Christian Rev., vii., 521; Princeton Rev., v., 39; vii., 677; xviii., 266; xx., 929; Meth. Q. Rev., v., 229; Rev. Eng., Oct., 1870, p. 549; Brit. and For. Rev., Jan., 1874, p. 189; Lowl. Qu. Rev., xi., 3; vi., 407; xi., 494; xlviii., 83; Oct., 1873, art. vi.; Bib. Scriptor., April, 1873, art. iv.; Edinb. Rev., vii., 413; ixxi., 193; xci., 86; Prospect, Rev., i., 577; ii., 400; North Brit. Rev., xiv., 160; Westn. Rev., i., 182; ii., 254; xii., 246; North Amer. Rev., ix., 289; Contemp. Rev., July, 1872, art. vii. See Morals.

Moral Sense. See Morals.

Moral Science. See Moral Philosophy.

Moral Sense is a term frequently used to designate the conscience. It is believed to have originated with lord Shaftesbury, who contended for the existence of an instinct in man, a kind of universal sentiment or intuition (q. v.), and in anticipation of what Hutcheson (q. v.) afterwards advocated. Whatever we may think of the principles involved, the term Moral Sense itself is incorrect; however, in at least two essential particulars in which that faculty differs from the characteristics of the senses. In the first place, it is not exercised in respect to external objects, whereas the conscience (conscienciam, conscientia, or self-knowledge) is exclusively introspective or subjective, and passes in review only the acts or states of the individual himself. Secondly, the senses give us absolute and invariable information of the real properties or relations of things, and when acting normally they never mislead or deceive any one as to the facts in the case; while conscience is so subjective that it conveys to us intuition only of a relative character, and hence affects different persons quite variously in respect to the same act or condition of things, according to the habit of mind and other circumstances. In short, conscience is a sense only in the general signification of an impression or influence of an emotive nature. It has usually been defined as that faculty of the mind by which we become aware of the moral quality of an act (purpose, sentiment, etc.), and are suitably (i.e. agree-
MORAL SENSE

ably or painfully) affected by it. Only the latter part of this definition is accurate; for the apprehension of the agreement or contrariety between the given subjects of thought (passions, etc.) and some intellectual or moral principle, or the exercise of the judgment, comparing the thing contemplated or reviewed with some previously acquired or adopted standard or principle of right. Hence the importance of a correct and true rule by which to try all moral questions; and hence, too, the exceeding diversity and even opposition of views on moral points between persons of different religions and associations. The tendency of the passions, moreover, to warp the judgment is proverbial; and as human nature is constitutionally corrupt, the unaided and untrained conscience cannot be relied upon to give a just verdict. It is only by introducing a divine element into the judgment that it becomes necessary in order to furnish a perfect norm to the erring judgment, as well as to reinforce the sanction of the conscience in its conflict with the depraved inclinations. On the other hand, the emotional function of conscience, which is blemished by nature as well as by habitual sin, needs quickening, so that it may become a clearer and more emphatic monitor in advance, as well as a more effectual penalty or reward after the performance of a praiseworthy or the commission of a guilty act, and thus stimulate—by its twofold action—to virtue in the future. It is revelation, again, that furnishes the clear and efficacious light by which the conscience can be renewed and purged, and it is the renewing of the conscience, and the mysterious and unsearchable way in which the light is shed upon the rewards and punishments of a future state supplies, but likewise by the supernatural influences of the Holy Spirit promised to all who humbly seek and encourage them. As this double culture of the natural conscience—its habitual exercise in accordance with a heavenly standard of duty, and its alliance with Almighty power—enables sound development and steady action, so, on the contrary, the repeated violation of its behests, and the incorrigible rejection of the proffered assistance from above, must eventually lead—as we find to be actually the case with many hardened wretches—to an apparent obliteration of the faculty itself, or at least a total suppression of its admonitions and awards. The latter state is one of hopeless inimicitia [see Judicial Blindness], and the former that of assured salvation. Yet even in an unfallen condition man's conscience was not of itself adequate for his moral guidance, and hence an objective law—the prohibition of the single tree as a prescriptive sample only—was given to supplement and direct its energy; and still Eve's judgment seems to have been incompetent, under that non-redeemable economy, despite her moral perfection, to detect the moral error that lurked in the tempter's suggestions: the actual "knowledge of good and evil," being utterly necessary to the effectual awaking the full power of this faculty. So, on the other hand, in the world of perdition we are wont to imagine that the seared and blunted conscience will rose itself to chastise the soul with retributive agony. But the pangs of guilt, at least in this probationary existence, are not strictly the measure or criterion of wrong-doing; for then the self-complacent Pharisee would be acquitted, and the tender penitent would be condemned. The most atrocious crimes have been committed under the plea of conscience, and that not hypocritically, but in self-delusion (Acts xxvii, 9); while the first steps in transgression are visited by a degree of remorse which gradually lessens as the offender progresses in his downward career. This leads us back once more to the main proposition of this discussion, namely, the insufficiency of conscience as a moral light. Nothing is right simply because our conscience approves it. The appeal must be to a higher authority than man's nature: He is not an absolute "law unto himself." It is his Creator who retains supreme jurisdiction over him, and who has reserved the prerogative of prescribing what he may innocently do, and what he is morally bound to do. See MORAL LAW. Yet when an individual has availed himself of the best means within his reach for ascertaining his Maker's will, and has scrupulously followed that light, he is not culpable for any error of faith or practice into which he may fall purely through the absence of any contrary evidence in the sequence of his naturally defective or even depraved condition. He must and he ought to obey his reason and conscience, however imperfect; but if sincere and docile, he will not long remain in serious misapprehension of moral truth; and in any case his responsibility is exactly proportioned to his means of light. He may enjoy or may have attained (Luke xii, 47, 48). While therefore a mistake, be it ever so grievous or closely related to moral subjects, is not in itself a sin, yet every man's conduct should be tried—both by himself and others, as it certainly is and finally will be by the unerring and unerring eye of the eternal Judge, in accordance with which the divine law as unconquered to him enjoys. To the heathen, walking by the dim light that tradition reflects upon his path from the prismatic revelations, supplemented only by the uncertain flickerings of the lamp of experience, or perchance by a few rays that occasionally break through the embrace of his abridged pilgrimage from the radiance of more favored dispensations, the office of conscience is all-important in aiding him to grope his way out of the thraldom of nature to a sense of the divine acceptance; and we may charitably hold that in rare examples he has thus been enabled to reach the day of moral purity, and emerge at last into the dominion of the inner spiritual. The melancholy facts of past history and present observation seem only to justify the fear that the mass of paganism, even in the cultured instances of Greece and Rome, of India or China, have but grovelled in the mire of sensuality, and quenched their higher aspirations and better convictions in the shambles of a baseless idolatry. Even Islamism, setting out with much of borrowed truth to reform a polytheistic faith, rapidly degenerated into puerile fanaticism, and aims no higher than a licentious Paradise; while Judaism, disciplined by a direct contact with the supernatural to the sternest regions that the race has ever known, has generally resulted in heartless Pharisaism and puerile formalism. Under the Redemptive scheme a simpler and profounder maxim—that of universal benevolence—has superseded for the resuscitation and tuition of the believer's conscience, stunned and bewildered by the burdensomely technical—indeed, systematized—character of the common share of Christendom either reverting to the obsolete methods of salvation by asceticism and ritualism and ecclesiasticism, or abusing the liberty of the Gospel by fanaticism and humanitarianism and rationalism. Yet, amid these vagaries and inconsistencies, the one cardinal fact still remains true, that "the one who has no faith in his heart must be recognised by the candid and thoughtful of all times and all climes as the sole test of genuine piety and philanthropy. Selfishness is the bane of all morality, and in proportion as the carnal self is crucified the spiritual self is resurrected out of the null of the fall, until at length the ideal man—God's own image—became transfigured in its permanent beauty; for "God is love" (comp. 1 John iv). Moral Theology is only another name for the science of Ethics (q. v.). Under the last-named heading we have considered as much of the subject as can be encompassed from a strictly philosophical and Pro- testant point of view. Of course it is impossible that Roman Catholics remain to be treated here. Those are in many respects radically different from those of the other classes referred to. The Protestant view, as we have seen in the article Ethics, is that Christianity is essentially an ethical religion; that, while it is true that other religious favor certain virtues, or give a certain sanctity to all virtues, Christianity is truly morality, for its aim is moral regeneration, and that is itself religion. Says Blackie (Four Phases of Morals), "It is a religion; by its mere epiphany it forms a Church; in its starting-point, its career, and its consummation, it is a kingdom of heaven upon earth" (p. 207 sq.; comp. p. 219 sq., 266 sq.). As the sources of this science, we pointed out, "Christ, his person and teaching; also the writings of the apostles as shown in the N. T., as objective and as subjective to the influence of the Holy Spirit in the faithful." The Roman Catholic Church, however, recognizes a standard of morality except that of her own construction, and insists upon it that not only the Scriptures, but also the tradition and declarations of the Church must control any effort, even in the domain of speculative philosophy. Says Dr. Fuchs, in the Roman Catholic Cyclopedia of Wetzer and Welte: "The tradition of the Church is one of the supernumerary sources that constitute the source of ethical knowledge. Tradition serves partly to complement the moral precepts of the Bible by further demands and institutions, and partly to elucidate and more clearly to interpret their sense and purpose. Not even does he rest here. Lect. he is misunderstood as to the extent of the domain of ecclesiastical tradition, he continues: "From the domain of ecclesiastical tradition we regard especially as important for moral purposes: (1) the rules and canons of the general ecclesiastical councils; (2) the decisions and declarations of the holy chair; (3) the infallible (7) utterances of the Church fathers." Not content yet, he goes on so far as to declare that "into the circle of moralistic sources we most naturally and properly admit also ecclesiastical customs and the lives of the saints, for in the life of the Church and her saints is reflected the life of our divine Lord and Master." In quoting his position, it is not by any means wish to be understood as citing only one of the sources of our standard Roman Catholic Cyclopedia of Germany, he speaks most assuredly the opinions of the Church for which he writes, and his views are those of the Roman Church at large. It is apparent, then, that by an outward law of the Church Romanists have modified the ethics of the N. T., and controlled the ethical consciousness of Christendom down to the period of the Reformation. The Protestant regards this modification as a descent from the purity of the Church, and as a degradation of herself; but as a matter of fact, the original Church in its ministrations, had no unimportant part; the clergy interpreting as they saw fit, and the people being taught by them as they were themselves influenced by the ascetic notions which invaded the Church in the 4th century, and have ever since continued to exert their authority among papists.

See also ARTICULAR; MONASTICISM; SACKRODOTERLICH. For our references in the article Ethics we have inserted the works of writers who deal carefully with the early teaching of the Church on this subject, and where we here give only a brief résumé of the views of ecclesiastical writers from the apostolic period down, in order to furnish the reader the most prominently connected with Roman Catholic ethics to the foundation of Christianity to the present.

1. Apostolic Period.—As regards the extent of apostolic ethics, it encompasses pretty much all departments of life, and the duties and virtues corresponding with them. Yet in this province such are made particularly conspicuous and praiseworthy as are natural to the spirit of Christianity. For while all antiquity had made the sovereign good consist in escape from pain, either by virtue or by pleasure, Christianity, by the mystery of the passion, announced the divinity of sorrow, and the most characteristic element in Christian virtue was the willing endurance of suffering. The apostles placed it in special prominence to those Christian ideals of faith, hope, love, prayer, mercy, chastity, martyrdom, and the like, which are the characteristic elements of perfect charity, and which, if realized, must absorb like ethics and politics in a higher science. The vacillation on some single moral questions and principles observable in the writings of these early Christian fathers gradually died out as a more profound and comprehensive Christian consciousness spread in the Church. As regards the manner of treatment of this subject, most apostolic writings deal with it in a way serviceable mainly to devotional purposes. Their basis, it has been well said, "remained from the first rather religious than speculative, notwithstanding the persuasion that in the reason enlightened by the Word there was given a ground of union between objective revelation and subjective knowledge." Even among those contributions to ethical life that may be looked upon as particularly Jewish, a sphere then usually occupied, only a few maintain a strictly scientific character. Earliest among the productions of that age stand the writings of the celebrated disciple of the apostle Paul, Clement of Rome, whose epistle to the Christian congregation at Corinth both exemplifies and is an example of the moral precepts that constituted the source of ethical knowledge. Its especial object was, however, to reconcile the disensions and factions which had arisen in that congregation, and it contains therefore mainly admonitions to concord and peace. More noteworthy in this department of Christian ethics are the productions of Ignatius (q. v.), who wrote six epistles to diverse congregations, and one to Polycarp; they were penned on his way to the lions of the Colosseum, and breathe the spirit of a man who had beheld John, and, full of faith, is ready to meet his Lord and Master. The moral precepts and admonitions of the Ignatian epistles are mostly passages quoted from the N. T., or sentiments in accord with its contents, expressed with fervency as well as simplicity. A remarkable feature in them is the emphasis with which their author insists on the propriety to belong publicly and externally to the Church, though he by no means forgets its value in the sight of God as consisting in the communion of spirit rather than in union with God. We learn to recognise the ecclesiastical consecration, the alliance of so many thousands by unity of faith and love, as something grand, the true obedience to the officers of the Church (elders) as something inseparable from Christian life. This decidedly ecclesiastical disposition is also shared by Poly-
MORAL THEOLOGY

carp (q. v.) himself in his epistle to the congregation at
Philippi. Above all things, he desires that attachment
to pure unadulterated faith be strengthened; like Iga-
tiuss, he has his chief aim the Church and the Church's
creed. His moral precepts are rightly denominated
"apostolic grains of gold." But really the most emi-
tent attempt to reconcile Christian ideas with the forms
and views of ancient philosophy, especially those of its
latest efflorescence—New Platonism—was made in the
mystic speculations of the Aperagii, or Epytholists, in
which the Christian scientific spirit aims at an inner-
mest comprehension of itself, for this end calling in the
support of traditional knowledge. No other product of
mind has exercised a deeper or more powerful influ-
ence upon the development of Christian mysticism—
the culminating-point of ecclesiastical ethics—than his
written statements about the religious mysteries of mys-
tical ideas and views, such as here and there glimmer
in Clemens Alexandrinus, Augustine, Macarius, and
others, converge as in a focus, and form one of the
strongest links connecting the period of which we are
speaking with the subsequent ones. To these relics of
spiritual treasures of the apostolic fathers we join three
compositions, two of which plainly show spurious au-
thorship, and a third gives no clue at all. They are the
Epistle of Barnabas, the Shepherd of Hermas, and the
Epistle to Diognetus. The author of the first-named
work calls his moral precepts the road of light, in con-
trast to the road of darkness which he regards as the
sinful life. The Shepherd is divided into three sections,
the second of which deals entirely with ethics. The let-
ter to Diognetus, as already stated, comes from an un-
known hand. The principal interest which attaches to
this ancient Christian memorial lies in the excellent de-
scription which the author gives of the life and morals
of the early Christians. Here, also, two other writings
adorned with the name of apostles deserve to be men-
tioned—namely, "The Apostolic Constitutions" and "The
Apostolic Canons." Both collections, as to their origin,
its true, come far short of reaching up to the apostolic
age, but they deserve a place here because Romanists as-
sert that they exhibit a picture of the most primitive
condition of Christian manners and ecclesiastical disci-
pline. They are certainly worthy of attention on ac-
count of the treasure of tradition they furnish; still
more, the peculiarity of their moral character renders
them notable and significant, this character being wholly
cut off from the wilderness with merciless, keeping the
right medium between laxity and rigor.

2. Patrician Period. We now reach the period in which
we deal with the writings of the fathers of the
Church. The series opens with Justin Martyr (q. v.),
"the evangelist wearing the mantle of a philosopher." It
is an exaggerated form of the ancient philosophy
which placed in the ground of Christian ethics the first
seed of scientific treatment. He clothed the Christian
ideas in the scientific forms of antique wisdom, and
showed that the classic must bend before the higher light
of the Gospel. Particularly noticeable is his conception
of reason as identical with knowledge and conscience.
Of the fundamental Christian ideas—liberty of hu-
man will—in opposition to fatalism, sustained by
 pagan views, he vindicated by an argumentation as
acute as striking. He tried to elucidate the relation of
Christian principles to the Mosaic law, and defended the
Christian ethics against objections raised both from the
Jewish and from pagan stand-points. Next we place
the two apologists, Athenagoras (q. v.) and Theophilus
(q. v.), bishop of Antioch. Their writings furnish a rich
store for ethics. After them we meet that great disciple
of Polycarp, St. Irenaeus (q. v.). In opposition to the
triumphant success of the Gnostics, he urges with
emphasis to a practical life. But in thus giving
prominence to the practical part of Christianity, he is
far from falling into a "moralizing" tendency. Far
greater services than those named were rendered in the
scientific elaboration of Christian ethics by Clement
of Alexandria. His three principal writings form a
tripartite entity, in which he successively imparts the
Christian doctrine of life in its fundamental features.
His chief work on ecclesiology (q. v.) is polemico-apologist; he combats what is morally injuri-
ous in popular religions and in the philosophical systems
of heathendom, and compares with it the beneficial
influence which Christianity exercises on its professors;
he shows the absurdity of the pagan legends of gods,
and demonstrates how the religious mysteries of the
pagans so often deeply offend the moral senti-
ments, while the Christian doctrines and mysteries have
the advantage of harmonizing with reason and moral
purity; he admits that the writings of pagan philoso-
phers contain seeds of morality, but reminds us that they
owe their origin to the Adversus, the source of all vital
truths. The second treatise (Introduction to the
Greek) is divided into several books. The first treat of
moral life in general; it may be considered an introdu-
tion to Christian ethics. The second treat of Christian
ethics in its main features. The remaining books,
corresponding to special morals, expatiates on the particular
duties and virtues, and discuss conduct, in the several
relations and occurrences of external life, from the Chris-
tian stand-point. The third essay (στρατηγαρ, miscel-
nanies) leads to a higher degree of moral knowledge and
action. The difference of the two degrees lies in γράμ-
τας. On the foundation of the ideas gained by a deeper
knowledge of the Church and the higher sense of moral
values, is constructed, the culmination of which is love assimili-
ating and uniting with the Deity. In conclusion of
the whole, Clement sketches the image of the γραμμη-
τικός, and thus presents the Christian ideal of a moral
personage. The γραμμητικός Clement deduces from no
other source than from the ideas of the divine personages
which personally appeared in Christ; an idea which, support-
ning and illustrating, pervades all his definitions of mor-
ality. In his smaller address, Τυτάφωλος ποιή-
σος ("Who is the rich man saved?") he discusses a
practical question of the time concerning the use of
earthly valuables and possessions. It may not be too
much to assert that Clement, by his literary activity, is
of no less significance for the department of Christian
ethics than his worthy disciple Origen, by his celebrated
work Περί ἐρωτήματι, became to that of Christian dogmatic
views. To these two ancient Christians science is indebted
for its most profound and lasting stimuli. The
discourse on Origen of Alexandria, the apologist
is disinterestedly moral but alludes here, and can speak only of his two prac-
tical treatises—Περί οική (on prayer) and Εἰς μαρτύ-
ρον προτετακτικος λογος (exhortation to martyrdom).
One feature to which we have alluded in the
writings of these Church fathers—the laying on of the
bishops and deacons of the same order the "laying on of
the hands"—excite surprise. For it must be apparent to every well-
read student of antiquity that the fathers, in order to
be understood, had to speak the language of the then
prevailing scientific consciousness; they could not break
at one stroke the barriers of the surrounding cultured
circle, and they felt the less obliged to do this as they
were thoroughly convinced that in reason, enlightened
by the Logos, was given a point of intermeditation be-
tween the classical and Christian consciousness, between
the objective basis of revelation and the subjective prin-
ciple of cognizance. This definition of unity is by no
one more emphasized than by Justin Martyr, Clement of
Alexandria, and Origen. They agree in the view that
reason is the source and measure of morality, conse-
quently that what is rational is moral, what is irra-
ional is immoral or sinful, and therefore that Christian
ethics, as the most rational, because derived from abso-
lute reason personified in Christ, must also be the most
complete and perfect. The writings of Tertullian (q. v.),
which come next, are marked by a dark rigor, grow-
ing more prominent in proportion as he inclined to
Montanism (q. v.). The moral earnestness of Christi-
anity, under Montanist direction, was aggravated into
Moral Theology

unnatural severity; the moral advice of the Gospel was made a command, and extended to all Christians. With this theory, if it had prevailed, Christian piety would have been reduced to the complicated and intricate formalities of the law. It still remains that of our Lord's parables, and his exhortations of love and charity, and that of his letters addressed to Amphilectus, the bishop of Iconium, which contain regulations of Church discipline, have acquired canonical authority in the Roman Catholic Church. At the confines of the 4th century we are met by the grave and venerable form of Ambrose, the bishop of Milan, whose writings introduce us to that new form of Church discipline, and the discipline of the Pelagian controversy. In his three books, De Officiis, he furnishes a counter-piece to Cicero's treatise of the same title. It aims to bring the purity, sublimity, and sanctity of Christian ethics to a conscious and clear recognition. After him we come to three men—(417-467) Chrysostom, Jerome, and Augustine—all more or less connected with the Pelagian controversy. The first of them discourses on the question of free-will and grace, and in a most practical manner. Soon after his death we see the same raised as an issue of controversy full of moral interest by Pelagius, a British monk. Until the commencement of the 5th century strictly doctrinal questions had been the topics of ecclesiastical disputes; now the Pelagian contest, an eminently moral question, engaged public attention. The contrast of liberty and grace must have been recognised at the first awakening of reflection. It found, however, no final equitable solution, and resulted at the last in the same unseemly valley of Origenism. Had Pelagius never been other times liberty, preponderating, at the expense of the adverse. (Compare the view of the Greek fathers of the Church of Icoines, Petavius, De theolog. dogm. tom. i. lib. v. cap. 2.) Pelagius, however, asserted the freedom of will to such lengths that the divine influence of grace was nearly reduced to nothing. Pelagius, in referring man to the power of his will, wished to rouse him to energetic action. This intention is ingenuous, and deserving of respect. But, as Neander (Joh. Chrysostomus u. die Kirche, ii, 134 sq.) correctly observes, man should be brought not only to the consciousness of his originally divine nature, but at the same time to the recognition of his internal corruption unlike it, and to the ideal of sanctity to be obtained: he ought to have cheered man, bowed down, by proclaiming what the infinite love of the Deity has done in Christ to deliver him from this corruption; he ought to have led him to the inexhaustible spring of divine grace, by which the strength of faith may be renewed, in order to impart to him confidence in moral exertions, not liable to be deceived, but rather confirmed, by self-knowledge and experience, which, according to his needs, humiliate and elevate him. Jerome (q. v.) preceded Augustine in coming forth to the conflict; he had already opposed what he conceived to be the Pelagian doctrine, and had written against it in order to make the Romans town on the position of the Pelagianism. Of the three, however, Augustine deserves by far the most important place. Except perhaps Clement of Alexandria and Ambrose, St. Augustine is certainly the ablest moralist of all the patristic writers. He was among the first to be distinguished by reduction to principles, by clear statement, dialectic progress of ideas, and systematic organization in general. The sovereign genius of Augustine, moreover, succeeded best in emancipating himself from classical influences, in which the Christian vital principle of love (caritas) more exactly defined and carried out more consequentially than in his excellent treatise, De moribus ecclesiae catholicae et Martinum, c. 15, 21-24 (comp. also his De civit. Dei, xiv, 5, p. 54, 107; Ecclesii, c. 121; De sde et operibus, c. 2.) does not lose its bearings, and with his strictly ethical system, but wherever and whenever he treats moral subjects, he is always led by a scientific dialectic spirit, and never loses sight of the spiritual ideal unity floating before his clear and comprehensive mind. Among his ethical works, besides the one men-
tioned above, the following are especially worthy of note: Enchiridion ad Laurentium s. de jide, sive et caritate; De jide et operibus; De vita beata; De agone Chrestiani; De anima; De materia; De bono, malo, virtutibus, virtutum, et humanitate; De viris viribusque; De continentia; De patentium. See, however, the article Augustine. In the further lapse of this period a number of men, partly of the Greek, partly of the Latin Church, have rendered service to ethics. Among these is Isidore of Pelusium, whose moral writings breathe the spirit of Chrysostom, with Andy show the love devoted to him by this great master, so influential in the Greek Church. Nius also must be considered as being in spiritual connection with this illustrious exemplar. Both clothed their ethical definitions, precepts, counsels, and casuistic decisions in epistolary form. Even in the hortor we meet with a disciple of the "gold-mouthed," John Cassian, who was actively engaged in the Pelagian movement by an attempt at mediation, which, however, miscarried. For ethics, not only his De octo capitis, evisis is worthy of mention, but also his Collationes Patrum, and his twelve books, De institutis conciliorum. Among the moralistic authors of the Greek Church, the series of the fathers hitherto enumerated is worthily continued by John the Scholastic, author of that moral-ascetic treatise, Climax Paradosis, and by Anastasius Sinaita, whose writings are mainly of an ascetic description. In the Western Church, Gregory the Great closes the period by his Moralibus, a work which is full of the emblem of love, is interlaced with thoughts from Job, disseminating many suggestive thoughts, the abundant fruits of which will not escape the attentive observer in subsequent periods of ethical history.

3. Scholastic Period. — The men whom we meet from the beginning of the 7th until the end of the 11th century, who have contributed to their point of task to collect from the patriarchal mines all moralistic material, and to distribute and group it under definite rubrics and titles. Among these collectors archbishop Isidore of Hispalis deserves first mention. His principal ethical work is Sententiarum s. de summo bono libri iii. The maxims gathered from older fathers treat of virtue and sin in general, the auxiliaries of virtue, and particular duties. The main source from which he draws are Augustine and Gregory the Great. In his De Differentia Spiritualibus also a moralistic tendency predominates, while his Symonia and Soliloquia are entirely pervaded by it. With perspicuity he develops spiritual truths, and shows them to logical connection. He is surpassed, if not in learning, in mental productivity by the abbot Maximus (the Confessor), whose "sermones" on love contain the most profound ideas, and are extremely valuable for scientific ethics. He besides has well deserved by the intelligent and critical reading of the members of his congregation. Maximus enunciates the proposition that the incarnation of the Logos had to be renewed in us spiritually; the human and divine must penetrate vitally. He distinguishes between the law of nature, the written law, and the law of grace, and attempts to develop the three elements in their simple and in their interchanging relations. The collections of moral maxims by the Palestinian monk Antiochus in his Pandecta of Holy Writ, and Beda the venerable in his Scilicet Patrum, are surpassed by John of Damascus in his extensive work Tad lapid. This ample collection of materials, surpassing all previous ones as regards complete, is arranged alphabetically; the single articles are divided into a Biblical and a Patristic part. Also his more renowned work, Εξοδια ακριβως των δευτερου πιστως, contains moral sections, the more significant the higher they stand in a scientific point of view. All these works are moral treatises, in which the authors of the doctrines, as they are stated by Augustine. It descants on virtue in general, and the cardinal virtues and principal vices. His other work, De Virtute et Virtus, is less scientific, and more remarkable for diligence in collecting. The thread of ethical writings, without enriching its particular sphere, was continued through the darkest times of the Middle Ages by Serafegus (Via Regia and Diodema Monachorum), by bishop Hallig of Olamenus, and more especially by the Spanish monks of the Order of St. Benedict (Scripta Brevitatis Historiae, Historia, Historiarum Christianorum, by Pascharius (Tract. de Fide, Sine et Caritate), by Hincmar (Ep. de Canisía Virtutum et Virtutum Exercendi), by Michaelis (Michaelis liii Brevitatum libri), by William of Damiani. The next writer, Anselm of Canterbury, really opens up the most auspicious outlook of the scholastic field. His writings, which in greater part belong to the department of moralis, indicate a decided advance in a well-cultured spirit; and there are foreshadowed in them the tendencies of the moralists of the latter part of the Middle Ages, which later became the system of the innumerable extravagances which successively held sway in the theological world under the name of mysticism, scholasticism, and casuistry. We come here upon Bernard of Clairvaux and Hugo of St. Victor, who were truly the coryphes of Middle Age ethics, and the leading representatives of mysticism (see Hefferich, Die Christ. Mystik [Gotha, 1842], i. 849 sqq., 480 sqq.). Bernard is surpassed by no author in his delineations of the worth and power of love. From him proceeded that passionate inspiration which the monastery of St. Victor perpetuated through the Middle Ages, and which remains the dominating impression of the literature of ethics. The abundant current of Christian sentiments, according to him, are humility and love; both spring from the knowledge of ourselves. A sense of humiliation is the first experience which we duly regard ourselves, and this prepares for intensity of love, which in its highest degree is felt only in reference to God. We come next to the great masters of scholastic theological ethics. These are Peter Lombard, Thomas Aquinas, and Duns Scotus. Their aim is to harmonize Aristotelianism and Christianity. The first completed, in his Magister Sententiarum, the list of the seven cardinal virtues by adding faith, hope, and charity to the ancient series of justice, fortitude, temperance, and wisdom. His scholars, Alexander of Hales and Albert the Great, still further perfected his system. Thomas's task is to fully develop, in his Summa Theol. pt. ii, the medieval philosophy of virtue. He makes the intellect the highest principle, and distinguishes between universal and special ethics, the former being the proper object of the human intellect, the latter of imperfect beings on earth. This work is by all critics conceded to be the most magnificent of all ethical structures of the Middle Ages. Duns Scotus, in his Questions in is libb. sent., opposes the primacy of the will to that of the intellect, and thus introduces a subjective element into the place of the objective, to which Aquinas has given prominence. Besides these great writers of this period, there are many others who have greatly distinguished themselves as contributors to the department of ethics. Among these, above all others of the Christian writers of these times whom we have just passed in review, stands the revered Bonaventura, the conciliator of the dialectico-scholastic and mystical forms of the Middle Age spirit. He commented upon Lombard's writings, and wrote in a scholastic manner his Brevislogo and his Centiloquium; in a mystical tendency he composed his Itinerarium mentis in Deum, and smaller works. A pretty exhaustive epitome of Christian ethics was furnished by William Peretus (Peralas) in his Summa de Virtutibus et Virtus. A still richer and more thorough treatise of moral theology came from the pen of the Dominican Antoninus, archbishop of Florence, who, after Thomas, performed the greatest task in this field. A pretty exhaustive epitome of Christian ethics was furnished by William Peretus (Perulais) in his Summa de Virtutibus et Virtus. A still richer and more thorough treatise of moral theology came from the pen of the Dominican Antoninus, archbishop of Florence, who, after Thomas, performed the greatest task in this field. A pretty exhaustive epitome of Christian ethics was furnished by William Peretus (Peralas) in his Summa de Virtutibus et Virtus. A still richer and more thorough treatise of moral theology came from the pen of the Dominican Antoninus, archbishop of Florence, who, after Thomas, performed the greatest task in this field.
MORAL THEOLOGY

577

MORAL THEOLOGY

cuadas; yet there seems to be little ground for this sup-
position, and Vincente should be counted here as a
writer of merit. Gerson also deserves mention here for
his valuable contributions to scholastic morals (as
contained in vol. iii of the Antwerp edition of his
works).

Mysticism, during the quarrels of the scholastics, de-
volved and flourished more than ever in the latter part
of this (14th) century, and brought forth much valu-
able fruit. Prominent among those who at this time
gave to mystics, popular, practical, tendency were
John Tauler (q.v.) and Henry Suso (q.v.). On the
borders of the objective ecclesiastical and subjective un-
ecclesiastical mysticism we meet John Ruyssbroeck, who
is by Gerson ruled out of the Church writers as a here-
tic (see Ulmann, Reformers before the Reformations).
But the greatest influence in the 14th century was exerted by Thomas
a Kempis, who, breaking away altogether from specu-
lation, entered the practical popular road in his Imita-
tion, to which we have already referred. But while thus
gradually by this new mystical method morality
was referred to inner feelings, aspirations, and conflicts, and
by the scholastic method it was founded on systems of
intellectual principles, prominence was given to the
casuistical method, which limits itself to the determina-
tion of duty in particular cases (casus conscientiae) in
practical life. Numerous works on casuistry, some of
them designed for the use of the confessional, were pro-
duced in the course of the 14th century, and the chief of
which are the Astesana, by a Minorite of Asti; the
Agelico, by Angelus de Calvisio; the Pisacella, also
called the Magistrucia, by Bartholomeo de Sancta Concordia,
in Pisa; the Rosedia, by the Genoese Minorite Trou-
amala; and the Monaldia, by archbishop Monaldus, of
Benevento. In the 15th century, in eight books, 6 of the
divine commandments, of virtues and vices, of cove-
nants and last wills, of the sacraments, of penance and
extreme unction, of ordination, of ecclesiastical censures,
and of marriage. The tendency of casuistry is to dissi-
late the essential unity of the Christian life in the tech-
nical consideration of a diversity of works.

4. Modern Period.—Casuistry had begun to decline
when it was revived and zealously improved by
the Order of Jesus, and became their peculiar ethics.
The doctrine of probabilities was developed by them in con-
nection with it. The number of writers who devoted
themselves to this subject was very large. We can only
name a few of those who were the more noted. Their
polemic as a moralist, Bellarmine († 1621) desires to be
first mentioned here because of the Jesuitical moral
sentiments contained in his Disputationes de contro-
versiis Christiana fidei. He has, moreover, played his
part as a mystico-academic writer. His Libri iii de gen-
niosis et sanctis († 1617), his Institutionum morali-
menta in Deum per secellas verum creaturarum († 1606),
are greatly valued by Romanists. But little less noted
is Peter Canisius († 1597), author of Summa doctrinarum
Christianarum, a work, which though intended as an aid to
catechetical, is yet much valued by Roman moralists be-
cause of the many important hints which it furnishes to
them. Other Jesuitical moralists who deserve mention here are Francis of Toledo († 1596), Summa casuum
conscientiae i. Instrutorum sacratorum in lib. viii dis-
tinctum (Rome, 1602) ; Immanuel Sa († 1605), Aporiarum
confessariorum ex doctrune sententiae collecti (ed.
ult. Duss, 1627); John Azor († 1616), Institutiones Mor-
ales (Rome, 1600 sq.); Gregory of Valentina († 1603),
Comment. theolog. et disput. in Summam Thomam Aqui-
natissimam; Gabriel Vasquez († 1604), Comment. et disput.
in Thom. (Inglat. 1606); Thomas Sanchez († 1630), Opus
Morale in praecepta Decalogii (Mad, 1613); Disputationes
de legisve de lege legislatorum in decem libros distribu-
(Ludg, 1616, et op. tit. x); De Tripliori virtute theo-
ctica, Fide, Spes et Caritate (Aschaff, 1622; Opp.
xii); De Ultimo hoinine Fons, voluntarii et in voluntatio-
rio, humanorum actuum Bonitute et Multitu, Pasionum-
bus, Habilitius, Vitis et Pecunia (Mojunt, 1618); v i et

 vii); Paul Laymann († 1635), Theologia Moralis (Mon-
ach, 1629); Vincento Filliatius († 1629), Questiones
morales de Christianis officiis et causibus conscientiae ad
formam cursus, qui prius soli in Societate Jesu Col-
legio in Leopoldio (Ludg, 1629). Leopoldus († 1629),
lib. iv, De Justitia et Jure caritatis virtutibus curia-
naulis ad Secundum Secundae Thomae (Ludg, 1680); Fer-
dinand de Castro Palao († 1683), Opus Morale de Virtua-
tibus et Vitis (Ludg, 1683 sqq.); John de Lugo († 1660),
Disput, de Sacramentis, etc.

Pascal, and others with him, though not so ably as
he, assailed the indefiniteness and ambiguity of casuist-
ical principles as espoused by many of these Jesuitic
moralists (see PRORABILISM) as the adequate type
of whom it should, however, be stated here that the Me-
dula of Hermann Bussenbaum, which is the basis of
the works of the theologian Morale, is well known only the highest
reputation. Bussenbaum's work is truly the embodiment of
Jesuitical ethics. It appeared first in 1645 at Mun-
ster, and passed through fifty editions, enjoying a cir-
culation like that of no other moral compend; and yet
this was not the end, for its embodiment into the The-
ologia Moralis of Liguori gave it another lease of life,
and thus the Medulla may be said to have enjoyed a
two-hundred-years' rule. See, however, our article Li-
GUORI. The Medulla was also used and commented
upon by Claude Lacroix and Francis Anth. Zacharia.
Of like tendency are the writings of Taberna, Viva,
Stephanus, Maginius, and others. The most famous
of these, the Synodica, is the work of Barten zacaria,
and, as we have seen, is the basis of the Jesuitical
moral treatise of the last named is now, after Liguori's,
the great favorite of Romanists, especially of Jesuits
and Ultramontanes, and has in recent years been re-
peatedly published at Rome and Paris.

Among the writers of the Roman Catholic Church
who have been most noted in the casu-
ists, as well as the reformers led by Pascal, the first place in
this period belongs to bishop Louis Abelly († 1691),
whose Medulla Theologica has passed through several
editions (last, Regensb, 1889). A favorite text-book
for theological students, because of its brevity and clear-
ness, is the Exercitum theologise Morale, by Mariani at
Angiolo. It has been in existence in popularity only by
Slobiech's Compend. theologise Morale, and more recently
by Liguori's Homo Apostolicus.

5. Recent Period.—Among those w.o in more recent
days have led the Romanists on moral subjects, none
deserve a place here as Hirschler, whose Christi
Morale (Tübingen, 1855) is a work of more than ordinary
merit. Perhaps equal merit is accorded to Saifer (Christkatholische Morale,
Ratisbon, 1831), also a scholar and a clear thinker.
These two men were liberal in sentiment, and accom-
mmodated themselves to the spirit of the age; but for this moral treatise of theirs we would strongly advise
among the Gallican clergy of France. Everywhere else
Liguori still holds sway. Ambrose Joseph Stapf may be
in many respects be counted a disciple of Saifer and
Hirschler. His Christliche Sittenlehre was published
at Innsbruck in 1860, edited by J. B. Hofmann. Other
works of Stapf's are well known and are from the distin-
guished Roman Catholic theologians Filsler, Martin,
Propst, and especially Werner. Danzer, Mutschelle, and
Schreiber may be pointed out as principal organs of
a negative tendency. They are Pelagian in their inter-
pretation of Christianity, and betray the modern ra-
tionalistic leaning in their moral systems. Among those
who have closely allied themselves with the sceptical
philosophic schools of our day the following are worthy
of mention: Aug. Leisenbich († 1800), Jugendlehre nach
Grundsatzen der reinen Vernunft und des praktischen Chris-
tenthums (Augsb, 1798); Jos. Geislttnner († 1805), Theol.
Morale (Augsb, 1793); and J. M. von Heyrman († 1805).
The last named is a disciple of Fichte, and, to-
gether with Maurus Schenkl († 1816), who published
Ethica Christiana (5th ed. Vienna, 1830), indicates a
passing over to a more positive tendency. One of
the more recent and noted works on the subject is Prof.

V.1—19
MORALITY

Paul Palatthy's Theologia Morum Catholica (1861, 4 vols.). Though the author is a Hungarian, the work has been brought out in Germany, and there enjoys a wide circulation. Palatthy's book is based on the specialized German works (comp. Literarischer Handwörter f. d. kath. Deutschland, Sept. 18, 1867). It is based on the labors of Suarez, Billuart, Less, Laymann, and Leander. Another work of about the same date is Prof. F. Friedhöf's Algem. Moralphilologie (Mayence, 1860). Later he wrote another work on the subject, entitled Spezielle Moralphilologie (1865), but neither of them compares favorably with the Hungarian production. Of greater value even than Palatthy's work, and more recent in origin, is Prof. Simar's Lehrb. d. kathol. Moralphilologie (Bonn, 1867, 8vo), which is fast gaining ground in the schools of German Morals. In his introduction he furnishes a valuable résumé of the history of Roman Catholic moral theology, which we have freely consulted in writing this article. See Wetzler u. Welte, Kirchen-Lezikon, vii, 294-308; Asbach, Kirchen-Lezikon, s. v. Moral Theology; Dublin Rev. Oct. 1858; Browne's Rev. Jan. 1853; and for Protestant criticisms, Manning and Meyrick, Moral Theology of the Church of Rome, or certain Points in S. A. from Liguori's Moral Theology considered, in 19 Letters (1855); Presbyterian Quarterly, April, 1873, p. 367; New British Review, July, 1870, p. 256; Westminster Review, 1873, p. 115; Christian Remembrancer, Jan., July, and Oct. 1854.

Moraes, Ambrosio, a learned Spanish Dominician, was born at Cordova in 1618. His parents and relatives were people eminent in literary circles, and Ambrosio enjoyed all the advantages his country could afford him. One of his uncles, Ferman Perez de Oliva, who was a professor of philosophy and theology at Salamanca, took a prominent part in his education, and greatly influenced his tendency to theological study. He was also indebted to Juan de Medina and to Melchor Cano, two great writers and eloquent preachers of divinity of Spain. At that time, the former at Alcala, the latter at Salamanca, where he was the great antagonist of his eminent colleague Bartholomew Carranza, and a still greater opponent of the Jesuits. This Cano, or Canon, is the author of the excellent treatise De Locis Theologici, and was a great reformer of the schools, from which he banished many futile and absurd questions. While yet a youth Moraes produced a translation of the Pincz or Table de Cebes. But religious enthusiasm arose far above all his literary aspirations, and pervaded all his actions. At the age of nineteen Moraes became a Jeronymite, when, his religious fervor being no longer controllable, in the year 1632 he attempted to follow the precedent of Origen. The crucifying pain inseparable from this self-mortification drew him from a shiek which brought a brother monk to his cell in time to give him effectual relief. In order to obtain a papal dispensation for his conduct, he set out for Rome, but fell into the sea, and was saved, according to his own account, by a miracle. Considering this accident as a warning not to proceed, he joined his friends at court, and lived thenceforward as a secular priest. After the death of his father he became a professor at Alcala, where he had, among others, Guerra, Chacon, Sanchoval, and the first Don Juan of Austria, among his pupils. He sustained the high literary credit of his family by his investigations into the antiquities of Spain. He also devoted himself to belles-lettres, and did much to cultivate among the Spanish of his day a taste for literature. His services were recognized at court, where he was made a prince of his order by Philip II., king of Spain. Moraes died in 1590. He was the author of several works on the secular as well as religious history and antiquities of Spain; but his extreme credulity greatly deteriorates the value of his writings. See Butterworth, Hist. of Spanish Lit. (see Index); Tichnor, Hist. of Spanish Lit. iii, 199.

Moraes, Juan Bautista, a Spanish moralist, was born at Montella, Andalusia, and flourished in the first half of the 17th century. Scarcely anything is known of his life, except what he himself states in his preface to his work On the Virtue of Christians as the author of Jardín de Suertes morales y civitas (Seville, 1616, 1680). See Antonio, Bibliotheca Hispánica nova, s. v.

Moraes, Luis de, a Spanish artist, noted for his paintings of sacred subjects, was born in Badajoz in 1608. Either from his constant choice of sacred subjects (less probably) from the nature of his works, he received the sobriquet of El Divino, "the Divine." His pictures were nearly all heads, generally of Christ or the Virgin; some authorities believe that there are no instances of his painting the figure at full length. His Ecce Homo and Mater Dolorosa are the best types of his painting. In spite of his humble beginnings, the prices he received for his works are said not to have been enough to compensate him for the great labor and time he spent upon them; and he lived in the greatest want until his old age, when he was supported by Philip II. His chief works are at Toledo, Avila, Burgos, and Granada. He died in Badajoz in 1656.

Morality, a term used for the theatrical representations made by the monks in the Middle Ages, designed to exhibit virtue and vice, so as to make the former look desirable, the latter detestable. This word is classed with two others of similar meaning—miracles and mysteries. See Mysteries.

Morality is that relation which human actions bear to a given rule of rectitude. Says Whately, "To lay down in their universal form the laws according to which the conduct of a free agent ought to be regulated, and to apply them to the different situations of human life, is the end of morality" (Lessons on Moral). It is the opposite of legality, as that expresses only conformity with justice, while morality is applied to the internal tendencies of human nature, and to the errors which it is the doctrine, in short, which treats of actions as right or wrong. It does not cover so vast a field as religion, but is, nevertheless, the outgrowth of it. "Morality," it has been aptly said, "is a shadowy conformity of our actions to the relations in which we stand to each other in civil society. Morality comprehends only a part of religion; but religion comprehends the whole of morality. Morality finds all its motives here below; religion fetches all its motives from above. The highest principle in social morals is a just regard to the rights of men; the first principle in religion is the fear of God." While religion, then, covers the whole life that lies in its present and future relations, morality confines itself virtually to the temporal, or better civil life. "Morality," says Corderie, "commences with and begins in the sacred distinction between thing and person. On this distinction all law, human and divine, is grounded" (Aids to Reflection, i, 265). "There are in the world," says Sewell, "two classes of objects, persons and things; and these are mutually related to each other. There are relations between persons and persons, and between things and things; and the peculiar distinctions of moral actions, moral characters, moral principles, moral habits, as contrasted with the intellect and other parts of man's nature, lies in this, that 'they always imply a relation between two persons, not between two things' (Christian Morals, p. 339). Now the Christian Church holds that so much of the glory of man's origin remains in him, that even when fastest from the light and grace of Christ's presence in the Church, he still possesses, which is derived from him—"the true light, which lighten every man that cometh into the world" (John i, 9). "Morality," argues Culverwell aptly, "is founded in the divine nature. It is an eternal ordinance made in the depth of God's infinite wisdom and counsel for regulating and governing the whole world, which yet
had not its binding virtue in respect of God himself, who has always the full and unreserved liberty of his own essence that it cannot bind itself" (Light of Nature). Hence a knowledge of good and evil, some sense of responsibility to God, and some capacity for practical virtue, may be possessed even by persons not Christians; those of the Sinaitic Law not much more so than the Jews in the reach of the Church, with its revelation of truth and its sacraments of grace. Of such St. Paul speaks in Rom. ii, 14; or at least his words respecting the Gentiles who had not the Jewish "law" may be fairly interpreted as extending also to those who have not the Christian law. They may be those who have been extended and heightened by grace, and may thus be "not far from the kingdom of God." To what extent such natural morality now exists (after eighteen centuries of Christianity) it is impossible to say; probably to a very small extent. In his epistle to the Romans, St. Paul clearly distinguishes between that conformity with the letter of the law springing from a Christian heart, and that external conformity prompted simply by a desire to evade the -dium or punishment of the transgressor. The latter the apostle does not recognise as true morality; the Conversation of Jesus to Christ's in its simple legality, and for want of a real inwardness of moral or better life, only an apparent morality. The εννοημενον ισευτα of the spirit of Christianity elicits; they want that life-giving spirit which is none other than the spirit of divine love, of the fullest, most, and truly unconditional surrender to God and his most holy purposes. The germ, the life or essence, of Christian morality is love, itself the principle of union in and with God, the fountain and original of all good. It is to Christian morality, then, that the highest standard and the noblest place must be assigned; indeed, it is Christian morality which must not only precede, but supercede all other systems of moralism. "The duties of morality are," says Coleridge, "the apostle instructs the believer in all, comprising them under the two heads of negative and positive: negative, to keep himself pure from the world; and positive, beneficence from loving-kindness—that is, love of his fellow-men (his kind) as himself. Last and highest come the spiritual, comprising all the truths, acts, and duties that have an especial reference to the timeless, the permanent, the eternal, to the sincere love of the true as truth, of the good as good, and of God as both in one. It comprehends the whole ascent from uprightness (morality, virtue, inward rectitude, good), to the religious and spiritual; to the acts and disciplines of mind, will, and affections that are requisite or conducive to the great design of our redemption from the form of the evil one, and of our second creation or birth in the divine image. It may be an additional aid to reflection to distinguish the three kinds severally, according to the faculty to which each corresponds, the part of our human nature which is more particularly its organ. Thus, the prudential corresponds to the sense and the understanding; the moral to the heart and the conscience; the spiritual to the will and the reason, that is, to the finite will reduced to harmony with an end in such a way as the reason, as a ray from that true light which is both reason and will, universal reason and will absolute" (Aids to Reflection, i, 265, also 22, 23). On the near coincidence of this scriptural division with the Platonic, see Prudence

Morals, a term usually employed to designate the aggregate of the moral principles of an individual or a community as evinced in its conduct in comparison with the acknowledged rules of morality. The various general relations of this subject are so fully discussed in the articles Ethics, Moral Law, etc., that we here bring together only some special distinctions. Those who head of duty, the fulfilment of which is the ultimate criterion of public and private morals.

Baumgarten defines duties to be actions which one is bound to perform, and Christian Augustus Crisius coincides with this opinion when he defines duty as the application of the principles of morality, a sort of subjective, and with Opitz, who calls it the inward knowledge of what one must do or abstain from doing in order to lead a religious life. Reinhard defines duty as the moral necessity of doing or not doing a certain thing, resulting from our perception of right (Systema christ. Mor. pt. ii, § 190). This is the view taken by the majority of German Catholic moralists (see Rieger, Christl. Moral, pt. i, § 124 sq.). This, however, considers only the outward part of duty, as manifested in action; its scope was afterwards enlarged by connecting it with the conscience (see Moral Sensor), which Crisius understands to be the inborn impulse by which we recognise the obligation of subjecting all our thoughts and actions to the will of God. Paley stands almost alone in making virtue consist in utility, and those who resolve it into "the fitness of things" both indirectly refer it to the will of God, who has ordained the constitution of the universe. All our duties to God are comprised in the expression, honor God (Walch), or, love God. For to fear God and keep his commandments is the whole duty of man (Eccles. xii, 13). It was already present as such in the O. T., but in the N. T. this is put in the first place, as the one important principle: unlimited love towards God, and to one's neighbour as the image of God, as well as of one's self (Matt. xxii, 37-40; Rom. xiii, 8-10; Deu. vi, 4-9; Lev. xix, 14, 17, 18, etc.). As the Kantian philosophy, abandoning the cognition of a thing per se, placed the power of truth entirely in the consciousness of obligation (categorical imperative), duty, as that commanded by it, as it stands in that subjective condition, is Will nothing, and do nothing which it cannot be lawful for entire mankind to do; or, as ye would that men should do to you, do ye also to them likewise (Matt. vii, 12; Luke vi, 31). The total submission to the categorical imperative arising from pure regard for the law is the highest morality: while that arising from love: Honor, as a satisfaction in it, is less pure, since the motive is akin to egotism. Thus morality resolved itself into the doctrine of law and duty, while previously it was considered as almost exclusively a question of good. Indeed, Paley made morality itself consist in seeking the highest good, a theory not far removed from the purer form of ancient Epicureanism. The modern philosophy, however, has justly repudiated this utilitarian text, and thrown the subject back for solution upon the deeper convictions of mankind as expressed in the instinctive discriminations of conscience. See also Moral Philoso- phy.

Morand, Sr., a Clugny monk, was born in Germany, and flourished in the 11th century. He was consecrated a bishop by Bishop Gundrindt, in France, and joined the Congregation of Clugny. Falling in with Hupo of Samur, a severe ascetic, Morand was en- listed in behalf of monasticism, and he preached in its
MORANDO
580
MORATA
favor wherever he went. He roamed all over France and Switzerland, resting as far as possible the former interest in monastic institutions, and creating new ones where they had never been. His austerity and piety secured for him a place in the list of saints; and it is claimed that miracles worked by him existed. See Vita S. Morandi in Biblioth. Clinicaeis, col. 501; Montalembert, Monks of the West, vol. iii (see Index).

Morando, Paolo, a Veronese painter, sometimes called Cavazzola, was born in 1491. He died young, and consequently left but few works to perpetuate his name; these, however, are of a high order of merit. Christ bearing his Cross, now in the gallery of Verona, is said to be by him; and one of his best compositions is on the subject which can be found among the old painters. Mrs. Jameson says: "This conception is one of the few which realize the scriptural and historical picture to the mind. Simon is here in his suitable character, and no superadded incident diverts the eye from the chief figure." See Mrs. Jameson and Ashtoke, Hist. of Our Lord (London, 1864, 2 vols. 8vo), ii. 118.

Morange, Bidion, a French theologian, was born at Paris about 1655, and was educated at the Sorbonne, where he received the doctorate. In 1660 he became canon of Lyons, and later vicar-general of that diocese. He died there in 1703. He wrote, "Libri de praedaa et brevis Analytica (Lyons, 1656, 8vo):" Primatus Ludwintiniae Apologeticius (1658, 8vo); Summa universae Theologiae Catheceticae (1670, 4 vols. 8vo). Morant, Philip, a British antiquary and divine, was born in the island of Jersey in 1700; was educated at Pembroke College, Oxford; then entered the sacred ministry, and became, first, rector of St. Mary's, Colchester, afterwards of Aldham, Essex. He died in 1778. Morant edited several works, and wrote a History of Colchester (London. 1746, fol.); also enlarged, and incorporated in a later work of his, Hist. and Antiquities of the County of Essex (1768, 2 vols.). He also wrote all the biographies marked with the letter C and the life of Stillington in the Biog. Brit. (1st ed. 17 vols. fol.). See Allibone, Dict. of Br. and Amer. Authors, ii. 119.

Morasthite (Heb. Morastith, מָרוֹשִׁית, gentile from Morasheth; Sept. Ἀνασαρχήν; Maspessa'v), a native of Meroes or Sinait-Gath (Jer. xxxvi, 18; Mic. i. 1). See MIEAN.

Morata, Olympia Fulvia, an Italian lady of great genius and learning, noted for her piety and faithful service to Italian Protestantism, and spoken of by the biographer of the duchess Renée as "a woman whose history may be pondered in silent compassion, yet in silent admiration—a saint so tried in life, so blessed in death," was born at Ferrara in 1526. Her father, preceptor to the young princes of Ferrara, sons of Alfonso I, observing her genius, took great pains in cultivating it; and when Olympia was called to court for the purpose of instructing the princes Anna d'Este, daughter of the duchess of Ferrara, and of herself studying belles-lettres of Ferrara, and of being a protégée of Ferrara, she was the tutelage of her father, she astonished the Italians by declaiming in Latin and Greek, explaining the paradoxes of Cicero, and answering any question that was put to her. The example of Renée de France, duchess of Ferrara, who was much interested in the religious controversies of the times, had a great influence upon Olympia's mind. Men like Jacques Amyot and Peter Martyr, Labadie, and Celius Calcagni were received at court, and formed a select circle. Calvin, who went in disguise from France to Italy to see her, brought her over to his opinions, and her court became the refuge of all those suspected of heresy. Peregrino Morata, Olympia's father, became himself a convert, but Olympia showed little inclination as yet for a devout, religious life. Her whole mind was taken up with her own literary works and the court gayeties. "If Olympia," says Young, the biographer of Palæarzio, "learned anything at court of true religion, she also found much to distract her attention. The extreme preciosity of her talents had early called forth her reasoning and reflective powers, but she herself owns that at this time she did not duly relish the sacred duties of a pious life, which were so necessary. She never brought her intellect revealed with greater delight in the mazes of human learning and philosophy." She wrote several essays at this time, the best known of which is a eulogy on Mucius Scévola. But the year 1548 brought a decided change. Her friend, the princess Anna of Ferrara, married the Elector to Lorraine, and shewed afterwards her father died. His death, and the ill-health of her mother, withdrew her from court, and she devoted herself to household affairs, the education of three sisters and a brother, and especially to spiritual contemplation and devotion. In communicating with her own heart she began to perceive her need, and from that moment resolved to live and die a follower of the Gospel. In the next hour of greatest happiness she made the acquaintance of a young German named Andrew Grunthler, who had studied medicine, and taken his doctor's degree at Ferrara. He was a Protestant, and the day when she was married to him (1549) she followed her father's example. Protestantism and Ferrara, then, precluded her from living in the world; she therefore left Ferrara, and, unprepared to depart at once with his bride, advanced to Germany to prepare the way for her, and over a year elapsed before he was ready to return for her. Together with her little brother and her husband she now left for Germany. They went to Schweinfurt, in Franconia, where he preached and buried himself, and they barely escaped with their lives. They suffered many hardships in consequence, until Grunthler in 1554 received a call to Heidelberg as professor of medicine. Now at last it was hoped that better days had come for poor Olympia, but the fearful hardships she had suffered during the siege of Schweinfurt had undermined her health. In December, 1554, she was taken sick, and never left her bed again. She died Oct. 25, 1555. A few months later her husband and brother died also. Several of her works were burned at Schweinfurt, but the remainder were collected and published at Basle in 1558 by Cellius Secundus Curio. They consist of orations, dialogues, letters, and translations, and are known as Olympia Fulvani Moratae, multieris omnium eruditorum Latini et Graeci, qua haberi poteramus, monumenta (Basle, 1558). They are distinguished for a deep religious conviction and great refinement of language and thought. The biographer, Dr. Morris Jones, of the Olympia Fulvia, her Orationes, 1850, in-English, Life of O. Morata, with a Historical Sketch of the Ref. in Italy (Edinb. 1854, 18mo); Turnbull, O. Morata, her Life and Times (Bost. 1846, 12mo); Mrs. Smith, Life, Times, and Writings of O. Morata; Some Memorials of Renée of France, Duchess of Ferrara (2d ed. Lond. 1859, 12mo), p. 62 sq.; Trollope, Decade of Italian Women, vol. ii; Colquhoun, Life in Italy and France in the Olden Time; Young, Life and Times of Palæarzio, ii, 90 sq.; McCre, Hist. of the Ref. in Italy, p. 54: Little's Living Age, March 18, 1852, p. 510. (J. H. W.)

Morata, Peregrino Fulvio, an Italian writer, noted as the father of the foregoing, and also for his defence of the Reformatory movement, which made him a Protestant, was born at Mantua near the close of the 15th century. During the early half of the 16th century he was professor of belles-lettres at the university of his native place, and later at Ferrara, where the fame of his literary talent had assumed a high value. He now taught not only in the high schools, but was also employed by duke Alphonso d'Este as preceptor of his two sons. He frequently appeared in the receptions at court, but he remained nevertheless an alien to the gayeties of its surroundings, and devoted himself largely to the service of his pious wife, Lucrezia. As a result of these studies, he brought out finally an exposition of the Lord's Prayer in 1526 (Esposizione dell' orazione Dominica della
MORAVIA
581
MORAVIAN BRETHREN

"Peter Noster"), and shortly after he published a book taking ground favorable to the Reformed opinions (see Calvinists, Opera, p. 156). He was on this account obliged to leave Ferrara in 1538, and only after a sixyears' stay abroad secured permission to return. He died in 1548. See Young, Life of Palestrina, ii, 96 sq.; Bonnet, Life of Lopez Moravia, p. 99 sq.

Moravia (German Mährer, Slav. Moraua), a northern province of the Austrian empire, especially interesting as being the chief seat of the Church of the United Brethren.

General Description.—Moravia, situated in 48° 40'—50° N. lat., and 15° 10'—28° 28' E. long., is bounded N. by Prussian and Austrian Silesia, E. by Hungary and Galicia, S. by Bohemia and Moravia, and contains in superficial area about 8555 square miles, with a population in 1882 of 1,997,897, divided as follows: 450,000 are Germans, upwards of a million and a quarter Slavonians, and 50,000 belonging to other nations. The Slavonians of Moravia are composed of Czechs and Poles, the former of whom are inferior to their brethren in Bohemia, being an incorrigibly lazy, dirty people. The Moravian Poles, although less industrious and cultivated than the Germans, are a physically well-developed, courageous, and enterprising people. Moravia is a very mountainous country, and except in the south, where are extensive plains, the level above the sea is about 800 feet. Not more than half of the territory is arable. The more elevated parts are not fertile, and the climate is severe; but in the mountain valleys and on the southern plains the soil is remarkably rich, and the temperature more genial than in other European countries lying in the same parallel. Moravia produces largely for export fine crops of grain, also hops, mustard, potatoes, clover-seed, beet-root; and in the south, maize, grapes, chestnuts, and many other of the less hardy fruits and vegetables. The breeding of cattle and sheep, and the making of cheese from sheep's milk are the most important branches of industry in the southern districts of the Hana (a plain famous for its fertility), horses are bred for exportation. Goose and fowls are reared in large numbers for the sake of their feathers, and the keeping of bees is conducted with great success. The mineral products, which include gold, silver, iron, salt, saltpetre, coal, graphite, whetstones, sulphur, vitriol, pipe-clay, marble, topazes, garnets, and other precious stones, have not been made as available as they might have been. Some of the mines have been known since the 8th century. No gold or silver has been extracted since the 16th century, and the iron and coal mines are but little worked. The productive industry of the country is the manufacture of linen and thread, which now enjoy a European reputation, and leather goods, cotton, flannels and other woolen fabrics. Brunn, the capital, is the chief emporium for the manufacturing trade, and Olmütz the principal cattle-market.

Religious and Educational.—Christianity was introduced among the Slavic nations as early as the reign of Charlemagne [see Slaves], but the conversions then made were only transitory. In 868 the Holy Scriptures, the preaching of the Gospel, and the service of the Christian religion as then practiced, were introduced to the Moravians in the Slavonic tongue by the Greek monks Cyrilus (Constantine) and Methodius, who became connected with Rome, but did not reline their peculiar Greek forms of worship. Methodius was consecrated at Rome archbishop of Moravia, and the Slavish forms of worship received the papal sanction (880), on the ground that they were "non-heretical and non-degenerate." The code was then translated and reprinted and distributed to the clergy by the archbishops and bishops of all nations. The efforts, however, to erect a distinct national Church met with continual opposition on the part of the German bishops, and finally, in 908, the Moravian kingdom was divided by the swords of the Hungarians and Bohemians. The Slavish ritual was kept up under these new rulers in only a few churches, and gradually the Romish practices were here the same as elsewhere (comp. Dobrovsky, Cyrill u. Methodius, der Slaven Apostel [1842]). The Reformation made some inroads into the country, but as conformity to the Romish worship was enforced by law, many of the people holding the doctrine of the Reformation had to meet secretly for worship, and as opportunity offered fled into the Protestant states of Germany. On this subject see especially the case with the Moravians (Brethren [q. v.]). The bulk of Moravia remained Romanists to this day, the Protestants only counting about 57,000, among whom the Lutherans and Reformed, who are the most numerous, have each a superintendent appointed by the state. There are also about 30,000 Jews, who, since 1848, have been freed from all oppressive restrictions. The people are divided into clerical and lay; the former, for instance, an archbishop, who resides at Olmütz, and a bishop, whose episcopal head-quarters are at Brunn. Both of these ecclesiastics are admitted to the provincial diet as members. The educational advantages of the country are exceptionally good. Until recently there was a university at Olmütz. There are now twelve Catholic gymnasia, besides numerous parish schools, and about ninety-nine per cent. of the children of proper age attend school.

History.—Moravia was anciently occupied by the Quadi, who, on their migration in the 5th century, were replaced by the Heruli; next by the Heruli and Longobardi, and finally by a colony of Slavonians, who, on their settlement in the country, took the name of Moravians, from the river Morava. charcoalmen, who brought the people under nominal subjection after they had spread themselves over a territory greater than the present Moravia, constrained their king, Samsoslav, to receive baptism. Moravia was made tributary to the German empire before the close of the century; but in 1029 it was incorporated with Bohemia, after having for a time been a prey to the incursive attacks of its Slavonic and Teutonic neighbors. At the close of the 14th century Moravia was erected into a magnavirate, and declared a fief of Bohemia, to be held from the crown by the younger branches of the royal house. On the death of Lewis II, at the battle of Mohacz, in 1526, Moravia, with all the other Bohemian lands, fell to Austria, in accordance with a pre-existant compact of succession between the royal houses. Since then it has shared the fortunes of the empire, and in 1849 was formally separated from Bohemia, and declared a distinct province and crown-land. See Dudlik, Mährern aligem. Gesch. (Brin, 1860—63, 4 vols. 8vo); Pilaret Morawitz, Moravian. Hist. Eccles. et Pol. (Brin, 1785 sq. 8 vols. 6to.).

Moravian Brethren, the designation of a body of Christians, will be considered under two heads.

I. The Ancient Moravian Brethren, or, more properly, "The Bohemian Brethren," an evangelical Church which flourished before the Reformation of the 16th century, which was overthrown in the beginning of the Thirty Years' War of Germany.

II. History.—John Huss (q. v.) was the precursor of the Brethren. They originated in that national Church of Bohemia into which the two factions of its followers, the Calixtines and the Taborites, were incorporated at the close of the Hussite War, and which was based upon the Compacta of Basle. These compacts were certain concessions, particularly the use of the cup in the Lord's Supper and of the vernacular in public worship, granted (1433) to the Bohemians by the council which met in that city. In 1466, some members of the Taborites at Prachatice organized the compacta of the national Church, and wished to further their own personal salvation, withdrew to a devastated and sparsely inhabited estate, called Lititz, on the eastern frontier, by permission of George Podiebrad, the regent of Bohemia, and through the intervention of John Rokyta, their priest. This exiled group had evidently inveighed against the degeneracy of the age, but lacked courage to inaugurate
reforms such as these parishioners longed for, although they entertained it to do so, and promised their support even to death. Their object in retiring to Litzitz was not to found a new sect, but to carry out, on the basis of the Articles of Prague, and of the Compacta of Bazel, the reformation begun by Huss, confining their work, however, to their own circle, and forming a society within the national Church, pledged to accept the Bible as the only rule of faith and practice, to that end the work was thenceforward to be endued with a new impetus, and to be conducted in a more decided spirit of discipline. Accordingly, in 1457, they adopted a formal declaration of principles, which was committed to the keeping and administration of twenty-eight elders. The association took the name of the "Brethren and Sisters of the Law of Christ." But as this title induced the belief that they were a national sect, however, it was changed into that of "The Brethren." At a later time the expressive name of "Unity of the Brethren" came into vogue, and was used indiscriminately both in its Bohemian and Latin forms, namely, Jednota Bratrstva, and Unitas Fratrum. The latter has remained the official denomination of the Moravians to the present day. At the head of the Brethren stood Gregory the Patriarch (q. v.); while Michael Bradacius (q. v.), and some other priests of the national Church, ministered to them in holy things. The association at Litzitz soon began to exercise a great influence throughout Bohemia. In 1460, elders were appointed in its principles, and received hundreds of awakened souls into its fellowship. The first persecution, which broke out in 1461, did not stop its growth; and in 1464, at a synod held in the open air, among the mountains of the domain of Reichenau, three of the twenty-eight elders were chosen to assume a more special management of its affairs. In the discharge of this duty they were guided by a document drawn up at that synod, and containing the doctrinal basis of the society, as well as rules for a holy life. This document, which is the oldest record of the Brethren extant, opens as follows: "We are, above all, agreed to continue, through grace, sound in the knowledge of the Church, and established in the righteousness which is of God, to maintain the bond of love among each other, and to have our hope in the living God. We will show this both in word and deed, assist each other in the spirit of love, live honestly, study to be humble, quiet, meek, sober, and patient, and thus to testify to others that we have in truth a sound faith, genuine love, and a sure and certain hope." This extract sets forth the tendency of the Brethren, to which they remained true throughout their history. The great object which they had in view was Christian life. They strove to be a body of believers who showed the purity of their lives in their conduct, and maintained the Scriptural discipline as an essential feature of a true Church. Although, in the course of time, they defined their doctrines in regular Confessions of Faith, they always made practical Christianity prominent, and required personal piety, and not merely an adhesion to a creed. For this reason we find that the Synod of Reichenau not only gave expression to this tendency, but also decided a grave question. The Brethren felt the necessity of separating entirely from the national Church, and of establishing a ministry of their own. Yet they were so anxious to avoid a schism, and to do nothing contrary to the will of God, that they spent several years in debating this step, and, in view of it, frequently appointed special days of fasting and prayer. The result to which they were led was to leave the decision to the Lord, by the use of the lot. This directed the Brethren to organize a Church of their own. Three years more were passed in praying to God for his blessing; but this did not satisfy such a devoted people as the village of Lhota, on the domain of Reichenau, three men, Matthias of Kunvalde, Thomas of Preloce, and Elias of Chrenovic, were appointed to the ministry, again by the lot. For the particulars, see MATTHIAS OF KUNVALDE. Thereupon the subject of their ordination was discussed. The synod believed that presbyterial ordination had been practiced in the times of the apostles, but recognized the episcopacy as a very ancient institution. It was deemed important, moreover, to secure a ministry whose validity both the Roman Catholics and the national Church would have to acknowledge. On the other hand, a primitive usage must not thereby be condemned. It was therefore determined to remain true both to the practice of the apostolical Church and to that of their predecessors, to that end the question was referred to three of the latter, Michael Bradacius and two others, were sent to a colony of Waldenses, who were living on the confines of Austria, and who had secured the episcopacy. For a historical account of the Waldensians, see MICHAEL BRADACIU. The Waldensian bishops consecrated the three delegates to the episcopacy, who "returned to their own with joy," as the old record says. Another synod was called, at which they, first of all, re-ordained Matthias, Thomas, and Elias to the priesthood, and then consecrated Matthias a bishop. A well-merited ecclesiastical government was instituted, and the Church soon spread into every part of Bohemia and Moravia. But it had to contend with two evils. The one threatened it from within. This was an extravagant tendency to press the discipline to anti-scriptural extremes. It occasioned disputes which continued for fourteen years, and was finally settled in the interests of the liberal party. For an account of these disputes, as well as of the exploratory journeys of the Brethren, see GREGORY, LUKE OF PRAGUE, and MATTHIAS OF KUNVALDE. The other evil approached from without. Two terrible persecutions occurred (1469 and 1598). The Roman Catholics and the national Church united in a bloody determination to root out the Brethren from the land. Imprisonment, confiscation, tortures, and death were the means employed. Many of the Brethren suffered martyrdom. But their blood was the seed of the Church. In both instances, the persecution gradually came to an end, and the Unitas Fratrum renewed its strength and increased its numbers. A full history of these and subsequent persecutions is found in the Historia Persecutionum Ecclesiae Bohemiae, published anonymously in 1648. This work was written by Amon Comenius (q. v.) and other exiled ministers of the Brethren, and has been translated into many languages. The English version is very rare. It came out in London in 1650, and was entitled "The History of the Bohemian Persecution." The latest German version is by Czerwenka, with notes: Die Persekutionen in Böhmen, (Götter, 1869). We can state here only the beginning. In 1469, the Church of the Brethren was prospering greatly. It counted 400 parishes; had at least 200,000 members, among whom were some of the noblest and most influential families of the realm; used a hymn-book and catechism of its own; had a confession of Faith; and employed two printing-presses on which it scattered Bohemian Bibles and evangelical books throughout the land. Hence the Brethren deservedly bear the name of the "Reformers before the Reformation." This position, however, did not prevent them from cordially fraternizing with the movement which Luther inaugurated. They corresponded with him, and sent several deputations to Wittenberg. It is true a personal estrangement between him and bishop Luke of Prague (q. v.) put an end for a time to this friendly intercourse; but it was soon resumed, and extended to the Swiss Reformers. Such fellowship was mutually beneficial. It purified the doctrinal system of the Brethren, who dropped some doctrines of their ancestors. Thus they better defined others more clearly. It gave the Reformers new ideas with regard to a scriptural discipline, and taught them the importance of union among themselves. These were the two points which the Brethren steadfastly urged in all their negotiations with other Protestants. Touching the first, they entreated Luther to apply him-
for a reform of Christian life, and not merely of doctrine; and they gave to Calvin some important principles, which he subsequently introduced in his discipline.

In 1561, the Brethren met in Ratisbona, and in a document dated 18 October, they acceded to the Reformation. Luther, bishop Augusta warned him, almost like a prophet, of the evil which would result in the Protestant Church if the discipline were neglected. This prediction was fulfilled by the deadly orthodoxy into which the Church was subsequently petrified in Germany, and by the Socinians which ate out the vitals of that in Poland. Touching the second point, the Brethren were a standing protest against the controversies which rent Protestantism; they strove to promote peace, and succeeded in bringing about an alliance among the Polish Protestants at Sandomir, where in 1564 a league, known as the Lutherans and Reformed, was formed conjointly issued the celebrated Consensus Sandomiriensis. The Brethren had established themselves in Poland in 1549, in consequence of the fourth great persecution which broke upon them in the reign of Ferdinand I, who falsely accused the Bohemian League, which had been against him during the Smalcald War, to their influence. In the course of this persecution a large number of them were banished from Bohemia and emigrated to East Prussia. Thence came George Israel to preach the Gospel in Poland, and met with such success that at the General Synod of Silesia, held in 1564, he was consecrated as the integral part of the Uniat Fratrum. During the reign of Maximilian II (1564-1576) the Brethren enjoyed peace, and united with the Lutherans and Reformed in the presentation of the Confessio Bohemica to the monarch (1578). His successor, Rudolph II, was constrained by his barons to grant a charter which established religious liberty in Bohemia and Moravia (1609). An Evangelical Consistory was formed at Prague, in which body the Brethren were represented by one of their bishops. They were now a legally acknowledged Church. But the Bohemian revolution in 1618, caused by the accession of Ferdinand II, a bigot Romanist, to the throne, brought about a change in the religious affairs of the kingdom. The Protestants and their rival king, Frederick of the Palatinate, were totally defeated at the battle of the White Mountain, near Prague, in 1620; the Bohemian revolution developed into a European war of thirty terrible years; and Bohemia and Moravia fell wholly into the power of the Roman Catholic Church. In 1621, Ferdinand II began the so-called "anti-Reformation" in those countries, after having executed a number of the leading Protestant nobles. Commissioners, accompanied by Jesuits and soldiers, were sent from place to place to force the inhabitants to embrace Roman Catholicism. Thousands died of disease, and others were banished or exiled. Whole families emigrated; the rest were driven into an outward subjection to the Catholic faith. The Uniat Fratrum, as well as the Lutheran and Reformed churches, were swept from the kingdom (1627). But the Brethren reappeared as a Church in exile. The contingent which they furnished to the emigration was, in proportion to the whole number of members in each body, three or four times larger than that either of the Lutherans or of the Reformed. About one hundred new parishes were organized, chiefly in Prussia, Hungary, and Poland; and the executive council which governed the Church was set up at Lissa, in the country last named. The hope of returning to Bohemia and Moravia at the close of the Thirty Years War was generally entertained by the Brethren; but the Peace of Westphalia (1648) painfully unwaited them. Their native land was excluded from the benefits of religious liberty. Ferdinand III, who succeeded his father, banished all Protestants at Lissa was broken up (1656) in the war between Poland and Sweden. The members of the council scattered; the Polish parishes united with the Uniat Church; while some sort of a superstition over the rest was kept up by bishop Amos Comenius (q, v), who had found an asylum at Amsterdam. This eminent
the apostolic writings, were explained; while the evening was devoted to the reading of the Bible in order, with instructive remarks. Throughout the summer, the young were taught the Catechism at noon. The Holy Communion was celebrated four or five times a year, but could be held more frequently. Confirmation took place generally at the time of the bishop's annual visitation. The principal festivals of the ecclesiastical year were observed with great dedication, fasting and almsgiving being enjoined. There were three degrees of discipline. Private admonition and reproof constituted the first, public reproof and suspension from the Lord's Supper the second, and total exclusion from the Church the third. The official account of the constitution and discipline of the Brethren was in the following genera and principles: "There are in Christianity some things essential (essentialia), some things auxiliarial (auxiliarialia), and some things accidental (accidentalia). Essentialia are those in which the salvation of man is immediately placed," i.e., cardinal doctrines: "auxiliarialia are means of grace, the Word, the keys, and the sacraments; accidentalia are the ceremonies and external rites of religion." For a more thorough study of this subject, consult Lassiti Historiae Origine et Rubus Gestis Fratrum Bohemici- rum, Liber Veteris, edited by Comenius in 1649, and containing a full description of the constitution and discipline—very rare work; J. A. Comenii Ecclesiae Fratrum Bohemici Romanae Historiae Libri, quatuor, libri Ordo Et Disciplinae Ecclesiasticae (republised at Halle in 1702, by Buddeus); Köpen, Kirchenordnung u. Disciplin der Hussiten. B. Kirche in B. u. M. (Leip- zig, 1845); Seifert, Church Constitution of the Boh. and Morav. Brethren, the original Latin, with a Translation and Notes (London 1862).

III. Schools and Literary Activity.—The Brethren devoted themselves to education. Their earliest schools were found in the parsonages of the priests. Many of these, instead of families, had classes of young acolytes living with them, whom they trained for the ministry. Next were instituted parochial schools, in which a thorough elementary education was given, including Latin, and which were frequented by large numbers of pupils not connected with the Church. In 1574 a classical school or college, with professor Earam Rüdinger, from Wittenberg, as its rector, was founded at Eibenschütz, in Moravia; soon after another at Messerbach, in the same country; and in 1585 a third at Lissa, in Poland. Of this last Amos Comenius subsequently became the rector. These colleges were attended by many young nobles, not excepting such as were of the Catholic faith. In 1585 three theological seminaries were opened at Jesenius, at Brno, and at Lissa and Eibenschütz, in Moravia. The training of acolytes in the parsonages was, however, not given up. By the side of such efforts to promote education may well be put the literary activity of the Brethren. This was extraordinary, far surpassing that of the national and Roman Catholic Churches, and competing even with that of the Reformers. The Unitas Fratrum had four publication offices: three in Bohemia, the first established in 1500, and one in Poland. From these offices, and from several public presses, which were often used, came forth a multitude of publications in Bohemian, Polish, German, and Latin, comprising the Holy Scriptures, hymn-books, catechisms, confessions of faith, exegetical and doctrinal works, books and tracts of a devotional character, polemical writings, and in the time of Comenius school-books, didactic works, and philosophical treatises. In addition to this prolific author, whose works numbered over ninety, the principal writers were: Luke of Prague (eight), and others (twelve) (two of them Bohemian Grammar, still in use), L. Renz, Lexer, Turnovius, Ephraim, Aristo, Rybinski, etc. Their Latin diction was often rough, but their Bohemian style pure, elegant, and forcible. In this respect they reached a standard which has never been surpassed. Excluding the writings of Comenius, the literature of the Brethren was mostly lost in the anti-Reformation, when evangelical books of every kind were committed to the flames. The most important of those works which have been preserved are the Kralie Bible (q.v.), the catechisms, the confessions of faith, and the hymn-books. The first Catechism in Bohemian appeared in 1505; the second, in Bohemian and German, in 1522; republished by Zeeschwitz in 1863, translated into English in 1869. In 1524 the first prayer book in German, by J. Gyrck, in 1544 and 1545; the fourth, the "Greater Cate- chism," in Latin, in 1616; the fifth, the "Shorter Cate- chism," in German and Polish; and the sixth, the Catechism of Comenius, in German, in 1611. Several others are mentioned, of which, however, little is known, except that one of them was a tetraglot—in Greek, Latin, Bohemian, and Polish—by G. Ruck. There were twelve different confessions of faith, in Bohemian, German, Latin, and Polish. Gindely counts up thirty-four, but of these the majority were merely new editions of the same Confession. The most important are, the Confession of 1585, printed in German at Wittenberg, prefixed by Luther, presented to the margrave of Brandenburg—very rare, a copy in the Bohemian Museum at Prague; the Confession of 1585, in Latin, with a historical introduction, presented by a deputation of bishops and nobles to Ferdinand II at Vi- enna, found in Niemeyer's Collectio, p. 717–818, pub- lished at Frankfort in 1689; the Confession of 1638, with a Latin version of the Confession of 1585, both in one volume, under the supervision of Luther, who sup- plied the work with a preface, found in Lydii Waldensis, ii, 944, etc.; and the Confession of 1578, in Latin and German, based upon all the previous confessions, giving the true doctrine of the Church, embracing a histo- rical proemium by Rüdinger, and printed at Witten- berg, under the direction of the theological faculty of the university, the Latin Confession found in Lydii Waldensis, iii, 90–226, and the German in Köcher, p. 161–266. The hymnology of the Brethren was one of their chief means by which they used for spreading the gos- pel and promoting spirituality. They gave to the na- tional fondness for song a sacred direction. Their hymns were doctrinal; the German versification was hard, the Bohemian soft and smooth; the tunes, which were printed out in the hymn-books, were in part the old Gregorian, in part borrowed from the German, and in part popular melodies adapted. In spite of their rough- ness, the German hymns, whose simplicity and devo- tion, fervor and loving spirit, Herder highly comments, found favor in the churches of the Reformation, while the Bohemian expressed, says Chlumecky, "the deep piety of the people and the pleasures of the national life, showing forth the Slavonic ideal of a sanctified mind." The first Bohemian Hymn-book appeared in 1604; the second, which was the masterpiece of the Brethren's hymnology, containing 748 hymns, in 1681. This latter passed through a number of editions. The first German Hymn-book (in 1511; the second in 1548; the third and best in 1566. This was dedicated to Maximilian II, contained 411 hymns, and was frequently reprinted. Polish hymn-books came out in 1554 and 1569.

IV. Doctrines. — For an exposition of the cardinal views of the Christian faith, as taught by the Brethren, the reader is referred to the works cited below. Three doctrines agreed, in the main, with those of the Re- formers. Gindely (R. C.), Zeeschwitz (Luth.), and some other writers, try to show that the Unitas Fra- trum did not hold to justification by faith. Gindely asserts that its stand-point in this respect was altogether Reformist. But this is disputed by the Brethren, although some of the private and polemical writings of Luke of Prague produce such an impression. In order to promote holy living, the Brethren strongly insisted on good works; but they taught that men are saved by faith, which they never understood in the Roman sense, and they utterly rejected an opus operatum. In their
MORAVIAN BRETHREN

called Hermuth, or “The Watch of the Lord,” to which
godly men from various parts of Germany were soon
attracted, so that its population rapidly increased. In
the midst of this colony the Church of the Brethren
was renewed, through the introduction of the ancient
discipline, preserved in the Ratio Discipline of Amos Co-
monis, and through the transfer of the venerable episco-
pal see, with the diocesan arms, from Ebrach to
contra spem, even after the ancient Church, as a visible
organization, had ceased to exist. This transfer was
made at Berlin, March 13, 1755, on which day David
Nitzschmann was consecrated as the first bishop of the
Renewed Church, by Daniel Ernst Jablonski and Chris-
Christian Strikovius, the two surviving bishops of the ancient
line.

In considering this renewal, two points are important.
First, it was not a scheme of man, but altogether a
work of God. Hence it bears a reality, and assumes its
place in history with an authority, for both of which we
would look in vain had a mere human plan been car-
ried out.

When Zinzendorf offered his estate as a ref-
uge for the Brethren, he had not the remotest idea
of renewing their Church, of which he knew little or noth-
thing. Long before they came to his domain his aims
in the interests of the Gospel had received an entirely
different turn. He saw in the Pietistic movement an
opportunity for the Moravians themselves, when they began to em-
igrate, agree to reorganize in some other land. They
left the issue of their flight in the hands of God. It
was only by degrees that both parties were led to un-
derstand the divine will. The failure of his own plans,
and the conversion of the people beyond his control, last in-
duced Zinzendorf to identify himself with the Brethren,
and to labor for the resuscitation of their Church; while the
gradual increase of their number at Hermuth, and the
opportunity which they there had to consult and to
tell each other of the pious hopes of their fathers,
gave them courage to maintain their independence, and to
persevere in the work of which this Jesus is the Christ. This
renewal involved a union of the German element of piet-
ism with the Slavonic element of the ancient Breth-
en's Church. Thus arose some principles which were
not found in the latter, and a polity of exclusivism that
gave a peculiar tendency for more than a century to the
Moravians of the modern period. Zinzendorf was a
Lutheran by birth, education, and conviction. He was
devoted to the system of Spener, who had been one of his
sponsors at his baptism, and especially to the pro-
ject of establishing “little churches in the Church”
(ecclesiae in ecclesiis), in other words, unions or associa-
tions of converted persons within a regular parish, for
the purpose of personal edification. Hence the great
aim which shaped his course was not to interfere with
the State Church, but to develop Spener's idea in such
a way that the Brethren would constitute, on the one
hand, an independent Church, and yet, on the other, a
union of believers within the ecclesiastical establish-
ments of the various countries in which they might settle.
Accordingly, wherever they spread, exclusive
towns were founded, in which religion controlled not
only spiritual, but also social and industrial interests;
from which the vices and follies of the world were ban-
ished, and where none but Brethren were allowed to
hold real estate. That the Church could not, with
such a system, enlarge its borders to any great extent in
its home-field is evident. That its avowed purpose was
to remain small is equally clear. The Moravian ele-
ment, indeed, which drew its life from the old "Unna
Estramus," struggled for a time to gain free scope and
expand. But Zinzendorf's views prevailed in the end,
and were consistently carried out. Here and there Mor-
avian villages were planned, as a haven in Christendom.
Such villages were to know nothing of a mere nominal
Church-membership. All their inhabitants were to be true
Christians, i.e., to be secure in their baptism, to cultivate
holiness, to foster holiness and love, to show forth a guile-
less spirit and a beautiful brotherhood. This constituted
Zinzendorf's ideal, which was crowned with wonderful
success.

At the time of Zinzendorf's death (1760), the Breth-
ren were established in most of the Protestant states of
Germany, in Holland, Great Britain, and North Amer-
ica, and after his decease they spread to Russia, Den-
mark, Sweden, and other lands. All over the world they were
represented by exclusive settlements; in Great Britain and
America they had, besides, a number of churches in
which their peculiar system did not prevail. The various
governments granted them liberal concessions, and
made them independent of the State Church; the Parlia-
ment of Great Britain, with the sanction of the arch-
bishop of the bench of bishops, acknowledged them in 1749 as
"an ancient episcopal Church," and passed an act en-
couraging them to settle in the North American colo-
nies. On the part of the theologians of the day, how-
ever, the same fraternal spirit was not always manifest-
ed. Lutheran divines, especially, began to publish bit-
ter attacks upon the Brethren. That these, in this early
period of their history, gave just cause of offence, at least
to some extent, cannot be denied. In the first place, the
controlling influence of the Church was carried to un-
reasonable extremes, particularly as regards the sacred
ordination of ministers and of such of the people as
were interfered with. In order to educate a chosen gen-
eration for work in the kingdom of God, the Church un-
dertook the training of the children almost to the exclu-
sion of parental rule. In the second place, about the year
1749 there began to appear in the churches of Middle
Germany a spirit of fanaticism, which spread to some other
Moravian towns on the Continent, and even to Great
Britain. Those in America were not affected. It was
a fanaticism which grew out of a one-sided view of the
relation of believers to Christ. The Brethren spoke of
him in a fanciful and antiscrupular style. A new
religious phraseology, unwarranted by the Bible, gained
ground. The more one threw into the name of Jesus, the
more one was justified. The wound in his side, were apostrophized in the most
extravagant terms. Images were used more sensuously
than anything found in the Song of Solomon. Hymns
abounded that poured forth puerilities and sentimental
nonsense like a flood. This state of affairs, which in
Moravian history is designated "the moravizing,"
continued for about five years, reaching its climax in
1749. When Zinzendorf and his coadjutors awoke to a
sense of the danger which was threatening the Church,
they adopted the most energetic measures to bring back
the fanatics to the true faith. By the blessing of God
they were successful, and the Church, for a time at least,
regained its original doctrine and scriptural practice. This is an experience
without a parallel in ecclesiastical history, and shows
how firmly it was founded upon Christ as its chief cor-
ner-stone. This, too, is the sufficient answer to those
assaults which were then made upon it by Rinitius, by
the author of The Moravians Distected, and by a legion
of other writers, whose publications have been collected
by the librarian of the archives at Hermuth, where they
fill up a large book-case, and are examined as li-
iterary curiosities by the visitor of the present
day.

The best evidence of the entire suppression of fanat-
cism is the fact that the Moravian people, subsequent
to 1750, not only continued to be centres of a
widely spread influence for good, but also exercised such
influence in an ever-increasing degree throughout the
world. However exclusive their system, they were not
market-places in which the people stood idle all the day;
on the contrary, there were various ways in which they
connected with the Moravian Church; they originated a
vast home missionary work, which will be described be-
low, under the head of "Diaspora;" and they sent out
so large an army of foreign missionaries, that perhaps no
body else amongst the Moravians are recognised as the
standard-bearers in the foreign missionary work of mod-
ern times.

Since the beginning of the present century various
modifications have been introduced in the Church, es-
specially such as set aside any undue interference on its
part with the rights of the family. The General Synod
of 1857 undertook a thorough revision of the Constitu-
tion, on the basis of local independence in the three
provinces of the Unitas Fratrum.

II. Moravian Towns.—There still exist fifteen exclu-
sively Moravian settlements on the Continent of Europe,
and two in North America. All the Moravian towns
are divided into seven classes, called "choirs," from
the Greek χοαριος. These classes are: the married
children, the widowed, the unmarried men, the unmar-
rried women, the boys, the girls, and the little children.

Each class is committed to the supervision of an elder.
Growing out of this system, we find in every Moravian
town a Brethren's, a Sisters', and a Widows' House.

In a Brethren's House, unmarried men live together and
carry on trade, the profits of which go to support the
establishment, as also the enterprises of the Church in
general. A Sisters' House is inhabited by unmarried
women who maintain themselves by work suited to their
sex. In each house there is a prayer-house, where
daily religious services are held. A common kitchen
supplies the inmates with their meals. There is noth-
ing monastic in the principles underlying these estab-
lishments, or in the regulations by which they are gov-
erned. The inmates are bound by no vow, and can
leave at their option. A Widows' House is a home for
widows, supplying them with all the comforts which
they need at moderate charges, and enabling the poor-
est to live in a respectable manner. Each house has a
spiritual and a temporal superintendent. The settle-
ments in general are governed by two boards: the one,
called the "Elders' Conference," with the senior pastor
at its head, attends to the spiritual affairs: the other,
called the "Board of Overseers," with the "warden" as
its president, to financial and municipal matters.

Business of importance, a general meeting of the adult
male members is convened. These towns at present
count among their inhabitants not a few who are not
members of the Moravian Church. Such residents, un-
til recently, were not permitted to own real estate. This
fundamental principle is now undergoing a change which
will, without doubt, gradually lead to the abol-
bition of the entire system of exclusionism.

III. Moravian America.—The Moravians settled in
Georgia in 1735, but left that colony in 1740, on account of the
war which had broken out with Spain. In the following year they founded Bethlehem,
and subsequently Nazareth, in Pennsylvania. These
towns, together with several smaller settlements, not
only adopted exclusive principles, but also instituted a
communion of labor. "The lands were the property of
the Church, and the farms and various departments of
mechanical industry were stocked by it and worked for
its benefit. In return, the Church provided the in-
habits with all the necessities of life. Whoever had
private means, retained them. There was no common
treasury, such as we find among the primitive Chris-
tians." This peculiar social system, which bore the
name of "Economy," and which has given rise to the
erroneous idea that there prevailed at one time a commu-
nity of goods among the Moravians, existed for twenty
years. It was abolished in 1812. Each member of the "Economy" was pledged to "devote his
time and powers in whatever direction they could be
most advantageously applied for the spread of the Gos-
pel." Hence, while there proceeded from the Moravian
settlements an unbroken succession of itinerants, who
traversed the colonies and the Indian country in every
direction, preaching Christ Jesus and him crucified, they
labored at home a body of farmers and mechanics in or-
der to maintain this extensive work under the abro-
gation of the "Economy," the Church for eighty years
continued to uphold its foreign exclusive policy. It is
true there were a number of organizations not exclu-
sive, but these were looked upon as of secondary im-
portance, and were characterized as mere "city and
countryside congregations." Consequently the Moravians
of the United States could expand as little as their
brethren in Europe. From 1844 to 1856, however, the
old system was gradually relinquished, and has now
cesscd to exist. There no longer are any Moravian
towns in this country. The American Moravian Church
now stands on the same footing as the other Protestant
denominations, the members of which are subject to the
policy of extension. In the last twenty years it has nearly
doubled its membership, and flourished in other re-
pects.

IV. The Constitution.—The Unitas Fratrum is dis-
tributed into three provinces, the German, British, and
American, which are independent of one another in
affairs, but form one organic whole in regard to the funda-
mental principles of doctrine, discipline, and ritual, as
also in carrying on the work of foreign missions. Hence
we find a provincial and a general government. Each
province has a Provincial Synod, which elects from time
to time its officers; one of the bishops is appointed by the
"Provincial Elders' Conference," to administer the
government in the interval between the synods. To
this board is committed the power of appointing the
ministers to their several parishes. It is responsible to
the synod. The Provincial Board of the American
Province consists of three members, has its seat at Beth-
lehem, Pa., and is elected every six years. The Amer-
ican Provincial Synod, composed of all ordained minis-
ters and of lay delegates elected by the churches, meets
triennially; and the province is divided into four dis-
tricts, in each of which a District Synod is annually
held. Every ten or twelve years a General Synod is
held, at which the whole Unitas Fratrum is convened at Herrnhut, in Saxony. It consists of nine delegates from each prov-
ince, elected by the Provincial Synod; of representa-
tives of the foreign missions; and of such other members
as are entitled to a seat by virtue of their office. This
synod elects a board of twelve bishops and other min-
isters, who form the "Sisters' Synod," which reduces the
work of each province so far as general prin-
ciples come into question, and superintends the foreign
missionary work. At the present time the same Con-
ference acts as the Provincial Board of the German
Province. It has its seat in the castle of Beltschdorf,
the former residence of Count Zinzendorf.

V. Doctrines.—The Renewed Moravian Church
does not, as was the case in the ancient Church of the Breth-
ren, set forth its doctrines in a formal confession of faith,
but does it bind the consciences of its members to any
which are not essential to salvation. Such essential
doctrines, however, it publishes in its Catechism, its Eas-
ter-morning Litany, and its Synodical Results, or code
of statutes, drawn up and published by each General
Synod. From this latter work, as issued by the Synod of
1869, we quote the following extract:

"The points of doctrine which we deem most essential
to salvation are:

1. The doctrine of the total depravity of human na-
ture: that there is no health in man, and that the fall
ab-
duced him to the state of sin.

2. The doctrine of the love of God the Father, who has
choosen us before the foundation of the world, and
so loved the world that he gave his only-begotten
Son, that whosoever believeth in him should not perish,
but have everlasting life. Each believer has this
faith.

3. The doctrine of the real godhead and the real

4. The doctrine of the atonement and satisfaction
of Jesus Christ for us: that he was delivered for our
forges, and was raised again for our justification; and
that in his merits alone we find forgiveness of sins and peace with God.

8. The doctrine of the Holy Ghost, and the operations of his grace: that it is he who works in us the knowledge of God, faith in Jesus, and the witness that we are children of God.

9. The doctrine of the fruits of faith: that faith must manifest itself in the life of a willing obedience to the commandments of God, prompted by love and gratitude to him who died for us.

When you read these fundamental articles of faith, the great theme of our preaching is Jesus Christ, in whom we have the grace of the Lord, the love of the Father, and the glory of the Holy Spirit. Rejoicing in this, we call it the main calling of the Brethren's Church to proclaim the Lord's death, and to point to him, as made of God into the high priest of our profession, the wisdom, and righteousness, and sanctification, and redemption, in Christ Jesus in fatherly love."

An authorized manual of doctrine is bishop Spangenberg's "Exposition of Christian Doctrine as taught in the Church of the U.B. (Lond. 1784);" a systematic work for theologians, although not authorized by the synod, is "Evangelische Glaubenslehre nach Schrift und Erhebung" (Gotha, 1808), by Dr. Pilt, president of the German theological seminary. See also Zinzendorf's "Theologie" (Gotha, 1807-79, 3 vols), by the same author.

VI. Ministry, Ritual, and Usages. — The ministry consists of bishops, priests, and deacons. The episcopal office is not provincial, but represents the entire Unitas Fratrum. Hence bishops have an official seat, not merely in the synods of the provinces in which they are stationed, but also in the General Synod; hence, too, they can be appointed only by this body, or by the Unitas Fratrum, and not by any provincial or local synod. The province has secured the right of nomination. From all this it is evident that the Moravian episcopacy is not diocesan, and that bishops are not rulers of the Church ex officio, as was the case among the ancient Brethren.

They are, however, almost invariably connected with the government by election at the "Uniter's Elder's" conference, or to the Provincial Councils. The president of the former is always a bishop; the president of the latter is, as a general thing, the same. The contrary is the exception. In the episcopate is vested exclusively the power of ordaining; it constitutes, moreover, a body of men whose duty it is to look to the welfare of the entire Unitas Fratrum, in all its provinces and missions, and especially to bear it on their hearts in unceasing prayer before God. At present there are eleven bishops in active service: four in America, two in England, and five in Germany. Of these, seven are members of the Uniter's Elder.

The ritual is liturgical in its character. A Litany is used every Sunday morning; free prayer is allowed in connection with the litany, and at other times. There are prescribed forms for baptism, the Lord's Supper, confirmation, ordination, marriage, and the burial of the dead. The services are performed for public, weekly, and Sunday schools; liturgical services for the various festivals of the ecclesiastical year, such as Advent, Christmas, Epiphany, etc., which are all observed; and a particular Litany for Easter morning, prayed annually at sunrise, and, wherever practicable, amid the graces of the service, is observed as a day commemorating important events in Moravian history, and in those churches in which the division of the membership into "choirs" has been retained, which is the case not only in the exclusive settlements, each church observing the annual day of praise and covenanting, the festival closing with the Holy Communion. "Love-feasts" are held, in imitation of the ancient "agape," preparatory to the Lord's Supper, and on other occasions.

At all liturgical services sacred music forms a prominent feature. Foot-washing (pedilavium) was formerly practiced on certain occasions within the limited circles of some of the "choirs," but has been universally discontinued since the beginning of the present century. The statement in this "Cyclopedia," vol. iv, p. 616, taken from Herzog's "Real-Encyklopädie," iv, 680, that the Moravians still practice foot-washing, is therefore incorrect.

At one time the lot was employed in the appointment of ministers, and in connection with marriages. Its use in the former case has been greatly restricted, and is left to the discretion of each provincial board. In the American Church it is scarcely ever resorted to, except when a man is being considered for an appointment, or when its use is desired for any other reason.

Touching marriages by lot, they were abolished, as a rule, by the General Synod of 1818. Since that time they have been almost unknown in the American Province. This usage, which has been so generally misunderstood and ridiculed outside of the Church, was a legitimate result of the conditions of the age and of the relations of its members, and constituted, moreover, a wonderful example of the childlike faith of the early Moravians. They gave themselves entirely into the hands of God. He was to lead them in all respects.

In view of the loose ideas that prevailed in our day with regard to the marriage contract, an intelligent mind cannot but admire such a spirit. That God did not put the confidence of the Brethren to shame is evident from the results of this practice. While it continued, there were fewer unhappy marriages among them than among the same number of people in other denomination of Christians. This is a well-known fact, which can be established by any statistics. Not a single marriage has been annulled. Without going into the details of this usage, we will merely add that any woman was at liberty to reject an offer of marriage even when sanctioned by the lot."

VII. Schools and Missions. — The Moravians have 35 flourishing boarding-schools: 17 in the German Province, 14 in the British, and 4 in the American. They are intended for young people not connected with the Church, and educate annually about 2500 pupils of both sexes. The schools in the American Province are the following: Moravian Seminary for Young Ladies, at Bethlehem, Pa., founded in 1753 (200 pupils); Nazareth Hall, for boys, at Nazareth, Pa., founded in 1785 (250 pupils); Linden Hall, at Lititz, Pa., founded in 1774 (75 pupils); Salem Female Academy, at Salem, N. C., founded in 1802 (200 pupils); Hope Academy, for girls, founded in 1806 (75 pupils). This province, moreover, has a flourishing theological seminary, with a classical department, at Bethlehem. It was founded in 1807; re-organized in 1858. The British theological seminary is located at Fulneck, Yorkshire, England; and the German seminary at Gnadenfeld, in Silicia. The German Province has a prosperous college at Nasky, in Prussia. The Moravian missions have been active for nearly ten years after the first house had been built at Herrnhut, and when that settlement counted but 600 inhabitants. Leonard Dober and David Nitschmann were the pioneers, and established the first mission among the negro slaves of St. Thomas. Since that time the work has been extended until it now embraces 110 missions at home and abroad, in 20 languages. The following missions proved unsuccessful: Lapland (1874-85); among the Samoyedes, on the Arctic Ocean (1737-88); Ceylon (1788-91); Algiers (1740); Guinea, West Africa (1737-41, and 1767-70); Persia (1747-50); Egypt (1736-89); East Indies (1796-98); Ceylon, Nova Scotia (1829-1830); Demerara, South America (1835-40). At the present time the work embraces the following fields, called "Mission Provinces:" Greenland (begun 1738); Labrador (1771); Indian Country of North America (1784); St. Thomas and St. John (1732); St. Croix (1732); Jamaica (1734); Antigua (1736); St. Kitts (1755); Barbados (1755); Tenero (1790, renewed in 1827); Mosquito Coast (1849); Surinam (1735); South African Western Province (1738, renewed in 1792); South African Eastern Province (1728); Australia (1849); Tibet (1853). This extensive work is supported by the contributions of the members of the Church, by the interest of foreign governments, by the aid of missionary associations, and by such revenue as the missions themselves can raise through voluntary gifts and the profits accruing from mercantile concerns and trade. The annual cost of the foreign missions is about $250,000. On retiring from the field
MORAVIAN BRETHREN

in consequence of sickness or old age, missionaries are pensioned. Their widows also receive a pension, and their children are educated at the expense of the Church. In most instances the widows are called upon to separate themselves from their husbands. The converts are divided into four classes: New People, or applicants for religious instruction; Candidates for Baptism; Baptised Adults; Communicants. The principal missionary associations are the following: The Society of the United Brethren for Propagating the Gospel among the Heathen, founded in 1735; at Bethlehem, Pa.; The Wachovia Society of the United Brethren for Propagating the Gospel among the Heathen, founded in 1828, at Salem, N.C.; The Brethren's Society for the Furtherance of the Gospel among the Heathen, founded in 1741, in England, supporting the mission in Labrador, and other places, for the purpose of sending out to the missionaries with the necessities of life; The London Association in Aid of the Missions of the United Brethren, founded in 1817, and composed chiefly of members not connected with the Moravian Church; The Missionary Society of Zion, in Holland, founded in 1789; and The Missionary Union of North Slavonia, founded in 1843.

In addition to these foreign missions, the last General Council inaugurated a work in Bohemia (1870), in the midst of the ancient seats of the Brethren, which promises to be successful. It already numbers four churches.

In the mission by the sea, the German Province carries on its Disponsa. This is a mission which receives its name from the Greek ἀγαθάρχας in 1 Pet. i, 1, and which has for its object the evangelization of the European state churches, without depriving them of their members. Hence missionaries itinerate through Protestant Germany, Switzerland, Denmark, Norway, Sweden, Poland, and Lithuanian, and in some other parts of Russia, and organize "societies" for the purpose of prayer, of expounding the Scriptures, and of edification in general. The members of such societies do not leave the communion of the state churches. In the event of their disestablishment, however, which seems to be approaching, it is more than probable that the members of such "societies" will fully join the Moravian Church, whose membership will thus be increased by thousands. Indeed such a change is now taking place in Switzerland, where, since the adoption of the new ecclesiastical laws (1873), three independent Moravian churches have grown out of the Disponsa.

VIII. Statistics.—German Province: churches, 26, of which 15 are in Moravian towns; ministers, 113; members, 8057; British Province: churches, 38; ministers, 55; members, 3553; number in Sunday-schools, 8994. American Province: churches, 70; ministers, 80; members, 2312; Sunday-schools, 8212. Foreign Missions: mission provinces, 16; stations, 114; out-stations, 8; preaching-places, 307; ordained missionaries from Europe and America, 161; female assistants from Europe and America, 172; total of laborers from Europe and America, 551; native or missionary assistants, 41; native instructors, 1573; normal schools, 7; day-schools, 217; scholars, 16,590; teachers (natives), 290; monitors, 623; Sunday-schools, 92; scholars, 13,094; teachers, 944; total number of converts, 73,091. Bohemian Mission: stations, 4; missionaries, 4; members, 259. Diakonie: central stations, 61; ordained missionaries, 20; ordained missionary assistants, 22; members, about 100,000. Tota] in home provinces of the Uniat Fratrum: ministers, 218; members, 27,906. Tota] in missions: laborers, 1454; members, 69,473. Tota] in Diakonie: laborers, 65; members of societies, 100,000. The Uniat Fratrum therefore has in all 1767 laborers engaged in the work of the gospel, and has besides 100,000 souls in its Diakonie societies.

IX. Publications and Literature.—Periodicals of the German Province: Herrnhut (weekly); Der Brüderbote (every alternate month); Nachrichten aus der Brüdergemeine (monthly); Journal de l'Unité des Frères (monthly); Berichten uit de Heeren-Wereld (monthly); Misionoblatt (monthly); Brüdermissionoblast für Kinder, (monthly). British Province: The Messenger (monthly); The Missionary Reporter (monthly); Periodical of the American Mission (published annually). The Moravian (weekly); Der Brüderbotschafter (weekly); The Little Missionary (monthly). South African Mission Province: De Kode (monthly); De Kinder-Vriend (monthly). Besides these periodicals, there is an annual published by the Unity's Elders' Conference, entitled The Text, containing two passages from the Bible—The Old, the other from the New Testament—each with a corresponding stanza from the Hymn-book, and arranged for every day in the year. This annual has appeared since 1781; it is published in German, English, French, Swedish, Esquimaun, and Negro-English; new editions are circulated every year outside of the Moravian Church.

The denominational literature is very extensive. We mention only the most important works: Cranz, Ancient and Modern History of the Brethren (Lond. 1790); Holmes, History of the United Brethren (Lond. 1825, 3 vols.); A Concise History of the Uniat Fratrum (Lond. 1862); The Moravian Manual (Bethlehem, Pa., 2d ed.), giving a short but complete account of the Church; Bp. Cröger, Geschichte der Erneuereten Brüderkirche (Gnaudau, 1823-34, 3 vols.); Schrautenbach, Zinsendorf und die Brüdergemeine (Gnaudau, 1831); Burchhardt, Zinsendorf's Brüdermission (Lond. 1842); days of the Renewed Church of the Brethren (Lond. 1822); Results of the General Synod of 1809 (1807); Plitt, Gemeine Gottes in ihrem Geist u. ihrem Formen (Gotha, 1859). The principal works relating to the foreign missions are: Holmes, Missions of the United Brethren (Lond. 1827); Cranz, Greendale (Lond. 1876, 2 vols.); The Moravians in Greeneland (Edinb. 1839); Oldendorf, Mission der Brüder auf den Kuriabischen Inseln (Barby, 1777); The Moravians in Jamaica (Lond. 1854); Loeckel, Historia der Missionen der Indischen Inseln (Lond. 1794); Heckewelder, Historia der Indian Mission (Phila. 1817); Moravian Missions among the Indians (Lond. 1868); Schweinitz, Life and Times of David Zeisberger (Phila. 1870). Works not emanating from the Church are: Bost, Historia der Moravischen Brethren (Lond. 1848; abridged translation of Histor. de l'Eglise des Freres de Boheme et Moravi, Paris, 1844, 2 vols.); Schauf, Evangelische Brüdergemeinde in Deutschland (Leipsic, 1829); Tholuck, Vermachte Schriften, i, 433; Müller, Verbreitungsgeschichte merckwiglischer Mission, vol. iii.; Schröder, Zinsendorf und Herrnhut (Northhausen, 1857); Bengel, Abria d. Brüdergemeinde (1751; reprinted in 1859; written against the Church); Litzl, Blicke in d. Vergangenheit u. Gegenwart d. E. K. (Leipsic, 1846); Nitzsch, Kirchengeschichtliche Besichtigung d. Brüdergemeine (Leipsic, 1853); Kuenz, Kurz-Text-Verzeichn. d. Allemeiner Re-Formation d. 1818. (Phila. 1892). This last work contains a chapter on the Moravians, dictated by the personal anonytnity of the author to their mission in Livonia, where he resides, and full of gross misstatements, as is shown in The Moravian Manual, p. 11-14. (E. de S.)

MORAVIANS. See MORAVIAN BRETHREN.

Morcelli, Stefano Antonio, a celebrated Italian archæologist, of the Order of Jesus, was born at Chiaran Jan. 17, 1737; studied at Rome, then joined the Jesuits; was sent to Ragusa, and afterwards returned to Rome, and was made professor in the Roman College. After the suppression of the order in 1773, Morcelli became librarian to cardinal Alessandro Albani, and while thus employed wrote his De Stilo Inscriptionum Latinaum, libri iii (Rome, 1780, 4to). In 1790 he was elected provost of the chapter in his native town, and so interested his friends in his cause that they bribed him to renounce the proffered see of Ragusa. He died in 1821. Few men lived more usefully than Morcelli. He liberally bestowed of his own to the poor, and abounded in philanthropic labors. Among other provisions, he founded an institution for the gratuitous education of young girls. Besides the work mentioned above, he wrote Inscrip-
one Commentarius subjiciet (Rome,1788,4to) — Parressyon
Inscriptionum Novissimam (Padua, 1818, 4to) — Kalendarii
Ecclentiae Constantinopolitani cum Commentarii
illustrationem (Rome, 1775, 4to). He added also a
MS. for the scholia between the Eastern and
Western churches. Morelli translated the MS. from
Greek into Latin, adding his own commentaries,
and rendering it a valuable work on Church history: Ex-
plunatio Ecclesiastica Sanci Gregorii. This was one
of the earliest histories of Agrigentum, the most
Christina (Brescia, 1816, 8vo. 4ts. 4s.) This is
another important work on Church history, from A.D. 197 till
A.D. 697. It may be styled the Fausti of the Christian
churches in Northern Africa. Morelli's works on
inscriptions have been collected and published together —
Opera Epigraphica (Padua, 1818-25, 5 vols.). Professor
Schliemann has added a Latin edition of Epigraphica
Morrowassium, in Latin and Italian. Morelli wrote also
a book of epigrams — Electorum Libri ii — and various
discussions on Roman antiquities. See Baraldi, No-
tizia di Morelli (Mod. 1825); Tipaldi, Biograf. degli Ital.
i, 102.

Mordecai (Heb. Mordekay, מָרִדֵּק, either from
the Persian, little man, see Gesenius, Thee. Heb. p. 818;
comp. Benify, Monumens, p. 281; or from Merodach,
l. q. worshiper of Mares, Simon, Onom, p. 363; Sept.
Marduk, and in Apoclypses, the name of one of
the seven during the Babylonian exile.
1. One of the principal Israelites who returned from
Babylon with Zerubbabel (Ezra ii, 2; Neh. vii, 7). B.C.
536. He was perhaps identical with the following.

2. The son of Jair, of the tribe of Benjamin, and
of the lineage of King Saul; apparently one of the
captives transported to Babylon, with Jehoshaph (Esth. ii, 5). B.C. 598. He was resident at Susa, then the metropolis of
the Persian empire, and had under his care his niece
Hadasah, otherwise Esther, at the time when the fair-
est damsels of the land were gathered together, that
from among them a fitting successor to queen Vashti
might be selected for king Xerxes. Among them was
Esther, and on her the choice fell; while, by what
management we know not, her relationship to Mordecai,
and her Jewish descent, remained unknown at the
palace. B.C. 479. The uncle lost none of his influence
over the niece by her elevation, although the seclusion of
the royal harem excluded him from direct intercourse
with her. It is supposed that he, held some office above
the court, for we find him in daily attendance there;
and it appears to have been through this employment
that he became privy to a plot of two of the chamber-
lains against the life of the king, which through Esther
he made known to the monarch. This great service
was, however, attended with a penal consequence.
Upon the order of the king, Mordecai was
taken to the royal palace; and to conduct him in magnificent cavalcade through the
city, proclaiming, "Thus shall it be done to the man
whom the king delighteth to honor." After this
we may well believe that the sense of poetical justice
decided the perhaps till then doubtful course of the
king; for in the name of Xerxes, as king of kings,
prepared for the man by whom his own life had been
preserved (Esth. iii-vii). B.C. 474. See HAMAN.

Mordecai was invested with power greater than that
which Haman had lost, and the first use he made of it, as
far as possible, to neutralize or counterfeit the decree
obtained by Haman. It could not be recalled, as the
kings of Persia had no power to rescind a decree once
issued; but, as the altered wish of the court was known,
and as the Jews were permitted to stand on their
defence, they were preserved from the intended de-
struction, although much blood was, on the appointed
day, shed even in the royal city. The Pseudo-Esther was
instituted in memory of this deliverance, and is
celebrated to this day (Esth. ix, x). See PERIM.

He was probably the author of the book of Esther,
which contains the narrative. His name is freely
introduced into the apocryphal additions to that book,
whose, however, it is unnecessary to pay attention. See
ESTHER, BOOK OF. There are some questions connect-
ed with Mordecai that demand further consideration.

1. His date. This is pointed out with great particu-
larity by the writer himself, not only by the years of
the king's reign, but by his own genealogy in Esth. ii,
§ 6. Most interpreters, indeed, havo understood this passage as stating that Mordecai himself was taken captive with Jehoiachin. But that any one who had been Nebuchadnezzar's chief-bearer in the year of his reign should be viceroy after the twelfth year of any Persian king among the successors of Cyrus is not very easy to believe. Besides, too, the difficulty of supposing the ordinary laws of human life to be suspended in the case of any person mentioned in Scripture, when the sacred history gives no record of his having served any other foreign functionaries in the supposition that the cousin-german of the youthful Esther, her father's brother's son, should be of an age ranging from 90 to 170 years at the time that she was chosen to be queen on account of her youth and beauty. But not only is this interpretation of Esth. ii, 6 excluded by chronology, but the fact of his being called a 'chief-bearer' quite equally points out, not Mordecai, but Kish, as being the person who was taken captive by Nebuchadnezzar at the time when Jehoiachin was carried away. Because, if it had been intended to speak of Mordecai as led captive, the ambiguity would easily have been avoided by either placing the clause ינשׁוּרְנָה אֲרָבָיָה etc., immediately after יַעֲבֹרָה אֲרָבָיָה, and then adding his name and genealogy, 'בְּנֵי הָעֵבֹרָת יִשְׁעִירָה etc., or else by writing יִשְׁעִירָה instead of יַעֲבֹרָה at the beginning of ver. 6. Again, as the sentence stands, the distribution of the copulative י distinctly connects the sentence יִשְׁעִירָה יַעֲבֹרָה יִשְׁעִירָה יַעֲבֹרָה in ver. 7 with יַעֲבֹרָה יִשְׁעִירָה in ver. 5, showing that three things are predicating of Mordecai: (1) that he lived in Shushan; (2) that his name was Mordecai, son of Jair, son of Shimuel, son of Joktan; and (3) that he was taken captive with Jehoiachin. This genealogy does, then, fix with great certainty the age of Mordecai. He was great-grandson of a contemporary of Jehoiachin. Now four generations cover 120 years—120 years from B.C. 598 brings us to B.C. 473, i.e. to the sixth year of the reign of Xerxes; thus confirming with singular force the arguments which led to the conclusion that Ahasuerus is Xerxes. See ANASTASI. This carrying back of the genealogy of a captive to the time of the captivity has an obvious propriety, as connecting the captives with the family record preserved in the public genealogies before the captivity, just as an American would be likely to carry up his pedigrees to the ancestor who emigrated from England. See HEBREU, Exeg. Handb. ad loc.). Furthermore, it would seem entirely possible (though it cannot be certainly proved) that the Mordecai mentioned in the duplicate passage, Ezra ii, 2; Neh. vii, 7, as one of the leaders of the captives, was returned from time to time from Babylon to Judaea (see Ezra vii, 2; Ezra vi, 6), as Mordecai of the book of Esther. It is not unlikely that on the death of Xerxes, or possibly during his lifetime, he may have obtained leave to lead back such Jews as were willing to accompany him, and that he did so. His age need not have exceeded fifty or sixty years, and his character points him out as likely to lead his countrymen back from exile if he had the opportunity. The name Mordecai not occurring elsewhere makes this supposition the more probable. We may add that in a passage of Josephus (Ant. xi, 4, 9), which gives an account of troubles excited by the Samaritans against the Jews about that time, as they were rebuilding the Temple, the names of Ananias and Mordecai (Mapo-ketio) are given along with that of Zerubbabel as ambassadors from the Jews to King Darius.

2. As regards Mordecai's place in prœfœ history, the domestic affairs of the reign of Xerxes are so scanty that it would be no surprise to find that Jew. But there is a person named by Ctesias, who probably saw the very chronicles of the kings of Media and Persia referred to in Esth. x, 2, and whose name and character present some points of resemblance with Mordecai, viz. Mattenus or Mattrus (as the name is variously written), described by him as Xerxes's chief favorite, and the most powerful of them all. His brief notice of him in these words, ἵσυστοποι τις ἡμερῶν ἀνατριχίαν ἐπὶ τῶν κρατερῶν ἡμῶν, gives a vivid picture of his immense power and influence in the description of Mordecai (Esth. ix, 4; x, 3). He further relates that he had time after his return from Greece, had commissioned Megabyzus to go and plunder the temple of Apollo at Delphi (perhaps, rather, the temple of Apollo Dileymusae, near Miletos, which was destroyed by Xerxes during his return to Persia from Greece, as cap. i, § 5), upon his refusal, he sent M昙tacaus the eunuch to insult the god and to plunder his property: which M昙tacaus did, and returned to Xerxes. It is obvious how grateful to the feelings of a Jew, such as Mordecai was, would be a commission to desecrate and spoil a heathen temple. There is also much probability in the selection of Xerxes for this purpose, for a monarch of such decided iconoclastic propensities as Xerxes is known to have had (Prideaux, Connect. i, 231–283). Xerxes would doubtless see much analogy between the Magian tenets of which he was so zealous a patron and those of the Jews' religion; just as Pliny actually reckons Moses (whom he couples with Jannes) among the leaders of the Magian sect, in the very same passage in which he relates that Osthanes the Magian author and heresiarch accompanied Xerxes in his Greek expedition, and widely diffused the Magian doctrines (lib. xxx, cap. i, § 2); and in § 4 he seems, though he does not explicitly state it, to imply that from the context it appears highly probable that this notice of Moses and of Jannes may be derived from the work of Osthanes, and, if so, the probable intercourse of Osthanes with Mordecai would readily account for his mention of them. The point, however, here insisted upon is that the known hatred of Xerxes to idolatry makes his selection of a Jew for his prime minister very probable, and that there are strong points of resemblance in what is thus related of M昙tacaus and what we know from Scripture of Mordecai. Again, that Mordecai was, what M昙tacaus is related to have been, a eunuch, seems not improbable from his having neither wife nor child, from his bringing up his cousin Esther in his own house (to account for this, the Targum says that he was seventy-five years old), from his situation in the king's gate, from his access to the court of the women, and from his being raised to the highest dignities of the kingdom, as we know that the history of the Persian dynasty was so often the case with the king's eunuchs. With these points of agreement between them, there is sufficient resemblance in their names to add additional probability to the supposition of their identity. The most plausible etymology usually given for the name Mordecai is represented by Farkas, and this is perfectly consistent with it: Merodach the Babylonian idol (called Mardok in the cuneiform inscriptions), and which appears in the names M昙tacaus-Morducias, Siat-Morducas, in nearly the same form as in the Greek, Μαρδοκαιος. But it is highly improbable that the name of a Babylonian idol should have been given to him under the Persian dynasty (Rawlinson, Herod. i, 270) points out Layard's conclusion (Näx, ii, 441), that the Persians adopted generally the Assyrian religion as "quite a mistake"), and it is equally improbable that Mordecai should have been taken into the king's service before the commencement of the Persian dynasty. If, then, we suppose the original form of the name to have been M昙tacaus, it would easily in the Chaldee orthography become Mordecai, just as מֶדְבֶּקֶס is for מֶלֶבֶּקֶס, מֶדֹנֶז for מֶבָּנֶז, מֶדֹזֶל for מֶבָּזֶל, etc. In the Targum of Esther he is said to be called Mordecai because he was like מֶדְבֶּקֶס, "to pure myrrh."
ished with the lapse of centuries. There Shime in Mordecai's genealogy is identified with Shimei the son of Gera, who cursed David, and it is said that the reason why David would not permit him to be put to death then was that it was revealed to him that Mordecai and Esther should descend from him; but that in his old age, when this reason no longer applied, he was slain. It is also said of Mordecai that he knew the seventy languages, i.e., the languages of all the nations mentioned in Gen. x, which the Jews count as seventy nations, and that his age exceeded 400 years (Juchasian ap. Wolf, and Stelhelin, Robb. Libr., i, 170). He is continually designated by the appellation הָרוֹשִׁי הַסְדוֹד, "the Just," and the amplifications of Esth. vii, 15 abound in the most glowing descriptions of the splendid robes, and Persian buses, and Median scimiters, and golden crowns, and the profusion of precious stones and Macedonian gold, on which was engraved a view of Jerusalem, and of the phalanx over the crown, and the streets strewed with myrtle, and the attendants, and the heralds with trumpets, all proclaiming the glory of Mordecai, and the exaltation of the Jewish people. Benjamin of Tudela mentions the ruins of Shushan and the remains of the palace of Ahasuerus as still existing in his day, but places the tomb of Mordecai and Esther at Hamadan, or Ecbatana (p. 128). Others, however, place the tomb of Mordecai in Susa, and that of Esther in or near Baram in Galilee (note to Asher's Benj. of Tud., p. 166). With reference to the above-named palace of Ahasuerus at Shushan, it may be added that considerable remains of it are still existing in Gen., but places the tomb of Mordecai and Esther at Hamadan, or Ecbatana (p. 128). Others, however, place the tomb of Mordecai in Susa, and that of Esther in or near Baram in Galilee (note to Asher's Benj. of Tud.), p. 166. It was built or begun by Darius Hystaspis. The so-called tomb of Esther and Mordecai at Hamadan has exhibits. The stork's nest by which it is surmounted frequently appears upon the highest points of public buildings in Persia. The tomb stands on a little mound somewhat more elevated than any in the immediate neighborhood, and is in rather a decayed condition. It occupies a small space in the midst of ruins, in the quarter appropriated to Jewish families. The entrance to the building is by a stone door of small dimensions, and the key is always kept by the chief rabbi. This door conducts to the tomb-chamber, which is small, and contains the graves of several rabbis. A second door, of still more confined dimensions than the first, leads to the tomb-chamber, which is larger than the outer apartment. In the midst of this stand the two sarcophagi of Mordecai and Esther, of dark and hard wood. These sarcophagi are concealed from each other, side by side each other, distinguished only by the one (Mordecai's) being a little larger than the other. They are richly carved, and have a Hebrew inscription along the upper ledge, taken from Esth. ii. 5, and x. 3. The wood is in good preservation, though evidently very old. The present building is said to occupy the site of one more magnificent, which was destroyed by Timur Beg, soon after which this humble building was erected in its place, at the expense of certain devout Jews; and it is added that it was fully repaired about 160 years since by a rabbi named Israel. If this local statement be correct, some of the inscriptions which now appear must, as the resident Jews state, have belonged to the preceding building, which, however, could not have been the original mausoleum, since one of these inscriptions describes it as having been finished posterior to the Christian era (see R. R. Porter's Travels in Persia, ii, 107). See ACHIMETHA.

Mordecai ben-Hillel, of Austria, a pupil of the famous Meir of Rothenburg (q. v.), son-in-law of R. Jehiel of Paris, and brother-in-law of R. Jacob of Corbeil, flourished towards the end of the 13th century, and was martyred in 1310 at Nuremberg. He is the author of the book בֵּית הַמוֹדֶדָא, Mordecai, also called כְּלַי מֵרֶדֶדָא, the Book of Mordecai; a treatise on the legal code (פֶּנֶס מֵרֶדֶדָא), embodying all the laws of the Talmud, which was compiled, revised, corrected, annotated, and supplemented by Isaac Alfasi (q. v.). The Sopher Mordecai has been printed with the Sopher Ithutashoth (Constantinople, 1609; Venice, 1521—22; Sabine's ed.), but places the tomb of Mordecai and Esther at Hamadan, or Ecbatana (p. 128). It has also been published separately (Venice, 1658; Cracow, 1698, etc.).—Frisch, Bibl. Jud. i, 324 sq.; De Rossi, Dizionario (Ger. transl.), p. 254; Steinschesieder, Catalogus libr. Hebr. in Bibliotheca Bodleiana, 1639, etc.; Basnage, Hist. des Juifs (Taylor's transl.), p. 688; Ginsburg, in Jacob ben-Chatijm ibn-Ashur, Discussiones de Robinibus in Storia Crisium, 1667, p. 76 sq.; Cassel, Leifunden für jud. Grach. u. Liteteratur (Berlin, 1872), p. 87; Grätz, Gesch. d. Juden (Berlin, 1873), vii, 252 sq.; Zunz, Literaturgeschichte der syngogalen Poeste (Berlin, 1866), p. 364; Die Monatstale des Kalenderjahres (Berlin, 1872), p. 44. (B. F.)

Morvins is a name of a people inhabiting Eastern Russia. They form a subdivision of the Bulgar or Volgic family of the Finnic branch of the Saranian, Uralo-Altaic, or Mongolian races, and are related to the Teheranemies and Caucasians. Their number has been estimated at 400,000, and their territory lies principally between the rivers Oka and Volga, in the Russian government of Nishni Nsvgorod, Tambov, Pensa, Simbirsk, and Saratoff, extending also into Samara and Astraham, of which they may be divided into Mokhans, chiefly dwelling on the banks of the Sura and Mokha, and Erass, occupying the shores of the Oka.

More, Alexander, a very noted preacher of the French Protestants, who flourished in the 17th century in France and Switzerland, was born at Castres, Languedoc, Sept. 25, 1616, of Scottish parents. He received his preparatory training under his father at Castres.

and went from home at the age of twenty to study divinity at Geneva. But it so happened that the chair of Greek was vacant at this time, and so young a man and so illustrious a scholar was passed by. However, he promptly accepted the proffered honor, and three years later had the pleasure of being promoted to a professorship in divinity, where he improved his time in the study of that department. His rapid advance made him many enemies, and he was accused of heresy. But, notwithstanding much and able opposition, More was advanced, and in 1465 was made rector of the high school with which he was connected. He was, however, destined soon to decline, for he was very arrogant and proud, and some even dared to assert that he was immoral. He was wise enough to perceive the near approaching storm, and therefore decided to leave Geneva. In 1469 he secured the divinity professorship and pastoral office at Middleburgh, in Zealand, and there also he won a reputation for his learning and ability, which opened to him in 1562 the university at Amsterdam. He had been proffered before a position in that noble high school, but had refused it; now he accepted, and removed thither. In 1564 he vacated his chair, and went on a visit to Italy, and became well acquainted with the men of note and of rank in that country. He enjoyed a personal intercourse with the duke of Tuscany, and was a favorite at Venice. Returning to his charge, he encountered decided opposition from the potentate, and was dismissed. But his writing and declaiming against the unholiness of his life. Charges were brought against him, and he was condemned by the Synod of Torgau. He quitted his parish, and accepted a call from a Church in Paris, and though there was great variety of opinion as to his worthlessness, he was confirmed in the position. He had not, however, occupied it long before he was openly attacked. Though his manner of preaching procured him applause from a crowd of hearers, his character was generally acknowledged to be ambiguous, and he had the mortification to see his reputation attacked by persons of merit, who accused him anew to the synod. He escaped further condemnation by quitting France in December, 1661. He returned again in the summer following, and, finding that the opposition had not subsided, he stuck at heart, as it is generally believed, declined rapidly in health, and died at Paris in September, 1670. The confession of his faults was well received, and he died in peace. The English bard was not given to falsifying. The trouble had been produced by a publication of More in 1652, addressed under the printer's name to the king of Great Britain, entitled Regis sanguinis clausor ad eum aduersus particulas Anglicos. It is a very violent invective against the Parliament party; and Milton, in particular, is extremely abused in it. He is no better used in the epistle dedicatory than in the book itself. Milton therefore wrote a reply, in which he considered More as the author as well as the editor of the book. He is treated upon the footing of a dog, or rather of a goat; for he is accused of a thousand lewd tricks, particularly of several acts of debauchery. He was also charged with having been convicted of heresies at Geneva, and of having shamefully abjured them with his lips, though not with his heart. Milton accused him of having for many months been deprived of his salary at Geneva, and suspended from his offices as a professor and master in a process of adultery which had been entered against him; and for which, says he, he would have been condemned, if he had not avoided the decisive sentence by declaring that he would leave the place. But, whatever Milton's opinion, the pious Huecius favored More, and wrote in his be- half. He even praised him in song (Pomot. p. 30 and 77, ed. 1700). More published some works: there is a treatise of his, De gratia et libero arbitrio (Geneva, 1644; 4to); Middleburgh, 1660; 4to.) — A Commentary on the 85th Chapter of Isaiah: — Notae ad loca quaedam Novi Testamenti (London, 1661, 8vo) — some Orations and Poems in Latin. More is well known, De litera. de Germania; Hug, La France Protestante, viii. 548 sq.; Bayle, Hist. Dict. s. v. (J. H. W.)
