This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world’s books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that’s often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book’s long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ **Make non-commercial use of the files** We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ **Refrain from automated querying** Do not send automated queries of any sort to Google’s system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ **Maintain attribution** The Google “watermark” you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ **Keep it legal** Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can’t offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book’s appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google’s mission is to organize the world’s information and to make it universally accessible and useful. Google Book Search helps readers discover the world’s books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at [http://books.google.com/](http://books.google.com/)

ME.

Mead, Matthew, an English divine, was born in Buckinghamshire in 1623. Of his early history we know but little. He first came prominently into public notice during the Cromwellian movement. Mead identified himself with the cause of the Independents, and was appointed by the Protector to the living of Shadwell in 1638. Four years later he was ejected for nonconformity, and removed to Holland, in common with many other ministers of that age. He became acquainted with the duke of Orange, and was greatly favored by him and the States. Afterwards he returned to England, and gathered about him one of the largest congregations in London. He settled at Stepney as pastor of a dissenting congregation in 1674, and the community betokened their love and esteem for him by presenting him with building material for a new chapel. He died in 1699. Matthew Mead, whom his friend and associate, Howe (Funeral Sermon for Mead), describes as 'that very reverend and most laborious servant of Christ,' was as indefatigable in Christian work as he was amiable in spirit, and, in consequence of his mild temperament and the moderation of his opinions, formed the strongest personal link between the Presbyterians and Independents of England in the second half of the 17th century. Among his publications are, The Almost Christian, or seven sermons on Acts xxvi, 28 (Lond. 1666, 8vo) — The Almost Christian Discover'd (1684, 4to; Glasgow, 1755, 12mo; with Essay by Dr. Young of Perth, Lond. 1825; 1849, 12mo) — Life and Death of Nathaniel Mather (1689, 8vo) — Vision of the Wheels: sermon on Ezek. xx, 18 (1689, 4to). See Calamy, Nonconformists; Sketch, Hist. of the Free Churches of England, p. 187; Allibone, Dict. of Brit. and Amer. Auth. II, 1237.

Mead, Richard, a distinguished English physician, who was born at Stepney in 1657, and after studying at the most eminent medical school of the time in London, returned and settled in England, and became one of the most celebrated practitioners of his time, wrote a treatise on the diseases mentioned in Scripture, entitled Medicina Sacra, seu de morbis antiquioribus qui in Biblia mentionatur (Lond. 1740, 8vo; republished at Amsterdam, 1749, 8vo). A translation of this work was made by Dr. T. Stark, and was published with a memoir of the author (Lond. 1755, 8vo). Dr. Mead died in 1754. See Allibone, Dict. Brit. and Amer. Biog. s. v.

Mead, Stith, an early Methodist Episcopal minister, was born in Bedford County, Va., Sept. 23, 1767; was converted in 1789, and feeling called of God to preach the Gospel, entered the itinerancy in 1798; was located in 1816; readmitted supernumary in 1827, and died in 1835. Mr. Mead was eminently useful as a preacher, and particularly conspicuous in the great revivals of his time, yet remembered in the Southern States. See Minutes of Conferences, II, 547.

Mead, Zechariah, a clergyman of the Protestant Episcopal Church, was born at Greenwich, Conn., some time in the first half of our century (perhaps 1802), and was educated at Yale College (class of 1822). He was ordained priest at Norfolk, Va., May 22, 1821, became rector of Grace Church, Boston, Mass.; from 1837-1840 was editor of the Southern Churchman, published at Richmond, Va.; and died Nov. 27, 1840. See General Catalog of the Divinity School of Yale College, p. 7.

Meade, William, D.D., a noted prelate of the Protestant Episcopal Church, was born at Millwood, Clarke County, Nov. 11, 1789, his father being Col. Richard K. Meade, the descendency to George Washington is connected both by birth and marriage with some of the oldest and best families in Virginia. His great-grandfather was an Irish Romanist, who came to this country, married a Quakeress in Flushing, L. I., and removed to Virginia. His grandfather was a descendant of Richard Kidder, bishop of Bath and Wells. William was educated at Princeton College, N. J. (class of 1808); was ordained deacon by bishop Madison, Feb. 24, 1811, in Williamsburg, Va.; and priest by bishop Claggett, in St. Paul's Church, Alexandria. He commenced his ministry in his own native parish, Frederick (now Clarke) County, as assistant to the Rev. Alexander Balmain; in the fall of 1811 he took charge of Christ Church, Alexandria, where he remained two years, when he returned to Millwood, and, on the death of Mr. Balmain, became rector of that Church. In 1826 he was a candidate as assistant bishop in Pennsylvania, but failed by one vote of nomination by the clergy; and in the following year the Rev. H. L. Onderdonk, D.D., was elected. In 1829 he was elected assistant bishop to bishop Moore, and was consecrated Aug. 19, 1829, in St. James's Church, Philadelphia, by bishops White, Hobart, Griswold, Moore, Croes, Brownell, and H. L. Onderdonk. On the death of bishop Moore, Nov. 11, 1841, he became bishop of the diocese of Virginia. In this capacity he labored unceasingly, up to the hour of his death, March 14, 1862, for the good of evangelical Christianity. He advanced the interests of his Master's cause not only in the pulpit, but in many and various ways he labored for the good of humanity. Several educational and missionary societies owe their origin to him, and the Theological School of Virginia, lately at Alexandria, was largely indebted to him for its existence (though the plan of a theological seminary in Virginia was not original with him). He gave to this school of the prophets his personal care and labors, nearly to the close of his life. During the exciting days of 1861 his voice was heard in many fervent though futile efforts to save Virginia from the troubles of the impending civil war. He steadfastly opposed secession to the very last. Taken altogether, but few men in the nation have enjoyed the confidence of the people to a greater degree than did this honest and evangelical bishop, who sought in many ways than one to serve his day and generation as a truly Christian man. For years before his death bishop Meade was the recognised head of the evangelical branch of the Protestant Episcopal Church in the United States. On bishop Meade's ecclesiastical position, the Church Review (July, 1862) thus comments: 'The gross worldliness, and even the open immorality of many of the early clergy of Vir-
The Sept., according to the Alex. MS. (the Vatican Codex transfers the word literally—Μαραθησθη), read Hebrew word—מַעֲרַחָה—from the word of Gibeah.

Fremdling, taking the root of the word in a figurative sense, reads "after Gibeath had been left open," i.e. by the quittling of its inhabitants—post demudariorum Gibeath. This is adopted by Bertheau (Kurzgez. Handb. ad loc.); But the most plausible interpretation is that of the Peshito-Syriac, which by a slight difference in the vowel-points makes the word וננ ח as the cave: a suggestion quite in keeping with the locality, which is very suitable for caves, and also with the requirements of the ambush. The only thing that can be said against this is that the liens-in-wait were "set round about" Gibeath, as if not in one spot, but several. See Gibeah.

Meש'ah (Heb. Meš'ah, מְשֶׁאָה, a hundred, as often; Sept. εἴκοσι, Mid.; Vulg. centum, Emath), a tower in Jerusalem, situated on the eastern wall (Neh. iii, 1; xii, 39), probably at the north-eastern angle of the Temple enclosure (Strong's Harmony and Expos. of the Greek, Append. i, p. 19; but it is not likely that the outer wall was different from that of the Temple, as supposed by Dr. Barclay, City of the Great King, p. 152). See JERUSALEM.

Meal (מָאָס), ke'mach, in pause מַשָ'א, prob. lat. e marrow; hence the fatness of wheats or barley, i.e. its ground substance, Gen. xviii, 6; Num. v, 15; 1 Kings xi, 23; 2 Kings iv, 5, 8; Is. xlviii, 2; Hos. viii, 7; "flour," as elsewhere rendered, 1 Sam. i, 24; xxviii, 24; 2 Sam. xvii, 28; Gr. ἄλθουσ, Matt. xiii, 38; Luke xii, 21, also רצ'א, soth, stripped of its bran, the finest portion of the grain, Gen. xviii, 6 [where it stands after the preceding term, in apposition]: elsewhere "flour" or "fine flour," Sept. σφιθράνσις, the ground produce of any species of grain. See Gibeath.

Meat (כָּל), a meal in the East by females in hand-mills. See FLOUR.

Meats. See DINE; REPASt; SUPP; and the article following.

Meal-time (כְּלָה). eth o'rel, the season of eating, Ruth ii, 14). That the Hebrews took their principal meal (כְּלָה, supper) in the latter part of the afternoon or towards evening, follows as well from the circumstances that banquets and convivial entertainments generally (perhaps always) occurred near the close of the day and that the good time for the sport of hunting, i.e. the night (Josephus, Life, 44), as from the custom still prevalent in the East (Wellsed, Trav. i, 113; the Persians sup about six or seven o'clock), a usage to which the Esseens were an exception (Josephus, War, i, 8, 5). See FEAST.

The agriculturul and laboring portion of the community, however, probably took their principal meal at noon (1 Kings xx, 16). See DINE. In the forenoon a slight repast was partaken (breakfast, āπρωπος, comp, Luke xiv, 12; John xxi, 22). Among the later Jews, it was usual for the deeply religious not to taste anything before the hour of morning prayer (comp. Acts ii, 15; Acts xiv, 17; Luke x, 38; Matt. v, 6; see the younger Buxtorf's Dissert. philol. theol. p. 397 sqq.; like the ancient Greeks (Hind, x, 577; Odyssey, i, 136 sqq.; iv, 216 sqq.; Aristoph. Vesp. 1216) and the modern Ori- entals (Niebuhr, Besch. p. 54; Shaw, Trav. p. 202), and also to "say grace" (Παρελάσατε, the blessing, εὐχόατα, εὐχαρία; Matt. xiv, 19; xv, 36; xxvi, 26; Luke ix, 16; John vi, 11; comp. Tim. iv, 3; see the Gemara, Berach, 278); and the rabbinical tract, Berachoth, p. 6-18; also Kuhnöl. Die precum ante et pos citum ap. Jud. et Chris-
MEAL-TIME

MEANS

...antiquitate, Lips. (1764). While eating, the Hebrews originally sat (Gen. xxvi. 19; Hengstenberg, Mo. p. 58, 59) and not on the floor. They seem to have been seated on their knees (Lev. xii. 23; xxvi. 2, 3, 11; xxviii. 23), or on cushions or divans (TVG 272); ελαιον, Xen. Cyrop. viii. 16, 18; καταλείπω, Josephus, and Act. xv. 9, 8; comp. A. Baccas, De comm. ant. (1. sq., in Gronov. Theor. xi.), at first only in special entertainments (Amos vi. 4; comp. l; Matt. ix. 20; xxvi. 7; Mark vii. 22; xiii. 5; Luke xiv. 5; vii. 57; xiv. 10; John xii. 2, 3; xiii. 23, etc.), but eventually in common life (Luke xvii. 7), without any particular invitation to that effect (Terent. Hern. i. 1, 72; Plaut. Truc. ii. 14, 16; Martial. iii. 50, 3; comp. Plat. Conviv. p. 218), and universally (see H. Mercurialis, Diss. de accusatio triumino, in his Ars gymnast. p. 57 sq.) See ACCUSATION. Every such divan or dinner-bed accommodated (according to Roman fashion) three persons. The Triclinium (Pline. xxxv. 6; v. 1), a prevalent form of luxury (Pline. xxxvi. 92; Josephus, Ant. i. 209; Philo, iv. 478), introduced from the Babylonians, who used a carpet or tapestry over it (Pline. viii. 74), whence the terms descriptive of spreading it (στερνερε, Cic. Mar. 36; Veron. lat., 2; στρογγυλων, Xen. Cyrop. v. 3, 6; which see generally Cicero, De trinonio, Amst. 1692), sometimes as many as five, who leaned upon the left arm, the foot being stretched out behind each. One on the right touched with the back of his head the breast of his left neighbor, whence the phrase "to lie in one's bosom" (fossavit in vpi κοιται, John xiii. 23; xxii. 20), as being the explanation of the spot (as among the Jews however, wives ate sitting, which the Romans generally held to be the most becoming attitude, Isidor. Orig. xi. 11, comp. Sueton. Claud. 82; Val. Max. ii. 1, 2; the "sitting at the feet" in Luke x. 39, was not an act of participation in the meal, a friend, or a favorite (Pline. Ep. iv. 22; see Kype, Observ. i. 402; comp. Talm. Babyl. Berach. vi. 2, 5), the place of honor being in the middle of the three (Talm. Hieros. Tamid, lviii. 1, comp. Potter, Archæol. xxi. 661). The tables (comp. 1 Sam. xx. 29; 2 Sam. iv. 7, 11; Kings x. 5; Ezek. xxix. xxix; Luke xxii. 21; Acts xvi. 54, etc.) were probably, as still in the East (Talm. Babyl. Keri. p. 283; Schne. T. T. p. 208; Mayr. Sockisch. i. 51; Robinson, Researches i. 2; among modern Orientals consisting of a round skin or reed-mat, Rüppel, Asien, ii. 65, spread on the floor in the middle of the room, Arrius, Voyage, iii. 257; Pococke, East. i. 252; Harmar, Observ. ii. 438, or on a stool, and furnished with rings on the edge, so that the meal may be folded together, and hung up like a bag, the food being laid on mats, or upon clothes covering it, comp. Nieburg, Trav. i. 572; Paulus, Samml. iii. 101), as appears likewise from the pattern of the tabule of slow-bread. See TABLE. Meat and vegetables, the first persons to the smallest pieces (the loin and shoulders affording what were regarded as choice morsels, Ezek. xxi. 4), were set on the table in large pieces, out of which each guest took his share with his fingers upon the flat pieces of bread, and ate without either knife or fork (comp. Zorn, in the Miscell. Düsselb. ii. 457 sq.; Matt. ix. 9; John xiv. 2, comp. John xiv. 3, 5; Xen. Cyrop. v. 7, 2), the pieces of bread being dipped into the dish by means of the hand or fingers to the mouth (comp. Prov. xiv. 24; xxvi. 15; 1 Tim. ii. 10) a custom which still prevails in the East even at the royal table (Tavernier, Trav. i, 282; Arrius, Voyage, iii. 238; Pococke, ii. 68; Nieburg, Besch. p. 53; Shaw, Trav. p. 203; Burnhardt, Wahl. p. 61; Rosenmüller, Morgend. iv. 188; Robinson, ii. 726; iii. 201). Whether the dinner consisted of meat (like the Romans) or after it (like the Egyptians, Herod. ii. 278, and Persians, Herod. v. 18, and as is still the practice of most Arabsians and Persians, Chardin, iv. 44, 52; Arrius, iii. 277; Burckhardt, Sprachen, p. 137; comp. Josephus, Ant. xii. 1, 2), is not positively stated, although the book of Isaiah (Isaiah. Berach. p. 251) seems to imply that the Jews did both, the draught following the meal, however, being the principal one (Berach. viii. 4, 7; comp. Robinson, ii. 726). See EATING. (See generally M. Geier, in the Biblioth. Lucc. v. 1 sq.) See ENTRETAILMENT.

MEAL-TUB Plot is the name of a plot concocted on the part of Romanists, but intended to be fathered on a number of eminent persons engaged in the interests of the Protestants during the reign of Charles II in the year 1679. A conspiracy on the part of the Jesuits to dethrone or make away with Charles, and place the duke of York (who was in favor of the papal rule) on the throne, having come to light, the papists, exasperated, determined to set on foot a sham plot, and brand the Presbyterians. The original plot having been attempted was timetely discovered, and heaped impunity upon the already spotted character of the Jesuits. For a full account, see Neale, Hist. of the Puritans, ii. 290; Stoughton, Ecc. Hist. of Eng. (Ch. of the Restoration), ii. 21 sq.

Mea'ni (Maavi v. m. Maavi and Maaw) a less correct form (1 Esdr. v. 51) for the Mehumim (q. v.) of the Heb. text (Ezra ii. 60).

MEANS of GRACE, a convenient but unscientific and unscriptural phrase for precesses or agencies which become the channel or occasion of spiritual influences to the Christian. The doctrine concerning the means of grace is based on that of grace itself. It has only received its adequate form through the Reformation, which, in opposition to the Roman Church, who considers that grace is imparted by the visible Church, particularly by the priest, asserts as the only regular means of grace the Word of God and the sacraments instituted by Christ. In popular language, however, the term "means of grace" is extended so as to include those duties which we perform for the purposes of improving our minds, affecting our hearts, and of obtaining spiritual blessings, whether as a hearty and devout performance of the Scriptures, self-examination, meditation, prayer, praise, Christian conversation, etc. The means are to be used without any reference to merit, solely with a dependence on the divine Being; nor can we ever expect happiness in ourselves, nor be good exemplars to others, while we neglect in this respect the Word of grace, the prayer of the soul, and in general to argue that the divine willingness to bestow grace supercedes the necessity of them, since God has as certainly appointed the means as the end. Besides, he himself generally works by them, and the more means he thinks proper to use, the more he displays his glorious perfections. Jesus Christ, when on earth, used means: he prayed, he exhorted, and did good by going from place to place. Indeed, the systems of nature, providence, and grace are all carried on by means. The Scriptures abound with exhortations to them (Matt. v. Rom. xii.), and none but enthusiasts or immoral characters ever refuse to use them. For the following article we use the term in its more restricted sense, that is, in a material sense, with the mental controversy between Roman Catholics and Protestants, condensing the statements in Herzog's Real-Encyclop. v. 200 sq.

The starting-point of the Protestant doctrine on this subject is found in the fifth article of the Confession of Augsburg. Grace itself is presupposed, thus in the form of justification by faith. The hearing of the Word and the partaking of the sacraments are methods of arriving at this faith: "Nam per verbum et sacramenta, tamquam per instrumenta donatur Spiritus..."
Sanctus, qui fidem afferit, ubi et quando visum est Deo in illis, qui audient Evangelium," etc. To this statement is joined the declaration, "Dannant Anabaptistas et aliis, qui sensunt eodem vel minus veritatis extremo hominibus per ipsumorum preparationes ad operas." The Heidelberge Catechismus enunciates the same doctrine, and at the same time states still more emphatically the connection between the sacraments and the Word of God in quest. 65: "Whence comes saving grace? It is the effect of the Holy Spirit in our heart by means of the preaching of the holy Gospel, and confirmed by the use of the holy sacraments." (The most important passages of symbols on this point are: Apoleg. iv, 158; Ar. Smal. par. ii, 2, 8; Catech. mag. Preceptum iii, p. 428; Symbol. apost. p. 502; Formal. conc. Epitome: De ill. et devotioni Spiritus Sancti, lib. i, cap. 29, 30; Conf. Helv. ii, c. 1; Conf. Gall. art. 25, 35; Conf. Belg. art. 24.) The means of grace are called instrumenta gratiae, medita, administratio graciae. In the Lutheran Church the union between the Word and the sacraments is made much closer than in the Reformed. The Helvetic Confession treats of the Word of God in the first chapter, and of the sacraments in the nineteenth. The reason of this separation is that the Bible, as the Word of God, is the foundation of the whole system. Yet their connection and union are not lost sight of: "Predicatiioni verbi sui adjunctus Deus mos ab initio in ecclesia sua sustinatur vehiculum sanctitatis, et signa fundamentalia, quæ unifying the means of grace is not considered by the evangelical Church as only a formal, human, or theological connection between the Word of God, baptism, and the Lord's Supper, but as the consequence of a divine act, the institution of the Church and of the ecclesiastical office. The means of grace are not mere possessessions of the Church, but its foundations itself. The Church is called into existence by the Word of God, while by baptism and communion it is manifested as a religious community (see Conf. Aug. art. vii). Schleiermacher himself recognised in them the essential and unchangeable foundations of the Church (ii, § 127). Thus he contradicts himself when further on, treating of the connection between baptism and the Lord's Supper, he refuses to consider it as an actual dogmatic point (p. 416). The union of the means of grace may be briefly said to consist in their constituting the Church as the organ of transmission of grace. The inner ground of their union is grace itself, of which they are the channels; the outer aspect is the ministerium, the office appointed by Christ, which has to administer both forms of the means of grace.

This brings us to the significance and necessity of these means of grace, or to the views of the Protestant Church in comparison with the Roman Church on these points. The first point of difference lies in the conception of the ecclesiastical office. Both, indeed, consider it as a divine institution, but the Protestants look upon it as a ministerium, which can be considered as a continuous Christian working of the Church in the Word and sacraments, while the Roman Catholics retain the idea of a succession forming the real fundamental means of grace, and creating itself the distinct means of grace after the manner of the apostles (see Dieringer, Lehrbuch d. Kath. Dogmatik, p. 519), "The substitution of the Son of man by the apostleship." If its sacerdotal character is susceptible of being defended by Scripture and tradition, it yet is certain that it is only through tradition that it obtained this superior importance, as capable of creating the other means of grace. The practical results of this superior importance became manifest in the prohibition to read the Bible, the refusal of the chalice in communion, etc., thus diminishing the other means of grace, while they were increased on the other hand by the promulgation of the commandments of the Church, and the institution of additional sacraments; and also modified in the doctrine of the sacramental character of the Eucharist, etc. Thus the Protestant doctrine of the means of grace differs at once from the Roman Catholic, by its conception of a ministerium in the place of a sacramentum. They next differ in the relative position they assign to the means of grace of the Priesthood. They hold that this grace is first communicated through the Word of God, and confirmed by the sacraments; Roman Catholics, on the contrary, consider the sacraments as the chief means of grace, and the Word of God as accessory. Then, as regards the Word of God, Protestants consider it as containing essentially in Scripture, together with other revelations, while by it Roman Catholics understand only the praedicatio verbi. The latter also increase the number of sacraments, and recognise other means of grace. On these points, see WORD OF GOD and SACRAMENTS. Another distinction is the difference in which the means of grace are found, as they are not essential to salvation with grace and forgiveness. According to the Concil. Trident., sess. 7, the sacraments work ex opere operato, a doctrine which the Conf. Aug. art. xiiii, rejects. We must, of course, refer to Roman Catholic theologians to find the sense which that Church attaches to the opus operatum. (Bellarmin, De oper. Christ. ii, § 2.) According to them, infant baptism is efficient in itself to regenerate them, without any resistance being for a moment to be thought of. The opposition of adults to baptism, confession, and the mass could only consist in an obstacle (ponere obstaculum), a deceitful hiding of a mortal sin, and the perseverance in it, for absolution presupposes a full and voided conscience passed in the act of faith, in the Protestant sense, is not required to give efficiency to the sacraments. We might then suppose that the Word would here, as a means of grace, be placed before the sacrament, and produce conversion, which would insure the effect of the sacrament. But we must remember that, for the most part, Roman Catholics are such from being born of Roman Catholic parents. Of converts themselves nothing further is demanded than that they should have enough fides implicita in the word announced to them to submit to the authority of the Church. History teaches us how even the word itself may become the opus operatum.

In opposition to the Roman Catholic Church, Protestants generally draw a distinction between grace and the means of grace, although they recognise their relation. We must, however, distinguish between such as reject altogether the necessity and ordinance of the means of grace, and those who recognise such as the Word of God but not the sacraments. Among the former we find in the time of the Reformation the Anabaptists, in later times the Quakers. They maintain that the Holy Spirit, without the aid of the Word, illumines each man immediately by an inner light at a certain moment, and that the act of faith enables him to rise to the Word of God but not the sacraments. Among the latter, we find in the time of the Reformation the Anabaptists, in later times the Quakers. They maintain that the Holy Spirit, without the aid of the Word, illumines each man immediately by an inner light at a certain moment, and that the act of faith enables him to rise to the Word of God (see Barclay, Apol.). Still it would be unjust to say that they altogether reject the notion of means of grace, for the Quakers are especially distinguished for diligent searching of the Scriptures. But they deny the existence of divinely-ordained, special means of grace of the Church. The Scriptures and Mononistes, on the other hand, consider, in a certain sense, the Word of God as an objective means of grace; the former considering the sacraments purely as symbols of the Christian faith (ceremonia), while the Mononistes consider them also as objective signs of the action of grace (Bux, Conf. art. 80). Here also we find the reflective character of the means of grace, but we find it again among the Armenians. Necessarily as the sphere of action of the sacraments is restricted as means of grace, that of grace itself, as immediately active, becomes enlarged; this we see exemplified in the doctrine of restoration of the Anabaptists, in the Quaker doctrine of the action of the revealing Spirit ("spiritum revelatio ne se ipsum semper fllis hominum patefacte," Barclay, Apol. thea. ii), and in the Socinian notion of an extraordinary and special action of the divine Spirit aside from its general action through the Gospel (Oesterodt, Unterricht. K. p. 94). The Protestant Church, in
In dogmatists, the means of grace represent the eternal presence of Christ in the spiritual Church, and through her in the world. In his institutions, Christ, by the Holy Spirit, guarantees his eternal presence, and in his eternal presence draws the world to his salvation. The Word and the sacraments are inseparably connected with each other: the Word receives its fulfillment and seal in the sacrament, while the sacrament receives light and spiritual life from the creative power of the Word. The Word, without the seal of the sacrament, is only a scholastic knowledge; the sacrament, without the vivifying influence of the Word, is a piece of priestly magic. But though the means of grace, in their connection with the Holy Spirit, set at work the saving power of the life of Christ, as a participation in his salvation, still these means can be present by their own intrinsic, required faith when personally present on earth. Yet he no more requires a perfect faith than he compels to believe. Those who ask shall receive. See SACRAMENT.

See Fletch, Works; Wesley, Works; Hagenbach, Hist. of Doctrines; Winer, Symbol. p. 113; Kurtz, Chr. Hist. vol. I.; Niedner, Philos. p. 441.

Mean's son "He miles of the eagle, a care, as often; Sept. "laj c.显然 reading η περι της του Γαζα"; Vulg. "Meares," a place mentioned in Josh. xiii, 4 as situated in the northern edge of Palestine: "From the south, all the land of the Canaanites, and Mearah that is beside the Sidonians, unto Aphek." Some find it in the town Marathos (Strabo, xvi, 738; Pliny, v, 17; Podemus, v, 15, 16). Most interpreters, following the Chaldean reading (see the Chaldee Bible), hold the opinion of the term that it should rather be rendered as an appellative—the cave (Keil's Comment, ad loc.); but if a mere cave were intended, and not a place called Mearah, the name would surely have been preceded by the definite article, and would have stood as η Μαραθης, "the cave." Besides, the scope of the passage shows that some place—either a city or district—must be meant. See Note on v. 852. Mearah is suggested that Mearah may be the same with Meroth, a village named by Josephus (Ant. iii, 3, 1) as forming the limit of Galilee on the west (see also Ant. ii, 29, 6), and which again may possibly have been connected with the waters of Merom. A village called el-Mughar is found in the mountains of Naphthal. It lies just ten miles west of the northern extremity of the Sea of Galilee (Robinson, ii, 73, 30; Van de Velde's Map), which may possibly represent an ancient Mearah.

"About half-way between Tyre and Sidon, close to the shores, are the ruins of an ancient town; and in the neighboring cliffs are large numbers of graves and tombs, hewn in the rock, and formerly used as tombs. Dr. Robinson suggested that this may be 'Mearah of the Sidonians' (i, 474). The ruins are now called 'Aldib, but perhaps that name from the village on the mountain-side.' Ritter (Evilk. xvii, 10; also xvi, 8, 9), on the other hand, identifies Mearah, under the name Mughara, with the remarkable cavern (Rosenmuller, Alterth. ii, 39 sqq., 62) in which the Crusaders fortified, and which is described by William of Tyre (Histor. Ieros, xix, 2, 11) as a certain fortress of ours in the Sidonian territory, namely, an impregnable grotto, commonly called the Cave of Tyre (Cave de Tyrole). It was afterwards a slave's latrine of the emir Fakhr ed-Din. The place is now known as Shu'fi Tairin (Abu'allida, Table). Schultz is the first traveller who mentions it in modern days. It is situated in the high cliff east of Sidon, between Jezem and Michhemuray (Van de Velde, Memoir, a. v.). See CAVE.

Meats, Thomas, M.A., an English divine of note, flourished near the opening of the present century. He was at one time rector of St. Lawrence and vicar of St. Michael's, in Southampton, and chaplain to the corporation of that town. He died about 1810. Mr. Meares was a prolific writer, and a pupil orator of no mean ability. He contributed many articles to the Orthodox Churchman's Magazine, and published several of his ser-
MEASURE

mons, among which the following deserve special mention: England expects every Man to do his Duty (1805, 8vo)—[By Pope, Example (1807, 8vo)].—On the Lord's
Banquet (1807, 8vo).

Measure is the rendering in the Auth. Vers. of a number of Hebrew and Greek terms, some of which are descriptively of dimension or extent generally, while oth-
er terms denote a specific length or capacity. Again, there are other words in the original denoting a particular quantity or space, which are still differently rendered in
the Auth. Vers. It is our purpose in the present article to present merely a general view of the various renderings, leaving the determination of the modern equivalents to the special head of METHODOLOGY (q. v.). The following are the words rendered "measure" in the A.V.:—

1. Those that are of indefinite Import.—(1) ג'ל, chōk (Isa. vi, 14; a statute, as elsewhere usually rendered); (2) תג', mad (Job xii, 9; Jer. xii, 25; reduplicated plur. Job xxxviii, 6; elsewhere as a garmen, as usually rendered); (3) פְּרָפָה, פרפה, the usual word thus rendered (Exod. xxvi, 2, 8; Josh. iii, 4; 1 Kings vi, 25; viii, 9, 11, 37; 2 Chron. iii, 3; 1 John xxvi, 25; Ps. xxxix, 4 [5]; Jer. xxx, 39; Ezek. xl, 5, 8, 10, 21, 22, 24, 28, 28, 32, 38, 35; xlix, 17; xlv, 16, 17, 18, 19; xlix, 13; xlv, 8; xlvii, 3; xlviii, 16, 30, 33; Zech. xi, i [5]; elsewhere "piece," etc.); (4) רָפָה,mesrakah (Lev. xxx, 55; 1 Chron. xxiii, 39; Ezek. iv, 11, 16); (5) בֵּן פָּחַת, b'en pi'ahun (Jer. xxx, ii; xlvi, 28; judgment, as elsewhere rendered); (6) רְמַמִ'ת, mishkoth (Ezek. xlv, 11; "tale," Exod. v, 8; "composition," Exod. xxx, 32, 37; "state," 2 Chron. xxiv, 19); (7) צַלְתָן, token (Ezek. xlv, 11; "tale," Exod. v, 18); (8) מְמֹר, the usual and proper Greek word (Matt. vii, 22; xxxii, 32; Mark iv, 24; Luke vii, 88; John iii, 24; Rom. xiii, 3; Cor. x, 13; Eph. iv, 7, 13, 16; Rev. xxi, 17).

2. Such as represent a definite Value.—(1) כָּפָח, ḫakh (Deut. xxx, 14, 15; Prov. xx, 10; Mic. vi, 10; elsewhere as "caph" [q. v.]); (2) כָּפָח, כפוח (Jer. li, 13; "post," Is. vi, 4; elsewhere as "cabūt" [q. v.]); (3) לְמִדָּה, ləme'dah (Gen. xxvi, 6; 1 Sam. xxi, 18; 1 Kings xxi, 35; 2 Kings vi, vii, 1, 16, 18; a sech [q. v.], the Gr. στέρως (Matt. xxxiii, 20; Luke xxii, 31), and the reduplicated form πιθοφρασ, pithophraas; (4) se'lah (Isa. xxvii, 2; used indiscriminately); (5) כָּפָח, כפך (Isa. xi, 12; "great measure," Isa. lxv, 5; lit. a third, 1 e. prob. of the ephah, but used indifferently); (6) בָּרָא, bara (Lukexvi, 3; the Hebrew chronic [q. v.]); (7) בָּרָא, bara (Gen. xxvi, 6; the Hebrew chronic [q. v.]).

Meat.—I. It does not appear that the word "meat" is used in any one instance in the Authorized Version of either the O. or N. Testament in the sense which it now almost exclusively bears of animal food. The latter is denoted uniformly by "flesh."

1. The only possible exception to this assertion in the Authorized Version is 2 Chron. xxvi, 4, etc., "savory meat;" Gen. xxv, 23, "corn and bread and meat." Here the Hebrew
word, בְּנֵקַנְתָן, matammin, which in this form appears in this chapter only, is derived from a root which has exactly the same force of our word "taste," and is
employed in reference to the manna. In the passages in question the word "dainties" would be perhaps more appropriate. (2) In Genesis the original word is one of almost exclusive application of the "flesh" sense, and if theLexicon did not show that this had only the general force of food in all the other Oriental tongues, that would be established in regard to Hebrew by its other occurrences, viz. 2 Chron. xi, 23, where it is rendered "victual;" and Dan. ix, 12, 21, where the meat spoken of is that to be furnished by a tree.

2. The only real and inconvenient ambiguity caused by the change which has taken place in the meaning of the word is in the case of the "meat-offering." the second and the three great divisions into which the cer-
neries of the Law were divided—the burnt-offering, the meat-offering, and the peace-offering (Lev. ii, 1, etc.)—and which consisted solely of flour, or corn, and oil, sac-
rifices of flesh being confined to the other two. The word thus translated is נְדִיבָה, niddivah, elsewhere rendered "present" and "oblation," and derived from a root which has the force of "sending" or "offering" to a per-
son. It is very desirable that some English term should be proposed which would avoid this ambiguity. "Food-
offering" is hardly admissible, though it is perhaps preferable to "unbloody or bloodless sacrifice." See MEAT,-
OFFERING.

3. There are several other words, which, though entirely
distinct in the original, are all translated by the A.V. by "meat;" but none of them present any special interest except נְדִיבָה, niddivah. This word, from a root signifying "to tear," would perhaps more accurately rendered "prey" or "booty." Its use in Ps. cxxi, 5, es-
specially when taken in connection with the word ren-
dered "good understanding in" ver. 10, which should rather be, as in the margin, "good success," throws a new light over the whole of the meaning of that beautiful Psalm. It seems to show how inextingu-
ishable was the warlike, predatory spirit in the mind of the writer, good Israelite and devout worshipper of Jehovah as he was. Late as he lived in the history of his nation, he cannot forget the power of Jehovah's enemies, and in this spirit his warfare against his people is a "heri-
tage of the heathen," and to him, as to his ancestors when conquering the country, it is still a firm article of belief that those who fear Jehovah shall obtain most of the spoils of his enemies—those who obey his commandments shall have the best success in the field.

4. In the N. T. the variety of the Greek words thus rendered is equaly great; but dismissing such terms as ἀναψωσθήσονται or ἀναψωστήσονται, which are rendered by "sit at meat"—πατισθε, for which we occasionally find "meat—πατισθε (Acts xxvi, 34), the same—πατισθε, "meat offered to idols"—πατισθε, generally "fragments," but twice "broken meat"—dismaying these, we have left φρέγα and βριόμα (with its kindred words, βριον, etc.), both words bearing the widest possible signification, and meaning everything that can be eaten or can nourish the frame. The former is most used in the Gospels and Acts. The latter is found in John and in this passage is the word of Jesus in his famous sentences, "for meat destroy not the work of God," if meat make my brother to offend," etc. See ALIGHEMA.

II. Meat, however, in the proper modern sense (בִּשְׁנָש, basar, "flesh," as it is rendered in the Author, Vers.), i.e. of clean beasts (Lev. xi, namely, lambs (Isa. liii, 7; Amos vi, 4), calves (1 Sam. xxvii, 24; Gen. xviii, 7; Amos vi, 4; Luke xv, 23; comp. Russell, Lexico, 145), oxen (Isa. xxiii, 13; Prov. xv, 17; 1 Kings iv, 23; Matt. xxii, 4), kids (1 Sam. xvi, 20; Judg. vi, 12), also venison (1 Kings iv, 32), and poultry (1 Kings iv, 32; see Ge-
nesius, Thes. Heb. p. 715; Michel, Mos. Recht, 198), was a favorite dish among the Hebrews, either roasted entire, or cooked with choice vegetables and eaten with bread (2 Sam. vi, 19; 1 Kings xviii, 6); yet only royal personages partook of it daily (1 Kings iv, 23; Neh. v, 18), the less wealthy merely on festive occasions (Luke xv, 23; comp. Niebuhr, Rosch, p. 52), especially at the great sacrificial festivals; and we find that the modern
Arabs, namely, the Bedouin, as a general rule, but sel-
ding the Jews (Shaw, Trav. p. 189; comp. Bedel, Trav. ii, 1008; Welsted, i, 248; those of the peninsula of Sinai live mostly on sour milk, dried dates, and un-
leavened bread, Rippep, p. 208; but among the ancient Egyptians flesh was very commonly eaten, Exod. xvi, 5; comp. Rosellini, Monum. cit. i, 151). The shoulder
was the most esteemed piece of the animal (1 Sam. ix,
Meat-offering (湎כא, minchah); sometimes more fully מֵנֵכָה, מֵנֵכָּה, to mark its sacrificial character; Sept. fully μνημόνευμα, but generally simply μνήμη or μνήμα, sometimes μνημονευμόλογον; Vulg. oblatio sacrificii, or simply sacrificium. The word minchah (from the obsolete root מֵן, "to distribute" or "to give") signifies originally a gift of any kind, and appears to be used generally of a gift from an inferior to a superior, whether God or man (Lat. fermentum). Thus in Gen. xxxii, 13 it is used of the present from Jacob to Esau, in Gen. xliii, 11 of the present sent to Joseph in Egypt, in 2 Sam. viii, 2, 6 of the tribute from Moab and Syria to David, etc.; and in Gen. iv, 3, 6 it is applied to the sacrifices to God offered by Cain and Abel, and of the burnt-offering and whole burnt-offering. Afterwards this general sense became attached to the word corban (קרבה), and the word minchah restricted to an "unbloody offering," as opposed to נ себе, a "bloody" sacrifice. It is constantly spoken of in connection with the drink-offering (לכן, Sept. συνοφρυί, Vulg. libationem), which generally accompanied it, and which had the same meaning. See Drink-offering.

The law or ceremonial of the meat-offering is described in Lev. ii and vi, 14-23. It was to be composed of fine flour, seasoned with salt, and mixed with oil and frankincense, but without leaven; and it was generally accompanied by a drink-offering of wine. A portion of it, including all the frankincense, was to be burnt on the altar as a "memorial;" the rest belonged to the priest; but the meat-offerings offered by the priests themselves were to wholly burnt.

Its meaning (which is analogous to that of the offering of the first-fruits, and the showbread) appears to be exactly expressed in the words of David (1 Chron. xxii, 10-14), "All that is in the heaven and in the earth is thine. All things come of thee, and of thine own have we given thee." It recognised the sovereignty of the Lord, and his bounty in giving us all the earth with all its contents. The dedicating sacrifice to God, and the best of his gifts: the flour, as the main support of life; oil, as the symbol of richness; and wine, as the symbol of vigor and refreshment (see Ps. civ, 15). All these were unleavened and seasoned with salt, in order to show their purity, and hallowed by the frankincense for God's special service. This recognition implied in all cases, is expressed clearly in the form of offering the first-fruits prescribed in Deut. xxv, 1-5.

It will be seen that this meaning involves neither of the main ideas of sacrifice—the atonement for sin and the self-dedication to God. It takes them for granted, and is based on them. Accordingly, the principle of meat-offering (Exod. xxix, 40, 41); (2) the Sabbath-offering (Num. xxviii, 9, 10); (3) the offering at the new moon (Num. xxviii, 11-14); (4) the offerings at the great feasts (Num. xxviii, 20, 28; xxix, 3, 4, 14, 15, etc.); (5) the offerings on the great day of atonement
MEAT-OFFERING (Numb. xxix, 9, 10). The same was the case with private sacrifices, as at (1) the consecration of priests (Exod. xxix, 1, 2; Lev. vii, 20; viii, 2) and of Levites (Numb. viii, 8); (2) the consecration of the leper (Lev. xxix, 20); (3) the termination of the Nazarite vow (Numb. vi, 15).

The unbloody offerings offered alone did not properly belong to the regular meat-offering. They were usually substitutes for other offerings. Thus, for example, in Lev. v, 11, a tenth of an ephah of flour is allowed to be substituted by a poor man for the lamb or kid of a trespass-offering: in Numb. v, 15 the same offering is ordained as the "offering of jealousy" for a suspected wife. The unusual character of the offering is marked in both cases by the absence of the oil, frankincense, and wine. We find also at certain times libations of water poured before the Lord (comp. Exod. xx. 26) by Samuel's order at Mizpeh during the fast (1 Sam. vii, 2), and by David at Bethlehem (2 Sam. xxii, 16), and a libation of oil poured by Jacob on the pillar at Bethel (Gen. xxxv, 14). They have these clearly especial meanings, and are not to be included in the ordinary drink-offerings. The same observation will apply to the regular libation of water customary at the Feast of Tabernacles, but not mentioned in Scripture. See TABERNACLES, FEAST OF.

From the above statements it appears that the "meat-offering" (or, rather, food-offering) was in general such eatable but bloodless articles (of vegetable growth) as were convenient to be prepared for the meal (comp. the early instance, Gen. iv, 3 sq.), and in a special sense only gifts of meal, raw or baked, which were brought to the altar of burnt-offerings, Exod. xvi, 29; comp. xxx, 9, and either wholly or partially burnt to the honor of Jehovah (commonly with incense) by the hand of the priest. The portion of such "meat-offering" that was to be consumed is called הָיוֹת, in contradistinction from that part which fell to the priest (Lev. ii, 2, 9, 16; Numb. vii, 26; comp. Lev. xxiv, 7, where the incense of the showbread is so called, which was also consumed). This word certainly has not the significance of ordinances (Saadia), or in general offering (as Michaelis thinks), but is a verbal noun from הָיוֹת (to cause to be burned), and the Sept. translates μικησινωρας accordingly (see Gesen. Thesaur. p. 417). The Mishnaic term מַעֲנָכֹת (v, 2; comp. Otho, Leb. Robb, p. 649) treats of the "meat-offering" in the above broad sense as an important part of the sacred ritual. The Bible itself specifies, of the not burned "meat-offerings," only the Pentecostal bread expressly by the name of מַעֲנָכֹת (Lev. xxiv, 7), and the leather sheaf, while the showbread belong by their own nature to the same category. The proper "meat-offerings," as above particularized, were either independent gifts (Talm. מַעֲנָכְתָי), or simply additions to other principal offerings (רִ♪ נָה וּשְׁנָנָה). For example, no burn-offering could be presented without a meat or drink offering (see Lev. vii, 8 sq.); and drink-offerings were associated likewise with thank-offerings (Lev. vii, 12 sq.), and in a certain case with a sin-offering (Lev. xiv, 10, 20). This appears to have been on the principle (d) a delicacy of flesh without wine or oil; a designation which also lay at the bottom of the Greek obłai (coarse ground barley grains) and the Roman molis seca, with which the victim was strewed. Bahr (Symlol. i, 216), however, regards the supplementary unbloody offering as a sort of compensation for the life that was not consumed. Such unbloody meat-offerings, at all events, appear regularly in connection with the principal offerings, whether (a) free-will (Numb. xxvi, 4 sq.; comp. Judg. vi, 19) or (b) enjoined. The latter, again, were sometimes offered publicly in the name of the whole people (יִהְוֶה יִרְדֵּנָה), as those in connection with the daily morning and evening oblation (Exod. xxix, 40; xxviii, 6; Numb. iv, 16), or with the sabbatical (Numb. xxviii, 9) and feast offerings (Numb. xxviii, 11 sq.; Lev. xxiii); at other times they were private (יִהְוֶה יִרְדֵּנָה), as that of the purification of the leper (Lev. xiv, 20 sq.), the Nazarite who had fulfilled his vow (Numb. vi, 16, 17), and the consecration of Levites (Numb. vii, 26 sq.), and perhaps of priests (Exod. xxix, 2, Lev. viii, 2). The term מַעֲנָכֹת for these cases the exact word for meat-offering was fine wheat flour (ךַּף; Josephus, Antiq. xiii, 9, 4), mixed with olive-oil (these were both to be the best procurable in Palestine; see the Mishna, Menach. viii, 1), and it was all consumed upon the altar. The proportions were: for a lamb, ךַּף ephah of flour and 2 1/2 hin of oil; for a ram, 3 1/2 ephah of flour and 3 1/2 hin of oil; and for a bullock, 6 ephah of flour and 3 1/2 hin of oil (Num. vi, 4 sq.; xxviii, 5, 9, 12 sq.; 28 sq.; xxviii, 3 sq.; xxviii, 13 sq.; Lev. xiv, 21). For the lamb offered with the Passover sheep, ךַּף ephah of fine flour was prescribed (Lev. xxiii, 18). In the case of the Nazarite still different regulations are made (Numb. vi, 16 sq.). See NAZARITE. From the fact that in connection with (comp. the) burn-offerings a handful of the meal only as a meat-offering was to be sprinkled upon the altar to be consumed with the incense, while the remainder fell to the priest's lot (Lev. vii, 14 sq.), we see that priestly festivitites were associated with the thank-offerings.

It is, however, for the foregoing account that the independent "meat-offerings" were sometimes free-will (Lev. ii, iii), and sometimes obligatory. To the latter belonged the cases specified above: (a) that of a poor man, who had made himself liable in the manner stated in Lev. vi, 1 sq. (comp. ver. 11); and (b) the "jealousy-offering" of a wife charged with adultery (Numb. xv, 20); to which is to be added (c) the consecration-offering of a priest (high-priest) on entering upon his office (Lev. vi, 20 [18 sq.]). The Talmud (see Menach. iv, 5; xi, 3) applies this law exclusively to the oblation of the high-priest, and makes the meat-offering to be a daily one (יִרְדֵּנָה יִרְדֵּנָה), with which Josephus agrees (Ant. iii, 10, 7). In both the first cases the meat-offering consisted of a ךַּף ephah of meal (without oil or incense), of which, as above noted, only a handful was burned, and the rest, as usual, went to the priest; whereas in the third case, the whole meat-offering was to be consumed (if so we may understand the somewhat dark passage of Lev. vii, 22). The meal in cases (a) and (b) was to be of wheat, but in the case (c) of barley. The free-will offering might be brought in either of three conditions, namely, as raw flour, upon which oil was poured and incense laid (strewed) (Lev. i, 1 sq.); or as roasted and pounded (firstling) grains, likewise with oil and incense (Lev. ii, 14 sq.); or, lastly, as baked dough. The unleavened bread might be baked in the oven, and in that case the meal must be spread under the loaves, or sprinkled upon them (Lev. ii, 14); or in a pan (ברכַּף), when the dough must be mixed with the oil, and in the presentation the loaves were broken in pieces and oil poured on them (Lev. ii, 5 sq.); or, finally, in the הָיוֹת הָיוֹת, i.e., according to the Jews, a deep stewpan, so that the loaves swam in oil (Lev. ii, 7). See CAKE. The priest always burned of these free-will offerings a handful of meal with oil (or a batch), with all the incense, on the altar (Lev. ii, 2); the remainder fell sometimes to him, sometimes to the other priests (Lev. vii, 9 sq.), and must be consumed in the sanctuary (Lev. iii, 8; x, 10, 12 sq.; comp. Josephus, Antiq. iii, 9, 4). Leaven or honey must not be mixed with the meat-offering (Lev. ii, 11; a rule which, with one exception (Lev. vii, 13), applied to all such offerings; see Exod. xxix, 2; Lev. xxv, 12; Menah. viii, 13); but they must be salted (Lev. ii, 18). Even in sprinkling the meat-offering the priests were not allowed to use ferrment (see Lev. vii, 16 [9]; x, 12). See generally Reland, Antiq. Sacr. iii, 7; Iken, Antiq. Heb. i, 14; Carcop. Append. p. 708 (brief); Bauer, Gottesd. Verh. i, 187 sq. (incomplete and inaccurate).
chiefly by letting them to the pilgrims who flock hither to visit the Belt Allah (House of God), or chief mosque, in the city, containing the Kaaba (q.v.). This metropolis, holding about 85,000 persons, is surrounded by nineteen gates surmounted by seven minarets, and contains several rows of pillars, about twenty feet high, and about eighteen inches in diameter, of marble, granite, porphyry, and common sandstone, which at certain distances are surmounted by small domes. A great number of people are attached to the mosque in some kind of ecclesiastical capacity, as kattib, muftis, mueddins, etc. Pilgrimages have very much decreased of late years, and in consequence the inhabitants of this city, at one time containing 100,000, now scarcely counts 40,000 regular residents. The age of the city of Mecca is very great. We feel that it is the beginning of a flourishing condition in the days of Ptolemy, under the name of Macoruba. Mohammed, who had been obliged to quit it quite precipitately in A.D. 622, returned to it in 627, forcing his entrance as conqueror. At first it belonged to the tribe of the Qosaites, later to the Ko- wesh (q.v.). Within the course of the present century (1809) Mecca was taken by the Wahabies (q.v.), but given up again to the pacha of Egypt, Mehemet Ali (1839), whose son Ibrahim was made sheik El-Haram —'of the Sacred Place.' At present, however, Mecca is directly dependent on the sultan of Turkey. A certain balm, the 'Balm of Mecca,' is made from a plant called Zizyphus medievalis, which grows in the neighborhood of the city. Another chief article of manufacture, and a great source of income to the residents of Mecca, are the chaplets for pious pilgrims. See Chambers, Cyclop. s. v.; Der Christliche Apologete, 1872, Nov. 12.

Mechanic. The Hebrews appear to have learned in Egypt the elements at least of all the forms of handicraft practiced in that highly-civilized country, and later on their neighbors the Phcenicians. It was probably in early times for their progress in the industrial arts, doubtless exerted a further influence upon them; nevertheless, down to about the close of the period of the judges, the skill of the Hebrews in manufactures was quite inconsiderable (1 Sam. xiii, 20). Many of the handicrafts were practiced by the proprietors of the house (house-owner) himself (comp. Homer, Odys., v, 248), chiefly the coarser kinds of work (i.e. in wood), while other sorts fell to the female head of the family, such as baking (2 Sam. xiii, 8), weaving and embroidery (Exod. xxxvi, 26; Prov. xxxi, 24), and the making up of garments, including the work of the men (Exod. xxxvi, 5, 6). Acts x, 19: Acta ix, 89). See Woman, and comp. the Mishna, Kethuboth, v, 5. But all the varied forms of manufacture, which, being generally executed by dint of actual manipulation, required a good degree of personal dexterity, were carried on among the Hebrews by the owners themselves, who were not slaves. So in the Hemic poems several kinds of mechanical arts appear (Judith, iv, 110, 485; xviii, 601; Odyssey, iii, 425, 432; see Wachmuth, Hellen. Alterth. II, i, 47 sqq.).

Accordingly we find mention of the gold and silver smiths (נבר מזון, 12, Kings xvii, 4; Isa. xvi, 19; Jer. ii, 14, etc.), who especially fabricated idols, or plated and ornamented them; the apothecaries (נבר בּג, Exod. xxx, 85; comp. vavvav, Ex. xxviii, 7); the artificer (נבר נון, Exod. xxx, 85; Deut. xxvii, 15; I Sam. xiii, 19), a term inclusive of blacksmithe (לְבָר נון, Isa. xiv, 12; 2 Kings xxiv, 14); I Sam. xiii, 19; Talm. בָּר נון, Mishna, Chel. xiv, 3) and brazier (נבר נון, 1 Kings vii, 14; comp. שומרא, 2 Tim. iv, 14), as well as carpenters (נבר נון, 2 Sam. v, 11; Isa. xiv, 13; comp. רועש, Matt. iii, 56; Mark vi, 3; also cabinet-makers, Mishna, Baba Kamma, ix, 3) and masons (נבר נון, 1 Chron. xiv, 1); the stone-squarers (לְבָר נון, 2 Kings xii, 12), which was distinct from the last named.
Veneering and the Use of Glue. (Wilkinson.)

Bandaging Mummies and making the Cases. (Wilkinson.)

Fig. 1, sawing wood. 2. cutting the leg of a chair, indicating the trade of the carpenter. 3. a man fallen asleep. 4. wood ready for cutting. 5. above and other provisions, which occur again at 10, with vases. 6. cutting and preparing the cases.

But whether the plasterers (πετροσιται, Ezek. xiii, 11) were a separate trade from the masons is not clear; the potter (ποταρης), Isa. xxix, 16, etc.; καρπομεθυς, Matt. xxvii, 7, 10; comp. Gesenius, Monum. Phoen. p. 161; the locksmith (λευκ. Jer. xxix, 2); the fuller (πολεμιστης) or παραστης, 2 Kings xviii, 17; γιαφες, Mark ix, 3; comp. Gesenius, p. 181; the weaver (πεπαραται) early (Exod. xxvii, 32) formed a separate branch of industry (especially in fabrics of byssus, 1 Chron. vi, 21), and in large cities the baker (βισκος, Hos. vii, 4; Jer. xxxvii, 21; see Josephus, Ant. xv, 9, 2; but Luke xvi, 2, does not prove the absence of such a trade); later also the barber (πεπαραται, Ezek. v, 1) is named (προφ., according to the Targum of Jonathan at Lev. xii, 45; Mishna, Shabb. i, 2). See each in its place. Nevertheless, that the Hebrews took no very high rank in the fine styles of work, especially those in which labor passes over into an art, appears from the fact that a single individual often carried on several trades at once (Exod. xxxvi, 3 sqq.; 2 Chron. ii, 14); while David and Solomon are recorded as having imported for their structures Phoenician (Sidonian) artisans (1 Kings v, 6; 1 Chron. xiv, 1; 2 Chron. ii, 7, 14, etc.).

See PHOENICIA.

After the exile handicrafts and arts in general stood in greater esteem among the Jews, so that experts were found among them, and their productions acquired considerable reputation (see Rosenmüller, Morgenland, vi, 42). It passed for a sign of a bad bringing up when a father failed to teach his son a trade (Mishna, Kiddush. iv, 14; Lightfoot, p. 616; comp. Pirke Abot, ii, 2; Wagensiel, Sota, p. 597; Otho, Lex. Robb. p. 491). In the Apocalypse of the Old Test, there are mentioned the καρπομεθυς, as a moulder of figures of clay (Wisd. xv, 8), the ψευδοεισαγορας, ψευδο- χωρς, and ψευδολυστας among metal-workers (Wisd. xv, 19), chiefly as tributary to idol image-makers; in the New Test. the tanner (πσαρευς, Acts ix, 43; x, 6, 32; Talm. י_meter or י close, Chel. xv, 1), the tentmaker (πσαρευς, Acts xviii, 3); in Josephus occur the cheese-makers (πσαρευς, War, v, 4, 1); the barbers (πσαρευς, Ant. xvi, 8; War, i, 27, 5), who were of service to princes; in the Talmud, among others, the tailor (קונס, Shabb. i, 3), the shoemaker (קונס, Pesach, iv, 6), the platerer (קונס, Chel. xxiii, 3), the glazier (יון, Chel. viii, 9), the goldsmith (קונס, Chel. xxix, 6), the dyer (קונס, comp. Thilo, Apoc. p. 111). Some of these occupations were of so low repute that those who followed them could not attain the office of high-priest (Kiddush. ixxii, 1); viz. those of the weaver, the barber, the fuller, the apothecary, the blood-
Catholic. To escape from the animosity of his countrymen he still found it necessary to remove in disguise to Paris. At the age of 50 he settled in Rome, under the protection of the Venetian government. To whom it then belonged. As early as Sept. 8, 1701, he had founded at Constantinople a new religious community, in which ten other persons joined with him; at Modon, on Sept. 8, 1705, he took possession of an estate given him by the Venetians, to build a convent of the new order, which was called after his own name. The war between the Turks and the Venetians drove Mech- 

citars in 1715 to Venice, where he remained until after the conquest of the Morea by the Mussulman. His petition for a place instead of Modon found a willing ear at the Venetian Senate in 1717, and he was presented with the little island of San Lazaro, which he called the Morea. In 1718 Mechitark built the convent which still attracts the atten-
tion of every visitor to Venice. It was opened on the
day of the Virgin Mary's birth, Sept. 8. Thenceforth Mechitark labored assiduously for the good of the Church of Rome and the elevation of his countrymen. He is acknowledged even by his opponents of the Armenian Church to have revived the high literary attainments of his country in former days. He not only contributed to this by his own efforts as a voluminous writer, but in a still more important degree by establishing printing-
presses. He died April 27, 1749. His own productions are many, whilst others include an Armenian church, because they were written before his apostasy, a translation of Thomas a Kempis's Imitation of Christ, and of Thomas Aquinas's Theology, and many philological works of value. The fullest account of Mechitark, of his work, and of his followers, in English, is to be found in Brief Account of the Mechitaristic Society, by Alexander Gore (Venice, 1889). See Me-

chitarists.

Mechitarists, a congregation of Armenian Chris-
tians, who reside on the island of San Lazaro at Venice, but who have also obtained a footing in France and Austria. They derive their name from MECHITAR DA PETRO (q. v.), who in the year 1701 founded this religious society for the purpose of diffusing a knowledge of the old Armenian language and literature. The Me-

chitarists, like their founder and instructor, acknowledge the supremacy of the Roman pontiff, and seek to spread the faith and practices of the Church of Rome in the East. The rules of the Mechitarists are modelled after those of the Benedictines, but every member must be of the Armenian nation, and promise an active devotion to the cultus of the Armenian language and literature. The result, as we have said above, has been the forma-
tion not only of a convent but of an academy; and, in fact, the best schools for the study of Armenian are in the houses of the order. A division was provoked in 1773, and some of the Mechitarists settled at Trieste, and there founded an institution like that at San Lazaro. In 1810 these seceders removed to Vienna, the Austrian capital, and there they still remain, busy mainly in the publication of Armenian classical productions and in-
structing young Armenians. A third society has re-
cently been founded at Paris, and efforts are making for the establishment of a fourth at Constantinople. Sev-
eral hundred volumes have already been published by the Mechitarists. Of these the theological portion has a Roman Catholic circulation only, but the others have been welcomed by the Armenians generally. They publish a periodical like the English Penny Magazine. See Bozé, De Convent de St. Lazare à Venise, ou Histoire succincte de l'Ordre des Mechitaristes Arméniens (Paris, 1837).

Mechthildis, St., a younger sister of St. Gertrude (q. v.), of the ancient and renowned family of Hacke-
born, was born at Eisleben in the early part of the 13th century. She early manifested a decided taste for reli-
gious exercises, and at the age of seven, having gone one day with her mother to visit the Convent of Ro-
dersdorf, occupied by Benedictine nuns, she was so much delighted with it that she insisted on remaining in it. She was allowed to become a novice, and fulfilled all the duties imposed upon her in that position with great zeal; and the convent, particularly serviceable in taking care of the poor and the afflicted. At the end of her noviciate she took the veil, and remained in the convent until 1258, when, together with the other nuns, she removed to that of Helsede, where she died shortly after.

Inclining from youth to mysticism, she, like her sister Gertrude, claimed to have had visions, but she steadily declined writing them down; this was, however, done against her will by one of her friends, under the title Revelationes selecta S. Mathildis, together with a short biographical notice. These mystic pieces are not only full of elevated thoughts and aspirations, but give evidence of a real, high spiritual experience connected with Scripture. The best edition is that published, together with a German translation, in the Bibliotheca mystica et ascetica (Cologne, 1854, pt. x).

Another Mechthildis, also honored as a saint in the Roman Catholic Church, flourished near the middle of the 12th century. She was a descendant of the counts of Andechs. In early youth she commenced to manifest signs of piety, and when she attained the requisite age she became a nun in the Convent of Diessen, in Bavaria. Here she acquired such reputation for piety and zeal that she was elected abbess in 1158. Some years afterwards she was removed to the convent at Halberstadt, where she lived the rest of her life, and was called by all who knew her "Mother of the Church." She died 1165.

Mechelburg, a German territory, now part of the larger German Empire, consists of two grand-duchies, the larger one called Mecklenburg-Schwerin, and the smaller one called Mecklenburg-Strelitz.

(1) Mecklenburg-Schwerin, bounded on the north by the Baltic, on the east by Pomerania, on the south by Brandenburg, and on the west by Lauenburg, covers an area of about 1612 square miles, and has a population of 560,618 (in 1867), of which 556,290 are Lutherans (200 Reformed), 1159 communicants of the Church of Rome, and 3004 adherents to the Jewish faith. The Mecklenburg-Schwerin was the most ancient of the three counties, the original Mecklenburg, but amalgamation with their Saxon neighbors has largely Germanized the original. The predominating name of religion is the Lutheran, the religion of the reigning prince. The grand-duke, whose powers are limited by a mixed feudal and constitutional form of government, is the title of the royal house of Mecklenburg-Schwerin. His residence is at Schwerin, capital of the county, and lord of Rostock, Stargard, etc. The state church divides the territory into 381 rectories, with 475 churches, which are controlled by six superintendents and thirty-seven preachers. The chief towns are the county seat, Schwerin, Ludwigsburg, Rostock, Gützow, and Wismar.

(2) Mecklenburg-Strelitz, the other grand-duchy, is composed of two distinct portions of territory, viz., Stargard (by far the larger division, lying to the east of Mecklenburg-Schwerin) and the principality of Ratzeburg. Mecklenburg-Strelitz covers an area of about 1512 square miles, and comprises an area of rather more than 1000 square miles, with a population of 98,770 (in 1867), of which 97,937 are Lutherans (1000 Reformed), 169 Roman Catholics, and 466 Jews. Like the other Mecklenburg duchy, the country is in the hands of the Luttherans. It is divided into sixty-two rectories, and is governed by seven diocesan superintendents (proprist).

The two Mecklenburg duchies have provincial estates in common, which meet once a year, alternately at Mecklenburg-Schwerin and Ratzeburg. There are in each province a certain number of noble landowners and the representatives of forty-seven provincial boroughs, each of which has, however, its separate municipal government.

History.—The Mecklenburg territory, anciently occupied by Germanic and afterward by Slavonic tribes, was in the 13th century called Henne the Lion, duke of Saxony, who, after thoroughly devastating the country, and compelling the small number of inhabitants remaining after the war to adopt Christianity, restored the greater part of the territory to Burewin, the heir of the slain Slavonic princes, Niklot, and gave him his daughter, Adelhild, in marriage. The country at that time received its present designation from its principal settlement, Milkinburg, now a village between Wismar and Bruel. Christianity was, however, known to the inhabitants of this country long before the invasions of Henry the Lion. Missionaries of the Cross are said to have been there in the days of Charlemagne; but true Christian principles and faithful adherents to the Christian cause were not made there until the first half of the 10th century. After Henry I had vanquished the natives in the battle at Leuven (931), bishop Adalward, of Verden, in that very year baptized one of their rulers, and by the year 1000 the country was nearly all Christianized. But Christianity was still unpopular, and its confessors suffered much persecution, especially near the middle of the 11th century (comp. Jaffé, Lothar, p. 147, 282; Conrad III, p. 16). Not until the successful invasions of Henry the Lion can Christianity be really said to have found a hold in the Mecklenburg territory, and hence he is generally looked upon not only as the founder of the consolidation of the territory as Mecklenburg, but also as the founder of Christianity within its bounds. Shortly after the middle of the 12th century convents were built, and several monastic establishments founded. We find one Vöclini († 1154), bishop of Lubeck, and his successor Jerold, especially active as missionaries. But Christianity did not attain to a really prosperous condition during the Middle Ages in this part of the Teutonic domains, although it was elevated into a duchy in 1849 by the emperor Charles. The Protestant doctrines were first introduced here in 1556 by duke Johann Albrecht, who renounced Catholicism, received the crown of Wurttemberg and Johann Albrecht, who founded the lines of Mecklenburg-Schwerin and Mecklenburg-Gutow. They were, however, deprived of the ducal title in 1827, in consequence of their adhesion to the Protestant cause, and the imperial general Wallenstein was proclaimed duke of all Mecklenburg-Schwerin and Schwerin. After the death of Gustavus Adolphus of Sweden, his kinsmen, the deposed dukes, to their domains. Kötzer, alias Schluter (q.v.), who was poisoned in 1592, was particularly prominent in the cause of the Reformers. The fruit of his labors was seen in 1594 in the decree against the reading of the mass, and in the final official adoption of the Protestant confession. But the religious and secular affairs of Mecklenburg continued to undergo changes. After various subdivisions of the ducal line into the branches of Schwerin, Strelitz, and others, and the successive extinction of several of these collateral houses, the Imperial Commission, which met at Hamburg in 1701, brought about the settlement of a family compact, by which it was arranged that Schwerin and Gutow should form one duchy, and Strelitz, with Ratzeburg and Stargard, Mirow and Nenemower, another independent sovereignty. After this, very few events of importance occurred till the accession in Schwerin, in 1785, of Friedrich, duke of Oldenburg, who was assassinated by order of the king of Prussia; he was proclaimed duke in 1815, and died in 1837, after a long reign, which he had made highly conducive to the internal welfare and external reputation of his hereditary dominions.

The reign of Friedrich Franz II, who succeeded his father, Paul Friedrich, in 1842, was disturbed by a contest
between the nobles and the burgher and equestrian landowners, the former arrogating to themselves the exclusive right of electing members into the equestrian order, nominating to benefices, and monopolizing other prerogatives of the ancient feudal nobility. The revo-

lutionary excitement of 1848 gave a fresh stimulus to the popular fervor, and the disturbances could only be quelled by the interposition of Prussian troops. In 1860, however, the duchies were incorporated in the North German Confederation, and since the establishment of the new German empire they form part of the latter. Religious toleration and freedom of speech, which were comparatively unknown in the duchies of Mecklenburg, have since given full play, and the prospect for the future, and promising much aid in the extinction of a very lukewarm profession of Christianity, and the establishment of vital Christianity in its stead. See Adem. Bremen. Hist. Ecol., in Bremen, Mon. Script., vol. ii; Ernst Boll, Geschichte Mecklenburg's mit besonderer Berücksichtigung der Culturgesch. (Neubrandenburg, 1856-56); Herzog, Beiträge zur Gesch. d. Vereins für d. Geschichte der d. Prov. v.; Deutsch-Amer., Conv. Lexi-

kon, s. v. (J. H. W.)

Med'aba (Med'aba, 2 Macc. ix, 36). See Medeba.

Mo'dad (Heb. Med'ad), יֹבֵּד, I0в; Sept. Modad), a person mentioned in connection with Eldad, as one of the seventy elders who were nominated to assist Mo-

ses in the government of the people, but who remained in the camp, probably as modestly deeming themselves unfit for the position when the others professed to have probated the tabernacle. The divine Spirit, however, rested on them even there, "and they prophesied in the camp." (Num. xi, 24-29.) The Targum of Jonathan alleges that these two men were brothers of Moses and Aaron by the mother's side, being sons of Jehochebed and Eliaz-

phon, B.C. 1435. See Elad, iv, 357.

Me'dan (Heb. Med'am, מֵדָאָנ, conformation, as in Prov. vi, 14, 19; Sept. Madâr v. r. in Chron. Madâb; Vulg. Madum), the third son of Abraham by Ketura (Gen. xxv, 2). B.C. post 2042. He and his brother Midian are believed to have peopled the country of Midian, east of the Dead Sea. "It has been supposed, from the similarity of the name, that the tribe descended from Medan was more closely allied to Midian than by mere blood-relationship, and that it was the same as, or a portion of the latter. There is, however, no ground for this theory beyond its plausibility. The traditional city Medân of the Arab geographers (the classical Medâa-

nus), situat in Arabia on the eastern shore of the Gulf of Elat, bearing the name Midian, or Medâniye, is Midianitish, not Medeanian (but Bunsen, Bücherei, supposed a Semitic root for the latter identification). It has been elsewhere remarked [see Keturah] that many of the Keturehit tribes seem to have merged in early times into the Ishmaelite tribes. The mention of 'Ismahelit,' as a convertible term with 'Midianite,' in Gen. xxvii, 28, 56, is remarkable; but the Midianite of the A. V. in ver. 28 is Midianite in the Hebrew (by the Sept. rendered Medâmavaiot, and in the Vulg. Ismaelitas and Midianitas); and we may have here a trace of the subject of this article, though Midianite appears on the whole to be more likely the correct reading in the passages referred to.' See Midian.

Medard, Sr., bishop of Noyon, in France, was born about 456, in the village of Salleney, near Noyon. Through his father, Nectardus, he belonged to a noble Frank family; his mother, Protagis, a Gallo-Roman, also claimed high connections. He was educated in the school of his native city, and early manifested that zeal and charity for which he afterwards became distinguished. He entered the Church under the guidance of the bishop of Vermand, and on the death of the latter, in 580, was appointed his successor. In consequence, however, of the frequent invasions which desolated that district, he exchanged this see for Noyon, a strongly-fortified town. When St. Etienne's bishop of Tournai, died in 602, Medard was invited to join this see to that of Noyon; he refused at first, but was finally induced to accept by king Clotaire himself, and the two dioceses continued to be administered by the same bishop until 1146, when they were again divided. St. Medard was one of the most influential and most universally-respected bishops of his time. King Clotaire came to visit him shortly before his death, which occurred about 455, and after- wards visited the city of Tournai, where the relics of the estate of Crouy, near Soissons. The renowned cathedral of St. Medard is erected over his grave. He is com-

memorated on June 8. He is highly praised by Gregory of Tours (Ivb. i, c. 19), who, like his biographers Venantius, Fortunatus, and Radbodus, attributes to him a great number of miracles, not one of which is contained in the Acta Sanctorum for July. See Per-

See Mom., Hist., Germ., vol. i and ii; Gregorius Turon., Hist. Franc., lib. i, c. 19; same, De Gloria Confrat. c. 55; Rad- 

bodus, Vita S. Medardi, Norimv., episc., apud Suriwm, 3 Junit; Gallia Christ. vol. ix, col. 579. (J. F. P.)

Medatha. See Hammatha.

Mede (Heb. Midâh, מִדְאָה, word of Indian origin, meaning, according to Gesenius, Theeb, p. 708, the middle country, from its position, as in Polybus, v, 44; Auth. Vers. "Medes," Hist., "Meda," Gen. x, 2; 2 Kings xiii, 20; 1 Chron. ii, 1, 5; 3 Kings xiva, 18; 19; x; 2; Isa. xiii, 17; xx, 12; Jer. xxxv, 20; li, 21; 11, 29; Dan. viii. 20; ix, 1; also Medai, "Mede," Dan. xiv. 1; Chald. Medâdy, מְדַדְי, "Mede," Meda, Ezra vi, 2; 19, 28; v, 8, 12, 15; and Medoda, מְדַדָא, "Me-

dian," or Medaba, מְדַדְא, Dan. v, 31; Gr. Midaph, the ethnographic title of a Median, or inhabitant of Media; the same of that of Madai [q. v.]. The Hebrew form, "which occurs in Gen. x, 2, among the list of the sons of Japhet, has been commonly regarded as a personal epithet to Japhet and most commentators call Madai the third son of Japhet, and the progenitor of the Medes. But it is extremely doubtful whether, in the mind of the writer of Gen. x, the term Medai was regarded as representing a person. That the genealogies in the chapter are to some extent ethnic is universally allow-

ed, and may be seen even in our Authorized Version (verse 16-18). As Gomer, Magog, Javan, Tubal, and Meshech, which are conjoined in Gen. x, 2 with Madai, are elsewhere in Scripture always ethnic and not per-

sonal appellatives (Ezek. xxxvii, 13; xxxviii, 6; xxxix, 6; Dan. viii, 21; Joel iii, 6; Ps. cxx, 5; Isa. lxv, 19, etc.), so it is probable that they stand for nations rather than persons. In that case we would regard Madai as a person; and we must remember that it is the exact word used elsewhere throughout Scripture for the well-known nation of the Medes. Probably, there-

fore, all that the writer intends to assert in Gen. x, 2 is that the Medes, as well as the Gomerites, Greeks, Tiba-

reni, Moschi, etc., descended from Japhet. Modern science has found that, both in physical type and in language, the Medes belong to that family of the hu-

man race which embraces the Cymry and the Greco-

Romans." (see Prichard's Phys. Hist. of Mankind, iv, 6-

50; chap. x, § 2-4; and comp. the article on Media.)

For "Darius the Mede," see DARIUS.

Mede, Joseph, B.D., a learned English divine, was de-

cended from a respectable family at Berden, in Essex, and was born in 1586. When but a boy ten years old he lost his father, but his education was provided for by friends. He became a preacher of Christ Church, Cambridge, in 1602, where he took the degree of mas-

ter of arts in 1616, having made such progress in all kinds of learning that he was considered an accomplished scholar. He was appointed Greek lect-

urer on Sir Walter Mildmay's foundation, and partic-

ularly employed himself in studying the history of the Chaldeans and Egyptians. He appears to have had many offers of preferment, but unhesitatingly declined them all in favor of this position, which afforded him leisure for favorite studies. He died in 1638. "Mr.
Mede," says his biographer, "was an acute logician, an accurate philosopher, a skilful mathematician, an excellent anatomist, a great philologist, a master of many languages, and a good proficient in history and chronology." His principal production, worthy the labors of a lifetime, he sent forth in 1627, under the title Claris Apologética (Cambridge, 1627, 4to); to which he added in 1632, In Sancti Joannis Apologiae Commentarius, ad Tuscanos scriptus.... A second publication of this celebrated work was published in London in 1650, entitled The Key of Revelation searched and demonstrated out of the natural and proper Characters of the Visions, etc.; to which is added a Conjecture concerning Peg and Magog. This work has been highly honored with commendation from the learned world; in his Introductory Lecture on the Study of the Prophecies (ii, 122, etc.), where Mede is spoken of as "a sublime genius, without vanity, interest, or spleen, but with a single, unmixed love of truth, dedicating his great talents to the study of the prophetic Scriptures, and unfolding the mysterious prophecies of the Revelation." A collection of the whole of Mede's writings was published in 1672, in 2 vols. folio, by Dr. Worthington, who added to them a life of the author. He was a pious and profoundly learned man; and in every part of his works the talents of a sound and learned divine are eminently conspicuous. He was distinguished for his meekness, modesty, and prudence; never pronounced for or against the needy. A very full account of Mede is given in Alli- bone's Dict. Brit. and Amer. Authors, s. v. See also English Cyclop. s. v.; Gen. Biog. Dict. s. v.; Darling, Cyclop. Bibl. i, 2028; Horne, Bibl. Bibl. 1833, p. 381; Orme, Bibl. Bibl. s. v.; Hunt, Hist. of Religious Thought in England, i, 167.

Medeba (Heb. Me'edhəb, מֶדֶּבָּא, מֶדֶּבֶּא, water of quiet; Sept. Μεδεβὰ in Chron., Μεδαβᾷ in Josh., Μεδαβὰ in Numb., and Μουσαβὰ v. r. Μεσαβὰ, Μεσαβὰ, Μεσαβὰ in Jos., וַעֲבֹות, וַעֲבֹות in Josh.); a town east of the Jordan, in a plain of the same name in the southern border of the tribe of Reuben (Josh. xii, 9, 16), before which was fought the great battle where Joab defeated the Ammonites and their allies (1 Chron. xix, 7; comp. with 2 Sam. x, 8, 14, etc.). In the time of Ahaz, Medeba was a sanctuary of Moab (Isa. xv, 2); but in the denunciation of Jeremiah (xlix, 28), often parallel with that of Isaiah, it is not mentioned. It originally belonged to the Moabites (Numb. xxx, 30), from whom it was conquered by Sihon the Amorilish king (Josephus. Ant. xiii, 2, and 4); but upon the captivity of the tribes beyond the Jordan, the Moabites again took possession of it (Isa. xv, 2), and it (Isa. xxvii, 1) after the return from exile (1 Macc. ix, 36). See JAMMU. It was the scene of the capture and possibly the death of John Macabaeus, and also of the revenue subsequently taken by Jonathan and Simon (Josephus, Ant. xiii, 1, 4); his name is omitted in Maccabees on the second occasion, see ver. 36. About 110 B.C. it was taken, after a long siege, by John Hyrcanus (Ant. xiii, 9, 1; War, i, 2, 4), and then appears to have remained in the possession of the Jews for at least thirty years, till the time of Alexander Janneus (xiii, 15, 4); and it is mentioned as one of the twelve cities by the promise of which Aree- tas, the king of Arabia, was induced to assist Hyrcanus II to recover Jerusalem from his brother, Aristobulus (Ant. xiv, 1, 4). Ptolemy calls it Medawō (Μεδαωά), in Arabia Petraea, in long. 68° 30', lat. 30° 45' (v. 17, 6). Stephen of Byzantium (p. 566) assigns it to Nabatene. The Onomasticon places it near Heshbon; and it was once the seat of one of the thirty-five bishoprics of Arab- bia (Rablan, Palestine, 217, 229, 290). The place, although in ruins, still retains the name Medeba, and is situated upon a round hill seven miles south of Hesh- bon. The ruins are about a mile and a half in circuit, but not a single edifice remains perfect, although the remains of the walls of private houses are traceable, and an immense tank (Irby and Mangles, p. 471) is visible

(Seezetn, in Zach's Monat. Corresp. xvii, 481; Burch- hardt, Trav. in Syria, p. 965 sq.). The foundations of the church and an ancient obelisk, which are said to be west of the town are perhaps those of the Christian church which it once contained (ἡ μονή Μεθυδαίων, Le Quien, Oriens Christianus, 769-772). A large tank, columns, and other marks of former structures are still to be seen; the remains of a Roman road exist near the town, and the site of a former Roman camp has been named Heshbon. "Taken as a Hebrew word, Me-deba means 'waters of quiet'; but, except the above tank, what wa- ters can there ever have been on that high plain? The Arab name, though similar in sound, has a different signification.

The place (מֶדֶּבָּא) from Medeba to Dibon, given in Josh. xiii, 9 as the southern portion of the territory of the Amorites, is the modern Belde, a fertile tract thus described by Raumer (Palladina, p. 70): "Southwards from Rabbath Ammon as far as the Arnon the country is mostly table-land, in some places for a considerable distance without a tree, but covered with the ruins of cities that have been destroyed. Towards the west it stretches away into the desert of Arabia, and on the west it slopes away to the Jordan." The part of this plateau here referred to is elsewhere (Numb. xx, 20) called, after its former inhabitants, "the field of Moab," or (Numb. xxiii, 14) "the field of the watchmen" (comp. Hengstenberg, Biblem, p. 241, 248). See MISHR.

Medhurst, Walter Henry, D.D., an English missionary and Chinese scholar, was born in London in 1790. He entered the mission work in China in 1816, when he was sent to China by the London Mis- sionary Society to ascertain if the country was open to the Gospel, and, if so, to furnish this people with a cor- rect version of the Scriptures in Chinese. After having labored successfully in India, on the island of Malacca, and in other Asiatic countries, he was again sent to China in 1835, with the Rev. Edwin Stevens; but he did not commence active missionary work in that country until 1845, when he was joined by Lockhart, and settled at Shanghai. He had charge of the printing establishment which was owned by this society, and had up to this time been occupied at Batavia; he now removed it to Shanghai, and began the publication of sermons and tracts. In spite of the opposition of the numerous Ro- manists, the mission grew so rapidly that in the year 1847 84,000 copies of different works were printed, and 500 tracts were weekly distributed. This same year he published several sermons converted to the Gospel for the revision of the New Testament in Chinese. Med- hurst was engaged in this important labor until 1850, when he withdrew, and gave his whole time to the re- vision of the Old Testament. He died Jan. 24, 1857, a few days after his return to England, closing a life of valuable service spent in the interests of Christian mis- sions. Medhurst founded several orphan asylums, and did much good among the Asiatics in various ways. His works of special interest are, China, its State and Prospects, with special Reference to the Diffusion of the Gospel (London, 1888, 8vo) — Dissertation on the Theology of the Chinese (8vo) — The Chinese Version of the Script- ures (8vo). See also various Dictionaries, both in Chinese and a Japanese and English Vocabulary. See Vaperou, Dictionnaire des Contemporains, s. v.; Allibone, Dict. of Brit. and Amer. Authors, vol. ii, s. v.

Mediā (מְדֵיָא). The same Hebrew word is used in the O. T. as the name of a son of Japhet, of the nation which he founded, and of their country. Hence we find it rendered in four different ways in our A. V. In most cases these renderings are hardly preferable rather than explain—(1) Mediā, the proper rendering (Gen. x, 2; Malbô; Alex. Malēa; Mediā; 1 Chron. i, 5, Malēi); (2) Medes (Medēa, 2 Kings xvii, 6; xviii, 11; Esther i, 19; Isa. xiii, 17; Jer. xxxv, 20; Dan. i, x, 2; Mēzād, Ezra vi, 22; Medēa); (3) Medes (Medēa, Medēi, Esther i, 8; x, 2; Isa. xxi, 2; Dan. viii, 20;
4. *Media*, only in Dan. xi, 1. In the following account we chiefly refer of course to ancient territorial distributions and descriptions.

1. Geography.—The general situation of the country is abundantly clear, though its limits may not be capable of being precisely determined. Media lay northwards of the Tigris and south of the Caspian, east of Armenia and Assyria, west and north-west of the great salt desert of Iran. Its greatest length was from north to south, and in this direction it extended from the 32d to the 40th parallel, a distance of 550 miles. In width it reached from about long. 45° to 53°; but its average width appr. amounts to more than from 250 to 350 miles. Its area may be reckoned at about 150,000 square miles, or three fourths of that of modern France. The natural boundary of Media on the north was the river Aras; on the east Zagros, and the mountain-chain which connects Zagros with Ararat; on the south Media was probably separated from Persia by the desert which now forms the boundary between Persia and Irak Ajem; and on the east its natural limit was the desert and the Caspian Gates. West of the gates it was bounded, not (as is commonly said) by the Caspian Sea, but by the mountain range south of that sea, which is the natural boundary between the high and the low country. It thus comprised the country now comprised by Irak Ajem, the Kurdish, part of Luristan, Azerbaijan, perhaps Talish and Gilan, but not Mazanderan or Astaraerd.

The division of Media commonly recognised by the Greeks and Romans was that into Media Magna and Media Atropatene (Strabo, xi, 13, § 1; comp. Polyb. vi, 43, viii, 26; Appian. vii, 2; Strabo, x, 13, § 3). Media Atropatene, so named from the satrap Atropates, who was the first of the royal governors appointed by Darius the Great, and who ruled from the 24th to the 30th year of his reign, was a very large and important district, and is mentioned in the third or fourth century B.C.

The division of Media into these two provinces can only be distinctly proved to have existed from the time of Alexander the Great, yet there is reason to believe that it was more ancient, dating from the settlement of the Medes in the country, which did not take place all at once, but was a gradual process, and was completed afterwards in the southern country. It is indicative of the division, that there were two Ecbatanas—one, the northern, at Takht-i-Suleiman; the other, the southern, at Hamadan, on the banks of Mount Orones (Eפול—or respectively the capitals of the two districts. See *Ecbatana*.

Next to the two Ecbatanas, the chief town in Media was undoubtedly Rhages—the Raga of the inscriptions. Hither the rebel Phraortes fled on his defeat by Darius Hystaspis, and hither, too, came Darius Codomannus after the battle of Arbela, on his way to the eastern provinces (Arrian, *Exp. Alex. ii, 30*). The only other place of much note in Media was Histiaia, on the Bosphorus, which guarded the chief pass connecting Media with the Mesopotamian plain.

No doubt both parts of Media were further subdivided into provinces, but no trustworthy account of these minor divisions has come down to us. The tract about the Caspian Gates was called Khurram-Shah, and that about the Tigris, the Zendan, or Zendaneh. Certain tract adjoining Persia seems to have been known as Paretacene, or the country of the Paretacene.

Polteny gives as Media districts Elym asia, Choromithre, Sogdiana, Daraitis, and Syromedia; but these names are little known to other writers, and suspicions attach to some of them. On the whole, it would seem that we do not possess materials for a minute account of the ancient geography of the country, which is very imperfectly described by Strabo, and almost omitted by Pliny.

In great Media lay the metropolis of the country, the Ecbatana of that district (Pliny, *Hist. Nat. vi, 17*), as well as the province of Hragana and the city Rhages, with the above Nisan plain, celebrated in the time of the Persian empire for its horses and horse-races (Herod. iii, 106; Arrian, viii, 13; Heeren, *Ideen*, i, 1, 305). This plain was near the city Nisae, around which were fine pasture lands producing excellent eulov (Herba Medica). The horses were entirely white, and of extraordinary height and beauty, as well as speed. They constituted a part of the luxury of the great, and a tribute in kind was paid from them to the monarch, who, like all Eastern sovereigns, used to delight in equestrian display. Some idea of the opulence of the country may be had when it is known that one of the tributes paid in money, Media paid a yearly tribute of not less than 8,000 horses, 4,000 mules, and nearly 100,000 sheep. The breeds...
once celebrated through the world, appear to exist no more; but Ker Porter saw the shah ride on festival occasions a splendid horse of pure white. Cattle abounded, as did the richest fruits, as pines, citrons, oranges, all of peculiar excellence, grazing as in their native land. Here also was found the silphium (probably asafoetida), which formed a considerable article in the commerce of the ancients, and was accounted worth its weight in gold.

II. History.—1. Its Early Stages.—In Gen. x. 2 we are told that Madai was the third son of Japheth (comp. 1 Chron. i. 5). The names in that invaluable ethnological summary were not merely those of individuals but of the nations which descended from them; for the historian says, “By these were the isles of the Gentiles divided in their lands, every one after his tongue, after their families, in their nations” (ver. 6). For a period of fifteen centuries the Medes are not again mentioned in Scripture. Then Isaiah, in pronouncing the prophetic doom of Babylon, says, “I will stir up the Medes against them” (xiii. 17). This prophecy was uttered about B.C. 720. There is no direct evidence connecting Madai, the son of Japheth, and the nation he founded, with the Medes (Medoi) of whom Isaiah speaks; but the names are identical in Hebrew; and the genealogical tables of Genesis appear to have been intended to show the origin of those nations which afterwards bore an important part in the history of God’s people.

Because the Babylonian priest and historian states that at a very early period (B.C. cir. 3000) the Medes ruled in Babylon (Eusebius, Chron. i. 4). Though we may not be able to rely upon either his dates or his facts, yet we may infer from his words and references that the Medes were one of the great primal races which established themselves in Central Asia. Herodotus gives a very graphic and circumstantial account of the early history of the Medes, and the establishment of the empire: “The Medes were called anciently by all people Arioi; but when Medæa, the Colchian, came to them from Athens, they changed their name. Such is the account which they themselves give” (vii. 69). This is opposed to what appears to be the opinion of the sacred writers; but there can be no doubt that during the time of ascendency of Greek arms, literature, and art, Eastern nations were all anxious to claim some sort of connection with Greece, and this may account for Herodotus’s story (comp. Rawlinson’s Herod. iv. 61, 1st ed.).

The Medes appear, however, to have been a branch of the Aryan family, who probably had their primitive seat on the east bank of the Indus, and thence sent their colonies eastward into India, and westward to Media, Persia, Greece, etc. (Müller, Science of Language). There are a great number of names by which the Medes are mentioned in the Old Testament, the place where the Medes were first mentioned was in the Chersonese of the west; and by the time of Herodotus we find them occupying the country of the Arians, and the Medes were the great allies of the Medes.

Ctesias, as quoted by Diodorus Siculus (ii, 29), assigns to the Median monarchy a still older date than Herodotus. He gives a list of eight kings who ruled before Astyages, for an aggregate period of 292 years, which would fix the establishment of the monarchy about B.C. 857. The names of the kings are different from those of Herodotus; and it is vain to attempt to reconcile the narratives (see, however, Hales's *Analysis of Chronology*, iii, 84; Heeren, *Manual of Ancient Hist.*). Rawlinson has clearly shown that Ctesias's narrative is fabulous (*Herodot. i, 406*).

2. The Median Empire.—(1.) Its Establishment.—From the foregoing notices we may conclude that the Medes migrated from beyond the Indus to the country on the southern shores of the Caspian Sea, about the 5th century B.C.; that they settled there as a number of distinct tribes (probably six, as Herodotus states, l.c.), and so remained during a period of three or four centuries; that some Scythian tribes either occupied the country with them or invaded it at a later date; and that (about B.C. 633) Cyaxares rose suddenly to power, united the Medes under his sway, drove out the Scythians, and established the monarchy. Before this time the Medes were only once mentioned in Scripture, and then, as has been seen, their country was subject to Assyria (2 Kings xxvi, 6).

A few years after the establishment of his empire Cyaxares made a league with the Babylonian monarch, and invaded Assyria. Nineveh was captured and destroyed, B.C. 625. The events of the siege and capture, as related by Diodorus Siculus (ii, 27, 28), contain a remarkable fulfilment of the prophecies uttered by Nahum concerning Babylon (i, 8; ii, 5, 6; iii, 14, 16) nearly a century previously; and recent excavations by Layard illustrate both (*Nineveh and Babylon*, p. 71, 105, etc.). See *Nineveh*. The Assyrian monarchy was then overthrown (Rawlinson, *Ancient Monarchies*, ii, 521).

Abydenus (probably following Berosus) informs us that in the Assyrian war Cyaxares was assisted by the Babylonian king Nabopolassar, between whom and Cyaxares an intimate alliance was formed, cemented by a union of their children; and that a result of their success was the establishment of Nabopolassar as independent king on the throne of Babylon, an event which we know to belong to the above-mentioned year. It was undoubtedly after this that Cyaxares endeavored to conquer Lydia. His conquest of Assyria had made him master of the whole country lying between Mount Zahara and the Halys, to which he hoped to extend the tract between the Halys and the Egean Sea. It is surprising that he failed, more especially as he seems to have been accompanied by the forces of the Babylonians, who were perhaps commanded by Nebuchadnezzar on the occasion. See *Nebuchadnezzar*. After a war which lasted six years he desisted from his attempt, and concluded the treaty with the Lydian monarch of which we have already spoken. The three great Oriental monarchies—Media, Lydia, and Babylon—were now united by mutual engagements and intermarriages, and continued at peace with one another during the remainder of the reign of Cyaxares, and during that of Astyages, his son and successor.

(2.) Extent of the Empire.—The conquest of Assyria produced a great change in the Median empire, and on the whole of Western Asia. Babylon then regained its independence, and formed a close alliance with Media. The Ismaelites, who had been led captive by the Assyrians, were released under new names; Cyaxares led his victorious armies into Syria and Asia Minor (Herod. i, 103). When Pharaoh-necho marched to the banks of the Euphrates against Babylon, the Babylonians were aided by the Medes (Joseph. *Ant. x, 5, 1). It was in an attempt to oppose this expedition of the Egyptian monarch that king Josiah was slain at Megiddo (Jer. xlvii, 2; 2 Chron. xxxix, 30; 2 Kings xxiii, 29). We also learn that Nebuchadnezzar was aided by the Medes in the conquest of the Jews and capture of Jerusalem (Eusebius, *Pr. Evang. ; comp. 2 Kings xxiv, 1; 2 Chron. xxxvi, 5). Media was now the most powerful monarchy in Western Asia.

The limits of the Median empire cannot be definitely fixed, but it is not difficult to give a general idea of its size and position. From north to south its extent was in no place great, since it was certainly confined between the Persian Gulf and the Euphrates on the one side, and the Black and Caspian seas on the other. From west to east it had, however, a wide expansion, since it reached from the Halys at least as far as the Caspian Gates, and possibly farther. It comprised Persia, Media Magna, Northern Media, Matiene or Media Mattiana, Assyria, Armenia, Cappadocia, the tract between Armenia and the Caspian, the low tract along the south-west and south of the Caspian, and probably some of the terreneum of Iberia, Armenia, Parthia, and Sagartia. It was separated from Babylonia either by the Tigris, or more probably by a line running about half-way between that river and the
Euphrates, and thus did not include Syria, Phoenicia, or Judea, which fell to Babylon on the destruction of the Assyrian empire. Its greatest length may be reckoned at 1500 miles from north-west to south-east, and its average breadth at 400 or 450 miles. Its area would thus be six or seven million square miles, or somewhat greater than that of modern Persia.

(3.) Its Character.—With regard to the nature of the government established by the Medes over the conquered nations, we possess but little trustworthy evidence. Herodotus in one place compares, somewhat vaguely, the Medes with the Persians (Hist. iv, 138) and Ctesias appears to have asserted the positive introduction of the satrapal organization into the empire at its first foundation by his Araxes (Diog. Sic. ii, 28); but, on the whole, it is perhaps most probable that the Assyrian organization was continued by the Medes, the subject nations retaining their native monarchs, and merely acknowledging submission by the payment of an annual tribute. This seems certainly to have been the case in Persia, where Cyrus and his father Cambyses were monarchs, holding their crown of the Median king before the revolt of the former; and there is no reason to suppose that the remainder of the empire was organized in a different manner. The satrapal organization was apparently a Persian invention, begun by Cyrus, continued by Cambyses, his son, but first adopted as the regular governmental system by Darius Hystaspis.

(4.) Its Duration.—Of all the ancient Oriental monarchies the Median was the shortest in duration. It commenced probably about 650 B.C., and terminated B.C. 558. The period of three quarters of a century, which Herodotus assigns to the reigns of Cyaxares and Astyages, may be taken as fairly indicating its probable length, though we cannot feel sure that the years are correctly ascribed between the monarchs, for the Ctesias was so rapid, and appears to have been chiefly owing to the genius of one man—Cyaxares. The power of Media was short-lived. With Cyaxares it rose, and with him it passed away. At his death he left his throne to Astyages, of whom little is known except the stories told by Herodotus (i, 110-129) and Nicolaus of Damascus (Heges. Hist. Gr. iii, 404-6), who probably borrowed from Ctesias; and on these little reliance can be placed. They are founded on fact, and we may infer from them that during the reign of Astyages a war broke out between the Medes and Persians, in which the latter were victorious, and Cyrus, the Persian king, who was not closely united the two nations under one sceptre (B.C. 558). The life of Astyages was spared, and even the title of king continued with him.

This is as far as the authorities we have followed carry us. But Xenophon, in his Cyropedia, gives us a vivid description of the condition and the relations of the Medes to the Median king, at the time of the capture of Babylon by their allied arms. See DARIUS THE MEDE.

(5.) Coalescence with the Persian Empire.—It is universally allowed that the Median king who succeeded Cyaxares was his son Astyages; but of the character of the Median king and the events and duration of his reign there exists no account. The contemporaries of the Medes and Persians, both in fact and Scripture, are silent. The only personsages mentioned in Scripture as connected with this period of Median history. But having already been considered under the two names in question, it becomes unnecessary to relate the circumstances a fresh. From chronological considerations we have leaned to the authority of Xenophon in those previous articles, but it is impossible to arrive at certainty. We simply state that whichever account be preferred of the birth and relations of Cyrus, the notices in Daniel oblige us to hold that at the time of the capture of Babylon there was a superior in rank, though not in power, to Cyrus; and this can only have been either Astyages or Cyaxares II. If it were the latter, the description given us by Xenophon of his vain, capricious, and fickle disposition perfectly accords with the idea suggested respecting him by the narrative in Dan. vi.

Whether we suppose Cyrus himself to have been king of Persia at the period of the conquest of Babylon, or came to the exalted throne to have still reign under the Cecro- rius of Daniel would probably be head only of the Median kingdom; and it was not until Cyrus came to the throne that the great empire was united under one head. Cyrus was consequently the first king of the Medo-Persian dominions, without any discredit to Daniel's statement respecting the head of the cypress tree of Media, and the uncle and father-in-law, according to Xeno- phon, of Cyrus, received during his brief reign the rank that gratified his excessive vanity. In regard to the position and character of Cyrus, this is not the place for any detailed account. He was the real founder of the vast empire which threatened Asia and threatened Europe until the time of Alexander. He is the hero whom the poets and historians of Persia delighted to celebrate, and whose real character doubtless was of the grand and heroic cast. The praises of Xenophon had been anticipated in that sublime address in which Jehovah, nearly 200 years before, calls upon Cyrus his shepherd to ad- vance on his career of conquest (Isa. lxi, 1-6). A statement of Xenophon that the Medes voluntarily submitted to Cyrus (Cyrop. i, 1) seems much more agreeable to the scriptural accounts of things after the conquest of Babylon, and to the manner in which foreign nations regarded the newly-risen empire, than is the narrative of Herodotus (i, 126, 180), who says: "The accession of Darius the Mede (Dan. v, 31) seems inconsistent with this latter view. Throughout his reign we always find the Medes mentioned first in rank, which they would scarcely be if they were a conquered people (Isa. lvii, 10-15)." At a subsequent period, when the Persian line of kings had succeeded to the throne, while we find the Medes ever ranked side by side with the Persians, we find, as was natural, that the language of the court placed Persia, the country of the reigning king, first in rank (Ezra. 1, 3, 18, 19, etc.). We have, however, in the conclusion of this book an indication that while the language of the court gave the preference to Persia, the state chronicles still ran under their ancient title, "the chronicles of the kings of Media and Persia"—pointing plainly to the original superiority of rank of Media over Persia, quite in accordance with the inequality of Astyages as the descendent of Cyaxares. 

With this view of Scripture the notions entertained by foreign nations of the new empire agree. So far from looking on the Medes as a conquered dependency of Persia, both the Greeks and the bar- barians of Asia look on the Median as the preponderant power in Asia, more than any other, and the most recent power of Per- sia. The queen of the Massagetae addresses Cyrus as the "sovereign of the Medes," ignoring the Persian na- tion (Herodot. i, 206). Thucydides, who ranks in the foremost place of Grecian history, invariably styles the barbarous power that had nearly conquered Greece Me- dian, and never calls it Persian (bk. i, 6). All this points to the superiority which still belonged to it in foreign eyes, but which could not well have attached to it if Media had been violently subdued to the rule of Persia. Scripture, which in its early silence as to the very existence of Persia was true to the political obscurity of this lat- ter power, is also true to the idea which attached to it the original position, and looking through the thin disguise which the assumption of Median dress and manners by the Persians had cast over reality, was the first to rec-
MIA

MIA

agree that Persia, not Media, had become the ruler of Asia. The Persians is spoken of throughout the book of Ezra, the Jewish scribe being better acquainted with the facts of history than Thucydides was. Nor are the subsequent revolts of the Medes against Persian rule any argument that at the first rise of the empire they were not one of two great nations united together on friendly and equal terms. So long as Cyrus and Cambyses held the reins of the Persian dynasty, sat on the throne, Media made no attempt at revolt. Nor did they do so under the foreign the pseudo Smerdis, who was supposed to be the son of Cyrus. It was not until the discovery of the imposture practiced by Smerdis, and the elevation of a purely Persian family in the person of Darius Hystaspis to the throne, that Media sought for a separate existence. Her ancient line of kings no longer ruled over the mountains of Media, and hence probably she sought to return to that independence which had been her pride during the centuries when Assyria vainly sought to rule over Media.

According to some writers (as Herodotus and Xenophon) there was a close relationship between Cyrus and the last Median monarch, who was therefore naturally treated with more than common tenderness. The fact of the relationship is, however, denied by Ctesias; and which does not at all affect the peculiar position of the Medes under Persia was not really owing to this accident. The two nations were closely akin; they had the same Arian or Iranian origin, the same early traditions, the same language (Strabo, xv, 2, 8), nearly the same religion, and ultimately the same manners and customs, dress, and general mode of life. It is not surprising therefore that they were drawn together, and that, though never actually coalescing, they still formed to some extent a single privileged people. Medes were advanced to stations of high honor and importance under Cyrus and his successors, an advantage shared by no other conquered people. The Median capital was at first the chief royal residence, and always remained one of the places at which the court spent a portion of the year; while among the provinces Media claimed and enjoyed a precedence, which appears equally in the Greek writers and in the native records. Still it would seem that the nation, so lately sovereign, was not altogether content with its secondary position. On the first convenient opportunity Media rebelled, elevating to the throne a certain Phraortes (Frārāvtā), who called himself Xathrites, and claimed to be a descendant from Cyaxares. Darius Hystaspis, in whose reign this rebellion took place, had great difficulty in suppressing it. After vain attempts to get down by the ordinary course of events, he was compelled to take the field himself. He defeated Phraortes in a pitched battle, pursued and captured him near Rhages, mutilated him, kept him for a time "chained at his door," and finally crucified him at Elebutana, executing at the same time his chief followers (see the Byblistian Inscription, in Rawlinson's Herodota, ii, 691, 692). The Medes thereupon submitted, and quietly bore the yoke for another century, when they made a second attempt to free themselves, which was suppressed by Darius Nothus (Xenophon, Hist. ii, 2, 19). Thenceforth they patiently acquiesced in their subordinate position, and followed through its various shifts and changes the fortunes of Persia.

Media, with the rest of the Persian empire, fell under the sway of Alexander the Great. At his death the northern province was erected by the satrap Atropatene into an independent state, and called Atropatene. The southern province, Media Magna, was attached with Bagdad. The whole country eventually passed over to the Parthian monarch (Strabo, xvi, 745). It is now included in the dominions of the shah of Persia.

III. Antiquities.—I. Internal Divisions.—According to Herodotus the Median nation was divided into six tribes (Gyu), called the Buse, the Paraitaceni, the Strachuates, the Arzianites, the Budii, and the Magi. It is doubtful, however, in what sense these are to be considered as ethnic divisions. The Paraitaceni appear to represent a geographical district, while the Magi were certainly a priest-caste; of the rest we know little or nothing. The Arzianites, whose name would signify "of noble descent," or "of Arian descent," must (one would think) have been the leading tribe, corresponding to the Paseagae in Persia. It is remarkable that they have only the fourth place in the list of Herodotus. The Budii are fairly identified with the eastern Phut—the Potiiya of the Persian inscriptions—whom Scripture joins with Persia in two places (Ezek, xxvii, 10; xxxviii, 5). Of the Buse and the Strachuates nothing is known beyond the statement of Herodotus. We may perhaps assume, from the order of Herodotus's list, that the Buse, Paraitaceni, Strachuates, and Arzianites were true Medes, of genuine Arian descent, while the Budii and Magi were foreigners admitted into the nation.

II. Character, Manners, and Customs.—The ancient Medes were a warlike people, particularly celebrated, as Herodotus (vii, 61) and Strabo (xi, 525) inform us, for their skill in archery. Xenophon says their bows were three ells long. This illustrates the language of Isaiah describing the attack of the Medes on Babylon: "Their bow also shall dash the young men to pieces" (xxii, 18). Their captains were also excellent, their horses being fleet and strong, and their men skilful riders. It is doubtless in reference to this fact that Jeremiah, speaking of the overthrow of Babylon, says, "They (the enemies) shall hold the bow and the lance . . . and they shall ride upon horses" (i, 42). Strabo states that the province of Artopatene alone was able to bring into the field an army of 10,000 horse (xi, 528). Xenophon affirms that the Medes did not fight for plunder. Military glory was their great ambition, and they would never permit gold or silver to turn them aside from their object. How striking do the words of Isaiah thus appear! "Behold I will stir up the Medes against them, which shall not regard silver, and as for gold, they shall not delight in it" (xxiii, 18). The wealth of Babylon could not save it, for the Medes could not be bought off (Rosenmüller, Bib. Geo. i, 176). The conquests of the Medes, and their intercourse with other nations, produced a marked change upon their character. They became fond of dress and display; those settled in cities engaged in commerce, and lost their hardy habits and bravery. The splendor of the Median robes became proverbial, and their princes and nobles ruled the fashion in the East. They were admitted to the Persian court. Their dress was worn at the Persian court, probably in part from its antiquity. This dress the Persian monarchs used to present to those whom they wished to honor, and no others were permitted to wear it. It consisted of a long white loose robe or gown, flowing down to the feet, and enclosing the entire body, species of which, as may be seen in plates given in Herodotus's work, may be seen in plates given in Persepolis (N. Y. 1843). The nature and the celebrity of this dress combine with the natural richness of the country to assure us
that the ancient Medians had made no mean progress in the arts; indeed, the colors of the Persian textiles are known to have been accounted second only to those of India. If these regal dresses were of silk, then was there an early commerce between Media and India; if not, weaving, as well as dyeing, must have been practiced and carried to a high degree of perfection in the former country. 

3. Religion.—The ancient religion of the Medes must undoubtedly have been that simple creed which is placed before us in the earlier portions of the Zendavesta. Its peculiar characteristic was Dualism, the belief in the existence of two opposite principles of good and evil, nearly if not quite on a par with one another. Ormazd and Ahriman were both self-caused and self-existent, both indestructible, both potent to work their will—their warfare had been from all eternity, and would continue to all eternity, though on the whole the struggle was more in favor of Ormazd. As the Principle of Light, Ormazd was the God of the Arians, the object of their worship and trust; Ahriman was their enemy, an object of fear and abhorrence, but not of any religious rite. Besides Ormazd, the Arians worshipped the sun and moon, under the names of Mithra and Homa; and they believed in the existence of numerous spirits or genii, some good, some bad, the subjects and ministers respectively of the two powers of Good and Evil. Their cult was simple, consisting in processions, religious chants and hymns, and a few plain offerings, expressions of devotion and thankfulness. Such was the worship and such the belief which the whole Arian race brought with them from the remote east when they migrated westward. Their migration brought them into contact with the fire-worshippers of Armenia and Mount Zagros, among whom Magism had been established from a remote antiquity. The result was either a combination of the two religions, or in some cases an actual conversion of the conquerors to the faith and worship of the conquered. So far as can be gathered from the scanty materials in our possession, the latter was the case with the Medes. While in Persia the true Arian creed maintained itself, at least to the time of Darius Hystaspis, in tolerable purity, in the neighboring kingdom of Media it was long swallowed up in Magism, which was probably established by Cyzaxares or his successor as the religion of the state. The essence of Magism was the worship of the elements, fire, water, air, and earth, with a special preference of fire to the remainder. Temples were not allowed, but fire-altars were maintained on various sacred sites, generally mountain-tops, where sacrificial feasts were continually offered, and the flame was never suffered to go out. A hierarchy naturally followed, to perform these constant rites, and the magi became recognized as a sacred caste entitled to the veneration of the faithful. They claimed in many cases a power of divining the future, and practiced largely those occult arts which are still called by their name in most of the languages of modern Europe. The fear of polluting the elements gave rise to a number of curious superstitions among the professors of the Magian religion (Herod. 1, 188); among the rest to the strange practice of neither burying nor burning their dead, but exposing them to be devoured by a species of birds of prey (Herod. i, 149; Strabo, xv, 3, § 20). This custom is still observed by their representatives, the modern Parsees. See Rhode, Heil, Sage der Baktir. Meder und Perser, p. 820; Abbildungen aus der Mythol. der Alten Welt; Pers. Med. Plate 10, 11.

4. The language of the ancient Medes was not connected with the Semitic, but with the Indian, and di-
MEDIATION

Sept. v Myeοκ, Vulg. Medius) , a patron epithet of Darius, "the son of Absauesu (A), of the seed of the Medes" (Dan. ix. 1), or "the Mede" (xii. 1), as described in Dan. v. 81. See 1 Esdr. 2. 28.

MEDIATION, in the Christian sense, is the intervention of Jesus Christ between God and sinners. It implies a condition of alienation and hostility on the part of man towards God, and a corresponding state of disfavor and condemnation in the divine mind with respect to man. Such a mutual relation of dissatisfaction lies at the basis of the whole remedial scheme of salvation, originating in the fall (q. v.), and provided for in the atonement (q. v.). It is presumed in every form of religion and worship, whether heathen, Jewish, or any other; and has its natural exponents in sacrifice (q. v.), the priesthood (q. v.), and ritual (q. v.). In the Mainstream of Man under the Mediator (q. v.), there remain certain fundamental aspects of this question which we propose here briefly to discuss. See EXPIATION.

1. Man's Enemy towards God.—This is a fact too apparent to require detailed proof. Its historical origin is given in the Bible in the account of Eden, its record is engraved in the whole course of human conduct, and its conclusive attestation is found in the deepest consciousness of man's nature. The sense of guilt and condemnation, to which it inevitably and legitimately gives rise in the human conscience, is a testimony so universal, so factorially constituted, and so active in human crimes, as affected in the life and death of our Savior, is not a mere forensic device, nor simply a diplomatic artifice; it is not a stratagem invented to elude justice, nor a pretense set up to screen impunity. If, with regard to its individual objects, it was unconditional and absolute, as Universally, generally on the one hand, it represents by its extension, and strict Predestinationism on the other by limitation, it would justly be liable to this charge. But inasmuch as it secures the permanent reformation of the culprit in the very process of amnesty, it is not purely penal, but also prophylactic; it changes the relations of the sinner by converting him into a saint.

(1.) The chief, if not the only difficulty in our conception of the method of Christian redemption, relates to the justice of substituting an innocent for a guilty person in the expiation of crime. This is, to be sure, an extremely abstract question, but it is a question of determination, however, rests with the Being to be placed, and with the individual submitting to become the victim, rather than with ourselves, the beneficiaries of the arrangement, or with any other intelligences who may be merely spectators. As the compact, in pursuance of which, that situation is described, was between the bosom of the Godhead, we might fairly be excused from attempting its vindication; especially as the Father and the Son, regarded as the contracting parties, are so identified in nature and action that any moral discrepancy or personal disagreement, such as this question implies, is necessarily excluded. Indeed, if they two freely consent, as the plain premises, it is hardly who can have a right to raise a doubt or utter complaint on the subject. Still, to obviate all cavil, it may not be amiss to pursue this point as far as we may without presumption or arrogance.

Instead of the similar but far less extensive vicarious suffering that have occurred in human history, and are often pointed to as rare but striking illustrations of this principle. These were applauded at the time of their occurrence, and have been commended ever since by the common voice of mankind, without incurring the imputation of unfairness or compromise. If we look into the design of judicial executions, so far as human legislation and administration enable us to discern it, we find it to be fourfold: 1, the appeasement of the wrath of the injured party; 2, the moral cure of the offending party; 3, the allaying of the sense of wrong in the convictions of the community; and 4, the deterring of others from
similar crimes. Most laws for earthly retribution have chiefly in view the pecuniary reparation of the wrong, and the protection of society against its recurrence; and in these respects as the essential objects to be attained. In cases of capital punishment, with which the present is most analogous, the first two ends of penal infliction are necessarily excluded, by the death of the murdered and the execution of the murderer: so that there remain only the moral influence and the preventive effect upon others as the essential objects to be attained. See PUNISHMENT. But, in the case in hand, these external and disinterested observers can consist only of the angels and inhabitants of other worlds, inasmuch as our own race is wholly included in the culprit himself. Of the moral constitution or even existence of the latter of these, though the deified species of the former have absolutely no knowledge, nor any reason to suppose that they could become informed of the transaction. Of the former we know but little more, and that little leads us to the belief that they have already passed their probation, and are therefore incapable of being influenced by example, while the interest which they take in the scene is that of intense satisfaction at its progress and consummation. All objects are thus removed, and the substitution is ratified by common consent.

We have assumed that man's demurral to this procedure is silenced by the fact of his being himself the complaint of his enemy. But he may be in fact entitled to the right to protest against another's taking his place as accused or condemned. This, however, he can only be allowed in court to do when he confesses his crime, and demands to bear his penalty in person. Both these privileges, if such they can be called, are reserved to him by the scheme under consideration. Nay, he is required to make confession before he can avail himself of the benefits of Christ's mediation, and that with a sincerity and fulness which admit of no retraction; and he is at last compelled to undergo the penalty himself unless he voluntarily and actively apply for the exemption offered him. These provisions are the saving clauses of the bill of amnesty, and by virtue of them the vicarious redemption receives its final approval.

(2) Nevertheless the sinner realizes a partial effect of the atonement unconditionally, in the respite from punishment till the close of his earthly career. But for this the whole race had been cut off in embryo at the first transgression. Hence there is an opportunity for the exercise of the remedial or curative as well as preventive influence of that penal retribution, which is temporarily suspended and may be wholly averted from himself. The only problem here arising is, How can impunity be allowed without encouraging vice? or rather, How can it be allowed without making it easier for the sinner to escape the law and go scot-free and yet be reformed? It has of late years only been discovered in families, schools, armies, and diplomacy that pardon is often the best discipline; but God knew long ago the true philosophy of the prevention of crime. The spectacle of another suffering the penalty due to himself has been found to be the most effectual softener of the rebel heart, and the condition of genuine contrition is the best safeguard against the abuse of clemency. In this light the scheme of Christian mediation is most abundantly sanctioned by actual experiment, and the Cross becomes the glory of the redeemed. See REMEDIATION.

(3) It is not to be imagined, however, that in this vicarious atonement Jesus Christ actually experienced the aggregate amount of suffering due for the sins of every human being. In the first place, this was unnecessary. The object to be attained was not a given amount of suffering, but the placing the Almighty, to reform the offender, or to vindicate the statutes infracted. This is obvious from the foregoing discussion. Had these ends rigidly required an exact balance-sheet of debt and credit on this basis, no substitution or vicarious satisfaction had been admissible as such. The strict terms of the law are, "The soul that sinneth, it shall die." The mediation under consideration was an equivalent, such as met the moral design of the penalty. Nor is it correct to argue that as man incurred a right to a vicarious satisfaction, an infinite retribution was possible. In cases of capital punishment, with which the present is most analogous, the first two ends of penal infliction are necessarily excluded, by the death of the murdered and the execution of the murderer: so that there remain only the moral influence and the preventive effect upon others as the essential objects to be attained. In view of this, therefore, it is evident that Christ offered an infinite satisfaction by reason of his divine and perfect nature. Neither part of this proposition is tenable. No finite creature is capable of infinite guilt, not even the sum total of all humanity, for it is limited both in its numbers and nature, and so is likewise incapable of infinite satisfaction. But an infinite redemption did not require that there should be an infinite atonement, but only an adequate or commensurate one. His expiation was sufficient, not because it was made by his divine nature—for that was by hypothesis incapable and incompetent—but because it contained such a degree of merit, in view of its composition as a whole, as made it in the literal sense of the word an adequate satisfaction. The divine Being could consistently accept it in lieu of the actual obedience of the race represented, and thus remit the penalty due them. In the next place, an absolute equality or identity of retribution was impossible in the remedial scheme. The supposition that Jesus endured—whether during his whole lifetime, or in the brief agonies of the garden and the cross—the sum total of the torments that will be and that would have been experienced by the eternally damned, is simply preposterous. Not only had he no opportunity for this, but he was not capable of it, either physically or spiritually. This should be clear to all, as such a thing is inconsistent with what other men have known as great, if not greater. His mental anguish, especially the hiding of his Father's face, was so intense as to literally break his heart; but he cannot have been the same, either in character, extent, or continuance, as the everlastings pangs of conscious guilt. All that was practicable, in him as a substitute for man, was to undergo an ordeal similar in kind and degree as his pure human nature would admit. In this sense he drank the bitter cup of atonement to its very dregs, but it was not the identical draught intended for mankind. Finally, such an absolute vicariousness would have been useless, and that in two most vital respects: it would so fully have exhausted the penalty for all possible or foreseen human transgression as to render the personal punishment of any offender there-after impossible, because unjust; and it would have been no gain or saving of suffering on the whole, but a mere shifting of a specific load from the shoulders of one being to those of another. No larger average of happiness could have resulted, nor any greater glory redounded to God. Such an atonement would have defeated instead of furthering the main design of its merciful Projector. It would have been fatal to all the advantages seen above to be secured by Christ's mediation.

Vicarious Suffering. Mediator, a person who intervenes between two parties at variance, in order to reconcile them. The term does not occur in the Old Testament, but the idea is contained in that remarkable passage (Job ix, 33) which is rendered in the Author's Version, "Neither is there any dayman betwixt us, that might lay his hand upon us both," The Hebrew words are, נַעֲלֵ֣י אֹכְלֶ֣י רַעַם מְעַלֵּ֖י נַעֲלֵֽי אִֽישׁ מֵעַלֵּ֣י נַעֲלֵֽי אִֽישׁ; literally, "There is not between us a re-prover—he shall place his hand upon us both." This is the Sept. translates, or rather paraphrases, εἶναι γὰρ μισθόν δι' ἡμῶν, καὶ δέχοντας γὰρ τὸ δίκαιον δι' ἡμῶν. See DAYMAN. In the New Testament, it is the invariable rendering of μισθός, a word which is rather rare in classical Greek—Polybius and Lucian being, it would appear, nearly the only classical authors who employ it (see Robinson, N. T. Lex. x. v.). Its meaning, however, is clear, especially in certain passages where it seems to be evidently to be, qui medio inter duo stát— he who takes a middle position between two parties, and principally with the view of removing their differences. Thus Suidas paraphrases the word by μισθόγνωσις, and also by τίγγειρία, μίσος είς μείρας. In the Sept. the word appears to occur only once, namely, in the above passage of Job.
1. It is used, in an accommodated sense, by many of the ancient fathers, to denote ονομισθερευεται between two dispensations. Hence it is applied by them to John the Baptist, because he came, as it were, between the Mosaic and Christian dispensations. Thus Greg. Nazianzen (Orat. xxxix, p. 638) calls him ὁ παλατιακός και νικαρισμός. Theophylact, commenting on Matt. iii, gives him the same denomination.

2. Again, it signifies, in its more proper sense, an intercessor, or ambassador, one who stands as the channel of communication between two contracting parties. Thus most commentators think that the apostle Paul, in Gal. iii, 19, calls Moses mediator, because he conveyed the expression of God's will to the people, and reported to God their wants, wishes, and determinations. In reference to this passage, Scripture, Basil (De Spiritu Sancto, cap. xiv), says, "Moses figurum representasse, quod inter Deum et populum intermedius existenter." Many ancient and modern divines, however, are of opinion that Christ himself, and not Moses, is here meant by the apostle, and this view would seem to be confirmed by comparing Deut. xxxiiii, 2 with Acts viii, 55-52. Christ it was who was surrounded by angelic spirits, communicated with Moses on Mount Sinai. On this point, the words of the learned and pious Chrysostom, on Gal. iii, are very express: "Here," says he, "Paul calls Christ Mediator, declaring thereby that he existed before the law, and that by him the law was revealed." This application thus makes the apostle's words to the Romans (ch. 1) and Galatians (ad loc.), keys to the meaning and science of the apostle's argument, which evidently is to point out the dignity of the law. How could he present a clearer demonstration of this than by showing that it was the second person of the ever-blessed Trinity who stood forth on the mount to communicate between God and the Father and his creation? Moreover, to contradict distinguish Christ's mediation from that of Moses, the former is emphatically styled μεσισθενες εκκλησιων διασεις (Heb. viii, 6). This, however, implies that Moses was the mediator of the former covenant, and Ebook, in his Commentary on Galatians (ad loc.), shows at length that this is the meaning of the passage, in opposition to all other views. Moses is likewise often styled υπερκλητος, or mediator, in the rabbinical writings (see Schütgen and Weitzstein, ad loc.). But he is thus regarded by Quranic, and officially, as the chancellor of the Mosaic kingdom.

3. Christ is called Mediator (1 Tim. ii, 5; Gal. iii, 15; iv, 5, 6; ix, 15; xii, 24) by virtue of the reconciliation he has effected between a justly-offended God and his rebellious creature man (see Grotius, De Satisfact. Christi, cap. viii). In this sense of the term Moses was, on many occasions, an eminent type of Christ. The latter, however, is the mediator by reason of his coming between God and his creatures, as certain heretics would affirm (see Cyril. Alex. Dial. I de Sancta Trinitate, p. 410), but because he appeased his wrath, and made reconciliation for iniquity. "Christ is the Mediator," observes Theophylact, commenting on Gal. iii, "of two, i.e. of God and man. He exercises this office between both by making peace, and putting a stop to that spiritual war which man wages against God. To accomplish this he assumed our nature, joining in a marvellous manner the human, by reason of sin unfriendly, to the divine nature." "Hence," he adds, "he made reconciliation." The same is expressed by Augustine in his treatise on the same passage of Scripture. Again, Cyril, in his work before quoted, remarks: "He is esteemed Mediator because the divine and human nature being disjoined by sin, he has shown them united in his own person; and in this manner he reunites to God and man." If, in addition to the above general remarks, confirmed by many of the most ancient and orthodox fathers of the Church, we consider the three great offices which holy Scripture assigns to Christ as Saviour of the world, viz. those of prophet, priest, and king, a further and more ample illustration will be added of his Mediatorship.

(1.) One of the first and most palpable predictions which we have of the prophetic character of Christ is that of Moses (Deut. xviii, 15): "The Lord thy God will raise up unto thee a prophet like unto me, even a prophet like unto me." The text further says, "wherewith I spake unto thee by the hand of Moses." That this refers to Christ we are assured by the inspired apostle Peter (Acts ii, 22). Again, in Isaiah lix, 1, 3, Christ's consecration to the prophetic office, together with its sacred and gracious functions, is emphatically set forth (see Luke, xv, 16-21, where Christ applies this passage to himself). In order, then, to sustain this part of his mediatorial office, and thus work out the redemption of the world, we may see the necessity there was that Messiah should be both God and man. It belongs to a prophet to expound the law, declare the will of God, and foretell the future; this was the office of Moses, who was in a singular and eminent manner, by Christ, our prophet (Matt. v, 21, etc.; John i, 8). All light comes from this prophet. The apostle shows that all ministers are but stars which shine by a borrowed light (2 Cor. iii, 6, 7). All the prophets of the Old, and all the prophets and teachers of the New Testament, lighted their tapers at this torch (Luke xxii, 42). It was Christ who preached by Noah (1 Pet. iii, 19), taught the Israelites in the wilderness (Acts vii, 37), and still teaches by his ministers (Eph. iv, 11, 12). On this subject bishop Butler (Analog. part ii, ch. v) says: "He was, by way of eminence, the prophet, the prophet that should come into the world; the Prophet, from the Hebrew word פה (pah), published anew the law of nature, which men had corrupted, and the very knowledge of which, to some degree, was lost among them. He taught mankind, taught us authoritatively, to live soberly, righteously, and godly in this present world, in expectation of the future judgment of God. He confirmed the truth of this moral system of nature, and gave us additional evidence of it, the evidence of testimony. He distinctly revealed the manner in which God would be worshipped, the efficacy of repentance, and the rewards and punishments of a future life. Thus he was a prophet in a sense in which no other ever was." Hence the force of the term מְשָׁר, by which John designates Christ. See Prophets. But, on the other hand, had the second person of the Trinity come to us in all the majesty of his divine nature, we could not have approached him as our instructor. The Israelites, terrified at the exhibitions of Deity, could not have carried out the law, or stood in its presence; again; it was then that he, in gracious condescension to their feelings, promised to communicate with them in future through a prophet like unto Moses. The son of God, in assuming the form of an humble man, became accessible to all. This condescension, moreover, enabled him to sympathize with his clients in all their trials (Heb. ii, 14, 15; xi, 25-29). We see then, in the condescension of Christ's mediatorial office—he being both God and man—with the salvation of man. On this subject Chrysostom (Homil. cxxxiv, tom. v, p. 860) remarks: "A mediator, unless he has a union and communion with the parties for whom he mediates, possesses not the essential qualities of a mediator. When Christ, therefore, became mediator between God and man (1 Tim. ii, etc.), it was indispensable that he should be both God and man." Macarius, also (Homil. vi, 97), on this question more pointedly observes: "The Lord came and took his body from the virgin; for if he had appeared among us in his naked divinity, who could bear the sight? But he spoke as man to us men." Again, the Redeemer was not only to propound, explain, and enforce God's law, but it was needful that he should give a practical proof of obedience to it in his own person (comp. Rom. v, 19). Now, if he had not been man, he could not have been subject to the law; hence it is said, Gal. iv, 4, "When the fulness of the time was come, God sent forth his son, made of a woman, made under the law;" and if he had not been God, he could not, by keeping the law, have merited forgiveness for us, for he had done but what was required of
him. It was the fact of his being very God and very man which constituted the merit of Christ's obedience. (2) Moreover, in working out the mighty scheme of redemption the mediator must assume the office of priest. To this end the Virgin Mary was solately appointed by God (Psa. cx. 4; Heb. v. 10), being qualified for it by his incarnation (Heb. x. 6, 7), and he accomplished all the ends thereof by his sacrificial death (Heb. ix. 11, 12): as in sustaining his prophetic character, so in this, his Deity and humanity will be seen. According to the exhibition of type and antitype by Messiah the son of David, David himself must die, and thus rescue us sinners from death by destroying him who had the power of death. “But we see Jesus,” says the apostle (Heb. ii. 9), “who was made a little lower than the angels for the suffering of death, crowned with glory and honor, that he by the grace of God should taste death for every man. Forasmuch, then, as the children are partakers of flesh and blood, he also himself likewise took part of the same, that through death he might destroy him who had the power of death, that is, the devil.” On the other hand, had he not been God he could not have raised himself from the dead. “I lay down my life (saith he, John x. 17, 18), and take it up again.” He had not had a life to lay down if he had not been man, for the Godhead could not die; and if he had not been God, he could not have acquired merit by laying it down: it must be his own, and not in the power of another, else his voluntariness would have been extinguished. He was exalted on the charge he that, being only man, made himself equal with God—was an act of suicide, and consequently an act of blasphemy against God! It was then, the mysterious union of both natures in the one person of Christ which constituted the essential glory of his vicarious obedience and death.

Nor are the two natures of Christ more apparent in his death than they are in the intercession which he ever liveth to make in behalf of all who come unto God by him (Heb. vii. 25). The author of the Epistle to the Hebrews teaches us (chaps. vii. ix.) that the high-priest under the Levitical dispensation typified Christ in his intercessory character: as the high-priest entered alone within the holiest place of the tabernacle once a year with the blood of the sacrifice in his hands, and the names of the twelve tribes upon his heart, so Christ, having offered up himself as a lamb without spot unto God, has gone into glory bearing on his heart the names of his people. We may then say: “Who shall have compassion on our infirmities?” (Rom. viii. 33), “Who shall lay anything to the charge of God’s elect? Is it God that justifieth, who is he that condemneth? Is it Christ that died, ye rather, that is risen again, who is even at the right hand of God, who also maketh intercession for us.” In this part of his character, and in that of our Advocate, attributes of omniscience, omnipresence, and omnipotence are seen. He must therefore have been God, and on the ground of his being able from personal experience to sympathize with the suffering members of his mystical body, he must have been man; being perfect God and perfect man, he is then a mediatorial character as king. (3.) We come, lastly, to notice Christ’s mediatorial character as king. The limits of this article will not admit of our even alluding to the varied and multiplied passages of Scripture which delineate Christ as “Head over all things to the Church” (see Psa. ii. 6; lux: Isa. xxxii, 1; Dan. ix. 29; Col. i. 17, 18, etc.). Suffice it here to say that Christ could not, without the concurrence of his divine nature, gather and govern the Church, protect and defend it against all assailants open and secret, and impart to it his Holy Spirit, to enlighten and renew the minds and hearts of men and subdue Satan. It is a mighty work. Such, then, is the work of Christ’s mediatorialship—salvation revealed by him as prophet, procured by him as priest, and applied by him as king—the work of the whole person wherein both natures are engaged. Hence is it that some of the ancients speaking of it, designate it θαυματική ἑρμηνεία, “a divine-human operation” (see Dionys. Areopag. Epist. IV ad Coiam Damascensem, iii, 19).

Thus Jesus Christ is the mediator between an offended God and sinful man (1 Tim. ii, 5). Both Jews and Gentiles need a Redeemer, and the Mediator of the new testament is the Messiah ΝΙΗΣΣΗ, the Mediator, or Middle One. The Israelites call their god Mithras μηιης, a mediator; and the demons, with the heathens, seem to be, according to them, mediators between the superior gods and men. Indeed, the whole religion of paganism was a system of mediation and intercession. The idea, therefore, of salvation by a mediator is not so novel or restricted as some imagine; and the Scriptures of truth inform us that even in this world human beings can arrive to eternal felicity (Acts iv. 12; John xiv. 6). Man, in his state of innocence, was in friendship with God; but, by sinning against him, he exposed himself to his just displeasure; his powers became enfeebled, and his heart filled with enmity against him (Rom. viii. 6); he was driven out of his paradisal Eden, and was totally incapable of returning to God, and making satisfaction to his justice. Jesus Christ, therefore, was the appointed mediator to bring about reconciliation (Gen. iii. 12; Col. i. 21); and in the fulness of time he came into this world, obeyed the law, satisfied justice, and brought his people into a state of grace and favor: yea, into a more glorious light than ever was given to the friendship with God than was lost by the fall (Eph. ii, 18).

We have seen above some of the reasons why in order to accomplish this work it was necessary that the Mediator should be God and man in one person. We may specify the following in addition. (a) It was necessary that he should be God. There is no mediator between man and God—1. That he might be related to those to whom he was to be a mediator and redeemer (Phil. ii. 8; Heb. ii. 11-17). 2. That sin might be atoned for, and satisfaction made in the same nature which had sinned (Rom. v. 17-21; viii. 3). 3. It was meet that the mediator should be man, that he might be capable of suffering death, for, as God, he could not die, and without shedding of blood there was no remission (Heb. ii. 10, 15; viii. 3-6; ix. 15-28; I Pet. iii. 18). 4. It was necessary that he should be a holy and righteous man, free from all sin, that he might offer himself without spot to God (Heb. vii. 26; ix. 14; i. 19; I Pet. ii. 22). (b) But it was not enough that the Mediator should be a mediator and a sacrifice, he must be also more than a man; it was requisite that he should be really God. 1. No mere man could have entered into a covenant with God to mediate between him and sinful men (Rom. i. 5; Heb. i. 8; 1 Tim. iii. 16; Tit. ii. 13). 2. He must be God, to give virtue and value to his obedience and sufferings (John x. 30; Acts xx. 28; I Pet. ii. 1; Phil. ii. 5-11). 3. The Mediator being thus God and man, we are encouraged to hope in him. In the person of Jesus Christ the object of trust is brought nearer to ourselves. If he were God and not man, we should approach him with fear and dread; and if he were man and not God, we should be guilty of idolatry to worship and trust in him at all (2 Cor. vi. 15; Phil. ii. 5-11). The plan of salvation by such a Mediator is therefore the most suitable to human beings; for here “Mercy and truth are met together, righteousness and peace have kissed each other” (Psa. lxxvi. 10). The properties of Christ as Mediator are three: 1. He is the only Mediator (1 Tim. ii. 4). Praying, therefore, to saints and angels is an error of the Church of Rome, and has no countenance from Scripture. 2. Christ is a Mediator of men only, not of angels; good angels need not any; and as for evil angels, none is provided nor named. 3. He is the Mediator of both Jews and Gentiles (Eph. ii. 18; 1 John ii. 2). 4. He is the Mediator both for Old and New Testament saints. 5. He is a suitable, constant, willing, and prevalent Mediator; his mediation always succeeds, and is infallible.

For a more ample view of this important subject, see
Medici, the house of, one of the most noted families of Italy's nobility, figures so largely in the ecclesiastical history of medieval times and the days of the Renaissance that we cannot pass it without a somewhat detailed account of its different members.

1. The early history of the family of the Medici is obscure, although some authors have traced their genealogy from the age of Charlemagne. But it must be remembered that these genealogies were made after the elevation of the Medici to the papal dignity in the 14th century, and the position of the Medici of Florence—a position which they attained only by degrees, after the accumulation of wealth sufficient to control the affairs of the Italian nation. It appears, however, from authentic documents, that many individuals of this family had signaled themselves on various important occasions even before 1300. Giovanni de' Medici, in the year 1251, with a body of only one hundred Florentines, forced his way through the Milanese army, then besieging the fortress of Scarperia, and entered the place with the loss of twenty lives. Francesco de' Medici was at the head of the magistracy of Florence in 1349, at the time when the black plague, which had desolated so large a portion of the world, extended its ravages to that city. Salvestro de' Medici acquired great reputation by his temperate but firm resistance to the nobles, who, in order to secure their power, accused those who opposed them of being attached to the party of the Ghibelines, then in great odium at Florence. The persons so accused were to be ammossati (abolished), and by that act were excluded from all offices of government. In the year 1379, Salvestro, being chosen chief magistrate, exerted his power to reform this abuse, which was not, however, effects without a violent commotion, several of the nobles being put to death and others escaping from the city at that time that we date the rise of the Medici to prominence in political, and finally also in ecclesiastical affairs.

2. The founder, however, of that almost regal greatness which the Medici enjoyed for more than two centuries was not Salvestro, who first received great public distinction, but Giovanni de' Medici. His immense wealth, honorably acquired by commercial dealings, which had already rendered the name of Medici celebrated in Europe, was expended with liberality and magnificence. Of a mild temper and amiable character, Giovanni de' Medici did not attempt to set up a party, but contented himself with the place in the public councils to which even his enemies declared him entitled in virtue of his eminence, his acquisitions, and the purity of his character. He died in 1429, leaving to his sons, Cosmo and Lorenzo, a heritage of wealth and honors hitherto unparalleled in the republic.

Cosmo (1389, died 1464), on whom was gratefully bestowed the honored title of "Father of his country," really began the glorious epoch of the Medici, Cosmo's life, except during a short period, when the Albizzi and other rivals re-established a successful opposition against the policy and credit of the Medici, was uninterrupted course of prosperity; at once a magnificent patron and a successful cultivator of art and literature, he did more than any other sovereign in Europe to revive the study of the ancient classics, and to foster a taste for mental culture. He assembled around him learned men of every nation, and gave liberal support to numerous Greek scholars, whom the subjection of Constantinople by the Turks had driven into exile; and by his foundation of an academy for the study of the sciences, and of a school for the study of the liberal arts and of Oriental MSS, he inaugurated a new era in modern learning and art. In the lifetime of his father, Cosmo had engaged not only in the extensive business by which the family had acquired its wealth, but also in the affairs of state. Such was his authority and reputation that when on January 1419 the pope, who had been elected pope, and had assumed the name of John XXIII, was summoned to attend the Council of Constance, he chose to be accompanied by Cosmo de' Medici, among other men of eminence, whose characters might countenance his choice. By this council, which continued nearly four years, Balthasar was deprived of his pontifical dignity, and Otto Colonna, who took the name of Martin V, was elected pope. Cosmo did not desert in adversity the man to whom he had attached himself in prosperity. At the expense of a large sum of money, he redeemed him from the hands of the duke of Bavaria, which had seized upon his person; and afterwards gave him the manor of S. Gregorio and the monastery of S. Maria Nuova, the smallest of his estates, which were all that remained of his life. The successful pontiff, instead of resenting the kindness shown to his rival, soon afterwards paid a public visit to Florence, where, on the formal submission of Balthasar, and at the request of the Medici, he created the ex-pope a cardinal, with the privilege of taking the first place in the sacred college. The new-made cardinal died in 1419, and it was rumored that the Medici at his death possessed themselves of immense wealth which he had acquired during his pontificate. This rumor was afterwards encouraged by those who well knew its falsehood. The true source of the wealth of the Medici was their superior talents and application to business, and the property of the cardinal was scarcely sufficient to discharge his debts and legacies. During the retirement of his latter days, his happiest hours were devoted to the study of letters and philosophy, and the conversation of learned men. He also endowed numerous religious houses, and built a hospital at Florence for the relief of distressed pilgrims.

3. Cosmo's grandson, Lorenzo, afterwards assumed the "Magnificent" (born Jan. 1, 1448, died April 8, 1492), was introduced to a knowledge of public affairs, on account of the infirmities of his father, immediately upon the decease of Cosmo. Though only a youth, he was at once determined to take his part in the affairs of state, and was supposed to belong to a much more mature mind. To afford him a clearer insight into political affairs than he could secure at home, he was sent to visit the principal courts in Italy. Upon the accession of Sixtus IV to the papal throne, he went, with other citizens of Florence, to congratulate the new pope, and was invested with the office of treasurer of the holy see; and while at Rome embraced the opportunity to add to the remains of ancient art which his family had collected. One of the first events after he undertook the administration of affairs was a revolt of the inhabitants of Volterra, on account of a dispute with the Florentine republic. By the recommendation of Lorenzo, force was used, and the result was the sack of Volterra. Like his grandfather, he encouraged literature and the arts, employed learned men to collect choice books and antiquities for him from every part of the known world, established printing-presses in his dominions, and the art was encouraged to flourish. All that he deserts special commendation for his re-establishment of the Academy of Pisa, to which city he removed in order to complete the undertaking: he selected the most eminent professors, and contributed a large sum from his private fortune, in addition to that granted by the state of Florence. In another respect also Lorenzo
resembled his grandfather Cosmo. He was, or affected to be, an admirer of Plato, took an active part in the establishment of the Academy in Florence as a center for the propagation of the Platonic philosophy, and instituted an annual festival in honor of Plato.

While Lorenzo was dividing his time between the administration of the state and the promotion of literature, the Pazzi, a numerous and distinguished family in Florence, plotted the overthrow of the Medici, who, through the most base and inveterate, formed a conspiracy to assassinate Lorenzo and his brother; experience having taught them the impossibility of overthrowing the reign of the Medici in any other way. Giuliano was killed, but Lorenzo escaped. "A horrible transaction, this, which has been justly counted as an incontrovertible proof of the practical atheism of the times in which it took place—one in which a pope, a cardinal, an archbishop, and several other ecclesiastics, associated themselves with a band of ruffians to destroy two men who were an honor to their age and country; and purposed to perpetrate their crime at a season of hospitality, in the sanctuary of a Christian Church, and at the very moment of the elevation of the host, when the congregation bowed down before it, and the assassins were presumed to be in the immediate presence of their God. The plan was concocted at Rome, with the participation of pope Sixtus IV. On the 22nd of March, 1478, in the church of the Reparata during the mass, while the host was elevated and the multitude was kneeling, the murderous blow was struck, the very mass-bell itself sounding the signal to the other conspirators to possess themselves of the palace and government." The failure of this dastardly scheme only made the Medici more invincible. The people, who had always been attached to them, exasperated by this open and daring attempt to rob them of those whom they conceived to be their best friends, now took the execution of the law in their own hands, and put to death or apprehended the assassins. Salviati, archbishop of Pisa, was hung through the windows of the palace, and was not allowed to die quietly, but was cut down in the street by Jacopo de' Pazzi, with one of his nephews, shared the same fate. The name and arms of the Pazzi family were suppressed, its members were banished, and Lorenzo rose still higher in the regard of his fellow-citizens. The troubles of the Medici, however, did not stop here. For them yet remained the punishment at the disposal of the papal party, and the latter, meddled with by the failure of their plot, determined now to avail themselves of the advantages which Rome could afford as "ecclesiastical thunderer." Sixtus IV promptly excommunicated Lorenzo and the magistrates of Florence, and upon the latter forming a league with the king of Naples, prepared to invade the Florentine dominions. Lorenzo appealed to all the surrounding potentates, and, zealously supported by his fellow-citizens, commenced hostilities, and carried on two campaigns. At the close of 1478, Lorenzo took the bold resolution of paying a visit to the king of Naples, and, without obtaining any previous promise of security, trusted himself to the mercy of his enemy. The result of this confidence was a treaty of mutual defense and friendship between the king of Naples and Florence, and this finally forced Sixtus to consent to a treaty of peace. In 1484 Sixtus IV died, and his successor on the papal throne, Innocent VIII, manifesting a determination to re-establish friendly relations with the different Italian princes [see INNOCENT VIII], the contest of the Medici with the Church seemed to have come to a happy close. There was, however, still one dark cloud over the peace of the state. Innocent VIII had threatened sooner or later to bring trouble and discomfiture to the Medici—we refer to Savonarola, the great Italian reformer, who was in the very strength of his manhood at this time. The Italian monk had long opposed the licentious habits of the court and the nobility. He was opposed, moreover, to the display of regal splendor, and boldly preached in favor of democracy and reprobation of institutions. Lorenzo sought in more than one way to conciliate the sturdy reformer, but all efforts failed. Nor was this a mere matter of theory; for when the Pope attempted him [see SAVONAROLA], and Lorenzo was forced to admit himself, "Besides this man, I have never seen a true monk." Gradually Savonarola gave system to his republican ideas, and, gathering about him a host of followers, these opponents of the ruling administration began to form themselves into a body, or "weepers," so called because of their determination to stem the progress of the voluptuous refinement of the day by ascetic severity of morals. Lorenzo himself saw clearly the inherent insufficiency of art and philosophy alone for the security of a state; but while he føth for a purely religious influence he feared the dangerous tendency of the Fieschiom to a popular and democratic form of government, and he had failed to extinguish or abate this opposition when suddenly cut down by disease and death, April 8, 1492.

Lorenzo is credited with even greater love and devotion to the development of literature and art, and a study of the fine arts than any of his predecessors. His own productions are sonnets, canzonet, and other lyric pieces; some longer works in stanzas, some comic satires, carival songs, and various sacred poems. Many of the lighter kind were popular in their day. Although the Medici collections were laid up in the Palazzo Vecchio, collection of manuscripts contained in the Laurentian library, Lorenzo has the credit of adding most largely to the stock. For the purpose of enriching his collection of books and antiquities, he employed learned men in different parts of Italy, and especially his intimate friend Politian, who made several journeys in order to discover and purchase the valuable remains of antiquity. Two journeys were undertaken at the request of Lorenzo into the East by John Lascaris, and the result was the acquisition of a great number of manuscripts. On his return from his second expedition, Lascaris brought back two hundred manuscripts, many of which he had procured from a monastery at Mount Athos; but the most important of these arrive till after the death of Lorenzo, who in his last moments expressed to Politian and Pico of Mirandola his regret that he could not live to complete the collection which he was forming. On the discovery of the art of printing, Lorenzo quickly saw and appreciated its importance. At his suggestion, several Italian scholars devoted their attention to collating the manuscripts of the ancient authors, for the purpose of having them accurately printed. On the capture of Constantinople by the Turks, many learned Greeks took refuge in Italy; and an academy was established at Florence for the purpose of publishing their works, and for the study of the direction of native Greeks, and partly under native Italians. The services of these learned men were procured by Lorenzo, and were amply rewarded by his bounty. "Hence," as Roscoe observes (in his Life of Lorenzo de'Medici, 1793, 2 vols. 410; Bohm's edit. Lond. 1861, 12mo,) "successive volumes have been profuse of their acknowledgment to their great patron, who first formed that establishment, from which (to use their own scholastic figure), as from the Trojan horse, so many illustrious champions have sprung, and by means of which the knowledge of the Greek tongue was extended, not only through Italy, but through France, Spain, Germany, and England, from all which countries numerous pupils attended at Florence, who diffused the learning they had there acquired throughout the rest of Europe." Lorenzo also augmented his father's collection of the remains of ancient art. He appropriated his father's collection of manuscripts, and the houses for the study of the antique, which he furnished with statues, busts, and other works of art, the best of their kind that he could procure. The higher class of his fellow-citizens were invited to these pursuits by the example of Lorenzo, and the lower class by his liberality. To the latter he not only allowed competent stipends while they attended to their studies, but gave consider-
able premiums as rewards of their providence. To this institution, more than to any other circumstance, Roscoe ascribes the sudden and astonishing advance which, towards the close of the 15th century, was evidently made in the arts, and which, commencing at Florence, extended itself to the rest of Europe.

4. Lorenzo's successor in the government of Florence was his eldest son Pietro; but of far greater interest to the historian is the death of his second son, Giovanni, and that of his nephew Giulio. The former of the two last named, Giovanni, was honored, by the prudent manipulations of Lorenzo, with the cardinal's hat when only a boy of thirteen years, at the hands of Innocent VIII, and, on the death of Julius II, brought credit upon the name of Medici by his part in the papal election of Leo X. Of Giulio's history we have the following from Roscoe. Shortly after the attempt at assassination, he says, "Lorenzo received a visit from Antonio da San Gallo, who informed him that the untimely death of Giuliano had prevented his disclosing to Lorenzo a circumstance with which it was now become necessary that he should be acquainted: this was the birth of a son, whom a lady of the family of Gorini had borne to Giuliano about twelve months before his death, and whom Antonio had held over the baptismal font, where he received the name of Giulio. Lorenzo immediately repaired to the place of the infant's residence, and, taking him under his protection, delivered him to Antonio, with whom he remained until he had arrived at the seventh year of his age. This concealed offspring of illicit love, to whom the kindness of Lorenzo supplied the untimely loss of a father, was destined to act an important part in the affairs of Europe. The final extinction of the liberties of Florence, the alliance of the family of Medici with the royal house of France, the expulsion of Henry VIII of England from the bosom of the Roman Church, and the consequent establishment of the doctrines of the Reformers in Great Britain, are principally to be referred to this illegitimate son of Giuliano de Medici, who, through various vicissitudes of fortune, at length obtained the supreme direction of the Roman see, and, under the name of Clement VII, guided the bark of St. Peter through a succession of the severest storms which it has ever experienced."

Pietro possessed neither capacity nor prudence, and, in the troubles which the ambition of her princes and the profligacy of her popes brought upon Italy, by plunging her into civil and foreign war, he showed himself treacherous and vacillating alike to friends and foes. Lodovico Sforza, summoned the "Muor," relying on the friendship which, from the middle of the 15th century, had prevailed between the Sforza family of Milan and the Medici, assisted him in his attempts to establish his claim to the duchy of Milan; but, seeing that no reliance could be placed on Pietro, he threw himself into the arms of Charles VIII of France. The result was the invasion of Italy by a French army of 82,000 men. Pietro, in hopes of conciliating the powerful invader, hastened to meet the troops on their entrance into the dominions of Florence, and surrendered to Charles the fortresses of Leghorn and Pisa, which constituted the keys of the republic. The magnates and people, incensed at his perfidy, drove him from the city, and formally deposed the family of the Medici from all participation in power in 1494.

The attempts of Giovanni, then a cardinal, to uphold the Medicinal authority, and his success in the reestablishment of his house in 1512, we have narrated in our article on Leo X. Pietro was slain in 1513, while fighting in the French ranks.

5. It was during the invasions of the French in Italy, in the days of Pietro, that Florence was robbed of one of her greatest treasures—the invaluable library which had been collected by the care of his father and grandfather. "The French troops, which had entered the city without opposition, led the way to this act of barbarism, in which they were joined by the Florentines themselves, who openly carried off or paroled whatever they could discover that was rare or valuable. Besides the nume-

MEDICINE

1. Sources of Medical Science among the Hebrews.—1. Nature. —Next to the food, clothing, and shelter, the curing of hurts takes precedence among the various needs of nations. At a later period comes the treatment of sickness, and recognition of states of disease, and these mark a nascent civilization. Internal diseases, and all for which an obvious cause cannot be assigned, are in the most early period viewed as the visitation of God, or as the result of sin. Certain charms and prayers, or invocations, or the evergreen eyes— or else superhuman, and to be dealt with by sorcery, or some other occult supposed agency. The Indian notion is that all diseases are the work of an evil spirit (Sprengel, Gesch. der Arzneikunde, ii, 48). But among a civilized race the pre-eminence of the medical art is recognized. To the degradation of the individual in health, there is attached an influence on human life, and the vastly greater amount of comfort and enjoyment of which civilized man is capable. 2. Egypt.—It would be strange if their close connection historically with Egypt had not imbued the Israelites with a strong appreciation of the value of this art, and with some considerable degree of medical culture. From the most ancient testimonies, sacred and secular, Egypt, from whatever cause, though perhaps from necessity, was foremost among the nations in this most human of studies purely physical. Again, as the active intelligence of Greece flowed in upon her, and mingled with the immense store of pathological records which must have accumulated under the system described by Herodotus, Egypt, especially Alexandria, became the medical repertory and museum of the world. Thither all that was best worth preserving amid earlier civilizations, whether her own or foreign, had been transported, and medicine and surgery flourished amid political decadence and artistic decline. The attempt has been made by a French writer (Renaudot, Histoire de Medicine depuis son Origine, etc.) to arrange in periods the growth of the medical art as follows: 1st. The Primitive or Instinctive Period, lasting from the earliest record to the fall of Troy. 2nd. The Sacred or Mystical Period, till the death of the Pythagorean Society, B.C. 500. 3rdly. The Philosophical Period, closing with the foundation of the Alexandrian Library, B.C. 320. 4thly. The Anatomical Period, which continued till the death of Galen, A.D. 200. But these artificial lines do not strictly exhibit the truth of the matter. Egypt was the earliest home of medical and other skill for the region of the Mediterranean basin, and every Egyptian mummy of the more expensive and elaborate sort involved a process of anatomy. This gave opportunities of inspecting a vast number of bodies, varying in every possible condition. Such opportunities are confirmed in the records of the preceding period (xix, 5) by the more diligent among the faculty, for “the physicians” embalmed (Gen. i, 2). The intestines had a separate receptacle assigned them, or were restored to the body through the ventral incision (Wilkinson, v, 468); and every such process which we can trace in the mumies discovered shows the most minute accuracy of manipulation. Notwithstanding these laborious efforts, we have no trace of any philosophical or rational system of Egyptian origin, and medicine in Egypt was a mere art or profession. Of science the Asclepiade of Greece were the true originators. Hippocrates, who wrote a book on “Ancient Medicine,” and who seems to have had many opportunities of access to foreign sources, gives no prominence to Egypt. It was no doubt owing to the depressive influences of her fixed institutions that this country did not attain to a vast and speedy proficiency in medical science, when post mortem examinations, instead of being scrupulously avoided, were actually prohibited by law, and the practice of medicine was regarded as a profane and unclean occupation. Yet it is impossible to believe that considerable advances in physiology could have failed to be made there from time to time, and similarly, though we cannot so well determine how far, in Assyria. Recent researches at Kouyunjik have given proof, it is said, of the use of the microscope in minute devices, and yielded up even specimens of magnifying lenses. A cone en- graved with a table of cubes, so small as to be unintellectible without a lens, was brought home by Sir H. Rawlinson, and is now in the British Museum, to whether the invention was brought to bear on medical science, proof is wanting. Probably such science had not yet been pushed to the point at which the microscope becomes useful. Only those who have quick, keen eyes for the nature-world feel the want of such spectacles. The Hebrews, who valued the eye— or else superhuman, and to be dealt with by sorcery, or some other occult supposed agency. The Indian notion is that all diseases are the work of an evil spirit (Sprengel, Gesch. der Arzneikunde, ii, 48). But among a civilized race the pre-eminence of the medical art is recognized. To the degradation of the individual in health, there is attached an influence on human life, and the vastly greater amount of comfort and enjoyment of which civilized man is capable. 2. MEDICINE

1. Ivory box, in Mr. Salis's collection.
2. Stone tablet, dedicated to Amon-re, for the recovery of a complaint in the ear; found at Thebes.
3. An ear, of terra cotta, from Thbes, in Sir Gardner Wilkinson's possession.

Medication as to the esteem in which it was held in the Homeric and pre-Homeric period. To descend to the historical, the story of Democedes at the court of Darius illustrates the practice of Greek surgery before the period of Hippocrates—anticipating, in its gentler waiting upon nature, as compared (Herod, lib. iii, 130) with that of the Persians and Egyptians, the methods and maxims of that father of physic, who wrote against the theorems and speculations of the so-called philosophical school, and was a true empiricist before that sect was formalized. The Dogmatic school was founded after his time by his disciples, who departed from his eminently practical and inductive method. It recognized hidden causes of health and disease, instead of relying on the empiricism of his successors.

Custornary to suspend in a temple an exvoto, which was commonly a model of the part affected; and such offerings doubless, as in the Coan Temple of Asclepius, became valuable aids to the pathological student. The Egyptians who lived in the corn-growing region are said by Herodotus (ii, 87) to have been specially sensitive to health. The practice of circumsicion is traceable on monuments certainly anterior to the age of Joseph. Its antiquity is involved in obscurity, especially as all we know of the Egyptians makes it unlikely that they would have borrowed such a practice, so late as the period of Abraham, from any mere sojourner among them. Its beneficial effects in the temperature of Egypt and Syria have often been noticed, especially as a preventive of cleanliness, etc. The scrophulous attention paid to the dead was favorable to the health of the living. Such powerful drugs as asphaltum, natron, resin, pure bitumen, and various osseous gummy substances were used. The use of ossiphylia from the corpse; even the sawdust of the floor, on which the body had been cleaned, was collected in small linen bags, which, to the number of twenty or thirty, were deposited in vases near the tomb (Wilkinson, v, 469, 469). For the extent to which these practices were imitated among the Jews, see Esther, xxxvii, 10. At any rate, the uncleanliness imputed to contact with a corpse was a powerful preservative against the inoculation of the living frame with morbid humors. But, to pursue to later times this merely general question, it appears (Plink, N. H. xix, 5) that the Polemises themselves practiced dissection, and that, at a period when Jewish intercourse with Egypt was complete and reciprocal, there existed in Alexandria a great zeal for anatomical study. The only influence of importance which would tend to check the Jews from sharing this was the ceremonial law, the special reverence of Jewish feeling towards human remains, and the absence of "uncleaness." Yet those Jews—and there were, at all times since the Captivity, not a few, perhaps—who tended to foreign luxury, and affected Greek philosophy and culture, would assuredly, as we shall have further occasion to notice that they in fact did, enlarge their anatomical knowledge from sources which rebelled against their stricter brethren, and the result would be apparent in the general elevated standard of that profession, even as practiced in Jerusalem. The diffusion of Christianity in the 3d and 4th centuries excited a similar but more universal restraint on the dissecting-room, until anatomy as a pursuit became extinct, and the moral and practical duties of the profession. But such researches, surgical science became stagnant to a degree to which it had never previously sunk within the memory of human records.

Grecians. In comparing the growth of medicine in the rest of the ancient world, the high rank of its practitioners—princes and heroes—settles at once the question from certain supposed principles or elements, out of which bodies were composed, and by virtue of which all their parts and members were attuned together and became sympathetic. Hippocrates has some curious remarks on the sympathy of men with climate, seasons, etc. He himself rejected supernatural accidents as a cause, and especially demonical possession. He refers, but with no mystical sense, to numbers as furnishing a rule for cases. It is remarkable that he extols the discernment of Orientals above Westerns, and of Asians above Europeans, in medical diagnosis. The Empirical school, which arose in the 3d century B.C., under the guidance of Acron of Agrigentum, Serapion of Alexandria, and Philinus of Cos, waited for the symptons of every case, disregarding the rules of practice based on dogmatic principles. Among its votaries was a Zacharias (perhaps Zacharias, and possibly a Jew) of Babylon, who (Plink, N. H. xxxvii, 10; comp. xxxi, 10) dedicated a book of medicine to Mithridates the Great; its views were also supported by Herodotus of Tarsus, a place which, next to Alexandria, became distinguished for its schools of philosophy and medicine; as also by a Jew named Theodas, or Theudas, of Lodicea (see Wunderbar, Biblioth.-Phil.Zeitschr., i, 20), but a student of Alexandria, and the last, or nearly so, of the empiricists whom its schools produced. The remarks of Theudas on the right method of observing, and the value of experience, and his book on medicine, now lost, in which he arranged his subject under the heads of indicatoria, curatoria, and solatoria, earned him high reputation as a champion of empiricism against the reproaches of the dogmatists, though they were subsequently impugned by Galen and Theodosius of Tripoli. His period was that from Titus to Hadrian. "The empiricists held that observation and the application of known remedies in one case to others presumed to be similar constitute the whole art of cultivating medicine. Though their views were narrow, and their information scanty when compared with some of the chiefs of the other sects, and although they rejected as useless and unattainable all knowledge of the causes and concomitate nature of diseases, it is undeniable that, besides personal experience, they freely availed themselves of historical detail, and of a strict analogy founded upon observation and the resemblance of phenomena" (Dr. Adams, Paul. Ag. ed. Sydenham Soc.).

This school, however, was opposed by another, known as the Methodic, which had arisen under the leading of Theissen, also of Alexandria, and the period of Democritus the Great. Asclepiades paved the way for the "method" in question, finding a theoretic basis in the corpuscular or atomic theory of physics which he borrowed from Heraclides of Pontus. He had passed some early years in Alexandria, and then came to Rome shortly before Cicero's time ("Quo nos medico amicoque at
MEDICINE

He was a transitional link between the Dogmatic and Empiric schools and this later, or Methodic (Sprengel, ut sup. pt. v, 16), that sought to rescue medicine from the bewildering mass of particulars into which empiricism had plunged it. He reduced diseases to two classes, chronic and acute, and endeavored likewise to simplify remedies. In the mean-
while, the method of medical schools, which Hippocrates, Celsius, of the Augustan period, had reviewed medicine in the light which all these schools afforded, and, not professing any distinct teaching, but borrowing from all, may be viewed as eclectic. He translated Hippocrates largely verbatim, quoting in a less degree Aescle-
piades and others, but very imperfectly, those "cold-water fires," after its successful trial on Augustus himself, be-
came generally popular, seems to have had little of scientific basis, but by the usual method, or the usual accidents, became merely the fashionable practitioner of his day in Rome. Attilas, near Tarres, furnished also, shortly after the period of Celsus, Aetenes, the leader of the last of the schools of medicine which di-
vided the ancient world, under the name of the "Pneu-
matic," holding the tenet of "an ethereal principle (r\\u03b9\\u03b9\\u03b5\\u03ba\\u03c3) residing in the microcosm, by means of which the mind performed the functions of the body." This is the "Aetenean" opinion, and it was transferred and estab-
lished in the inner heat, \theta\\u03b1\\u03b8\u03bd\u03b7\u03b1\\u03bb\\u03b9\u03c6\u03b7\u03b4 (Aret. de Caus. et Sign. Morb. Chron. ii, 13), and the calidum innatum of modern physiologists, especially in the 17th century (Dr. Adams, Pref. Aeteneus, ed. Syden. Soc.).

Of the Egyptians.—It is clear that all these schools may easily have contributed to form the medical opinions current at the period of the T. T.; that the two earlier among them may have influenced rabbinical teaching on that subject at a much earlier period; and that, especially at the time of Alexander's visit to Jeru-
salem, the Jewish people, whom he favored and protected, may have had an opportunity of largely gathering from the medical lore of the West. It was necessary, therefore, to pass in brief review the growth of the latter, and es-
specially to note the points at which it intercepts the medical progress of the Jews. Greek Asiatic medicine culminated in Galen, who was, however, still but a com-
mentator on his Western predecessors, and who stands literally without rival, successor, or disciple of note, till the period when Greek learning was reawakened by the Arabian intellect. The Arabs, however, continued to build wholly on Hippocrates and Galen, save in so far as their advance in chemical science improved their phials and their instruments. A great part of this knowledge is to be seen in the works of Rhazes, A.D. 980, and Haly Abbas, A.D. 980. The first mention of small-pox is ascribed to Rhazes, who, however, quotes several earlier writers on the sub-
ject. Mohammed himself is said to have been versed in medicine, and to have compiled some aphorisms upon it; and a herbalist literature was always extensively followed in the East from the days of Solomon down-
wards (Freind's History of Medicine, ii, 5, 27). Galen himself belongs to the period of the Antonines, and he appears to have been acquainted with the writings of Moses, and to have travelled in quest of medical expe-
rience over Egypt, Syria, and Palestine, as well as Greece, and a large part of the West, and, in particular, to have visited the banks of the Jordan in quest of opo-
balsamum, and the coasts of the Dead Sea to obtain samples of bitumen. He also mentions Palestine as producing a watery wine, suitable for the drink of fe-
brile patients.

II. Historical Notices.—Having thus described the external influences which, if any, were probably most potient in forming the medical practice of the Hebrews, we may trace next its internal growth. The cabalistic legends mix up the names of Shem and Heber in their familiar sequences. Aramaic SCRIPTURE speaks to knowledge of simples and rare roots, with, of course, magic spells and occult powers, such as have cloaked the history of medicine from the earliest times down to the 17th century. 1. In the Old Testament.—So to Abraham is ascribed a talisman, the touch of which healed all disease. We know that such simple surgical skill as the operation for circumcision implies was Abraham's; but severer opera-
tions than these are constantly required in the flock and in the herd, and of medical skill in rescuing the lives of animals can hardly fail to amass some guiding princi-
pies applicable to man and beast alike. Beyond this, there was probably nothing but such ordinary obstetri-
cal craft as has always been traditional among the wom-
en of rude tribes, that could be classed as medical lore in the family of the patriarchs. Macedonia brought him among the more cultivated Philistines and Egyp-
tians. The only notices which Scripture affords in con-
nection with the subject are the cases of difficult mid-
Wifery in the successive households of Issac, Jacob, and Judah (Gen. xxxv. 26; xxxvi, 17; xxxviii, 27, and so,
later, in that of Phinehas (1 Sam. iv, 19). Doubts have been raised as to the possibility of twins being born, one holding the other's heel; but there does not seem to be any such limit to the operations of nature as an objection on that score would imply. After all, it was perhaps only such just a relative position of the limbs of the infants as the hand of his father at the natural time was forcing the one out or the other under the pressure of the other's heel.

"Surely, the midwife, when she sees the head, first⽣
and ready to be born, will stretch out her hand and help to pull the one or the other out; but if she com-
pare the two, and find that one is more born than the other, then she shall say, 'This one I will pull out; but this,

the other shall live.' " (Isa. xlii. 20, 21). The midwife, it seems, in case of twins, were called upon to distinguish the first-born, to whom important privileges appertained. The tiring on of a thread or ribbon was an easy way of preventing mis-
take, and the assistant in the case of Tamar seized the less prominent part of the twain, and took it with the hand or foot of a living child prostrates, it is to be peeled up ... and the head made to present" (Paul. Apologia, ed Syden.
Soc. i, 648, Hippocr. quoted by Dr. Adams). This probably the midwife did, at the same time marking him as first-born in virtue of being thus "presented" first. The present meaning of the doubtful expression in Gen. xlii. 20, 21 is clear, and is distinctly taken up by the Hebrew, ut sup. p. 50, in reference both to the children and to the mother. Of Rachel a Jewish commentator says, "Multa etiam ex itinere difficultatibus prægressis, viri-
busque post duos praestans dolores exhaustis, atoma uteri, forsan quidem hemorrhagias in pariendo mortuas est" (Abdi). The traditional value ascribed to the man-
-drake, in regard to generative functions, relates to the same branch of natural medicine; but throughout this period there occurs no trace of any attempt to study, digest, and systematize the subject.

But, as Israel grew and multiplied in Egypt, they do not appear to have been subject to a large part of the author's position until cruel policy turned it into bondage; even then Moses was rescued from the lot of his brethren, and became learned in all the wisdom of the Egyptians, in-
cluding, of course, medicine and cognate sciences (Clem. Alex. i, p. 419), and those attainments, perhaps, became suggestive of future laws. Some practical skill in met-
Allurgy is evident from Exod. xxxiii, 20. But, if we ad-
mit Egyptian learning as an ingredient, we should also notice how far exalted above it is the standard of the whole Jewish legislative fabric, in its exemption from the blemishes of sorcery and juggling pretences. The priest, who had to pronounce on the cure, used no means to advance it, and the whole regulations prescribed ex-
clude the notion of trafficking in popular superstition. We have no occult practices reserved in the hands of the sacred caste. It is God alone who doeth great things, working by the wand of Moses, or the brazen serpent; but the very mention of such instruments is such as to expel all pretense of mysterious virtues in the things themselves. Hence various allusions to God's "healing mercy," and the title "Jehovah that healeth" (Exod. xxv, 26; Jer. xvii, 14; xxx, 17; Psa. cii, 3; cxxvii, 8; Isa. xxx, 26). Nor was the practice of physic a priv-
ilege reserved to the priests alone. The priest himself might sell the cure and selle it, and this publicity must have kept it pure. Nay, there was no scriptural bar to its practice by resident
mon, may have conduced to the establishment of these rites, and drawn away the popular homage, especially in prayers during sickness, or thanksgivings after recovery, from Jehovah. The statement that king Ass (2 Chron. xvi, 12) "sought not to Jehovah but to the physicians," may seem to countenance the notion that a rivalry of actual worship, based on some medical fancies, had been set up, and would so far support the Talmudical tradi-

The captivity of Babylon brought the Jews into contact with a new sphere of thought. Their chief men rose to the highest honors, and an improved mental culture among a large section of the captives was no doubt the result of this important change. Wunderbar regards the Babylonian captivity as parallel in its effects to the Egyptian bondage, and seems to think that the people would return debased from its influence. On the contrary, those whom subjecttion had made ignoble and unpatriotic would remain. If any returned, it was a pledge that they were not so impaired; and, if not impaired, they would certainly be improved by the discipline they had undergone. He also thinks that sorcery had the largest share in any Babylonian or Persian system of medicine. This is assuming too much: there were magicians in Egypt, but physicians also (see above) of high cultivation. Human nature has to great an interest in this subject in the savage and oriental societies, the economy of medicine is much involved in phantasms. The earliest steps of civilization include something of medicine. Of course superstitions are found copiously involved in such medical tenets, but this is not equivalent to abandoning the study to a class of professed magicians. Thus in the Liber rerum... babyloniensium Literatur, p. 123, by D. Chwolson, St. Peters, 1859 (the value of which is not, however, yet ascertained), a writer on poisons claims to have a magic antidote, but declines stating what it is, as it is not his business to mention such things, and he only does so in cases where his work is in danger of being treated and resembles it; the magician, adds the same writer on another occasion, use a particular means of cure, but he declines to impart it, having a repugnance to witchcraft. So (p. 125-6) we find traces of charms introduced into Babylonian treatises on medical science, but apologetically, and as against sorcery, or incantation. Similarly, the opinion of fatalism is not without its influence on medicine; but it is chiefly resorted to where, as often happens in pestilence, all known aid seems useless. We know, however, too little of the precise state of medicine in Babylon, Suss, and the "cities of the Media," to determine whether in days of pestilence in which these...
sion of dress to meet that of temperature, were peculiarly liable to sickness (Kall, De Mortibus Sacerdotum, Hafn. 1746). Hence the permanent appointment of a Temple physician has been supposed by some, and a certain Ben-Ahijah is mentioned by Wunderbar as occurring in the Talmud in that capacity. But it rather appears as if the Temple service were various, and varied with the demands of the ministers.

The book of Ecclesiastick shows the increased regard given to the distinct study of medicine by the repeated mention of physicians, etc., which it contains, and which, as probably belonging to the period of the Ptolemies, it might be recognized by the wisdom of writers. The name of Galen is recognized in Ecles. xviii. 19; perhaps also in x. 10. Rank and honor are said to be the portion of the physician, and his office to be from the Lord (xxxviii. 8, 12). The repeated allusions to sickness in vii. 55; xxx. 17; xxxi. 22; xxxvii. 80; xxxviii. 9, coupled with the former recognition of merit, have caused some to suppose that this author was himself a physician. If he was so, the power of mind and wide range of observation shown in his work would give a favorable impression of the standard of practitioners; if he was not, the great general popularity of the study and practice may be inferred from its thus becoming a common topic of general conversation. The medicine, as a matter of education, was recognized by the Jews and the Christians of the Apostolic age (Acts ii. 9; 1 Pet. i. 1). It is very likely that Tertullian, the nearest place of academic repute to that region, was the scene of, at any rate, the earlier studies of Areteus, nor would any chronological difficulty prevent his having been a pupil in medicine there when Paul and also, perhaps, Barnabas were, as is probable, pursuing their early studies in other subjects at the same spot. Areteus, then, assuming the date above indicated, may be taken as expounding the medical practice of the Asiatic Greeks in the latter half of the first century. There is, however, much of strongly-marked individuality in his work, probably in a measure to distinguish his own school from that of disease. That of pulmonary consumption in particular, is traced with the careful description of an eye-witness, and represents with a curious exactness the curved nails, shrunken fingers, slender, sharpened nostrils, hollow, glassy eye, cadaverous look and hue, the waste of muscles, and the most melancholy and deplorable condition of disease. That is, the habit of body marking predisposition to the malady, the thin, venereal-like frame, the limbs like pinions, the prominent throat and shallow chest, with a remark that moist and cold climates are the haunt of it (Aret. ψηφ. προς τον Δημοκράτ.). His treatment of the disease in the Pneumatic school, as in his statement regarding lethargy, that it is a frigidity implanted by nature; concerning elephantiasis more emphatically, that it is a refrigeration of the innate heat, "or, rather, a congelation—as it were one great winter of the system." The same views betray themselves in his statement regarding the blood, that it is the warming principle of all the parts; that diabetes is a sort of dropsey, both exhibiting the watery principle; and that the effect of white helbore is as that of fire: "so that whatever fire does by burning, helbore effects still more by penetrating inward, and not by burning, but rather by deep penetration into the very bowels, into the heart, to the full scope to his imagination, which indeed we might illustrate from some of his pathological descriptions: e. g. that of elephantiasis, where the resemblance of the beast to the afflicted human being is wrought to a fanciful parallel. Allowing for such overstated touches here and there, we may say that he generally avoids extravagant cruelties, and rests chiefly on wide observation and on the common-seense which sober theory and rationalizes facts. He hardly ever quotes an authority; and though much of what he states was taught before, it is dealt with as the common property of science, or as become nisi juris through being proved by his own experience. The freedom with which he follows or refutes his predecessors has occasioned him to be classed by some among the Eclectic school. His work is divided into—1, the causes and signs of (1) acute and (2) chronic diseases; and, II, the curative treatment of (1) acute and (2) chronic diseases. His boldness of treatment is exemplified in his selection of the vein to be opened in a wide range of parts—the arm, ankle, tongue, nose, etc. He first has a distinct mention of leeches, which Themison is said to have introduced; and in this respect his surgical resources appear to be in advance of Celsius. He was familiar with the operation for the stone in the bladder, and also used the stone in the amputation of the use of the catheter, where its insertion is not prevented by inflammation, then the incision into the neck
of the bladder, nearly as in modern lithotomy. His views of the internal economy were a strange mixture of truth and error, and the disuse of anatomy was no doubt the reason why this was the weak point of his teaching. He held that the work of producing the blood pertained to the liver, "which is the root of the veins;" that the bile was distributed from the gall-bladder to the large vessels, the arteries, which were thus interconnected, and that the bile was thrown back into the veins, and by them diffused over the system. He regarded the nerves as the source of sensation and motion; and had some notion of them as branching in pairs from the spine. Thus he has a curious statement as regards paralyzis, that in the case of any severe prostration, say typhus fever, he, e.g., from the irritation of the spinal marrow being affected injuriously, the parts on the right side will be paralyzed if the nerve towards the right side be hurt, and similarly, conversely, of the left side; but that if the head itself be so affected, the invariable law of consequence holds concerning the parts related, since each nerve passes over to the other side from that of its origin, demultiplying each other in the form of the letter X. The doctrine of the Pneuma, or etherial principle existing in the microcosm by which the mind performs all the functions of the body, holds a more prominent position in the works of Aretæus than in those of any of the other authorities (Dr. Adamson's text, pp. 24, 25, 28, 29, 32). He was aware that the nervous function of sensation was distinct from the motive power; that either might cease and the other continue. His pharmacopoeia is copious and reasonable, and the limits of the usefulness of this or that drug are laid down judiciously. He makes large use of wine, and prescribing the kind and the number of grapes to be taken; and some words of his on stomach disorders (τετι καρδαλιζμον) forcibly recall those of Paul to Timothy (1 Tim. v. 23), and one might almost suppose them to have been suggested by the intense spirituality of his Jewish or Christian patients. "Such disorders," he says, "are caused by dejection, not only from drink, but from whose yearning after divine instruction, who despise delicate and varied diet, whose nourishment is fasting, and whose drink is water." As a purgative of melancholy, he prescribes "a little wine, and some other more liberal sustenance." In his essay on causus, or "brain" fever, he describes the powers acquired by the soul before dissolution in the following remarkable words: "Every sense is pure, the intellect acute, the gnostic powers prophetic; for they prognosticate to themselves in the first place their own departure from life; then they foretell what will afterwards take place to those present, who fancy sometimes that they are delicious: but these persons in this order at the result of what has been said. Others also talk to certain of the dead, perseverance they alone perceiving them to be present, in virtue of their acute and pure sense, or perception from their soul seeing beforehand, and announcing the men with whom they are about to associate. For formerly they were immersed in humors, as if in mud and darkness; but when the disease has drained these off, and taken away the mist from their eyes, they perceive those things which are in the air, and, through the soul being uncumbered, become true prophets." To those who wish further to pursue the study of medicine at this era, the edition of Aretæus by the Sydenham Society, and in a less degree that by Boerhaave (Lugd. Bat. 1785), to which the references have here been made, may be recommended.

As the general science of medicine and surgery of this period may be represented by Aretæus, so we have now a range of observation in the System of Medicine given by his successors, through Galen, by the Arabs, through Dioscorides. He too was of the same general region—a Cilician Greek—and his first lessons were probably learnt at Tarsus. His period is tinged by the same uncertainty as that of Aretæus; but he has usually been assigned to the end of the first or beginning of the second century (see Smith, Dict. of Greek and Roman Biog., s. v.). He was the first author of high mark who devoted his attention to Materia Medica. Indeed, this branch of ancient science remained as he left it till the times of the Arabs; and these, though they enlarged the supply of drugs and pharmacy, yet copy and repeat Dioscorides, as, indeed, Galen himself often does, on all common subject-matter. Above 90 minerals, 700 plants, and 168 animal substances are said to be described in the works of Dioscorides, dispatched in nine books, a work which has remained the marvel of all subsequent commentators. Pliny, copious, rare, and curious as he is, yet, for want of scientific medical knowledge, is little esteemed in this particular branch, save when he follows Dioscorides. The third volume of Paulus Aegin. (ed. Sydenham Soc.) contains a catalogue of medicines simple and compound, and the long series of skill which the authority of Dioscorides has contributed to form it will still be most the cursor inspection. To abridge such a subject is impossible, and to transcribe it in the most meagre form would be far beyond the limits of this article.

III. Pathology in the Bible. Before proceeding to the examination of diseases in detail, it may be well to observe that the question of identity between any ancient malady known by description and any modern one known by experience is often doubtful. Some diseases, just as some plants and some animals, will exist almost forever, and can only be produced within narrow limits depending on the conditions of climate, habit, etc. and were only equal observation applied to the two, the habitat of a disease might be mapped as accurately as that of a plant. It is also possible that some diseases once extremely prevalent may run their course and die out, or occur only casually; just as it seems certain that, since the Middle Ages, some maladies have been introduced into Europe which were previously unknown. See Biblioth. Script. Med. (Geneva, 1731), s. v.; Hippocrates, Celsius, Galen; Leclerc's History of Medicine (Paris, 1729; transl. London, 1775); and Freind's History of Medicine.

1. General Maladies—Eruptive diseases of the acute kind are more prevalent in the East than in colder climates. They also run their course more rapidly; e.g. common itch, which in Scotland remains for a longer time vesicular, becomes, in Syria, pustular as early sometimes as the third day. The origin of it is now supposed to be an acarus, but the parasite perishes when removed from the skin. Disease of various kinds is commonly regarded as a divine infliction, or denounced as a penalty for transgression; "the evil diseases of Egypt" (perhaps in reference to some of the ten plagues) are especially so characterized (Gen. xxxviii. 18; Exod. xv. 25, 26, 28; Lev. xii. 2; Deut. x. 25; 30); so the emerods [see HAMORRHIODIS] of the Philistines (1 Sam. v. 6); the severe dysentery (2 Chron. xxii. 15, 19) of Jehoram, which was also epidemic [see Blood, Issue of; and Fever], the peculiar symptom of which may perhaps have been prolapsus ani [Dr. Mason Good, i. 111-15, mentions a case of the entire colon exposed]; or, perhaps, what is known as diarrhoea tubularia, formed by the coagulation of fibrine into a membrane discharged from the inner coat of the intestines, which takes the mould of the bowel, and is thus expelled; the sudden deaths of Er. Omam. (Gen. xxxviii. 7, 10), the Egyptian first-born (Exod. xi. 4, 5), Nahel, Batsheba's son, and Jeroboam's (1 Sam. xxv. 38; 2 Sam. xii. 15; 1 Kings xiv. 1, 6), are ascribed to the action of Jehovah immediately, or through a prophet. Pestilence (Hab. iii. 5) attends his path (comp. 2 Sam. xxiv, 15), and is incommunicable to those whom he sells (Ps. xci. 4, 5, 6). The arrow of Ascalon is Cyprian, (as historically in 2 Sam. xxiv, 13) with "the sword" and "famine" (Jer. xv. 12; xx. 2, xxii. 7, 9, 11; xxiv. 10; xxvii. 18, 19; xxxvi. 24, 36; xxxvii. 17; xxxviii. 2; xlii. 17, 22; xliii. 13; Ezek. v. 12, 17; vii. 11, 12; vii. 15, xii. 16, xiiii. 21, xxxiii. 27; Amos iv. 6, 10). The sickness of the widow woman of Zarephath, of Abanian, Benhadad, the leprosy of Uziah, the boil
of Hezekiah, are also noticed as diseases sent by Jeho- 
vah, or in which he interposed (1 Kings xxvii, 17, 20; 
2 Kings i, 1; xx, 1). In 2 Sam. iii, 29, disease is involved 
as a curse, and in Solomon’s prayer (1 Kings viii, 37; 
comp. 2 Chron. xx, 9) anticipated as a chastisement. 
Job and his friends agree in ascribing his disease to 
divine infliction; but the latter urges his sins as the cause. 
So, conversely, the healing character of God is invoked 
or promised by the friends of Job (2 Sam. xii, 11; 
evil, or, in every case, die! [Job xi, 17]; comp. 2 Kings 
iv, 20; vii, 7, 29; xii, 14; 2 Chron. xxi, 6).

2. Among special diseases mentioned in the Old Test. 
are, ophthalmia (Gen. xxix, 17, פָּעְלַיֶּה פָּעְלַיֶּה), which is 
perhaps more common in Syria and Egypt than any 
where else in the world, especially in the fig season, 
the juice of the newly-ripe fruit having the power of giving 
it. It may occasion partial or total blindness (2 Kings 
vi, 18). The eye-salve (בְּלָדַר הָאָרֶץ, Lev. iii, 18; Hos. 
Sat. i) was a remedy common to Orientalis, Greeks, and 
Romans (see Hippocr. κολλωτήρ; Celsius, vi, 8, De ocul- 
lorum morbis, [2] De diversis collyris). Other diseases 
are—barrenness of women, which mandrakes were 
supposed to have the power of correcting (Gen. xx, 18; 
comp. xxxii, 34); [2] De diversis collyris]); several, the 
names of which are derived from various words, 
signifying to burn or to be hot (Lev. xxvi, 16; 
Deut. xxi, 22) [see FEVER]; compare the kinds of 
fever distinguished by Hippocrates as καθάρος and στρ. 
The “burning boil,” or “of a boil” (Lev. xiii, 23, דָּבָא דָּבָא, 
Sept. οὐκέτι νῦν δένια), is again merely 
marked by the notion of an effect resembling that of fire, 
like the Greek δρακοντις, or our “carbuncle”; it may possibly 
find an equivalent in the Damascas boil of the pres- 
ent day (Lev. xiii, 1, 2, 14–16); [2] Deut. xxvii, 27) is 
so vague a term as to yield a most uncertain 
sense; the plague, as known by its attendant bubo, 
has been suggested by Scheuchzer. It is possible that the 
Elephantiasis Graduum may be intended by יָדוֹּר, 
understood in the widest sense of a continued ulceration 
until the whole body, or the portion affected, may be 
regarded as one יָדוֹּר. Of this disease some further 
notice will be taken below; at present it is observable 
that the same word is used to express the “boil” of 
Hezekiah. This was certainly a single locally-confinéd 
empyema, possibly a carbuncle with some degree of 
fever, and may well be fatal, though a single “boil” in our sense of the 
word seldom is so. Dr. Mead supposes it to have 
been a fever terminating in an abscess. The diseases 
rendered “seab” and “scourvy” in Lev. xxvi, 20; xxii, 
22; Deut. xxviii, 27, may be almost any skin-disease, 
such as those known under the names of lepra, psoriasis, 
pythiasis, ichthyosis, favus, or common itch. Some 
of these may be said to approach the type of leprosy 
as laid down in Scripture, although they do not appear 
to have involved ceremonial defilement, but only a blemish 
disqualifying for the priestly office. The quality of 
being incurable is added as a special curse, for these dis- 
ases are not generally so, or at any rate are common in 
milder forms. The “running of the reins” (Lev. xv, 2, 
3; xxii, 4, marg.) may perhaps mean goronhrea, or more 
probably blemnorea (mucous discharge). If we 
compare Numb. xxx, 1, xxxi, 7, with Josh. xxxii, 17, 
there is glaring evidence of the effect that some of these 
diseases derived from polluting sexual intercourse, remained among the people. The existence of goronhrea in early times 
—save in the mild form—has been much disputed. 
Michel Lévy (Traité d’Hygiène, p. 27) considers the affirma- 
tive as established by the above passage, and says of 
aphylia, "Que pour notre part, nous n’avons jamais pu 
considérer comme une nouvautie du xxv siècle." He 
certainly gives some strong historical evidence against 
the view that it was introduced into France by Spanish 
traders under Gonzalvo de Cordova on the return of 
the New World, and so into the rest of Europe, where it 
was known as the morbus Gallicus. He adds, "La 
syphilis est perdue confusément dans la pathologie an- cienne par la diversité de ses symptômes et de ses alté- 
rations; leur interprétation collective, et leur réduction 
en un morbus Gallicus, n’est guère en accord avec le 
diagnostic d’une maladie nouvelle." See also Freydi’s History 
of Med., Dr. Mead, Michaelis, Reinhardt (Bibelkranken- 
heiten, Schmidt (Biblisch. Med.), and others. Wunderbar (Bib- 
Talm. Med., iii, 20, commenting on Lev. xv, and compar- 
ing Mishna, Zabim, ii, 2, and Maimonides, ad loc.) thinks 
that the term coitus in the mouth was in the mind of the 
latter writers. Dr. Adams, the editor of Paul. Lég. (Sydenh. 
Soc. ii, 14), considers syphilis a modified form of 
elephantiasis. For all ancient notices of the cognate 
diseases, see that work, i, 598 sq. The "issue" of xv, 19, 
may be the menorrhagia, the duration of which in the 
East is sometimes, when not checked by remedies, for 
an indefinite period (Matt. ix, 20), or uterine hemorrhage 
from other causes.

In Deut. xxviii, 35 is mentioned a disease attacking 
the "knees and legs," consisting in a "sore botch which 
cannot be healed," but extended, in the sequel of the verse, 
from the "sole of the foot to the top of the head." The 
diseases of Deut. xvii, 12 have been connected with 
Elephantiasis Graduum; but this, if the whole verse be a mere 
continuation of one described malady, would be in contradiction to the fact that 
this disease commences in the face, not in the lower members. On 
the other hand, a disease which affects the knees and legs, 
or more commonly one of them only—its principal feature 
being intumescence, distorting and altering all the 
proportions—is by a mere accident of language 
known as Elephantiasis Arabum, Bucemia Tropica 
(Rayer, iii, 820–841), or "Barbadescue legs," from 
being well known in that island. Supposing, however, 
that the Deut. passage alludes to the "knees and legs," and 
that the latter part of the description applies to the 
Elephantiasis Graduum, the incurable and all-pervading 
character of the malady are well expressed by it. This 
disease is what now passes under the name of "leprosy" 
(Michaelis, iii, 256)—the lepers, e. g. of the huts near 
the Zion gate of modern Jerusalem are elephants. It 
has been asserted that there are two kinds, one pain- 
ful, the other painless; but, as regards Syria and the 
East, this is contradicted. There the parts affected 
are quite bemused and lose sensation. It is classed as a 
tubercular disease, not confined to the skin, but per- 
vading and destroying all connective tissues and destroying 
the organism as a whole. It is not confined to any age 
or either sex. It first appears in general, but not always, 
about the face, as an indurated nodule (hence it is improperly called tubercular), which 
gradually enlarges, inflames, and ulcerates. Sometimes 
it commences in the neck or arms. The ulcers will heal 
spontaneously, but recur after a long period; and after 
destroying a great deal of the neighboring parts. If 
the joint be attacked, the ulceration will go on till its de- 
scription is complete, the joints of finger, toe, etc., 
dropping off one by one. Frightful dreams and fetid breath 
are symptoms mentioned by some pathologists. More 
modules will develop themselves, and, if the face be 
the chief seat of the disease, it assumes a leucine aspect 
(hence called also Leontiasis), loathsome and hideous; 
the skin becomes thick, rugose, and lipid; the eyes are 
fierce and staring, and the hair generally falls off from 
all the parts affected. When the throat is attacked the 
organs are rapidly destroyed, and decay and death 
seem to be at hand; only those who choose to whisper 
these two symptoms are emphatically characteristic. 
The patient will become bedridden, and, though 
a mass of bodily corruption, seems happy and contented 
with his sad condition, until, sinking exhausted under 
the ravages of the disease, he is generally carried off, 
at least in Syria, by diarrhoea. It is a leucine, and may 
be incurable, but does not propagate itself by the close-
MEDICINE

contact; e.g., two women in the aforesaid leper-huts remained uncontaminated though their husbands were both affected, and yet the children born to them were, like the fathers, elephantiasic, and became so in early life. In the children of sex, however, the appearance of the malady is kept; but no one is afraid of infection, and the neighbors mix freely with them, though, like the lepers of the Old Test, they live "in a several house." Many have attributed to these wretched creatures a libido uncepsiibdra (see Procedure of Ned, and Chem). 1890, 160, 14, from which some of the above remarks are taken). This is denied by Dr. Robert Sim (from a close study of the disease in Jerusalem), save in so far as idleness and in-activity, with animal wants supplied, may conduces to it. It became first prevalent in Europe during the crusades, and by their means was diffused, and the ambiguity of designating it leprosy then originated, and has been generally since retained. Pliny (Nat. Hist. xxvi. 5) asserts that it was unknown in Italy till the time of Pompey the Great, when it was imported from Egypt, but soon became extinct (Paul. Aegip. ed. Sydenh. Soc. ii, 6). It is however, broadly distinguished from the Arapor, because it does not go beyond the stated symptoms, no less than by Roman medical and even popular writers; comp. Lucanitus, whose mention of it is the earliest—

"Est elephas morbus, qui propter fumina Nilii, Gignitur Egypti in medii, neque preterea usus—"

It is nearly extinct in Europe, save in Spain and Nor- way. Besides this, the Greeks by the Greeks have been elsewhere. It prevails in Turkey and the Greek Archipelago. One case, however, indigenous in England, is recorded among the medical fac-
similes at Guy's Hospital. In Granada it was generally fatal after eight or ten years, whatever the treatment. This favors the correspondence of this disease with one of those evil diseases of Egypt, possibly its "botch," threatened in Deut. xxviii. 37, 35. This "botch," however, seems more probable to mean the foul ulcer mentioned by Areteus (De Signt. et Caus. Morb. Aet. i, 9), and called by him θυκων or τιρίγυν. He ascribes its frequency in Egypt to the mixed vegetable diet there followed, and to the use of the turbid water of the Nile, but adds that it is common in Cœlia-Syria. The Tal-

mus speaks of the elephantiasis (Baba Kama, 80 b) as being "moist without and dry within" (Wunderbir, Biblisch-Talmudische Med. Stud. Heft, 10, 11). Advanced cases tend to have a cancerous aspect, and some even class it as a form of cancer, a disease dependent on faults of nutrition. It has been asserted that this, which is perhaps the most dreadful disease of the East, was Job's malady. Oegen, Hexaplia on Job ii. 7, mentions that one of the Greek versions intended Job to be the malady befell him. Wunderbir (ut sup. p. 10) supposes it to have been the Tyrian leprosy, resting chiefly on the. itching implied, as he supposes, by Job ii, 7, 8. Schmidt (Biblischer Med. iv, 4) thinks the "soe bole" may indicate some grave disease, or complication of diseases. But there is no reason for going beyond the stated symptoms, which speaks not only of this "boil," but of "skin kathsome and broken," "covered with worms and clods of dust," the second symptom is the result of the first, and the "worms" are probably the larvae of some fly, known to infest and make its nidus in any wound or are exposed to the air, and to increase rapidly in size. The "clods of dust" would of course follow from his sitting in ashes. The "brute strange to his wife," if it be not a figurative expression for her estrangement from him, may imply a fetor, which in such a state of body strictly requires explanation. The expression my bow;

(37) (xxv. 27) may refer to the burning sensation in the sinews. Areteus (De Cur. Morb. Aet. ii, 3) has a similar expression, Στοιχεία των σπακλήουμεν ᾅρασιν της τον πυρός, as attending syncope. The "scaring demons" and "terrifying visions" are perhaps a mere symptom of the state of mind bewildered by uncontrollable afflictions. The intense emaciation was (xxxii, 21) perhaps the mere result of protracted sickness.

The disease of king Antiochus (2 Mac. ix. 5, 10, etc.) is that of the usual and chronic receiving of So Sulla, Pherecydes, and Alcamen, the poet, are mentioned (Plut. Vitae Sullae) as similar cases. The examples of both the Herods (Josephus, Ant. xxvi. 6, 5; War, i, 53, 5) may also be added, as that of Pherecime (Herod. iv, 205). There is some doubt whether this disease be not a sort of phthisis, in which there are bred, and cause ulcers. This condition may originate either in a sore, or in a morbid habit of body brought on by uncleanness, suppressed perspiration, or neglect; but the vermination, if it did not commence in a sore, would produce one. Dr. Mason Good (iv, 504-5), speaking of the κοκον αηκυς, μακρυγυς, verrucous vermination, mentions a case in the Westminster Infirmary, and an opinion that universal phthisis was no unfrequent disease among the ancients; he also states (p. 500) that in gangrenous ulcers, especially in warm climates, innumerable grubs or maggots will appear almost every morning. The camel, and other creatures, are known to be the habitat of similar parasites. There are also cases of vermination without any wound or faulty outward state, such as the Venum Medina, known in Africa as the "Guines-

worm," of which Galen had heard only, breeding under the skin, and needing to be drawn out carefully by a needle, lest it break, when great soreness and suppura-
tion succeeds; see Joseph, v, 10, and War, i, 49; De Med. Plato, Tracte, p. 4; and Paul. Aegip. t. iv, ed. Sydenh. Soc.). Rayer (iii, 808-819) gives a list of parasites, most of them in the skin. This "Guinea-worm," it appears, is also found in Arabia Petraea, on the coasts of the Cas-

pian and Persian Gulf, on the Ganges, in Upper Egypt, and Abyssinia (ob. 1848). De Med. Plato refers Herod's dise-

case to ἱυρίζων, or intestinal worms. Shapte, without due foundation, objects that the word in that case should have been not σαυφες, but εἰκεθ (Medica Sacra, p. 188).

In Deut. xxviii. 65 it is possible that a palpitation of the heart is intended to be spoken of (comp. Gen. xiv, 26). In Mark ix, 17 (comp. Luke ix, 38) we have an apparent case of epilepsy, especially shown in the foaming, falling, wallowing, and similar violent symptoms mentioned; this might easily be a form of demoniacal manifestation. The case of extreme hunger recorded in 1 Sam. iv. 16 is merely the result of exhaustion; but it is reasonable to think that the boy's fit, "which the seer 

phan speaks (1 Sam. iv, 5, 7), was remedied by an application in which "honey" (comp. 1 Sam. xiv, 27) was the chief ingredient.

Besides the common injuries of wounding, bruising, striking out eye, tooth, etc., we have in Exod. xxi, 22 a case of leprosy, according produced by a blow, push, etc., damaging the forus.

The plague of "boils and blains" is not said to have been fatal to man, as the murrain preceding was to cattle; this alone would seem to contradict the notion of Shapte (Medica Sacra, p. 115), that the disorder in question was smallpox, which however, when properly applied, until mitigated by vaccination, has been fatal to a great part, perhaps a majority of those seized. The small-pox also generally takes some days to pronounce and matur,

which seems opposed to the Mosaic account. The expression of Exod. ix, 10, a "boil" flourishing, or ebulli-ent with blains, may perhaps be a disease analogous to phlegmonous erysipelas, De Med. Plato, 16, chapter 1, 2, which is often accompanied by vesications such as the word "blains" might fitly describe. This is Dr. Robert Sim's opinion. On comparing, however, the means used to produce the disorder (Exod. ix, 8), an analogy is perceptible to what is called "bricklayer's itch," and therefore to leprosy. A disease involving a white spot break-

ing forth from a boil related to leprosy, and clean or un-
clean according to symptoms specified, occurs under the

current genus of leprosy (Lev. xiii, 18-23). The "withered hand" of Jeroboam (1 Kings xxii, 4-6)

Digitized by Google
and of the man (Matt. xii, 10-18; comp. Luke vi, 10), is such an effect as is known to follow from the obliteration of the main artery of any member, or from paralysis of the principal artery of the body, disease or injury through injury. A case with a symptom exactly parallel to that of Jeremiah is mentioned in the life of Gabriel, an Arab physician. It was that of a woman whose hand had become rigid in the act of swinging, and remained in the extended posture. The most remarkable feature in the case, as related, is the remedy, which consisted in alternating acting on the nerves, inducing a sudden and spontaneous effort to use the limb—an effort which, like that of the dumb son of Creuses (Herod. i, 85), was paradoxically successful. The case of the widow's son restored by Elisea (2 Kings iv, 19), was probably of one of unusual duration, of Aas' (v. i, 12) woman, Biblischer Med. iii, 5, 2), which attacked him in his old age (1 Kings xv, 28; 2 Chron. xvi, 12), and became exceeding great, may have been either adema, dropsey, or podagra, gout. The former is common in aged persons, in whom, owing to the difficulty of the return upward of the sluggish blood, its watery part stays in the feet. The latter, though rare in the East at present, is mentioned by the Talmudists (Sotah, 10 a, and S andra, 48 b), and there is no reason why it may not have been known in Aas' time. It occurs in Hippocr. Aphor. vi, Prognot. 15; Celsius, iv, 24; Areatus, Moral. Chron. ii, 12, one of which the almighty be a great deal treated as a disease, but in connection with the "fiery (i.e. venomous) serpents" of Num. xxii, 6, and the deliverance from death of those bitten, it deserves a notice. Even the Talmud acknowledges that the healing power lay not in the brazen serpent itself, but "as soon as they feared the Most High, and uplifted their heads to their heavenly Father, they were healed, and in default of this were brought to naught." Thus the brazen figure was symbolized only; or, according to the lovers of purely natural explanation, was the stage-trick to cover a false miracle. It was customary to consecrate the image of the afflicted, or in its cause or in its effect, as in the golden emerods, golden mice, of 1 Sam. vi, 4, 8, and in the ex-votos common in Egypt even before the exodus; and these may be compared with the setting up of the brazen serpent. We have it in in all instances of the current, fanciful or superstitious, being submitted to a higher purpose. The bite of a white she-mule, perhaps in the cutting season, is, according to the Talmudists, fatal; and they also mention that of a mad dog, with certain symptoms by which to discern his state (Wunderbar, ut sup. p. 21). The scorpio and centipede are natives of the Levant (Rev. ix, 2-7), and, contrary to the serpent, or because of the venom. To these, according to Lichtenstein, should be added a venomous solpurge, or large spider, similar to the Calabrian tarantula; but the passage in Pliny added (H. N. xxix, 29) gives no satisfactory ground for the theory based upon it, that its bite was the cause of the emerods. It is, however, remarkable that Pliny mentions with some fulness a mus araneus—not a spider resembling a mouse, but a mouse resembling a spider—the shrewmouse, and called araneus, Isidore says from this resemblance, or from its eating spiders. Its bite was venomous, caused mortification of the part, and a spreading ulcer attended with inward griping pains, and when crushed to the wound it was its own best antiseptic. See Disease.

The disease of old age has acquired a place in Biblical nosology chiefly owing to the elegant analogy into which "The Preacher" throws the succeeding tokens of the ravage of time on man (Eccles. xi). The symptoms are entirely literary in their character, being either of a sort local or general; for, though his art can do little to arrest them, they yet mark an altered condition calling for a treatment of its own. "The Preacher" divides the sum of human existence into that period which involves every mode of growth, and that which involves every mode of decline. The first reaches from the point of birth or
even of generation, onwards to the attainment of the "grand climacteric," and the second from that epoch backwards through a corresponding period of decline till the point of dissolution is reached. These are respectively called the פה לפני זה and the הגרテスト מִזִּיעַנְתָּה of the rabbis (Wunderbar, θνή Ζυγίον). The stigmatizing of the "grand climacteric" as a metaphor by the dazzling of the great lights of nature, and the ensuing season of life is compared to the broken weather of the wet season, setting in when summer is gone, when after every shower fresh clouds are in the sky, as contrasted with the showers of other seasons, which pass away into clearness. Such he means are the ailments and troubles of declining age, as compared with those of advancing life. The "keepers of the house" are perhaps the ribs which support the frame, or the arms and shoulders which enwrap and protect it. Their "trembling," especially that of the arms, etc., is a sure sign of vigor past. The "strong men" are its supporters, the lower limbs "bowing themselves under the weight they once so lightly bore." The "grinding" hardly needs to be explained of the teeth, now become "few." The "lookers from the windows" are the pupils of the eyes, now "darkened," as Isaac's were, and Eli, and Moses, though spared the dimness, was yet in "total vision" as of an "angel of the Lord" (Ex. xliii, 10; i Sam. iv, 15; Deut. xxxiv, 7). The "doors shut" represent the dulness of those other senses which are the portals of knowledge; thus the taste and smell, as in the case of Barzillai, became impaired, and the ears stopped against sound. The "rising up the voice" represents the light reflex, "easily broken slumber of the aged man; or rather, in the voice of the bird," i.e. the high key, the "big, many voice now turn'd agaids to childish treble." The "daughters of music brought low" suggest the cracked voice of age, or, as illustrated again by Barzillai, the failure in the discernment and the utterance of musical notes. The fears of old age are next noticed: "They shall be afraid of that which is high," an obscure expression, perhaps, for what are popularly called "nervous" terros, exaggerating and magnifying every object of alarm, and "making," as the saying is, "mountains of mole-hills." Or, even more simply, these words may be understood as meaning that old men have neither vigor nor breath for going up hills, mountains, or anything requiring much physical effort, for them the plain, even the road has its terros—they walk timidly and cautiously even along that. "Fear in the way" is at first less obvious; but we observe that nothing unnerves and agitates an old person more than the prospect of a long journey. Thus regarded, it becomes a fine and subtle touch in the description of decrepitude. All readiness to haste is arrested, and a numb despondency succeeds. The "flourishing" of the "almond-tree" is still more obscure; but we observe this tree in Palestine blossoming when others show no sign of vegetation, and when it is dead winter all around—no ill type, perhaps, of the old man who has survived his own contemporaries and many of his juniors. Youthful zest dies out, and their strength, of which "the grasshopper" is probably a figure, is relaxed. The "silver cord" has been thought to be that of nervous sensation, or motion, or even the spinal marrow itself. Possibly some incapacity of retention may be signified by the "golden bowl broken," the "pitcher broken at the well." suggests the vital supply stopping at the usual source—derangement perhaps of the digestion or of the respiration; the "wheel shuffled at the cistern" has been imagined to convey, through the image of the water-lifting process familiar in irrigation, the notion of the blood. Possibly, too, we were through the vessels, and fertilizing the whole system; for "the blood is the life." IV. Hebrew Therapeutics.—This careful register of the tokens of decline might lead us to expect great care for the preservation of health and strength; and this indeed is found to mark the Mosaic system, in the regulations concerning diet, the "divers washings," and the pollution imputed to a corpse—nay, even in circumcision itself. These served not only the ceremonial purpose of impurities and re-consecrations to the hypotéca, and keeping him distinct from alien admixture, but had a sanitary aspect of rare wisdom, when we regard the country, the climate, and the age. The laws of diet had the effect of tempering, by a just admixture of the organic substances of the animal and vegetable kingdoms, the regimen of those few families and those living for the vigor of future ages, as well as checking the stimulus which the predominant use of animal food gives to the passions. To these effects may be ascribed the immunity often enjoyed by the Hebrew race amid epidemics devastating the countries of their sojourn. The best and often the sole possible exercise of medicine is to prevent disease. Moses could not legislate for cure, but his rules did for the great mass of the people what no therapeutics, however consummate, could do—they gave the best security for the public health by provisions incorporated in the public economy. Whether we regard the laws which secluded the leper as designed to prevent infection or repress the dread of it, their wisdom is nearly equal, for of all terrors the imaginary are the most terrible. The laws restricting marriage have in general a similar tendency, degeneracy being the penalty of a departure from those which forbid commixture of near kin. Michel Levy remarks on the salubrity of the Hebrew marriages, "the marriages being once im- posed (Levy, Traité de Hygiène, p. 8). The precept also concerning purity on the necessary occasions in a desert encampment (Deut. xxiii, 12-14), enforcing the return of the elements of productiveness to the soil, would probably become the basis of the municipal regulations having for their object a similar purity in towns. The consequences of its neglect in such encampments is shown by an example quoted by Michel Levy, as mentioned by M. de Lamartine (i.8, 9). Length of life was regarded as a mark of divine favor, and the divine legislator had pointed out the means of ordinarily insuring a fuller measure of it to the people at large than could, according to physical laws, otherwise be hoped for. Perhaps the extraordinary means taken to prolong vitality may be referred to this source (1 Kings i, 2), and there is no reason why the case of David should be deemed a singular one. We may also compare the ap- pellations "high" and "vital warmth" in the highest degree, but having, perhaps, a physical law as its basis, in the cases of Elijah, Elisha, and the sons of the widow of Zarephath, and the Shunammite. Wunderbar has collected several examples of such influence similarly exerted, which, however, he seems to exaggerate into an absurd pitch. Yet it would seem not against analogy to suppose that, as pennisinal exhalations, miasms, etc., may pass from the sick and affect the healthy, so there should be a reciprocal action in favor of health. The climate of Palestine afforded a great range of temperature within a narrow compass—e.g. a long sea-coast, a long, deep valley (that of the Jordan); a broad, flat plain (the region of the Dead Sea); a large body of water (the Dead Sea, Judah and Ephraim), and the higher elevations of Carmel, Tabor, the lesser and greater Hermon, etc. Thus it partakes of nearly all supportable climates. In October its rainy season begins with moist westernly winds. In November the trees are bare. In December snow and ice are often found, but preserves moderate till June. Hence until September becomes extreme; and during all this period rain seldom occurs, but often heavy dews prevail. In September it commences to be cool, first at night, and sometimes the rain begins to fall at the end of it. The
migration with the season from an inland to a sea-coast position, from low to high ground, etc., was a point of social development never systematically reached during the scriptural history of Palestine. But men inhabiting the south, over centuries, would hardly fail to notice the connection between the air and moisture of a place and human health, and those favored by circumstances would certainly turn their knowledge to account. The Talmudists speak of the north wind as preservative of life, and the south and east winds as exhaustive, but the southward migration is a feature of all, common to the desert-dweller, and from the desert, producing abortion, tainting the babe yet unborn, and corroding the pearls in the sea. Further, they disdained from performing circumcision or venesection during its prevalence (Jebamoth, 72 a, 38) (Wunderbar, 386, Heft, vol. 2, A). It is stated that "the marriage-bed placed between north and south will be blessed with male issue" (Berachoth, 15, ib.), which may, Wunderbar thinks, be interpreted of the temperature when moderate, and in neither extreme (which winds respectively represent), as most favoring fecundity. If the fact be so, it is more probably related to the phenomena of magnetism, in connection with which the same theory has been lately revived. A number of precepts are given by the same authorities in reference to health; e.g. eating slowly, not contracting a sedentary habit, regularity in nature operations, cheerfulness of temper, due sleep (especially early morning rising), etc. (M. and M. p. 251), but no recommendation by day (Wunderbar, ut sup.). We may mention likewise in this connection that possession of an abundance of salt tended to banish much disease (Psa. 1x, 2; 2 Sam. 111, xiii, 1; 1 Chron. xiv, 12). Salt-pits (Zeph. ii, 9) are still dug by the Arabs on the shore of the Dead Sea. For the use of salt for new-born infant, Ezek. xvi, 4, comp. Galen, De Sanit. lib. i, cap. 7.

The rite of circumcision, besides its special surgical operation, deserves some notice in connection with the general question of the health, longevity, and fecundity of the race with whose history it is identified. Besides being a mark of the covenant and a symbol of purity, it was perhaps also a protest against the phallic-worship, which has a remote antiquity in the corruption of mankind, and of which we have some trace in the Egyptian myth of Osiris. It has been asserted also (Wunderbar, 386, Heft, p. 25) that it distinctly contributed to increase the fruitfulness of the race, and to check inordinate desire. Its beneficial influence is in such a climate as that of Egypt and Syria, as tending to promote cleanliness, to prevent or reduce irritation, and thereby to stop the way against various disorders, there been the subject of comment to various writers on hygiene. In particular a troublesome and sometimes fatal kind of child-bed fever called "putrid phlegmon" is mentioned as occurring commonly in those regions, but only to the uncircumcised. It is stated by Josephus (Cont. Ap. ii, 13) that Api, against whom he wrote, having at first derided circumcision, was circumcised of necessity by reason of such a boil, of which, after suffering great pain, he died. Philo also appears to speak of the same benefit when he speaks of the "anthrax" infesting those who retain the foreskin. Medical authorities have also stated that the capacity of imbibing syphilitic virus is less, and that this has been proved experimentally by comparing Jewish with other, e.g. Christian populations (Wunderbar, 386, Heft, p. 27). The operation itself consisted of originally a mere incision, to which a further stripping off the skin from the part, and a custom of sucking the blood from the wound, was in later period added, owing to the attempts of Jews of the Macabean period, and later (1 Mac. i, 15; Josephus, Ant. xii, 258), to cure the following practices. The reduction of the remaining portion of the prepuce after the more simple operation, so as to cover what it had exposed, known as epispasmum, accomplished by the elasticity of the skin itself, was what this anti-Judaic practice sought to effect, and what...
MEDICINE

MEDICINE

alba, cassia, ladanum, galbanum, frankincense, storax, gum of various trees, musk, myrrh, benzoin; and these minerals—bitumen, natrum, borax, alum, clay, salerite, quicksilver, litharge, yellow arsenic. The following preparations were also well known: Theresins, as a substitute for preserved perspiration; in the preparation of drinks, e.g., from the fruit-bearing rosary; decoction of wine with vegetables; mixture of wine, honey, and pepper; of oil, wine, and water; of asparagus and other roots steeped in wine; emetics, purging draughts, sopersifices to produce abortion or fruitfulness; and various salves, some used internally, e.g., oil of mullein; hair; for some wounds and other injuries. The forms of medicaments were cataplasms, electuary, liniment, plaster (Isa. 1, 6; Jer. viii, 22; xlvi, 11; li, 8; Josephus, War, i, 33, 5), powder, infusion, decoction, essence, syrup, mixture.

An occasional trace occurs of some chemical knowledge, e.g., the calcination of the gold by Moses; the effect of "vinaigre upon nitre" (Exod. xxxii, 20; Prov. xxv, 20; comp. Jer. ii, 22). The mention of "the apothecary" (Exod. xxxii, 35; Excal. x, 1), and of the merchant in "powders" (Cant. iii, 6), shows that a distinct and independent occupation was set up, even as it exists to this day, in which, as at a modern druggist's, articles of luxury, etc., are combined with the remedies of sickness (see further, Wunderbar, 1st Heft, p. 78, ad fin.).

Among the most favorite of external remedies has always been the bath. As a preventive of numerous disorders its virtues were known to the Egyptians, and the effects of it were proverbial. "Anyone would merely enjoy the continuance of a practice familiar to the Jews, from the example especially of the priests in that country. Besides the significance of moral purity which it carried, the use of the bath checked the tendency to become uncouth by violent perspirations from within the body; it kept the fastidious system in play, and stopped the outbreak of much disease. In order to make the sanction of health more solemn, most Oriental nations have enforced purificatory rites by religious mandates—and so the Jews. A treatise collecting all the dicta of ancient medicine on the use of the bath has been current ever since the revival of learning, under the title De Balneis. According to it, Hippocrates and Galen prescribe the bath medicinally in peripneumonia rather than in burning fever, as tending to allay the pain of the sides, chest, and back, promoting various secretions, removing lassitude, and supplying new breath, and which is recommended for those suffering from lichen (De Balne. p. 464). Those, on the contrary, who have looseness of the bowels, who are languid, loathe their food, are troubled with nausea or bile, should not use it, as neither should the epileptic. After exhausting journeys in the sun, the bath is recommended as the restorative of moisture to the frame (p. 456-458). The four objects which ancient authorities chiefly proposed to attain by bathing are—1, to warm and dislodge the elements of the body throughout the whole frame, to equalize whatever is abnormal, to rarefy the skin, and promote evacuations through it; 2, to reduce a dry to a moister habit; 3, to dry the cold habit, to cool the hot habit; 4, to make the warm habit more genial, and to expel cold. Exercise before bathing is recommended, and in the season from April till November inclusive it is the most conducive to health; if it be kept up in the other months, it should then be but once a week, and that fasting. Of natural waters some are nitrous, some saline, some aluminous, some sulphurous, some bituminous, some copperous, some ferruginous, and some composed of these. Of all the natural waters the power is, on the whole, desiccant and cailefacient, and they are peculiarly fitted for those of a humid and cold habit. Pliny (i. N. xxxii) gives the fullest extant account of the thermal springs of the ancients (Paul. Epin. ed. Sydenh. Soc. i. 71). Avicenna gives precepts for salt and other mineral baths; the former he recommends in case of scurvy and itching, as rarefying the skin, and afterwards condensing it. Waters medicated with alum, santon, sulphur, naptha, iron, litharge, vitriol, and vinegar, are also specified by him. Friction andunction are prescribed, and a caution given against staying too long in the water (ibid. p. 388-389; comp. Attius, i. 33, 48, 44). At the baths, music is soft, not loud, and allow others to rub and anoint him, and use no stigil (the common instrument for scraping the skin), but a sponge (p. 456). Maimonides, chiefly following Galen, recommends the bath, especially for phthisis in the aged, as being a case of dryness with cold habit, and recommends to a hot bath instead of a cold one for a hot habit; also in cases of ephemeral and tertian fevers, under certain restrictions, and in putrid fevers, with the caution not to incur shivering. Bathing is dangerous to those who feel pain in the liver after eating. He adds cautions regarding the kind of water, but these relate chiefly to water for drinking (De Bala. p. 438, 439). The bath of oil was formed, according to Galen and Attius, by adding the fifth part of heated oil to a water-bath. Josephus speaks (War, i, 33, 5) as though oil had, in Herod's case, been used pure. There were special occasions on which the bath was ceremonially en- joined, such as the end of a war, such as the opening of a judicial act, or an involuntary emission, or any gonorrhoeal discharge, after menstruation, childhood, or touching a corpse; so for the priests before and during their time of office such a duty was prescribed. The Pharseises and Essenes aimed at scrupulous strictness of all such rules (Matt. xv, 2; Mark vii, 19; 5; Luke xi, 41; xxii, 39; xxiv, 3, 5), but hence soon began to include a bath-room (Lev. xviii, 12; 2 Kings v, 10; 2 Sam. xi, 2; Susanna 15). Vapor-baths, as among the Romans, were laterly included in these, as well as hot and cold bath apparatus, and the use of perfumes and oils after quitting it was everywhere diffused (Wunderbar, 1st Heft, p. 31, 32; vol. ii, 2). The vapor-baths are supposed to be inhaled, though this was reputed mischievous to the teeth. It was deemed healthiest after a warm to take also a cold bath (Paul. Epin. ed. Sydenh. Soc. i, 68). The Tal- mund has it—"Who soakes a warm bath, and does not also drink thereupon some warm water, is like a stove hot only from without, but not heated also from within. Who soak bathes, and does not withal anoint, is like the liquor outside a vat. Whoso having had a warm bath does not also immediately pour cold water over him, is like an iron made to glow in the fire, but not thereafter hardened in the water." This succession of cold water to hot, is very frequent in those who use Russian and Polish baths, and is said to contribute much to robust health (Wunderbar, ibid.). See BATH.

V. Literature.—Besides the usual authorities on Hebrew antiquities, Talmudic and modern, Wunderbar (1st Heft, 57-69) has compiled a collection of writers on the special subject of scriptural, etc., medicine, including its psychological and botanical aspects, as also its political relations; a distinct section of thirteen monographs treats of the leprous; and every various disease mentioned in Scripture appears elaborated in one or more such short treatises. Those out of the whole number which appear most generally in esteem, to judge from their references to the various parts of Scripture, include a few from other sources: Rosenmüller's Natural History of the Bible (in the Biblical Cabinet, vol. xxvii); De Wette, Hebräisch-Jüdische Archäologie, § 271 b; Calmet (Augustin), La Médecine et les Médecins des anciens Hebreaux (in his Comm. litterale, Paris, 1729, vol. v); Idem, Dissertation sur la Sourur du Sange (Luke xxii, 43, 44); Pruner, Krankheiten des Orients; Sprenkel (Kurt), De medic. Ebraorum (Halle, 1789, 8vo); Idem, Beiträge zur Geschichte der Medicin (Halle, 1794, 8vo); idem, Vercsch einer progr. Geschichte der Arzneimittel (Halle, 1792, 1809, 1821; the last edition by Dr. Rosenbaum, Leipsic, 1846, 8vo, i. § 27-46); Idem, De potissimo biblia (in the Lib. i. cap. i, Flora Biblica); Bartholin (Thom.), De morbis biblicis, miscellaneous medicina (in Ugolini, xxx, 1521); idem, Paradigmi non Testamenti (in Ugolini, xxx, 1469);
MEDLER
forward [1. E. Eastern] sea," i.e. the Dead Sea, Zech. xix, 8, etc., "sea of the Philistines" (גֵּדָה הָאָרָם Gu'dah Hayarah). Exod. xxiii, 31, and also simply "the sea" (Josh. xix, 36; as likewise in the Greek, Ἰορδανός, 1 Macc. xiv, 34; xv, 11; Acts x, 6, 23), and bounding Palestine on the north, from Tyre to Philistia, a narrow necky shore, which farther south becomes low and sandy (Strabo, xvi, 758 sq.; comp. Josephus, Ant. xxv, 9, 6; War, i, 21, 5; see Scholz, Reisse, p. 136); it makes at Mount Carmel a great bay (that of Accho or Poolemais), but elsewhere it afford very few good harbors (chiefly those of Caesarea, Joppa, and Gaza). Its surface lies higher than that of the Dead Sea. The north coast of the tide in the Mediterranean is irregular, and noticeable only in particular localities, and unimportant on the coast of Palestine (see Michaelis, Eisdcti, in A. T. 174, ann.). The current of the sea is regularly from south to north, and is doubly strong at the time of the Nile freshet, so as to carry the deposits of mud and sand against the southern (Philistine) shore, which according is continuously pushing farther and farther into the sea (see Ritter, Erdk. ii, 460, 462). Under the water there are found at the coast from Gaza to Jaffa large coral reefs (Volney, Voyag. ii, 246); and the sea abounds in fish. Commerce finds it a great sphere; but the Phœnician and Egyptian boats in its neighborhood are nothing in comparison with this, as the Mosaic legislation was unfavorable even to coast trading. Particular portions of this vast body of water were designated by special names, but of these only the Adriatic (ὁ Ἀδριατικός) is distinctively named in the Bible (Acts xxvii, 27). See ADRIAN. Vague mention, however, is made likewise of the Egypian sea, the mod- ern Archipelago (Acts xvii, 14, 18), the sound between Cilicia and Cyprus (Acts xxvi, 5), and the Syrius of the Lybian Sea (Acts xxvii, 17). See generally Bachiene, Politi, i, 87 sq.; Hamenfeld, Bibl. Geogr. i. 440 sq.—Winer, ii, 70. See SHA. The whole of the coast, from the Nile to Mount Carmel, was assigned to the Phœnicians and the land of the Plain of the Mediterranean Sea. The tract between Gaza and Joppa was simply called the Plain; in this stood the five principal cities of the Philistine satrapies—Ascalon, Gath, Gaza, Ekron or Accaron, and Azotus or Ashdod. The countries bordering on the Mediterr- anean were unquestionably the cradle of civilization, and they have in all ages been the scene of mighty changes and events, the investigation of which belongs to the general historian; all, however, that has relation to scriptural subjects will be found stated under the heads Crete, Egypt, Greece, Syria, etc., and therefore to enter into special detail here would be out of place. Without any lengthened notice of the sea itself, the Hebrews having never been a maritime people. See Smith, Dict. of Class. Geogr. a. v. Internum Mare; M'Culloch, Dict. of Geogr. v. a. See PALESTINE.

MEdler, NICHOLAS, one of the three principal disciples of Luther, was born at Hof, in Saxony, in 1502. He studied at Erfurt and Wittenberg, where he held conferences on the Old Test. and mathematics. He afterwards opened a school at Eger, but came into conflict with the authorities of that city for teaching the doc- trines of Luther to his pupils. He then took a situation as teacher in his native city, and was appointed pastor there in 1530, but preached such violent sermons that he was obliged to leave in 1531. Retiring to Witten- berg, he remained there six years as deacon. Luther often allowed him to supply his place in the pulpit, as he highly esteemed Medler for his great talents as well as zeal. He was made chaplain of the wife of Joachim I, who had fled to Wittenberg. In 1536 he was, to- gether with Jerome Well, made D.D., and in 1536 succeeded his friend Martin in the chair at Naumburg. He was of a most grave and reverent disposition, but was much beloved and re- jeeted both by the people and by the authorities. Maurice of Saxony succeeded in attracting him to the University of Leipzig. In 1541, he went by order of the elector to hold the first evangelical worship in the cathedral of Naumburg; he found that the canon regu- lar had closed the doors: Medler caused one of them to be broken open and another he burned down. In the same year he got into a controversy with Sebastian Schweigcn, who was summoned the Greek, on account of his philosophical acquirements and his devotion to the cause of the canons. He also quarreled with his colleague Amold, and with the senate of Naumburg, particularly with Mohr, to whom he addressed the re-proach, "Quod nuncum pulat et expressa taxavit vel errores popolaciones doctrine et qui dictis, vel manifesta scandalia in vita illius gregis." The faculty of Witten- berg approved the accusation, and deposed Mohr, but Medler himself was also obliged to resign. Medler now went to Spandau, near Berlin, where the Reformed doc- trines were becoming established, and in 1546 finally became superintendent of Brunswick, after having three times declined the appointment, notwithstanding the advice of Melanchthon and Luther. In Brunswick he succeeded, after great efforts, in establishing a school, where afterwards Melanchthon, Urbanus Regius, Justus Jonas, and Flaccius taught for a while after the downfall of Wittenberg in 1547. In 1561 he left Brunswick on account of his health, and went to Leipsic, where he was made superintendent of Berlin, but on his first preaching he was struck with apoplexy, and died shortly after at Wittenberg. He was full of controversial zeal for the doctrines of Luther. His works are enumerated by Streitengelius, and by Schiewarcke in the Bibl. Varia, p. 9, 137. A sermon of his against the Interim of Leipsic (q. v.) was often reprinted; also in Schame- lius, Nurnburgum literaturn. See M. A. Streitengel, De vita D. N. Med. (in Acta promouotionis—per A. leutio Residuum, fol. O sq., Jenae, 1581); Hummel, Neue Bib- liothek, iii, 326 sq.; Reuther, Kirchenepig. t. Bruns- wickensei, ii, 173, 194; Danz, Epistolae P. Melanch. ad N. Med.: Döllinger, Reformationsgesch. ii, 74 sq.; Herzog, Real-Encyklopädie, ix, 284. (J. N. P.)

Meddā (Meddā v. r. Medē), a Grecized form (1 Esdr. v, 32) of the MISHDA (q. v.) of the Heb. lists (Ezra ii, 52; Neh. vii, 54).

MeeKenss (מְקֵנָה, ἡ συναίνεσις), a calm, serene tem- per of mind, not easily ruffled or provoked to resent- ment (James iii, 7, 8). Where the great principles of Christianity have disciplined the soul, where the holy grace of meekness reigns, it subdues the impetuous dis- position, and takes up God, in thought and in love, in patience and in forgiveness. It teaches us to govern our own anger whenever we are at any time provoked, and patiently to bear the anger of others, that it may not be a provoca- tion to us. The former is its office, especially in supe- riors; the latter in inferiors, and both in equals (James iii, 19). Nothing can be more essential to the spirit appears, if we consider that it enables us to gain a victory over corrupt nature (Prov. xxvii, 1). That it is a beauty and an orna- ment to human beings (1 Pet. iii, 4); that it is obedi- ence to God's word, and conformity to the best patterns (Eph. v, 1, 2; Phil. iv, 8). It is productive of the highest peace to the professor (Matt. xi, 19; Matt. xix, 29). It fits us for any duty, instruction, relation, con- dition, or persecution (Phil. iv, 11, 12). To obtain this spirit, consider that it is a divine injunction (Zeph. ii, 8; Col. iii, 12; 1 Tim. vi. 11). Observe the many ex- amples of it: Jesus Christ (Matt. xii, 26), Abraham (Gen. xiii, 6, 5), Moses (Num. xii, 8), David (Zech. xi, 8; 2 Sam. xvi, 10, 12; Ps. xxxxi, 2), Paul (1 Cor. ix, 2). Note how lovely a spirit it is in itself, and how it secures us from a variety of evils; that peculiar promises are made to such (Matt. v, 5; Isa. lxvi, 2); that such give evidence of their being under the influence of divine grace, and shall enjoy the divine blessing (Isa. lvi, 15). See Henry, Dict. of the O. T. Lexicon, i, 66; Evans, Sermons on the Christian Temper, ser. 29; Tillo- son, Sermon on 1 Pet. ii, 21, and on Matt. v, 44; Logan, Sermons, vol. i, ser. 10; Jortin, Sermons, vol. iii, ser. 11.
MEENE

MEENE, HENRICH, a German theologian, was born at Bremen April 11, 1710, and was educated at the universities of Helmstädt and Leipzig. In 1784 he entered the service of the pastor at Volkersheim, near Hildesheim, and in 1787 removed to Quedlinburg, where, in addition to his pastoral labors in town, he served as court preacher. He was honored at this time with the title of "Consistorial-Rath." In 1788 he accepted a call to Jever, and there he flourished until his death, May 20, 1782. Besides many contributions to different periodicals, to Sinceri's Sammlung Hamburgischer Künstlerzüge, and to Cramer's Sammlungen zur Kirchen gesch., u. theol. Gelehr samt., etc., Meene published a large number of books in the department of religious literature. His works of special interest are, Die treue Ratsprache des heiligen Geistes (2 vols. Helmstädt, 1764, 8vo); ; Werk der Natur, mit vormaiäischem Überliegen der beiderseitigen Gründe für und gegen die uns geistliche Unglückelichen der Verbrecher Gottes und deren endliche erlage Wiederdürckung, angezeigt, und zur Rechtfertigung der Gesetzen des hochverderbten Herrn Ab. Mosheim von dem Ende der Ritterungen (Helmstädt, 1747-1748, 3 vols. 8vo); also published under the title, Die gute Suche der Lehre von der unendlichen Dauer der Ritterungen. See Döring, Gelehrte Theol. Deutschlands, ii, 498 sq.

MEESHA. See MIRZA.

Meeting. The Society of Friends, vulgarly called Quakers, have adopted the use of this word to designate their official gatherings for various purposes.

(1.) Meeting for Sufferings. Its origin and purpose are thus given: "The yearly meeting of London, in the year 1675, appointed a meeting to be held in that city, for the purpose of advising and assisting in cases of suffering for conscience sake, which hath continued with great success to the society to this day. It is composed of Friends, under the name of correspondents, chosen by the several quarterly meetings and residing in or near the city. The same meetings also appoint members of their own in the country as correspondents, who are to join their brethren in London on emergency. The names of these correspondents, previously to their being recorded, are submitted to the approbation of the yearly meeting. Such men as are approved ministers and appointed elders are also members of this meeting, which is called the 'Meeting for Sufferings,' a name which arose from its original purpose, and has not yet become entirely obsolete. The yearly meeting has instructed the Meeting for Sufferings with the care of printing and distributing books, and with the management of its own press as a station with the proceedings of the yearly meeting, it hath a general care of whatever may arise, during the intervals of that meeting, affecting the society, and requiring immediate attention, particularly of those circumstances which may occasion an application to government." See FRIENDS.

(2.) Monthly Meeting, a gathering of Friends of several particular congregations, situated within a convenient distance of one another. The business of the monthly meeting is to provide for the subsistence of the poor, and for the education of their offspring; to judge of the sincerity and fitness of persons appearing to be convinced of the religious principles of the society, and desiring to be admitted into membership; to excite due attention to the discharge of religious and moral duty; and to deal with disorderly members. Monthly meetings also grant to such of their members as remove into the limits of other monthly meetings certificates of their membership. It is also the business of this body to appoint overseers for the proper observance of the rules of discipline, and for the disposal of difficulties among members by private admonition, agreeably to the Gospel rule (Matt. xxviii, 15-17), so as to prevent, if possible, their being laid before the monthly meeting. When a case, however, is introduced to the monthly meeting, it is usual for a small committee to be appointed to visit the offender, in order to endeavor to convince him of his error, and induce him to forsake his way. The decision of the Visiting Committee as to the effect of this labor of love, and if needful the visit is repeated. If these endeavors prove successful, the person is by minute declared to have made satisfaction for the offence; if not, he is disowned by the society. In disputes between individuals, it has long been the decided judgment of the society that its members should not sue each other at law. It therefore enjoins all end their differences by speedy and impartial arbitration, agreeably to rules laid down. If any refuse to adopt this mode, or, having adopted it, to submit to the award, it is the direction of the yearly meeting that the matter shall be referred to the Quarterly Meeting for the allowing of marriages; for the society has always scrupled to acknowledge the exclusive authority of the priests in the solemnization of marriage. A record of marriages is kept by the monthly meeting, as also of the births and burials of its members. A certificate of the date, of the name of the infant, and of its parents, in the subject of one of these last-mentioned records; and an order for the interment, countersigned by the grave-maker, of the other.

(3.) Quarterly Meeting, among the Society of Friends, is an assembly composed of several monthly meetings. At these meetings are produced and written answers from the monthly meetings to certain queries respecting the conduct of their members, and the meetings' care over them. The accounts thus received are digested into one, which is sent, also in the form of answers to queries, by representatives to the yearly meeting. Appeals from the judgment of monthly meetings are brought to the quarterly meetings, whose business also is to assist in any difficult case, or where remissness appears in the care of the monthly meetings over the individuals who compose them. See QUARTERLY MEETING.

(4.) Yearly Meeting, an annual meeting of the Society of Friends. "The yearly meeting has the general superintendence of the society in the country in which it is established; and therefore, as the accounts which it receives discovers the state of inferior meetings, as particular exigencies require, or as the meeting is impressed with a sense of duty, it gives forth its advice, such regulations as appear to be requisite, or excites to the observance of those already made, and sometimes appoints committees to visit those quarterly meetings which appear to be in need of immediate advice. At the yearly meeting another meeting (a sort of sub-committee) is appointed, bearing the name of the General Committee. It is the business of revising the denominational manuscripts previous to publication; and also the granting, in the intervals of the yearly meeting, of certificates of approbation to such ministers as are concerned to travel in the work of the ministry in foreign parts, in addition to those granted by their monthly and quarterly meetings. When a visit of this kind does not extend beyond Great Britain, a certificate from the monthly meeting of which the minister is a member is sufficient. If to Ireland, the concurrence of the quarterly meeting is also required. Regulations of similar tendency obtain in other yearly meetings. The "stock" of the yearly meeting consists of occasional voluntary contributions, which is expended in printing—books, salary of a clerk for keeping records, the passage of ministers who visit their brethren beyond sea, and some small incidental charges; but not, as has been falsely supposed, the reimbursement of those who suffer distress for the sake of honest and other duties, with which they are scrupulous to comply. Appeals from the quarterly meetings are heard at the yearly meetings. There are ten yearly meetings—namely, one in London, to which representatives from Ireland are received; one in Dublin; one in New England; one in New York; one in Pennsylvania; one in Maryland; one in Virginia; one in the Carolinas:
MEETING-HOUSE 43 MEGAPOLENIS

one in Ohio; and one in Indiana. Reports of each of these may be found in the *Annual Monitor*.

MEETING, Quarterly. Among the Methodists, this is a quarterly meeting of the local societies, townships, members, and others, for the purpose of transacting the general business of the "circuit" or "district," in the Methodist Episcopal Church presided over by the "presiding elder," or the minister in charge. Its special object is, besides the celebration of the Lord's Supper (q.v.), to examine the spiritual and financial conditions of the Church. See Discipline, chap. ii, sect. i, 3. See Conference, Quarterly.

Meeting-house, a place appropriated for the purpose of public Christian worship. In England the churches of Dissenters are so called by the Anglican communicants, and in the United States the Quakers thus name their places of public worship. See Church; Chapel.

Megaw, François Dominique, a noted Dutch theologian and valiant defender of the cause of the Janissaries, was born at Menin about 1688; studied at the University of Louvain, and then devoted himself wholly to the polemical field of theology. At first he wielded his pen only, but after a time he entered the pulpit also, developed his polemics and wrought the Janissaryism into a system. He was a member at the council, in 1763, at Utrecht. He died at Leyden, Oct. 12, 1776. His principal works are, Réfutation abrégée du Traité du Schisme (1718, 12mo; Paris, 1719, 8vo)—Défense des contrats de vente rachetables des deux côtés (1780, 4to); —Principe de Saint-Simon et des Successeurs (1776 and 1777, 12mo). In the last-named work he questions the pope's supremacy over a church.

Megawder (also known under the name of Grosenacus, Caspar), was born at Zurich in 1495. He was educated at the University of Basle, where he secured the degree of M.A. in 1518, and soon after was appointed chaplain of the hospital at Zurich. Here he early espoused the doctrines of Zwingli, and with him, in 1526, publicly demanded the suppression of the mass and the evangelical celebration of the Lord's Supper. After the Bernese disputation, in 1528, he was called as professor of theology to Berne, where he soon obtained the first post among the leading personalities, and zealously labored in this place for the advance of Zwinglian doctrines. In 1532, at Zofingen, he took part in the deliberations of the Anabaptists; and again, as deputy of the council, at the disputes at Lausanne in 1536, and of the symposium at the same place in 1537. He also compiled the Berne Catechism in 1536. His Zwinglianism involved him in many serious disputes with Bucer, and the latter's attempts at union. As one of the originators of the Helvetic Confession of 1536, he successfully defended the Wittenberg Formula of Concord at the convent at Berne, Oct. 19, 1536, and in consequence Bucer was disowned. In 1537, however, Bucer's justification of his conduct was finally accepted, and Megawder was charged to modify his Catechism in conformity with the Formula of Concord. Megawder no longer opposed the alteration, the revised Catechism was at once prepared by Bucer, and was accepted by the Council of Berne in 1537. Megawder, however, refusing to be governed by these alterations, was deposed from office, and returning to Zurich was there reappointed archdeacon at the cathedral, and in this position he arduously labored to oppose the efforts of Bucer. Megawder died in 1545. Of his works, the *Ammerung von Genesis und Exodus, Hebrews and Epistles of John, deserve special mention. See Hundeshagen, Compendium des Zwingliert, Lutheriz, and Calvin, in Berne (1832).*

Megapolenis, Joannes, a minister of the (Dutch) Reformed Church, was the second clergyman sent out by the Classis of Amsterdam to this country, under the patronage of the Dutch West India Company and the patron Van Rensselaer in 1642. He was also the first missionary to the Indians, preceding the celebrated "apostle to the Indians," John Eliot, some three years. His original family name was VAN MEKKLENBURG, which, after the pedantic fashion of the age, was well-known for its importance in the history of the negotiations in Holland, he engaged with the patroon to serve for six years, his outfit and expenses of removal to be paid, and at a salary of eleven hundred guilders per year $(440). In addition to the usual duties of a missionary pastor at an outpost of civilization, like Rensselaerwyck, he soon interested himself in the Indians who came thither to trade, and learned what he called "their heavy language" so as to speak and preach fluently in it. The early records of the First Reformed Church in Albany contain many names of Indians converted, baptized, and received into the communion of the Church under him. Thus comparatively early was the foreign missionary work and spirit combined in this apostolic man. In 1644 he wrote a tract (which was published in 1651 in Holland) on the Mohack Indians in New Netherland (now translated in the New York Historical Society's Collections, vol. ii, series i, p. 158).

While our subject was residing in Albany, the celebrated Jesuit missionary, father Isaac Jogues, was captured on the St. Lawrence by the Mohawks, and subjected to horrible cruelties by the savages. The Dutch at Fort Orange tried to ransom him. At length, escaping from his captors, he remained in close concealment for six weeks. During this time Megapolenis was his constant friend and comforter. He considered him his champion in his power. The Jesuit father was at length ransomed by the Dutch, and sent to Manhattan, whence he returned to Europe. But in 1646 he came back again to Canada, and revisited the Mohawks, who put him to a cruel death. Another Jesuit, father Simon le Moyne, who discovered the salt springs at Onondaga in 1634, also became intimate with the dominie of Fort Orange, and wrote "three polemical essays" to convert his "Dutch clerical friend to the Romanish doctrine." But the stanch minister wrote a vigorous and elaborate reply, which, however, was lost in the wreck of the ship by which it went to Canada. At the close of his stipulated term of service Megapolenis proposed to return to Holland, but governor Stuyvesant persuaded him to remain in New Amsterdam (now New York) as pastor of the Dutch Church. Here, for twenty years, he labored as senior pastor, being assisted from 1664 to 1668 by his son Samuel. He died in 1670, a seventy-one-year-old man, aged, returning his pastoral relation to the last. He was a man of thorough scholarship, energetic character, and devoted piety, and he is entitled to a high, if not pre-eminent position in the roll of early Protestant missionaries among the North American savages. For nearly a quarter of a century he exercised a marked influence in New Netherlands through the moral and religious infamy of the Dutch province, watched its growth, and witnessed its surrender to overpowering English force. His name must ever be associated with the early history of New York, towards the illustration of which his correspondence with the Classis of Amsterdam, now in the possession of the General Synod of the Reformed Protestant Dutch Church, and his sketch of the Mohawk Indians, form original and very valuable contributions. See J. Remyz Brodhead, in the *N. Y. Hist. Society's Coll.*, vol. iii; Rev. E. F. Rogers, D.D., *Historical Discourse*; *Sprague, Annuals*, vol. ix. (W. J. R. T.)

Megapolenis, Samuel, son of the minister, was born in 1634, and was educated at Harvard College, Cambridge, Mass., where he spent three years; afterwards went to the University of Utrecht, Holland, and there he graduated in 1659, having pursed a full theological course. He next went to Leyden University, and, after a complete course in that most celebrated medical school of Europe, obtained the degree of doctor of medicine. Returning to America, he was associate pastor of the Church of New Amsterdam with his venerable father for over four years—1663-68. In 1664 he was appointed one of the Dutch commissioners who prepared the
MEGARIA, SCHOOL OF

MEGIDO

terms of surrender to the English government. "Probably it was through his influence that the rights of the Reformed Church were so carefully guarded." In 1668 he was called to the Zwickau, where he ministered seven years, 1670 to 1677. Afterwards, "being well skilled in both the English and Dutch languages," he served the English or Dutch churches of Flushing (1677-85) and Dordrecht (1685-1700), when he declared eremitus, or honorably laid aside from his work, after a ministerial-seventeen years. The date of his death is not known. See Rev. Dr. DeWitt, in Sprague's Annals, vol. i.; Corwin's Manual of the Ref. Church, s. v. (W. J. R. T.)

Megara, School of, one of the schools founded by disciples of Socrates, but so modified in position from their teacher as to deserve the name of a peculiar society. Its principal supporter was Euclides of Megara, who was born about 440 B.C., and was himself a pupil of Parmenides, one of the most prominent leaders in the Eleatic School (q. v.). After the death of Socrates, his disciples, fleeing for safety from Athens, found a pleasant home in the house of Euclides, and there, guided by him, finally established principles which gave them the name of Megarics, which was derived from that of his house and the service of dialecticians. The essence of good is unity—unity so entire as to embrace immobility, identity, and permanence. Hence the sensible world has no part in existence. Being and good are thus the same thing, viz., unity; good therefore alone exists, and evil is but the absence of unity in existence. It does not follow, however, that there is but a single being and a single sort of good, for unity may be found contained in various things. Euclides expressly taught that, in spite of their unity, being and good clothes themselves in different forms, present themselves under different points of view, and receive different names, as wisdom, God, intelligence, and the like. Euclides also anticipated Aristotle in distinguishing the act from the power, and resolved, according to his ideas of being, the relation between the two. Other supporters of this school were Eubulides, Alexines, Diotodorus, Chrones, Philo, and Stilpo. See Dyck, De Megaricorum doctrina (Bonn, 1827); Ritter, Uber die Philosophie der Megarischen Schule; Ueberweg, History of Philosophy, vol. i.

Megerlin, David Friedrich, a noted German Orientalist and mystic, was born at Stuttgart near the opening of the 18th century. After holding for some time a professorship at the gymnasium at Montbelleher, he moved to Mainz, where he resided, in 1756, he moved to Frankfurt-on-the-Main to continue in the pastorate. He died in August, 1709. Megerlin took a lively interest in the welfare of the Jews, and labored earnestly for their conversion. In 1756 he gained great notoriety by his public intercession in behalf of rabbi Eibeschutz, who had published a cabalistic work containing many points to which his brethren had taken decided exception, particularly the favorable allusions to Sabbatical Zewi (q. v.). The Jews were greatly provoked with Eibeschutz because they had found him a believer in the messiahship of the pretended Sabbatian, but Megerlin insisted that Eibeschutz had been mistaken in his interpretations at the instigation of Jehovah Christ. He made these views public in his Geheime Z Lynch für die Wahrheit der christlichen Religion (Leipsic, 1756, 4to); and in Neue Erweckung der Zweenen Judenschaft (1765, and Christlicher Zurnuf an die Rabbinen (1757). His other valuable works are, De scriptis et colloquentiis Tubar: Item Observationes crico-theologicae (Tubing, 1729, 4to)—Hezoi orientalium collegiorum philologorum (1729, 4to)—De Biblis Latins Magnus primo impresso 1440-1462 (1750, 4to); and a translation of the Koran into German. See Meuric, Gelehrten-Lexikon, s. v.; Grätz, Gesch. der Juden, xi. 414.

Megathus. See MARGION.

Megid' do (Heb. Meqid'do', 1739, according to Geophy. acc. to the classics, 43; in the Revised Version, 1740; the Vulgate, 1741; in the English Version, 1741; ibid. 24), one of the eight great cities of the Canaanites. It is located on a second plateau between the Jordan and the Wadi Se'ar, at an altitude of 2200 feet, and is about six miles from the Jordan river. It is the site of a modern village, Megiddo, which is built in the ruins of the ancient city. The site of Megiddo has been occupied since prehistoric times, and has been inhabited by various peoples, including the Canaanites, the Hebrews, and the Phoenicians. It was a strategic position, and a major battle was fought here between the armies of the Israelites and the Canaanites, according to the Bible. The Battle of Megiddo is referred to as the "Valley of the Crossroads," because it is located at the intersection of several important trade routes. The city was also known as "The Pass of Ahab," because the Pharaoh of Egypt, Ahiram, was able to command it and use it as a gateway to the south. Megiddo was one of the most important cities in the region, and was a center of trade and commerce, as well as a military and political hub. It was also a center of religious activity, with numerous temples and shrines dedicated to various gods and goddesses. The city was destroyed by various conquerors, including the Assyrians and the Babylonians, and its ruins have been extensively studied by archaeologists and historians. The site of Megiddo is a popular tourist destination, and is a UNESCO World Heritage Site.
megiddo

separate with his fathers in the city of David."

son of the brethren of Abiahiah, he was married to Abiahiah, and he slew him. And he sought Abiahiah: and the king destroyed him (for he was hid in Samaria), and they brought him to Jehu, and when the king had slain him, they buried him: because he was the son of Jehosheba, who sought the Lord with all her heart. Now the house of Abiahiah had no power to keep still the kingdom."

With reference to the above two accounts of the death of Abiahiah, which have been thought irreconcilable (Ewald, iii, 529; Parker's De Vetere, p. 270; Theinias, etc.), it may be observed that the events is sufficiently intelligible if we take the account in Chronicles, where the kingdom of Judah is the main subject, as explanatory of the brief notice in Kings, which is only incidentally mentioned in the history of Israel. The order is clearly as follows: Abiahiah was with Jehoram at Jezreel when Jehu attacked and killed him. Abiahiah escaped and fled by the Beth-gan road to Samaria, where the partisans of the house of Abah were strongest, and where his own brethren were, and there concealed himself. But when the sons of Abah were all put to death in Samaria, and the house of Abah had been thus lost the kingdom, he returned to Jezreel, made his submission to Jehu, and sent his brethren to salute the children of Jehu (2 Kings x, 13), in token of his acknowledgment of him as king of Israel (not, as Theinias and others, to salute the children of Jehoram, and of Jezebel, the queen-mother). Jehu, instead of accepting this submission, had them all put to death, and hastened on to Samaria to take Abiahiah also, who had probably learned from some of the attendants, or as he already knew, was at Samaria. Abiahiah again took flight northwards, towards Megiddo, perhaps in hope of reaching the dominions of the king of the Sidonians, his kinsman, or more probably to reach the coast where the direct road from Tyre to Egypt would bring him to Judah. See also 2 Kings x, 13. He was hotly pursued by Jehu and his followers, and overtaken near Ibleam, and mortally wounded, but managed to get as far as Megiddo, where it seems that he was near the end of his journey, and where he was brought to him as his prisoner. There he died of his wounds. In consideration of his descent from Jehoshaphat, "who sought Jehovah with all his heart," Jehu, who was at this time very far in playing his zeal for Jehovah, handed over the corpse to his followers, with permission to carry it to Jerusalem, which they did, and buried him in the city of David. The whole difficulty arising from this incident, that the name of Abiahiah being abridged, and so bringing together two incidents which were not consecutive in the original account. But if 2 Kings ix, 15, 17. 17. If Beth-gan (A.V., "garden-house") be the same as En-gannim, now Jenin, it lay directly on the road from Jezreel to Samaria, and is also the place at which the road to Megiddo and the coast, where Cæsarea afterwards stood, had its departure from the plain of Samaria. In this case the mention of Beth-gan as the direction of Abiahiah's flight is a confirmation of the statement in Chronicles that he concealed himself in Samaria. This is also substantially Keil's explanation (p. 288, 289). Movers proposes an alteration of the text (p. 92, note), but not very successfully instead of of there in Megiddo (p. 61). See also 1 Esd. i, 25-31, where in the A.V. the plain of Megiddo" represents the same Greek words. The lamentations for this good king became "an ordinance in Israel" (2 Chron. xxxvi, 25). In all Jewish tradition they mourned for him, and the lamentation was made perpetual "in all the nation of Israel" (1 Esd. i, 32). Their grief was no land-flood of present passion, but a constant channel of continued sorrow, streaming from an annual fountain" (Fuller's Pindar Sight of Psalm., p. 165). Thus, in the language of the prophets (2 Chron. xxiv, 20, "as the mourning of Huldah for the valley (Sept. παλαιοί) of Megiddon" becomes a poetical expression for the deepest and most despairing grief; as in the Apocalypse (Rev. xvi, 16) Armageddon, in continuation of the same imagery, is presented as the scene of terrible and final conflict. For the Septuagint version of this passage of Zechariah, we may refer to Jerome's note on the passage. Against the view that the town of LXX translitterant ʿPillation, ʿurus est juxta Jerusalem, quae hic oleum vocabi nuncapasta est, et hodie vocatur Maximianopolis in Campo Mageddon. A. Armageddon may be for ʿ}elseif in equivalent to the Hebrew ʿgam, then the meaning will be "mountain of Megiddo," which would likewise be appropriate (Alford, ad loc.). That the prophet's imagery is drawn from the actual facts of the battle of Hatzor, where there can be no doubt. In Stanley's S. and P. (p. 347) this calamitous event is made very vivid to us by an allusion to the Egyptian archers, in their long array, so well known from their sculptured monuments." For the mistake in the account of Pharaoh-Necho's campaign in Herodotus, who has evidently mistaken the battle of El (2 Kings x, 25, 159, it is enough to refer to Bihir's excursus on the passage (see below). The Egyptian king may have landed his troops at Acre; but it is far more likely that he marched northwards along the coast-plain, and then turned round Carmel into the plain of Esdraelon, taking the left bank of the Kishon, and that there the Jewish king came upon him by the gorge of Megiddo. Eusebius and Jerome (Onomast.) do not attempt to mark the situation of the place, and it appears that the name Megiddo was in their time already lost. They often mention a town called Legio (Arwāw), which must in their day have been an important and well-known place, as they assume it as a central point from which to mark the position of several other places in this quarter (e.g., fifteen miles west of Nazareth, and three or four from Tannach). This has been identified (Rendel, P. Aram., p. 873, comp. Benjamin of Tudela, ii, 438) with the village now called Legiā, which is situated upon the western border of the great plain of Esdevabelon, where it begins to rise gently towards the low range of wooded hills that connect Carmel with the mountains of Sama- ria (Onomast., s. v. Gabathon). This place was visited by Maundrell, who speaks of it as an old village near a brook, with a khan then in good repair (Journey, March
This house was for the accommodation of the caravans on the route between Egypt and Damascus, which passed here. It seems to have been identified with the ancient village of Taanakk with the ancient Taanach, the vicinity of this to Leijun derived from Dr. Robinson (Biblical Researches, iii, 177-180; also new ed. iii, 116-118) to conceive that the latter might be the ancient Megiddo, seeing that Taanach and Megiddo are constantly named together in Scripture (1 Kings iv, 12; 1 Chron. viii, 11) and to this writer a German geographer (Gross in the Stud. u. Krv. 1845, i. 256 sq.) adds the further consideration that the name of Legio was latterly applied to the plain or low valley along the Kishon, as that of Megiddo had been in more ancient times (יַהַזְּמַן הַקִּ督导, 2 Chron. xxxix, 22; יַהַזְּמַן הַקִּ督导, Zech. xii, 11; יַהַזְּמַן הַקִּ督导, 3 Esdr. i, 27). See Esdraelion. Herodotus (ii, 199) appears to allude to the overthrow of Josiah at this place (2 Kings ii, 25, 29), but instead of Megiddo he names the town Magdolion (מַגְדוֹלוֹן), the Magdolion of Egypt (see Harenberg, Bibl. Brem, vi, 281; Rosenmuller, Alterth. ii, ii, 99). Rosellini (Monum. stor. ii, p. 133) thinks that Herodotus may still refer to the Palestinian locality, and he imagines that he finds traces of the name on the monuments (Malto, i. e. Magd, ib. iv, p. 106). Later he is cited by Dr. Robinson (ib. iii, 401). Rosellini (ibid.) mentions Magdolion of Herodotus in el-Megfel (the Megdol of Josh. xix, 38), between the Kishon and Acco (comp.Histig. Philist, i, 96). Megiddo or Leijun is probably the place mentioned by Shaw as the Ras el-Kishon, or the head of the Kishon, under the south-east brow of Carmel (Travels in Palestine, 1782). It was visited and described by Mr. Wolcott in 1842, who found it to be an hour and forty minutes distant from Taanach. The Naher Leijun is a stream five or six feet wide, running into the Kishon, and feeding three or four mills. A little distance up it is situated the Khan el-Leijun, and on a small eminence on the opposite side the remains of the ancient Legio. Among the rubbish are the foundations of two or three buildings, with limestone columns mostly worn away; and another with eight or ten polished columns still remaining, and others of limestone among them. The finest structure appears to have been in the south-west corner of the ruins, by the side of the brook. Among its foundations are two marble columns with Corinthian capitals, and several of granite. A gateway with a pointed arch is still standing. A small bridge is thrown over the stream, and leads to the khan, which is of Saracen structure (Bibl. Sacra, 1845, p. 77). Van de Velde visited the spot in 1802, approaching it through the brook from the south and via the Jew's path). He describes the site of the plain as seen from the highest point between it and the sea, and the huge tella which mark the positions of the "key-fortresses" of the hills and the plain, Taanilk and el-Leijun, the latter being the most considerable, and having another called Tell Metzelim, half an hour's journey north-west (Stur. and Pal., i, 350-356). About a month later in the same year Dr. Robinson was there, and convinced himself of the correctness of his former opinion. He, too, describes the view over the plain northwards to the wooded hills of Galilee, eastwards to Jezreel, and southwards to Taanach. Tell Metzelim being a high mound, he identified the present village, which is continuous with Carmel, the Kishon being just below (Bib. Res. ii, 116-119). Both writers mention a copious stream flowing down this gorge (March and April), and turning some mills before joining the Kishon. Here are probably the "waters of Megiddo" (יָהַזְּמַן הַקִּ督导) of Judges, 19, though it should be added that by this name the Zanvak identifies the present vil, supposed to be rather the "pools in the bed of the Kishon" itself, which has its springs in Tabor (ver. 21; see Hollin, Commentar. in carn. Deborae, Lips, 1818, p. 42 sq.), and not (as in Michaelis, Suppl. p. 389; Hamesvold, iii, 138) the Sea of Cendresia (Pliny, v, 17; xxxvi, 65), at the foot of Carmel. The same author regards the "plain (or valley) of Megiddo" as denoting not the whole of the Esdraelon level, but that broadest part of it which is immediately opposite the place we are describing (p. 385, 386). The supposition of Raumer (Pto- lém. p. 402), that Legio represented the ancient Mtsur- minuscopolis (which is given by Jerome as the later name for Hadadrimmon), based upon the presumption that the remains of a Roman road said to be still visible to the south of Leijun are those of the thoroughfare between Cesarea and Jezreel, is without good foundation (see Bibl. Sacra, 1844, p. 250). Yet Van de Velde (Memoir, p. 383) holds this view to be correct. He thinks he has found the true Hadadrimmon in a place called Ramannah, "at the foot of the Megiddo hills, in a notch or valley about an hour and a half south of Tell Metzelim," and would place the old fortified Megiddo in this part. Further that its name, "the Tell of the Governor," may possibly retain a reminiscence of Solomon's officer, Baana the son of Ahilud. Porter believes this tell was the site of the stronghold of Megiddo itself (Family Treasury, Dec. 1864). Megid'ilon (Zech. xii, 1). See MEGIDDO. Megillah. See Talmud. Megilloth (יָהַזְּמַן הַקִּ督导, rolls, from הָיְבִּ, yevi'ah). The Hebrew MSS. were on rolls of parchment, usually written on one side, though sometimes also on both (Ezra. ii, 10). Afterwards the term הָיְבִּayah was used for a book consisting of several leaves fastened together (Jer. xxxvi, 28; 24); once even as designating the Pentateuch (Ps. xi, 8 [7]). In later Jewish usage the term Megilloth was applied to the five books, viz. Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther, which were read on certain festivals in the synagogue. See HAPHTARAH. The title of Megillah was used for "any book of the Sibyls" (see e.g. "Book of the Damned""); and from this it is supposed it was transferred to the others. To the reading of this at the Feast of Purim special importance was attached by the Jews (Talmud, Tr. Megillah, ed. Surenhusius ii, 387). See ROLL. Megama, the, a Mohammedan name for an assembly or council specially convened to judge of the merits or demerits of their highest functionaries. The members of the Megma are the imama, or "doctors of the law." See IMAM. Mehadoth is the name of a Hindit deity of inferior rank, supposed to have been created before the world, and which they hold will be used when the end of the world shall come as an instrument to destroy all created things. See MEADOT. Mehemet Ali, one of the most noted of Egypt's sovereigns, who filled the vicereignty from 1804 to 1848, deserves a place here for his philanthropic acts towards the Christians, and his beneficence towards all men, without distinction of creed. He was born in 1769, and died at Cairo Aug. 6, 1849. Mehemet Ali was particularly noted for creating successful wars against the Mame- lukus, and for his reduction of Syria, which he conquered in 1830. "As a ruler," says a contemporary, "Mehemet Ali displayed talents of a very high order, and few princes have founded more beneficent institutions or shown a more just and liberal spirit. He established schools and colleges, created an army and navy, and introduced the manufactures of Europe. He protected his Christian subjects, and aided by his liberality the researches of Champollion, Lepsius, and other eminent savants." See F. Menghin, l'histoire de l'Igpte sous le Gouvernement de Mohammed Ali (1889); A. de Vailabell, Histoire de l'Igpte; Cannabis, Hist. of the Ottoman Turks, ii, 392. Mehmet 'Abd el (Neb. vi, 10). See MEHETABEL. Mehmet 'Abdel (Heb. Mejagtebel, מֵהֶמְט אָבָד, whose benefactor is God; or, according to Gesenius, a Chalid. form for מֵהֶמְט אָבָד, blessed by God; Vulg. Metalabet), the name of a man and of a woman. 1. (Sept. Megugoth, Megugoth). The daughter of
Mehida, widow of Hadad, the last named of the original kings of Edom, whose native or regal city was Pau or Pau (Gen. xxxvi, 39; 1 Chron. i, 50). B.C. prob. cir. 1619.

Meh‘da (Heb. Mechi’dı, מְכִיתָד, prob. joining; Sept. in Ezrâ i, r. v. Mosâda, in Neh. Mosâda v. r. Midâ; Vulg. Mahidâ), a name given in Ezrâ ii, 52; Neh. vii, 54, apparently as that of a person whose descendants (or possibly a place whose inhabitants) were among the Nethinim of the "children" (i.e. probably residents) of Babylon, after their return (cir. 536).

Meh‘da (Heb. Mecha‘ı, מְכָהִית, s. price, as often; Sept. Mosâda v. r. Maydâ), the son of Chelub and wife (? founder) of Eshton, the tribe of Judah (1 Chron. iv, 1), but of what particular family does not clearly appear. B.C. perhaps cir. 1618.

Meholah. See Abel-Meholah.

Mehola‘ith (Heb. Meholatih, מְכֹלָתִית, Gentle adj. from Mehola; Sept. Mosâdatı̄n, Mosâdatı), a native doubtful of Abel-Meholah (1 Sam. xviii, 19; 2 Sam. xxi, 6).

Mehu‘jael (Heb. Mecha‘al, מְכָהַל, smitten by God; r. v. in the same verse Mechâl, מְכָל), Sept. as Mehola‘ith. Marâfi, Vulg. Memosid, the son of Heli the father of Methuselah, third antennibrarian patriarch in descent from Cain (Gen. iv, 18). B.C. cir. 3840.

Mehu‘man (Heb. Mehumân, מְחֻמָן, either from the Syr. S fails, or from some unknown Persian word; Sept. אָמַע, Vulg. Mehumam), the first named of the seven eunuchs whom Xerxes commanded to bring in every third year to the royal presence (Esth. i, 10). B.C. 485.

Mehu‘nim (Heb. Mehumân, מְחֻמָן, inhabitants, inhabitants, as in 1 Chron. iv, 41, etc.; Sept. in Ezr. Mosâmuw, in Mosâmuw, Auth. Ver. "Mehumân"; in Neh. Mosâmuw r. Midim, Vulg. constanti Munim), apparently a person whose children returned among the Nethinim from Babylon (Ezr. ii, 50; Neh. vii, 52); but rather, perhaps, to be regarded as indicating the inhabitants of some town in Palestine where they settled after the exile, and in that case probably identical with the inhabitants of Moan (or possibly the Mehumâin) [below] of 2 Chron. xxvi, 7. See MAONITE.

MEHUNIMS, THE (מְוֹעִים, i.e. the Mehumim; Sept. o Í Mosâmu v. r. o Mosâmu; Vulg. Ammonite), a people against whom king Uzziah waged a successful war (2 Chron. xxxvi, 7). Although so different in its English dress, yet the name is in the original merely the plural of Moan (מֹּא), a nation named among those who in the earlier days of their settlement in Palestine harassed and oppressed Israel. Moan, or the Moantites, probably inhabited the country at the back of the great range of Seir, the modern esh-Sherah, which forms the eastern side of the Wady el-Arabah, where at the present day there is still a town of the same name (Burckhardt, Syria, Aug. 24). This is quite in accordance with the terms of 2 Chron. xxxvi, 7, where the Moehanim are mentioned as the "Arabians of Gur-ban", or, as the Sept. renders it, Petra. Another notice of the Mehumim in the reign of Hezekiah (B.C. cir. 736-697) is found in 1 Chron. iv, 41. Here they are spoken of as a personal group, either they themselves in alliance with Hamites, quiet and peaceable, dwelling peacefully with them. They had been settled from "of old", i.e. aboriginally, at the eastern end of the valley of Gedor or Gerar, in the wilderness south of Palestine. A connection with Mount Seir is hinted at, though obscurely (ver. 42). Here, however, the Auth. Ver.—probably following the translations of Luther and Junius, which in their turn follow the Targum—treats the word as an ordinary noun, and renders it "habitations," a reading now relinquished by scholars, who understand the word to refer to the people in question (Genessius, Theaur. p. 1002 a, and Notes on Burckhardt, p. 1069; Bertheau, Chronik). A third notice of the Mehumim, corroborative of those already mentioned, is found in the narrative of 2 Chron. xxx. There is every reason to believe that in ver. 1 "the Ammonites" should be read as "the Moantites," who in that case are the "men of Mount Seir" mentioned later in the narrative (ver. 10, 22).

In all these passages, including the last, the Sept. renders the name by Μανία—"the Moantians"—a nation of Arabia renowned for their traffic in spices, who are named by the Apocalypse as one of the seven kings of the earth, together with Pidion, others and another name of the barbarians, and whose seat is now ascertainment to have been the south-west portion of the great Arabian peninsula, the western half of the modern Hedraimatu (Smith, Dict. of Geography, s. v. Minea). Bochart has pointed out (Phaleg, vol. ii, cap. xxii), with reason, that distance alone renders it impossible that these Mineans can be the Meumin of the Bible, and also that the people of the Arabian peninsula are Shemites, while the Meumin appear to have been descended from Ham (1 Chron. iv, 41). But, with his usual turn for etymological speculation, he endeavors nevertheless to establish an identity between the Mineans of the group that is called "the Mineans", a place two days' journey south of Mecca, one of the towns of the Mineans, signifies the "horn of habitations," and might therefore be equivalent to the Hebrew Meumim. Josephus (Ant. ix, 10, 3) calls them "the Arabs who adjoined Egypt," and speaks of a city built by Uzziah on the Red Sea to overawe them. Eusebius (Geogr. arch. c. 323, note) suggests that the southern Mineans were a colony from the Moantites of Mount Seir, who in their turn appears to consider a remnant of the Amorites (see the text of the same page). That the Mineans were familiar to the translators of the Sept. is evident from the fact that they not only introduce the name of Minean, and on the occasions already mentioned, but that they further use it as equivalent to NAAMATHITE. Zophar the Naamathite, one of the three friends of Job, is by them presented as "Sopher the Manian," and "Sopher king of the Mineans." In this connection it is not unworthy of notice that as there was a town called Maon in the mountain-district of Judah, so there was one called Naamah in the lowland of the same tribe. El-minya, which is or was the first station south of Gaza, is probably identical with Minola, a place mentioned with distinction in the Christian records of Palestine in the 5th and 6th centuries (Roland, Palest. p. 699; Le Quien, Origines, viii, 490, and both record a trace of the Mineans. Bala-Maon, a town on the east of Jordan, near Hebron, still called Ma‘in, probably also retains a trace of the presence of the Moantites or Mehumim north of their proper locality.

The latest appearance of the name Mehumim in the Bible is in the lists of those who returned from the captivity with Zerubbabel. Among the non-Israelites from whom the Nethinim—following the precedent of what seems to have been the foundation of the order—were made up, we find their name (Ezr. ii, 50, A.V. "Mehumim"; Neh. vii, 52, A.V. "Meumim"). Here they are mentioned with the Naphishim, or descendants of Nahash, an Amalekite people whose seat appears to have been on the east of Palestine (1 Chron. v, 19), and therefore certainly not far distant from Ma’an, the chief city of the Moantites.

Meichelbeek, Charles, a German monastic and scholar, was born May 25, 1603, at Oberhaldorf, in Aigard. He was successively Prior of the Order of the Holy Fathers of Bure in Bavaria. From 1697 he taught Latin, and subsequently theology, in the different convents of his order. After having prepared a history of the abbey of Buren—Chronicum Benedicto-Buranae (Buren, 1752, fol.)—he was commissioned in 1725, by the chief bishop of Freisingen, to write one of that city—Historia
MEYER 48 MEINANDERTS

Freisingensis, ab anno 724 (Augsburg, 1724-29, 2 vols. fol.); the numerous diplomas contained in this work render it very valuable as a history of Germanic institutions. Called later to Vienna to write the annals of the house of Austria, he declined the task on account of the bad state of his health. He died at Freisingen April 2, 1734. P. Haidenfeld prepared a life of Meichlebeck, but it was never published. See Hirsching, Hist. lit. Abt. Geschichtsbuch der seraphischen Reiten, vol. 1; Meusel, Gelehrten-Lexikon, a. v.

Meier, Ernst Hehirich, a German Orientalist, was born at Ruschbaid, in Schaffhausen-Lippe, May 17, 1813. He studied at the University of Tübingen, and was appointed professor there in 1848. He died March 2, 1866. Of his writings, the following deserve especial mention: Geschichte der hebräischen Sprache (Tübing, 1840);—Hebräisches Wörterbuch (Mainz, 1845);—Über die Bildung und Bedeutung des plural in den sem. und germanischen Sprachen (ibid. 1846);—Die ursprüngliche Form des Dekaloges (1846);—Commentarius zu Jesaja, vol. 1 (Pforz., 1850);—Die Form der hebr. Poesie (Tübing, 1853);—Geschichte der poetischen Nationalliteratur der Hebräer (ibid. 1856). This last-named work was an attempt to transform the introduction of the Old Testament into a history of the literature of the Hebrews.

Meier, Friedrich Karl, a German theologian, was born Aug. 11, 1808. He became privat-docent in 1832, and professor of theology at Jena in 1835. In 1856 he removed to Giessen, to labor in the same capacity until his death, Feb. 13, 1841. His principal writings are, Geschichte der Transubstantiationlehre (Heidelberg, 1822);—Commentar zum Briefe an die Epheser (Berlin, 1884);—Girolamo Savonarola (ibid. 1836);—Lehrbuch der Dogmengeschichte (Giessen, 1840).

Meier, Georg Friedrich, a German philosopher, was born in 1718 at Ammerdorfer; was a student, and in 1745 he was appointed professor of philosophy, at Halle. He died there in 1777. His writings are, Anfänggründe der schönen Wissenschaften (Halle, 1748, 3 vols.; 2d ed. ibid. 1754);—Betrachtungen über den ersten Grundsatzen aller schöner Künste und Wissenschaften (ibid. 1757);—Metaphysik (ibid. 1756, 4 vols.);—Philosophische Statistik (ibid. 1756-61, 5 vols.);—Recht der Natur (ibid. 1767);—Vorlesungen eines neuen Lehrgebäude von den Seeleen der Thiere (ibid. 1756);—Vorlesungen einer allgemeinen Auslegungskunst (ibid. 1756);—Untersuchung verschiedene-Materien aus der Philosophie (ibid. 1758-71, 4 vols.). See his biography by S. G. Lange (ibid. 1783).

Meier, Gerhard, a German theologian, was born at Augsburg, Aug. 26, 1664. He received his first instruction in the schools of his native city; studied theology at the university of Leipsic and at Wittenberg. In 1684 he received his degree, and in 1687 was appointed adjunct to the faculty of philosophy. In 1659, he received his degree of licentiate of theology. His dissertation at this time was De sylvestriopontificatus in Paradiso revelata. In December of the same year he was called to the gymnasium of his native city as professor of logic and metaphysics. He was next appointed pastor of St. Benedict's Church, and later was made superintendent and a Church councilor. In 1690 he was appointed to Augsburg to receive the degree of doctor of divinity. In 1709 he accepted a call to Bremen as chancellor of the consistory, and superintendent and pastor of the cathedral. In 1715 the position of general superintendent and professor of theology at Greifswald was offered him, but he declined it. He died Feb. 25, 1741. He was esteemed for his sound theological research, which he displayed in several dissertations, mostly of a dogmatic character. A complete list of his works is given by Doring, Gelehrte Theol. Deutschlands, ii, 462.

Meier, Johann Christian Wilhelm, a German theologian, was born at Engel July 5, 1731. He received his first instruction in languages and sciences at home, and afterwards at the gymnasiam at Osanbrück. He studied theology in Jena and Göttingen. In 1758 he returned home, a candidate of theology, and was soon assigned to assist a clergyman at Nienstädt, near Nienstädt, near Niernberg. In this position he secured for himself the respect of his superior, and added to his literary fame by contributions to a theological periodical. In 1756 he formed the acquaintance of major Von Busch at Niensburg, who appointed him field chaplain to his regiment. In 1760 he accepted a call to a parish at Canterbury, England. During his stay there he collected material for a history of the Methodists. After having travelled much for this purpose, he returned to Nienburg with his regiment in February, 1757. The history, we are sorry to say, was never published. It was left in manuscript, but particularly one, crowned with a prize, Schrift und Verbreitung des Geistlichen in England und Deutschländ, a book which he wrote while at England, and published in 1756, recommended him to the favor of the count of Schaffhausen-Lippe. With the title of a councillor of consistory, he became presiding superintendent of Bieleck and supreme pastor at Stadthag. At Rinteln he obtained the degree of a doctor of divinity by the defense of his dissertation De effectibus concionum Methodisticaum harum Miraculosar nec mirabilius (Rintel, 1758, 4to). He died in 1775. Meier was esteemed a theologian of great learning and sincere piety, and was uniriting in his endeavors to elevate the moral and religious life of his hearers (J. H. W.)

Meigs, Benjamin Clark, D.D., a missionary of the American board in Ceylon, was born at Bethlehem, Conn., Aug. 9, 1798; was educated at Yale College (class of 1809), and while a student there he was hopelessly converted, and united with the college Church in 1809. His religious exercises were very deep and marked. He taught for a time in an academy at Bellford, New York, and then went two and a half years at the Andover Theological Seminary. During his course there he attended, in connection with Samuel J. Mills and others, those select meetings of inquiry and prayer in reference to the subject of missions to the heathen which were commenced with the formation of the American board. Mr. Meigs, determined to devote himself to a missionary's life, was ordained at Newburyport, Mass., June 21, 1815, and sailed from that place October 23 following, to find the Ceylon mission at Jaffna. In connection with this mission he labored more than forty years, sharing in its toils and trials, its fears and hopes. In 1840, after an absence of forty-five years, he returned to his native land, and sailed again from Boston Oct. 17, 1841, to continue his missionary labors. In 1858 the failure of his health compelled him to return again to America, and relinquish the work to which his life had been devoted. He died from a disease contracted by his long residence in New York City, May 12, 1862. See Missionary Herald, July, 1862.

Meinah. See TAUMUS.

Meinandaets, Peter John, a Dutch theologian of note, was born Nov. 7, 1684, at Groningen. After having concluded his studies at Malines and Louvain, he became attached to the cause of Peter Codie, a Jansenistic prelate, who had just been dismissed by the pope from the vicarship of the United Provinces. Meinandaets was therefore obliged to go to Ireland to receive his sacerdotal ordination (1716). On his return he was made pastor of Lewarden. In 1739 he was elected bishop of Utrecht, in the place of Theodore van der Croon, and occupied the see until his death. Like his predecessors, Meinandaets was often obliged to defend the rights of his clergy. In this capacity he accompanied the representatives of Clement XII, he appealed from him to the first council, and executed the project, a long time meditated, of filling the vacant seats of his metropolis. It was thus that he revived the extinct bishoprics of Harlem and Denver, by giving them, one to Jerome de Bock (1745), the other to Jean Byevek (1756). These acts of authority drew upon him now censures from
Meineke, Johann Heinrich Friedrich, a German theologian, was born at Quedlinburg Jan. 11, 1745, and was educated at the University of Helmstädt, which he entered, when in his nineteenth year, as a student of divinity; later he studied at Halle. He returned to Quedlinburg in 1767, and was two years after appointed to a position in the high-school of that city. He gave himself up to the study of literature and philosophy, especially Kant's system, which he studied diligently for several years. Though much engaged in his profession as a teacher, he yet wished, as he advanced in years, to become a rational philosopher. He very readily accepted an appointment as minister at St. Blasius' Church at Quedlinburg. In the beginning of 1825 he was taken ill, and died July 25, 1825. Meineke united a perfect knowledge of theology, philosophy, and ancient languages, with a talent for the practical application of both. Through his labors in the ministry, he yet displayed the most decided abilities of a politician who gave no quarter. He knew only one cause, that of his God and of his Church, and to serve it faithfully was his only endeavor. His best political production, entitled "Füßerlinge unserer Zeit," he published under the nom de plume of Aloysius Frey (in 1825). For the use of the ministers, he published in 1811 "Reperatoria der Welle Kanzelbürflinsien der Prediger an Sommer- und Festivaltagen oder in der Wque (Quedlinburg, 1811, 8vo, vol.); the second volume was never published, but an appendix to this he published in 1817: "Tägliches Handbuch für Prediger und Predigtganten-Candidates zur leichtern Aufzwingung der Materialien zu ihrem Kanzelbuer- tragen (ibid. 1817, 8vo)." But perhaps the most valuable production of his life was "Die Bibel ihrem Cjesamumin- kate nach summarisch erklärt zuzichtiger Beurtheilung und zweckmässigem Gebrauche derselben für Lehrer in Bürgerschulen in Landknecht (Quedlinburg, 1819, 2 vols., 8vo)."

Meinecke, Christian, a celebrated German philosopher, was born at Quedlinburg, Hanover, in 1747. About his early life but little is known. He studied at the University of Göttingen, and became a professor at his alma mater in 1772. He died in 1810. He wrote, "Rei- vision der Philosophie (Göttingen, 1772): "Verauch einer Religionsgeschichte der ältesten Völker besonders der Assyris- ten (ibid. 1775): "Historia doctrinae de vero Deo (Lem- go, 1780, 2 vols.):" Geschichte des Ursprungs der Was- senschaften in Griechenland und Rom (ibid. 1781, 2 vols.):" Geschichte des Verfassens der Staaten und Staatsver- fassung der Römer (Leips, 1782):" Geschichte des Verfassens der Wissenschaften und Sprache der Römer (Wien, 1791):" Geschichte aller Religionen (Hanover, 1806, 2 vols.):" Geschichte der Ethik (ibid., 1806, 2 vols.):" Unter- suchungen über die Denk- und Willenskräfte (Göttingen, 1806):" Geschichte der Erstellung und Entwicklung der kolonialen Schulen (ibid. 1802, 4 vols.):" Geschichte des weiblichen Geschlechts (Hanover, 1798, 4 vols.):" Lebensbe- richt zweier Männern aus der Zeit der Wiederher- stellung der Wissenschaften (Hanover, 1809):" Vergleichung der Sitten des Mittelalters mit denen unseres Jahrhunderts (Hanover, 1798, 3 vols.). Besides these, his own works, he edited, in connection with T. G. Fe- der, "Philosophische Bibliothek (Göttingen, 1788-91, 4 vols.); in connection with Spittler, "Göttingisches historisches Magazin" (Hanover, 1787-90); "Neueres Magazin" (ibid. 1791-92, 3 vols.). Meineke's literary works evince great activity, and at the same time a great variety in his themes; but it is his work as an editor, that he is best known for, in trying to show the difference between past and present morals.

Meinhold, Johann Wilhelm, a German theologian, was born Feb. 27, 1737, at Netzelskow, on the isle of Usedom, and was educated at Greifswalde. In 1780 he was appointed rector of the school at Usedom, and soon after minister at Kosrow, near the Baltic; in 1786 at Krummin; in 1784 at Rehbenkow, near Starn- burg. He resigned this position in 1850, and joined the Roman Catholic confession. He died in 1851 at Char- lottenburg. He published "Athenasius oder die Verklärung Friedrich Wilhelm III. (1844):" "Die babylonischen Sprachen und Ideenverwirrung der modernen Preussen (1844-47)." His works were collected and published at Leipzig (1846-52), entitled "Gesammelte Schriften." Meinrad, Sr., a German Roman Catholic ascetic, was born towards the close of the 8th century. He was educated at the abbey of Reichenau. He secluded himself in a desert near the Etzel Mountains, and afterwards near the spot where now stands the Benedictine convent of Einsiedeln, which was built in 984 by the canon Ben- edictus of Strasburg. Meinrad was murdered Feb. 21, 863.

Meintel, Conrad Stephen, a German theologian, was born at Schwabach, Bavaria, in the early part of the 18th century. In his very youth he made such rapid progress in old and modern languages that he had finished in his twelfth year the reading of the Bible in the original. He studied theology at the universities of Altdorf in 1745; continued in 1746 at Jena; went in 1747 home to Peternauarck, where his father was then installed as a minister of the Gospel. In 1751 he re- turned to Altdorf. He gained great notoriety in 1751 by means of his dissertation "De locis quaestionums Jobs, in quibus celebrb. Scholasticm majorvm tacum dissidentia. In the latter part of 1751 he was dismissed from his church, and stayed there till 1754, when he went to Er- langen, and then gained great distinction by his defence of the dissertation "Observationes philologico-philosophicas in Ecclesiasia septem piorum versus." He was given the privilege of holding public lectures. He had hopes of a professorship, but love for his home made him return to it again, and he became an assistant of his father. He finally accepted a call from St. Petersburg, Russia, and died, as minister of the Protestant congregations at Was- sili-Ostrow, Aug. 13, 1784. A short time before his death the doctorate in divinity was given to him by the University of Heidelberg. Bergner says, he published the following: "Note selectissimorum commentatorum Judiciorum in Psalmo Davido ex col- lectione Hebraea celebrb. II. J. V. Bashuyzen, Latine redi- dite (Suabac, 1746, 8vo):" "Centro quarto historise cecile della Biblia raccolte dal frio Greg. Holm. Hubner ed hora tradotte de originali Tedesco in Italiano (ibid. 1745, 4to).

Meir, Rabbi (surnamed "illuminator," i.e. the en- lightener, from the estimate which his contemporaries had formed of his merits), lived about 120. He was a native of Asia Minor. Legend traces his origin to the emperor Nero. He was a disciple of the famous rabbi Akiba (q. v.), and was very intimate with Elisa ben- Abus, who, after his apostasy and subserviency to the Romans, was called Acher, i. e. the other one. Meir's talents early procured him ordination from his teacher Akiba. As an instructor, he was remarkable for a thorough and effective investigation of his subject. The rabbins used to say, in their Oriental manner, that he dealt with difficulties of the law as a giant would uproot the mountains, and shatter them against each other. So replete was he with knowledge, and so successful in the communication of it, that "were a man even to touch the staff of rabbi Meir, he would become wise." His wife was Beruria, the talented and accomplished daughter of Chananja ben-Teradion, who was burned,
Meir, besides cultivating intercourse with the most noted theologians of his own time, was also on friendly and even intimate terms with heathen sages, especially in Alexandria and Caesarea. He left Palestine and resided some time in Babylonia, whence he returned to his colleagues with another and less learned bride.

Meir's principles of this philosopher were essential traits of Neo-Platonism, in the peculiar modification of that philosophy which the influx of Eastern elements had brought about. The most noted, if not the most sophistical, among Meir's numerous pupils, was Symmachus, of Ecbatana, known as a translator of the Bible into Greek. Meir had always held him in the highest estimation, thoroughly imbued his method. It is said that this dialecticist on one occasion undertook by forty-nine arguments to prove that the touch of a certain dead reptile could not defile a person. It was oppressively said of Symmachus by his contemporaries that his ancestors could not have heard the law on Mount Sinai. Symmachus afterwards joined the Christian sect of the Ebionites. His translation of the Bible is stated to have been more free from errors and more faithful than that of Aquila. According to Grätz, this Symmachus is not the translator of the Bible.

After the death of his master, Meir retired to his residence. When the Sambodrim was restituted under Simeon (q. v.), he returned to the Holy Land, and was elected vicar of the rabbinical see; but his continual disagreements with the Nasi induced him at last to leave Palestine for Asia Minor, where he died, bequeathing to his countrymen the following proud and characteristic message: "Tell the children of the Holy Land that their Messiah has died in a strange country." According to his expressed wish, the tabernacle of his unquiet spirit found its last resting-place by the sea-shore, where his grave was washed by the waves, and looked out upon the wide, storm-tossed sea, as "inch by inch, letter by letter, line by line, Hebrew and Latin by Rittangel in the Ṣaḥīḥ al-Isā (Amst. 1662). He wrote also a letter against Maimonides's Ṣaḥīḥ al-Isā, a treatise on the Masorah, entitled "The Fence of the Law," Ṣaḥīḥ al-Isā, and some novellae on parts of the Mishna. See Furst, Bib. Jud., 1; Etheridge, Intro. to Heb. Literature, p. 276, 277; Grätz, Gesch. d. Juden, viii, 33 sq.; Jost, Gesch. d. Judenthums, ii, 8, 9; Lindo, History of the Jews of Spain and Portugal, p. 81; Finn, Sephardim, or the History of the Jews in Spain and Portugal, p. 193 (Lond. 1841).
nised by a former co-religionist, named Kippie, who was in the suite of the bishop of Basle. Rabbi Meir was imprisoned by the emperor, not so much for punishment as for the purpose of extorting from him or his co-religionists a sum of money. Meir died in 1298 in prison at Worms, where his tombstone was discovered a few years since in the "Gottesacker," or cemetery. The Ashkenazim, or German Jews, venerate him as a saint. Meir wrote Theological Decisions, or Questions and An- swers (יון תשובות ותשובות), which have been published at Cremona, 1557; Prague, 1608. He also wrote Commentaries on the Masorah ( mấyּתִנְתָּא), which are still in MS. in the public libraries. He also wrote some legal works, which are still in MS. among the Jewish books, among other pieces, the famous lamentation יאֲנִיאוֹל יאֲנִיאוֹל, in commemoration of the burning of the law at Paris in 1242. See Etheridge, Introductory to Heb. Litera- ture, p. 288; Grätz, Gesch. d. Juden, vii, 107, 170-172, 188-191, 445, 456-60 (new ed. Leipzig, 1873); Jost, Gesch. des Judenstaates u. s. d. Sechtem, iii, 32, 58; Fürst, Biblioth. Jud. i, 176, 177; Zunz, Gesch. und Literatur, p. 49, 95, 128 (Berlin, 1845); Literaturgeschichte der Juden, Berlin, 1853, p. 62-69 (Berlin, 1865). (B.P.)

Meir ibn-Gabbai, a Jewish writer, was born in 1481 in Spain. When eleven years old he was obliged to leave his country on account of the edict of Ferdin- and and Isabella, which banished all Jews from the land. Little is known of his personal history after this time. He wrote several cabalistical works: יִיתְרָאִים יְםִיתוֹגְלָא; יִיתְרָאִים יְםִיתוֹגְלָא, i.e. the way of truth, ten sections on the ten Sephiroth (Pattus, 1563; Berlin, 1850, by N. A. Goldberg); יִיתְרָאִים יְםִיתוֹגְלָא; יִיתְרָאִים יְםִיתוֹגְלָא, also יִיתְרָאִים יְםִיתוֹגְלָא, in four sections: a. on the unity of God; b. on the mysteries of the adoration of God; c. on the end of the higher and lower creations; d. on the mysteries of the law (Mantua, 1545, folio; Venice, 1567; Krakau, 1578); and a work on prayer, entitled יִיתְרָאִים יְםִיתוֹגְלָא (Kestl, 1560; Zolkiew, 1799). See Fürst, Biblioth. Jud. i, 311, 312; Jost, Geschichte des Juden- staates, iii, 158; Grätz, Gesch. d. Juden, ix, 239 (Berlin, 1866). (B.P.)

Meir Joseph ben-Joshua, surnamed Ha-Sephardi, i.e. the Spaniard, a Jewish savant of note, flourished in the early part of the 16th century. He was born in 1505, his father being a professor of medicine in the town of Aragon in Spain. He is the author of a most valuable historic work, entitled יִיתְרָאִים יְםִיתוֹגְלָא, Chronicles of the Kings of France and the Ottoman Sovereigns, in two parts; the first from the creation till 1520, and the second of transactions from that time till 1555 (Venice, 1545; Amsterdam, 1733). The value of the work consists in the fact that it throws aside much of the false and wild imagination which render almost worthless all other rabbinical his- tories. Though contemporary with those events, the chronicle must be regarded as an impartial historian. A part of this work has been translated into Latin by L. Ferrand (Paris, 1670). To English readers this work is most accessible in the translation of G. H. Balliolborth's translation, The Chronicle of the Jews and Jews of the Sephardi (Lond., 1838-39). See Fürst, Biblioth. Jud. ii, 115; Etheridge, Introductory to Heb. Literature, p. 458; Lindo, Hist. of the Jews of Spain and Portugal, p. 461; Jost, Geschichte des Judenstaates, iii, 124; Milman, History of the Jews, iii, 461 (New York, 1870); Da Costa, Israel and the Gentiles, p. 397 sq. (New York, 1895). (B.P.)

Meir Rofe. Hebrew. As his father Chaja Rofe, he was a physician. Little is known of his life, except that he was one of the adherents of Sabbatian Zewi (q. v.), or Aga Mohammed Effendi, the Messiah, who during the 17th century excited the whole of Eu- rope and Asia. (B.P.)

Meiri (מְרִי מְרִי) or (מְרִי מְרִי), Menachem ben-Salomoni (Menachem ben-Sulomo, a Jewish savant, was born at Perpignan, in France, in 1249. He was a man of great learning, and, like Maimonides, he tried to harmonize philosophy with the Talmud. He wrote in a lucid style, and in this re- spect he made a great advance over the works of his pre- cedents, which was prevalent in his times. In his explanations of the holy Scriptures he kept aloof from the philosophical and mystical interpretation, and, though he acknowledged that some passages contain a higher hidden sense, he nevertheless adhered to the literal interpretation of the Word. He died between 1297 and 1306. Besides a compre- hensive commentary on the book of Proverbs, he wrote commentaries on the Talmudic tract Megilla (יכלון תבシャלא), new edition Königsberg, 1860, 4to); on Joma, printed with Is. Nunez-Vaz's הַדוֹדָה הַדוֹדָה (Livorno, 1760); on Jebamoth, Sabbath, Nedanir, Nisim, Sota (Lo- vorno and Salonic, 1794 and 1795). But his greatest commentary is on the tract Aboth (יִיתְרָאִים יְםִיתוֹגְלָא), with an introduction to the Talmud, etc. This latter work has been edited by M. Stern (Vienna, 1854), with biographical and bibliographical matter. See Grätz, Gesch. d. Juden, vii, 240-42 (Leipzig, 1873); Jost, Gesch. des Judenstaates, iii, 67; Fürst, Biblioth. Jud. ii, 345, 346; Zunz, Zur Gesch. u. Literatur, p. 476-481 (Berlin, 1845). (B.P.)

Meisel, Marco or Mordechai, a great Jewish phil- anthropist, was born in 1528 and died in 1601. Little is known of his life, except that he was one of the wealthiest men at that time in Germany, and that he used his means for philanthropic purposes. He built homes, hospitals, poorhouses, colleges, and other charitable institutions, using his power to elevate the condition of his brethren, especially at Prague. The German emperor, Rudolph I, honored him by the appointment of councillor. See Grätz, Gesch. d. Juden, ix, 497-99 (Leipzig, 1866); Jost, Gesch. d. Judenstaates, iii, 281. (B.P.)

Meiseles, Bar, a celebrated rabbi, was born in 1579, and died on the 15th of February, 1671, at Warsaw, where for many years he had shewn the eminent distinction of a leader in Israel. A decided republican in politics, he was long the eyesore of the Russian govern- ment, but the very eye-apple of the Poles. Of his life we hardly know anything, because the papers were prohibited by the police from giving any biographical notices of the deceased, or any description of the demon- stration at his funeral. That Meiseles's death was felt as a loss to the community at large, we may gather from the fact that forty thousand people, representing all creeds, nationalities, and races, attended his funeral. In him the Poles lost one of their staunchest patriots, a man who was devoted to utlizing his patriotic sentiments. In 1861 he suffered imprisonment for six months on ac- count of his political activity. (B.P.)

Meissner, Balthazar, one of the most eminent German Protestant theologians of the early part of the 17th century, was born in 1587. He studied at Witten- berg, Giessen, Strasburg, and Tübingen, and in 1618 be- came professor at Wittenberg. In connection with B. Mentzer (q. v.) of Giessen, and J. Gerhard of Jena, he perceived the requirements of the Church, and did his utmost to satisfy them. This we see in a remarkable sketch of his on the subject, published anonymously at Frankfurt in 1679, under the title B. Meissneri pia des- sideria paulo ante beatum obtium ab ipso manifestata. The principal passages of it were also published in Tho- lack's Wittenberger Theologen, p. 96. He had made him- self known in the literary world when but twenty-four years of age by his Philosophia sobria (Giessen, 1611), which passed through several editions. This work in- volved him in a controversy with Cornelius Martin of Helmstädt, the champion of the Aristotelian school (see Henke, Calizius, i, 258). His merits as a theologian have lately been fully recognised by Kaltenborn, in his Vorläufer d. Grotius auf dem Gebiete des "Jus naturae gentium" (1848), p. 220. Meissner died Dec. 29, 1626. See Herzog, Real-Encyklop. ix, 201. (J. N.P.)
MELANCHOLY

Melancholy, in so far as it is a mental disease, and must more or less affect the religious state of the believer, demands our consideration. It is generally held that melancholy is the exaggeration of the natural and legitimate feelings of grief, despondency, and apprehension, which become morbid when the emotion is without a cause, or is disproportioned to the actual cause, or is so intense as to disturb and destroy the exercise of the intellect. When it is acute, its depression and suffering is found associated with exalted sensations, or delusions as to the personal or physical condition of the individual, which originate in habitually cherishing certain impressions, in fixing the attention upon certain vital processes, which may be unhealthy, or become so by the local influence of whatever may be the cause. The patient lives in fear of death, in the conviction that
he is differently or more exquisitely constructed than those around; that he labors under some foul or fatal disease; that he is destitute of strength or comeliness. The latter, as well as the rich, entertain such doubt and all dread. They starve in order to husband their resources. This affection prevails at maturity—at the period of greatest activity and usefulness. Towards the decline of life—although encountered at every age—morbid depression assumes the form of religious anxiety, despair, remorse, and weakness. This indicates that among the inhabitants of Northern Europe the number of cases of melancholy exceeds those of mania; and it has been supposed that the rudiments of the malady may be detected in the original character, the temperament and habits of the race, as well as in the climate, domestic condition, and diet, by which these are modified. Defective blood nutrition, or anemia, appears to be the physical state with which the great majority of cases of melancholy are connected, and to which all modes of treatment are directed. Powerful and permanent and depressing moral emotions act as effectively in arresting healthy digestion and alimentation as the use of injurious medicines. In the Germans, the inhabitants of the provinces of the Confederacy, and the inhabitants of the Netherlands, circumstances such as the respiration of impure air, or indulgence in intemperate or degraded tendencies, which render assimilation impossible. The aspect of the melancholic corroborates the view of intimation and examination. The surface is pale, dry, cold, attenuated, even insensible; the muscles are rigid; the frame is bent; the eyes sunk, and fixed or flickering; the lips parched and colorless. There is a sense of exhaustion or pain, or impending dissolution. It has been remarked that in proportion to the intensity of the internal agony there is here an obtuseness or anesthesia to wounds or external injuries. Such an immunity causes in lunatics an indifference to the most grievous forms of suffering, and has given rise to the supposition, on the part of those scientists who cannot see any virtue in religion, that Christian martyrs displayed at the stake a fortitude inspired rather by a lunatic condition than by heroic faith; a lunatic condition, of course, with the supposition that the fortitude of virtue is in fact a product of the faculty of reason. To remove the opportunities of misusing the following remedies may be applied: 1. early rising; 2. plain, nourishing food; 3. strict temperance; 4. exercise in the open air. Or, if it arises particularly from the mind: 1. associate with the cheerful; 2. study the Scriptures; 3. consider the amiable character of God, and the right and just nature of his government. If these should not avail: 5. be much in prayer, so as to enjoy the promised presence of the Holy Spirit, the infallible Comforter; 6. be constantly engaged in such employments as combine the sense of duty and the feelings of benevolence. See Burton, Baxter, and Rogers, On Melancholy: Cecil, Remants of Fuller, Works; Haslam, Observations on Madness and Melancholy; Esquirol, Maladies Mentales, i, 398; Crichton, Inquiries into the Nature and Origin of Mental Derangement. See also MIND; MORONIA.

Melancthon, Philip, the most noted associate of Luther in the German Reformation. Life.—Philip was born at Braten, then in the Lower Palatinate, but now in the grand-duchy of Baden, Feb. 16, 1497. His father, George Schwartzerd, was a skilful armorier, and an earnest, pious man, whose personal worth and success in his art had gained for him the patronage and esteem of many of the princes of Germany. His mother, Barbara Reuter, was a frugal, frugitious, and energetic woman, the daughter of the burgomaster of the village, and the supposed author of several household rhymes still popular in Germany. His education was begun, under the superintendence of his grandfather Reuter, at his native place. Among his earliest teachers was John Unger, to whose thoroughness Melancthon, in later years, paid the tribute, "He made me a grammarian. Already, under Unger, he had acquired his quickness, his hibernating memory, by which he memorized, the readiness with which he clearly explained what he knew, his deep interest in his studies, and his eagerness to converse upon them, marked the young pupil as a boy of rare promise. Upon the death of his grandfather, he was removed in 1508 to Pforzheim, where he attended a Latin school, and made his home with a female relative (according to some authorities, his grandmother), who was a sister of the renowned Reuchlin. Here he became a favorite of this great classical scholar, who presented him with books, and in recognition of his extraordinary attainments, augmented the customary fees which his German name Schwartzerd into the Greek Melancthon (μαλακός, black; χωρίς, earth)—a name retained throughout his life, although he usually spelled it Melancthon; at present many writers have come to adopt the spelling Melanchthon, and, as this is the orthography of this Cyclopaedia, we have conformed to it. In October, 1509, he entered the University of Heidelberg, where, notwithstanding his extreme youth, he soon gained great distinction as a linguist, being known among his fellow-students as "the Grecian." When only a few months over fourteen he received the degree of bachelor of arts, became private tutor to the sons of Count Lotharius, and composed the Prose Grammar, which was published several years afterwards. The severity of the climate occasioning repeated attacks of fever, and the refusal of the faculty, on account of his youth, to admit him to the master's degree, induced him in 1512 to remove to Tübingen. Here he devoted himself to a wide range of study; embracing Greek and Latin literature, philosophy, history, rhetoric, logic, mathematics, medicine, jurisprudence, and theology. In theology he attended the lectures of Lemp, and read William Oeciasm. In medicine, he studied Galen with such diligence that he could repeat the most of that author from memory. In 1514 he received his master's degree, and began to lecture on Virgil and Terence. The next year found him aiding Reuchlin in the controversy with the monks. About the same time (1515) Erasmus expressed his unqualified admiration of the young master's attainments. "What promising hopes does Philip Melancthon give us," he wrote, "who almost at 15 years of age possesses unusual esteem for his knowledge of both languages. What sagacity in argument, what purity of expression, what a rare and comprehensive knowledge, what extensive reading, what delicacy and elegance of mind does he not display?" Three years later he wrote: "Christ desires this work is done; all: he who is not a citizen of this world." In 1516 he lectured on rhetoric, and expounded Livy and Cicero: and before leaving Tübingen had published his Greek Grammar. Of the spiritual struggles of Melanchthon during this period we know nothing. His great modesty prevented him from giving publicity to the details of his inner history. Whatever was the mode in which God was preparing this chosen vessel for his service we cannot discern, as in the case of Luther, any crisis, marked on the one side by the anguish of felt guilt and agonizing efforts to satisfy God's law, and on the other by rest in the merits of Christ and joy in the assurance of personal salvation. From his earliest youth God's Spirit seems to have sanctified his mind through the principles of the divine Word, which he had made the object of the most conscientious study; so that when he was called to the assistance of Luther, by his personal experience of the grace of God, he had already apprehended the great doctrine of justification by faith, which he was summoned to expound and defend. Called in 1518, upon the recommendation of Reuchlin, to the Greek professorship at Wittenberg, he declined, on his way thither, invitations from both Ingolstadt and Leipzig. At his arrival, his boisterous appearance, and his timid and
retiring manners, caused a feeling of disappointment; but when, four days later (Aug. 29), he delivered his inaugural address, in the Old Church, at Cambridge, his enthusiasm was rewarded by the enthusiastic applause of all his hearers. Luther, especially, was delighted. Two days afterwards he wrote: "We quickly forgot all our thoughts about his person and stature, and rejoiced and wondered at his treatment of his theme. . . . I really desire no other teacher of Greek so long as he lives." And again, Sept. 2, "Philip has his lecture-room crowded with students. He has especially infused an enthusiasm for the study of Greek into the students of theology of all classes." This favorable opinion was only strengthened by further intimacy, which revealed the extensive erudition of Melanchthon, and called forth eulogiums still more ardently. As he wrote to Luther that "the most supernatural, yet my most cherished and intimate friend" (Luther to Reischlin, Dec. 14, 1518). Although repeatedly called elsewhere, even to France and England, he remained at Wittenberg until the close of his life, exerting, by his varied attainments, marvellous industry, and simple piety, an influence second only to that of the great Reformer. Married in 1530 to Catharine Krapp, daughter of the burgomaster of Wittenberg, whom his friend Camerarius describes as a pious and devoted wife and mother, Melanchthon enjoyed in his domestic life much happiness, but during his later years suffered great trouble and anxiety. Of his two sons, one died in infancy; Philip died in 1580, a pious but not a gifted man, at one time secretary of the Consistory. Of his two daughters, Anna married the learned but erratic and unprincipled George Sahlinus, provost of the University of Königsberg, and died in 1547; while Magdalena became the wife of Dr. Caspar Bucer, afterwards professor at Wittenberg, and survived her father. Melanchthon's last years were embittered not only by domestic griefs, but also by the distracted condition of the Church. He longed to be delivered, as he said, from the "rubes theologicae." A violent cold, contracted in travelling, April, 1560, terminated in a fever, which eventually proved fatal. Although in much feebleness, he continued to lecture until a week before his death, which occurred April 19. Almost his last words were, "Nothing but heaven." Two days afterwards his body was laid by the side of that of Luther, where, on the anniversary of his death, in 1866, the corner-stone of a monument to his memory was laid with appropriate ceremonies. It has since been reared, in 1869.

Melanchthon as a Teacher. — His reputation as a teacher gave him the title of Praeceptor Germaniae, and attracted to Wittenberg crowds of students not only from all parts of Germany, but also from England, France, Switzerland, Denmark, and Greece. He frequently lectured to an audience of 2000. His lectures covered Old and New Testament exegesis, dogmatic theology, the explanation of the principal Latin and Greek classics, ethics, logic, physics, and occasionally metaphysics. In addition, he received private pupils at his house, and exercised over them a truly paternal oversight. By his work in the organization of many of the schools of Germany, and more especially by his valuable text-books, he continued for many years after his death to exert a more powerful influence than any living teacher, and became, as Hallam (Hist. of Lit., 1:145) remarks, "far above all others, the founder of general learning throughout Europe." His Latin Grammar, prepared originally for his private pupils, was almost universally adopted in Europe, running through fifty-one editions, and continuing until 1734 to be the text-book even in the Roman Catholic schools of South Italy. Gian Giordano's version enjoyed great popularity. Of his Terence, 78 editions have been published within 106 years of its first publication. He also published either scholiæ upon or expositions or paraphrases of the De Officiis, Legibus, De Oratore, Orator, Topica, Epistolae, and 19 Orations of Cicero, Porcius La- tro, Sallust, the Germans of Tacitus, Philo, Quintilian, 1, xii, six orations of Demosthenes, one of Zæcchines, Lycurgus, Stoibæus, Sallian, Lucian, Thucylides, Xenoph- on, Diog. Laert., Pythocles, selections from Pla- mer and Sophocles, 18 tragedies of Euripides, Aristophanes, Menander, 19th Idyl of Theocritus, Tyrtæus, So- lon, Theognis, Calimachus, Pindar, Empedocles, Virgil, Ovid, the Miles of Plautus, and the Theogonis of Seneca, in addition to composing 891 Latin and Greek odes. His style (genniculus) is marked by a purity of diction and correctness of classical taste, to excel even that of Erasmus, for a time was regarded in the schools as a model, even to the exclusion of Cicero and Quintilian.

In philosophy, although, in his first edition of his Loci Comuniæ, he sympathizes with Luther's antagonism to Aristotle, yet he soon learned to distinguish between the use and the abuse of that author, and, while condemning Aristotle as perverted by Romish scholasticism, he effectually employed him in his true meaning as an important aid to the student of theology for the detection of sophistry and the attainment of a clear method of thought. He declared that he had never understood the use of philosophy until he had apprehended the pure doctrine of the Gospel. Among his philosophical works were an Epitome of Moral Philosophy; Elements of Ethics; Explanation of Aristotle's Ethics; Commentary on Aristotle's Politics; Elements of Rhetoric; Logic; and other miscellaneous ethical subjects, such as oaths, contracts, etc. For many years instruction in these works was the regular course in ethics in most of the schools of Protestant Germany. A writer before quoted pronounces them "more clear, elegant, and better arranged than those of Aristotle himself or his commentators" (Hallam's Literature, ii, 50). He was the author, also, of an elementary text-book of physics, and a sketch of universal history, from the creation to the Reformation (Chronicon Caritatis). His miscellaneous orations, lectures, and essays fill over two volumes of the Corpus Reformatorum. Melanchthon as a Theologian and Reformer. — But it is with Melanchthon as a theologian that we have chiefly to do. He never entered the ministry, and therefore performed his work in the Church entirely in the capacity of a layman. Immediately upon going to Wit- tenberg he identified himself with the Reformation, which had begun the preceding year. During his first fall and winter there he delivered lectures on Titus, following them by a course on the Psalms, Matthew, and Romans. His published exegetical lectures embrace, in addition, Genesis, Proverbs, Ecclesiastes, Isaiah, Jeremiah, Lamentations, Daniel, Haggai, Zechariah, Malachi, John, Corinthians, Colossians, and Timothy. His lectures on Jeremiah, John, and Hebrews, were written by Luther without the author's knowledge. Extemporaneous explanations of the Gospels, during a later period of his life, delivered on Sundays at his residence, were committed to writing by some of his hearers, and, after revision by Pezel, were published under the title of Poetæ. He accompanied Luther to the Leipsic Disputation (1519), at which he remained a mere spectator, but afterwards published a letter to Ecolampadius, in which he gave a succinct account of the discussion. Though written in the best spirit, it provoked a very bitter reply from Dr. Eck, in which, while acknowledging Me- lancthon's pre-eminence as a grammarius, he expressed the utmost contempt for his theological attainments, and advised him thereafter to confine his attention to classical pursuits, and not to attempt to enter a higher sphere. The reply of Melanchthon is brief and modest, but the indignation of Luther manifested itself even in a vein in which he pronounced Melanchthon better versed in Scripture than all the Eckes together. During the same year Melanchthon received the degree of D.D.

Early in 1521, under the assumed name of Didymus Faventinus, he published an apology for the Reforma-
tion, in reply to Emer (Bhadram). About Easter of that year he laid the foundation of Protestant systematic theology by the publication of his Loci Communes seu Hypotyposeis Theologicae. It originated from a very brief summary of doctrine, prepared for his private use, which was afterwards delivered to his pupils, as an introduction to his lectures on Romans, and published by them without his consent or revision. The Locii, therefore, cannot be regarded as a work in which he intended to make any absolute confession, and, to its author, very unsatisfactory sketch. They are marked by the clearness of method and purity of style for which Melancthon was distinguished. Luther declared that the little book could not be refuted, and that it was worthy not only of immunity, but even of veneration, as a theological authority. Chemnitz affirmed that Luther often remarked in private conversation that there was more solid doctrine contained in it than in any other volume since the days of the apostles. The same author quotes the Roman theologian, Alphonsus de Zamora, as declaring: "It explains its doctrinal statements in such appropriate and accurate terms, and, by a methodical treatment, renders them so clear and strong, that it is injuring the papal power more than all other writings of the Lutherans." Erasmus termed it "a wondrous army, ranged in order of battle against the Haraecian tyranny of false teachers." and Calvin, "So beautiful a work!" No proof of that is needed, until it is a perfect simplicity is the noblest method of handling the Christian doctrine." The couplet of Schnecker was often repeated:

"Non melior liber estnullus post biblia Christi. Quam qui doctrina, corpusque, loquie vocatur."

During the author's life it passed through over sixty editions, but was subjected to constant changes. The only exception of any moment taken within the Lutheran Church to the first edition is against its statement of the doctrine of the freedom of the will, to which Hutter and others have objected that it inclines towards fangism. Sacken, says, on the contrary, claims that on this point it was misunderstood. In 1565 the objectionable sentence, "All things happen necessarily," was omitted. After 1548 the work was greatly enlarged, and so far changed on that subject as to seem more in harmony with the teaching of Erasmus than that of Luther. It was repeatedly translated into the German. The translation of Justus Jonas was revised by Luther, who suggested that, while the articles on justification and the holy supper were well treated, they were not sufficiently full. A French translation appeared, with the commendation of Calvin, in 1546, and one into Italian (1584 or 1585) found eager readers even at Rome. There were later in Latin Revisions of it have been translated into English—"On the Divine Essence," by Dr. J. A. Seiss, in the Evangelical Review, xii, 1-46; "On the Nature of Sin," Theological Essays from the Princeton Review, p. 218-226. It was attacked by the papists, Richard Smyth, of England, and defended by Paulus ab Elten, a Hamburg theologian, who prepared an edition with additional notes, and citations from the fathers. The renowned Loc. Theologici of Chemnitz is a commentary upon it. Similar commentaries were written by Prætorius, Pessel, Strigel, and Fabricius, while Spangeberg, Sohn, Mayer, and Hemmingius have prepared abridgments. For many years it continued to be a text-book in the Lutheran schools, until supplanted by Hutter's Compend.

During Luther's absence at the Warburg, the care of the Reformation rested mainly upon Melancthon. With great ability he defended Luther against the theologians of Rome, reconciling the sect of Carstadt and the Zwicksian prophets might not be true, and received from Luther a reproof because he dealt with them in such mildness. Without any reserve, he insisted on his own inability to meet the crisis, and urged the return of Luther as the only solution of the difficulty.

After Luther's return, he was diligently occupied in revising the translation of the Bible—a work in which his philological attainments were at several periods of invaluable service to the Church. In 1522 Luther wrote to Spalatine, asking that Melancthon might be relieved of teaching the classics, in order to devote his entire time to the labors of the later Reformation, and even to cease his theological instructions. In 1526, however, he was formally appointed professor of theology. During the two succeeding years he was the principal member of the commission to visit the churches and church-schools of Thuringia. The Articles of Visitation, in connection with the main object of the commission, to give the ministers some directions concerning their preaching and teaching, are sometimes regarded as the earliest confession of the Lutheran Church. The importance which they attach to the preaching of the law, in order to guard against the abuse of the doctrine of justification by faith, excited the opposition of Agriola and others, and led to a conference at Torgau (q. v.), November 28, 1527, in which the position of Melancthon was approved. In February, 1529, he accompanied his prince to the Diet of Spires, and assisted in the preparation of the Protest, presented April 19th, from which the friends of the Reformation obtained the name Protestants. November 17, 1529, he left the Lateran for presence together with Luther, Brentius, and others, in the Colloquy at Marburg (q. v.) with Zwingli and his adherents. In 1530 he accompanied the evangelical princes to the Diet of Augsburg, and there, on the basis of the seventeen articles prepared by Luther at Schwabach, elaborated the Augustsburg Confession, which was presented to the emperor June 25. During its preparation the work was repeatedly revised by Luther, then at Coburg, in almost daily correspondence with Melancthon. "Melancthon, then, was by pre-emminence the composer of the Confession, not as a private individual, but as chief of a body of advisers, without whose concurrence nothing was fixed; Luther, by pre-emminence, as the divinely-called representative of the Church, its author." For a thorough examination of the relation which Melancthon sustained to the Augustsburg Confession, the reader is referred to Krauth's Conservativa Reformatione, p. 201-267. The hypothesis of the rationalist Rieck, that Melancthon intended by it to effect a compromise with Rome, and that, for this purpose, a conspiracy was formed to keep Luther in ignorance of the plan, is there completely overthrown. Melancthon's excessive love of peace, and his desire to bring together into an organic union all the Protestant churches, caused him in later years to adopt views that were inconsistent with the work of the Church, and not his own; for he felt himself at liberty to publish numerous revised editions, in which he made frequent changes. These changes, originating the distinction between the Variatio and Inversus, almost caused a rupture with Luther, and ultimately resulted in controversies which impaired the life of the Lutheran churches. Notwithstanding these changes, it cannot be proved that his personal convictions were at any succeeding period actually different from the teaching of the unaltered Confession. He repeatedly declared, until the close of his life, that his faith was unchanged. His object in the alterations was simply to generalize those statements which were so specific in their declaration of the Lutheran faith as to prevent the endorsement of the adherents of Calvin and others. He was constantly seeking for a generic form of agreement in which the specific differences might be set aside. He remained at Augsburg until late in September, employed in fruitless negotiations with the Roman theologians. The constitution of the Augustsburg Confession, presented August 3, led him in reply to prepare the Apology—a masterpiece which the Lutheran Church has prized so highly as to number it among her symbols.
MELANCHTHON

His Catechism (Catechesis Puerilis) appeared in 1528. In 1535 and 1536 he was actively engaged in negotiations with Bucer to secure a union of the Protestant churches on the doctrine of the Lord's Supper. As the result of these efforts, the Wittenberg Concord was signed May 28, 1536. In February, 1537, he was a member of the convention at Smalcald, and signed the Articles, with the proviso that he would acknowledge the supremacy of the Holy See, quite apart from the latter's permission or a denial of the doctrine of justification by faith; but the object of the conference failed, because of an irreconcilable difference concerning the externals of religion, in which Melanchthon displayed more than his ordinary firmness. In 1542 and 1543 he was employed by the archbishop and elector of Cologne to superintend the introduction of the Reformation into his territories. The book of instruction prepared in connection with this work excited the indignation of Luther against Melanchthon, until the latter assured him that Bucer was alone responsible for the article on the Lord's Supper. Early in 1546, at the request of the elector of Saxony, he composed a commentary on the Wittenberg Constitution, which was sent to the Council of Trent as a summary of the doctrines of the Lutheran Reformers. After the death of Luther, in 1546, he was the acknowledged head of the Reformation, but unfortunately became again involved in negotiations with the papists, to whom he made the most remarkable concessions. His connection with the Leipzig Interim (1548) was the most unfortunate act of his life. Under the form of an apparent compromise, he yielded to the papists many of the most essential points of difference between them and the Protestants. "He was willing to tolerate both a lower clergy and the liturgy of the church in Germany, stripped of its divine rights, and deprived of all power in matters of faith. The relation of faith to works, and the doctrine of the sacraments, might, in his estimation, be veiled in a judicious obscurity of phrase." In every part of the evangelical Church the Interim was most violently resisted, and his connection with it strongly condemned. In addition to private rebukes from Calvin and Brentius, Agricola, Flacius, and others publicly attacked him. In 1550 he published his Explanation of the Nicene Creed, and in the succeeding year the Confessio Saxonicus, in which he had gained courage to entirely repudiate the compromise formulae of the Interim. In 1553 and 1554 he was engaged in a controversy with Osianer, who had confounded justification with sanctification; in 1553 he published brief treatises against Schweinfeldt and Stancar, and in 1554 his Examen Ordinandorum, a brief outline of doctrinal, ethical, and polemical theology, for the use of candidates for the ministry. His labors during his last years were directed toward his plan to unite the followers of Calvin with those of Luther, and his attendance at another religious conference at Worms (1557) with the papists, were equally unsuccessful.

Melanchthon was undoubtedly the great theologian of the Lutheran Reformation. Yet the very gifts which were of such great service in reducing the purified doctrine to a connected system, and organizing the outward form of the Church, constantly tempted him to seek for external union, even at the expense of principles essential to all true inner harmony. This tendency, fostered by his classical tastes and natural amiability and tenderness, led him to make unwarrantable concessions, so strong when under the guidance of a firmer will, as that of Luther. It is to this that Calvin referred when he heard of Melanchthon's death: "O, Philip Melanchthon! for it is upon thee whom I call, upon thee, who now livest with Christ in God, and art waiting for us, until we shall attain that blessed rest. A hundred times, worn out with fatigue and overwhelmed with care, thou hast laid thy head upon my breast and said, Would God I might die here. And a thousand times since then I have earnestly desired that it had been granted us to be together. Certainly thou wouldst have been more valiant to face danger, and stronger to despise hatred, and bolder to disregard false accusations."

La Grange.—The first edition of his collected works was published at Basle, 1541; the second, edited by his son-in-law, Peucer, Wittenberg, 1562-64 (4 vols. fol.). The most valuable is that of the Corpus Reformatorum, edited by Breuschneider and Bindseil (1884-80, 28 vols. fol.). A complete catalogue of Melanchthon's writings, collected and of their different editions, etc., was published by H. E. Bindseil, entitled Bibliotheca Melanchthoniana (Halle, 1866, 8vo, 28 pp.). The tercentenary of Melanchthon's death has called forth a large number of addresses and essays to celebrate his memory. Besides the admirable orations of Dörner, Kahnis, and Bothe, are W. Thilo, Melanchthon in the Service of the Holy See; F. A. Nitznelnadel, Philipp Melanchthon, the Teacher of Germany; W. Beyschlag, Phil. Mel., a Sketch in Church History; F. W. Gente, Oration at Eisleben; H. Keil, Lau- datio Phil. Melanchthonis; H. K. Sack, a Sermon at Magdeburg; C. Schottmann, De Phil. Mel. reformatorum heresibus; J. A. J. Schacht, Melanchthon's Description to Frankfort-on-the-Main. Other works have been published upon some of the pupils and friends of Melanchthon; e. g. J. Classen, on Jacob Myciullus, rector at Frankfort, and professor in Heidelberg, 1526 to 1558; E. W. Lohn, on Dr. Caspar Creuziger (Creuciger), a pupil of both Melanchthon and Luther, reb. Tagezon, or Petrus Vincensus of Dreslau. The earliest life of Me- lanchthon was written by his friend Camerarius. The Anales Vitas, in vol. xxvii, Corp. Ref., afford the richest biographical material. Biographies have been written by Camerarius (1560), Strobel (1777), Niemeyer (1817), Köthe (1829), Fasicus (1832), Ulloenberg (1856), Heidegger (1865), H. von der Heydt (1867), Crüger (1847), Wohlfahrt (1890), C. Schmidt (1881), Meurer, Plank (1896), and others. Those accessible to English readers are the valuable but brief sketch by Dr. F. A. Cox, and an excellent translation of Lederhose by Dr. G. F. Kroetel (Phila. 1885). See also Krauth's Conservative Reformation, p. 220 sq.; Steckendorn's Historia Luther- anismi, Ranke, Hist. Ref., p. 132; Cunningham, Reformers; D'Aubigné, Hist. Ref., p. 325; Birckner, Studien über die Geschichte der Reformationszeit, vol. i, ch. iv; Reformation, 1750, vol. i, Grammatici, 1831, Jan.; Hackett, Hist. Ref., p. 30 sq.; Burnet, Hist. Ref.; Gieseler, Church Hist. vol. iv, ch. i; Moehl, Eccles. Hist. vol. iii; Hagenbüch, Kirchengesch. vol. i, ch. 3; Löffler, Creutziger, Hist. Soc. Litt. 1854, p. 185; Meth. Qu. Rev. 1855, p. 183; 1869, p. 676; Studien u. Kritiken, 1850, vol. ii, Briefe an Dr. Boizenburg, 1854, En. Rev. 1851, Jan.; Am. Theol. Rev. 1851, April; 1869, p. 529; Amer. Presbyt. Rev. 1861, p. 261; Zeitschr. f. wissenschaft. Theol. 1871, vol. ii, art. viii. (H. E. J.)

Melangists (or Convulsionists) is the name of a degenerate sect of Jansenists (q. v.). It originated in 1727, under the direction of François de Paris. He had been noted for his piety and asceticism, and, now that he had left his earthly abode, multitudes flocked to his grave, and there, in various ways, testified their superstitious regard and veneration. Marvelous curés were claimed to be wrought there, and miracles were said to be performed. Strong religious emotions and testimo- nies of miraculous cures abounded. Some were endowed with the spirit of prophecy, and predicted the overthrow of Church and State. Many of the fanatics themselves claimed that their miraculous doings were divinely inspired, while others ascribed them to evil influences. Those who considered these curious works inspired by evil influences were called "Discori-
ents," while the believers received the name of Melan- 
gias, because they supposed themselves partly actively, 
partly passively inspired. The superstition and fanati-
cism which prevailed at Francia's grave soon after his 
death were not wholly confined to the common people, 
but were shared by a considerable number of men of 
rank and learning. These religious excesses, however, 
tended to create a general prejudice against Jansenism, 
and really ruined the cause—at least in France—or, as 
Voltaire remarks, "The grave of St. François of Paris 
became the grave of Jansenism."

Melania, St., called the Younger, a Roman lady 
of a noble family, who was born about A.D. 388, became 
a convert to Christianity and founded a convent in 
Palestine, and subsequently a monastery near Mount 
Calvary. She was the daughter of a Roman consul, 
and one of the many noble ladies of the Eternal City 
who joined the cause of the Christians. She died in 
439, and her death is commemorated by the Church of 
Rome Dec. 31. See Macé, Hist. de Sainte-Mélanie (Paris, 
1789, 12mo).

Melati'ah (Heb. Melati'ah, מֶלָּתִיָּה, deuereance of 
Jeroeh; Sept. Melat'ia, but most copies omit), a Gib-
enite who repaired part of the walls of Jerusalem on the 
northern side, after the return from Babylon (Neh. 
iii. 34, 35; C. C. 46).

Mel'chi (Mas'chi, Heb. מֶלְכִּי, my king), the name 
of two of Christ's maternal ancestors. See GENEALOGY 
OF JESUS CHRIST.

1. The son of Addi and father (maternal grandfather) 
of Ner or Neriah (Luke iii, 28); probably identical with 
the MASEEDAH of 2 Chr. xxxviii. 8, 9.

2. The son of Jannas and father of Levi, fourth in as-
cent from the Virgin Mary (Luke iii, 34, 35). B.C. much 
mutter 22.

Melch'i (Heb. Melkithah, מֶלְכִּיתָה, Jeroehah's king; 
Sept. MELCYAH), a priest, the father of Pashur (Jer. xxi. 
1); elsewhere called MELCHIAM (Jer. xxxviii. 11; Neh. 
xi. 12) and MALCHIJA (1 Chron. ix. 12).

Melch'i (Mas'ciah, أًمُلْكُيَا, the Greek form (in the Apoc-
pypha) of the Heb. MELCIAH; namely, (a) 1 Esdr. ix. 
25; (b) 1 Esdr. ix. 32; (c) 1 Esdr. ix. 44.

Mel'chi (Mas'ciah), a person whose son Char-
mas was one of the three governors of Bethulia (Judith 
v, 15). It is not improbable that he was a relative of 
Carmel the same as Gothonel; and the Peshito gives 
the name Manashojel.

Melchor, the name attributed in Romish legends to 
one of the wise men who visited the infant Saviour. 
See MAGI.

Melchor, Albrecht Wilhelm, a German theo-
lologist, was born at Herborn March 13, 1685. His 
father, who died in 1690, was superintendent and 
professor of theology. Albrecht commenced his academic 
course at Duisburg, but continued his studies at the university 
at Franeker. He paid special attention to Oriental 
languages and literature. He finished his studies at 
Utrecht, and returned to Duisburg. He was in 1709 
invited to-missificate at Mülheim, and made professor of 
thology at Hanau in 1718. Upon taking this position 
he delivered an essay, De religione et vera religiosis 
critioria. In 1728 he was called to a professorship of theo-
lology and Church history at Franeker, where he died, 
Aug. 11, 1738. Melchor made quite a name for himself 
in theological literature. He published several dog-
matical and expository dissertations to prove the authen-
ticity of the miracles of Christ. A list of all his pro-
ductions, of minor value at present, is given by Döring, 
Gedichte Theol. Deutschl. s. v.

Melch'is'edec (Heb. v-vii). See MELCHEZEDEK.

Melchi-shu'a’a (1 Sam. xiv, 49; xxxii. 2). See 
MELCHISHUA.

Melchites or Melchitites (from מֶלְכִּי, a king), i.e. 
Equites, is the name given to those Syrac, Egyptian, 
and other Christians of the Levant, who acknowledge 
the authority of the pope and the doctrines of the Church 
of Rome. Excepting some few points of little 
or no importance which relate only to ceremonies 
and ecclesiastical discipline, the Melchites are in all 
respects professes Greeks; but they are governed by a par-
ticular patriarch, who assumes the title of Patriarch of 
Antioch. Their origin is referred to the labors of the 
Jesus in the 17th century, and the name of Melchites 
was given to them because they agreed with the Greeks 
who submitted to the Council of Chalcedon, and was 
designed by their enemies to brand them with the 
reproach of having done so merely in conformity to the 
religion of the emperor. They celebrate mass in the 
Arabic language, use unleavened bread in the Encha-
rists, and their priests (not their bishops) are allowed 
to marry. They have also some monastic establishments, 
whose inmates follow the rule of St. Basil, the common 
rule of all the Greek monks. See FARRAR, ECCLES. DIcT.; 
Eadie, Eccles. Cyclopedia; NAELE, Hist. East. Church, ch. ii, 
7; Neander, Church Hist. iii, 176.

Melchis'edek (Heb. Melki-'Tse'dek, מֶלְכִּי-צֶדֶק, king of 
righteousness, i.e. righteous king, comp. Heb. vii, 
2; Sept. and N.T. MELCSEDEK, and so Anglicized in the 
N.T. "Melchisedec;" Josophus, ὁ Ἰθωσαύσης, Ant. i, 10, 
2), the "pious of the most high God," and king of Sa-
lem, who went forth to meet Abraham on his return 
from the pursuit of Chedorlammer and his allies, who 
had carried off his captives. The inscription is here 
described as having occurred in the "valley of Shaveh 
(or the level valley), which is the king's valley." 
He brought refreshment, described in the general terms of 
"bread and wine," for the fatigued warriors, and 
bestowed his blessing upon their leader, who, in return, 
gave to the royal priest a tenth of all the spolium which 
had been acquired in his expedition (Gen. xiv, 18, 20). 
B.C. cir. 2080. See Abraham. In one of the Messianic 
Psalms (ex, 4) it is foretold that the Messiah should 
be "a priest after the order of Melchizedek," which the 
author of the Epistle to the Hebrews (vi, 20) cites as 
showing that Melchizedek was a type of Christ, and the 
Jews themselves, certainly, on the authority of this pas-
sage of the Psalms, regarded Melchizedek as a type of 
the regal-priesthood, higher than that of Aaron, to which 
the Messiah should belong. The bread and wine which 
were set forth on the table of show-bread, was also sup-
posed to be the bread of which Melchizedek, on meeting 
the king of Salem brought forth to Abraham (Schortrig, 
Hor. Heb. ii, 615). In the following discussions re-
specting his person, office, and locality, we substantially 
attest to the traditional view of this character.

There is something surprising and mysterious in the 
first appearance of Melchizedek, and in the subsequent 
references to him. Bearing a title which Jews in after-
ages would recognise as designating their own sover-
eign, bringing gifts which recall to Christians the Lord's 
Supper, this Canaanite crosses for a moment the path 
of Abraham, and is unhesitatingly recognised as a per-
son of higher spiritual rank than the friend of God. 
Disappearing as suddenly as he came in, he is lost to 
the sacred writings for a thousand years, and then a few 
emphatic words for another moment bring him into 
sight as a type of the coming Lord of David. Once 
mote, after another thousand years, the Hebrew Chris-
tians are taught to see in him a proof that it was the 
consistent purpose of God to show to the Levitical 
priesthood. His person, his office, his relation to Christ, 
and the seat of his sovereignty, have given rise to innumera-
tible discussions, which even now can scarcely be consid-
ered as settled. Hence the faith of early ages ventured 
to invest his person with superstitious awe. A myste-
rious supremacy came also to be attached to him ("the 
great high-priest," Philo, Opp. ii, 34) by reason of his 
having received tithes from the Hebrew patriarch; and 
on this point the Epistle to the Hebrews (vii, 1-10) 
expatiates strongly. But the Jews, in admitting this of-
ficial or personal superiority of Melchizedek to Abra-
ham was sought to account for it by alleging that the
royal priest was no other than Shem, the most pious of Noah's
sons, who, according to the shorter chronology, might
have lived to the time of Abraham (Bochart, Phaaleg, ii, 1),
and who, as a survivor of the deluge, is supposed to
have been authorized by the superior dignity of old age
to bless even the father of the faithful, and entitled, as
the king of Sodom (Gen. 14), to convey to
(xiv, 19) his right to Abraham. Jerome, in his Ep. lixxiii,
ad Evangelium (in Opp. i, 438), which is entirely devoted
to a consideration of the person and dwelling-place of
Melchizedek, states that this was the prevailing opinion
of the Jews in his time; and it is ascribed to the Sa-
maritans (Her. iv. 6), to which Jerome refers. Afterwards
emended by Luther and Melancthon, by H. Broughton,
Selden, Lightfoot (Chor. Marco prarm. ch.
x, i, 2), Jackson (On the Creadt, bk. ix, § 2), and by
many others. Equally old, perhaps, but less widely
diffused, is the supposition, not unknown to Augustine
(Quest. in Gen. lixxii, in Opp. iii, 396), and ascribed by
Jerome (l.c.) to Origen and Didymus, that Melchizedek
was an angel. The fathers of the 4th and 5th centuries
record with reproduction the tenet of the Melchizedekians
that he was a Power, Virtue, or Influence of God (Au-
gust. De Hierarch., § 84, in Opp. viii, 11; Theodoret,
Histor. i. 36, p. 468; Eusebius, Prol. in).
comp. Cyril. Alexander. Glaup. in Gen. ii, 57) superior to
Christ (Chrysost. Hom, in Melchiz, in Opp. vi, p. 269,
and the not less daring conjecture of Hieracas and his
followers that Melchizedek was the Holy Ghost (Epi-
phan. Her. lixvii, 3, p. 711, and Iv, 5, p. 472). Epi-
phanius also mentions (lv, 7, p. 474) some members of
the Church as holding the erroneous opinion that Mel-
chizedek was the Son of God appearing in human form,
an opinion which Ambrose (De Abrak. i, § 8, in Opp.
i, 288) seems willing to receive, and which has been
adopted by many modern critics. Similar to this was a
Jewish opinion, the Messiah (ap. Deyling, Obi. Sacr. ii, 78; Schöttgen, L.; comp. S. Asok Sohar,
ap. Wolf, Cora Phil. in Heb. vii, 1). Modern writers
have added to these conjectures that he may have been
Ham (Jurius), or a descendant of Japhet (Owen), or of
Shem (ap. Deyling, or, Job (Kohlires), or Mizraim, or
Canaan, or even Enoch (Deyling, Observ. Sacr. ii, 71 sq.);
Clayson, Chronology of the Heb. Bible, p. 190). Other
guesses may be found in Deyling (l.c.) and in Pfeifer
(Der person Melch. in Opp. p. 51). All these opinions
are unauthorized additions to Holy Scripture—many of them
seem to be irreconcilable with it. The conjecture,
however, which holds Melchizedek to have been Shem (see
above), and is entered by the majority of modern scholars
and which Gen. as well as in the Jerusalem Targum, and also that
of Jonathan (ad loc. Gen.), but not in that of Onkelos,
requires an explanation how his name came to be changed,
how he is found reigning in a country inhab-
ated by the descendants of Ham, how he came forth to
congratulate Abraham on the defeat of one of his own
ancestors, as was Chedorlaomer, and how he could be
said to have been without recorded parentage (Heb. vii,
8), since the pedigree of Shem must have been notori-
ous. In that case, also, the difference of the priesthoods
of Melchizedek and Levi would not be so distinct as to
bear the argument which the Epistle to the Hebrews
found upon it. Rejecting on such grounds this op-
inion, others, as we have seen, in their anxiety to vindic-
cate the dignity of Abraham from marks of spiritual
submission to any mortal man, have held that Melchiz-
edek was no other than the Son of God himself.
But in this they have evidently made an error. Instead of
having made "like unto the Son of God" (Heb. vii, 3), or
that Christ was constituted "a priest" after the order of Mel-
chizedek (Heb. vi, 20), or, in other words, was a type of
himself. The best founded opinion seems to be that of
Carpov (Apparat. Antiq. Sacr. Cod. chap. iv, p. 50) and
most judicious moderns, who, after Josephus (War, vi,
10), allege that he was a principal person among the
Canaanites and posterity of Noah, and eminent for holi-
ness and justice, and therefore discharged the priestly as
well as regal functions among the people; and we may
conclude that his twofold capacity of king and priest
(characters very commonly united in the remote ages;
see N. Schwebel, De causis conjuncta omit cæ rus sac-
cerdotis dignitatis, Onolx. 1789; G. J. Müller, De regibus
op. ant. divin. et sacralis, Franc. 1782; J. P. Hahn, On the
opportunity of testifying his thankfulness to
God, in the manner usual in those times, by offering a
tenth of all the spoil. This combination of characters
happens for the first time in Scripture to be exhibited in
his person, which, with the abrupt manner in which he
is introduced, and the nature of the intercourse between
him and Abraham, would be in itself most suitable for
an appropriate and obvious type of the Messiah in his
united regal and priestly character. The way in which
he is mentioned in Genesis would lead to the immediate
inference that Melchizedek was of one blood with the
children of Ham, among whom he lived, chief (like the
king of Sodom) of a settled Canaanite tribe. This was
the opinion of most of the early fathers (ap. Je-
rome, l.c.), of Theodoret (in Gen. lxxiv, p. 77), and
Epiphanius (Her. lvii, p. 716), and is now generally re-
ceived (see Grotius in Heb.; Patrick's Commentary on
Gen.; Bickel, Heriër, ii, 365; Ebrard, Heriër; Fair-
bam, Typology, ii, 318, etc.). Melchizedek, as a
Christian prophet, so Melchizedek was a priest among the
corrupted heathen (Phil. Abrakh. xxxii; Euseb. Prop.
Evang. i, 9), not self-appointed (as Chrysostom suggests,
Hom. in Gen. xxxv, § 5; comp. Heb. v, 4), but consti-
tuted by a special gift from God, and recognised as such
by him.
Melchizedek combined the office of priest and king,
as was not uncommon in patriarchal times. Nothing is
said to distinguish his kingship from that of the con-
temporary kings of Canaan; but the emphatic words in
which he is described, by a title never given even to
Abraham, as a "king of kings" and "priest of the most
high", and receiving tithes from him, seem to im-
ply that his priesthood was something more (see Heng-
stenberg, Christol. Psa. cx), than an ordinary patriarchal
priesthood, such as Abraham himself and other heads of
families (Job, 5) exercised. Although it has been ob-
erved (Pearson, On the Creadt, p. 122, ed. 1939) that we
read of no other sacerdotal act performed by Melchize-
dek, but only that of blessing [and receiving tithes,
Pfeiffer,] yet it may be assumed that he was accustomed
to discharge all the ordinary duties of those who are
"ordained to offer gifts and sacrifices" (Heb. viii, 3),
and we might concede (with Philo, Grotius, l c, and
many others) that his sacerdotal functions were pre-
ceded by a record of unrecorded sacerdotal act of oblation
to God, without implying that his hospitality was in-
itself, as recorded in Genesis, a sacrifice.
The "order of Melchizedek," in Psa. cx, is explained by
Gesenius and Rosenmüller to mean "manner"—like-
ness in official dignity—a king and priest. The relation
between Melchizedek and Christ as type and antitype
is made in the Epistle to the Hebrews to consist in the
following particulars: 1. Melchizedek was the priest
of the most high God by an immediate divine constitution;
so Christ was a priest after his order, and not after that
of Aaron. 2. Melchizedek derived his priestly office
from no predecessor, and delivered it down to no suc-
cessor; in this respect Christ also stands alone: "Our
Lord sprang from the tribe of Judah, of which tribe
Moses spoke nothing concerning priesthood.
3. Melch-
izedek was superior to Abraham, consequently his
priesthood was superior to that which he was received
by his descend-
ants. So Christ's priesthood was superior to the
Aaronic.
4. Melchizedek was the priest appointed to exercise his
office in behalf of all the worshippers of the true God;
so Christ is the universal priest, the only one appointed
to make intercession for our guilty race. 5. Melchize-
dek's priesthood was limited to no definite time; this
circumstance is noticed just as it would have been had

his priesthood had neither beginning nor end: "Christ is a priest forever" (Ps. cx. 4). 6. Each sustained the high honors of king and priest; and the significant appointment of an "Eternal Priest" and "King of Peace" (Joae. xxxiiii, ii; viii, 6, 7). In the Mes- sianic prediction (Ps. cx. 4), "Thou art a priest forever after the order of Melchizedek," the phrase "forever" is not to be understood in the absolute sense, either of Melchizedek's priesthood or of Christ's. Melchizedek's priesthood terminated with his life; so Christ's priestly and kingly office as Mediator will both cease when the work of redemption is fully accomplished (1 Cor. xvi, 24-28). But in neither case is there any statute which limits the specified accession to office and of egress from it. To these points of agreement, noted by the apostle, human ingenuity has added others which, however, stand in need of the evidence of either an inspired writer or an eye-witness before they can be received as facts and applied to establish any doctrine. Thus J. Johnson (Unbody Sacrifice, i, 125, ed. 1847) asserts on very slender evidence that the fathers who refer to Gen xiv, 18, understood that Melchizedek offered the bread and wine to God; and hence he infers that one great part of our Saviour's Mediecksianic priesthood consisted in offering bread and wine. Bellarmine asks in what other respects is Christ a priest after the order of Melchizedek. Waterland, who does not lose sight of the deep significance of Melchizedek's action, has replied to Johnson in his "From the Antient Sacramentary" (ch. iii, § 2, Works, v, 165, ed. 1843). Bellarmine's question is sufficiently answered by Whitaker, Disputatio on Scripture (Quest. ii, ch. x, p. 168, ed. 1849). The sense of the fathers, who sometimes expressed themselves in rhetorical language, is cleared from misinterpre- tation by Both (Sacramentum, a. xvii, (1647), 731, ed. 1847). In Jackson, On the Creed (bk. ix, § 2, ch. vi-xi, p. 955 sq.), there is a lengthy but valuable account of the priesthood of Melchizedek; and the views of two different theological schools are ably stated by Aquinas (Summa, iii, 22, § 6) and Turrettin (Theologia, ii, 439-438).

Another fruitful source of discussion has been found in the site of Salem and Sheave, which certainly lay in Abraham's road from Hobab to the plain of Mamre, and which are assumed to be near to each other. The various theories may be briefly enumerated as follows: (1) Salem is supposed to have occupied in Abraham's time the situation of the present town of Salem, when Jerusalem stood; and Sheave to be the valley east of Jerusalem through which the Kidron flows. This opin- ion, abandoned by Reland (Paë, p. 883), but adopted by Winer, is supported by the facts that Jerusalem is called Salem in Psal. lixvi, 2, and that Josephus (Ant. i, 10, 2) and the Targums assert its connection with the king's dwelling, and that Zedek, in Gen. xxiv, 5, is the son of Sheave, is placed by Josephus (Ant. vii, 10, 8), and by medieval and modern tradition (see Ewald, Gesch. iii, 239), in the immediate neighborhood of Jeru- salem; that the name of a later king of Jerusalem, Ado- niadone (Josh. xiv, 2), sounds like that of a legitimate successor of Melchizedek; and that Jewish writers (ap. Schottgen, Hor. Heb. in Heb. vii, 2) claim Zedek = righteouness, as a name of Jerusalem. (2) Jerome (Upp, i, 446) denies that Salem is Jerusalem, and asserts that it is identical with a town near Scythopolis or Bethaham, which in his time remained the name of Sa- lem, and in which some extensive ruins were shown as the remains of Melchizedek's palace. He supports this view by quoting Gen. xxx, 18, where, however, the translation is questionable; compare the mention of Sa- lem in Judit. iv, 4, and in John iii, 28. (3) Stanley, (5, and P. p. 257) is of opinion that there is every prob- ability that Mount Gerizim is the place where Melchiz- edek, the priest of the Most High, met Abraham. Eu- plemus (ap. Eusebius, Praep. Evang. ix, 17), in a confused version of this story, names Argezirim, the mount of the Most High, as the place in which Abraham was hospita-

bly entertained. (4) Ewald, Gesch. iii, 289) denies posi- tively that it is Jerusalem, and says that it must be north of Jerusalem on the other side of Jordan (i, 410): mention that there is a fabulous life of Melchizedek printed among the spurious works of Athanasius, iv, 189.

Reference may be made to the following works in addi- tion to those already mentioned: two tracts on Melchizedek by M. J. H. von Elstwick, in the Theaerus Nova Theol. philolo- philiciam; L. Borgiuss, Historia Critica Melchizedecum (Born, 1796); Quaunt, De sacetcrato Melch. (Regiom. 1787); Gaillard, Melchisedecus Christ- ius (Leidy, 1866); M. C. Hoffman, De Melchisedecio (1669); H. Broughton, Treatise on Melchizedek (1591); Kirch- maier, De Melchisedecio (Rotterdam, 1696); Lange, idem (Hal. 1718, 1714); Danhauer, idem (Strasb. 1684); Fialtsc, idem (Halle, 1718); Reinhart, idem (Wittenb. 1751); Wänder, idem (Göt. 1745); Henderson, Melchizedek (Lond. 1839); and other monographs cited in Darling, Cyclop. Bibl. col. 183, 1607. See also J. A. Fabriecis, Cod. Theop. T. 7; P. Molinaeus, Vates, etc. (1640), iv, 11; J. H. Heidiggeur, Hist. Sacr. Patriarcharum (1671), 69; Rottingers, Ensew. Dip. 1; P. Cusnus, De Repub. Heb. iii, 3, apud Crit. Sacr. vol. v; Ursini, Analect. Sacr. i, 349; Kraemer, in Iliger's Zeitschr. vi, 4, 87; Aunerlein, in the Stud. u. Crit. iii, 1857, 453 sq; Presb. Qua. Rev. Oct. 1861. Melchizedekians, a sect which arose in the Christian Church about the beginning of the 5th century, and was composed mainly of Jewish converts. They affirmed that Melchizedek was not a man, but a heavenly person, prior to our Lord; but, on the other hand, Melchiz- edek, they said, was the intercessor and mediator of the aegles; and Jesus Christ was only so for man, and his priesthood only a copy of that of Melchizedek. Similar views were revived among the Hierarctics. See Theodo- ret, Hares. Sat. ii, 5, 6.

Melenius, Rupertus, a German Protestant theologian of the 17th century, is known especially by his work entitled Fenneste civer proyect coetcesiologiae Anglicae opus (Frankfort, 1641). Very little is known of his life, and it was even at one time supposed that the name was fictitious. Yet the existence of Melenius appears now well established. He was a warm supporter of the Formula Comorcorae, and did not con- templation a union of the two churches, but at the same time he wished the spirit of scholastic controversy was then ruled the churches to give way to real, practical piety and peace. In the first part of his work he de- nounces the state of the Lutheran Church, and in the second he presents the remedy for it. He accused theologians of not distinguishing sufficiently between es- sentials and non-essentials and maintains that, while they should always be ready to defend their opinions, they ought not to be ceaselessly engaged in controver- sies. He claims that in order to labor efficiently for the edification of his flock the minister must himself lead a holy life, and nothing, in his opinion, can be worse than Pharisial hypocrisy, which is the origin of pe- sident, philozon, and phylozon. He ends his de- scription of these besetting sins of the Church with the exclamation, Serva nos Domine, aliquro(n) perimus. In the second part he contrasts these faults the oppo- site virtues of humility, moderation, and peacefulness which the Christian should possess. He wanted that love he considers as the true cause of the state of af- fairs; there is enough of science, but a great lack of love. He cannot understand a minister whose sins have been pardoned by God not hiding under the shield of love the faults of his colleague. "Omnium vero norms,"
says Rupertus, "sit caritas cum prudentia quodam pia et humilmente non ficta conjuncta." He does not wish all controversies to cease, but to be conducted in a more moderate and Christian manner.

He then compares the actual state of religion with its state in the early ages, and concludes by saying, "Sic nos servavere in necessariis unitatem, in non necessariis libertatem, in utrique caritatem, optimo certe loco essent res nostra."

As essentials, Rupertus considers those principles which refer directly to the articles of faith or principal points in the Catholic Church, such as can be clearly established from Scripture, such as were held by the early Church, proved such by the acts of synods or symbolic works, and, finally, those which all orthodox theologians agree upon as such. On the other hand, he holds that non-essential such points as are not clearly demonstrated by Scripture and are not given in the acts of the Councils, were not held by the ancient Church, or considered necessary by the greater number of orthodox theologians.

Rupertus openly declares that he does not hold the views of those who consider purity of doctrine as essential. The work is published by J. G. Pfeiffer in his Miscellanea Theologica (Leips. 1780); also by Adam of the Alter, den Verführer, etc., des Kirchlichen Friedensspruches: In necessariis unius, in non necessariis libertas, in utrique caritatis (Gotting. 1800). See Herzog, Real-Encyklopädie, ix, 804.

Melech: (Melchi, of uncertain signification), c person of Ismael, son of Menas and father of Eliaakin, among the maternal ancestry of Jesus. He is the private line of David (Luke xi, 31), but the name itself is of doubtful authenticity (see Meth. Quart. Rev. 1852, p. 597).

Melech (Heb. Melak, מלך), king; Sept. Melachi and Melach and μέλαχ and μέλαξ, the second name of the four sons of Micaiah, the grandson of Saul's son Jonathan (1 Chron. viii, 35; ix, 41), B.C. post 1037. See also HAMMER, EMED-MELECH; NATHAN-MELECH; ROEM-MELECH.

Melechians, Asiatic. The Arians in 381 had deposed Eustathius, bishop of Antioch, a learned and zealousNice; but a party who adhered to the Nicene symbol, and who called themselves Eustathians, continued to exist at Antioch. After appointing several successors to Eustathius, the Arians, in 380, transferred Melechias from the bishopric of Seleucia on the Orontes to that of Antioch.

Although the Arians found they had made a mistake, and soon deposed him as an enemy of Arianism, yet only a part of the Nicenes at Antioch would acknowledge him as bishop, since the Eustathians regarded an Arian ordination as invalid. In this way two parties were formed among the Nicenes, the Arians; a third party, the Eustathians; and a moderate party, the Melechians. This schism, after Athanasius had tried in vain to remove it, Lucifer made worse by ordaining as bishop over the Eustathians the presbyter Paulinus, in opposition to the wishes of Eusebius of Vercelli, who had been sent with him to Antioch by the Alexandrian Synod, as his co-deputy. The entire Nicene portion of Christendom now became divided, in reference to this matter, into two parties; the Occidentals and Egyptians recognizing Paulinus as the true bishop of Antioch, and the majority of the Orientals, whose Nicene proclivities had been somewhat weakened by the Arian influence, recognizing Melechias. See EUSTATHIANS. See also MELECHIUS.
MELICU 61 MELITA

for nearly a century and a half, when its members made common cause with the Ariana. See Schaff, Ch. Hist., i. 451; Gieseler, Eccles. Hist., i. 166; Stanley, Hist. of the East. Ch. p. 256; Mosheim, Eccles. Hist., i. 75; Hase, Ch. Hist., p. 690. (H. W. T.)

Melicu (Heb. marg. Mel'icu, מליכע, text Mel'kiu, מלקיו; Sept. Melākoúν μ. Ἀμαλκύν, Vulg. Melico; Neh. xii. 14). See MELICU.

Melissaeus of Samos, a Greek philosopher, was born at Samos, and flourished in the 5th century (about 444) before Christ. It is said that he was not less distinguished as a citizen than as a philosopher, and that he commanded the fleet of his country during its insurrection against Athens. Melissaeus seems to have been the disciple of Parmenides; he studied at least the writings of the philosophers of the Eleatic school, and adopted their doctrines in a modified form; or, as one has it, "he took up the letter rather than the spirit of their system." He made his opinions known in a work written in Ionic prose, probably entitled Of Being and of Nature. He treated of the infinite variety of things produced or engendered, but of eternal nature considered abstractly, apart from all concrete things, and, like Parmenides, called it Being. Simplicius has preserved some fragments of this treatise, and the author (Aristotle or Theophrastus) of the book on Melissaeus, Xenophanes, and Gorgias, has made its doctrines well known. Melissaeus taught the same system of idealism as did the leaders of the Eleatic school, Xenophanes and Parmenides, but he is characterized by greater boldness, yet not by a lack of stating it and in some respects by profounder views. What really existed, he maintained, could neither be produced nor perish; it exists without having either commencement or end; infinite (differing in this respect from Parmenides), and consequently one; invariable, not composed of parts, and indivisible: which doctrine implies a denial of the existence of bodies, and of the dimensions of space. All that our senses present to us (that is to say, the greater part of things which exist) is nothing more than an appearance relative to our senses (ρό ιν μεταλ), and is altogether beyond the limits of real knowledge. He thus made the first thorough weak attempt, which was afterwards carried out by Zeno with far more acuteness and sagacity, to prove that the foundations of all knowledge derived from experience are in themselves contradictory, and that the reality of the actual world is inconceivable. As for the relation between real existence and that which is ignorance of the sentiments of Me-

lisaeus on this head; for what is reported by Diogenes Laertius (ix, 24) can be considered as relating only to the popular notions. Some important fragments of Melis-

saeeus have been collected by Brandis in the first part of the Commentationum Eleaticorum, pars prima, p. 185 sq., and by M. Mullica in his excellent edition of the treatise Aristoteles de Melisse, Xenophon, et Gorgia, Disputationes, cum Eleaticorum philosophorum fragmentis (Ber-

Melita (Μῆλιτα; probably of Phoenician etymology, and signifying refuge, otherwise clay; but according to Hammerke, Miscell. Phoen. p. 46, so named from its abundance of oak-trees), an island in the Mediterrane-

an Sea, a remnant of which was accompanied by a little ship that was used as a prison, because the city of Melita was a prisoner to Rome was wrecked, and which was the scene of the interesting circumstances recorded in Acts xxvii. 28 (see J. Ab. Cantiani Diæs. apol. de Melitam narragro ejocto, Ven. 1738).

1. Identification of the Locality.—Melita was the ancient name of Malta (see J. E. Malalas, Diæs. de Ar-

chita Pali, Hatn., 1707); and also of some small islands in the Adriatic, now called Melada (Μηλάδια νησιώτικα, Paul, ii. 17, 39; comp. Pliny, iii. 80; Apollon, Rhod. iv. 572), and each of these has found warm advocates for its identification with the Melita of Scripture (see Cantarian edition of Abela's Malta Illustrata, i, 608), the former being the traditional and long-established opinion (see Ign. Gorgi, Paulus in maris quod nunc Venetus sinus dictates, see Paris, 1739; J. J. de Rhode, Phys. nat. insul. Melit. narragro, Traj. ad R. 1743; comp. Bibl. Ital. xi, 127; Nov. Miscell. Lips. iv, 808; Paulus, Sommi, iv, 356), liable only to the objection that the part of the Mediterranean in which it was situated was not properly the "Sea of Adria" (Dr. Falconer's Dissertation on St. Paul's Voyage, 1817), which has been shown (see Wet-

stein's Commentaries on the loco) to be without foundation (see J. Smith, Voyage and Shipwreck of St. Paul, Lond. 1848; also Conybeare and Howson's Life of St. Paul, ii, 533). As, however, the controversy on this subject has been somewhat voluminous, we will discuss it in detail, re-

ferring to other articles for confirmation of the opinions and conclusions here expressed.

1. Arguments in Favor of Malta.—(1.) We take St. Paul's ship in the condition in which we find her about a day after leaving Fair Haven, i. e. when she was un-der the lee of Claudia (Acts xxvii, 16), laid to on the starboard tack, and strengthened with "undergirders" (see Siris Smith, Voyage and Shipwreck of St. Paul, Lond. 1848; also Conybeare and Howson's Life of St. Paul, ii, 533).

(2.) As was generally allowed, the ship's direction of drift would be toward the coast of Malta, on the right-hand side of the wind, and would be blown by the wind toward the north-east.

(3.) A ship drifting in this direction to the place traditionally known as St. Paul's Bay, would come to that spot on the coast without touching any other part of the island previously. The coast, in fact, trends from south-eastward to north-east, and is seen on consulting any map or chart of Malta.

(4.) On Koura Point, which is the south-eastern extremity of the bay, there must infallibly have been breakers, with the wind blowing from the north-east. Now the alarm was certainly caused by breakers, for it took place in the night (ver. 27), and it does not appear that the passengers were at first aware of the danger which became sensible to the quick ear of the "sailors." (5.) Yet the vessel did not strike; and this corresponds with the position of the point, which would be some little distance on the port side, or to the left of the vessel. (6.) Off this point of the coast, there are several shoals are twenty fathoms deep (ver. 29), and a little farther, in the direction of the supposed drift, they are fifteen fathoms (ver. 28).

(7.) Though the danger was imminent, we shall find from examining the chart that there would still be time to anchor (ver. 29) before striking on the rocks ahead.

(8.) With bad holding-ground there would have been great risk of the ship dragging her anchors. But the bottom of St. Paul's Bay is remarkably tenacious. In Purdy's Sailing Directions (p. 180) it is said of it that "while the cables hold there is no danger, as the an-

chor will never start." (9.) The other geographical char-

acteristics of the place are in harmony with the narra-

tive, which describes the crew as having been on board, and the vessel was a sandy or muddy beach (εἰς τὸν ἑαυτὸν αἰγαλὸν, ver. 39), and which states that the bow of the ship was held fast in the shore, while the stern was exposed to the action of the waves (ver. 41). For particularly we must refer to the work (mentioned below) of Mr. Smith, an expert in shipwreck. Also the place of the coast where the event is of most detail is of considerable interest—viz. that, as the ship took the ground, the place was observed to be ξυῖανος, i. e. a connection was noticed between two apparently separate pieces of water. We shall see, on looking at the chart, that this would be the case. The small island of Salmoneetta would at first appear on the right of Malta itself; but the passage would open on the right.
as the vessel passed to the place of shipwreck. (11.)
Malta is in the track of ships between Alexandria and
Puteoli; and this corresponds with the fact that the
"Castor and Pollux," an Alexandrian vessel which ulti-
mately conveyed St. Paul to Italy, had wintered in the
island (Acts xxvii, 11). (12.) Finally, the course pur-
sued in this conclusion of the voyage, first to Syracuse
and then to Rhegium, contributes a last link to the
chain of arguments by which we prove that Melita is
Malta.

2. Objections to Malta.—The case is established to
demonstration. Still it may be worth while to notice
one or two objections. It is said, in reference to xxvii,
27, that the wreck took place in the Adriatic or Gulf
of Venice. It is urged that a well-known island like Malta
could not have been unrecognised (xxvii, 39), nor its
inhabitants called "barbarous" (xxviii, 2). And as
regards the occurrence recorded in xxviii, 3, stress is laid
on the facts that Malta has no poisonous serpents, and
hardly any wood. To these objections we reply at once
that it is not in the track between Alexandria and
Puteoli; that it would not be natural to proceed
from it to Rome by means of a voyage embracing Syra-
cuse; and that the soundings on its shore do not agree
with what is recorded in the Acts.

3. History of the Controversy.—An amusing passage
in Olearius's Table Talk (p. 185) is worth noticing as
the last echo of what is now an extinct controversy.
The question has been set at rest forever by Mr. Smith,
of Jordan Hill, in his Voyage and Shipwreck of St. Paul,
the first published work in which it was thoroughly in-
vestigated from a sailor's point of view. It had, how-
ever, been previously treated in the same manner, and
with the same results, by admiral Penrose, and copious
notes from his MSS. are given in The Life and Epistles
of St. Paul. In that work (2d ed. p. 426, note) are given
the names of some of those who carried on the controve-
sery in the last century. The ringleader on the Adri-
atic side of the question, not unnaturally, was padre
Georgi, a Benedictine monk connected with the Venet-
ian or Austrian Meleto, and his Paulus Nauprygos
is extremely curious. He was, however, not the first to
speak out on the evidence. We find it, at a much
erlier period, in a Byzantine writer, Const. Porphyrogen.
De Adm. Imp. (c. 56, vol. iii, p. 164, of the Bonn ed.).

II. Description and History of the Locality.—In this
portion we chiefly use the statements found in Kitto's
Cyclopædias, a. d. —1. The immediate Scene.—The name of
St. Paul's Bay has been given to the place where the
shipwreck is supposed to have taken place. This, the
sacred historian says, was at "a certain creek with a
shore," i.e., a seemingly practicable shore, on which they
pursued, if possible, to strand the vessel, as their only
apparent chance to escape being broken on the rocks.
In attempting this the ship seems to have struck and
gone to pieces on the rocky headland at the entrance of
the creek. This agrees very well with St. Paul's Bay,
much more so than with any other creek of the island.
This bay is a deep inlet on the north side of the island, being
the last indentation of the coast but one from the west-
The extremity of the island. It is about two miles deep, by one mile broad. The harbor which it forms is very unsafe at some distance from the shore, although there is good anchorage in the middle for light vessels. The most dangerous part is the western headland at the entrance of the bay, particularly as there is close to it a small island (Salamone), and a still smaller islet (Salmonetta), the currents and shoals around which are particularly dangerous in stormy weather. It was usually supposed that the vessel struck at this point. From this place the ancient capital of Malta (now Citta Vecchia, Old City) is distinctly seen at the distance of about five miles; and on looking towards the bay from the top of the church on the summit of the hill whereon the city stands, it is evident that the people of the town might easily from this spot have perceived in the morning that a wreck had taken place; and this is a circumstance which throws a fresh light on some of the circumstances of the deeply interesting transactions which ensued. See SHIPWRECK.

2. The Island in General.—The island of Malta lies in the Mediterranean, about sixty miles south from Cape Passaro, in Sicily. It is about seventeen miles in length, and nine or ten in breadth. Near it, on the west, is a smaller island, called Gozo, the ancient Gaula. Malta has no mountains or high hills, and makes no figure from the sea. It is naturally a barren rock, but has been made in parts abundantly fertile by the industry and toil of man. It was famous for its honey and fruits, for its cotton-fabrics, for excellent building-stone, and for a well-known breed of dogs. A few years before St. Paul's visit, corsairs from his native province of Cilicia made Melita a frequent resort; and through subsequent periods of its history, Vandal and Arabian, it was often associated with piracy. The Christianity, however, introduced by Paul was never extinct. Melita, from its position in the Mediterranean, and from the excellence of its harbors, has always been important both in commerce and war. The island was first colonized by the Phoenicians (hence the term "barbaran," that is, neither Greek nor Roman, used in the sacred narrative, Acts xxviii, 1), from whom it was taken by the Greek colonists in Sicily, about B.C. 736: but the Carthaginians began to dispute its possession about B.C. 528, and eventually became entire masters of it. The Phoenician language, in a corrupted form, continued to be spoken there in St. Paul's day (Genius, Vernich 2s. ed. Sprache, Leips. 1810). From the Carthaginians it passed to the Romans in the Second Punic War, B.C. 242, who treated the inhabitants well, making Melita a municipium, and allowing the people to be governed by their own laws. The government was administered by a proprator, who depended upon the pretor of Sicily; and this office appears to have been held by Publius when Paul was on the island (Acts xxviii. 7). Its chief officer (under the governor of Sicily) appears from inscriptions to have had the special title of προτος Μελαιαμος, or Primus Meliensemum, and this is the very phrase which Luke uses (xxviii. 7). Mr. Smith could not find these

![Coin of Melita.](image)

*(This view is taken from a point at the back of the bay, near the castle. The island shown as shutting in the bay is Salmonetta.)*
inscriptions. There seems, however, no reason whatever to doubt their authenticity (see Bochart, Opera, i, 522; Abel, Descr. Melit., p. 146, appended to the last volume of the Antiquities of Graevius; and Bück, Corp. Iac., iii, 5754.). On the division of the Roman empire, Melita belonged to the western portion; but having, in A.D. 655, become the territory of the Vandals by a violent assault, it was by them restored afterwards to the empire of the East. About the end of the 9th century the island was taken from the Greeks by the Arabs, who made it a dependency upon Sicily, which was also in their possession. The Arabs have left the impress of their aspect, language, and many other institutions upon the present inhabitants, whose dialect is to this day perfectly intelligible to the Arabsians and to the Moors of Africa. Malta was taken from the Arabs by the Normans in A.D. 1090, and afterwards underwent other changes till A.D. 1530, when Charles V., who had annexed it to his empire, transferred it to the Knights of St. John of Jerusalem, whom the Turks had recently dispossessed of Rhodes. Under the knights it became a flourishing state, and was the scene of their greatest glory and most signal exploits (see Porter, Malta and its Knights, Lond. 1872.). The institution having become unsuited to modern times, the Order of St. John of Jerusalem, commonly called Knights of Malta, adopted a new form of government, and Malta was surrendered to the French under Bonaparte when on his way to Egypt in 1798. From them it was retaken by the English with the concurrence and assistance of the natives; and it was to have been restored to the Knights of Malta by the stipulations of the treaty of Amiens; but the French, by the interference of the British order (composed mostly of Frenchmen) could be obtained, the English retained it in their hands; and this necessary interposition of the treaty was the ostensible ground of the war which only ended with the battle of Waterlo., the island is still in the hands of the English, and the present government remodelled to meet the wishes of the numerous inhabitants. It has recently become the actual seat of an Anglican bishopric, which, however, takes its title from Gibraltar out of deference to the existence of the Catholic bishopric of Malta. See, in addition to the works above cited, P. Caro, Origine della Fea in Malta (Milan, 1789); Carsentia, De apothesi Pauli in Melita (Lubeck, 1754); L de Boelgeling, Malte ancienne et moderne (Par. 1809); Bartlett's Overland Route (Lond. 1851), p. 8-118; Smith's Dict. of Class. Geogr. s. v. Melita; McColloch's Gazet. s. v. Malta; also the observations and travels cited by Engelmann, Bibl. Sacra, vol. iv, Sect. i (Vienna, 1848); and monograph, cited by Volbeding, Index Progr., p. 84. See Paul.

Melito or Sardis, bishop of the place after which he is named, and a writer of considerable eminence, flourished in the 2d century. So little is known of his personal history that it cannot be determined at what date he was elevated to the episcopacy, though he probably held the bishopric when the controversy arose at Laodicea respecting the observance of Easter, which caused him to write a book on the subject. This took place under Marcus Aurelius, to whom Melito presented an Apology for Christianity, according to Eusebius, in his Chronicon, in A.D. 160-170. In this apology (which, recently re-discovered in a Syrian translation and placed in the British Museum, was lately [1866] rendered into English by the celebrated Cureton) Christianity is described as a philosophy that had indeed originated among the barbarians, but had attained to a flourishing condition under the Roman empire, to the benefit of which it greatly contributed. According to a fragment preserved by Eusebius, he beseeches the emperor "to examine the accusations which were brought against the Christians, and to stop the persecution by revoking the edict which he had published against them. He represents to him that the Roman empire was so far from being injured or weakened by Chris- tianity that its foundation was more firmly established and its bounds considerably enlarged since that religion had taken footing in it. He puts him in mind that the Christian religion had been persecuted by none but the worst emperors, such as Nero and Domitian; that Hadrian and Antoninus had granted privileges in its favor, and that he hoped from his clemency and goodness that they should obtain the same protection of their lives and property; and finally, that it was by the means of Tertullian (in a work now lost, but which Jerome cites), Melito was regarded as a prophet by many of his contemporaries. The Church of Rome commemorates him as a saint April 1. From a passage in Origen, quoted by Theodoret (Quiest. in Genesis, c. 20), Melito appears to have been that great man Scylus some author who had to write in support of that doctrine. This as- sertion of Origen is supported by the testimony of Gren- nadius of Messalia (Lib. Dogm. Eccles, c. 4); and Tillemont, though unwilling to allow this, admits that the early Church may possibly have been withheld from honors by his appointment on account of this imputation, or else on account of the ascription to him of the book De Transitu Beatae Virginis. The names of Arianus and of Sardinius given him by Jerome designate rather his see than his birthplace. Polycy- rates of Epheus, a somewhat later writer, in a letter to Arius, mentions him as an author. It is not to be taken in the literal sense, but rather indicates only that he remained faithful to his vow of chastity. As to the particulars of the death of Melito, scarcely anything is known. Polycrates, in a letter addressed to pope Victor (A.D. 190), says, "What shall I say of Melito, who, in the space of three days, all guided by the gifts of the Holy Spirit? who was interred at Sardis, where he waits the resurrection and the judgment." From this it may be inferred that he had died some time previous to the date of this letter at Sardis, the place of his interment. Melito was especially skilled in the litera- ture of the Old Testament, and was one of the most skilled in the use of the研古, and it is not surprising to find that he is the author of the following list of Melito's works: Περι τοιά τάγα ἐν ου, περι τοια ποροφορών, περι κυριακά, περι ψυχών ανδρών, περι πλαστών, περι ἕπεκατο χιττορωτῆς, περι ψυχής καὶ σώματος, περι λοιπών, περι ἄλογων, περι τίτων καὶ γενώσιμων χρωτων, περι προφητείας, περι βασιλείας, περὶ ταπείνων καὶ τῆς ἀποκάλυψεως Ἰωάννου, περὶ ιησού, προς το ἀνωτάτων Θεοῦ, προς Ἀνωτάτων βιβλίων, ἐκλογάς, περὶ σαρκωμένου Χριστοῦ, ἀνάμισον, Ἀλόγος καὶ τό πάθος. Although these works are lost, the testimony of the fathers remains to inform us how the early church received their contents. Eusebius mentions a number of important fragments of Melito's works; some others are found in the works of other ecclesiastical writers. The best collection of these fragments is found in Rouh., Religieuse Sacra (Oxford, 1814, 8vo.), i. 109. Dom Pitra published several fragments in the Epistollogia Syla- nenus. Fragments of his works, found preserved in a Syriac translation, are now stored in the library of the British Museum. Cureton has translated some; others have been published in Kito's Journal of Sacred Litera- ture, vol. xvi. A satire against monks was published in France under the title Apocalypsis de Melito. MELITONIANS

MELON

Mello, Guillaume de, an ascetic French author, a native of Nantes, flourished in the latter half of the 17th century. He was canon of the collegiate church of Notre Dame at Nantes. He notes in his book, taken from the Latin of Cardinal Bellarmine (Nantes, 1666, 4to) De l'âme à Dieu par les degrés de Créatures, taken from the Latin of cardinal Bellarmine (Nantes, 1666, 4to):—Le Devoir des Pasteurs, translated from the Latin of Bartheremi des Martyr (Paris, 1672, 12mo):—Les divines Opérations de Jésus (Paris, 1673, 12mo):—Le Prédicateur tennas de France (Paris, 1685, 4 vols. in 8o). His works are anonymous. It is believed that Mello is also the author of a Vie des Saints (Paris, 1688 & 4 vols. 8vo).

Melody (μουσική, μουσική), a song or music, of the voice, Isa. ii. 3 ("we praise," Ps. lxxxi. 2; xcxi. 5), or of an instrument, Amos v. 23; metaphorically, a song of the land, i.e. its "best fruits," Gen. xxiii. 11; τὰς σάρας, to strike, i.e. to sound a musical chord, Isa. xxiii. 13, elsewhere where "play" = ἑλλυνί, Eph. v. 19, elsewhere "singing" is strictly a musical science, the pleasing variation between notes of a different pitch in the same measure, in distinction from harmo, the accord of sounds between the different parts; but in general terms it is synonymous with music or sweetness of sound. See Music.

Melon (only in the plur. μελόντα, abbatichim, from μελόν, according to Gesenius by transposition for μελανόν, to cook; but perhaps rather a foreign word; Sept. likewise πίτευμα, Vulg. pepone) occurs only in Num. xi. 5, where the murmuring Israelites say, "We remember the fish which we did eat in Egypt, the cucumbers and the melons," etc. The etymology of this term is evident from the kindred word butik used for the melon generally by the Arabs (Abul. p. 52; 54; Rheas. De temp. p. 56; Abul. Am. ii, 65), whence the Spanish butíces, and French pastèques. The Mishna, however, distinguishes two kinds of melons, Ecclesiastes i. 6, and Josephus, Antiq. i. 4, 5, distinguishes this term from watermelons (Αρχαῖος ὁ λιθαριός) which is the singular (Chelidius, i. 8; Eusebius, iii. 3) undoubtedly in the sense of muskmelon, a signification which all the versions (Onkelos, Syr., Arab., and Samar.) have affixed to it. A similar distinction prevails among the Arabs, who call the watermelon butik-khindi, or Indian melon. The muskmelon is called in Persian khurfzah, and in Hindit kharifzah. It is probably a native of the Persian region, whence it has been carried south into India, and north into Europe, the Indian being a slight corruption of the Persian name. As the Arabian authors append yaduk as the Greek name of butik, it is more than probable that this is intended for πίτευμα, especially for the description in the mishna of the melon that is in Dioscorides. By Galen it was called Melopepo, from melo and pepo, the former from being roundish in form, like the apple. The melon is supposed to have been the πίτευμα of Theophrastus, and the πίτευμα of Hippocrates. It was known to the Romans, and cultivated by Columella, with the assistance of some precaution at cold times of the year. It is said to have been introduced into England about the year 1520, and was called muskmelon to distinguish it from the pumpkin, which was then usually called melon. All travelers in Eastern countries have borne testimony to the refreshment and delight they have experienced from the fruit of the melon (Hasselaerquist, Trav. p. 528; Bellon, Observ. ii, 75; Joliffe, Trav. p. 231; Tournefort, iii, 311; Chardin, iii, 380; Soninii, ii, 316, 328). Alpinus speaks of their very general use, under the title Batech, by the Egyptians (Rerum Aegypt. Hist.i. 17). He also describes in the same chapter the kind of melon called Abbadiari, which, according to De Sacz, is oblong, tapering at both ends, but thick in the middle (De Planit. Aegypti, tab. xii); but Forskål applies this name also to the Chate (which is separately described by Alpinus, and a figure given by him at tab. xii), and says it is the commonest of all fruits in Egypt, and is cultivated in all their fields,
and that many prepare from it a very grateful drink (Flora Ägyptico-Arabica, p. 168). The Chate is a
villous plant with trailing stems, leaves roundish, bluntly
angled, and toothed; the fruit pilose, elliptical, and ta-
ering at both ends (Alpin. L. c. p. 64). Hasselquist
calls this the “Egyptian melon” and “queen of cucum-
ers,” and says that it grows only in the fertile soil
round Cairo; that the fruit is a little watery, and the
flesh almost of the same substance as that of the melon,
sweet and cool. “This the grandees and Europeans
in Egypt eat as the most pleasant fruit they find, and
that from which they have the least to apprehend. It
is the most excellent fruit of this tribe of any yet known”
(Hasselquist, Travels, p. 258). These plants, though
known to the Greeks, are not natives of Europe, but of
Eastern countries, whence they must have been intro-
duced into Greece. They probably may be traced to
Syria or Egypt, whence other cultivated plants, as well
as civilization, have travelled westwards. In Egypt
they formed a portion of the food of the people at the
very early period when the Israelites were led by Moses
from its rich cultivation into the midst of the desert.
The melon, the watermelon, and several others of the
Cucurbiteae, are mentioned by Wilkinson (Thebes, p.
212: Ancient Egyptians, iv, 62) as still cultivated there,
and are described as being sown in the middle of De-
cember, and cut, the melons in ninety and the cucum-
bers in sixty days.

It is not necessary to exclude from the generic term
abaticus in the above passage the watermelon (Cucurbita
oioifolia), which is clearly distinguished by Alpinus as
cultivated in Egypt, and called by names similar to the
above. Serapion, according to Sprengel (Comment. in
Orientali Watermelon.

Dioscor. ii, 162) restricts the Arabic Batik to the water-
melon. It is mentioned by Forskål, and its properties
described by Hasselquist. Though resembling the other
kinds very considerably in its properties, it is very dif-
ferent from them in its deeply-cut leaves. The plant
is hairy, with trailing cirrhiform stems. Hasselquist
says that it is cultivated on the banks of the Nile, in the
rich clayey earth which subsides during the inund-
ation, and serves the “Egyptians for meat, drink, and
physic. It is eaten in abundance, during the season,
even by the richer sort of the people; but the common
people, on whom Providence hath bestowed nothing but
poverty and patience, scarcely eat anything but these,
and account this the best time of the year, as they are
obliged to put up with worse at other seasons of the
year” (Travels, p. 250).

The common melon (Cucumis melo) is cultivated in
the same places and ripens at the same time with the
watermelon, but the fruit in Egypt is not so delicious
(see Somnini’s Travels, ii, 328); the poor in Egypt
do not eat this melon. “A traveller in the East,” says
Kitto (note on Numb. xi, 5), “who collects the intense
greatness which a gift of a slice of melon inspired while
journeying over the hot and dry plains, will readily
comprehend the regret with which the Hebrews in the
Arabian Desert looked back upon the melons of Egypt.”

For further details, see Ol. Celsius, De Melonis
Ægyptiis (Lugd. 1726), and Hierobot. i, 556 sq.; Sal-
ford. Hist. of Egypt; c. 35; Ross. Homol. Myth. Egypt.,
ii, 241 sq.; Thomson, Land and Book, ii, 261; Tris-
tram, Nat. Hist. of the Bible, p. 468.

Melugin, Thomas Maddin, a minister of the Method-
ist Episcopal Church, South, was born near Covington,
Ky., Sept. 17, 1838; in 1853 he was converted, and
joined the above Church; was licensed to preach in
August, 1861, and in November following was admitted
to the Memphis Conference on trial, and sent to La
Grange Circuit; in 1863 he was transferred to Randolph
Circuit; in 1865 to Huntington Circuit, where his health
failed, and he was compelled to leave the work. In 1864 he received
a supernumerary relation, in which he was assigned to
Randolph Circuit, and in 1865 to Covington Station,
where he remained until his death, April 2, 1866. Mr.
Melugin was ever devoted to his work, and in his last
illness exemplified the power of the Christian’s faith.
See Minutes of the M. E. Church, South, 1866.

Melville, Andrew, one of Scotland’s celebrated
characters, the most eminent worker in the “Kirk” next
to John Knox himself, and denominated by Anglican
churchmen “the father of Scottish Presbyterian” (Step-
en, i, 258; compare, however, Hetherington, p. 78, col.
1), was born Aug. 1, 1544. He was the youngest of the
four sons of Richard Melville of Baldovly, a small estate
on the banks of the South Esk, near Montrose. He had
the misfortune to lose both his parents when only about
two years old, his father falling at the battle of Pinkie
in 1547, and his mother dying in the course of the same
year: and the education of young Andrew devolved upon
his eldest brother, who was minister of the parish of
Maritoun after the establishment of the Refor-
mation in 1560. Even as a child Andrew distin-
guished himself by the quickness of his capacity, and,
though a delicate boy, it was determined that he should
have all the advantages the schools of his day could af-
ford him. At the age of fourteen he was removed from the
grammar-school of Montrose, where he had been for
some time, to St. Mary’s College, in the University of
St. Andrew’s. Here he studied for four years most de-
votedly, and, upon the completion of the curriculum,
bore away the reputation of being “the best philoso-
pher, poet, and Grecian of any young master in the
land.” We are told that John Douglas, who was at that
time rector of St. Andrew’s, showed Andrew Melville
much marked attention, and that the old rector was so
much pleased with his shrewdness and accuracy of ob-
servation, that, on parting with him, Douglas exclaimed,
"My silly fatherless and motherless boy, it's ill to wit what God may make of thee yet." Anxious to continue his studies under the guidance of master minds, he determined to go abroad, and take his place at the foot of the learned of other lands. First among the high-schools of that day figured Paris, and thither he now directed his steps. He was only a boy of nineteen, but he had the purposes of a man, and without the loss of a moment, he made haste to reach Paris, and recommenced his studies at a higher level. After a two-year's stay he proceeded to Ptoiers, to devote some time to the study of civil law, not, however, for the purpose of preparing for the legal profession, but only as a source of discipline "connected with a complete course of education."

Melville had gone to Poitiers, as he imagined, a perfect stranger, but his reputation as a scholar had reached the place long before he made his actual debut, and he was greeted with the offer of a professorship at the higher school which he had intended to enter as a student. For three years he labored at the College of St. Marcecn with most marked success, at the same time, however, adhering steadfast to the chief intention of his visit, viz. the study of civil law. In 1567 the renewed political disturbances obliged him to quit France. He retired to Geneva, and by the exertions of Beza the chair of humanity, which had been to be then vacant, in the academy of that place, was secured for him. Andrew Melville had been the first to hold the chair of political and civil law in the University of Geneva, and religiously, and Geneva was a scene to which his mind often recurred in after-life. It was there he made that progress in Oriental learning for which he became so distinguished. There also he enjoyed the society of some of the best and most learned men of the age; but above all it was the exercise of the love and practice of the Scriptural and religious freedom which had now become to him his chief delight and comfort in life. It was during this period of Melville's residence in Geneva that the "scourge of bishops," by any Episcopalian, and there seems every reason for the opinion that Melville was really the first Scotchman to press the interests of Presbyterianism. There is one thing certain, however, that even though Melville did not come determined to overthrow the church of his parents country, he certainly did determine to set the game--the regent's proposals, which, if Melville had acceded to them, "might have enabled that crafty statesman [Morton] to rivet securely the fetters with which he was striving to bind the Church, instead of being mightily instrumental in wrenching them asunder" (Hetherington, p. 76, col. 2). Melville's intrepidity was often very remarkable. On one occasion, when threatened by Morton in a menacing way, few who were acquainted with the regent's temper could bear without apprehension, Melville replied, "Tush, man! threaten your couriers so. It is the same to me whether I rot in the air or in the ground; and I have lived out of your country as well as in it. Let God be praised; you can neither hang nor exile his truth!"

In March, 1576, Melville had an opportunity to publicly press his reforming schemes. He was at this time a member of the General Assembly, and his name was included in a committee appointed to confer with the government on the subject of the liberty of conscience. The Assembly was at this time directed to prepare a scheme of ecclesiastical administration to be submitted to a general assembly. In 1578 his labors were finally crowned with success. He presided this year over the assembly, and had the pleasure to take the vote approving the second book of Discipline, from that period the Church of Scotland and the established church in England were united. Other matters to which the attention of the General Assembly was at this time directed was the reformation and improvement of the universities. Here Melville also took a leading part. The high state of learning and discipline to which the University of Glasgow had been raised by him and the community of educators in the other colleges, had become an object of public notoriety, and it was necessary that measures be taken for reforming and remodelling them. A new theological school was agreed upon for St. Andrew's, and it was resolved to translate Melville thither. At the end of the year 1578 he was installed principal of St. Mary's College, in the University of Edinburgh. In this new position he distinguished himself by his usual zeal and ability. Besides giving lectures on theology, he taught the Hebrew, Chaldee, Syrian, and rabbinical languages, and his prelections were attended not only by young students in unusual numbers, but also by several masters of the University, for whom it was, however arduous and multifarious, could not prevent him from continuing an active worker for the interests of the Church, even in the pulpit. Immediately after his removal to St. Andrew's, Melville began to perform
divine service, and he also took a share of the other ministerial duties of the parish. His gratuitous labors were highly gratifying to the people in general, but the freedom and fidelity with which he reproved vice exposed him to the resentment of several leading individuals, and the most atrocious calumnies against Melville were conveyed to the king, whose mind was predisposed to receive any insinuation that his desire to his disappointment in 1822, when Melville was sent to the General Assembly, and was by that body honored with the office of moderator. In this prominent place he had many opportunities to advocate the interests of his pet plans on ecclesiastical government. But even here matters did not rest. He was involved in a struggle before, and in his sight, he boldly inveighed against the tyrannical measures of the court, and against those who had brought into the country the "bluidy guillie" of absolute power. This fearless charge, which the assembly had applauded, and had seconded by a written remonstrance, intrusted to Melville for presentation at court, led to a citation before the privy council for high treason, and, though the crime was not proved, he was sentenced to imprisonment for contempt of court, as he had refused to appear, maintaining that whatever a preacher might say in the pulpit, even if it should be called treason, he was not bound to answer for it in a civil court until he had been tried in an ecclesiastical court. Apprehensive that his life was really in danger, he set out for London, and did not return to the North till the faction of Arran was dismissed in the year following. After being reinstated in his office at St. Andrew's, Melville and his nephew took an active part in the proceedings of the Synod of Fife (q.v.), which terminated in the excommunication of Archbishop Adamson, for having dictated and defended the laws subversive of ecclesiastical discipline. When Adamson was relaxed from censure, and restored to his see, Melville was charged to retire to the north of the Tay, and was not allowed to return to his college until he had reluctantly consented to gratify one of the king's menial servants by renewing a lease, to the great diminution of the rental. Not long afterwards, the king, accompanied by Du Barts, the poet, on a visit to St. Andrew's, had an opportunity of hearing from Melville a most spirited and learned, though extemporaneous, refutation of an elaborate lecture by Adamson in favor of his views of royal prerogative, and, upon the decease of Adamson in 1592, Melville had the pleasure of seeing the passage of an act of Parliament ratifying the government of the Church by general assemblies, provincial synods, presbyteries, and kirk sessions, and explaining away the papists, and most of the acts of the year 1584—the black acts, as they were usually called. This important action is considered to this day as the legal foundation of the Presbyterian government, and it was regarded by Melville as an ample reward for his laborious efforts. The king, however, was not sincere in favor of these measures, and secretly displayed a strong desire to make the "Kirk" a mere tool of political power, or to restore episcopacy. Melville strenuously resisted every such attempt, whether made in an open or clandestine form.

In 1596 a very favorable opportunity seemed to present itself for the court to effect its purposes. A tumult had taken place at Edinburgh on December 16, and this opportunity was seized by the court as a handle for the purpose of effecting a change in the constitution of the Church. Melville, and the Synod of Fife, and many leading clergymen, protested. To reach the Synod, Melville was selected as the highest man of a deputation to the king. Upon this occasion Melville displayed the same intrepidity of character that he had exhibited on meeting Morton while in the regency. King James seemed to be displeased with the Protestants, and reminded Melville that he was his vasal. "Sirrah," retorted Melville, "ye are God's silly vasal; there are two kings and two kingdoms in Scotland: there is king James, the head of the commonwealth; and there is Christ Jesus, the king of the Church, whose subject James the Sixth is, and of whose kingdom he is not a king, nor a lord, nor a head, but a member." It is not to be wondered at that such plain speaking met the displeasure of the man who had a peculiar liking for stragglers, or who was accustomed to look upon the works of darkness as a sort of sport. As a result, the general assembly was summoned by the king to meet at Perth; and as it was composed chiefly of ministers from the north, who were studiously infected with prejudices against their southern brethren, the adherents of Melville were left in the minority. But the next assembly was to be held at Edinburgh, and it was quite as tractable, and it became quite clear to king James that in this way he would not succeed in annihilating, nor even lessening, Melville's ascendancy. An opportunity, however, was not long wanting for such a nefarious attempt. A royal visitation of the university was determined upon, and king James went to St. Andrew's in person, where, after searching in vain for matter of accusation against Melville, it was ordained that all professors of theology or philosophy, not being actual pastors, should thenceforth be precluded from sitting in sessions, presbyteries, synods, or assemblies, and from teaching in congregations. When the assembly met at Dunfermline, Melville had withdrawn, and was standing the restrictions under which he had just been placed; but, when his name was called, king James objected, and declared that he would not permit any business to be done until Melville had withdrawn. Melville defended himself, and boldly told the king that the objection was invalid; to prevent difficulty, however, he was prevailed upon to withdraw under protest. Preparation was now made for restoring the order of bishops, and the first approach to this measure was to induce the commissioners of the General Assembly to solicit that the ministers and elders of the Church might be represented in Parliament. A week afterwards, Melville, writing to the king, said: "I will be the third estate, and asserting the right of such ministers as should be advanced to the episcopal dignity to the same legislative privileges which had been enjoyed by the former prelates. The next conference, held at Falkland, Melville attended, and there, in presence of his majesty, maintained his sentiments with his accustomed fearlessness and vehemence, and the king judged it prudent to refer all the matters which were still intended to be adjusted to an assembly which met at Montrose in March, 1600. Melville appeared as a commissioner from his presbytery, and, though by the king's objections, he was not to have his seat, his counsel was frequently listened to, and he was able to bring about the resolution of his brethren; and the assembly was with great difficulty prevailed upon to adopt the scheme of the court, under certain modifications. In 1601 Melville, nothing daunted by the fierce opposition of his royal master, attended the assembly at burnt island. Melville's conduct was grossly misrepresented, and James, incensed by the perseverance of his subject, immediately set out for St. Andrew's, and there, without even the sanction of his privy council, issued a lettre de cachet, charging Melville to confine himself within the walls of the college; the royal mandamus decreasing, at the same time, "if he fail and do in the contrary, that he shall be incontinent thereafter, denounced rebel, and put to the law, and all his movable goods escheat to his highness's use for his contention." The king's conduct towards the Church from this time forward we have already treated in detail in the article James I (q.v.). James's accession to the English throne brought to Melville a permit enlarging his circle of activity to within six miles of the college, and three congratulatory poems, which he had written for the occasion, seemed even to have established peace between the two combatants. But in 1606, however, the war broke out anew, and this time it ended only with the removal
of the sturdy reformer. In 1604 and in 1605, Melville had sorely provoked the king by his activity against the royal measures. In 1606 Melville was selected to represent Morocco, and the king, with a keen eye to the matter, sent him to the island of Barbary, where he was captured and held for ransom. He was finally ransomed in 1607.

Melville, Henry B., an eminent English divine and pulpit orator, was born at Pendennis Castle, Cornwall, Sept. 14, 1800; was educated at St. Peter's College, Cambridge, graduated B.A. in 1821, and soon after became a fellow and tutor; later he determined to take holy orders, and was appointed minister of Camden Chapel, Camberwell, London; in 1843 he made principal of East India College, Haileybury; in 1846 he accepted the appointment as chaplain to the Tower of London, and incumbent of the church within its precincts; about 1848 he was elected to the Golden Lectureship of St. Margaret's, Lothbury; in 1858 he became chaplain to the queen, and in 1856 canon of St. Paul's; in 1863 rector of Barnes and rural dean. He died in London Feb. 9, 1871. A number of Mr. Melville's Lectures and Sermons were published, many of them without his consent (1846, 1846, 1850, 1851, 1855); they have also been reprinted in this country. Also see, "Voices of the Year: Readings for the Sundays and Holidays through the Year (1855, 2 vols.)—Golden Counsels: Permanence to a Christian Life (1857)"; and other works.

No other clergyman of the English Church during the present century has had the reputation for eloquence and rhetorical finish in his discourses which Mr. Melville retained to the last. His sermons were very carefully and elaborately written, and delivered with great earnestness and fervor. If there was fault anywhere, it was in the superabundance of his imagery, and his more than Oriental wealth of style."

Melville, James, an eminent Scotch scholar and divine, was born in 1556. He was professor of Hebrew and Oriental languages in the University of St. Andrew's in 1580, minister of Anstrutherwerter in 1586, and subsequently of Kilrenny. He died in 1614. Mr. Melville was a zealous advocate of Presbytery. He was the author of Ad Jacobum I Ecclesin Sociorum Libelli supplexi (1645), and his Autobiography and Diary (1556-1610). See Dr. M'Crie's Life of Andrew Melville; Blackwood's Magazine, xvi, 356.

Melzar (Heb. mel'zar; מְלָצָר, "mélazar"); prob. from the Pers. master of wine, i.e. chief butler; so Bohlen, Symbol, p. 22; others, treasurer); the title rather than the name of an officer in the Babylonic court (as in the margin, "steward," but Sept. ἀμπόριος, on account of the Hebrew, Vulg. Mælazar), being that of the person who had charge of the diet of the Hebrew youths in training for promotion as magi (Dan. i, 11, 16; comp. Lengerke, Stuart, Comment, ad loc.). "The melzar was subordinate to the 'master of the eunuchs,' his office was to superintend the preparation of the young; he thus combined the duties of the Greek παιδαγωγός and προειστής, and more nearly resembles our 'tutor' than any other officer. As to the origin of the term, there is some doubt; it is generally regarded as of Persian origin, the words mal fari giving the sense of 'head of the head.' First (Lex. s. v.) suggests its connection with the Hebrew melazar, 'to guard.'"

—Member (in the pl. מְלָצָר, pst. mel'zarim, forms, Job xvii, 7; μελαρά, parte, i.e. limbs) properly denotes a part of the natural body (1 Cor. xii, 25)—figuratively, sensual affection, like a body consisting of many members (Rom. vii, 23); also true believers, members of
MEMENTO MORI

70

MEMORY

Christ's mystical body, as forming one society or body, of which Christ is the head (Eph. iv. 25).

MEMENTO MORI — remember death. It was God himself who first gave this admonition to fallen Adam (Gen. iii, 19). Such admonitions we find in the Old and New Testaments, and that very frequently, with a view to remind us constantly of the final day, of the end of life. Philip, king of Macedon, it is said, ordered his attendant to remind him of his death every morning by saying, "King, thou art a mortal being; live in the thought of death." Human beings are but too apt to forget the "Memento mori" when called to high places of honor. An exception, however, was a certain general who, when holding his triumphal processions, had a servant advance to him and cry out repeatedly, "Do not forget that you are a mortal man." We should be mindful that every one of us is but a mortal being. Even to this day the sinister thought of this oppressive upon the pope at his coronation, when the master of the ceremony advances toward the holy father with a silver staff, on which is fastened a tuft of oakum; this is lighted by a candle borne by a clerk who bends his knee, and, holding up the burning oakum, exclaims, "Holy father, be reminded that all earthly existence will be extinguished like this tuft of oakum.

On another occasion the Romanists furnish in their liturgy, so especially solemn on Ash Wednesday, where the sentence occurs, "Memento homo, quia pulvis es, et in pulverem revertetur." There are two ecclesiastical orders, the Carthusians and Trappists, whose members, on meeting a person who is about to die, do say "Memento mori." The Trappists always keep in their gardens an open grave, surely a good warning and constant reminder of the uncertainty of earthly existence. See DEATH.

Mennling, Hans or Jan, a celebrated Flemish painter, was born at Constantz in 1439, according to Dr. Boisserée, but other authorities, among whom may be cited Mrs. Heaton, assert positively that his birthplace was Bruges, and that he was born in 1495. There was for a long time a fierce controversy as to the painter's name, some writers insisting that it should be written Heemling or Hemmdeynck, and that he was of German origin; there is, however, very little reason for doubting that Mennling was the real name of the painter whose works adorn the Chapel of St. John at Bruges. There is but little information which can be trusted in the lives of Bruges were entered (which fact is also given to prove that he was born in Bruges), and, upon recovering, painted, from gratitude at his kind treatment, the beautiful picture of Sylvi Zambeth. There are a number of works of art in this hospital by Mennling, prominent among which is the history, in minute figures, of St. Ursula, the virgin saint of Cologne, and her companions, exquisitely painted in oil in many compartments, upon a relic case of Gothic design, known as La Châsse de St. Ursule. Mennling painted also during his stay at this hospital the Adoration of the Magi, the large altar-piece of the Marriage of St. Catharina, the Madonna and Child, and a Deacon from the Cross. Nine pictures by Mennling are in the Munich Gallery, among which the greatest are, Israelites collecting Manna, St. Christopher carrying the infant Christ, Abraham and Melchizedek, the Sezure of Christ in the Garden, a Statue of Herode, and Fount of the Joy and Sab- rous of the Virgin, and the Journey of the three Kings of the East. Rathgeber enumerates over one hundred works which are attributed to Mennling, but few of them, however, can be authenticated. He also decorated mis- sals and other books of Church service, one of which is in the Library of St. Mark at Venice. Mennling proba- bly died in the year 1499, as an authentic document preserved in the records of the town of Bruges, dated in 1498, in thanks to the late Mme. Hanse. See Mrs. Heaton, Masterpieces of Fémish Art (Lond. 1869, 4to); Kugler's Hand-Book of Painting, transl. by Waagen (Lond. 1860, 2 vols. 12mo); Mrs. Jameson, Legends of the Madonna, p. 19, 89, 105, 202, 304.

Memmi, Simon, an eminent Sienese painter, was born in 1285. Vasari says he was a pupil of Giotto; Lanzi, however, classes him as a school of the Sienese of Pietro Mino. He was a close imitator of the style of Giotto, whom he approached to Rome. After his master's death he painted a Virgin in the portico of St. Peter, also two figures of St. Paul and St. Peter upon the wall between the arches of the portico on the outer side. He then returned to Siena, where he was appointed by the Signoria to paint one of the panels of their palace in fresco, the subject being a Virgin, with many figures around her. He painted three other pictures in the same palace, one of which, an Annunciation, was afterwards removed to the gallery of the Ufizzi. The other represented the Virgin holding the Child in her arms, and was destroyed by the earthquake of 1798. He was invited to Florence by the general of the Augustines, where he painted a very remarkable Crucifixion. Vasari says, "In this painting the thieves on the cross are seen expiring, the soul of the repentant thief being joyfully borne to heaven by angels, while that of the impudent thief, accompanied by devils, and roughly dragged by these demoniacs to the torments of hell" (Lives of the Painters, i, 184). He also painted three of the walls of the chapter-house of Santa Maria Novella. On the first wall, over the entrance, is the Life of San Domenico; on that which is nearest the church the Betrayal of the Apostle; on the other, the Murder of the Doves, and the Visitation of the Virgin, with an extraordinary number of figures. He died before its completion at Avignnon, in July, 1444. See Vasari, Lives of the Painters, transl. by Foster (Lond. 1860, 5 vols. 8vo), i, 181; Lanzi's History of Painting, transl. by Roscoe (Lond. 1847, 3 vols. 8vo), i, 278; Mrs. Jameson, Legends of the Madonna (Lond. 1857, 8vo), p. 172, 278.

Memb'ius, Quintus (Kěvōs Mi yüjos), one of the Roman ambassadors sent to the Jews by Lyons (2 Macc. xi, 34) about B.C. 168-2. See MAnnius.

Memorial is the name (1) of a prayer of obligation; (2) the prayer in the order of the communion beginning "O Lord and heavenly Father," which follows the communion of the faithful. (3) The tomb of a church, or a church dedicated to his memory. (3) The commemoration of a concurrent lesser festival by the use of its collect. (4) Exequies, an office for the dead said by the priest in the 14th century in England.

Memory, that faculty of the mind which enables us to recall past impressions, whether of external facts or internal thoughts. The external facts may be divided into creations of the fancy, matters acquired by learning, in short, to anything, actual or imaginary, which has previously occupied the mind. It is the great mental storehouse of knowledge. The clearness of the impression so recalled depends, other things being equal, upon the strength and vividness of the original memory, and upon the degree of attention given to the object of it at the time. Other conditions are, chiefly, length of interval since the first impression, frequency of its reiteration, variety of intervening and confusing impressions, etc. There are two accessory ideas usually included in the definition of memory.
MEMPHIS

namely, the power of retaining as well as recalling previous impressions, and as it is always a fact that associations are more vivid than impressions recalled relate to the past. But both these are logically involved in the definition above given; for the power of retention is only indicated and measured by the facility or ability of recalling, and the past character of the thing remembered is implied in its being re-called rather than conceived, perceived, or originated. Memory is thus a definite act, which serves as the exponent or index of the faculty by virtue of which it is performed; and the power itself is estimated and characterized according to the ease, rapidity and completeness of the function. Memory can hardly be said to be voluntary, yet the will may assist it indirectly. The memory of a single impression depends upon what is called the association of ideas, i.e., the connection in which the impression was first made; and this furnishes the link for retrieving it. This association differs greatly in different minds, and, indeed, with almost every occasion. By attentively fixing the mind upon something connected with the matter sought to be recalled, the train of thought may often be recovered; yet, when it does at last recur, it is spontaneous. Hence memory has been distinguished into simple remembrance, or passive memory without effort, and recollection, or active memory accompanied by a mental endeavor. Memory is thus a double act, which serves as a unifying link and a means of uniting and command the two. Where the valley of Upper Egypt is about to open into the plain it is about five miles broad. On the east, this valley is bounded almost by the river's brink by the light yellow limestone mountains which slope abruptly to the narrow slip of fertile land. On the west, a broad surface of cultivation extends to the low edge of the Great Desert, upon which rise, like landmarks, the long series of Memphite pyramids. The valley is perfectly flat, except where a village stands on the mound of some ancient town, and uneven but by the long groves of date-palms which extend along the river, and the smaller groups of the villages. The Nile occupies the middle of the great volume of water, and to the west, not far beneath the Libyan range, is the great canal called the Bahr Yasaf, or "Sea of Joseph." The scene is beautiful from the contrast of its colors, the delicate tints of the bare desert-mountains or hills bright with the light of an Egyptian sun, and the tender green of the fields, for a great part of the year, except when the Nile spreads its inundating waters from desert to desert, or when the harvest is yellow with such plenteous ears as Pharaoh saw in his dream. The beauty is enhanced by the recollection that here stood that capital of Egypt which was in times very distant a guardian of ancient tradition, that here, as those pyramids—which travelers in all ages have mocked at—were raised to attest, the doctrine of a future state was firmly believed and handed down till revelation gave it its true significance; and that there many of the great events of sacred history have taken place, countless many as chief personages they have wondered at, which in the days of Abraham were the work of an older and stronger generation. But for the pyramids it would now be difficult to ascertain the precise site of Memphis, and the pyramids, extending for twenty miles, do not minutely assist us. No lofty mounds, as at Bubastis and Saïs, mark the place of the great city; no splendid temples, as at Thebes, enable us to recall its magnificence. The valley between the Libyan Desert and the Nile is flat and unmarked by standing columns, or even, as at neighbouring Heliopolis, by a solitary obelisk. Happily a fallen colossal statue and some trifling remains near by, as Edfu, share the Edfu bamboo whose sacred resort, if we may judge from the inundation, show us where stood the chief temple of Memphis, and doubtless the most ancient part of the city, near the modern village of Mit-Rahineh (fully Miûet Râbinik; comp. Robinson, Researches, i, 40, 41). This central position is in the valley very near the present west bank of the river, and three miles from the
MEMPHIS

The climate of Memphis may be inferred from that of the modern Cairo — about ten miles to the north — which is the most equable that Egypt affords. The city was said to have had a circumference of about nineteen miles (Diod. Sic. i, 50), and the houses or inhabited quarters, as was usual in great cities of antiquity, were interspersed with numerous gardens and public areas.

The building of Memphis is associated with tradition with a stupendous work of art, which has permanently changed the course of the Nile and the face of the Delta. Before the time of Menes the river, emerging from the upper valley into the neck of the Delta, bent its course westward, or the Nile, to determine its limits, or to decide whether the different quarters mentioned in the hieroglyphic inscriptions were portions of one connected city; or, again, whether the Memphis known to classical writers was smaller than the old capital, a central part of it, from which the later additions have, in a time of decay, been gradually separated. In the inscriptions we find three quarters distinguished: The "White Wall," mentioned by the classical writers (Ἄρεως τοίχος), has the same name in hieroglyphics, σεβεθ-ήτ (Brugsch, ut sup. i, 120, 234, 235; p. 1 tab. xv, Nos. 1091-1094; tab. xiii). That Memphis is meant in the name of the nome appears not only from the circumstance that Memphis was the capital of the Memphitic Nome, but also from the occurrence of ἡ-πατα-κα or ἡ-κα-πτα, as the equivalent of σεβεθ-ήτ in the name of the nome (Brugsch, ibid. i, tab. xv; i, 1; ii, 1, etc., and Νομεν αου δεν νενε νειγε, p. 1). The White Wall is put in the nome-name for Memphis itself, probably as the oldest part of the city. Herodotus mentions the White Wall as the citadel of Memphis, for he relates that it held a garrison of 120,000 Persians (iii, 91), and he also speaks of it by the name of the Citadel simply (ὁ τοίχος, p. 13, 14). Thucydides speaks of the White Wall as the third, and, as we may infer, the strongest part of Memphis, but he does not give the names of the other two parts (i, 104). The Scoliast remarks that Memphis had three walls, and that whereas the others were of brick, the third, or White Wall, was of stone (ad loc.). No doubt the commentator had in his mind Greek towns surrounded by more than a single wall, and did not know that Egyptian towns were rarely if ever walled. But his idea of the origin of the name white, as applied to the citadel of Memphis, is very probably correct. The Egyptian forts known to us are of crude brick; therefore a stone fort, very possible in a city like Memphis, famous for its great works in ma- sonry, would receive a name denoting its peculiarity. It is noticeable that the monuments mention two other quarters, "The two regions of life" (Brugsch, ibid. i, 236, 237, Nos. 1107 sqq., tab. xili, xliii), and Ammi or Per-Ammi (ibid. p. 257, No. 1114 a, tab. xliii).

III. History.—1. The foundation of the city is assigned to Menes, the first king of Egypt, head of the first dynasty (Herod. ii, 99). The situation, as already ob- served, is admirable for a capital of the whole country, and it was probably chosen with that object. It would at once command the Delta and hold the key of Upper Egypt, controlling the commerce of the Nile, defended upon the west by the Libyan mountains and desert, and on the east by the river and its artificial embankments.
The environs of Memphis presented cultivated groves of the acacia-tree, of whose wood were made the plans and masts of boats, the handles of offensive weapons of war, and various articles of furniture (Wilkinson, iii, 92, 168).

Sir Gardner Wilkinson observes, "The dikes of Menes were probably near the modern Kafr el-Eyuat, forty miles south of Mit-Rahbee, where the Nile takes a convex bend and makes the chief town of Eqypt the city of the east point. No traces of previous direction of its course continued) run immediately below the Libyan mountains, and over the site of Memphis. Calculating from the outside of Memphis, this bend agrees exactly with the hundred stadia, or scarcely eleven and a half English miles—Mit-Rahbee being about 11 miles from the old city. No traces of these dikes (sic) are now seen" (Rawlinson's Herod. ii, 163, note 6). That the dike has been allowed to fall into neglect, and ultimately to disappear, may be accounted for by the gradual obliteration of the old bed, and the cessation of any necessity to keep the inundation from the site of Memphis, which, on the contrary, as the city contracted, became cultivable soil and required to be annually fertilized. But are we to suppose that Menes executed the great engineering works attributed to him? It is remarkable that the higher we advance towards the beginnings of Egyptian history, the more vast are the works of manual labor. The Lake Moris, probably excavated under the 6th dynasty, cast into the shade all later works of its or any other kind executed in Egypt. The chief pyramids, which, if reaching down to this time, can scarcely reach later, increase in importance as we go higher, the greatest being those of El-Gizeh, sepulchres of the earlier kings of the 4th dynasty. This state of things implies the existence of a large servile population gradually decreasing towards later times, and shows that Menes might well have diverted the course of the Nile. The digging of a new course seems doubtful, and it may be conjectured that the branch which became the main stream was already existent.

The mythological legend of the time of Menes is ascribed by Bunsen to "the amalgamation of the religion of Upper and Lower Egypt; religion having already united the two provinces before the power of the race of Thia in the Thebaïd extended itself to Memphis, and before the giant work of Menes converted the Delta from a desert, checked over with lakes and morasses, into a blooming garden." The political union of the two divisions of the country was effected by the builder of Memphis. "Menes founded the Empire of Egypt by raising the people who inhabited the valley of the Nile from a little provincial station to that of a historical nation; and it is still the boast of the Egyptians (Steph. ii, 819)."

2. It would appear from the fragments of Manetho's history that Memphis continued the seat of government of kings of all Egypt as late as the reign of Venerpes, the third successor of Menes. Athribis, the son and successor of Menes, built the palace there, and the king first mentioned built his palace near Cochome (Cory's Anno. Pers. ed. p. 94-97); pyramids are scarcely seen but at Memphis, and Cochome is probably the name of part of the Memphis necropolis, as will be noticed later. The 4th dynasty was of Memphis kings, the 2d and part of the 1st having probably lost the undivided rule of Egypt. The 4th dynasty, which succeeded about B.C. 2940, was the most powerful Memphis line, and under its earlier kings the pyramids of El-Gizhreh were built. It is probable that other Egyptian lines were tributary to this, which not only commanded all the resources of Egypt to the quarries of Syene on the southern border, but also worked the copper mines of the Sinai coast. Memphis was not at this early period a city any thing in contemporaneous with the 4th and 6th, the latter being Memphis house which continued the succession. At the close of the latter Memphis fell, according to the opinion of some, into the hands of the Shepherd kings, foreign strangers who, more or less, held Egypt for 600 years. At the beginning of the 18th dynasty we once more find hieroglyphic notices of Memphis after a silent period of some centuries. During that dynasty and its two successors, while the Hellenic empire lasted, Memphis was its second city, though, as the sovereigns were the Thebans, Thebes was the capital.

3. After the decline of the empire, we hear little of Memphis until the Persian period, when the provincial dynasties gave it a preference over Thebes as the chief seat of the Ptolemaic dynasty. The city, according to Ptolemy, was enfraged at the opposition he encountered at Memphis, committed many outrages upon the city. He killed the sacred Apis, and caused his priests to be scourged. "He opened the ancient sepulchres, and examined the bodies that were buried in them. He likewise went into the temple of Hadrian (Ptaḥ), and made great sport of the image. . . . He went also into the temple of the Cæbri, which it is unlawful for any one to enter except the priests, and, not only made sport of the images, but even burned them" (Herod. iii, 37). Memphis never recovered from the blow inflicted by Cambyses. With the Greek rule, indeed, its political importance somewhat rose, and while Thebes had dwindled to a thinly-populated collection of small towns, Memphis became the native capital, where the sovereigns were crowned by the Egyptian priests; but Alexandria gradually destroyed its power, and the policy of the Romans hastened its natural death.

4. At length, after the Arab conquest, the establishment of a succession of rival capitals, on the opposite bank of the Nile—El-Fustat, El-Askar, El-Katā-ē, and El-Kahireh, the later Cairo—drew away the remains of its population, and at last left nothing to mark the site of the ancient capital but ruins, which were long the quarters for any who wished for costly marble, massive columns, or mere blocks of stone for the numerous mosques of the Moslem seats of government. The Arabian physician, Abd-el-Latif, who visited Memphis in the 18th century, describes its ruins as then marvellous beyond description (see De Sacy's translation, cited by Bunsen, Egypt, p. 18). Abraham, in the 14th century, speaks of the remains of Memphis as immense; for the most part in a state of decay, though some sculptures of variegated stone still retained a remarkable freshness of color (Descrip. Egreg. ed. Michaelis, 1776). At length, so complete was the ruin of Memphis that for a long time its very site was lost. Pococke could find no trace of it. Recent explorations, especially those of Meers. Mariette and Linant, have brought to light many of its antiquities, which have been dispersed in the museums of Europe and America. Some specimens of sculpture from Memphis adorn the Egyptian Hall at the British Museum (Herod. ii, 83)." Scenes of this great city are in the Abbé Museum in New York. The dikes and canals of Memphis still form the basis of the system of irrigation for Lower Egypt; the insignificant village of Mit-Rahbee occupies nearly the centre of the ancient capital.

IV. Edifices, Ruins, and Monuments.—Of the buildings of Memphis, none remain above ground; the tombs of the neighboring necropolis alone attest its importance. It is, however, necessary to speak of those temples which ancient writers mention, and especially of such as are known by remaining fragments.

1. Herodotus states, on the authority of the priests, that Menes "built the temple of Hephastus, which stands within the city, a vast edifice, well worthy of mention" (ii, 99). The divinity whom Herodotus thus identifies with Hephastus was Ptah, "the creative power, the maker of all material things" (Wilkinson, in Rawlinson's Herod. ii, 299; Bunsen, Egypt, Book 1, 367, 384). This king was especially worshiped under different representations in different nomes; ordinarily as "a god holding before him with both hands the Nilometer, or emblem of stability, combined with the sign of life" (Bunsen, i, 382). But at Memphis his worship was so prominent that the primitive sanctuary of his temple was built by Menes: successive monarchs

VI.—9*
greatly enlarged and beautified the structure by the addition of courts, porches, and colossal ornaments. Herodotus and Diodorus describe several of these additions and enlargements; they therefore give a complete description of the temple, with measurements of its various dimensions (Herod. ii, 99, 101-108, 110, 121, 136, 158, 176; Diod. Sic. i, 45, 51, 62, 67). According to these authorities, Morius built the northern gateway; Sesastris erected in front of the temple colossal statues (varying from thirty to fifty feet in height) of Pharaoh, wife, and his four sons; Ramesses built the western gateway, and erected before it the colossal statues of Summer and Winter; Aschylus built the eastern gateway, which "in size and beauty far surpassed the other three"; Psammertichus built the southern gateway; and Amosis presented to the temple "a recumbent colossal statue five feet, two inches and a half in height, and twenty feet high." The period between Menes and Amosis, according to Brugsch, was 3871 years; according to Wilkinson only about 2100 years; but upon either calculation the temple, as it appeared to Strabo, was the growth of many centuries. Strabo (xvii, 807) describes this temple as "built in a very sumptuous manner, both as regards the size of the Naos and in other respects." The Dromos, or grand avenue leading to the temple of Ptah, was used for the celebration of bull-fights, a sport pictured in the tombs. But these fights were probably between animals alone—no captive or gladiator. A bull was led to the arena, and the bulls having been trained for the occasion, were brought face to face and goaded on by their masters, the prize being awarded to the owner of the victor. But though the bull was thus used for the sport of the people, he was the sacred animal of Memphis.

This chief temple was near the site of the modern village of Mit-Rahbneh. The only important vestige of this great temple, probably second only, if second, to that of Amen-ra at Thebes, now called the temple of El-Karnak, is a broken colossal statue of limestone representing Ramses II, which once stood, probably with a fellow that has been destroyed, before one of the propylas of the temple. (See cut, p. 72.) This statue, complete from the head to below the knees, is the finest Egyptian colossal known. It belongs to the British government, which has never yet spared the necessary funds for transporting it to England.

2. Near this temple was one of Apis, or Hapi, the celestial cow, in procession by a road with extraordinary honors at Memphis, from which the Israelites possibly took the idea of the golden calf. Apis was believed to be an incarnation of Osiris. The sacred bull was selected by certain outward symbols of the indwelling divinity; his color being black, with the exception of white spots of a peculiar form on his ears, his hairless head, and his hind legs. The temple of Apis was one of the most noted structures of Memphis. It stood opposite the southern portion of the temple of Ptah; and Psammertichus, who built that gateway, also erected in front of the sanctuary of Apis a magnificent colonnade, supported by colossal statues or Osiride pillars, such as may still be seen at the temple of Medinet Abu at Thebes (Herod. ii, 158). Through this colonnade the Apis was led with great pomp upon state occasions. Two stable adjoined the sacred vestibule (Strabo, xvii, 807).

The Serapeum, or temple of Serapis, or Osiriaphi, that is, Osiris-Apis, the ideal correspondent to the animal, lay in the desert to the westward, between the modern villages of Abû-Str and Sakkarah, though to the west of both. Strabo describes it as very much exposed to sand-drifts, and in his time partly buried by masses of sand heaped up by the wind (xvii, 807). The sacred cult and other symbols used in Memphis are supposed to have been used in this temple, the whole of which, like the Nile, were deposited in the temple of Serapis. Near this temple was the burial-place of the bulls Apis, a vast excavation, in which they were sepulchred in sarcophagi of stone in the most costly manner. Diodorus (i, 86) describes the magnificence with which a deceased Apis was interred and his successor installed at Memphis. The place appropriated to the burial of the sacred bulls was a gallery some 2000 feet in length by twenty-five feet in width, and two and a half in the height, without any provision for ventilation. The sculptors had already been opened. These catacombs of mummied bulls were approached from Memphis by a paved road, having colossal lions on either side.

3. At Memphis was the reputed burial-place of Isis (Diod. Sic. i, 22); it had also a temple to that "myriad-named" divinity, which Herodotus (i, 176) describes as "a vast temple, well worthy of note," but inferior to that consecrated to her in Bubiris, a chief city of her worship (ii, 59).

Herodotus describes a "beautiful and richly-ornamented enclosure," situated upon the south side of the temple of Ptah, which was sacred to Proteus, a native Memphitic king. Within this enclosure there was a temple to "the foreign Venus" (Astarte?), concerning which the historian narrates a myth connected with the Grecian Helen. In this enclosure was "the Tyrian camp" (ii, 112). A temple of Ra or Phre, the Sun, and a temple of the Cabiri, complete the enumeration of the sacred buildings at Memphis.

4. The necropolis of Memphis has escaped the destruction that has obliterated almost all traces of the city, partly from its being beyond the convenient reach of the inhabitants of the Moeslem capitals, partly from the unrivalled massive solidity of its chief edifices. This necropolis, consisting of pyramids, was on a scale of grandeur corresponding with the city itself. The "city of the pyramids" is a title of Memphis in the hieroglyphics upon the monuments. The great field or plain of the pyramids lies wholly upon the western bank of the Nile, and extends from Abû-Roehish, a little to the north-west of Cairo, to Meydûn, about forty miles to the south, and thence in a south-western direction about twenty-five miles farther, to the pyramids of Hawara and of Biahmû in the Fayum. Lepsius regards the "pyramids fields of Memphis" as most important testimony to the civilization of Egypt (Letters, Bohn, p. 25; also Chronologie der Aegypter, vol. i). These royal pyramids occupy eminences in the form of considerable tumuli or large monuments in the sand; while the less conspicuous tombs of public officers erected on the plain or excavated in the adjacent hills, gave to Memphis the pre-eminence which it enjoyed as "the haven of the blessed." The pyramids that belong to Memphis extend along the whole length of the Libyan range, and form four groups—those of El-Ghizieh, Abû-Str, Sakkarah, and Dahshûr—all so named from a neighboring town or village. The principal pyramids of El-Ghizieh—those called the First or Great, Second, and Third—are respectively the tombs of Khafu or Shufu, the Cheops of Herodotus and Sophis I of Manetho, of the 4th dynasty; of Khafra or Shafra, the Chephren (Herod.), of the 5th; and of Menkaures, Mycerinus or Mencheres of the 4th. The Great Pyramid has a base measuring 738 feet square, and a perpendicular height of 436 feet, having lost about twenty-five feet of its original height, which must have been at least 480 feet (Mr. Lane, in Mrs. Poole's Supplement to the Egyptian History, ii, 121, 125). It is of solid stone, except a low core of rock, and a very small space allowed for chambers and passages leading to them. The Second Pyramid is not far inferior to this in size. Next in order come the two stone pyramids of Dahshûr. The rest are much smaller. In the Dahshûr group are five cit of crudely brick, the only examples of Memphis necropoles. The whole number that can now be traced is upwards of thirty, but Lepsius supposed that anciently there were about sixty, including those south of Dahshûr, the last of which are as far as the Fayum, about sixty miles above the site
of Memphis by the course of the river. The principal pyramids in the Memphitic necropolis are twenty in number. They were built for the Pharaohs and their consorts. The pyramids of El-Ghitzeh, the three of Abu-Str, the nine of Sakkarah, and the four of Dahshur. The "pyramids" built by Venephe near Cochome may have been in the groups of Abu-Str, for the part of the necropolis where the Serapeum lay was called in Egyptian KERM-KA-KERM, also KERM-KERM, as Budge has shown, remarking on its probable identity with Cochome (ut zap, i, 240, Nos. 1121, 1122, 1123, tab. xiiii). The pyramids were tombs of kings, and possibly of members of royal families. Around them were the tombs of subjects, of which the oldest were probably in general contemporaneous with the king who raised each pyramid. The private tombs were either built upon the rock or excavated, wherever it presented a suitable face in which a grotto could be cut, and in either case the mummies were deposited in chambers at the foot of deep pits. Sometimes these pits were not guarded by the upper structure or grotto, though probably they were then originally protected by crude brick walls. A curious inquiry is suggested by the circumstance that the Egyptians localized in the neighborhood of Memphis those terrestrial scenes which they supposed to symbolize the geography of the hidden world, and that in these the Greeks found the first ideas of their own poetical form. The "gods of the rock" of the Philistines, "the Mene of the Acheronian Lake," this the captivating subject cannot be here pursued (see Bruschi, i, 240, 241, 242). See Pyramids.

V. Biblical Notices.—The references to Memphis in the Bible are wholly of the period of the kings. Many have thought that the land of Goshen lay not very far from this city, and that the Pharaohs who protected the Israelites, as well as their oppressors, ruled at Memphis. The indications of Scripture seem, however, to point to the valley through which ran the canal of the Red Sea, the Wadi-Tanur, the region of the present inhabitants of Egypt, as the old land of Goshen, and to Zoan, or Tanis, as the capital of the oppressors, if not also of the Pharaohs who protected the Israelites. A careful examination of the narrative of the events that preceded the Exodus seems indeed to put any city not in the easternmost portion of the Delta wholly out of the question. See Exodus.

It was in the time of the decline of the Israelish kingdom, and during the subsequent existence of that of Judah, that Memphis became important to the Hebrews. The Ethiopians of the 25th dynasty, or their Egyptian vassals of the 24th and 24th, probably, and the Sais, styled "the Merrimes," were the most important of the mercantile capital of Egypt. Hosea mentions Memphis only with Egypt, as the great city, predicting of the Israelitic fugitives, "Mizraim shall gather them up, Noph shall bury them" (ix, 6). Memphis, the city of the vast necropolis, where Osis and Anubis, gods of the dead, threatened to over-shadow the worship of the local divinity, Ptolemy, could not be more accurately characterized. No other city but Abidos was so much occupied with burial, and Abidos was far inferior in the extent of its necropolis. With the same force that personifies Memphis as the buryer of the unhappy fugitives, the prophet Nahum describes Thebes as walled and fortified by the sea (iii, 8), as the Nile had been called in ancient and modern times, for Thebes alone of the cities of Egypt lay on both sides of the river. See No-Amon, Isaiah, in the wonderful Burden of Egypt, which has been more marked and literally fulfilled than perhaps any other like it in the history of the world. The "Tanis" with the princes of Noph as evil advisers of Pharaoh and Egypt (xix, 13). Egypt was then weakly governed by the last Tanitic king of the 23rd dynasty, as ally or vassal of Tirisakah; and Memphis, as already remarked, was the political capital. In Jeremiah, Noph is spoken of with "Tahapanes," the frontier stronghold Daphne, as an enemy of Israel (xii, 15). It is difficult to explain the importance here given to Tahapanes, if Israel is not also an ally in Egypt which they should afterwards enter in their foreign flight was a city of enemies? In his prophecy of the overthrow of Pharaoh-Necho's army, the same prophet warms Migdol, Noph, and "Tahapanes" of the approach of the invader (xvi, 14), as if warning the capital and the frontiers alike. When Migdol and "Tahapanes" had fallen, or whatever other comments upon the eastern border, the Delta could not be defended. When Memphis was taken, not only the capital was in the hands of the enemy, but the frontier fort commanding the entrance of the valley of Upper Egypt had fallen. Later he says that "Noph shall be waste and desolate, without an inhabitant" (ver. 19), and so it is, while many other cities of that day yet flourish—as Hermopolis Parva and Sebennytos in the Delta, and Lycopolis, Latopolis, and Syene, in Upper Egypt; or still exist as villages, like Chemmis (Panopolis), Tentyra, and Hermomitis, in the latter division—It is doubtful if any village on the site of Memphis, once the most populous and the capital of Egypt, even preserves its name. Latest in time, Ezekiel prophesies the coming distress and final overthrow of Memphis. Egypt is to be filled with slain; the rivers are to be dried and the lands made waste; idols and false gods are to cease out of Noph; there is to be no prince of the land of Noph; and much more is said of the destruction of this city, and much is general, and refers to an invasion by Nebuchadnezzar. Noph, as by Hosea, is coupled with Egypt—the capital with the state. Then more particularly Pathros, Zoan, and No are to suffer; Sin and No again; and with more vivid distinctness the distresses of Sin, No, Noph, Aven, Pi-beseth, and "Tehaphnehes" are forecast, as if the prophet witnessed the advance of fire and sword, each city taken, its garrison and fighting citizens, "the young men," slain, and its fair buildings given over to the flames, as the invader marched upon Daphne, Pelusium, Tanis, Bubastis, and Heliopolis, until Memphis fell before him, and beyond Memphis Thebes alone offered resistance, and met with the like overthrow (xxx, 1—19). Perhaps these vivid images represent, by the force of repetition and their climatic-like arrangement, but one series of calamities: perhaps they represent three invasions—that of Nebuchadnezzar, of which we may expect history one day to tell us; that of Cambyses; and another of the most ruinous, that of Alexander. The minuteness with which the first and more particular prediction as to Memphis has been fulfilled is very noticeable. The images and idols of Noph have disappeared; when the site of almost every other ancient town of Egypt is marked by colyseum and statute, but one, and that fallen, with some ancient and neighbors, is found where once stood its greatest city.

VI. Literature.—The chief authorities on the subject of this article are Lepsius, Denkmaler aus Aegypten und Aethiopien; Bruschi, Geographische Inschriften; Col. Howard Vyse, Pyramids of Gizah, fol. plates, and 8vo text and plates; Sir J. G. Wilkinson, Modern Egypt and Thebes, and Hand-book to Egypt; and Mrs. Poole, Englishwoman in Egypt, where the topography and description of the necropolis and the pyramids are by Mr. Lane. See further, Fourmont, Description des Plaines d'Heliopol. et de Memphis (Par. 1758); Nebiouch, Trav. i, 101; Du Bois-Ayme, in the Description de l'Egypte, VIII, 203; de Frerichs, Ermer, ii, 38 sq.; also Gesenius, Thes. Heb. p. 812; Smith's Dict. of Class. Geogr. s. v. See Noph.

Mem'can (Heb. Mem'kan, `meg`Can, of unknown but prob. Persian origin; Sept. Myunting, Vulg. Mem'cam, the court of the king, temple, town of the counsellors of the court of Xerxes, and the one at whose suggestion Vashti was divorced (Esth.i, 14, 16, 21). B.C.483. They were 'wise men who knew the times' (skilled in the planets, according to Aben-Ezra), and appear to have formed a council of state; Josephus says that one of their offices was that of interpreting the laws
MEN

Men, The, are a class of persons who occupy a somewhat conspicuous place in the religious communities of Northern Scotland, chiefly in those parts of it where the Gaelic language prevails, as in Ross, Sutherland, and the upland districts of Inverness and Argyle. Large and undivided parishes, a scanty supply of the means of grace, patronage, and other causes peculiar to such localities, seem to have developed this abnormal class of self-appointed instructors and spiritual overseers, who sustain in the Church of Scotland a relation very similar to that of our lay-preachers. They are designated by the term "Men," by a title of esteem, in recognition of their superior natural abilities, and their attainments in religious knowledge and personal piety. There is no formal manner in which they pass into the rank or order of Men, further than the general estimation in which they are held by the people among whom they live, on account of their known superior gifts and religious experience. If they are considered to excel their neighbors in the exercises of prayer and exhortation, for which they have abundant opportunities at the lyke-wakes, which are still common in the far Highlands, and at the meetings for public worship, and are eagerly sought to frequent such meetings, and take part in these religious services, so as to meet with general approbation, they thus gradually gain a repute for godliness, and naturally glide into the order of "The Men."

There are oftentimes three or four "Men" in a parish; and as, on communion occasions, Friday is specially set apart for prayer and mutual exhortation, these lay-workers have then a public opportunity of exercising their gifts by engaging in prayer, and speaking on questions bearing on religious experience. This, in many parts of the Highlands, is considered as the great day of the week, aonsomasion, and is popularly called the "Men's day;" and, as there may be present twenty or thirty of these "Men" assembled from the surrounding parishes, the whole service of the day is, so to speak, left in their hands—only the minister of the parish usually presides, and sums up the opinions expressed on the subject under consideration. Many of the "Men" assume on these occasions a peculiar garb in the form of a large blue cloak; and in moving about from one community to another, they are treated with great respect, kindness, and hospitality. The influence which was thus acquired by the "Men" over the people was very powerful, and it was said that some of them grievously abused it. Yet there can be no doubt that, in many parishes in the Highlands, where the ministers have been careless and remiss in the performance of their duties, these lay-workers have often been useful in keeping spiritual religion alive. It is not to be wondered that the heads of some of them were turned, and that the honor in which they were held with the Free Church has been gradually on the wane. See Audl. Min. and Men of the Far North (1868), p. 142-262. (J. H. W.)

MEN OF UNDERSTANDING, a religious sect which seems to have been a branch of the Brethren and Sisters of the Free Spirit, has already been considered under the heading HOMINES INTELLIGENTES.

Menacho. See TALMUD.

Menae (or Messvoir), a part of the liturgy of the Eastern Church, containing all the changeable parts of the services used for the festival days of the Christian year. It is usually arranged in twelve volumes, one for every month, but the whole is sometimes compressed into three volumes. The Menae of the Eastern Church nearly answers to the Breviary of the Western Church, omitting, however, some portions of the services which the latter contains, and inserting others which are not in common. See Breviary, Breviary Ritu.; Neale, Eastern Church, p. 829. See Breviary.

Ménage, Matthew, a French theologian, was born about 1388, in Maine, near Angers. He studied at the University of Paris, and there received the degree of M.A. in 1408, and was called to the chair of philosophy after 1415. The success he obtained caused him to be elected vice-chancellor in 1418, and rector of the university in 1417. He afterwards established himself at Angers, where he taught theology. In the year 1422 he was sent by the Church of Angers, with Guy of Ver- sailles, to the Council of Basle, and by the council to pope Eugene IV at Florence. He did not return to Basle until 1431. In 1441 he received the functions of a theologian, and he died Nov. 16, 1446. His biography has been written by Gilles Ménage. See Hoefer, Nouv. Biog. Générale, s. v.

Ménaehmus (Heb. Menachem, מתנך, comforting [comp. Manaen, Acts xiii. 1]; Sept. Mevaia, Vulg. Manahem; Josephus, Maviniac), Ant. ix. 11, 1), the seventeenth separate king of Israel, who began to reign B.C. 789, and reigned ten years. He was the son of Gathas, and succeeded Josiah, and continued in the king of Zerubbabel. When he heard the news of the murder of that prince, and the usurpation of Shallum, he was at Tirzah, but immediately marched to Samaria, where Shallum had shut himself up, and slew him in that city. He then usurped the throne in his turn, and forthwith reduced Tiphah, which refused to acknowledge his rule. He adhered to the sin of Jeroboam, like the other kings of Israel. His general character is described by Josephus as rude and exceedingly cruel (Ant. ix. 11, 1.). The contemporary prophets, Hosea and Amos, have left a melancholy picture of the ungodliness, debauchery, and debasement of this king. Merania and Ewald add to their testimony some doubtful references to Isaiah and Zerubbabel (For the encounter with the Aseyrians, see below.) Menahem died in B.C. 750, leaving the throne to his son Pekahiah (2 Kings xv. 14—22). There are some peculiar circumstances in the narrative of his reign, in the discussion of which we follow the most recent elucidations. See ISRAEL, KINGDOM OF.

(1.) Ewald (Gesch. Isr. iii, 598), following the Sept., would translate the latter part of 2 Kings xv, 10, "And Kolobam (or Kebalaam) smote him, and slew him, and reigned in his stead." Ewald and Conze have both supposed that the king's existence a help to the interpretation of Zech. xi. 8; and he accounts for the silence of Scripture as to his end by saying that he may have thrown himself across the Jordan, and disappeared among the subjects of king Uzziah. It does not appear, however, how such a translation can be made to agree with the subsequent verses, by which one of the men of Zerubbabel slays him in the night, and the express description of Shallum's death (ver. 14) to Menahem. The nius excuses the translation of the Sept. by supposing that their MSS. may have been in a defective state, but ridicules the theory of Ewald. See Kings.

(2.) In the brief history of Menahem, his ferocious madness against his own countrymen, his treachery, and his flight, has been gradually on the wane. See Auld. Min. and Men of the Far North (1868), p. 142-262. (J. H. W.)
MENAHEM
than the remote Thapsacus on the Euphrates, the north-
est boundary (1 Kings iv, 24) of Solomon's dominions;
and certainly no other place bearing the name is men-
tioned in the Bible. Others suppose that it may have
been some town which Menahem took in his way as
he went from Tirzah to win a larger one known in the
scripture as Ptolemais Philadelphus (Josh. xviii, 8),
and that Menahem laid it waste when he returned
from Samaria to Tirzah (Thenus). No sufficient rea-
son appears for having recourse to such conjectures
where the plain text presents no insuperable difficulty.
The act, whether perpetrated at the beginning or the
end of Menahem's reign, was despicable, but it is inten-
tended to strike terror into the hearts of reluctant subjects
throughout the whole extent of dominion which he
claimed. A precedent for such cruelty might be found
in the border wars between Syria and Israel (2 Kings
viii, 12). It is a striking sign of the increasing degra-
dation of the land, that a king of Israel practiced upon
his subjects a brutality from the mere suggestion of
which the uncivilized Syrian usurper recoiled with
indignation. See TIPHAH.

(3.) But the most remarkable event in Menahem's
reign is the first appearance of a hostile force of Assy-
rians on the north-east frontier of Israel. King Pul, how-
ever, withdrew, having been converted from an enemy
into an ally by a timely gift of 1000 talents of silver,
which Menahem exacted by an assessment of fifty shek-
els a head on 60,000 Israelites. This was probably the
only choice left to him, as he had not that resource in
the Assyrian empire which the Temple at Jerusalem
availed themselves in similar emergencies. It seems,
perhaps, too much to infer from 1 Chron. v, 26 that Pul
also took away Israelitish captives. The name of Pul
(Sept. Phaloch or Phallos) appears, according to Rawlin-
son ('Bampton Lectures for 1859, Lect. iv, p. 135), in an
Assyrian inscription of a Niniveh king, as Phalushka,
who took tribute from Beth Kumi (= the house of
Omri = Samaria), as well as from Tyre, Sidon, Damas-
cus, Idumea, and Philistia; the king of Damascus is set
down as giving 2000 talents of silver, besides gold and
copper, but neither the name of Menahem, nor the
amount of his tribute, is stated in the inscription.
Rawlinson also says that in another inscription the name
of Menahem is given, probably by mistake of the stone-
cutter, as a tributary of Tiglath-pileser. See NINKHEM.

Menahem (ben-Zerach) of Estella, a Jewish
savant, was born in 1306 at Estella, whither his father
had fled after the expulsion of the Jews from France.
In 1326, six years after his marriage to the daughter of
Baudouin of Navarre, the rabbi of Estella, whose mas-
sacred occurred, in which his father, mother, and four
younger brothers were murdered, while he himself,
severely wounded, was left for dead. A soldier riding by,
late in the night, heard him groan, and lifted the unfor-
tunate Jew upon his horse, bound up his wounds, clothed
him, and secured a physician's care for him. Thus pre-
served, Menahem repaired to Toledo, and studied the
Talmud for two years. Thence he went to Alcala, where
he joined R. Joshua Abalesh in his studies. Upon
the death of the latter in 1550, Menahem succeeded as rueler
of the college, and held this place till 1588. Having
lost all his property during the civil war, Don Samuel
Ababael, of Seville, liberally supplied him during the
remainder of his life, which he spent at Toledo, where
he died in 1374. To this benefactor he dedicated his
book on Jewish rites and ceremonies, in 327 chapters,
titled Provisions for the Way, מזון לדרך (Ferrara, 1554).

Menahem of Merseburg, a rabbi of great dis-
tinction among Jewish scholars of the 14th century, and
of the representatives of truly German synagogal
teachers, flourished about 1360. He lived in the de-
plorable times, and because the literary remains of
this period were scanty, it was called the בֵּית הַלְּבָב יְשׂוֹא, "the
destitute generation." To the prominent literati of
that period, who left some monuments of their learning,
belongs Menahem of Merseburg, who wrote annotations
on Rabbinical decisions, entitled הָעָדָה הַמְּלָכָה, reprinted in

Menan, or rather Mainan (Μανᾶν [with much
variety of readings], of uncertain significance), a
person named as the son of Mattathah and father of Melea,
among the private descendants of David and ancestors
of Christ (Luke iii, 31); but of doubtful authenticity

Menandrians, one of the most ancient branches
of the Gnostics, received their name from their leader,
Menander. He was a Samaritan by birth, and is said
to have received instruction from Simon Magus. This
supposition is not well founded, however, and has arisen,
no doubt, from the mixture which existed, to some extent,
between his teachings and those of Simon, as well as
from the erroneous idea that all the Gnostic sects
sprung from the Simonians. Menander aspired to the
honor of being a Messiah, and, according to the tes-
imonies of Irenæus, Justin, and Tertullian, he pretended
to be one of the sons sent from the pleroma, or celestial
regions, to succor the souls that lay groaning under bod-
ily oppression and servitude, and to maintain them
against the violence and stratagems of the demons that
hold the reins of empire in this sublunary world.
One of the conditions of salvation was baptism in his
name, according to a peculiar form instituted by him.
He claimed also the power to make his followers immortal.
His daring pretensions and fanatical teachings should
cause him to be ranked as a lunatic rather than
the founder of a heretical sect. The influence of the
Menandrians continued through several minor sects until
some time in the 6th century. They were often con-
founded, by those not well informed on the subject, with
the origins of Gnosticism. See Gnosis, Gnostics, Hist.
Eccles. iii, 26.; iv, 22; Irenæus, Adv. haeres. i, 21; Justin
M., Apolog. i, 26; Schaff, Chr. Hist. i, 235; Gieseler, Eccles. Hist. i, 56; Mosheim, Commentary on Eccles. Hist.; Wetzler und Welte, Kirchen-Lexikon, vol. vi, s.v.; Walch, Hist. der Ketzerien, i, 185 sq., 276, 279; Schröck, Kirchen-Gesch. ii, 244. See also GNOSSIOS; MAGUS, SIMON.

Ménard, Claude, a French theologian, was born
at Angers in 1580. He began his career as a barrister,
and was made a lieutenant-general of the provostship.
Beginning oppressed in mind by the loss of his wife, he
forsook his calling, and intended to retire from the world.
His friends prevented his entering a cloister, but he
embraced the ecclesiastical profession, and devoted his
interest in monastic institutions by contributing to
the erection of several convents. He applied himself
to researches in the antiquities of his province with so
much success that his compatriot Ménage calls him "Le
père de l'histoire d'Anjou." He died Jan. 20, 1652.
He is noted for the following works: Extraits des
Livres de St. Augustin contre Julien (Paris, 1617, folio and
8vo) --- S. Hieronymi calendaris de Heresibus Judaorum
(ibid. 1617, 4to). Ménard published this history from a
Ménard, Nicolas Hugues, a French theologian, was born at Paris in 1585. Having finished his studies at the college of the cardinal Le Moine, Hugues Ménard joined the Benedictines in the Monastery of St. Denis, Feb. 3, 1608. He first devoted himself to preaching, and was very successful in the principal pulpits of Paris. Finding the discipline not sufficiently severe in the Abbey of St. Denis, he repaired to Verdun, to enter the reformed Monastery of St. Vanne. Later he taught rhetoric at Cluni, and finally went to St. Germain-des-Prés, where he terminated his laborious career. He was, in 1630, Martyrdom of four Benedictine monks at St. Bénédict (Paris, 1629, 8vo), a work that is still read:—Concordia Regularum, authore S. Benedicto, Anianam abbate, with notes and learned observations (Paris, 1628, 4to) — D. Gregorius papae, cognomento Magni, Liber Sacramentorum (Paris, 1642, 4to):—De unico Divino, Auctoritate S. Hieronymi Augustinianorum et Seraphicolorum, (Paris, 1643, 8vo), against the canon of Lanuoy:—S. Barabuse, apostoli, Epistola catholica (Paris, 1645, 4to), an epistle taken by H. Ménard from a MS. of Corbie, and published after his death by D'Achery. See Nicéon, Mémoires, xxii; Ellis Dupin, Bibli. des aut. eccles. du xviéme siècle: Histoire litt. de la Cong. de Saint-Maur. P-18.

Ménard, Quentin, a French prelate, was born at Flavigny, diocese of Autun, about the beginning of the 15th century. He was successively treasurer to the chapel of Dijon, provost of St. Omer, counsellor to the duke Philippe de Bourgogne, and his ambassador to the kings of France, England, and Germany. The letters of pope Eugenius IV, who afterwards promoted him to the metropolitan see of Besançon, bear the date Sept. 18, 1439. He made his entrance into that city Aug. 1, 1440. There was at that time no kingdom or republic whose administration was more difficult than that of the Church of Besançon. The archbishop pretended, by virtue of ancient titles, to be temporal lord of the city; but the citizens were armed with the right of self-government, reserved to themselves unqualified freedom, which they did not hesitate to defend at all times even at the point of the sword, so that between the archbishop and his people there was continual war. Quentin Ménard had just taken possession of his see as his procurator had arrested a citizen whom he accused of heresy, and caused to be condemned by the ecclesiastical judge. The citizens declared that this crime of heresy was only a pretext, and came to the archbishop's palace bringing a complaint which greatly resembled a menace. The latter was obliged to yield, blamed the conduct of his procurator, and restored liberty to the condemned heretic. Very soon other tumults arose. On the heights of Bréglise the archbishop possessed a castle, which overlooked and irritated the city of Besançon. A pretext offering itself, the citizens repaired to Bréglise, and entirely demolished not only the castle, but the adjacentolutely. The archbishop went to天文ur him, but they scarcely listened to him. He then retired to his castle of Gyl, with all his court, and hurled against the city a sentence of interdiction. The citizens of Besançon, however, were not superstitious enough to fear this punishment, and submitted without a murmur to the suffering inflicted by the resentment of the archbishop.

MENCUS

and refused to yield in order to obtain a repeal of the
interdict. Ménart proceeded to Rome, and invoked the
authority of the pope; the pope delegated the affair to a
cardinal, who even aggravated the sentence pronounced
upon the rebels. But the people carried the cause be-
tween the tribunal of the emperor, and the latter sent a
message to the effect that if one sovereign of the
province of Quebec of one and the same family, the
zeal of the people, would have gone so far as to
be opposed in at least one case. At last, in April, 1450, this
great lawsuit was terminated, Ménart coming forth victor.
The castle of Bréguille was reconstructed at the expense of the
citizens of Quebec, which then had the honor of being the
first city of Canada. It was in 1604, in the 3rd year of the
reign of Louis XIII., that Ménart died of old age in the
city and to his palace, where he died, Dec. 18, 1604. See

Mencius (or Meng), one of the two great Chinese
sages (the other being Confucius), is supposed by Legge
(whose statements we condense) to have been born about
the year 372 B.C.; and to have died not many years after
the death of Confucius, and to have been contemporary with Plato,
Aristotle, Zeno, Epicurus, and Democritus. His name,
like that of his great exemplar, was Latinized by the
Jews from Meng-tse, as that of the earlier sage was from
Koong-foo, to conform to which the latter wor-
thy should have been called Meng-foo-tse, or Meng-foo-
tsch. The name being, however, transferred to him,
one hundred family names of the empire are all mono-
syllables. In transferring the names Koong and Meng
into Latin or English, foreigners have fallen into the
ludicrous mistake of confounding name and title, and
making a single polysyllabic surname out of the two—as
if the name of Confucius were Tung-foo, or Tung-foo-
john, or Tung-foo-lorolut of lord Bute! Men often owe their greatness to their mothers. The
mother of Meng is celebrated throughout China as a
model of feminine wisdom in family training. The first
home of her widowhood was near a cemetery, and her
little boy, with the instinctive imitiveness peculiar to
children, began to practice funeral ceremonies, and to per-
form Liliputian burial-rites. "This will never do," said
Madam Meng, "my son will grow up an undertaker,"
and she promptly removed to a house in the market-
place. Here the boy imitated the cries, disputes, and
chaffering of the buyers and sellers of mourners, and
answered, "said the watchful mother, "he will make only
a pedlar or an auctioneer," and again she removed and
took up her abode in the vicinity of a school. The
youth forthwith took to chanting lessons in concert with
the loud chorus peculiar to the Chinese school-room.
"This will do," said the prudent dame, "my son will
become a scholar," and she was not disappointed in her
forecasting. Nevertheless he was, like all boys, indif-
cent and careless, and we are told that, to quicken his
zeal and give him a striking lesson, his mother one day
surprised and alarmed him by suddenly cutting asunder
the web she was weaving. Upon his inquiring why
she did it, she replied that thus, by his idleness, he was
asundering the web of opportunity, and destroying
his prospects for life, just as she had destroyed the prod-
uct of the loom. The boy was affected, and gave great-
er diligence to his studies. These are all the glimpses
we have of philosopher Meng, until we meet him in
public life at forty years of age. He must have spent
his early years in diligent study of the classics, but how,
or under what masters, we are not informed. In his
writings he says, "Although I could not be a disciple of
Confucius myself, I have endeavored to cultivate my
character and knowledge by means of others who were.
Like his master Confucius, Mencius doubtless assumed
the office of a teacher—not a teacher or professor in our
Western sense, but a peripatetic advocate of morals, po-

itical philosophy, and good government—one to whom
youthful and perplexed inquirers resorted for counsel
and encouragement. In the times of Confucius and
Mencius, China was not a consolidated empire as at
present, but consisted of a number of states or provinces
under independent chiefs or kings. To the court
Mencius was an old friend of one of his predecessors of
the house of the K'ing, the Duci of Montreal, Hartung of
Cappel—who in their turn declared Quinten Ménart accused and guilty of rebellion.
At last, in April, 1450, this great lawsuit was termi-
nated, Ménart coming forth victor. The castle of
Bréguille was reconstructed at the expense of
the citizens of Quebec, which then had the honor of being
the first city of Canada. It was in 1604, in the 3rd
year of the reign of Louis XIII., that Ménart died of old age
in the city and to his palace, where he died, Dec. 18,
1604. See Dunod, *Hist. de l'Eglise de Besancon*, vol. i.;

character and knowledge by means of others who were.
Like his master Confucius, Mencius doubtless assumed
the office of a teacher—not a teacher or professor in our
Western sense, but a peripatetic advocate of morals, po-

MENCKE, CRIT. learned German divine, was born at Oldenburg, in Westphalia, in 1644. When a youth of seventeen, he left the parental home to seek further educational advantages than his native place could afford him at the large harbor of Bremen, and there he pursued the study of philosophy; he next removed to the University of Leipsic, where he was admitted master of arts in 1664. Thenceforth he continued his studies at the universities of Altdorf, Wittenberg, Utrecht, Leyden, and Kiel. Returning to Leipsic, he applied himself for some time to divinity and civil law. In 1668 he was chosen professor of morality in that university, and in 1671 took the degree of licentiate in divinity. He discharged the duties of his professorship with great emolument. In 1677 he was made president of the University. In 1707 he was five times rector of the University of Leipsic, and seven times dean of the faculty of philosophy. He published several works of his own, and edited many valuable productions of others. They are all, however, of a secular character. See Gen. Biog. Dict. a. v.; Biographie Universelle, s. v.

Mendesianae (or Mendianae), also known as Christians of St. John, are an Eastern religious sect of Christians, who appear to retain some New-Testament principles, tainted, however, very much with Jewish doctrines and customs, and even with many heathen practices and phases of religious opinion. See HEBREWBAPTISTS. They style themselves Mendes Yochanam, i.e. "the mendianae of Yochanan." Names. — The name מנדיאני, Mandeiy, derived from Manda da-Clay, מגדיר, the λογος της λογικης, word of life, is equivalent to ei λογος, in opposition to those holding different views, who are designated by them as λογιαται. But it is only among themselves they use that appellation; in public they call themselves Sobba (from the Arabic tasabbar), and allow themselves to be considered by the Mohammedans as the followers of the Saul-bad. This, however, is a usual name. In any case, it is said, took its rise from their habit of turning to the polar star when praying. The name of Christians of St. John was never assumed by them, and originated with travellers. Their most learned and distinguished men are called by them Nasbadeiy, נסבדיאן.

Sacred Books. — Most of their standard works, which might have given us authentic views of their principles, are in the Turkiy language. Many of the works now extant are only, 1. the נבידיאני נביאים, Siddra Rabbia, "the great book"; also called נביאים, Gesna, "the treasury." This is their principal work, and contains their doctrines, only in unconnected fragments, evidently the production of a number of different persons. It is divided into two parts, the first forming about two thirds of the whole, is written for the living, and is called נביאים, "the right;" the other, smaller, for the dead, is called נביאים, "the left," and contains an account of the death of Adam, as also the prayers to be used by the priests on the occasion of deaths and funerals. Norberg has given some information on that work under the title Liber Adami, which is quite improper, and which he probably took from Abraham Ecchelensis; his version also is full of errors arising from erroneous interpretation of the text, which he gives also incorrectly, so that this work can only be used with great caution. 2. נביאים יבון, "the book of souls;" it contains the prayers of the priests, and constitutes the liturgy, which every priest is to know by heart. 3. קדשנים. This contains the marriage ritual.

4. קדישיאים, in which are found the prayers for each day. 5. קדישיאים קדישים, prayers to be recited before the cross, both at home and in the church, but exclusively by the priests. 6. קדישיאים קדישים, a history of John the Baptist. 7. קדישיאים אחרי קדישיאים, a treatise on astrology. Aside from these they have formulas for
all kinds of sorcery, and amulets for sickness and other misfortunes which evil spirits may bring; these charms are used by all classes. Those against incurable diseases are called नृपसि, those against curable disorders नृपसि. According to Ignatius a Jesu, they also possess another work, entitled "Dianum," of which he gives an account; yet the characteristics he furnishes of it seem to apply equally to the Śidra ṛṣabha, and it is thought that the latter may be the work he refers to.

Brahma—Their religion, which is a singular mixture of the most opposite systems of antiquity, is very obscure and confused, the more so, as in the course of time, it underwent different and often contradictory modifications, which we find in their religious works. Another very perplexing feature of the system for those who study it is that the same deities or angels are sometimes designated by entirely different names, until it becomes almost impossible to establish their identity.

In a single abstract from the Śidra ṛṣabha (i, 130-236) we find no less than three conflicting accounts of the creation. They agree in placing at the beginning of all things नृपसि नृपसि, Pira ṛṣabha, "the great fruit," the नृपसि नृपसि लड़, Bego Pira ṛṣabha, "in the great fruit." This recalls the Orphic myth of a world's egg, containing the germ of all that exists. Norberg, in hispreface, remark 3, not being able to understand नृपसि, transformed it into नृपसि, which, in his Osmatonic, he explains "volucris, sc. Phoenix," and translates the preceding words "(fruit) Ferho per Ferho," which, in the Osmatonic, he explains by "Summu Numen per se extincta." At the same time with the great fruit was the नृपसि नृपसि मा, "Mama the Lord of Glory," and the नृपसि नृपसि ए, "the Ether of great brilliancy," which latter is the world, in which the Mana ṛṣabha reigns, and which contains the नृपसि नृपसि, the "great Jordan" (they call all rivers Jordans), which proceeds from him. Maha ṛṣabha finally called forth the "life," नृपसि (sc. नृपसि, "the first"). This accomplished the act of creation, and the Maha ṛṣabha at once went into the most absolute retirement, where he dwells invisible to all but the purest emanations, and the most pious among the Mendeans, who, after their death, are permitted, but only once, to contemplate the Almighty. As they are very superstitious, and not similar to the semigods of the Gnostics—stands the Chayé Kadmâyé, the "first life," which is therefore entitled to the first worship and adoration. Hence also it is, and not the Maha ṛṣabha, who is first invoked in all prayers, and with whose name every book begins. It is the Maha ṛṣabha under a variety of names sometimes by those applied to the Maha ṛṣabha, with whom it is occasionally confounded. Like him, it dwells in the pure, brilliant ether, which is considered as a world in itself, in which all that exists is pervaded by the waters of the fire of life, and is inhabited by numberless Uthr, नृपसि, "angels," who dwell there in eternal blessedness. From the Chayé Kadmâyé emanated first the Chayé Thiŋhag, नृपसि, the "second life," often called also गोज, and then the नृपसि मादन, Matd-d-de-Chayé. This is sometimes (ii, 208) called नृपसि, the "pure," yet is described as susceptible of impure thoughts: thus it attempted to usurp the place of the first life, and was on that account exiled from the pure ether into the world of being, separated from it by the नृपसि नृपसि (the Cabalistas call them गोज).

It is similar to Cain, while its younger brother, Matd-d-de-Chayé, represents Abel. It is called the father, master, and king of the Uthr, lord of the worlds, the beloved son, the good shepherd, the high-priest, the word of life, the लोग, the teacher and redeemer of mankind, who descended into hell and chained the devil:

he is, in short, the Christ of the Mendeans; and as the followers of our Saviour, so are they named after the theme of their faith. He dwells with the father, who is supposed to be sometimes Chayé Kadmâyé (comp. in the Cabala, जै, जै), the real revealer of himself, however, to humanity in his three sons, who are also called his brothers, नृपसि, नृपसि, and नृपसि (Abel, Seth, and Enoch). In another place it is said that Hebil alone is his son, Shephili his grandson, and Anush his great-grandson. Hebil, the most important among them, is almost equally venerated with the Mandá-de-Chayé, receives the same names, and is often confounded with him. He is generally named नृपसि.

Among the Uthr, "angels," who emanated from Chayé Thiŋhag, the first and most eminent is नृपसि, the "third life;" often also called नृपसि, Abathur. This is not the "buffalo," as erroneously asserted by Gesenius (in Ersch und Gruber, Ḥayyag. s. v. Zabier), but only has that name because of his being called also Ḥayṭj, "the father of the Uthr," नृपसि.

He is also called "the old, the hidden, the watcher." He sits at the limit of the world of light, where, at the door which leads to the middle and lower regions, and in a scale which he always holds in his hand, he weighs the deeds of the departed as they appear before him to gain admittance. Under him there was in the beginning an immense void, and at the bottom of it the troubled, black waters, नृपसि. As he looked down and saw his image reflected in it, arose नृपसि, who is also called Gabriel, and retains in part the nature of the dark waters from which he proceeded. He received from his father the mission to build the earth and to create man. Then he is remembered, and at times as having performed alone; at others, with the aid of the demons. When he had created Adam and Eve, he found himself unable to give them an upright posture, or to breathe the spirit into them. Hebil, Shephili, and Anush then interfered, and obtained from Chayé Kadmâyé (or took from Pethahil at his instigation) the spirit of Mana, and infused it into man, that he might not worship Pethahil as his creator. The latter was on that account exiled from the world of light by his father, and consigned to a place below, where he is to remain until the day of judgment. He will then be raised up by Hebil-Siva, and made king, and will be generally worshipped. The nether world consists of four entrances into hell, or limbo, each of which is governed by a king and queen. Then only comes the real kingdom of darkness, divided into three parts, governed by three old, single kings—Shedum, the grandson of darkness; Gia, the great; and Krun, or Karkum, "the great mountain of flesh," who, as the oldest and greatest among them, the first-born king of darkness, inhabits the lowest region. In the entrances to hell there is yet dirty, slimy water; in the real hell there is none, and Krun's kingdom consists only of dust and vacancy. In hell and its entrance there is no longer any bright ocean, but only an ocean of dirt, or busk, as the name Hebil-Siva (or Mandá-de-Chayé), sustained by the power of Maha ṛṣabha, descended into it, unravelled the mysteries of the lower regions, took all power from their kings, and closed the door of the different worlds. By subterfuge he brought out Ruchu, daughter of Kin, the queen of darkness, and prevented her return to the nether world. She then bore the worst of all devils, नर, the fire, i.e., the destroyer, whom Hebil-Siva, when in his zeal he sought to storm the worlds of light, threw into the black waters, bound, and surrounded with iron and seven golden walls. While Pethahil was occupied in the creation of the world and of man, Ruchu bore first seven, then twelve, and again five sons to the fire. These twenty-four sons were by Pethahil transplanted
years in piety and innocence. Then will the fire, also
called leviathan, destroy the earth and the other medium worlds,
as well as the nether worlds; their spirits will be
annihilated, and the universe become a realm of light.

Priesthood. — There are different degrees in their
priesthood. The lower class is called Shegapda, and forms a sort of medium between the clergy, properly
so called, and the laity. The members of it are actually but assistants, and are consacred to that office by the imposition of hands, and the
recital of a short formula at baptism. Many remain al-
ways in this subordinate position; if they desire to go
higher, which they are not permitted to do before they are
fifteen years of age, they must study diligently the
religious books and customs of their people, undergo a
strict trial for sixty days, and pass seven days and nights
awake and in prayer with a priest; if admitted, they
then become Tarmides, (probably for şolam), to
office they are consecrated by
seven priests. This is the true priestly order, which qualifies them for every ecclesiastical office. Those who
distinguish themselves by their science and conduct can
become ınba, which probably is equivalent to ınba,
Ezra i, 8; vii, 21, or "thesauriarius," he who pos-
sesses the great treasure in himself. It corresponds to
the office of high-priest or bishop, and requires only a
short probation, and the consecration by the ordinary
priest of the rank. His functions are only to consecrate others, and
to preside at marriages, which can, however, be legally
administered by the tarmides, without his participation.
A priest who officiates at the marriage of a woman not a
maiden, a widow, or a woman divorced from her hus-
band, has the right to perform afterwards any religi-
ous ceremony connected with marriages. On the right fore-
arm, "one cut off." Finally, the highest ecclesi-
asical dignity, similar to that of patriarch or pope, is that
of the ınba, "chief of the people," who is also con-
sidered as their civil chief. Their princes—when they
had princes—were to be at the same time their high-
priests, as they assert it was the case with Pharaoh.
At present they have none. Women are also allowed by
them to become members of the clergy: they must be
virgins to enter into the order of shegandani, but when they enter the order of tarmides they may at once
marry a priest of that order or of a higher.
They can in this manner arrive to the degree of Rēk Amma,
if their husband is invested with that title, for in no case can the woman have a higher title than her hus-
band. The official dress of the priests is pure white, it is
very simple, consists of long white linen garments, and a shirt of the same material tied with a white belt.
From both shoulders hangs a white stole, about the
width of the hand, extending down to the feet. They
wear a white cloth on their head, twisted like a tur-
ban, the end of which, about a yard in length, hangs
down on the left side in front. On the right fore-
arm they wear, during divine worship only, the ınba,
"crown," which consists of a piece of white linen, two
finger-lengths in breadth, sewed on three sides, and
which, when not in use, is put under the turban.
On the little finger of the right hand the tarmides wear a
gilt and the superior priests a golden seal-ring, bearing
the inscription "the name of the Judge Sīdūr," and carry an olive-branch in the left hand. They
must always be barefooted in exercising their func-
tions.

Houses of Worship. — The churches, which are only
intended for the use of the priests and their assistants,
the laymen remaining in the entry, are so small that
only two persons can stand in them at the same time.
Their roofs are supported by a single beam, repre-
sented by gable-roofs. They have no altar and no ornaments, only a few boards in the corners to put things on when
now commenced to write musical compositions of every form. At the early age of sixteen, he composed his first opera, the music of which is not only charming, but full of dramatic element. This composition shows what Mendelssohn might have accomplished in operatic music had he not left this field for a higher and nobler —that of sacred music. Another proof of his dramatic power is in his music to Shakespeare's *Midsummer Night's Dream*, which is regarded as one of his best efforts in dramatic music. In 1821 he composed his second opera, and finished one half of a third one, besides writing six symphonies, one quartet for the piano and strings, and six fugues, a cantata, a number of etudes, sonatas, and songs. At the age of twenty Mendelssohn visited England for the first time, and was there deeply influenced for the whole course of his after-life. He arrived in London in 1829, and, being known by reputation to the most eminent musicians, was most cordially received. At the first concert with the Philharmonic Society, his overture to *Midsummer Night's Dream* was most enthusiastically received by those who had not even heard his name. In the same year Mendelssohn visited Scotland, and was warmly welcomed by literary and musical societies fully able to appreciate his genius. He made an extended tour through the Highlands, being deeply impressed with the wild and romantic beauty of the old Caledonian music, which some years after gave rise to his celebrated Scotch symphony in A minor. His music to the Iles of Fingal also owes its origin to the impression made upon his mind by a visit to the Hebrides in 1829. The following year he visited Italy, and two years afterwards Paris. Later he revisited London, and from that time to the end of his life was a frequent sojourner there. He began to be even more appreciated in England than in his native country, and it became to him, as it were, the land of his adoption. Beethoven's *Egmont* overture Mendelssohn, says: "The mean calashes which were always at work against him in Berlin increased his dislike to that city, so much so as to induce him to leave it, as he then thought, forever." At Leipzig he accepted the conductorship of the celebrated Gewandhaus concerts, and remained there until 1844, when, induced by the invitation of the King of Prussia, he returned to Berlin.

His entrance upon his glorious career as a composer of sacred music may be ascribed to the committee of the Birmingham Festival, which called forth the oratorio of *St. Paul* for its festival of 1837. The impression which this composition made at Birmingham is described by the committee as triumphant. Mendelssohn composed his *Hymn of Praise*, written expressly for the Birmingham Festival, and performed under his direction. It is a work called a symphony cantata, of marvellous beauty. His third and last oratorio was also written for Birmingham, and, although he commenced it in 1837, it was only finished in time for the festival of 1846, and during these nine years he bestowed upon it his greatest care and attention. The first performance of it took place Aug. 26, 1846, he being the conductor. The enthusiasm was unabated, and it was universally pronounced his masterpiece, and the greatest oratorio since Händel brought out his Messiah. Although king Frederick William IV bestowed the greatest honors upon Mendelssohn, and offered him every inducement to stay in Berlin, yet he preferred Leipzig, and it was mostly there and in England that he devoted his time to further everything noble and true in art. Mendelssohn was also a diligent student of philosophy, history, and other sciences. His *Letters from Italy and Switzerland* (translated from the German by lady Wallace, London, 1862) bear evidence of his superior attainments, and may be regarded as a fine literary production. In the selection of a text for his oratorios he was very exact, and to the sacred music be ascribed as that in Mendelssohn's compositions, founded upon a scriptural text, not only love of music as an art, but also a genuine spirit of piety.
MENDELSSOHN 84 MENDELSSOHN

is revealed. No one could give more true and deeply felt expression than he did in his music to such passages as these: "As the hart pangs for cooling streams," "I waited for the Lord," "He, watching over Israel," "It is enough," etc. By the student and lover of sacred music Mendelssohn must ever be regarded as a shining star in the firmament. His study of the works of Bach, Händel, Mozart, or Beethoven, the great talent, exquisite taste, and depth of feeling which he displayed in all his compositions will ever secure him a place among the first of masters. Riehl, in his Musikalische Karakterköpfe (1, 186), says, "Many thousands have, by the influence of Mendelssohn's music, been led to the study of the works of Bach and Händel, and enabled to form a more correct idea of their true and lasting value." Again, Riehl says (p. 101), "He made the severe forms of sacred music more elegant and more charming by uniting the formal part of it with a subjective wealth of feeling." In his private life he was a man of most charming disposition, making all who came in contact with him his ardent friends and admirers. Towards his fellow-artists he was perfectly free from envy, always encouraging those in whom he discovered talent. Death plucked him when in his best years, at Leipzig, Nov. 4, 1847. It is impossible to speak here in detail of Mendelssohn's works. They are very numerous, every branch of his art, but it was in sacred music that his highest powers were displayed; and St. Paul and Elijah will descend to posterity along with the Messiah and Israel in Egypt. Magnien, Etude biographique sur Mendelssohn-Bartholdy (1850); Hiller, Mendelssohn-Bartholdy (Cologne and Lond. 1874); Fraser's Magazine, April, 1848; Brit. Quarterly Review, October, 1882.

Mendelssohn, Moses (also called RAMBAN [רמב"ע], from the initials of הברח על אברהם [יוסף בר אברהם], R. Moses ben-Menschach Mendel, and Moses Dessau), whom Maimonides describes as "un homme jeté par la nature au sien d'une horde avilie, né sans espace de fortune, avec un tempérament faible et même infirme, un caractère timide, une douceur peut-être excessive, enchanté toute sa vie dans une profession presque mécanique, s'est élevé rang des plus grands écrivains que ce siècle a vu naître en Allemagne" (Sur Moses Mendelssohn, London, 1877), was born at Dessau, Germany, Sept. 6, 1729. His father was a copyer (עמדות) of Biblical writings upon parchment. Moses gave early tokens of an intelligent and scrutinizing mind. Fortunately for his nascent talents, the rabbi of the congregation, David Herschel Frankel, perceiving the eagerness of the boy for learning, undertook to instruct him in all those branches which then constituted a Jewish education—the Bible in the original Hebrew, with its chief commentaries, and rabbinical literature. At an early age Mendelssohn also became acquainted with Maimonides's (q. v.) famous work, the More Nebuchin, or "Guide of the Perplexed," the intense study of which made a new era in his life, and that in two ways—it laid the foundation of his mental culture, and also of his bodily disease and suffering. (Mendelssohn was hump-backed, and extremely small and feeble in person.) The German language the rabbi of Mendelssohn desired to be taught as Gentile learning, and hence his studies had been entirely confined to the Hebrew; but as he branched out in his studies he also acquired the German tongue. When hardly fourteen years of age he was obliged to relinquish learning for the choice of a profession. He went to Berlin in search of employment, and gained it by following the occupation of copist and corrector for the press, carefully making use of every leisure moment to learn the ancient languages, and to gain in

construction in general literature and philosophy. Chance favored him with the acquaintance of a Polish Jew who possessed a profound knowledge of mathematics. The Pole became his instructor in Euclid, which he studied from a copy of the work in Hebrew, this being the only language understood by his master. Besides the study of the "Human Understanding," he studied the writings of Wolf, Leibnitz, and Spinoza, which exercised the greatest influence upon his mental development. Thus passed seven of the most laborious years of his life; it was the period of apprenticeship served to science. Greatly as this most highly cultivated youth became known in wider circles. His fortune now began to turn. A rich co-religionist of Berlin, Isaac Bernhard, a silk manufacturer, engaged him as tutor for his children. Henceforth he was in easy if not affluent circumstances. His connection with the house of Bernhard continued throughout life, first as tutor in the family, afterwards as book-keeper in the manufacturer, and eventually as manager if not as partner in the concern. In the intervals of business he published, in concert with his friend, Tobias Bock, some essays on natural philosophy in Hebrew, for the use of young men studying the Talmud. This publication, which appeared in the י"ן הכרך, i.e. "The Hebrew Preacher," gave some offence to the rabbinical party, but escaped persecution by the strict observance of the Oral Law, to which he undeviatingly submitted all the rest of his life, although his internal convulsions were little in accordance with its practices. About this time (1754) he became acquainted with Lessing (q. v.) and Nicolai (q. v.). With the former he formed an intimate friendship, always regarded by Mendelssohn as among the most fortunate circumstances of his life; for in "Lessing, than whom no man was nearer free from the prejudices of creed and nation, Mendelssohn found a hearty sympathy and an effective fellow-laborer in his projects for bettering the condition of the German Jews, an object which then and at all times lay nearest his heart. Indeed, the known friendship of so eminent a man for one of that tribe, in defiance of all the prejudices of his age, was scarcely less important to the Jews in general than it was to Mendelssohn in particular." For two hours every day regularly they met and discussed together literary and philosophical subjects, a circumstance which led Mendelssohn to write his Philosophische Schriften, an effort by which he became something distinguished beyond the pale of Judaism. The MS. of these dialogues Mendelssohn left with Lessing for examination; but how great was the former's surprise when one day Lessing returned his dialogues in print, published without the author's knowledge. He next sent forth Pope, ein Metafysiker (together with Lessing [1755]), and several other essays, and finally his Briefe über die Empfindungen (1764). In the same year he also wrote Abhandlungen über die Evidenz der meta-physischen Wissenschaften as a prize essay for the Berlin Academy, which was crowned by that learned body, which besides unanimously resolved to elect him a member of their number. Frederick the Great, however, generally prejudiced against the Jews, struck the name off the list, and the Jew had to content himself with the consciousness that he enjoyed less than his contemporaries believed he entitled to. Mendelssohn afterwards, at the instigation of Nicolai and Lessing, collected all his philosophical essays and published them in 1701 under the title of Philosophische Schriften, of which in a short time three editions were published (3d ed. 1777, 2 vols. 8vo). At thirty-one Mendelssohn married a lady from Hamburg, by whom he had several children, among them a son, whose birth gave rise to one of his most celebrated works in the Gymnastik, which treats on the existence of God, in refutation of Pantheism and Spinozism—the result of many years' inquiry on that subject. Mendelssohn had formerly
defined the universe as a creation out of the divine substance, a view involving the main principle of Spinoza, and directly opposed to the notions of deity and creation prevalent in his day. He now attempted, by concessions and modifications, to get rid of the ethical objections usually brought against kindred theories. The work is a fragment; only the first volume appeared (in 1785), the death of the author arresting its progress. The most popular work, however, was his Phädon, oder über die Unterbringhichkeit der Seele, a colloquy on the doctrine of immortality. The characters are taken from Plato's dialogue of the same name, and the descriptive parts are made to conform to the chief Platonic idealist philosopher, however, has made Socrates produce new arguments in place of those attributed to him by his disciple Plato, thinking these substitutions better adapted to modern readers. The following is his principal, and, indeed, his only peculiar argument, the rest of the dialogue being employed in its defence, and in expressions of reliance on the goodness of the Deity. For every change three things are required: first, a state of the changeable thing prior to its change; secondly, the state that follows the change; and, thirdly, a middle state, as change does not take place at once, but by degrees. Between being and not-being there is no middle state. If being be a compound body, capable of resolution into parts, it must, if it perish, be absolutely annihilated; and in its change from death to life, it must pass at once from being to not-being, without, of course, going through any middle state—a change which, according to the three requirements of change, is impossible. Thus by "reductio ad absurdum" the immortality of the soul was proved. Kant, in his Kritik der reinen Vernunft (2d ed.; it is not in the 1st ed.; see the complete edition of Kant's works by M. Rosenkranz [Leipzig]), has shown the fallacy of Mendelssohn's argument, while he admits his acuteness in philosophical criticism; but his position into parts of itself not sufficient to preserve the immortality of the soul, as had been supposed by many philosophers of the time. Mendelssohn, by assuming that change must be gradual and not sudden, thought that he had established his point, as the soul, being simple, could not admit of gradual resolution. Kant, however, shows that we may conceive a gradual annihilation even without resolution into parts—or, to use his own expression, a diminution of the "intensive magnitude." Thus a deep red color may grow fainter and fainter till at last all the redness is gone, and this without any diminution of the surface colored. Another fallacy in Mendelssohn's reasoning is, that his general principle applies only to a transition from one state of being to another, and therefore does not include a transition from being to not-being. For if not-being be considered a state of being, there is no occasion for an argument at all, as the continuity of being is assumed in the definition of change, nor would anything be gained by supposing the soul in such a paradoxical state as necessarily with still a sort of being attached to it. This work not only immortalized its author's name, but conferred upon him for the strength of his reasoning the name of "the Jewish Socrates," and "the Jewish Plato" for the amenity of his discussion. About three years after its first appearance (1767) it went through a third edition, and was translated into Hebrew, and into almost every modern language; English editions were published in 1789 and 1838. Mendelssohn's fame was at its height both among Christians and Jews, and he was lauded both by the philosopher and literary character. Zealous Christians were of the opinion that an exemplary man should retain the faith of his fathers, and regarded it as a sacred duty to bring him over to the Church. Foremost among them was John Caspar Lavater (q. v.), who sought to drag him into theological controversy, though with no unkind intentions. In order to make use of this result, he dedicated Mendelssohn's translation of Bonnet's Inquiry into the Evidence of Christianity, with the request that he would refute in case he should find the argument untenable; and that, if it should seem to him conclusive, he would "do what policy, love of truth, and probity demanded—what Socrates doubtless would have done, had he read the work and found it unanswerable," thus of course excluding any change in the doctrine of his own people by formally abjuring the faith of his fathers, or to draw upon himself the wrath of the Christian clergy by a public assault on their religion. This was in the year 1769. The position in which Mendelssohn was thus placed was not only most delicate, but also not without peril. He was, in fact, the champion of the ancient religion not only with the tenacity of early habits, but also with the fulness of conviction which profound study of the subject had given him. How was it possible to reply to the arguments brought forward in favor of Christianity without giving offence to the dominant churches, and becoming liable to the severe penalties enacted by the laws against the assailants of the established creeds? Mendelssohn, however, did reply. He wrote a courteous but decided letter to the pastor of Zurich, in which he not only speaks of his "veneration for the moral character of the founder of Christianity," but also for the "very fully his position as a liberal-minded and enlightened Jew. To this letter he added an address to all parties, but also drew from Lavater a public apology and retraction of his peremptory challenge. The agitation caused by this transaction aggrandized Mendelssohn's constitutional complaints, threatening his life, and for a long time incapacitating him for intellectual labor. After his recovery he published a Hebrew commentary on Ecclesiastes (Berl. 1769; ibid. 1788), translated into German by Rabe (Ansbach, 1771), and into English by Preston (Lond. 1845). The author complains that "nearly all the commentators who have preceded me have almost entirely failed in doing justice to their task of interpretation." He had not found in one of them an interpretation adequate to the correct explanation of the connection of the verses of the book, but, according to their method, nearly every verse is spoken separately and unconnectedly; and this would not be right in a private and insignificant author, much less in a wise king. As to the design of the book, Mendelssohn thinks that Solomon wrote it to propound the doctrine of the immortality of the soul, and the necessity of leading a cheerful and contented life, and interspersed these cardinal points with lessons of minor importance, such as worship, politics, domestic economy, etc. Soon after this appeal was made, Mendelssohn was appointed a German translator of the Pentateuch, made by the crown. This was a grammatical and exegetical commentary in Hebrew, contributed by several Jewish literati, viz. Saal Dubno (q. v.), Aaron Jaroslav, N. H. Wessely (q. v.), and H. Homberg. This important work, which is entitled הֶפֶךָ, i.e. The Book of the Paths of Peace (Berlin, 1780-88), is preceded by an elaborate and most valuable introduction, written in Hebrew, called בהֶפֶךָ, A Light to the Path, in which Mendelssohn discusses various topics connected with Biblical exegesis and literature. The introduction, which was published separately before the completion of the commentary (Dec. 1780), is a good introduction to the translation and commentary, and is given in German in his Collected Works (Leipa, 1845), vii, 18 sq.; and in English in the Hebrew Review, edited by Breslau (Lond. 1860). The work soon found its way into the principal synagogues and schools in Germany, and, thus encouraged, he produced afterwards two other commentaries, i.e. on the translation and commentary, which are considered classical. "It was in this especially," says Da Costa, "that the philosopher kept up the striking resemblance to Maimonides, his celebrated predecessor and model. Both, under the outward forms of Rabbinical Judaism, desired to give an entirely new direction to the religion of the Jews—to reform it, to develop it." Nothing, indeed, could have
was doomed to experience another trial of his sensibility
in an attack on his deceased friend Lessing by
Jacobi (q. v.), who published Briefe an Mendelssohn
über die Lehre des Spinoza, in which he charged Les-
sing with being an "implicit Spinozist"—a charge
then much severer than at present, when many German
philosophers have adopted the "classical" theory
Mendelssohn endeavored to refute the charge in a work enti-
titled Moses Mendelssohn an die Freunde Lessings (1786),
in which he stated that "if Lessing was able absolutely and
without all further limitation to declare for the sys-
tem of any man, he was at that time no more in harmo-
y with himself than with the authors whom he imitates.
was a paradoxical assertion which, in a serious hour, he him-
self rejected." The answer was considered triumphant,
and drew from Kant the remark, "It is Mendelssohn's
fault that Jacobi thinks himself a philosopher." In
a hurried preparation of this latter work Mendelssohn
overstated his physical powers, and the exhaustion thus
produced led to his premature death, which took place
Jan. 4, 1786.
Ramler wrote this epitaph on Mendelssohn:
"True to the religion of his forefathers, wise as
Socrates, teaching immortality, and becoming immortal
like Socrates." Besides many Hebrew and German es-
seys which we have not room to mention, Mendelssohn
wrote an important work on the Bible, Die Geschichte der
schatzen, edited by Lessing (q. v.). His complete works
were collected and edited by his grandson, G. B. Men-
delssohn (Leips., 1848-5, 7 vols.). The influence which
he exercised over the Jewish nation is incalculable.
He roused the Jews of Germany, if not of the world,
from the mental apathy with which in his day they re-
garded all that had not a distinct reference to religion.
On the other hand, he acted in the most beneficial man-
ner on his Christian contemporaries by exterminating
the brutal prejudices which they entertained against
Jews, and through his most distinguished Christian
friends endeavored to make Jews better understood and
the laws with respect to them. See Jews. He effected a
reformation in Judaism, and founded that new school of
Hebrew literature and Biblical exegesis which has
now produced so many and such distinguished Jewish
literati not only in Germany, but throughout Europe.
No wonder that the Jews regard him as the father of their
and reverence for him in the saying, "From Moses (the
law-giver) to Moses (Maimonides) and Moses (Men-
delssohn), no one hath arisen like Moses" (Mishnah,
ומnoise רבי מונדוס). See Kayslering,

the multitude. In consequence, the great desire of the Church was the formation of a society composed of a set of men who—by the austerity of their manners, their contempt of riches, and the external gravity and sanctity of their conduct and maxims—might resemble those doctors that had gained such reputation for the heretical sects, and who might rise so far above the allurements of worldly profit and pleasure as not to be seduced by these. The greatest of these—admitting experience had demonstrated their public and extensive usefulness. But when it became generally known that they had such a peculiar place in the esteem and protection of the rulers of the Church, their number grew to such an enormous and unwieldy multitude, and swarmed so prodigiously in all the European provinces, that they became a burden, not only to the people, but to the Church itself. The great inconvenience that arose from the excessive multiplication of the Mendicant orders was first attempted to be remedied by Gregory X in a general council which he assembled at Lyons in 1272; for here all the religious orders that had sprung up after the Council of Lyon, and were not included in the decrees of Innocent III, were suppressed; and the extravagant multitude of Mendicants, as Gregory called them, were reduced to a smaller number, and confined to four societies or denominations, viz. the Dominicans, the Franciscans, the Carmelites, and the Augustines, or Hermitas of St. Augustine (see each). As the pontiffs allowed these four Mendicant orders the liberty of travelling wherever they thought proper, of conversing with persons of every rank, of instructing the youth and multitude wherever they went, and as these monks exhibited in their outward appearance and manner of life more striking marks of gravity and holiness than were observable in the other monastic societies, they arose all at once to the very summit of fame, and were regarded with the utmost esteem and veneration through all the countries of Europe. The enthusiastic attachment to these sanc
timonalibeggars went so far that, as we learn from the most authentic records, several cities were divided or cantonized out into four parts, with a view to these four orders: the first part being assigned to the Dominicans, the second to the Franciscans, the third to the Carmelites, and the fourth to the Augustines. The people were unwilling to receive the sacraments from any other hands but those of these Mendicants, so that if they could not get a Mendicant from the former, they crowded to perform their devotions while living, and were extremely desirous to deposits there their remains after death. Nor did the influence and credit of the Mendicants end here, for we find in the history of this and the succeeding ages that they were employed not only in spiritual matters, but also in temporal political affairs of the greatest consequence—in composing the differences of princes, concluding treaties of peace, concerting alliances, presiding in cabinet counsels, governing courts, levying taxes, and other occupations, not only remote from, but absolutely inconsistent with the monastic character and profession. However, the power of the Dominicans and Franciscans greatly surpassed that of the other two orders, insomuch that these two orders were, before the Reformation, what the Jesuits have been since that period—the very soul of the hierarchy, the engines of the state, the secret spring of all the motions of the one and the other, and the authors of every great and important event, both in the religious and political world.

By very quick progression, the pride and confidence of the Mendicants arrived at such a pitch that they had the presumption to declare themselves publicly possessed of a divine impulse and commission to illustrate and maintain the religion of Jesus. They treated with the utmost insolence and contempt the priesthood; they affirmed without a blush that the true method of salvation was revealed to them alone; proclaimed with ostentation the superior efficacy and virtue of their indulgences; and vaunted beyond measure their interest at the court of heaven, and their familiar connections with the Supreme Being, the Virgin Mary, and the saints in glory. By these impious wiles they so deluded and captivated the ignorant and subjugated multitude that they intrusted any others but the Mendicants with the care of their souls. They retained their credit and influence to such a degree nearly to the close of the 14th century that great numbers of both sexes—some in health, others in a state of infirmity, others at the point of death—came to beg for the sacred absolution, and some of the Mendicant order, which they looked upon as a sure and infallible method of rendering Heaven propitious. Many made it an essential part of their last wills that their bodies, after death, should be wrapped in old, ragged Dominican or Franciscan habits, and interred among the Mendicants; for such was the barbarous superstition and wretched ignorance of this age, that people universally believed they should readily obtain mercy from Christ at the day of judgment if they appeared before his tribunal associated with the Mendicant friars. About this time, however, the Mendicants fell under a universal odium; but, soliciting the protection of all of which, they open or secret, by the popes, who regarded them as their best friends and most effectual supports, they suffered little or nothing from their numerous adversaries.

In the 15th century, besides their arrogance, which was excessive, a quarrelsome and litigious spirit prevailed among the Mendicants, and drew upon them justly the displeasure and indignation of many. By affording refuge at the time to the Bequins (q. v.) in their order, they became offensive to the bishops, and were involved in difficulties and perplexities of various kinds. They lost their credit in the 16th century by their rustic impudence, their ridiculous superstitions, and the insolent presumptions of the former. They displayed the most barbarous aversion to the arts and sciences, and expressed a like abhorrence of certain eminent and learned men, who had endeavoured to open the paths of science to the pursuits of the studious youth, and had recommended the culture of the mind, and attacked the barbarism of the age in their writings and discourses. The general character of the society, together with other circumstances, concurred to render a reformation desirable, and had the effect of bringing it about. Among the number of Mendicants are also ranked the Capuchins, Recollets, Minims, and others, and the Mendicant order of which is divided into two classes from the former. Buchanan says that the Mendicants of Scotland, under an appearance of beggary, lived a very luxurious life; whence one wittily called them, not Mendicants, but Mendicant friars. tianity, vi, 921 et al.; Hardwick, Ch. Hist. (Middle Ages), 282 sq. 920 sq.; et al.; M. Jameson, Legends of the Monastic Orders, p. 257; Len, Sacerdotial Cae
debay, p. 877; Chr. Review, vol. xx, Jan. (J. H. W.)

Mendoza. See Mende.

Mende, Herbert, an English Protestant divine, born in the 15th century, about the middle of the 18th century, was the son of Christopher Mende, also a clergyman. He early decided to devote himself to the ministry, and was accordingly placed at a gram
college at Plymouth, where he obtained the rudiments of a classical education; and was after that in
troduced by the Rev. Samuel Buncombe, a minister of the Independent Church at Ottery St. Mary, Devon,
where he continued three years. In 1777, having com-
pleted his academic studies, he removed to Sherborne, in
Ireland, and was ordained pastor of the Church. In
1782, his father's infirmities increasing, he was in-
vited to assist him at Plymouth; here he was very successful,
his Church augmenting greatly, not only in the number of
hearers, but in the membership. He was steadfast
and consistent in his attachment to evangelical truth in
the midst of the boding influences of the time. He per-
period pervaded the West of England, and which led
him to express his sentiments with unusual energy in his
confession of faith delivered at his ordination. If
in his later years he insisted more earnestly on the ob-
ligations of true Christians to maintain good works, it
did not detract from the character of the man; for he
knew that many of other religious duties; but local circum-
stances in-
duced him to inveigle against certain errors which
seemed to him dangerous to practical religion. Anoth-
er great cause of his success was the animation and
warmth of his address, which not only attracted a large
congregation, but kept them still united at a period when a
minister's wasting energies frequently impair his use-
fulness. In 1785 Mr. Mends became the first and most
active promoter of the Association of Independent Min-
isters of Churches in the West of England, by which so-
ciety valuable aid was contributed to the extension and
success of the Gospel. He died about the opening of this
century; Mr. Mends did not write much. In
1785 he published an Elegy on the Death of
Williams Shepard, Esq.; in 1789, A Sermon on the In-
justice and Cruelty of the Slave-trade; in 1790, A Ser-
mon on the Education of the Children of the Poor; in
1791, A Defence of Infant Baptism; and, in 1801, A Ser-
mon preached in London before the Masonic Society.

ΜΕΝΕ, a word Anglicized in the Auth. Ver. of
the Chaldee sentence ΜΕΝΕ, ΜΕΝΕ, ΤΕΚΕΛ, ΥΠΑΡΒΗΝ (μν., μν., τεκ., υπ., ρ.,
num., num., num., num., num., divided), as each term
is immediately interpreted, the last being given in its
sing, and pass. form δή, περα, διερ, divided; Sept. [i.e.
Theodotion] in both passages μανή, ταφί, ροσ.; Vulg.
mane, thecel, phares), an inscription supernaturally writ-
ten "upon the plaster of the wall" in Belshazzar's pal-
ace (Dan. v. 5-25); which "the astrologers, the
Chaldeans, and the soothsayers" could neither read nor interpret, but which Daniel first read and then in-
terpreted. Yet the words, as they are found in Daniel,
are pure Chaldee, and, if they appeared in the Chaldee
character, could have been read, at least, by any person
present on the occasion who understood the alphabet of his own country. But for the word in the Chaldee charac-
ter, as a part of that inscription, it has been supposed that it
consisted of those Chaldee words written in another
character.

Dr. Halea thinks that it may have been written in the
primitive Hebrew character, from which the Sa-
marian was formed, and that, in order to show on
this occasion that the writer of the inscription was the
offended God of Israel, whose authority was at that
moment peculiarly despised (ver. 2, 3), he adopted his
own sacred character, in which he had originally writ-
ten the decalogue, in which Moses could transcribe it
into the law, and whose autograph copy was found in
Joseph's days, and was most probably brought to Baby-
lon in the care of Daniel, who could therefore under-
stand the character without instruction, but which would
be unknown to "the wise men of Babylon" (New Anal-
ysis of Chronology [Lond. 1811], i. 505). This theory
has the recommendation that it involves as little as possible
the supernatural. This hypothesis makes Daniel
have a conversation with Belshazzar as if the inscription
were written in Greek. He (Daniel) explained the writing thus:

ΜΑΝΗ. 'This,' said he, 'in the Greek language, may
mean a number; thus God hath numbered so long a
time for thy life and for thy government, and that
there remaineth a short time for thee.'

ΣΥΓΧΩ, his weight; hence he says, 'God having weighed in
balance the time of thy kingdom, finds it already going
down.' 

ΜΕΝΕ. This also, according to the Greek language,
denotes a fragment; hence 'he will break pieces thy kingdom, and divide it among the Medes and Persians'" (Am. x. 11, 8).

It has been supposed by some that "the wise men" were not so much at fault to read the inscription as to explain its meaning, which, it is said, they might sufficiently understand to see its spiritual signification. But the monarch, who had be-

considered the wise men, or the wise men of the kingdom, and his nobles, throughout the history of the Book, were not to be considered further—the like disciples in regard to the predic-
tions of our Lord's death (Luke x. 19, 46), where it is said,
"These saying was hid from them, they perceived it not, and
they feared to ask him of that saying." Certainly it is
said throughout our narrative that "the wise men
did not understand the writing, nor make any interpretation of it," phrases which would seem to mean one
and the same thing; since, if they mean different things,
the order of ideas would be that they could not inter-
pret nor even read it, and Wintle accordingly translates,
"could not read so as to interpret it" (Improved Version
of Daniel, Lond. 1807).

At all events, the meaning of the inscription by itself would be extremely logical and obscure. To determine the application, and to give the full sense, of an isolated device which amounted to no more than "he or it is numbered, or he it is num-
bered, he or it is weighed, they are divided" (and there
is even a riddle or paradoxism on the last word ροσ.;
comp. Susannah, ver. 54, 55, and 38, 59, Greek, and Jer.
iv. 1, 11, 12, where "they number his mules," and the Ar-
vite, "or the Persians," with little difference of pro-
nunciation in the sing. ροσ. and ροσ. and none in the plur. ροσ. and ροσ.), must surely have required a sup-
natural endowment on the part of Daniel—a conclusion which is confirmed by the exact coincidence of the
error with the prediction, which he propounded with
so much fortitude (ver. 30, 31).

ΜΕΝΕΔΕΜUS, a Greek philosopher and teacher,
born in the 8d or 7d century B.C.

Life. He was born in Eretria, a city of a noble family, the
Theopropide. Being poor, he labored as a tent-maker
and builder for a livelihood. According to Diogenes
Laertius, he was sent on some military service to Megara,
where he profited by the occasion to hear Plato. He
then relinquished the army, and devoted himself to phi-
losophy.

But it is not probable that he was old enough to
have heard Plato before the death of the latter. If
the length of his life as Diogenes gives it is correct, it
would not have been possible; for at the period of Pla-
ato's death he would have been only four years of age.

According to the story in Athenaeus (iv. 149b), he and
Aristarchus, a man of great learning, were the soli-
eters, passing the night in toil in order to gain time for
philosophy during the day. They subsequently became
pupils of Stilpo at Megara, whence they proceeded to
Elis, to profit by the instructions of some disciples of
Thed. Menedemus, on his return to Eretria, estab-
lished a school of philosophy, which was called the Ere-
trian. He did not devote himself entirely to philosophy,
but was an active participant in the politics of his native
city, becoming the most influential man in the state,
although in his earlier days he was regarded with dis-
like. He was sent on various missions to Polemaeus
(probably Ptolemaeus Ceraunus), to Lysimachus, and to
Demetrius, and obtained for his native city a repeal of a
portion of the tax paid to Demetrius. During some
portion of his life he visited Cyprus, and greatly enraged
the tyrant Nicocreon by his freely-expressed opinions.
The story of his being in Egypt, and sharing in the
making of the Septuagint version, which is found in
Aristane, he was not unworthy of credence. He en-
joyed the favor of Antigonus Gonatas, and persuaded
the Eretrians to present to him a public congratulation
after his victory over the Gauls. This induced the sus-
ception of an intention on his part of betraying Eretria
into the power of Antigonus. According to one ac-
count, these surmises led him to depart secretly from
MENELAUS

MENES

Eteria, and take refuge in the sanctuary of Amphius at Aegina. Some golden vessels, the property of the temple, being lost while he was there, the Eotians compelled him to leave, when he fled to the court of Antigonus, where he soon died of grief, probably in the year B.C. 277, at the age of seventy-four. Another account says that he went to Antigonus to solicit his interference in behalf of the Eotians against his own rival, Aphirole in the city.

A Philosopher and Teacher—As a teacher, Menedemus, in his intercourse with his disciples, was characterized by the absence of formality and restraint, although noted for the severity with which he rebuked all insouciance and intemperance, so that the fear of his censure seems to have acted as a check. He lived with his son and the Argonauts. There are records that he existed a close friendship.

In the latter part of his life he seems to have lived in influence. Of the philosophy of Menedemus little is known, excepting that it closely resembled that of the Megarian school, and that of Phaedo of Elis. Indeed, he may be said to have continued Philo's philosophy. Its leading feature was the dogma of the oneness of the Good, which he carefully distinguished from the Useful. All distinctions between virtues he regarded as merely nominal. The Good and the True he looked upon as identical. In dialectics he rejected all merely negative propositions, maintaining that truth consists of the relations of those which are affirmative, and of those he admitted such alone as were identical propositions. He was a vehement and keen disputant, but none of his philosophical controversies or doctrines were committed to writing. Epiphanes, in a passage quoted by Athenaeus (ii, p. 59), classed Menedemus with Plato and Socrates; but it appears from Diogenes Laertius that his opinion of Plato and Xenocrates was not very high. Stilpo he greatly admired. See Diogenes Laertius, ii, 125-144; Plutarch, De Ald. et Al. Mor. Disc. p. 55; Strabo, ix, p. 393; Ritter, Geschafte der Philosophie, bk. vii, ch. 5.

Menedemus (Menedemus), a usurping high-priest who obtained the office from Antioces Epiphanes (B.C. cir. 172) by a large bribe (2 Macc. iv, 23-25), and drove out Jason, who had obtained it not long before by similar means. When he neglected to pay the sum which he had promised, he was summoned to the king's presence, and by plundering the Temple gained the means of silencing the accusations which Jason had brought against him. But when he was to be sacrificed to secure himself against the consequences of an insurrection which his tyranny had excited, and also procured the death of Onias (ver. 27-34). He was afterwards tried and pressed by Jason, who, taking occasion from his unpopularity, attempted unsuccessfully to recover the high-priesthood (2 Macc. v, 5-10). For a time he then disappears from the history (yet comp. ver. 28), but at last he met with a violent death at the hands of Antiochus Eupator (B.C. cir. 163), which seemed in a peculiar manner a providential punishment of his sacrifice (xili, 3, 4).

According to Josephus (Ant. xii, 5, 5) he was a younger brother of Jason and Onias, and, like Jason, changed his proper name, Onias, for a Greek name. In 2 Macc., on the other hand, he is called a brother of Simon the Benjamite (2 Macc. iv, 28), whose treason led to the first attempt to plunder the Temple. If this account be correct, the professions of the sacred office was the more marked by the fact that it was transferred from the family of Jason.

Menas was the name of the first king of the first Egyptian dynasty. He marks a great chronological epoch, being placed by different chronologers as early as B.C. 3865, 3892, or even 5702. Stricter Egyptiologists make his accession B.C. 2717. This name, which signifies the conductor, has been found on inscriptions, but no connexion has been established between whom and himself. Menes was the most usual form of his name, but it is also written

Menas, Menes, Meineis, Men, Min, and Mein. It is singularly in accordance with the Indian Menes, the Grecian Minos, the Teutonic Manhum, and similar appellations of a primeval king; although the oldest Egyptian language seems to have had nothing akin with the Aryan family, to which the others belong. Herodotus says that he built Memphis on the original bed of the Nile, which he regulated, and forms the city, and transformed to the most beautiful temple to Hephaestus or Phrhab II (comp. Diod. i, 50, ed. Wess. ad loc.). Diodorus informs us that he introduced into Egypt the worship of the gods, the practice of sacrifices, and many luxuries. For this last innovation he was subsequently held in great dishonor, as Plutarch mentions a pillar at Thebes, in Egypt, on which is depicted Menas, an introducer of luxury. There is a legend preserved by Diodorus which narrates—in defiance of chronology, unless Menes is to be substituted for Menas—his being saved from death in lake Moris by a crocodile, in gratitude for which he inaugurated the worship of that animal, and built a city in the neighborhood of the lake called the City of Crocodiles, and a pyramid to serve as his own tomb. During his reign there was a revolt of the Libyans. That he made foreign conquests we learn from an extract from Manetho, preserved by Eusebius. By Marshm and others he is considered as identical with the Egyptian Sun-god. Some accounts state that he was killed by a hippopotamus. See Lepsius, Kgmbsch, Qelentaf, p. 5; Boch, Meneth, p. 386; Poole, Hor. Egypt. p. 219; Herodotus, ii, 4, 99; Dio- dorus, i, 43, 49, 89 (ed. Wess. ad loc.); Plutarch, De Is. et Osir. p. 8; Perizon, Orig. Egypt. c. 5; Stukeley's Antiquities, bk. iv; Bunson, Agypten Stelle in der Weltgeschichte, ii, 38-45.

At Memphis.

Meneses, Alexio de, a Portuguese prelate and statesman, was born Jan. 25, 1555. His father had directed the education of King Sebastian. Brought up in this manner, he was contrary to his parents' wishes, and joined the company of the Augustines at Lisbon, Feb. 24, 1574, and finished his studies at Coimbra. He was appointed Archbishop of Goa by Philip II, and took possession of his see in September, 1565. He converted a provincial synod, in which useful reforms were established; he organized many missions, and evangelized among the savages, and introduced the island of Socotra. He devoted himself also to the Christians of Abyssinia, and, above all, to those schismatic Nestorians known under the name of "Christians of St. Thomas," who have taken refuge for centuries in the mountains of Malabar. That in which stands the Apparition of Jesus, the so-called Tan-Tor, even the disciples of St. Francis were unsuccessful, he was enabled to accomplish, and after many centuries of division the Roman Church received into its bosom the greater part of this branch of the Christian family. Pope Clement testified to Meneses his satisfaction by a brief April 1, 1569. Meneses was subsequently appointed to the government of the Indies, and performed the duties of viceroy from May 3, 1606, to May 28, 1609. He showed himself stern and severe towards some of the Mohammedan princes, but tranquillity at least was preserved in the Indies during his administration. He died May 3, 1617. His memorable journey in the missionary field is published under this title: Jornada Rorabacho de Goa D. Alexio de Meneses quandofo a serras de Malvar, em que mord o antigos Christiato de S-Tom e por Fran. Antonio de Gouvea (Coimbra, 1606, fol.). There is added generally to this curious narration: Sino de cavalro de igreja e bishop de antigos Christiato de S-Tom e de Malvar celebrado por D. Fra. Alexio de Meneses (ibid, 1606; translated into Spanish in 1608 by Francs Mufos). He also wrote Histoire Orientale des grands progres de l'Eglise catholique en la reduction des ancien Chrétiens du St. Thomas en Indes Orientales et de l'apparition d'Anomale (Bruxelles, 1609, 8vo; the translator, J. B. de Gien, has unfortunately left many blanks in his
MENESTHEUS

Menes'theus (Μηνησθεὺς v. r. Μηνησθέως, Vulg. Mnestheus), the father of Apollonius (q. v.), the ambas-
dor of Antiochus Epiphanes to Ptolemy Philometor (2 Macc. iv. 21).

Meng. See Meniscus.

Menge, Anton Raphael, a distinguished artist of the 18th century, was born at Augsburg; in Bohemia, in 1726. His father, also a painter, adopted a very cruel course of treatment to his son, forcing him, at the age of six years, to draw the entire day without other nour-
ishment than a crust of bread and a bottle of water, and chastising him severely if the task given was unfinished in the allotted time. In 1741, at the age of thirteen, he was taken to Rome, where he was employed in copying the works of Raphael in miniature for Augustus III, elector of Saxony and king of Poland. In 1744 he re-
turned to Dresden, and was appointed court-painter by Augustus, with permission to return to Rome to con-
tinue his studies. He there painted several original pic-
tures, among which that of the Virgin, for St. Mary the Virgin which the Virgin was painted from a beautiful peasant-
girl, of whom he became so enamoured that he turned Roman Catholic for her sake and married her. Soon after this he again returned to Rome, where he remained three years, when the tyranny of his father became so oppressive that he received permission from his royal patron to visit Rome again, in order to execute his com-
mision for an altar-piece for the royal chapel. Shortly after his arrival he was deprived of his pension, the king's finances having suffered by the Seven-years' War: and thus suddenly thrown upon his own resources, Menge painted at low prices for the support of his fam-
ily. In 1754 he received an appointment as director of the new academy at Rome, and in 1757 was employed by the Celestines to paint the ceilings of the Church of St. Eusebio. In 1761 the king of Spain invited Menge to his court at Madrid, and granted him a liberal pen-
sion. Here he executed, among other works, a Descent from the Cross and the Council of the Gods. The air of Spain proved detrimental to his health, and he re-
turned to Rome, and was there engaged, immediately upon his arrival, by Clement XIV, to paint in the Vatic-
ian a picture of Jesus dictating to History, and one of the Holy Family. One of his finest productions is the Nativity painted for the National collection of the royal family of Spain. He died in 1779. See Globales, Éloge historique de Mengs (1781); Bianconi, Eloge storico di R. Mengs (1780); Spooner, Biographical History of the Fine Arts (N. Y. 1865, 2 vols. 8vo), vol. ii; Chev. Don Joseph Nich-

Meni (Heb. Meni), יַמְ נָ , from יַמְ נָ , to distribute; Sept. τίμα, Vulg. dedit, e. i. fortunae, just mentioned [see GAD]; Auth. Vers. "that number," marg. "Meni"), ap-
parently an idol which the captive Israelites worshipped by libations (libecistoria), after the custom of the Baby-
loneses and Phoenicians, as well as by the Phrygians and the Britons. See Pococke (Specim. hist. Arab. p. 92) has pointed out the resemblance to Mandi, an idol of the ancient Arabic (Koran, Sur. iii, 19, 20), "What think ye of Allah, and Al-Urah, and the other three goddesses?" Manah was the object of worship of the 'tribes of Hudhely and Kuzah, who dwelt be-
tween Meckheh and El-Medineh, and, as some say, of the tribes of Ows, El-Khazraj, and Thalik also. This idol was a large stone, demolished by one Saad in the eighth year of the flight, a year so fatal to the idols of Arabia" (Lane's Del. from the Kur-an, pref. p. 50, 81). But Al-Zamakshari, the commentator on the Koran, derives Manah from a root meaning a root or stock because of the blood which flowed at the sacrifice to this idol, or, as Mill explains it, because the ancient idea of the moon was that it was a star full of moisture, with which it filled the sublunary regions.

"That the word is a proper name, and also the proper name of the cult of idolatrous worship cultivated by the Jews in Babylon, is a supposition which there seems no reason to question, as it is in accordance with the context, and has every probability to recommend it. But the identification of Meni with any known heathen god is still uncertain. The versions are at variance. In the Septuagint the word is rendered for "temple," but it is of the same kind apparently gave rise to the super eaus of the Vulgate, referring to the "table" menioned in the first clause of the verse. From the old versions we come to the commentators, and their judg-
ments are equally conflicting. Jerome (Comm. in Ex. lv, 11) illustrates the passage by reference to an an-
cient idolatrous custom which prevailed in Egypt, and especially at Alexandria, on the last day of the last month of the year, of placing a table covered with dishes of various kinds, and a cup mixed with mead, in ac-
nowledgment of the fertility of the past year, or as an omen of that which was to come (comp. Virg., Æn. ii, 765). But he gives no clue to the identification of Meni, and his explanation is evidently suggested by the renderings of the Sept. and the old Latin version; the former, as he quotes them, translating Gad by 'fortune,' and Meni by 'demon,' in which they are followed by the latter. In the later mythology of Egypt, as we learn from Macrobius (Sat. i, 19), Δαίμων καὶ Τύχη were two of the four deities who presided over birth, and represented the influence of the Sun and Moon. A passage quoted by Selden (De Diis Syris, i. 1) from a MS. of Vetius Valens of Antioch, an ancient astro-
loger, goes also to prove that in the astrological lan-
guage of his day the sun and moon were indicated by Δαίμων καὶ Τύχη, as being the arbiters of human des-
tiny. True, the word Meni, as it is used here, with the identity between Meni and Miyw or Miyq, the ancient name for the moon, has induced the majority of commentators to con-
clude that Meni is the Moon god or goddess, the Deus Lunus, or Deus Luna of the Romans; masculine as regards the earth which she illumines (terra maritus), feminine with respect to the sun (sois uxor), from whom she receives her heat. This twofold character of the moon is thought by David Mill be indicated in the two names Gad and Meni, the former feminine, the latter masculine (Dis. v. § 23); but as both are masculine in Hebrew, his speculation falls to the ground. Le Moyne, on the other hand, regarded both words as denoting the sun, and his doctrine among the Egyptians: Gad is then the goat of Mendes, and Meni =Mnevis worshipped at Heliopolis. The opinion of Huetius that the Meni of Isaiah and the Miyw or Strabo (xii, 31) both denoted the sun, was refuted by Vi-
trings and others. Among those who have interpreted the word "meni" from a root meaning a "root" or "stock" is the reckoned Jarchi and Abarnabel, who understand by it the 'number' of the priests that formed the company of revellers at the feast, and later Hoheisel (Obs. ad. diff. Jes. loca, p. 349) fol-
lowed in the same track. Kimchi, in his note on Isa.
lxv, 11, says of Meni, "It is a star, and some interpret it of the stars which are numbered, and they are the seven stars of motion; i.e., the planets. But Hebrew applies it to the 'number' of the stars which were worshipped as gods; Schindler (Lex. Pentagl.) to the 'number and multitude' of the idols, while according to others it refers to 'Mercury, the god of numbers,' all which are more conjectures, quod coniungere, tot seminestas, and take the form of play upon words. But Hebrew and Meni, which is found in the verse next following that in which it occurs ('therefore will I number [םֹקֹמָה, ע-מָנָד] to the sword'), and which is supposed to point to its derivation from the verb מֹקֹמָה, מָאָד, to number. But the origin of the name of Noah, as given in Gen. v, 29, shows that such plays upon words are not to be depended upon as the bases of etymology. On the supposition, however, that in this case the etymology of Meni is really indicated, its meaning is still uncertain. Those who understand by it the moon, derive an argument for their theory from the fact that ancients years were numbered by the courses of the moon.

The fact of Meni being a Babylonian god renders it probable that some planet was worshipped under this name: but there is much diversity of opinion as to the particular planet with which the description of deity would be most applicable (see Lakenacher, Oberr. philol. iv, 18 sq.; David Mill's dis on the subject in his Dissert. seelica, p. 81-132). Münster considers it to be Venus (see Gesenius, Comment. ad loc.), as the lesser star of good fortune (the Numea of the Persians [2 Macch. xiv, 3]; see also 738 of Jewish genealogies [xi, 562; xii, 599]). Ewald takes it to be Saturn, the chief dispenser of evil influences; and Movers (Phön. i, 310) has returned to the old opinion that Meni is the moon, which was also supposed to be an arbiter of fortune: the best arguments for which last view are collected by Vitringa (ad loc.). It also deserves notice that there are some, among whom is Hitzig, who consider Gadd and Meni to be names for one and the same god, and who chiefly differ as to whether the sun or the moon is the god intended. It would seem on the whole that, in the passage under consideration, the prophet reproaches the idolatrous Jews with setting up a table to Fortune, and with making libations to Fate; and Jerome (ad loc.) observes that it was the custom as late as his time, in all cities, especially in Egypt, to set tables before the gods, and furnish them with various luxurious articles of food, and with goblets containing a mixture of new wine, on the last day of the month and of the year, and that the libation was thought to be of great service to the fruitfulness of the year; but in honor of what god these things were done he does not state. Numerous examples of this practice occur on the monuments of Egypt (Wilkinson, Anc. Eg. i, 265). See GAD.

Menifee, QUINN M., a minister of the Methodist Episcopal Church, South, son of H. W. William Menifee, was a native of Texas. He first studied law, and took his place at the bar with a good prospect of success in that profession. At the call of duty, however, he relinquished the practice of jurisprudence, and entered the Methodist Itinerancy in 1857. During the war he served, for nearly two years, as a private soldier in the army of Virginia, losing a leg at the battle of Sharpeburg. After the restoration of peace he entered upon ministerial work in Texas, and there labored faithfully till his death in 1867. "Quinn Menifee was a young man of noble and generous impulses, a high-toned gentleman, and a pure-minded Christian. . . . Notwithstanding the losses he had sustained, he became a friend and last all his life. About 1791 he became an inmate in the family of the rector, Fr. A. Hasenkamp, whose example and precepts appear to have exerted a lasting influence over him. In 1794 he became assistant preacher at Frankfurt-on-the-Main; in 1796, pastor of the Protestant Church at Wetzlar; removed in the same capacity
MENANDER

93

MENNO

The friends of the Netherlands believe it to have occurred in 1496, but Göbel, the noted German Church historian, holds that Menno saw the light of day in 1505 (Gesch. d. christl. Lebens in d. Rhein. Wesph. evang. Kirche, i, 191). His native place was the little village of Witmarsum, in Friesland. He was reared and educated under the influence of the Chiliasts, but he devoted his life to his service. In 1524 he took orders as priest, and was located at the village of Pingium. His religious condition at this time was anything but desirable. "He was," we are told, "in utter darkness of mind and worldliness of spirit, yet not without some tenderness of conscience and apparent piety." About 1527 he was induced to travel and impart the New Testament with diligence, in consequence of doubts concerning transubstantiation. He now became through grace gradually enlightened, his preaching changed, and he was called by some an evangelical preacher, though he says of himself, "At that time the world loved me, and I the world." His preaching found favor among the people, and he gained daily in popularity. In 1531 finally came the turning-point which resulted in his departure from the mother Church. In this year he witnessed the martyrdom of Sieke Snyder, at Leeuwarden, for Anabaptism. This severity towards one who had dared to assert conscience sake his own, and the reported sympathy, roused him to a similar inquiry concerning the sacrament of Baptism, and resulted in his embracing the views of the persecuted Baptists, though he for several years struggled to suppress his secret convictions, on account of the oium and suffering which the avowal must necessarily involve. "By the grace of God," he observes, "I have acquired my knowledge, as well of baptism as of the Lord's Supper, through the enlightening of the Holy Spirit, attendant on my much reading and contemplating the Scriptures, and not through the efforts and means of seducing sects, as I am accused." Mosheim has taken advantage of this hesitating course on the part of Menno after his conversion to the cause of the Anabaptists, and has accused our subject of duplicity, as guilty of having held "clandestine intercourse with the Anabaptists" until he found it convenient "to throw off the mask." This, however, is unjust and cruel. Menno was never an adherent of the Anabaptist. He never sympathized with the excesses committed at Münster and elsewhere (for he actually published a severe censure against the erroneous opinions and vile practices of John of Leyden in 1585), and his views of baptism were so peculiar that to this day the Mennoists are not one of the modes of administering the sacrament. The only thing he held in common with the Anabaptists was opposition to infant baptism. Menno, however, associated quite freely with the Anabaptists, and exerted a most salutary influence over them, making many friends among that sect. In 1537 he was actually invited by a number of Anabaptists of Groningen to assume among them the rank and functions of a public teacher; and as he looked upon the persons who made this proposal as exempt from the fanatical frenzy of their brethren at Münster, he yielded to their entreaties. His conversion from Romanism he himself alludes to in the following strain: "I believed my God with sighing and tears that to me, a troubled sinner, he would grant the gift of his grace; that he would endue me with wisdom, spirit, frankness, and manly fortitude, so that I might preach his worthy name and holy word unadulterated, and proclaim his truth to his praise. At length the great and gracious Lord, perhaps after the consent of mine own Churc, led me to his fatherly spirit, help, and mighty hand, so that I freely abandoned at once my character, honor, and fame, which I had among men, as also my antichris- tian abominations, mass, infant baptism, loose and careless life, and all, and put myself willingly in all trouble and poverty under the pressing cross of Christ my Lord. In my weakness I feared God; I sought pious people,
and of these I found some, though few, in good zeal and doctrine. I disputed with the perverted, and some I gained through God's help and power, and led them by his word to the Lord Christ; but the stiff-necked and obdurate I commended to the Lord. Thus has the gracious Lord drawn me, through the free favor of his grace, to the defense of the Gospels and of my people; and in me, as in a new mind; he has humbled me in his fear; he has led me from the way of death, and, through mere mercy, has called me upon the narrow path of life into the company of the saints. To him be praise forever. Amen."

According to Van Oosterzee (in Herzog's "Reini-Encyklo-
depedia" Vol. 9), Menno was led to separation from the Church of Rome by the cruel treatment of the Anabaptists in 1585. Many of the sufferers at this time had been heirs of the word of God as dispensed by Menno, and had been made disciples of the new sect by his declarations against infant baptism and the opinion of a "real presence" in the Eucharist. Indeed, his own brother had suffered a martyr's death on this occasion, and this may have contributed in no small measure to the decided step which Menno took shortly after.

With Menno's appointment to the ministry of a class of "Anabaptists" at Groningen opens the most eventful period of his life. His withdrawal from the Church of Rome relieved him of the vow of celibacy, and he made haste to select a companion for life, by whom he had several children. All these things would make it appear that Menno settled quietly at Groningen, and there enjoyed life's ease. But this is not the record of Simon Menno. Anxious to spread the Reformations, he labored especially at Oldesloe, in Holstein, where he was granted not only protection, but even encouragement, and was allowed to establish a printing-press for the diffusion of his religious opinions. There he died, January 15, 1591, in the satisfaction of having gathered a large and flourishing sect, which continues to this day. See MENNONITES.

MENNO as a Protestant.—Moosheim (Eccles. Hist. 16th century) thus speaks of Menno's labors after his estableishment at Groningen: "As a Protestant, Menno labored with the energy of the East and West Frisians, with the province of Groningen, were first visited by this zealous apostle of the Anabaptists; whence he directed his course into Holland, Guelderland, Brabant, and Westphalia; continued it through the German provinces that lie on the coast of the Baltic Sea, and penetrated so far as Livonia. In all these places his ministerial labors were attended with remarkable success, and added to his sect a prodigious number of followers. Hence he is deservedly considered as the common chief of almost all the Anabaptists, and the parent of the sect that still subsists under that denomination." As Moosheim persists in mentioning Menno in connection with the Anabaptists, and as the public is prejudiced against all who were known under that name, we think it but just to insert here Menno's own account of his labors: "Through our feeble service, teaching, and simple writing, with the careful deportment, labor, and help of our faithful brethren, the great and mighty might become humble, the impure clean, the drunken temperate, the covetous liberal, the cruel kind, the godless godly, but also, for the testimony which they bear, they faithfully give up their property to confiscation, and their bodies to torture and to death; as has occurred again and again to the present hour. These can be no fruits or marks of false doctrine (with that God does not co-operate); nor under such oppression and misery could anything have stood so long on earth without roots. But you will ask me, is this not our calling, doctrine, and fruit of our service, for which we are so horribly calumniated, and persecuted with so much enmity. Whether all the prophets, apostles, and true servants of God did not through their service also produce the like fruits, we would gladly let every one be the judge. All this I have given in the blood of his love, and called me to his service, unworthy as I am, searches me, and knows that I seek neither gold and goods, nor luxury, nor ease on earth, but only my Lord's glory, my salvation, and the souls of many immortals. Wherefore I have had, now the eighteenth year, to endure so excessive anxiety, oppression, trouble, sorrow, and persecution, with my poor, feeble wife and little offspring, that I have stood in jeopardy of my life and in many a fear. Yes, while the priests lie on soft beds and cushions, we must hide ourselves commonly in secret corners. While they at all nuptials and christenings, and other times, make themselves merry in public with fife, drum and other absurdities, we must look out for every dog, lest he be one employed to catch us. Instead of being greeted by all as doctors and masters, we must be called Anabaptists, clandestine holders forth, deceivers, and heretics. In short, while for their services they are rewarded in princely style, with great emoluments and distempers, we must be fire, sword, and death. What now I, and my true coadjuvators in this very difficult, hazardous service, have sought, or could have sought, all the well-disposed may easily estimate from the work itself and its fruit. I will then humble entreat the faithful and candid reader, to enquire into these facts; and at all times ask for his enforced acknowledgment of my enlightening, and make of it a suitable application. I have presented it out of great necessity, that the pious reader may know how it has happened, since I am on all sides calumniated and falsely accused, as if I were ordained and called to this service by a sedulous and misleading sect. Let him that fears God read and judge.

In the article ANABAPTISTS we have already alluded to the general mistake of supposing that all Anabaptists were engaged in the Munster excesses, and that usually persons fail to make a distinction between the sober and law-abiding groups of the Churcmen, who were the first to adopt a sketch of the life and labors of David Jorje (q.v.), we had occasion to point out the earnestness which characterized his followers of the "Anabaptists;" but it is in this place that we would enlist our reader's attention to the injustice of suffering a whole sect to be despised and forsaken because of the faults of a few who may have secured membership in order to make their religious garb a stepping-stone to abused power. The two large Protestant bodies of Lutheran and Reformed have always been characterized by jealousy towards any new sects, and have quickly charged their weaker rivals with all the infirmities which flesh is heir to, if any one member of the new comers was open to criticism. Even in our very day the Methodistists and Baptist suffer more or less persecution from the communicants of the State churches in Germany; how much more likely in those days of the 16th century, when first the iron hold of the papacy, which had cramped the Church for ages, was suddenly relaxed. From all the sources now in my command, we gather the fact that Menno was a gentle, earnest, modest man, of a spiritual nature, with no trace about him of wild fanaticism; ready to encourage all that was noble, pure, and good in his fellow-men, constantly reproving those of his followers who appeared guilty of misdemeanors of one kind or another. In the Reformation period, he was frequently involved in controversies; thus in 1548 he was visited by the celebrated
John à Lasko, who was determined to draw Mennon into the party of the Reformed Church whenever there were some of the
two eminent divines held public disputa-
tions upon Christ’s humanity, infant baptism, etc., etc.,
but so gentle was Mennon in his manner that at the close of
the controversy the two combatants parted in peace,
promising good-will towards each other. In 1550 he
published a special tract to defend the doctrine of the
Two Churches; and in 1553, at Wienerwalt, he published a
country from Italy and Switzerland; in 1552, A thorough
Confession on Disputed Points, for the use of other relig-
ious bodies than his own.

Result of Mennon’s Labors.—The whole system of the
theology as taught by Simon Mennon presents few, if any,
developments. In his theology are the names of Lasko and Micronius, he confessed a peculiar Christology.
He did not believe in a Son sullelder and divided
into two persons ("zerestickel oder zertheilt") of a human
and divine nature. He confessed one and the same Son
and Only-begotten, who in his very flesh is the God-
Logos, who in his flesh came down from heaven, and in
very flesh became man. He believed that Christ, in this
way, was born in Mary, but not of Mary; that he
became flesh, and was made man, without taking upon
him Mary’s flesh and blood. Anxious to ascribe to our
Lord the highest purity possible, he seems to have in-
duced the spectacles of the world, and was not in the reality
Christ’s human nature somewhat doubtful. He probably
borrowed this vague notion from the Münster Anabap-
ists. As a writer of systematic theology, Simon Mennon
was inferior to most of his contemporaries, and his main
work, Das Fundamentbuch (1539), shows his want of
adaptedness to a systematic treatment of religious doc-
tines. Following the example of the apostles, he taught
his followers, as the occasion required, in a simple, child-
like way, and never allowed himself to be drawn into
abstruse, or even abstract questions, when preaching to
them. A complete and systematic statement of his doc-
tines was never given by Simon Mennon, and the great
interest which he and his followers exercised in the internal
and external history of the Reformation was due to the
principle they represented.

Like the other Protestant Reformers, Mennon accept-
ated the formal and material principles of the Reforma-
tion; but, besides these, he aimed at a moral, practical
end. It was his earnest desire to restore the king-
dom of God, or the Christian Church, to that purity
which is taught in the New Testament, and which he
believed had existed in the Apostolic Church. To bring
back this golden age of Christianity, and to organize a
congregation με κοινωνικο σελικω, η οικομη, μ ε τον τοι-
αληθο σωμα, and to form a spiritual state.
This accounts for the singular asceticism of the sect, and
explains why the Mennonites did not, like other
ecumenical bodies, concern themselves about abstract
religious speculations, but about moral laws and duties.
For the same reasons they also separated themselves
from the unbelieving and amoral, and tried to purify the
Church by administering the ordinances of baptism only
those to whom had a personal profession of faith in
Christ. The validity of infant baptism was rejected,
while only adults "who do actually profess repentance
unto God and obedience to our Lord Jesus Christ"
were considered proper subjects of this ordinance. We
quote here article seven of a Mennonite Confession of
Faith: "We confess of baptism that all repenting be-
lievers, who by faith, regeneration, and renewal of heart
by the Holy Spirit, have been united with God, and
whose names are written down in heaven, are to be bap-
tized in the name of the Father, and the Son, and the
Holy Spirit, and to them be given the title of Christian,
and be invested with the dignity of being fellow-
people in our Lord’s body; and that all, who having re-
derred, and risen to live; and to whatsoever things
Christ taught his followers." The necessity of the power
of excommunication in the Church was earnestly as-
serted by Mennon, "for without the right usage of ex-
communication the spiritual kingdom of God on earth
cannot exist in purity and piety. A Church is a poli-
tical thing, not a spiritual; but for communion
is like a city without walls or gates, like a field or gar-
den without a fence, or like a house without walls or
doors. For without it the Church would stand open to
all seducers and evil-doers, to idolators and wilfully
pertinent sinners." He insisted upon excommunication
to such an extent that members of his congregation at
Wienerwalt, who abstained from the communion, were communi-
cers were excommunicated as if they had com-
mitted public crimes, or indulged in gross passions.

The works of Simon Mennon, of which the last was
printed in his own printing establishment, were
published collectively in 1600, under the title Sommario
di opere di Zennon de Mennon. Some of his works were
published under the names of "Zassene des gelofo, nitgaders enige waarachtige Verant
woordingen, gedaan door Mennon Simons. It was, how-
ever, a very imperfect compilation; much better was
that of 1646, 4to; but the best appeared in 1681, in
sm. fol., at Amsterdam, entitled Opera omnia theologi-
ica, of al de Godegeleerden werken van Mennon Simons, etc.

Besides the histories on his followers, quoted in the article Mennonites, see Biographie des Protest. célèbres
(Paris), ii, 59-70; Cramer, Het leven en de verrigtingen con Mennon Simons (Amst., 1657), perhaps the most im-
portant work on his researches; Kuyvenhoven, Monumenta Mennonitica (Kölnsberg, 1848); Roosen, Mennon Simons den evan-
gelischen Mennonitengemeinden geschildert (Leipzig, 1848).

J. H. W.

Mennonites is the name of a Christian sect which
sprung up in Holland and Germany about the time of
the Reformation, though it cannot be said to have actu-
ally originated in the great revolution of the 16th cen-
tury. The Baptists claim the Mennonites as their fore-
runners, and regard them to be the direct descendants of
the Waldenses (q. v.); but this origin of the Mennon-
ites is disputed by most Peabody Baptists, who recog-
nise them simply as the followers of one Simon Mennon
(q. v.), who gathered the more notable body of the An-
baptists (q. v.), gave them a new code of discipline, and be-
came to them the interpreter of the law and the Gospel.
Because of the excesses committed by the more fanatic
and unruly of the German Anabaptists in the reforma-
tory period, the Baptists and Mennonites take exception
to this classification. M. Herman Schyn, a Mennonite
minister, who has published their history and apology,
seeks to maintain that they are not Anabaptists, either
by principle or by origin. Besides the necessity of adult
baptism, the Mennonites in the 16th century held, in com-
mon with the Anabaptists, the belief in Christ’s personal
titulation during the millennium—the unlawfulness of oaths
and wars, even in resistance to injury—the impropriety
of engaging in lawsuits—and the exclusion of the civil
magistrate from the Church. But with the wild notions,
which were indulged in by many, of setting up Christ’s
kingdom on earth by violence and bloodshed, they had
no sympathy. Every immoral practice, also, they as a
sect disapproved; and they desired to be held up
as a Christian body characterized by consistency and
moderation. In the days of their founder they were
certainly among the most pious Christians the Church
ever saw, and the worthiest citizens the State ever had.
"It must be acts condoned," says Hardwick (Church
Hist. During the Ref. p. 298), "that the principles of the
sect are free from nearly all the dark fanaticism which
stains the records of the older party."

Mennonites, the Anabaptists of the Netherlands first
called themselves in 1536, the year in which the hith-
erto scattered community celebrated its union. Mennon,
the name of a German town and also of a church
in a region near it, was obtained a regular state of Church order, separate from all
Dutch and German Protestants, and thus secured an
ecclesiastical establishment. He laid down rules for
the guidance of the congregations, and furnished them
with a sort of "confession of faith." His doctrines
were free from the anti-social and licentious tenets and the
churches came again into closer fellowship (see *Jahres-

But, though divided, all Mennonites are agreed in
regard to the fundamental doctrine of baptism, which
is administered by pouring, and only to adults. "The
opinions," says Mosheim (*Éléments*, iv, 142 sq.), "that
human science is useless and pernicious to a Christian.
But these tenets were so explained and modified by
Mennon as to differ very little from the doctrines gen-
erally held by the Reformed churches, securing a high
dergree of credit to the religious system of this famous
teacher. Among his followers, too, he contributed to the
growth of his followers both in numbers and in influence.
He in-

sisted upon the strictest attention to moral duties, and
exercised a most severe discipline upon offenders, and in
a very short time succeeded in excluding from this fel-

mellow those fanatics that had so disdained the name of
Anabaptists, and gradually built up a large and flour-

ishing sect.

The severe discipline which Mennon exercised over
his followers had, however, ultimately the effect of pro-
ducing divisions within his flock. Oftentimes the pro-
piety or impurity of excommunicating from the fellowship of the Church those who had incurred its censure.
Mennon insisted upon the expulsion of all guilty of misdemeanor, even if the erring ones showed signs of repentance. Some in the flock took exception to this severity, and insisted upon it that an excommunicated might at least be readmitted if signs of repentance were clearly manifest. This divi-
sion of opinion resulted finally in the division of the sect into two parties, named respectively "die Feinem," the
Fine, and "die Groben," the Coarse. They were also
called "Flemings" or "Flandrians" and "Water-

landers," from the districts in which they resided. The
former was the more rigid of the two; but ere long it
was divided into Flanders and Zeelanders. This separa-
tion arose out of a question as to what should constitute a sufficient cause for excommunication. One pa-

arty regarded those only who were open contemners of
the divine law to be deserving the highest censure of
the Church, while the other party considered offenders of
the most trivial kind a reason for the instant rejec-
tion of the offender. Mennon himself officially sided with
the Flemings, and he was forced to pronounce the expul-
sion of the milder party, although his sympathies were
supposed to be with them.

Other particular sentiments that divided the Men-
nonites are the following: The Flemings maintain,
with the ancient opinion of rigor, that the opinion of
founder Mennon as to the human nature of Christ, al-

leging that it was produced in the womb of the Virgin
by the creating power of the Holy Ghost, and hence
object to the term *person* and *trinity* as not consistent with the simplicity of the Scriptures; they hold to the

obligation that binds us to wash the feet of strangers, in
consequence of our Saviour's command; the necessity of
excommunicating and avoiding, as one would do the
plague, not only avowed sinners, but also all those who
depart, even in some slight instances pertaining to dress,
etc., from the simplicity of their ancestors; the con-
temnures due to human learning; and to other matters of
an express moment. Another separation took place at
Amsterdam in 1654, and had a much wider influence, ex-
dending also to the other Dutch churches; it was be-
tween the Mennonites who held to the opinions of the
*Remonstrants* (q. v.) and the old orthodox party. The

leaders of the Remonstrants, or Synod of the Theo-
denous Abrahams (see Bentheim, *Holland, Kirche- u. Schu-

l nataf, i, 882; Jhring, p. 30), hence called *Gallemists* (q. v.), and, from the house where they assembled (bij
Het Lam), Lamists; the opponents were called Aposto-
larians, from their leader, Dr. Samuel Apostol; and Zon-

ists, from their house in de Zon (sun). By the Algwe-

nece Doopergesinde Societet, founded in 1811, the two

churches
MENNONITES

must be acquainted with Latin and Greek. They attend at a literary institution for instruction in Hebrew, ecclesiastical history, physics, natural and moral philosophy, botany, and chemistry, in different parts of the city. The college was established nearly a century ago, and was at first supported by the Amsterdam Mennonites alone; but lately other churches send in their contributions. Some of the students receive support from the public fund; they are all intended for the Christian ministry. Mennonites provided with an educated ministry, they were placed on a more equal footing with the other Protestant bodies of the country. The names Oosterbaan, Stiistra, and Hesselinck are mentioned with pride as theologians of Holland, and not simply as Mennonite ministers, by every Dutchman. In 1795, the year of the kingdom of the Netherlands, a convention of 428 preachers and elders was held at Amsterdam, and soon after they began gradually to drop peculiar characteristics, so as to form substantially only one national body. In 1811 all Mennonites united in the formation of a society for the support and encouragement of theological education. In 1855 the tercentenary date of Menno’s withdrawal from the Papal Church was unitedly observed by all his followers. A missionary society, sustaining three laborers in Java, is supported by all Mennonites, and is the Tegel Theological School at Haarlem. According to the Mennonite ‘Year-Book’ of 1850 (the last published by the denomination), the number of Dutch congregations of the Mennonites amounted to 1274 congregations and 140 ministers, not counting the retired preachers and their engaged as professors. The Mennonites in Germany, etc.—In Germany the Mennonites were rather numerous in the 17th century. In Moravia alone they counted some 70,000. They were expelled from that country by Ferdinand II in 1622, and, after a short stay in Hungary and Transylvanìa, finally found a resting-place in Russian territory (see below). The Mennonites were very largely represented in Eastern Prussia. They were particularly numerous at Danzig, Marienburg, and Elbing. Their Dutch neatness and Dutch industry soon made these desolate and swampy regions to flourish like a garden. But almost incessant persecution gradually reduced their number by emigration. In 1730 and in 1732 they were threatened with extermination on account of their refusal to serve in the army; but the storm passed by, and king Frederick II gave them additional privileges—not, however, until the order had been weakened by emigration. Gradually they increased again until 1789, when they were forbidden to purchase landed property. But, notwithstanding all difficulties, the Mennonites have remained, in part at least, on Prussian soil, particularly in the valley of the Vistula, called the Garden Spot of Prussia, their number in all Germany is estimated at about 50,000.

The Mennonites in Russia.—Russia gladly availed herself of Prussia’s intolerance, and did much to secure these valuable citizens for her own territory. Catharine II in 1786 had invited the Mennonites to Russia, along with other German colonists, and in 1789-92 families arrived in Russia, and between 1798 and 1796 there was an immigration of 118 more families. These all settled on the northern shores of the Gulf of Finland, and a few also in the province of Vitebsk. The conditions on which they came to Russia were: Protection from all attacks, freedom of worship, a gift of lands to the amount of 190 acres for each family, exemption from all taxes and imposts for ten years, money for their journey, and money and wood with which to establish themselves, freedom of trade and manufactures, the administration of oaths in their own way, and exemption forever from military service. These privileges were confirmed by the emperor, and extended to all Mennonites who should come therewith. In spite, therefore, of the repeal and abrogation of the severe laws against them in Prussia, there was a continued and large immigration of Mennonites into Russia, up to the year 1917. These colonists ended near their brethren in the government of Taurida, in the region between the rivers Molotchna, Dnieper, and Tokmak, not far from the town of Berdiansk. From that time the Mennonites have gone on increasing, multiplying, and prospering, till they number half a million souls. They have always been protected and favored by the government, so that they have almost entirely governed themselves, and have preserved their German character and institutions intact. This they in great part owe to the character and efforts of Johann Cornies, who, up to his death in 1848, exercised a very powerful influence over them, though he held no office and no rank. Titles and orders were on several occasions offered to him by the imperial government, which highly appreciated his services, but they were always refused. His advice was several times asked by the minister of the interior of the Russian government, which very likely took an important measure without first consulting Cornies. These Mennonites not only had their own schools and churches, and retained in their integrity the language, habits, and usages of their ancestors, but had a sort of self-government, each village of villagers being under a governor appointed by themselves from their own ranks, who acted as the organ of communication between them and the general government. In 1861, the present czar (Alexander II) granted new lands and renewed all the old concessions to a colony of Mennonites who settled on the Volga. These lands, however, were not given to Cornies, but to Catherine the second. The receivers were allowed to leave them to their children and to sell them to each other, but could not dispose of them to any other than a Mennonite without special permission of the government. In our own day the attitude of the Russian government towards the Mennonites has decidedly changed, and a harsh and unfriendly spirit has been manifested in regard to them. The sharp-sighted among them foresaw an invasion of their liberties from the tone of the Russian newspapers and the attitude of Russian officials. On June 4, 1871, the expected blow came. An edict, addressed to all the colonists in the empire—German Lutherans and Roman Catholics as well as Mennonites, Bulgarians, and others, to all of whom, as to the Mennonites, grants of lands and special privileges had been given—set the limit of ten years as the terminal period of exemption from military service, with the proviso that, as to furnishing recruits, the laws ruling colonists should continue in force only for the purpose of a general law on military duty. Such a law might be promulgated at any day, and the Mennonites, with others, be obliged to furnish recruits, in spite of their religious convictions against bearing arms. By the general law of Russia emigration is not permitted; but, for the benefit of the aggrieved colonists, ten years were given them to leave Russia if they chose to take themselves or Russia, if unwilling to come under the full extent of Russian law. After that time no emigration is to be permitted. Meanwhile some of the Mennonites had been busy making inquiries to guide them in the selection of new homes. Cornelius Jansen, a leading Mennonite, acting as German consul at Berdiansk, had written letters to members of the sect in this country and Canada, asking information as to the advantages of America for settlement by their people. Very full and encouraging replies were received from John Funk, at Elkhart, Indiana, and from others in Canada, Pennsylvania, and the West. Jansen had these letters printed, and distributed them among his brethren with little pamphlets, telling of the attractions of America. So enthusiastic did the people become over the hope of freer and happier homes in the New World, that in a short time $20,000 was raised to aid a deputation to America, to visit its finest sections, and to return to Russia with a report of the result of their springing out of the land. The delegates sent were twelve in number, and left Russia for this country at various times from February to May, 1873, and the result is manifest in the large arrival of this people, who have purchased lands on the Western prairies, and in some of our South-
ern states. The probability is that all the Mennonites of Russia will settle in the United States.

They, who, after their migration from Russia, settled in the Crimea, and there lived on land bought by themselves, and not included in the grants of either Catherine or Alexander, are likewise emigrating to this country. An advance guard of some thirty families, who were able to sell their estates at once, quitted the Russian territory and arrived here Aug. 15 (1878). They are essentially German, still speaking the language of the land they were obliged to leave nearly a century ago, and are from the villages of Friedenstein ("Stone of Peace") and Bruderfield ("Brother's Field"), in the Crimea, in the neighborhood of the Black Sea. They marry only within their own Church. A correspondent of the Reformen writes from St. Petersburg under date of April 19 (1878), concerning this people: "That the Mennonites are thrifty, industrious, and economical, their prosperity is sufficient proof. They are, besides this, very clean, neat, and orderly (a lady could go into every peasant's stall), and quiet, contented, honest, moral, and deeply religious. There is no drunkenness or gambling among them. Crime is exceedingly rare. The latest statistics I can find are dated 1841, and those show that for 37 years there were only 86 crimes in the Mennonite colonies on the Molotchina, including about 12,000 people. Of these crimes, 41 sprang from the lack of a written law, while 9 were the result of minor offences, such as disobedience to the authorities. Besides all this, the Mennonites are educated. Every child knows how to read and write; in every village there is a school. The Bible and other religious books are, of course, to be found in every house. The Mennonites were visited by Hathhausen in 1845, and by Petzholdt in 1855, and both travellers bear testimony to the worth and the prosperity of the colonists. Petzholdt says: 'It is my firm conviction that Russia possesses no more useful or more industrious citizens than the Mennonites.' Up to this time the Mennonites have always been loyal subjects to Russia. They have never been remiss in their taxes; and during the Crimean War sent large voluntary gifts of grain and provender to the besieged army. It is only because the privileges granted to them are infringed, and they will be compelled to enter the army against their conscience, that they now wish to emigrate from Russia."

The Mennonites in the United States. These newcomers are not by any means the first Mennonites in the United States. They came as early as 1838. Holding much in common with the Friends, the Mennonites received an invitation from William Penn to settle in the Pennsylvanian colonies. They accepted the kind offer of the Quaker leader, and in little more than half a century the sect had migrated to the number of about 500 families. In 1708 a school and meeting-house were erected by them in Germantown, Pa. In the following year another colony was established in what is now known as Lancaster County, Pa. Other emigrating followers followed in 1711, 1717, 1727, and 1738 successive. In 1735 there were nearly if not quite 500 families settled in Lancaster County. Afterwards their families settled also in various parts of Maryland, Ohio, Indiana, New York, and Canada; and they are now found in nearly every part of the Union and of Canada, though they are most numerous presented in Pennsylvan- sylvania, Ohio, Maryland, and Virginia. It is difficult to arrive at their whole number, as they keep no accessible records for that purpose, believing public displays of this nature to be only one of the vanities of denominations, and of no good service, as the Great Head of the Church alone can judge and know. They probably number, however, as nearly as can be ascertained, about 350 ministers and 66,000 members. They have a publishing-house at Elkhart, Indiana. Their bishops, ministers, and deacons meet semi-annually in district conferences for the purpose of learning the state of the Church, and deliberating upon sug-
Mensa Dei (the Lord's table), a term which has immediate reference to the Lord's Supper. The opposition between the expressions, "table of the Lord" and "table of daemons" (see 1 Cor. xi), at once marks it out as a table set apart for sacred purposes. See ALTAR; TABLE.

Mones Papálos is the technical term for one form of papal investiture claimed by the incumbent of St. Peter's chair, in case the vacancy occurs within certain stated months. The present rules of the Roman church, in effect from 1520, state: "Qui everit pope, sine dominio Nostris, pauperibus et aliis benemensibus personis oderi omnia beneficia ecclesiastica cum cura et cura, sacerdoria et quorumvis ordinum regularium quaecumque qualitatem, et ubiquecumque existentia in singulis Januarii, Februarii, Aprilis, Maii, Iulii, Augusti, Octobris, et Novembris mensibus, usque ad eam voluntatem benedictissimi Romanorum patriarcarum, alias, quorumvis aliis dispositione quocumque modo vacat, eis ad collationem, provisionem, presentationem, electionem, et quovis aliis dispositionem quocumque conscriptum, et collatricem seculumurum et quovis ordinum regiariarum (non autem S. R. E. cardinalium, aut aliorum sub conciliatis inter sedem apostolicam et quocumque aliis initis, et per eos qui illa acceptare et observare debuerint, acceptatis, que lederi non intendit, comprehensores, quomodo libet pertinenter dispositioni suae generaliter reservatur," etc. It is to be remarked that the term alternativa mensium (Schloss, De reservatione beneficiorum et dignitatum ex qualitate vacantis per reservationem [Franz. ad M. 1777, 4to]), as also benefices under lay patronage (Ferraris, Bibliotheca Canonicum, s. v. Beneficia, art. xi, note 18-20; most curacies, and other subordinate offices, are also excepted (Hedderich, Diaev. de parochia in Germania, etc. [Bonn, 1789, 4to]), vol. 1; Koch, et al., De negotiationibus ecclesiasticis illustrato [Argentorati, 1789, 4to], p. 228, note 64).

These doctrines, however, managed to elude the papal months entirely, by means of special papal edicts rendered for the purpose of securing other advantages (see Probat, Tornarii ecclesiastarum Germaniae, in Ulricher, Ad concordationem inters. terr. integrae doctrinae, integrae, integrae. In [Franz. and Leips. 1777], p. 396, 376; Gudenus, Codex diplomati, tom. iv, No. ccxxxiv, p. 717; Le Brevet, Magazin z. Gebrauche d. Staaten- u. Kirchengeschr. pt. viii, p. 4, etc.).

This law is still in force, but has in later times undergone various modifications. Shortly after the War of Bavaria, the Concordat of 1817, art. x, states: "Regia Majestas ad canonicatus in sex mensibus apostolici sive papalibus nomine adforatis," For Prussia, the bull De salute animarum, of 1821, regulates that "Futuro autem tempore... canonicatus in mensibus Januarii, Martii, Maii, Iulii, Septembris, ac Novembris... vacantes conferentur, quasdemmodum hac etiam in capitolo Wrazlauviensi haejectum est..." (see Lamprey, Gesch. u. heutige Verfassung d. Kath. K. Preussen [Halle, 1840], ill, 389, 369, 370). In several other countries the law has fallen into disuse, and the appointments are made by the dioceses. See Herzog, Reallexikon, s. v. Canonicatus.

Mens-stenalder ("avparaordning"), one who kidnaps or decoys a free person into slavery, an act condemned by the apostle among the highest crimes (1 Tim. i, 10). The seizing or stealing of a free-born Israelite, either to

endowment which was to defray the table expenses of the chapter members, and (2) mensa episcopalis for the episcopal share. The chapter's portion was again subdivided according to the number of members belonging to a chapter, and the proportion of allowance for each parish was determined by the admin-istration of the capitation property was usually intrusted to the provost, and that of the episcopal table estate to an official appointed by the bishop himself (vice-domi-nus) (Carol. M., capit. I, 802, c. 13; Lothar I, capit. ao. 824, c. 8). If any of the capitation estates were to be sold, a permit of the bishop and all capitate rights must be secured (c. 1, 2, 8, x, De his quos fiant a privatis, iii, 10; sexta c., De reb. eccles. non alieni, iii, 9). If any of the episcopal estates were to be sold, a permit of the pope had to be asked for (c. 8, x, De reb. eccles. non alieni). In cases where the episcopal chair is endowed with such goods, this regulation remains yet in force. See Wetzer und Welte, Kirchen-Lexikon, s. v.

Mensa Dei (the Lord's table), a term which has immediate reference to the Lord's Supper. The opposition between the expressions, "table of the Lord" and "table of daemons" (see 1 Cor. xi), at once marks it out as a table set apart for sacred purposes. See ALTAR; TABLE.

R. E. cardinalium, aut aliorum sub conciliatis inter sedem apostolicam et quocumque aliis initis, et per eos qui illa acceptare et observare debuerint, acceptatis, que lederi non intendit, comprehensores, quomodo libet pertinenter dispositioni suae generaliter reservatur," etc. It is to be remarked that the term alternativa mensium (Schloss, De reservatione beneficiorum et dignitatum ex qualitate vacantis per reservationem [Franz. ad M. 1777, 4to]), as also benefices under lay patronage (Ferraris, Bibliotheca Canonicum, s. v. Beneficia, art. xi, note 18-20; most curacies, and other subordinate offices, are also excepted (Hedderich, Diaev. de parochia in Germania, etc. [Bonn, 1789, 4to]), vol. 1; Koch, et al., De negotiationibus ecclesiasticis illustrato [Argentorati, 1789, 4to], p. 228, note 64).

These doctrines, however, managed to elude the papal months entirely, by means of special papal edicts rendered for the purpose of securing other advantages (see Probat, Tornarii ecclesiastarum Germaniae, in Ulricher, Ad concordationem inters. terr. integrae doctrinae, integrae, integrae. In [Franz. and Leips. 1777], p. 396, 376; Gudenus, Codex diplomati, tom. iv, No. ccxxxiv, p. 717; Le Brevet, Magazin z. Gebrauche d. Staaten- u. Kirchengeschr. pt. viii, p. 4, etc.).

This law is still in force, but has in later times undergone various modifications. Shortly after the War of Bavaria, the Concordat of 1817, art. x, states: "Regia Majestas ad canonicatus in sex mensibus apostolici sive papalibus nomine adforatis," For Prussia, the bull De salute animarum, of 1821, regulates that "Futuro autem tempore... canonicatus in mensibus Januarii, Martii, Maii, Iulii, Septembris, ac Novembris... vacantes conferentur, quasdemmodum hac etiam in capitolo Wrazlauviensi haejectum est..." (see Lamprey, Gesch. u. heutige Verfassung d. Kath. K. Preussen [Halle, 1840], ill, 389, 369, 370). In several other countries the law has fallen into disuse, and the appointments are made by the dioceses. See Herzog, Reallexikon, s. v. Canonicatus.

Mens-stenalder ("avparaordning"), one who kidnaps or decoys a free person into slavery, an act condemned by the apostle among the highest crimes (1 Tim. i, 10). The seizing or stealing of a free-born Israelite, either to

treat him as a slave or sell him as a slave to others, was by the law of Moses punished with death (Exod. xxii, 16; Deut. xxiv, 7), which the Jewish writers inform us was carried out. The practice was likewise forbidden among the Greeks (see Smith's Dict. of Class. Ant. s.v. Andrapodismus Graph), and was condemned by law among the Romans (see Adams' Roman Antiq. p. 24). See Slave.

Mensurius, bishop of Carthage, of whose personal history but little is known, figured very prominently during the Diocletian persecutions. He seems to have been identified with the liberal or Arian party, and to have entertained heretical opinions, to which he gave publicity in books published under the title of "Sacred Scriptures." He opposed the enthusiastic veneration of the confessors who were kept in prison. At the symposium held at Olena, A.D. 305, he was arraigned for these acts, but, as most of the African bishops were accused of the same crime, the matter was passed over. Later a new charge was brought against Mensurius, and he had to defend himself at Rome in 311. It seems that he there cleared himself, but on his return home he died. Under his successor in the bishopric the Donatist quarrels opened. See Donatists.

Mental Reservation is a term for withholding or failing to disclose something that affects a statement, promise, oath, etc., and which, if disclosed, would materially vary its import. As this is a false and deceitful way of acting, it cannot be approved by true morality. The Jews were, however, allowed to teach their pupils to delude people by all kinds of mental and verbal deceitful intentions. With many of them the end sanctified the means, and so they taught that even deceit by false promises and perjuries is allowable, if only good things were attained thereby in the end. They defended this manner of action by the shallow pretext that mental deceit being very difficult has been promised or sworn to from what the spoken words declared. See Carcivity; Moral Philosophy.

Mentone, Bernard de. See Bernard.

Mentzer, Balthasar (1), a German Lutheran divine, greatly noted for his decided opposition to the Reformed Church theologians, was born in Allendorf, Hesse, February 27, 1565. He studied at the University of Marburg, where he excelled by the display of uncommon talents. After preaching for several years at Kirtorf, he was appointed in 1596 professor of theology at his alma mater. While in this position he was involved in many controversies because of his prince's tendency towards the doctrines of the Reformed Church. Mentzer was especially radical in his opposition to the views of his opponents. After preaching for about 40 years at Marburg, he was appointed in 1653 professor of theology at his alma mater. While in this position he was involved in many controversies because of his prince's tendency towards the doctrines of the Reformed Church. Mentzer was especially radical in his opposition to the views of his opponents. After preaching for about 40 years at Marburg, he was appointed in 1653 professor of theology at his alma mater. Mentone, Bernard de. See Bernard.

Mentzer, Balthasar (2), son of the preceding, was born May 14, 1614, at Gaisburg, and was educated at the University of Marburg, which he entered in 1628, but completed his education at Strasburg and Jena. In 1640 he became professor at Marburg, in 1648 at Rinteln. He returned four years after and got a position at the University of Halle. He died in 1657. Of Mentzer's works, the most important are, Compendium Theol. Chris. (Rinteln, 1649); Quaest. Theol. ad Aug. Conf. (Darmstadt, 1668; often republished; at last at Rinteln, 1733); De termino vitae (1647), and Abgeführte ferne Erklärung der Frage vom Ziel des menschlichen Lebens (Rinteln, 1649); Kursus Bekenner über Wahrnehmung Gottes geprüft von der Polygamie (Darmstadt, 1671); etc.

Menu. See Menu.

Menuchah (Heb. Menuchah, מנוחה, rest, as often) appears in the marg. of the A.V. at Judg. xx, 43 (Sept. [Yat.] drār Novg, Vulg. and A.V. "with ease," as if מנוחה: Jer. ii, 59 (Sept. ἀνασπο, Vulg. prospetio, A.V. "quiet"). The Sept. likewise, in the remarkable list of additional towns in Judah (Josh. xvi, 59), seems to make mention of it (Maruvi). First mention of Menuchah is in the Heb. Law (Lev. xxvi, 8) in the list of a place called Manochah (1 Chron. vii, 6) or Hotai-am-Menouchah (1 Chron. ii, 54). But all this is doubtful, and the word is rather an appellative. See Menuchah.

Menuchite or Menouchite is given in the marg. of the A.V. at 1 Chron. ii, 52, 54, in place of "Manahethite" of the textual rendering, as an alternative

whom he sent forth Abterius calumniumr J. Croci, Apologetico, Anticrocia, Collatio Augustana Confessi- onis cum doctrina Calvin, Beati et sociorum (1610).

He had also the support of John Pistorius (Wegscheier, for alle verführer Christen), he wrote Anti-Pistorius sui disputatio praecepits quibusdam controversye capitis (Marburg, 1600):—Evangelischer Wegeweiser (Marburg, 1605), and many others. He engaged in a controversy with John Crocius, professor at Marburg, against...
rendering of the Heb. *Menuchoth* (מְנֻכָּה, ver. 52) or *Menachthi* (מְנָכָה, ver. 54), which, as far as can be gathered from the obscure and confused passage, seems to be assigned as a general name of certain descendants of Judah, classified according to some locality settled or inhabited by them. Some (as apparently the A. V.) have referred this presumed place to the Manachath (q. v.) of 1 Chron. viii. 6; but this was either in Benjamin or Moab, certainly not in Judah. Others have found it in the Menuchah (q. v.) supposed to be referred to in Judg. xx. 48; but of the existence of this latter there is very great doubt. The ancient versions are able to make nothing intelligible out of the passage. Thus must be understood, that the Menachoth, as in ver. 54 as *Hatsihammer-Menachthi*; but the relation between the noun Menuchoth and the adjective Menachthi we cannot dis-cover. The latter of these two moieties is predicated of the son of Salma, the former of the son of Shobal. As of Shobal, however, some are announced, we must recognise in Haroeh the name of another son; moreover, in chap. iv. 2, Reiah appears as a son of Shobal, and this name so closely resembles Haroeh that we may suppose them identical. Haroeh and Reiah are thus associated as the two sons of Shobal, and the connective ("and") may have originally stood between them in the Hebrew text. If, however, this is the case, it is not an article and a participle (*זָרָה* = "the sea"); and it may also be reduced to a mere appellation or attribute, but this would not help the narrative. Hatsi-ham-Menuchoth, on the other hand, is a less natural form for a pastoral name than Hatsi-ham-Menachthi, and this would seem to designate an original or ancestor by the name of Manachath (מָנָכָה), a form which actually occurs elsewhere as the name of a man. See MANAHATH. Now as Shobal is repeatedly stated to be the "father" (founder) of Kirjath-jezreel, his sons of course, in part at least, settled there. We may therefore clear up ver. 52 by interpreting it as meaning that Shobal had two sons, Reiah and Manahath, and that part of the descendants of the latter settled at Kirjath-jezreel, becoming the heads of the families named in ver. 58. The other portion of the Manachathites appear to have colonized at Zorah, in the adjoining territory of Dan; and are hence, for some reason not clear, classed in ver. 54 with the descendants of Shobal's brother Salma as "Zorites," that city being perhaps chiefly occupied by the latter. Yet it is a singular circumstance (see chap. iv. 1, Rotherham) that the Gibeonites are said to have populated an entire city, if, indeed, that be the just interpretation of "Zorahites." See ZORAH.

**Menynthi** (Μενυνθι), the initiated) was the name given, especially in the 4th and 5th centuries, to full members of the Church of Christ. It originated in the supposed analogy between baptism and the rites of initiation into certain mysteries of the heathen. The phrase τεανοι το Μενυνθι, "the initiated know," occurs about fifty times in the works of Augustine and Chrysostom. In like manner μώστα, μονεγαγοντος, μονεγαγοντας, and other terms borrowed from the heathen mysteries, are applied to the Christian rites. All these expressions, which came into general use in the 4th century, mark the prevalence of that system of secret instruction or doctrine which we noticed in the article ARAUCANIA DISCIPLINA. See Riddle, Christian Antiquities, p. 195.

**Meon.** See BAAAL-ΜΕΟΝ; BET-BAAL-ΜΕΟΝ; BETH-MEON.

**Meon'emin** (Heb. *Meomein*) occurs in the Auth. Ver. (Judg. ix. 37) in the proper name Elon-Meomein (אֵלוֹן מְאוֹמֵין), "the plain;" or, as it should be rendered, the oak of Meomein (Sept. Ηλων Μεωμείνιον v. r. ἔδρος ἀποτελοῦσθεν, marg. "regarders of times"). Meomein (variously rendered in the Auth. Ver. "sooth-sayers," "regarders of times"); etc. means sorcerers, and is derived either from "meom" (= "time") (Exod. xx. 10), from "mων," "the eye," or else, which is more probable, from "mων," "a cloud;" it means, therefore, those dealers in forbidden arts who observe times, or practice fascination, or take auguries from the signs of the sky. See DIVINATION. Whatever was its original meaning, Meomein was afterwards used in a perfectly general sense (Deut. in xviii. 11; 2 Kings xxii. 6; Micah v. 12) for wizards. In this article, therefore, we are only concerned with "the oak of the sorcerers," a celebrated tree near Shechem, mentioned in Judg. ix. 37, where Gaal, son of Ebed, the Shechemite conspirator, standing "in the entering of the gate," saw the soldiers of Abimelech first on the hill-tops, and then in two companies, of which one approached by "the oak of the sorcerers," which is evidently pointed out as a conspicuous land-mark. It would be the better suited for this purpose because oaks are rare in Palestine, except in the hills. For other trees used as land-marks, see Gen. xxxiv. 8; 1 Sam. xxii. 6; xli. 2, xiv. 2, etc. Now it happens that in Scripture no less than four other celebrated trees in the immediate neighborhood of Shechem are prominently mentioned in connection with important events, and it is interesting to inquire whether all or any of these can be identified with this one. See SHECHEM.

1. In Gen. xxxi. 6, we are told that Abraham "passed through the land unto the place of Sichem, unto the oak of Moreh" (Sept. τηρημ ουράνιον την υπαρξην), where the use of the singular points to one tree of note, although at Shechem there was a grove of oaks (Deut. xi. 80). It was, therefore, in all probability conspicuous for size and beauty, and the vision which Abraham there commemorated by building an altar would add to it a sacred and venerable association. See SHECHEM.

2. In Gen. xxxvi. 4, we read that Jacob, on his way to Bethel, took from his family all the strange gods which were in their hand, and all their ear-rings which were in their ears, and hid them under the oak which was by Shechem (יִשְׂרָאֵל הַשָּׁרוֹן, יִשְׂרָאֵל הַשָּׂרָה). The use of the article in this verse is not, indeed, absolutely decisive, but would lead naturally to the supposition that this tree was the one already so famous in the religious history of the Israelitish family. That this is used (Sept. ταπεινότατος) and not תַּם, is a consideration of no importance, for it seems certain that the two words are synonymous (see Genesis, Thessur. p. 50, 51), or at any rate are used interchangeably. See TAANATH. In Gen. xxi. 31, Isaac, after ascending the assembled tribes at Shechem, "took a great stone and set it up there under an oak (το οξύλιον την ζαράν) that was by the sanctuary of the Lord." The use of the definite article again renders it probable that this is the same tree as that which had been connected with the memories of Abraham's vision, and Jacob's rejection of idolatrous possessions; and the probability is strengthened into certainty by the fact that Joshua's injunction in ver. 14 ("put away the gods which your fathers served on the other side of the flood") is almost identical with that which Jacob had addressed to his family on that very spot (Gen. xxxvi. 2) some 800 years before. Kalsch, indeed, in his commentary of the Sept. of Joshua, oil; that there were erected at the place of idols (Genesis, b. 586); but, to say nothing of the fact that several of the Jewish high-places seem to have been also connected with the worship of the Canaanites, a place where idols had been buried, and so rejected and scornered, would surely be most fitted for the sanctuary, especially if it had been here that a previous protection of the great forefather of the race against the idolatry which there surrounded him (Gen. xii. 7).

4. In Judg. ix. 6, we read that "all the men of Shechem ... made Abimelech king, by the oak (A. V.
plain) of the pillar that was in Shechem (יהוּדָהָה הַיָּבָא). The word מַטָּשֵׁב, muttabab, is very obscure, and Jerome’s version, “quercus quam stahat in Sichem,” seems to show that it may have followed מַטָּש בָּא (פְּלַס מַטָּש בָּא). The Sept. renders it πάρος τῆς Σακχαρέως (τῆς σάκχαρος τῆς Σακχαρός), where rendering approved by Gesenius (Thesaur. p. 904), who compares Isa. xxxix. 3. Our A. V. refers it to the sacred stone set up by Joshua, and this seems a very probable rendering, from the constant use of the word מַטָּשֵׁב for similar erections (Gen. xxviii. 18; Exod. xxiv. 4; 2 Kings iii. 2; Micah v. 18). It seems further possible that during the confounding which prevailed in the area after Joshua’s death, the stone which he had erected beneath it, and which was invested, even though in metaphor, with qualities so like those which the Canaanites attributed to the stones they worshipped—during these confused events, the Canaanite, one of their “mattasehah” [see IDOL], and thus the tree have acquired the name of the “oak of Muttabab” from the fetish below it. The argument that this tree cannot be identical with Jacob’s, because that is spoken of as near ( إطار), and this is as (חרף), is quite unconvincing, both because the use of the prepositions by Hebrew writers is by no means the same, and further because in this way cooling the general שֵׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶךְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁפֶ�ְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶךְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁpֶ�ְ שִׁ
The seven corpses, protected by the tender care of the mother of Mephibosheth from the attacks of bird and beast, were exposed on their crosses to the fierce sun of at least five of the midsummer months, on the sacred eminence of Gibeah. This period results from the statement that they hung from barley harvest (April) till the commencement of the rains (October); but it is also well known that in Sept. and Oct. the sun was very intense, and that the corpse is always exposed to the sun, “to expose to the sun.” It is also remarkable that on the only other occasion on which this Hebrew term is used—Num. xxv, 4—an express command was given that the victims should be crucified “in front of the sun.” At the end of that time the attention of David was called to the fact that the sacrifice had failed in its purpose. A different method was tried: the bones of Saul and Jonathan were disinterred from their resting-place at the foot of the great tree at Jabesh-Gilead, the blanched and withered remnants of Mephibosheth, his brother, and his five relatives, were taken down from the crosses, and father, son, and grandsons found at last a resting-place together in the ancestral cave of Kish at Zelah. When this had been done, “God was entreated for the land,” and the famine ceased. B.C. 1053—1019. See Rizpah.

The son of Jonathan and grandson of king Saul (2 Sam. iv. 4; in which sense “the son of Saul” is to be taken in 2 Sam. xix, 24; see Gesenius, Thesaur. p. 216; called also by the equivalent name of Meribbaal (1 Chron. ix, 40). The following account of his history and character is sufficiently detailed to set forth the important relations which he held to the adventures and reign of his father’s successor.

1. His life seems to have been, from beginning to end, one of trial and discomfort. The name of his mother is unknown. There is reason to think that she died shortly after his birth, and that he was an only child. At any rate, we know for certain that when his father and brothers were slain on Gilboa, he was an infant of but five years old. B.C. 1058. He was then living under the charge of his nurse, probably at Gibeah, the regular residence of Saul. The tidings that the army was destroyed, the king and his sons slain, and that the Philistines, spreading from hill to hill of the country, were sweeping all before them, reached the royal household. The nurse, perhaps apprehending that the enemy were seeking to exterminate the whole royal family, fled, carrying the child on her shoulder. This is the statement of Josephus (ἀντὶ καὶ ἀναπέμφη, Ant. vii, 5, 9; but it is hardly necessary, for in the East children are always carried on the shoulder (see supra p. 346, note. Epigra- phics, ch. i, p. 52, and the art. Child). But in her panic and hurry she stumbled, and Mephibosheth was precipitated to the ground with such force as to deprive him for life of the use of both feet (2 Sam. iv, 4). These early misfortunes threw a shade over his whole life, and his personal deformity—as is often the case where it has been the result of accident—seems to have exercised a depressing and depreciatory influence on his character. He can never forget that he is a poor lame slave (2 Sam. xix, 26), and unable to walk; a dead dog (ix, 8); that all the house of his father were dead (xix, 29); that the king is an angel of God (1b, 27), and he his ab- ject dependent (ix, 6, 8). He receives the slanders of Ziba and the harshness of David alike with a submis- sive equanimity which is quite touching, and which ef- fectually wins our sympathy.

2. After the accident which thus embittered his whole existence, Mephibosheth was carried with the rest of his family beyond the Jordan to the mountains of Gil- ead, where he found a refuge in the house of Machir ben-Amnien, a powerful Gadite or Manassite sheik at Lo-debar, not far from Mahanaim, which during the reign of his uncle Ishboseth was the head-quarters of his forces. At this time he was five years of age (Ant. vii, 5, 9; there he married, and there he was living at a later period, when David, having completed the submission of the adversaries of Israel on every side, bad leisure to turn his attention to claims of other and less pressing descriptions. The solemn oath which he had sworn to the father of Mephibosheth at their critical interview by the stone Ezel, that he "would not cut off his kindred from the house of Jonathan forever: nor, not when Jehovah had cut off the ene- my of my Lord Jonathan, or any of his house, from the house of Israel, even so will I cut off thee from the house of David, and from the house of Saul," (1 Sam. xx, 15); and again, that "Jehovah should be between Jonathan's seed and his seed forever" (ver. 42), was naturally the first thing that occurred to him, and he eagerly inquired who was left of the house of Saul, that he might show kindness to him for Jonathan's sake (2 Sam. xix, 29). So brothers, in whose family of the late king vanished from the western side of Jordan that the only person to be met with in any way related to them was one Ziba, formerly a slave of the royal house, but now a freed man, with a family of fifteen sons, who, by arts which, from the glimpse we subse- quently have of his character, are not difficult to under- stand, must have acquired considerable substance, since he was possessed of an establishment of twenty slaves of his own. From this man David learned of the ex- istence of Mephibosheth. Royal messengers were sent to the house of Machir at Lo-debar, in the mountains of Gilead, and by this means the family of the upstart chieftain (2 Chron. ix, 40) were brought to Jerusalem. The interview with David was marked by extreme kind- ness on the part of the king, and on that of Mephibos- saphet by the fear and humility which have been pointed out as characteristic of him. He leaves the royal pres- ence with all the property of his grandfather restored to him, and with the whole family and establishment of Ziba as his slaves, to cultivate the land and harvest the produce. He himself is to be a daily guest at Da- vid's table. From this time forward he resided at Jeru- salem (2 Sam. ix). B.C. 1057. See Kitto's Daily Bible Illustr. ad loc.

3. An interval of about fourteen years now passes, and the crisis of David's life arrives. See David. Of Mephibosheth's behavior on this occasion we possess two accounts—his own (2 Sam. xix, 24-30), and that of Ziba (xvi, 1-4). They are naturally at variance with each other. (1.) Ziba meets the king on his flight at the most opportune moment, just as he has under- gone the most trying part of that trying day's journey, has taken the last look at the city so peculiarly his own, and completed the hot and toilsome ascent of the Mount of Olives. He is on foot, and is in want of relief and refreshment. The relief and refreshment are there. He is free to accept them for the king or his household to make the descent upon; and there are bread, grapes, melons, and a skin of wine; and there—the donor of these welcome gifts—is Ziba, with respect in his look and sympathy on his tongue. Of course the whole, though offered as Ziba's, is the property of Mephibosheth: the asses are his, one of them his own riding animal (הָעֵד, both in xvii, 2, and xix, 26); the fruits are from his gardens and orchards. But why is not their owner here in person? Where is the man who is to welcome and receive them? Ziba, says Ziba, is in Jerusalem, waiting to receive from the nation the throne of his grandfather, that throne from which he has so long been unjustly excluded. Such an aspiration would be very natural, but it must have been speedily dissipated by the thought that he at least would be likely to gain lit- tle by Absalom's rebellion. Still it must be confessed that Ziba's tale at first sight is a most plausible one, and that the answer of David is no more than was to be ex- pected. So the presumed ingratitude of Mephibosheth is requited with the ruin he deserves, while the loyalty and thoughtful courtesy of Ziba are rewarded by the possession of his master, thus reinstating him in the family of his former benefactor. (2.) Mephibosheth's story— which, however, he had not the opportunity of telling
MERAH

until several days later, when he met David returning to his kingdom at the western bank of the Jordan—was very different from Ziba's. He had been desirous to fly with his patron and benefactor, and had ordered Ziba to make ready his ass that he might join the cortège. But Ziba had deceived him, had left him, and not returned with the asses. In his helpless condition he had no doubt of the opportunity of accompanying David was lost, but to remain where he was. The swift pursuit which had been made after Ahimaaz and Jonathan (2 Sam. xvii) had shown what risks even a strong and able man must run who would try to follow the king. But all that he could do under the circumstances he did, and in the evening when mourning possible (the same as in xii, 20) for his lost friend. From the very day that David left he had allowed his beard to grow ragged, his crippled feet were unwashed (Jerome, however, pedibus infectis—alluding to false wooden feet which he was accustomed to wear, (text. Heb. ad loc.) and untended, his linen remained unchanged. That David did not disbelieve this story is shown by his revoking the judgment he had previously given. That he did not entirely reverse his decision, but allowed Ziba to retain possession of half the lands of Mephibosheth, is probably due partly to weariness at the whole transaction, but mainly to the conciliatory spirit which is manifested in which he was willing to make peace.

"Shall, then, any man be put to death thic day?" is the key note of the whole proceeding. David could not but have been sensible that he had acted hastily, and was doubtless touched by the devotedness of his friend's son, as well as angry at the imposition of Ziba; but, as he was not wholly convinced of Mephibosheth's innocence, and as there was at the time no opportunity to examine fully into the matter, perhaps also actuated by the pride of an already expressed judgment or by reluctance to offend Ziba, who had adhered to him when so many old friends forsook him, he answered abruptly, "Why speakest thou of me in the presence of thy matters? I have said, Thou and Ziba divide the land." The answer of Mephibosheth was worthy of the son of the generous Jonathan, and, couched as it is in Oriental phrase, shows that he had met a better reception than he had expected: "Ifa, let him take all; forasmuch as my lord the king is come again in peace unto his own house" (2 Sam. xiv, 24–30).

B.C. cire. 1023.

4. We hear no more of Mephibosheth, except that David was careful that he should not be included in the savage vengeance which the Gibeonites were suffered to execute upon the house of Saul for the great wrong they had done during his reign (2 Sam. xxii, 10). Though his name and that of Saul are continued to a late generation (1 Chron. ix, 40 sq.).

On the transaction between David and Mephibosheth, see J. G. Elmer, Die gerechte Unschuld u. Redlichkeit Mephibosehs (Frankf. u. Leipzig, 1767); Niemeyer, Charakter u. 434 sq.; Kittto's Daily Bible Illust., ad loc.; Blunt, Undesigned Coincidences, ad loc.; Hall, Contemplations u. Hist., ad loc.; H. Lindsay, Lectures, ii, 102; Dodridge, Sermon, i, 177; Ewald, Hist. of Israel (Engl. transl. iii, 191). See Ziba.

MEROV (Heb. Meror, כֶּרֶב, increase; Sept. Μεροῦς and Μερών; Josephus Μεροῦς, Ant. vi, 6, 5), the eldest of the two daughters of king Saul (doubtless by his wife Ahinoam), and possibly the eldest child (1 Sam. xiv, 19). She first appears (B.C. cire. 1062) after the victory over Goliath and the Philistines, when David had become an intimate friend of Saul's household and immediately after the commencement of his friendship with Jonathan. In accordance with the promise which he made before the engagement with Goliath (xxv, 25), Saul betrothed Merab to David (xiv, 18), but it is evidently implied that one object of thus rewarding his valor was to invite him to further feats, which might at last lead to his death by the Philistines. David's bestowal looks as if he did not much value the honor, although his language in ver. 18 may be only an Oriental form of self-depreciation (comp. 1 Sam. xviii, 23, xxv, 42; 2 Sam. ix, 8); at any rate before the marriage Merab's younger sister Michal had displayed her attachment for David, and Merab was then married to Adriel the Meholathite, who seems to have been one of the wealthy and prominent people of the eastern district of the land, with whom the house of Saul always maintained an alliance. To Adriel she bore five sons, who formed five of the seven members of the house of Saul who were given up to the Gibeonites by David, and by them impaled as a propitiation to Jehovah on the sacred hill of Gibeah (2 Sam. xxv, 8). See RUZNA.

The Authorized Version of this passage is an accommodation, rendering ומְרוֹב, "she brought up," although it has "she bare" for the same Hebrew word in the previous part of the verse. The Hebrew text has "the five sons of Michal, daughter of Saul, which she bare to Adriel," and this is followed in the Sept. and Vulgate.

The Targum explains the discrepancy thus: "The five sons of Merah (which Michael, Michal's daughter, brought up) which she bare," etc. The Peshito substitutes Merab (in the present state of the text "Nodob") for Michal. J. H. Michaelis, in his Hebrew Bible (2 Sam. xxi, 10), suggests that there were two daughters of Saul named Michal, as there were two Elisabases and two Absaloms among David's sons. Probably the most feasible solution of the difficulty is that "Michal" is the mistake of a transcriber for "Merab"; but, if so, it is manifest from the agreement of the versions and of Josephus (Ant. vii, 430) with the present text, that the error is one of very ancient date. See Michal.

Mera'ath (Heb. Merorah, מְרוֹרָה, resistence; Sept. Μαρπα, Μαρπα; Vulg. Merora), a chief priest, the "son" of Seraiah, contemporary with the high-priest Joakim (Neh. xii, 12). B.C. post 586.

Mera'oth (Heb. Meroroth, מְרוֹרֵות, rebellions; Sept. Μερωροῖς, Μερωροὶ, and Μαρπαδείς v. r. Μαρπαία), the name of one or more leading priests.

1. The son of Zerahiah and father of Amariah, a high-priest of the line of Eleazar (1 Chron. vi, 6, 7, 52; Ezra vii, 8), B.C. considerably ante 1062. It was thought by Lightfoot that he was the immediate predecessor of Eli in the office of high-priest, and that at his death the apostate priesthood transferred from the line of Eleazar to the line of Ithamar (Temple Service, iv, § 1). In 1 Chron. ix, 11; Neh. xi, 11, his name appears to have become transposed between those of Zadok and Ahiut, instead of its proper place after the latter, as may be seen from 1 Chron. vi, 6–12. See High-priest.

2. A chief priest whose name is contemporary with the high-priest Joakim (Neh. xii, 15); doubtless identical with the Meremoth of ver. 3.

Me'ran (Mešpāv, Vulg. Mervaha), a place mentioned along with Theman as famous for its merchants and its wise men (Bar. ii, 23). The association with the Haggarenes leads us to seek for Meran in Arabia. It may be Mabarah in Desert Arabia, or Marame, of which Pliny speaks (Nat. Hist. vii, 22). See also Bidor, Sic. (iii, 43) also mention the Malperan. The conjecture of Grotius that it is the Meheran mentioned in Josh. xiii, 4, and that of Hiëvernick (De libro Baruch, p. 5) that it is the Syrian town Maaran, are mere guesses (comp. Frischschr., Excerpt. Hist. v. Apok. ad loc.—Kittto). The suggestion of Hirtzsch, Pana., 105, 13, 107, that this city is merely a corruption of "Medan" or "Midian," owing to the ready mistake of "for," is more plausible, although there is little evidence of a Hebrew original for this portion of Baruch. Janius and Trebellius give Molcanus, and their conjecture is supported by the appearance of the Midianites as nomade merchants in Gen. xxxvii. Both Medan and Midian are enumerated among the sons of Ketura in Gen. xxv, 9, and are closely connected with the Deanim, whose VI.—4*
"travelling companies," or caravans, are frequently alluded to (Isa. xxii, 18; Ezek. xxvii, 15).

**Mera’ri** (Heb. *Merari*), מֶרָאי, sad; Sept. *Miparei*), the youngest son of Levi, probably born in Canaan (Gen. xlv, 11; Exod. vi, 16; Numb. iii, 17; 1 Chron. vi, 1). B.C. 1674. Of Merari's personal history, beyond the fact of his birth before the descent of Jacob into Egypt, and of his being one of the seventy who accompanied Jacob thither, we know nothing whatever (Gen. xlv, 8, 11). He became the head of the third great division (תָּנִינָא) of the Levites, whose designation in Hebrew is the same as that of their progenitor, only with the article prefixed, viz. מֶרָאי, i.e. the Merarites (Exod. vi, 19), who during the march through the desert had charge of the materials of the Tabernacle (Numb. iii, 36; iv, 30 sq.), for the transportation of which they were provided with four carts, each drawn by a yoke of oxen (Numb. vii, 8). In Palestine they were assigned twelve trans-Jordanic cities for a residence (Josh. xxii, 7, 34 sq.). See Merarite.

**Merarite** (Heb. *Merari*), מֶרָאי, r. *Miparei*), the patronymic title of the descendants of Merarite (Numb. xxvi, 57). Their prominence among the Levitical families justifies a somewhat copious treatment of the subject.

At the time of the exodus, and the numbering in the wilderness, the Merarites consisted of two families, the Mahliites and the Mushites. Mahli and Mushi being either the two sons or the son and grandson of Merari (1 Chron. vi, 19, 47). Their chief at that time was Zuziel, and the whole number of the family, from a month old and upwards, was 6200; those from thirty years old to fifty were 3200. Their charge was the boards, bars, pillars, sockets, pins, and cords of the Tabernacle and the court, and all the tools connected with setting them up. In the encampment their place was to the north of the Tabernacle, and both they and the Geraromites were "under the hand" of Ithamar, the son of Aaron. Owing to the heavy nature of the materials which they
had to carry, four wagons and eight oxen were assigned to them; and in the march both they and the GerHonites followed immediately after the standard of Judah, and before that of Reuben, that they might set up the Tabernacle in the land of Judah (Josh. 3, 14; 7, 24). In the division of the land by Joshua, the Merarites had twelve cities assigned to them, out of Reuben, Gad, and Zebulun, of which one was Ramoth-Gilead, a city of refuge, and in later times a frequent subject of war between Israel and Syria (Josh. 13, 25; 1 Chron. 6, 62, 73–81). In the time of David Asiah was their chief, and assisted with 220 of his family in bringing up the ark (1 Chron. xxvi, 6). Afterwards we find the Merarites still sharing with the two other Levitical families the various functions of their caste (1 Chron. xxiii, 6, 31–32). Thus a third part of the singers and musicians who were Merarites, and Ethan or Jeduthun was their chief in the time of David. See JEDUTHUN. A third part of the door-keepers were Merarites (1 Chron. xxiii, 5, 6; xxvi, 10, 19), unless, indeed, we are to understand from ver. 19 that the door-keepers were all either Kohathites or Merarites, to the exclusion of the Gershonites, which does not seem likely. In the days of Hezekiah the Merarites were still flourishing, and Kish, the son of Abdi, and Azariah, the son of Jehaleli, took their part with their brethren of the other two Levitical families in promoting the reformation, and purifying the house of the Lord (2 Chron. xxix, 12, 15). After the return from captivity, Shemariah represented them at the bar of Ezra, in 1 Chron. ix, 14; Neh. xi, 15, and is said, with other chiefs of the Levites, to have “had the oversight of the outward business of the house of God.” There were also at that same time of Jeduthun under Obadiah or Abdi, the son of Shemariah (1 Chron. ix, 16; Neh. xi, 17). Verses ix, 14, and vi, 24, tell us that in the time of Ezra, when he was in great want of Levites to accompany him on his journey from Babylon to Jerusalem, “a man of good understanding of the sons of Mahli” was found, whose name, if the text here and at ver. 24 is correct, is not given. “Jeshiah, also, of the sons of Merari,” with twenty of his sons and brethren, came with him at the same time (Ezra viii, 18, 19). But it seems pretty certain that Sherebiah, in ver. 18, is the name of the Mahliite, and that both he and Hashabiah, as well as Jeshaijah, in ver. 19, were Levites of the family of Merari, and not, as the actual text of ver. 24 indicates, priests. The copulative ἐν has probably fallen out before their names in ver. 24, as appears from ver. 80 (see also 1 Chron. ix, 14; Neh. xii, 24). See LEVITES.

The above table gives the principal descents, as far as it is possible to ascertain them. But the true position of Mahli, Shamir, and Jeduthun is doubtful. How too, as elsewhere, it is difficult to decide when a given name indicates an individual, and when the family called after him, or the head of that family. It is sometimes too difficult to decide whether any name which occurs repeatedly designates the same person, or others of the family bore the same name. E.g. in the case of Mahli, Hilkiah, Shimri, Kish or Kishlab, it is not always clear if the table gives the result of the different names. The father of Ethan, in 1 Chron. xxv, 3, 19, might be the same as Hashabiah in vi, 19. Hoshai and Obededom seem to have been other descendants or classmen of Jeduthun, who lived in the time of David; and, if we may argue from the name of Hosha’s sons, Simri and Hilkiah, that they were descendants of Shamer and Hilkiah, the inference would be that Jeduthun was a son either of Hilkiah or Amaziah, since he lived after Hilkiah, but before Hashabiah. The great advantage of this supposition is, that while it leaves to Ethan the patronymic designation Jeduthun, it draws a wide distinction between the term “sons of Jeduthun” and “sons of Ethan,” and explains how in David’s time there could be sons of those who are called sons of Judethun above thirty years of age (since they filled offices, 1 Chron. xxv, 10), at the same time that Jeduthun was said to be the chief of the singers. In like manner it is possible that Jaziah may have been a brother of Malch or of Abdi, and that if Abdi or Ithri had other descendants besides the lines of Kish and Eleazar, they may have been reckoned under the headship of Jaziah.

The family of the Gershonites, who were reckoned as 2600 in the census according to 1 Chron. xxiv, 27, Shoham, Zaccur (apparently the same as Zerahiah in 1 Chron. xv, 18, where we probably ought to read ‘Zaccur, son of Jaziah,” and xxvi, 11, and Ithri, where the Sept. has ‘Ωδηφ, ‘Ασαφ, and ‘Αβδι). See each name in its place.

Merathaim (Heb. Merathayim, מְרַתְיָהָים, double rebellion; Sept. τοῦ παρακλήσεως, Vulg. dominantes), a name given to Babylon (Jer. I, 21), symbolical of its intensely perverse character (see Henderson, Comment. ad loc.). The expression “the land of two dominations” seems especially to allude “to the double captivity which Chaldæa had inflicted on the nation of Israel (Jer. I, 21). This is the opinion of Gesenius, Fürst, Michaelis (Bibel für Ungeduldige, p. 96), and the case has been taken by the versions generally, excepting that of Junius and Tremellius, which the A.V.—as in other instances—has followed here.

Merati, Gariato Mania, an Italian theologian, was born at Venice Dec. 23, 1668. He was educated in the regular order of the Theatins, afterwards taught philosophy and theology in the college belonging to his order, and in 1707 accompanied the Venetian ambassa- dor to London. He went to Rome in 1716 as procurator-general of his order. Pope Benedict XIV honored him with his friendship. He died at Rome Sept. 8, 1744. Some of Merati’s works are, La vita soaveamente regolata delle donne (Venice, 1708, 12mo)—La Verità della Religione Cristiana e Cattolica dimostrata ne’ suoi fondamenti (1721, 2 vols. 4to)—Notes Observations et Additions a’ Gavanis Commentaries in rubricis Missale et Breviarium Romani (Augsburg, 1740, 2 vols. 4to)—six Lettres dans les Epistolæ claror. Venetorum (1746, 2 vols.), addressed to Mighiobechi. He was also the editor of Theatinarum sacrarum Rituem de Garavoni (Rome, 1786-88, 4 vols. 4to), a work to which he made valuable contributions.

Merault, Athanase Réneké, a noted French educator, was born at Paris in 1744, and was educated at the College of Jeuilly. Although possessing a very large fortune, he entered the Oratory in order to devote himself to the instruction of the young. After his twenty-fifth year he was director of the house of education. Compelled to leave Paris by the Revolution, he retired to Orleans, where his parents resided. Imprisoned in 1788, and set free again after the 9th of Thermidor, he remained in the city, and became in 1805 grand vicar of the bishopric of Bernier, which place he held at the head of the great seminary. The archbishop of Orleans is indebted to the abbot Merault for several religious and charitable institutions, to the foundation of which he devoted a large portion of his money. He died at Or- leans June 13, 1855. His works are, Les Apologistes In- volontaires ou la Religion éternelle prouvée et défendue par les objections mêmes des incrédules (Paris, 1806, 8vo); Les Apologistes, ou la Religion Chrétienne prouvée par ses ennemis comme par ses amis (Orleans, 1821, 8vo and 12mo); a continuation of the preceding work: — Confession de l'impoli contre l'humanisme (Paris, 1822, 8vo); — Réponse à l'article du citoyen des champs contempo- rieurs (Orleans, 1829, 12mo); — Enseignements de la Religion (Orleans, 1827, 5 vols. 12mo); — Recueil des Mandements sur l'instruction des peuples (Paris, 1830, 12mo).

Merbes, Bon de, a French theologian, was born
in 1616 at Montdidier. He entered the congregation of the Oratory, and rose to much distinction. The doctorate of theology was conferred upon him. He died Aug. 9, 1834. His Latin works are excellent. Special notice is due to his Summa Christiana seu Orthodoxa morum disciplina ex Sacra Litera, sanctorum patrum monumenitis, conciliorum oraculis, sermonum denique pontificum decreta fideliter excerpta, etc. See Du Fin, Bibliothèque du dix-septième siècle, iv., 274.

Mercati, Giovanni Baptista, a painter of the 17th century, was a native of S. Sepolcro, Tuscany. He achieved a high reputation at home, and his fame extended as far as Rome. Two of his historical frescoes, representing Our Lady, are in S. Chiara; and at S. Lorenzo there is a picture of the titular, with other saints. In the Guides to Venice and Rome several of his works are mentioned; and in that of Leghorn, the only picture in the cathedral esteemed worthy of notice is that of the Five Saints, painted by Mercati with great care. See Lanzi's History of Painting, transl. by Roscoe (London, 1847, 3 vols. 8vo), i., 255.

Mercator, Marius. See Marius.

Mercer, T. F. Randall, a minister of the Methodist Episcopal Church, was born in New York City November 25, 1817; was converted in 1820, and joined the Presbyterian Church, to which his parents belonged. His educational advantages were very superi- or, as he was intended for the ministry. In his second year at college his health failed, and he was obliged to desist from all study. While at home he fell in with books that gave him a taste for Chinese theology. He promptly joined the Methodists, was licensed to preach, and exercised his power as a Christian pastor for eleven years. He died at Sheffield, Mass., Sept. 15, 1856. "Of a high order of intellect, carefully educated, deeply serious and thoughtful, with a profound sense of ministerial responsibility, bold and faithful in the discharge of his duties, modest, and unassuming, was eminently fitted to adorn both public and private life. His deep, ardent piety pervaded and beautified his whole being. He was emphatically a pure, humble, heavenly-minded man. His rare gifts made him an attractive speaker, a fine writer, a successful author, an accomplished debater, a choice friend. He was loved even more than he was admired" (Smith, Sacred Memories of the N. Y. and N. E. East Conf., p. 75 sq.). His published works are, Natural Goodness: The Wise MasterBuilder: Childhood and the Church; and numerous essays, etc., in the periodicals of the Church. All these evidences of earnest study and industry imbued with the spirit of Christian love. Minutes of Conferences, vi., 321; Dr. Dewey's Lecture (p. 296), of the "Pitt's Street Chapel Lectures" (Boston, Jewett & Co., 1858).

Mercer, Jesse, D.D., a Baptist minister, was born in Halifax County, N. C., Dec. 16, 1769. His early education was limited, yet he began to preach when only eighteen years of age; was ordained Nov. 7, 1789, and soon became pastor of a church at Hutton's Fork (now Sardis), in Wilkes County. In 1789 he accepted a call to Indian Creek (or Bethany), in Oglethorpe county, whence he removed in 1796 to Salem, where he became preceptor in the academy; and also succeeded his father in the charge of the Phillips Mill, Powelton, and Bethesda churches for some time, and finally removed to the fork of the Little River, in Green County. In 1826 he attended the General Convention in Philadelphia, and at the end of the next year accepted a call from the Churches in Wilkes County, which he continued to hold until 1833, when he became editor of the Christian Index, a religious periodical. He was made D.D. by Brown University in 1835. He was for many years identified with the Georgia Association, acting as clerk of that body from 1785 till 1816, and afterwards as moderator till 1839; he was also connected with the Baptist Convention of the State of Georgia from its beginning in 1822, being its moderator until 1841, when his impaired health obliged him to resign. He became also one of the trustees of the State University, and was at one time chairman of the board. He was president of the mission board of the Georgia Association from 1830 to 1841. He died Sept. 6, 1841. Dr. Mercer published a large number of Addresses, Circular Letters, Essays, etc. See Mallory, Memoir of the Rev. Jesse Mercer, D.D.; Sprague, Annals, vi., 282.

Merchant (this and kindred terms, as merchantiae, etc., are properly expressed by some form of the Heb. מַרְבַּה, sacher, to travel about, Gr. ἑπαργος, a passenger to and fro; sometimes also by ἀρχαῖ, rokal, to go about; and occasionally by the title CANAANITE). Trade of very great antiquity in the East (Niebuhr, Trav., iii. 4, 149), and was sometimes offered as a present (Prov. xxxvi., 14; Psa. cxxvii, 23), but more commonly on land by means of a company associated for a mercantile journey (Gen. xxxxvii, 25; Job vi, 18). See CARAVAN. The itinerant character and temporary location which appear in all the ancient notices of Oriental merchants, whether individuals or an association of several persons, is still a marked trait of the same class in the East (Hackett's Illustrat. of Script., p. 61). In the patriarchal times such parties of Ishmaelites passed through Canaan on their way to Egypt (Gen. xxi, 31, 25, 28), and bartered with the nomades for various products of their own and in return received for their goods similar articles, and sometimes purchased slaves (Gen. xxxvi., 28; xxxix, 1). After the Hebrews became settled in Palestine, they were drawn into those forms of commercial relations that early existed, but rather passively than actively, since the Mosaic law little favored this profession (Michaelis, Mose Reck, i., 229 sq.; Josephus's denial of all mercantile pursuits by his nation, Apion, i, 12, is probably too strong an expression), although the geographical position of their country would seem to be in general advantageous for it; but the circumscribed extent of their territory, the prevailing direction of the population to agriculture, which left few poor, their almost total want of those natural and artificial products most in demand in general traffic, and the preoccupation of the trade between Asia and Africa by two mercantile nations (the Phoenicians and Arabs), mostly prevented them from an independent commerce, for their introduction to further intercourse and by the continuance of their sea-coast for the most part in the hands of the Canaanites and Philistines, who had, moreover, secured to themselves the great commercial route to Damascus, through the prominence of several cities in the northern part of Palestine (Berthelot, Jour. Geoch., ii., 275 sq.), in the western Indies and in the Mediterranean. The eastern merchant early to have occupied a post in the Phenician mart (Gen. xlix., 18; Deut. xxxiii., 18; Judg. v., 17). Solomon not only (as a royal monopoly) imported horses from Egypt, and traded them away in Syria by governmental salamsen (1 Kings v., 26; 2 Chron. i, 16, 17), but formed a commercial treaty with the king of Tyre for maritime enterprise (1 Kings ii, 26), and launched from the Edomites ports of Ezion-geber and Elath, which David had acquired on the Red Sea, a fleet that sailed under the piloting of Tyrian seamen into the Indian Ocean, and, after a three years' voyage, brought back gold, silver, ivory, sandal-wood, ebony, apes, peacocks, and other products of Chin-India (1 Kings x., xi; xxii, 22, 60; 2 Chron. x., 10, 21). See ORPHN. After the death of Solomon this marine commerce shared the neglect of all the royal affairs, and the trade never revived, with the single exception of Jehoshaphat's undertaking (1 Kings iv., 26), which he continued entirely out of the control of the Israelites. See EDOMITES. What position the Jews held in the Phenician traffic, or what profit the transit of Phenician merchandise brought them, is only to be gleaned indirectly from the historical records (Berthelot, Jour. Geoch., p. 584); but that both these were not inconsiderable is clear from Ezek. xxxvi,
The kingdom of Israel was probably more favored in this latter particular than that of Judah, as the principal thoroughfares of trade passed through its bounds. Commercial relations subsisted between Tyre and Judæa after the exile (Neh. xiii, 16), and even in New-Testament times (Acts xii, 20). From the Phenicians the Hebrews imported, besides timber for edifices (1 Kings v; 1 Chron. xiv, 1), and sea-fish (Neh. xiii, 16), a great many foreign necessaries, and even luxuries (such as variegated stuffs, ungents, and peltry, purple garments, etc.), which for the most part came from Arabia, Babylonia, and India (comp. Ezek. xxvii), and sold in exchange wheat (comp. Acts xii, 20), oil (1 Kings v, 11), honey, dates, balsam (Hos. xii, 2; see Ezek. xxvii, 17), and also a fine species of fancy fabric, which the dilligent hands of the women had prepared (Prov. xxxi, 24). Respecting the balance of trade we have no certain means of judging, and it is the more difficult to ascertain how this was adjusted, inasmuch as Palestine must have derived its supply of the metals likewise from foreigners. Yet we nowhere find any indication that the national wealth had sensibly diminished; on the contrary, the Israelites were able to endure an almost unbroken series of hostile attacks, often resulting in pillage, and always very exhaustive of money (1 Kings xiv, 26; xv, 18; 2 Kings xii, 18; xiv, 14; xvi, 18, etc.), while certain periods (Isa. ii, 7), and even individual tribes (Hos. xii, 9), were distinguished for opulence and luxury; perhaps the revenue was derived through the surrounding districts of Edom, Moab, and Phœnicia (see T. C. Tychsen, De commerciis et navigationibus Hebrœor- ante exil. Bab., in the Comment. Gott. vol. xvi; Class. Hier. p. 150 sq.; Hartmann, Deb. Pentat. p. 751 sq.). After the exile the Hebrew commerce had a wider range, especially as many Jews had become scattered in foreign countries where they experienced many favors, so that the nation took a greater relief in this accommodation and in its safe emoluments. Prince Simon invited commercial intercourse by the improvement of the harbor of Joppa; the Palestinian Jews, however, being still restrained by the discouragement of their law and their early mercantile prejudices, appear not to have risen to any great degree of activity in trade; and Herod’s improved port at Cesarea (Josephus, Ant. xv, 9, 6) was mostly occupied by foreigners, while under the Roman

Shop of an Eastern Clothes-dealer.

domination traffic was encumbered by tolls and imposts, many commodities being even included in the list of government monopolies. Still Jewish love of gain prevailed wherever a favorable opportunity offered; la Josephus, Life, p. 19), and laid claim to trading privileges (Josephus, War, ii, 21, 2). Internal, especially retail trade (enactments relative to which are contained in Lev. xix, 36; Deut. xxxv, 18 sq.; comp. Hos. xii, 8), was particularly promoted by the high festivals, to which every adult male resorted in pursuance of the national religion. In the cities open spaces at the gates were designated for the exchange of wares, and even Tyrian merchants frequented the market at Jerusalem (Neh. xiii, 16; see Hartman, ad loc.; comp. Zeph. i, 10; Zech. xiv, 2; and see Movers, Phœnic., 1, 50); a mart for sacrificial victims and sacred shrubs being established in the Temple itself (2 Kings x, 5; Matt. xxi, 12). The Mishna contains notices of the early practice of beating down in price (Nedar. iii, i), and of shop-keepers (Mastareoth. ii, 3). For the commerce of the Phenicians, Egyptians (Isa. xiv, 14), Babylonia (Nab. iii, 16), and Arabsians, see those articles respectively. See COMMERCE. In modern Oriental cities the retail trade is chiefly carried on in small shops, usually gathered together in a particular quarter or street, like the stalls in an Occidental market. See BAZAAR.

**Merchants’ Lecture.** A lecture originally set up at Furner’s Hall in 1672 by the Presbyterian and Independents to defend the doctrines of the Reformation against the Papists. Some misunderstanding occurring, the Presbyterians removed to Saltire’s Hall. See LECTURE.

**Mercier, Barthélemy,** a learned French ecclesiastic and bibliographer, was born at Lyons April 4, 1734. At the age of fifteen he became a novice among the regular prebendaries of the collegiate church of Saint-Genève, in Paris, and after one year of probation he was allowed to take the vow. Immediately thereafter he was sent to the Abbey of Chatrizes, in Champagne, and there studied rhetoric and philosophy. In 1754 he was made assistant to the learned Perigré, librarian of Saint-Genève, and in 1760 was appointed his successor. Four years later Mercier was invested with the abbotsip of Saint-Léger, which was then vacant, at the instance of Soisson. In consequence of some slight which he had with his associates, he resigned his functions as an abbot. Being thus liberated from official duties, he travelled through Holland and the Netherlands, where he was in hopes of collecting the materials necessary for the compilation of certain works on which he was engaged. After a sojourn he had yet another to publish a Supplement to the history of printing by Marchand, and was warmly greeted wherever he went. In 1792 he was appointed a member of the so-called Monument Commission. In this capacity he exerted himself to rescue from destruction all private and public collections of art and literature. He also drew up for the use of librarians minute instructions touching the books intrusted to their custody, and a method for classifying them. Towards the latter part of his life, François de Neufchâtel, a clergyman and a forestier of letters, granted him a pension of 2400 francs, the first annual instalment of which was paid to him in 1738. This assistance enabled Mercier to decline the generous offer of Jeanne Santander, who had proposed to relinquish in favor of Mercier his own office of librarian at Brussels. He died in 1795. His writings are characterized by an evidence of profound erudition, together with system and perspicuity in all his researches. He published a large number of works, among which we may cite, Lettres sur la Bibliographie instructive de M. Delure (Paris, 1763, 8vo);—Lettres sur le véritable auteur du Testament politique du Cardinal de Richelieu (Paris, 1765, 8vo); all of which were extracted from the Mémoires de Trévoux;—Consultation sur la question de savoir si les reliques de

Saint-Gervais sont ou ne sont pas Chanoines Réguliers
(new ed. Paris, 1772, 4to) — Opinion sur de prétendues
propriétés qu'on applique aux événements présents (Paris,
1791) — Dissertation sur le culte de la Vierge de Jésus-
Christ, par l'abbé Chesquerie (1775, 12mo). See
Notice sur la vie et les écrits de Mercier de Saint-Léger,
y par Chardon de la Rochette.

Mercier, Christophe, a French ascetic author,
was born at Dôle near the opening of the 17th
century. He entered the Order of the Carmelites,
and changed his name to that of St. Jacques.
He died in 1680. His most celebrated works are:
Vie de la Mère Thérèse de Jésus, fondatrice des Carmelites
de la Franche Cour (Lyons, 1673, 4to); and La Lu-
mierre aux vivants par l'expérience des morts (Lyons,
1675, 8vo).

Mercier (or Le Mercier), Jean, in Latin Mer-
cerus, a distinguished Huguenot, was born in
Uzès, France, near the beginning of the 16th century.
Destined for the bar, he studied law in Avignon,
and also in Toulouse. But the dead languages having a
powerful attraction for him, he devoted much of his
time to the study of Greek, and ere long confined him-
self entirely to the pursuit of Hebrew and other She-
mite tongues. After having been the devoted pupil
of Vatable, he became his successor, in 1546, to the
chair of professor of Hebrew in the Royal College of
France. Casaubon believed that Mercier was the most
learned Hebraist of his day. When the second religious
war broke out, Mercier was constrained to quit Paris.
After the treaty of peace at Saint-Germain, he returned
to France, but while passing through his native city he
was carried away by the pestilence. He died a Protest-
ant in 1562. Mercier published almost the whole of
Jonathan's Targum on the Prophecies. He also wrote
in Latin valuable commentaries on all the books of
the Old Testament, and on the Gospel according to Mat-
thew. His commentaries furnish matter to the Syn-
opsis Criticorum of Utrecht (1634). He is also
the author of Tractatus de accentibus Job, Proverbiu-
num, et Psalmorum, auctore B. Juda, filio Betham Hispano,
the translation from Hebrew (Paris, 1566, 4to) — Liber de
accentibus Scripture, auctore R. Juda, filio Basarum
(Paris, 1565, 4to) — In Decalogum commentarius Rab-
bini Abraham, cogomento Ben- Esra, interpr. J. Mercero
(Lyons, 1568, 4to): — Note in Thaurum Linguam
Sancta Pagini (Lyons, 1575-95, 4to) — Observationes
ad Hieropolitana hieroglyphica (Strausburg, 1593,
4to). He also published a Commentary on the Canticles
and Lectures on Genesis. See Haag, La France Pro-
testante.

Mercurianus, Father, a noted Romanist of the
Order of the Jesuits, was a Belgian by birth. We know
but little of his personal history, except that he stood
very high in the estimation of pope Gregory XIII, who
caused his advancement to the generalship of the order.
He died Aug. 1, 1580. Nicollini, Hist. of the Jesuits (p
150), tells us that "he was a simple and weak old man.
Mercurianus," he continues, "exercised very little influ-
ence on the destinies of the order, and was the first gen-
eral whose authority was held in little account."

Mercurius (the Roman name of the god Mer-
cury, the Hermes of the Greeks, Equi, Acts xiv, 12;
comp. Matt. xvi, 14; the name is of uncertain etymol-
ogy), properly a Greek deity, whom the Romans iden-
tified with their god of commerce and bargains. In
the Greek mythology Hermes was the son of Zeus and
Maia, the daughter of Atlas, and is constantly repre-
sented as the companion of his father in his wanderings
upon earth. On one of those occasions, he was trav-
elling in Phrygia, and were refused hospitality by all
save Bacis and Philemon, the two aged peasants of
whom Ovid tells the charming episode in his Metam,
vi, 620-724, which appears to have formed part of the
folk-lore of Asia Minor. See LIGAONIA. Mercury was
the herald of the gods (Hom, Od, v, 28; Hym. in
Herm, 3), and of Zeus (Od, i, 88, 84; Il, xiv, 383,
461), the eloquent orator (Od, i, 86; Horace, Od, i, 10,
1), inventor of letters, music, and the arts. He was
equally characterized by artfulness of action and readi-
ness of speech, being the representative of intelligence
and craft among men (see Paulus's Real-Encyclop. iv,
1842). He was usually represented as a slender, beardless
youth, but in an older Pelasgic figure he was bearded.
The fact that he was the customary attendant of Jupi-
ter when he appeared on earth (Ovid, Fast, v, 496;
comp. Metam, i, 731 sq ), explains why the inhabitants
of Lystra (Acts xiv, 12), as soon as they were disposed
to believe that the gods had visited them in the like-
ness of men, discovered Hermes in Paul, as the chief
speaker, and as the attendant of Jupiter (see Kühn,
Comment, ad loc.). It seems unnecessary to be curious
whether the representations of Mercury in ancient stat-
ues accord with the supposed personal appearance of
Paul (see Walch, Dis, ad Acta Ap, iii, 188 sq.),
and especially in the matter of the beard of the latter,
for all known representations of the god differ in much
more important particulars from the probable costume
of Paul (e. g. in the absence of any garment at all, or
in the use of the short chalmy; merely; in the cadu-
ceus, the petasus, etc. (see Müller, Ancient Art, § 379-
81)). It is more reasonable to suppose that those who
expected to see the gods mixing in the affairs of this
lower world, in human form, would not look for
much more than the outward semblance of ordinary
men.

Mercurius. See Hermes THRISMAGISTUS.

Mercury (properly Ῥώμ, che'ead, kindness; ἀλεος,
piety), a virtue which inspires us with compassion for
others, and inclines us to assist them in their neces-
sities. That works of mercy may be acceptable to God,
as Christ has promised (Matt, v, 7), it is not enough
that they proceed from a natural sentiment of human-
ity, but they must be performed for the sake of God,
and from truly pious motives. In Scripture mercy and
truth are commonly joined together, to show the good-
ness that precedes and the faithfulness that accompa-
nies the promises; or, a goodness, a clemency, a mer-
cy that is constant and faithful, and that does not de-
ceive. Mercy is also taken for favors and benefits
received from God or man; for probity, justice, good-
ness. Merciful men—in Hebrew, chasidim—are men of
piety and goodness. Mercy is often taken for giving
of alms, Prov. xiv, 34; xvi, 6; Zach. vil, 9. See CHAR-
ITY.

Mercy, as derived from misericordia, may import
that sympathetic sense of the suffering of another by which
the heart is affected. It is one of the noblest traits
of character. The object of mercy is misery: so God
pities human misery, and forbears to chastise severely;
so man pities the misery of a fellow-man, and assists
to diminish it; so public officers occasionally moderate
the strictness of national laws from pity to the culprit. But only those can hope for mercy who express penitence and solicit mercy; the impudent, the stubborn, the obdurate, rather brave the avenging hand of justice than beseech the relieving hand of mercy. See PARDON.

Mercy is an essential attribute of Jehovah, for the knowledge of which we are indebted wholly to revelations. By the propitiatory sacrifice of our Divine Redeemer, way is opened for the exercise of mercy and grace towards the human family perfectly honorable to the attributes and government of God. He appears a just God and a Saviour: "He is just, and yet he justifyeth him that believeth in Jesus." Thus the plan of salvation by Jesus Christ provides for the exercise of infinite mercy, consistently with the most rigid mandates of truth and righteousness; so that, under this gracious dispensation, "mercy and truth" are said to "have met together," and "righteousness and peace have kissed each other" (Gen. xix., 19; Exod. xxx., 6; xxxiv., 6, 7; Ps. lxxx., 10; lix., 15, 16; chl., 17; Luke xvii., 19; Rom. ix., 15–18; Heb. iv., 16; viii., 13). The expression "I will have mercy, and not sacrifice" (Hos. vi., 6; Matt. ix., 13), signifies, as the connection indicates, that God is pleased with the exercise of mercy rather than with the offering of sacrifices, though sin has made the latter necessary (1 Sam. xv., 22; Mic. vi., 6–8). See ATONEMENT.

Mercy, also a Christian grace, and no duty is more strongly urged by the Scriptures than the exercise of it towards all men, and especially towards such as have trespassed against us (Matt. v., 7; xiii., 33–35).

Mercy, Sisters of. See Sisters of MERCY.

Mercy, Wilhelm, a German Roman Catholic theologian, was born Feb. 9, 1758, at Ueberlingen, near the Bodensee, and was educated at Oberschwang. In 1787 he was called to the court of duke Charles of Wurttemberg, and in 1788 became the minister of the principality of Hohenzollern-Sigmaringen. His advanced age obliged him to resign his position in 1819, and he died July 1, 1825. Mercy was an extremely well-educated man. He published in 1801 an essay on the necessity of reform within the Roman Catholic Church, which caused considerable sensation. He aimed at an entire reform of the Church constitution and the clergy. Besides several articles in the Jurassischen f{"u}r Theologie und Kirchenrecht der Katholiken (Ulm, 1806–10), he published several other valuable but minor productions in theological literature. See D{"o}ring, Gelehrte Theol. Deutschlands, a. v.

Mercy-seat (מַעֲנֵי, kapporoth, a covering, i. e. lid of a vessel, spoken only of the top of the sacred ark; מַעֲנֵי, a. m. מַעֲנָי, a. n. מַעֲנָא, Mercy-seat, a covering by fire [a. n. מַעֲנָא, fire begetter], the cover of the box or ark containing the tables of the Sinaitic law, and overspread by the cherubim, between which appeared the shekinah, or visible radiant symbol of the divine presence; it is properly represented as a plank of acacia overlaid with gold, for it was not probably a solid plate or sheet of the precious metal (Exod. xxxv., 17 sqq.; xxx., 6; xxx., 7, etc.). Hence the holy of holies is sometimes called the "house of the mercy-seat" (1 Chron. xxxviii., 11, Heb.). Josephus simply calls it a lid (סַלְמָן, Ant. iii., 6, 5); but the versions have all regarded the term as indicative of propitiatio (as if from the Piel of סלָם, and the same view appears to be taken by the New-Testament writers, who seem to think of the cherub as having access to which has been opened by the blood of Christ (Heb. ix., 5; Rom. iii., 24). See Ark. Comp. 1 Chron. xxxviii., 11, where the holy of holies is called הַיּוֹרְשָׁה, "house of the mercy-seat." It was that wherein the blood of the yearly atonement was sprinkled by the high-priest; and in this relation it is doubtful whether the sense of the word in the Heb. is based on the material fact of its 'covering' the ark, or from this notion of its reference to the 'covering' (i.e. atonement) of sin. See ATONEMENT. But in any case the notion of a 'seat,' as conveyed by the name in English, seems superfluous, and will not like the Hebrew, be understood as spoken of as 'dwelling' and even as 'sitting' (Psa. lxxx., 1; xxix., 1) between the cherubim, but undoubtedly his seat in this conception would not be on the same level as that on which they stood (Exod. xxvi., 18), and an enthronement in the glory above it must be supposed.

The idea of mercy-seat as the seat of mercy is true of the concept of 'mercy,' but of formal atonement made for the breach of the covenant (Lev. xvi., 14), which the ark contained in its material vehicle—the two tables of stone. The communications made to Moses are represented as made 'from the mercy-seat that was upon the ark of the testimony' (Exod. xxxi., 18; xxxii., 34; xxxvi., 6); a sublime illustration of the moral relation and responsibility into which the people were by covenant regarded as brought before God (Smith). It is not without significance that the mercy-seat was above the ark and below the symbols of the divine presence and attributes, as if to overshadow the supersedence of the law of ordinances contained in the ark by the free grace of the Gospel. See PRATENIUS, De Judaean area (Upsali, 1727); Wernher, De Propitiatoria (Giesen, 1695). See SHEKINAH.

Me'red (Heb. id., מֵרֶד, rebellion, as in Josh. xxii., 22; Sept. Μουραθός and Μουράθως, Vulg. Mered), a person named as the second son of Ezra (or Ezer), of the tribe of Judah (1 Chron. iv., 17). See EZRA. Great confusion prevails in the account of his lineage and family, and indeed in the whole chapter in question. Ver. 17, after mentioning the four sons of Ezra, immediately adds, "and she bore Miriam, etc."; where the Sept., by an evident gloss, attributes these children to Jethro, the first named of Ezra's sons; the Vulg. has genuit, referring them to Ezra as additional sons, in defiance of the text מַעֲנֵי, which is undoubtedly feminine; while Luther renders this word as a proper name, Thakar, equally at variance with the text, which joins the following word by the accus. particle מְנָה, a construction that does not here allow the resolution by the rendering מַעֲנֵי, in ver. 18 we find several sons attributed to "his wife Jehudijah," and the statement added, "And these are the sons of Bithiah, the daughter of Pharaoh, which Mered took:" the Sept., Vulg., and Luth. follow the Heb., which yields no intelligible connection. Ver. 19: "And the sons of his wife Hodiah, the sister of Naham, the father of Gemarit, and Eknathen the Maachathite," where, however, the Heb. text would be more naturally rendered "the sons of the wife of Hodiah," יְהוּדִיָּה חֵלֶלְתָּה, the form מַעֲנֵי being rarely absolute (see Norden's Heb. Gramm. § 604); the Sept. renders: "And the sons of the wife of his Jewish sister [יוֹאָד הָעָבָד הַיֶּדֶנְיָה הָאָדָמְשָׁף] were Nachem, and Dania the father of Keela, and Soenem the father of Joriam. And the sons of Naem, the father of Keela, were Gamrit and Kathan; and the sons of Hodiah, the sister of Nahchai, the father of Keela, were Garmir (otherwise "Hotarmir" or "Hogarmi") and Eshtaimon, Nikathai; the Vulg. and Luth. are like the Heb., except the ambiguous renderings, "Et filii uxorius Odalan," etc. "Die Kinder des Welse Hodiela." The Syr. and Arab. omit ver. 17 and 18 (Davidson's Revista. of the Heb. Text, ad loc.). The corruption of the text is evident. We suggest a conjectural restoration by transposing the latter part of ver. 18 to the middle of ver. 17, and the whole of ver. 19 to the end of ver. 17; these simple changes will supply the manifest imperfections as follows: "And the sons of Ezra [or Ezer] were Jether, and Mered, and Epher, and Jalon. And these are the sons of Bithiah (the daughter of Pharaoh), whom Mered [first] married; she bore Miriam, and Shammai, and Ishbah (founder of Esthemao); and the sons of his
[second] wife Hodijah (the sister of Naham, father [founder] of Keilah the Garmite [strong city] and of Eshtemoa the Maachathite) — this Jewish wife bore Jered (founder of Gedor), and Heber (founder of Socho), and Jeshua (founder of Zanoah). This vessel he then purified, agrees with Bertheau’s rectification of the passage (Erklär. ad loc.), adopted by Keil (Comment. ad loc.).

"It has been supposed that Pharaoh is here the name of an Israelite, but there are strong reasons for the common and contrary opinion. The name Bithiah, ‘daughter,’ that is, ‘servant of the Lord,’ is appropriate to a convert. It may be observed that the Moslems of the present day very frequently give the name Abdallah, ‘servant of God,’ to those who adopt their religion. That another wife was called the Jewess, is in favor of Bithiah’s Egyptian origin. The name Miriam, if, as we believe, it was a double from Miriam, is congenial with the child of an Egyptian.” See BITHI不合理. Pharaoh, whose daughter Mered espoused, was therefore undoubtedly some one of the Egyptian kings, and hence Mered himself would appear to have been a person of note among the Israelites. As his children by his other wife (who was also highly related), were recognised as chief men or builders of Canaanitish cities, and hence must have lived soon after the conquest and settlement of Palestine by the Hebrews, Mered himself will be placed in the period of the exode, and he may be supposed to have married the daughter of the predecessor of that king. He by whom the Israelites were held in such cruel bondage; perhaps his Egyptian wife refused to accompany him to the promised land, and the later children may have been the fruit of a subsequent marriage during the wanderings in the desert with a Hebrewess Hodijah. B.C. cir. 1638.

Mered’s wife Bithiah is enumerated by the rabbins among the nine who entered Paradise (Hottenger, Synag. ma Orientale, p. 515), and in the Targum of R. Joseph on Chronicles it is said to have been a proselyte. In the same Targum we find it stated that Caleb, the son of Jephunneh, was called Mered because he withstood or rebelled against (יִבְרָד) the counsel of the spies, a tradition also recorded by Jarchi. But another and very curious tradition is preserved in the Quæstiones in libros Paral., attributed to Jerome. According to this Ezra was Amram; his sons Jether and Mered were Aaron and Moses; Ephra was Eldad, and Jaloh Medad. The tradition goes on to say that Moses, after receiving the law in the desert, enjoined his father to put away his mother, as a Gentile, while he was the son of Levi: that Amram did so, married again, and begat Eldad and Medad. Bithiah, the daughter of Pharaoh, is said, on the same authority, to have been ‘taken’ by Moses, because she forsook idols, and was converted to the worship of the true God. The origin of all this seems to have been the occurrence of the name ‘Miriam’ in 1 Chron. iv, 17, which was referred to Miriam the sister of Moses. Rabbi D. Kimchi would put the first clause of ver. 18 in a parenthesis. He makes Bithiah the daughter of Pharaoh the first wife of Mered, and mother of Miriam, Shammali, and Isshab; Jehudiath, or ‘the Jewess,’ being his second wife.1

Meredith, C. G., a Methodist Episcopal minister, was born in Baltimore County, Md., May 5, 1830; was converted at eleven, joined the Ohio Conference in 1846, travelled with usefulness eight years, and died at Lebanon Station, Ohio, July 16, 1854. Mr. Meredith was amiable and serious from childhood, was full of good works, and by his own efforts acquired not only a fine gentlemanly education, but rare mental and religious influence. He was a sound theologian, and a dignified, instructive, and useful minister of the Gospel. See Minutes of Conferences, v. 467.

Meredith, Thomas, a Baptist minister, was born at Warwick, Bucks County, Pa. After graduating (Jan. 4, 1816) in the University of Philadelphia, he began the study of theology, was licensed Dec. 30, 1816, and two years after he was ordained at Edenton. In 1819 he was settled as pastor of the Baptist Church at Newbern. In 1822 he accepted a call of the Baptist Church of Savannah, and finally settled in 1825 as pastor of the Church of God, Newbern. He was substantially employed for nine years. He commenced the publication of the Baptist Interpreter, the first Baptist paper printed in North Carolina. In 1835 he returned to the Church of Newbern, where he published the Biblical Recorder. In 1840 he removed to Raleigh, where he continued to issue the paper until his death of a fever, September 30, 1842. He was able to him to take a pastoral charge. He died Nov. 13, 1850. He published a pamphlet entitled Christianity and Slavery in 1847, which had previously appeared in the Biblical Recorder.

Meremoth (Heb. Meremoth, מֵרֶמֶוֹת, exaltations), the name of two men at the close of the captivity. 2. (Sept. מַרְמָטָה, מַרְמַטָה, מַרְמַטָה, etc. Vulg. Meremuth.) A priest, son of Urijah, and grandson (descendant) of Kor, who returned from Babylon with Zerubbabel (Neh. xii, 3), B.C. 536, and to whom were afterwards consigned the bullion and sacred vessels forwarded by Ezra (Ezra viii, 32). B.C. 459. "After the statement in Ezra ii, 62, respecting the marriage of the family of Elam and the priestly family of the temple, it is puzzling to find one of this family recognised as a priest; but probably the exclusion did not extend to the whole family, some being able to establish their pedigrees" (Kitto). He repaired two sections of the walls of Jerusalem (Neh. iii, 4, 21), B.C. 446, and lived to join his tribe in the movement of obedience to Nehemiah (Neh. x, 5). B.C. cir. 410. In Neh. xii, 15 he is mentioned by the name of Meraroth, as the father of Helkai.

2. (Sept. מַרְמַטָה, Vulg. Marimuth.) An Israelite of the "sons" (inhabitants) of Bani, who divorced his Gentile wife after the exile (Ezra x, 36). B.C. 459.

Mereriu, a Persian name, flourished in the latter half of the 6th century as bishop of Angoulême. He was the bishop of Angoulême. The case is another example of how the civil government differed so little from the ecclesiastical that, without any change of habits or alteration of moral law, the appellation of count was not infrequently exchanged for that of bishop, in order to transmit to a son, or perhaps a nephew, the title thus relinquished. In this way the prerogatives of both titles were retained in the same family. But it was considered an abuse of authority to have any one person inverted with the combined privileges and distinctions of a count and of a bishop. The count Mererius was canonically seated in the see of Angoulême by St. Germain, bishop of Paris, and St. Euyphe, archbishop of Tours, with the consent of king Charibert. Niantin, the nephew of Mererius, inherited the immunities and possessions attached to the title of count. This occurred about 570. After seven years of episcopacy Mererius was poisoned by Frontonius, who seized the bishop’s mitre, and was apparently recognised without opposition as the bishop of Angoulême. It is worthy of notice that in those troublesome times it was not uncommon through such crimes to reach the highest offices. The authors of L’Histoire Litteraire et la Geographie des Juifs Christianes have fancied the identity of Mererius, bishop of Angoulême, with one Marcharius, who, according to Fortunatus, attended the dedication of the church at Nantes in 568; but father Lecointe would rather believe that this Marcharius Romacharius was the bishop of Coutances. Yet neither the bishop of Coutances nor the bishop of Angoulême was a fellow provincial of the bishop of Nantes. Marcharius mentioned by Fortunatus is the same with Macarius, bishop of Vannes, who died probably in 577. It is said that some writings by Mererius were deposited in the library of Cluni, but they seem to have been lost.

Me’re (Heb. מֶרֶה, מֶרֶה, from the Sanscrit merah, worthy, according to Beinfey, p. 200; Sept. Mepes, but
most copies omit; Vulg. Mares), one of the seven sa-
traps or viziers of Xerxes (Esth. i. 14). B.C. 488.

Méri, François, a French Benedictine monk, was
born at Vierzon in 1675. He died Oct. 18, 1728, in the
Abbey of Saint-Martin de Mâcon, province of Berry.
Méri published a work entitled Dissertation critique et
épistolique des Remarques de M. sur le dictionnaire de
Mérimée, under the nom de plume M. Thomas (1720).
He has sometimes been mistaken for Dom Philippe Bil-
louet, his contemporary, who never published any work.

Meriacè, St., a French prelate, whose name in
Latin is Meriacocus, was born in Vannes about AD. 606.
He was a lineal descendant of the ancient kings of Ar-
monica, and was brought up at the court of Juel III, king
of Brittany. He was ordained a priest by Hingueton,
the bishop of Vannes, and afterwards retired into the
waste and sterile country of Stivale, near Pontivy.
At the death of Hingueton, the clergy and the laity alike
with one acclaim appointed Meriacè his legitimate suc-
cessor. St. Meriacè is mentioned in the Vita Sancto-
runus by Bollandus (ii, 36). It is not known when he was
canonicalized, but his name is still much venerated in Brit-
tany, where many churches and chapels have been con-
secrated under the inspiration of his memory. He died in
Vannes in the year 666.

Merian, Hans Bernhard, a noted philosopher, was
born in 1629 at Lichstadt, in the canton of Basle, where
his father was a minister. After finishing an academi-
cal course of philosophical and philological studies, he
became private tutor of a young Dutch nobleman. At
the recommendation of M. de Maupertuis, Frederick the
Great called him to Berlin. Here he became a member of
the Academy of Sciences, and soon distinguished him-
self so much that in 1771 he was nominated director of
the philosophical department, and in 1797 (after For-
mey's death) secretary of the academy. Of his numer-
sous philosophical works, some of which show superior
merits, we mention the following: Dissee de autochthoria
(Basle, 1740); Discours sur la métaphysique (Basle,
1766); Système du monde (Bouillon, 1770); Examen de
l'histoire naturelle de la religion par Mr. Hume, ou
les refutes les erreurs, etc. (Amsterdam, 1779). Nu-
merous philosophical essays of his are printed in the "Mém.
de l'Acad. des Sciences à Berlin," e.g. Mém. sur l'appar-
ception de sa propre existence; Mém. sur l'appercception
considérée relativement aux idées, ou sur l'existence des
idées dans l'idée (vol. v); Réflexions philos. sur la ressem-
blance (vol. xii); Examen d'une question concernant la
liberté (vol. ix); Parallèle de deux principes de psycholo-
gie (vol. xii); Sur le sens moral (vol. xiv); Sur le dé-
sir (vol. xvi); Sur la crainte de la mort; Sur le mépris
de la mort; Sur le suicide (vol. xix); Sur la durée et
sur l'intensité du plaisir et de la peine (vol. xii). For
further details, see Fred. Ancillon, Éloge historique de J.
B. Merian, etc. (Berlin, 1810).

Meribâh (Heb. Meribah, מֵרִיבָה, quarrel, or
"strife," as in Gen. xiii. 8; Numb. xxviii. 14), the desig-
nation of two places, each marked by a spring.

The Rock of Moses."
water is said to have issued—in all about twenty in number, and lying nearly in a straight line around the three sides of the stone, and for the most part ten or twelve inches long, two or three inches broad, and from one to two inches deep; but a few are as deep as four inches. The rock is highly revered both by the Christians and Bedouins. It lies in the valley called Wady el-Lejah, in the very highest region of the Sinai group, running up narrow and without fall between the two peaks that claim to be the Mount of Moses, and contains the deserted convent of El-Abein (Kitto, Fict. Bible, ad loc.).

2. (Sept. ἀπολαγία, in Numb. xx, 18; xxvii, 14; Deut. xxii, 51; Λαοχία in Numb. xx, 24; Vulg. contradic., in EXEV, 8); Sept. Βεστ. "provocation;" and in Ezek. xlvii, 19, Μαρσελατ; xlviii, 28, Βαρμονν— in which last two passages, as well as in Psa. civ, 32, the Auth. Vers. has "strife." Another fountain produced in the same manner, and under similar circumstances, in the desert of Zin (Wady Arabah), near Kadesh; to which the name was given with a similar reference to the previous misconduct of the Israelites (Numb. xx, 13, 24; Deut. xxiii, 3). In the last text, which is the only one where the two places are mentioned together, the former is called Massah only, to prevent the confusion of the two Meribahs: "Whom thou didst prove at Massah, and with whom thou didst strive at the waters of Meribah." Indeed, this latter Meribah is almost always indicated by the addition of "waters," as if further to distinguish it from the other (Numb. xx, 13, 24; Deut. xxiii, 3; Psa. lxxxi, 8; cvi, 32; Ezek. xlvii, 19; xlviii, 28), a title that is but once applied to the other Meribah (Psa. lxxxi, 8); and the locality we are now considering is still more distinctly called "waters of Meribah in Kadesh" (Numb. xxvii, 14), and even Meribah of Kadesh (A. V., "Meribah-Kadesh,"); Deut. xxiii, 51). Only once is this place called simply Meribah (Psa. xxvii, 8). It is strange that, with all this carelessness of distinction in Scripture, the two places should always have been so indiscriminately used. Indeed many commentators have regarded the one as a mere duplicate of the other, owing to a mixture of earlier and later legend. The above monkish tradition has contributed to confound the two localities. But, besides the differences already noted, there was this very important one, that in smiting the rock at the second place Moses himself exhibited impatience with the multitude (Numb. xx, 10-12); whereas he showed no signs of passion on the former occasion. See Moses. The distance of place from the former Meribah, the distance of time, and the difference of the people in a new generation, are amongst those things which, whereas the conditions of the two wells were so equal, explain why Moses might give the same name to two places. See Kadesi. Merib-'Baal (Heb. מֵרִיב-בָּעַל, מֵרִיב-בָּעַל, contend with Baal, I Chron. viii, 34; Sept. Μειησαίας v. r. Μειησαίας, Vulg. Meribbaal; also in the contracted form Merib'-Baal, מֵרִיב-בָּעַל, I Chron. ix, 40; Sept. Μειησαίας v. r. Μειησαίας, Vulg. Meribbaal), the son of Jonathan, elsewhere called MERIBOHESHTHI (2 Sam. iv, 4, etc.), apparently from an unwillingness to pronounce the idolatrous name. See Baal. Merici. Angela, foundress of the Order of Ursulines, was born at Desenzano, on the lake of Guarda, in 1511. Her family name was De Brescia. She was brought up by her uncle, and at an early age entered the Order of St. Francis. She made a pilgrimage to the Holy Land, and after her return established at Brescia, in 1532, a school of young women, of which she maintained superiored superior. Angela Merici died March 21, 1540. Her order was so successful that at the end of a century after its organization it counted in France alone over three hundred and fifty convents. See Helyot, Hist. des ordres monastiques, iv, 150; D'Emilliene, Hist. des ordres religieux, p. 249; Moreri, Dict. Hist. a. v.; Hoeper, Nouv. Biog. Générale, ii, 638. See Ursulines. Meridian is the technical term for the siesta or noon-day sleep in a convent, allowed to be taken during one hour after half-time. Merino, John Anton Diaz, a Roman Catholic prelate, was born in 1771. In his twelfth year he had made such extraordinary progress in his studies that he was ready to enter the University of Alcalá. Later he lectured as professor of theology at several universities in Spain and Cbas, then joined the Dominicans, and was shortly after pronounced general of the order. On account of his great wisdom and sagacity, he was often consulted by the bishops in cases of an intricate character. In 1882 he was ordained, and in his position led a most exemplary and simple life, and greatly devoted himself to the sufferings of the poor. His death was looked upon as a blow to the Church, and the evils of his time, and, for refusing to support irreligiose edicts of his government, he was finally expelled from his see and had to leave Spain. He spent his last years in France in exile, and died at Marseilles in 1844. He published Coleccion Eclesiasticos y Biblioteca de la Religion, the first work containing all the acts of the Spanish bishops in defence of the system of the Church pursued during the constitutional epoch, and the latter comprising the translation of the works of Lamen- nais, Maistre, etc. Merit signifies desert, or that which is earned; originally the word was applied to soldiers and other milit- ary who, by their labors in the field, and by the various hardships that they underwent, acquired the merits of a campaign, as also by other services they might occasionally render to the commonwealth, were said, merere stipendia, to merit, or earn their pay; which they might properly be said to do, because they yielded in real service an equivalent to the state for the stipend they received, which was therefore due to them in justice. Here, then, we come at the true meaning of the word merit; from which it is very clearly to be seen that, in a theological sense, there can be no such thing as merit in our best obedience. One man may merit another, but all mankind together cannot merit from the hand of God. This evidently appears, if we consider the imperfections of all our services, and the express declaration of the divine Word (Ephes. ii, 8, 9; Rom. xi, 5, 6; Tit. iii, 5; Rom. x, 1, 4). The scholastic distinction between merit of congruity and merit of com- dignity is thus stated by Hobbes (Of Man, pt. i, ch. iv): "a man may have promised Paradise to those that can walk through this world according to the limits and precepts prescribed by him, they say he that shall so walk shall merit Paradise ex congro. But because no man can demand a right to it by his own righteousness, or any other power in himself, but by the free grace of God, so he can never receive it, but by Divine meri- diana." See Merit. See South's Sermons, The Doctr- ine of Merit stated, vol. iii, ser. 1; Toplady's Works, iii, 471; Hervey's Eleven Letters to Wesley; Robinson's Claude, i, 218. See also Works. Merits of Christ, a term used to denote the influence or moral consideration resulting from the obedience of Christ, right and perfect, which he suffered for the salvation of mankind. See Atonement; Im- putation; Righteousness of Christ. Merits of Saints. See Supererogation. Meritum de Condigno, or De Condigno (desert of worth or fitness). This distinction in the idea of the merit of good works, as it was first interpreted by Thomas Aquinas, may be looked upon as a compromise between the strict Augustinian doctrine to which he himself was attached, and the Pelagian tendencies of the Church in general, particularly on the subject of good works. He therefore considers meritorious works under two aspects: 1. According to the substance of the work itself, in so far as proceeding from beings endowed with free will, it is an effect of their free voli- tion. 2. As proceeding in a measure from the grace of
the Holy Spirit. Under the last aspect, being, in fact, an effect of the divine grace in man, it is meritorious virtus merita meritis. While considered as a result of free will, the immense disproportion between the creature and the supernatural communicated grace prevents there being any condignitas, any absolute desert, but only a congruits, proper quandom equalitatem proportionis. For it appears suitable that "it hominum opera, vel etiam operum Dei impleit hominum voluntatem in salutatione," The conclusion, which opens wide the door to the practice of supererogatory works, is consequently this, that "fides illius est solius alii ad salutem merito congruit, non condignus." Dun Scotus goes even further in this Pelagian direction, and asserts that man can, in all cases, despise or reject it for the reception of the grace offered him. By Protestants this distinction is of course rejected, as well as the whole doctrine of good works. The *Apol. Conf.* (ii, 68) declares that this scholastic distinction is but a screen for Pelagianism: "Nam si Deus necessario dat gratiam pro merito congrui, jam et merito meriti congrui, non condigni; merito congrui, sed non condigni." The following arguments: 1. That this doctrine tends to diminish the mediatorial character of Christ, who perpetuo est mediator, non tantum in principio justificationis. 2. That it continually awakens doubts in the conscience, for hypocrites could always rely on their good works to merit justification, while conscientious believers would be in doubt as to all their works, and always seeking for more. 3. How est enim de congruo mereri, dubitare et sine fine operari, donec desperatio incidit." See Münch, *Lutherbuch d. Dogmatik*, ii. 145, 146, 176; Neander, *Christ. Religion u. Kirche*, ii, 294, 610; Herzog, *Real-Encyclopädie*, 955.

Merlet, Élie, a French theologian, was born at Saintes in March, 1834, and was educated at Saumur and Montauban; he afterwards visited Switzerland, Holland, and England, and in 1856 secured a position as minister at the church of All Saints. In 1878 he presided over the provincial synod at Jonzac. His reply to *Remerciement du Morale d'Arnault* brought upon him the displeasure of the government. In 1873, he was sent to prison, and in 1880 the Parliament of Guienne was asked to recall him from the country. Merlet escaped to Lausanne, where he was appointed professor of theology. He died there Nov. 18, 1795. His most celebrated works are, *Réponse générale au livre de M. Arnault: Le Remerciement de la Morale de Jesus Christ* (Saumur, 1852, 12mo); *Le moyen de discern er les esprits;* this sermon was directed towards the visionaries, and created great disturbance: —*Le vrai et le faux Pédisme* (Lausanne, 1790, 12mo).

Merle d'Aubigné, Jean Henri, D.D., one of the illustrious characters of the Church of the 16th century, the popular historian of the most prominent event of modern times—the great Reformation of the 16th century—was born at the village of Eaux Vives, on Lake Leman, in the canton of Geneva, Switzerland, Aug. 16, 1794. He was the descendant of celebrated French Protestants. His first French ancestor to leave the native soil was his great-grandfather, John Lewis Merle, who quitted his home at Nismes after the revolution of 1790, and settled in the home of Switzerland's greatest character—John Calvin. In 1743 Francis, son of John Lewis, married Elizabeth D'Aubigné, daughter of the celebrated French Protestant nobleman, and direct descendant of the noted chevalier, Theodore Agrippa d'Aubigné, the founder of the Calvinist party in France, and the author of the celebrated work *Sur la peste* (1614), by which the French usage, the name family of Elizabeth's illustrious ancestry was appended to the family name of her own offspring. One of these children was John Alexander d'Aubigné, who died in 1799, the father of this subject, and of two other sons who now figure in American mercantile life—one of them has been for many years a resident of Brooklyn, L. I.; the other a resident of New Orleans. Jean Henri was educated in the Academy, or, as it is more commonly called, the University of Geneva. Determined to carry on the spiritual work begun in the Reformation by his illustrious ancestors, he pursued a theological course at his alma mater. While engaged in his studies, under the leadership of a faculty decided to continue the Reformation and free distinct from Calvinist dogmas, and became the leader of the movement. In his own account of his conversion, he states that his soul remained unconverted, and it is his duty not to believe the doctrine of the Trinity, and that, instead of the Bible, "St. Seneca and St. Plato were the two saints whose writings he held up for admiration." The pupil followed the master thoroughly. He was chairman of a meeting of students who protested most vehemently, in a public document, against "the odious aggression" of a pamphlet entitled "Considerations upon the Divinity of Jesus Christ," by Henri Empeyts, which was addressed to them, and had produced a great excitement. "But soon," he continues, "I met Robert Haldane, and heard him read from an English Bible a chapter of the Psalm I could not understand the language except I was a doctrine of which I had never before heard. In fact, I was quite astonished to hear of man being corrupt by nature. I remember saying to Mr. Haldane, 'Now I see that doctrine in the Bible.' 'Yes,' he replied; 'but do you see it in your heart?' That was but a simple question, yet it came home to my conscience. It was the Sword of the Spirit; and from that time I saw that my heart was corrupted, and knew from the Word of God that I can be saved by grace alone. So that, if Geneva gave something to Scotland at the time of the Reformation—if she communicated light to John Knox—Geneva has received something from Scotland in return in the blessings portion of Robert Haldane," See Haldane; Malan

Upon the completion of his theological course at Geneva, Merle d'Aubigné went abroad and studied at the universities of Leipsic and Berlin. In the last-named place he attended the lectures of the "father of modern Church history," Neander. On his way to Berlin he had passed through Eisenach, and visited the castle of Wartburg, made famous by Luther's sojourn. It was in this spot that he first conceived the purpose of writing the "History of the Reformation." His stay at Berlin, and association with the immortal Neander, only confirmed the views he had retired, and he restored the name and influence of the Church in the possession of the world. In 1817 he was ordained to preach, and became the pastor of an interesting French Protestant Church at Hamburg. There he labored diligently for his people and his God for some five years, when he was invited to Brussels, by the late king himself, as pastor of the large French community. He rapidly rose in favor and distinction, and enjoyed the position of president of the Consistory of the French and German Protestant churches of the Belgian capital. In 1830, the revolution delivering the country from Protestant rule and Dutch authority, all persons friendly to the king of Holland were regarded as enemies of the Belgians, and Merle d'Aubigné, fearing for his life, determined to return to his native country. The pious "Switzers" were actively canvassing at this time for the establishment of an independent theological school—a training place for the ministry of the orthodox church. His arrival gave a new impulse to the project, and resulted in the formation of the *Evangelical Society* in 1831, and the founding of the long-desired seminary. Merle was appointed professor of Church history, and intrusted with the management of the school, a position which he continued to hold for the remainder of his life, adoring it by his piety, learning, and eloquence, and sanctified by the divine blessing
upon his ever-memorable labors. His associates in the school were Gauzean, celebrated as the author of a work on "Inspirations." Fisher, Le Harpe. Though possessed of an ample fortune, Dr. Merle d'Aubigné lived a life of laborious activity. At seventy-eight he was still vigorous, and went to bed on Sunday night, October 20, after partaking of the sacrament, and subsequent devotions, with no sense of pain or illness. Like Dr. Chalm- ers, he may have resembled, he was found to have died quietly in his room at night, and to have been some hours dead before his family knew their loss. His death occurred on Oct. 21, 1872, at Geneva. Upon his country's loss, the Chris- tian Intelligencer (Oct. 24, 1872) thus comments in a beautiful and touching anniversary of our loss. "Not since the impressive death-scene of John Calvin, which took place 808 years ago, has Geneva been called to mourn over the loss of a more illustrious citizen and minister of the Lord Jesus Christ. The Free Church, of which he was founder, pastor, professor—which differs from the Established Church in having no connection with the State government—partakes largely of the nature of Calvinistic Methodism. But the man himself was broader and greater than any sect. His beautiful tribute to the memory of Calvin is his own most appropriate epitaph: "He was not a Genevan; he was not a Swiss; he was not a Protestant. But he felt the influence of his Scriptural Bayle. A century after" "An Evening with D'Aubigné" (Zion's Herald, Nov. 14, 1872), has furnished a description of Merle's appearance of late years: "D'Aubigné stood, I should say, full six feet, rather more than less; was large, but not corpulent. His face was long, not full, and smooth, I think. His iron-gray locks were combed back, exposing a high forehead; his eyebrows were heavy and black. His fea- tures and expression were somewhat severe, and marked, as if he had inherited the spirit and fought the battles of the old Scotch Covenanters. He conversed in Eng- lish with tolerable readiness. His health was then fee- ble, but he was hopeful of improvement." "As a man of duties incumbent upon a professor of theology are so varied, es-pecially at Geneva, where the influences, as in most large European cities, are decidedly rationalistic, that the manner in which D'Aubigné discharged his duty to-wards his pupils was of itself sufficient to entitle him to the very highest regards on the part of all followers of Jesus the Christ. The task, however, which D'Aubigné had set for himself at Eisenach, the writing of a history of the great Reformation, was the one that mainly oc- cupied him; and while a most devoted pastor and a truly laborious professor, he yet found time for the com- pletion of his work. It was immediately recognized by his author. His Histoire de la Réformation au seizième siècle (Paris, 1853-55, 5 vols. 8vo) gained him for liberally a world-wide reputation. His warm, devotional manner made him singularly popular as a preacher and speaker, and threw a charm over his hearers. His vigorous labors in this respect were devoted to the special providential mission of the evangelical forms of Prot- estant Christianity, made his history almost a mani- festo of Protestantism. His style is brilliant, and gen- erally clear, and, as was said of him by one of the most eminent of the English reviewers, "He wrote for time, and his writings will endure for eternity." The sale of this work was immense. More than 500,000 copies were sold in France alone; whilst the English transla- tion has circulated in more than 300,000 copies in Great Britain and the United States. In Germany also the work proved an immense success. But while the fame of this work has been in some degree misrepre- sented and importance of its matter, captivated the peo- ple, there are many scholars who have taken excep- tion to his "one-sidedness," and have declared it uncritical and unscholarly. One of the latest writers on the subject, Prof. Fisher, of Yale, actually ignores D'Aub- igné as an authority, and refuses to place him by the side of such men as Gieseler and Front. This we think a great injustice to D'Aubigné. We do not ourselves believe that he has done anything more than popularize the Protestant story; but to ignore the Chris- tian Intelligencer, whom we have already had occasion to quote: "It is impossible to estimate the far-reaching influence of this work in reproducing the characters, scenes, and struggles of the Reformation times, and in its strong hold upon the popular mind. We are well aware of the critical criticism which it has passed through among the scholars of Europe, and that its scientific value is not rated so high as that of histories written for learned men. But as a book for the people it has no rival, either in its immense circulation, or in its ac- knowledged power in behalf of the great principles of the Protestant Reformation. The work is, moreover, the bright and best reflection of its gifted author's genius, learning, and grace. Brilliant in style, picturesque in description, sententious, full of striking thoughts and powerful word-painting, it also glows with his profound love for the dear old faith, and with burning zeal against the iniquities of the papists of Rome. In no other book in our language do Luther and Erasmus, Melancthon, Farell, Calvin, Tzetzel, and Dr. Eck, the great emperor and the greater elec- tor, Leo X, and other characters, so live and move, and act in all their personal traits and historical deeds." In 1862 he repeated his great work by the publication of Histoire de la Réformation en Europe in the Time of Calvin, the fourth volume of which was published in 1868. The other works of M. d'Aubigné, al- though less widely celebrated, are in their way scarcely inferior to his greatly-renowned production. They are: Le Luthéranisme et la Réforme (Paris, 1844);—La Pro- testante et la Réforme à Allemand (ibid., 1848, 8vo), translated by J. Cowell (ibid., 1848, 8vo): rendered into English, and largely circulated under the title, "The Protector, or the English Republic in the Days of Cromwell," a thoughtful and admirably written review of the rule of the Puritan dictator. It is based upon Carlyle's famous monograph on the Protector, and was expressly designed as an exhibit of that "Protestantism which in Crom- well's mind was far above his own person:”—Germamy, England, and Scotland, or Recollections of a Swiss Minis- ter (London, 1848, 8vo), a work that showed great pow- er of observation and clearness of expression:—Three Centuries of English History, with a new preface by M. Teco Kingdon (Paris, 1850, 18mo): a brief—if we may so style it—in which are presented the main features of the Scottish Reformation:—L'Ancien et le Ministre (1856):—and Character of the Reformer and the Reformation of Geneva (1865, 8vo). M. Merle d'Aubigné has also contributed largely to periodical publications, the most noted of his papers being a series on the Ar- chives of Christianity. See, besides the writers already quoted, La France Protestant, ou vies des Protestants Francais (1853); Charles de Remusat, Mélanges de Lit- térature et Philosophie; Vaperne, Dict. des Contempo- raiins, s.v.; Hoefer, Nouv. Biog. Générale, s.v.; Brit. and For. Rev. Apr. 1845, 101 sq.; New-Englander, iv, 344; Harper's Magazine, 1872, Nov. (J. H. W.)

Merle, Matthieu, a noted Huguenot soldier, was born at Uzes, Languedoc, in 1548. He was not, as De Thou represents, the son of a wool-carder, nor did he follow the trade of his father. He is described as having been restored to a noble but poor family of Lower Languedoc, did not receive any school education, and never learned either to read or to write. Having a decided liking for war and the profession of arms, Merle, at the age of twenty, enlisted in a guard commanded by D'Acier, who subsequently became the duke of Uzes. As a member of that guard, Merle went through the cam-
pauper of 1589 in Poutou. After the pacification in 1570, he entered the service of François de Pesre, a general of the horse, who induced him with the super-
vision of his chest in Génaudais. Shortly after the massacre of St. Bartholomew, hostilities having been kindled afresh, Merle inflicted the bloodiest retaliation upon the Romanists, and by his deeds of valor and prowess became so redoubtable that the mere mention of his name was sufficient to cause far and near the
direst consternation among his enemies. He died about 1540. Goudin, in his Mémoires, published a brief sketch of Merle, and his career as a soldier. See De Thou, Hist.

**Merlin, Charles**, a French critic, was born at Amiens in 1678. He joined the Society of Jesus; at first a teacher of belles-lettres, and subsequently instructed in theology with much success. He was also one of the editors of the Mémoires de Trévoux. Merlin died in Paris about 1747. He is the author of Réfutation des critiques de M. Bayle sur St. Augustin (Paris, 1732, 4to). He had also undertaken to examine or re-

**Merlin, Jacques (1), a French theologian, was born in Saint-Victorin, Limousin, about the latter part of the 15th century. After having received his diploma as a doctor of theology at Navarre (1499), he became lecturer on divinity in the college of Saint-Bernard of Limoges. Subsequently he was ordained curate of Montmartre, near Paris. In 1525 he was appointed chief penitentiary of the cathedral of Notre-Dame, of which he had previously been resident canon. In 1527, king Francis I caused his arrest and incarceration for preaching against certain courtiers who were suspected of sympathy with the reform movement. He was cast into the dungeon of the Louvre. At the entreaties of the prebendaries of Paris he was liberated, after having suffered incarceration for two years, but even then was confined in his residence at Nantes. He was allowed, however, to return to Paris in 1530, when he was in-

**Merlin, Pierre**, a French Protestant theologian, the son of Jean-Raymond, was born about 1535. After having been a disciple of Theodore de Beza, according to De Thou, he became religious adviser to the prince of Condé. D'Aubigné, however, maintains that he was a minister of the Gospel under admiral de Châ\n
tillon. The Geneva Reformers were likely to have been favorably inclined toward him. Certain it is that he was with admiral de Châtillon during the St. Bartholomew massacre. Through a for-

Mero. See Meryth.

Meryor (Heb. Meroz), Ἱἐρος, apparently a syncopated form of Ἱερόος; Sept. Μηροζ; v. r. Mērōz and Mēroēz; Vulg. Meroz) occurs in Jer. 1, 2, in such connection with idols as to leave no doubt that it is the name of a Babylonian god. In conformity with the general character of Babylonian idolatry, Merodach is supposed to be the name of a planet; and, as one of the Tsabian and Arabic names for Mars is Mērītch, "arrow" (the latter of which Gesenius thinks may be for Mīrādch, which is very nearly the same as Merodach), there is some presumption that it may be Mars, but in other respects he more closely resembles Jupiter. As for etymologies of the word, Hitzig has suggested (Comment. auf Isa. xxxix, 1) that it is the Persian mērdak, the diminutive of mard, "man," used as a term of endearment; but more probably it is from the Persian and Indo-Germanic mord, or mōrt (which means death, and is so far in harmony with the conception of Mars, as the lesser star of evil omens), and the affix ὕς, which is found in many Assyrian names, as Nisroch, etc. (Gesenius, Thes. Heb. p. 818). The bloody rites with which Mars was worshipped by the ancient Arabs are described in Norberg's Omn. Cod. Cosm. Nat. p. 107. Of the worship of this idol by the Assyrians and Babylonians, besides the passages in Isa. xxxix, 1; Jer. 1, 2, we have testimony in the proper name of the king of Assyria and Babylonia, which are often compounded with this name, as Evil-Merodach, and Merodach-Baladanan, who is also called Berodach-Baladan (see Gesenius, Comment. zu Jer. i. 281). In the above passage of Jeremiah, "Bel and Merodach are coupled together, and threatened with destruction in the fall of Babylon. It has commonly been concluded from this passage that Bel and Merodach were separate gods; but from the Assyrian and Babylonian inscriptions it appears that this was not exactly the case. Merodach was really identical with the famous Babylonian Bel or Belus, the word being probably at first a mere epithet of the god, which by degrees superseded his proper appellation. Still a certain distinction appears to have been maintained between the names. The golden image in the great temple at Babylon seems to have been worshipped distinctly as Bel rather than Merodach, while other idols of the god may have represented him as Merodach rather than Bel. It is not known how far the word Merodach remained in the special aspect of the god, when worshipped under that title. In a general way Bel-Merodach may be said to correspond to the Greek Jupiter. He is 'the old man of the gods,' 'the judge,' and has the gates of heaven under his especial charge. Nebuchadnezzar calls him 'the captain of the guard, the senior of the gods, the most ancient,' and Nergalissar 'the first-born of the gods, the layer-upon of treasures.' In the earlier period of Babylonian history he seems to share with several other deities (as Nebo, Nergal, Bel-Ninmrod, Anu, etc.) the worship of the people, but in the later times he is regarded as the source of all power and blessings, and thus concentrates in his own person the greater part of that homage and respect which had previously been divided among the various gods of the Pantheon. See Rawlinson, Herodotus, i. 267 sq.; Ancient Monarchies, i. 163.

Meroz-balad'an (Heb. Merodach-Baladan), מֶּרֶדַךְ-בָּלָדָן, Mars [or Jupiter] is his lord [see Merodach]; Bohlen less well compares the Persian mardak at Zahah [see Marduk]; Sept. Μήροδας v. r. Mērōdās (Ἀλαδᾶς, Vulg. Merodach Baladan), a king of Babylonia, the son of Baladan, and contemporary of Hezekiah (B.C. 711), with whom he cherished friendly relations (Isa. xxxix, 1; 2 Kings xx, 12; 2 Chron. xxxii, 31; in two of which passages the name is transposed into the form Baladan-Berodach, but with the change of the letters). He is unquestionably the Mardokempa (Μὰρδοκέμπα) of Ptolemy's Canon (comp. Ewald, Isr. Gesch. iii, 384), who reigned at Babylon for twelve years, B.C. 721-709. Josephus (Ant. x. 2, 2) calls him simply Baladus (Baladās), apparently identifying his name with that of his father. He is usually identified (Gesenius, Comment. on Isa. ad loc.) with the Merodach-Baladan mentioned by Berosus (in Eusebius, Chron. Armen. i, 42, ed. Ancher) as a viceroy of the king of Assyria, whom he poisoned, after which he succeeded him for himself (see Knobel, Comment. on Isa. p. 282); but this person is probably one who fell in a part of the two years' interregnum some years later (B.C. 702-699), since he is said to have been slain by Elibus (the Belius of Ptolemy's Canon) after a reign of only six months (see the same passage, Comment. on Isa. p. 283). Merodach-Baladanan is mentioned in the Assyrian inscriptions at Khorsabad, deciphered by Dr. Hincks and Col. Rawlinson, according to which he was conquered by Sennacherib in the first year of the latter's reign. Merodach-Baladan is there called king of Kar-Duniyas, a city and country frequently mentioned in the Assyrian inscriptions, and comprising the southernmost part of Mesopotamia, near the confluence of the Tigris and Euphrates, together with the districts watered by these two rivers, to the borders of Susiana. This king, with the help of his Susianian allies, had recently recovered Babylon, which Sennacherib's father had relinquished to him in the twelfth year of his reign. The battle seems to have been fought considerably to the north of that city. The result was that Sennacherib totally defeated Merodach-Baladan, who fled to save his life, leaving behind him all his military equipments. In the cuneiform inscription for the next year, Sennacherib relates how Merodach-Baladan further mentioned as having escaped to an island, where himself and all his family were finally captured by Sennacherib (Layard's Nineveh and Babylon, p. 140, 145). The dates of these notices would seem to identify the Merodach-Baladan of the monuments with the temporary usurper of the same name alluded to by Assyrian authors, rather than by the Sasanian accounts of Scripture; possibly future investigations may show that they were all three identical, as also the Mardokempas of the Canon, since the records of the inscriptions appear to speak of an occupancy of Babylon by him at two distinct periods, the first during the reign of Sargon (being probably that referred to in the inscriptions and the Canon), and the second for a shorter space and after a considerable interval, in the first of Sennacherib (being that alluded to by Berosus). A different but analogogous solution of the above difficulty is to suppose two kings of the same name at the two periods in question. See Rawlinson, See above. The word 'putting all our notices together, it becomes apparent that Merodach-Baladan was the head of the popular party, which resisted the Assyrian monarchs, and strove to maintain the independence of the country. It is uncertain whether he was self-raised or was the son of a former king. In the second book of Kings he is styled 'the son of Baladan'; but the inscriptions call him 'the son of Yaqin'; whence it is to be presumed that Baladan was a more remote ancestor. Yaqin, the real father of Merodach-Baladan, is possibly represented in Ptolemy's Canon by the name Jugesus—which in some copies replaces the name Elibus—as the appellation of the immediate predecessor of Merodach-Baladan. At any rate, from the time of Sargon, Merodach-Baladan and his family were the champions of Babylonian independence, and fought with spirit the losing battle of their country. The king of whom we are here treating sustained two contests with the power of Assyria, was twice defeated, and twice compelled to fly his country. His sons, supported by the king of Elam, or Susiana, continued the struggle, and are found among the adversaries of Esarhaddon, Sennacherib's son and successor. His grandsons contend against Asshur-bani-pal, the son of Esarhaddon, till the latter arranging the events of the family seems to become extinct, and the Babylonians, having no champion to maintain their cause, content-
ally acquiesce in the yoke of the stranger. The increasing power of Assyria was at this period causing alarm to her neighbors, and the circumstances of the time were such as would tend to draw Judea and Babylonia together, and to give rise to negotiations between them. The astronomical marvel, whatever it was, which accompanied the recovery of Hīleh, may have been the cause of the two rivers doubting to attract the attention of the Babylonians; but it was probably rather the pretext than the motive for the formal embassy which the Chaldaean king despatched to Jerusalem on the occasion. The real object of the mission was most likely to effect a league between Babylonia, Judea, and Egypt ( Isa. xx, 4, 5), in order to check the growing power of the Assyrians. Hezekiah’s exhibition of all his precious things (2 Kings xx, 13) would thus have been, not a mere display, but a mode of satisfying the Babylonian ambassadors of his ability to support the expenses of a war. The league, however, though designed, does not seem to have taken effect. Sargon, acquainted probably with the intentions of his adversaries, anticipated them. He sent expeditions both into Syria and Babylonia—seized the stronghold of Ashdod in the one, and completely defeated Merodach-Baladan in the other. That monarch sought safety in flight, and lived for eight years in exile. At last he found an opportunity for revenge, and, taking the river R.C. 703 or 702 Babylonia was plunged in anarchy—the Assyrian yoke was thrown off, and various native leaders struggled for the mastery. Under these circumstances the exiled monarch seems to have returned, and recovered his throne. His adversary, Sargon, was dead or dying, and a new and united prince was about to rule over the Assyrians. He might hope that the reins of government would be held by a weaker hand, and that he might stand his ground against the son, though he had been forced to yield to the father. In this hope, however, he was disappointed. Sennacherib had scarcely established himself on the throne when he began to engage his people in wars, and it seems that his very first step was to invade the kingdom of Babylonia. Merodach-Baladan had obtained a body of troops from his ally, the king of Susiana; but Sennacherib defeated the combined army in a pitched battle; after which he ravaged the entire country, destroying 75 walled cities and 820 towns and villages, and carrying vast numbers of the people into captivity. Merodach-Baladan fled to ‘the islands at the mouth of the Euphrates’ (Fox Talbot’s Assyrian Texts, p. 1)—trusts probably now joined to the continent—and succeeded in eluding the search which the Assyrians made for him. If we may believe Polybius (H. R. 40, 1), one of the late battles in the war, the writer relates (esp. Euseb. Chron. Can., i. 5) that he was soon after put to death by Elibius, or Belibus, the viceroy whom Sennacherib appointed to represent him at Babylon. At any rate, he lost his recovered crown after wearing it for about six months, and spent the remainder of his days in exile and obscurity. See BABYLONIA.

MEROE. See SEKA.

Meroe (Heb. Memra, מֵמְרוֹא, height; Sept. Meraiou, a lake (جمهور, "waters") among the hills (hence the name, Baruchkhad, Travn., ii, 555) of northern Pal- estine, whose shores were the scene of the great victory of the Hebrews over the northern Canaanites (Josh. xi, 5-7); doubtless the same with that through which the Jordan flows three miles from its source, called by Josephus Samechonias (Syrmwv8 or Syrmwvina, Ant. v, 5, 1; War, iii, 10, 7, iv, 1, 1). In his account of the battle (Ant. v, 1, 18), the confederate kings en- camp near Beroth, a city of upper Galilee, not far from Kesed; nor is there any mention of water. In the Omastasion of Eusebius the name is given as "Meran" (Μερανία), and it is stated to be "a village twelve days' journey from the lake Belastein (Shechabn)." Abufelaha (Tab. Syr. p. 155) calls it the Sea of Bethammon, but its usual modern name is Bakrat el-Hilah (Burck- hardt, Travn., i, 87). It was visited by Lieut. Lynch (Ex- pedition, p. 471), and is most fully described by Thomson in the Bibliotheca Sacra, 1846, p. 185; see also 1848, p. 12, and map; 1854, p. 56; Robinson’s Res. new ed. p. 395; comp. Reland, Palast., p. 261 sq.; Hamborsveld, l, 482 sq.; Schwarz, Palast., p. 47. As regards the modern name of Hīleh, by which both the Chaldaeans (Sennacherib and Darius) and the Hebrews commonly designate the lake, there are some grounds for tracing it also to a very ancient source. Josephus (Ant. xx, 10, 3) speaks of Herod as having obtained from Ces- sar the territory of a troublesome prince named Zenodo- rus—a territory that lay between Trachon and Galilee, and which contained Ulata (Ulatmus) and Penen. The country so described is the very region in which Lake Merom is situated; and Ḫilah has every appearance of being the Greek form of Hīleh. It is also con- jected that this Ulata of Josephus and Hīleh of modern times may derive their common origin from a period so remote as that of Had, the son of Aram, mentioned in the book of Genesis (x, 28), a personage whom Josephus calls "Ovloes (Ant. i, 6, 4). Hence, not improbably, the name (see Ritter, Palast. und Syr. ii, 284; Stanley, Sin. and Pal. p. 283). The word, both in Hebrew and Arabic, seems to have the force of depres- sion—the low land (see Michaelis, Suppl. Nos. 655, 720); and in Arabic it is used to denote any large depression as the Hungarian depression, and in the present form it may have been sufficiently modified to transform it into an intelligible Greek word (Spielegiogenii, ii, 137, 138). The name Samechonias may perhaps be de- rived from the Arabic rāmak, "to be high," and would thus denote a high place in the midst of the sea. The name Merom (Gesenius, Thesaur. p. 1276; Reland, Palast., p. 262). Perhaps the phrase περὶ ὑποῖς ὑπὸς might be rendered "the upper waters," that is, the upper lake or collection of waters formed by the river Jordan (see Reland, p. 262). Several other explanations of the Greek name as found in Josephus have been given: 1. It is derived from the Chaldean פָּבָר, "red," because of the reddish color of its water. 2. From פָּבָר, "a thorn," because its shores abound with thorn-bushes (Lightfoot, Opp. ii, 172). 3. From the Arabic samak, "a fish" (Reland, p. 262). These explanations appear to me all too fanciful (Stanley, Sin. and Pal. p. 283, note). Josephus (Bk. Wars, ii, 10, 6) calls Merodoth (Memra or Meroth, Life, p. 37; War, ii, 20, 6), which Ritter connects with the Heb. name of the lake (Pal. und Syr. ii, 235). This interesting lake—Merom, Samechonias, or Hī- leh—lies embedded in the midst of one of the finest scenes in the Holy Land. The Arnon, which carries the lake, is a nearly level plain of sixteen miles in length, from north to south; and its breadth, from east to west, is from seven to eight miles. On the west it is walled in by the steep and lofty range of the hills of Kesed-Naphtali; on the east it is bounded by the lower and more gradually ascending slopes of Bashan; on the north it is shut in by a line of hills hummocky and irregular in shape, and of no great height, and stretching across from the mountains of Naphtali to the roots of Mount Hermon, which towers up, at the north-eastern angle of the plain, to a height of several thousand feet. At its southern extremity the plain is similarly traversed by elevated and broken ground, through which, by deep and narrow clefts, the Jordan, after passing through Lake Hīleh, makes its rapid descent to the Sea of Galilee, the level of which is from 600 to 700 feet lower than that of the waters of the Mediterranean (Vandervelde, Memoir, p. 181). This noble landscape, wherever you look, for the first time and suddenly, from the lofty brow of the mountains of Naphtali, can never fail to excite the liveliest admiration: the intense greenness, so unusual in Palestine, of the abundantly-watered plain—the bright blue lake reflecting from its bosom the yet brighter and bluer sky in a singularly picturish scene. In the surface of the hills; and, rising far above them all, the Jebel esh-Sheikh, the

MERRIAM

the lake Merom, perhaps the locality (reading יַעֲרֵב, high place) which gave name to the lake itself. Wilson (Lands of the Bible, ii, 89) identifies it with the Kefr-Mear, on the southern slope of Mount Tabor, and this Van der Veen approves (Memoir, p. 834). Thomson thinks it may be the present Mevois, a famous Jewish cemetery six miles west of Safed; this would be between Barak’s residence and Tabor (Judg. iv, 12), and therefore render the inhabitants liable to a summons to arms by the Hebrew general (Land and Book, i, 424). This last identification is not wholly the Moorean method, as modified by Josephus (Life, p. 57; War, ii, 20, 6; iii, 5, 1).

Merriam, Edwin Elisba, a Presbyterian minister, was born in Mason, Hillborough County, N. H., in 1837. He graduated with honor at Amherst College, Mass., in 1858, and at Union Theological Seminary, N. Y., in 1863; was ordained and installed pastor of the Church in Salem, Wayne County, Pa., in 1864; married on Feb. 17, 1865. Mr. Merriam possessed superior qualifications for usefulness as a minister, and was much beloved as a pastor. See Prob. Hist. Almanac, 1866, p. 218.

Merriam, W. W., an American missionary to Turkey, of whose personal history we know but little, des- serves a place here for his activity and zeal in behalf of the American missions. He was born in Utica, N. Y., in life in 1862, when he was assassinated near Philippiopolis, Turkey, on his return from a missionary meet- ing at Constantinople. Merriam was appointed by the American Board.

Merrick, James, an English divine, noted for his theological and, especially, for his poetical productions, called by Lowth “one of the best of men and most em- inent of scholars,” was born Jan. 8, 1720, and was educat- ed at Trinity College, Oxford. He became a “probation fellow” at his alma mater in 1744, took holy orders shortly after, and became noted for his philanthropic labors. Owing to infirm health he never undertook the task of supplying the pulpit. He died Jan. 5, 1762. When yet a member of a school at Reading, Merrick published a poetical production that deserves to be placed among the classical writings of the English. His chief works are, A Dissertation on Proverbs, ch. ix (Lond. 1744, 8vo);—Prayers for a Time of Earthquakes and Violent Storms, written in 1756, soon after the earthquake at Lisbon:—Annotations, Critical and Grammatical, on the Gospel of St. John (Reading, 1764, 8vo; 2d pt. 1767, 8vo);—Annotations on the Psalms (ibid. 1767, 8vo; 1768, 4to), of which only part were his own; archbishop Seeker, bishop Lowth, and Kennicott were contributors:—Emancipation to a Good Life, particularly ad- dressed to soldiers quartered at Reading, among whom he labored much for the good of the Christian cause. Indeed, he appears to have paid great attention to this class of men, who at that time especially required it. He also wrote Poems on Sacred Subjects, and made an excellent Translation of the Psalms into English Verse. This, beyond all doubt the best poetical translation in English, was unfortunately not adapted for parochial choirs, inasmuch as it was divided into stanzas for mu- sic. This work is not perhaps as generally known as its merits would justify. He published several other minor religious treatises. See Orne, Bibliotheca Biblica, p. 315; Bosanquet, Dict. Brit. and Amer. Authors, s. v.; English Cyclop. s. v.; Holland, Psalmists of Great Brit- ain, ii, 210 sq.

Merrick, James Lyman, a Presbyterian minis- ter, was born at Monson, Mass., Dec. 11, 1818. He graduated at Amherst College in 1839, and in 1839 at the theological seminary at Columbia, S. C.; was ordained as a Presbyterian minister in August 1839. He was in the same year he sailed for Constantinople, and in Oc- tober, 1839, arrived at Tabriz, Persia. He labored, travelled, and explored among the Mohammedans about two years, then joined the Nestorian Mission at Oroo- niah, and in 1845 returned to America, and in 1849 was installed pastor of the Congregational Church at Am-

MERRILL

hers, Mass. He died June 18, 1866. Mr. Merrill had a strong mind, and was a good scholar, a faithful pastor, and an earnest philanthropist. He was thoroughly acquainted with the Persian, and well read in the Arabic, Hebrew, Turkish, Greek, Latin, and French tongues. He was altogether absorbed in the interests of the Persian lan- guage and literature, and bequeathed his property to the literary institutions which had afforded him his early advantages, for the foundation of four Persian schol- arships. He was the author of The Pilgrim’s Homer, a volume of poems (1847)—The Life and Religion of Mo- hammed, translated from the Persian (1860)—Keith’s Evidence of Prophecy, translated into Persian (1846). He also left in MS, A Full Work on Astronomy, select- ed, compiled, and translated into Persian, A Friendly Treatise on the Character of Christ, English, and A Treatise on the Orthography and Grammar of the English Language. See Prob. Hist. Almanac, 1867, p. 181, 182; N. Amer. Rev. Ixxi, 273; Brown’son’s Quar. Rev. 2d ser., iv, 408. (J. L. S.)

Merrill, Joseph, a Methodist Episcopal minis- ter, was born at Annopolis, Md., Nov. 25, 1811; entered the Baltimore Conference in 1831; in 1835-8 was sta- tioned in Baltimore; in 1838-9, in Lewiston, Pa.; in 1840-1, in Hagerstown, Md.; in 1842-3, in Annopolis; in 1844-5, in Baltimore; and in 1847 in Alexandria, where he died, in February (?), 1848. He was a man of great energy and labor, and one of the best preachers of his time, but in so many talents, in research, clear and earnest study, and great faith. He was espe- cially noted for excellence and faithfulness as a pastor. See Minutes of Conferences, iv, 197.

Merrill, Daniel, an American Baptist minister, noted for his opposition to open communion and Pado- baptists, flourished as pastor at Dedgwick, Me., where he died in 1833, about sixty-five years of age. His works are, Seven Sermons on Baptism (10th ed. 1812):—Eight Letters on Open Communioin (1805)—Letters oc- casioned by Worcester’s Discourses:—Balaum Disap- pointed: and several sermons preached on important public occasions.

Merrill, David, a Presbyterian minister, was born at Peaam, Vt., in 1778, and was educated at Dart- mouth College (class of 1821). He was called to preach at Urbanna, Ohio, in 1827; thence to the Church at Peacham in 1841, where he died in 1850. Mr. Merrill published Three Occasional Sermons, and contributed to several periodicals. A volume of his sermons, with a sketch of his life, was published by Thomas Scott Pear- son (Windor, Vt., 1855, 8vo). See Aitbome, Dict. of Brit. and Amer. Authors, s. v.

Merrill, Franklin, a Presbyterian minister, was born in 1819. He was educated at Princeton College, studied divinity at the Princeton Theological Seminary, and was ordained pastor of the Presbyterian Church at Hempstead, Long Island, N. Y., in 1846. In 1853 he accepted a call to the First Church of Stillwa- ter, N. Y., and in 1855 to the Reformed Dutch Church of Schuyerville, N. Y., where he died, March 31, 1861. Mr. Merrill was an earnest and instructive preacher, and possessed the high art of impressing the message of God with peculiar directness and pungency. See Prob. Hist. Almanac, 1865, p. 206.

Merrill, Joseph A., a noted Methodist Episco- pal minister, was born at Newbury, Mass., Nov. 22, 1785; was converted in 1804; entered the New England Conference in 1807; was stationed in Boston in 1813-14; in 1815-18 was presiding elder on Vermont District; in 1819 was agent of the Wesleyan Academy at New Market, and the first missionary of the first missionary society of the Methodist Episcopal Church, which was formed by the Lynn Common Church, and his field was New Hampshire. In 1826-27 he was stationed in Bos- ton; 1830-33 was presiding elder on Providence Dis- trict; 1834-38 was on Springfield District; 1843-47, in Salem, Boston, and Cambridge; and died at Willbra-
MERRILL

ham, Mass., July 23, 1849. "Mr. Merrill was an able and useful minister, and greatly devoted to the inter-denominational spirit, and was one of the original trustees of the Wesleyan University, and remarkably successful as an agent for the academy, of which he secured the removal to Wilbraham. He was one of the earliest and most devoted friends of the anti-slavery cause, and his name is honorably identified with the rise and progress of that important movement. His administrative and practical talents were of the highest order, and his firm integrity made him trusted and respected by all. See Minutes of Conferences, iv, 586; Steven's Memorials of Methodism, ii, ch. xxxii. (G. L. T.)

Merrill, Thomas Abbott. D.D., a Congregational minister, was born January 18, 1780, in Andover, Mass.; graduated at Dartmouth College in 1803, where he was chosen a tutor in 1800; and in 1804, Professor in Middlebury College, which office he held a year, and was then ordained pastor in Middlebury, Dec. 19, 1805. He bore on this charge until Oct. 19, 1842. He died April 25, 1855. He was one of the founders of the Vermont Domestic Missionary Society in 1818, and secretary of the same until 1821; and he was president of the Peace Convention in 1838. In 1842 he was chosen treasurer of Middlebury College. He published two of his sermons (1806; 1838). See Sprague, Annales, ii, 481.

Merritt, Timothy, an early and eminent Methodist Episcopal minister, was born at Barkhamsted, Conn., October, 1775. He was converted about 1792, and entered upon his ministry in 1803. He was a member of the General Conference from 1808 to 1817 he located; was stationed in Boston in 1817-18; in 1822 at Providence; in 1825-26 preached at Boston; in 1831 at Malden, and also "devoted much time to the editorship of Zion's Herald." From 1832 to 1836 he was assistant editor of the Christian Advocate and Journal, New York. He died at Lynn, Mass., 1845. Mr. Merritt was an able and powerful writer, an eloquent preacher, an accomplished debater, and in all respects one of the foremost ministers of his time. He was a well-read man, and worthy of a place among the scholars of his Church. His ministry was made especially useful by the enjoyment and earnest preaching of the doctrine of Christian perfection. His influence was wide and blessed, and his memory is precious. Mr. Merritt published Correct the Guide and Preacher's Assistant:—Christian Manual:—Discussion against Universal Salvation:—On the Validity and Sufficiency of Infant Baptism:—and (together with Dr. Park) Lectures on the Ecclesiastical Discussions on Universal Salvation. See Minutes of Conferences, iii, 616; Steven's Memorials of Methodism, i, ch. xxii; ii, ch. xxvii; Sherman's New Engl. Dictionaries, p.312. (G. L. T.)

Merrwether, John T., a minister of the Methodist Episcopal Church South; joined the Memphis (Tenn.) Conference in 1854, and was appointed to Dyersburg Circuit; in 1856 to Dresden Station; in 1856 to Trenton Station; in 1857 to Holly Springs Station; in 1858 to Asbury Chapel, Memphis; in 1859 and 1860 to Aberdeen Station; in 1861 was made presiding elder of Aberdeen District; in 1865 was appointed to Denmark Circuit; and in 1866 took a supernumerary relation. He died in Denmark, Tenn., April 10, 1867. He possessed a strong and highly-cultured mind, a soul imbued with the spirit of Nazirite, and an intelligent yet burning zeal in his high calling." See Minutes of the M.E. Church South, 1867.

Mersennus (Fr. Mersenne). Marin, a very learned French ecclesiastic and philosopher, was born in 1588 at Oyse, in the present department of Maine. He received his education at the College of La Flèche, where he remained for nine years. In 1612 he was elected dean of the University of Orleans, and in 1615 he formed an intimacy, which a similarity of pursuits ripened into a friendship dissolved only by death. He also studied at the University of Paris, and subsequently at the Sorbonne. In 1612 he took the vows at the Minimes, in the neighborhood of Paris. In the year following entering the priesthood, he deemed it incumbent on him to study the Hebrew language, and addressed himself to the accomplishment of this task. In 1619 he received the degree of doctor, and there taught till the year 1619, when he was chosen superior of the convent, and, on completing the term of his office, he travelled in Germany, Italy, and the Netherlands. He finally settled in Paris, where his gentle temper and polite and engaging manners procured for him a large circle of friends. He held the chair of the Cartesians in the Sorbonne, where he exhibited the highest opinion of his abilities, and consulted him upon all occasions. It has been stated — though the story seems fairly improbable — that Des Cartes, by the advice of Mersenne, at once changed his intention of founding his system on the principle of a world composed of a plurality of spheres. The discovery of the cycloid has been ascribed to him and also to Des Cartes, but it now seems pretty clear that neither were we indebted for the first notice of this curve. Mersenne died at Paris in 1648. Pierre Mersenne was undoubtedly a man of great learning and unrivaled research, and deserved the esteem in which he was held by the philosophers and literati of his age; but, except his Harmonie Universelle, his works are now unread and almost unknown. If by some he was overrated, by others he has been undervalued; and when Voltaire mentioned him as "Le minime et très minime Pierre Mersenne," he indicated that at the time he was writing, with whose writings, it is to be suspected, he was very little acquainted. His eulogist, however, in the Dictionnaire Historique, admits that Mersenne very ingeniously converted the thoughts of others to his own use; and the abbé Le Vayer calls him "Le bon Larron"—a skilful pilferer. Nevertheless, the work above named, L'Harmonie Universelle, contenant la Théorie et la Pratique de la Musique (1687, 2 vols. fol.), has proved of the utmost value to all later writers on the subject. The work was, in 1648, translated into Latin and enlarged by the author; but both the original and translation have now become obscure as they are curiously mingled in the earlier production of his, La Vertu des Sciences contre les Sceptiques (Paris, 1625), discusses at considerable length the nature of mathematical evidence, and concludes by maintaining that mental philosophy, jurisprudence, and all the arts and sciences, should be taught and illustrated through the aid of mathematics (liv. i, ch. viii, x, xiii, xiv). "The mind itself," he held, "is the real and effective source of all its powers and perceptions of abstract truth" (p. 193). See Hilarion de Coste, Vie du R.P. Marin de Mersenne; Nicéon, Hommes illustres, vol. xxxiii; Blakey, Hist. of the Philosophy of Mind, ii, 429 sq. (J.H.W.)

Merton, Walter, an English prelate noted for his philanthropy, flourished in the 15th century. He was sursumed from the place of his birth, a village in Surrey. His education he received at a neighboring convent, and was there influenced to enter the ecclesiastical life. After filling various important offices in the Church, he was in 1258 advanced to the post of chancellor of England; but he held this position only a very short time, and in 1263 he founded a hospital at Oxford, which still bears his name. In 1274 he was advanced to the see of Rochester. He died before the expiration of 1277.

Merf or Merus (Gr. Μερός), a word of doubtful etymology, is in Hindu mythology the name of a mythical mountain. It is said to be situated in the centre of the seven continents, and its height is supposed to be 84,000 geographical miles of which 16,000 are below the surface of the sea. It is also supposed to be 9,600 miles in diameter, and that it revolves in 12 days, or about nine of our miles; but, according to some authorities, it is only five miles. The sacred river Ganges (Ganga), which is said, falls from heaven on its summit, and flows to the surrounding worlds in four streams, of which the southernmost is the Ganges of India. Brahmas, attended by rishis (sages) and celest-
MERSCH

official minister, is supposed to visit them, and also Siva and his consort Parvati. See Wilson, Sanscrit Dictionary, s. v.; Moor, Hindoo Pantheon, s. v.; Coleman, Hindu Mythology, 1853.

Merew, SAMUEL, an early and eminent Methodist Episcopal minister, was born at Durham, Conn., Sept. 18, 1777; was converted while young; entered the New York Conference in 1800; in 1803 was stationed at Montreal, Canada; in 1804 at New York; in 1806 at Boston; in 1807-8 at Newport, R. I.; in 1815-16 at Albany; in 1816 at Brooklyn; from 1815 to 1818 was presiding elder on New York District; in 1819 preached in New York; in 1820 in Albany; from 1821 to 1823 was on the New Haven District; in 1824-5 at Baltimore; in 1826-7 at Philadelphia; in 1828-9 at Troy; in 1829-30 at New York; from 1832 to 1833 on the New York District; in 1836 at New York; in 1837-8 at Rhinebeck, N. Y., where he died, Jan. 13, 1839. Mr. Merew was a man of great influence and usefulness in his whole public career. His ministerial and administrative talents were of the highest order. He possessed a mind of great richness and power, a clear and commanding imagination, a fervent and fervent piety; these, combined with the gift of utterance, made him one of the most eloquent men of his time; and the important stations which he filled in the New England, New York, Philadelphia, and Baltimore Conferences, testify to the opinion of his brethren respecting his abilities. In the presiding eldership his masterly influence and influence over his brethren were conspicuous as a peace-maker and an organizer. Many souls were converted through his labors, and his memory in the church is blessed. See Minutes of Conferences, ii. 669; Sprague, Annals of American Pulpit, vol. vii. (G. L. T.)

Merz, PHILIPP Paul, a German theologian, was born near the close of the seventeenth century. After having been received as a minister in the evangelical ministry in 1724, he suddenly turned to Romanism; was subsequently ordained a priest, and became the curate of Schwabeyen, and sometime afterwards retired into his native city. He died in 1734. He wrote Theologiae Bibliicae (Augsburg, 1703-9, 1711, 2 vols. 4to; Venice, 1730, 4to). This work is very useful to preachers. At the end of each important part it contains a reference to such passages of Scripture as bear upon it. Merz also published Quotidie Catechetica (Augsburg, 1732, 5 vols. 4to), which is a complete and methodical abstract of the best catechisms then extant. See Zard, Augsburgische Bibelkritik, ii. 394; Peith, Bibliotheca Augustana; Meusel, Gmelin-Levisen, s. a.

Mesa, CHRISTOBAL DE, a Spanish poet, was born at Zafra (Estremadura) in 1550. The little that is known of him is gathered from his own poetical compositions, and particularly two epistles to the count de Lemos, together with that addressed to the count de Castro. From these productions it appears that in his youth Mesa was the pupil of Sanchez, the most eminent of Spanish philologists, and that he had also deeply studied both Femand de Herrera and Louis de Soto. In after-life he spent some years in Italy, where he became intimately acquainted with the poet Tasso. He died, poor and obscure, about 1620. One of his poems is founded upon the tradition that the corpse of St. James, after his martyrdom in Jerusalem, was miraculously translated to Spain and deposited at Compostella, where from that day to this James has been honored as the patron saint of the realm. See James. Another of his poems treats of Philip II and the struggles of the Christians against the Moors up to the battle of Covadonga. His third poetical work relates the battle of Tolosa, which destroyed the power of the Mohammedans, and secured the emancipation of the Peninsula. He also wrote El Patron de España (Madrid, 1611, 12mo). See Ticknor.

History of Spanish Literature, ii. 462; Hoefer, Nouv. Biog. Générales, s. v.

Meshech (Meg., cxx, 5). See Mezhech.

Mesengui, FRANCOIS PHILIPPE, a French ecclesiastic, celebrated for his connection with Jansenism, was born at Beauvais, in August, 1677. His parents being poor, friends defrayed the expenses of his education in the college of Beauvais, at which he entered in 1690 at the age of seven. He went to Trent-Trois in Paris. After having been invested with the first minor orders, he became a professor of humanities in his native city. On his return to Paris in 1707, through the influence of his friends he was appointed superintendant of the department of rhetoric in the college of Meaux. Coffin (Ann. Meaux) gives him as the director of that institution, selected the abbé Mesengui for his coadjutor, and upon him devolved the duty of teaching the catechism to the students. The opposition, however, which he manifested to the papal bull known as Unigenitus constrained him in 1726 to resign his official functions. He subsequently became a member of the clergy at Saint-Etienne-du-Mont. Suspected of harboring the doctrines of Jansenism, he was in consequence prohibited from all ecclesiastical avocations, and confined to privacy and obscurity. He took up his residence in Paris, and devoted himself to the composition of various works designed for the propagation of the Jansenistic doctrines, which were finally adopted. He died in February, 1768, at Saint-Germain-en-Laye. Mesengui published: Êdie de la vie et de l'esprit de N. Chorat de Busavalo, évêque de Beauvais, avec un abrégé de la vie de M. Hermann (Paris, 1717, 12mo)—Abrièd de l'histoire et de la morale de l'Ancien Testament (Paris, 1728, 12mo)—Le Nouveau Testament, trad. en Francais, avec des notes littérales (Paris, 1729, 12mo; 1752, 6 vols. 12mo)—Vie des Saints pour tous les jours de l'année (Paris, 1730, 6 vols. 12mo)—Abrièd de l'histoire de l'Ancien Testament, avec les edéclaircissements et des réflexions (Paris, 1733-8, 10 vols. 12mo)—Abrièd de l'histoire de l'Ancien et du Nouveau Testament (Paris, 1737-38, 8 vols. 12mo)—Épitres et Épîcles, avec des réflexions (Paris, 1737; Lyons, 1810, 12mo)—Exposition de la doctrine Chrétienne, ou instructions sur les principales vertus de la religion (Utrecht [Paris], 1744, 6 vols. 12mo; new edition, revised and enlarged, Paris, 1754-58, 4 vols. 12mo). Some writers state that the duke of Berri endeavored to prevail upon Mesengui to expunge from his works such passages as reflected upon the religious controversies of his day; but Mesengui evidently turned a deaf ear to the duke's entreaties. A new edition of the last work, issued in Italy, was placed in the Index Expurgatorius by an apostolic bull promulgated by Pope Clement XI. In a posthumous Mémoire, addressed to the cardinal Pas- sionei, Mesengui attempted to justify his religious views. Among his other works may be mentioned: La Constitution Unigenita, avec des Remarques (Paris, 1746, 12mo)—Entretien de Théophile et d'Esopo sur la religion ( Ibid, 1760, 12mo). Mesengui took part with Viger and Coffin in the liturgical writings which M. de Vintimille, archbishop of Paris, disseminated in his diocese. See Lequeux, Mémoire abrégé sur la vie et les ouvrages de l'abbé Mesengui (Paris, 1768, 8vo).

Mesha, the name of a place and of three men, differently written in the Heb.

L. (Heb. Mesha', מֶשֶחַ, probably of Arabic origin; Sept. Maeschi, Vulg. Mesha). A place mentioned in describing the boundary of that part of the land of Gilead, the descendents of Joktan (Gen. x. 30), where it is stated that "their dwelling was from Meha even unto Sephar, (and beyond even unto) a mount of the east." In this passage it has been assumed by many that "the mountain of the east" (נַחַל נַחַל) is not put in apposition with conjunction, but is some third locality to which the boundary extends, as
MESA

Saadia interprets; and, if so, it is doubtless none other than the chain running across the middle of Arabia from the region of Mecca and Medina as far as the Persian Gulf, now called Nejd, the highlands (see Jonard, Nôtoe sur le pays de l'Aragie centrale, Paris, 1823). Sephar would then be the modern Sehir, the chief city of the district Shehr in the province of Hadramaut. See Spath, Geography, ii, 20). The name of Masa, from which the boundary extends, is the Musa or Musa (Moiva, Ptol. vi, 8; Moza, Arrian, Peripl.; Maza, Pliny, vi, 23) spoken of as a maritime city on the western coast of Arabia, not far from Mocha, where Musa (Niebuhr, Arabien, p. 225; Jaina, Hist. Jemenae, p. 598) or rather Musia (Niebuhr, p. 224, 226; Mannucci, Geografia, i, 58) was established. Not only is it known of in classical times, but has since fallen into decay, if the modern Musa be the same place. The latter is situated in about 34° 40' N. lat., 43° 20' E. long., and is near a mountain called the Three Sisters, or Jebel Musa, in the Admiralty Chart of the Red Sea, drawn from the surveys of Captain Pullen, R.N. But as neither of these Arabic names can well be compared with that of Masha, it may be better (with J. D. Michaelis, Spicilegi, ii, p. 214; Suppl. No. 1561) to understand Masaen or Musain, situated among the mouths of the Tigris (in the Shat el-Arab) on the Persian Gulf—a place described by Asserius, i and ii; Aelian, viii, 2; Justin, Hist. Rom., iv, 30; Philostratus, Martyr. ii, 2, comp. Dict. of A. vi, 28; Assaman. Bibl. Orient. iii, 2, p. 430, 608; Abufleda in Tob. Iucono ap. Michael. in Spicil. i. c.; D'Anville, l'Extrapole et le Tigre, p. 135), the name perhaps signifying the river island, from its being enclosed by the branches of the Tigris, as often alluded to by the Greek geographers (see Siepih. Byz. a. v. Orathea and Musaen; Pliny, v, 27, 31; Collar. Notit. ii, p. 749; D'Anville, p. 130, 181). The sacred writer would thus in his description begin with the eastern limits of the Joktanides, and end with the western and northern, Sephar being sought between them. "But it is very doubtful whether the chain of mountains formed by the limits of the river, was in existence in the days of Moses; and it is still more doubtful whether such a spot could at that early period have attained to any political or geographical notoriety. Besides, it is not likely that an accurate writer would describe a purely Arabian territory as commencing on the east side of the Tigris. The theory of Mr. Forster is much more probable than either of the preceding. He identifies Masha with a mountain-range called Zamas by Pтолemy (vi, 7), which commences near the Persian Gulf, and runs in a south-western direction nearly across the peninsula. It is an undoubted fact that the various Joktanitic tribes, or Beni-Kahata, as they are called, were the earliest of the early wanderers, and have been from the earliest period, in the wide region extending from Mount Zamas to the Indian Ocean and Red Sea; and that this range separates them from the Sabaean Arabs (Forster, Geography of Arabia, 1, 96 sq.). Forster further conjectures that the name Zamas is radically identical with Masha, the syllables being inverted, as is very common in Arabic words—thus Masaen = Masha. The Zamas range is now called by the general name of the 'Nejd Mountains,' and the country extending thence to the Indian Ocean on the east, and the Red Sea on the south, embraces the most fertile part of Arabia—the classic Arabia Felix, now called Yemen (Ritter, Erdkunde, xii, 708 sq.). The mountains of Nejd are famous for their pastures and for their horses, which are considered the best in Arabia (Ritter, p. 918-1035; Fresnel, Lettres sur la Geog. de l'Aragie, in Journ. Asiat, vol. v., 2). The position of the early Joktanitic tribes, and the clear evidence of the names of the races that have left in the ethnology, language, and monuments of Southern Arabia; and, without putting too precise a limitation upon the possible situation of Masha and Sephar, we may suppose that these places must have fallen within the south-western quarter of the peninsula; including the modern Yemen on the west, and the districts of Oman, Mahbreb, Shih, etc., as far as

Hadramaut, on the east. These general boundaries are strengthened by the identification of Sephar with the port of Zafarî, or Dhafarî; though the site of Sephar may possibly be hereafter connected with the old Himyaritic metropolis in the Yemen, but this would not materially alter the question. In Sephar we believe we have the eastern limit of the early settlers, and the eastern limit of the time in which the correctness of this supposition appears from the Biblical record, in which the migration is apparently from west to east, from the probable course taken by the immigrants, and from the greater importance of the known western settlements of the Joktanides, or those of Yemen."

2. (Heb. Mesha', מְשַׁחְרָה, deliverance; Sept. Μαύρα, Vulg. Murâ.) The eldest son of Caleb or Caleb the Amorite (son of Jerahmeel and son of Hezron), and the father (founder) of Ziph, of the tribe of Judah (1 Chron. ili, 42). B.C. cir. 1618.

3. (Heb. Messa', מֶשֶׁה, retreat; Sept. Μωάθ, Vulg. Moab.) One of the sons of Shaharah of the tribe of Benjamin, by the latter of his two wives, Baara or Hodesh (1 Chron. viii, 9). B.C. cir. 1612. See Shaharah (v).

4. (Heb. Mesha, מְשַׁחְרָה, deliverance; Sept. Moa, מֹאָה, Vulg. Moab.) A king of Moab, who possessed an immense number of flocks and herds (2 Kings iii, 4). Probably the allegiance of Moab, with that of the tribes east of the Jordan, was transferred to the northern kingdom of Israel upon the division of the monarchy, for there is no account of any subjugation of the country subsequent to the war of extermination with which it was visited by David, when Benaiah displayed his prowess (2 Sam. xxii, 30), and "the Moabites became David's servants, bearers of gifts" (2 Sam. viii, 2). When Ahab had fallen in battle at Ramoth Gilead, Mesha seized the opportunity afforded by the absence of the king, and erected a glorious temple in the only temple of the Lord to be found in the Jordan valley, and with the aid of which it was visited by David, when Benaiah displayed his prowess (2 Sam. xxi, 30), and "the Moabites became David's servants, bearers of gifts" (2 Sam. viii, 2). It is probable, that the improvement of the name in a single letter, as was done in the case of Moab, may have been at least agreed to by the Moabites, and the king of this pastoral people was described as nokkid (נוקֶקֶד), a "sheep-master," or owner of herds. About the significance of this name nokid there is much doubt, but its origin is obscure. It occurs but once besides in Amos i, 1, where the prophet Amos is described as among the herdmens (נוקֶקֶד, nokedim) of Tenoah. On this Kimchi remarks that a herdman was called nokid, because most cattle have black or white spots (comp. גֶּפֶן, nokid, Gen. xxx, 22; A.V., "speckled"), or, as Buxtorf explains it, because sheep are generally marked with certain signs so as to be known. But it is highly improbable that any such etymology should be correct, and Furst's conjecture that it is derived from an obsolete root, signifying to feed or to eat, is more likely to be true (Concord. s. v.).

When, upon the death of Ahaziah, his brother Jehoram reigned, and as he had been taught by the events that occurred from his first act was to secure the assistance of Jehoshaphat, his father's ally, in reducing the Moabites to their former condition of tributaries. The united armies of the two kings marched by a circuitous route round the Dead Sea, and were joined by the forces of the king of Edom, See JEHORAM. The defeated soldiers of Moab, eager only for spoil, were surprised by the warriors of Israel.
and their allies, and became an easy prey. In the panic which ensued they were slaughtered without mercy; their country was made a desert, and the king took refuge in his last stronghold and defended himself with the energy of despair. With 700 fighting men he made a vigorous attempt to cut his way through the beleaguering army, and, when beaten back, he withdrew to the wall of his city, and there, in sight of the allied host, offered his first-born son, his successor in the kingdom, as a burnt-offering to Chemosh, the ruthless fire-god of Moab. There appears to be no reason for supposing that the son of the king of Edom was the victim on this occasion, whether, as R. Joseph Kimchi supposed, he was already in the power of the king of

The Moabitic Stone.

(The numbers in the margin designate the lines corresponding to the verses below. The dots over some of the characters show that the decipherment is doubtful. The small letters, a, b, c, indicate the two large fragments recorded from the Arabs, who had broken the stone after impressions had been taken from it by the discoverer. The whole stone was about three feet seven inches long, by one foot eleven inches wide.)
Moab, and was the cause of the Edomites joining the armies of Israel and Judah; or whether, as R. Moses Kimchi suggested, he was taken prisoner in the battle of the Moabites, and sacrificed out of revenge for his failure. These conjectures appear to have arisen from an attempt to find in this incident the event to which allusion is made in Amos ii, 1, where the Moabites are charged with burning the house of the king of Edom into lime. It is more natural, and renders the narrative more vivid and consistent, to suppose that the king of Moab, finding his last resource fail him, endeavored to avert the wrath and gain the aid of his god by the most costly sacrifice in his power. On beholding thisfeat, the Moabites and their beseechers withdrew in horror, lest some portion of the monstrous crime might attach to their own souls (comp. Josephus, Ant. ix, 3, 2; Ewald, Jer. Gesch. iii, 226 sq.).

By this withdrawal they, however, afforded the king the relief he desired, and this was, no doubt, attributed by him to the efficacy of his offering, and to the satisfaction of his god therewith. The invaders, however, ravaged the country as they withdrew, and returned with much spoil to their own land (2 Kings iii, 25-27). B.C. cir. 891. See Moabite.

The exploits of "Mesa, son [i.e. vortary] of Chemosh, king of Moab," are recorded in the Phoenician inscription lately discovered by M. Ganneau on a block of black basalt at Dibon in Moab (see Quarterly Statement, No. 5, of "The Palestine Exploration Fund," Lond. 1870); which, according to the decipherment given by him in the Revue Archéologique (Jan. and June, 1870), is (see the Supplement, May 24th, 1870), by Prof. Neubauer has published the text in modern Hebrew characters in Grütz's Monatschrift, and Prof. J. Derenburg a translation in the Revue d'Israélite (April 8, 1870), substantially as below. See also the Church Gazette, N. Y. 1871, No. 6. Several other commentaries have been published upon it, especially by Dr. Deutsch of the Berlin Museum. See also Nöldeke, Geschichte des Mesa (Kiel, 1870); Schottmann, Siegesfälle Mosis's (Halle, 1870); DeCosta, The Moabite Stone (N. Y. 1871). The fullest exhibit, together with the literature of the subject, is that of Dr. Ginsburg (2d ed. Lond. 1871).

1. I, Mesa, son of Chemosh, ... King of Moab, [son] of Yahbal ... My father reigned over Moab (thirty years), and I reigned.

2. after him; I made this altar for Chemosh at Karah on account

3. for the sake of the name which I gave him in all battles, and because he made me successful against my enemies the men

4. of the king of Israel, who oppressed Moab a long time, and his land.

5. His son succeeded him, and he also said, I will oppress Moab. In my days he (Chemesh) said, I will... and dwell

6. Chemosh there in my days. I built Baal-Meon and made sacrifices there... and I [built]

7. Kiriathaim. The men of Gad [dwelt] (in this) land from early times, and there built the king of Israel [that I might]

8. the Israelites by chance. Muri took the place of S. Mahdeba and dwelt in it ... built forty ... [and dwell]

9. Chemosh there in my days. I built Baal-Meon and made (sacrifices) there ... and I [built]

10. Kiriathaim. The men of Gad [dwelt] (in this) land from early times, and there built the king of Israel [that I might]

11. of Israel (Yazzer); I besieged the city, took it, and killed all (who dwelt)

12. in the city, to the gratification of Chemosh and Moab; I made captive there...

13. (and brought) Chemosh to Keriyoth. I remained here with the chiefs (and the soldiers until)

14. the next day. Then Chemosh made me go and take Nebi from them (I eisay)

15. went in the night and fought against it from the break of day till noon; I

16. it, killed all, seven thousand ... [to please Astor].

17. ... for Chemosh devoted to Astor. I took from them...

18. the vessels of Jehovah, and [offered] them to Chemosh. And the King of Israel built

19. Chemosh and dwelt there, when I made war upon him. Chemosh drove him out from thence; I

20. took from Moab two hundred men, all chiefs, transferred

21. to make war against Dibon. I built Kirhah, Ham-

22. Here I constructed their gates and their towers; I

23. built the palace, and I made aqueducts (?) in the interior

24. of the town. There were no claterus in the interior of the land of Kirhah, and I said to all the people

25. every one a claterus in his house. And I made a ditch round Kirhah with (the men)

26. built a fortifier, and I made the passage over the Arnon.

27. I fortified Dibon to hold it in subjection, and I con-

28.fortresses in the towns which I added to [my] land. I built

29. ... Beth-Diblaithan, Beth-Baal-Meon, and trans-

30. (in order to take possession of) the land. At Horo-

31. the king of Israel, Chemosh told me, Go, fight against Horonan (I fought against it and took it).

32. I went there dwelt] Chemosh in my days...

33. (Heb. or Chald. Meyshakeh, מְשַׁאֵךְ, of foreign etymology; Sept., Meuxas v. r. Morox, Vulg. Mis-

34. the title given by the Babylonian court to Mi-

35. (q. v.), one of the Hebrew youths in training for the rank of maga or vizier. In Isa. vii, 7; 49; 51, 23, Chem-

36. senius resolves the name into the Persian misha, the 'guest of the shah' (Thesaur. s. v.); Hitizig (Exeg. Hebr. ad loc.) and Fürst (Hebr.-Lex. s. v.) refer it to the San-

37. Mešachat, 'a ram,' and regard it as a name of the sun-god. The changing of the names of persons taken among the Babylonians is so common in ancient times among both the Orientals and the Greeks (Jahn, Archäol. pt. 1, vol. ii, p. 289; Theodoret on Dan. i, 7; Chrysostom, Opp. v, 286; Hävernäck, Comm. ub. Dan. p. 30) (Kitto). "That Mešachat was the name of some god of the Chaldeans is extremely probable, the name of the god that stood near Belte-

38. shazzar, was so called after the god of Nebuchadnezzar (Dan. iv, 8), and that Abednego was named after Nego,

39. Nebu, or Nebus, the Chaldæan name for the planet Mercury. See Daniel.

40. Mešach (Heb. Mešēk, מְשֵׁךְ, a drawing out, as in Psa. cxxvi, 6; or possession, as in Job xxxviii, 18; Sept. Moraχ, Vulg. Mosoch; a pronunciation which the Samaritan codex also exhibits, מְשָׁךְ; but in Ezek. xxxviii, 2, 9; xxxix, 13, r. Morokkiwra; in Ezra, king cxxxv, 5, r. Impaqvvi, Vulg. prolongatus est, Auth. Vers. "Mosch," the sixth son of Japheth, B.C. cir. 2500 (Gen. x, 2), and founder of a tribe mentioned among his descend-

41. (1 Chron. i, 5), and later (Ezek. xxxviii, 15) as engaged in war with Tyre, in connection with Gog (Ezek. xxxix, 1, 2, 8; 17). In nearly every instance they are coupled with Tubal or the Tibrani as neighbors (Gen. x, 2; Ezek. xxxv, 13; xxxii, 26; xxxix, 2, 3; xxxix, 1; so also Herodotus, iii, 94; vii, 78; comp. Hengstenberg, Moses, p. 206; Wilkinson, i, 378 sq.); and from one passage at least (Ezek. xxxvi, 29) they appear to have lived near Assyria and Elam. They are without doubt the same with the Mosch (Bochart, Phalaic, id. 12), a barbarous people of Asia, inhabiting what were known as the Moschian Mountains (Ptol. v, 6, 1: 13, 5), between the Black and Caspian seas (Strabo, xi, 94, 378, 489 sq.; Pliny, vi, 11), in the later Iberia (comp. Josephus, Ant. i, 6, i), who are named by ancient authors as forming a single department of the Persian empire under a separate jurisdiction with the Tibrane-

42. (Herod. iii, 94; vii, 78). In confirmation of the trade alluded to in Ezek. xxxvii, 18, Reinegev remarks (Beschreibung der Conzem, i, 6, ii, 61) that the Moschian Mountains contain rich copper-mines, and this region has always been noted for the export of slaves, especially females, whose beauty usually commands a ready market for the Turkish harems (see Rosenmüller, All.

43. See Daniel.
Meshe's'abéel (Heb. Meshešyabéel, מֵשֶׁשְּאֵבֶל), his deliverer is God; Sept. Μασάβαλα, Μασάβαλας, and Басавись v. r. Маса́вилам; Vulg. Meesebel and Me- 
sizebel), one of the chief Israelites that subscribed the sacred covenant after the captivity, B.C. cir. 410 (Neh. x. 21); apparently the same with the father of Dasi- 
shiah the Zerahite of Judah, which latter had previously (B.C. cir. 440) assisted in the administration of civil affairs (Neh. xi. 24); and perhaps the same with the father of Berechiah and grandfather of Messehum, which last had (B.C. 440) assisted in repairing the walls of Jerusalem (Neh. iii. 2).

Mesbi. See Silk.

Mesbil'lemuth (1 Chron. ix. 12). See Mesbil-
lemoth.

Mesbil'lemoth (Heb. Meshillemoth, מֶשְׁכִּילֶםוֹת, requisits; Vulg. Mosillemoth), the name of two men.
1. (Sept. Μοσσαλαμάς v. r. Μοσσαλαμάς.) The father 
of the chief Ephraimites Berechiah, which latter 
was one of those who opposed the reduction of their 
captive brethren of Judah to slavery (2 Chron. xxviii. 
2. (Sept. Mesar umpis.) A priest, son of Immer and 
father of Ahasai (Neh. xi. 13); doubtless the same 
with the priest Meshibilemuth (Heb. Meshillemith', מֶשְׁכִּילֶמְיָה, retribution; Sept. Μοσσαλαμα̇ς v. r. Μοσסa-
laμ, Vulg. Mosaillemuth), the son of Immer and father of Messehum (1 Chron. xix. 12). B.C. long ante 440.

Mesho'bab (Heb. Meshehabb, מֶשְׁהַבָב, returned; Sept. Μουσαλαμιδ, one of the chief Simeonites, whose en-
larged family induced him to migrate to Gedor in the time of Hezekiah (1 Chron. iv. 84). B.C. cir. 711.

Meshul'lam (Heb. Meshullam, מֶשְׁעֶלָם, befriended; Sept. usually Mosaillama), the name of several 
persons in the later periods of Jewish history.
1. Of the chief Gadites resident in Bashan in the 
time of Joatham's viceroyship (1 Chron. v. 18). B.C. 781.
2. The father of Azalsh and grandfather of Shap-
ham, which last was then sent by Josiah to di-
rect the contributions for repairing the Temple (2 Kings 
xxii. 8). B.C. considerably ante 623.
3. A priest, son of Zadok and father of Hilkiah (1 
Chron. ix. 11; Neh. xi. 11). Probably the same as 
Shamm (q.v.), the high-priest (1 Chron. vi. 18; Ezra 
vii. 1). B.C. ante 569.
4. A Levite of the family of Kohath, one of the 
overseers of the Temple repairs undertaken by Josiah 
5. One of the chief Benjamites of the family of El-
paal resident at Jerusalem (1 Chron. viii. 17). B.C. ante 569. He is perhaps the Benjamite (son of Hadorah, and grandson of Hashenah) whose son (or descendant) Salhu resided at Jerusalem after the captivity (1 Chron. ix. 7); but this person seems elsewhere to be called the 
son of Zed (Neh. xii. 7).
6. The eldest of the children of Zerubbabel (1 
7. A chief priest, son of Ezra, contemporary with 
Joakim (Neh. xii. 13). B.C. post 536.
8. A chief priest, son of Gimmethon, contemporary 
with Joakim (Neh. xii. 16). B.C. post 536.
9. One of the leading Israelites sent for by Ezra to 
accompany his party to Jerusalem (Ezra viii. 16). B.C. 459. He appears to be the same with one of those who 
assisted in the investigation concerning the foreign 
marriages of those who had returned (Ezra x. 15). He 
was perhaps the same with one of the Temple warden 
rooms, as afterwards arranged (Neh. xii. 25). B.C. cir. 440.
10. This last is also called Meshelemith (1 Chron. 
xxvi. 17), Shelemish (1 Chron. xxvi. 14), and Shamm (Neh. 
vi. 45).
MESHELLEM

10. An Israelite, of the "sons" (or residents) of Bani, who divorced his Gentle wife after the exile (Ezra x, 29). B.C. 459.

12. The son of Berechiah and grandson of Meshchez- bab, he repaired two portions of the walls of Jerusalem after the captivity (Neh. iii, 4, 30). B.C. 446. It was his daughter that Tobiah's son Johanan married (Neh. vi, 18).

13. The son of Beoadiah, who, in connection with Jehoiada, repaired the "top gate" of Jerusalem after the exile (Neh. iii, 30). B.C. 440.

14. One of the Jewish leaders who made the tour of the walls of Jerusalem on their completion after the captivity (Neh. xii, 38). B.C. 446.

15. A chief Benjaminite (son of Shephathiah), who dwelt at Jerusalem after the captivity (1 Chron. ix, 6). B.C. c. 520.

16. One of the principal Israelites who supported Ezra on the left while expounding the law to the people (Neh. viii, 4). B.C. cir. 410. He may have been identical with No. 9, 12, 13, 14, or 15. He is probably the same with one of those who subscribed the sacred conv- entment in Nehemiah (Neh. x, 39). B.C. cir. 400.

17. One of the priests who joined in Nehemiah's solemn bond of allegiance to Jehovah (Neh. x, 7). B.C. cir. 410. He is perhaps the same with either No. 6 or No. 7.

Meshe1lemeth (Heb. Meshe1le'meth, מֶשֶׁלֶם, friend; Sept. Mesale'khou, Vulg. Messalemeth), the daughter of Haruz of Jashub; she was the mother of king Abner, and consequently the wife of Manasseh, whom she appears to have survived (2 Kings xxii, 19). Her character may be inferred from the idolatry of her son as well as of her husband. B.C. 664-642.

Meat1s (μειώσε, i.e. mediator) was the name given to a presbyter while engaged in discharging the functions of the Eparchist. This was considered by the ancient Church as the highest point of a presbyter's dignity and office. The appellation was very properly censured by Augustine as derogating from the dignity and office of the true and only Mediator of the Christian covenant (Contr. Parmen. lib. ii, c. 8; comp. De Civ. Dei, lib. ix, c. 15). This word also denoted the middle rank occupied by the presbyter between the bishop and deacon. (See also Medull1oous, Antiqu. Eccl. Index.)

Mesmer, Franz (according to others, FRIEDRICH ANTON), the founder of the doctrine of animal magnetism, or, as it is more generally termed, mesmerism, was born at a village near the Bodensee May 23, 1733. He studied mathematics and natural science at the Jesuit school in Dillingen, and, later, medicine at the University of Vienna, and there took the degree of doctor of medi- cine in 1766. About 1772 he commenced, assisted by father Hell, to investigate the curative powers of the magnet, and was led to adopt the opinion that there exists a power similar to magnetism, which exercises an extraordinary influence on the human body. This he called animal magnetism, and published an account of his discovery, and of its medicinal value, in 1773: Précis historique et facts relatifs au magnétisme ani- mal; and in 1776, in his thesis, On the Influence of the Planets on the Human Body. Honors were conferred upon him in Germany. In 1778 he went to Paris, where he attracted much attention. His system ob- tained the support of members of the medical profes- sion, as well as of others; but he refused two offers, one of 30,000 livres, and the other of 340,000 livres, to re- veal his secret; and this, combined with other circum- stances, gave rise to suspicion, and induced the French government to appoint a commission, composed of physi- cians and naturalists, among them Baily, our own Franklin, and Lavoisier, whose report was unfavorable to him. He now fell into disrepute, and after a visit to

England, retired to Meersburg, near his native place, where he spent the rest of his life in complete obscuri- ty. He died March 5, 1815. See MESMERISM.

Mesmerism. Under this heading we propose to consider the various phenomena which have at different times been presented for public consideration under the name of Animal Magnetism, Magnetic Man, Magnetic Somnambulism, Clairvoyance, etc., etc. The nature of this Encyclopedia of course limits us in the consideration of this subject from a theological stand-point.

Animal magnetism is a supposed influence or emanation by means of which one person can act upon anoth- er, producing wonderful effects upon his body, and con- troling his volitions, and even making him answer to have some analogy to the magnetism of the lodestone, and hence its name. The term has been used to group together a multitude of manifestations deemed to be of a wonderful kind, which have given rise to an amount of delusion and credulity hastily exemplified on any other subject. Electro-biology, oculism, table-turn- ing, spirit-rapping, table-talking, spiritism, have been classed as only modifications of the same phenomena. For the sake of securing a thorough review of the vari- ous phenomena which mesmerism, so called, or better, animal magnetism, has been conceived to produce in those who have been brought under its influence, we shall subdivide the subject into two classes: cases which are effected while the person operated upon remains awake, and those which take place while the patient is in a state of sleep, or in a state resembling it. These two classes of phenomena, moreover, belong to different periods of the procedure of mesmerism. To those of the first class chiefly the early practitioners of this mysterious art con- fined their pretensions, and it was only at a later period that the magnetizers laid claim to the power of pro- ducing those wonderful manifestations included under the second class.

Mesmer's Proper.—Anthony Mesmer, whose per- sonal history we have detailed above, is supposed to be the first in modern times who claimed to have dis- covered the process of healing physical derangements by the application of animal magnetism, as already defined. Many were the cures pretended to be wrought by Mesmer and his disciples, until he was suddenly checked in his suspicious career by the unfavorable re- port of the committee which the French government appointed in 1785. "This pretended agent," said they, "is not magnetism; for on examining the grand reservoir of the fluid by a needle and electrometer, neither magnetism nor electricity could be detected in it; and we will not rely upon it ourselves and others without effect. On blind- folding those who professed great susceptibility of its influence, all its ordinary effects were produced when nothing was done, but they imagined they were mag- netized; while none of its effects were produced when they were really magnetized, but imagined nothing was done. So also when brought under a magnetized tree, nothing happened if they thought they were at a dis- tance from it, while they immediately went into violent convulsions when they thought they were near the tree, though really not so. The effects, therefore," say the commissioners, "are purely imaginary; and although they have wrought some cures, they are not with- out evil results, for the convulsions sometimes spread among the feeble of mind and body, and especially among women. And, finally, there are parts of the oper- ations which may readily be turned to vicious purposes, and in fact immoral practices have already actually grown out of them."
MESMERISM.

Mesmer's pupils, the marquis de Puysegur. In the hands of Mesmer animal magnetism was simply a curative agent; in the hands of Puysegur, however, we find it not only to be a curative means, but to confer the power of detecting the morbid condition of parts, both in health and disease, and of influencing and removing the morbid conditions. His own senses of touch, taste, and smell appear to be dormant, but he perceives all the impressions produced on those senses in the magnetizer's frame. The fifth stage is that of clairvoyance. This is a heightened condition of the fourth stage. The patient has means of perception unknown to man, the very means which the magnetizer is unable to use. The sixth stage is that of telepathy, so singular that the assertion of their possession, measured by the general experience of the race, appears to be an impudent falsehood or imposture. The somnambulist can see with his eyes closed and bandaged; he can then even see what waking men in his place can not see with their eyes open. He can read the contents of letters unopened; he can see through clothing, wood and metal boxes, and walls of brick or stone; he can tell what is going on in the room above him or in the room below. Sometimes the sense of sight, or a faculty capable of perceiving things which the normal man perceives only by means of the organs of vision, seems to reside in the forehead, in the back and top of the head, or in the knuckles of the hand. Thus the clairvoyant will sometimes move about holding his fist in front of him for the purpose of seeing where he is going. How this means of perception can exist apart from the organs of vision, why it exists in one part of the body more than in another, and why it should occur in the forehead, another in the forehead, and a third in the back-head, are questions very proper to be asked, but to which there is no satisfactory answer. The clairvoyant not only sees things outside of his body, but even in it. His whole physical frame is transparent to him; he looks through it and sees all the functions of his body, though they were going on in a glass case. He can see through the bodies of others placed in magnetic connection with him in the same way. Frequently he will describe, with the accuracy of high anatomical, physiological, and pathological knowledge, the operations of healthy and diseased organs; and will even prescribe remedies for disease. While in this state the functions of the body are liable to be much affected—the pulsations of the heart and the respirations are quickened or retarded, and the secretions altered, and that chiefly at the will of the operator. At his direction the limbs are made rigid, or become endowed with unyielding strength; one liquid tastes hot, the other cold, and the former bitter, as the subject is told; in short, every thought, sensation, and movement of the subject obeys the behest of the mesmerizer, if we may take the word of mesmerists for the subject's experience. The sixth and last stage, finally, the mesmerists claim to be that of "perfect clairvoyance," and a far more exalted position than the fifth. The "perfect clairvoyant," we are told, "sees what is going on at a distance of hundreds of miles, reads the thoughts of all persons about him, reads the past, and can truly foretell the future. His soul dwells in light and delight; he often regrets that he cannot live for ever. He can also foretell the necessity of being brought down into the dull, tiresome, base world of normal life." Between these different stages of the mesmeric condition, as here described, no precise line can be drawn. The transition from one stage to the other is gradual, and generally imperceptible at the time. Thus most of the characteristics of the clairvoyant stage belong also to the somnambulistic stage, in which they are, indeed, most frequently observed.

These are the phenomena alleged by mesmerists. To say that they are not true statements, or to decide which are true and which false, is one thing; to prove that they do or do not lie within our domain as encyclopedists, but it may be well enough to state here that physiologists, physicians, and savants are pretty well agreed that the notion of a force

VI.—5
of any kind whatever proceeding in such cases from a person, or from a magnetizing apparatus, is a delusion. The effects, whatever they are, must have their cause somewhere else. Where it is to be looked for was already indicated in the earliest days of mesmerism by the people of the primitive age, and by the court of the Republic, who closed their report by saying, "the effects actually produced were produced purely by the imagination."

This part of the science of human nature—the reflex action of the mental upon the physical—had not then, however, been sufficiently studied, and is not now widely enough known. The theory led by the conclusion reporters to a scientific theory of the phenomena; and the fallacies of mesmerism, though subjected to many similar exposures (Dr. Falkoner, of Bath, e.g., annihilated the patent metallic tractors of Perkin by making wooden ones exactly like them, which produced exactly the same effect), have constantly revived in some shape or other. One chief cause of the inveracity of the delusion is that the opponents of mesmerism do not distinguish between denying the theory of the mesmerists and the facts which that theory pretends to explain, and have been too ready to ascribe the whole to delusion and fraud. It thus happens that the most sceptical often become believers a posteriori, because they see the most marvellous things do actually happen which they cannot explain, and had been accustomed to denounce as impossibilities, they rush to the other extreme, and embrace not only the facts but the theory, and call this, too, believing the evidence of their senses. Now the reality of the phenomena is manifest enough to be shown by experiments in which the mesmerist must be admitted, though we deny his explanation of them; and even where their reality must be denied, it does not follow that the mesmerist is not sincere in believing them; there is only greater room than in any other case for suspecting that he has deceived himself.

The first to give a really scientific direction to the investigation of appearances of this class was Mr. Braid, a surgeon in Manchester, who detached them altogether from the semblance of power exerted by one individual over another, or by metallic disks or magnets, and traces the whole to the brain of the subject, acted on by suggestion, a principle long known to psychologists, though never yet made so prominent as it ought to be. The subject has been ably handled in a paper in the Quarterly Review for September, 1853 (said to be by Dr. Carpenter). The reviewer traces the operation of this principle through the most ordinary phenomena, which no one supposes to be the most miraculous of the so-called 'spiritual' manifestations. Ideas become associated in our minds by habit or otherwise, and one being awakened brings on another, thus forming a train of thought; this is 'internal' suggestion. But impressions from without originate and modify those trains, constituting 'external' suggestion. While awake and in a normal condition, the will interferes with and directs these trains of thought, selecting some ideas to be dwelt upon, and comparing them with others and with present impressions. A comparative inactivity of this selecting and comparing faculty, leaving the flow of ideas to its spontaneous activity, produces the reverie or abstraction. In dreaming and somnambulism, the will and judgment seem completely suspended; and under internal suggestions the mind becomes a mere automaton, while external suggestions, if they act at all, act as upon a machine. These are well-known facts of the human constitution, and independent of mesmerism, though their bearing upon it is obvious. Another fact of like bearing is the effect of concentrated attention on any object of thought in intensifying the impression received. This may proceed so far, in morbid states of the nervous system, that an idea or revived sensation assumes the vividness of a present impression, and overpowers the evidence of the senses. Ideas thus become dominant, overriding the impressions of the outer world, and carrying themselves out into action independently of the will, and even without the consciousness of the individual. These dominant ideas play a greater part in human actions and beliefs than most are aware of. "Expectant attention" acts powerfully on the bodily organs, and often makes the individual see and hear what he expects. For want of his consciousness, moves his muscles to bring it about. These, too, are recognised facts in the sciences of physiology and psychology. See Carpenter's Human Physiology and Dr. Holland's Chapters on Mental Physiology.

In the Illustrations of Modern Mesmerism, from Personal and Official Sources, by Dr. (the late Sir John) Forbes in 1845, we have an account of some of the most notorious exposures of the pretended clairvoyant powers of some of the most notorious persons of this class. In the preface he states that he only professes, by a simple narrative of facts, to illustrate the actual pretensions and performances of the mesmerists of the present day, and to show on what sand foundations the popular belief in their marvellous rests. He expresses the modest hope that what is contained in this little book may teach a useful lesson to those numerous unscientific persons who are accustomed to attend mesmeric exhibitions, public or private, from motives of rational curiosity, or with the common prejudice of having heard mention of such phenomena as having what seem to be important truths. He believes that such persons must now feel convinced that no reliance whatever is to be placed on the results presented at such exhibitions as evincing the truth and powers of mesmerism. He found that it was impossible for the ordinary visitor at these exhibitions to form any judgment at all from the facts expounded by the mesmerist, and that the coarsest juggling might pass with the trusting spectator, seated at a distance from the scene of action, for mysterious and awful truths. Mesmerism or clairvoyance may be true or false, and he professes to be ready to believe them on obtaining sufficient proof of their reality. If for the moment, we find the mesmerist, and apparently the most trustworthy of the clairvoyants, not only uniformly unsuccessful when the necessary precautions are taken to test their powers, but actually detected, and confessing with shame that they have been guilty of the grossest imposition and deceit—where are we to look for the means of establishing the truths of this mysterious science? If we were to believe a fifth part of the pretensions put forth in the works and lectures of professional mesmerists, it would be the easiest matter in the world to carry off the prizes offered to any one who could read writing contained in any metal or glass plate that could not be read in the ordinary way. If it is an easy matter for a man who is going on in the arctic regions, it cannot surely be difficult to see what is contained in a deal-box. In July, 1839, M. Bourdin, a member of the French academy of science and medicine, as one of a commission of that celebrated body, appointed to inquire into the merits of clairvoyance, made the following offer to the mesmerists: 'Bring us a person magnetized or not magnetized, asleep or awake; let that person read with the eyes open, through an opaque substance, such as tissue of cotton, linen, or silk, placed at six inches from the face, or read even through a simple sheet of paper, and that paper shall have eleven lines of printed script written in l'italienne.' (Bull. de l'Acad. iii, 1128.) If such a power as seeing in any other way than by the organ of vision really existed, as was vaunted to be possessed by so many persons both before the prize was offered and since, surely some one of the clairvoyants would have come forward and established a just claim to the prize, but, as not appeared, we may conclude with safety that both then and now no such marvellous power exists or is developed in the human constitution.

So signal and repeated were the failures of the magnetists to establish the truth of their doctrines in France, that the congresses have been taken into merited contempt and oblivion. In more recent times the exciting phenomena of spirit-rapping have superseded those of somnambulism, and spiritual media...
have of late too much occupied the public attention to leave any room for those who can boast no higher powers than those of which magneticclairvoyants claim the possession.

Our limits do not permit us to pursue the subject at greater length. See SPIRITISM. We must content ourselves with stating briefly the following general conclusions advanced by the Encyclopædia Britannica: 1. That it has not been proved that there is any magnetic influence, or nervous fluid, which passes from the operator to the person operated upon, and induces in him various phenomena of magnetic somnambulism. 2. That it has been proved that all the phenomena recorded, which have received sufficient scientific scrutiny to convince men of their truth and reality, can be accounted for on ordinary principles, without the aid of mesmerism. 3. That the lower phenomena—such as sleep, diminished or exalted sensibility, loss of voluntary motion, muscular rigidity, and the like, can be produced by persons acting on themselves by means of fixed staring at objects, which are incapable of giving out any nervous or magnetic influence. 4. That the evidence which can be obtained of the reality of the existence of magnetic somnambulism, in any case, is inconclusive; that it is possible that the person supposed to be in such a state may really be awake, and simply feigning sleep; and that in many cases there is the most conclusive evidence that the persons pretending to be so affected are simply pretending. 5. To the test, have been submitted, and by the deceiver may have existed, the patients have acted under a peculiar state of mind, to which only the weak and nervous are liable. 5. That though numerous cases of surgical operations are recorded in which the patients are reported not to have felt pain, it is probable that some at least may have really experienced painful sensations without giving any outward expression of their sensations; that we have no evidence or means of knowing, except from their own testimony, that they did not really feel pain, but that it is very probable that in some cases, from a peculiar state of the mind acting upon the nervous system, the patients were really rendered unconscious of pain. 6. That it does not appear from experiment that immunity from pain in operations can be induced, in any but exceptional cases, in Europeans; though it appears, from the experience of Dr. Eales, that it can be produced with comparative facility in the natives of India. 7. That the higher phenomena of clairvoyance, clairaudience, teleportation, mental interaction, do not rest on adequate and satisfactory evidence. That it has never been proved in a single instance, when the necessary precautions have been taken, that a person could read or see objects through opaque substances; and that the alleged instances of the possession of such a power are more proper to the test, have been submitted, and by the deceiver may have existed, the patients have acted under a peculiar state of mind, to which only the weak and nervous are liable. That it has been proved in some cases that the persons pretending to know events which happened at a distance were fully acquainted with the events through ordinary channels of information. 8. That the phenomena pretended to have been discovered by means of clairvoyance has not in evidence the truth, unless it has been possible for the patient to employ the usual means of discovering them; and that in most instances there are observed the most manifest attempts, on the part of their friends, to assist clairvoyants by suggesting leading questions. That the attempt to describe what is going on in the interior of their own bodies, to diagnose diseases in themselves or others, to prescribe remedies for the cure of the diseases which they pretend to discover, have been complete failures, and mere repetitions of such notions of anatomy, of disease, and of treatment, as they may have acquired by casual reading, or by observation, or more careful study. 9. That there is no recorded instance, worthy of credit, of transference of the senses—that is, of persons being able to read, taste, smell, or hear, by the fingers, stomach, or any other part of the body, other than the organs by which these functions are naturally performed—and that pretended instances of the possession of such powers have been proved to be cases of the most obvious and wildest invention. That no-mesmerism does not prove the truth of phrenology, or throw any light upon the doctrine that the faculties of the mind have a local seat in special parts of the brain, which can be tied up and let loose—mesmerized or de-mesmerized—at pleasure; and that the experiments designed to prove the excitement of the so-called phrenological organs by magnetic operations have all resulted in manifest failures or impositions when properly tested. 10. That the phenomena described by different authors, under the various designations of animal magnetism, magnetic somnambulism, hypnotism, odyle, and electro-biology, are identical in their nature, and can be explained, in so far as they possess any truth or scientific value, upon recognised physiological principles. That the whole subject has been systematically obscured by its cultivators with a cloud of mystery, which has given rise to difficulties, and placed impediments in the way of rational and scientific investigation. That the real phenomena which not uncommonly occur in the weak and nervous subjects of magnetic operations are in themselves very remarkable, but that they are not different from phenomena which occur spontaneously; and that they are to be explained by the reciprocal influence exerted by the mind and the nervous system upon each other and by the unnatural influence thus induced of the nervous system upon the musculature. See Thouret, Recherches et Doutes sur le Magnétisme animal (1784); Eschmeyer, Versuch über die scheinbare Magie des Magnetismus (Stuttg., and Tüb, 1816, 8vo); Théorie du Mécanisme (Paris, 1818, 8vo); Jozwik, Sur le Magnétisme animal (1822); Tomkowitch, Faccs in Mirerism (London, 1858); id., Mesmerism Proved True (London, 1857); Sandys, Mesmerism and its Opponents (Amer. Mesobaiah. See Mesobaithe.

Meso'baite (Heb. Meteboya'k, מְטְבַּעְיָה, garrisons of Jehovah, being apparently the name of the place itself, used for a gentile, the preceding noun being regarded as in the construct; Sept. Mesebo'ia v. r. Mesu'baia, Vulg. Masobo), a designation of Jasiel, the last named of David's body-guard (1 Chron. xi. 47), probably meaning of Mesobaia, as being his place of residence; but the name is given being created, or there is no room even to conjecture its position. Possibly it is rather the name of a person from whom he was descended; but the form and construction are equally difficult as a patronymic. Perhaps we should point prop. Meteboya'ah, and thus refer to ZEBAH as the place of his nationality. Kennicott's conclusion (Diœst. Phil., p. 232, 234) is that originally the word was the "Mesobaius" (Μεσοβαίος), and applied to the three names preceding it.

Meso'potamia (Μεσοποταμία, Acts ii. 9; vii. 2; so called by lying between the rivers; see Tab. Beil. Melo, iii. 335 sqq. 1; the Aram. דְּמָבָא, of the Hebrews, usually rendered "Ararm," or "Syria," in the Auth. Vers.), the Greek and Roman name for the entire region lying between the rivers Euphrates and Tigris, and bounded on the north by Mt. Taurus, and by Mt. Massius on the north-east (Pror. c. 18; Pliney, v. 13; vi. 9; Philos. Apol. i. 20). It is never formed a distinct state, and the so-called Greek name, which does not appear to have existed beyond the time of Alexander (comp. Arrian, Alex. vii. 7; Tacit. Annal. vi. 87), applies rather to its natural than political geography, but was generally employed by the Romans, who (under the emperors) joined it with
Syria (Mela, i, 11, 1; Pliny, vi, 13); and hence it appears in Acts ii, 9. In the Old-Test. geography it is designated as a part of Aramæa, under the names PADDAN-ARAM (מְדַדַּן אֲרָם; the plain of Aram, Gen. xxvi, 29; xxxi, 18; xxxii, 18; comp. the field of Aram, בֵּית אֲרָם), Hos. xii, 12; and so campi Mespotamiae, Curt. iii, 2, 4; iv, 9, 6) and ARAM-NAHARAIM (арам-נהרaim; this is Aram of the two rivers, Gen. xxvi, 19; Deut. xxxii, 5), for which the Sept. has Mespotamia, or Mespotamia of Syria; the Syriac renders house of the rivers (Peshito at Acts ii, 9; vii, 2; see Assemani, Biblioth. Orient. i, 462), and the Arabs call it the island (i.e. peninsula; see Abulafia, Tuh. Mespot. ed. Paulu, and Tuch, Abulfed, descriptiones Mespot. spec. [Hal. 1880]). In this early-inhabited land, the northern portion of which was an uncommonly fertile plateau, rich in fat cattle (Strabo, xvi, 747), and not destitute of forests (Oio Cass. lv, 26; lxxv, 9), dwelt the nomadic ancestors of the Hebrews (Gen. xi; comp. Acts vii, 2). From hence Isaac obtained his wife Rebecca (Gen. xxiv, 10, 19; xxv, 20); here Jacob served as a herdsman for Rachel (Gen. xxxviii sq.), and here most of his sons were born (Gen. xxxv, 26; xlii, 15). The principal cities, situated not only on the two main rivers, but also along their tributaries, the Chaboras (Habor) and Mydonius, were Nisibis, Edessa, Canne (Haran), and Circeium (Cardchemesh); in the interior were only villages (Philost. Apoll. i, 20). The inhabitants were of Syrian origin (Strabo, xvi, 737), and spoke a dialect of the Aramaean (Strabo, ii, 84; comp. Gen. xxxi, 47). Southern Mesopotamia, on the contrary, is a flat, uncultivated, and poorly-irrigated steppe, a resort of lions (Ammon, Marc. xviii, 7), ostriches, and (formerly) wild asses, and roamed over by predatory hordes of Arabs (see Strabo, xvi, 747, 748; comp. Xenoph. Anab. i, 6, 1). Only on the banks of the two principal rivers is it susceptible of much tillage. Yet through this barren tract from the earliest ages passed the great caravan route for commerce from the shore of the Euphrates to Seleucia and Babylon (Strabo, xvi, 748), as it still does to Bagdad. See generally Collar. Notit. ii, 602 sq.; Olivier, Voyages, iv, ch. xiv, p. 372 sq.; Ainsworth, Researches; Heeren, Ideen, i, i, 185 sq.; Ritter, Erdk. xi, pl. 36 [1844]; Forbiger, Handb. ii, 625 sq.; Southgate’s Tour; Buckingham’s Travels; Layard’s Nineveh and Bab. ch. xi–xv.

Of the history of this whole country we have but little information till the time of the Persian rule. “According to the Assyrian inscriptions, Mesopotamia was inhabited in the early times of the empire (B.C. 1200–1100) by a vast number of petty tribes, each under its own prince, and all quite independent of one another. The Assyrian monarchs contended with these chiefs at great advantage, and by the time of Jehu (B.C. 880) had fully established their dominion over them. The tribes were all called ‘tribes of the Na-sign, a term which some compare with the Nahbarin of the Jews, and translate ‘tribes of the stream-lands.’ But this identification is very uncertain. It appears, however, in close accordance with Scripture, first, that Mesopotamia was independent of Assyria till after the time of David; secondly, that the Mesopotamians were warlike, and used chariots in battle; and, thirdly, that not long after the time of David they lost their independence, their country being absorbed by Assyria, of which it was thenceforth commonly reckoned a part.” The Mesopotamian king Chushan-Rishathaim, who for eight years (B.C. 1575–1567) held the (trans-Jordanic) tribes of Israel in subjection (Judg. iii, 8, 10), was probably only the petty chiefman of one of the principalities nearest the Euphrates. In the time of David (B.C. 1040) the kings of Syria–Zoba appear to have had dominion over the Mesopotamian clans (2 Sam. x, 16). See ZOAN. In the beginning of the 8th century B.C., Shalmaneser of Assyria had brought the different states of Mesopotamia under his sway (2 Kings xix, 18); and in after-times the Mesopotamians shared the conquest of the other Asiatic nations under the successive empires of the Babylonians, Persians, and Macedonians. After Alexander’s death, this country fell under the Syrian rule of the Seleucids (comp. Josephus, Ant. xii, 3, 4); and after the fall of this dynasty it became the area for the Parthian, Armenian, and finally the Roman arms. In New–Test. times many Jews had settled in Mesopotamia (Josephus, Ant. xii, 3, 4; comp. Acts ii, 9). The Romans under Lucullus and Pompey began to disturb Mesopotamia; and, somewhat later, Crassus was there defeated and slain. Trajan wrested the whole province, with several adjacent territories, from the Parthians; and although Hadrian had to relinquish these conquests, Lucius Verus and Severus again subdued Mesopo-
MESORION

MES JOMHS

potamia, and it remained a Roman province until the end of the 4th century. On the death of Julian, Jovian found himself obliged to abandon the greater part of the country to the Persians and to stand alone against so much of Western Mesopotamia as was enclosed by the Chalorbas and Ephrates, and on the north by the Mono Maius (see Smith's Dict. of Class. Geog. s. v.). When the Sassanian dynasty in Persia was overthrown by the Arabs, towards the middle of the 7th century, Mesopo-
tamia came into the possession of the caliph. Since the year 1516 it has formed an integral part of the
Ottoman empire. See SYRIA.

Mesorion (μεσωρίων) is the technical term for an
intermediate office in the Greek Church after Proton, Trion, Ekton, Ennaton; but omitted after Lachniakon and Hesperian, Apeidosphon, Mesomukton (matins), and Orothon (lauds). See CANONICAL HOURS.

Mespelbrunn, Johann Echter von, an eminent
German theologian, of princely birth, was born at Mos-

pelbrunn, near Mayence, March 18, 1545. In 1555, when ten years old, he obtained a canonicate in
Wurzburg, and in 1559 one in Mayence. He studied at Mayence, Cologne, Louvain, Douay, Paris, and Pavia; became prebendary of Wurzburg in 1569, and soon after dean of the cathedral, and finally prince bishop of Wurz-
burg. Despite his absence from his diocese, his consideration, but aimed at the same time at the moral and religious improvement of his diocese. The emperor Rudolph II often employed him, particularly in 1578-79, to quell the disturbances in the Spanish Netherlands, and as envoy on affairs of state; in this capacity Echter was one of the prime movers of the Liga. Yet in a
difficulty he had with the abbot of Fulda concerning that abbey, both the pope and, in 1602, the emperor de-

cided against him. In order to check the progress of the evangelical doctrines of the Reformation in Wurz-
burg, he occupied himself zealously with the interior aff-
airs of his diocese, and endeavored to form its Church.
In 1576 he took a part in the Diet of Regensburg, and in 1582 in that of Augsburg. He improved the system of education, organized several public schools, and in 1582 founded the University of Wurzburg. The chairs of philosophy and theology he filled with Jesuits, and founded three colleges, which were afterwards united into one under the name of Seminary of St. Kilian. On the other hand he deposed and exiled all the evangelical ministers and preachers, and even the civil officers of his diocese who favored the principles of the Reformation, whenever an occasion presented. He sought to retain the people in their allegiance to the Roman Catholic Church by means of preaching and visiting tours, which he tried to reform the immorality of the clergy, and to restore them to a better standing. With this view he wrote his Constitutiones pro culto divino, statuta ruralia pro Clero (1584; in German, 1589); several Antiphonien, &c. (1602); and a Missal. He also founded the Fulda Hospital at Wurzburg. He died Sept. 13, 1587.

Mesplede, Louis, a French canonist, was born at

Caen about 1001. He became a Dominican monk, was made a prior, and then a provincial of Langueauc.; but in the latter capacity he had to contend with many
difficulties, and failed in his efforts to bring about a

Mesrop, also called Mushotz, the noted translator of the Armenian version of the Bible, was born in the lat-

ter half of the 4th century in a small village of the
province of Ararat. He was at first a Christian, then a
patriarch Nerses the Great, and afterwards became his minister of ecclesiastical affairs. After filling this pos-
ition seven years, he went into a convent, but, failing to
find any satisfaction there, he went into a desert, where he gathered about him a number of young men as

scholars. Under the government of the patriarch Issak (Sa'ak) the Great (A.D. 390-440) Mesrop was com-
mmissioned to preach as missionary, for which pos-
ition he was especially fitted by his thorough knowl-
edge of foreign languages. He now found need of an
Armenian version of the Scriptures, the version of the
clergy being in the Syriac, a language but little under-
stood by his countrymen. After having labored many
years in the arduous task, and that with but little show of
success, he resolved to throw himself upon the mercy of
his Lord and God, and seek at his hands the wisdom and knowledge required for the successful accomplishment of his undertaking. Nor did he wait long for
answer to his prayer. While sojourning at Samosata,
we are told, he was led to see the different types en-
graved in a rock, and that he could remember every
single letter so plainly that he was able to describe them
to the distinguished calligraph Rufanus, who finally
composed the desired alphabet. He immediately com-

menced the laborious work of translating the Bible
from the Greek into the Armenian, a version which was
introduced afterwards into that part of Armenia governed
by his king Vramshapuh. By request of other sov-

eigns, he made also translations for the Georgian and
Albanian countries. A change in the government obliged him to quit Armenia, and he sought a new home in Grecian Armenia, where he continued his activity under the special protection of the emperor
Theodosius of Constantinople and the patriarch Atticus.
In spite of the severe crusades against the 
members of the new religion, he continued to inspire his scholars and friends with confidence in their final success, and defeated several times the various attempts to introduce idolatry in the practices of a pure Catholic religion.

One of his later great works was the translation of the liturgical books of the Greeks into the modern Armenian language. After the death of his old companion Issak I, Mesrop was elected patriarch of Armenia, but he died the next year. A few months after Mesrop's translation of the Bible appeared in Venice in 1005, in four volumes. As an energetic and scientific man, Mesrop ranks among the most important combat-

ants of the Christian religion in the early centuries, when the communication of the new religion met especially with success in the use of written languages. Mesrop furthered life.ature among his countrymen not only by his own literary productions, but by founding " a whole school of remarkable thinkers
and writers, that created what is called "the golden pe-

riod for the enlightenment of ancient Armenia" (Malan).

the Illuminator, etc. (London, 1868, 8vo), p. 28 sq. See

ARMENIAN VERSION. (J. H.W.)

Messa (Mass, messet), a lifting up, as of the hands,
Ps. cxiii, 2; or of flame, Judg. xxi, 38; 40; so of a sign;
Jer. vi, 5; properly a burden, Lam. ii, 14, proper a gift ("oblation," "reward," etc. Esth. ii, 18; Jer. xi, 5; Amos v, 11); also tribute ("oblation," "collection," 2 Chron. xxiv, 6, 9; Ezek. xx, 40); specially a portion of food to a guest (Gen. xliii, 34; 2 Sam. xii, 8). See EATING.

Mess John, in the Church of England, is, accord-

Digitalized by Google
MESSAGE

ing to Broughton (Bibliotheca Hist. Sat. a. v.), a name given last century to a certain class of chapskins kept by the nobility and families of higher rank, who were generally expected to rise from table after the second course, and to eat better in the absence of the menials. In Scotland, Eadie (Eccl. Cyclop. a. v.) informs us, the name of Mass or Mass John was given to Presbyterian ministers, not from any connection with the mass, or because they succeeded mass-priests, but probably because they were called Mr. or Messer, the title "reverend" not being applied to them.

Message (prop. for ἐχόμενον, Hag. i, 18; ἀγγέλια, 1 John iii, 11; elsewhere ἠχόμενον, a word; ἐπάγγελλα, a promise; ἐπεβίβασιν, an embassy). See Messenger.

Messianics (from Chald. וּנְקָרָא, or Euchites from εὐχήνα, to pray) is the name borne by two heretical sects of Christian mendicants. (1.) An ancient sect, composed of roaming mendicant monks, flourished in Mesopotamia and Syria towards the end of the 4th century (dating from 360) as a distinct body, although their doctrine and discipline subsisted in Syria, Egypt, and other countries before the birth of Christ. They were a sort of mystics, who believed that two souls exist in man, the one good, the other evil. They were anxious to expel the evil soul, and hasten the return of the good in little more than 2 years, by contemplation and prayer, believing that only prayer could save them, and therefore taught the duty of every Christian to make life a period of unintermitted prayer. They despised all physical labor, moral law, and the sacraments, and embraced many opinions nearly resembling the Manichean doctrine, derived from Oriental philosophy. When their heretic principles became fully known towards the end of the 4th century, the persecution of both the ecclesiastical and civil authority fell upon them; yet they perpetuated themselves to the 7th century, and reappeared in the Bogomils and Messianics (2) of the Middle Ages.

(2.) Another sect of this name arose in the 12th century, in which there appears a revival or extension of the opinions held by those of the same name in the 4th century. They are charged with holding heterodox views respecting the Trinity. They rejected marriage, abstained from animal food, treated with contempt the sacred ordinances of the church, and the Lord's Supper, and the various ordinances of external worship, placing the essence of religion in prayer, and maintaining the efficacy of perpetual supplications to the Supreme Being for expelling the evil genius which dwells in the breast of every mortal. The term Euchites, or Messianics, became common as an appellation for persons of pietie in the Eastern churches, just as the terms Albigenians, Waldeuses, and Bogomiles were used subsequently to designate all enemies of the Roman pontiff. See Neander, Ch. Hist. ii, 589; Haweis, Ch. Hist. ii, 222; Mosheim, Ch. Hist. bk. iii, ch. xii; pt. ii, ch. v; Schaff, Ch. Hist. ii, 199 sq. (J. H. W.)

Messermakers, Engelbert (Latin, Cultrifex), a Belgian theologian, was born at Ninove about the opening of the 16th century. He joined the Dominican friars, became a doctor of theology, probably at Louvain, and in 1485 undertook to establish a convent in Zwolle, of which he was appointed the first prior. He died about 1492. Among other works, he wrote Epistola declaratoria privilegiorum F. F. Medicinantium contra curatos parochiak et Epistola de sinum viridum in receptione noviciorum (Ninove, 1497, 4to; Cologne, 1497, 8vo; Paris, 1507, 8vo; Delft, 1508, 16mo),:—Carmen de Paine:—Manuale Confessorum metricum (Cologne, 1497, 4to). See De Jonghe, Deodata Batavia Dominciana, p. 186-87; Hartzheim, Predromus Hist. univers. Colonenian., vol. ii.

Messenger (properly ἡραδίς, malak' [see MALACH], ἀγγέλος; both words often rendered angel [q. v.].

in a more general sense ἀστυνομος, Prov. xxv. 18; Isa. li, 9 [see APOSTLE]; in a special sense for forms of ἐπισκόπος, to convey good news [see GOSPEL]; also vaguely for τῷς, to tell; τῷς, to command). It is a practice in the East to employ messengers who run on foot to convey despatches (Job i, 14), and these men sometimes go a hundred and fifty miles in less than twenty-four hours. See Footman. Such messengers were sent by Joab to acquaint David with the fate of his son Absalom. Ahimaaz went with such speed that he outran Cush, and was the first to appear before the king, who sat at the gate of Mahanaim, anxiously awaiting tidings from the battle (2 Kings ix, 18). The common pace of travelling in the East is very slow. Camels go little more than two miles an hour; but dromedaries are often used for the purpose of conveyance: messuagia in haste, especially to a distance, as they are said to outrun the swiftest horses. To this practice Job alludes when he says, "My days are swifter than a post" (ix, 25). Instead of passing away with a slowness of motion like that of a caravan, my days of prosperity have disappeared with a swiftness like that of a messenger carrying despatches.

Messer, A.J. B.D., LL.D., a noted American educator and Baptist minister, was born in Methuen, Mass., in 1769. He studied at Brown University, where he graduated in 1790. The next year he became a tutor in that institution; a professor of languages in 1796. of mathematics and natural philosophy in 1799, and president in 1802, which latter position he held until 1810. Having been licensed in 1792, and ordained in 1801, he preached occasionally, both while professor and president, for congregations of different denominations. After retiring from the presidency, he was elected to several civil offices of trust by the citizens of Providence. He died Oct. 11, 1866. Dr. Messer published a number of sermons and orations. See Sprague, Annals of the Amer. Pilgr., vii, 326.

Messer, Leon, also called Mestre Leon, Leonx Henrico, was the eldest son of the famous statesman, philosopher, theologian, and commentator, Don Isaac b.-Jehudah Ababanel (q. v.), whose full name was Don Jehuda Leon b.-Isaac Abravanel. He is better known as Leo Hebreus. Leon Messer was born at Lisbon near the close of the 16th century. When the Jews of that city were expelled in 1492, he made his abode in Spain, where he was educated in the Hebrew tongue, having first learned the Latin language and Greek. He became known as a Neoplatonist, the symbols of mythology, the Hebrew Kabala, and the Arabian philosophy. It exists in French, Spanish, and Latin translations, all made in the 16th century. He also wrote some poems in honor of his father, an elegy on his death, and a poem of 150 stanzas descriptive of the vicissitudes of his life, and containing exhortations to his son. He was also a good mathematician, and an amateur in music. The date of his death is not known. Comp. Pritz, Biblioth. Jud. ii, 230 sq.; Londo, History of the Jews of Spain and Portugal, p. 268 sq.; Finn, Sephardim, p. 418; Etheridge, Introd. to Heb. Literature, p. 377; Usher, History of Philosophy (transl. by C. Morris, N.Y. 1872), p. 428; Munk, Enquise historique de la philosophy chez les Juifs (Germ. transl. by B. Beer, Leipzig, 1852), p. 57, 84 sq.; Zunz, Literaturgesch. d. Synagog. Jud. vol. vii.; but especially Delitzsch's lucid treatise in the L. B. d. Oriens, 1840, c. 81 sq., Leo der Hebräer: Charakteristik seines Zeitalters, seiner Rich- tung und seiner Werke. (B. F.)
MESSIAH

Messiah, the special title of the Saviour promised to the world through the Jewish race. We have space for the discussion of a few points only of this extensive theme, and we here treat especially those points not particularly discussed under other heads.

1. Official Import of the Name.—The Hebrew word מֶשֶׁאָה, Masch'ath, is in every instance of its use (thirty-nine times) rendered in the Sept. by the suitable term Χριστός, which becomes so illustrous in the N.T. as the official designation of the Holy Saviour. It is a verbal noun (see Simmona Arcaim Form. Heb. Ling. p. 91 sq.), derived from מָשָׁא, and has much the same meaning as the participle מְשָׂא (2 Sam. iii, 38, and occasionally in the Pentateuch), i.e. Anointed. The prefix and all but universal (Isa. xxii. 5 and Jer. xxi. 14 perhaps being the sole exceptions) sense of the root מָשָׂא points to the consecration of objects to sacred purposes by means of anointing-oil. Inanimate objects (such as the tabernacle, altar, laver, etc.) are included under the use of the verb; but the noun מָשָׂא is applied to animate objects. There is, however, some doubt as to 2 Sam. i, 21—נִשְׁאֲרוּ־אֶל לָעַבְרָא מָשָׂא לְスタッフ—where, according to some (Maurer, Gesenius, Fürst, see also Com. à Lapide, ad loc.), the phrase, "not anointed with oil," is applied to the shield (comp. Isa. xxvi, 5). The majority of commentators refer it to Saul, as if he had never been anointed with oil. So the A.V., which, governor of the Vulgate. This double sense (govern non esseet uctus oleo), is really as inexplicit as the original, admitting the application of "anointed" to either the king or his shield. This double sense is avoided by the Septuagint (ὢρισθεὶς δὲ καὶ ἑτοιμασθεὶς η αἰωνιῶν, which assigns the anointing, as an epithet, to the shield. The Targum of Jonathan refers the מָשָׂא to Saul, but drops the negative. To us the unvarying use of the word, as a human epithet, in all the other (thirty-eight) passages, two of them occurring in the very context of the disputed place (2 Sam. i, 14, 16), settles the point in favor of our A.V., as if the king had fallen on the fatal field of Gilboa like one of the common soldiers, "not as one who had been anointed with oil." See ANOINTING.

The official personal ("the Christ of the O.T."") Person—Jesus, Hebrew Shehim, of O. and N. T. who were consecrated with oil were priests (Exod. xxviii, 41; Levit. iv, 3, 5, 16; Numb. xxvii, 36, 35), kings (1 Sam. i, 16; xvi; 8; 2 Sam. xii, 7; 1 Kings i, 34), and prophets (1 Kings xix, 16). The great Antitype, the Christ of the N.T., embraced and exhausted in himself these several offices, which in the O.T. were but types of one great shadow of his eternal person, the sons of Aaron as the Priest, King, and Priest of his people. It is the pre-emminence which this combination of anointed offices gave him that seems to be pointed at in Psa. xlv, 6, where the great Messiah is anointed "above his fellows;" above the Christ of old, whether of only one function, as the priest Aaron, or the prophet Elisha, or the king Saul; or of two functions, as Melchizedek the priest and king, or Moses the priest and prophet, or David the king and prophet. In our Saviour Christ is uniquely found the triple comprehension, the recapitulation in himself of the three offices (see Esenius, Hist. Ecles. i, 5, vol. i, p. 24, by Buxtorf, [Exon. 1490]). But not only were the ancient offices typical, the material of consecration had also its antitype in the Holy Ghost (Cyril of Jerusalem, Catech. Illun. x, 99; Catech. Nef. p. 202, 203; Basil, contra Eunom. v; Chrysostom on Psa. xlv; Theodoret, Epit. divin. Decret. xi, p. 279; Theophylact on Mat. i; [Ecumenius on Rom. i, etc.]. The prophecy of Isa. lx, 1 ("Simeon of the Lord Jehovah is upon me, because Jehovah hath anointed me") was expressly claimed by Jesus for fulfilment in the synagogue at Nazareth (Luke iv, 16-21) on his return to Galilee "in the power of the Spirit" (ver. 14), which he had plenarily received at his recent baptism (ver. 1), and by which he was subsequently led into the wilderness (ver. 1). This anointing of our Lord to his Messianic functions is referred to in a general sense in several passages as Isa. xi, 2 and Acts x, 38. But from the more specific statement of Peter (Acts ii, 38), it would appear that it was not before his resurrection and consequent ascension that Christ was fully induced into his Messianic dignities. "He was anointed to his prophetic office at his baptism; but that throne which was intended to be, than actually made Christ and Lord. Unto these two offices of everlasting Priest and everlasting King he was not actually anointed, or fully consecrated, until his resurrection from the dead" (Dean Jackson, Works, vi, 368). As often as the evangelists style him Christ but not Messiah, the conjunction "but" thereby indicates that he was only "to be, than actually made Christ and Lord. Unto these two offices of everlasting Priest and everlasting King he was not actually anointed, or fully consecrated, until his resurrection from the dead" (Dean Jackson, Works, vi, 368). As often as the evangelists style him Christ but not Messiah, the conjunction "but" thereby indicates that he was only "to become more of a proper name. In the epistles of Paul and Peter, however, the word has the article when a governing noun precedes (for extremely elaborate tables, containing every combination of the sacred names of Christ in the N.T., the reader is referred to the last edition of Benson's Dictionary of the Greek and Latin Dialect, by H. J. Rose, B.D., App. ii, p. 486-496). Twice only in the N.T. does the Hebrew form of it (Messias) occur, in John i, 41 and iv, 25; and twice only in the O.T. have our translators retained the same form (Messiah), in Dan. ix, 25 and 26. In these passages, both in the Greek of the evangelist [Μαριαμ] or, as Griesbach preferred to read [Μεσσια], more closely like the original] and in the Hebrew of the prophet [נֶשֶׁא], there is an absence of the article—the word having, in fact, grown out of its appellative state, which so often occurs in the earlier books, into a proper name; thus resembling the course of the Χριστός of the Christian Scriptures. See CHRIST.

II. The Gradual Growth of the Messianic Revelation.—1. First or Pentecostal Period.—(1.) In the Messianic promise (Gen. iii, 15) lies the germ of a universal blessing. The tempted came to the woman in the guise of a serpent, and the curse thus pronounced has a reference both to the serpent which was the instrument; to the tempter that employed it; to the natural error and eminence of the seed against the serpent, and the enmity between man and redeemed by Christ its Head, and Satan that deceived mankind. Many interpreters would understand by the seed of the woman the Messiah only; but it is easier to think with Calvin that mankind, after they are gathered into one army by Jesus the Christ, the Head of the Church, are to achieve a victory over evil. The Messianic character of this prophecy has been much questioned by those who see in the history of the fall nothing but a fable: to those who accept it as true, this passage is the primitive germ of the Gospel. "The seed of the woman," the vengeance and obliquity of which phrase was so suited to the period of the protovangelium, is cleared in the light of the N.T. (see Gal. iv, 4, where the γυναῖκας is γυναῖκας explains the original מֶשֶׁאָה). The deliverance intimated was no doubt understood by our first parents to be universal, like the injury sustained, and it is no absurdity to suppose that the promise was cherished afterwards by thoughtful Gentiles as well as believing Jews; but to the latter it was subsequently shaped into increasing precision by supplementary revelations, until at last it was embraced in the full form and obscurity. The O.T. gives us occasional gleams of the glorious primal light as it struggled with the gross traditions of the heathen. The nearer to Israel the clearer the light; as in the cases of the Abimelech (Gen. xx, 5; xxxi,

28, and Melchizedek (Gen. xiv, 18), and Job (xix, 25), and Balaam (Num. xxiv, 17), and the magi (Matt. ii), and the Samaritan woman (John iv, 25; and see, on the Christology of the Samaritans, Westcott's Introduction, p. 118, 119). But even at a distance from Israel the light still flickered to the last, as "the unconscious prophecies of the chief of the priests"—archbishop Trench happily designates—though in a somewhat different sense—the yearnings of the Gentiles after a deliverer (Hulsean Lectures for 1846; see also bishop Horsley's Dissertation, on the Messianic Prophecies dispersed among the Heathen, in Sermons, ed. 1829, ii. 263-318; and comp. Virgil's well-known phrase Pullo, and the expression mentioned by Suetonius, Vit. Veget. iv, 8, and Tacitus, Hist. v, 9, 13, and the Sibylline oracles, discussed by Horsley [ut sup.], with a strong leaning to their authenticity). See below, § i, 4 (3). But although the promise was absolutely indefinable to the first father of man (on which see bishop Horsley, Sermons xi, p. 294, 295, comp. with Faber's Prophetical Dissertation, vii, 4 and 5), additional light was given, after the deluge, to the second father of the human race.

(2.) To Noah was vouchsafed a special reservation of blessing for one of his sons in preference to the other two—and, as words fell him—it exclaimeth, "Blessed be Jehovah, the God of Shem!" (Gen. ix, 26). Not at any time God meant to confine a monopoly of blessing to the individual selected as the special depository thereof. In the present instance Japheth, in the next verse, is associated with his brother for at least some considerable extent. "God shall bless him, and he shall dwell in the tents of Shem." Instead of blessing Shem, as he had cursed Canaan, he carries up the blessing to the great fountain of the blessings that were to follow Shem.

(3.) The principle of limitation goes on. One of Shem's descendants has three sons, sons—of these is selected a peculiar treasure of the divine favor. But not for himself alone was Abraham chosen. As in Shem's instance, so here again Abraham was to be the centre of blessing to even a larger scope. More than once was he assured of this: "In thy seed [in thee, xii, 3] shall all the nations of the earth be blessed" (Gen. xxi, 18). The Messianic purport of this repeated promise cannot be doubted after Christ's own statement (John viii, 56) and Paul's comment (Gal. iii, 16). The promise is still indefinite, but it tends to the undoing of the curse of Adam by a blessing to all the earth through the seed of Abraham, as death had come on the whole human race through Adam. When our Lord says, "Your father Abraham rejoiced to see my day, and he saw it and was glad!" (John viii, 56), we are to understand that this promise of a real blessing and restoration to come after was understood in a spiritual sense, as a leading back to God, as a coming nearer to him, from whom the promise came; and he desired with hope and rejoicing ("gestivit cum desiderio, Bengel) to behold the day of it.

(4.) In Abraham's son—the father of twin sons—we meet with another limitation: Jacob not only secures the traditional blessing to himself, but is inspired to concentrate it at his death on Judah, to the exclusion of the eleven other members of his family. "Judah, thou art he whom thy brethren praise. . . . The sceptre shall not depart from Judah, nor a lawgiver from between his feet, until Shiloh come" (Gen. xlix, 8, 10; see Verowe's Essay, p. 35, 188; Delitzsch, ad loc; bishop Pearson, Creed, art. ii; Hengstenberg, Christol. i, 59, 60; Davison, On Prophecy, p. 106; Dillingen, Gentile and Jew in the Courts of the Temple of Christ, translated by Darnell, ii, 392. Onkelos and Raschi, it may be worth while to add, make Shiloh here to refer to the Messiah, as do D. Kimchi and Abendana). To us the Messianic import of the phrase seems plain, but by the principle of periodical limitation, which amounts to a law in the Christological Scriptures. We accept the conclusion, therefore, that the וּלְשָׁלֹחֽוּ of this verse is the
"shining more and more unto the perfect day" (Prov. iv, 18), it is yet enough to suggest to us how great must have been the longing for their Deliverer which such persistent and persevering prayers were likely to ex- cite in the hearts of faithful men and women.

The expectation of a golden age that should return upon the earth was, as we have seen, common in hea- then nations (Heidol, Works and Days, p. 109; Ovid, Met. i, 89; Virgil, Ec. iv; and passages in Eusebius, Prep. Ev., i. 7, xii. 15). It was doubtless inspired by some light that had reached them from the Jewish rev- elation. This hope the Jews also shared, but with them it was associated with the coming of a particular per- son, the Messiah. It has been asserted that in him the Jews looked for an earthly king, and that the existence of the hope of a king in Messianism may thus be accounted for on natural grounds, and without any bad influence upon the Messianic hope. But the prophecies refute this: they hold out not only a King only, but a Prophet and a Priest, whose business it should be to set the people free from sin, and to teach them the ways of God, as in Psa. xxvi, xi, cx; Isa. ii, xi, lii.

In these and other places, too, the power of the coming One reaches beyond the Jews and embraces all the Gen- tiles, which is contrary to the exclusive notions of Jud- aism. A fair consideration of all the passages will con- vince us that the growth of the Messianic idea in the prophecies is owing to revelation from God. The wit- ness of the N. T. to the O. T. prophecies can bear no doubt that the Messiah is in the New Testament sum- marized in the words of Peter (2 Pet. i, 19–21; comp. the elaborate essay on this text in Knapp's Opusc. vol. i). Our Lord affirms that there are prophecies of the Messiah in the O. T., and that they are fulfilled in him (Matt. xxvi, 54; Mark x, 12; Luke xvii, 31–33; xxi, 37; xxiv, 27; John v, 39, 46). The apostles preach the same truth in Acts ii, 16, 25; viii, 28–35; x, 43; xiii, 22, 23; xvi, 22, 23; 1 Pet. i, 11, and in many passages of Paul. Even if internal evidence did not prove that the prophecies were much more than vague longings after better times, the N. T. proclaims everywhere that although the Gos- pель was the sun, and O. T. prophecy the dim light of a candle, yet both were light, and both assisted those who had led him to see aright; and that the prophets inter- preted, not the private longings of their own hearts, but the will of God, in speaking as they did (see Knapp's Essay for this explanation) of the coming kingdom.

6. The period after the close of the Old Testament of the O. T. is known as the intertestamental, the period from allusion to the Messiah in the New Testament to the expectation of the Jews. From such pas- sages as Psa. ii, 2, 6, 8; Jer. xxxiii, 5, 6; Zech. ix, 9, the Pharisees, and those of the Jews who expected the Mes- siah at all, looked for a temporal prince only. The apostles themselves were infected with this opinion till the end of the first century (Matt. xxiv, 40; Psa. xxii, 6). The expectation of the Jews was seen in the same events as in the Gospels (Acts i, 6). Gleaners of a purer faith appear (Luke ii, 30; xiii, 42; John iv, 25). On the other hand, there was a sceptical school which had discarded the expectation altogether. No mention of the Messiah appears in the Book of Wisdom, nor in the writings of Philo; and Jo- sephus avoids the doctrine. Intercourse with heathens had made some Jews ashamed of their fathers' faith.

It is quite consistent with the prospects which, as we have seen, the prophecies were calculated to raise, that we are informed by Luke of the existence of what seems to have been a considerable number of persons "that looked for redemption in Israel" (li, 88). The messen- ger of these believers was exhibited in a close and con- scientious adherence to the law of Moses, which was, in its statutes and ordinances, at once the rule of pious life and the schoolmaster to guide men to their Messiah (Gal. iii, 24). As examples of these "just and devout" persons, the evangelist presents us with a few short but beautiful sketches in his first and second chapters. Be- sides the blessed Mary and faithful Joseph, there are Zacharias and Elisabeth, Simeon and Anna—pictures of holiness to be met with among men and women, married and unmarried, whose piety was strongly toned
with this eminent feature, which is expressly attributed to one of them, "waiting for the consolation of Israel" (comp. Luke i, 6 with ii, 25, and 37, 38). Such hopes, stimulated by the presence and favour of Christ, were exhibited at the birth and infancy of the Messiah Jesus by these expectant Jews; and they were not alone. Gentiles displayed a not less marvellous faith, when "the wise men from the East" did homage to the babe of Bethlehem, undeterred by the disguise of humility with which the glory was to the human eye obscured (Matt. ii, 2, 11). But his death, no less than his birth, under a still darker veil of ignominy, similar acknowledgments of faith in his Messiahship were exhibited. Mark mentions it as one of the points in the character of Joseph of Arimathea that he "waited for the kingdom of God," and it would seem that this faith urged him to desire that holy body of Jesus, in his influence with Pilate to rescue the body of Jesus, and commit it to an honorable tomb, as he realized the truth of Isaiah's great prophecy, and saw in the Crucified no less than the Messiah himself (Mark xv, 43). To a like faith must be imputed the remarkable confession of the repentant thief upon the cross (Luke xxiii, 42) — a faith which brought even the Gentile centurion who superintended the execution of Jesus to the conviction that the expiring sufferer was not only innocent (Luke xxiii, 47), but even the "Son of God" (Matt. xxvii, 54, and Mark xv, 39). This conjunction of Gentile faith with the most interesting circumstances, indeed, was consistent with the progress of the promise. We have seen above how, in the earliest stages of the revelation, Gentile interests were not overlooked. Abraham, who saw the Messiah's day (John viii, 56), was repeatedly assured of the share which all nations were destined to have in the blessings of his death (Gen. xii, 3; xxii, 18; Acts iii, 25). Nor was the breadth of the promise afterwards narrowed. Moses called "the nations" to rejoice with the chosen people (Deut. xxxii, 43). Isaiah proclaimed the Messiah expressly as "the light of the Gentiles" (Is. xi, 6; xl, 6); Haggai foretold his coming as "the desire of all nations" (ii, 7); and when he came at last, holy Simeon inaugurated his life on earth under the title of "a light to lighten the Gentiles" (Luke ii, 82). When his Gospel was beginning to run its free course, the two missionaries for the heathen quoted this great prophetic note as the warrant of their ministry: "I have set thee to be a light of the Gentiles, that thou mayest be a light unto the Gentiles" (Matt. v, 14, 16). Plain, however, as was the general scope of the Messianic prophecies, there were features in it which the Jewish nation failed to perceive. Framing their ideal not so much from their Scriptures as from their desires, and impatient of a hated heathen yoke, they so avenged themselves, as should have inflicted upon their oppressors retaliation for many wrongs. This wish colored all their national hopes; and it should be borne in mind by the student of the Gospels, on which it throws much light. Not only was the more religious class, such as Chris's own apostles and pupils, affected by this thought of an external kingdom, even so late as his last journey to Jerusalem (Mark x, 37); but the undiscriminating crowds, who would forcibly made him king (John vi, 15)—so strongly did his miracles attest his Messianic mission even in their view (ver. 14) — and who afterwards followed him to the capital and shouted hosannas to his praise, most artfully withdrew their popular favor from him and joined in his destruction, because he gave them no signs of an earthly empire or of political emancipation. Christ's kingdom was "not of this world" — a proposition which, although containing the very essence of Christianity, offended the Jewish people when Jesus presented himself as their veritable Messiah, and led to their rejection of him. Moreover, his lowly condition, sufferings, and death, have been a stumbling-block in the way of their recognition of him ever since. See SAUVOR.

III. Jewish Views respecting the Messiah. — Even in the first prediction of the woman's seed bruising the serpent's head, there is the idea of a painful struggle and of a victory, which leaves the mark of suffering and triumph on the person of the Messiah. [Baruch's Prophecy of the Messiah (Isaiah lxvi, 21), p. 164]. This thought has tinged the sentiments of all orthodox believers since, although it has often been obscured by the brilliant fancy of ambition. See Son of Man.

1. Early Jewish Opinions. — The portrait of an afflicted and suffering Messiah is too clearly drawn by the Psalmist (Psa. xcvii, xil, xili, xlix), by Isaiah (chi. liii), by Zechariah (ch. xii—xiv), and Daniel (ix. 24—27), to be ignored even by reluctant Jews; and strange is the embarrassment observable in Talmudic Judaism to obviate the advantage which accrues to Christianity from its tenure of this unpalatable doctrine. Long ago the problem, "Is the Messiah described in the prophetic Scriptures, which delineated Messiah as a man of sorrows" (Justin. Dial. 89). In later times, after the Talmud of Babylon (7th century) became influential, the doctrine of two Messiahs was held among the Jews. For several centuries it was their current belief that Messiah Ben-David was referred to in all the prophecies which spoke of glory and triumph, while on Messiah Ben-Joseph of Ephraim fell all the predicted woes and sufferings. By this expediency they both gratified their traditional idea which exonerated their chief Messiah, of David's illustrious race, from all humiliation, while they had the history of Jesus to refer to inspired prophets who had written of the sorrows of Messiah. (For a popular sketch of this opinion of two Messiahs, the reader is referred to Smith's sermons On the Messianic Prophecies of Isaiah, p. 177—181; see also Buxtorf's Lexicon Talmud. s. v. יְשׁוֹעַ, p. 1126, 1127, and s. v. יְשׁוֹעַ כְּבָר; Eisenmenger's Entdecktes Judenthum, ii, 720—750; Otho's Lexicon Rabbin.; Schöttgen, Horae Heb. et Rabbin. ii, 1—778.) All the references to a suffering Messiah made by great writers, such as Rashi, Ibn-Esra, and D. Kimchi, are to "Messiah Ben-Joseph," while of the more than seventy quotations cited by Buxtorf from the Targums, including Onkelos, not one refers to the Messiah as suffering. This early Targumistic literature (as distinguished from the latter Rabbinical) dwells on the glories, triumphs, and power of a conquering Messiah. However absurd this distortion of prophecy may be as, it was yet to show the excessive power of the speculation of the prophetic Scriptures as given by Christian writers, who showed to the votaries of the Talmud that their earlier authors had applied to the Son of David the very passages which they were for referring to the Son of Joseph. From the tenth and eleventh centuries, therefore, other interpretations have been given whichadena under the whole story of Messiah Ben-Joseph in his account of the Messiah; see Pococke, Append. on Malachi. The Messiah has been withdrawn altogether from the reach of all predicted sufferings. Such passages as Isa. liii, have been and still are applied to some persecuted servant of God, Jeremiah especially, or to the aggrieved Jewish nation. This anti-Messianic exegesis is prevalent among the Neologians of Germany and France, and their "free-handling" disciples of the English school (see Dr. Rowland Williams, Essays and Reviews, p. 71—75 [edit. 2]). Thus Jewish sentiment has either reverted to that low standard of mere worldly expectation which recognises no humiliation in Messiah, but only a career of un mixed triumph and glory, or else has collapsed in a disappointment and despair which forbid all speculation of a Messiah whatever (Eisenmenger, Entdecktes Judenth. 1, 677). Jewish despair does not often resolve itself into Christian hope. Here and there affecting instances of the genuine change occur, such as the two mentioned by bishop Thirlwall (Reply to Dr. W's earnestly respectful letter, p. 78); in the second of which—that of Isaac da Costa—conversion arose from his thoughtful reflections on the present dispersion of the Jewish race.
for its sna. His acceptance of Jesus as the Messiah solved all enigmas to him, and enabled him to esti-
mate, as he did, the extent of the prophetic promises as if
they were yet unfufilled to Israel. But the normal state of
Jew-
ish Messianic opinion is that sickness of heart which
comes from deferred hopes. This despair produces an
abatement of faith and a lowering of religious tone, or
else finds occasional relief in looking out after pretended
Messiahs. Upwards of three hundred of these have deluded
the nation in its scattered state since the destruction of
Jerusalem. See Messiahs, False. The nycvo of
life and
reputation caused by these attempts has tended much
more to anything else to the discouragement of Mes-
Sianic hopes among the modern Jews. Foremost in the
unhappy catalogue of these fanatics stands the formid-
able and much abhorred figure of Rabbi Akiba, "the second Moses," the great light of the
day in Jewry, declared before the Sanhedrin that Bar-
Cocheba was the Messiah. Rabbi Jochanan alone made
opposition, and said, "Grass, O Akiba, will grow out
of thy jaws, and yet the Son of David not have come." We
know not what was the fate of Bar-Cochbea (or Bar-
Cocheba, "the son of lying," as his disappointed
dupes at length called him), but the gray-headed Akiba
was taken by the Romans and executed. More are said
to have perished in this attempt than in the previous
war of Titus. Embarrassing as all these failures are to
the Jews, they only add one more to the many people of the
Messianic hope of Jesus of Nazareth, who expressly
foretold these delusions of "false Christs." (Matt. xxiv,
24; Mark xiii, 22), as one class of retributions which
should avenge on Israel the guilt of his own rejection.
Not only, however, from the lowliness and suffering of
the Christian Messiah, but in a still greater degree from
his exalted character, there arises a difficulty of faith
to the Jewish objection. The divinity of nature which
Jesus claimed is perhaps the greatest doctrinal obstacle
to his reception among the Jews. See Gfrorer, Gesch.
d.Urkundeithums (Stuttg., 1888); Solani, Croyances
Jewish (Paris, 1864). See Note or Comment.
2. Modern Jewish Views. The hope of a Messiah—
The bounteous benefactor and inaugurator of a glorious
reign on earth, firmly establishing forever and ever the
greatness of Abraham's descendants—had prevailed even
among the children of Israel, but it required the days
of trial and tribulation, such as came in the days of the
exile, to create a yearning for the appearance of the
King, the Conqucror, the God of Israel. Within the
domains of a foreign ruler, and subject to his rule, the
Messiah became an ever-present being to the thoughts
and to the visions of the Jews; and yet when at last
the Son of man came to his own, his own knew him not.
But the Jewish mind, like that of the other nations, was
filled with prophecies; hence a great many of the
prophets wrote, the faith in a Restorer of Israel for many
centuries continued to knit together the nation in their
disperscd condition. Of late only a change has come
over them, and the Jewish camp may be truly said to
have divided into three distinct branches: (1) the
extreme right, (2) the extreme left, and (3) the centre.
(1) The Jews belonging to the first class are those
who remain either (a) orthodox in their adherence to
the liberal interpretation of the Bible and tradition, or
(b) who, though accepting both Bible and tradition, fa-
vor a liberal construction of the traditional usages. This
class of Jews continue to look for a personal reign of
Messiah, and their restoration to the land of their fore-
 fathers. Their number is daily decreasing, however, and
the time promises to be soon when they shall be
counted among the things that were.
(2) To the second class belong those Jews generally
denominated as "crypto-Christian," who, calculating on
Talmudism and the ceremonial law, claiming a complete
emancipation from religious thraldom as their indefeasi-
ble right. They question the propriety of interpreting
the prophets as predicting a personal Messiah, and deny
the possibility of a restoration of Israel as a nation of
political entity. In 1949 they for the first time gave
public expression to their belief in a meeting at Frank-
fort, when they declared that "a Messiah who is to lead
back to Palestine is neither expected or desired by the
associated, and they acknowledge that alone to be their
country to which they belong by birth or civil relation." In
1869 a meeting of the educated Jews of Germany
was held in the city of Leipzig, at which eighty-four
different Jewish congregations were represented. Ten-
ner's presentations were no rabbinic high repute;
the lay members men who had secured national
places in the gift of the nation, among them the late
Dr. Fürst, then professor at the University of Leipzig,
the learned Lazarus, of the University of Berlin, etc.
In 1840 the gathering had been composed of a handful
of rationalistic Jews; in 1869 the meeting at Leipzig
was attended by the most prominent and representative.
Yet these men rejected the belief in Israel's restoration,
and passed the following resolution: "Those portions
of our prayers which refer to the re-establishment of
the annual sacrifices at the Messianic period, or to the return
of the Jews to Jerusalem, must be modified." How
widespread the opinion referred to here, the following
passing may be best judged if such a conservative journal as the
London Jewish Chronicle is led to comment that "Al-
though every Jew is bound to believe in a Messiah, the
question whether that expression indicates a person or
time, and whether he or it has arrived or not, is, ac-
counting the view of the people, an open question." (3)
The main portion of modern Judaism consists of the
moderate party, embracing those Jews who seek to
develop a higher spirituality from the old form of Ju-
daism. With them the ceremonial law is valuable only
as a hedge to keep the people apart from other forms of
religion till the times are fulfilled. Like Kimchi, Abra-
ham, and other Jewish commentators, they apply the
oracle in Isa. xi, 1-10 to the age of the Messiah, whose
advent they place at the very time when the final gath-
ering of the Jewish people is to be accomplished. "The
one," says the Rev. Prof. Marks (Jewish Messenger,
January, 1872), "is to be immediately consequent upon the
other; or, rather, they are prophesied as synchronous
events." Denying the accuracy of Christian inter-
pretation, which refers the 11th chapter to the first, and
the 12th chapter to the coming of Christ in the
final day, they insist that the Hebrew Scriptures teach
only one Messianic appearance, and that chapter 11 war-
rants no distinction in point of time between "the clear-
dy-defined occurrences which are to mark Messiah's ad-
vent;" "and," continues Prof. Marks, "so far from repre-
senting the complete regeneration of the moral world as
the result of many centuries after the promised Messiah
shall have appeared, the prophet of the text mentions
the universal redemption and harmony between men as
well as the ingathering of the dispersed of Judah and of
Israel, as the special events which are to characterize
the inauguration of the Messianic age. The promised
regenerator of mankind is to be known by the accomplish-
ment of these his appointed tasks; and no one, according
to the Jewish view of prophetic Scripture, is entitled to
the name of 'the Messiah' who does not vindicate his
claim to that high office by means of the fulfilment of the
conditions which the word of inspiration has as-
signed to his coming.
As is well known, the Jews looked for Messiah in
the days of their Saviour. For centuries after the whole-
nation was incessantly on the watch: their prosperity
seemed the harbinger of his coming; their darkest ca-
lamities, they believed, gathered them only to display,
with the force of stronger contrast, the mercy of God
and the glory of their Redeemer. Calculation upon
the future at the time of their captivity, was the result of
the desertsion, the rabbinical interdict was sent forth to re-
press the dangerous curiosity which, often baffled, would
still penetrate the secrets of futurity. "Cursed is he who
calculates the time of the Messiah's coming" was the
daily message to the faithful of the synagogue; and
at last it was declared that "No indication is given
with regard to the particular epoch at which the prophe-
cy of the 11th chapter (of Isaiah) is to be accompl-
ished," but that the inspired messenger of God has
furnished means of determining by the evidence of our
senses the distinctive signs by which the advent of
the Messiah is to be marked, viz. (1) the arrival of the
golden age (ver. 7, 8, 9); (2) the rallying of the nations,
unnourished and uninhabited, around the Messianic
banner (ver. 11); and (3) the second ingathering of the
whole of the Jewish people, including the tribes of Judah
and Benjamin, as well as those which composed the kingdom
of Samaria, and are popularly spoken of as "the lost
tribes" (ver. 11 and 12). Compare on this point Linfoz,
The Conciliator of R. Mannassas ben-Israel [Lond. 1842,
2 vols. 8vo.], ii, 145. As Jews, we, "they say, "maintain
that the promised Messiah has not yet appeared,
and that the world has never witnessed such a moral
picture as the prophets predict of the Messianic age.
And yet they are obliged themselves to confess that
Various opinions prevail [among them] with respect
to what is to be precisely understood by the coming of
the Messiah. Some hold that it implies the birth of a par-
ticular personage; others, that it describes the conjunc-
tion of certain events which are to act with extraordin-
ary moral power on the world at large. But what it
does especially behove us to bear in mind is, first, that
the prophets identify the Messianic advent with an age
which the people shall have come to an end, when war-
fare and strife shall have disappeared from the earth,
and when love shall have become the sole governing
principle of humanity; and, secondly, that this impor-
tant work of the regeneration of mankind is to be
brought about by the instrumentality of the Jewish
people, if not by some remarkable individual born of
that race."
Jesus the Christ they refuse to recognise as that "re-
markable individual," "because," as one of their number has declared, "we do not find in the present compara-
tively imperfect stage of human progress the realization
of all the divinely foretold characteristics and prophecies
of the Messiah associates with the era when Messiah is to ap-
ppear. And as our Hebrew Scriptures speak of one
Messianic advent only, and not of two advents (even
even those in the synagogue who speak of a Messiah from
the house of Joseph concurrently with one from
the house of David make their advent synchronous); and
and as the inspired Book does not preach Messiah's kingdom
as a matter of fact, but distinctly identifies it with mat-
ters of fact which are to be made evident to the senses,
we cling to the plain inference to be drawn from the text
of the Bible, and we deny that Messiah has yet appeared,
and that all the promises and prophecies have been fulfilled by
by one of the three distinctive facts which the inspired seer of Judah
inseparably connects with the advent of the Messiah,
the cessation of war and the uninterrupted reign of
peace, the prevalence of a perfect concord of opinion on
all matters bearing upon the worship of the one and
only God, and the ingathering of the remnant of Judah
and of the dispersed ten tribes of Israel—not one has,
up to the present time, been accomplished. Second.
We dissent from the proposition that Jesus of Nazareth
is the Messiah announced by the prophets, because the
Church which he founded, and which his successors de-
veloped, has offered, during a succession of centuries, a
most singular contrast to what is described by the He-
brew Scriptures as the immediate consequence of
Messiah's advent, and of his glorious kingdom. The prophet
Isaiah declares that when the Messiah appears, peace,
love, and union will be permanently established; and
everyone who has read has no reason to suppose that he has not yet realized the accomplishment of this prophecy.
Again, in the days of Messiah, all men, as Scripture
saith, are to serve God with one accord; and yet it is
very certain that since the appearance of him whom our
Christian brethren believe to be Messiah, mankind has
been split into more hostile divisions on the grounds of
religious belief, and more antagonistic sects have sprung
up, than in any historic age before Christianity was
preached." For the articles of confession, see the arti-
cles Judaism, iv, 1057, col. 1 (1912), 1058, and espe-
ially those portions in Conservative and Reformed Ju-
daim; also Restoration of the Jews.
IV. Proof of the Messiahship of Jesus.—This discus-
sion resolves itself into two questions. See Jesus
Christ.
(2) The promised Messiah has already come. To prove
this assertion, we shall confine our remarks to three
prophecies. (1) The first is the passage above com-
mented on, occurring in Gen. xlix, 8, 10, where Jacob is
giving his sons his parting benediction, etc. When he
comes to Judah, he says: "The sceptre shall not de-
part from Judah, nor a lawgiver from between his feet, un-
till Shiloh come, and unto him shall the gathering of
the people be." It is evident that by Judah is here
meant, not the person, but the tribe; for Judah died
in Egypt, without any pre-eminence. By sceptre and
lawgiver are obviously intended the legislative and ruler-
ning power, which did, in the course of time, come
in David, and which for centuries afterwards was con-
tinued in his descendants. Whatever variety the form
of government—whether monarchical or aristocrical—
might have assumed, the law and polity were still
the same. This prediction all the ancient Jews referred to
the Messiah. Ben-Uzziel renders it, "Until the time
when the king Messiah shall make his appearance."
The Targum of Onkelos speaks to the same effect, and that of Jerusa-
lem paraphrases it thus: "Kings shall not cease from
the house of Judah, nor doctors that teach the law
from his children, until that the king Messiah do come,
whose the kingdom is; and all nations of the earth
shall be subject unto him." Now that the sceptre has
departed from Judah, and, consequently, that the Mes-
iah has come, we argue from the acknowledgments of
some most learned Jews themselves. Kimchi thus com-
ments on Hosea: "These are the days of our captiv-
ity, wherein we have neither king nor prince in Israel; but
but the Messiah will appear, and he shall be a king and a
kings and princes." Again, Abarbanel, commenting on
Isa. iii., says that it is a great part of their misery in
their captivity that they have neither kingdom nor rule,
or a sceptre of judgment! The precise time when all authority departed from Judah is disputed.
Some date its departure from the time when Herod,
an Idumean, ascended the throne, and others believe
that the last vestige of the sceptre was left behind
when the Jews were divided into two nations. If,
therefore, the sceptre has departed from Judah— and
who can question it who looks at the broken-up, scat-
tered, and lost state of that tribe for ages?—the conclu-
sion is clearly irresistible that the Messiah must have
long since come! To avoid the force of this conclusion
the Jews now say that the Mashiach, the shevet, which we
render sceptre, may be translated rod, and metaphorically
signifies, in the above passage, affliction. That the
word cannot bear this meaning here is evident, because,
for a long while after the prophecy was uttered, espe-
cially in the reigns of David and Solomon, the tribe of
Judah was in a most prosperous state. See sceptre.
(2) The next proof that the Messiah has long since
come we adduce from Dan. ix, 25, 26. It is evident
that the true Messiah is here spoken of. He is twice
designated as the one that has not yet come, which is
how he is here said to accomplish, we shall have a
full confirmation of this. Who but he could
finish and take away transgression, make recompilation
for iniquity, bring in everlasting righteousness, seal up
the vision and prophecy, confirm the covenants with
many, and cause to cease the sacrifice and oblation? In-
deed, there is a saying extant in the Talmud, as the

tration of former times, "In Daniel is delivered to us the key of the Messiah," i.e., the Term wherein he ought to come, as it is explained by Jarchi. Grothus (De\n\nitiat. v) speaks of a Jew, R. Berachia, who lived fifty years before our Lord, and who declared that the time fixed by Daniel could not go beyond fifty years! If then it be the true Messiah who is described in the above prophecy, it remains for us to see how the time predicted by Daniel of the seventy-seven weeks is expressly said to be seventy weeks from the going forth of the commandment to restore and build Jerusalem. That by seventy weeks are to be understood seventy-seven years of days, a day being put for a year, and a week for seven years, making up 490 years, is allowed by Kimchi, Jarchi, Abulafia, and other learned Jews, as well as by many Christian commentators. It is clear that these seventy weeks cannot consist of weeks of days, for all put together make but one year, four months, and odd days—a space of time too short to crowd so many various events into as are here specified; nor can any such time be assigned between the two capacities, wherein like events did happen (see Pridaux, Connect. lib. v, pt. 1). This period of time then must have long since elapsed, whether we date its commencement from the first decree of Cyrus (Ezra i, 1, 2), the second of Darius Hystaspes (vi, 15), or that of Artax\nerxes (vii, 10). This was Deuteronomy v; Josephus, War, vii, 12, 13. See SEVENTY WEEKS. (3.) We can only barely allude to one remarkable prediction more, which fixes the time of the Messiah's advent, viz. Hag. ii, 7-9: "I will shake all nations, and the desire of all nations shall come: and I will fill this house with glory, saith the Lord of Hosts. The silver is mine, and the gold is mine, saith the Lord of Hosts. The glory of this latter house shall be greater than of the former, saith the Lord of Hosts." The glory here spoken of must be in reference to the Messiah, or on some other account. It could not have been said that the second Temple exceeded in glory the former one; for in the presence of their Lord and Saviour, the possession of the Jews themselves, it was far inferior, both as a building (Ezra iii, 8, 12) and in respect of the symbols and tokens of God's special favor being wanting (see Kimchi and R. Salomon on Hag. i, 8). The promised glory, therefore, must refer to the coming and presence of him who was promised to the world before there was any nation of the Jews; and who is aptly called the "Desire of all nations." This view is simply confirmed by the prophet Malachi (iii, 1). Since, then, the very Temple into which the Saviour was to enter has for ages been destroyed, He must, if the integrity of this prophecy be preserved, have come. Nor is this the purpose that passage for concern to the great diminished if we take the interpretation of many, that 7777, "desire," being fem., cannot directly refer to the Messiah personally; for in any case the prophecy refers to some glorification, at the time future, of the then existing Temple; and as that Temple has now utterly passed away, its fulfillment cannot be looked for under any Messiah yet to come. See DESIRE. That there was, at the time of our Lord's birth, a great expectation of the Messiah, both among Jews and Gentiles, may be seen from three celebrated historians, as well as from the sacred Scriptures. Tacitus (Hist. c. 13) says: "Plutarchus persuasio inerat, antiquius sacrando\niterium literarum contineri, eo ipso tempore fore ut valesce\nret Orient, profectique Judea rurum potientur." Again, Suetonius (in Vespasianus) says: "Percrebretur Orienti terrae necesse est; necesse est ut Judaei profecti rem potientur." Josephus, not being able to find any calculation by which to project the general expectation of the Messiah, applies it in the fol\lowing words to Vespasian (War, vii, 31): "That which doomed the Jews to war was an ambiguous prophecy; which was also found in the sacred books, for at that time some one within their country should arise who would obtain the empire of the whole world." We are, moreover, informed again by Suetonius (Octavi. 94), that at the very time of the restoration of the Temple it was gen\erally thought that Nature was then in labor to bring forth a king who would rule the Romans. Some suppose that the words of Virgil (Elog. iv) point at our Saviour, but they were intended by him to apply to the son of Pollio. We may just add that as there was a great expectation of the Messiah, a general expectation of the Messianic age, it follows that there were many impostors who drew after them many followers (Josephus, Ant. xx, 2, 6; War, ivii, 31). See also a full account of the false Christs who appeared by John A. Lenti, Schediasm., c. 2; Maimonides, Ep. ad Ju\daius Marcellinens.; Christ prophets of such persons (Matt. xxiv, 23, 24). 2. The limits of this article will admit of our only touching upon the proofs that Jesus of Nazareth, and none other, is the very Messiah that was to come. (1.) What was predicted of the Messiah was fulfilled in Je\sus. Was there the Messiah to be of the seed of the woman (Gen. iii, 15), and this woman a virgin? (Isa. vii, 14). So we are told (Isa. iv, 4; Matt. i, 18, and 22, 23) that Jesus was made of a woman, and born of a virgin. Was it predicted that he (Messiah) should be of the tribe of Judah, of the family of Jesse, and of the house of David? (Mic. v, 2; Gen. xlix, 10; Isa. xi, 10; Jer. xxiii, 5, 6; John. i, 41). See GENEALOGY OF CHRIST. (2) If the Messiah was to be a prophet like unto Moses, was so Moses also (Isa. xlvii; John vi, 14). If the Messiah was to appear in the second Temple, so did Jesus (Hag. ii, 7, 9; John xviii, 20). (3) The Messiah was to work miracles (Isa. xxvii, 6, 18; comp. Matt. vi, 4, 5; see MIRACLE. (4) If the Messiah was to suffer and die (Isa. liii), we find that Jesus died in the same manner, at the very time, and under the identical circumstances, which were predicted of him. The very man who betrayed him, the price for which he was sold, the indignities he was to receive in his last moments, the parting of his garments, and even the words, etc., were foretold in the Book of the Messiah, and accomplished in Jesus! (5) Was the Messiah to rise from the dead? So did Jesus. How stupendous and admirable is the providence of God, who, through so many apparent contingencies, brought such things to pass! See Kidders, Demonstration of the Mess\iah (Lond. 1726, fol.); Olearius, Jesu d. savorre Messis\cia (Leipa, 1714, 1737); M'Caul, Messiahship of Jesus (War\burton Lect. 1852); Black, Messiah and anti-Messiahs (Lond. 1853); Browne, Messiah as foretold and expected (Lond. 1862); Higginson, Hebrew Messianic Hope and Christ\nian Reality (Lond. 1871). Comp. also Malcolm's Theological Reconstruction of the He\galism, p. 88 sq.; Hase's Leben Jesu, p. 86; and Danz, Wer\terbuch, p. 855 sq. See CHRESTOLOGY. MESSIAH, FALSE. Jesus warned his disciples that false Christs should arise (Matt. xxi, 24), and the event has verified the prediction. No less than twenty-four such impostors have appeared in the various ages, so having appeared in different places and at different times; and even this does not exhaust the list. One by the name of Simeon was the first of any note who made a noise in the world. Being dissatisfied with the state of things under Hadriran, he set himself up as the head of the Jew\ish nation, and last in mind of him of their long-expected Messiah. He was one of those banditti that infested Judaea, and committed all kinds of violence against the Romans; and had become so powerful that he was chosen king of the Jews, and by them acknowledged their Messiah. However, to facilitate the success of this bold enterprise, he assumed the name of Jesus, (Matt. xxvi, 54), alluding to the star foretold by Balaam; for he pre\tended to be the star sent by heaven to restore his na\tion to its ancient liberty and glory. This epitaph was changed by his enemies into that of Bar-Cozeba, i.e., son of a lie. He chose a forerunner, raised an army, was anointed king, coin money inscribed with his own name, and proclaimed himself Messiah and prince
of the Jewish nation. Hadrian raised an army, and sent it against him: he retired into a town called Bithera, where Bar-Cocceius, a great Maccabean, was asso- luted, A.D. 1176, in Moravia, who was called David Aburi, he pretended he could make himself invisible; but he was soon taken and put to death, and a heavy fine laid upon the Jews. A famous cheat and rebel exerted himself in Persia, A.D. 1199, called David-d el-Davisd. He was a man of learning, a great magician, and pretended to be the Messiah. He raised an army against the king, he was taken and imprisoned; and, having made his escape, was afterwards retaken and beheaded. Vast numbers of the Jews were butchered for taking part with this impostor.

In the 8th and 14th centuries the Messiah imposition came to a comparative stand-still. It is the true the learned of the rabbis, the celebrated Sandia, Abraham Ibn-Chija, Nachman, and Gerison, had taken upon themselves to calculate the time of the actual coming of the veritable deliverer, and had fixed upon 1858 as the Messiah year; but no one came forward and sought to impose upon themselves for the pretended leader, but he had disappeared, and escaped out of their hands.

In the reign of Justin, about A.D. 520, another impostor appeared, who called himself the son of Moses. His name was Dunan. He entered into a city of Arbia, in Africa, and there spread a new and widely opposed and revolting imposture. On the day appointed, this false Moses, having led them to the top of a rock, men, women, and children threw themselves headlong down into the sea, without the least hesitation or reluctance, till so great a number of them were drowned as to open the eyes of the rest, and make them sensible of the cheat. They then began to look for their pretended leader, but he had disappeared, and escaped out of their hands.

In the reign of Leo the Isaurian, about A.D. 721, arose another false Messiah in Spain; his name was Serenus. He drew great numbers after him, to their no small loss and disappointment; but all his pretensions came to nothing.

The 12th century was particularly fruitful in producing Messianics. About 1137 there appeared one in France, who was put to death, and numbers of those who followed him. In A.D. 1138 the Persians were disturbed with a Jew who called himself the Messiah. He collected a vast army; but he, too, was put to death, and his followers were treated with great inhumanity. A false Messiah stirred up the Jews at Cordova, in Spain, A.D. 1157. The wiser and better part looked upon him as a madman, but the great body of the Jewish nation believed in him. On this occasion nearly all the Jews in Spain were destroyed. Another false Messiah who appeared in Persia, and there spread a new imposture, was called the name of Davad Aburi (Alroy), brought great troubles and persecutions upon the Jews that were scattered throughout that country. Disraeli has taken this historical event as the plot of his Abroy. In the same year an Arabian professed to be the Messiah, and pretended to work miracles. When search was made for him, his followers fled, and he was brought before the Arabian king. Being questioned by him, he replied that he was a prophet sent from God. The king then asked him what sign he could show to confirm his mission. "Cut off my head," said he, "and I will return to life again." The king took him at his word, promising to believe him if his prediction was accomplished. The poor wretch, however, never came to life again, and the cheat was sufficiently discovered. Those who had been deluded by him were grievously punished, and the nation was condemned to a very heavy fine. Not long after this, a Jew who well understood the Kaphramah called himself the Messiah, and drew vast multitudes of people about him. He gave this for a sign of it, that he had been leprous, and had been cured in the course of one night. He, like the rest, perished, and brought great persecution on his countrymen. A magician and false Christ arose in Persia, A.D. 1174, who seduced many of the common peo-
with the prospects of an early delivery from oppression, and the dawn of a happy change. Though hoary with age, he wrote with trembling hands book after book to explain the principal Messianic passages of the O. T., especially those of Daniel, and argued that Israel could safely depend upon a glorious future, and that the day of the Messiah was near at hand. He even went so far as to predict that the year 1816, the year promised in the prophecy, would be the year of their delivery. As a leader in Israel, Abraha-

Messiah 143 Messiah

latter exulting his daring at the stake. This put an end to the Messiah promises of the 16th century.

In the 17th century the first false Christ arose in the East Indies, A.D. 1616, and was largely followed by the Portuguese Jews who are scattered over that country. Another in the Low Countries declared himself to be the Messiah of the family of David, and of the line of Na-

as it led them to believe that they would overthrow the kingdom of Antichrist and the Turkish empire.

The year 1666 was a year of great expectation, and some wonderful thing was looked for by many. This was a fit time for an impostor to set up, and accordingly false and lying reports were carried about that the time was

rivet for a journey to the Holy Land, to anticipate the change so near at hand. One German rabbi, Ascher Lämmlin (or Lämmlin), a resident within the Austrian dominions, actually gave himself out as the forerunner of the approaching Messiah, and, as pseudo-John, about A.D. 1692, called the people to repentance, and urged an immediate removal to the East. He pulled down his own house, pressuring that by another year he and his brethren who would follow him should live in peace under the reign of the "King of the Jews." Lämmlin lived near Venice, but his admonitions travelled all through Ger-

many, Italy, Spain, and France. Everywhere his message was received with enthusiasm, even Christians and Jews be-

lieved in his mission (see Grütz, Gesch. d. Juden, ix, 243).

But the prophet died suddenly, and all hopes lay pro-

trate in the dust. The agony of the people, so basely deceived, lacks description. A few flocked to the cross of Christ, and in this their most trying hour declared that Jesus was the Christ; but the greater number, with that stubbornness characteristic of the Semitic race, yet refused to look for help from the great Physician.

The Messiah-hope still lingered, however faintly, in the heart of the Jew, particularly in the Iberian peninsula, where he now suffered most; and it was not long before we hear of the impostures and an abuse of his much dejected brethren. This time the pretender played his part more acutely, and it was some time be-

fore his deception was discovered. During the eventful reign of Charles V a person suddenly turned up at the court of the king of Portugal, who, calling himself Da-

vid Rebenci, declared that he had come from India as ambassador of his brother, the king of the Jews, to propose an alliance for the recovery of the Holy Land from the Musulman. He had so carefully prepared himself for his rôle that he appeared natural, and his story apparently bore truth upon its face. He readily found admittance, and even Sabbatical days were set aside that the time might be favorably received wherever he went. To persuade the Iberian government of the verity of his mission, he had brought papers confirming his claims; and he kept at such a respectful distance from the Jews that they became doubly anxious to approach him. Those who had been forcibly converted to Christianity fairly warred against the ground he had stood upon; and great was the joy among the Jews of Italy when David found favor in the eyes of Clement VII (1523-34), and gained dis-

associations at the papal court. In the midst of his successes he was joined by one Solomon Moscho (q. v.), a Portu-

guese Jew, who, openly apostatized to Judaism, and set up as the prophet of the movement. He submitted to circumcision, and in many other ways sought to prove his sincerity. At first he travelled with David, but, anxious to visit the Holy Land, he parted with the prince and set out for the East. On his return he visited Clement VII, and found even greater favor with the pope than David had enjoyed. Moscho enjoyed the confidence of the emperor, and, though an apostate, he was suffered to pour out his apocalyptic rhapso
dies without restraint. But he finally came to a woful end. He had met David again, and together they had gone to Ratisbon, the seat of Charles V, to convert the emperor. Charles was hard-hearted, and both David and Solomon were thrown into prison; the former escaping, we hardly know how, the
was to unite all religions, sects, and confessions. Among the paradoxical opinions he is said to have advanced was the idea that the Lord Jesus Christ is still upon earth, and that he would soon again send forth twelve apostles to publish the Gospel. All that now remains of the Frankists is contained within the Roman Church; and it is generally believed that they are actually Christians, though distinguishing themselves by marked remains of Judaism. Some consider that they still retain in secret a belief in the religion of the synagogue. They are found in Poland, especially at Warsaw, dispersed among all, even the highest, classes of society, chiefly in the profession of law and medicine. They are said to have taken a considerable share in the war of insurrection against Russia in the year 1830; it has even been said that the chief of the Frankists was a member of the Diet of Poland, and afterwards obliged to take refuge as an exile in France. But little is known of them at present, as they mix so largely with the Christians as such.

In our own day the Messiah question is again enlivened by the appearance of new claimants. One of these lately made his début in the far East, at Sanaa, in the kingdom of Yemen, and created much excitement, which has scarcely subsided yet. The well-known Eastern traveller, Baron De Malzahn, furnishes the following account of this modern Messiah of the Orient: "The pretender, of a fascinating exterior, remarkably brilliant eyes, and a melodious voice, after studying the mysteries of the great cabalistic work, the Zohar, withdrew from intercourse with his sect, and eventually retired into a desert, where he submitted to bodily mortifications and self-denial. He soon became distinguished as a worker of miracles, and as such attracted the attention of the superstitious Bedouins. These, seeking to obtain his good graces, brought various descriptions of food, and were pleased to see that he condemned the usual food of these people, and ate only the wild fruits and herbs. They were about to bring him back to his own people, when a sudden calamity gave the position of this man a new turn. An epidemic broke out among the flocks of the Bedouins, who in consequence of this calamity were in a short time reduced to extreme want. These changes in the fortune of the Arabs were assigned to the secret influence of the mysterious man. It was then remembered that he was a Jew, and he at once became the object of bitter hatred. The recluse had meanwhile quitted his solitude and returned to his native place. Here he was declared, chiefly by the Arabs, to be a Messiah, the son of David; and a large number of his converts, under his supernatural power even in the eyes of his fiercest enemies. His Jewish countrymen were in expectation that he would crush the Arabs and lead his own brethren to the Holy Land. His heated imagination accepted the messianic part which the delusion of the people had conferred upon him; and he beheld in the opinion of the multitude an evidence of his high mission. He received everywhere munificent presents, lived in a princely style, was revered by his own people, and dreaded by the Moslems, until some daring Arabs finally waylaid and killed him, and thus proved that he was vulnerable. But superstition is such a powerful arm, that no power is so powerful as that of a Skocher (such as was his name) is not considered as dead by his followers. He appeared after the murder, they say, under another form, in the neighborhood of Sanaa, and prophesied that, at a later time, he would assume again his former shape. The government has taken steps to seize him, but he has since disappeared, and his present whereabouts are unknown. Very recently a "new Messiah," writes the Fremden-Blatt (August, 1872), "has made his appearance, and he is leading a pleasant and prosperous life among the Christians, though communicating with them by marked remains of Judaism. Some consider that they still retain in secret a belief in the religion of the synagogue. They are found in Poland, especially at Warsaw, dispersed among all, even the highest, classes of society, chiefly in the profession of law and medicine. They are said to have taken a considerable share in the war of insurrection against Russia in the year 1830; it has even been said that the chief of the Frankists was a member of the Diet of Poland, and afterwards obliged to take refuge as an exile in France. But little is known of them at present, as they mix so largely with the Christians as such.

In our own day the Messiah question is again enlivened by the appearance of new claimants. One of these lately made his début in the far East, at Sanaa, in the kingdom of Yemen, and created much excitement, which has scarcely subsided yet. The well-known Eastern traveller, Baron De Malzahn, furnishes the following account of this modern Messiah of the Orient: "The pretender, of a fascinating exterior, remarkably brilliant eyes, and a melodious voice, after studying the mysteries of the great cabalistic work, the Zohar, withdrew from intercourse with his sect, and eventually retired into a desert, where he submitted to bodily mortifications and self-denial. He soon became distinguished as a worker of miracles, and as such attracted the attention of the superstitious Bedouins. These, seeking to obtain his good graces, brought various descriptions of food, and were pleased to see that he condemned the usual food of these people, and ate only the wild fruits and herbs. They were about to bring him back to his own people, when a sudden calamity gave the position of this man a new turn. An epidemic broke out among the flocks of the Bedouins, who in consequence of this calamity were in a short time reduced to extreme want. These changes in the fortune of the Arabs were assigned to the secret influence of the mysterious man. It was then remembered that he was a Jew, and he at once became the object of bitter hatred. The recluse had meanwhile quitted his solitude and returned to his native place. Here he was declared, chiefly by the Arabs, to be a Messiah, the son of David; and a large number of his converts, under his supernatural power even in the eyes of his fiercest enemies. His Jewish countrymen were in expectation that he would crush the Arabs and lead his own brethren to the Holy Land. His heated imagination accepted the messianic part which the delusion of the people had conferred upon him; and he beheld in the opinion of the multitude an evidence of his high mission. He received everywhere munificent presents, lived in a princely style, was revered by his own people, and dreaded by the Moslems, until some daring Arabs finally waylaid and killed him, and thus proved that he was vulnerable. But superstition is such a powerful arm, that no power is so powerful as that of a Skocher (such as was his name) is not considered as dead by his followers. He appeared after the murder, they say, under another form, in the neighborhood of Sanaa,
MESTREZAT

145

METAL

afterwards among the Venetians. Authors differ widely-
ly as to the date and little is known of his life.
His principal works are the Head of St. Sebastian and a
Madonna and Child, in the Berlin Museum. A Christ
bound to a Pillar is in the Manfrini Gallery at Venice,
and a Dead Christ, with three weeping angels, in the
Imperial Gallery of Vienna. A Crucifixion, with the
Virgin and St. John, is in the Antwerp Museum; and
in the same city are two other important compositions.
These pieces by him are recorded, which were painted for
the two churches of the Dominante, besides several Ma-
donas and sacred subjects for individuals. He died
about 1590. See Vasari, Lives of the Painters, transal, by
Foster (London, 1856, 5 vols. 8vo), ii, 56; Spooner, Bio-
graphic History of the Fine Arts (N. Y. 1866, 2 vols. 8vo),
vols. i., ii.

Mestrezat, Jean, a distinguished French Prot-
estant theologian, was born at Geneva in 1592. He
studied theology at Saumur, and was in 1615 appoint-
pastor at Charenton, near Paris, which position he
held until his death, May 2, 1657. He took part in the
national synod held at Charenton in 1625, and presided
over that of 1631. Among the important events of his
life, we must mention three public conferences he held,
the first with P. Véron, a Jesuit, the great polemic
of his order; the second with P. Regourd, in the presence
of Anne of Austria; and the third with abbot De Retz
(abbot of St. Yves), who refused the tempting feature
of it in his Mémoires. Mestrezat was distinguished
for his inflexible firmness of purpose. It is said that he
once defended the cause of Protestantism in the pres-
ence of the cardinal De Richelieu with so much vivacity
that that prelate could not help remarking, “Here is
the most daring minister in France.” Like his col-
league Daillé (q. v.), he inclined towards the views of
the theologians of Saumur concerning hypothetical uni-
versalism. His most important works are: De la Com-
mission de Jésus Christ au sacrement de l’Eucharistie,
coule les Cardinal Bellarmín et Du Perron (Sedan,
1624, 8vo)—Tracté de l’Ecrivite Soutie, contre le Jesuite
Regourd et le Cardinal du Perron (Gen. 1642, 8vo)—
Tracté de l’Eglise (Gen. 1649, 4to)—Sermons sur
la veue et la naissance de Jésus Christ au monde (Gen.
1659, 8vo)—Sermons sur les chapitres XII et XIII de l’Épi-
tre aux Hébreus (Gen. 1665, 8vo)—Vingt sermons sur
divers textes (Sedan, 1625, 12mo; Gen. 1658, 8vo). See
Mestrezat, Jean Cénet de (Teilhard de Chardin, ix, 130); Bayle, Dict. Hist.; Senebier, Hist. Litt. de
Genève; Haag, La France Protest. vii, 404; André, Études
sur les œuvres de J. Mestrezat (Marsabon 1847); Hoefer,
l, xiv, 443; A. Vinet, Hist. de la Prédication, p. 145. (J. N. P.)

Mestrezat, Philippe, a Reformed theologian,
son of Jean, was born at Geneva. In 1644 he
was a professor of philosophy in his native city; in 1644 he
was the pastor of a church; and in 1649 a professor of theology.
He acquired the reputation of being an original think-
er and good preacher. He died at Geneva in 1690. He
published many dissertations, among which may
be mentioned De Unione Perennis in Christi (Gen.
1682, 4to); De Communicazione in Cese de Cato
fucda (ibid. 1675, 4to); De Tolerantia trium disserta-
mentum in prater-fundamentalibus (1683, 4to); Qua-
estionum philosophico-theologiarum de libero arbitrio De-
us (1665, 4to). See Senebier, Hist. Littér. de Genève;

Metabolism (from μεταβάλλειν, to change) is a
term coined by the German chemist Justus von Liebig
for the doctrine of the Christian fathers Ig-
натius, Justin, and Ireneæus on the Lord’s Supper.
They stand midway between strict transubstantiation and the
merely symbolic view, and hold fast to an objective union of the sensible with the supernatural. See Lieb’s Lehrbuch der Zivilrechte.

Magnetism is a synonym of metaphysics (q. v.) (from μαγικός, beyond, and γνώσις, knowledge), because it

transcends common knowledge. This name, of course, might be given to the whole system of philosophy.

Metals are that portion of the earth's crust which is not covered by sea water, although the various metals and operations with them are frequently referred to. The allusions indeed are of such a character as to show that the art of metallurgy was well advanced in those ancient times.

The mountains of Palestine contained metals, nor were they unknown in the region of the Euphrates (Deut. viii, 9); but they do not appear to have understood the art of mining, unless indeed the numerous allusions apparently to mining operations in Job xxxviii are an evidence that these were carried on in the period of the mon-
archy. See MINERVA. They therefore obtained from oth-
ers the precious stones as well as the inferior metals, and
worked them up. They received also metal utensils ready made, or metal in plates (Jer. x, 9), from nei-

boring and distant countries of Asia and Europe. The
Hebrews, in common with other ancient nations, were
acquainted with nearly all the metals known to mod-
ern metallurgy, whether as the products of their own soil or the results of intercourse with foreigners. The
trade in these metals was chiefly in the hands of the
Phoenicians (Ezek. xxvii, 7), who obtained them from
their colonies, principally those in Spain (Jer. x, 9; Ezek. xxvii, 12). Some also came from Arabia (Ezek.
xxvii, 19), and there is an apparition from the country of the
caucasus (Ezek. xxvii, 13).

I. One of the earliest geographical definitions is the
one describing the country of Havilah as the land
which abounded in gold, and the gold of which was
good (Gen. ii, 11, 12). The first artist in metals was a
Caineite, Tubal-cain, the son of Lamech, the forger or
sharpener of every instrument of copper (A. V. "brass") and
iron (Gen. iv, 22). "Abraham was very rich in cattle, in
silver, and in gold" (Gen. xiii, 2); silver, as will be
showed hereafter, being the medium of commerce, while
86 gold existed in the shape of ornaments during the
patrimonial society of a great many of the western
nations of Greece. Silver vessels and ornaments of
jewelry. As all the accounts, received from sources so various, cannot be founded on exag-

geration, we may rest assured that the precious metals
were in those ancient times obtained abundantly from
mines—gold from Africa, India, and perhaps even then from North America—and silver, principally from Spain.
The first mentioned among the spoils of the Mid-
ianites which were taken when Balaam was slain
(Numb. xxxi, 22), and lead is used to heighten the im-

agery of Moses's triumphal song (Exod. xvi, 10).

Whether the ancient Hebrews were acquainted with steel properly so called, is uncertain; the word is ren-
dered in the A. V. (2 Sam. xxii, 35; Job xx, 24; Psa.
xxviii, 34; Jer. xv, 12) are in all other passages trans-
lated brass, and would be more correctly copper. The
“northern iron" of Jer. xv, 12 is believed by commenta-
tors to be iron hardened and tempered by some pecu-
lar process, so as more nearly to correspond to what we

call steel (q. v.); and the "flaming torches" of Nah. ii,
3 are probably the flaming steel scythes of the war-
chariots which should come against Nineveh.

Besides the simple metals, it is supposed that the
Hebrews used the mixture of copper and tin known as
bronze (q. v.). The symbol of the serpent on Moses's
staff mentioned as in any way manufactured, bronze is to be
understood as the metal indicated. But with regard to the
chasdaim (A. V. "amber") of Ezek. i, 4, 27; viii, 2,
rendered by the Sept. ἑλέβρας, and the Vulg. electrum,
by which our translators were misled, there is consid-
erable difficulty. Whatever be the meaning of chasdaim
for which no satisfactory etymology has been proposed,
there can be but little doubt that by σιλερος the Septuagint translators intended, not the fossil resin known by that name in the Hebraic tongue; but the metal so called, which consisted of a mixture of four parts of gold with one of silver, described by Pliny (xxxiii, 23) as more brilliant than silver by lamp-light. There is the same difficulty attending the γαλαθαίθρον (Rev. i. 15; ii. 18; A.V. "fine brass"), which has been referred to the brass alloyed with all the metals contained in theNeededmetal, but which is explained by Suidas as a kind of electron more precious than gold. That it was a mixed metal of great brilliancy is extremely probable, but it has hitherto been impossible to identify it. Whether it was the same as that precious compound known among the ancients as Corinthus bronze, it is uncertain, and it is only likely that in later times the Jews possessed splendid vessels of the costly compound known by that name. Indeed, this is distinctly affirmed by Josephus (L. J. p. 18). See Brass.

In addition to the metals actually mentioned in the Bible, it has been supposed that mercury is alluded to in Numb. xxxvi, 23 as "the water of separation," being "looked upon as the mother by which all the metals were fructified, purified, and brought forth," and on this account kept secret, and only mysteriously hinted at (Napier, Metal of the Bible, Intro. p. 6). Mr. Napier adds, "there is not the slightest foundation for this supposition." With the exception of iron, gold is the most widely diffused of all metals. Almost every country in the world has in its turn yielded a certain supply; and as it is found most frequently in alluvial soil, among the debris of rock-wash and down the torrents, it was known at a very early period, and was procured with little difficulty. The existence of gold and the prevalence of gold ornaments in early times are no proof of a high state of civilization, but rather the reverse. Gold was undoubtedly used before the art of working iron or copper was discovered. We have no indications of gold smelting in ancient Babylonia or Egypt, and the countries of the East obtained their principal supply from the south of Arabia, and the commerce of the Persian Gulf. The ships of Himark, king of Tyre, brought it for Solomon (1 Kings ix, 11; x, 11), and at a later period, when the Hebrew monarch had equipped a fleet and manned it with Tyrian sailors, the chief of their freight was the gold of Ophir (1 Kings ix, 27, 28). It was brought thence in the ships of Tarshish (1 Kings xxii, 48), the Indians of the ancient world; and Parvaim (2 Chron. iii, 6), Ramah (Ezek. xxvii, 22), Sheba (1 Kings x, 10; Psa. lxviii, 15; Isa. ix, 6; Ezek. xxvii, 22), and Uphaz (Jer. x, 9), were other sources. The Greeks of Palaestina (Gen. xxxii, 16), and his was probably brought in the form of ingots (Josah, vii, 21; A.V. "wedge," lit. "tongue"), and was rapidly converted into articles of ornament and use. Ear-rings, or rather nose-rings, were made of it—those given to Rebecca were half a shekel (1 oz.) in weight (Gen. xxiv, 22)—bracelets (Gen. xxiv, 22), chains (Gen. xi, 42), signets (Exod. xxx, 22), bullae, or spherical ornaments suspended from the neck (Exod. xxx, 22), and chains for the legs (Numb. xxxi, 50; comp. Isa. iii, 18; Pliny, xiii, 12). It was used in embroidery (Exod. xxxix, 5; 2 Sam. i, 24; Pliny, viii, 74); the decorations and furniture of the Tabernacle were enriched with the gold of the ornaments which the Hebrews willingly offered (Exod. xxxi-xvi); the same precious metal was lavished upon the Temple (1 Kings vii, vii); Solomon's throne was overlaid with gold (1 Kings x, 18), his drinking-cups and the vessels of the house of the forest of Lebanon were of pure gold (1 Kings vii, 40), and the "corners and the posts of the temple as presents of gold and silver (1 Kings x, 25).

So plentiful indeed was the supply of the precious metals during his reign that silver was esteemed of little worth (1 Kings x, 21, 27). Gold and silver were devoted to the fashioning of idolatrous images (Exod. xx, 29; xxxii, 4; Deut. xxiv, 17; 1 Kings xiii, 19). The crown on the head of Maniam (A.V. "their king"),

the idol of the Ammonites at Rabbah, weighed a talent of gold, that is, 120 lbs. troy, a weight so great that it was called the weight of David among the ordinances and insignia of royalty (2 Sam. xii, 30). The great abundance of gold in early times is indicated by its entering into the composition of every article of ornament and almost all of domestic use. Among the spoil of the Midianites taken by the Israelites, in their bloodless victory over the Midianites and other tribes, we learn (Num. xxxi, 26) that the spoil consisted of gold vessels, to the amount of 16,750 shekels in gold (Numb. xxxi, 28-45), equal in value to more than $15,000. 1700 shekels of gold (worth more than $15,000) in nose-jewels (A.V. "ear-rings") alone were taken by Gideon's army from the slain Midianites (Judg. viii, 26).

These numbers, though large, are not incommodiously high, at least, when we consider that the country of the Midianites was at that time rich in gold streams, which have since been exhausted, and that, like the Malays of the present day and the Peruvians of the time of Pizarro, they carried most of their wealth about them. But the amount of treasure accumulated by David from spoils taken in war is so enormous that we are tempted to conclude the numbers exaggerated. From the gold shields of Hadadezer's army of Syrians and other sources he had collected, according to the chronicler (1 Chron. xxii, 14), 100,000 talents of gold, and 1,000,000 talents of silver. Some idea of the largeness of this sum may be formed by considering that in 1855 the total amount of gold in use in the world was calculated to be about $4,100,000,000. Undoubtedly the quantity of the precious metals possessed by the Israelites might be greater in consequence of their commercial intercourse with the Phenicians, who were masters of the seas, but in the time of David was in a state of transition for political existence, surrounded by powerful enemies, and without the leisure necessary for developing their commercial capabilities. The numbers given by Josephus (Ant. vii, 14, 2) are only one tenth of those in the text, but the sum, even when thus reduced, is still enormous. But though gold was thus common, silver appears to have been the ordinary medium of commerce. The first commercial transaction of which we possess the details was the purchase of Ephron's field by Abraham for 400 shekels of silver (Gen. xxiii, 16); slaves were bought with silver (Gen. xvi, 12); silver was the money paid by Abimelech to the shepherds for his protection (Gen. xxxv, 19); and a sheep was sold to the Ishmaelites for twenty pieces of silver (Gen. xxxvii, 28); and generally in the Old Testament, "money" in the A. V. is literally silver. The first payment in gold is mentioned in 1 Chron. xxxi, 25, where David buys the threshing-floor of Ornan, or Araunah, the Jebusite, for 600 shekels of gold by weight." But in the parallel narrative of the transaction in 2 Sam. xxiv, 24, the price paid for the threshing-floor and the oxen is fifty shekels of silver. An attempt has been made by Keil to reconcile these two passages, by supposing that in the former the purchaser referred to was that of the entire hill on which the threshing-floor stood, and in the latter that of the threshing-floor itself. But the close resemblance between the two narratives renders it difficult to accept this explanation, and to imagine that two different circumstances are described. That there is a discrepancy between the numbers in 2 Sam. xxiv, 24, and 1 Chron. xxxi, 25, is impossible to avoid the conclusion that the present case is but another instance of the same kind. With this one exception there is no case in the O. T. in which gold is alluded to as a medium of commerce; the Hebrew coinage may have been partly gold, but we have no proof of it. See Golosh.

Silver was brought into Palestine in the form of
plates from Tarshish, with gold and ivory (1 Kings x, 22; 2 Chron. ix, 21; Jer. x, 9). The accumulation of wealth in the gold trade was so great that it was "little esteemed: " the king made silver to be in Jerusalem as stones" (1 Kings x, 21, 27). With the treasures which were brought out of Egypt, not only the ornaments, but the ordinary metal-work of the Tabernacle was made. Silver was employed for the sockets of the boards (Exod. xxvi, 19; xxxvi, 34), and for the hooks of the pillars and their fillets (Exod. xxviii, 13). The capitals of the pillars were overlaid with it (Exod. xxxviii, 17); the chargers and bowls offered by the princes at the dedication of the Tabernacle (Numb. vii, 15, etc.), the trumpets for marshalling the host (Num. x, 2), and some of the candlesticks and tables for the Tabernacle (Exod. xxv, 29). Silver was also employed for the setting of gold ornaments (Prov. xxv, 11, and other decorations (Cant. i, 11), and for the pillars of Solomon's gorgeous chariot or palanquin (Cant. iii, 10). See SILVER.

From a comparison of the different amounts of gold and silver collected by David, it appears that the proportion of the former to the latter was 1 to 9 nearly. Three hundred talents of silver and thirty talents of gold were demanded of Hezekiah by Sennacherib (2 Kings xviii, 14); but later, when Pharaoh-nechoh took Jehohaz prisoner, he imposed upon the land a tribute of 100 talents of silver, and only five talents of gold (2 Kings xxiii, 33). In the difference in the proportions of gold to silver in these two cases is very remarkable, and does not appear to have been explained. See MONEY. Brass, or more properly copper, was a native product of Palestine, "a land whose stones are iron, and out of whose hills thou mayest dig copper" (Deut. viii, 9; Job xvii, 5). It was so plentiful in the days of Solomon that the quantity employed in the Temple could not be estimated, it was so great (1 Kings vii, 47). Much of the copper which David had prepared for this work was taken from the Syrians after the defeat of Hadadezer (2 Sam. viii, 8), and more was presented to Toi, king of Hamath. The market of Tyre was supplied with ves- 

ets of the same metal by the merchants of Javan, Tubal, and Meshech (Ezek. xxvii, 13). There is strong reason to believe that brass, a mixture of copper and zinc, was unknown to the ancients. To the latter metal no allu- 

sion is found. But tin was well known, and from the district which supplied the tough and brittle plate or sheet so called as to render it fit for hammering, it is probable that the mode of decocitizing copper by the admixture of small quantities of tin had been early discovered. "We are inclined to think," says Mr. Napier, "that Moses used no copper vessels for domestic purposes, but bronze, the use of which was objected to. But, not being so subject to tarnish, takes on a finer polish, it was often used to much more easily melted and cast, it probably was more extensively used than copper alone. These practical considerations, and the fact that almost all the antique castings and other articles in metal which are preserved from these ancient times are composed of bronze, prove in our opinion that the word "brass" occurs in Scripture, except where it refers to an ore, such as Job xxxviii, 2 and Deut. viii, 9, it should be translated "bronze" (Metals of the Bible, p. 66). Arms (2 Sam. xxii, 16; Job xx, 24; Psa. xxviii, 84) and armor (1 Sam. xvii, 5, 39) were made of this metal, which was capable of being so wrought as to admit of a keen and hard edge. The Egyptians employed it in cutting the hardest granu- te. The Mexicans, before the discovery of iron, "found a substitute in an alloy of tin and copper; and with tools made of this bronze they could cut not only metals, but with the aid of dilute acid, the hardest substances, as basalt, porphyry, amethyst, and emerald" (Prescott, Comp. of Mexico, ch. v). The great skill attained by the Egyptians in working metals at a very early period shows light upon the remarkable facility with which the Israelites, during their wanderings in the desert, elaborated the works of art connected with the structure of the Tabernacle, for which great acquaintance with metals was requisite. In the troublous times which followed, when war was introduced, the people are said to have learned this knowledge, which seems to have been lost, for when the Temple was built the metal-workers employed were Phoenicians. See COPPER.

Iron, like copper, was found in the hills of Palestine. The "iron mountain" in the trans-Jordanic region is described by Josephus (War, iv, 8, 2), and was remarked for producing a particular kind of point (Mishnah, Sева; ed. Dacha, p. 182). Iron mines are still worked by the inhabitants of Kefti Höchü in the S. of the valley Zarahni; smelting-works are found at Shemuster, three hours W. of Baalbek, and others in the oak-woods at Mashek (Bitter, Erdkunde, xvii, 73, 201); but the method of working and the utmost points employed were like those in the old Samothracians, and the iron so obtained is chiefly used for horse-shoes. See IONS.

Tin and lead were both known at a very early period, though there is no distinct trace of them in Palestine. The former was among the spoils of the Midianites (Numb. xxxii, 22), who might have obtained it in their intercourse with the Phoenician merchants (comp. Gen. xxxvii, 25, 36), who themselves procured it from Tarshish (Ezek. xxvii, 12) and the tin countries of the West. The allusions to it in the Old Testament principally point to its admixture with the ores of the precious metals (Isa. i, 25; Ezek. xxii, 18, 20). It must have occurred in the formation of lead, that tin or copper bowls and dishes in the British Museum are found to contain one part of tin to ten of copper. "The tin was probably obtained from Phoenicia, and consequently that used in the bronzes in the British Museum may actually have been exported, nearly three thousand years ago, from the British Isles" (Layard, Nin. and Bab, p. 191). See LEAD; TIN.

Antimony (2 Kings ix, 30; Jer. iv, 30; A.V. "painting", in the form of powder, was used by the Hebrew women, like the kohl of the Arabs, for coloring their eye- lids and eyebrows. See PAINT.

III. As above stated, the invention of the metalurgical arts is in Scripture ascribed to Tubal-cain (Gen. iv, 22). In later times the manufacture of useful utensils and implements in metals seems to have been carried on to a considerable extent among the Israelites, if we may judge from the frequent allusions to them by the poets and prophets. But it does not appear that the craft was ever so elaborate and branchy of this great art, they made much, if any, progress during the flourishing times of their commonwealth; and it will be remembered that Solomon was obliged to obtain assistance from the Phoe- nicians in executing the metal work of the Temple (1 Kings vii, 15), Among the ancient Egyptians the opera- tions of the metal worker were highly esteemed, as the delineations extant upon the monuments still testi- fy (see Wilkinson, ii, 138 sq.). The Assyrians like- wise had made great proficiency in the same art (see Layard's Nineveh, ii, 315 sq.; Nin. and Bab, p. 191 sq.).

The Hebrew workers in iron, and especially such as made arms, were frequently carried away by the differ- ent conquerors of the Israelites (1 Sam. xiii, 19; 2 Kings xxiv, 14, 15; Jer. xxxvii, 1; xxix, 2); which is one cir- cumstance among others to show the high estimation in which this branch of handicraft was anciently held.

The following are the metallic manufactures named in the Old Testament: Of iron, axes (Deut. v, 5-7; 2 Kings vi, 5); saws (2 Sam. xii, 31); stone-cutters' tools (Deut. xxvii, 5); sauce-pans (Ezek. iv, 8); bolts, chains, knives, etc., but especially weapons of war (1 Sam. xvii, 7; 1 Mac. vi, 35). Redbeads even were sometimes made of iron (Deut. iii, 11); "chariots of iron," i.e., chariots drawn by iron, are noticed frequently. Of cop- per we find vessels of all kinds (Lev. vi, 28; Num. xvii, 39; 2 Chron. iv, 16; Ezek. viii, 27); and also weapons of war, principally helmets, cuirasses, shields, spears (1 Sam. xvii, 5; vi, 38; 2 Sam. xii, 16); also chains (Judg. xvi, 21); and even mirrors (Exod. xxxix, 6). Gold and
METALLURY

silver furnished articles of ornament, also vessels, such as cups, goblets, etc. The holy vessels of the Temple were made of gold (Ezra vii, 14). Idolaters and idols and other sacred objects of silver (Exod. xx, 20; Isa. ii, 20; Acts xvii, 9; xix, 24). Lead is mentioned as being used for weights, and for plum-lines in measuring (Amos viii, 7; Zech. v, 8). Some of the tools of work-ers in metal are also mentioned: סֵפִゲーム, pu'am, the anvil (Isa. xii, 7); מֵקָרָה, makokah; the hammer for car-penters (Isa. xlvii, 12); מַפִּתְשָׂה, pattish; the stone-ham-mer (Isa. xlii, 7); מָכָמָה, mac kham; the pickers; מִנְפָּעָה, minnapah; the bellows (Jer. vi, 29); מַעֲשֶׂרָה, maaseerah; the crucible (Prov. xvii, 6); מִשְׁלָק, miskih, the melting-furnace (Exek. xxii, 18). See each of these articles for a more chemicall order.

There are also allusions to various operations connected with the preparation of metals. (1.) The smelting of metal was not only for the purpose of rendering it fluid, but in order to separate and purify the richer metal when mixed with baser minerals, as silver from lead, etc. (Isa. i, 25; comp. Plny, Hist. Nat. xxxvii, 47; Exek. xxi, 18-20). The process separated by this process is called סֵפִゲーム, sippah, although this word also applies to metal not yet purified from its dross. For the actual or chemical separation other materials were mixed in the smelting, such as alkaline salts, יְהֹוָה, יְהֹוָה, יְהֹוָה, יְהֹוָה, יְהֹוָה, תָּבָא, bôr (Isa. i, 25), and lead (Jer. vi, 29; comp. Plny, Hist. Nat. xxxviii, 31). (2.) The casting of images (Exod. xxi, 12; xxvii, 20; Isa. xl, 19), which are always of gold, silver, or copper. The casting of iron is not mentioned, and was perhaps unknown to the ancients (Hausmann, in Comment. Soci. Gatt. iv, 58 sqq.; Miller, Archäol. p. 581). The hammering of metal, and making it into broad sheets (Num. xvi, 58; Isa. xlvii, 12; Jer. x). (4.) Soldering and welding parts of metal together (Isa. xlii, 7). (5.) Smoothing and polishing metals (1 Kings vii, 45). (6.)Overlaying with plates of gold, and silver, and copper (Exod. xxvii, 11; 1 Kings vii, 20; Deut. v, 21; comp. Isa. xl, 10). The execution of these different metallurgical operations appears to have formed three distinct branches of handicraft before the exile; for we read of the blacksmith, by the name of the "worker in iron" יְבָא מִשְׁמַי, yeb a mishmay, Isa. xlvii, 12; the brass-founder (1 Kings vii, 14); and the gold and silver smith (Judg. xviii, 4; Mal. iii, 2). See Macm. Handb. Belier. Archäol. ii, 221 sqq.; De Wette, Archäol. p. 130 sqq.; Faber, Archäol. i, 384 sqq.; Link, Urwelt, i, 435 sqq.; Winer, Real. v. v. Metalle. See further under Mine.

Metallurgy. See Metal; Mine.

Metamorphoses (Gr. μεταμορφώσεις, change of form) denoted, in the mythology of the ancients, those transformations of human beings into beasts, stones, trees, and even into fire, water, etc., in fables of which that mythology abounded. The origin and significance of such fables it is often impossible to determine. Some of them probably originated in observation of the wonderful transformations of nature; some in a misappre-hension of the metaphors employed by the elder poets; and finally, many such fables are mere superstitions or marvellous. The wild imagination of the Orientals filled their mythologies with metamorphoses in the greatest number; and the classic mythology approaches to them in this respect. The medieval days of Eu-rope, especially of Germany, gave forth the fairy tales and other fables of a wonderfully rich in meta-morphoses. See Mythology.

Metaphor (Gr. μεταφορά, a transference), a figure of speech by means of which one thing is put for another which it only resembles. It differs from other comparisons, e. g. simile, etc., in consisting of a single word. Thus the Psalmist speaks of God's law as being "a light to his feet and a lamp to his path." The meta-phor is therefore a kind of comparison, in which the speaker or writer, casting aside the circumference of the ordinary similitude, seeks to attain his end at once by boldly identifying his illustration with the thing illustrated. It is thus of necessity, when well conceived and expressed, graphic and striking in the highest degree, and has been a favorite figure with poets and orators, and the makers of proverbs, in all ages. Even in ordinary language the meanings of words are in great part metaphorical, so that we speak of an acute intellec-tual or a bold promontory.

Metaphrases, Simon, a Byzantine writer of the Middle Ages, acquired great reputation by his compilation of the lives of the many saints and martyrs. Very lit-tle is known of his individual history. It appears, how-ever, to be proved that he lived at Constantinople, and there built an official position. The name Metaphrases was given him on account of the manner in which he commented and paraphrased (ἰεροφαίρης) the mate-rials for his biographical work. The greatest variety of opinion prevails as to the time when he lived: Blon-del, Vossius, Cellier, Baronius, Siemir, Vokèrra, Al-lias, Cave, Oudin, Fabricius, all give different dates, varying from the 9th to the 16th century. It even ap-pears uncertain whether there may not have existed two men of that name at different times. The more ancient date is that of Leo Alliuss, who in his work De Simeonis Scriptiis (Paris. 1664, p. 40 sqq.) enters into deep researches concerning Metaphrases, upon which much of which is adopted by Cave (Histor. Litter., [Lond. 1668], p. 578) and Fabricius (Bibl. Gr. vi, 509; in ed. Harl. xli, 180 sqq.). His conclusions were opposed by Oudin in his Dissertatio de etate et scriptiis Sim. Met. (Comment. li, 1600 sqq.). From various passages in works undoubtedly written by Metaphrases, it appears to be pretty well established that he lived during the reign of the emperor Leo VI (Philosopher), and was sent as ambassador to the Arabs of Crete in 902, and in 904 to those who had conquered Thessalonica, whom he persuaded not to de-stroy that city, as they originally intended. It seems almost certain that both these statements, and also the account of the emperor Constantine VII (Phorogogenitus), his principal works are: Vita Sanctorum, undertaken, it is said, at the suggestion of the emperor Constantine. This assertion, however, has often been contradicted. The work is not original; Metaphrases only arranged and paraphrased, in very good style for the times, vari-ous biographies which existed previously in the librar-ies of churches and convents. He omitted many de-tails which he considered useless or unproved, and sub-stituted others which he looked upon as more important or authentic. He has been accused of having by these modifications obscured the simplicity of the ancienst biographies. His own work has undergone many altera-tions and additions, as well as curtailment, so that, ac-cording to Fabricius, out of 589 biographies generally ascribed to him, only 122 are undoubtedly genuine. Cave, on the other hand, maintains that the greater part of the biographies which exist in the vearious libraries of Europe are the work of Meta-phrases. Agapius, a monk, gave an extract of them under the title Liber dictus Parachitus, seu illustrum sanctorum vita deumptae ex Simeone Metaphraste (Ven-ice, 1541, 4to). The most important among these biogra-phies were published in 1693 in Greek and Latin, in the Bol-londists' Acta Sanctorum—Annales, commencing with the emperor Leo the Athenian (818-820), and ending with Romanus, the son of Constantine Phorogogenitus (959-963). It is evident that Metaphrases, who was already an ambassador in 902, could not have been the historiographer who wrote the biographies which occurred while he was ambassador. Some critics consequently consider the later part of the Annales to have been written by another Metaphrases, while Baronius thinks that the whole work was com-pared by a writer living in the 12th century. These Annales, which are of great historical value, were pub-lished with a Latin translation by Combé in his Hist. Byzantinae Scriptores post Theophanem, of which the
The great authority which Aristotle enjoyed in the Middle Ages, and the little actual knowledge respecting the laws of existence, induced his followers to form from his philosophical fragments a system, which served as a canon for the philosophy of the time. The oldest commentators of Aristotle had directed their endeavors to this point; but metaphysics, as an independent science, was developed by the scholars of the Middle Ages (Thomas Aquinas, Duns Scotus, William Occam, and others). In the 17th century, however, the metaphysics of the scholmen was undermined by the introduction of a critical spirit of investigation. Lord Bacon, More, Hobbes, appeared in England; Th. Campagna, in Italy; Des Cartes, in France, as adversaries of the Aristotelian school-philosophy. For details, see PHILOSOPHY.

As regards the origin of the name, the most recent discussions appear, on the whole, to confirm the commonly-received opinion, according to which the term METAPHYSICS, though originally employed to designate a treatise of Aristotle, was probably unknown to that philosopher himself. It is true that the oldest and best of the extant commentators on Aristotle refers the inscription of the treatise to the Stagirite (Alexander, in Arist. Meth. p. 127, ed. Bonitz); but in the extant writings of Aristotle himself, though the work and its subject are constantly referred to, under the titles of the First Philosophy, or Theology, or Wisdom (Asclepius, apud Brandis Scholia, p. 519, b. 19; Bonitz, in Arist. Metaph. p. 5), no authority is found for the latter and more popular appellation. On the whole, the weight of evidence appears to be in favor of the supposition which attributes the inscription ἡ μετὰ τὰ γενέσθαι to Andronicus Rhodius, the first editor of Aristotle's collected works. The title, as given to the writings on the first philosophy, probably indicates only their place in the collection, as coming after the physical treatises of the author (comp. Bonitz ad Arist. Metaph. p. 3). The term METAPHYSICS, however, is much more limited, compared to that of Postilla; both names signifying nothing more than the fact of something else having preceded. Shakespeare used metaphysical as synonymous with supernatural.

"Fate and metaphysical ird doth seem
To have thee crowned."—Macbeth, Act I, Scene 3.

Clemens Alexandrinus (Strom. i) considered metaphysical as equivalent to supernatural; and is supported by the Greek commentator Philoponus. But if μετὰ be interpreted, as it may, to mean along with, then metaphysics, or metaphysical philosophy, will be that philosophy which should be placed between physics and the vast expanse of the department itself known as philosophy. Of the above two branches of philosophy or metaphysics, psychology (q. v.) investigates the faculties and operations of the human mind, while ontology (q. v.) seeks to develop the laws and nature of real existence. The former deals with the phenomena of consciousness, the constitution of the mind, the laws of thought; the latter with the essential characteristics of being per se, the constitution of the universe, the laws of things. The former is descriptive, and the latter scientific metaphysics. "Metaphysics," says Sir William Hamilton (Lect. vii, p. 80), "in whatever latitude the term be taken, is a science, or complement of sciences, exclusively occupied with mind. Now the philosophy of mind—psychology or metaphysics, in the widest signification of the terms—is threefold, for the object it immediately proposes for consideration may be either, 1. Physical parts of the mind; 2. Pure reason or, 3. Inference and Results. . . . The whole of philosophy is the answer to these three questions: 1. What are the facts or phenomena to be observed? 2. What are the laws which regulate these facts, or under which these phenomena appear? 3. What are the real results, not immediately manifested, which these facts or phenomena warrant us in drawing?"
would physics be the first and the only philosophy; but if this be an immaterial and unmoved essence which is the ground of all being, then must there be also an antecedent, and, because it is antecedent, a universal philosophy.

The first ground of all being is God, whence Aristotle occasionally gives to the first philosophy the name of theology.

"The aim of metaphysics," says D'Alembert (Diction, iv, 1683), "is to examine in genera-

lities the ideas, and show that they come from sensations." This is the ideology of Condillac and De Trace.

"Metaphysics," says Stewart (Disert. pt. ii, p. 475), "was a word formerly appropriated to the ontol-

ogy and pathomatology of the schools, but now under-
stood as equally applicable to all those inquiries which have to do with the various branches of human knowledge to their first principles in the constitu-

tion of the human mind; and in the Preface to the same Dissertation he says that by metaphysics he under-

stands the "inductive philosophy of the human mind.” For literature, see PHILOSOPHY. (J. H. W.)

Metastasio, Pietro Bonaventura, an eminent Italian poet, deserves our notice as the author of several sacred dramas, oratorios, etc. He was born at Rome in 1678, and was originally named TRAFASSI. He mani-

fested at an early age extraordinary talents for improv-

isation on any subject. Having attracted the notice of the celebrated jurist Gravina, he was adopted by him, and his name was changed to Metastasio (a "changing"), in allusion to his adoption. His benefactor died in 1716, leaving Metastasio a legacy of £1000. As a boy he devoted himself principally to literary pursuits and the publica-

tion of his different poetical productions. In 1729 he was invited to Vienna to become poet laureate, and flourished at the Austrian capital until his death in 1782. The genius of Metastasio is eulogised by Voltaire and La Harpe, the former of whom compares him among his scenes to the most sublime of the Greek poets. Rou-

seau, in his Nouvelle Heloise, pronounces him "the only poet of the heart, the only genius who can move by the charm of poetic and musical harmony;" and Schlegel observes that his purity of diction, grace, and delicacy have rendered him, in the eyes of his countrymen, a classic author—the Racine of Italy. Of Metastasio's seven sacred dramas, or oratorios, La Passione, La Mort de d'Abel, and Isacco, are best known; but all of them, Calsabigi justly observes, are as perfect as this kind of composition will allow. See Burney, Memoire de Metas-

tasio, (Paris, 1808); and METASTASIO (1782); Heiler, Ueber P. Metastasio und seine Werke (1780); Altanesi, Vita di P. Metastasio (1787); Lives of the Italian Poets, by the Rev. Henry Stebbing (London, 1881). (J. H. W.)

Metcalfe, William, M.D., a prominent minister of the Bible-Christian Church, was born in the parish of Orton, Worcestershire, England, March 11, 1788. He became a disciple of the Rev. Dr. Cowherd, a noted minister of the Swedish Christian Church, who in 1809 organized the Bible-Christian Church. Metcalfe in 1811 was ordained as a minister of this Church by Dr. Cowherd, and in 1817, with a small company of his fellow-believers, immigrated to Philadelphia, where he continued his ministerial labors till the day of his death in 1862. According to his biographer, the specific work of Mr. Metcalfe's life was "that of sowing the seeds and cultivating the principles of temperance and vegetarian-

ism, and permanently establishing the Bible-Christian Church in this country." The Bible-Christian Church in England founded its doctrinal basis mainly upon the writings of John and James, and its leaders were men of two subjects, however, which have never been generally received in the New Jerusalem Church, as the Swed-

eborgians prefer to call themselves. It inculcated the duty of total abstinence from all intoxicating drinks as a bev-

erage, and from the use of animal food. These two re-

quirements were made conditions of Church membership, more particularly by Mr. Metcalfe. He was one

of the original members of the American "Vegetarian Society," and was one of its most earnest supporters. On the death of Dr. William A. Aleott, the first presi-

dent of the society, in 1859, Dr. Metcalfe was elected his successor. He rendered efficient service also in the cause of temperance, and may be termed one of the pio-

neers of the movement in this country.

As a preacher, as is told by his biographer, "he was not what is called an orator, but his delivery was easy, plain, distin-

ct, and impressive. His action was moderate and graceful. He was never boisterous, never sensational, and seldom allowed his imagination to display its pow-

ers in the pulpit. His sermons were suggestive and in-

structive, always including some teaching on practical, everyday life. He wrote all his sermons and all his fugi-

tions of Bible truths, especially availing himself of the lights of modern science and of ancient history in the elucidation of his subject." Seventeen of his Discourses were lately published by his son Joseph, under the title Out of the Clouds into the Light (Phila. 1873, 12mo).

See New Jersey Messengar, Oct. 20, 1872; Memoir of the Rev. William Metcalfe, M.D., by his son Joseph (Phila. 1866, 12mo).

Metel (Lat. Metellus), HUGUO, a French canon, was born at Toul, in Lorraine, about 1080. He was the offspring of wealthy parents. While yet a child he lost his father, and was indebted to the charity of his mother for his education. He studied theology at Laon under the celebrated teacher Anselm, and embraced Christianitv at Toul about 1118, when he was entered a member of the regular canons in the abbey of Saint-

Leon. He remained in that institution until his death, which occurred near 1157. Fifty-five noted epistles bear his authorship. The first of them is addressed to St. Bernard, whom Hugues Metel calls a "clarissima lampas," while to himself he attributes the humble qualifications of quendam superius, nunc cruici Christi bula. See Calmet, Histoire de la Lorraine, 1, xxii; Forti d'Urbain, Histoire et Oeuvres de Hugues Metel (Paris, 1804).

Metempsychosis. See TRANSMIGRATION.

Merteus (Mirtjque v.b. Barmpoq, Vulg. omits), given (1 Esdr. v.17) among those whose "sons" returned from the captivity with Zerubbabel; but the Heb. lists (Ezra ii; Neh. vii) have no corresponding name.

Mete-yard (πηνηθ, mith'dh), Lev. xix, 35; measure simply, as elsewhere rendered.

Meth, Ezechriel, a noted leader of a mystic sect who at the beginning of the 17th century created great excitement in Thrulia. Meth was practicing medi-

cine at Langensalza, Thrulia, when his father, an uncle, a merchant in the same town, who had become an enthusiastic mystic, presented him with his peculiar conceptions of Christian fellowship and responsibility. Meth was readily won in favor of the heretical doctrines, and became one of the leaders of a sect which soon became numerous. Afterwards moved to Leip-

sic, where he died in 1640. Stiefel and Meth found their first followers among their own relatives and friends at Langensalza and Erfurt. They also gained access to the house of count Hans Ludwig de Gleichen, whose wife, the countess Juliana, became so ensnared in their mystic doctrines that she was finally excluded from the Lord's table. But matters did not rest here. She imagi-

ned she was a second Virgin Mary, and was to give birth to the new Messiah. She therefore separated her-

self from the count, and to the day of her death (July 28, 1638) remained steadfast in her hopes that she would bring forth the Messiah. The authorities tried in va-

rious ways to bring these enthusiasts to their senses, but kindness as well as punishment proved in vain, until at last Stiefel died—Stiefel who had been considered im-

mortal by Meth and all his followers. A change took place in Stiefel's mind, and he is said to have died a truly converted Christian.

The doctrines of Stiefel and Meth were for the most
Methodism, as a distinctive form of Church life and polity, dates from the revival of religion in England under the labors of the brothers Wesley and of Whitefield. It has developed into a universal Christian movement.

I. Origin.—In November, 1729, the Wesleys, Whitefield, and their associates—about a dozen young men, students at Oxford University—formed themselves into a society for purposes of mutual moral improvement. They had a sincere desire to please God; and, by diligence, self-denial, and active benevolence, they sought to know and do his will. By instructing the children of the neglected poor, by visiting the sick and the inmates of prisons and almshouses, by a strict observance of the fasts ordained by the Church, and by scrupulous exactness in their attendance upon public worship, they became objects of general notice. Many grave men thought them righteous overmuch, and attempted to dissuade them from an excess of piety; while profane wits treated them with sarcasm and contempt. Nothing could save from ridicule men who in that age and in such a place professed to make religion the great business of life. Hence by their fellow-students they were called in turn, Sacramentarians, Bible-bogots, Bible-trolls, The Golly Club. One, a student of Christ-Church College, with greater reverence than his fellows, and more learning, observed, in reference to their methodical manner of life, that a new sect of Methodists had sprung up, alluding to the ancient school of physicians known by that name. The application obtained currency, and, although the word is still sometimes used reproachfully as expressive of enthusiasm, or undue religious strictness, it has become the acknowledged name of one of the largest and most rapidly increasing evangelical Christian denominations (comp. Tyerman, The Oxford Methodists, N. Y., Harper's, 1875, 8vo).

From this time Methodism may be said to have been established. The first Methodist church in England was built at Kingswood. "Weasley's idea at this time, and for many years afterwards," says Skewes (Hist of the Free Churches of England, p. 383), "was merely to revive the state of religion in the Church; but he knew enough of the condition of society in England, and of human nature, to be aware that unless those who had been brought up under the Established Church of the Gospel met together, and assisted each other in keeping alive the fire which had been lit in their hearts, it must, in many instances, seriously diminish, if not altogether die out." Originally, therefore, it was no part of the design of Wesley and his associates to found a new religious sect. He considered them all members of the Church of England—zealous for her welfare, and loyal to her legitimate authorities. For a full discussion of this point, see the article Wesley. They were all too nacions of her order, and great ticklers for what they deemed decency and decorum. One of them tells us, "I should have been glad if the saving of the world had been left to us, even if it had not been done in a church;" and such was the sentiment of John Wesley, when, to his horror, he first heard that his bosom friend, Whitefield, had attempted to preach the Gospel in the open air. This was in the year 1738, on Saturday, the 17th of February. The discourse was addressed to the colliers at Kingswood, near the city of Bristol. "I thought," said Whitefield, "that it might be doing the service of my Creator, who had a mountain for his pulpit, and the heavens for a sounding-board; and who, when his Gospel was rejected by the Jews, sent his servants into the highways and hedges. John Wesley was little disposed to follow his example. Being providentially at Bristol, and a great assembly (estimated at 8000) having come together at a place called Race Green, "I submitted," he says, "to be more vile, and proclaimed in the highways the glad tidings of salvation." This was Wesley's first attempt in England. He had previously preached in the open air while in this country as a missionary to the Indians in Georgia, but he had no intention of resuming the practice in England, till he was stimulated by the example and urgent advice of his friend. His brother Charles was even more opposed to this departure from Church usages, and this appar-ently burst of daring gave him much pain. He had confined himself to the usual labors of the ministry in such pulpits as were opened to him, preaching the Gospel with earnestness and simplicity, more especially in London, where he also devoted much of his time to the felons in Newgate, not a few of whom were brought through his instrumentality to repentance and faith in Christ. Being strenuously urged by Whitefield, he at length consented to make one effort. "I prayed," he says, "and went forth in the name of Jesus Christ. I found near a thousand helpless sinners waiting for the Word in Moorfields. I invited them in my Master's words, as well as name, 'Come unto me, all ye that labor and are heavy laden, and I will give you rest.' The Lord was with me, even me, the meanest of his messengers, according to his promise. . . . My load was gone, and all my doubts and scruples. God shone on my path, and I knew this was his will concerning me." Thenceforth, in various parts of the kingdom, on almost every street in the Gospel in the open air as opportunity was afforded. Immense crowds thronged everywhere to hear the Word, and multitudes were converted from the error of their way. As a consequence of this violation of ecclesiastical order, and more especially because of the earnest and energetic style of the preachers, most of the pulpits of the Established Church were soon closed.
METHODISM

METHODOLOGY

Against them. Many dignitaries of the Church were above measure enraged at this new way, and zealous in opposing it. Some even desired to have it "jurisdiction to this "new doctrine," salvation by faith; and, because of my unorthodox doctrine, I was excluded from one and another church, and at length shut out of all." In many places, too, Wesley and his associates were treated as disturbers of the peace, and subjected to annoyance and persecution. They were reviled, mobbed, beaten, and imprisoned. They bore everything with patience. "Not daring to be silent," says Wesley, "it remained only to preach in the open air; which I did at first not out of choice, but necessity. I have since seen abundant reason to admire the wise providence of God herein, in making a way for myriads of people who never transeared the Church's walls, were likely to hear that Word which they soon found to be the power of God unto salvation."

The result of these labors was not only the conversion of many souls, but the formation of religious societies. The young converts, neglected, and in many instances persecuted, this was the rise of the Methodists, clergy, as shee sheep having no shepherd. They naturally longed for the fellowship of kindred spirits. At their own request, they were united together for mutual comfort and edification. Wesley gives the following account of the origin of what was then called simply "the United Societies." These rules were originally adopted by them and laid before the present day recognised, with two or three very slight alterations, as the General Rules of all branches of the great Methodist family in England, in the United States, and elsewhere:

1. In the latter end of the year 1739 eight or ten persons came to me in London, who appeared to be deeply concerned for sin, and earnestly groaning for redress of their condition. They desired (as did two or three more the next day) that I would meet with them some time the next week, in order, and advise them how to flee from the wrath to come, which they saw continually hanging over their heads. That we might have more leisure for this work, I appointed a day when they might all come together; which, from thenceforward, they did every week, viz. on Thursday in the evening. To these, and as many more as desired to join with them (for their number increased daily), I gave those advice from time to time which I judged most needful for them; and we always concluded our meetings with prayer suitable to their several necessities.

2. The meetings of the United Societies, first in London, and then in other places. Such a society is no other than "a company of men having the form and seeking the substance, united in common counsel together, to receive the word of exhortation, and to watch over one another in love, that they may help each other to a holy conversation." This is printed in all the rules as the rejection of, and according to their respective places of abode. There are about twelve persons in every class; one of whom is always elected the class leader. It is his business.

3. (To see each person in his class once a week, at least, in order.

4. To inquire how their souls prosper;

5. To advise, reprove, comfort, or exhort, as occasion require;

6. To receive what they are willing to give towards the support of the Society;

7. To inform the minister of any that are sick, or of any that are absent from the meetings, and will not be in attendance;

8. To pay to the stewards what they have received of the members in the week preceding; and

9. To show their account of what each person has contributed.

4. There is one only condition previously required or those who desire admission into these societies; viz. a desire to flee from the wrath to come, and be saved from their sins. But whenever it is really fixed in the soul, it will be shown by its fruit. It is therefore expected of all who continue therein that they should continue to evi-

dence their conversion. The rules of the society are:

1. First, by doing no harm, by avoiding evil in every kind; especially that which is most generally practiced.

2. The taking the name of God in vain;

3. Profaning the day of the Lord, either by doing ordinary work on it, or buying or selling on it;

4. Drunkenness; buying or selling spiritual liquors; or drinking them, unless in cases of extreme necessity;

5. Fighting, quarrelling, brawling; brother going to law with brother,or taking counsel for evil, or for gain, or for ra-

iling; the using many words in buying or selling;

6. The buying or selling uncleaned goods.

7. The taking such diversions as cannot be used in the name of the Lord Jesus;

8. The singing those songs or reading those books which do not tend to the knowledge or love of God;

9. Softness, and needless self-indulgence;

10. Laying up treasure upon earth;

11. On the sacrifice of the probability of paying; or taking up goods without a probability of paying for them.

12. The work of all these societies, that they should continue to evidence their desire of salvation.

13. Secondly, by doing good, by being in every kind merciful after their power, as they have opportunity; doing good of every possible sort, and as far as is possible to all others.

14. To their bodies, of the ability that God giveth, by giving food to the hungry, by clothing the naked, by helping or visiting them that are sick or in prison;

15. To their souls, by instructing, reproving, or exhorting all we have any intercourse with; tempting under foot that which is called the doctrine of devils, that we are not to do good, unless our hearts be free to it.

16. To the conversion and preservation of the soul, especially to those that are of the household of faith, or groaning so to be; employing them preferably to others, buying one of another, helping each other so far as we are able, and branch the more, because the world will love its own, and them only.

17. By all possible diligence and frugality, that the Gospel be extended and spread.

18. By running with patience the race that is set before them, denying themselves, and taking up their cross daily; submitting to bear the reproach of Christ; to be as the fifth and sixt and seven the eighth and ninth and tenth, and the eleventh and twelfth, and the thirteenth and fourteenth and fifteenth, and the sixteenth, and all the ordinances of God:

19. The public worship of God;

20. The ministry of the word, either read or expounded;

21. The supper of the Lord;

22. The family and private prayer;

23. Searching the Scriptures; and

24. Fasting or abstinence.

25. The society in general, are all the rules which they should continue to evidence their desire of salvation.

26. Thirdly, by attending upon all the ordinances of God:

27. The public worship of God;

28. The ministry of the word, either read or expounded;

29. The supper of the Lord;

30. The family and private prayer;

31. Searching the Scriptures; and

32. Fasting or abstinence.

33. These are the general rules of our societies: all which we are taught of God to observe, even in his written word, the rule and pattern of faith and practice, both of our faith and practice and all these we know his Spirit writes on every truly awakened heart. If any man can find a fault in them, or that he cannot bear them, let him be made known unto them who watch over the souls of the Lord's flock. If he cannot give them so much, let him give them less. We will admonish him of the error of his ways: we will bear with him for a season. But then, if he repent not, he hath no place among us. We have delivered our own soul."

The "societies" thus formed increased so rapidly that very soon there arose a necessity for additional ministerial service. As the leaders in this wonderful revival of religion had been led providentially into the practice of field-preaching, and into the formation of religious societies, so they were induced in the same manner to accept the assistance of preachers who had not been educated for the ministry, nor ordained to that service. This was at that time regarded by many as the most heinous of their offences. The Wesleys themselves at first were extremely averse to any measure so monstrous an innovation; and the elder brother, when he first heard that a layman had taken a text and preached a sermon, hastened to London to put a stop to the irregularity. The man, Thomas Maxfield by name, had been left in charge of the little flock during the absence of the ordained minister. He had prayed with them, read to them passages of Scripture, attempted an exposition of a verse or two, and found himself preaching almost before he was aware of it. Happily for the interests of the new sect, and happily, too, for the cause of Christ, Wesley was met by his brother before he had time to censure the young preacher, or publicly to denounce this innovation. Mrs.
Wesley, the widow of a stanch minister of the Established Church, had been educated in its doctrines, and she revered its prelatical assumptions. But she had heard the young man preach several times. On the arrival of her son, seeing that his countenance was expressive of dissatisfaction, she inquired the cause. "Thomas, Markwell," he said, "pray in judging, and condemning others, be careful. configurable everywhere with showing their hearers how fallen the Church and its ministers are; we begin everywhere with showing our hearers how fallen they are themselves" (Cook, Life of Wesley, p. 267). "Monday, June 26, and the five following days," says the leader of this church "in conference, I was pleased, and the remonstrating justified her opinion. Wesley recognized the validity of the young man's call; and thereafter it became a set- tled conviction with him, as it is with his followers to this day, that a warrant to preach the Gospel does not of necessity come only through one channel. In process of time, as instances of this kind increased, it became necessary to raise some criticism by which to test those who professed to believe themselves called of God to preach. This was a subject to which John Wesley early turned his attention; and the question, with his answer, continues to the present day to be incorporated among the rules recognized by all Wesleyan Methodists. We say rules, because the regulations of another kind were few years later adopted, as the state of the societies, and the enlarging opportunities of doing good, seemed to require. The first indication of a desire to see a separate establishment was given by John Wesley in 1784, when he ordained Coke (q.v.) bishop of the Methodist Church in America. See METHODIST EPISCOPAL CHURCH. On neither side of the ocean had adherents of Wesley hitherto organized as a Church. They were simply up to this time non-ecclesiastical religious societies, entirely voluntary on the part of the members, and all governed by a common discipline, of which their founder was the author. But a movement had set in, to provide something more organized and lasting. Following this step to provide for the Methodists in America a separate ecclesiastical organization does not clearly reveal whether Wesley changed his mind as to his former relation and that of his adherents within the Anglican rule to the Church of England. Says Dr. Currill, of the Christian Advocate (N.Y., May 26, 1871), "No fact respecting the history of John Wesley is more clearly manifest than that he was always a strenuous supporter of the authority of the Established Church of England. He jealously regarded the exclusive ecclesiastical authority of that Church in all that he did as an evangelist, and seemed always determined that it should be maintained while he was in the world—and understood that he would rule as long as he lived—nothing should be tolerated in his societies at all repugnant to the sole and exclusive ecclesiastical authority of the Established Church. This rule was applied to his societies in America before the Revolution just as strictly as to those in England. But the political separation of America from Great Britain, as it also ended the authority of the English Church in this country, made it lawful, according to his theory of the case, for the Methodist societies in America to become regularly organized churches."

II. The theological doctrines of Wesleyan Methodism are, with perhaps two or three modifications, the same as those which, by common consent, are at present deemed evangelical. The articles of religion drawn up by Wesley for his immediate followers, and substantially adopted by all Methodist bodies since, are but slightly modified from those of the Established Church of England. They were originally prepared for the churches in the States. See ARTICLES, TWENTY-FIVE. The sermons of John Wesley, and his notes on the New Testament, are recognized by his followers in Great Britain and America as the standard of Methodism, and as the basis of their theological creed. The unity of the general and the coequal dignity of the Father, the Son, and the Holy Ghost; the death, resurrection, ascension, and interces-
sion of Jesus Christ; salvation by faith; the sufficiency and divine inspiration of the Holy Scriptures; a final day of judgment, and the eternity of future rewards and punishments, are doctrines held in common with other evangelical branches of the Church of Christ. Maintaining man's total depravity through the fall of Adam, and his utter corruption and impotency to deliver himself by any possible means, or take one step towards his recovery, Methodists hold that this grace is free, extending itself equally, by virtue of the atonement, to all the children of men. Hence they deny the doctrine of special election, with its counterpart, reprobation, as taught in Calvinistic formulations, and maintain, in opposition to those who hold to a limited atonement, that Jesus Christ, "by his oblation of himself once offered, made a full, perfect, and sufficient sacrifice, oblation, and satisfaction for the sins of the whole world." They recognize two sacraments as ordained by Christ—Baptism and the Lord's Supper. Infant children and believing adults have a right to the former; and penitent seekers of salvation, as well as professing Christians, are invited to partake of the latter, both being regarded not only as "badges or tokens of Christian men's profession, but as certain signs of grace and God's good will towards us, by which he doth work invisibly in us, and doth not only quicken us, but strengthen and fit us in faith in him." As to the mode of baptism, so that the ceremony be performed by an authorized minister in the name of the Father, the Son, and the Holy Ghost, it is optional whether the water be applied by sprinkling or pouring, or by the immersion of the candidate; and although kneeling is the usual mode of receiving the elements at the Lord's table, those who prefer may partake of them in a standing or sitting posture. They deny the doctrine usually styled the "persecution of the saints," believing that a true child of God may fall from grace and finally perish; but they hold the doctrine of assurance, in the sense that it is their conviction that the saved are those who "know his own sins forgiven." The Holy Spirit, they teach, bears witness of the fact of present pardon and acceptance; but this is deemed to be the privilege of believers, not the indispensable evidence of regeneration. "It does not follow," says Wesley, "that all who do not know their sins forgiven are children of the devil." Methodism teaches also that it is the privilege of believers in this life to reach that maturity of grace, and that conformity to the divine nature, which cleanses the heart from sin, and fills it with love to God and man—the being filled, as Paul expresses it, with all the fulness of God. This true, perfect, and absolute perfection, a declaration to be attainable through faith in Christ. Wesley says on this subject, and none of his authorized followers have gone beyond him, "Christian perfection implies the being so crucified with Christ as to be able to testify, 'I live not, but Christ liveth in me.' It does not imply an exemption from ignorance, or mistake, infirmities or temptations. I believe," he adds, "there is no such perfection in this life as excludes these involuntary transgressions, which I apprehend to be naturally consequent on the ignorance and mistakes inseparable from mortality. Therefore 'sinless perfection' is a phrase I never use. I used to contradict it. I believe a person filled with the love of God is still liable to these involuntary transgressions. Such transgressions you may call sins, if you please: I do not, for the reasons above mentioned." This doctrine Wesley calls the "grand depositum which God has given to the people called Methodists," and he gives it as his opinion that God raised them up chiefly to protest against, and to propagate it. See Wesleyanism.

III. As to the government and usages of Methodism, they are similar, but not entirely uniform, in all its branches and divisions. In the parent body, the Wesleyan Methodists of England, the ecclesiastical government is entirely in the hands of the ministry. "The Conference," originally instituted, as we have seen, by Wesley, has the power of making rules and regulations for the government of the body. This power is, however, restricted within certain limits prescribed in what is known as "the deed of declaration," executed by John Wesley a little while before his death, and enrolled in the archives of the high court of chancery in 1794. By the provisions of this deed, the Conference consists of one member from each congregation, and the president and vice-president, and to whom and to their successors was committed the duty of filling vacancies as they occur. The Conference, by the deed of declaration, is to meet annually, and to continue in session not less than five days nor more than three weeks. Other ministers attend and take part in the deliberations, and the president is selected from the three hundred only. Their first business, after filling vacancies, is the election from their own number of a president, who holds his office for one year, but is eligible to a re-election after an interval of eight years. Any member of the "legal hundred" abstaining himself without leave from two successive Conferences, and not appearing on the first day of the third, forfeits his seat. The Conference admits preachers on trial; receives them into full membership by ordination; examines and scrutinizes the character of every minister in the connection, and has power to try those against whom any charge is brought that is not of a nature "which requires correction if necessary. By the Conference the proceedings of subordinate bodies are finally reviewed, and the state and prospects of the Church at large are considered, and regulations enacted for its increasing efficiency. The most important of these subordinate judicatories is "the district meeting," which is composed of ministers and laymen in the district, held every ten years, or every twenty years, or from ten to twenty or more circuits—a circuit being the prescribed field of labor for two, three, or, in some cases, four ministers. The district meeting has authority: 1. To examine candidates for the ministry; and without their recommendation no candidate can come before the Conference. 2. To ordain and license ministers who are found immoral, erroneous in doctrine, unfaithful to their ordination vows, or deficient in ability for the work they have undertaken. 3. To decide preliminary questions concerning the building of chapels. 4. To review the demands from the less wealthy churches, which draw upon the public funds of the connection for aid in supporting their ministers. 5. To elect a representative, who is thus made a member of a committee appointed to sit previously to the meeting of "the Conference," in order to prepare a draft of the stations of all the ministers for the ensuing year; regard being had to the number of the population and the demands for the services of individual pastors. The judgment of this "stationing committee" is conclusive until Conference, to which an appeal is allowed in all cases, either from ministers or people. But the appointments are made for one year only, and no preacher can be appointed to the same charge more than three years successively. In the district Conference laymen take part, equally with ministers, in all that affects the general welfare of the body; and the lay influence predominates still more in "the quarterly meeting," which is held, as its name indicates, every three months on every circuit. All local preachers, a numerous and influential body of men, who preach on Sundays, and follow some secular employments for a livelihood; stewards, whose duty it is to attend more especially to the temporalities of the society; class-lead- ers, of whom mention is made above in the general rules, are members of the quarterly meeting; at which candidates for the sacred office are first proposed, and, if rejected by their fellow-members, they have no appeal to another tribunal. A similar balance of power is maintained in the "leaders' meeting," which is held monthly, in regard to various affairs of the particular society to which it belongs. Many of these meetings are attended by one minister only, or, at the most, by two or three, while the other is numerously. No leader, or other society officer, is appointed but with the concurrence of a leaders' meeting; no stea-
METHODISM

and without that of the quarterly meeting. Among the usages peculiar to Methodism we have already noticed "the class-meeting," at which, although chiefly designed for spiritual instruction and improvement, it is expected that weekly contributions shall be made for the support of the ministry; and in which it is necessary for all who desire to become Methodists to undergo a period of probation of three among the Methodists of England, and of six months among those of the Methodist Episcopal Church (in the Church South there is no probationship), and attendance upon which thereafter is a term of membership. There is also in England what is known as the band-meeting, which differs from the class-meeting in some respects, as it does not allow males and females to meet together, nor the married to belong to the same "band" with the single. The love-feast is a meeting held at the discretion of the preacher, quarterly or oftener; and the watchnight is a meeting for prayer, preaching, and mutual exhortation, held at first frequently, but now only on the last night of the year, and continuing until after midnight. John Wesley is claimed to have been the originator of religious tracts for gratuitous distribution, and of cheap volumes for the dissemination of the principles of Christianity. His followers have continued the same spirit of "cheap grace," as it is called, in London still emanating religious publications, tracts, and periodicals, the profits arising from the sale of which are applied to connectional purposes. For further details, see WESLEYANS.

The duties of a Methodist minister were thus defined by Wesley himself in 1789: "The business of a Christian minister is to: 1. Watch over souls as heads of families; 2. Feed and guide the flock; 3. Feed and guide the flock; 4. Converse sparingly and cautiously with women, particularly with young women; 5. Take no steps towards marriage without solemn prayer to God, and consulting with your brethren; 6. Believe evil of no one unless fully proved, take the part of the present you have the power to do, and never think you can on everything—you know the judge is always supposed to be on the prisoner's side; 7. Speak evil of no one, else your word especially would eat as doth a canker; 8. Keep your thoughts within your own breast till you come to the person concerned; 9. Tell every one what you think wrong in him, lovingly and plainly, and as soon as may be, else it will fester in your own heart; 10. Make haste to cast the fire out of your bosom; 11. Do not affect the gentleman; 12. A gentleman of the Gospel is the servant of all. 13. Be ashamed of nothing but sin; 14. Not of cleansing your own shoes when necessary. 15. Be punctual; do everything exactly at the time and do not mend our rules, but keep them, and that for conscience' sake. 16. You have nothing to do but to save souls, and therefore spend and be spent in this work; and go always, not only to those who want you, but to those who want you most. 17. Act in all things, not according to your own will, but as a son in the Gospel; heart, by understanding, and breathing. 18. Such a part of your time to employ your time as our rules direct; partly in preaching and visiting from house to house; partly in reading, meditation, and prayer. Above all, if you labor with us in our Lord's vineyard, it is needful that you should do that part of the work which the Conference shall advise, at those times and places which they shall judge most for his glory. Observe: It is not your business to preach so many times, and to take care merely of this and that society, but to save as many souls as you can; to bring as many sinners as you possibly can to repentance; and with all your power to build them up in that holiness without which they cannot see the Lord; and, remember, a Methodist preacher is to mind every point, great or small, in the Methodist discipline; therefore you will need, all the grace and all the sense you have, and have all your wits about you." See ITINERANCY.

The latest writer on Methodism (the Rev. L. Tyerman, Life and Times of John Wesley) who dares to hold that it is "the greatest fact in the history of the Church of Christ," then, is that it is an "undeviating constant condition of the parent body of Methodism, the Wesleyan Methodists (q.v.)." "The 'Methodist,' or parent 'Conference,' employs in Great Britain and Ireland 1782 regular ministers. Besides these, there were, in 1864, in England only, 11,804 lay preachers, preaching 8754 sermons every Sabbath-day. In the same year, the number of preaching-places in England only was 6718, and the number of sermons preached weekly, by ministers and lay preachers combined, was 13,892. To these must be added the lay preachers, preaching-places, etc., in Wales, Scotland, Ireland, Shetland, and the Channel Islands, making the whole number of Churches in Great Britain and Ireland is 365,295, with 23,223 on trial; and, calculating that the hearers are three times as numerous as the Church members, there are considerably more than a million persons in the United Kingdom who are attendants upon the religious services of the parent Conference of the Wesleyan Methodists." Some idea of their chapel and school property may be formed from the fact that, during the last seven years, there has been expended, in Great Britain only, in new erections and in reducing debts on existing buildings, £1,672,541; and towards that amount of expenditure there has been actually raised and paid (exclusive of all connectional collections, loans, and grants) £1,284,492. During the years 1859 to 1868, inclusive, there was raised for the support of the foreign missions of the connection £1,408,235; and if to this there be added the amount of the Jubilee Fund, we find more than a million and a half sterling contributed during the decade for the sustenance and extension of the Methodist church in foreign missions. The missions now referred to are carried on in Ireland, France, Switzerland, Germany, Italy, Gibraltar, India, Ceylon, China, South and West Africa, the West Indies, Canada, Eastern British America, Australia, and Polynesia. In these distant places the committee having the management of the mission is composed of the members of the missionaries, agents, including 994 who are regularly ordained, and are wholly engaged in the work of the Christian ministry. Besides these, there are about 20,000 agents of the society (as lay preachers, etc.) who are rendering important service gratuitously, while the number of Church members is 164,187, and the number of attendants upon the religious services more than half a million. Space prevents a reference to the other institutions and funds of British Methodism, except to add that, besides 174,721 children in the mission schools, the parent connection has in Great Britain 698 day-schoo,ls, efficiently conducted by 1503 matron, assistant, and pupil teachers, and containing 119,070 scholars; also 532 Sunday-schools, containing 601,801 scholars, taught by 108,441 persons who render their services gratuitously; and that the total number of publications printed and issued by the English Book Committee only, during the year ending June 1866, was four millions and one hundred and twenty-two thousand eight hundred and thirty-six copies. As such, he is a benefactor of the British missionaries, and millions were periodicals, and more than a quarter of a million were hymn-books.

IV. Subdivisions.—The different branches of the great Methodistic body are as follows:

1. The Wesleyan Methodists, or main and original body of the Methodists in Great Britain, often spoken of above. See WESLEYANS.
2. The Calvinistic Methodists date from a dispute between Whitefield and the Wesleys on doctrinal points. The former, with his associates, under the special patronage of the countess of Huntington, and greatly aided by her liberal contributions, organized societies and built chapels in various parts of England, Scotland, and Wales. For their particular creed and sect, see Calvinism. On Whitefield they were divided into three separate sects. (1.) The first was known as Lady Huntington's Connection, which observed strictly the liturgical forms of the English Established Church, with a settled pastorate instead of an itinerant ministry. They have not increased with much rapidity since her death, having at the present time less than a hundred ministers, and between sixty and seventy chapels. They have maintained from the beginning a theological school for the education of ministers, now known as Cheshunt College, in Hertfordshire, England. See Huntington. Although the name "connection" continues to be used, the Congregational polity is practically adopted; and, of late years, several of the congregations have become, in name as well as in fact, Congregational Churches. The number of chapels, mentioned in the census of 1851, as belonging to this connection, was 109, containing accommodations for 38,572 persons. At the last annual conference of this connection in 1851, 19,151. (2.) The second of these divisions was called the Tabernacle Connection, or Whitefield Methodists. They had no connection bond after the death of their founder, and each separate society regarding itself as independent, they are now lost as a distinct sect, and form part of the churches known as Congregationalists or Independents. (3.) The Welch Calvinistic Methodists, the third of these branches, was organized in 1743. They have continued to increase and prosper until the present day, being confined, however, mostly to the principality of Wales, where they at present number about 14,000 persons. In the same census they are about 4000 members of this denomination, with four annual Conferences, one in each of the states of New York, Pennsylvania, Ohio, and Wisconsin. The members are mostly Welsh, or of Welsh descent, and their religious services are generally held in the Welsh language.

3. The Wesleyan Methodist New Connection was the result of the first secession from the parent body after the death of Wesley. It originated in 1797, under the leadership of Alexander Kilham, after whom they are sometimes called Kilhamites (q. v.). He had been a preacher among the Wesleyans, and was expelled from the Great Academy, having at the previous time less than a score of laymen in which he criticized severely the then present order of things, and submitted proposals for what he deemed reform. In accordance with his sentiments a secession Church was organized, and the New Connection sprang into existence with about 5000 members. Their Conference is constituted upon the representative system, laymen having an equal voice with the clergy in the government of the Church, while in doctrine and general usage they differ not at all from the old connection. Their history has not been marked by any great success. They have a few chapels in Ireland, and in Canada there are from 8000 to 10,000 members. Of late years they have decreased in the number of membership. In 1890 the body contained about 25,000 members.

4. The Band-Room Methodists originated in Manchester in 1806. The name is derived from the Band Room in North Street, Manchester, where a class of overzealous revivalists used to gather and, contrary to the rules of the Connection, admitted parties not members. They were also guilty of acting independently of leaders' meetings, and when remonstrated with, withdrew and formed an independent body. The Band-Room Methodists still exist; but are now called The United Free Gospel Churches. They differ from the "parent" body in having no paid ministers. They have, however, annual conferences.

5. The Primitive Methodists are, next to the Wesleyans, the largest Methodist body in England. They date from the year 1810. A few regular Wesleyan preachers introduced, on their circuits, the American practice of holding camp-meetings. These were disapproved by the Conference, and denounced as "highly improper." Other questions entered into the controversy, and the matter was further vexed by a difference as to discipline. Their discipline and theology are strictly Wesleyan, but they go beyond any other denomination in committing the duty of Church government to the laity. Their Conference is composed of one third preachers and two thirds laymen. From the stir they make in their respect for sacred Scriptural ordinances, they allow women to preach. They have several missions in foreign lands, and in England and Wales, according to the last official report of 1890, the connection had 193,658 members. In the United States, also, they have secured a footing; they here count a membership of 60,589. See Primitive Methodists.

6. The Bryanites, or Bible Christians, are a sect of Methodists very similar to the preceding. They date from 1813. Their leader was a Wesleyan local preacher of considerable talent, by the name of O'Bryan (q. v.). Among them, as among the Primitive Methodists, the general supposition of the Church is that they principally exist in Cornwall and the West of England, but also have mission stations in the Channel Islands, the United States, Canada, Prince Edward's Island, and Australia. They had, according to their report of 1873, 28,427 full and accredited Church members.

7. The Methodist Episcopal Church, or the Methodists of Ireland, is a body of Primitive Methodists of later origin than that of England, and is entirely independent of the other organization of like name. The Primitive Methodist Church of Ireland date from 1816. The English Conference in 1793 granted to the members the privilege of receiving from the American Church the sacraments and any other privileges. In 1807, the Irish Conference, having for the first time placed the sacraments on par with ordination, the Church chose a field of its own, and was incorporated in 1816. From this time until the date of the first annual conference, the number of members increased rapidly. In 1872, the number was 13,000; in 1890, 22,700. The membership is still increasing, and the Church is now, by far, the largest, and is entirely independent of the other denominations of the same name.

8. The United Methodist Free Church is a union, recently formed, of three different divisions of secters from Wesleyan Methodism.

(a) The Protestant Methodists, who organized into a distinct body in 1828, then counting 28 local preachers, 56 leaders, and upwards of 1000 members, seceded from the Leedse societies, because of the opposition there was to the introduction of an organ.

(b) The Wesleyan Methodist Association, which was organized in 1835, under the leadership of Samuel Warren, one of the opponents (in 1834) to the proposed establishment of a theological institution, to be presided over by Dr. Jabez Bunting. The Leedse seceders joined the Association in 1839; both amalgamated with the Free Methodists in 1857: S22 United Methodist Free Church.
(c) The Reformers, who were organized into a body in 1848. At the Manchester Conference held in that year, six members, suspected of private intrigue with members of the Wesleyan Methodist Association (see 8), were placed at the bar, without having received any regular notice of the charges to be preferred against them, as required by the standing laws and usages of the connection, and without a trial, without any evidence of guilt on the part of any of them, were reprimanded and three were expelled. The act excited the astonishment of the nation, convulsed the connection, and led to the loss of one hundred thousand members. Many of them, after a while, for want of ministers and suitable places of worship, resorted to the use of confessions of faith or church constitutions into a distinct body styled the Reformed Methodists. These amalgamated bodies differ from the "parent" body only in Church government and usages. One of the principal objects of the reform is the remodelling of the body from which they are separated. Their annual assembly admits lay representatives, circuits with less than 500 members sending one; less than 1000, two; and more than 1000, three delegates. Each circuit governs itself by its local courts, without any interference as to the management of its internal affairs. At their Annual Assembly, held at Bristol, England, in August, 1890, the report of which has recently been published, the ratio fixed by the General Conference of 1872 as a basis of future representation is one delegate for every forty-five members of an Annual Conference. At the same Conference lay members, in the ratio of two for every Annual Conference, were also admitted. The bishops, like the preachers, are itinerant; and it is especially enacted that if one of them ceases from travelling without the consent of the General Conference, he shall not be restored to the episcopacy. The Episcopal Church in the United States is similar to that of the Presbyterians in the English Church, with the additional duty of fixing the appointment of the preachers, deciding all questions of law in an Annual Conference, and ordaining bishops, elders, and deacons. The limit of three years, beyond which the preachers of the British Wesleyan Connection may not continue in the same place, is now also the rule of the Methodist Episcopal Church in the United States; and to this is added the regulation that they may not be returned to the same place more than three years in six. Presiding elders in this branch of the Church occupy a position very similar to that of the chairmen of district Synods in England, except that they have no separate pastoral charge. They are appointed by the bishops, and may remain four years on the same district. They form a kind of advisory committee in assisting the bishops to fix the appointments of the preachers. The "Book Concern," situated in New York, with a branch at Cincinnati, and depositories in various other cities, has a capital of more than a million of dollars, and is one of the largest publishing houses in the world. Under the patronage and control of the Church are weekly papers published in New York, Syracuse (N.Y.), Pittsburgh (Pa.), Cincinnati (O.), Chicago (III.), St. Louis (Mo.), Cincinnati (O.), New Orleans (La.), and Atlanta (Ga.). They publish also several illustrated papers for Sunday-schools, one of a similar kind for the Tract Society, a monthly Sunday-school journal, a monthly magazine in English, another in German, and a quarterly review. See METHODIST EPISCOPAL CHURCH.

11. The METHODIST EPISCOPAL CHURCH, SOUTH, projected at Louisville, Ky., in 1845, was formally organized by delegates from Conferences within the slaveholding states in May, 1846. In doctrine, discipline, and general usages, it is the same as the preceding. The same is true of its forms of worship and usages. But while the Church North made open declaration against the institution of slavery, the Church South ignored the subject. Now that the institution is abolished in the United States, the two bodies can hardly be said to differ. The Methodist Episcopal Church, South, has a flourishing publishing house (at Nashville, Tenn.), and issues several periodicals. See METHODIST EPISCOPAL CHURCH, MEETINGHOUSE.

12. The METHODIST PROTESTANT CHURCH was organized in the city of Baltimore, Md., in the year 1830, by a convention composed of an equal number of clerical and lay delegates from various states of the Union. The convention continued in session three weeks, and adopted a "Constitution" for the new association. Its
METHODOISM

fundamental doctrines, and most of its usages, are the same as those of the Episcopal Methodists, the body from which it seceded. Following the example of the British Wesleyans, the episcopal ballot was adopted as a rule over each Annual Conference, elected by the body of that body. The laity is admitted to an equal participation with the clergy in all Church legislation and government. The General Conference, which meets every four years, consists of an equal number of ministers and laymen, who are elected by each Annual Conference. The slavery question divided the Methodist Protestant Church into two bodies—the Methodist Protestant Church of the North-western States and the Methodist Protestants of the Southern States. The head-quarters of the former were established at Springfield, Ohio; those of the latter at Baltimore, Md. Their members are almost exclusively in the southern part of the United States. Their greatest strength is in Virginia, Maryland, and in some portions of Ohio and Pennsylvania. Of late years, a union of all non-episcopal Methodists having been proposed, the Protestant Methodists North changed their official name to The Methodist Church. The Wesleyan Methodist Church was one of the churches expected to be merged into this newly-constituted body, but hitherto all efforts at union have failed, and there seems to be no immediate prospect of their amalgamation. The Methodist Church numbers about 75,000 members; altogether the Methodist Church and Episcopal Church number 140,000 members. The head-quarters of the Methodists South remain at Baltimore, Md.; those of The Methodist Church have been removed from Springfield, Ohio, to Pittsburgh, Pa. See METHODIST PROTESTANT CHURCH; METHODISTS, THE.

13. The Wesleyan Methodist Church was formed by a convention of ministers and lay delegates which met in the city of Utica, N.Y., in 1848. The principal part of the delegates in attendance were ministers or members of the Methodist Episcopal Church, and the main reason for the establishment of the new body was their hostility to slavery. At their organization as a Church they adopted a Discipline and plan of Church government, and divided the connection into six Annual Conferences, having about 600 ministers and preachers (mostly local), and a reported membership of about 20,000. Their Articles of Faith are the same as those of the Methodist Episcopal Church, and their General Rules are similar, with the exception that they are more strictly in sympathy with the abolition of slavery. They discard episcopacy and presiding elders, but, like the English Wesleyans, they have chairmen of districts, and elect the presidents of their Annual Conferences at each successive session. Ministers are appointed to their respective fields of labor by a stationing committee, the decisions of which are subject to approval by the Conference. Societies and churches are permitted to negotiate beforehand with any minister for his services; but such engagements, if made, must receive the sanction of the Conference. Both General and Annual Conferences are composed of ministers and lay delegates, the local preachers also having a representation.

14. The African Methodist Episcopal Church was formed by a party of colored members, under the leadership of Richard Allen, hence sometimes called Allenites, who seceded from their white brethren at Philadelphia in 1816. They adopted, in the main, the doctrines and usages of the body from which they seceded. Mr. Allen was elected to the office of bishop, and ordained by four elders of their Church, assisted by a colored presbyter of the Protestant Episcopal denomination. They are found in various parts of the states of Pennsylvania, New York, New Jersey, Delaware, and Maryland. There are seven conferences, two in the Eastern States, one in Canada, their congregations being largest and most influential in the city of Philadelphia. The Methodist Almanac of 1881 assigns them 7 bishops, 8000 preachers, and 400,000 members.

15. The African Methodist Episcopal. (Zion) Church was formed by another secession of colored members in the city of New York in 1819. They elect annually one of their elders as general superintendent, but that position is not hereditary, and is subject to the impeachment of hands. The Methodist Almanac of 1891 credits them with 7 bishops, 8000 preachers, and 412,518 members.

16. The United Brethren in Christ is the designation of a body of Christians, sometimes called German Moravians. They must be born members of the Church, be candidates of the Church, and be subjects of the Church. They form part of the United Brethren in Christ, and have several Annual Conferences, and a General Conference, the supreme law-making authority, which meets quadrennially. The members are mostly Germans or of German descent, and are numerous only in Pennsylvania, Ohio, Indiana, and other portions of the United States. They have four bishops, nine Annual Conferences, and a General Conference, which meets every fourth year. In doctrines and Church government they are, with few unimportant variations, the same as the Methodist Episcopalians.

17. The Evangelical Association are in doctrine and Church government nearly allied to the Episcopal Methodists. They date from the year 1800, and are sometimes called Almarsh, after one of the founders of the sect. They elect bishops from the body of the elders, and have several Annual Conferences, and a General Conference, the supreme law-making authority, which meets quadrennially. The members are mostly Germans or of German descent, and are numerous only in Pennsylvania, Ohio, and Illinois. The Methodist Almanac of 1891 reports 1 bishop, 1187 preachers, 426 local preachers, and 14,060 members.

18. The Free Methodist Church was organized by former members of the Methodist Episcopal Church, Aug. 23, 1860. The main occasion for the establishment of this body was the expulsion of two ministers from the Geneseo Conference. The Free Methodists rigidly enforce the rule for simplicity of dress; the privilege of free seats in all houses of worship; congregational singing, without the aid of choir or musical instrument; extemposeric preaching. In doctrine they are one with other Methodist bodies, but adhere strictly to Wesley's views on sanctification, and teach everlasting torment. They retain the episcopacy, but have one superintendent, who is elected by a majority of the clergy of their General Conference. They report, in 1890, 513 preachers and 19,998 members. See Methodists, Free.

19. The Colored Methodist Episcopal Church in America was organized by order of the General Conference of the Methodist Episcopal Church, South, Dec. 16, 1870. The new Church includes all colored preachers and members heretofore belonging to the Methodist Episcopal Church, South. Two bishops were elected—Rev. William H. Miles, of Kentucky, and Rev. R. H. Vanderhorst, of Georgia. The Christian Ineder, edited by Rev. Samuel Watson, at Memphis, Tenn., was adopted as the organ of the new Church, and Rev. L. J. Scullock was elected assistant editor and book agent. The structure of the new Church, counting about 17,000 members, conforms in all essential particulars to that of the Methodist Episcopal Church, South, viz. in discipline, discipline, and economy, but is entirely independent of the other organization, though in sympathy with and fostered by it. White people are not admitted to membership.

There are a few other minor subdivisions of the Methodist family, e.g. the Independent (or Congregational) Methodist Church, the names and statistics of which are given in the Almanac in the table of the Independent (or Congregational) Methodist Church, in connection with one or other of the larger bodies. Methodists are found not only in England and North America, but they have "Conferences" in France, Germany, Africa, and Australasia. They have missionary stations (for more particular concerning which, see section VI).
20. Defunct Methodist Bodies.—Of these, the most important are:

(a) The Reformed Methodist Church. This body, which is now merged into the Wesleyan Methodist Church, was formed in 1816 by a separation from the Methodist Episcopal Church in 1814. The seceders considered themselves restricted under the episcopal form of government, and, with a view to obtain redress of their grievances, petitioned the General Conference. Their representations met with no favorable reception, and in consequence they withdrew into the formation of their own body, the Primitive Methodist Church. Their formal separation from that body took place Jan. 16, 1814. In the leading doctrines of Christianity they agreed with the Church which they left; but as to the government of the Church, they conducted their affairs on the Congregational principle. They held peculiar views regarding the efficacy of faith. They believed that all blessings given in answer to prayer are in consequence of faith; and in cases of sickness and distress, faith exercised is the restoring principle. They also taught moral perfection in the present state. They admitted to membership all who simply exhibited clear evidence that their sins were forgiven, and that their hearts were renewed. They held that subscription to any record of Christian principles is altogether unnecessary. In 1818 they spread in Upper Canada, and there made great progress. For some time after the organization of the Wesleyan Methodist Church they united with that body in publishing a magazine—a circumstance which ultimately led to a union between the two bodies.

(b) The Methodist Society, a body which originated in a secession from the Methodist Episcopal Church in New York in 1826, in consequence of what was deemed an undue interference on the part of the ruling preacher with the temporalities of the Church. In Church doctrine the new body adhered to the rules of the "parent" society, but in the government of the Church there was a considerable difference. 1. No bishop was allowed, but a president of each Annual Conference was chosen yearly by ballot from the members thereof. 2. All ordained ministers, whether travelling or not, were allowed a seat in the Annual Conference. “The property of the societies to be vested in trustees of their own choice, and the minister to have no oversight of the temporal affairs of the Church.” After the organization of the Methodist Protestant Church (see 12), the Methodist Society was merged in the former.

21. Methodists in Canada and other British Dominions in America.—A little more than sixty years ago Methodists were for the first time represented in those parts by William Losee, whom the stated Asbury had appointed as a worker of the Gospel, “to range at large.” The work has prospered there as elsewhere, and there are now five large bodies, predated over by no less than 800 itinerant ministers. Four of these large bodies, viz., the Wesleyans, Primitives, New Connexionists, and Bible Christians, are either offering of like associations in the United Kingdom, or in intimate relations at present. But the fifth of them is an independent organization, like the great Methodist body of the United States, from which it sprung, and after which it is named the Methodist Episcopal Church of Canada, dating its origin as a separate body in 1828. The Canada Wesleyans, though adhering to the polity of the English Wesleyans, are now agitating the adoption of lay-representation, in order to effect a union of all the Methodist bodies in Canada; their aggregate membership amounts at present to a little over 100,000, their preachers to over 600 in all the different Dioceses. See Mackintosh, Episcopal Church in Canada; Wesleyan Methodists; Primitives; New-Connection Methodists; etc.

V. Aggregate.—Not reckoning the Band-Room Methodists, nor the countess of Huntington’s connection, and making a moderate estimate the Sunday-school scholars belonging to the Welsh Calvinistic Methodists and to the Primitive Methodists in Ireland, we arrive at the results given in the table below. Reckoning two additional hearers for each church member and Sunday-school scholar, we make a total of more than twelve millions of persons receiving Methodist instruction, and from week to week meeting together in Methodist buildings for the purpose of worshipping Almighty God. The statement is startling, but the statistics given entitle it to the fullest consideration.

But rightly to estimate the results of Methodism during the last hundred and thirty years, there are other facts to be remembered.

* The Canada Wesleyan Church was not only founded by, but for many years belonged to the Methodist Episcopal Church of the United States.

GREAT BRITAIN AND IRELAND.

The number of members is for the United Kingdom; of chapels and scholars, Great Britain only.

* This does not include the colored membership now separately organized as the Colored Methodist Episcopal Church, South.'
exercised a potent and beneficial influence upon other churches: Episcopal, Presbyterian, Independent, and Baptist churches have all been largely indebted to Methodism for the revival of piety and the orthodoxy of the best ministers and agents they have ever had. It is a remarkable fact that, during Wesley's life-time, of the 690 men who acted under him as itinerant preachers, 249 relinquished the itinerant ministry. These 249 

recessors included not a few of the most intelligent, energetic, pious, and useful preachers that Wesley had. Some left him on the ground of health; others began business, because as itinerant preachers they were unable to support their wives and families; but a large proportion became ordained ministers in other churches. In some instances, the labors of these men, and their brother Methodists, led to marvellous results. To give but one example: David Taylor, originally a servant of lady Huntington, was one of Wesley's first preachers, but afterwards left the work. Taylor, however, was the means of converting Samuel Deacon, an agricultural laborer; and the two combined were the instruments, in the hands of God, in raising up a number of churches in Yorkshire and the midland counties, which, in 1770, were organized into the New Connection of General Baptists; and that connection seventy years afterward, in 1840, comprised 113 churches, having 11,858 members, a foreign missionary society, and two theological academies (Methodist Magazine [1886], p. 383).

Such was an important and suitable accomplishment of every church, and have been a benefit to millions of immortal souls; but it deserves to be mentioned that Hannah Ball, a young Methodist lady, had a Methodist Sunday-school at High Wycombe fourteen years before Robert Raikes began his at Gloucester; and that Sophia Cooke, another Methodist, who afterwards became the wife of Samuel Bradburn, was the first who suggested to Raikes the Sunday-school idea, and actually worked with him, at the head of his troop of ragged urchins, the first Sunday they were taken to the parish church.

The first British Bible Society that existed, "The Naval and Military," was projected by George Cussons, and organized by a small number of his Methodist companions. The London Missionary Society originated in an appeal from Melville Horne, who for some years was one of Wesley's itinerant preachers, and then became the successor of Fletcher as vicar of Maidstone. The church was formed a year after the society was started by the son of Henry Venn, the Methodist clergyman. The first Tract Society was formed by John Wesley and Thomas Coke in 1782, seventeen years before the organization of the present great Religious Tract Society in Paternoster Row—a society, by the way, which was inaugurated by the late Rev. Richard Hill and receiving the laudable suggestion, is an institution to which Methodism gave birth in 1785.

Building churches is one of the great features of the age. Unfortunately, England has had no religious worship census since 1661; but even then, according to the tables of Horace Mann, Methodist had, in England and Wales only, 11,855 places of worship, with 2,291,017 sitting. In America, according to the census of 1860, Methodism nine years ago provided church accommodation for 6,239,789, which was two and a quarter millions more than was provided by any other Church whatever.

The public press is one of the most powerful institutions of the day. England has four Methodist newspapers: Ireland, one; France, one; Germany, one; India, one; China, one; Australia, two; Canada and British America, five; and the United States about fifty.

VI. Outgrowth in Missionary Labor. 1. In England or chiefly so.—Methodism was from its very inception its missionary movement, domestic and foreign. It initiated the revival of the spirit of the great English mission work. Protestant England had manifested but a faint interest in this species of Christian labor until the birth of Methodism, and the spirit of life may be said to have been breathed into English missionary societies by Methodism. Nor need this astonish us. The Church of England recognized as its field the territory held by the Church of Rome, cold and almost lifeless at home, the residents in the colonies and other dependencies received but little religious care. Methodism, the outgrowth of a reawakened zeal for holy living, sought its fields not only in England and Ireland, but manifested early a strong desire for the spread of the Gospel into all the world. To this end Dr. Thomas Coke, in 1786, issued "An Address to the Pious and Benevolent, proposing an Annual Subscription for the Support of Missionaries in the Highlands and adjacent Islands of Scotland, the Isles of Jersey, Guernsey, and Newfoundland, the West Indies, and the Provinces of Nova Scotia and Quebec;" and in the year following the Wesleyan missions bore the distinctive title of "missions established by the Methodist Society." Even before this organization had been effectual, missionary labors were put forth in behalf of the residents of the West Indies. In 1791 Methodist reached out its hand after France, and its great schemes were not finished until after the close of the Napoleonic wars, in 1811. In Asia labor was commenced in 1814; in Australasia in 1815; in Polynesia in 1822; until, from the first call of Wesley for American evangelists, in the Conference of 1769, down to our day, we see the grand enterprise reaching to the shores of Sweden, to Germany, France, and the Upper Alps; to Gibraltar and Malta; to the banks of the Ganges, the Ganges and the Ganges, and to the Gold Coast; to the Cape of Good Hope; to Ceylon, to India, and to China; to the colonists and aboriginal tribes of Australia; to New Zealand, and the Friendly and Fiji Islands; to the islands of the western as well as of the southern hemisphere; and from the Gulf of St. Lawrence to Pugot's Sound (comp. Alder, Wesleyan Missions [London, 1842], p. 4). From 1803 to the present time Wesleyan Methodism has contributed more than twenty millions of dollars for foreign evangelization. In England the Wesleyan Society to-day enrols more communicants in its mission churches than all the other societies combined. In Scotland, in 1774, the Lord Kames, a historian of religion during the last and present centuries would find it difficult to point to a more magnificent monument of Christianity.

Methodist missions may, however, be said to have had their origin long before the founding of a society for this purpose. They were from the first of three or four distinct foreign parts. "From its very beginning," says Stevens (Hist. of Methodism, iii, 312), "Methodism was characterized by a zealous spirit of propaganda. It was essentially missionary. Its introduction into the West Indies by Gilbert in 1760, and into Nova Scotia by Coke in 1762, in the counties of Leicestershire, and Boardman in America in 1769, and its commencement at New York at least three years before this date; the formation successively of its Irish, Welsh, and English domestic missions, and the organization of a missionary 'institution' at least two years before the first of what are called modern missionary societies in its charter; as an energetic system of evangelization. But these wide developments of missionary energy, grand as some of them are in their historical importance, were but initiatory to that denominational missionary system which arose from Coke's project of an Asiatic mission (in 1766), to be headed by himself in person, with a separate constitution, and thus constituting him, above the mere fact of being first bishop of American Methodism, and the first Protestant bishop of the New World, as the representative character of Methodist
American Methodism has been aptly termed by Dr. Abel Stevens (Centenary of Amer. Meth. p. 187) "a mission scheme," for it was clearly "the great home mission enterprise of the North American continent."

The independent establishment of the colonies as a republic were accompanied by the formation of "home" fields, and the mission and the missionary body gradually ripened into a Church organization, from which, in turn, went out enterprises. The year 1819 is memorable in the history of American Methodism as the epoch of the formal organization of its missionary work. But these early years were confused with "new home" fields, and the mission and the missionary body mainly at the conversion of the aborigines and slaves.

It was some thirteen years later, during the session of the General Conference of 1832, that foreign missions were decided upon, and American Methodism commissioned its Gospel harbingers to carry the truth as it is in Jesus to the dark, desolate continent of South Africa, the Roman Catholic missions of Mexico, and of South America.

We give below some of the details of this great work in particular fields. Besides its very extensive domestic work, the Methodist Episcopal Church has now missions in China, Corea, India, Africa, Bulgaria, Germany, Switzerland, Denmark, Norway, Sweden, and South America. Its missions, foreign and domestic, in the year 1889 numbered 1239 circuits and stations, 8325 paid laborers (preachers and assistants), and 261,987 communicants.

The funds contributed to its treasury, from the beginning down to 1865, amounted to about $6,000,000. After that time, the Conference of 1895, at Nimesh in Turkey, increased the tithe again in favor of Methodism, and notwithstanding the organization of other churches, some of which, it must be owned, have grown more rapidly, the Conference of 1890 reported 1518 members, 184 chapels and preaching-rooms, 58 Sunday-schools, 4900 Sunday-school teachers, 101 local church members, and 56 ministers, and some 9000 regular hearers at the public services. The official title of the Methodist body in France is The Evangelical Methodist Church of France and Switzerland. The French Methodists sustain a publishing-house at Paris, and issue a weekly paper, entitled L'Evangéliste. The "Methodist Episcopal Church" sustains one missionary in the suburbs of Paris, but he is a member of the Swiss Mission Conference, and his laborers are intended to benefit only the German residents of the French metropolis.

3. Methodism among the Germans. — The Germans were first brought into direct contact with the Methodists in the United States of America by the Brethren, who have always been in close communion with the Methodists, may really be said to have paved the way for the success of the work among the Germans. The labors of the Rev. William Otterbein, the founder of the United Brethren Church, and a warm personal friend of Bishop Asbury, were thoroughly Methodist, and the United Brethren Church was for many years considered by the Methodists a co-ordinate branch of their own Church, having a special mission to labor and spread the doctrines of Methodism among the Germans. Turning their attention to the young generation and its wants, they were upon the spot, and, upon the worst citadels of paganism, it has perpetuated its original militant spirit, and opened for itself a heroic career, which need end only with the universal triumph of Christianity. English Methodism was considered, at the death of its founder, a marvellous fact in British history; but to-day (1866) the Wesleyan missions alone comprise more than twice the number of the regular preachers enrolled in the English Minutes in the year of Wesley's death, and nearly twice as many communicants as the Minutes then reported from all parts of the world which had been reached by Methodism. The latter number included thousands of missionaries, and communicants in the Methodist Episcopal Church equals nearly the half the whole membership of the Church in 1819, the year in which the Missionary Society was founded, and is nearly double the membership with which the denomination closed the last century, after more than thirty years of labor and struggles.

2. Methodism among the French. — In the year 1790 Methodism was introduced among the French by English Wesleyan preachers, and in 1791 Dr. Coke ordained in a small village in France the first French missionary, who afterwards became the first French preacher. The work was successful, and a society of 100 members had been gathered when the storm of the Revolution prevented further progress, and in 1817 the work had to be begun anew. In 1819 Methodism was introduced into the south of France by Charles Cook, whose labors were most successfully completed among the Protestants, who were then in such a state of ignorance and religious indifference that, out of some 400 ministers, not ten could be found who knew and preached the Gospel. Revivals ensued, classes were formed, societies were organized, preachers were raised, and in 1844 there was in France a Church of nearly 1500 members, with 24 travelling preachers. During the progress of the work the other churches had profited, however, by the revolving influence, and Methodism, being regarded as a "foreign importation," began gradually to lose in membership, so that by 1862 there were only 800 actual adherents to the Methodist Church, notwithstanding the fact that the work of evangelization had progressed as usual. These circumstances prompted the Wesleyans to counsel the independent establishment of French Methodism in a distinct French Church, dependent upon the "parent body" for an annual stipend only. The first French Methodist Church was organized at Nimesh in 1859, and the tide turned again in favor of Methodism; and, notwithstanding the organization of other churches, some of which, it must be owned, have grown more rapidly, the Conference of 1890 reported 1518 members, 184 chapels and preaching-rooms, 58 Sunday-schools, 4900 Sunday-school teachers, 101 local church members, and 56 ministers, and some 9000 regular hearers at the public services. The official title of the Methodist body in France is The Evangelical Methodist Church of France and Switzerland. The French Methodists sustain a publishing-house at Paris, and issue a weekly paper, entitled L'Evangéliste. The "Methodist Episcopal Church" sustains one missionary in the suburbs of Paris, but he is a member of the Swiss Mission Conference, and his laborers are intended to benefit only the German residents of the French metropolis.
tion, commonly called Albrights, or Albright Methodists. But with slight modification, they have adopted the Methodist Discipline and Methodist usages. In the matter of doctrine, they are Methodist throughout, laying peculiar emphasis upon those experimental doctrines of Christianity—repentance, faith, regeneration and adoption, growth in grace, and the duty and privilege of entire sanctification. Wesley, Watson, and Clarke are their standard authorities. They lay claim to the title of Methodism, and pride themselves in a common origin with Methodists. At a very early date of their history, when they numbered but a few hundred members, they proposed organic union with the Methodist Episcopal Church upon the sole condition of being permitted to use the German language in the public worship of their congregations, and of laboring exclusively among Germans. If the offer was rejected, under the erroneous impression which then prevailed that the German language would necessarily die out in a generation or so, of course emigration had not then attained its present gigantic dimensions, nor were there any indications of results in this direction such as we witness in our day. Efforts looking to organic union between the Methodist Episcopal Church and the Evangelical Association have since been renewed.

In 1836 the conversion and call to the ministry of William Nast, a highly-educated German, a graduate of Tu- bingen University, and one of the leading members of the Methodist Church to establish a domestic mission among the Germans, and it was intrusted to the newly-made convert. He travelled extensively through Ohio and Pennsylvania, and was eminently successful in impressing his countrymen with the need of a "higher" life. The progress of forming a congregation, however, was very slow. Thus after a whole year's labor at Cincinnati, among its thousands of Germans, subjected to the grossest insults, and in constant danger of bodily harm, preaching in the streets and market-places, distributing tracts and talking about Jesus and his salvation in the beer saloons and the tenement houses, he went up to Conference and reported the reception of three members, all told. But the final result was, after all, great and glorious. The influence of Nast's example gradually spread among the Germans, and converts came in numbers. From the little congregation, in the old Burke church in Cincinnati, the Methodist Church has made its inroads among the Germans of the United States with such a force that this branch of the Church now presents the results given in the table below.

The German Methodists now possess two colleges—one in Berea, Ohio, and one in Warren, Mo.; one Normal School in Galena, Ill.; and a "Mission House" at New York. They have also two orphan asylums—

one in Berea, Ohio, with sixty-five orphans, and one in Warren, Mo., with thirty-five orphans; the running expenses of these orphan asylums amount to nearly $14,000 per year, which sum is contributed by German Methodists. The value of the property of these institutions is over $250,000, besides an endowment fund of $57,000 of the German Wallace College at Berea, Ohio. The circulation of their official organ, the Christliche Apologeten, is 1,156, and of the Sunday-School Glaubens-Zeitung, 20,000. Very recently a religious German monthly family magazine has been started, and it promises to be a success. The Germans of the Methodist Episcopal Church, South, issue an official organ weekly, and a Sunday-school paper.

German Methodists returning to their native country impressed the Germans more with the value of experimental religion, and in 1849 a mission was established in Germany by the Methodist Episcopal Church. Its first superintendent and most efficient worker was the Rev. L. S. Jacoby, D.D., himself a German. But long before any effort had been made to establish missions in that country Methodism was already known there. Wesley had spent in 1728 nearly three months in Germany and Holland, and again in 1738 and 1736 shorter periods in the latter country, where he became acquainted with some of the most godly and learned men in those two centres of Protestant Christianity and enlightenment. The friendship of the Moravians contributed to make his visit his most successful. On returning to England, Nor was the German press silent while such a revival was going on in England. Dr. Burckhardt, a godly minister, of the Savoy Chapel, in the Strand, and an admirer of the Wesleys, published in Nuremberg a Complete History of the Methodists in England, which reached a second edition in 1736. Wesley's sermons were translated into German by Lutheran ministers, several of whom visited England and became greatly interested in Methodism. Since then Methodist literature has multiplied in Germany, until it would make up quite a formidable list both for and against the Methodists.

The first Methodists who established themselves on German soil were the converts of a German named Albrecht, or Albright, who, having embraced the Methodist doctrines in America, was pressed in spirit to engage actively in caring for the religious wants of his fellow countrymen in the United States. The work which he carried on was of the highest value, as the character he has drawn there has grown into vast proportions, under the name of the "Evangelical Association," noticed above. After having extended to thousands of the Germans of America, the Albrecht Methodists, as they are called abroad, began to extend their efforts towards the Germans in Europe. They have thirty-sixth of Conference, South, and their sixtieth Conference in St. Louis, where they commenced a work several years

*The Methodist Episcopal Church, South, supports a mission for the Germans within that body. This field of labor was entered by the Methodist Episcopal Church South, immediately upon its organization in 1866. Superintendents are set apart by the conference laboring in Texas, Louisiana, Maryland, and Virginia. Very recently a German congregation has been started in Murfreesboro, Tennessee. The Rev. E. N. Blogg, superintendent of the German mission in the Baltimore and Virginia conferences, reports in 1873 a gradual and healthful growth. "The work," he adds, "has the central institution in Nuremberg, Richmond, Baltimore, and Hockstown, with four missionaries in the field besides myself, who are zealously engaged in the duties of aggressive missionary labor."*
METHODISM

They have in all Germany 10,231 Church members, 226 Sunday-schools with 11,822 scholars, and 64 itinerant preachers. They have two parliaments, and have lately extended their field to Switzerland.

This work was strengthened by the establishment of a mission from the Wesleyans of England. A German layman of the name of Muller had been converted in London, and had become an exhorter and class-leader. Upon his return to Wurttemberg, his native place, after an absence of fourteen years, he could not conceal from his family the change which had been wrought in his heart, and he soon began to hold meetings from village to village. A revival took place, and the persons converted organized themselves in classes. Muller, finding himself in a work that demanded all his ability, gave up his secular business and devoted himself to the evangelization of his fellow-countrymen. This work, begun in 1831, has resulted in the founding of a number of small churches, which comprise (in 1878) a membership of 7026, and 678 Sunday-school scholars, with 101 travelling and local ministers; and has extended from Wurttemberg into the duky of Baden and to the borders of Austria.

But the grandest and most enterprising of the branches of German Methodism is unquestionably that of the American Methodist Episcopal Church, which, as we have seen above, took its rise from the work among the German emigrants in the United States. In 1852 this missionary field was organized as a separate conference, and it now covers all the German-speaking people in Germany, Switzerland, and France, divided into seven districts: Bremen, Berlin, Frankfort, Ludwigshaven, Carlsruhe, Zurich, and Basle, which comprise more than sixty circuits or stations, with (in 1872) 73 travelling ministers, 596 places of worship, 229 Sunday-schools with 10,071 scholars, 6280 Church members, and 1369 probationers. This mission is thoroughly organized. It has a book publishing house, which issues, besides a variety of tracts and books, every fortnight the Evangelist and Kinder-Freund; every month the Missionar-Sammler and Monatlicher Bote; and every quarter the Wächter-Stimmen. It has also a theological college, which has had as its professors Dr. Warren, of Boston University, and Dr. Hurst, of Drew Theological Seminary. Its present instructors are Dr. Sulzbacher and L. Nippert. It had had an existence of fourteen years, when, by the timely and princely gift of John T. Martin, of Brooklyn, N. Y., the present commodious and substantial building, four stories high, standing on a lot one hundred by five hundred feet, was erected, free of debt, at Frankfort-on-the-Main. The property is estimated at about $30,000. The following branches are taught: Greek, Latin, English, German, Hebrew, geography, arithmetic, music, homiletics, dogmatics, discipline of the Methodist Episcopal Church, history of Methodism, Church history, profane history, literature, archaeology, exegesis. There are at present twenty-seven young men in this school preparing for the ministry. Sixty or seventy ministers have already gone forth in the course of twelve years. About fifty-four labor in Germany, and others have come to America and are laboring here.

4. Methodism among the Scandinavians.—The Methodist Episcopal Church has also done immense service to the cause of personal religion by its missionary efforts among the Scandinavians, with whom the Church was brought face to face in this country. As early as 1845 these labors were commenced, under the auspices of the Home Missionary Society. The work has grown until it presents this imposing array:

The annual statistics covering my operations in the Baltimore Conference are as follows: Local preachers, 2; members, 20; Infants baptized, 12; Sunday-schools, 2; superintendents, 2; teachers, 18; scholars, 178; volumes in library, 210." The Missionary Report for 1873 furnishes similar statistics, and also gives an account of the method of dividing the reports from the superintendents (under date of June 1) with the remark that "a very important question will be agitated at the next General Conference [May, 1874]—that of erecting the Germans into a separate Conference." A German paper for the members in this field is published by the Methodist Episcopal Church, South, and the editorial guidance of the Rev. J. B. A. Ahrens, at New Orleans, Louisiana.
METHODISM

For the last three years a monthly, called Missionaires, devoted to religion, has been published. A hymn-book has also been prepared for the members of this branch of the Methodist Church.

The success of this work at home gave rise to the establishment of a mission to the Scandinavians in 1854. It now extends over Denmark, Sweden, and Norway. Its importance may be judged by the last annual report. In Denmark there are now 801 members, 6 class-leaders, 9 exhorters, 2 local preachers, 90 regular appointments, and 4 missionaries, under the superintendence of the Rev. Karl Schon, at Copenhagen, where the mission possesses a very elegant church. In the other two countries the reports are as given in the two preceding tables.

7. Methodistism in Australia.—Methodism at the beginning of this century found its adherents in Australia. The first class was organized March 6, 1812. The first missionary to this colony was Samuel Leigh, who landed in 1815. At first the labors of the preacher were confined to the whites, particularly the convicts who had been transported hither from the mother country. Gradually the work was extended to the natives also. In 1853 Methodism had progressed so well that the formation of an independent Conference was counselled by the home Church, and in January, 1855, the first session of the Wesleyan Conference was held at Melbourne, and was presided over by the Rev. W. B. Doyle, at that time generally known as the General of Missionary work in Australia, now secretary of the Wesleyan Missionary Society, London. At that time there were some 60 preachers and 11,000 members. Now this bough of the vigorous tree planted by John Wesley divides itself into three branches. The first extends over Australia Proper and Van Diemen’s Land, the Methodist districts in which adapt themselves to the colonial divisions of New South Wales, Victoria, South Australia, Western Australia, and Tasmania. These are the home districts of Methodism in that region, the work in them being missionary only as regards a few surviving relics of the feeble aborigines, or the swarms of immigrant Chinese. The second branch of Australian Methodism divides itself over New Zealand into the two districts of Auckland and Wellington, and the work is of a mixed character, embracing the British settlers and the Maori. The third branch is purely missionary, and extends over the Friendly Islands, the Gilbert Islands, the Cook Islands, the Marquesas, the Sandwich Islands, the Windward and Leeward Islands, the Bahamas, British Guiana, Honduras, and Hayti are mainly inhabited by the descendants of the Africans emancipated in 1834. The European population is comparatively small. No missions have had greater difficulties to contend against. Earthquakes, hurricanes, the pestilence, and occasional fires have from time to time destroyed life and property; the changes in the commercial policy of the British government operated for a while most injuriously in reducing the value of the staples of these colonies, and in some localities fearful droughts reduced the population to poverty and starvation. Our Maya mission to Honduras has been disturbed by Indian raids on the colony; and our societies in R utan, an island belonging to the republic of Honduras, have suffered from a political revolution, which is no strange event in the Spanish republics of America. Yet, in spite of these discouragements, the congregation has been gradually improving—agriculturally, commercially, and socially. The great want is an educated native ministry. The time since the emancipation has been but a short period in the history of a nation, and our moral and educational agencies have not been equal to the task. The life of the average Indian does not extend past the age that at the present rate of living is attended with the death of the people within the lifetime of a generation. Yet over many of our churches we have great reason to rejoice; and, from what has been effected in their case, to look hopefully in reference to the future. In these missions we have 97 missionaries, 44,728 members, and 28,058 scholars.

8. Methodistism in India.—Next in importance is the missionary work in India. The Wesleyans have labored there for years, but their expenditure on the field, both in men and money, is far inferior to that of the Methodist Episcopal Church, which has, especially within a very recent period, met with unprecedented success. But all Methodists have an equal interest in the success of this missionary field, to which the sainted Coke gave his life. See Coke. Work was commenced in 1813 at Ceylon. By 1819 the impression made warranted the establishing of schools in the principal cities along the western coast. In the mean time missionary labors had been carried on the continent itself, with head-quarters at Bombay. At the time of the centennial of Methodism (1839) the mission in India counted 21 stations, 43 missionaries and helpers, and 1200 members. At present (1873) the field covering the Tamil and Singhalese districts, Calcutta, Mysore, and Madras,
METHODIST contains 2976 members, with 18,987 children in the schools, guided by 75 missionaries. These statistics do not give, however, an adequate impression of the nature and character of the work itself. In India and Ceylon the missionaries preach in the streets and bazaars, as well as in the temples; they make frequent missionary tours in their respective districts, to preach and converse, and circulate books in the villages. Much time is necessarily occupied in the training of native agents, and in the charge of the higher classes in the schools, as well as in the general superintendence of the educational department of this work.

The Methodist Episcopal Church sent its missionaries to these parts in 1856. The pioneer operations were confined to efforts for the education of the natives and the so-called "parent body"—the Wesleyans—were invited into this field by the voluntary labors of George Piercy, a preacher, in 1851. Two years later the Missionary Society of his Church came to his aid by sending two assistants. The Methodist Episcopal Church, South, has also an interest in this field. The Wesleyans support at present in the Canton and Wuchang districts 11 missionaries, with 178 members, and 886 children in the schools. Work has recently been commenced by them at Kwang-chi, with prospect of success. They also support medical institutions. The great coolie traffic moved the establishment of a Chinese mission in Australia, and it is prospering. The mission of the Methodist Episcopal Church in 1890 reported its condition in China to be as follows: Missionaries in the field, 40; assistant missionaries, 29; missionaries of the Women's Foreign Missionary Society (a body lately formed as auxiliary to the regular Missionary Society of the Methodist Episcopal Church), 6; native preachers ordained, 79; adults baptized the past year, 558; children baptized the past year, 663; total baptisms during the year, 1221; members in full connection, 1895; probationers, 458; baptized children, 4357; total members, probationers, and baptized children, 4875; increase, 78; Sunday-school scholars, 4387. A Biblical institute for the training of native helpers is supported. A Christian native teacher is employed, and each American missionary devotes part of one day every week to giving instruction in some special part in the course of study. There is a press connected with the mission, and last year one million and a half of pages of tracts were printed and distributed. The property of the mission is valued at $252,620. The mission has also two boarding-schools, one for boys and another for girls; a day-school, with 75 scholars; and a foundling asylum, with 80 inmates. The Woman's Foreign Missionary Society has greatly aided the work in these parts within the past two years by the employment of deaconesses.

The influx of Chinese on our Pacific coast aroused the interest of the Methodist Episcopal Church, and in 1867 a home mission was incorporated for their conversion. The present status of this field of labor is as follows: Missionaries, 2; members, 115; 1 church, value $29,000; 1 parsonage, value $1,000; missionary collections, $40; missions, 1; money, $3,500. The Methodist Episcopal Church, South, has also very recently commenced operations there.

Near the close of last year a Methodist mission was established at Japan under the auspices of the Methodist Episcopal Church. Dr. Maclay, formerly superintendent of the missionary work in China, has supervision, and he hopes to make this new effort a glorious success. Already a native of influence and rank in the empire has espoused this cause, and is now preaching.

9. Methodism in Africa.—Dr. Coke was early drawn towards this field of missionary labor. But all efforts proved unsuccessful until 1811, when a Methodist mission was established at Sierra Leone, commencing its labor with a membership of 110, and three local preachers, who had fostered the work for some time. Gradually the mission extended to the Gambia districts. In these parts of Western Africa the natives are in process of becoming Christianized, the influences of the Wesleys, to benefit them by the civilization which too often has been made a means of degradation to their race. The majority of the ministers in Africa are natives, educated and trained for their work. Twenty-one missionaries labor in this field, which has 8974 Church members. "In the Cape Colony, the Orange Free State, Trans-Vaal Republic, and Natal, the native and European populations are so mingled that it is impossible to separate the returns of the colonial work from those of the missions in Kaffirland and in the Bechuanaland country. The early history of the mission is identified with the names of Barnabas and William Shaw, the latter, the housekeeper of the Kaffir mission, is longer among us, but his work survives. These missions have been, since their beginning, tried by native wars, and by the unsettled population occasioned by emigration, and by the discovery of the diamond fields; but the work is rapidly advancing. A large number of the Kaffir population have been brought under Christian influence; thousands of scholars have been trained to read the Word of God in their own tongue, and many able native ministers have been raised up. The difficulty now is to meet the enlarged educational wants and requirements of the native people. In these missions 85 ministers labor; the number of Church members is 13,748, and the scholars reported are 18,821" (Perks, in his address already quoted).

The Methodist Episcopal Church established a mission in Liberia in 1822. By 1830 the formation of an Annual Conference became necessary, and at present a bishop presides over the mission. We give the following summary of statistics for 1890: Members, 2954; deaths, 67; probationers, 224; local preachers, 58; baptisms—adults, 121; children, 85; churches, 56; of the probable value of $31,450; parsonages, 1, of the probable value of $150; Sabbath schools, 41; officers and teachers, 403; weekly school, 841; day-schools, 16; scholars in day-schools, 450; volumes of books, 115; libraries, 11; other institutions for the support of the Gospel, $1292. See LEBRIA.

The Conference, at its last session, expressed its deep sense of the need of a more thorough training of men for the holy ministry, and took incipient steps towards the establishment of a Biblical institute. Measures have also been taken for the establishment of a mission in the Kong mountains, north and east of Liberia and Sierra Leone, where dwell the Mandingoes, perhaps the most cultivated tribe on the western coast of Africa. See MANDINGO. Ten thousand dollars have been appropriated for this work.

10. Methodism in Italy, Spain, and Portugal.—For some time the Wesleyans have supported missionaries in each of these countries. Late events have given a new impetus to the work, and it promises to yield fruit in abundance. Besides two English ministers, seventeen Italians are preaching Methodist doctrines. At Rome the Wesleyans are now in possession of suitable buildings for preaching and educational purposes, and at Naples the new chapel and schools are advancing towards completion, while their educational establishment at Padua is in efficient operation.

The Methodist Episcopal Church in 1871 decided to establish a mission in that country, and placed the Rev. Dr. Vernon in charge. Bologna has been selected as head-quarter.

In Spain, Methodism supported for years a mission at Gibraltar, the only spot available until the new order of things developed. At present there are stations at Barcelona and Port Mahon (in the island of Minorca), and in Portugal at Oporto.

11. Methodism in South America and Mexico.—In 1820 missionary work was commenced in South America, but the success of the mission has not yet been fairly established. There are connected with this work 18 ordained preachers and 6 assistants, with 985 members. The Sunday-schools number 2113 teachers and scholars, and the day-school 3379 scholars. About half of these are in Brazil.

In November, 1872, the Methodist Episcopal Church organized a mission for Mexico, under the superintendence of the Rev. William Butler, D.D., formerly superintendents of her work in India. The enterprise is too recent to enable us to say much about it.

12. In Bulgaria.—The Methodist Episcopal Church established a mission in 1897. Connected with it are two ordained preachers, one at Constantinople and the other at Tulcha. These missionaries are engaged in preaching the Gospel, scattering religious reading, and translating the New Testament into the Bulgarian tongue.

The appropriation is $15,920.

The whole number of Methodists in the world would probably come to about 80,000,000, according to the best information we can obtain, was in 1866 as follows:

<table>

The whole number of Methodists in the world would therefore figure at the present time about as follows:

United States and Canada ........................................... 2,651,675
Greece and the Balkans ............................................. 961,460
All others ...................................................................... 276,075
**Total** ...................................................................... 4,099,210

VII. Literature.—The sources for the history and doctrine of the Methodists are as follows: Works of John Wesley (first complete edition, Bristol, 1771-74, 82 small quarto works, containing historical and critical errors); ed. 1808-15, 16 vols. 8vo, with a register, also containing errors; a critical edition was prepared by Thomas Jackson and published, London, 1831, 14 vols. 8vo; N. Y. 1831, 7 vols. 8vo); Memoirs of the late John Wesley, with a Review of his Life and Writings, and a History of Methodism from its Commencement in 1729 to the present Time, by John Hamson, A.B. (Sunderland, 1791, 3 vols. 12mo; translated into German, with remarks and additions by Niemeyer, Itale, 1785, 2 vols.); Burkhart, Complete History of the Methodists in England (Nurnb. 1795, 2 vols.); Life of the Rev. John Wesley, A.M., including an Account of the Great Revival of Religion in Europe and America, of which he was the first and chief Instrument, by Dr. Coke and Mr. Moore (Lond. 1792, 8vo); Life of John Wesley, collected from his private Papers and printed Works, and written at the Request of his Executors; in which is prefixed some Account of the Neat House where he Dwelt, collected from his private Journal, and never before published—the whole forming a History of Methodism, in which the Principles and Economy of Methodism are unfolded (chiefly from a London edition published by John Whitehead, M.D., Dublin, 1865, 2 vols. 8vo). For the sources of these biographies, see Curry, Remarks, in
addition to his revision of Southey's edition. i. 405, 406. "Vermon's by Charles Wesley, with a Memoir of the Author (Lond. 1816); Journals of Charles Wesley, to
which are appended Selections from his Correspondence and Poetry, with an Introduction and Notes by the Rev. T. Jackson (Lond. 2 vols. 8vo); Thomas Jackson, Memo-
rials of Charles Wesley, comprising Notices of his Poetry, of the Methodist Connexion and its Growth, and an alphabetical List of Important Events and Characters (Lond. 8vo); William Mylne, Chronological History of the People called Meth-
odists, of the Connection of the late Rev. John Wesley, from their Rise in the Year 1729 to their last Conference in the Year 1803 (Lond. 1803, 12mo); Life of Wesley, and Rise and Progress of Methodism, by Robert Southey, Esq. (Lond. 2 vols. 8vo); Note on the Life of Thomas Tid-
ridge, Esq.; and Remarks on the Life and Character of John Wesley, by the late Alexander Knox, Esq., edited by the Rev. Charles S. Southey, M.A. (2d American edition, with Notes, etc., by the Rev. Daniel Curry, D.D., 2 vols. 12mo, N. Y. 1847); Richard Watson, Observations on Southey's Life of Wesley (Lond. 1820); E. Watson, Life of the Rev. John Wesley (Lond. 1831); A. Clarke, Memoirs of the Wesley Family (Lond. and N. Y.); Wm. C. Larrabee, Wesley and his Coadjutors (N. Y. 2 vols. 16mo); E. J. W. Wesley, his Own Historian (N. Y. 1872, 12mo); the Rev. L. Tyerman, Life and Times of John Wesley (Lond. 1870, 3 vols. 8vo); and by the same author, The Oxford Meth-
odists (Lond. and N. Y. 1873, 8vo); Complete Works of John Fletcher (Lond. 1815, 10 vols. 8vo; N. Y. 1831, 4 vols. 8vo); Joseph Benson, Life of the Rev. John William de la Flechère (Fletcher), compiled from the Nar-
rative of the Rev. Mr. Wesley, the biographical Notes of the Rev. Mr. Gilpin, from his own Letters, and other authentic Documents (Lond. 1817, 8vo; in German, with a Preface by A. Tholuck, Berlin, 1833); Samuel Drew, Life of the Rev. Thomas Coke, L.L.D., including in Detail his various Travels and extraordinary Missionary Exer-
sions (Lond. 1835, 2 vols. 8vo); G. B. I. P. Newbery, with an Account of his Death (Lond. 1817, 8vo; N. Y. 1847, 12mo); Extracts of the Journals of the Rev. Dr. Coke's Fire-Visits in America (Lond.1789, 12mo); Stevenson, City Road Chapel, London (Lond. 1863, 12mo); Annual Min-
utes of the Methodist Conference, from the First held in London by the late Rev. John Wesley, in the Year 1744 (sev-
able vols.); Armagnac Magazine, from 1778, now styled Wesleyan Magazine (Lond.); London Quarterly-
ly Review, since 1835; the great ecclesiastical weeklies—Watchman, Wesleyan Times, etc. See also Gillie, Life of the Rev. George Whitefield (Lond. 1818); Philip, Life of the Rev. Philipourg and Life and Times of the Countess of Hamilt-
on (2 vols.); Mudde, Life and Times of the Rev. John Wesley (Brugy, N. Y. 1857); Lives of Early Methodist Preachers, edited by the Rev. Thomas Jackson (Lond. 1839, 2 vols. 12mo); and numerous biographies from the time of the origin of Methodism.
Sources for the history of the Methodist Episcopal Church especially: Journals of the Rev. Francis Asbury, Bishop of the Methodist Episcopal Church (new ed., N. Y. 1854, 3 vols. 12mo); Minutes of the Annual Confer-
ences of the Methodist Episcopal Church (N. Y. 29 vols. 8vo); Journals of the General Conference of the Meth-
odist Episcopal Church (N. Y. 12 vols. 8vo); Methodist Quarterly Review (N. Y. 1844 vols.); A. Stevens, Memo-
rials of the Introduction of Methodism into the Eastern States (N. Y. 2 vols.); J. B. Finley, Sketches of West-
er Methodism (N. Y. 12mo); and similar researches by Peck, Baybold, and others; Waleky, Lost Chapters ren-
over from the Early History of American Methodism; id., Heroes of Methodism (N. Y. 1844); id., Life of Methodism (N. Y. 12mo); Stevens, Women of Meth-
odism (N. Y. 12mo); Rev. W. Reddy, Inside Views of Methodism (N. Y. 1830); W. P. Strickland, History of Mis-
ions of the Methodist Episcopal Church (N. Y. 12mo); Bishop Thomson, Our Oriental Missions (N. Y. 2 vols. 8vo); C. Smith, Pullars in the Tropics, or Lives of Denouced Laymen of the Methodist Episcopal Church (N. Y. 1860); Deems, Annals of Southern Methodism; Miller, Experience of German Meth. Preachers (Cincinnati, 1859); Strickland, Life of Bishop Asbury; id., Pio-
ners of the West (N. Y. 12mo); Stevens, Life and Times of Nathaniel Bangs (N. Y. 1863); id., Sketches and Incidents (N. Y. 1818mo); Larrabee, Asbury and his Coadjutors; Life and Letters of Bishop Hamline (N. Y. 12mo); Sanford, Wesley's Missionaries to America; G. Pock, Episcopacy and Slavery.
Collective histories of Methodism: the best universal history of Methodism which the Methodist Episcopal Church has ever produced is Dr. Abel Stevens's History of the Religious Movements of the Eighteenth Century called Methodism, considered in its Internal Organization, Foreign Missions, and in its Relation to British and Ameri-
can Protestantism (N. Y. and Lond. 1858-61, 3 vols. 8vo and 12mo). The best history which was ever written in England is by Dr. George Smith: History of Meth-
odism—vol. i, Wesley and his Times; vol. ii, The Middle Age of Methodism; vol. iii, Modern Methodism (Lond. 1857-58, 3 vols. 8vo). Earlier works: Jackson, History of Wesleyan Methodism (Lond. 1839); Jonathan Crowther, Portraiture of Methodism, or the History of the Wesleyan Methodists, showing their Rise, Progress, and present State; Biographical Sketches of some of their most eminent Ministers; the Doctrines the Methodists be-
lieve and explain, and the Rules and Regulations with which their Discipline, including their original Rules and subsequent Regulations. Also a Defence of Method-
ism (Lond. 1815, 8vo). Concerning the history of the Methodist Episcopal Church especially: Nathan Bangs, Hist. of the Meth. Episc. Church, from the Year 1766 to 1840 (N. Y. 1849, 4 vols. 12mo); A. Stevens, Hist. of the Meth. Episc. Church (N. Y. 1865-67, 4 vols. 8vo and 12mo); Lee, Hist. of the Methodists; Strickland, Hist. of the Missions of the M.E. Church (1st ed. Cincinnati, 1849); Goes, Statistical Hist. of Methodism (N. Y. 1866, 18mo); R. Emory, Hist. of the Discipline of the M. E. Church, which was brought about by the Rev. Dr. Asbury, Bishop, and E. J. Strickland (1st ed. N. Y. 1848); Charles Elliott, Hist. of the great Seccession from the M. E. Church in the Year 1854, eventuating in the Organization of the new Church, entitled the M. E. Church South (Cincinnati, 1855, 8vo); Hist. of the M.E. Church in the South-east from 1844 to 1864, by the Rev. Charles Elliott, D.D., LL.D., partly edited and revised by the Rev. Leroy Vernon, D.D. (St. Louis, Mo., 1873, 12mo). On Canada: G. F. Player, Hist. of Methodism in Canada (Toronto, 1862, 12mo); Gorrie, Lives of Eminent Methodist Ministers; etc.
Books on Methodism. (a) Polemical books. Innumerable anti-Methodist works have been published since the rise of Wesley. A list of these works, which, however, are now almost forgotten, is given in alphabetical order by H. D. Decaner: Catalogue of Works in Refutation of Methodism, from its Origin in 1729 to the present Time (Phil., 1846). (b) Philosophical (pragmatical) studies: Isaac Taylor, Wesley and Method-
ism (Lond. 1861); Introduction; 1. Founders of Method-
ism; 2. Substance of Methodism; 3. Form of Methodism; 4. Methodism of the Future. Mr. Taylor, a copious Cal-
vinistic writer of the Anglican Church, was once a Dis-
senter; B. F. Telft, Methodism Successful, and the Internal Causes of its Success (N. Y. 1859). (c) More or less apol-
ogistic are: James Port, Compendium of Methodism, embrac-
ing the History and present Condition of its various Branches in all Countries, with a Defence of its Doctrinal, Governmental, and Prudential Peculiarities (N. Y. 1851; 16th ed. 1860, 12mo); George Smith, The Polity of Wes-
leyan Methodism exhibited and defended (Lond. 1862, 12mo); J. D. Alcock, The Methodist Polity Explained and its Objects, the Methodist Dependency and the Church (Auburn, N. Y. 1852, 12mo); Bishop Emory, Defence of our Fathers (N. Y. 8vo); T. E. Bond, Economy of Meth-
odism (N. Y. 8vo); J. Dixon, Methodism in its Economy (Lond. and N. Y. 1850); N. Bangs, Responsibilities of the M.E. Church (N. Y. 1860); A. Stevens, Church Pol-
y (N. Y. 1862); Morris, Church Polity (N. Y. 1862); L. S. Jacobs, Handbuch des Methodismus, embracing its
Methodism

Methodist Episcopal Church, The, is the official title of the largest body of Methodists in the United States, with branches in different parts of the world.

I. Organization.—This title was assumed by the American Methodists as a distinct body at what is historically known as the Baltimore Conference, held its session on Friday, Dec. 24, 1784, and was continued through Christmas week, and until the second day of the new year. Previous to this period the American Methodists had constituted societies, like those in Great Britain, in connection with and under the jurisdiction of the Rev. John Wesley, whom they all alike revered and obeyed. Father and son having, however, established their first Methodist service in America is believed to have been held in the year 1766, in the city of New York, by Philip Embury, an Irish immigrant and local preacher, a carpenter by trade, who was moved thereto by the stirring appeals of Barbara Heck, an Irishwoman, whose name is illustrous in the annals of the denomination. Thomas Webb, a captain in the British army, who was then staying in America, Robert Strawbridge, and Robert Williams, all local preachers, were, with Embury, the prosecutors of the work thus begun, until, in the autumn of 1789, Richard Boardman and Joseph Fimmo arrived at Philadelphia, missioners sent out by Mr. Wesley. Seven others afterwards came; but the entire service of all Wesley's missionaries was less than twenty-eight years, leaving out of the account Francis Asbury, who alone of them remained in the country during the Revolutionary War, and who became the apostle and bishop of the Church. Though several of them were not fortunate in their associations with their American brethren, two soon becoming Presbyterians, a third, by his active Toryism, causing grave scandal and even persecution, and none, except Asbury, staying long, they, as a whole, by their labors, zeal, and industry, with the aid of the Methodists, did much to lay the foundations of the Church. Their labors were instrumental in settling the cause upon a firm basis, and raising up scores of native preachers to carry on the work.

The first Conference, held in 1773, presided over by Ilkin as superintendent, consisted of ten members, all Europeans, with an aggregate in the societies of 1160. In May, 1784, eleven years later, notwithstanding all the adverse influences of the war, they numbered 14,988 members, several hundred local preachers and exhorters, 84 itinerant preachers, with more than sixty chapels, and probably not less than 200,000 attendants upon their worship. By this time, the itinerancy, which had never been attempting the organization of the Church was prevented from localizing itself, and had established organized societies in every state of the Union outside of New England, become the dominant, popular, religious power in Maryland and Delaware, and at several points planted its standard beyond the Alleghanies. Though thus widely spread, nearly nine tenths of its membership were south of Mason and Dixon's line, and of these a large proportion were in the Middle States, where the Anglican, or the English Established Church, once so flourishing, had become nearly extinct.

Most of the Methodists of 1784 were without the sacraments; for the English clergy upon whom they had generally depended had, with few exceptions, either left the country or forsaken their parishes. Thousands had been received into the societies without baptism; their children were growing up without that sacred rite; and preachers were ministering in their pulpits who had never even partaken of the Lord's Supper. The growing necessity for some provision for the administration of the sacraments had led to so serious thought and discussion in successive Conferences that the regular session of 1777, deeming the exigency sufficient to warrant a departure from ecclesiastical usage, constituted four of their number a presbytery, with power to proceed to ordain another, and afterwards others of their brethren. At the end of a year the sacramental
parly yielded to the minority for peace' sake; the ad-
ministration of the sacraments was suspended; and it
was agreed to seek the counsel of Wesley, and abide
by his judgment. He advised them to continue on the
same course of further direction. Wesley, who had
his American societies no way of relief until subsequent
conclusion of the war. Then, after long and ma-
ture thought, and consultation with his friends, among
whom was Fletcher, the sainly vicar of Madeley, he
resolved to use the power which he believed himself as
a parish clergyman had, that is, to appeal to the bishop;
should meet the demands of the thousands who sought
aid from him as their spiritual founder. He proposed
to the Rev. Thomas Coke, LLC, to receive ordination
at his hands as their superintendent, to which Coke,
whose sympathies were profoundly stirred in their be-
half, consented, when study and reflection had con-
vinced him of Wesley's power to ordain to the Episco-
opal office. It was also arranged that two of the English
preachers should be ordained to accompany him as el-
der. Accordingly, on the first day of September, 1784,
at Bristol, using the convenient and solemn forms of the
Church of England, and, assisted by Coke and the Rev.
Thomas Creighton, a presbyter of the English Church,
Wesley ordained Richard Whatcoat and Thomas
Vasey to the office of deacon. On the next day he
ordained them elders, and, assisted by Creighton and
Whatcoat, he also ordained Coke superintendent, or bish-
op, as this officer was afterward called. He then sent
them forth to their respective missions, instructing the
societies into a distinct Church, and to ordain As-
bury joint superintendent with Coke. To facilitate their
work, he furnished them with a "Sunday Service," or
hymn, a collection of psalms and hymns, and also "The
Articles of Religion." Upon their arrival in America, a
special meeting of the General Assembly was held, and
persons were examined by a commission assembled;
no one either exercised or claimed any ecclesiastical
authority at all. In this peculiar situation, some thought of the lubricity of the new clergy, and gave them
dangerous addresses; and, in compliance with their desire, I have
drawn up a little sketch.
"The very first meeting of the Primitive Church con-
cluded me, many years ago, that bishops and presbyters
were the same order, and consequently have the same right
to ordain. For many years I have been importuned, from
time to time, to exercise this right, by ordaining part of
our ruling preachers. But I have still refused, not only for peace' sake, but because I have determined at present to
be able to violate the established order of the National
Church in England, or for any other reason than to ordain, and, in compliance with their desire, I have
drawn up a little sketch.

to ordain. For many years I have been importuned, from
time to time, to exercise this right, by ordaining part of
our ruling preachers. But I have still refused, not only for peace' sake, but because I have determined at present to
be able to violate the established order of the National
Church in England, or for any other reason than to ordain, and, in compliance with their desire, I have
drawn up a little sketch.
Wesley had believed that bishops and presbyters constituted but one order, with the same right to ordain. He knew that for two centuries the succession of bishops in the Church of Alexandria was preserved through ordination. He had said, "I am a scriptural ιερεύς, as much as any man in England or in Europe; for the uninterrupted succession I know to be a fable which no man ever did or can prove;" but he also held that "neither Christ nor his apostles prescribe any particular form of Church government." He had called the Church of England a "false bishop which God had given to his care. He had hitherto refused "to exercise this right" of ordaining, because he would not come into needless conflict with the order of the English Church to which he belonged. But after the Revolution, his ordaining for America would violate no law of the Church; and when the necessity was clearly apparent, his hesitation ceased. "There does not appear," he said, "any other way of supplying them with ministers." Having formed his purpose, in February, 1784, he invited Dr. Coke to his study in City Road, laid the case before him, and proposed to ordain and send him to America. Coke was startled at first, doubting Wesley's right to ordain him, though why, if the ordination were not to the office of bishop, the next higher to which he already held, is inexplicable. He finally assented, and wrote, "The power of ordaining others should be received by me from you, by the imposition of your hands." 3. History records no other plan as proposed than that of an Episcopal ordination. This was what was laid before the few preachers called for counsel immediately after Coke's arrival in America. The title assumed by the Church is "Episcopal." The Minutes of the organization say that this was done, "following the counsels of Mr. John Wesley, who recommended the Episcopal mode of Church government, making the Episcopal office elective, and the elected superintendent, or bishop, amenable to the body of ministers and preachers;" and he had no reproof for the statement or the title, though the document was printed under his eye. The Minutes of 1789 say of him: "Preferring the Episcopal mode of Church government, he set apart Thomas Coke for the Episcopal office, and having delivered to him letters of Episcopal orders, directed him to set apart Francis Asbury for the same Episcopal office, in consequence of which the said Francis Asbury was solemnly set apart for the said Episcopal office. He knew what was done, and the intention in doing it. He says that his brother "assumed the Episcopal character, ordained elders, consecrated a bishop, and sent him to ordain our lay preachers in America." He wrote bitterly to his brother John of Coke's "Methodist Episcopal Church in Baltimore," of the readiness of the Lords to grant the request; he wrote to Wesley saying "Christian ambition and rashness." Coke distinctly said, after his return to England, that "he had done nothing but under the direction of Mr. Wesley," and Wesley replied to Charles that Coke "has done nothing rashly." Silence in such circumstances becomes assent. 5. Wesley, then, intended an Episcopal Church. But an Episcopal Church must have an Episcopacy, and therefore an ιερεύς, bishop, or superintendent, names alike in signification. He preferred the latter, as did Coke, who spoke in his sermon at Asbury's ordination of "our bishops, or superintendents, as we rather call them. When it is called bishop, it is called by the superintendent of the office, Wesley wrote, "How can you, how dare you, suffer yourself to be called bishop?" though he well knew that an Episcopal Church must have its bishop. To the title, not to the thing, he did object, and most strongly, for as it met him in England, its pomp and pretentiousness were far removed from that character of simplicity which he had so laboriously stamped upon Methodism. "I study to be little," he truly said in the same letter; but when he added, "You will not find any man who understands the nature of the Church ministry, the main body and trunk of the ministerial strength and power. As such it is naturally and crudely the undeveloped one order. Just as, and naturally, and by sacred precedent and expediency, it reserves the diaconate order as its preparatory pulpilage, so it flowers up into the Episcopal as its concentrated representative power. Fundamentally, there may thus be one order; subsidiarily, a second order; and derivatively, yet superior in function, a third order. The ordination and organic permanence is constituted in all three cases, according to sacred precedent, by ordination. The highest of the three orders is especially, as it happens, perpetuated by freer use of the former; the latter has been a necessary successor, bishop authenticating bishop, as elder does not authenticate elder, or deacon, deacon. Hence, though, as derivative, it is in origin less an order, and an inferior order, yet, as constituted, it becomes more distinctively an order than either of the other two. The facts of the case do not make an independent and permanent precedence of an ordained and permanently fixed superpresbyterian order; but it does furnish classes and instances of men exercising superpresbyterian authority, so that pure and perfect parity of office is not divinely enjoined. Such classes and cases are the 'apostles, the evangelists, St. James of Jerusalem, the Twelve, and Titus, ... Wesley held that the episcopate and episcopacy were so one order that the power constituting an Episcopal order inhered in the episcopacy; but he did not believe that there lay in the episcopacy a right to exercise that power without a true providential and divine call. Hence, in his Episcopal diploma given to Coke, he announces, 'If, John Wesley, think myself providentially called at this time to set apart,' etc." (D.D. Whe- don, Meth. Quar. Rev. Oct., 1871, p. 676.) II. DOCTRINES.—1. The "Articles of Religion" prepared by Wesley for the new Church, twenty-four in number, were adopted by the Annual and General Conference of the Church of England. Fifteen of the latter are entirely omitted, and several others considerably amended. While all traces of Calvinism, as well as of Roman leanings, are carefully eliminated, there is no insertion of Wesley's Arminianism, or of his doctrines of the Holy Spirit and "Christian perfection." Several important protests against Pelagian, Romish, and other errors, are retained, as are also, in substance, those articles which are in accordance with the sentiments of the universal Church. On the Trinity, the person and work of Christ, the Holy Spirit, the Scripture canon, original sin, free will, justification by faith and vicarious atonement, and good works, they speak clearly and in the most orthodox language. The design was to provide a broad and liberal platform upon which the great body of Christians who hold the essentials of Christianity might stand together in love and charity. With a few verbal changes, and the addition of one new article (the twenty-third), they stand as they were adopted in 1784; and from the year 1822 it has been placed beyond the power of the Church to "revoke, alter, or change" them. See ARTICLES, TWENTY-FIVE, of the Methodist Episcopal Church.
system, and incorporated with it other and objectionable principles, rather than from a familiarity with the views of Arminius himself. The articles on "Original Sin," for example, should forever have saved it from that reproach. Wesley's doctrinal sermons, Notes on the New Testament, and other writings, have been its standards of Arminian orthodoxy, while the rigid examination to which all candidates for the ministry are subjected is its chief security that only what is deemed corollary and sound in doctrine shall be preached in its pulpits.

3. Wesley's doctrine of the "Witness of the Spirit," known to many by the term "Assurance," holds an important place in the system of the Church. He defines it as an "inward impression on the soul, whereby the Spirit of God immediately and unmistakably convinces my spirit that I am a child of God; that Jesus Christ has loved me, and given himself for me; that all my sins are blotted out, and I, even I, am reconciled to God; and to effect this persuasion, he supposes that the Holy Spirit "works upon the soul by his immediate influence, and by a strong though inexplicable operation." The possession of this assurance is taught to be the privilege of all believers, and penitents are diligently instructed not to rest until it is received; while it is a constant theme in the pulpit and the social meeting. Such is the emphasis practically placed upon it.

4. Sanctification, or "Christian Perfection," as Wesley understood it, is the general official doctrine of all Methodism and is firmly held by the Church. It teaches no state attainable in life like that of the angels, or of Adam in Paradise, or in which there is an exemption from mistakes, ignorance, infirmities, or temptations; and, positively, that all saints may by faith be so filled with the love of God that all the powers of the soul shall be recovered from the abnormal, perverted, sinful condition, and, together with the outward conduct, be controlled in entire harmony with love. See METHODISM.

III. Government. — 1. The General Conference, the highest of the five judicatories of the Church, assembles on the first day of May in every fourth year, and is the only legislative body of the denomination. As in the Christmas Conference, it was for many years, constructively at least, an assembly of the whole ministry; but their increasing number, the impossibility of a general attendance from the constantly-extending field, and the fact that the Conference could not remain in one place, led to the arrangement, in 1808, that thenceforth it should be composed of ministerial delegates from the several Annual Conferences, acting under certain clearly-defined restrictions. These restrictive rules, or articles, as they are termed, have been modified from time to time, though the most important changes were those affecting systems upon a basis less easily changed, led to the arrangement, in 1808, that thenceforth it should be composed of ministerial delegates from the several Annual Conferences, acting under certain clearly-defined restrictions. These restrictive rules, or articles, as they are termed, have been modified from time to time, though the most important changes were those affecting the General Conference upon orders or for admission on trial, and holds jurisdiction over them; it is also charged with a general supervision of the temporal and spiritual affairs of the district. Specifically, it inquires into the work of Sunday-schoo1s, forms plans for the occupation of new fields within its territory, and promotes attention to the charities of the Church.

5. The Quarterly Conference is limited to a single pastoral charge, over which it exercises entire supervision, subject to the provisions of the Discipline. Its members are the pastor, local preachers, exhorters, and one steward and Sunday-school superintendent from each pastoral charge. It licenses local preachers, recommends them to the Annual Conference for orders or for admission on trial, and holds jurisdiction over them; it is also charged with a general supervision of the temporal and spiritual affairs of the district. Specifically, it inquires into the work of Sunday-schools, forms plans for the occupation of new fields within its territory, and promotes attention to the charities of the Church.

The Quarterly Conference is limited to a single pastoral charge, over which it exercises entire supervision, subject to the provisions of the Discipline. Its members are the pastor, local preachers, exhorters, stewards, and Sunday-school superintendent, if members of the Church. Besides the functions of the District Conference, which devolve upon it where no District Conference is held, it inquires carefully into the condition and work of every department of the local society.
6. The Leaders' and Stewards' Meeting, presided over by the pastor, and consisting of all the class-leaders and stewards of his charge, is usually held monthly, for the purpose of helping the members and the sick, and for any that, by neglect of the means of grace or by incorrect life, may need the admonitions of good discipline. The meeting recommends probationers for reception into the Church, as also candidates for license to exhort or preach. See LEADERS' MEETINGS.

7. The legislation of 1784 gave new force to the essential features which Rankin and Asbury, who had been trained in the school and under the eye of Wesley, had stamped upon the American societies. Evangelization and supervision, the former to extend the work, the latter to secure and build up what had been won, were fundamental in the methods then adopted, as they were in the measures of Wesley. The bishops were to sift the evangelists, almost plenary in power, yet sharing with the humblest in fare and labor, inspecting the local societies and classes, meeting leaders and trustees, and holding themselves responsible for even the details of the work throughout the denomination. The preacher in charge of a circuit was the bishop's "assistant," and the other preachers of the circuit were the assistant's "helpers," and under his direction. In still closer contact with the membership was the class-leader, appointed by the assistant, and in his subordinate sphere of pastorship aiding him by watching over the little band while he might be absent. The "pastors," a part of the circuit's "military regimen," as the historian of the Church has styled it, very remote from a democracy, which, indeed, it never pretended to be, gave surprising vigor to all the movements of the system. In all the modifications which have been from time to time effected, and the numerous limitations of power which the ministry have imposed upon themselves, these features of evangelization and supervision have been steadily maintained. The bishop presides in the Conferences; forms the districts according to his judgment; appoints the preachers to their fields, allowing none to remain more than three years in succession in the same charge; except the presiding elders, who may remain four years, and a few others specially designated; ordains; travels through the connection at large, and oversees, in accordance with the prescribed regulations of the General Conference, to which he is subject, the spiritual and temporal business of the preachers, who are not concelebrants but have a joint jurisdiction over the whole Church, constituting an "itinerant general superintendency." The arrangement and division of their work is annually made by themselves, giving to each his portion (though their respective residences are assigned by the General Conference), and for its faithful and orderly performances they are responsible to the General Conference. See EPISCOPACY; ITINERANCY.

8. Ordinations of preachers were at first designed simply to supply the sacraments to the societies, and soon an elder came for this purpose to be placed in charge of a district containing several circuits. Thus originated the office of presiding elder, a sub-episcopacy, with duties of oversight and administration indispensable in the system of the Church. Their constant travel through their districts, their presidency in the Quarterly Conferences, and familiarity with both churches and pastors, enabled the presiding elders to give the bishop the information and counsel necessary for the best adjustment of the appointments. In this work usage has made them his advisers, or, in more popular phrase, his "cabinet," though without authority of law. The wisdom of the Church has judged it best that the sole responsibility of the appointments shall be with the Episcopal.

9. Admission into an Annual Conference is preceded by a two years' probation in the itinerant work, and a rigid examination in a prescribed course of study; and all preachers thus admitted as members are ordained deacons, and in two years more, on the completion of the required studies, they are ordained elders. It devolves upon the former to "administer baptism, solemnize marriage, assist the elder in administering the Lord's Supper, to baptize the young and the sick, to teach the preacher," and upon the latter, in addition to these, to "administer the Lord's Supper" and to "conduct divine worship." But an elder, deacon, or preacher may be in charge of a circuit or station, with no difference in function except in the matter of the sacraments. He is the chief executive officer of the local society, charged to "take care" of its interests in accordance with the provisions of the Discipline, and is responsible to the Annual Conference both for the proper discharge of his duties and for his moral conduct. While he is the pastor of the flock, sub-pastors, denominatized class-leaders, are charged with the oversight of small bodies of the people. The chief executive officer of the local society is the "church and religious worship, for instruction, encouragement, and adoration." The local preachers, without a share in the government of the Church, except in the District and Quarterly Conferences, constitute a lay ministry, a corps of self-supporting evangelists, numerically larger than the travelling preachers, which has been of great efficiency. See LAY MINISTRY. All churches and parsonages are the property of the local society, held by trustees chosen in accordance with the law of the state or territory wherever a specific mode is required, and otherwise by the Quarterly Conference.

10. Admission into the Church is preceded by a probation of at least six months, during which period the candidate has opportunity for acquiring that familiarity with the Church, its doctrines, rules, and usages, which enables him to intelligently assume the obligations of a member therein. The one preliminary condition for reception on trial is "a desire to flee from the wrath to come, and to be saved from their sins," which is expected to show itself by such fruits as are specified in the General Rules. Genuine spiritual life is more carefully sought than rigid dogmatic orthodoxy, the only test of the latter sort being the "doctrines of holy Scripture, as set forth in the Articles of Religion," which, as shown above, embrace little more than the fundamentals of Christian doctrine as accepted by evangelical churches. The probationer, having been previously baptized, and also recommended by the Leaders' and Stewards' Meeting, or by his leader and district conference, is recommended to the Church upon giving assurance in presence of the Church of his doctrinal belief as just expressed, his purpose to observe and keep the rules of the Church, and to contribute of his worldly goods, according to his ability, for the support of its institutions. Nevertheless, persons cannot be reported out of the Church, except at once into full fellowship without the usual probation.

IV. History and Progress.—Under this head we propose to give a rapid sketch of the work performed by the Methodist Episcopal Church and its gradual growth, noting, as we pass, its relations to public questions, its changes of internal economy, and the principal controversies that have grown up from time to time, with their effects.

1. Pioneer Work.—"Methodism presented itself to the new nation," says Stevens, "an Episcopal Church, with all the necessary functions and functionaries of such a body; the only one, of Protestant denomination, now in the nation, to spread the scriptural holiness to these lands." Under the new system, the eucharist was immediately administered to thousands of disciples who had never partaken of it, and large numbers of both adults and children were baptized, scores of the latter receiving the rite at a single meeting. The work ex-
tended in every direction. The post of hardship and
severity was the post of honor. Going in the true spirit of
evangelicism with the conviction that they had "nothing
to do but to save souls," they not only held and
strengthened the fields already won, but pressed on to
the regions beyond, continually forming new circuits,
and proclaiming their message wherever men would hear—
in churches, in barns and log-cabins, in the forest and
highway. They traveled with the constantly-advancing frontier; they
penetrated Canada, and established themselves in New
England and Nova Scotia. Gown, and band, and
prayerbook too were cumbersome for their use, and were soon
laid aside. The system was providentially adapted to
self-propagation. "Its class and prayer meetings travelled
with the frontier. The labors of the clergyman are
larger, and three or four of them, meeting in any distant
part of the earth by the emigrations of these times,
were prepared immediately to become the nucleus of a Church.
The lay or local ministry, borne on by the tide of popula-
tion, were almost everywhere found, prior to the arri-
val of regular preachers, ready to sustain religious serv-
ices—the pionees of the Church in every new field."
Such was their success that, in sixteen years, at the end
of the century, their 15,000 members had become 64,894,
and the 84 itinerants had increased to 287, not counting
the scores who had fallen out of their ranks from pure
physical inability to endure the terrible severity of the
system, but were still working nobly in their local
sphere. Bishop Coke's stay in the country at his first
visit was but five months, a fair type of his subsequent
visits. After 1787 his Episcopal work was limited to
missions, presiding in Conferences when present, itin-
erating through the country, and preaching, the sta-
ning of the preachers being left with Bishop As-
bury.

Coke threw himself with zeal into the work of raising
funds for the college at Abingdon, Md., whose corner-
bones Asbury laid three days after his first departure for
Europe. In 1789 he stood with Asbury in the presence
of Washington, presenting to him, in behalf of the
Church, a congratulatory address upon his inauguration
as president, approving the recently-adopted Federal
Constitution, and professing allegiance to the govern-
ment. The Methodistic Episcopal Church was the first
religious body to recognize the Constitution of the
United States, and, in its article afterward adopted, it
declared its faith that they are a "sovereign and inde-
pendent nation," rather than a confederacy of sovereign
states. Coke's indefatigable labors in travelling and
preaching in behalf of the cause of education, and for
the emancipation of slaves, show him worthy of his high
position. Yet he was one of the last to take up the
Church, giving it his entire energies, becoming an ex-
ample to his brethren in labors and sacrifices, and care-
fully attending to even the most minute and local details,
exting classes, trustees, and often visiting pastorally
from house to house. He instituted in 1786, in Vir-
ginia, the first Sunday-school in America, and four years
later the Conference ordered Sunday-schools to be
established for the instruction of poor children, white
and black, in "learning and piety," being the first American
Church to recognize this institution. Official attention
was given as early as 1788 to the publication of books,
a "book steward" being appointed; and a borrowed
capital of six hundred dollars became the foundation
of the future "Book Concern." Additional legislation
from time to time, as necessity demanded, gave greater
efficiency and solidarity to the body, but innovations upon
tried methods found no favor.

2. John Rogers, in 1792, James O'Kelly
introduced into the Conference a resolution permitting
a preacher who might feel aggrieved by the appoint-
ment assigned him, "to appeal to the Conference and
state his objections," and requiring the bishop, if his
objections were found valid, to appoint him to another
duty. The proposition was lost by a large majority;
but the defeat cost the Church the succession of the
mover with a few other preachers and a large number
of members who, ultimately styled themselves "the
Christian Church."

Attempts were made in 1800 to make the presiding
eldership elective in the Annual Conferences, to intro-
duce the English method of making the appointments
by requiring them to be read in open session, "to hear
what the Church may have to say on the subject," and
and to aid the bishop in making the appointments by a
committee of preachers chosen by the Conference for
the purpose; but they Signally failed, though some of them
were revived in subsequent years.

3. Early Emancipation Movements.—The most vexing
question of the early day was that of the liberty of
slaves, and the right of the Church to practice slave
labor, and aid in the perpetuation of a system that
of slavery. The Methodist preachers of those days
were thoroughly hostile to the institution. At the or-
organization of the Church they pronounced it "contrary
to the golden law of God and the unalienable rights of
man kind, as well as every principle of the Revolution;" and
their enactments required all members holding slaves
to set them free, wherever it could be done, and forbade all future admission of slaveholders into the
Church or to the Lord's Supper, while all who might buy
or sell slaves were "immediately to be expelled, un-
less they buy them on purpose to free them." Could
they have looked forward a century, and seen that either
the Gospel of Jesus Christ must solve the problem of
slavery, these men who believed themselves divinely sent to
"reform the continent," would surely, with their clear
convictions on the subject, not have failed to dis-
cern that it was a part of their mission to destroy the
great crime of the nation, and they would doubtless
have maintained the high ground they had so firmly
taken. But they compromised with the evil because
of the great embarrassments attending the execution
of their rules, which in six months were suspended,
ever again to be enforced. Yet the Church was always
anti-slavery. Its preachers, holding "the power of the
keys," effected the liberation of thousands of slaves kept
by those who sought admission into its fold. The
Discipline never ceased to pronounce a condemnation
upon the system; and, from 1804, it perpetually asked,
"What shall be done for the extirpation of the evil
of slavery?" While successive General Conferences sought
by legislation, addresses to the Church, and measures
for memorials to the state Legislatures, to remove and
abolish it.

4. Completed Organization.—The absence of Dr. Coke
in Europe rendering an additional bishop necessary,
Richard Whatcoat was elected to that office in 1800, as
was William M'Kendree in 1808, the first native Ameri-
can elevated to episcopacy.

The latter year is the epoch of the plan of a
dele gated General Conference, adopted to "preserve, strengthen,
and perpetuate the union of the connection, and to
render "the doctrine, form of government, and General
Rules, sacred and inviolable." The "Council" devised
by the bishops, composed of themselves and the presid-
ing elders, had proved abortive after two trials, and the
General Conference, as then constituted, practically
placed the doctrinal and administrative systems of
the denomination in the power of the more centrally
located ministers. The new plan was conservative of every
fundamental principle of the Church, and at the same

* The General Rule on Slavery certainly existed in May,
1787, and was probably written by Coke or Wilberforce,
though over by Coke, and adopted by the Christmas Confer-
ence. Elliott so holds without the "probably." Neither Articles
or Rules were printed in the Discipline till 1789, nor the
Articles till 1790. In 1789 was issued the "fifth edition"
of the Discipline, and added in 1792, etc. That of 1799 was "revised and approved." But the edition of
1789 has the Rule on Slavery with Wesley's rules, and is
dated "May 27, 1789." In 1798, Abiny and Dicken
changed the "order and arrangement" of the Discipline.
April 25, 1786, Asbury read it in manuscript arranged in
"sections" in "the most public place," and that public
had received the sanction of Coke, who had been absent
from June,1786, to March, 1787.
time gave to the remotest Conference equal power with the most central, in proportion to its number of ministers. The first session, held in 1812, was composed of 90 members, representing 688 preachers, and a membership of 195,857; the sixteenth, held in 1872, was composed of 421 members, 292 clerical and 129 lay, representing, according to the Minutes of 1876, 9099 travelling preachers, 613 local preachers, 2821 members and probationers. Taking a fresh departure with the adoption of this measure, the Church pressed forwards in its practical work with added zeal.

5. Denominational Institutions. — The Book Concern, already (in 1804) removed from Philadelphia to New York, multiplied its publications, and elevated its annual receipts from $1700 in 1805 to $55,000 in 1840; and the circuit of its agents has been extended through the circuits by the agency of the preachers. They were too busy to make books, but they could sell them, and thus educate a people trained in the truth as they received it. In 1818 the Methodist Magazine was started—the beginning of the periodical literature of the denomination. It is now known as the Methodist Quarterly Review, one of the ablest of the quarterlies, with the largest circulation of all. The first weekly, The Christian Advocate, was issued in 1826, though Zion's Herald, under the auspices of New England Methodists, preceded it nearly four years, and in its second half-century it is full of beauty and power. The publishing-house was established in 1820 in Cincinnati; and depositories are located in several of the principal cities of the country. The increase of the business led in 1833 to a removal from Crosby Street, in New York, where it had been carried on for nine years, to Mulberry Street. The whole establishment was swept away by fire early in 1836, at a loss of at least a quarter of a million. New and better buildings soon rose on the same spot, which, with their subsequent additions, have been used as a manufactory of the house since the date of the removal of the principal office to its present location (905 Broadway), and complete the most splendid publishing-office in the world. The annual cost of the Quarterly Review is now about $1,052,448. There is also a "Western Methodist Book Concern," with a capital of $467,419.

To the relief of worn-out and needy preachers, and the widows and orphans of preachers, the denomination has always been attentive. At first, in 1874, the preachers themselves instituted a "Preachers' Fund," each paying out of his poverty a specified sum annually to its treasury. It was afterwards merged in the "Chartered Fund," instituted in 1876 for the same purpose. This fund has never been a favorite charity; it amounts to only about $40,000, and its dividends on the Conference are not always well paid. Many of the Annual Conferences hold trust funds, whose proceeds are devoted to the same end. Surplus profits of the Book Concern were for many years employed for their relief, but the chief reliance is on the annual contributions of the congregations, amounting now nearly to $100,000.

The missionary work of the Church took an organized form in 1815, when its Missionary Society was instituted. Methodist was itself a missionary system, "the great home-mission enterprise of the North American continent, and its domestic work, demanded all its resources of men and money. The Conference of 1874 ordered an annual collection in every principal congregation to provide a fund for "carrying on the whole work of God," chiefly for the expenses of preachers sent to new or feeble fields. Missionsaries were early sent among the slaves and Indians, and the constant extension of the Church, whether in the older states or on the western plains, was the impetus to the missionary movement. The society, organized primarily to aid the home-mission work, grouped with it the foreign field; and now, besides more than 2000 missionaries in the English-speaking Conferences, 161 in the German Conferences, and 90 among the Indians and other peoples of foreign birth in the United States, is supported in whole or in part by the society, its foreign missions, including native preachers and teachers, number 670, and are scattered in Africa, South America, China, India, Japan, Germany, Switzerland, Denmark, Norway, Sweden, Bulgaria, Italy, and Mexico. Its receipts in 1872 amounted to $661,056 60. It is supplemented by the Women's Foreign Missionary Society, and by other organizations of a quasi missionary character, equally efficient, especially with the help of the General Conference, its Sunday-school Union, its Tract, Freedman's Aid, and Church Extension societies.

The educational movements of the Church began with the Church itself. John Dickens, afterwards the first book agent, suggested to Asbury the plan of an academic institution as early as 1790, and at their first meeting the latter summoned it to go forward, and the latter approved it. It was laid before the Christmas Conference, which agreed upon measures to establish a college. Five thousand dollars—a large sum for those days—were raised for it before the building was begun; its foundations were laid at Abingdon, Md., in the following June, and in the last month of 1787 it was solemnly dedicated under the name of Cokesbury College. The curriculum embraced "English, Latin, Greek, logic, rhetoric, history, geography, natural philosophy, and astronomy, and, when the finances will admit of it, Hebrew, French, and German." More than seventy students were enrolled in the first year, and the first class were graduated in 1791-2. The college was burned down in 1795: "a sacrifice of $10,000 in about ten years," says Asbury. A new edifice was soon provided in Baltimore, and the college reopened with fair prospects, but in a year it also was lost by fire. Another college was projected in Georgia in 1789, and several academies were opened before the close of the century. The disastrous fate of Cokesbury led Asbury to think the Lord had "not called Methodists to build colleges," a saying of his that has been most sadly perverted. He would have had the same thing, but would have called it a "school," and not a "college," and he would have provided for the small cost of a primary or "circuit" school, which might have framed a scheme to bring "two thousand children under the best plan of education ever known in this country." In 1818 a second attempt was made to establish a college in Baltimore, but without success. The educational plans of the early Methodists were simply broader than their financial ability. There is no time in the history of this slander been just that they were enemies to education. In 1817 an academy was opened in Newmarket, N. H., since removed to Wilbraham, Mass.; and in 1819 another in New York City. In 1820 the General Conference took up the subject, and recommended that each Annual Conference establish a Conference academy under its own control. This action was followed by new efforts. Several Conference seminaries were soon opened, and, to meet the increasing demand for higher education, within twelve years no less than five colleges were put in successful operation. Theological schools are of a later date, and assumed at first the modest title of "Biblical Institutes." The first projected in 1839, after various fortunes, was located at Concord, N. H., in 1847; in 1867 it removed to Boston, and in 1871 became the school of theology in the Boston University. The Garrett Biblical Institute, at Evanston, Ill., founded in 1865, received an endowment of $300,000 and its name from a liberal Methodist lady of Chicago. The Drew Theological Seminary was originated in the Centenary movement at Madison, N. J., through the munificence of the gentleman whose name it bears. There is also a mission institute at Frankfort-on-the-Main, in Germany, named Martin Institute, after the name of one of the most influential of the fathers of the school; and there are similar schools in India, and at two or three points in the Southern States. By the close of the centennial year of American Methodism, "the Methodist Episcopal Church alone reported no less than 26 colleges (including theological schools), having 155 instructors, 1584 students, about $4,000,000 in endowments and other property, and 105,581 volumes in
their libraries. It reports also 77 academies, with 566 instructors, and 17,761 students, 10,462 of whom are female, making an aggregate of 102 institutions, with 714 instructors, and 23,106 students. The Southern division of the denomination [the Methodist Episcopal Church, South] reports below the Rebellions 12 colleges and academies, with 8,000 students, making an aggregate for the two bodies of 191 institutions and 31,100 students" (Steven's *Hist. of Am. Meth.* p. 94). In the thank-offerings of the Centenary, education was made a prominent object of the contributions of the people.

6. Later Divisions. — Various causes have operated to prevent the continued union of the denomination whose origin and progress are here traced, but it should be noted that no division has ever occurred on doctrinal grounds. The separation of O'Kelly and his friends, as already stated, took place in 1792, because the Conference refused to restrict the power of the bishops to the appointment of ministers to their fields of labor. In 1816 the colored members of Philadelphia and its vicinage withdrew and organized the "African Methodist Episcopal Church;" and in 1820 a secession in New York City originated the African Methodist Episcopal Zion Church. They are large and useful bodies.

Embarrassments arose in Canada after the War of 1812, through jealousies of the Conference, because of its connection with a foreign ecclesiastical body, which finally became so severe that in 1828 the General Conference was formally requested to set off the Canada Conference as a distinct Church. The General Conference consented that the people are to be "kept in all things subject to the government of this great evil, and to seek its extirpation by all lawful and Christian means." The discussions in Great Britain from the year 1823, that resulted in emancipation in all the British colonies in 1834, drew attention to the system of slavery as it existed in the United States, which was not greatly unlike that of the West Indies. Philanthropic movements began to be made and well-authenticated facts of the wicked and inhuman treatment of slaves. They were led to examine the system of chattel slavery and its practical workings, and found them so adverse to the rights to himself of every person of full age and sound mind, except for the commission of another secession from the Church, and between the two sections, the most friendly relations have ever subsisted.

The circumstances which led in 1830 to another secession, and the formation of the "Methodist Protestant Church," were of a more serious sort. The subject of lay representation in the public business of the Church had been under consideration from an early day deemed by a few to be important, began about 1820 to agitate the Church. The measures of the "Reformers," as the friends of the movement styled themselves, were unfortunate, leading not only to a most acrimonious controversy, but to such disorders as required necessary ecclesiastical trials and expulsions. Out of the controversy arose Emory's masterly production, "The Defence of Our Fathers." The subject came before the General Conference by petitions and memorials, and received the fullest attention. The report refusing the radical change asked for, written by Dr. Thomas E. Bond, a local preacher, and not a member of the body, and presented by Dr. Emory, was unanimously adopted. "The great body of our ministers, both travelling and local, as well as of our members—perhaps not much, if any, short of one hundred to oppose their wishes," says the report; and Bange thought that "nine tenths of our people were decidedly opposed to the innovation." The result was a new denomination, starting with 83 preachers and 5600 members, and a long and bitter controversy that finally died of exhaustion.

The subject of slavery, which for many years agitated the Church, was left in 1830; the first formal plans of war, though many of them, that were not feasible, did not prevent, in the progress of the Independents, to involve in its complications a Church which constantly had slavery under its ban, but did not make absolute non-slaveholding a test of membership. Two important secessions resulted—one in the North, the other in the South. One of the General Rules—the moral code of the Church from the beginning—forbade "the buying or selling of men, women, or children, with an intention to enslave them." The legislation of the Church was steadily adverse to the institution, though generally not barrassed by the obstacles which the civil laws placed in the way of a legal emancipation. The prohibition, however, of buying or selling slaves with any other intent than their freedom, remained unchanged. Moreover, from the year 1808, the Discipline provided that when any traveling preacher became the owner of a slave or slaves by any means, he shall forfeit his ministerial character in the Methodist Episcopal Church until he execute, if it be practicable, a legal emancipation of such slaves, conformably to the laws of the state in which he lives;" from 1816, that "no slaveholder shall be eligible to any official station in our Church;" and in 1824 it contained provisions for the religious instruction of slaves, and concerned colored local preachers. These regulations were not in force at the commencement of the "abolition movement," and continued unchanged until 1860, when the formula in the Discipline declares that "the buying, selling, or holding of human beings, to be used as chattels, is contrary to the laws of God and nature, and inconsistent with the golden rule;" and both preachers and members are "kept subject to the government of God in this great evil, and to seek its extirpation by all lawful and Christian means." The discussions in Great Britain from the year 1823, that resulted in emancipation in all the British colonies in 1834, drew attention to the system of slavery as it existed in the United States, which was not greatly unlike that of the West Indies. The movement began to be made and well-authenticated facts of the wicked and inhuman treatment of slaves. They were led to examine the system of chattel slavery and its practical workings, and found them so adverse to the right to himself of every person of full age and sound mind, except for the commission of crime, that they pronounced slaveholding to be a crime in God's sight, and immediate, unconditional emancipation a duty. Leading ministers, chiefly in New England at first, espoused these views, and advocated them in the pulpit, at camp-meetings, in conventions, through the press, and by all those means that could act upon the public mind. They were not content with the abolition of which some of the most able pens of the denomination were engaged, the question was examined in all its aspects. The subject was introduced into Quarterly and Annual Conferences, and ultimately became involved with questions of Conference rights, Episcopal prerogatives, and the rights of the laity. The General Conference of 1866 passed a vote of censure upon two of its members who had attended and spoken at an anti-slavery meeting in Cincinnati, where the session was held, (a resolution which in 1865, so greatly had opinion changed with events, it rescinded and pronounced void), and exhorted all members and friends of the Church "to abstain from all abolition movements and associations, and to refrain from patronizing any of their publications. But Methodist had not overlooked the welfare of the slave. At the culmination of these troubles, a hundred thousand colored persons, mostly slaves, were enrolled as members of the Church, and the Church adopted any measures additional to those already in the Discipline," many began to abandon all hope of seeing the Church purged of slavery, and to regard withdrawal
as necessary to free themselves from the guilt of con-
nection with it. Others, who had been prominent in the
anti-slavery ranks, and had advocated such modifi-
cations in the law of the Church as would prevent the
holding of slaves as chattels, maintained that the Dis-
cipline was against slavery, and that secession was not
an option. They were engaged in a battle within the
Church. But Orange Scott, Jotham Horton, Luther Lee, and others, felt impelled by their
consciences to withdraw. At a convention held at Utica,
N.Y., in 1843, they organized the "Wesleyan Methodist
Connection." This was but the beginning of a strug-
gle in which churches were rent in twain through most
of the Northern States. The organization thus formed
numbered at one period a considerable number of preach-
ers and members; but time and events have produced
such changes that many of its first leaders and warm-
est friends have returned to the old Church in the belief
that the denomination has accomplished its mis-
tion.

But a severer convulsion was preparing in the South.
The discriminations of the Discipline against slavehold-
ing had come to be distasteful to a generation that held
views on slavery widely different from those of the fa-
thougths the Church. The Confession of Faith, wholly or in part,
slaveholding states, the Baltimore being one, rigidly enforced
the old rule requiring ministers to emancipate the slaves of
whom they might become owners by inheritance, marriage, or any other means, wherever the civil law
allowed it, and never permitted slaveholders in their
ranks. It was also the ancient and settled policy and
constant usage to place no slaveholder in the Episcopa-
cy; and in 1832 James O. Andrew was put in nomin-
ation for that high office by Southern delegates, because,
though of the South, he was free from all personal con-
nection with slavery, and was elected. This was upon
the principle that a bishop, in a system of general super-
intendence which gave to each state equal bearing in Massa-
quocttess and South Carolina, must be free from what-
ever would prevent the exercise of his functions with
acceptance in any part of the Church. A slaveholding
bishop could never have presided in the Northern Con-
ferences, and the election of one would be an instruc-
tion of the law forbidding the General Conference to "de-
stroy the plan of our itinerant general superintendency." The
increasing restiveness under this exclusion from the
highest office of the Church led to an attempt by South-
ern delegates, in 1836, to elect to it a slaveholder, and,
upon its failure, to great agitation and threats of seces-
sion; they believed that this part of the system
should not be abandoned. The renewal of the effort in 1844 was
duly determined upon, and the purpose of re-
sistance on the part of the Northern Conferences was
equally firm, when the marriage of bishop Andrew, in
January of that year, with a lady who was the owner of
slaves, suddenly gave the friends of the movement
precisely what they wanted, but could not have obtained by
the suffrages of the General Conference—a slavehold-
ing bishop. That trouble was ahead was evident, and
the Southern ministry became at once a unit in sustain-
ing him. It could not be expected that the Church
would submit to the revolution of its an-
cient policy by a marriage; and nothing could have
more astounded the Northern delegates to the General
Conference of 1844 than the intelligence, which met
them upon their arrival in New York, the place of the
session, that slaveholding was already intrenched in the
Episcopacy. Early in the session an appeal of the REV.
Francis A. Harding from the action of the Baltimore
Conference was presented. That gentleman having
become by marriage the owner of five slaves, the Con-
ference, in pursuance of its old purpose to "not tol-
erate slavery in any of its members," required him to leavethe Church within the limits of his refusal, suspended him from the ministry. The Gen-
eral Conference, after a full hearing of the case, it be-
ing clear that emancipation could be legally effected in
Maryland, affirmed the decision of the Baltimore Con-
ference by a vote of 117 to 56. That body, though few
were "abolitionists," certainly was in no mood to yield
further to the encroachments of slavery; and it was
equally evident that should bishop Andrew be touched,
secession would ensue. His voluntary resignation
could not have saved both the South and the Church; and this
step he promptly resolved to take, but he was overruled by
the Southern delegates. They preferred disruption to
a non-slaveholding Episcopacy. The committee on the
Episcopacy was instructed to ascertain and report the
facts in relation to the bishop's alleged connection with
slaveholders and their friends; and to the number of
members of several others, he had married a lady owning
slaves, and had secured them to her by a deed of trust,
thus putting their freedom out of his power. A resolu-
tion, with a preamble reciting the facts, was promptly
offered by Mr. Griffith, a delegate from Baltimore, affec-
ting no steps from first to last towards an amicable settle-
ment. After the final action, after ten days' debate, was the adoption of the
following substitute by a vote of 111 years and 69
mayors:

"Whereas, The Discipline of our Church forbids the do-
thing anything calculated to destroy our itinerant general
superintendency; and whereas bishop Andrew has be-
come connected with slavery by marriage and otherwise,
and is the slaveholder of the church in which he is the
clergyman in the estimation of the General Conference, will greatly em-
barrass the exercise of his office as an itinerant general superintendant, if not in some places entirely prevent it;
therefore,
"Resolved, That it is the sense of this General Confer-
ce, that the bishop resign the exercise of his office so long as this impediment remains."

Evidently this was the mildest action possible with-
out the abandonment of the established principles and
usage of the Church. It left him still a bishop, free to choose his own course, and, with unquestioned right to the
full exercise of his powers the hour the "impedi-
ment" should be removed; and private individuals vain-
ly opened the way for his relief by offering to bind
themselves to purchase all his slaves and their connec-
tions, and set them free. The Southern delegates took
no steps from first to last towards an amicable settle-
ment of the difficulty; and acquiescence in the doctrine of a non-slaveholding bishop or separation from the
Church were the only alternatives left. All their meas-
ures were in the latter direction. First, Dr. Capers pro-
posed a plan of two independent General Conferences, with
their own bishops. But this was rejected by the Mis-
ionary Society. This, being in reality a division of the
Church, was held impossible. Then, as a second step,
the following declaration was presented, signed by
fifty-one delegates from the thirteen slaveholding Con-
ferences, and one from Illinois:

"The Conferences in the slaveholding states take leave to declare to the General Conference of the Methodist Episcopal Church, that the continued agitation on the subject of slavery and abolition in a portion of the Church: the frequent action on that subject in the General Conference; and especially the extra-judicial pro-
ceedings against Bishop Andrew, which, according to Sat-
urday last, in the virtual suspension of him from his office as superintendant, most probably produce a state of facts which renders a continuance of the jurisdiction of
this General Conference over these Conferences incon-
venient, and that the success of the ministry in the slavehold-
ing states."

This paper was at once referred to a committee of
nine, who were afterwards instructed (according to the
Journal), in case they could not frame an "amicable
adjustment of the difficulties now existing in the Church
on the subject of slavery." But the committee was sus-
tended, and the subject was changed as simply as South
should separate, to make provision in such a contingency to meet the
emergency with Christian kindness and the strictest
equity?" Mr. Hamline said, "I will go out with such instructions" (Hamline’s Life and Letters, p. 165). The instructions were modified accordingly. On the next day a protest against the action of the majority was made, affirming in stronger terms the position of the Declaration, which was followed some days later by a Resolution adopted in the two-thirds majority, setting forth that after the final act of separation, it would not have been the wisest to allow events to take their course, an open question. The protest delegates, about to renounce the jurisdiction of the General Conference, could claim nothing, as of right, at its hands; and it was certainly an act of the highest magnanimity on the part of the two-thirds majority to prescribe for itself beforehand a law of most liberal treatment of the withdrawing Conferences, and to provide for the conditional division with them of the property of the Church. Yet this was done in the report of the committee on the Declaration. (See the paper quoted in full under Methodist Episcopal Church, South.) This document was adopted with great unanimity. An analysis of it shows that (1) it is based upon one fundamental condition, namely, a necessity to be found by the slaveholding Conferences for a distinct ecclesiastical connection, produced by the action of the General Conference. (2) It assumes that such distinct organization, if formed at all, will come into being by the action of those Conferences, and upon their own responsibility. (3) It does not arrange a division of the Church. For this the General Conference had no power, as was agreed in the Committee; and that the Church could not and would not necessarily freely assert by Southern as by Northern delegates, both during and after the debate. The term “division” does occur, but solely with reference to property. (4) It is not a “plan of separation,” as it afterwards came to be styled, for it does not authorize, direct, or sanction any step of that nature by any party; but it finally enacts the rules to be observed by the Methodist Episcopal Church in case a “not improbable contingency” becomes, by the sole action of the South, an accomplished fact. (5) To avoid the strife and bitterness that so generally accompany a disruption, it enacts that, in case a new Church is formed, the Methodist Episcopal Church shall exercise no jurisdiction beyond certain limits, if the Church South shall act upon the same friendly principle. "The Church simply lays down for itself the rule of non-interference. (6) Nine of the twelve resolutions relate entirely to property, which, even if a Southern Church should be formed, can have no legal existence until the property is conveyed to it. (7) Only one of the resolutions adopted by the General Conference of 1844, or solemnly declares the jurisdiction of the Southern Annual Conferences to be vested in the new Church, to be constituted by the plans and doctrines and entire moral, ecclesiastical, and canonical rules and regulations of said Discipline, except only in so far as verbal alterations may be necessary to a distinct organization, and to be known by the style and title of “The Methodist Episcopal Church, South.” By this and the other action of the Methodist Episcopal Church host 1845 travelling and 8166 local preachers, and 495,288 members. Bishop Andrew at once gave his adhesion to the new Church, and Bishop Soule followed him at its first General Conference in May, 1846.

Troubles soon occurred upon the border line of the two churches. The Southern General Conference took summary possession of the newspapers within its territory, and of the Charleston Book Depository, with their books, notes, presses, etc., all of which belonged to the Book Concern. The understanding in relation to boundaries was not kept. Though the rule had not been changed, a pro rata division of the Book Concern was demanded at a suit at law. At the annual meetings of annual conferences, the General Conference of 1846 was met by the Rev. Dr. Lovick Pierce, as delegate from the Church South, hearing the “Christian salutations” of that body, and proposing fraternal relations between the two churches; but the existing difficulties were so evidently incompatible with the proposed fraternity, that it could not “at present” be entered into, though all personal courtesies, with an invitation to a seat within the bar, were tendered to Dr. Pierce. As the report on the Declaration was an enactment of the General Conference, it was, like any other enactment, repelable at its pleasure; and in the exercise of that right it was said, “It cannot be imagined that the Church South, having found and incontestable evidence, that the three fundamental conditions of said proposed plan have severally failed, and the failure of either of them separately being sufficient to render it null and void, and having found the practical working of said plan incompatible with certain great constitutional principles, in whatever manner we may be prevented, we have found and declared the whole and every part of said provisional plan to be null and void.” But in its desire to amicably adjust the claims made by the Church South upon the funds of the Book Concern, it authorized the book agents to offer to submit them to disinterested arbiters, at the same time an eminent counsel was employed to advise the Church South and its leaders, to advise them that it could be legally done: otherwise, and in case a suit at law should be commenced, to propose an arbitration under authority of the court; and
in case they could not offer arbitration, and no suit should be commenced, it was recommended to the Annual Conferences to "so far suspend the sixth Restrictive Article of the Discipline as to authorize the book agents at New York and Cincinnati to submit said claim to arbitration."

This was going to the ultimate extent of its power. The adoption of the recommendation of the sixth article was midway in its progress through the Annual Conferences when it was arrested by the commencement of suits in the civil courts. The case in New York came to a hearing before Judge Nelson, but before the issuing of the final decree the matter was amicably adjusted through the friendly offices of Judge McLean. The Cincinnati case resulted in favor of the defendants in the Circuit Court; but on a hearing of the appeal by the Supreme Court, to which it was carried by the Southern commissioners, the decision of the court below was reversed, on the alleged ground that the General Conference had full power to divide the Church, and that that body did, in the adoption of the report on the Declaration, actually divide the Church, when the division of the property follows, as a matter of course. The Church at once obeyed the decision; but no intelligent minister or member of the denomination has ever accepted the exposition given by the Supreme Court, through the lips of judge Nelson, of the law of the Church, the facts of its history, or the action of the General Conference of 1844. The relations between the two churches have not as yet become cordial. The bishops of the Methodist Episcopal Church in 1869 made some advances toward reunion, which were apparently received, but the General Conference of 1872 ordered the appointment of a delegation of two ministers and one layman to convey its greetings to the General Conference of the Church South at its next ensuing session.

Aside from these troubles, and others growing out of the demands for the return of the property, the intensity of the slavery question, and the work of the Church was vigorously and successfully pressed. It stood arrayed with its full moral power on the side of the Union in the war provoked by slavery, and more than a hundred thousand of its members gave themselves to the armies of their country. Before the close of the war it entered upon preparations for the celebration of the centenary of Methodism in America, by all the churches and people. "With devout thanksgiving, by special religious services and liberal thank-offerings," setting apart the month of October, 1866, for that purpose. The Church had attained by the end of the century, notwithstanding its losses from the general depression, a full membership of 207,550 members, and it was hoped that "not less than two millions of dollars" would be contributed to render its agencies more efficient in the future. Appropriate services were held throughout the Church, and at the close of the joyful month the aggregate contributions amounted to $8,709,408.39.

7. An important organic change in the economy of the Church was effected in 1872 by the introduction of laymen into the General Conference. In 1860 that body expressed its approval of the measure "when it shall be ascertained that the Church desires it," and also provided for the submission of the question to the vote of both the ministry and members. The result showed a large majority against the proposed change. Nevertheless, while the General Conference felt precluded by this expression of the popular will from adopting it, it reaffirmed in 1864 its approval of it upon the same condition. Before its next meeting took up the subject anew, recommending a definite plan to the consideration of the Church, ordering the submission afresh of the question of lay deputation to the vote of the laity, and proposing to the Annual Conferences the requisite alterations in the second Restrictive Rule. A large majority opposed deputation, and more than the necessary three-fourths vote in the latter, having been obtained in favor of the change, the General Conference, with the assent of 288 out of its 292 members, concurred in the same.

The lay delegates who had been provisionally elected in anticipation of this action, were at once admitted to their seats. It is provided that "the ministerial and lay delegates shall sit and deliberate together as one body, but they shall vote separately whenever such separate vote shall be demanded by one third of either order. It is also provided that both orders shall be necessary to complete an action."

8. The Bishops are assigned to certain residences, and some of them are limited to particular foreign fields. The following are their names, with the year of their ordination, and other facts:

Thomas Cobe — Died at sea, May 5, 1814, aged 44.
Francis Asbury — Died in Virginia, March 21, 1815, aged 70.
Robert Muhlenberg — Died in Delaware, October 15, 1812, aged 70.
William McDermott — Died in Tennessee, March 8, 1812, aged 56.
Kneal George — Died in Virginia, August 23, 1829, aged 60.
Robert B. Roberts — Died in Indiana, March 9, 1832, aged 64.
Jobn Sears — 1834 — Ext. M. E. Church, South, 1843 — Died, March 6, 1851, aged 50.
John W. Harding — Died in Kentucky, April 9, 1851, aged 61.
James O. Andrew — 1832 — Bishop M. E. Church, South, 1843 — Died, March 8, 1871, aged 75.
John Emory — Died in Maryland, Dec. 16, 1855, aged 68.
Edward O. Haven — Died in Maryland, June 7, 1869, aged 69.
Thomas W. Morris — Died in Ohio, Sept. 2, 1864, aged 60.
Leona C. Lamb — Died in Iowa, March 27, 1864, aged 37.
Edmund J. Jones — Died in Tennessee, Oct. 18, 1878, aged 69.
Levi Scott — Died in Ohio, Dol., July 13, 1857, aged 53.
Matthew Simpson — Died in Philadelphia, June 18, 1874, aged 70.
Edward B. Adams — Died in Baltimore, April 25, 1878, aged 58.
Frederick J. Star — Died of typhus, April 16, 1852.
David W. Clark — Died in Cincinnati, May 5, 1871, aged 71.
Calvin Kingsley — Died in Sydney, April 5, 1870, aged 69.
John D. M. Mason — Died in Liberty, Jan. 26, 1874, aged 54.
James W. Haggard — Died in New York, Nov. 27, 1872, aged 56.
Thomas Bowden — Died in St. Louis, Mo., August 17, 1872.
William P. Hill — Died in N. Y. City, Sept. 5, 1871, aged 80.
Richard S. Martin — Died in Boston, Sept. 7, 1872, aged 69.
Issac W. Wiley — Died in Foodooch, China, Nov. 17, 1874, aged 55.
Stephen M. Merrill — Died in Chicago, Ill., July 19, 1873.
Cyrus D. Foster — 1892 — Residence, Green Bay, Wis.
John P. Hartz — 1880 — Residence, Woonsocket, R. I.
Emanuel J. Miller — 1850 — Residence, Topeka, Kan.
John M. Walden — 1860 — Residence, Chippewa, O. A.
Benjamin L. Williams — 1875 — Residence, New York City.
Charles H. Fowler — 1864 — Residence, San Francisco, Cal.
James B. Page — 1878 — Residence, Bishop to the General Conference.
John H. Winsett — 1880 — Residence, Buffalo, N. Y.
Barnwell B. Scurlock — 1878 — Residence, Chattanooga, Tenn.
Issac W. Joyner — 1880 — Residence, Chattanooga, Tenn.
Edward H. Boyer — 1880 — Residence, Chattanooga, Tenn.
Daniel A. Goodall — 1880 — Residence, Fort Worth, Tex.

V. Statistic.—There are in the denomination 76 Annual Conferences, whose statistics show in 1872 10,542 travelling preachers, 11,964 local preachers, 1,058,904 members and probationers, 17,471 Sunday-schools, with 1,977,808 scholars and 13,551 officers and teachers, and 14,908 churches and 4,548 parsonages, valued together at $8,575,877. The baptisms for the year were 58,459 children and 61,311 adults. The benevolent contributions for the year were, for the Missionary Society, $671,000; Woman's Foreign Missionary Society, $10,765; Church Extension Society, $194,572; 63: 86; Tract Society, $21,585 67 Sunday-school Union, $24,674 51; American Bible Society, $42,528 56; Freedman's Aid Society, $12,048 97; Education, $6,650 42; and for necessitous ministers, $150,140 62—making an aggregate of $1,089,856 36. See Methodism. (D.A.W.)

Methodist Episcopal Church in Canada. The first Canadian Methodist Society, as nearly as can be ascertained, was formed in the town of Augusta, Colborne, by the Rev. Mr. Lyon, in 1778. Its first members were some of the parties who had constituted the first Methodist Society in New York. See Methodist Episcopal Church. Prominent names
were those of Paul and Barbara Heck, their three sons, John, Jacob, and Samuel; John and Catharine Lawrence—Mrs. Lawrence had been the widow of Philip Embury; and Samuel Embury, a son of Philip Embury. Besides these, it was joined by such others of the scattered settlers of Augusta as wished to unite with them in a public place of worship. The first meeting was held in the class-room of the schoolhouse. About two years after the organization of this society, viz., in 1780, Mr. Tuffey, a Methodist local preacher from England, then connected with a regiment stationed at Quebec, preached to his comrades and to the towns-people; but it does not appear that he at- tempted to form the regular class, which John Weakly was class-leader. Methodism was introduced into the country about Niagara and westward by the Rev. George Neal, who was born in Pennsylvania Feb. 28, 1751. He was converted under the ministry of the Rev. Hope Hull. Mr. Neal became a local preacher, and went into Canada in 1786. He settled in the Niagara District, taught school during the week, and preached to the people on the Sabbath, and frequently on week-day evenings. Follow- ing the illustrious examples of Nelson, in England, Williams, in Ireland, and Embury, in New York, Neal collected together those who had been converted through his instrumentality, and formed a society in the township of Stamford in 1790, appointing Christian Warner the class-leader, an office which he continued to fill until his death, March 21, 1833. This class, collected without the intervention of any travelling preacher, was also the class in this church, the same club as in Augusta, embraced among its members a number of people who often came to the district itself as members of the Church of God (Hist. of the M. E. Church in Canada, p. 94). The ministrations of Mr. Neal were approved by his brethren in the United States and Canada, and he was therefore ordained dea- con by bishop Asbury July 28, 1810, at the Annual Conference held that year at Lyons, in the State of New York.

The Rev. William Losee was the first itinerant Meth- odist preacher on Canadian soil. In 1789 or the be- ginning of 1790 he was visiting some of his friends and relatives near Kingston, Upper Canada. Being zealous in the Master's work, he improved his visit by preach- ing whenever opportunity offered. The people heard him gladly, and, having been edified by his labors, they sent a petition to the New York Conference, of which he was a member, requesting that body to send Losee among them, and he was appointed. The first class was organized Feb. 20, 1791; the second March 2 of the same year. This was the beginning of the Church as it, among John Weakly died. From this year the Methodist societies and con- gregations were regularly supplied with missionaries from the Church in the United States. The ministers in what was then a wilderness endured great privations, and encountered formidable dangers; but they were indelible in their labors, through zeal for God and for the salvation of the people.

Early Methodism in Canada, as well as in Europe and the United States, had to contend with great oppo- sition. Its most formidable foes were those who were determined upon the aggrandizement and dominancy of their own churches, who pillaged the Established Church, although no such thing as a Church establishment had been con- stituted in those provinces by legal enactment. These would-be adherents of the Church of England were vio- lent in their hostility to Methodism, as were also the members of some other Protestant churches, to say nothing about the Roman Catholics. An instance of the intolerant spirit manifested towards the early Methodist preachers is presented by the following facts. In 1788 Mr. James M'Carty, an adherent of Mr. Whitefield, went from the United States and settled in Earnestown, near the shore of the Bay of Quinte. Feeling it to be his duty to support the Established Church, he built a school together in their little log-cabins, and dispensed to them the Word of Life. He was interfered with by parties from Kingston, who, clothed with a little brief author-
June 21, Bishop George presiding. An Annual Conference was a new thing in Canada, and therefore great excitement attended the meeting, especially on the Sabbath. The number of preachers present was large, and all were anxious to build up the walls of Zion. Religious services commenced at eight o'clock on Sabbath morning, and the Lord manifested himself with power. Many were seeking redemption before the close of the meeting, and it was not until eight o'clock at night that the people dispersed. It is believed that more than one hundred souls were brought to Christ at this Conference. But the work of reformation did not end there. The preachers went from the Conference refreshed and strengthened, preaching with great effect Christ, the power of God, and the wisdom of God. On all the circuits the Word prevailed mightily, sinners were converted, and believers quickened. For more than three years there were constant additions to the Church throughout the Canadian work; and in some instances the revival influence extended to the churches of the neighboring States. In 1827 the Genesee Conference was again held in Canada. The church in which it assembled was at the west end of "Lundy's Lane," near the spot where six years previously the British and American soldiers had met in deadly conflict. How great the change now! Americans and Canadians, united by the love of Christ, united harmoniously in council and effort to build up the walls of Zion, and rejoiced together in the triumphs of the Gospel of peace. There were about one hundred preachers present at the Conference. Bishop George presided, still exerting the same holy influence upon preachers and people as in 1817. Thirty preachers were ordained at this Conference, and there were four lay preachers residing in Canada. The state of the work in 1820 was 2 districts, 17 circuits, 38 preachers, 47 local preachers, 65 exhorters, and 5557 members.

In the same year a settlement was effected between the General Conference and the English Church, by which it was agreed that the Methodist Episcopal Church should withdraw its ministers from Lower Canada, and give up that province, with all its Church property therein, to the management of the English Conference; and that the English Conference should in like manner withdraw its missionaries from Upper Canada, and give up that province, with all its Church property therein, to the Methodist Episcopal Church (comp. History of the Methodist Episcopal Church in Canada, p. 127-154). The rival interest having been withdrawn from Upper Canada—with the exception of Kingston, where the English Conference continued to keep one of its missionaries—the societies of the Methodist Episcopal Church, once more in the enjoyment of peace, soon recovered from the effects of the recent agitations, and were greatly prospered in spiritual things. So rapidly had the work extended, that in 1824 the General Conference held in Baltimore consented to the establishment of the border circuits in the United States. In 1827 the Methodist Episcopal Church in Canada had 2 districts, 17 circuits, 38 preachers, 47 local preachers, 65 exhorters, and 5557 members.

The Canadian Conference was organized at Hallowell, Upper Canada, August 25, 1824. Bishops George and Hodding were present, and presided in turn. The preachers numbered, including the two bishops and those on trial, thirty-three persons. This was a small number compared with what it could be. The Conference was held at Hallowell in 1817, or at Lundy's Lane in 1820. For four years longer the bishops went into Canada and presided at the sessions of the Canada Conference, appointing the preachers to the several charges, both preachers and societies cheerfully accepting such appointments. The work continued to extend and prosper, and Methodistism was beginning a power in the land. But the good it was accomplishing among the people, instead of removing the prejudices of its opponents, only tended to inflame the feelings of the latter, and to secure the advocates of a State Church. Among the Methodists, also, there were some who advocated the independent establishment of the Canadian Methodist Episcopal Church, on the ground that it would secure to the Canadian Methodists greater civil and religious liberty. Prominent among these was the Rev. H. Ryan, who had been agitating for a separation of the societies in Canada from the parent Church in the United States since 1820. The scheme was presented to the people on national and patriotic grounds, and the General Conference was memorialized on the subject, and at its session held at Pittsburgh, May 29th, the request was granted. Accordingly, the Canadian Methodists were on October 2, 1828, organized into the Methodist Episcopal Church of Canada. In 1828 there were 3 districts, 48 travelling preachers, 7 superannuated preachers, and 32 circuits, with a membership of 9678. The increase for the year was 1093.

From 1828 until 1832 the infant Church in Canada had unprecedented success, considering the opposition it met with from the Rev. H. Ryan and his followers, who separated themselves from the connection in 1829, and organized another body. The provisional government was quite friendly to the Methodists. The Methodist Episcopal Church in Canada after 1828 as it had been before, had a representation from the parent body. Parliament vindicated the rights of the preachers and Church, but the executive was not only confederated with the Church and State party in the country to cripple the energies of the original Methodists of the province, but was intriguing with the English Wesleyan Missionary Committee to induce that body—in violation of the settlement of 1820—to send their agents again into the country to form rival societies, large sums of money from the public revenue being promised if these missionaries would come. The scheme of the executive was successful, and Dr. Alder was sent out by the Missionary Committee to commence operations in Upper Canada in 1832. It was to avoid a collision with these agents of the English Conference, and also in evident anticipation of large financial supplies, that the great majority of the preachers consented to revolutionize the newly-organized Methodist Episcopal Church in Canada, and to become a more dependency of the English Conference.

This unconstitutional movement was resisted by some of the preachers, and by hundreds of the members. Despite remonstrance, however, the Canada Conference consummated its union with the English body, taking the name of the Methodist Episcopal Church, with the Rev. H. Ryan, who had separated from the Conference, maintaining that the discipline of the Church did not vest in the Conference the powers assumed by it in that action, and that therefore the action was null and void. They also maintained that if the General Conference had possessed the powers it claimed, its action was nevertheless null and void, because persons were allowed to take part in its proceedings who, according to the discipline of the Church, were not members of the General Conference. The prelates further claimed that, having joined an Episcopal Church, they could not without their own consent be made members of a non-Episcopal Church; neither could they be in any other way connected with the Rev. H. Ryan, who left their membership in the Church they had joined; that they therefore were still members of the Methodist Episcopal Church in Canada, and that said Church remained in its constitution and government intact—the action of the Conference amounting to nothing more than the withdrawal of the Conference and those who followed it from the Church.
Those preachers, travelling and local, who continued to adhere to the Methodist Episcopal Church, therefore exerted themselves to collect together the scattered remnants remaining faithful to the old Church. The task was indeed a difficult one, but it was accomplished that only fourteen preachers could be calculated upon who were prepared to take work the ensuing year; with a membership of 1100—a decrease during eight months of 13,899. These statistics, however, did not represent the true status of the Church, for many more of the people returned to the old fold as soon as they found that there was sufficient vitality left in it to reconstruct and carry on the work of God in the land. Ten years after the disruption of 1838, viz., in 1843, there were seventy effective ministers and preachers supplying circuits and stations in Upper Canada, besides superannuated and supernumerary preachers, and a goodly staff of local preachers, who were doing efficient service in the Master's vineyard. The membership had increased to 8880, and there had been a corresponding increase of Church property. It will be remembered that at the union in 1838 the Church had lost almost all its connectional property, and that the membership had decreased 6084. In January, 1845, the *Canada Christian Advocate*, a weekly paper, was established to supply the place in Church literature formerly occupied by the *Christian Guardian*. This medium of communication drew the societies and preachers more closely together, and enabled all to understand the true position of the Church, and the work accomplished through its agency. It is still the weekly official paper.

The connection has a two-room and publishing-house, located in the thriving and beautiful city of Hamilton, at the head of Lake Ontario. The class of publications and papers sent out from it very greatly benefits the Church, and assists in advancing the cause of Christ through the country generally.

There are two colleges under the direction and control of the Methodist Episcopal Church in Canada, viz., Albert College, vested with university powers, and Alexandria College, for the education of young ladies. These educational institutions, however, are located in a healthy situation, surrounded by pleasing scenery, and in full view of the pure and placid waters of the Bay of Quinte, about fifty miles west from Kingston. Under the able management of the president, Rev. A. Carman, M.A., these institutions are prospering, and are exerting an influence all over the country.

The Methodist Episcopal Church in Canada is composed of three Annual Conferences, with a delegated General Conference which meets every fourth year, and has the same legislative powers as the parent body in the United States. The present position of the Church, therefore, is: First, the General Conference; second, three Annual Conferences—Niagara, Ontario, and Bay of Quinte—ten extensive districts, 145 circuits and stations, 228 travelling preachers, 225 local preachers, 21,818 members, with Church property amounting to $2,149,776. Great attention is given to the Sabbath-school work. As nearly as can be estimated, from reports at hand, there are not far from 30,000 children in the Sunday-schools.

The polity of the Methodist Episcopal Church in Canada is like that of the Methodist Episcopal Church in the United States: the bishop taking the general oversight of the connection, presiding at the Conferences, and proceeding from them a conference in the persons of the bishops of the parent body. The late incumbent of the bishopric, the Rev. J. Richardson, D.D., Yorkville, Ontario, died in 1874. See Webster, *Hist. M. Epis. Ch., Canada*; Meth. Qu. Rev. 1863, Jan. p. 109 sq.; 1863, Apr. p. 204; 1866, Apr. p. 294; 1871, Jan. p. 173. (T. W.)
sentative for every five members of the Annual Conference, nor allow of a less number than one for every seven. 3. They shall not change or alter any part of the General Rules of the United Societies. 4. They shall not do away the privileges of our ministers or preachers of trial by a committee, and of an appeal; neither shall they do away the privilege of our members of trial before the society, or by a committee, and of an appeal. 6. They shall not appropriate the produce of the Book Concern, nor of the Chartered Fund, to any purpose other than for the benefit of the travelling, superannuated, superannuated, and worn-out preachers, their wives, widows, and children. Provided, nevertheless, that the joint recommendation of all the Annual Conferences, the major- ity of two thirds of the General Conference succeeding shall suffice to alter any of the above restrictions. 7. In 1832 the proviso was changed thus: "Provided, nevertheless, that upon the concurrent recommendation of three fourths of all the members of the several Annual Conferences, which shall be present and vote on such recommendation, then a majority of two thirds of the General Conference succeeding shall suffice to alter any of the above restrictions excepting the first article; and also, whenever such alteration or alterations shall have been first recommended by two thirds of the General Conference, the recommendation of a majority of all of the Annual Conferences shall have concurred as aforesaid, such alteration or alterations shall take effect." 8. In 1876 these rules were suspended, as it was thought they "would do harm," though still the destruction of slavery was to be sought "by all wise and prudent means. In 1786 the following section was inserted in the Discipline: "Quot. What regulations shall be made for the extirpation of the crying evil of African slavery? Ans. 1. We declare that we are more than ever convinced of the great evil of such slavery which prevails in the United States, and do most earnestly recommend to the Yearly Conferences, quarterly meetings, and to those who have the oversight of the circuits and circuits, the duty of carefully cautioning what persons they admit to official stations, and to give such directions to the annual conferences that they shall be required to hold an eminent sense of the necessity of the emancipation of the negroes in society in their respective stations. 2. Quot. What methods can we take to extirpate slavery? Ans. We are deeply conscious of the impropriety of taking new terms of communion for a religious society already established, excepting on the most pressing occasion; and such we esteem the practice of holding our fellow-creatures in slavery. We view it as contrary to the golden law of God, on which hang all the law and the prophets, and the inalienable rights of mankind, as well as the duties of brotherhood. Being, therefore, the deepest degradation, in a more subject slavery than it is perhaps to be found in any part of the world, except American slavery, which is one of the most odious that are known to the existence of man. We therefore think it our utmost bounden duty to take immediately some effectual method to extirpate this abomination from among us; and for that purpose we add the following to the rules of our society, viz. 1. Every member of our society shall have the right to annual examination, which shall, within twelve months after notice given to him by the assistant (which notice the assistants are required in every case to give), and at any time, if the assistant or any other member of the society, shall reasonably believe that it is necessary, there shall be held, and held in districts; and the general conference, shall, within twelve months after notice given to him by the assistant, who shall have a right to give such notice, to that effect, if he shall be of the opinion that the assistant or committee, or both, are right in the opinion. 5. When any travelling preacher becomes an owner of a slave or slaves by any means, he shall forfeit his minis- terial character in our Church, unless he execute, if he be a preacher, or be otherwise put aside as a member of the Church; and he shall be absolutely subject to the laws of the state in which he lives. 6. The Annual Conferences are directed to draw up addresses for the age of twenty, as soon as they arrive at the age of twenty, as soon as they arrive at the age of twenty, and every year thereafter, every year after the above-mentioned rules are complied with, im- mediately on its birth. 2. Every assistant shall keep a jour- nal, in which he shall record the ages, names, and ages of all the slaves belonging to all the masters in his respective circuit, and also the date of every instrument executed in the matter of sale, or purchase, of the slaves, with the name of the court, book, and folio in which the said instrument respectively shall have been recorded and recorded, and handed to the assistant, if it be in his circuit to the succeeding assistants. 3. In consideration that slavery is looked on as a great evil, it is earnestly recommended, who will not comply with them, shall have lib- erty quietly to withdraw himself from our society within the two years, from the notice given to consider the expe- dience of comply with the above regulations. 5. No person holding slaves shall, in future, be ad-mitted to the Society, or to the office of preacher, or to be pre- viously complies with these rules concerning slavery. 6. These rules are to affect the members of our society no further than as they are consistent with the laws of the states in which they reside. And respecting our society, the following is now considered, and in due con- sideration of their peculiar circumstances, we allow them two years from the notice given to consider the expe- dience of complying with the above regulations. 6. Quot. 43. What shall be done with those who buy or sell slaves, or give them away? Ans. They are immediately to be expelled, unless they buy them on purpose to free them."
the gradual emancipation of the slaves to the legislatures of the States, which was passed to that purpose. These addresses shall urge, in the most respectful but pointed manner, the necessity of a law for the emancipation of slaves. The插入的 silence of the legislature on these addresses shall be appointed by the Annual Conferences, out of the most respectable of our friends, for the conducting of the business of the churches, in the present evil day. To deputize and travelling preachers, shall secure as many proper signatures as possible to the addresses, and give all the assiduity and attention due to every request of the committees, and to further this blessed undertaking. Let this be continued from year to year till the desired end be accomplished.

In 1804 the following alterations were made: the question reads, "What shall be done for the extirpation of the evil of slavery?" In paragraph 1 (1796), instead of "more than ever convinced," it reads, "as much as ever convinced;" and instead of "the African slavery which still exists in these United States," it reads simply "slavery." In paragraph 4 (3 of 1796), respecting the selling of a slave, before the words "shall immediately," the following clause is inserted: "Except at the request of the slave, in cases of mercy and humanity, agreeably to the judgment of a committee of the male members of the society, appointed by the preacher who has charge of the circuit." This new proviso was inserted: "Provided also, that if a member of our society shall buy a slave with a certificate of future emancipation, the terms of emancipation shall, notwithstanding, be subject to the decision of the Quarterly-meeting Conference," All after "it is agreed, and is agreed, and is agreed, and is substituted: "The members of our societies in the states of North Carolina, South Carolina, Georgia, and Tennessee shall be exempted from the operation of the above rules." The paragraphs about considering the subject of slavery and petitioning legislatures were cancelled, and this was added: "6. Let the preachers, from time to time, as occasion serves, address and exhort all slaves to render due respect and obedience to the commands and interests of their respective masters." In 1808 it was ordered that "no slaveholder shall be eligible to the office of an elder, where the laws will admit of emancipation, and permit the liberated slave to enjoy freedom;" but all that related to slaveholding among private members, and paragraph 5 of 1804, were cancelled, and the following substituted: "3. The General Conference authorizes each Annual Conference to form their own regulations relative to buying and selling slaves." In 1812 this was altered thus: "3. Whereas the laws of some of the states, then existing, prohibiting, regulating, and providing special act of the legislature, the General Conference authorizes each Annual Conference to form their own regulations relative to buying and selling slaves."

In 1816 paragraph 1 of 1796 was altered thus: "1. We declare that we are as much as ever convinced of the great evil of slavery, therefore no slaveholder shall be eligible to any official station in our Church hereafter, where the laws of the state in which he lives will admit of emancipation, and permit the liberated slave to enjoy freedom." In 1820 the paragraph leaving it to the Annual Conferences "to form their own regulations about buying and selling slaves, as they shall please," was cancelled. In 1824 the following paragraphs were added: "4. All our preachers shall prudently enforce upon our members the necessity of teaching their slaves to read the Word of God; and to allow them time to attend upon the public worship of God on our regular days of divine service. 5. Our colored preachers and official members shall have all the privileges which are usual to others in the District and Quarterly Conferences, where the usages of the country do not forbid it. And the presiding elder may hold for them a separate District Conference, where the number of colored local preachers will justify it. 6. The Annual Conferences may employ colored preachers to travel among their trades; when their services are judged necessary; provided that no one shall be so employed without having been recommended according to the Form of Discipline.

The General Rules drawn up by Mr. Wesley for the Methodist societies in England were not placed in the Discipline at the time of the organization of the Methodist Episcopal Church in America in 1784. They were introduced into the Discipline by bishop Coke and Asbury in 1789. The bishops took the liberty of inter- polating the rule forbidding "the buying or selling the bodies and souls of men with an intention to enslave them." In 1792 it was altered thus: "The buying or selling of men, women, or children, with an intention to enslave them." In 1808 the rule was changed to: "The buying and selling of men, women, and children, with an intention to enslave them." In view of the time and manner of its introduction, and its peculiar phraseology, this rule was considered to refer to the African slave-trade, and not to the transfer of those already in slavery from one person to another; hence it met with but little opposition in the South, which denounced that odious traffic. The later General Conferences, down to that of 1840, were conservative on this subject, and this latter affirmed the right of local preachers in Maryland and Virginia who held slaves to ordination, from which they had been debarred by the Baltimore Conference. As the Southern States did not allow the emancipation of slaves without expatriation, both ministers and members held them without violation of the Discipline. As slavery was a civil and social institution, it was impossible for the Church to exist in the South without this permission. In this respect the Methodist Episcopal Church is the only Church in the United States which allowed slavery among both the membership and ministry, and made laws for the regulation of the same. Mr. Wesley pursued the same course in the West Indies, licensing Mr. Gilbert, a slaveholder, to preach, and baptizing his slaves. The British Conference did so too, charging its ministers in the West Indies to have nothing to do with the institution of slavery, as that was a matter belonging to the legislature, but to preach the Gospel alike to master and slave. Thus, after a tortuous legislation on the vexed question, which scarcely knows a parallel in Church history, the Methodist Episcopal Church in America appears to have been settling down upon a satisfactory and permanent basis.

III. The Separation.—But when the General Conference met in 1844, in New York, the Rev. Francis A. Harding, of the Baltimore Conference, appealed to it from the decision of that Conference, which had suspended him from the ministry for not emancipating his slaves, saying this was contrary to his understanding of the doctrine of the Church. He confirmed the decision of the Baltimore Conference, despite the laws of Maryland and of the Discipline. It was ascertained, too, that one of the bishops, James Os- good Andrew, residing in Georgia, had become connected with slavery. Neither he nor Mr. Harding had either bought or sold a slave ever. Even Gilley in possession of a slave, bequeathed him by a lady, and whom he would have to see at any time, but she would not receive her freedom; also a boy, left by his former wife to his daughter without will; him, too, he would willingly manumit if he could do so by the laws of Georgia; also slaves legally his by his second marriage, to whom he gave nothing of his own. He secured them by deed to his wife, to whom they belonged—the law not allowing their emancipation. But after a lengthened, excited, and very able discussion of the question on both sides, the General Conference adopted the following preamble and resolution: "Whereas, the Discipline of the Church forbids as an evil, the purchase of slaves, the calculated emancipation of our itinerant and general superintendency; and whereas, bishop Andrew has become connected with slavery, by marriage and otherwise, and this act having been done in all the circumstances which, in the estimation of the General Conference, will greatly embarrass the exercise of his office as an itinerant general superintendent; and whereas, in some places, entirely prevent it; therefore, Resolved, That it is the sense of this General Conference that he
dealt from the exercise of this office so long as this important result. The vote stood 111 for and 69 against—all in the affirmative, except one (he a Northerner), being from Northern Conferences, the Baltimore Conference being equally divided: several from the Northern Conferences, however, voted in the negative. The bishops had requested the General Conference to suspend action in the premises, suggesting that arrangements be made to return to the region in which he himself held his office, as his services would be "welcome and cordial" in the South. Resolutions declaring the action in the case of bishop Andrew, to be advisory only, and not to be considered in the light of a judicial mandate, and postponing its final disposition, according to the suggestion of the bishops, were held over until the next General Conference—the South, of course, voting in the negative. Resolutions proposing two General Conferences were referred to a committee, which could not agree on a report. The Southern delegates then presented the following "Declaration:"

The delegates of the Conferences in the slaveholding states take leave to declare to the General Conference of the Methodist Episcopal Church that the continued agitation on the subject of slavery and abolition in a portion of the Church, the frequent action on that subject in the General Conference, and especially the extra-judicial proceedings against bishop Andrew, which took place at the Saturday last in the virtual suspension of him from his office, produce a state of things in the South which renders a continuation of the jurisdiction of the General Conference over these Conferences inconsistent with the success of the ministry in the slaveholding states. This declaration was referred to a committee of nine, composed of Northern and Southern delegates, with instructions to devise a constitutional plan for a mutual and friendly division of the Church, provided the difficulties could not otherwise be adjusted. The minority, through Dr. Bascom, presented an elaborate protest against the action of the majority in the case of bishop Andrew, characterizing that proceeding as extra-judicial and unconstitutional—the Episcopacy being a co-ordinate branch of the government of the Church, a bishop cannot be subjected by a delegated Conference to any official disability without formal presentation of a charge of the violation of law, and conviction on trial, and no law concerning slavery had been violated by bishop Andrew; the action therefore in his case was unconstitutional, and would establish a dangerous precedent, subservient of the union and stability of the Methodist Episcopal Church. This protest was allowed to go on the Journal, and a reply was made to it on the part of the majority. Resolutions were presented to assist bishop Andrew's name to remain in the Minutes, Hymn Book, Discipline as formerly; allowing him and his family a support; and leaving to him to decide what work he would do, if any, in view of the action of the Conference—the third resolution being adopted by a vote of 108 to 67. The committee of nine made their report on a plan of separation, which, after discussion and amendment, and earnest advocacy by Drs. Olin, Hamline, Bangs, Elliott, and other Northern delegates, was adopted by a nearly unanimous vote. The leaders of the North considered that the Conference was shut up to this course, as they affirmed that, under the circumstances, bishop Andrew could not preside in some of the Northern Conferences, and they believed that if he were suspended, and the Southern Church submitted to it, Methodist Church could not prosper in the South. Hundreds of thousands of negroes were supplied with the Gospel by the Southern Church, and assisting them, especially on the plantations, would be debased if they were removed by the government to the North. Division, therefore, was inevitable. It was accomplished in the spirit of candor and charity—and the rather as the Connection was getting too large, as Dr. Elliott said, for one General-Conference jurisdiction. The following is the Plan of Separation:

The select committee of nine to consider and report on the declaration of the delegates from the Conferences of the slaveholding states, beg leave to submit the following report:

Whereas, a declaration has been presented to this General Conference containing the grievances of the members of the body, from thirteen Annual Conferences in the slaveholding states, representing that, for various reasons enumerated, the interests and purposes of the ministry and Church organization cannot be successfully accomplished by them under the jurisdiction of this General Conference as it now exists; therefore be it resolved, by the Conference, that if the interest of the Church, with Christian kindness and the strictest equity, therefore, be the desire of the members of the Annual Conferences in General Conference assembled,

1. That should the Annual Conferences in the slaveholding states, on petition to the General Conference, with a due Christian connection, the following rule shall be observed with regard to the northern boundary of such connection or lines of station, societies, stations, and Conferences adhering to the Church in the South, by a vote of a majority of the members of said societies, stations, and Conferences, shall remain under the nominal pastoral care of the Southern Church; and the members of the Methodist Episcopal Church shall in no wise attempt to organize churches or societies in the lines of station, societies, stations, and Conferences adhering to the Church in the South, nor shall they attempt to exercise any pastoral oversight therein; if they shall understand that the ministry of the South reciprocally shall not be exercised in the lines of station, societies, stations, and Conferences bordering on the line of division, and not to interfere with the care of the Church within those territory they are situated.

2. That the ministers, local and travelling, of every grade and office in the Methodist Episcopal Church, may, as they believe, remain in that Church, or, without blame, attach themselves to the Church South, or what shall they exercise any pastoral oversight therein? It being understood that the ministers of the South reciprocally shall not be exercised in the lines of station, societies, stations, and Conferences bordering on the line of division, and not to interfere with the care of the Church within those territory they are situated.

3. Resolved, by the delegates of all the Annual Conferences in General Conference assembled, that we recommend to all the Annual Conferences at their next approaching sessions to authorize a charge of the sixth Restrictive Article of the Discipline for the work of persons who shall reside or travel in the South, and they shall not appropriate the produce of the Book Concern of the Chartered Fund, to any other purpose other than for the work of travelling superintendents, evangelists, and missionaries; and relieve, and, worn-out preachers, their wives, widows, and children, and to such other purposes as may be determined upon by the votes of the three or more of the members General Conference.

4. That whenever the Annual Conferences, by a vote of three fourths of all their members voting on the third resolution, shall have concurred in the recommendation to alter the sixth Restrictive Article, the agents in New York and Cincinnati, and those who shall be hereby authorized and directed to deliver over to any authorized agent or appointee of the Book Concern, (churches, societies, or missionaries), all notes and book accounts against the ministers, Church members, or citizens within its boundaries, with authority to sell the same, as the Ministerial Board of the Southern Church; and that said agents convey to the aforesaid agent or appointee of the Southern all the real estate, and all the property, and all the accounts, notes, and book stock, and all right and interest connected with the printing establishments at Charleston, Richmond, and Nashville, the Methodist Episcopal Church South.

5. That when the Annual Conferences shall have approved the aforesaid change in the sixth Restrictive Article, the Southern shall have the same proportion to the whole property of said Conference as the preachers and teachers of the Methodist Episcopal Church shall bear to all the travelling ministers of the Methodist Episcopal Church, the division to be made on the basis of the number of travelling preachers in the following time.

6. That the above transfer shall be in the form of an annual payment of twenty-five thousand dollars in stock of the Book Concern, and in Southern notes and accounts due the establishment, and accruing after the first transfer, and until the transfer shall be made, the Southern shall share in all the net profits of the Southern Book Concern in the proportion that the amount due them, or in arrears, bears to all the amount due the Southern Book Concern.

7. That Nathan Bangs, George, Park, and James B. Finley be, and they are hereby appointed commissioners to act in concert with some of the number of commissioners appointed by the Church Northern to the establishment (or a commission to be formed), to estimate the amount which will fall due to the South by the preceding rule, and to have full powers to carry into effect the arrangement with regard to the division of property, should the separation take place. And if by any means a vacancy occur in this
Board of Commissioners, the Book Committee at New York shall still hold vacancy.

8. That whenever any agents of the Southern Church are selected by the local authorities to act in the premises, the agents at New York are hereby authorized and directed to act in concert with said Southern agents, so as to the provisions of these resolutions a legally binding force.

9. That all the property of the Methodist Episcopal Church, including all the changed and unmoved Conference funds, cemeteries, and of every kind within the limits of the Southern organization, shall, in case another fee is ever again set up or another part of the Methodist Episcopal Church, so far as this resolution can be of force in the premises.

10. That the Church so formed in the South shall have a common right to use all the copyrights in possession of the Church at New York and Annual at the time of the settlement by the commissioners.

11. That the book agents at New York be directed to make a presentation to the Conference for their dividend from the Chartered Fund as the commissioners above provided for shall agree upon.

12. That the bishops be respectfully requested to lay that part of this report requiring the action of the Annual Conferences before them as soon as possible, beginning with the New York Conference.

The Southern delegates sent out an address to their constituents, showing what they had done, and counselling moderation and forbearance. They called for a convention of the Annual Conferences—in the ratio of one to eleven of their members—to meet in Louisville, Ky., at some date within the relation of the Church, and Quarterly and Annual Conferences, took action in the premises, and declared in favor of the plan of separation with a very near approach to unanimity. The convention met in Louisville at the appointed time, bishops Soulé, Andrew, and Morris being present. The bishops were invited to preside, and the two former did so. The convention, acting under the plan of separation, declared the Southern Conferences there represented a distinct connection, under the style of "The Methodist Episcopal Church, South," and made provision for the holding of its first General Conference in Petersburg, Va., May 18, 1870. The bishops, Dr. Hendrix and Andress, requested to become regular and constitutional bishops of the Methodist Episcopal Church, South; the latter complied with the request, but the former, in view of outstanding engagements, postponed doing so till the session of the General Conference. The action of the convention was nearly unanimous, and it gave great satisfaction throughout the South. Bishop Soulé gave in his formal adherence at the General Conference in Petersburg; two other bishops were consecrated, viz., William Capers, D.D., and Robert Paine, D.D.; the Discipline was revised; missions, etc., were projected; Henry B. Bardwell, Alexander L. P. Green, and Charles P. Parson, were appointed to superintend the spiritual affairs of the South. An Early agent and appointee, according to the provisions of the plan of separation; editors, etc., were chosen, and all the operations of the Church went on as though no separation had taken place. Lovick Pierce, D.D., was commissioned to attend the session of the Northern General Conference in 1840, to tender to that body the Christian regards and fraternal salutations of the General Conference of the Methodist Episcopal Church, South; but he was not received in his official capacity. A change had come over the Northern Church, and the General Conference repudiated the plan of separation. The Church was the better settled by the Supreme Court of the United States, which decided in favor of the South. The property was divided according to the provisions of the plan. A publishing-house was established in Nashville; a quarterly review, weekly papers, Sunday-school papers, books, tracts, etc., were made and issued; and the Church was gradually and firm-ly till the war interfered with the operations of the Church, and sadly crippled its institutions. Much of its property was appropriated by others during the military occupancy of the South; but most of it has been restored, and it is hoped all the rest will soon be recovered. Tentative movements have been made by some in the Northern Church for reunion; but as that is deemed impracticable, the Northern General Conference of 1872 empowered the bishops to send a deputation to the General Conference of the Methodist Episcopal Church, South, in 1874, to see if fraternal intercourse cannot be established between the two connections. It is hoped that this will take place on a basis honorable to both parties. The fraternal messenger sent to the Northern Conference in 1849, in that body that the Methodist Episcopal Church, South, was always ready for fractionalization on the basis of the plan of separation.

III. Present Condition.—The Church has been rapidly recovering from the sad effects of the war. At the time of the separation, in 1864, there were about 450,000 communicants and $1,257,757, of which 207,760 were colored members. These figures were greatly reduced during the war. In 1890 the number of communicants was 1,161,666, of whom only 520 were colored. There were 4862 travelling and 9299 local preachers—all embraced in the foregoing figures. Most of the colored members had joined other colored bodies of Methodists. Many of them are connected with the Colored Methodist Episcopal Church in America, which was organized in 1870 by the sanction of the General Conference of the Methodist Episcopal Church, South, with a distinct connection in fraternal Church, the two denominations seceding as bishops two colored ministers chosen by a colored General Conference. One of them died in 1872; but the connection is prosperous, having a number of Annual Conferences, and at a special General Conference, held in Augusta, Ga., in 1873, three other bishops were elected. Their Discipline, formula, etc., is the same as that of the Methodist Episcopal Church, South. The bishops of the Southern Church have been: Soulé, Andrew, Blascom, Capers, Pierce, Early, Kavanagh, Wightman, Doggett, Marvin, and McIntyre; and they now are Keener, Wilson, Granberry, Hargood, Duncan, Galloway, and King. The number of churches, Sunday-schools, and other agencies, have increased since the war. The Annual Conferences, composed of travelling ministers and lay delegates—four of the latter (one of whom may be a local preacher) from every district. The General Conference is constituted of an equal number of ministers and laymen. District Conferences are held in all the districts once a year, for the purposes of religious worship and instruction, without legislative or judicial power. Quarterly Conferences are held in all the pastorial charges, at which exhorters and local preachers are licensed, and preachers are recommended to the Annual Conference for ordination or admission into the travelling ministry. Church Conferences are ordered once in 18 months by the General Conference, which has spiritual control of the pastoral charges. Sunday-schools, love-feasts, class-meetings, and prayer-meetings enter into the economy of the Church. The General Conference ordered a revised edition of the Liturgy, as abridged by Mr. Wesley for the Methodist Episcopal Church in America, to be published for those congregations that might desire to use it; but few, if any, do so. The Ritual is still in use for all occasional services, and it has been carefully revised and improved, as also has been the psalmody of the Church. The Sunday-school cause has received a great impulse, and many valuable publications are issued to meet its demands. Universities, colleges, and academies, for both sexes, have been multiplying all over the connection. Many original works, which are held in high estimation, such as histories, biographies, sermons, commentaries, and other works on theology, have been issued from the publishing-house of the Church; and the Harvard and Yale press have been carefully revised and reprinted. The publishing-house was in part destroyed by fire in February, 1872, but a magnificent edifice, approaching completion, is to take its place. The missionary work of the Church was well-nigh broken up by the war; but it is recuperating—except the missions to the colored people, which were considered the crowning glory of the Southern Method-
ist Church. The missions to China and Brazil have re-
ceived a great impetus and promise well; so do the In-
ian missions. A mission has been established in Mexi-
co under favorable auspices. But the destitute portions 
of the South—destroyed by the war—require a vast 
amount of missionary work, and in rendering this the 
Church is restricted, for want of sufficient men and 
material, to do the work in a very limited manner.

Conferences of the Methodist Episcopal Churches North 
and South; Emory's History of the Discipline; Meth-
odist Church Property Case; Redford's History of the 
Organization of the Methodist Episcopal Church, South. 
South Carolina Conference (S. C.)

Methodist Protestant Church is the name 
assumed by a body of Christians who seceded from the 
Methodist Episcopal Church in 1830. The primary 
causes for this step were opposition to the episcopate, 
and the decided refusal of the Methodist Episcopal min-
istry to vest any authority in the laity. From the very 
outset efforts were made by a minority in the Methodist 
Episcopal Church to secure the representation of the 
laity in the conferences. See Kilhamites; Lay Rep-
resentation. In 1824 a so-called Union Society was 
founded at Baltimore, Md., for the purpose of agitating 
the question of a change of the Church government, 
and the rights of the laity. A convention was called the 
Mutual Rights of the Ministers and Members of the 
Methodist Episcopal Church. In the spring of 1826 the 
Baltimore Union Society initiated a movement to inquire into 
the expediency of making a united petition for a general 
representation to the General Conference of 1828. 
The convention was held in November, 1827, and the peti-
tion was presented, but received an unfavorable 
reply. The Union Society, persisting in its efforts, a number 
of individuals were expelled in Tennessee, North Caro-
line, and Baltimore. This provoked many friends of the 
radicals, and caused the secession of considerable num-
bers. A second convention met at Hagerstown, Md., Nov. 
12, 1828, drew up provisional articles of association; and 
on Nov. 2, 1830, another convention, composed of an 
equal number of clerical and lay delegates from various 
states of the Union, assembled at the same place, and, 
after a session protracted for three weeks, adopted a 
Constitution and a Book of Discipline, and formed a new 
society, under the name of Methodist Protestant Church. 
The Rev. Francis Waters, D.D., of Baltimore, was pres-
ident of this convention.

The Methodist Protestant Church holds the same 
doctrinal views as the parent body, and differs from 
it only in a few points of ecclesiastical government. 
Following the example of the British Wesleyans, the 
Episcopal office is abolished, and a president called to 
rule over each Annual Conference, elected by the ballot 
of that body. The laity is admitted to an equal par-
icipation with the clergy in all Church legislation and 
government. The General Conference, which, at first, 
met every seventh, but now congregates every fourth 
year, is composed of an equal number of ministers and 
laymen, who are elected by the Annual Conferences at 
the ratio of one delegate of each order from every one 
thousand communicants. The General Conference has 
authority, under certain restrictions, to make such rules 
for the government of the Church as may be necessary 
to carry into effect the laws of Christ; to fix the com-
ensation and duties of travelling ministers and preach-
ers, etc.; to devise means for raising money, and to reg-
ulate the boundaries of Annual Conference districts. 
The Annual Conference, which consists of all the or-
ders, hold in each minister of the district, has power to 
elect to orders, station ministers, preachers, and mis-
sionaries; make rules for defraying the expenses of their 
support, and fix the boundaries of circuits and stations. 
It elects its own president yearly. The Quarterly Con-
ference is composed of the trustees, ministers, preachers, 
exhorters, elders, and stewards in the circuit of which 
it is the immediate official meeting. It examines 
the official character of its members, licenses preachers, 
recommends candidates for ordination to the Annual 
Conference, etc. There are classes, leaders, and stew-
ards, as in the Methodist Episcopal Church.

The slavery question divided the Methodist Protes-
tant Church into two bodies—the Methodist Protestant 
Church of the North-western States, and the Methodist 
Protestant Church of the Southern States. Conveni-
ences of the former were established at Springfield, Ohio; 
those of the latter at Baltimore, Md. The members of 
the Methodist Protestant Church were at that time scat-
tered mainly over the Border States and certain parts 
of the West; their principal strength has since developed 
in the South, where the body is now the strongest in South 
and Pennsylvania. Of late years a union of all non-Epi-
copal Methodists having been proposed, the Protestant 
Methodists North changed their official name to the 
Methodist Church. Their head-quarters were lately removed 
from Springfield, Ohio, to Pittsburgh, Pa. Each body has 
a board of foreign and domestic missions and a Book 
Concern—the Protestant Church South at Baltimore, Md.; 
the Methodists at Pittsburgh, Pa. At the beginning 
the Methodist Protestant Church counted 88 ministers 
and about 5000 members; and at the seventh General 
Conference in 1858 there were 2000 stationed ministers, 
1290 churches, 96,606 members, and $1,550,000 worth 
of property. In their present divisions they are according 
to the New York Observer Year-book of 1873, as follows: 
(1) The Methodist Church counts 28 con-
ferences, 766 preachers, and about 75,000 members, with 
a Church property of $1,609,425; and (2) the Method-
ist Protestant Church, within 25 conferences, employs 
428 preachers, and has about 70,000 members.

The Methodist Protestants have three colleges: the 
Western Maryland, at Westminster, Carroll County, Md.; 
Yadkin College, North Carolina; and one in West Vir-
ginia. The Methodist Protestant, a weekly paper, of which 
the Rev. L. W. Bates, D.D., is the editor, pub-
lishes a short account of their Conference; and the 
Conference of the Western and Southern States. The 
eleventh General Conference of this body is to be held 
at Lynchburg, Virginia, on the first Friday of May, 
1874.

The Methodist Church issues a weekly newspaper, 
The Methodist Recorder, edited by Alexander Clark, 
and published by the Book Concern at Pittsburg, Pa. 
Also a semi-monthly Sunday-school journal, edited by 
the same. A new Hymn-book, entitled The Voice of Praise, 
has just been compiled and published, which compares 
favorably with that of any other denomination. Among 
the recent literary productions of the Church are the 
Voyageings of a Pulpit, and, the Non-Episcopal Methodists, 
First Year, by T. H. Colhoun, A.M.; Wonders of the East, 
y J. J. Smith, D.D.; The Impending Conflict, by J. J. Smith, 
The Lady Preacher, by the same; The Gospel in the Trees, by 
Alexander Clark, A.M.; Work-day Christianity, by the same; 
Adrian College, Adrian, Mich., is under its control, and is 
in a most promising condition. Its president is George B. 
McElroy, D.D. It admits both males and females. The 
Missionary Board—William Collier, D.D., president, 
and C. H. Williams, corresponding secretary—is devis-
ing large schemes for the West, and initiating foreign 
work. The Board of Ministerial Education—J. H. 
Walker, corresponding secretary—is doing a good work 
for young men preparing for the ministry. There is a 
fair prospect that at an early day an organic reunion 
with the Methodist Protestant Church will be effected. 
The initiatory steps have already been taken, and will 
be taken to a sure and decisive union of the Methodist 
Episcopal Church and of our episcopal order. The General Conference of the 
Methodist Church will meet at Pittsburg, Pa., May 17, 1874, 
See the Discipline of the Methodist Church, and Disci-
pline of the Methodist Protestant Church; also Stevens,
Hist. of Methodism, iii, 409; Bangs, Hist. Meth. Ch., iii, 
482; Speer, American Pulpit, vol. vii, Intro. 
p. 18. See Methodism.
Methodists, Camp, is a term of reproach which in the days of early Methodism was fastened upon those Methodists in the Western States and North America, with which it was held to promote revivals of religion, adopted camp-meetings, at which religious services were conducted. Now that camp-meetings have become popular, in this country the term is no longer employed.

Methodists, Dialectic, or Romish, as they have also been called, flourished near the middle of the 17th century. They were priests of the Church of Rome, who, attempting, by ingenious sophistry, to refute the arguments employed against them by the Presbyterians (Humphrey. D. Meth. Hist. Oper. Vol. III. Hist. vol. iii) arranged these "Methodists" under two classes. According to his classification, the one party in their controversies urged their opponents to adduce direct proof of their doctrines by an appeal to the statements of the Holy Scripture. The other party refused to encounter the Protestants with arguing with them on the various disputed points, but sought to overcome them by ad- ducing certain great principles involving the whole subject. Thus they insisted that the Church which was chargeable with changing or modifying its doctrines could not have the Holy Spirit for its guide.

The word "Methodist" is improperly applied to a person who becomes religious, without reference to any particular sect or party, and especially to ministers of the Church of England who are evangelical and zeal- ous in their preaching.

Methodists, Free (properly "The Free Meth- odist Church"). This body, the youngest of the Methodist family, an offshoot of the Methodist Episcopal Church, dates its existence from Aug. 22, 1840, when it was organized at a convention held at Pekin, Niagara Co., N.Y., composed of laymen and ministers who were then or had been of the Methodist Episcopal Church.

I. Origin, etc.—The causes for the establishment of this independent body were manifold. Most prominent, however, were a desire for primitive Methodist simplic- ity, and more faithful adherence to the doxologies of Wesley and his associates. Its organizers were ministers expelled from the "parent" body because of their course in opposing what they called innovations or departures from the rules of the Discipline. It was and is claimed by those engaged in the Free Methodist movement that the Methodist Church has declined in spirituality since their early history, and that in the rapid progress made by the Church in adding numbers, acquir- ing property, etc., sufficient care has not been taken to guard its purity, and preserve its primitive power and spiritual efficiency—the toleration of many worldly prac- tices, and the abandonment of certain correct doctrine on several important points. In proof of this it is asserted that widely divergent and contradictory teachings are heard from the pulpit on the doctrine of entire sanctification without official rebuke, some preachers claiming sanctification as a work done concomitantly with justification, others re- garding it as a result to be reached by a gradual process of spiritual growth, and yet others preaching it as a sec- ond distinct attainment to be received instantaneously by faith. The Free Methodists also hold that hearty and thorough repentance, evinced by honest confession, and complete abandonment of all sin, is practically not essential for entrance into the Church; converts who are not even scripturally awakened; that a merely intellectual, belief, born of human reason, is al- lowed to take the place of the supernatural faith taught by Paul and Wesley; that the direct witness of the Spirit is not now enjoyed by multitudes of professing Methodists; that all sin has not been forgiven by the Protestants; that entire sanctification is even professedly a rare at- tainment; that the execution of discipline is so neg- lected as to become difficult, and in many societies im- possible; that Methodists generally have abandoned plainness of dress, and are as fashionably attired as the world itself; that they are allowed and countenanced in the transaction of unscriptural business enterprises, and transact lawful business on worldly principles; and that the distinctive spirit of the church, and the special work of God is not done, and the church is not in the world, and has not the world by the power of the Holy Spirit. The Free Church has been in this state for a generation or more.

The movement for the organization of this independent body had its commencement within the bounds of the Genesee Conference (N.Y.) of the Methodist Episcopal Church. A number of ministers of that body had written and spoken against these alleged departures from the primitive faith of Methodism. Thus, in the year 1855 a state of feeling had been engendered which resulted in acrimonious disputes, accusations, Church tri- als, etc., and, finally, in the year 1858, in the expulsion of the Rev. B. T. Roberts and the Rev. Joseph McCreery on a charge of contumacy. Mr. Roberts had been tried by the proceedings of his Conference for "im- moral and unchristian conduct." (Said conduct consisted in publishing an article in the New Independent entitled "New-school Methodism," in which the writer set forth views such as have been recited above, and which he offered to retract and confess as publicly as they had been promulgated if proved untrue or in- correct.) His article was assumed to be slanderous, however, and he was found guilty, and was sentenced to be rebuked by the bishop. The contumacy charged against him in the following year consisted in publish- ing and circulating a second edition of New-school Methodism, and a pamphlet signed by George W. H. Pease, which gave a short account of the trial of the year preceding. On this charge (which was dismissed as to the publishing), and on the testimony of one wit- ness (whose veracity was impeached) as to the circula- tion, Mr. Roberts, in connection with one or two col- leagues, was expelled from the Genesee Conference and the Methodist Episcopal Church. This proceeding was regarded as a measure of high-handed persecution by many ministers and laymen of the Church, and during the ensuing year one hundred and ninety-five promi- nent laymen met in convention at Albion, Orleans County, N.Y., and passed resolutions expressing their entire disapproval and condemnation in the matter of ex- pelling, or recommending them to continue to labor for the salvation of souls. This sympathy of the laymen was shared by many of the ministers of the Conference, and this was so publicly expressed that the ensuing Con- ference four of them were expelled on charges of "con- tumacy," while two others were located for the same cause. A large number of the lay members were also excluded from the Church. The ensuing General Con- ference, held at Buffalo in 1860, was respectfully pet- itioned by fifteen hundred members of the Methodist Episcopal Church within the bounds of the Conference from which these expulsions had taken place to inves- tigate the judicial action of said Conference in relation to these matters. A committee was appointed for this purpose; but was finally discharged. B. T. Roberts had appealed from both of the decisions of the Conference in his case. The first only was entertained, and on that, "The First "Methodist" on the principle that these matters were equally divided. The other appeal was not entertained. Thus these ministers and members were shut out of the Church. As they believed that the causes which had led to their expulsion existed more or less in all the other churches bearing the Methodist name, they felt com- pelled to organize a new denomination, that would, in
their judgment, more fully carry out the purposes and designs of Methodism.*

II. Organisation, Doctrines, etc.—In the formation of the new Church, while everything calculated to sustain and cherish the original spirit of Methodism has been carefully retained, care has been taken to incorporate into its modes of government everything shown by the experience of the Church, for a century and a half, to be necessary. The Episcopacy is abandoned, and general superintendency substituted; the incumbents of the office are elected every four years. Quadrennial, Annual, and Quarterly Conferences are retained as in the parent body, while the last addition to the machinery of the Methodist Episcopal Church, viz., the District Conference, adopted in 1873, has been in use among the Free Methodists from their beginning. In all the before-named Church courts a number of laymen, equal to the ministry, are admitted, and their right to speak and vote is fully guaranteed. The official board is retained, and there is provision for annual meetings of all members of the societies for the appointment of delegates to the Annual Conferences, and stewards. Class-meetings are held, and attendance is a condition of membership in the Church. The preachers in charge nominate and the classes elect the class-leaders. The office of president is retained, but the name of the officer is district chairman.

The articles of faith adopted are the same as those of the Methodist Episcopal Church, with two additions, designed to secure uniformity of belief, and guard against the introduction of errors on the important points to which they relate. The first is on entire sanctification, and the first part is in the words of John Wesley, viz.: "Justified persons, while they do not outwardly commit sins, are nevertheless conscious of sin still remaining in the heart. They feel a natural tendency to evil, a proneness to depart from God, and cleave to the things of earth. Those that are sanctified wholly are saved from the risk of evil thoughts and evil tempers. No wrong temper, none contrary to love remains in the soul. All their thoughts, words, and actions are governed by pure love. Entire sanctification takes place subsequently to justification, and is the work of God wrought instantaneously upon the consecrated, believing soul. After a soul is cleansed from all sin, it is then fully prepared to grow in grace" (Discipline, "Articles of Religion," ch. i, § 1, p. 23). This doctrine is regarded as of so much importance that no person is admitted to the full membership of the Church who does not endorse it, and pledge himself definitely to seek diligently the experience of entire sanctification. Wesley wrote: "Every of our members ought to be so far instructed as not to be a stumbling block to the unconverted body who could be truthfully regarded as out of accordance in views or teaching therewith.

The second new article of faith is on future reward and punishment, and reads as follows: "God has appointed a day in which he will judge the world in righteousness by Jesus Christ, according to the Gospel. The righteous shall have in heaven an inheritance in incorruptible, undefiled, and that fadeth not away. The wicked shall go away into everlasting punishment, where their worm dieth not, and their fire is not quenched" (Discipline, "Articles of Religion," ch. i, § 1, p. 29).

A noteworthy difference of polity exists between this and all other Methodist bodies in respect to admitting members on probation. None are received simply on their written expression of faith, but all are required to give evidence of such a desire by confessing a "saving faith in Christ." In other words, none are added to the Church, even on probation, unless it is believed that they "are saved." Free Methodists claim that much of the defection alleged to have taken place in the Methodist Episcopal Church is due to the fact that multitudes have joined the Church as seekers of salvation, but have gone no further spiritually.

It is also definitely required of all who join the Free Methodist Church that they shall lay aside all superfluous ornaments in dress, "laying aside gold, pearls, and costly array" (Discipline, ch. i, § 3, ¶ 4). That they shall keep free from connection with all societies requiring an oath, affirmation, or promise of secrecy as a condition of membership therein (ibid. ¶ 5). Also that they shall refrain from the use of all intoxicating liquors, and from the use of tobacco, except as medicine (ibid. p. 21, ¶ 4).

III. Present Condition, etc.—The progress of the denomination is rapid, considering the bold stand it makes against many customs and usages quite popular even in the churches, and the nature of the requirements made of those who become members. During the first years of its history it had to encounter some of the difficulties which beset early Methodism in the form of wild fanaticism and a spirit of insubordination to proper church regulations, and it suffered considerably from the doings and sayings of some who were never members of the Church, but who, taking advantage of the circumstances under which it was formed, and acting somewhat in connection with its movements, promulgated ideas and encouraged practices contrary to pure Gospel; but the young denomination has had power to shake off these parasites, and free itself from these incumbrances, and bids fair to march on its way successfully in the mission of spreading scriptural holiness throughout the nation. John Wesley and his immediate coadjutors. The religious services of the Free Methodists are generally characterized by the warmth and fervor so noticeable among early Methodists. Congregational singing is universal.

The Free Methodist Church is at present composed of societies in the following States and portions of nearly every Northern state in the Union. The following is an abstract of statistics taken from the reports of the Conferences for the year ending September, 1890; Members, 208,801; travelling preachers, 700; local preachers, 159; Sabbath-schools, 155; scholars, 4894; teachers, 972; value of Church property, $265,500.

Two educational institutions have been started under the auspices of the Church, one at North Chili, Monroe County, N. Y., the other at Spring Arbor, Michigan. These are conducted with strict reverence to the principles and usages of the people by whom they are sustained, and bid fair to become successful.

The publication of a monthly magazine was commenced by the Rev. B. T. Roberts in the year 1860, entitled The Earnest Christian, devoted to the advocacy of Bible holiness. It has been from the first well sustained, and, though it is an exponent of the principles taught by Free Methodists, is still conducted as an independent enterprise, and regarded as an unsectarian publication. It has a large circulation outside the Church, which supplies its chief patronage. A weekly paper, entitled The Free Methodist, and edited by the Rev. Levi Wood, was started in the interests of the denomination in 1857, and is conducted as an independent enterprise, though depending on the patronage of the body for support. It is now published at Chicago, Illinois, and its...
present editor is the Rev. L. Bailey. It has a very large circulation.

At present the labors of the Free Methodist Church are confined to the poor and comparatively uneducated classes of the community, and its ministers are mostly drawn from them. It can scarcely claim much denominational literature. The Rev. E. Bowen, D.D., wrote a history, entitled The Origin of the Free Methodist Church, which is rather a plain, straightforward statement of historical facts than an attempted literary monument.

The Rev. B. T. Roberts, who has from its organization been general superintendent of the body, having been twice re-elected to that position, graduated at Middletown, Conn., and is a writer of considerable power. His editorials, tracts, and essays display argumentative ability, and a style of writing which has few equals.

Methodist, The. See Methodism.

Methodius, Sr. (suffixed also Eubulus and Eubulus), a noted theologian of the Eastern Church of the 3d century, one of the "fathers" and "martyrs" of the Church, flourished first as bishop of Olympus and Patara, in Lycia (hence also sometimes surmised Pataraensis), and later presided over the see of Tyre, in Palestine. He is supposed to have died early in the 4th century. According to Suidas, he suffered a martyr's death at Chalcos (Avarahoph) during the reign of Decius (249-251) and Valerian. This seems improbable, however, since Valerian reigned after and not contemporary with Decius and it is certain that the lives of these emperors is far from accurate. It seems pretty well established now that Methodius was a contemporary of Porphyry; and if he died in a persecution, it was probably, as Cave supposes, in that of A.D. 308, or, as Fabriuses thinks, in that of A.D. 911. The last-named date is quite generally accepted as the year of Metho-
diuss's decease. Epiphanius says that "he was a very learned man, and a strenuous assessor of the truth."

Jerome has ranked him in his catalogue of Church writ-
ers, but Eusebius has not mentioned him; which silence is attributed by some, though merely upon conjecture, to Methodius's having written very sharply against Origen, who was favored by Eusebius. His principal works are, Περὶ Αναστασίως, De Resurrectione, against Origen, divided into two or three parts; fragments of it are to be found in Epiphanius (Panarion), in Photius (Bibliotheca), and in the works of Damascenus.—Περὶ τῆς ἐν Θεῷ Σωτηρίας in Photius;—Περὶ Αφρωδι-
σίου καὶ Παύου καὶ Καίσαρ, De Libero Arbitrio. Leo Allas-
tius gave the full text, together with a Latin version, of the work, as contained in Combebia's edition of Me-
thodius, is not complete.—Περὶ τῆς ἁγιομασίας παρακλήσεως καὶ ἀγνίας, De Angelica Virginitate et Castitate. Coggeshall considers it in the fourth century a very curious and

rare work, partaking at once of the character of Plato's Banquet and of the Song of Solomon, thoroughly Chris-
tian in its doctrines, but very free in its language. Pho-
tius claims that it was interpolated, and contains traces of Arianism; these, however, have disappeared from the MSS. at present extant, from which the work was first published by Leo Allatius, under the title S. Me-
thodii, episcopi et martyr, Consivium decem Virginiun Leo Allatius hactenus non edition primus Graece vulgavit. Latine versi; notas et dissertation de Methodorum scripta adjecti (Rome, 1856, 8vo). About the same time Possi-
nus prepared another edition, which was published at Paris under the title S. Methodii Consivium Virginiun Graece et Latine nunc primum edition (1857, 8vo). It is also to be found in Combebia, Auctoria. Bibl. Patr. (Paris, 1672)—Oratio de Sinone et Anna, seu in Festum Octo-
cerus et Purificationis B. Mariae, published by Petrus Pius (Rome, 1595), this has by some been con-
idered as the work of a later Compiler, but this opinion is contradicted by Allatius—Αδύν τις Μαρφυών, Sermo de Martyrijs—Εἰς τὰ Βαλα, in Rursum Pal-
marum; Photius gives extracts of this oration, but some doubt Methodius being its author:—Libri Adversus Porphyrium, fragments of which are given by Damas-
cenus:—De Pythomarios contra Origem, lost:—Com-
mentaria in Comitica Caesariun, of which only fragments remain—Zeuxis, lost; etc. Another work, De Revet-
lutione, attributed to him, is supposed to be the work of a later Methodius. The De Libero Arbitrio, De Resur-
rectione, De Angelica Virginitate et Castitate, two holi-
lies, and the extracts contained in Photius, were pub-
lished by Combebia in Greek and Latin, with notes (Paris, 1644, fol.), together with the works of Amphilocho and Galland. Combebia has collected the present evidence of Methodius' works supposed to be the production of Methodius, as well as all fragments, and published them in his Biblioth. Patr. vol. iii. See also Photius, Cod. p. 234-237; Mai, Script. ett. nov. coll. vii; Cave, Histor. Lit.; Henchen, in the Bollandists, Acta Sanctorum, vol. iv; Nath. Lardner, Credibilitas S. Scripturae, vol. ii; Vogel, Histor. der Kirche, facsimile edition, de Scholaribus eccles. vol. i; Andrea Sixt, Dissert. de Methodio (Altorf, 1787, 4to); Fabricius, Bibl. Graeca (edit. of Harless), vii, 746 et al.; Donaldson, Hist. Ch. Lit.; Milman, Hist. Lat. Christianity (see Index); Schaff, Ch. Hist. i, 356 sq., 611; Neander, Christ. Dogmata, i, 121, 256; Meth. Qu. Rev. 1871, January, p. 164.

Methodius of Bohemia, a native of Theissalonaica, who flourished during the 9th century, became distin-
guished by his missionary zeal, his learning, and his skill as a painter. He first entered a convent at Con-
stantinople, and afterwards spent some time in Rome, where he acquired the remarkable facility of not being able to say a word except in Greek. He returned to the See of the Church of the House Empire, xiv, 962) to speak of him as the most eminent painter of his time—a high compliment, indeed, when we note that among his contemporaries were Madaluphal, in France, Tutilo, in Germany, and Lazarus, in Constantinople, all of whom are considered artists of great ability. After his return to Constantinople, however, he received an invitation from Bogo-
ris, king of Bulgaria, to visit his court, and instruct him and his subjects in the principles of Christianity. This king's heart had been softened towards the Chris-
tian religion by the influence of his sister, who had shortly before returned from Constantinople, whither, thirty-eight years before, she had been conveyed as a captive, and where she had been brought up and edu-
cated a Christian. A severe pestilence oppressed Bul-
garia, and led Bogoris formally to implore the aid of his sister's God. The plague was stayed, and the king ac-
nowledged the might and goodness of the Christian's God in a memorable pledge. Bogoris, who was a

shrank from deserting entirely the faith of his fathers, lost his subjects should revolt against him in defence of paganism. At this critical moment he betheithed him-
self of the strange expedient of using the skillful pencil of Methodius, knowing that his people could be more readily affected by images of terror than by eloquent words of divine truth. Methodius painted the last judgment, and so vividly represented the tor-
tures of the damned that the heart of the king himself was struck with terror, and he sought to escape this ter-
rrible destiny by numbering himself among the sons of the Church. He was accordingly baptized in 863 or 864; and, though much opposition was shown, paganism

was rapidly compelled to yield to the Christian re-
ligion as introduced by Methodius. After working with such success in Bulgaria, Methodius was sent into Greek Moravia, where, in conjunction with his brother Cyril (q. v.), he accomplished a great work, his holy zeal meeting with great results. Christianity had already found its way to some parts of the tribe by its connection with the Frankish empire under Charlemagne, but the nation, as a whole, was still devoted to paganism. Its ruler, Radislav or Rastices, had formed an alliance with the Greek empire for political purposes. This af-
forded an opportunity for the sending forth of these two missionary brothers. Methodius rendered valuable as-
sistance to his brother Cyril in his task of inventing an alphabet for the Slavonic language, and in the work of translating the Bible, as well as several liturgical works, into the language of the people.
both sides of the controversy, assured him of his kindly feelings towards him, and exhorted him not to allow the work to suffer, but to prosecute it faithfully. In 881 Methodius went to Rome, after which time his name disappears from the records of history. It cannot be determined whether he died soon after, or whether the hostile party in Moravia prevented his return. He was canonized by Rome, and his relics were venerated by the Moravians, who celebrate him on May 11, although in the Martyrology the day is March 9. See F. X. Richter, Cyril und Method der slavischen Apostel (1825); Ginzell, Gesch. der slavischen Apostel (1857); Baxmann, Politik der Päpste (Elberfeld, 1869), vol. ii; Neander, Ch. Hist., iii, 318 sq.; Hengstenberg, Die Apostel, Ap. A.D. 811, sq.; Hengstenberg, Hist. of Missions in Middle Ages, p. 284 (H. W. T.).

Methodius of Constantinople, a patriarch in the Eastern Church who flourished about 1240, is probably the author of De Revelatione, which some attribute to Methodius Eubulus. The Greek text, with a Latin version, is contained in the first volume of the Graecia Orthodoxa, as well as in some of the Biblioth. Patrum. He also wrote Anagenniseis, in lamiae triobles, extant in MS. See Fabricius, Bibl. Græc. vii, 272; Cave, p. 862 (ed. Geneva).

Methodology (μεθοδος and λογος) is the scientific plan of investigating any department of knowledge. In the science of theology, it is the practical application of the science of theology. The one leads to the other. A clear insight into the nature and connections of any science will lead to a right mode of treating it; and as the science of theology is a science of the mind, so a good method is the best test and verification of knowledge. The aims of methodology are to furnish a plan of theological study, showing the order in which the topics should be taken up, and indicating the best methods of study, and recommending the best books. All kinds of men hold that methodology should be treated and studied entirely apart from encyclopedia. In a strictly scientific sense, this view is correct; but, for practical purposes, these two branches are generally blended into one connected whole. The whole treatment taken together is therefore called by the double name of theological encyclopedia and methodology. Of these, encyclopedia is the objective side, the outline of the science itself; methodology is the subjective side, having reference to the work of the student of the science.

The science of the theological encyclopedia and methodology is, at present, relatively recent study. A large part of the study of the science has been so fully treated in the article on encyclopedia (q. v.), and the methods of the chief writers on the subject so amply set forth, that we simply refer to it. Since the publication of that article, however, an important work, Lectures by the late John Mclintock, D.D., L.L.D., on Theological Encyclopedia and Methodology (N.Y. 1878, 12mo.), has appeared, which contains so many new thoughts that we here insert Dr. Mclintock's division of the subject. He divides theological science into the following four departments:

1. Exegetical Theology, which is concerned with the records of the Church.
2. Historical Theology, which is concerned with the development of revelation in the life and thought of the Church. This definition gives a twofold division of Historical Theology:
   a. The Life of the Church; that is, Church History.
   b. The Thought of the Church; that is, Church History.
3. Systematic Theology, which is concerned with the matenal revelation—namely, the scientific treatment of its contents: making a fourfold subdivision:
   a. The doctrine of the redemption of humanity from the attacks from without.
   b. Dogmatics, or the scientific statement of doctrines as admitted by the Church.
   c. Ethics, or a scientific statement of duty in which man stands to God.
   d. Jurisprudence, or the vindication of doctrine from the attacks from within the Church.
4. Practical Theology, which is concerned with the preservation of revelation and its propagation and through
the Church, as the outward and visible form of the king-
dom of Christ among men. Here we have two general
divisions:

1. The Functions of the Church; and
2. Its Organization and Government of the Church.

This treatment, which has largely prevailed since the 16th century, rests upon the theory that Christianity is
a system founded upon divine revelation, and that the
reality is really the product of the application of the
human intellect to the contents of revelation.

See Crooks and Hare, "The Engels and Methodol-
gy," and also Joel and E. D. in "Theological Elements,"
Vol. 1871.

Metethu (Metathesis, man that is from God; Sept.
Metathesis, Vulg. Metathesa), the son of Mehujael and father of Lamech, of the family of Cain (Gen. iv. 19). The resem-
blance of the name to the Lamech of the next genera-
tion (in both lines) some theories have been formed, is
apparent rather than real.

Metathel (Heb. Metathel), man that is from the
dart; and Sept. and N. T. Metathel; Josephus, Ma-
thelela, Ant. i, 3, 4 and 4; Vulg. Metathesul and
Metathesula; Auth. Vers. "Mathathai." In Luke iii, 37,
the genealogy of Christ, Lamech of the antediluv-
ian patriarchs (Gen. v, 21, 22, 25, 26, 27; 1 Chron. i, 8).
He was born (according to the Hebrew text) B.C. 484.
When he had attained the age of 187 years, his son La-
mech was born, after which he lived 782 years, and
died (B.C. 2516) only a few months before the flood, at
the extreme age of 989; which, being the greatest term
tablished by any on record, has caused his name to be
come a proverb of long life. See Longevity.

Metochia, Georgius (Γεωργίος ὁ Μετοχιώτης), a Greek theologian, flourished in the latter half of the 18th century.
He was the archdeacon of the Church at Con-
stantinople, the intimate friend and zealous partisan of
the emperor Andronicus, and favored a union of the Greek
Church with the Latin. Under the reign of Andrus the
Younger he was ostracized on account of his religious
opinions, and died in exile. He was the relative, per-
haps the father, of Theodorus Metochia, with whom he
has often been confounded. He wrote several works of
great importance for their bearing on the history of his
times; but his literary works, many on record, have caused his name to be
known in the annals of the Church and
Metochia, Theodorus (Θεόδωρος ὁ Μετοχιώτης), a Greek theologian, flourished in the days of the emper-
or Andronicus the Elder, who appointed him the chief
logothete, or chancellor, of the Church at Constantinople,
and intrusted him with several missions. Amid all his
official duties, Metochia found time to compose sun-
dry works which reflect honor upon his learning. He
was banished from the country shortly after the usur-
pation of the empire by Andronicus the Younger in 1282.
The emperor was not slow to recall him; but Metochia
being disgusted with the complexion which matters
had assumed, retired into a convent, where he died about 1382.
His principal works are Commentaries (Πα-
ραραθέα) on several treatises by Aristotle: Physica, De
Anima, De Caelo, De Ortu et Umbra, De Memoria et
Reminiscencia, De Somno et Vigilia. These commenta-
tories were published in Latin by Gent, Hervet (Basel, 1663, 4to); Ravenna, 1814, 4to); but the original Greek
was lost in the fire of Constantinople in 1204. He also
wrote two books on ecclesiastical history, and several
works of a secular character, which were never printed.
See Fabricius, Bibliotheca Graeca, i, 412 sq.; C. F. de Boden-
bourg, De Th. Metochita Scriptis Notitiae vulgo insinu-
atis, in the Miscellanea Lipsiensia, vol. xii.

Metonymy (μετωνομα, "denomination nominis pro
nominis posita," Quintillian, 8, 6, 38), a technical term in
rhetoric designating a "trope, in which a word is used
to express a thing (not literally its original meaning in
kind." (E. D. Haven, Rhetoric, p. 78.) Metonymies are
only a little broader than synecdoches (q.v.), and, as Aristotle
observes, may be employed either to elevate or to
degrade the subject, according to the design of the
author. The subject may be named for the quality, the
cause for the effect, the precedent for the consequence, or
the reverse, e. g. "Addison was smooth, but Prescott
smoother." Here Addison means the writings of Addi-
son; smooth means pleasing to the ear. Both words are
metonymic. "Always respect old age"—a metonymy for
age-poor people. Thus, "gray hairs" may stand for "old
age," the name of Virgilius for that of his writings, the
"head" for the "intellect," and the "olive-branch" for
"peace." Metonymies may be classified as follows:

1. The sign for the thing signified, signum pro sig-
nato. Sword for war; Spōνος for power (Luke i, 32;
Heb. i, 8); ἀναφορά, ἀναφῆς, for east and west (Matt.
iv, 23; Acts ii, 40); a. L. for the east (Ps. xcv, 4), for the diffi-
culties in obtaining the completion of a work that must
pass the inspection of several officers; a pen for litera-
ture."—The pen is mightier than the sword.

2. The container for the thing contained, continens pro conten-
to. "The country is jealous of the city." (The army yielded,
but the wary resisted," πάρηκμας, sound, for the house being contained, for the work (Matt. xviii, 7; John i, 10; iii, 16, 17); ὁ ὁσιοκτήτης, the house, for domestics (John iv, 33; Acts x, 2, 11, 14, 16).

3. A cause may be put for an effect, and an effect for
a cause. "The savage desolation of war. The cause
of the desolation is a savage spirit; here it is transfer-
red to the effect. In an opposition there can be no
cause, we may speak of pale death, joyful health, a proud testimony.
This is sometimes called a transferred epithet.

4. A man may be named for his works. Thus we speak of "Shakespeare," meaning his writings. "Black-
stone," meaning his works on law. So the "Prophets" are referred to as "the three exviviparous" (Gen. III, 24; Acts viii, 28), meaning their writings. This is akin to
personification (q. v.).

Metre (Μέτρον) is, in its most extensive signifi-
cation, the measure by which any thing is determined with
exactness and due proportion. In its classical
sense the word is used for the subdivision of a verse.
The Greeks measured some species of verses (the dac-
tylic, choriambic, antipastic, iambic, etc.) by considering
each foot as a metre; in others (the iambic, trochaic, and
anapestic), each dipodis, or two feet, formed a metre.
Thus the dactyllic hexameter (the heroic verse) con-
tained six dactyls or spondees; the iambic, anapestic,
and trochaic trimeter, six of those feet respectively. A
line is said to be accentual when the last syllable of
the last foot is wanting; trisyllabic, when two syll-
bles are cut off in the same way; hyperaccentual, when there is one superfluous syllable.

In religious poetry, as adapted to music, metre de-
notes the regular succession in a stanza of lines con-
taining a certain number of syllables of a given kind
of verse. A line is said to be accentual when the last syllable of
the last foot is wanting; trisyllabic, when two syll-
bles are cut off in the same way; hyperaccentual, when there is one superfluous syllable.

In religious poetry, as adapted to music, metre de-
notes the regular succession in a stanza of lines con-
taining a certain number of syllables of a given kind
of verse. A line is said to be accentual when the last syllable of
the last foot is wanting; trisyllabic, when two syll-
bles are cut off in the same way; hyperaccentual, when there is one superfluous syllable.
called "particular metra," as 6 lines of 8 syllables each, 4 lines of 7, 6 lines of 7, 4 lines of 10, 4 of 6 and 2 of 6, 6 of 7, 7 of 6, etc.

**Metrodora.** See **FIRKIN**.

**Metrical Psalms and Hymns.** Several of the Psalms were translated into English metre, during the latter part of the reign of Henry VIII, by Sir Thomas Wyatt, and printed in 1549. This version, however, is supposed to be lost. It has been thought that a reference to some metrical psalms existed in the 7th section of the 1st Act of Uniformity in the reign of Edward VI, 1549, authorizing the use of the Prayer-book, where it was enacted "that it shall be lawful for all men, as well in churches, chapels, oratories, or other places, to use openly any psalm or prayer taken out of the Bible at any due time; not letting or omitting thereby the service, or any part thereof, mentioned in the said book." But this was several years antecedent to the appearance of any regular version. The metrical Psalms, called the "Old Version," originated with Sternhold, who was the groom of the robes to Henry VIII and Edward VI, and was continued by others until 1641, when the revisers of the Prayer-book declared that "singing of hymns in metre, no part of the liturgy," and therefore they refused to consider them, as not in their commission. See **Proctor, On Common Prayer** (see Index); **Cardwell, Conferences**, &c.; **Bates, Christ. Autopo.** &c.; **Staunton, Eccles. Dict.** &c. See **PSALMS, VERSIONS OF**.

**Metrodorus,** a leading Epicurean philosopher, was, according to the best authorities, a native of Lampsacus, although he claimed to have been an Athenian. He flourished in the second half of the 5th century B.C. From his earliest connection with this school of philosophy until his death, he lived in daily and intimate intercourse with Epicurus, abstaining himself only six months during the whole period. He is regarded as the founder of that harsher and more sensual form of Epicurean philosophy which many, who sought for "pleasure as the chief good," substituted for the intellectual enjoyment adopted by Epicurus as his ideal good. According to Cicero, he made perfect happiness to consist in having a well-constituted body, and knowing that it would always remain so. One of his sayings, as quoted by Athenaeus, was that "the belly is the foundation of all philosophy." He claimed that all pertaining to a happy life should be tested and measured by this organ. Metrodorus became the favorite disciple of Epicurus, and may justly be ranked second only to him in importance. He died at the age of eighty years before the death of his master, who had intended to make him his successor. He left two children, a son and daughter, whom Epicurus protected while he was living, and for whom he generously provided in his will. Metrodorus left to the world some of his thoughts in the tangible form of thirteen volumes, as enumerated by Diogenes. All these have disappeared, except some fragments found among the Herculean Papyri; the most important of which is a portion of his treatise Ἴπειρον ἐνδοικαίου, contained in the sixth volume of the Neapolitan collection. For many years the Epicurean library held a monthly month by month in honor of their master and of Metrodorus, whose name will ever be linked with that of Epicurus. Another philosopher of like name flourished in Chios, in Greece, about 400 B.C. He was the author of a Treatise on Nature, which was very celebrated. See **Bayle, Hist. et Cit. Dict.** &c.; **Fabricius, Bibloth. Graecor.** lib. iii, 367; **Pliu. Hist. Nat.** xxxiv, 40; **Plutarch, Paulus Xemidus.** 32. (H. W. T.)

**Metrology.** The science of determining the relative value of measures, whether these belong to pecuniary standards or to fixed quantities of capacity or extent. Indeed, these three are intimately connected, for coins can only be accurately determined by weight, and the bodies whose weights are thus expressed in lines, or lengths, are determined in cubic dimensions, or by a given weight of a certain substance of uniform density. Specific gravity, therefore, lies at the basis of all quantitative measurement; and if the standard is designated as a so-called 'fundamental' measure, it is, of course, strictly concerned only with the Biblical, especially Hebrew, weights and measures; but as the value of these has come down to us chiefly in Greek equivalents, it becomes necessary to take the latter also into consideration. The Roman measures came from Greece, both from Phoenicia, the Phoenician from Babylon. Accordingly each system will throw light on the other, and all may be made to contribute something to the elucidation of the Hebrew weights and measures. This method of viewing the subject, and the satisfactory lessons which have been hence deduced, are to be ascribed to **Kiechel (Metrologia Untersuchungen, Berlin, 1838),** who, availing himself of the results ascertained by English, French, and German scholars, and of the peculiar facilities afforded by a residence in the midst of the profound and varied erudition of the Prussian capital, has succeeded, by the application of his unwearied industry and superior endowments, in showing that the system of weights and measures of Babylon, Egypt, Palestine, Phoenicia, Greece, Sicily, and Italy, formed one great whole, with the most intimate relationships and connections. To these researches must be added later investigations and comparisons by different authorities, whose value of particular specimens of coins and measures still extant, which sometimes considerably modify the conclusions of Kiechel.

1. **Coins and Weights.**—1. Names of the principal Hebrew Standards.—The following are the regular gradations, beginning with the highest:
   1. **The talent,** צו"ע, kikkur, strictly a circle, hence any round object; and thus a circular piece of money. It was the test of the talent of gold (1 Kings vi, 14) and the talent of silver (2 Kings v, 22). See **TALENT.**
   2. **The maneh, מְנָחֶה**, the Greek mina, or μάρα, strictly a portion, i.e. a subdivision of the "talent."
   3. **The skikkel, סְקִיקֶל, Greekized αἰκλος, properly a weight, the usual unit of estimation, applied to coins and weights. It likewise was of two kinds, the sacred (Lev. v, 15) and the royal (2 Sam. xiv, 20).
   4. **The bekah, בֵּכָה, strictly a cleft or fraction (Gen. xxiv, 22).
   5. **The gerah, גְּרָה, properly a kernel or bean, like our "grain," and the Greek σφαλος.

2. Values of those as compared with each other.—The value of the talent of gold (1 Kings vi, 14) determined by the statement in Exod. xxx, 13, that every Israelite above twenty years of age had to pay the poll-tax of half a shekel as a contribution to the sanctuary. Exod. xxxviii, 26 tells us that this tax had to be paid by 608,550 men. The sum amounted to 100 talents and 1775 shekels (Exod. xxxviii, 25), which are therefore, equal to 608,550 half shekels, or 301,775 full shekels. This gives for the value of the talent in shekels, 301,775 = 3000. The relation of the maneh to 100 the shekel, and consequently to the talent, is not so clear. In Ezek. xiv, 18, it seems to have consisted of 60 shekels (201-35-15); but a comparison with 1 Kings x, 17 with 2 Chron. xvi, 16 would make it consist of 100 shekels (3 maneh = 300 shekels). Some explain these discrepancies by supposing that the sacred shekel was double the commercial, or that the talent and maneh of gold were respectively double those of silver. In this uncertainty it is generally agreed to reckon the maneh to the shekel; and to the talent a maneh and a half. This was a half-shekel (Exod. xxxviii, 26); and the gerah was 1 the shekel (Exod. xxx, 13; Lev. xxvii, 25; Num. iii, 47; Ezek. xiv, 20).

3. Values of the Hebrew Weights as determined by a Concise Comparison of the Greek and Roman.—Josephus states (Ant. iv, 3, 6, 7) that the Hebrew talent of gold contained 100 mines (μαρα), but whether by this latter he means...
the Greek or the Hebrew weight corresponding to that term, is not clear. Again he states (1 Macc. xiv. 7, 1) that the gold mina (pως) was equal to two and a half Roman pounds (λίρας). On the presumption that the same kind of mina is spoken of in both passages, the talent would be equivalent to 250 pounds. On the other hand, Eusebius (De Pant. et Mont. Hdb. 138) estimates the Hebrew talent at 125 Roman pounds. This difference, being just one half, leads to the suspicion that it is connected with the above variation in the value of the talent, meneh, and shekel; and this, in connection with the nearer correspondences to the Greek measures of similar name, renders the lower estimate the more probable. The most important Roman pound (pως) is believed to be equal to the Greek χρυσός at 5934 grains (Smith, Dict. of Class. Antiq. s. v. Lebra), we have the Hebrew talent equal to 650,500 grains, or 112.79 pounds troy, or 92.9 pounds avoirdupois. Once more, Josephus says the gold shekel was equal to a daric (Ant. iii. 8, 10), a Persian coin in Greek circulation, specimens of which have come down to us weighing an average of 128.5 grains (Smith, l.c. s. v. Darius). This would yield a talent of 385,500 grains; which is much less, yet confirms the above conclusion sufficiently for an approximate equivalent, as it evidently was meant to be, especially as the daric coin of course lost considerable weight by time. Moreover, foreign coins usually pass for less than their true value.

4. Absolute Determination of the Value of the Hebrew Weights. — This has been attempted by means of the coins that have actually come down to our time. The heavier specimens of silver of the Macedonian mintage that have been found give an average weight to the shekel of 220 grains. See SHEKEL. This affords a talent of 660,000 grains, very nearly agreeing with the above result. The copper coins of the same period that have survived are on the average much heavier, being about double the weight, showing a variation in the standard for that metal similar to that which has been noted in the case of gold. Böckh, by averaging the shekels of every kind of metal, arrives at a mean weight of 274 grains; but this is too high for the preceding estimates. See MONEY.

In the New Testament (Matt. xxvi. 23) the Temple-tax is dēdrachm; from other sources we know that this ‘tribute’ was half a shekel; and in verse 27 the stater is payment of this tax for two persons. Now the stater—a very common silver Attic coin, the tetradrachm—weighed 328.8 Persian grains: thus considerably surpassing the sacred shekel. Are we, then, to hold the stater as a silver coin for any purpose? There is reason in the passage of Matthew and in early writers for regarding the two as the same. The Attic tetradrachm sank from its original weight of 328.8 to 308 and 304. This approximation must have gone on increasing, for under the empire a drachm was equal to a Roman denarius, which in the time of Tiberius weighed 69.8 Persian grains. Four denarii were equal to 279 Persian grains; so that, if the denarius is regarded as an Attic drachm, the sacred shekel may be correctly termed a tetradrachm. With this Josephus agrees (Ant. iii. 8, 25), who says that the shekel (σχέλος), a Hebrew coin, contains four Attic drachmas. See DRACHMA.

II. Measures of Dimension or Extent.—These are chiefly taken from some natural standard, such as the various portions of forearm and hand, or the distance of travel, etc.; so, among other nations, the foot,athom, etc. Being the descriptive portion of this and the following section we shall endeavor to bring these disputed questions to something like a practical conclusion.

1. Measures of Length.—(1.) The principal of these were as follows: (a) The תְּאֵפָה, etshed, or finger-breadth, mentioned only in Jer. iii. 21. (b) The תֶּפֶח, tephach, or hand-breadth (Exod. xxv. 25; 1 Kings vii. 26; 2 Chron iv. 5), applied metaphorically to a short period of time in Ps. xxxix. 5. (c) The וְלֶפֶת, šemesh, or span, the distance between the extremities of the thumb and the little finger in the extended hand (Exod. xxviii. 16; 1 Sam. xvii. 4; Ezek. xliii. 18), applied generally to describe any small measure in Isa. xi. 12. (d) The וְלֶפֶת, ammod, or cubit, the distance from the elbow to the extremity of the middle finger. This occurs very frequently in the Bible in relation to buildings, such as the dwelling of the Tabernacle (Exod. xxv. 5; 1 Kings vii. 5) and the Temple (1 Kings vi. 2; Ezek. xlii. xliii), as well as in relation to man's stature (1 Sam. xvii. 4; Matt. vii. 27), and other objects (Esth. v. 14; Zech. v. 2). (e) The יְבֵן, gomed, lit. a rod, applied to Eglin's dirk (Judg. iii. 16). Its length is uncertain, but it probably fell below the cubit, with which it is identified in the A. V. (f) The כַּפַּל, kaneth, or reed (comp. our word “cane”), for measuring buildings on a large scale (Ezek. xi. 5–8; xlii. xliii. 15-18). (g) Little information is furnished by the Bible itself as to the relative or absolute lengths described under the above terms. With the exception of the notice that the reed equals six cubits (Ezek. xli. 5), we have no intimation that the measures were combined in anything like a scale. We should, indeed, infer the reverse even, if from the number of times that the “four fingers” were, according to the scale, he would have said “a hand-breadth,” that in the description of Goliath's height (1 Sam. xvii. 4), the expression “six cubits and a span” is used instead of “six cubits and a half,” and that Ezekiel mentions “span” and “half a cubit” in close juxtaposition (xiii. 18, 17), as though they bore no relation to each other either in the ordinary or the long cubit. That the denominations held a certain ratio to each other, arising out of the proportions of the members in the body, could hardly escape notice; but it does not follow that they were ever worked up into an artificial scale. But by comparing together Exod. xxv. 10 with (a) (b) (c) (d) (e) (f) (g) we find that the term cubit is divided into four; half a cubit; for the length which Moses terms two cubits and a half, Josephus designates five spans. The relation of tepach (hand-breadth) and etba (finger) to ammā (cubit) appears from their several names and their import in other systems. The hand-breadth is four fingers, the span contains three times the breadth of the hand, or twelve fingers. This is the view which the rabbins uniformly take. We find a similar system among the Greeks, who reckoned in the cubit twenty-four fingers, six hand-breadths, and two spans. The same was the case with the Egyptians. The most important comparison, naturally drawn from the Biblical notices is to the effect that the cubit, which may be regarded as the standard measure, was of varying length, and that, in order to secure accuracy, it was necessary to define the kind of cubit intended, the results being that the other denominations, if combined in a scale, would vary in like ratio. Thus in Deut. iii. 11, the cubit is specified to be “after the cubit of a man,” in 2 Chron. iii. 3, “after the first,” or, rather, “after the older (יְבֵן) measure,” and in Ezek. xlii. 8, “a great cubit,” or, literally, “a cubit to the joint,” which is further defined in xlii. 5 to be “a cubit and a hand-breadth.” These expressions involve one of the most knotty points of Hebrew archaeology, viz. the number and the respective limits of the scriptural cubit. A cubit “after the cubit of a man” implies the existence of another cubit, which was either longer or shorter than it, and from analogy it may be taken for granted that this second cubit would be the longer of the two. But what is meant by the “ammā (cubit) works in the anatomical sense of the term—in other words, the bone of the forearm between the elbow and the wrist? or is it the full cubit in the ordinary sense of the term, from the elbow to the extremity of the middle finger? What, again, are we to understand by Ezekiel's expression, “cubit to the joint?” The term יְבֵן, attasil, is
explained by Gesenius (Theaur. p. 144) of the "armholes," and not of the "armholes," as in the A.V. of Jer. xxxviii, 12, where our translators have omitted all reference to the word ἔκδεικνυς, which follows it. A "cubit to the knuckles" would imply the space from the shoulder to the knuckles. A "cubit to the waist" is expressed by a hand-breath to the ordinary cubit, we should infer that it was contra-
distinguished from the cubit that reached only to the waist. The meaning of the word is, however, contested: Hitzig gives it the sense of a connecting word (Comm. on Jer.). Sturmius (Schr. p. 94) understands it of the edge of the walls, and others in the sense of a string or a cord (Rosenmüller, Schol. in Jer.). Michaelis, on the other hand, understands it of the knuckles (Supplem. p. 119), and so does Saalschütz (Arch. ii, 165). The expressions now discussed, taken together, certainly fa-
vor the idea that the cubit of the Bible did not come up to the full length of the cubit of other countries. (See below.) A further question remains to be discussed, viz., whether more than two cubits were in vogue among the Hebrews. It is generally conceded that the "for-
ner" or "older" measure of 2 Chron. iii, 3 was the Mo-
saic or legal cubit, and that the modern measure, the existence of which is implied in that designation, was at the same time somewhat larger. Further, the cubit "after the cubit of a man" of Deut. iii, 11 is held to be a common me-
asure, in contrast to the Mosaic one, and to have fallen below this latter in point of length. In this case we should have three cubits—the common, the Mosaic or old, and a new measure. This was the case with Ezek-
iel and find a distinction of another character, viz., a long and a short cubit. Now it has been urged by many writers, and we think with good reason, that Ezekiel would not be likely to adopt any other than the old or-
thodox Mosaic standard for the measurements of his ideal temple. The whole Jerusalem cubit would be identified with the old measure, and his short cubit with the one "after the cubit of a man," and the new measure of 2 Chron. iii, 3 would represent a still longer cubit than Ezekiel's long one. Other explanations of the language have, however, been offered: it has been some-
times suggested, that while in Chaldea, he and his countrymen had adopted the long Babylonian cubit (Jahn, Arch. § 118); but in this case his short cubit could not have belonged to the same country, inasmuch as the difference between these two amounted to only three fingers (Herod. i, 178). Again, it has been ex-
plained that his short cubit was the ordinary cubit in the long of the Mosaic cubit (Rosen-
müller, in Ezek. xl, 5); but this is unlikely, on account of the respective lengths of the Babylonian and the Mosaic cubits, to which we shall hereafter refer. Inde-
pendently of these objections, we think that the pas-
sages previously discussed (Deut. iii, 11; 5 Chron. iii, 3) imply the existence of three cubits. It remains to be inquired whether from the Bible it-
self we can extract any information as to the length of the Mosaic or legal cubit. The notices of the height of the altar and of the height of the lavers in the Temple are of importance in this respect. In the former case a special limit was set (Exod. xxvii, 16), with a direct prohibition against the use of steps (Exod. xx, 20); in the latter, the height of the base on which the laver was placed was three cubits (1 Kings vii, 27). If we adopt the ordinary length of the cubit (say 20 inches), the height of the altar and the base would be 5 feet. But it would be extreme incongruity, if not impossible, to minister at an altar or to use a laver placed at such a height. In order to meet this difficulty without any alteration of the length of the cubit, it must be as-
sumed that an inclined plane led up to it, as was the case with the loftier altar of the Temple (Mishna, Mid-
doth, iii, § 1, 3), or in other words, that the spirit of the text; and, even if suited to the altar, would be wholly needless for the lavers. Hence Saal-
schütz infers that the cubit did not exceed a Prussian foot, which is less than an English foot (Arch. ii, 167). The other instances adduced by him are not so much to the point. The molten sea was not designed for the purpose of bathing (though this impression is conveyed by 2 Chron. iv, 6, as given in the A.V.), and there was no reason why the cubit should exceed the depth of the water in it. The height of Og, as inferred from the length of his bedstead (9 cubits, Deut. iii, 11), and the height of Goliath (6 cubits and a span, 1 Sam. xvii, 4), are not inconsistent with the idea of a cubit about 18 inches long, if credit is given to other recorded in-
stances, such as extraordinary stature (Pilny, vi, 2, 15; He-
rod. i, 68; Josephus, Ant. xxii, 4, 4). At the same time the rendering of the Sept. in 1 Sam. xvii, 4, which is followed by Josephus (Ant. vi, 9, 1), and which reduces the number of cubits to four, suggests either an error in the Hebrew text, or a considerable increase in the length of the cubit in later times. (3.) We now turn to collateral sources of information, which we will follow out, as far as possible, in chrono-
logical order. The earliest and most trustworthy testi-
mony as to the length of the cubit is supplied by the ex-
isting specimens of old Egyptian measures. Several of these have been discovered in tombs, carrying us back at least as far back as 1700 B.C., and even 2000 B.C., and in the so-called Elephantine exhibits the length of the cubit in the time of the Roman emperors. No great difference is exhib-
ted in these measures, the longest being estimated at about 21 inches, and the shortest at about 20½, or ex-
actly 20.4729 inches (Wilkinson, Am. Enc. ii, 256). They are divided into 10 digits, which are used in the measurement with the Mosaic cubit, which, according to rabbinical authorities, was divided into 24 digits. There is some difficulty in reconciling this discrepancy with the almost cer-
tain fact of the derivation of the cubit from Egypt. It has generally been surmised that the Egyptian cubit was of more than one kind, but that at the same time the smaller measures exhibit the shorter as well as the longer by special marks. Wilkinson denies the existence of more than one cubit (Am. Enc. ii, 257-259), apparently on the ground that the total lengths of the measures do not materially vary. It may be conceded that the measures are intended to represent the same length, the variation being simply the result of mechanical inaccuracy; but this does not decide the question of the double cubit, which rather turns on the peculiarities of notation ob-
servable on these measures. For a full discussion of this point we must refer the reader to Thomson's essay in the Journal of Egyptian Archaeology, published in London in 1883. Our limits will permit only a brief statement of the facts of the case, and of the views expressed in reference to them. The most perfect of the Egyptian cubit measures are those preserved in the Turin and Louvre mu-
seums. These are unequally divided into two parts, one containing 20 digits, and the other 13 digits. In the former part the digits are subdivided into aliquot parts from \( \frac{1}{2} \) to \( \frac{1}{3} \), reckoning from right to left. In the latter part the digits are marked on the lower edge in the Turin, and on the upper edge in the Louvre measure. In the Turin measure the three left-hand digits exceed the other 27, and are represented by two marks, either fingers or the numerals 1, 2, 8. The four left-hand digits are marked off from the rest by a double stroke, and are further distinguished by hieroglyphic marks supposed to indicate that they are digits of the old measure. There are also special marks between the 6th and 7th, and between the 9th and 10th digits of the right-hand portion of the Louvre. In the Louvre cubit two digits are marked off on the lower edge by lines running in a slightly transverse direction, thus producing a greater length than is given on the upper side. It has been found that each of the three above specified digits in the Turin measure is \( \frac{1}{3} \) of the whole length, and that the two marks or digits in the other form, the four left-hand digits is \( \frac{1}{2} \) of the 25 right-hand digits; also that each of the two digits in the Louvre measure is \( \frac{1}{3} \) of the whole length, less these two digits; and, further, that the left half of each margin =...
The whole length of the Louvre measure, less the two digits. Most writers on the subject agree in the conclusion that the measures contain a combination of two, if not three, kinds of cubits; the length of the Turin papyrus is, however, manifested as to particulars. Théodotus makes the difference between the royal and old cubits to be no more than two digits, the average length of the latter being 484.289 millimetres, or 19.066 inches, as compared with 535.524 millimetres, or 20.611 inches, and 535 millimetres, or 20.951 inches, for the length of the Egyptian cubits respectively. He accounts for the additional two digits as originating in the practice of placing the two fingers crosswise at the end of the arm and hand used in measuring, so as to mark the spot up to which the cloth or other article has been measured. He further states in the notation of the measures the indications of a third or ordinary cubit. 23 digits in length. Another explanation is that the old cubit consisted of 24 or 25 new digits, and that its length was 462 millimetres, or 18.199 inches; and, again, others put the old cubit at 24 new digits, as marked on the measures. The relative proportions of the two would be, on these two hypotheses, as 28 : 26, as 28 : 25, and as 28 : 24. (See below.)

The use of more than one cubit appears to have also prevailed in Babylon, for Herodotus states that the "royal" exceeded the "moderate" cubit (πῆριχ μῆτρος) by three digits (i, 178). The appellation "royal," it is thought, originated in the Babylonian custom of measuring the existence of another; but it is by no means certain that this other was the "moderate" cubit mentioned in the text. The majority of critics think that Herodotus is there speaking of the ordinary Greek cubit (Boëck, p. 210), though the opposite view is affirmed by Grote in his notice of Boëck's work (Class. Hist., i, 28). Even if the Greek cubit be understood, a further difficulty arises out of the uncertainty whether Herodotus is speaking of digits as they stood on the Greek or on the Babylonian measure. In the one case the proportion of the two would be as 8:7, in the other case as 9:8. Boëck adopts the Babylonian digits (without good reason, we think), and estimates the Babylonian royal cubit at 234.2743 Paris lines, or 20.806 inches (p. 219). A greater length would be assigned to it according to the data furnished by M. Oppert, as stated in Rawlinson's Herod., i, 315; for if the cubit and foot stood in the ratio of 5:3, and if the latter contained 15 digits, the whole length of 315.281 millimetres, and the length of the ordinary cubit would be 525 millimetres, and of the royal cubit, assuming, with Mr. Grote, that the cubits in each case were Babylonian, 588 millimetres, or 23.149 inches.

Reverting to the Hebrew measures, we should be disposed to identify the new measure implied in 3 Chron. iii, 3, with the full Egyptian cubit; the "old" measure and Ezekiel's cubit with the lesser one, either of 26 or 24 digits; and the "cubit of a man" with the third one of which Théodotus speaks. Boëck, however, identifies the Mosaic measure with the full Egyptian cubit, and accounts for the difference in the number of digits on the hypothesis that the Hebrews substituted a division into 24 for that into 28 digits, the size of the digits being of course increased (p. 266, 267). With regard to the Babylonian measure, it seems highly improbable that either the ordinary or the royal cubit could be identified with Ezekiel's short cubit (as Rosenmüller thinks), seeing that its length on either of the computations above offered exceeded that of the Egyptian cubit.

In the Mishna the Mosaic cubit is defined to be one of six palms (Celum, 17, § 10). It is termed the moderate cubit (םינמיסה נק), and is distinguished from a lesser cubit of five palms on one side (Celum, i, b.), and on the other side from a larger one, consisting, according to Bartenora (in Cel. 17, § 9), of six palms and a digit. The palm consisted, according to Maimonides, of six digits; and the digit, according to Ariaus Montanus (Am. p. 118), of four barleycorns. This gives 144 barleycorns as the length of the cubit, which accords with the number assigned to the cubiti justa et modesta of the Turin papyrus (see above). The length of the Mosaic cubit, as computed by Théodotus (after several trials with the specified number of barleycorns of middling size, placed side by side), is 214.512 Paris lines, or 19.0615 inches (Stud. u. Krit. p. 110). It seems hardly possible to arrive at any very exact conclusion by this mode of calculation. Eisenschmidt estimated 144 barleycorns as equal to 238.35 Paris lines (Boëck, p. 269), perhaps from having used larger grains than the average. The writer of the article on "Weights and Measures" in the Penny Cyclopaedia (xviii, 189) gives, as the result of his own experience, that 88 average grains make up 5 inches, in which case 144 barleycorns, while the length of the Arabian cubit referred to is computed at 213.058 Paris lines (Boëck, p. 247).

The Talmudists state that the Mosaic cubit was used for the edifice of the Tabernacle and Temple, and the lesser cubit for the vessels thereof. This was probably a fiction; for the authorities were not agreed among themselves as to the extent to which the lesser cubit was used, some of them restricting it to the golden altar, and parts of the brazen altar (Mishna, Cel. 17, § 10). But this distinction, fictitious as it may have been, shows that the cubits were not regarded in the light of sacred and profane as stated in works on Hebrew archeology. Another distinction is made by the rabbis that, in reference to the palm, would tend to show that they did not rigidly adhere to any definite length of cubit; for they recognised two kinds of palms, one wherein the fingers lay loosely open, which they denominated a smiling palm; the other wherein the fingers were closely compressed, and styled a grieveing palm (Carpzov, Apar. p. 674, 676).

(4) Prof. T. O. Paine, the acute and accurate author of Solomon's Temple, etc. (Bost. 1881), presents some original and ingenious views on the subject, which appear to us to solve most of the above difficulties. He maintains that there was but one cubit in use among the Hebrews, and that essentially the same with the Egyptian cubit. The "hand-breath" he regards as an addition (a b) to the red itself (b c), for convenience of holding, as in the annexed figure. This, he thinks, likewise explains the peculiar phraseology in Ezekiel xiii, 13: מִלְחַמָּה יִסְתַּמֵּר יִשָּׁמֵר. A cubit [i. e. the rule] is a cubit and a hand-breath long (p. 72). So also by means of the following figure he shows that only six cubits were counted on the reed (b c), while the hand-breath (a b) was a handle to hold the reed by. Thus Ezek. xlv, 5, "And in the man's hand a measuring-reed six cubits by the reed [or "cubit", and a hand-breath" [additional]]," again, Ezek. xlii, 8, "A full reed of six great cubits," יִתְנָה לְפִי כֹּבֵד סֵגוֹד נַעֲרָה, literally, as the Masoretic accents require, the reed, six cubits to the joint, i. e. as Mr. Paine shrewdly interprets the joint of the reed, one of its knots or sections, as in the subjoined cut (ibid.). All this suggests the surmise that the three larger
and separate digits over the cubits described above as
extant were actually no part of the measure itself, but
only the finger-marks or handle by means of which it
was grasped in use. If these be deducted, the cubit will
be reduced to the usual or traditioinal reckoning, which
is about 18 inches.
We take the liberty of adding some interesting re-
sources from the communication by the same
writer, in which he believes that he has discovered the
cubit locked up in the sockets of the Tabernacle walls.
Having determined that these were each 1/2 cubit square
and 1 cubit thick, he makes the following curious cal-
culation: The 56 silver sockets of the planks (Exod.
xxx. 11) would require 112 cubit cubic feet, if pi-
together, a solid mass 2 cubits in each dimension, or,
in other terms, 24 sockets made a solid cubit. As
each socket weighed a talent (Exod. xxxviii, 27), we have the
formula,
\[ 1 \text{ cubit (in inches)} = \sqrt[3]{\frac{24 \text{ talents in silver}}{\text{weight of 1 cub. inch of silver}}} \]
As the talent contained 3000 shekels, and as silver
weighs 2651 grains per inch, we have, by substitution,
\[ 1 \text{ cubit (in inches)} = \sqrt[3]{\frac{72,000 \text{ shekels silver}}{2651 \text{ grains}}} \]
or, assuming the ancient shkel to have weighed (as
above) 220 grains,
\[ 1 \text{ cubit (in inches)} = \sqrt[3]{\frac{15,840,000}{2651}} \approx 18.14 \text{ inches} \]
This strikingly agrees with the result attained above.
Prof. Paine remarks that the corrs for the tenons in the
sockets may safely be neglected, as the dress would
fully counterbalance them. The alloy, if all used in
manufacturing, would not materially raise the value of
the cubit in this calculation.

(5.) Land and area were measured either by the cubit
(Numb. xxxiv, 4, 5; Ezek. xii, 27) or by the reed (Ezek.
xiii, 20; xiii, 17; xlv, 2; xlvii, 20; Rev. xxi, 16).
There were men of profession in this occupation, and
such measurements were evidently taken for permanent
measures by the Jews. Whenever they wished to define
the size of a plot, they specified its length and breadth,
even if it were a perfect square, as in Ezek. xlviii, 16.
The difficulty of defining an area by these means is ex-
perienced in the interpretation of Numb. xxxv, 4, 5,
where the suburbs of the Levitical cities are described as
reaching outward from the wall of the city 1000 cubits
round about, and at the same time 2000 cubits on each
side from without the city. We can hardly understand
these two measurements otherwise than as applying,
the one to the width, the other to the external boundary
of the suburb, the measurements being taken respec-
tively parallel to the sides of the city. In this case it is
necessary to understand the words ren-
dered “from without the city,” in ver. 5, as meaning to
the exclusion of the city, so that the length of the city
shall be added in each case to the 2000 cubits.
The result would be that the size of the areas would
vary, and that where the city walls were unequal in
length, the sides of the suburb would be also unequal.
For instance, if the city wall were 500 cubits long, then
the side of the suburb would be 2500 cubits; if the city
wall were 1000 cubits, then the side of the suburb would
be 3000 cubits. Assuming the existence of two towns,
500 and 1000 cubits square, the area of the suburb would
in the former case be 8,000,000 square cubits, and would
be 24 times the size of the town; while in the latter
case the suburb would be 8,000,000 square cubits, and
only 8 times the size of the town. This explanation is
not wholly satisfactory, on account of the disproportion
of the suburbs as compared with the towns; neverthe-
less any other explanation only exaggerates this dispro-
portion. Kell, in his comment on Josh. xiv, 4, assumes
that the city wall was in all cases to be regarded as
1000 cubits long, which, with the 1000 cubits outside the
wall, and measured in the same direction as the wall,
would give 2000 cubits, and would reduce the side of
the suburb in every case a length of 3000 cubits.
The objection to this view is that there is no evidence
as to a uniform length of the city walls, and that the
suburb might have been more conveniently described as
3000 cubits on each side. All ambiguity would have been
avoided if the size of the suburb had been decided
either by absolute or relative acreage; in other words,
if it were to consist in all cases of a certain fixed acreage
outside the walls, or if it were made to vary in a certain
relation to other parts of the town. As the text stands, neither
of these methods can be deduced from it. See LEXI-
CIVAL CITT.
2. The measures of distance noticed in the Old Testa-
ment are the three following: (a) The הַתָּדֹד, od, or
pace (2 Sam. vi, 15), answering generally to our yard.
(b) The הָרָקָע, קָרָאתוֹ, קָרָא הָרָקָע, rendered in the A. V., "a little way" or "a little piece of ground" (Gen.
xxxvi, 16; xlviii, 7; 2 Kings v, 19). The expression
appears to indicate some definite distance, but we are
unable to state with precision what that distance was.
The Sept. retains the Hebrew word in the form חֹּל-
ぱּתָה, as if it were the name of a place, adding in Gen.
lxivii, 7 the words שֶׁחַרֹת נַוְּתָהוֹנָו, which is thus
a second translation of the expression. If a certain
distance was intended by this translation, it would
be difficult to determine the length of a race-course of
such a distance as a horse could travel without being over-
fatigued—in other words, a stage. But it probably means
a locality, either a race-course itself, as in 3 Macc. iv,
11, or the space outside the town walls where the race-
course was usually to be found. The Sept. gives it
again in 4 Macc. vii, 7 and the equivalent expression in
Greek. The Syriac and Persian versions render קָרָאתּוֹ, קָרָא יִרְעָא, קָרָא יִרְעָא, a well-known Persian measure, generally estimated
at 80 stades (Herod. ii, 6; v, 53), or from 83 to 4 Eng-
lish miles, but sometimes at a larger amount, even up
to 60 stades (Strab. xi, 516). The only conclusion to be
drawn from the data before us is that the קָרָא, קָרָא יִרְעָא, קָרָא יִרְעָא, קָרָא יִרְעָא, did not ex-
ceed and probably equaled the distance between Bethle-
hem and Rachel's burial-place, which is traditionally iden-
tified with a spot 14 miles north of the town.
(c) The כֶּּנֶּה, וְּרֵעֶק, כֶּּנֶּה וְּרֵעֶק, mahalud yom, a day's journey, was the most usual method of
calculating distances in travelling (Gen. xxx, 36; xxxi,
23; Exod. iii, 18; v, 3; Numb. x, 33; xl, 31; xxxii, 8;
Deut. i, 2; 2 Kings xiv, 9; 2 Kings xii, 18; 1 Macc. iv,
24, 28; viii, 45; Tobit vi, 1), though but one instance of
it occurs in the New Testament (Luke ii, 44). The
distance indicated by it was naturally fluctuating, ac-
cording to the circumstance of the traveller
or the country through which he passed. Herodotus
varies it from 56 to 80 stades (Hist. i, 38; ii, 58); Marinus (op. Pot. i, 11) at 150 and 172 stades;
Pausanias (x, 33, § 2) at 150 stades; Strabo (i, 85) at
from 250 to 300 stades; and Vegetius (De Re Mil., i, 11)
at from 20 to 24 miles for the Roman army. The ordi-
nary day's journey among the Jews was thirty miles; but
when they travelled in companies, only ten miles. Ne-
apolis formed the first stage out of Jerusalem, accord-
ing to the former, and Beerioth according to the lat-
ter computation (Lightfoot, Exerc. in Luc. ii, 44). It is
impossible to assign any distinct length to the day's joi
yarn's estimate of 35 miles, 172 yards, and 4 feet, is
based upon the false assumption that it bore some fixed
ratio to the other measures of length.
In the Apocrypha and New Testament we meet with the
following additional measures: (d) The Sabbath-
day's journey, αὐθάρασιν δόος, a general statement for
a very limited distance, such as would naturally be
regarded as the insubstantial vicinity of any locality. (e)
The σταθοῦν, σταθμόν, or "furlong," a Greek measure
introduced into Asia subsequently to Alexander's con-
cquest, and hence first mentioned in the Apocrypha (2
Macc. xi, 5; xii, 9, 17, 29), and subsequently in the New
Testament (Luke xxiv, 13; John vi, 19; xii, 18; Rev.
xviii, 6). Both in the Gospels, and in John and that of
the stade were borrowed from the foot-race course at
Olympia. It equaled 600 Greek feet (Herod. ii, 149),
or 125 Roman paces (Pitn. ii, 23), or 6061 feet of our measure. It thus falls below the furlong by 533 feet. The distances between Jerusalem and the places Betha- ny, Jannis, and Scythopolis, and given with tolerable exactness by 552-588 miles (John vi, 18; 530 stades (2 Macc. xii, 9), and 660 stades (2 Macc. xii, 29). In 2 Macc. xi, 5 there is an evident error, either of the author or of the text, in respect to the position of Bethusara, which is given as only 5 stades from Jerusalem. The Talmudists describe the stade under the term γεάς, and regarded it as equal to 625 feet and 125 paces (Carophon, Apocry. p. 679). (f) The mile, μιλὸς, a Roman measure, equaling 1000 Roman paces, 8 stades, and 1618 English yards. See each in its place.

III. Measures of Capacity.—1. Those for liquids were:
(a) The θύρα, βαζίδ, measured in the Bible (Exod. xxix, 40; xxx, 24; Numb. xv, 4, 7, 9; Ezek. iv, 11, etc.). (c) ζέρα, the bath, the name meaning "measured," the largest of the liquid measures (1 Kings vii, 26, 28; 2 Chron. ii, 10; Ezra vii, 22; Isa. v, 10; Luke xvi, 1). With regard to the relative values of these measures we learn nothing from the Bible, but we gather from Josephus (Ant. iii, 8, 3) that the bath contained 6 hinps (for the bath equalled 7 xestat or 12 choti, and the hin 2 choti), and from the rabbis that the hin contained 12 choti (Ant. xi, 3, 5).
(b) The dry measure contained the following denominations:
(a) The ποῦς, cub, mentioned only in 2 Kings vi, 25, the name meaning literally hollow or concave. (b) The ποῦς, omer, mentioned only in Exod. xvi, 16-36. The same measure is elsewhere termed γεύρα, iasárd, as being the tenth part of an ephah (compare Exod. xvi, 36), whence in the A. V. "tenth deal" (Lev. xiv, 10; xxiii, 18; Numb. xxv, 4, etc.). The word omer implies a heap, and secondarily a sheaf. (c) The ποῦς, státh, or "measure," this being the etymological meaning of the term, and appropriately applied to it, inasmuch as it was the ordinary measure for household purposes (Gen. xviii, 6; 1 Sam. xxv, 18; 2 Kings vii, 1, 16). The Greek equivalent, σαῦρος, occurs in Matt. xiii, 83; Luke xiii, 21. The seah was otherwise termed ὀρθ, skalith, as being the third part of an ephah (Isa. xi, 12; Ps. lix, 5). (d) The pòs, ἐφαχ, a word of Egyptian origin, and of frequent recurrence in the Bible (Exod. xvi, 36; Lev. v, 11; vi, 20; Numb. v, 15; xxviii, 5; Judg. vi, 19; Ruth ii, 17; 1 Sam. i, 24; xvii, 17; Exod. xiii, 14; xvii, 14; 5, 7, 11, 14). (e) The pòs, likhe, ἡπικος, or "half-homer," literally meaning what is poured out: it occurs only in Hos. iii, 2. (f) The pòs, hómer, meaning heap (Lev. xxvii, 16; Numb. xi, 22; Isa. v, 10; Ezek. xvi, 18). It is elsewhere termed ὀρθ, from the circular vessel in which it was measured (1 Kings iv, 22; vi, 11; 2 Chron. ii, 10; xxvii, 5; Ezra vii, 22; Ezek. xv, 14). The Greek equivalent, σαὺρος, occurs in Luke xvi, 7.

The relative proportions of the dry measures are to a certain extent expressed in the names iasárd, meaning a tenth, and skalith, a third. In addition, we have the Biblical statement that the omer is the tenth part of the ephah (Exod. xvi, 36), and that the ephah was the third part of a homer, and corresponded to the bath in liquid measure (Exod. xiv, 11). The rabbis supplement this by stating that the ephah contained three seahs, and the seah six cabs (Carophon, p. 685).

The scale is constructed, it will be observed, on a combination of decimal and duodecimal ratios, the former prevailing in respect to the omer, ephah, and homer, the latter in respect to the cab, seah, and ephah. In the liquid measure the duodecimal ratio alone appears, and hence there is a fair presumption that this was the original, as it was undoubtedly the most general principle on which the scales of antiquity were framed (Böckh, p. 88). Whether the decimal division was introduced from some other system, or whether it was the result of practice, is evidence of the same order.

3. The absolute values of the liquid and dry measures form the subject of a single inquiry, inasmuch as the two scales have a measure of equal value, viz. the bath and the ephah (Ezek. xlv, 11): if either of these can be fixed, the conversion of the other denominations into their respective values readily follows. Unfortunately, the data concerning the value of these measures are both scanty and conflicting. Attempts have been made to deduce the value of the bath from a comparison of the dimensions and the contents of the molten sea as given in 1 Kings vii, 23-28. If these particulars had been given with greater accuracy and fulness, they would have furnished a sound basis for a calculation; but, as the matter now stands, uncertainty attends the statement. The diameter is given as 10 cubits, and the circumference as 30 cubits, the diameter being stated to be "from one brim to the other." Assuming that the vessel was circular, the proportions of the diameter and circumference are not sufficiently exact for mathematical purposes, nor are we able to decide whether the diameter was measured from the internal or the external edge of the vessel. The difference, however, in either respect, is not sufficiently great to affect the result materially. The shape of the vessel has been variously conceived, as cylindrical, hemispherical, with perpendicular and with bulging sides. The contents are given as 2000 baths in 1 Kings vii, 26, and 3000 baths in 2 Chron. iv, 5, the latter being probably a corrupt text. The conclusions drawn have been widely different, as might be expected. If it be assumed that the diameter of the vessel was cylindrical (as the description prima facie seems to imply), that its clear diameter was 10 cubits of the value (often estimated) of 19.0515 English inches each, and that its full contents were 2000 baths, then the value of the bath would be 4.8885 gallons; for the contents of the vessel would equal 2718.656 cubic inches, or 5970 gallons. If, however, the statement of Josephus (Ant. viii, 5, 5), as to the hemispherical form of the vessel, be adopted, then the estimate would be reduced. Saigey, as quoted by Böckh (p. 261), on this hypothesis calculates the value of the bath at 18.086 French litres, or 3.9807 English gallons. If, further, we adopt Saebach's view as to the length of the cubit, which is put at six English inches at the highest, the value of the bath will be further reduced, according to his calculation, to 104 Prussian quarts, or 2.6907 English gallons; while at his lower estimate of the cubit at 12 inches, its value would be little more than one half of this amount (A robidity, ii, 171). On the other hand, if the vessel be supposed to be circular, and the diameter and circumference were measured at the neck or narrowest part of it, space might be found for 2000 or even 3000 baths of greater value than any of the above estimates. It is therefore hopeless to arrive at any satisfactory conclusion from this source. Neverthe- less, we think the calculations are not without their use, as furnishing a certain amount of presumptive evidence. For, setting aside the theory that the vessel bulged considerably, for which the text furnishes no evidence whatever, all the other computations agree in one point, viz. that the bath fell far below the value placed on it by Josephus, and by modern writers on Hebrew metrology in general, according to whom the bath measures between 8 and 9 English gallons. See BRANZIA SEA.

We turn to the statements of Josephus and other early writers. The former states that the bath equals 72 xestat (Ant. viii, 2, 9); that the hin equals 2 Attic chotti (Obad. i, 4); and that the ephah equals 2 Attic modii (Obad. ix, 4, 5); that the corn equals 10 Attic modiim (Obad. ix, 2); that the sheaf equals 7 Attic cythoim (Obad. iii, 6, 6). It may further be implied from Ant. i, 4, 4, as compared with 2 Kings vi, 25, that he regarded the ga, as equal to 4 xestat.
small vessel, such as a cup (Mark vii, 4; A.V. "pot").

(d) The modius, similarly applied to describe any ves-

sel of moderate dimensions (Matt. vi, 15; Mark iv, 21; Luke viii, 8), may possibly, however, the Greek term properly mean-

ing a Roman measure, amounting to about a peck.

The value of the Attic metretēs has already been

stated to be 8.6696 gallons, and consequently the amount

of liquid in six stone jars, containing on the average

2 &frac12; metretēs each, would exceed 110 gallons (John ii, 6).

Very possibly, however, the Greek term properly mean-

ing a Roman measure, amounting to about a peck.

The question is one simply of archaeological interest as

illustrating the customs of the Jews, and does not affect

the character of the miracle with which it is connected.

The chesīm was &frac1; of an Attic medimnus, and contained

nearly a quart. It represented the usual amount of

corn a day's food, and hence a chesīm was a penny,
or denarius, which usually purchased a bushel (Cicero,

Verr. iii, 81), indicated a great scarcity (Rev. vi, 6).

With regard to the use of fair measures, various pre-

cepts are expressed in the Mosaic law and other parts of

the Bible (Lev. xix, 33, 36; Deut. xxv, 14, 15; Prov.

viii, 33; Prov. xxxi, 6), and small, as well as large, and

the old or the new measure, though, according to his

estimate of the cor, it would only equal 3 modii.

Little reliance can be placed on statements so loosely made, and the question arises whether the identification of the

bath with the metretēs did not arise out of the circumstance

that the two measures held the same relative position in the scales, each being subdivided into 72 parts; and, again, whether the assignment of 30 modii to the cor did not arise out of there being 30 seahs in it. The discrepancies can only be explained on the assumption that a wide margin was allowed for a long measure, amounting to an increase of fifty percent. This appears to have been the case from the definition of the seah or σάρην given by Hesychius (μόλος γίγνης, ήν θηλήν μολὼν ἵπποιος), and again by Suidas (μόλος υπερηπερημώνων, ως εἶναι μοῖνο καὶ καὶ ημοῖοι). Assuming, however, that Josephus was right in stating that the cor was the same bath with the metretēs, its value would be, according to Böckh's estimate of the latter (p. 261, 278), 1993.95 Paris cubic inches, or 8.7063 English gallons; but, according to the estimate of Bertheau (Gesch. p. 78), 1985.77 Paris cubic inches, or 8.6696 English gallons.

The rabbinists furnish data of a different kind for calculating the value of the Hebrew measure. They estimated the log to be equal to six hen eggs, the cubic contents of which were ascertained by measuring the amount of water they displaced (Maimonides, in Cel. 17, § 10). On this basis, Thienius estimated the log at 14.088 Paris cubic inches, or 0.3147 English gallon, and the bath at 101.438 Paris cubic inches, or 4.4986 gallons (St. u. Kr. p. 101, 121). Again, the log of water is said to have weighed 108 Egyptian drachmas, each equaling 61 barleycorns (Maimonides, in Pech, 3, § 6, col. Giuisius). Thienius finds that 668 barleycorns fill about the same space as 6 hen eggs (St. u. Kr. p. 112). Again, a log is said to fill a vessel 4 digits long, 4 broad, and 2 3/4 high (Maimonides, in Prof. Menachoth). This vessel would contain 21.6 cubic inches, or 0.07754 gallon. The conclusion arrived at from these data would agree tolerably well with the first estimate formed on the notices of the molten sea.

From the New Testament we have notices of the follow-

ing foreign measures: (a) The metretēs, μετρητής (John ii, 6; A.V. "arinkin"), for liquids. (b) The chesīm, κοσίσ (Rev. vi, 6; A.V. "measure"), for dry things. (c) The seah, σεäche, applied, however, not to the particular measure so named by the Greeks, but to any
# METROPOLENES (Μητροπολένης), a Greek theologian, bishop of Smyrna, flourished in the 9th century. He is particularly known for his opposition to Photius. He was already bishop of Smyrna when his friend, the patriarch Ignatius, was replaced by Photius, and, although he be at first tolerant, he rebuked the new patriarch for his unchristian ways, and was banished. When Ignatius was restored by emperor Basil I, Metropolenes regained his See, and in the Council of Constantinople (869) showed himself one of the most ardent of Photius's adversaries. After the death of Ignatius in 877, Photius became once again patri-arch, and Metropolenes was again deposed. He nevertheless continued to speak and write against Photius, and was excommunicated in 880. We have no details concerning his life after that date. He wrote a letter to Manuel concerning the dispute with Photius from 885 to 887, which is preserved both in Greek and Latin in Labbe, Concilia, vol. viii, and in Raderus, Aeta Con- ciliaria (Ingolstadt, 1694, 4to). See Fabricius, Biblioθ. Graec. xi, 700; Baronius, Anno. ad ann. 870; Hankius, Scriptores Byzantini, xvii, 1; xviii, 66; Hoefer, Nouv. Biog. Générale, xxxvi, 220. (J. F. N.)

of theology (Conf., p. 13, ed. Weissenb.). The first treatise of God and of the Trinity, leading naturally to the exposition of the Greek doctrine concerning the Holy Ghost (Conf. p. 15 sq.). If we compare the doctrine of the author on the point with the tradition of the Greek Church, we find a concurrence and something similar to that of the Latin Church. Each of the three divine persons stands in a definite relation to the two others, and at the same time constitute one form of the Deity. The first person stands as the father of the second and the son of the third (πατὴρ τὸν υἱὸν καὶ τὸν ἀγνότος, but embraces them both in himself as a whole. The second person, or son, possesses a Λόγος, the third the πατριαρχία of the first, as αυτός, an identity with both. See Weissenborn, Profatio a Appendix lit. Symbol. Ecles. Orientalis (Jena, 1590); Dietelmaier, De Metaphys. Crisologo (Alost, 1789); Naele, Florent. Council, p. 108.

Metropolitan (Μητροπολίτης) is the name of an ecclesiastical dignitary—an episcopal officer—who, by virtue of his residence in the capital of a country or province, exercises not only the authority of a presiding officer in his own diocese, but exerts, in some sense, jurisdiction over the other bishops of the same country or province; and in this respect differs from the archbishop (q. v.), who simply enjoys some additional privileges of honor and respect not common to the plain bishop (comp. Schaff, Ch. Hist., i, 270).

The office originated in the Roman countries, when the bishop of a metropolitan city was made a prince of the Church. The date of its origin cannot be exactly fixed, but "the third century," says Coleman (Manual of Peculacy and Ritualism, p. 235), "may be regarded as the period in which it was chiefly consolidated and established." Romanists hold that it can be traced, at least to a certain degree, to the days of the apostles, and that mention is made of it in the letters of Paul to Timothy and to Titus (comp. Pierre de Marca, Concord. lib. vii. Giorgi, De Antiquo Ital. Metropolit.) Several of the Church fathers also mention the fact that the metropolitan office existed in apostolic days (e.g. Chrysostom, 15 Hom. in V. Tim., and Eusebius, Hist. Ecles. iii. c. 4); but it is clear that the name of metropolitan does not occur until the 4th century" (Coleman, Arc. Christi: Ann. Exemplified, p. 143). The title was first publicly adopted by the Church at the Council of Nicaea, A.D. 325, and there seems good ground for the belief that, like all other episcopal offices, the metropolitan government was not followed both in its origin and in its nature as a result of a gradual modification of the diocesan government, by a further concentration of episcopal power, and the extension of its influence over a wider range of territory" (Coleman, Prel. and Rel. p. 242; comp. Schaff, Ch. Hist., ii, 270).

The following may be considered as the rights and privileges of the office. The metropolitan had precedence of all other bishops of his province, a decisive voice in their election, and the power of confirming and ordaining them. He summoned provincial councils, presided in them, and drew up the decrees. He had the right to appoint in the province, the provincial and diocesan superintendence of the whole province. He had the privilege of determining all causes of special importance in provincial council, but in concurrence with the other bishops of the province. In extreme cases, appeal was made to him, when he had the power of controlling a provincial bishop, without the assistance of other bishops. He could give and receive letters of communion, and publish and carry into effect laws enacted either by emperors or by councils relating to the Church. The bishops of a province elected and ordained their metropolitan, without the concurrence of the other bishops of any other province.

The ninth canon of the Council of Antioch (341) thus defines the office of the metropolitan: "The bishops of each eparchy (province) should know that upon the bishop of the metropolis (the municipal capital) also devolves a care for the whole eparchy, because in the metropolis all, who have business, gather together from all quarters. Hence it has been found good that he should also have a precedence in honor, and that the other bishops should do nothing without him—according to the old and still binding teaching of our fathers—that which pertains to the supervision and jurisdiction of their parishes (i.e. dioceses in the modern terminology), and the provinces belonging to them; as in fact they ordain presbyters and deacons, and decide all judicial matters. Otherwise they ought to do nothing without the bishop of the metropolis, and without the consent of the other bishops." In the nineteenth century, this council forbade a bishop being ordained without the presence of the metropolitan, and the presence or concurrence of the majority of the bishops of the province. The writers of the Latin Church use promiscuously the words archbishop and metropolitan, making either name denote a bishop, who, by virtue of his see, presides over or governs several other bishops.

Thus in the newly-constituted hierarchy of the Roman Catholic Church in England the archbishop of Westminster has the rank of metropolitan. In the Roman Catholic Church of Ireland, the archbishops of Armagh, Dublin, Cashel, and Tuam, all possess the same rank. In the Church of England, also, the real meaning of the term metropolitan seems to have been lost sight of, and the archbishops of Canterbury and York, in England, and in Ireland those of Armagh and Dublin, are called archbishops, and the bishops of the metropolis are known only to denote him whose see is really a civil metropolis. See Farrar, Ecles. Dict. s. v.; Hook, Church Dict. s. v.; Walcott, Sacred Archeology, s. v.; Siegel, Handbuch d. christl. Kirchl. Alterth.immer, iii, 264 sq.; Planck, Gesch. d. christl. Kirchl. Gesellschaftsverfassung, i, 572 sq.; Ziegler, Vern. d. Kirchl. Verfassungsformen, p. 61.

Metropolitanism is the name of the archiepiscopal ordinarium and consistory, a sort of ecclesiastical supreme court, or second court of appeals, in the Church of Rome, installed by the metropolitan or archbishops. Occasionally it has the special power conferred which constitutes it also a third court of appeals, but, as a rule, this court hears all appeals in matters of discipline and matrimonial difficulties. As the duties and office of the assistant bishops are both to attend to the management of his own diocese and the dioceses of his subaltern bishops, the metropolitan council is divided into two boards or senates, one of which constitutes the court in cases of discipline and matrimonial differences of the archdiocese, the other hearing appeals from the ordinaries as the court of the assistant bishops. But it is against the nature of archiepiscopal jurisdiction that the metropolitanism can also take the appeals against the sentence of the archiepiscopal vicar and ordinary and decide upon these. An appeal ab eaem ad eundem is not admissible, for it cannot be thought of that the general vicar or the archiepiscopal ordinary represents the archbishop as common bishop in propra diocesi, the metropolitan representing him as such, inasmuch as the archbishop is in his own archdiocese as ordinarius. The archbishop certainly cannot fill the offices of two dignitaries; the cognizance or decision of appeals from sentences of archiepiscopal general vicaries and metropolitan courts should therefore be sent to other, hence to the metropolitan court of another archiepiscopate. Appeals from the decisions of the metropolitan courts in second instance are usually presented to the pope himself, securing acquittal at Rome by the Curia Romana, unless his holiness may, in order a judgment be given in 40 days, transfer upon the metropolitanism the power of acting as a court of appeal of the third instance. See Wetzer und Welte, Kirchen-Leistung, s. v.

Mets, Laurent de, a Flemish prelate, was born at Grammont about 1520. He studied theology at Louvain, became a curate at Deinze, almoner and canon of

MEUILLON

Saint-Gudula’s church at Brussels, and shortly after the opening of the year 1662 he was appointed vicar to canonize, at Graurus, archbishop of Malines, and in installed ecclesiastical in France and the district of Brussels. In 1659, the University of Louvain constituted him the conservator of its privileges and vested rights, which were then hotly contested. Laurent de Metz did not long discharge the intricate functions of this last office, for in November, 1659, he was preferred to the bishopric of Rethel and Vesoul; he founded a seminary, and published a Ritual for the use of his clergy. In November, 1577, he was constrained to yield to the insurrection of the Calvinists. At first he took refuge in Cologne, and then in Namur, where, in 1578, Gregory XIII invested him with the episcopal see rendered vacatious by the death of his predecessor. He died in Paris in 1580. He is the author of Statuta Synodi Diocesana Bascodocensi anno Domini MDLXXI (Bois-le-Duc, 1571, 8vo)—Manuel du Patronat diocesain Sulpiciens (1572, 4to). See Paquot, Mémoires pour servir à l’histoire littéraire des Pays-Bas, xii, 319-327; Valère André, Bibliothèque Belge; Guillaume Gazeau, Histoire ecclésiastique des Pays-Bas; Foppens, Bibliotheca Belgica, p. 810.

METSIAH. See TALMUD.

Mettray, Reformation. Of this noted institution for the reformation of juvenile delinquents is the parent of all institutions of this character, and deserves our notice therefore. The object of the Reformation of Mettray and other like institutions, which have, especially in France, been fast multiplying, is the prevention of that much-endur'd and ultimate restoration to society of juvenile delinquents. The founder of the reformation—whose labors, like those of the prison reformers of our day, deserve to be cherished forever—was M. Demetz, a French lawyer, a member of the Parisian bar, who, struck with the evil and hardships attending the commitment to prison of young persons, and considering the training and habits of scarcely responsible criminals, condemned to languish hopelessly for a time, incapable of producing results other than their emerging worse than when they entered, resolved, in conjunction with the vicomte Bretegiron of Courtelles, to found a school which should have for its object the reformation of this class of offenders. In 1689, accordingly, the Reformation, or, as it is called, the Colony of Mettray, was set on foot, about five miles from the city of Tours, in France. From that day to this, M. Demetz has, by his assiduous labors and self-denial, given a model of what can be made of those whom the greatest benefits that could be conferred on society, proving that, by agricultural and other labors of industry, and well-considered rules of organization and discipline, the neglected and criminal may be trained to take their place honestly and honorably in society; the lapse into crime being in the institution of Mettray only 3.81 per cent. See PRISON REFORM. (J. H. W.)

Metus, an aged and venerable Christian of Alexandria, who, in the persecution of that city A.D. 249, for refusing to blaspheme his Saviour, was first beaten with clubs, then pierced with sharp reeds, and finally stoned to death. Quintus and Apollonia, two Christian females, with many others whose names are not preserved, were fellow-sufferers. Fox, Book of Martyrs, p. 28.

Metz, an important fortified city of the province of Lorraine, lately conquered by the Prussians in their contest with France, and situated on the Moselle, at its confluence with the Seille, holds an important position in civil and religious history.

This place, known to the Romans by the name of Divodurus, was the chief town of a people called the Mediomatrici, whose name it took at a later date. In the 6th century the corrupted form Metts first came into use, whence the modern Metz. It was destroyed by the Huns in 452. At the death of Clovis it became the capital of Austrasia, and later the capital of Lor- 

raine. In 885 it became a free imperial town. It was finally secured to France by the peace of Westphalia in 1814, and was held by the French until ceded to the German Empire, in 1871. In 1874 the capital of the state was moved to Trier, but Metz was still the capital of the district of Metz, though somewhat diminished of late by the excursions of families unwilling to live under Prussian rule. Its streets are wide and clean, and it contains numerous spacious squares. The cathedral, a Gothic edifice, begun in 1414, and finished in 1546, is remarkable for its boldness, lightness, and elegance, and has a beautiful spire of open work, 373 feet in height. The church of Notre- Dame-de-la-Ronde is a noteworthy structure. Its choir was built in 1130. Metz contains also many other noble edifices and institutions, religious, civil, and military. Its industry is active, the chief employments being lace-making, embroidery, floristry, and the manufacture of brushes, clothing for the army, flannels, pins, and casts; there are also brass and copper foundries.

Metz figures quite prominently in the history of religious persecutions during the 16th and 17th centuries. The Huguenot war, especially, affected the peace of the city. Metz was a Protestant of this place. The revocation of the Edict of Nantes was put in force at this place only five days after its publication. More than 4000 people left the place. (Comp. La persécution de l'Eglise de Metz, d'écrite par le sieur Oly [2d ed.], by O. Cuvier [Paris, 1860]).

METZ, COUNCIL OF. (Concilium Metense). Church councils held at Metz as early as A.D. 390. At this time Aquitania, archbishop of Rheims, was deposed and banished for high treason against king Childerich. Of far greater importance, however, was a council held here in A.D. 885, which revoked the excommunication of Louis le Debonnaire, who had been unjustly treated by Ebbio, archbishop of Rheims. Another council, in the year following, supplemented the action of 885 by crowning Louis Ebbio himself receding from his former position. See LOUIS LE DEBONNAIRE. See also LANDON, Manual of Councils, s. v.

Metz, Christian. See INSPIRED.

Metz, Joseph von, a German Roman Catholic theologian, was born at Ebenhofen, Bavaria, March 9, 1758. He was educated by Meinrad Meichelbck, prior of the monastery at Reichenau, continued his education at the monastery of St. Peter and Paul, and was ordained in 1779 at Augsburg. Afterwards he studied at the seminary at Pfaffenhauzen; was ordained at Augsburg in 1785; became in the same year tutor of the children of the count of Stauffenberg, with whom he went to Strauburg, Metz and Wurzburg; was then installed as minister at Pfaffenhauzen and St. Peter and Paul in 1801 at Eberstall. In 1801 he was nominated clerical counsellor by Carl Theodor of Dalberg, bishop at Constance. In 1802 he got a position as minister to Riazidissen, and in 1804 as dean at Laupheim; in 1809 poor health forced him to resign both positions, but in 1810, being restored to health, he became clerical counsellor of the government of the bishopric of Constance; in 1812 general counsellor of the vicarage at Elwangen; resigned in 1817, and died January 4, 1819. His manifold duties as pastor prevented the composition of extended literary works. Besides several essays in journals, he published Katschheim and seine Umgebung (1805); Jura, Frankreichs Peterlebnisse, und der Lehren. Beitrage zur ... der Vor- und Nachbarländer (1812, 8vo). See Düring, Ge- lehrt Theol. Deutschlands des 18ten u. 19ten Jahrhun- derts, ii, s. v.

MEOCCI, VINCENZIO, a Florentine artist, born in 1604, was chiefly employed in works of perspective, which he executed at various places in Tuscany, and in the cupola of the royal chapel in S. Lodolo. Several works of Meucci are dispersed through various churches in Florence, and in a chapel of the Wunztata, where he painted a lovely Madonna, which is allowed to be one of his best works. He died in 1776. See Lanzi's His- tory of Painting, transl. by Roscoe (London, 1847, 5 vols. 8vo), i, 274.

MEUILLON, RAYMOND DE, a French preacher and
theologian, was born about 1235 in Dauphiny. After having declared to adhere to the rules of St. Dominic at the Convent of Sisteran, he was elected in 1254 general in the chapter of St. Dominic at Paris in 1262; and in 1267 he was nominated definitor. In 1278 he was commissioned to go to England to suppress the too liberal discourses of some Dominicans, accused of irreverence to the memory of St. Thomas. After having accomplished the mission assigned to him, Raymond gave an account of it to the assembled chapter at Paris in 1279. The delinquents were condemned, and the priors authorized to punish vigorously whoever should attempt new excesses. As a reward for his zeal, Ray- mond was nominated definitor for a second time. Some years after he was introduced to the secular church in the diocese of Burgundy. In 1299, the chapter at Paris elected him as the correspondent and representative of the Bahn des wahren Christenthums: — Madonna und santa casa di Loreto, oder historische Beschreibung der lieben Frauen und des heiligen Hauses zu Loreto (Jena, 1702, 8vo); — Diss. academica de Cynismo philosophia (Kilon, 1708, folo): — Diss. de profugio auctoritatis (ibid. 1704, 4to); — Diss. de falsa Pythagorici mysticus (ibid. 1704, 4to): — Anweisung zur Verlegung der Welt und seiner selbst (Osnabruck, 1706, 12mo): — Dos hohe Geheimnis der Geburt Christi in der Stad Amster- dam (1709, 8vo): — Die in der ersten Kirche gehorte Apostelkirche des Apostels Hieronymus in Rom, welche Doch- malz, aus den Putrivar und Kirchengeschichten erwirren. Meuschen was a very superior student in the ancient and Oriental languages, and his contributions to exegetical theology are perhaps among the most valuable productions of his age and country. His best works in the field of Biblical literature are: Diction de Nase prince et directeur Synodii Mogi Hebraeorum (Colburg, 1724, 4to): — Novum Testamentum et Talmude illustratum (Leip. 1736, 4to): — Bibliotheca medica sacri, seu recens scripturn quos Scripturam Sacram ex medicina et philosophia naturali illustratum (The Hague, 1712, 8vo). He also edited Eyggun's Chronicon Universale, under the title Heris, Eyggun Ord. minor, flores temporum s chroni- con universale ab anno Christi ad A.D. 1830 et adhinc ad a. 1518 continatum a M. Eygenni; edite premisse glossario Latinis in Pontia J. M. Meuscheni (Leip. 1748, 4to). See Programma funebre in Meuschenium (in the Acta Historico Ecclesiasticae [Leipsic, vol. viii]); Strieder, Hansische geschicht geschichte, vol. ix.; Grett, Generale Europa, vol. ii. and liii. (J. H. W.)

Meusel (or Möse1), WOLFGANG (Latin Musc- eu), a German Protestant theologian and Hebraist, was born at Dieuze, Lorraine ( lately in France, but now in Germany), in 1457. At the age of fifteen, through the good influence of his uncle, he was entered in 1471 in the monastery of the Benedictines near Lixheim. After a course of arduous studies he was ordained a priest, and then devoted himself to preaching. In 1518 the writings of Luther strongly inclined Meusel to embrace the doctrines of the Reformation. Though elected prior of the cloister with which he was connected, he declined the priory of that office in order to maintain his independence. About this time he began so openly to preach the dogmas of Protestantism that he became generally known as the "Lutheran monk." Soon afterwards he quitted the monastery and went to Strasbourg, where, in 1527, he married a relative of his former superior in the pri- ory. A series of misfortunes and vicissitudes involved Meusel in obscurity until 1529, when he was appointed vicar at the cathedral at Strasbourg. It was then that he diligently applied himself to the pursuit of Hebrew under the tuition of Bucer and Capito. In 1531 the Augsburg Articles enabled him to come to the spiritual head of the city. His principles of liberality and toleration so pleased the Senate that they intrusted him with some important missions. In 1536 he was sent to the assembly at Wittemberg, where he executed the formulary of a union designed to bind together the churches of Germany, North and South, in the matter
MEXICO

of the Eucharist. In 1540 the Augsburg Senate de
glected him to the council held at Worms by the Protes
tants and the Catholics, and afterwards to the conferences
which took place at Ratisbon. In the following year he
was once more present at the Council of Trent, and in 1544
he established at Donau
tworth the principles of the Reformation, and distin-
guished himself as a preacher. In 1549 he was installed
professor of theology at Bern. He died in that city
about 1563. Meusel wrote, Anti-Cochlens præmies ad
ons: Lecit hostis Christiano evangeliaco doctrine
suo popustitia superstitiose ac falsa culatius exter
nae scientiae communicare? (1549, 8vo). — Commentarius in Psalmod (ibid. 1558, fol.). — In Decalogum Expleniatum
(ibid. 1558). — Commentarius in Genesis (ibid. 1554, fol.). — Commentarius in Epistolam ad Romanos (ibid. 1556, fol.). — Commentarius in Ezechiel prophetam (ibid. 1567, fol.). — Commentarius in Epistolas ad Corinthios, ad Galatios, ad Ephesios (ibid. 1559, fol.). — Loci communes The

MEXICO, a federal republic of North America, and by far the most powerful representative of the Spanish American states.

I. General. — Mexico is situated between latitude 15° and 32°20' north, and longitude 97° and 117° west. The area is estimated by Behm and Wagner (Bevölkerung der Erde, Gottinga, 1872) at 776,320 square miles; by other authorities somewhat differently. The population amounted in 1868, according to the calculations of the Mexican statistician, Cubas y Garcia, to 9,178,002. The country was, in 1518, conquered by Cortes for Spain, and from that time to 1821 constituted the vice-king
dom of New Spain. Up to 1848, when Texas separated from Mexico and declared itself independent, the area of Mexico was more than double what it is at present, embracing about 3,000,000 square miles, but soon after the loss of Texas, the entire coast-line of the Rio Grande had, in consequence of the war of 1846 to 1848, to be ceded to the United States. In 1821 Mexico declared independence from Spain, and constituted itself a republic. The attempt of the Creole, Ibarra, to revert the country in an empire (1822), ended after about one year with his expulsion; and from that time Mexico, though continually torn by civil war, remained a republic, with the single exception of the inter
terval from 1862 to 1867 when Maximilian I was emper
or of Mexico. The Mexican population embraces about 1,400,000 whites (Europeans, 300,000 Creoles, 800,000 Chapeptones, or people of mixed Spanish and Indian stock to be white), 1,500,000 to 2,000,000 Mestizos of mixed descent, and about 16,000 negroes; all the others are Indians. Nearly all of these last are Christianized (Judios), only about 100,000 are still unchristianized (Indios bruscos), and inhabit in small tribes the northern regions of the republic. All races have equal rights before the law; slavery was abolished on Sept. 16, 1829, under president Guerrerio. The general language of the coun
try is Spanish; of the Indian dialects, about twenty have maintained themselves to the present day; those most extensively spoken are the Aztec, or Mexican, and the Otomiatic. The population in 1888 was 10,447,904.

II. History of the Roman Catholic Church. — The con
quest of the country was soon followed by its Christianiza
tion. The first missionaries (after 1522) belonged to the Franciscan order, and one of the first Franciscan

monks, Peter of Ghent, reported that the missionaries of his order had, during the first six years of their labors, converted 200,000 Indians; and according to a report of the first bishop of Mexico, Zumarraga, in 1581, the num
ber of the conversions had risen to 443,000. The
missionaries, however, complain that the conversion in many cases was little more than nominal, and many bid
their idols under the cross in order to be able to worship them with impunity. The Franciscans were, in 1526, followed by the Dominicans, who gave to the country the beneficia of the Mercedarians (Order of Merce
dy), and (after 1558) by the Augustinians. When the Jesuits arrived in the country in 1572, the Christiani
zation of the districts settled by the colonists was nearly complete; but the Jesuits established a number of pros
perous missions in the territories of Northern Mexico, which at that time did not belong to the Spanish do
minions. About the year 1600 Mexico abounded in magnificent churches, convents, and charitable insti
tutions. The cruel treatment of the Indians by many Spaniards often called forth the remonstrances of monks and bishops, who prevailed upon king Charles V of Spain to interfere in behalf of the Indians, and upon pope Paul III to declare, by a bull, that the Indians were rational beings, and must be treated as such. At the same time the bishops took good care of their own interests, and the Church of Mexico was one of the wealthiest on the globe. In 1767 the Jesuits were expelled from the country, and about the same time the influence of the liberal party was on the increase. Mexico was invaded in South-western Europe invaded Mexico, and gradually undermined both the Spanish rule and the influence of the Catholic Church. Among the leaders of the war of independence were many liberals. After the establish
ment of the federal republic, the Church generally sided with the Centralists, or Excessives (so called after the Scotch rite of Freemasonry), and thereby provoked the bitter hostility of the Federalists, or Yorkinos (so called after the York rite of the Freemasons), who con
fiscated very large amounts of Church property whenever they were in power. In consequence of the refusal of the Spanish government to relinquish its historical rights in Mexican Church affairs, nearly all the episco
pal sees became gradually vacant, until a convention with Rome for the reorganization of the Mexican Church was concluded and proclaimed, in 1831, as a law of the state. In 1851, under the presidency of Arista, a papal nuncio, Clementi, was appointed for Mexico, but the Church authorities did not receive him, as a portion of the clergy received him with distrust. In an allocution of Dec. 15, 1856, the pope complained that in the previous year (1855) the ecclesiastical jurisdiction had been abolished, the property of the diocese of Puebla confiscated, and the bishop of that city exiled; that in 1856 the Church had been stripped of all her possessions, the bishop of Guadalajara exiled, the sale of the Church property ordered, and the monks prevailed upon to leave their convents; that liberty of worship, speech, and the press had been introduced, many priests fined, a number of convents destroyed, and others suppressed; and that "in general the government has a high opinion of the Church, but has shown a bitter hostility to the Church. President Con
montfort (elected in 1856) was regarded as a still worse enemy of the Church than Santa Anna. A good under
standing between Church and State was for a short time re-established under president Zuloaga (1858); but after his speedy overthrow (1859) the conflict was renewed in the same law. A papal allocution of Sept. 30, 1861, deplored the new persecution of the Church in Mexico, when under the administration of president Juarez the possessions of the Church had been declared as national property, churches plundered, bishops expelled, clergymen, monks, and their possessions exposed to many annoyances, and so forth. When Maximilian was proclaimed emperor, the entire Church party supported him. Maximilian, before going to Mexico, implored at Rome the papal blessing, conferred many favors upon the Church, and received a new
papal nuncio in Mexico; but the negotiations for a new concordat failed from reasons that have not yet been fully cleared up. After the re-establishment of the re-
publican government under Juarez, the Church again complained of the liberal policy pursued by the govern-
ment, and these complaints continued when Juarez was succeeded (1872) by president Lerdo de Tejada. The new president, as well as the majority of the Mexican Congress, were against the principles of the concordat. In May, 1873, the Mexican Congress adopted a new law for the regulation of the affairs of the Roman Catholic Church, and the relation between Church and State, which contained the following provisions: Art. 1. Church and State are independent of each other. Congress has no power to legislate in matters of religion. Art. 2. Marriage is a civil contract, which is under the exclusive jurisdiction of the state authorities, and regulated by law. Art. 3. Religious societies can possess no real estate. Art. 4. All inhabitants of the republic are declared free from religious vows. The first article of this law was adopted unanimously, the remainder by overwhelming majorities, the minority in no case consisting of more than seventeen votes.

III. Constitution and Statistics of the Roman Catholic Church.—Soon after the conquest of the country by the Spaniards, the first bishopric was established in Mex-
ico. About 1530 the vice-kingdom was divided into 7 dioceses: Mexico, Michoacan, Oaxaca, Puebla, Guadalajara, and Yucatan, forming the ecclesiastical province of Mexico. Subsequently the number of dio-
ceses rose to 11, and the number of parishes, in 1856, amounted to 1285. In 1868 pope Pius IX raised the dio-
ceses of Michoacan and Guadalajara to archbishoprics, and erected 7 new dioceses. Accordingly the country is at present divided into 8 ecclesiastical provinces: Mexico, with the dioceses of Puebla, Chiaipa, Oaxaca, Yu-
catan, Vera Cruz, Chilapa, and Tulancingo; Michoacan, with the dioceses of San Luis Potosi, Queretaro, Leon, and Zamora; and Guadalajara, with the dioceses of Duran-
gio, Lindares, San Juan, and Nayarit. All these provinces have chapters. According to the decrees of the third Provincial Council of Mexico, each cathedral shall have 5 dignitaries (dean, archdeacon, canter, theologus, thesau-
rarius), 10 canons, 6 prebendaries, 6 half-prebendaries, and 6 clerks, "with a good income." The new dioceses have as yet no chapter. Besides the regular parishes, there are many missionary stations, part of which were supported by six colleges de propaganda fide. Most of the latter were, however, suppressed by a decree of pres-
ident Santa Anna, and parishes erected in their place. Under the Spanish rule the bishops were appointed by the king. After the re-establishment of the republic, the president of Mexico claimed the same right to ap-
point bishops for every see that became vacant. But the pope refused to recognise the claims of the president, and to confirm the appointments. Thus in 1829 all the dioceses, with the exception of one, had become vacant. In 1830 the canon Valdes, as su-
veyor of the Mexican republic, succeeded in concluding a convention with the pope, which regulated the elec-
tion of Mexican bishops by providing that the chapter were to propose to the government three candidates, among whom the latter would designate one as the fu-
ture bishop, who thereupon would be appointed. All the canonical

institution from the pope. The emperor Maximilian
again claimed all the rights and privileges which the Spanish kings had possessed in Mexico, inclusive of the right of appointing the bishops. These, as well as oth-
er controverted points, were to be settled by a con-
cordat, for the conclusion of which he was negotiating with the pope. At last an agreement was arrived at, Maximilian lost his throne and life. The Mex-
ican bishops formerly enjoyed all the rights conferred
upon the bishops by the canon law as it prevailed in
Spain; but the presidents of the Mexican republic re-
fused to recognise many of these rights, and pope Pius
IX, in an allocution of Dec. 16, 1856, complained that

president Comonfort had abolished the ecclesiastical
jurisdiction altogether. The emperor Maximilian also
failed to meet the expectations of Rome in this respect.
This republic confiscated the entire property of the Church,
and promised to give to the bishops a fixed income
from the public revenue; but the bishops protested against this, and declared that they preferred to be sup-
ported by the voluntary gifts of the faithful. The num-
ber of the parishes was variously estimated at from 6000 to
10,000; they are actually distributed in 14 dioceses,
partly in convents. Nearly all of them are of In-
dian descent; the native Spanish priests were in 1828
expelled from the country, in common with all the oth-
er Spaniards. The parish priests derived their income
formerly from the very high fees which had to be paid for the ecclesiastical functions. These fees were established
by a decree of Santa Anna (Aug. 17, 1833), and again
by Maximilian (Dec. 27, 1864), and it was provided that they should receive salaries from the state; but the bishops refused to accept this arrangement. Monks and nuns were very numerous in Mexico during the empire of Maximilian. In 1840 there were 23,610 religious, the Dominicans 8, the Augustinians 2, the Carmelites and Mercedarians 1 each. There were in all 1981 monasteries. The female orders in the same year had 57 convents with 1962 nuns. The property of the monasteries amounted to about 10,000,000 pesos, exclu-
sive of the large amount of alms. The female orders had,
in 1845, 50 convents, with real estate yielding a net annual income of 500,000 piastres; and had besides a capital of 4,500,000 piastres. The republic abolished the obligatory
character of the monastic vows, and suppressed several
convents; yet the number of convents did not begin to show a considerable decrease until about 1880, when the Franciscans had 20 houses, the Dominicans 25, the Au-
gustinians 10, the Carmelites 10, the Jesuits 1, the Or-
torians 3, the Benedictines 1, the Brothers of Charity 2.
The female orders were all suppressed by a decree is-
 sued in 1863, except the Sisters of Charity. The pub-
lic educational institutions are under the exclusive con-
trol of the state authorities. They embrace one uni-
versity in the city of Mexico, founded in 1551, 2 lyeceums in Potosi and Guanajuato, and colleges in most of the large cities. Elementary instruction has severely suffered from the constant civil wars; but, according to the returns of 1870, there were 23,456 denominational schools in the principal provinces, "in most of the states each municipality has primary schools for both sexes, the teachers being paid out of
municipal funds. The Lancasterian Society of the city of
Mexico furnishes examined teachers for the elemen-
tary branches of those schools, and by its uniting ef-
forts for the advancement of education generally, is establishing a firm basis for the future wel-
fare of the country." There is, however, also a large
number of schools established by the Church, and under
her exclusive control, and their number has of late
considerably increased. Besides the religious societies
found in all the schools of the country, Mexico has some pecu-
liar confria and hermandados, the members of which
engage to pay monthly contributions for defraying the
extraordinary pomp at the festivities of the patron saints
of the churches. Some of these confraternities are very
wealthy. One of these secular brotherhoods is called the
Brown Brothers of the Coachmen of our Lord. It
was founded in 1758, and now forms an efficient body to act
in the capacity of the Eucharist to sick persons. The consecration of the immense Church
property was begun by the Spanish government soon after
the expulsion of the Jesuits. During the War of
Independence, the government of Mexico drew large-
large upon the possessions of the Church in order to get
the money needed for carrying on the war. The value of the tithe, which in 1810 yielded about 2,000,000 pesos, had decreased in 1826 to about half, and decreased still more when the Mexican Congress in 1838 abolished the charge. The income from the collection of the tithe, leaving the payment of it wholly to the individual piety of the citizens. President Comonfort, in 1835, confiscated all the property of the Church of Puebla. Under president Juarez, in 1839, the entire possessions of the clergy were declared to be a national domain, and their sale was ordered. The income from this property was estimated at about 20,000,000 pesos. One very regency which was appointed after the French invasion did not dare to stop the progress of the sale, and was therefore communicated by the bishops. After the establishment of the empire, the clerical party demmanded the return of this property that had belonged to the Church, and which was estimated at one third of the entire estate of the republic. As a considerable portion of the sold property had already changed hands, the emperor found it impossible to concede the demand, and by decree of Dec. 27, 1864, ordered the secularization of the Church property to be proceeded with. Commissioners were subsequently sent to Rome, to come, if possible, to an understanding with the pope; but they were unsuccessful. Four provincial synods were held by the Mexican bishops—the first three in 1553, 1566, 1858; the fourth by archbishop Lorenzo de Churruca in 1864.

IV. Protestant Missions.—The history of the Protestant missions in Mexico began in 1860, when the government proclaimed religious freedom. Until then, Protestant Christianity in any form had been prohibited. But previously to that year Miss Rankin had (in 1852) opened at Brownsville, Tex., just opposite the Mexican town of Matamoras, a school for the children of the large Mexican population. She sent a considerable number of Spanish Bibles, which were supplied by the American Bible Society, into Mexico, and in 1854 established a Protestant seminary for Mexican girls likewise at Brownsville. In 1856 the American Foreign and Christian Union took charge of the Mexican mission. After all obstructions to the establishment of Protestant worship had been removed in 1860, the Rev. Mr. Thompson, of the Methodist Episcopal Church, South, went (in November, 1860) as agent of the American Bible Society into Mexico as far as Monterey. He was compelled to return, and the second agent was the Rev. Mr. Smith, who was ordered to open Protestant missions and to circulate the Bible; but when the outbreak of the civil war in the United States interrupted the communication with New York, he had to suspend his labors, and to return to Texas. When the communication with New York had been re-established, the American Foreign and Christian Union, in 1862, sent the Rev. Mr. Hickey, a colportor of the American Bible Society, who, being a Union man, had to flee the South, went to Matamoras, and accepted in 1863 an agency of the Bible Society for Mexico. He subsequently went to Monterey, collected a congregation, and after a little time administered baptism to a dozen Mexicans. When his duties compelled him to leave Monterey, he selected a suitable man from the converts to continue religious services. In 1865 Miss Rankin went to Monterey, where she erected a mission-house, suited for chapel, school, and residence of the missionary. The building was completed in 1866, and several of the converts were sent out as colporters and Bible-readers. Two of these men went to the state of Zacatecas, in company with two of the Bible Society's agents. Their labors resulted in the conversion of thirty persons, among whom were two highly educated men, who purchased for the mission a small country house, with colporters, and carried it forward with great success. An evangelical paper, the Antorchita Evangelica, was published, which proved a very efficient aid to Protestant preaching. In 1871 the number of converts amounted to more than one hundred. In 1872 the mission of Zacatecas was transferred by the American and Foreign Christian Union to the Board of the Presbyterian Church, which in the same year also stationed missionaries at San Luis Potosi and in the city of Mexico. In 1878, three new stations were opened, the first being at Hermosillo, to carry on the work of the mission connected with the American Foreign and Christian Union in Sonora. The American Board of Commissioners of Foreign Missions, which, in September, 1872, had sent out a missionary from California, established a mission station in middle Sonora. In 1873 a station was opened in the central region of the country. In 1876, the missions of the American Foreign and Christian Union were united with the American Board of Commissioners of Foreign Missions. In 1878, the mission at Hermosillo was closed, and the station was united with that in Sonora. The mission at Nogales was transferred to the American Board of Commissioners of Foreign Missions. The mission at Hermosillo was transferred to the American Board of Commissioners of Foreign Missions. The mission at Nogales was transferred to the American Board of Commissioners of Foreign Missions. The mission at Hermosillo was transferred to the American Board of Commissioners of Foreign Missions.
of Jesus. At Chaluphauc three persons were killed and several wounded. The Methodist and Presbyterian missionar- 
iaries in the city of Mexico, with the rest of the representatives of their organization, went to Washington through the United States minister, the Hon. Thomas H. Nelson, an interview with the president of Mexico, in order to seek from him an assurance of his disposition to protect Prot- estants in Mexico in the enjoyment of their religious rights under the constitution. The interview took place on April 23, 1773, when president Louis de Tolosa as- sured the missionaries that the opinion of all the en- lightened classes of society favored religious toleration, and that he, the president, would answer for the con- duct of all the authorities depending directly upon the federal government.

Meyer, Hermannus, D.D., a noted Dutch Reformed 
minister, was born in Bremen, Lower Saxony, July 27, 
1735. He was educated at the Latin school and gym- 
nasium of that Saxony city, and subsequently at the theo-
r
cological academy in Groningen, where in 1758 he became a candidate for the ministry. Having received a call to the Dutch Church of Kingston, New York, he was or- 
dained March 31, 1768, and sailed from London for New 
York, where he arrived in October of that year, and im- 
mEDIATELY assumed the duties of his pastoral charge. 
He found the church sadly divided on the old quarrel of 
the Coetus and Conventicle parties as to ordination in 
this country or in Holland. He sympathized with the 
former, which was the liberal side, in favor of a minis-
try trained in America; but his efforts to keep the peace 
were vain. His pungent, practical preaching also made 
him many foes among the formal and worldly people. 
Thus, after preaching on regeneration, one of his Church 
officers said to him, "Flesh and blood cannot endure 
such preaching." "Flesh and blood cannot inherit the 
kingdom of God," was his quick reply. The ecclesiasti-
cal difficulties alluded to above culminated in his sus-
pectedness of being a supporter of the conventicle activ- 
ities of the times, his being charged with an ex- 
parte and illegal body of Conventicle ministers in 1766. 
For nearly seven years afterwards, although this disci-
pline was declared illegal, he remained in Kingston, 
preaching to his adherents in private houses. In 1772 
he removed to New Jersey, as pastor of the united 
churches of Flemington and Pottowa (now Atwood). 
Brighter days had dawned. He was a member of the 
convention of 1771, which reunited the long-sundered 
churches. The General Synod elected him to two pro-
fessorships in their theological institution—Hebrew 
(1784) and lector in divinity (1786), both of which he 
held during life; and in 1792 he was made a doctor of 
divinity by Queen's College. He died Oct. 27, 1791, 
lamented as "one of the pillars of the Church." Dr. 
Meyer was a truly learned divine. In Latin, Greek, 
and Hebrew he was a critical scholar, and had made 
considerable attainment in the Syriac. He had long 
meditated over the translation of the Bible, but the 
eclesiastical troubles of his life prevented its comple- 
tion. He left "the beginning of that work in a full 
translation of the Psalms of David, in Latin interline- 
arions between the text, with copious commentaries and 
emendations in the finest German writing upon a broad 
margin." His person was small, his features fine and 
bevolent, his voice and manner in the pulpit good, 
and his delivery very animated. In theological senti- 
ments he held strongly evangelical. His faithful 
preaching made him peculiarly attractive among the good 
ministers of his day. Amiable and kind-hearted, punctual 
and exact, faithful as a pastor, and humble in his pri- 

cate and official walk, his severe trials chasened and 
exalted his sterling piety, and his last days were 
crowned with honor. His death was pre-eminently 
peaceful and happy. See J. M. Meyer's Concil. de 
Amsterdum ii, 300; Sprague, Annals, vol. ix; Corwin's Manual 
of Ref. Church, s. v. (W. J. R. T.)

Meyer, Johann Friederich von, an eminent 
German theologian and jurist, was born at Frankfort-on-
the-Main, Sept. 12, 1772. In 1798 he entered the Univer-
sity of Göttingen, where he applied himself with great 
skill to jurisprudence, not however neglecting his fa-

or study, Greek. In 1798 he published his Commenta-
tario di diei ac dombus Groecorum et Romanorum 
Apoloogos cum ex tabulis aoeis, which attracted great 
attention. In 1798 he went to Leipzic, where he turned 
his attention mainly to the study of philosophy. After 
holding various official positions, which he successively 
lost on account of the French invasion, he was, in 1807, 
appointed to the munificence of the city of Frankfort ; 
became member of the senate in 1816; judge in 1821, 
and, finally, in 1837, president of the criminal court 
and of the court of appeals. At the same time he was 
a member of the diet, and thence, in 1825, 1829, and 
1844, filled the office of burgomaster. He died Jan. 27, 
1847, and was buried in the churchyard of the church 
of his life 3, the Carolino, at Frankfort. His theory 
not only to rationalism—this still appears in his poem of 
Tobias, in seven cantos, published in 1800; but he was subse-
quently converted, and thenceforth became very active 
as a theologian. In 1806 and 1807 he translated Cicero's 
works on the nature of the gods, divination, and fate; 
in 1810, Xenophon's Cyropedia (2d ed. 1829). In 1812 
he published his Bibliolzerungen, in which he found 
full play for his acquirements in philology, jurispru-
dence, etc. He next turned his attention to a new 
translation of the Bible, as he wished to correct the 
philological errors contained in Luther's translation. 
It assumed the form of a revision of Luther's translation, 
with annotations, and was published in 1819 (2d ed. 
without the notes, 1823; latest ed. Frankf. 1855). The 
value of this work was recognised by the University of 
Lüneburg, and he was honored with the doctorate in 
divinity, and in 1816 was made president of the Bible So-
ciety. On the evening of his death, a funeral service in 
the church of his life, he pronounced a funeral oration. 
Meyer took a leaning towards mysticism, in the better 
sense of the word. This is apparent in such works as 
his Blüter für höhere Wahrheit (Frankf. 1820-32); 
Wahrnehmungen einer Seherin (Frankf. 1857). Aside 
from the above-named works, he wrote, Der Rosenkreu-
sler, die Fama u. d. Confezjon (Frankf. 1828)—Kritische 
Kritische (Berlin, 1880); —Das Buch Jesu, hebräisch u. 
deutsch (Leips. 1890); —Inbegriff d. christlichen Glaubens-
lehre (Kempt. 1882); —Heerspider, (Kempt. 1886); — 
Proosodisches Hüftbuch (1886); —Zur Aegyptol. (1840). 
See Döring, Gelehrte Theol. Deutschl. v. (J. H. W.)

Meyer, Johann Hermann, a German Protestant 
thologist, was born at Hamburg October 6, 1737, and 
was educated at the University of Helmstedt. He was 
appointed minister at Rendschlagen and in 1750 at 
Rendsburg. He was elected deacon in 1771 by the pa-
rishioners of the Nicolai Kirche at Kiel, and made, in 
1778, archdeacon, and in 1786 pastor of that church. 
He died August 26, 1785. Meyer was very much be- 
loved for his strict sense of honesty, morality, friend-
liness, and love of the welfare of the church, but was 
devoted to his vocation as minister, and found but little time for the publication of books. The following dissertations are the most im-
portant works he gave to the public: Hamburgische 
Abchneiderische und Rendsburgische Arzneipredigt, (Ham-
burg, 1768, 4to); Gedenkverse mit dem Inhalt Predigten 
vom J. 1774 (Kiel, 1774, 8vo); Der Verlust der Gnade.
MEYER

MEZAHAB

in einer Wahlpredigt (Hamburg, 1775, 8vo); Das Andenkner Ceder Zeiten (Kiel, 1767, 8vo).

Meyer, John, a noted Dutch theologian and Hebraist, was born about the middle of the 17th century. He flourished as professor of theology at the University of Haderwyk, and died in 1725. His works are of great value to the exegete. Those most worthy of notice are his Uxor Christiana, sive de conjunio inter duos, de gentibus et nationibus (Amst. 1686, 4to); Tractatus de temporibus et factis divinis Hebraorum (Amst. 1724); and his edition of Seder Olam, a Hebrew chronicle of great esteem among the Jews, usually attributed to rabbi Joss ben-Chilpeta.

Meyer, John H., son of Dr. Herman Meyer (q.v.), another distinguished minister of the Reformed Church, was born in 1671, and after a course of study at the public schools of his native town and Columbia College in 1765; studied theology under Dr. Livingston, and was licensed to preach in 1788; settled as pastor of the Dutch churches at New Paltz and New Hurley, N. Y., from 1799 to 1803, and at Schenevuctdy from 1803 to 1806. He was an accomplished scholar, and preached with great elegance and ease in the Dutch and English languages. He was remarkable for ambition and popularity as a preacher.

Meyerbeer, Giacomo, a very noted German composer of music, was born in Berlin Sept. 5, 1794, and was of Jewish descent. At the age of nine years he was regarded as a masterly pianist in a city full of cultivated musicians. In 1809 he commenced his career as a composer, producing many songs and a piano-forte, which excited the wonder and admiration of his friends by their spirit and originality. At fifteen he was placed under the tuition of abbé Vogler, who had established a celebrated school of composition in the city of Darmstadt. Here, under the abbe's instruction, young Meyerbeer composed a quantity of classic and elaborate sacred music in the severest scholastic style of his master, all of which, however, is lost to the world, as the composer, when his ideas became more mature, did not care to preserve it. One of these compositions, however, brought him into notoriety: it was an oratorio bearing the title God and Nature, and was performed in the presence of the grand-duke of Darmstadt, gaining for his author the distinction of being appointed composer to the court. When Meyerbeer was eighteen, his first dramatic piece, Jephtha's Daughter, was performed at Munich. Though intended for the stage, it was not so much an oratorio that it was a composition of its severe style, and the evident inattention to the minor attractions of melody, it was not received in a flattering manner by the Bavarian public. After a series of professional disappointments, his first success was achieved at Padua in 1816, in the performance of Ro- melia e Clotilde, which, together with Semiramide, produced at Turin in 1819, and Emma di Resburgo, at Venice in 1820, firmly established the composer's reputation. In 1831 he gave to the public Robert the Devil. His subsequent works are operatic. He died May 2, 1864.

See L de Loménie, M. Meyerbeer, par un H. Bour de Bury, Meyerbeer et ses temps (1865); Hentel, Meyerbeer, a. Leben u. Werke (1868).

Meyere, Lievin de, a Belgian Jesuit, was born at Gand in 1655. In 1700 he became a member of the Society of Jesus. He subsequently taught philology, philosophy, and theology, and was made rector of a college at Louvain. He bitterly opposed the tenets of the Jansenists (q.v.), and serious writings, full of the most pointed and replete with animadversions against them. Meyer died at Louvain in 1730. The following work, said to have been written by Théod. Etheleurius, was edited by Meyer: Historia Controversiarum de divina gratia auctore et posito; Sesto V. Clemente VII, et Paulo V. lib. vi (Antwerp, 1700, fol.). See Meyer, Grand Dict. Hist. V. N.; Goethals, Lectures relatives à l'histoire des sciences et du lettres en Belgique, vol. i.

Meyfart (or Mayfart), Johann Matthias, a Lutheran theologian of considerable note, son of a Protestant divine, was born at Jena in 1590. He received an excellent philosophical and theological education at Gota, and afterwards entered the University of Wit- tengen, where he devoted himself to the study of logic, physics, ethics, and the classics. In 1611, having secured the degree of A.M., he began the study of theology. In 1616 Meyfart was called to a professorship at the newly-founded University of Erfurt. He published his first theological essays in 1617. In 1624 he was created doctor of theology by the University of Jena. In the same year he began the preparation of a large dogmatic work entitled De theologika, de philosophia sive usu, de S. et de symbolis; but he never completed this work. In 1627, however, he went before the public with a small volume entitled Becausi sive manuallis controversiarum theol, a Becausi collecti, confutato (Leipic, 1627, 2 vols.); Nodus Gordius Sophistharum solutus, i.e. de ratione solvendi argumenta sophistica, etc., libri iv (Coburg, 1627, 8vo). Meyfart is one of the most remarkable characters of the 17th century, and can justly be called the true successor of Spener (q.v.). With an intense longing for the highest ideals, which undoubtedly had been fostered by his classical studies, he united a true, living faith in Christ, and desired to leave this earth to be with his Saviour. At the same time he was quick to perceive the many errors and the moral decay of the Church, and, with an earnest heart, strove to raise the Church to its former dignity, to expiate the manifold sins and imperfections of the Church of his day and country. In 1628 he issued his Tabula no- vissima, i.e. of the four last things, viz. death, judgment, eternal life, and condemnation. These were originally four sermons preached by him at Coburg; but they created such an impression on him that he did not only publish them in book form, but was also urged to publish more sermons and admonitions on these and similar subjects. Thus he published six more volumes on The Heavenly Jerusalem, Eternal Damnation, and the Final Judgment. Some of these books passed through five and more editions. Henke, in just appreciation of his merits, calls Meyfart "a German Dante, full of poetry and knowledge." During his later life Meyfart published several books and essays which were written in the spirit of the Reformation. One of his essays contains an earnest address to the clergy to live and seek to combat all that is sordid and base, and all hypocrisy and simony; and in another, De conscientiis pace inter ecclesias per Germaniam evangelicam, he enumerates seventeen characteristic reasons why theologians are so ill adapted to peace, e.g. inanissimia morum et eruditionis, metus odio et invidia, tumultus humanae autotratutiae, etc. The last edition of Erfurt, published by Adolphus, Meyfart was called as professor of theology to the newly-reorganized Lutheran University of Erfurt, and in 1635 he was elected rector of the university, and senior of the theological department. He died Jan. 26, 1642.

Mezahab (Heb. Mej-Zahab, מַעְזָהַב, "water of gold," i.e. of a golden lustre; Sept. Mæcūw, but omits in Chron.; Vulg. Mezabab), the father of Matred and a maternal grandsire of Mehemed, who was the father of Hadr, or Hadas, the last mentioned of the early Edom- itish kings (Gen. xxxvi, 39; 1 Chron. i, 50), B.C. considerably ante 1619. His name has given rise to much speculation. Jarchi renders it, What is gold? and explains it, He was a rich man, and gold was not valued in his eyes at all; the translation of the Sept. is rich and great, so that in this account he was called Mezahab, for it was the gold in his house as water. Haggai (writes Aben-Ezra) said he was a refiner of gold, but others said that it pointed to those who made gold from brass. The Jerusalem Targum of course could not resist the temptation of punning upon the name, and combined the names of Jarchi and Haggai. The latter part of Gen. xxxvi, 39 is thus rendered: The
name of his wife is Mehetabel, daughter of Matred, the daughter of the daughter of Mehetabel, who was married to Laban (Gen. 36:22, Matt. 1:25). All the days of his life: after he had eaten and was filled, he turned and said, What is gold? and what is silver? A somewhat similar paraphrase is given in the Targum of the Pseudo-Jonathan, except that it is there referred to Matred, and not to Mezuzah. The Arabic version translates the name ‘water of gold,’ which must have been from the Hebrew, which the Targum of Onkelos is rendered ‘a reifer of gold,’ as in the Questions Hebraica in Paralip., attributed to Jerome, and the traditions given above; which seems to indicate that originally there was something in the Hebrew text now wanting, which gave rise to this rendering, and of which the present reading, יַЂִּי, may be an abbreviation.

Mezuzah (מְזוֹזָה) or Mezuzah (מְזוֹזָה), the, and plural, forms of a “door-post,” the place on which the Mosaic law is interpreted by the Jews as enjoining the Israelites to write passages of Scripture (Deut. vi, 9; xi, 20). In the following account we especially treat of the Rabbinical regulations.

1. Signification of the Word, and Design of the Inscription. —The word מְזוֹזָה (from מָזוּזָה, to push about, to more) denotes either that which is most prominent, highest, or that on which the door moves, or on which the hinges turn; hence a door-post. This is the sense in which it occurs in the Hebrew Scriptures. From the fact, however, that on it were written passages of the law, the term Mezuzah came afterwards synecologically to denote the writing itself, or the passages of Scripture affixed to the door-post, and this is the sense in which the word is used in the Chaldee paraphrases, and in the Jewish writings generally.

As books were exceedingly rare and expensive in ancient times, and could only be possessed by very few, the practice obtained among the nations of antiquity, and still prevails in the East, of writing, engraving, or painting sacred verses or sacred names over the doors of dwellings as the parents were especially anxious to record or to impart to their children. Thus the ancient Egyptians had brief hieroglyphical legends over their doorways (Wilkinson, Manners and Customs of Ancient Egypt, ii, 102; Sale, p. 101); the Greeks and Romans had inscriptions over their doors (Virgil, Georg. iii, 26 sq.). Other nations had their laws written upon their gates (Huetius, Demonstratio Evangelica, p. 58); and the Moslems to the present day, “never set up a gate, cover a fountain, build a bridge, or erect a house, without writing on it its choice sentences from the Koran, or their best poets” (Thomson, The Land and the Book, p. 98). Now Moses in this instance, as in many other cases, availed himself of a prevalent custom, in order to keep the divine precepts ever before the eyes of the people, and to enable them to instruct their children in the law of God. Hence Maimonides beautifully remarks: “The commandment about the Mezuzah is binding on every one. For whenever an Israelite comes into the house, or goes out, he sees on it the name of the Holy One, blessed be he, will thereby be reminded of his love; and when he awakens from his sleep, and from his thoughts about the vanities of time, he will thereby be led to remember that there is nothing which endures forever and throughout all eternity except the knowledge of the everlasting Rock, and he will reflect and walk in the paths of righteousness” (Jad Harchakos, Hilchot Tephillin, vi, 13).

2. The Manner in which this Inscription has been and still is written. —That the Jews of old observed this injunction is not only evident from the above-mentioned prevailing custom of antiquity, but also from Josephus, who distinctly says that the Jews “inscribe the greatest blessings of God upon their doors” (Ant. iv, 8, 13); from the Chaldee paraphrase of Onkelos, which translates the word מְזוֹזָה, “And thou shalt write them upon scrolls, and affix them on the door-posts of thy houses and thy gates.” From the Jerusalem Targum, Jonathan ben-Uziel, Jerusalem Talmud (Pesach, 1, 1), Babylonian Talmud (Erubin, 96b; Aboda Sara, 11 s.), etc. These authorities, moreover, show that the Hebrews, at least after the Babylonian captivity, and at the time of Christ, wrote the passages containing this injunction on a piece of parchment, and affixed it to the door-posts; and that this Mezuzah, as it is called, is substantially the same as the Jews now have it, which is made in the following manner: On the inside of a piece of square parchment, prepared by a Jew especially for this purpose, are written Deut. vi, 4-9, and xi, 13-21, while on the outside are written the divine name יְהֹוָֹה, יְהֹוָֹה, קָדוֹשׁ בָּעֵתַיִת, to the left at the bottom. Thus written, the schedule is then rolled up in such a manner that the divine name יְהֹוָֹה is outside, and is put into a reed, or hollow cylinder made of lead, brass, or wood, or any thin, flexible material according to the circumstances of the people. In this tube there is a little hole, just large enough to show the divine name, which is protected by a piece of glass, forming, as it were, a little window, through which יְהֹוָֹה is seen. Such a Mezuzah must be affixed to the right-hand door-post of every door in the house by a nail at each end. The fixing of it is accomplished by the following prayer: “Behold I prepare my hands to perform the commandment which my Creator has given me about the Mezuzah. In the name of the one, holy, most blessed God and his Shechinah, who is concealed, mysterious, and incorporated in the name of all Israel. Blessed art thou, O Lord our God, king of the universe, who hast sanctified us by thy commandments, and hast enjoined us to affix the Mezuzah.” Like the Greeks and Romans, who attached amulets to the jambe of the doors, and ascribed to them magic power, the Jews from a very early period believed that the Mezuzah guarded the house against the entrance of diseases and evil spirits, as may be seen from the remarks in the Talmud (Jerusalem Pesach, 1, 1; and Babylonian Aboda Sera, 11 s.; Menachoth, 38 b), and the Chaldee paraphrase of the Song of Solomon (viii, 3), who speaks of the Mezuzah to the right side of my door, in the third part thereof, towards the inside, so that the evil spirits may have no power to hurt me.” Hence the divine name יְהֹוָֹה is made to denote the Guardian of the dwellings of Israel, the ו standing for יְהֹוָֹה, the 5 for צְרִיכָם, and the 5 for וּלְכִּי, according to the exegetical rule called אֶת־נָטָרָאָם (natarium, from notarius, a short-hand writer, one who writes with abbreviations), which regards every letter of a word as an initial or abbreviation of a word; while the words יְהֹוָֹה יְוָֹה יְוָֹה יְוָֹה יְוָֹלְכִּי, supposed to be the name of the guardian angel, or of God himself, are made to stand for נַוָֹר יְהֹוָֹת יְוָֹלְכִּי, Jehovah our God is Jehovah, by another exegetical rule, which exchanges each letter of a word with its immediate predecessor in the alphabet; e.g. the 5 in יְוָֹלְכִּי is exchanged for י, the י for יְוָֹה, the ו for וּלְכִּי, the ה for יְוָֹלְכִּי, and the א for יְוָֹה, thus yielding יְוָֹלְכִּי. Every pious Jew, as often as he passes the Mezuzah, in leaving the house or in entering it, touches the divine name with the finger of his right hand, puts it to his mouth, and kisses it, saying in Hebrew, “The Lord shall preserve thee going out and coming in, from this...”
time forth, and for evermore" (Ps. xxxi. 8); and when leaving on a business expedition, he says, after touching it, "I say, he snatched a purse or any other that came within his reach, "in thy name, Kuzu Bemukas Kuzu (=God), I go out and shall prosper."

III. Literature.—Mainmonides, Jud Ha-Chesek Hakikhot Tefilin U-Mezaah Vey-Sepher Torah, vii, Jork Desc. 22, 1. In the Jewish Chajim, containing a summary of all the laws connected with the Jewish observances (Vienne, 1859), p. 51 sq.; Buxtorf, Synag. Jud, p. 492-497; Leo Modena, Batei and Custodia, pt. i, ch. ii, § 3; Allen’s Modern Jud., p. 927-929. See Doar-Post.

Mezzofanti, Joseph Caspar, a Roman Catholic prelate, celebrated as the greatest linguist the world has ever seen, was born at Bologna Sept. 17, 1774. His father, Francis Mezzofanti, was a carpenter; and his self, being destined for the same humble career, was placed at one of the free schools of the Oratory in his native city. Father Respighi, a priest of that congregation, observed the remarkable talents of the boy, and saved him for literature. He was removed to a higher school—one of the so-called "Scuole Pile" of Bologna—and eventually to the archiepiscopal seminary, where, after completing the usual course of letters, philosophy, divinity, and canon law in the university, he was admitted to priest’s orders in September, 1797. Of the details of his progress in the study of languages during this time little is recorded. He soon displayed powers of rapid learning of a most remarkable kind, and it is known that, like most eminent linguists, he was gifted, even in childhood, with a very wonderful memory, and that, partly under the various professors in the university, partly by the aid of foreign residents in the city, partly by his own unsolicited studies, he had acquired, before the close of his university career, the Latin, Greek, Hebrew, Arabic, Spanish, French, German, and Swedish languages. In 1797, at the early age of twenty-two, he was appointed professor of Arabic in the university; but on the annexation of Bologna, as one of the papal legations, to the newly-established Cibalpine republic, he, refusing to take the oaths of the new constitution, was set aside from the professorship. After the conclusion of the concordat between Pius VII and the first consul, the ancient constitution of the university was restored. In 1803 Mezzofanti was named to the higher professorship of Oriental languages, and in 1806 was appointed librarian of the public library of the city. In 1808 the professorship was discontinued, and Mezzofanti was reduced to great distress. He made a scanty living by private tuition: but, nothing daunted, steadily followed in private what had become his engrossing pursuit—the study of languages. A letter of his, dated in 1804, to the celebrated Orientalist, John Bernard de Rossi, whose personal acquaintance he subsequently formed during a short visit to Modena in 1865, enclosed a composition in twelve languages, which he submitted to the judgment of his correspondent; and by 1812 Mezzofanti’s reputation as a linguist was thoroughly established. The well-known Pietro Giorgio Giardini, bishop of the city of Bologna, who, we are told, "the divine Mezzofanti," and declares that his skill in living and dead languages entitles him to be regarded as "a man of all ages and all nations." The war of which Northern Italy was so long the theatre afforded Mezzofanti many opportunities of extending his stock of languages. In the hospital of Bologna, to which he was attached as volunteer chaplain, we are told that among the invalids of the Austrian, Russian, and French armies—Germans, Hungarians, Bohemians, Walachians, Servians, Russians, Poles, and Croats. Partly in the desire to offer these sufferers the consolations of religion, partly from the love of his studies the study, Mezzofanti laboured assiduously to turn these and all similar opportunities to account; and several instances are recorded in which, without the assistance of a grammar or dictionary, he contrived to establish a mode of commun
Wallachian, the Albanian, the Bulgarian, and the Illyrian. The Roman of the Alps and the Latins are not unknown to him today; he has made himself acquainted with Lappish. He is master of the languages which fall within the Indo-Germanic family—the Sanscrit and Persian, the Turkish, the Georgian, the Armenian; he is familiar with all the members of the Semitic family—the Hebrew, the Arabic, the Syriac, the Samaritan, the Chaldean, the Phœnician, even the Egyptian, through which he not only reads, but speaks. Among the Hamitic languages, he knows Coptic, Ethiopic, Abyssinian, Amharic, and Angoloe.

What is especially notable in this marvellous gift possessed by Mezzofanti is that his knowledge of each among this vast variety of languages was almost as perfect as though his whole life had been devoted to such language exclusively. The reports of all the great students of language conceal in describing him as speaking even their own tongues always with the precision and, in most cases, with the fluency of a native. His pronunciation, his idiom, his vocabulary, were alike unexceptionable. Even the familiar words of every-day life, and the delicate turns of conversational language, were at his command; and in each language he was master of the leading dialects, and of the provincial peculiarities of idiom, of pronunciation, or of expression. In French, he was equally at home in the strict rule of the Académie Française, or in the Provençal of Toulouse. He could accommodate himself in German to the rude jargon of the Black Forest or to the classic vocabulary of Hanover; and he often amused his English visitors with specimens of the provincialisms of Yorkshire, Lancashire, or Somersetshire. With the literati of those various countries, too, he was well acquainted. He loved to talk with his visitors of the great authors in their respective languages; and his remarks are described as invariably sound and judicious, and exhibiting careful and various reading, often extending to departments with which it would never be supposed that a foreigner could be familiar. A Dutch traveller for instance, Dr. Wap, was surprised to find him acquainted with his own national poets, Vondel and Cato; a Dane, with the philological works of Rask; a Swede, with the poetry of Oehsentejerna. To a Sicilian he would repeat whole pages of the poetry of Meil; and an English gentleman was astounded to hear him discuss and criticise Hadibbas, of all English writers the least attractive, as well as the least intelligible to a foreigner. He was in the habit, too, of amusing himself by metrical compositions in the various languages which he cultivated, and often wrote for his visitors a couplet or two in their native language, as a little memorial of the occasion of his visit. Dr. Wap, for instance, had visited him, and travel-ler just referred to, speaks in high praise of some extrêmep lines in Dutch by which Mezzofanti replied to a sonnet which Dr. Wap had addressed to him; and the well-known Orientalist, Dr. Tholuck, having asked Mezzofanti for some memorial of his visit, received from him a Persian couplet, after the manner of Hafiz, which he composed (although not without some delay) during Dr. Tholuck’s visit. After his removal to Rome, although he had already passed his fiftieth year, he added largely to his stock of languages. His most notable acquisition during this period was Chinese, which he acquired (partly at the Chinese college in Naples, partly among the Chinese students of the Propaganda) in such perfection as to be able not only to write and converse freely in it, but even to preach to the young Chinese ecclesiastics. During the same period he acquired the Abyssinian, the Calabrian, some of the North American Indian, and the Burmese. Through this last he received the name of “impossible” Basque. It was in Rome, and especially in the Propaganda, that he displayed in its greatest perfection his singular power of instantaneous passing in conversation from one language to another, without the slightest mixture or confusion, whether of words or of pronunciation.

Mezzofanti, by virtue of his position as cardinal, was member of many ecclesiastical congregations in Rome, but he never held any office of state. He died on the 24th of March, 1849, and was buried in the Church of St. Onofrio, beside the grave of Torquato Tasso. His personal character was gentle, humble, modest, humane, and he was a sincere and devout man.

It is difficult to determine with accuracy the number of languages known by Mezzofanti, and still more to ascertain to what degree of fluency in each. During his lifetime, as we have seen, report varied considerably at different times; nor was he himself believed to have made any very precise statement on the subject. To a Russian traveller, who visited him before the year 1846, and who begged him to make him a list of all the languages he knew, he was able to express himself, he sent a paper in his own hand containing the name of God in fifty-six languages. The author of a memoir which appeared soon after the cardinal’s death in a Roman journal, the Civiltà Cattolica (now known to be by father Bresciani, a Roman Jesuit), states that in the year 1840 Mezzofanti himself informed him that he was able to express himself in seventy-eight languages. Marvellous as these statements may appear, they seem fully borne out by inquiries (with a view to the preparation of a biograp-hy) which have been made since the death of the cardinal, and have been verified from a vast number of individuals, natives of different countries, whose collective testimony, founded on their own personal knowledge of Mezzofanti, places beyond all question the fact of his having spoken fluently considerably more than fifty different languages. There are others among the languages ascribed to him, regarding which it is difficult to institute any direct inquiry; but, judging from analogy, and relying on the well-known modesty and truthfulness of Mezzofanti, we need not hesitate to accept his own statement as reported by F. Bresciani; the more so as among his papers now in the possession of his family is a list, drawn up from memoranda contained therein, of at least a hundred and thirty different languages, with which he possessed some acquaintance, unaccompanied, however, by any note specifying those among the number which he spoke, or the degree of his knowledge of each. His English biographer, Russell, comes to the following results, which are, in brief (for details see that work): 1. Languages frequently tested, and spoken by the cardinal with rare excellence—thirty. 2. Stated to have been spoken fluently, but hardly sufficiently—nine. 3. Spoken rarely and less perfectly—eleven. 4. Spoken imperfectly; a few sentences and conversational form—eight. 5. Studied from books, but not spoken—fifteen. Dialects spoken, or their peculiarities understood—thirty-nine dialects of ten languages, many of which might justly be described as different languages. This list adds up one hundred and eleven, exceeding by all comparison everything related in history. 

In general learning Mezzofanti’s attainments were highly respectable. He was a well-informed theologian and canonist, and an impressive though not eloquent preacher. M. Libri, the historian of mathematical science in Italy, found him well acquainted with algebra, and reports an interesting conversation which he had with him on the Bija Gannita (the algebra of the Hindis), as well as on the general subject of Indian history and antiquities. Other writers describe him as entering freely into the study of jurisprudence, medicine, and several countries. But as an author he is almost unknown. He occasionally read papers at various literary and scientific societies in Bologna and Rome; but his only known publication is a short memoir of his friend and brother professor, father Emmanuel da Ponte, which was written in Bologna in 1826; and he leaves no monuments for posterity beyond the tradition that he was

Miako, one of the largest cities of Japan, was, until the recent abolition of the ecclesiastical emperor, the seat of the *mikado*, or spiritual prince. The city, containing nearly one million of inhabitants, is situated in the south-west of the island of Nipon, in the midst of an extensive marshy plain. The city is about three miles square. The name *mikado* is also noted as the great stronghold of *Shintaim* (q.v.)—the ancient religion of Japan—of temple-worship, priests, monks, ceremonies, and ritualism. Some of the temples are of great size and splendor. Don Rodrigo de Vivero, the Spanish governor of Manilla, who visited Miao in 1668, was told that it then contained 5000 temples. He describes one in which was an immense bronze image of Buddha, the construction of which was begun by the tycoon in 1602. He says, "I ordered one of my people to measure the thumb of the right hand; but, although he was a person of the ordinary stature, he could not quite encircle it with both arms. But the size of the statue is great. It has thirty feet from the feet, hands, mouth, eyes, forehead, and other features are as perfect and as expressive as the most accomplished painter could make a portrait. When I first visited this temple it was unfinished; more than 10,000 men were daily employed upon it. The devil could not suggest to the emperor a surer expedient to get rid of his immense wealth." This colossal was injured by an earthquake in 1662, after which it was melted down, and a substitute prepared of wood gilded. Kämpfer, who was at Miako in 1691, describes the temple which contained this image as enclosed by a high wall of freestone, some of the blocks of which were twelve feet square. "A stone staircase of eight steps led up to the gateway, on either side of which stood a gigantic image twenty-four feet high, with the face of a lion, but otherwise well proportioned, black, and almost naked, and placed on a pedestal six feet high. Within the gateway were sixteen stone pillars on each side for lamps, and on the inside of the enclosing wall was a spacious gallery covered with a roof supported by two rows of pillars eighteen feet high and twelve feet distant from each other. Opposite the gateway, in the middle of the court, stood the temple, much the loftiest structure. The sultan had borrowed it from Japan, and had it built at the expense of a public fund supported by ninety-four immense wooden pillars, nine feet in diameter. The floor of the temple was paved with square flags of marble. There was nothing inside but the great image of Buddha sitting on a *terete*, or dais, flowered, supported by another flower of which the leaves were turned upwards, the two being raised about twelve feet from the floor. The idol was gilt all over, had long ears, curled hair, and a crown on the head which appeared through the window over the first roof of the temple. The shoulders were so broad as to reach from one pillar to another, a distance of thirty feet. In front of this temple is an edifice containing a bell, which is described in the Japanese guide-books as seventeen feet two and a half inches high, and weighing 1,700,000 Japanese catties, equal to 2,066,000 English pounds, a weight five times greater than that of the famous bell at Moscow. Kämpfer, however, who had seen this bell at Moscow, described the Japanese bell as inferior in size to that, and as being rough, ill cast, and ill shaped. It was sounded by striking it on the outside with a large wooden mallet. Another temple, dedicated to Quan won, was very long in proportion to its breadth. In the centre was a gigantic image of Quan won, with thirty-six arms. Sixteen black images larger than life stood round it, and on each side two rows of gilt idols, with twenty arms each. On either side of the temple, running from end to end, were ten platforms rising like steps one behind the other, on each of which stood fifty images of Quan won as large as life—1000 in all, each on its separate pedestal, so arranged as to stand in rows of five, one behind the other, and all visible at the same time, each with its twenty hands. On the heads and hands of all these are placed smaller idols, to the number of forty or more. The whole number of images is stated by the Japanese to be 35,000* (New American Cyclopaedia, vol. xi. s. v.). Miako is also the head-quarters of literature, science, and art. The imperial palace, on the northern side of the city, is, together with its ward, a town of itself. See JAPAN; MIAMIN.

Mi'amin (Heb. Mi'amim' ,מִאָמִים, a contracted form of the name Mi'amim), the name of three persons after the exile.

1. (Sept. Mi'amiv v. r. Mi'ativ, Vulg. Mainum, Auth. Vers. 'Miamim'). The head of the sixth division of the sacerdotal order as distributed by David (1 Chron. xxiv, 9). B.C. 1014.

2. (Sept. Mi'amiv v. r. Maïvip, Vulg. Miciinum). One of the chief priests who returned from Babylon with Zerubbabel (Neh. xii, 5). B.C. 586. He must have attained a great age if identical with the priest who subscribed the religious covenant with Nehemiah (Neh. x, 7, where the name is Anglicized "Mijamin"). B.C. cir. 410 B.C. He was probably the same person called Miam in Neh. xii, 17, but his son's name appears there to have accidentally escaped from the text. See MIADIAH.

3. (Sept. Mi'ativ v. r. Mi'ap, Vulg. Miànum). One of the Israelites, a "son" (i. e. inhabitant) of Parosh, who dedicated his Gentile wife after the captivity (Ezra xiv, 25). B.C. 459.

Miàtsä, the hill-tribes of China, are generally supposed to be the aborigines of that country. From the dawn of Chinese history, we find the people of the plains contending against those of the high lands, and to the present day the hardy mountaineers have maintained their independence. The Miatsä consist of forty-one tribes, occupying large portions of Kwang-foo, Kwei-chow, Yunnan, Sze-chuan, and adjacent provinces. Some of their own Chinese swry; other tribes are absolutely independent. They are smaller in size and stature, and have shorter necks, and their features are somewhat more angular than the Chinese. Their dialects are various, and wholly different from the Chinese; their affinities is most likely with the Laos and other tribes between Burmah, Siam, and China. Dr. Macgowan, a well-known ethnologist, describes them as skilful in manufacturing. He holds to an identity of the Miatsä of Western China and the hill-tribes of Burmah. See KARKE. The degree of civilization they have attained is to a much lower that of the Chinese. Both sexes wear their hair braided in a tuft on the top of the head, but never shaven and twisted as the Chinese; they dress in loose garments of cotton and linen; ear-rings are in universal use among them. They live in huts constructed upon the branches of trees, and in mud and straw hovels. Their agriculture is rude, and their garments are usually obtained by barter from other people. Their religious observances are of the same peculiar nature as those of the other Asiatic tribes uninfluenced by Christian civilization. Their marriage and funeral usages are particularly striking. In one tribe it is the custom for the father of the new-born child, as soon as the mother has become strong enough to leave her couch, to get into bed himself, and there receive the congratulations of his acquaintances as he exhibits his offspring. See Chinese Repository, i, 29; xiv, 105 sq.; Williams, The Middle Kingdom, i, 87, 147 sq.

Mi'bhar (Heb. Mi'kevar, מ'נבה, choice, as in Isa. xxii, 7, etc.; Sept. Mâshâd v. r. Mi'âdah), a Hagarite
dering Levite, named Jonathan, became the priest, at a yearly stipend (Judg. xviii). Subsequently the Danite army, on their journey to settle northward in Laish, took away both the establishment and the priest, which they afterwards maintained in their new settlement (Judg. xvii). See Dan; Jonathan.

The establishments of this kind, of which there are other evidences on the hillside at Qophnah—although most mistakenly, formed in honor of Jehovah, whom they thus sought to serve by means of a local worship, in imitation of that at Shiloh (see Kitto's Daily Bible Illustra., ad loc.). This was in direct contravention of the law, which allowed but one place of sacrifice and ceremonial service; and everything of the same kind, although different in extent and degree, as the service of the golden calves, which Jeroboam set up, and his successors maintained, in Dan and Bethel. The previous existence of Micah's establishment in the former city no doubt pointed it out to Jeroboam as a suitable place for one of his golden calves—Kitto. See Jeroboam. The preservation of the story here would seem to be owing to Micah's accidental connection with the colony of Danites who left the original seat of their tribe to conquer and found a new Dan at Laish—nearly the same spot, for it has the means of furnishing us with a picture of the "interior" of a private Israelite family, which in the days of the kingdom, stands quite alone in the sacred records, and has probably no parallel in any literature of equal age. But apart from this the narrative has several points of special interest to students of Biblical history in the information which it affords as to the condition of the nation, of the persons of which Micah was probably an average specimen.

(1.) We see how completely some of the most solemn and characteristic enactments of the law had become a dead letter. Micah was evidently a devout believer in Jehovah. While the Danites in their community established an image of a god (Exod. xxxiv. 17), and offered the counsel of God, "God hath given it into your hands," ver. 10, with Micah and his household the case is quite different. His one anxiety is to enjoy the favor of Jehovah (xxvii. 13); the formula of blessing used by his mother and his priest invokes the same awful name (xxvii. 2; xxviii. 6), and yet a person seemingly ignorant is he of the law of Jehovah that the mode which he adopts of honoring him is to make a molten and a graven image, teraphim or images of domestic gods, and to set up an unauthorized priesthood, first in his own family (xxvii. 6), and then in the person of a Levite not of his family (xxviii. 17)—this same Jehovah in the most flagrant manner the second of the Ten Commandments, and the provisions for the priesthood—laws both of which lay in a peculiar manner at the root of the religious existence of the nation. Gideon (viii. 27) had established an ephod; but here was a whole chapel of idols, "a house of gods" (xxvii. 5), and all dedicated to Jehovah.

(2.) The story also throws a light on the condition of the Levites. They were indeed "divided in Jacob and scattered in Israel" in a more literal sense than that prediction is usually taken to contain. Here we have a Levite belonging to Beelzebub-judah, a town not allotted to the Levites, and with which they had, as far as we know, no connection; next wandering forth, with the world before him, to take up his abode wherever he could find a residence; then undertaking, without hesitation, and for a mere pitance, the charge of Micah's idol-chapel; and, lastly, carrying off the property of his master and benefactor, and becoming the first priest to another system of false worship, one, too, in which Jehovah had no part, and which ultimately bore an important share in the disruption of the two kingdoms. It does not seem at all clear that the words "molten image, teraphim," as in the LXX, are used to translate the original words Peseel and Masebech. See Idol. As the Hebrew text now stands, the "graven image" only was
carried off to Laish, and the "molten" one remained behind with Micah (xvii, 20, 20; comp. 18). True the Sept. adds the molten image in ver. 20, but in ver. 80 it is omitted.
(3) But the transaction becomes still more remarkable when we consider that this was no obscure or ordinary Levite. He belonged to the chief family in the tribe; nay, we may say to the chief family of the nation, for, though not himself a priest, he was closely allied to the priestly house, and was the grandson of no less a person than the great Moses himself. For the "Manasseh" in xviii, 30 is nothing less than an alteration of "Moses," to shelter that venerable name from the discredit which such a descendant would cast upon it. See MANASSAH, 3.
In fact we possibly have the explanation of the celebrated passage, xviii, 16: "They knew the voice of the young man the Levite." The grandson of the Lawgiver was not unlikely to be personally known to the Danites; when they heard his voice (whether in casual speech or in loud devotion we are not told) they recognised it, and their inquiries as to who brought him hither, what he did there, and what he had there, were in this case the eager questions of old acquaintances long separated.
(4) The narrative gives us a most vivid idea of the terrible anarchy in which the country was placed when "there was no king in Israel, and every man did what was right in his own eyes." The overthrow of Saul and the establishment of David's rule was evidently necessary a central authority had become. A body of six hundred men completely armed, besides the train of their families and cattle, traverses the length and breadth of the land, not on any mission for the ruler of the nation, as on later occasions (2 Sam. ii, 12, etc.; xx, 7, 14), but simply for their private ends. Entirely disregarding the rights of private property, they burst in wherever they please along their route, and, plundering the valuables and carrying off persons, reply to all remonstrances by taunts and threats. The Turkish rule, to which the same district has now the misfortune to be subject, can hardly be worse.
At the same time it is startling to our Western minds accustomed to associate the blessings of order with religion—to observe how religious were these lawless freebooters: "Do ye know that in these houses there is an ephod, and teraphim, and a graven image, and a molten image?" Now therefore consider what ye have to do" (xvii, 14). "Hold thy peace, and go with us and be to us a father and a priest" (ver. 19).
(5) As to the date of these interesting events, the narrative gives us no direct information beyond the fact that it was before the beginning of the monarchy; but we may at least infer that it was also before the time of Samuel. It appears that the Danites took the origin of the name of Mahaneh-dan, a place which already bore that name in Samson's childhood (xiii, 25, where it is translated in the Auth. Vera, "the camp of Dan"). That the Danites had opponents to their establishment in their proper territory before the Philistines entered the field is evident from Judg. i, 44. Josephus entirely omits the story of Micah, but he places the narrative of the Levite and his concubine, and the destruction of Gibeath (chaps. xix, xx, xxi)—a document generally recognised as part of the same (see Berthau, Kommentar, p. 193) with the story of Micah, and that document by a different hand from the previous portions of the book—at the very beginning of his account of the period of the judges, before Deborah or even Ehud (Judg. v, 2, 8-12). This is supported by the mention of Painelas, the grandson of Aaron, in Judg. xx, 28. An argument against the date being before the time of Deborah is that the prophecy of Samuel was apparently one of the earliest, and that of C高新 had been succeeded by a church (Epist. Pseudo-Paul. c. 6). As little is known of the circumstances of Micah's life as of many of the other prophets. Pseudo-Epiphanius (Opp. ii, 245) makes him, contrary to all probability, of the tribe of Ephraim; and besides confounding him with Micaiah the son of Imlah, who lived...
more than a century before, he betrays additional ignorance in describing Ahab as king of Judah. For re-
buking this monarch's son and successor Jehoram for his impieties, Micah, according to the same authority, was thrown from a precipice, and buried at Morath in his own country, hard by the cemetery of Enakim (Eneasia, a place which apparently exists only in the Sept. of Mic. i, 10), where his sepulchre was still to be seen. This tradition is confirmed by theitta, v. 14 of 1 Kings xix, 46. The prophet's tomb was marked by the inhabitants Nephehmeumae, which is probably a corruption of Morath (Sozomen, H. E. vii, 29; Niceta. Hist. ii, 48). The prophet's tomb was occupied by the inhabitants Nephehmeumae, which Sozomen renders μυπρατος.

MICAH, Book of, the sixth of the minor prophets in the usual arrangement, but the third in the Sept. (after Hosea and Amos). In the following account of Micah in Judah, according to rabbinical tradition, he has created controversies in modern times.

1. The Name.—This, which the prophet bears in common with the other persons above and below, is found with considerable variation in the Heb. and A. V. The full form is המיקדש, Mikckydsh, "who is like Jeho-
vah," which is found in 2 Chron. xiii, 2; xxvii, 7. This is abbreviated to המיקדש, Mikckydsh, in Judg. xvii, 1, 4; and further to המיקד, Mikckd, (Jer. xxxvi, 11, and הימיקדש, Mikckydsh (1 Kings xxii, 18); and finally to המיקד, Mikck, or מיך, Mikd (2 Sam. ix, 12).

2. Date.—The period during which Micah exercised the prophetic office is stated, in the superscription to his prophecies, to have extended over the reigns of Jo-
tham, Ahaz, and Hezekiah, kings of Judah, giving thus a maximum limit of 90 years (B.C. 750-660) from the accession of Jotham to the death of Hezekiah, and a minimum limit of 16 years (B.C. 742-726), from the death of Jotham to the accession of Hezekiah. In either case he would be contemporary with Hosea and Amos during part of their ministry in Israel, and with Isaiah in Judah. According to rabbinical tradition, he transmitted to the prophets Joel, Nahum, and Habakkuk, and to Jeremiah the priest the mysteries of the Kabala, which he had received from Isaiah (R. David Ganz, Tsneam David), and by Syncellus (Chronogr. p. 198 c) he is enumerated in the reign of Jotham as contemporary with Hosea, Isaiah, and Ode. The date of the book itself may be fixed in B.C. 725. His prediction with impunity of the desolation of Jeru-
salem (iii, 12) is expressly alluded to in Jeremiah (xxvi, 18, where the text has מיכה, Micah), as having been uttered during the reign of Hezekiah. The allu-
sions to idolatry (vii, 13) and to Babylon (iv, 10) have induced Berthold (Einleitung, § 411) to refer the prophecy of Micah to the time of the captivity; but De Wette truly observes that this supposition is unnecessary, as idolatry existed under Hezekiah (2 Kings xxiii.), and Babylon equally belonged to the kingdom of Assyria. Hartmann's attempt to regard the passage respecting Babylon as an interpolation (see Micah nee uberarbeitet, De Wette regards as even still more venturesome; nor had this writer the slightest authority for supposing that only some of the prophecies are Micah's, and that the work was compiled during the exile. The time as-
signed to the prophecies by the only direct evidence which we possess agrees so well with their contents that its authenticity should be considered as certain.

Why any discrepancy should be received between the statement in Jeremiah, that "Micah the Morashith prophet in the days of Hezekiah king of Judah," and the title of his book, which tells us that the word of the Lord came to him "in the days of Jotham, Ahaz, and Hezekiah," it is difficult to imagine. The former does not limit the period of Micah's prophecy, and at most applies only to the passage to which direct allusion is made. A confusion appears to have existed in the minds of those who see in the prophecy in its present form a connected whole, between the actual delivery of the several portions of it, and their collection and trans-
scription into one book. In the case of Jeremiah, we know that he dictated to Baruch the prophecies which he had delivered in the interval between the 18th Year of Josiah (xxi, 1) and the 3rd Year of Jehoiakim (xxii, 1), and Baruch is committed to writing they were read before the people on the fast day (Jer. xxxvi, 2, 4, 6). There is reason to believe that a similar process took place with the prophecies of Amos. It is, therefore, conceivable, to say the least, that certain portions of Micah's prophecy may have been delivered in the reigns of Josiah and Ahaz, and for the probability of this there is strong in-
ternal evidence, while they were collected as a whole in the reign of Hezekiah and committed to writing.

Caspri (Micha, p. 78) suggests that the book thus written may have been read in the presence of the king and the whole people on some great fast or festival day, and that this circumstance may have been in the minds of the elders of the land in the time of Jehoiakim, when they appealed to the impurity which Micah enjoyed under Hezekiah. Knobel (Prophezesiau, ii, § 30) imagines that the prophecies which remain belong to the time of Hezekiah, and that those delivered under Jos-
hua, Jotham, and Ahaz are portions of a larger period. It is true that v. 1, 2, 3, 4, 6 of the section of the prophecy in which verse occurs must have been delivered before the de-
struction of Samaria by Shalmaneser, which took place in the 6th year of Hezekiah (cir. B.C. 722), and connecting the "high-places" mentioned in i, 5 with those which existed in Judah in the reigns of Ahaz (2 Kings xvi, 4; 2 Chron. xxvii, 4, 25) and Jotham (2 Kings xv, 35), we may be justified in assigning chap. i to the time of one of these monarchs, probably the latter; al-
though, if chap. ii be considered as part of the section to which chap. i belongs, the utter corruption and demoralization of the people there described agree better with what history tells us of the times of Ahaz. Caspari maintains that of the two parallel passages, Mic. iv, 1-5, Isa. ii, 2-5, the former is the original, and the latter belongs to the times of Uzziah and Jotham, and this view is maintained by Hengstenberg (Chris-
tologie, i, 480), and accepted by Pusey (Minor Prophets, p. 269). But the evidence on the point is not at all conclusive. Mic. iv, 1-4 may possibly, as Ewald and others have suggested, be a portion of an older prophecy current at the time, which was adopted by both Mi-
cah and Isaiah (Isa. ii, 2-4). The denunciation of the northern kingdom ( Mic. v, 10) and the declaration that the great avenue of the people shall be opened to the state of the country under Jotham, after the long and prosperous reign of Uzziah, by whom the military strength of the people had been greatly developed (2 Chron. xxvi, 11-15; xxvii, 4-6). Compare Isa. ii, 7, which belongs to the same period. Again, the forms in which idolatry manifested itself in the reign of Ahaz correspond with those which are threatened with de-
struction in Mic. v, 12-14; and the allusions in vi, 16 to the "statutes of Omri," and the "works of the house of Ahab," seem directly pointed at the king, of whom it is expressly said that "he walked in the way of the kings of Israel" (2 Kings xvi, 8). It is impossible in dealing with internal evidence to assert positively that the in-
ferences deduced from it are correct; but in the present instance they at least establish a probability that, in placing the period of Micah's prophetic activity be-
tween the times of Jotham and Hezekiah, the super-
scription is correct. In the first years of Hezekiah's reign, idolatry prevailed in the northern kingdom, it was not eradicated, and in assigning the date of Micah's prophecy to this period there is no anachronism in the allusions to idolatrous practices. Mauer contends that chap. i was written not long before the taking of Samaria; but the third and following chapters he places in the in-
terval between the destruction of Samaria and the time
that Jerusalem was menaced by the army of Sennacherib in the 14th year of Hezekiah. The passages, however, which question his fidelity are inexplicable on the ground of captivity, and Jehovah sit as king in Zion having destroyed the nations who had rejoiced in her overthrow. The predictions at the close of this section form the climax of the book, and Esdras arranges them in four strophes, consisting of seven or eight verses each (iv, 1-9; iv, 9-12; v, 1-7; v, 12-15), with the exception of the last, which is shorter, and in which the prophet reverts to the point whence he started: all objects of political and idolatrous confidence must be removed before the grand consummation. 3. In the last section (vi, vii) Jehovah, by a bold poetical figure, is represented as holding a controversy with his people, as judges in his own cause, in justifying one another for the treatment of the people of "you" (1 Kings xxii, 28). From this, Bleeke (Einl. übert, p. 539) concludes that the author of the history, like the ecclesiastical historians, confounded Micah the Morasthite with Micahiah; while Hengstenberg (Christologie, i, 409, Eng. tr.) infers that the coincidence was intentional on the part of the later prophet, and that "by this very circumstance he gives intimation of what may be expected from him, and shows that his activity is to be considered as a continuation of that of his predecessor, who was so jealous for God, and that he had more in common with him than the mere name." Either conclusion rests on too narrow and too simple a foundation of the occurrence of a formula which was at once the most simple and most natural commencement of a prophetic discourse.

III. Contents.—But, at whatever time the several prophecies were first delivered, they appear in their present shape as an organic whole, marked by a certain regularity of development. Three sections, omitting the superscription, are introduced by the same phrase, הָיְהֵי, and represent three natural divisions of the prophecy—i—ii—iii—vi—vi—xi—vi—vi—xi. Each commencing with rebukes and threatenings, and closing with a promise. 1. The first section opens with a magnificent description of the coming of Jehovah to judgment for the sins and idolatries of Israel and Judah (i, 2-4), and the sentence pronounced upon Samaaria (ver. 5-9) by the Judge himself. The prophet, whose sympathies are strongly with Judah, and especially with the lowlands which lay between the Jordan and the Mediterranean, threatens his country, and traces in imagination the devastating march of the Assyrian conquerors from Samaria onward to Jerusalem and the south (i, 8-16). The impending punishment suggests its cause, and the prophet denounced a woe upon the people generally for the corruption and violence which were rife among them, and upon the false prophets who led them astray by pandering to their appetites and luxury (ii, 1-11). The sentence of captivity is passed upon them (ver. 10), but is followed instantaneously by a promise of restoration and triumphant return (ii, 12-15). 2. The second section is addressed especially to the princes and heads of the people; their avarice and rapacity are rebuked in strong terms; and as they have been deaf to the cry of the suppliants for justice, they too "shall cry unto Jehovah, but he will not hear them" (iii, 1-4). The false prophets who had deceived others should themselves be deceived; "the sun shall go down over the prophets, and the day shall be dark over them" (iii, 6). For this perversion of justice and right, and the covetousness of the heads of the people who judged for reward, of the priests who taught for hire, and of the prophets who divided for money, Zion should be "ploughed as a field, and the mountain of the temple become like the uncultivated woodland heights (iii, 9-12). But the threatening is again succeeded by a promise of restoration, and in the glories of the Messianic kingdom the prophet sees sight of the desolation which should befall his country. Instead of the temple mountain covered with the wild growth of the forest, he sees the mountain of the house of Jehovah established on the top of the mountains, and nations flowing like rivers unto it (iv, 1-5). 3. The last section is in inverse order of the events from captivity, and Jehovah sit as king in Zion having destroyed the nations who had rejoiced in her overthrow. The predictions at the close of this section form the climax of the book, and Esdras arranges them in four strophes, consisting of seven or eight verses each (iv, 1-9; iv, 9-12; v, 1-7; v, 12-15), with the exception of the last, which is shorter, and in which the prophet reverts to the point whence he started: all objects of political and idolatrous confidence must be removed before the grand consummation. 3. In the last section (vi, vii) Jehovah, by a bold poetical figure, is represented as holding a controversy with his people, as judges in his own cause, in justifying one another for the treatment of the people of "you" (1 Kings xxii, 28). From this, Bleeke (Einl. übert, p. 539) concludes that the author of the history, like the ecclesiastical historians, confounded Micah the Morasthite with Micahiah; while Hengstenberg (Christologie, i, 409, Eng. tr.) infers that the coincidence was intentional on the part of the later prophet, and that "by this very circumstance he gives intimation of what may be expected from him, and shows that his activity is to be considered as a continuation of that of his predecessor, who was so jealous for God, and that he had more in common with him than the mere name." Either conclusion rests on too narrow and too simple a foundation of the occurrence of a formula which was at once the most simple and most natural commencement of a prophetic discourse.
not of necessity himself born in Bethlehem. Others, however, as David Ganz (R. Zemach David), expressly mention Bethlehem as the birthplace of the Messiah. The interpretation which considered this prophecy as intimating only that the Messiah was to be a descendant of David, was that current among the Jews in the time of Theodoret, Chrysostom, Theophylact, and Euthymius Zigabenus, from whom we learn that it was mistaken. They and the other fathers who are full of the Messiah, the leader of the Jews on their return from Babylon, of which, and not of Bethlehem, he was a native. (See Sozomen, vii, 729; Carpzov, Introit, iii, 374 sq.; Jerome, Ep. ad Eustach. i, 704.) This interpretation was held among Christians by the celebrated Theodore of Mopsuestia (as we learn from his condemnation by the council at Rome under pope Vigilius), and afterwards by Grotius (Comment.), who, however, regarded Zerubbabel as a type of Christ, and considered Christ's birthplace at Bethlehem as an outward representation of his descent from the family of David. Many of the moderns have been attached to this interpretation of the prophecy, referring it to the general idea of the Messiah rather than to Zerubbabel, while some among them have, after the example of some Jews, ventured to assert that the account of the birth of Christ at Bethlehem was not to be depended on. Some have asserted, after Jerome (Comm. in Matt., vii, 17), that the Messiah was of the Sanhedrim only, not of the evangeliast (Hengstenberg's Christology). Jahn (Append. Hermeneut.) observes that it is evident that the Jews in the time of Christ expected the Messiah's birth to take place at Bethlehem; and although he admits that the prophecy may be understood tropically in the sense applied to it by Grotius, he contends that the context will not admit of its applicability either to Hezekiah or any other monarch than the Messiah; nor is it possible to apply the prophecy fully and literally to any but him who was not only of the house and lineage of David, but was actually born at Bethlehem, according to the direct testimony of both Matthew and Luke. Consequently, the Messiah, as David's son, should be born in David's town (Hofmann, Weiss. u. Erf., p. 249). Terrullian also presses the argument that the Messiah has come, for Bethlehem was deserted—"Neminem de generi Israel in civitate Bethlehem remansisse" (Adv. Judaeos, vol. xiii: Opero, ii, 734, ed. Oehler). To give the vague sense of Davidic extraction, and yet to deny that the words point out the place of birth, was thus a necessary but feeble Jewish subterfuge. Rénan admits the usual interpretation of the prophecy, though he affirms that Jesus was really not of the family of David, and was born at Nazareth. (Herod. vii, chap. ii, ed. Eichhorn, Einleit. iv, 369 sq.; Bertheau, Einl. iv, 1588 sq.; Knobel, Prophet, iii, 199 sq.) See Messiah.

IV. The genuineness of the book has not been called in question. Only Ewald, in his Jahrb. xi, 29, is disposed to maintain that the two concluding chapters are the work of a different hand. His objections, however, have no force against the universal opinion. The language of the book is quoted in Matt. ii, 5, 6, and his prophecies are alluded to in Matt. x, 35, 36; Mark xiii, 12; Luke xii, 58; John vii, 42.

V. The style of Micah is rich, full, and musical—nervous, vehement, and bold in many sections, as Hosea, and as abrupt, too, in transitions from menace to mercy. He presents, at the same time, no little resemblance to Isaiah in grandeur of thought, in richness and variety of imagery, and in roundness and cadence of parallelism. The similarity of their subjects may account for many times in which Micah is the latter prophet, which were almost unavoidable (comp. Mic. i, 2 with Isa. i, 2; Mic. ii, 2 with Isa. v, 8; Mic. ii, 6, 11 with Isa. xxx, 10; Mic. ii, 12 with Isa. x, 20-22; Mic. vii, 8 with Isa. i, 11-17). The diction of Micah is vigorous and forcible, sometimes obscure from the abruptness of its transitions, his language and rich figures derived from the pastoral (i, 8; ii, 12; v, 7, 8; vii, 14) and rural life of the lowland country (i, 6; iii, 12; iv, 12, 13; vi, 15), whose vines, and olives, and fig-trees were celebrated (I Chron. xxvii, 27, 29), and the prophet the shepherd with so many striking allusions (i, 6; iv, 3, 4; vii, 3; i, 4) as to suggest that, like Amos, he may have been either a herdsman or a vine-dresser, who had heard the howling of the jackals (i, 8; A.Vern. "dragons") as he watched his flocks or his vines by night, and had seen the lions slaughtering the sheep (v, 8). The sudden changes are frequently hidden from the reader by a return to our version into which Grotius translates; the simple connective "and" being often rendered by some logical term, as "therefore" (i, 6), "then" (iii, 7), "but" (iv, 1), "notwithstanding" (vii, 13), etc. Concise and pointed questions are put suddenly; persons are changed rapidly; the people are spoken of, and then in a moment spoken to; the nation is addressed now as a unit, and now edged appeals are directed to individuals.

The language is quite pure and classical—intercourse with northern countries had not yet debased it. An under-tone of deep earnestness pervades the book; everywhere are discerned the workings of an intensity honorable and patriotic soul. Micah is successful in the use of the dialogue, and his prophecies are penetrated by the purest spirit of morality and piety (see especially vi, 6, 7; vii, 3, 7).

One peculiarity which Micah has in common with Isaiah is the frequent use of paronomasia; in i, 10-15 there is a succession of instances of this figure in the plays upon words suggested by the various places enumerated (comp. also ii, 4), which it is impossible to transfer to English, though Ewald has attempted to render them into German (Prophezen des A. B. i, 269, 380). In these verses there is also vivid grouping, as place after place is challenged along the line of the conqueror's march. Each town is seen to carry its doom in its very name. That doom is told in many ways—either to them or of them; either in the prophet's name or as that of Jehovah, as is the place of Manaheth or as a judgment which will certainly overtake them. Perhaps in vii, 18 there is an allusion to the meaning of the prophet's own name. The divine name which appears with greatest frequency is, as usual with the prophets, Jehovah; but we also meet with Adonai and Adonai Jehovah (i, 2), also "the Lord of the whole earth" (iv, 13), and "Jehovah of hosts" (iv, 4). Elohim is used distinctively of the divine as opposed to the human in iii, 7. Allusions to the past history of the people are found in many places. There are also several expressions which are found in the Mosaic writings, though it might be rash to say that Jehovah takes them directly from the Pentateuch. Nor would we endorse all the instances in which, as Caspari affirms, later prophets, as Jeremiah and Ezekiel, Habakkuk and Zephaniah, have adopted the language of Micah (Micha, p. 449, et seq.). The poetic vigor of the opening scene, and of the dramatic dialogue sustained throughout the last two chapters, has already been noticed.

VI. Commentaries. — The following are the especial exegetical helps on the whole book alone, to a few of the most important of which we prefix an asterisk: Ephrem Syrus, Explanatio (in Opp. v, 272); Theophylact, Commentarius in (Opp. vol. iv) Luther, Commentarius (ed. Theodore, Vitemberg, 1642, 8vo; also in his Works, both Germ. and Lat.); Brentz, Commentarius in (Opp. vol. iv); Gerlach, Commentarius (Aug. Vinckbr. 1624, 8vo); Biblischer, Commentarius (Tigrar, 1584, 4vo); Przygody, Commentarius (Arpent, 1688, 8vo); Gilly, Commentarius (Loncin, 1655, 8vo); Eichhorn, Prophetae (Neib.) (Vitemberg, 1655, 8vo); Doraconis, Expositori (incul. Joel and Zechar. (Vitemberg, 1655, 8vo); Grzza, Commentarius (Baltz, 1670, 8vo); Secknecker, Anmerkungen (Leips. 1578, 4to); Bang, Fontium trias (incul. Jonah and Ruth) (Hafnia, 1681, 8vo); Graver, Expositor (Jen., 1618, 4to); *Focquez, Commentarius (Cologne, 1677, 12mo, also in Works); An Toli, Vulgatae (Utrecht, 1709,
MICAHIAH

(10); Schnurrer, Animadversiones (Tubing, 1788, 4to); Bauer, Animadversiones (on chap. 11) (Altorf, 1790, 4to); Gesenius, Untersuchungen (Gena, 1796, 8vo); Kuester, Erleuter (Leips, 1799, 8vo); *Hartmann, Erleuter (Lengo, 1800, 8vo); Wolf, הַבּוּרָה יְהוֹשָׁעַ (Dessau, 1803, 8vo); Gellman, Illustratio (Hali. 1842, 4to); *Caspari, Mica zur Geschichter (Marb, 1852, 8vo); Roorda, Commentarius (Leyd, 1869, 8vo). See PROPHETS, MINOR.

6. The father of Abdon (2 Chron. xxxiv, 20); elsewhere called Micaiah, the father of Achbor (2 Kings xi, 12).

7. A Levite of the descendants of Asaph (1 Chron. ix, 15); elsewhere properly called Mica ( Neh. xi, 17, 22).

Micaiah, the prevailing form of the name of several persons (one a Levite, 2 Chron. xiii, 2), written with considerable diversity in the original and in the ancient translations, as well as in the Author. Vers. (properly, for Heb. מְכִיאוֹן, Micaiah, Micaiah; paragogically, Heb. מְכַיָּה, Micaiah.) Judges, xvii, 13, Micaiah, Micaiah. Micaiah: 1 Kings xxii, 9, 13, 14, 15, 24, 25, 26, 28, Micaiah; Micaiah: 2 Chron. xxvii, 7, 12, 18, 23, 24, 25, 27, Micaiah, Micaiah, Micaiah; Micaiah: Jer. xxxii, 11, 15, Micaiah, Micaiah, Micaiah, Micaiah; 2 Kings viii, 24, 25, 26, 28, Micaiah; 2 Kings vii, 13, 26, Micaiah, Micaiah, Micaiah; 2 Chron. xxiv, 7, 25, Micaiah, Micaiah, Micaiah; 2 Chron. xxvii, 7, Micaiah, Micaiah, Micaiah; Micaiah; "contracted, Heb. Micaiah, Micaiah; Judges, xvii, 8, 9, 10, 12, 13, and xxvii, 2, 3, 4, 13, 15, 18, 22, 23, 26, 27, 31, Micaiah, Micaiah; 1 Chron. v, 5, and viii, 34, 35, and ix, 40, 41, and xxii, 20, Micaiah, Micaiah; "Micaiah, 1 Chron. xxiv, 24, 25, Micaiah, Micaiah, Micaiah; 2 Chron. xiv, 14, Micaiah, Micaiah, Micaiah; Micaiah! 2 Chron. xxiv, 29, Micaiah, Micaiah, Micaiah; Jer. xxxii, 16, 18, 19, Micaiah, Micaiah, Micaiah; Micaiah; Micaiah; 1 Kings i, 1, Micaiah, Micaiah, Micaiah; "by Khaliadis, Micaiah, Micaiah; 2 Sam. ix, 12, and Neh. x, 11, and xi, 17, Micaiah, Micaiah; Micaiah; 1 Chron. ix, 15, Micaiah, Micaiah, Micaiah; Neh. xi, 22, Micaiah, Micaiah, Micaiah."

The only person invariably thus called was the son of Imi, and a prophet of Samaria (1 Kings xxii, 1, 2; 2 Chron. xvi, 11). B.C. 895. The following abstract of the narrative concerning him is sufficiently concise on certain disputed points. Three years after the great battle with Benhadad, king of Syria, in which the extraordinary number of 100,000 Syrian soldiers is said to have been slain, without reckoning the 27,000 who, it is asserted, were killed by the falling of the wall at Aphek, Ahab probably requested Jehoshaphat to join him in battle. The two kings should jointly go out to battle against Ramoth-Gilead: which Benhadad was, apparently, bound by treaty to restore to Ahab. Jehoshaphat, whose son Jehoram had married Athaliah, Ahab's daughter, ascertained in corroboration of the proposal; but suspected that they should first "inquire at the word of Jehovah." Accordingly, Ahab assembled 400 prophets, while, in an open space at the gate of the city of Samaria, he and Jehoshaphat sat in royal robes to meet and consult them. "That these were, however, no true prophets of Jehovah, is evident from their being afterwards emphatically designated Ahab's prophets, in contradistinction to the Lord's (ver. 22, 23), it is evident also from the suspicion created in the mind of Jehoshaphat respecting their character by their manner and appearance; for, after they had all spoken, and as having yet to learn the real purpose, for which Jehoshaphat asked whether there was not yet a prophet of Jehovah. In accordance with this request Micaiah was mentioned by Ahab, but with the notification that he hated him, 'for he doth not prophesy well concerning me, but evil' (ver. 8); which, in the circumstances, cannot be regarded otherwise than as a further proof of the essential difference between the actual position of this man and the others who assumed the name of prophets of the Lord." The prophets unanimously gave a favorable response; and among them, Zedeckiah, the son of Chemazon, made horns out of iron as a symbol, and announced, from Jehovah, that with those horns Ahab would push the Syrians till he consumed them. For some reason which is unexplained, and can now only be conjectured, Jehoshaphat was dissatisfied with the answer, and asked if there was no other prophet of Jehovah for Ahab to appeal to. Ahab added there was yet one, Micaiah, the son of Imla; but, in words which obviously call to mind a passage in the Isaiah (i, 106), he added, 'I hate him, for he doth not prophesy good concerning me, but evil." Micaiah was, nevertheless, sent for; and after an attempt had in vain been made to to persuade him, he finally expressed an ironical concurrence with the 400 prophets, and then openly foretold the defeat of Ahab's army and the death of Ahab himself. In opposition to the other prophets, he said that he had seen Jehovah sitting on his throne, and all the host of heaven standing by him, on his right hand and on his left: that Jehovah said, We shall destroy Ahab to go up and fall at Ramoth-Gilead; that a spirit (the Heb. has the art. the spirit, as if some special emissary of evil) came forth and said that he would do so; and on being asked, Wherefore? he answered, that he would go forth and be a lying spirit in the mouth of all the prophets. Irritated by the account of this vision, Zedekiah, the officer of the prophet, troubled him, and Ahab ordered Micaiah to be taken to prison, and fed on bread and water, till his return to Samaria. Ahab then went up with his army to Ramoth-Gilead; and in the battle which ensued, Benhadad, who could not have failed to become acquainted with Micaiah's prophecy, uttered so publicly, which had even led to an act of public personal violence on the part of Zedeckiah, gave special orders to direct the attack against Ahab, individually. Ahab, on the other hand, requested Jehoshaphat to wear his royal robes, which we know that the king of Judah had brought with him to Samaria (1 Kings xxix, 10); and then he put himself in disguise for the battle: hoping thus, probably, to baffle the designs of Benhadad and the prediction of Micaiah; but he was, nevertheless, struck and mortally wounded in the combat by a random arrow. We hear nothing further of the prophet. Jospehus dwells emphatically on the death of Ahab, as showing the utility of prophecy, and the impossibility of escaping destiny, even when it is revealed beforehand (Ant. viii, 15, 6). He says that it steals on human souls, flattering them with cheerful hopes, till it leads them round to the point whence it will gain the mastery over them. This was a theme familiar to the Greeks (Evagrius, in many treatises), and Josephus lived in sympathy with their ideas. (See Euripides, Hippolyt, 1256, and compare Herodot. vii, 17; viii, 77; i, 91). From his interest in the story, Josephus relates several details not contained in the Bible, some of which are probable, while others are very unlikely; but for none of which does he give any authority. Thus, he says, Micaiah was already in prison when sent for to prophesy before Ahab and Jehoshaphat, and that it was Micaiah who had predicted death by a lion to the son of a prophet, under the circumstances mentioned in 1 Kings xx, 35, 36; and had rebuked Ahab after his brilliant victory over the Syrians for not putting Benhadad to death. There can be no doubt that these facts would be not only consistent with the narrative in the Bible, but would throw additional light upon it; for the rebuke of Ahab in his hour of triumph, on account of his forbearance, was calculated to excite in him the intensest feeling of displeasure and mortification; and it would at once explain Ahab's hatred of Micaiah, the son of Imla, and the reason why the rebuke was given. Nor is it unlikely that Ahab, in his resentment, might have caused Micaiah to be thrown into prison, just as the princes of Judah, about 300 years later, maltreated Jeremiah in the same way (Jer. xxxvii, 15). But some other statements of Josephus cannot so readily be regarded, as probable. Thus
he relates that, when Ahab disguised himself, he gave his own royal robes to be worn by Jehoshaphat in the battle of Ramoth-Gilead, an act which would have been so unreasonable and cowardly in Ahab, and would have shown such singular complaisance in Jehoshaphat, that, although supported by the translation in the Septuagint, it cannot be received as true. The fact that some of the dogs did lick the blood of Ahab, when dogs had licked the blood of Naboth, in the city of Samaria: inasmuch as Ramoth-Gilead, where, according to Micaiah, Ahab was to meet his doom, was distant from Samaria a journey of three days. It is unlikely, however, that Zedekiah would have founded an argument on Elijah's insinuating prophecy, even to the meekest of kings who might have been the subject of it; but that, in order to prove himself in the right as against Micaiah, he should have ventured on such an allusion to a person of Ahab's character, is absolutely incredible. See Ahab.

It only remains to add, that the history of Micaiah offers no particular interest, and agrees in the two following respects: 1. Micaiah's vision presents what may be regarded as transitional ideas of one origin of evil actions. In Exodus, Jehovah himself is represented as directly hardening Pharaoh's heart (vii, 3, 18; xiv, 4, 17; x, 20, 27). In the Book of Job, the name of Satan is mentioned: but he is admitted without rebuke, among the sons of God, into the presence of Jehovah (Job i, 6-12). After the captivity, the idea of Satan, as an independent principle of evil, in direct opposition to goodness, becomes fully established (1 Chron. xxii, 1; and compare Wisd. ii, 24). See Satan. Now the ideas presented in the vision of Micaiah are different from each of these three, and occupy a place of their own. They do not go so far as the Book of Job—much less so far as the ideas current after the captivity; but they go farther than Exodus. See Ewald, Predigt. Bücher, iii, 65. 2. The history of Micaiah is an exemplification in practice of contradictory predictions being made by different prophets. Other striking instances occur in the time of Jeremiah (xiv, 18, 14; xxviii, 15, 16; xxxii, 16, 25, 26). The only rule bearing on the judgment to be formed under such circumstances seems to have been a negative one, which would be mainly useful after the event. It is laid down in Deut. xviii, 21, 22: old questions are asked, where the children of Israel were to know the word which Jehovah had not spoken? The solution is, that "if the thing follow not, nor come to pass, that is the thing which Jehovah has not spoken." See PROPHET.

Mice. See Mouse.

M'cha (for the Heb., etc., see Micaiah), the name of three men. 1. A son of Mephhiboseeth (2 Sam. ix, 12); elsewhere (1 Chron. vii, 43, 35) called Micaiah (q. v.).

2. The son of Zabdi and father of Mattaniah, a Levite of the family of Asaph (Neh. xi, 17, 22); probably the same that joined in the sacred covenant after the captivity (Neh. x, 11). B.C. cir. 410. In 1 Chron. ix, 15 his name is incorrectly Anglicized "Micha." He must not be confounded with the Michaiah of Neh. xii, 35.

3. A Simeonite, father of Osias, one of the three governors of the city of Bethulia in the time of Judith (Judith vi, 15). His name is remarkable as being connected with one of the few specific allusions to the ten tribes after the captivity.

Micha'ea (Vulg. id.), an erroneous form (2 Esdr. i, 39) of the name of the prophet Micaiah.

M'châ'âil (Heb. Mika'âil; מִכְחָל, who is like God?) Sept. and N.T. Muxhâl), the name of an archangel and of several men.

1. The title given in the angelology of the Jews adopted during the exile, to one of the chief angels, who, in Dan. x, 13-21; xii, 1, is described as having special charge of the Israelites as a nation, and in Jude 9 as disputing with Satan about the body of Moses, in which he was to be preserved, or among the hosts of angels, as the enemy any railing accusation, he only said, "The Lord rebuke thee, O Satan!" Again, in Rev. xii, 7-9, Michael and his angels are represented as warring with Satan and his angels in the upper regions, from which the latter are cast down upon the earth. This representation serving not only to vindicate man's faith in God's supernatual agents, which was so much needed at a time of captivity, during the abeyance of his local manifestations and regular agencies, but also to mark the finite and ministerial nature of the angels, lest they should be worshipped in themselves. Accordingly, as Gabriel represents the ministration of the angels towards man, so Michael is the type and leader of their strife, in God's name and his strength, against the power of Satan. In the O.T. therefore he is the guardian of the Jewish people in their antagonism to godless power and heathenism. In the N.T. (see Rev. xii) he is known as the angel who delivered the old serpent called the Devil and Satan, which deceived the whole world; and so takes part in that struggle which is the work of the Church on earth. The nature and method of his war against Satan are not explained, because the knowledge would be unnecessary and perhaps impossible to us: the fact itself is revealed rarely, and with that mysterious vagueness which hangs over all angelic ministrations, but yet with plainness and certainty. On the authority of the first of these texts the Jews have named Michael not only one of the "seven" archangels, but the chief of them (comp. the Targum on Cant. viii, 9); and on the authority of the second they have also disposed to concur in this impression (see J. D. Hâbîrîn, Selecta de Mîch, ejusque apparitionibus, genet et cultu, Helmst. 1768). The Jews regard the angels as belonging, not simply as a class by themselves, but as respectively the chiefs of the several classes into which they suppose the angels to be divided; and of these classes Michael is the head of the first, and therefore chief of all the archangels (Sêpher Othîbîth, fol. 16).

"The rabbinical traditions constantly oppose him to Sammael, the accuser and enemy of Israel, as disputing for the soul of Moses; as bringing the ram the substitut, etc., as the angel himself, etc.: they give him the title of the 'great high-priest in heaven,' as well as that of the 'great prince and conqueror;' and finally lay it down that 'wherever Michael is said to have appeared, there the glory of the Shechinah is intended.' It is clear that the sounder among them, in making such use of the name, intended to personify the divine power, and typify the Messiah (see Schöttgen, Hor. Hebr. i, 1079, 1119; ii, 8, 15, ed. Dresd. 1742)." Hengstenberg maintains at length (both in his Christology and his Commentary on the Apocalypse) that Michael is no other than the Lord Jesus Christ himself; but this is hardly in accordance with the mention of the other archangel, Gabriel, nor with the other theophanies of the O.T., in which the Logos appears only as the Angel [of] Jehovah, or the Angel of the Covenant. The passages in Daniel and Revelations must be taken as symbolic, and in that view offer little difficulty. In the former, one of the guardian angels of the Jews (probably Gabriel, Dan. ix, 21) exhibits himself as a protector, and as struggling with the prince of Persia for the liberation of the Jewish exiles. In the discharge of this duty, Michael, the chief guardian of the same people, comes to help him. The first angel promises to return (from his visit to Daniel) to indicate his success by declaring that "the prince of Greece will come," i. e. to overthrow the
Goetic Gem of Michael. (The lower figure shows the size of the gem.)

Persian empire. Here also Michael, in particular, is designated as the prince of the Jews. So in Zech. i, 8, 14, the guardian angel of the Jews exhibits his solicitude for them and his care over them. The same thing is again exhibited in Zech. iii, 1, 2, where the angel of the Lord rebukes Satan on account of his malignant intentions towards the high-priest Joshua. So again in Rev. xii, 7, 9, Michael and his angels are represented as waging war with Satan and his angels. This passage stands connected with ver. 5 of the context, which represents the Man-Child (Jesus) as caught up to the throne of God. The war waged would seem to have arisen from the efforts of Satan to annoy the ascending Saviour. Such appears to be the symbolic representation (see Stuart's Comment, ad loc.). The allusion in Jude 9 is more difficult to understand, unless, with Vitringa, Lardner, Macknight, and others, we regard it also as symbolic; in which case the dispute referred to is that indicated in Zech. iii, 1; and “the body of Moses” as a symbolical phrase for the Mosaic law and institutions [see JUDAE], in accordance with the usual mode of speaking among Christians, who called the Church “the body of Christ” (Col. i, 18; Rom. xii, 5). A comparison of Jude 9 with Zech. i, 8–14 gives much force and probability to this conjecture (see F. U. Wolter, De Michaeli cum diabolo litigante [Hentzel, 1827–9]). According to others, “the body of Moses” here means his proper and literal body, which the Lord secretly buried (Deut. xxxiv, 5, 6), and which Satan wished to present to the Jews as an object of idolatry (comp. 2 Kings xviii, 4). The allusion seems to be to a Jewish legend attached to Deut. xxxiv, 6. The Targum of Jonathan attributes the burial of Moses to the hands of the angels of God, and particularly of the archangel Michael, as the guardian of Israel. Later traditions (see Eusebius, in Jud. cap. 1) set forth how Satan disputed the burial, claiming for himself the dead body because of the blood of the Egyptian (Exod. ii, 18) which was on Moses’ hands (see Quistorp, Num Michaelis de corpore Mosae destructi fabula et; [Uspagh, 1770]).

Michael as a Saint in the Church of Rome. This archangel is canonized in the Roman calendar, and his festival, called Michaelmas (q. v.), is celebrated on the 29th of September. The legends preserved by Roman Catholics relate that Michael appeared to the Virgin Mary to announce to her the time of her death, and that he received her soul and bore it to Jesus. And again, that during the 6th century, when a fearful pestilence was raging in Rome, St. Gregory advised that a procession should be made, which should pass through the streets singing the service which since then has been called the Great Litanies. This was done for three

As patron of the Church Militant, he is the “winged saint,” with no attribute save the shield and lance. As conqueror of Satan, he stands in armor, with his foot upon the Evil One, who is half human or like a dragon in shape. The angel is about to chain him, or to transfixed him with the lance. But the treatment of this subject is varied in many ways, all, however, easily recognized. As lord of souls, St. Michael is unarmed; he holds a balance, and in each scale a little naked figure representing the soul; the beato usually joins the hands as in thankfulness, while the rejected one expresses horror in look and attitude. Frequently a demon is seizing the falling scale with a Plutonic hook, or with his talons. In these pictures the saint is rarely without
wings. When introduced in pictures of the Madonna and Child he presents the balance to Christ, who seems to welcome the happy soul. Whether with or without the balance, he is always the lord of souls in pictures of the death, assumption, or glorification of the Virgin Mary, for tradition teaches that he received her spirit, and cared for it until it was reunited to her body and ascended to her Son. The old English coin called an angel was so named because it bore the image of this archangel.

2. The father of Sethur, which latter was the Ascherite commissioner to explore the land of Canaan (Num. xiii, 15). B.C. ante 1657.

3. One of the four sons of Israhial, the great-grandson of Issachar (1 Chron. vii, 3). B.C. prob. post 1618. Possibly the same with the No. 8.

4. One of the "sons of Beriah, a son of Elpaal, of the tribe of Benjamin (1 Chron. viii, 16). B.C. post 1612.

5. A chief Gadite resident in Bashan (1 Chron. vii, 18). B.C. probably post 938. He was perhaps identical with the son of Jeheshai and father of Gilead, some of the posterity of whose descendant Abialit are mentioned as dwelling in the same region (1 Chron. vi, 14). B.C. long ante 782.

6. One of the Manassite chilarchs who joined David when he returned to Ziklag (1 Chron. xii, 20). B.C. 1058.

7. The son of Basseiah and father of Shimea, among the ancestors of the Levite Asaph (1 Chron. vi, 40). B.C. considerably ante 1014.

8. The "father" of Omri, which latter was the phylarch of the tribe of Issachar under David and Solomon (1 Chron. xxvii, 18). B.C. ante 1014.

9. One of the sons of King Jehoshaphat, whom he portioned before the settlement of the succession upon Jehoram, but whom the latter, nevertheless, out of jealousy, caused to be slain upon his own accession (2 Chron. xxi, 5). B.C. 899.

10. A "son" (prob. descendant) of Shephatiah, whose son Zebediah returned with eighty males from Babylon ( Ezra viii, 8). B.C. ante 459.

Michael, St., and all Angels, Feast of. This festival of the Latin and Greek churches, commemorating the ministry of the holy angels to the heirs of salvation, originated in some provincial festivals which were introduced between the 5th and 6th centuries, and which were then combined into one common celebration on the 29th of September by pope Felix III in 489 (Mansi, xiv, 73). Its observance was not enjoined upon the Greek Church before the 12th century (Guericke, Kirchen-Gesch. p. 194 sq.). The Collect is taken from the Missal. The blessing is given in order to appease the Easteria hominumque dispensas; concede propitius ut quibus tibi ministriantibus in coelo semper assistis, ab his in terra vita nostra muniamur. Per dominum" (Missal Sar. 

Michael Alexandrinus, a noted patriarch of Alexandria, flourished near the middle of the 9th century. He was bishop at the time of the iconoclast controversy and was summoned to the Council of Nicaea in behalf of a union of the Eastern and Western churches, and wrote, about A.D. 869, De Unitate Ecclesiae (printed in Labebe's Concil. vol. viii, and in Hardouin, Concil. vol. v.). See Cave, Hist. Lit. ad an. 869; Fabriacus, Bibl. Graeco, ii, 188.

Michael Anchialus, another distinguished Eastern ecclesiastical patriarch of Constantinople from 1167 to 1185, was a decided opponent at the attempt to union of the Eastern and Western churches. He was also noted as an eminent disciple of Aristotelian philosophy. His extant works are five synodal decrees, published in Greek in the Neuscrift and in Latin (1523), and a dialogue with the emperor Manuel Comnenus concerning the claims of the Roman pontiff. Of the latter work only some extracts have been published by Leo Allatius.

Michael Angelo Buonarotti (1475-1564), an Italian artist, who, in an age when Christian art had reached its zenith, stood unrivalled as a painter, sculptor, poet, and architect, was born March 6, 1474, at the Castle of Caprese, in Tuscany. He was of noble origin, having descended on his mother's side from the ancient family of Ca-nossa, in Tuscany, while the Buonarotti had long been connected by marriage with the Beschi family of Bologna and Siena. Michelangelo was very early afforded the advantages of association with first-class artists, and this gave rise to the saying that "he sucked in sculpture with his milk." About 1488 he was admitted as a student into the seminary which was established by Lorenzo the Magnificent for the study of fine art in connection with the collections of statuary in the Medicean Gardens, and there he attracted the notice of Lorenzo by his artistic skill, and was invited that generous Florentine prince to take up his residence at the palace of the Medici. As an inmate of the palace, he enjoyed the society ofengineers, mathematicians, and poets, one of whom, Angelo Poliziano (Politian), became his intimate friend. Among his earliest works was a marble base-relief, the subject of which was The Battle of Hercules with the Centaurs. This work, which was approved by his own mature judgment, is preserved in Florence. Lorenzo's death in 1492, and the temporary reverses which befell the Medice family in consequence of the incapacity of Lorenzo's successor, Pietro, led Michael Angelo to quit Florence for Bologna. There, however, he remained only about a year, and gladly enough turned his face towards Florence again. Michael met with a patron in the person of Pietro Soderini, the gonfalonier (chief ruler) of Florence. About 1497 he produced an admirable marble group called a "Pietà," representing "The Virgin weeping over the Dead Body of her Son." "In none of his works," says Ernest Breton, "has he displayed more perfect knowledge of design and anatomy, or more profound truth of expression" (Nouve. Disc. Générale, s. v.). This Mater Dolorosa now adorns a chapel in the Church of St. Peter at Rome. After this he executed a gigantic marble statue of the psalmist David, which stands in front of the Palazzo Vecchio, in Florence. He received 400 ducats for this work, on which he spent about eighteen months, during which he finished in marble what he had begun in marble, in order of time, and, according to some of his contemporaries, first in merit, ranks his great cartoon for the ducal palace at Florence, which, together with the pendant executed by Leonardo da Vinci, has long since perished. This work, which represented a scene in the wars with Fiesa, when a number of young Florentines, while bating in the Arno, were surprised by an attack of the Pisans, showed so marvellous a knowledge of the anatomical development of the human figure, and such extraordinary facility in the powers of execution, that it became a study for artists of every land, creating actually a new era in art. "Such was the excellence of this work," says Vasari, "that some thought it absolute perfection." Another production which belongs to this period, and which is of special interest to the student of Christian art, is an oil-painting of the Holy Family (about 1504). Shortly after his accession to the pontificate, Michael Angelo received a commission from the pope to make the pope's monument, which was to be erected within St. Peter's. Although this work was never completed on the colossal scale on which it had been designed, and was ultimately erected in the Church of St. Pietro ad Vicinol, it is a magnificent composition, and is memorable for having given
occasion to the reconstruction of St. Peter's on its present sublime plan, in order the better to adapt it to the colossal dimensions of the proposed monument. In 1566 Michael Angelo signed "the great work on which Michael Angelo's fame depends, and, taking it for all in all, the greatest work of his whole life, is the ceiling of the Sistine Chapel. . . His sibyls and prophets exhibit with variety and energy the colossal powers of his mind. . . In his great scenes of war, his superiority are shown in the sublimity of his conception, and the power and force with which they are executed." See Condivi, Vita di Michael Angelo Buonarroti (Rome, 1553; new ed. Pisa, 1822); Vignali, Vita di Michael Angelo (1758); Richard Duppa, Life of Michael Angelo (London, 1806); Haenschome, Vie de Michael-Ango; Quattremere de Quincy, Vie de Michael-ANGEU (1817); Crowe, Life of Michael Angelo (1856-7, 2 vols. 8vo); Hermann Grimm, Michael Ange- lo's Leben, and English version of the same (London, 1856, 2 vols.); Vasiari, Lives of Painters and Sculptors; Lanzi, Storia della Pittura; Winckelmann, Neues Maler-Lexikon, a. v.; Nagler, Künstler-Lexikon, a. v.; Marie Henri Bayle, Histoire de la Peinture en Italie; Pater, Studies in the History of the Renaissance (Lond. and N. Y., Macmillan & Co., 1873, 8vo), ch. v., contains an interesting essay on the poetry of Michael An- GEOLO.

Michael Apostolius, an eminent Greek scholar, who contributed largely to the revival of learning in Italy, flourished in the 15th century. He was an intimate friend of Gemistus Pletho, and an adherent of the Platonic philosophy, two circumstances which, together with his own merits, caused him to be well received by cardinal Bessarion in Italy, where he settled about 1440. Later in his life Michael Apostolius was entrusted by the emperor, who, because he suspected Bessarion, had a persecution directed against the Platonic philosophy, to make a list of the names of the philosophers and other literati who had written in the Platonic line. Michael Apostolius is said to have net a livelihood by teaching children and copying manuscripts. He died, some time after 1457, for in that year he wrote a panegyric on the emperor Frederick III. His principal works are, a defence of Plato against Theodore Gaza, extant in MS. in the Vic- enza library;—Menexenus, a dialogue on the Holy Trin- ity, investigating whether the Mohammedans and Jews are right in believing a Mono-Deus; or the Christians, in believing a Deus Trin-umus; extant in MS., ibid.—: Oratio consulta in Auctoritatem sibi vascendam cum ad secundas transiret nuptias, extant in the Bodleian:—: Oratio ad Ioannem Arygropulam.—Epitome XLY: these letters are important for the history of the writer's time, as Lambeckus asserts, who perused all or most of them, and it is to be regret- ted that none of them are printed. The first is ad- dressed to Gemistus, the others to Manuel Chrysoloras, Hyacinthus Achilles, and Jacobus Aurelius, and is directed to men of the time. They are extant in MS. in the Bodleian; some of them are also to be found in the Vatican and at Munich.—Oratio Panegyrica ad Fred- ericum III, written about or perhaps in 1457: it was pub- lished in Greek and Latin by Freherus in the second vol. of his Hercius Germanus, Script.——Praefatio in Laudem Bessarionis, does credit to the heart of Michael, for it seems that the cardinal had not behaved very generously towards the poor scholar. Still it is very questionable whether our Michael is the author of it; Bessarion died in 1472, and as Michael, previously to leaving Constantinople, in or before 1460, had played, during many years, the friendship of Gemistus, whose name became conspicuous in the very beginning of the 15th century, and who was a very old man in 1441, he must have attained a very great age if he survived Bessarion.—Dissertatio aduersus eoa qui Occidentalis Orientalium superioriores esse contendunt, extant in MS. in the Bodleian:—De Figura Grammaticae, which Leo Allius est deemed so highly that he intended to publish it, but was unfortunately prevented.—An Etymological Dictionary; doubtful whether still extant; a work of great importance:—Versa, Violeta, a pleasing title giv-
en to a collection of sentences of celebrated persons. Arsenius, of Malavia, made an extract of it (ArQoSti-
yparr [Romana, 8vo]), which he dedicated to pope Leo X, which he had written in 1558—80; the text, with a Latin
version and valuable notes, by P. Panthius and A. Scholl, (Leyd. 1619, 4to); also cum Clavi Homericae, by George
Perkins. See Cave, Hist. Lit. ad an. 1440; Fabricius, Bibli. Graec. xl, 189; Smith, Dict. Greek and Rom. Biog.,
and Mythol. s. v.

Michael Balsamon, a noted Eastern ecclesiast, flourished in the latter half of the 15th century. He is
supposed to have been a native of Constantinople, where he always lived. He was one of the Greek deputies
sent in 1438 to the Council of Florence, discovered the secret intrigues of the Latins, and prognosticated the
ultimate fate of the union of the two churches, to which he subscribed reluctantly. He wrote and addressed to the
emperor Ioannes Palaeologus A sophora Clei Constanti-
schemici, on the union of the Churches, given to the emperor in his work De Consensum universae Ecclesiae. See Cave,
Hist. Lit. ad an. 1440; Fabricius, Bibli. Graec., x, 378, note.

Michael Bradacius, the first Moravian bishop, flourished originally as a Hussite priest at Zamberg, in the
eastern part of Bohemia, about the middle of the 15th century. In 1467, when the Moravian Brethren (q. v.) separated from the National Church, and instituted a ministry of their own, Michael, who had in the
mean time joined the Moravian Brethren, was sent, together with two other priests, to a Waldensian colony
on the frontiers of Bohemia and Austria, in order to secure the episcopacy. These Waldensians were on friendly
terms with the Calixtines, and openly fraternized with them at the mass. John Rokysan, the Calixtine
leader, who had ambitious projects with regard to the archiepiscopal chair at Prague, which had long been vac-
cant, hoped to win the support of the Waldensians. Hence, when their ministry had become extinct, he induced
bishop Philibert, who had come to Prague as a delegate of the Council of Basle, to ordain two members of the
Waldensian colony, Frederic Nemez and John Wlach, as priests, on the 14th of September, 1458. In the sum-
mer of the following year (1434)—when the Taborites had been defeated by the Calixtines; when the utmost
confusion prevailed throughout Bohemia in Church and State; when an open feud was raging between the coun-
try parties; and when, however, the former did everything in its power to conciliate the Bohemians—these
two Waldensian priests were consecrated bishops at Basle by bishops of the Roman Catholic Church. This
act was meant as an example and encouragement for the Bohemians, that they might be the more ready to ac-
cept the compacta of the council. Nemez and Wlach consecrated other bishops, of whom two were living in
1467, the name of the senior being Stephen. He and his associate consecrated Michael Bradacius and his two
companions, who thus became the first bishops of the Bohemian Brethren. A Church council was organized,
of which Michael Bradacius was elected as president.
After a time he resigned the presidency in favor of
Matthias of Kunwald (q. v.), but remained in the
council. He died at Reichenau in 1501. Zeschwitz, in
his article Lutus v. Prag, in Herzog's Real-Encycl.
vol. xx, calls in question the authenticity of the above notice. It is not improbable, however, that the latter
books are of later date than those of the first edition, and that they may have been misled by preconceived notions against the Moravian episcopacy, as his article plainly shows. The transfer of the Waldensian episcopate to the Brethren is es-
blished by a number of documents, whose dates range from 1476 to 1600, in the "Lisse Folios," at Heminut
(see Moravian BRETHREN, THE ANCIENT); by the of-

cial report (1478) of Wenzel Koranda, the administr-
ator of the Utraquist Consistory at Prague (Palacky's Geschichte v. Bohmen, i, 191, 192); and by the earliest
historian of the Bohemian Brethren, John Podiebrad,
while the origin of the Waldensian episcopacy
is set forth in the official answers with which the
Brethren met the attacks of the learned Jesuit, Wenzel
Sturm, in the reign of Maximilian II. These answers
were written by the assistant bishop Jaffet, and are pre-
served in the archives at Hradec Kralove, Bohemia. The
transfer of the episcopate of the Brethren was not doubted either by the Roman Catholic or by the National Church, and the fact that they had secretly secured it from the Wal-
denses brought about a severe persecution immediately after the truth became known (1468). Compare Ban-
ham, Annales et Libri de Boh. Brethren. (Lond. 1667);
Schweinitz's Moravischen Episcopatus (Berlin, 1868);
Palacky's Geschichte v. Bohmen, vii, 492; Ginde-
ly's Geschichte d. B. B., i, 37; Czerwenka's Perserkations-
büchlein (Gütersloh, 1869), c. xx, n. 81; Cröger's Gesch.
A. Almen. Brüderkirche (Grudan, 1863), vol. l (E. de S.);

Michael Cerularius, a noted Eastern ecclesiast, flourished as patriarch of Constantinople near the mid-
dle of the 11th century. He gained great notoriety main-
tly through his attack on the iconoclasts by his Persian
cause so much scandal that pope Leo IX sent cardinals
Humbert and Frederick, with Peter, archbishop of Amalfi,
to Constantinople in order to persuade Cerularius to a more moderate conduct. Their efforts were not only unsuccessful, but they were treated with such abuse that the Emperor John Comnenus, the
vicar of the patriarch, excommunicated Cerularius, and
brought the name of pope Leo IX to be erased from the
diptychs. In 1057 he prevailed upon the em-
peror Michael Stratistococ to yield to his successful rival,
Isaac Comnenus, whose interest he took care of for some
time. Differences, however, soon broke out between
them; and when he was once quarrelling with Isaac
about the respective authority of the Church and the
State, he impudently cried out, "I have given you the
crown, and I know how to take it from you again." Banishment was his due reward, and Isaac was about to
remove him from his see when death removed him from the
earth (1058). Cerularius wrote "Decretum Synodica
de Nuptiis in Septimo Grado: De Matrimoni pro-
hibitii (the former printed, Greek and Latin, in the third
book, and fragments of the latter in the fourth book of
Leucadian, Jux Graeco-Roman.)—Epistula II ad Pe-
trum Antiochenum (Greek and Latin, in the second vo-
Umblachian Monumenta, etc., ed. de Sardocer-
Uros and Adolus polluta (in Cotelerius, Patres Apos-
tol.)—Sigmaie, t. Edictum Symodale adversus Latinos de
Pittacienses, seu De Excomunicatione a Latini Legatis in
ypsam esse in Legatos vibrata, anno 1054, die sep-
Montfaucon, under the title Epistola Synodi Niceno-
ianae ad Sanctum Alexandri Ecclesiain (Paris, 1715,
fol.). There are, farther, extant in MS. fragments of
several letters, as Contra Rebelle Abbas, Contra Ar-
menios, De Humilicato Facio in Ecclesia, De Episcoporum
Judice (in the Cat. Lit. ad an. 1043; Fabri-
cius, Bibli. Graec. x, 195, 196.

Michael Glycas, a noted ecclesiastical historian of the Greek Church of the 12th century (some place
him as late as the 15th), was a native of Sicily, and
flourished about A.D. 1120. His most important pro-
duction, the Annales Quadruplicis, is a work not only
historical, but also philosophical and theological. Part
I describes the creation of the world. In Part II exten-
sions from the creation to the birth of Christ; Part III to Constantin the Great; and Part IV to the death of
Alexius Comnenus, A.D. 1188. It was published in
Gr. and Lat., with notes, by Labbe (Paris, 1660, fol.).
Glycas also wrote Disputationes II, and likewise many epistles, of which fragments are preserved.
Michael Monochius, a theologian of the Church of the East, flourished as presbyter at Constantinople probably towards the close of the 9th century. He is noted as the author of a work, Cursus usque ad annum 877, edited, Greek and Latin, in a very matuted form, by Raderus in his Acta Concilii (Ingolstadt, 1604, 4to), also in the eighth vol. of the Concilia:—Encomium in Angelocorium Ordoevum Doctores, Michaelium et Gabrielium:—Encomium in gloriosum Christum Apostolum Philipum:—Peripha Vites et Miraculps S. Nicolai:—Vita Theodori Studia, of which Baronius gives some fragments in his Annales ad an. 795 and 826. The complete text, with a Latin translation, was published by Jacobus de la Baume, in the fifth vol. of Opera Sirmioldi (Paris, 1696, fol.). The life of Theodore Studites, written by another, Michael Monachus, a contemporary and survivor of Studites, who died as early as 882. The author of this life was a very incompetent writer. Cave, Hist. Lit. ad an. 876; Fabriacus, Biblioth. Graec. ix, 505.

Michael Scotus, a learned author of the 13th century, was born at Durham, England; or, as some assert, at the University of Paris, and afterwards at Oxford, and afterwards at Paris, and devoted himself to the study of mathematics and Oriental languages. Emperor Frederick II, who reigned at that time in Germany, was the most prominent protector of art and sciences, and Michael went to his court, studying medicine and chemistry. After a stay of several years in Germany, he returned to England, where he became a great favorite of king Edward II. He died in 1291, at a very advanced age. Michael Scotus was celebrated on account of his knowledge in secret arts and magic (comp. Dante, Inferno, xx, 115-118). It is said that his books on magic were burned with his body. He also actively engaged in the translation of Aristotle, which was undertaken by command of emperor Frederick II, and was afterwards printed at Venice in 1496: Aristotle opera Latina versa, partim et Graeco, partim et Arabico, per viros lectos et in ariuissim quoque prolationes perisse, iussu imperatoris Frederici II. He probably translated the natural philosophy of Aristotle from the Arabic version of Avicenna. Michael is the author of De secretis natura, sive de procreatione hominis et philosophia, of the Quotio curiosus de natura solis et luna, i.e. of gold and silver. He has also been considered the author of *Materia philosophica seu enchiadion, in qua de quaternibus novis, mutuabiles et variabiles ac jucundas hominum corporumque aqur, which has been printed several times. This latter work, however, has been attributed, by some at least, to Theobald Anguillartus, a learned Irishman, who lived about the year 1500 as doctor of medicine and philosophy at Paris. See Tempesta, Manual Hist. Philos. p. 226; Weitzer u. Weilbe, Kirchenlexicon, s. v.

Michael VIII, surnamed Palaeologus (ὁ Παλαιόλογος), emperor of Nicea, and afterwards of Constantinople, from A.D. 1260 to 1282, the restorer of the Greek empire, and the laborer for the “unity of the Church,” was born of noble parentage in 1244. At an early age he rose to eminence, which he owed more to his uncommon talents than to his illustrious birth. He was in great favor with the emperor Theodore (II) Lascaris. This sovereign died in August, 1259, leaving a son, John, who was only one year of age. He whom he had placed the patriarch Arsenius, and the magnus domesticus Muzalon, as guardians. Michael, the friend of the soldiers, was determined to secure for himself the place of Muzalon, who was despatched by the imperial guard, and Michael Palaeologus, whom his father Theodore shortly before his decease had appointed mag- nus dux, was chosen as guardian instead, and soon after- wards received or gave himself the title and power of despot. Next he made himself master of the imperial treasury, bribed or gained the Vrangian guard and the clergy, and secured his proclamation as emperor at Magnesia in 1261. Michael and the rest of the nobility met together at Nicea, on the 1st of January, 1260. While the event was hailed with satisfaction at home, it failed to secure friends abroad. The Latins, especially, were dissatisfied; assumed a haughty tone towards Michael, and demanded the cession of those parts of Thrace and Macedonia which belonged to Nicea, as a provocation of acknowledging him as emperor. But Michael treated the Latin ambassadors with ridicule, and, in answer, took prompt measures for driving the Latins out of Constantinople; and, before the end of the year 1260, Baldwin II was shut up within his capital. Michael, however, was not strong enough to rest content, the story he was obliged to content the siege into a blockade, until one day, one Currizacius, the commander of a body of volunteer auxiliaries, was informed of the existence of a subterranean passage leading from a place outside the walls into the cellar of a house within them, and which seemed not to be generally known. Upon the strength of this information, a plan was formed for the surprise of the garrison by means of the passage, and, after concerted measures with the commander-in-chief, he ventured with fifty men through the passage into the city. His plan succeeded completely. No sooner was he within than he took possession of the nearest gate, disarmed the post, opened it, and the main body of the Greeks rushed in. The stratagem was executed in the dead of night. The inhabitants, roused from their slumber, soon learned the cause of the noise, and kept quiet within their houses, or joined their daring countrymen. The Latins, dispersed in various quarters, were seized with a panic, and fled in all directions, while the emperor Bald- win had scarcely time to leave his palace and escape on board of a Venetian galley, which carried him immediately to Italy. On the morning of the 26th of July, 1261, Constantinople was in the undisputed possession of the Greeks, after it had borne the yoke of the Latins during fifty-seven years, three months, and thirteen days.

Michael, informed of the success of his arms, lost no time in repairing to Constantinople; and on the 14th of August held his triumphal entrance, saluted by the people with demonstrations of the sincerest joy. Con- stantinople, however, was no more what it had been. During the reign of the Latins plunder, rapine, and dev- astation had spoiled it of its former splendor; trade had deserted its harbor, and thousands of opulent families had abandoned the palaces or mansions of their forfa- thers in order to avoid contact with the hated foreigners. To restore, repopulate, and readorn Constantinople was now Michael's principal task; and, in order to accom- plish his purpose the better, he confirmed the extensive privileges which the Venetian, the Genoese, and the Pisan merchants had received from the Latin emper- ors. Although the Nicanian emperors considered them- selves the legitimate successors of Constantine the Great, the possession of Constantinople, in such magnitude as to suggest to Michael the idea of a new coronation, which was accordingly solemnized in the cathedral of St. Sophia. But Michael was crowned alone, without John—an evil omen for the friends of the young emperor, whose fears were but too soon realized, for on
Christmastime of the year, 1261, John was deprived of sight and sent into exile to a distant fortress. This hateful crime caused a general indignation among the people, and might have proved the ruin of Michael had he been a man of a less energetic turn of mind. The patriarch Arsenius, cugardian to John, was irascible; he fearlessly pronounced excommunication upon the imperial criminal, and years of trouble and commotion elapsed before Michael was readmitted into the communion of the faithful by the second successor of Arsenius, the patriarch Joseph.

The loss of Constantinople pope Urban IV regarded as robbing him of the hope of effecting a union between the Latin and the Greek churches, and he therefore used all his resources to produce a crusade against the Greek schismatics; but Michael avoided the danger by promising the pope to do his utmost in order to effect himself a mediation between the belligerents, and, as both the parties were tired of bloodshed, peace was soon restored (1263). In 1268 Arsenius was deposed, because he would not revoke the excommunication he had pronounced against the emperor; whereupon the prelate’s adherents, the Arsenites, caused a schism which lasted till 1312. See ARSENIUS. In this skilful manner he also avoided troubles which threatened him in 1269, when Charles, king of Sicily, took up arms on pretence of restoring the fugitive Baldwin to the throne, marching an army across the Peloponnesus, placed the capital in jeopardy. Michael, afraid that these hostilities were only the forerunners of a general crusade of all the Latin princes against him, made prompt proposals for a union of the Greek Church with that of Rome. The learned Vuccos, accompanied by several of the most distinguished among the Greek clergy, were sent to the council which was called to assemble at Lyons in 1274; and there the union was effected by the Greeks giving way in the much disputed doctrine of the procession of the Holy Ghost, and submitting to the supremacy of the pope. See LYONS, II. The union, however, was soon voided by a minority of the Greeks and the orthodox majority accordingly did their utmost to prevent the measure from being carried out. Michael, in his turn, supported his policy with force. The patriarch Joseph was deposed, and Vuccos appointed in his stead; cruel punishment was inflicted upon all those who opposed the union; and Greece was shaken by a religious commotion which forms a remarkable event in the ecclesiastical history of the East. As space forbids us to dwell here longer upon these important transactions, we can only remark that the union was never effectually carried out, and was entirely abandoned upon the death of Michael. See FILIOQUE; GREEK CHURCH.

The manliness and the cruelty with which the emperor behaved finally made him odious to his own subjects and contemptible to his Latin friends, and the latter part of his reign was an uninterrupted series of domestic troubles and dissensions. His dearly-bought friendship with the Latin, and especially the Italian powers, was brought to a very speedy end. Upon the decease of the ex-emperor Baldwin, his son Philip assumed the imperial title, and formed an alliance between pope Martin IV, Charles of Anjou, king of Sicily, and the Venetians, with a view of reconquering Constantinople and dividing the Greek empire. But the invaders failed, and Michael, not satisfied with the glory of his arms and the material benefit he derived from his victory, resolved to take terrible revenge: he paid twenty thousand ounces of gold towards equipping a Catalan flotilla under the command of the king of Aragon to attack Sicily; and the Sicilian Vespers," in which eight thousand Frenchmen were massacred, and in consequence of which Sicily was wrested from Charles of Anjou and united with Aragon, were in some degree the work of Michael’s fury. In the autumn of 1292 he fell ill, and died Dec. 11, 1292, leaving the renown of a successful but treacherous tyrant. See Nicoph. Gregor, lib. iv.-v; Acropol. c.76, et al.; Pranz. lib. i.; Pachymeres, Historia Herum a Michaela Paleologo gestarum (1666); Neale, Hist. of the East, C. 11, ii. sq.; Hasse, Ch. Michaelenai, Jean, a Swiss theologian of the 12th century, the date of whose birth and death are unknown, figures among the Latin name in 1112—1114, and is so little of his life that we cannot say whether this same Michaelenai was the one that assisted at the Council of Troyes in 1128, and who was commissioned to draw up a body of rules for the Temple order. These rules have often been reprinted, but appeared for the first time in the Chronique de Citeaux, by Aubert Lemire. They have also been attributed to Saint Bernard, but without foundation. See, for the scanty information accessible, Fleury, Hist. Eccl. liv. 67, n. 55; Mahillon, Op. S. Bernardi, i, 571; Hist. Litt. de la France, xi, 66; Ruchat, Abrégé de l’Histoire Ecclési. du pays de Vaud. p. 75.

Michaelis is the name of a German family distinguished in the Protestant theological world. The following note on the first mentioned takes up the following account:

1. CHRISTIAN BONSEKTI was born at Elrich, in Hohstein, Jan. 26, 1860. He was educated at Halle, and in 1713 was made a professor extraordinary of philosophy, and in 1731 ordinary professor of theology at his alma mater. In 1786 he was transferred to the departments of Greek and Oriental literature. He died Feb. 29, 1764. He was not a very prolific writer, but his few productions display unusual talent and ripe scholarship. He was a thorough master of the Biblical languages, particularly the Hebrew. His principal works are, 1. On Hebrew Grammar and Philology: Dissertation, qua solemnes generis quae Sumtiz S. Codicia Ebraici depellitur (Halle, 1739)—Dissertatio qua solemnes genera a Syntaxa S. Codicis Ebraici depellitur (Halle, 1739)—a treatise against the etymological hypothesis, defended by Hermann Hardt and others, that Hebrew and the cognate tongues were derived from Greek (Halle, 1726); —a treatise on the Hebrew points, in which he took the side of Capellus (Halle, 1739)—a dissertation on Scripture Paronomasia (Halle, 1737)—a dissertation on Hebrew Ellipsis (Halle, 1724). 2. On Biblical Exegesis: De Herba Borith (Halle, 1738)—De Idauma et aequ. Antig. Historia (Halle, 1738)—Philologemata Medica (in which he discusses certain points of the art medical of the Bible)—Observationes philologicae de nomina praeprii Ebraei, a work which was a worthy predecessor of Simon’s Onomasticon V. T.—Dissertatio philologica de antiquitatis economia patriarcaeh (reprinted in Ugelino, Thesaur. xxiv, 582). In the year 1749 he published Tractatus critico de varia lectione N. T. eurto collegiensi et disputanda, an elaborate treatise on the various readings of the Greek Testament, exhibiting proofs of an accurate critical judgment. It gives some account of the MSS. known in his day, both Greek and Latin; of the ancient versions, and of the patristic quotations. We must not omit to mention his co-operation with his uncle, Johann Herrick Michaelis (1727), in the valuable commentary on the Hagiography. Our author contributed the annotations on the Proverbs, Lamentations, and Daniel. He was also associated with J. H. Michaelis in a commentary on the first two of the greater prophets. Simultaneously with the work of the latter part of the 18th century, he appeared with his master. See Michaelis’s treatise, De Jeremia et de Malachi eos (Halle, 1712). In the year 1736 he published a short work, De vativio Aenae proposita. See Kitto, Cyclop. Bibl. Lit. a. v.; Herzog, Real-Enciclopidiæ, a. v.

2. JOHANN DAVID, one of the ablest of Germany’s theologians, and son of the preceding, was born at Halle
Feb. 27, 1717. After receiving instruction for some time from private tutors, Michaelis spent four years in the Orphan School at Halle, where his attention was particularly directed to languages and philosophy. In 1735 he was admitted to the academy of several eminent scholars, both in London and Oxford. During part of his residence in England he preached in the German church at St. James's Palace. On his return to Germany, he devoted himself to the study of history, Oriental languages, and Biblical criticism. Upon the death of the chancellor Ludwig, Michaelis was commissioned to arrange and catalogue his entire library. The catalogue was published in 1746, and is considered a model for such works. Michaelis published his first book in 1739, *It was a Dissertation de Punctuorum Hebr. Antiquitate, and was quite ultra-orthodox, written in the Buxtorian manner. But later he appears to have joined the school of Schultz, if we may judge by the Hebrew Grammar he published in 1745. The pietistic air of Halle finally led him to accept the proffered position at Göttingen, and he removed to that place in 1746, and there he spent the rest of his life, although he was invited by Frederick the Great in 1756 to return to Prussia. To the cultivated Pietist, Michaelis was the most important services as professor of theology and Oriental literature from 1745 to 1791; as secretary and director of the Royal Society of Sciences, from 1751 to 1770, when he left it on account of some differences with the members; as editor of the journal entitled *Gebülte Anzeigen*, from 1753 to 1770; and as librarian and director of the philological seminary, which would have been abandoned after the death of Gesner in 1761 if Michaelis had not consented to direct it gratuitously.

In order to throw new light upon Biblical science, Michaelis planned the expedition to Arabia and India which was conducted by Carsten Niebuhr. The first project of this enterprise was submitted in the year 1756 to baron Von Bernstorff, then minister of Frederick VI, king of Denmark. The course of the travellers was directed mainly by Michaelis, who drew up a series of questions for their guidance. These questions discuss the language, the life of the inhabitants, the Biblical geography, Oriental habits and customs, natural productions mentioned in the Bible, and diseases which still affect men in the East as they did of old. "The perspicuity, and precision, and learning with which our author proposes the questions, and the information in answer to them obtained by Niebuhr and Forskål as emigrated in the *Voyage in Arabe and Description de l'Arabie of the former, and in the Descriptiones Animilia, etc., of the latter, strikingly illustrate the sagacity of Michaelis; and the literally results of the expedition, though short of the exaggerated expectations of the time, have, in the shape of five quarto volumes, been preserved. In all the subsequent series of Biblical works, Michaelis was a knight of the Polar Star by the king of Sweden; in 1786 he was appointed an Aulic counsellor of Hanover, and in 1789 he was elected a Fellow of the Royal Society of London. He was also a member of the Academy of Inscriptions, Paris. He died Aug. 22, 1791.

The works of Michaelis are very numerous; the following are some of the most important. In Oriental literature, grammars of Hebrew, Chaldee, Syriac, and Arabic, and treatises on various subjects connected with these languages: *Orientalische und Egyptische Bibliothek* (a valuable periodical commenced by Michaelis in 1741, and in which he conducted 24 vols.); *Supplement in Lexico Hebraico* (6 pts. in 2 vols. 4to—useful, not more for the language illustrated, than for the information afforded on Biblical geography, archaeology, and natural history. In philosophy: an *Essay On the Influence of Opinions on Language, and of Language on Opinions*, which obtained a prize from the Prussian Academy of Sciences in 1759; a treatise on moral philosophy, and another on theology. In addition to his chief work, *Spiegelum Geographiae Hebraeorum externa post Bochartum* (Götting, 1769, 1780); other treatises on geography and chronology; several separate dissertations on the laws and antiquities of the Jews, the substance of which is embodied in his *Mosaices Becht, in 5 vols. 1777*; and a second edition of his work was published in the years 1775-80. This work, which is considered the masterpiece of Michaelis, was translated into English by Dr. Alexander Smith, under the title of *Commentaries on the Laws of Moses* (1814, 4 vols. 8vo). "The great object of Michaelis in this work is to investigate and illustrate the philosophy of the Mosaic laws, to show their wonderful adaptation in every respect to the very peculiar circumstances in which the people to whom they were given had been placed by Providence; and, while he takes every opportunity of establishing the claims of Moses to the character of an ambassador from heaven, to inculcate upon the human legislators the important lesson of studying those particulars respecting the nature and political situation, the ideas and prejudices, the manners and customs of their countrymen, by attention to which alone they can ever hope to make them virtuous, prosperous, and happy" (Dr. Smith's Preface, p. xvii). In Biblical criticism, Michaelis undertook the introduction of more well known in England by the translation of the late bishop Marsh; he also published an *Introduction to the Old Testament; a Translation of the Bible, with Notes, for the Unlearned*; a monograph on the three chief Messiahian psalms (viz. x, cx, cx), in which he boldly defended their prophetic character (comp. cardinal Wiseman, Lectures, p. 578); a commentary on the *Book of Maccabees* (1778); on *Ecclesiastes* (1769). He also wrote an able vindication of the sacred narrative on the *Burial and Resurrection of Christ according to the Four Evangelists* (Halle, 1788; English transl. 1827); and published learned notes on an edition of bishop Lowth's *Sacra Povia Hebraeorum* (reprinted in the Oxford edition, with further annotations by E. F. C. Rosenmüller, 1821).

Johann David Michaelis has been in many respects more influential as a Biblical writer than any other of the numerous Biblical scholars of the last 150 years, and within the last 150 years. He exhibited an indomitable energy in the prosecution of his studies, and, hurried forward by an inquiring spirit, he could not fail to produce valuable writings. Unfortunately, however, he was inconsistent as a writer. Anxious to adhere to the established system of Lutheranism, he displayed outwardly great respect for the Christian religion, while he was really too light-minded, as he himself acknowledged, to adopt their tone of pious feeling. It is true, however, that his early pietistic training nevertheless sustained him in a certain conviction of the truth of Christianity. He endeavored constantly, by new and unorthodox theories, to counteract the influence of the rationalism which was growing among the younger contemporaries, whose rationalistic views were ripening the space, he held to the last many parts of the older system, which they had either modified or thrown aside. The melancholy consequences, however, of this merely natural persuasion are abundantly manifest. Destitute of that conviction which alone can give a comprehensive insight into the real character of revelation, and the harmonious relation of its several parts, he had no guide to enable him to perceive what might be safely admitted without detriment to the system itself; he consequently, according to the usual customs of men taking only a partial view of subjects, frequently opposed the objection, instead of the principle on which the objection was founded; endeavored to remove it by theories in conformity with mere human systems, and
strengthened it equally by his concessions and by his own inadequate and arbitrary defences. Possessed of no advanced principles, every minute difficulty presented itself with integral force and perplexity, and his belief was a readv ready to be shaken by every fresh breeze; all that he had previously gained seemed again staked on the issue of each petty skirmish; and, in the very descriptive comparison of Lessing, he was like the timid soldier who loses his life before an outpost, without once seeing the country of which he would gain possession. The theological opinions of this celebrated man are never to be trusted; and, indeed, the serious student cannot but be disgusted with the levity which too frequently appears in his writings, and the gross obscenity which frequently defiles them. After all direct and explicit discriminations, a student will seldom consult Michaelis without benefitting by his erudition and clearness of illustration; and often will he find objections on Scripture refuted with much force and felicitous originality. Dr. Tholuck describes Michaelis as one of the chief pioneers of neology, though not because he indulged in bold neiological assumptions, but because he was devoid of religious life, retaining only the external form of orthodoxy, but abandoning its essence and spirit (comp. Tholuck, Vermischte Schrif- ten, ii, 190). See Lebensbeschreibung von ihm selbst olge- fassst (Leipsic and Rinteln, 1788); C. G. Heyne, Elogium J. D. Michaelis (1791); Kitto, Cyclop. Bibl. Lit., s. v.; English Cyclop. s. v.; Döring, Gelehrte Theol. Deutsch- lands, vol. ii, s. v.; Hagenbach, Ch. Hist. of the 18th and 19th Centuries, i, 157 sq.; Kuhnus, Hist. of German Protestantism, p. 120.

3. Johann Friedrich, another writer of this family, a pupil of Danzius, is the author of a philological dissertation on the derivation and meaning of the sacred name שֵׁבָּנָה (reprinted in Ugelino, Thesaur. cvv, 105-138). With this treatise it is worth while to compare J. D. Michaelis's remarks, Supplement, ad Lex. Hebraic. p. 63-67; and Gesenius, Thesaur. p. 66-69.

4. Johann Georg, who flourished as divinity pro- fessor at Halle, was born at Zerbst May 22, 1690; was educated at the University of Frankfort; in 1715 en- tered the ministry; in 1717 accepted a position in the gymnasium at Frankfurt-on-the-Oder; and in 1730 was promoted to a professorship in the university then at that place. In 1740 he was called to Halle, and died there July 16, 1758. He is the author of several learned works; one, on the famous Catechetical School of Alex- andria, was first published in 1739; another work is enti- tled De propegra et incremento doctrina salutaris inde a protevangelio nesque ad Nochum (1752); he is, how- ever, chiefly known for his Observationes, in a vol- ume of great and varied erudition, containing certain disquisitions which he had held at the University of Frankfurt. This volume was published at Utrecht in 1738; we add the titles of such as claim mention in this work: De saciura proper mortuo:—De Elias, a proprio noemorium Bibliotheca suo Dei judicia vindicato:—De cane, symbolo prophetae:—De Spiritu Sancto, sub externo linquarum igneum symbolo Apostolico com- municato:—De cruciata quotidiana pontificii maximini:—De Sacerdote, ex ministerio suflfins non divine. In Ugelino, Thesaur. xi, 73-74, there occurs a valuable dissertation, De Thuribulo Adhæ, in which our author fully considers the high-priest's sacrificial duties on the great day of atonement, and takes occasion to illus- trate, in an interesting manner, the priesthood of Christ in some of its features as indicated in the Epistle to the Hebrews (ix, 7-15). See Döring, Gelehrte Theol. Deut- schlands, vol. vii, s. v. (J. H. V.)

5. Johann Heinrich, upon the whole, the most ac- curately learned of all the accomplished members of his family, was born at Klettenberg, in Hohnstein, July 26, 1668. He studied Oriental literature for some years at Frankfurt-on-the-Oder, where he had the cele- brated Ludolf for his instructor in Hebrew. He next studied for a time at Leipsic, and then removed to Halle, the head-quarters of Spener's influence, and became li- brarian to the university, later professor of the Oriental languages, and lastly archbishop. It is a great fame that the most renowned of the German Michaelis; its professors were eminent men, and its schools crowded with eager students, and J. Heinrich Michaelis was the soul of the place. In connection with A. H. Franke, he instituted the Colloquia Orientale Theologi- ci, where he gave the instruction in the Biblical languages. Fifty years before Kennicott's publication, J. H. Micha- elis, after some thirty years' conscientious labor, led the way in Old-Testament textual criticism by issuing from the press a carefully-edited Hebrew Bible (Halle, 1720, 2 vols. 4to). Kennicott, who was impetuous in publishing unauthorized judgments, and the author, from favor of the Masoretic text, had improperly used his manuscripts (see Kennicott's Annual Account of Hebrew Collections, p. 146). He afterwards modified his opinion in the following statement, which we ex- tract, as giving a good description of Michaelis's lab- ors: "This edition was the first which contained any various readings collected from Hebrew MSS, by a Christian editor. The text is taken from Jablonski's edition, with some few emendations. . . . There were collated for this Bible most of the best printed editions, and also five Hebrew MSS, belonging to the library at Erfurt, two of which contain the versions in Joshua ex- cluded by the Masora. The propriety of selecting var- ious readings from Hebrew MSS, and ancient versions is set forth in the preface" (Hist. of Hebr. Text. Dissert. ii, 457, Teller's ed. p. 465). Three quarto volumes of exegesis, in the shape of a commentary on the Hagio- grapha, entitled Annexo ad Th. Philico-Essexet Samia in Hieroglyphi (Halle, 1720), accompanied the critical text. This is a work of still acknowledged value. J. H. Michaelis was the general editor of the whole work; but he received assistance from his nephew, and from Ranbach in portions of it. The annotations on the Psalms, Job, Canticles, Ezra, and the Chronicles were contributed by him (on the critical merit of our author, see Wiseman, Connection between Science, etc. 2d ed. p. 349). Other works of his, worthy of mention here, are, a dissertation, De Paradiso:—a tract, De peculiarius Hebraorum logendi modis (Halle, 1702):—De tevacto prophetæ ejusque vestiticio (Halle, 1710):—and on the Hebrew, De textu N. T. Graeco (Halle, 1715):—Introductio in Jacobo epistolam (Halle, 1722, 4to). Johann Hein- rich Michaelis died in 1738. See Döring, Gelehrte Theol. Deutschlands, vol. ii, s. v.; Herzog, Real-Encyklopädie, ix, 522 sq.

Michaelis, Sebastien, a French Dominican, was born in 1543, at Saint-Zacharie, Provence. He intro- duced reforms into many houses of his order, for which, with the consent of the court of Rome, he raised a par- ticular congregation. Michaelis was the first vicar-general of this body, and, after having refused in 1579 the bishopric of Frejus, became prior of the new convent of the Friar Preachers at Paris in 1613. He may be re- garded as the restorer of the Order of St. Dominic in France, a work with which in our days Lacroix's name is so closely linked. Beside his ecclesiastical works, he wrote L'Histoire véritable de ce qu'est passé sous l'ecorce de trois filles posséables au pays de Flan- dre, with a Traité des Sorcières et des Musiciens (Paris, 1623, 2 vols. 8vo); and edited Le Fevre, Coëlvier historique et chronologique de l'Eglise de Paris. See Hoefer, Nouv. Dic. Générale, s. v.

Michaelius, Jonas, a Reformed (Dutch) minister, the great interpreter and promoter of the Bible by the Dutch in America, was born in 1577; was educated at Leyden University; settled in Holland in 1612-16, in St. Salvador in 1624- 25, in Guinea in 1626-27, and then migrated to this country, and arrived at Manhattan (now New York) in 1628. He organized a consistory, administered the sac- raments, and performed all the functions of a minister
of the Gospel. In 1638 he was succeeded by the Rev. Everardus Bogardus, who was accompanied by Adam Boelandsen, the first schoolmaster. After a few years of service he returned to Holland, and the province of Azi, of American Indians, was sent to send him back to New York in 1657, but he did not return. At his first communion here he had fifty communicants. He paints a sad picture of the low condition of the natives, and proposes to let the parents go and try to educate the children. His letter breathes a spirit of deep piety, and of submission to the will of God in all his sufferings. He died in 1628, only seven weeks after their arrival in this country, leaving him with three small children. This letter, and other particulars respecting this pioneer of the Dutch churches in this country, are found in Colonial Hist. of New York, ii. 740-770. See also Corwin's Missionary Ref. Church, p. 164. (W. J. R. E.)

Michaelmas, a day which, according to the Church of Rome, was set apart to express her thankfulness to God for the many benefits she had received by the ministry of holy angels; and called Michaelmas because St. Michael is alluded to in Scripture as an angel of great power and dignity, and as presiding and watching over the Church of God with particular vigilance and application. He is thus called the champion of the Church, and mentioned in some provincial festivities which were introduced between the 3d and 9th centuries, and which were then combined into one common celebration on the 29th of September, the day on which St. Michael's Church on Mount Garganous was dedicated, as mentioned in the Synod of York, 1011, and the Synod of Whalley, 1094.

There is a tradition that this feast was instituted by Alexander, bishop of Alexandria. It was generally observed in the 8th century; in the 12th century by the Council of Mayence, and indeed by the whole Greek Church, in accordance with an injunction of the emperor Manuel Comnenus. The apparition of St. Michael, the prince seraphim, leader of the angelic hosts, prefect of Paradise, and conductor of souls to the place of repose, to whom cemetery chapels and churches on hills were in consequence dedicated, was observed on the 8th of May. In the 10th century there was a curious superstition that on every Monday morning St. Michael held high mass in the churches.

The Greek and other Eastern churches, the Church of England, as well as several other evangelical churches, continue to observe the Feast of St. Michael, according to Wheatly, in order "that the people may know what benediction Christians receive by the ministry of angels" (On the Common Prayer, p. 190).

The Romish Church, besides observing St. Michaelmas, also celebrates three appearances of St. Michael, which have happened (we are told) in these later years. The first is the appearance of this archangel at Colossus, in Paralygia; but at what time the Romonists do not know themselves. They observe Sept. 6 as the day. The second is that of Mount Garganous, in the kingdom of Naples, about the end of the 5th century. May 8 is set apart as the day to commemorate the event. The third is his reputed appearance to Aubert, bishop of Arras, upon a rock called the Tomb, where now stands the abbey of St. Michael. This apparition of St. Michael, October 16 is observed in memory of this event. See Broughton, Biblioth. Hist. Sacra, ii, 98; Procter, On the Book of Communion Prayer, p. 301; Wheatly, On the Common Prayer, p. 253; Butler, Lives of Saints, Martyrs, and Soldiers, ii, 98, 115; Michaelis, Denkwürdigkeiten d. christl. Archdekan. iii, 38 et seq.

Mīchāl (Heb. as in Micah, a son of Uzziel and a Kohathite priest (1 Chron. xxiv, 24, 25); elsewhere (1 Chron. xxiii, 20) more correctly Anglicized Micaiah (q.v.).

Michā'yah (for the Heb., etc., see Micaiah), the name of several men and one woman.

1. The queen-mother of Abijah (2 Chron. xiii, 3); elsewhere (2 Chron. xx, 20) called Maachah (q.v.).

2. One of the national chieftains to whom Jehoshua
gave orders to instruct the people of the various cities of Judah in the sacred law (2 Chron. xlvii, 7). B.C. 910.

3. The father of Achbor, which latter was one of the courtiers (perhaps a Levite) sent by Josiah to inquire of the prophetess Huldah concerning the newly-discovered copy of the Pentateuch (2 Kings xxii, 12). B.C. ante 623. In the parallel passage (2 Chron. xxxiv, 20) he is called Micah, and his father's name is written Abdon.

4. The son of Gemariah and grandson of Shaphan: after having heard Baruch read the terrible predictions of Jeremiah in his father's hall, he went, apparently with good intentions, to report to the king's officers what he had heard (Jer. xxxvi, 11-13). B.C. 605. "Micaiah was the third in descent of a princely family, whose names are recorded in connection with important religious transactions. His grandfather Shaphan was the scribe, or secretary, of king Josiah, to whom Hilkiah the high-priest first delivered the book of the law which he said, he had found in the House of Jehovih Shaphan first perusing the book himself, and then reading it aloud to the youthful king (2 Kings xxii, 10). It was from his father Gemariah's chamber in the Temple that Baruch read the prophecies of Jeremiah in the ears of all the people. Moreover, Gemariah was one of the three who made intercession to king Zedekiah, although in vain, that he would not burn the roll containing Jeremiah's prophetic oracles. See Jeremiah.

5. The brother of Zaccur and father of Mattrania, Levites ("priests' sons") of the line of Asaph (Neh. xiii, 35). B.C. considerably ante 446.

6. One of the priests who celebrated with trumpets the completion of the walls of Jerusalem after the exile (Neh. xiv, 41). B.C. 446.

Mīchā'el (Heb. Mikāl, מיכאל, v. 2, 20, 20, Sept. Mīḵāl v. r. Mēḵāl; Josephus, Ἰωσεφ, Ant. vi, 11, 4), the younger of king Saul's two daughters (1 Sam. xiv, 49), doubtless by his wife Ahinoam (1 Sam. xiv, 60). In the following statement of the Biblical history, we chiefly dwell upon those points that relate to his successor. See David.

The king had proposed to bestow on David his eldest daughter Merab; but before the marriage could be arranged an unexpected turn was given to the matter by the behavior of Michal, who fell violently in love with the young prince with whom David was at once put aside. Saul eagerly caught at the opportunity which the change offered him of exposing his rival to the risk of death. The price fixed on Michal's hand was no less than the slaughter of a hundred Philistines. For these the usual "downy" by which, according to the custom of the East, from the time of Jacob down to the present day, the father is paid for his daughter, was relinquished. David by a brilliant feat doubled the tale of victims, and Michal became his wife (1 Sam. xviii, 20-28).

What her age was we do not know—her husband cannot have been more than twenty. B.C. cir. 1063.

It was not long before the strength of her affection was put to the proof. They seem to have been living at Gibeah, then the head-quarters of the king and the army. After one of Saul's attacks of frenzy, in which David had barely escaped being transfixed by the king's great spear, Michal learned that the young prince was watched by the myrmidons of Saul, and that it was intended on the next morning to attack her husband as he left his door (1 Sam. xix, 11). That the intention was real was evident from the behavior of the king's soldiers, who paraded round and round the town, and "returning to the house in the evening," with loud cries, more like the yells of the savage dogs of the East than the utterances of human beings, "bellowed out" curses and lies against the young warrior who had so lately shamed them all (Psa. lxix, 3, 6, 7, 13). Michal seems to have known too well the vacillating and fero-
cious disposition of her father when in these damonial
moods. The attack was ordered for the morning; but
before the morning arrives the king will probably have
changed his mind and hastened his defeat. So, like a true
sleeper, in the usual stratagem by stratagem. She first
provided for David's safety by lowering him out of
the window; to gain time for him to reach the
residence of Samuel, she next dressed up the bed as if
still occupied by him; one of her teraphim, or household
gods, was laid in the bed, its head enveloped, like that
d of a sleeper, in the usual shawls or strappings by which
renders "πράγατον," rather than a guilty or mattress, A.V.
"pillow" [q. v.] of goat's hair for protection from
guits, the rest of the figure covered with the wide "bēgēd"
or plaid. It happened as she had feared; Saul could
not delay his vengeance till David appeared out of
doors, but sent his people into the house. The reply
of Michal is that her husband is ill and cannot be
disturbed. At last Saul will be baulked no longer: his
messengers force their way into the innmost apartment,
and there discover the deception which has been played
off upon them with such success. Saul's rage may be
imagined: his fury was such that Michal was obliged to
fabricate a story of David's having attempted to kill
her (1 Sam. xix., 12-17). B.C. cir. 1062.

This was the last time she saw her husband for many
years; and when the rupture between Saul and David had
been patched up, impossible, Michal was married to
another man, Phaltai, or Phaltiel, of Gallim (1 Sam. xxv.
44; 2 Sam. iii., 15), a village apparently not far from Gib-
seh. Her father probably did not believe her story
concerning David's escape; but he had taken advantage
of it by cancelling her former marriage. David, how-
ever, as the divorce had been without his consent, felt
that the law (Deut. xxiv., 4) against a husband taking
back a divorced wife could not apply in this case; he
therefore formally reclaimed her of Ish-boseh, who
employed no less a personage than Abner to take her
from Phaltiel, and conduct her with all honor to David.
It was under cover of this mission that Abner surrounded
the elders of Israel respecting their acceptance of David
for king, and conferred with David himself on the same
subject at Hebron (2 Sam. iii., 12-21). As this demand
was not made by David until Abner had contrived to
intimate his design, it has been supposed by some that
it was managed between them solely to afford Abner
and his men a footing to go in for David, but it is more
pleasing to suppose that, although the matter happened
to be so timed as to give a color to this suspicion, the
demand really arose from David's revived affection for
his first wife and earliest love. After the death of her
father and brothers at Gilboa, Michal and her new hus-
bond appear to have been left to themselves, but it is the
rest of the family of Saul, to the eastern side of the Jordan.
If the old Jewish tradition inserted by the Targum in
2 Sam. xxi. may be followed, she was occupied in bring-
ing up the sons of her sister Merab and Adriel of Meho-
lah. At any rate, it is on the road leading up from the
Jordan valley to the Mount of Olives that we first en-
counter her with her husband—Michal under the joint
escort of David's messengers and Abner's twenty men,
_ en route_ to David at Hebron, the submissive Phaltiel
behind, bewailing the wife thus torn from him. It was
at least fourteen years since David and she parted at
Gibeah, since she had watched him disappear down the
cord into the darkness, and had perilled her own life
for his against the rage of her insane father. That Da-
vid's love for his absent wife had undergone no change
in the interval seems certain from the eagerness with
which he reclaim's her as soon as the opportunity is af-
forded him. Important as it was to him to make an all-
iance with Ishboseth and the great tribe of Benjamin,
and much as he respected Abner, he will not listen for
a moment to any overtures till his wife is restored.
Every circumstance is fresh in his memory, "I will not
see thy face except thou first bring Saul's daughter
... my wife Michal whom I espoused to me for a hun-
dred foreskins of the Philistines" (2 Sam. iii., 13, 14).
The meeting took place at Hebron. B.C. cir. 1047.

It is possible that David, in the altered circum-
stances of his household, now received by Abigail and Ahinoam we are not told; but it is plain from the subsequent occurrences that some-
thing had happened to alter the relations of herself and
David. They were no longer what they had been to
each other. The alienation was probably mutual. On
her side must have been the recollection of the long con-
tests which had taken place in the interval between her
father and David; the strong anti-Saulite and anti-
Benjamite feeling prevalent in the camp at Hebron,
where every word she heard must have contained some
distasteful allusion, and where at every turn she must
have encountered men like Abiathar the priest or Ima-
lah the Gibonite (1 Chron. xii., 4; comp. 2 Sam. xxi,
2), who had lost the whole or the greater part of their
relatives in some sudden burst of her father's fury. Add
to this the connection between her husband and the
Philistines who had killed her father and brothers; and,
more than all perhaps, the inevitable difference between
the boy husband in the newly-acquired and the matured
and occupied warrior who now received her. The
whole must have come upon her as a strong contrast to
the affectionate husband whose tears had followed her
along the road over Olivet, and to the home over which
we cannot doubt she ruled supreme. On the side of
David it is natural to put her advanced years, in a cli-
nate where men are at thirty or forty, and a tempera-
ment and jealousy inherited from her father, one outburst of which certainly produced the rupture
between them which closes our knowledge of Michal.

It was the day of David's greatest triumph, when he
brought the Ark of Jehovah from its temporary resting-
place in the tent of Phaltiel to the newly-acquired and
won the triumph in every respect peculiarly his own.
The procession consisted of priests, Levites, the captains
of the host, the elders of the nation; and conspicuous
in front, "in the midst of the damsels playing on the tim-
brels" (comp. Ps. cviii., 20), was the king dancing
and leaping. Michal watched this procession approach
from the window of her apartment in the royal palace;
the motions of her husband, clothed only in a thin lin
ceph (1 Chron. xv., 27), shocked her as undignified and
indecent—"she despised him in her heart." B.C. cir.
1045. It would have been well if her contempt had re-
sted there; but it was not in her nature to conceal it,
and when, after the exertion of the long day's work
—"he is refining and the last peace-offering of-
ered, the last portion distributed to the crowd of wor-
shipers—the king entered his house to bless his fam-
ily, he was received by his wife, not with the congrat-
lations which he had a right to expect, and which would
have been so grateful to him, but with a bitter taunt,
which showed how incapable she was of appreciating
either her husband's temper or the service in which he
had been engaged. David's retort was a tremendous
one, conveyed in words which once spoken could never
be recalled. It gathered up all the differences between
them which made sympathy no longer possible, and we
do not need the assurance of the sacred writer, that "Mi-
chal had no child unto the day of her death," to feel
quite certain that all intercourse between her and David
must have ceased from that date. Josephus (Ant. vii.,
4, 3) intimates that she returned to Phaltiel, but of this
there is no mention in the records of the Bible; and it
would be difficult to reconcile such a thing with the
knowledge of the time, when Jewish women bore no
share of the king's bed. See ABISHAG; ADONIJAH.
Thejealous Jewish tradition, preserved in the Targum on
Ruth iii., 3, states that Phaltiel had from the first acted
in accordance with the idea alluded to in the text.
He is placed in the same rank with Joseph, and is com-
memorated as "Phaltiel, son of Laish, the pioua (नृष्ण,
rime at Marseilles, and who preserved a secret and intimate friendship for a long time with Madame deMaintenon. Michel, fatigued with the curiosity of which he was the object, retired to Lançon, a village near Aix, where he died on 18 October 1786 at the age of eighty-four. He was buried in the cemetery of Our Lady of the Assumption, xi, 16 sq. (edit. Cheruel); Proyst, Vie du Dauphin pare de Louis XVI. See Hoefer, Nouv. Biog. Générale, a.v.

Michel, Georg Adam, a German theologian, was born Sept. 23, 1708, at Walpheim; was educated at the school of his native place, and studied theology at the University of Jena. Afterwards he assisted his father in ecclesiastical functions for seven years, was then appointed inspector of the orphan asylum at Oetingen, with the title Counsellor of the Consistory; and died March 21, 1780. Michel combined with a great knowledge in theology a thorough acquaintance with history. He contributed largely to the Oettingische Bibliothek (Oettingen, 1758, 8vo), and to the Oettingische politische kirchliche und gelehrten Geschichte (ibid. 1772-79, 3 vols. 8vo).

Michel, Jean, a French ecclesiastic, was born at Beauvais about the close of the 14th century. He was at first counsellor to Louis II, king of Sicily; then canon of Rouin, of Aix, and of Angiers. He was appointed bishop of Angiers by the state, February 28, 1459; archbishop of Amiens in 1466; of Cahors in 1472; archbishop of Toulouse in 1478; and however, obtained edicts from the pope for the bishopric. Fortified with these bulls, he presented himself to the chapter, and demanded the deposition of Michel; but, instead, the suppliant himself was removed. Guillaume persisted notwithstanding, and seated himself as bishop in the Occitan. The Pope, however, obtained a commission from the Council of Florence, while Jean Michel was seated with the same title in the Council of Basle. Stormy discussions ensued, which the pope Eugenius endeavored to terminate by appointing Guillaume successively bishop of Digne and cardinal. But a man of so great an origin, and so powerful in his alliances, was not to be satisfied with these transactions. His intrigues continued to involve the bishopric in constant agitation. The plebeian Jean Michel had, however, resolute partisans. Few prelates have left in the Church of Angiers such honorable memories. The kings of France have several times demanded, though in vain, his canonization by the Church of Rome. Michel died Sept. 11, 1447. See Colla, De Caritatis, vol. xiv, col. 580; Hoefer, Nouv. Biog. Générale, a.v.

Michele, Parravic, a Venetian painter, flourished about 1500. He was a pupil of Paul Veronese. He executed several works for the churches, especially a Pietà, in a chapel of the church of San Giuseppe, into which he introduced a portrait of himself. See Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo).

Michelinski, Gio. Battista, a painter of religious subjects, who flourished about 1560, was a native of Puglia. He was a pupil of Guido Reni, and wrought in the churches of the Romagna. Lanzi says there are several of his works at Gubbio, and mentions particularly a Dead Christ. But little is known of him. See Lanzi's Hist. of Painting, tran. by Roscoe (Lond. 1847, 3 vols. 8vo). See also Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo).

Michelozzi (or Michelozzo), a celebrated Florentine sculptor and architect, was born in 1396. He was a pupil of Donatello, and the greater part of the sepulchral monument erected for pope Giovanni Coscia, in the church of San Giovanni at Florence, by Donatello, is in reality the work of Michelozzi. In the same church is a beautiful statue of Pisa, which was executed by Michelozzi as a companion to the two statues of Hope and Charity by his master. Over the sacristy and the rooms of the superintendents, which are opposite to San Giovanni, Michelozzi executed a full relief of
Michl, Anton, a German Roman Catholic theologian, was born in 1758 at Ebersberg, Bavaria; was educated at Freising, and ordained in 1776. He afterwards studied law and ecclesiastical history, and was in 1787 appointed Professor of Ecclesiastical History at Landshut. He was a faithful adherent of the government party, at that time, as in our own day, decidedly anti-Romantic in feeling and tendency, and Michl thereby made many friends even among the Protestants, who looked upon him as a friend of liberty and the law. When Landshut was attacked in 1796, besides a number of other dissertations, he published Kirchenrecht für Katholiken und Protestant, mit Hinsicht auf den Code Napoleon und die bayerischen Landesgesetze (Munich, 1809); and Kirchengeschichte (ibid., 1807–11, 2 vols. 8vo.). See C. A. Baader, Lexicon verbesserter bayer. Schriftsteller (Augsburg and Leipzig, 1824); Wetzler u. Wale, Kirchen-Lexikon, s. v.

Michmas (Heb. Mihmas, מִימָס, something hidden; Ezra ii, 27, Sept. Maymah; v. r. Kama; Neh. vii, 81, Mayma; or Michmas (Heb. Mihmas, מִימָס, id. Neh. xi, 81, Sept. Maymah, in pause שְׁפָרֵב, 1 Sam. xiii, 2, 5, 11, 16, 23; xiv, 5, 51; Isa. x, 28; Sept. Maymah, and so in 1 Mach. ii, 13; Josephus, Mayma [Ant. xiii, 2, 6], a town of Benjamin (Ezra ii, Neh. xii, 4; comp. vii, 81), east of Bethel or Beth-a-ven (1 Sam. xiii, 6), and southeast of Migron, on the road from Bethel to Taanach (1 Sam. xii, 6). "If the men of Shechem be as scholars assert (First, Handbuch, p. 606, 732b), compounded from that of Chomesh, the Moabitish deity, it is not improbably a relic of some incursion or invasion of the Moabites, just as Chepher-hammonial, in this very neighborhood, is of the Ammonites. But though in the heart of Benjamin, it is not named in the list of the towns of the tribe (comp. Josh. xvii)." The words of 1 Sam. xiii, 2; xiv, 4; and Isa. x, 29, show that at Michmas was a pass where the progress of a military body might be impeded or opposed, since it was held by the Philistines while Saul and the Israelites were at Gibeah; it was also on the line of march of an invading army from the north, and the Assyrians are represented as depositing their baggage there on their way to Jerusalem, just before reaching Gibeah (Isa. x, 28). It was perhaps for this reason that Jonathan Maccabeus fixed his abode at Michmas (1 Macce. ix, 73); and it is from the chivalrous exploit of another hero of the same name, the son of Saul, that the place is chiefly celebrated (1 Sam. xiii, xiv, 4–16). "Saul was occupying the range of heights above mentioned, one end of his line resting on Bethel, the other at Michmas (1 Sam. xiii, 2). In Geba, close to him, but separated by the wide and intricate valley, the Philistines had a garrison with a chief officer. The taking of the garrison or the killing of the officer by Saul's son Jonathan was the first move. The next was for the Philistines to swarm up from their sea-side plain in such numbers that no alternative was left for Saul but to retire down the wady to Gilgal, near Jericho, that from that ancient sanctuary he might collect and reassure the Israelites. Michmas was then occupied by the Philistines, and was their furthest post to the east. But it was only a short range of hills between it and Geba, and while he was in Geba, and his father in Michmas, Jonathan must have crossed the intervening valley too often not to know it thoroughly; and the intricate paths which render it impossible for a stranger to find his way through the mounds and hummocks that crowd the bottom of the ravine—over which these heaves and declivities perversely here, the sharp rocks there—as to be able to traverse them even in the dark. It was just as the day dawned (Joseph. Ant. vi, 6, 2) that the watchers in the garrison at Michmas descried the two Hebrews clambering up the steep ascent. We learn from the details supplied by Josephus, who must have had an opportunity of examining the spot when he passed it, that Titus on their way to the siege of Jerusalem (see War, v, 2, 1), that the part of Michmas in which the Philistines had established themselves consisted of three summits, surrounded by a line of rocks like a natural entrenchment, and ending in a long and sharp precipice, believed to be impassable. Finding himself opposed from above, and taking the invitation as an omen in his favor, Jonathan turned from the course which he was at first pursuing, and cut up in the direction of the point reputed impregnable. It was there, according to Josephus, that he and his armor-bearer made their entrance to the garrison of Michmas. And Josephus adds, "We are now at the village Gibeah; Jonathan. It was inhabited, after the return from Babylon (Neh. xi, 51), by 122 returned colonists (Ezra ii, 27; Neh. vii, 81). Eusebius describes Michmas as a large village nine Roman miles from Jerusalem, on the road to Ramah (Onomast. s. v. Maymah). Travellers have usually identified it with Bir or el-Birkah (see Maundrell, March 25; and the details in Quaresmius, Elucidatio, ii, 786, 787); but Dr. Robinson (Researches, ii, 117) recognizes it in a place still bearing the name of Mukmas, at a distance and position which correspond well with these intimations. It is small, and almost desolate, but bears marks of having once been a place of strength and importance. There are many foundations of hewn stones, and some columns lie among them. The steep and precipitous Wady es-Sweineh, a valley into which the two ravines on the low ridge between which the village is situated run, is probably the "passage" which Jonathan mentioned in the targum (1 Sam. xii, 28; Isa. x, 29). "In it," says Dr. Robinson, "just at the left where we crossed, are two hills of a conical, or rather spherical form, having steep rocky sides, with small wadys running up between each so as almost to isolate them. One of them is on the side towards Jeba (Gibeah), and the other towards Mukmas. These would seem to be the two rocks mentioned in connection with Jonathan's adventure (1 Sam. xiv, 4, 5). See Bozez, Senneh. They are not, indeed, so sharp as the language of Scripture would seem to imply; but they are the only rocks of the kind in this vicinity. The northern one is connected towards the west with an eminence on the road to Jerusalem. See Newton, Onomast., i, 116; comp. new ed. iii, 289; and Thenius, in the Sachsa. exeget. Stud. ii, 147 sqq."

"Immediately facing Mukmas, on the opposite side of the ravine, is the modern representative of Geba; and behind this again are Ramah and Gibeah—all memorable names in the long struggle which has been so vividly described to us by the Talmud (Menachot, viii, 1; comp. Schwars, Palest. p. 131) the soil of Michmas is much admired for its fertility (Ireland, Palest. p. 857). "There is a good deal of cultivation in and among groves of old olives in the broad, shallow wady which slopes down to the north and east of the village; but Mukmas itself is a very poor place, 230
and the country close to it has truly a most forbidding aspect. Huge gray rocks raise up their bald crowns, crowned with evergreen pines, above the gray buttes of the village, and the gray ruins that encompass them, can hardly be distinguished from the rocks themselves. There are considerable remains of massive foundations, columns, cisterns, etc., testifying to former prosperity greater than that of either Anathoth or Geba" (Foster, Homily, xvi, 215, 216).

Mich'mah (1 Sam. xiii, 22-23; xiv, 5, 31; Neh. xi, 31; Isa. x, 38). See Micmacs.

Mich'methath (Heb. Michmethath, מיכִּמְתַּחְתּ, perh. kibbat-pole; Sept. Měṣforte, Vulg. Michmethath), a town on the northern border of Ephraim (and the southern of Manasseh), situated eastward of Shechem and southward from Asher, in the direction of Tappuah (Josh. xvii, 7); also not very far west of Jordan, but beyond Taanach-Shiloh (Josh. xvi, 6; where part of the verse appears to have been transposed from its proper location at the beginning of ver. 8; see Keil's Comment. ad loc.). These notices appear to fix it not far from Wady Bidan, north-east of Salem. See Taima. This position corresponds to the location assigned to the associated places by Eusebius (Schwarz, Putei, p. 147); and M. G. M. Rodin has found a large village called el-Makka, which he thinks may be a vestige of the Biblical locality (Narrative, i, 99); but Dr. Robinson, who passed through this region during his last visit, speaks only of "several villages" visible in this vicinity (Researches, new ed. iii, 290), and applies the name to a larger territory called the Valley of Na-bilah (Tillem. p. 132, etc.); which, however, according to Van de Velde's Map, runs into Wady Bidan.

Mich'ri (Heb. Mīkhīrī, מיכִּרִי, salable; Sept. Mōξυς v. Ῥαιφη), the father of Uzzi and grandfather of Elah, which last was one of the principal Benjamites resident in Jerusalem after the exile (1 Chron. ix, 8). B.C. considerably ante 440.

Mich'tam (Heb. mīkām, מִכְּתָם, prob. for בְּכָתָם, בְּכָתָא, written; Sept. στρατιαρχία, Vulg. tituli licvitius), a term found in the titles of several persons from (Jos. xvi, lvii, lviii, x, 1), and signifying a writing, i.e. a poem or song (see Genesis, Theour., p. 734), like בְּכֶתָם (mikchat), "writing," in Isa. xxxviii, 9). Others (as Luther, after Aben-Ezra, Kimchi, and others) usually transliterate it gold, i.e. precious, distinguished, as if from בְּכָתָם, gold. Still others (as Hezel, Ewald) refer to an Arabic root meaning to conceal, as if written from retention, or in a partial strain; and some (after the rabbinis) make it a compound of בְּכָתָם, i. q. humble and perfect, referring to David. See PSALMS.

Micilalus, duke of Poland in the 10th century, is noted in ecclesiastical history as the promulgator of Christianity among the Poles, A.D. 965. His own version was brought about by his wife, Dambrowska, daughter of a Bohemian prince. John XIII was at that time the Roman pontiff, and he dispatched Egidius, bishop of Tuscumia, to the aid of the duke and his wife. See POLAND.

Miclaus, JEN-Louis, a French Protestant theologian, was born at Rheims about 1530. He took part in the Reformation; established a school at Orleans in 1557, and taught the humanities in the college of the same city. Allied by friendship with Gentien Hervet, a canon of Rheims and native of Orleans, the difference in their religious brought upon a polemical correspondence. He died near the close of the 16th century. He wrote Laepamnius castri excellitio et excidium (1554): —De constituenda apud Aurelius juvenitius disciplinio Orato (1558); —Aurelius urbis memorabilis ab Anglia ordo, anno, 1560, et Joanne Virginis Latharingo regina gesta (1560); —Respense au discours de Gentien Hervet, en ce que les pilleurs royaux et brouteurs de l'Episcop dicent qu'ils ne eulent qu'utre priscia (1564); —Dezascisme

MICRONESIA

Microlius, JOHANN, a German Lutheran professor, was born at Cösin, in Pomerania, Sept. 1, 1597. He began his studies at the college of his own town, and in 1614 removed to Steitten, where he studied theology under professor Aamer. In 1616 he maintained a dispute, "De idolatre, which secured him much reputation. A year after he disputed at the University of Königsberg, "De veritate transendentuli." He received in 1621 the degree of master of philosophy at the University of Greifswald, after having maintained a thesis, "De meteoris." He finished his studies at Leipzig. He was made professor of rhetoric in the royal college at Steitten in 1627, rector of the Senate in 1627, and rector of the royal college and professor of theology in 1649. He had a famous dispute with John Bergius, first preacher at the court of the elector of Brandenburg, upon the differences between the Lutherans and Calvinists. On a visit to Sweden, in 1650, he died, having had his respect to queen Christina, who received him with very marked attention. She declared the charges of his doctor's degree. He died Dec. 8, 1658. Micrulas wrote, Lexicon Philologicum: —Lexicon Philosophicum: —Synagoga Historia Mundis: —Synagoga Historia Ecclesiastica: —Ethnophonia conscripsit: —Bacteriana Geo- Phisica, Guion (both p. 315, 218) he afterwards added a continuation, Contra Judaeas Depravations: —Tabella Historica, ad Millen. et Rempublic. Tempora disjuncta Necessaria: —Tractatus de copia Rerum et Verborum, cum Praef. continuo Precipitum Rhetor. —A rachologia, Artithetica, una Gloorum Tabular. Geographicorum: —De Thesba, inlocutus contra Bergium; and numerous theses, disputations, orations, etc. See Allgemeines Historisches Lexicon (Leips. 1731, 5 vols. fol.), iii, 560 sq.; Witte, Mem. theol. p. 292 sq.; Bayle, Hist. Dict. s. v. (J. H. W.)

Micronesia (from Greek μικρος, small, and νησος, island, signifying a region of small islands or islets) is a term of recent application, and is applied to a portion of the Central Archipelago, Pacific Ocean, including the Kingsmill group. Micronesia proper extends from the westernmost island of the Sandwich group to near Japan and the Philippines, and reaches south of the equator, including the Ladrone Islands, the Carolinas, and the Pellew Islands. The Kingsmill group lies on both sides of the equator, and contains fifteen principal islets, all coral islets, mostly covered with coco-nut groves.

Customs. —The population of these islands amounts to about 50,000 souls. They are governed by independent chiefs or kings, and mostly lead a life of indolence. They are divided into three classes—chiefs, landholders, and slaves. They live in small communities, regarding the eldest of their number as a kind of patriarch. Polygamy is common. They are hospitable, and ready to share the last morsel with the needy. In each town is a "stranger's house," where travellers find a temporary home. The cocoa-nut, which everywhere abounds, supplies the few wants of the natives with little labor. Their chief employment is the manufacture of cocoanut oil. Almost everything which the natives eat, drink, wear, live in, or use in any way, is obtained from the cocoa-nut tree.

Religion. —There exists hardly any well-developed form of worship or religion. They have no idols and no priests. Religion is a "right of nature," said, of veneration for the spirits of the dead, used to prevail among these people, but is gradually dying out. When a Micronesian dies, the body is placed upon mats, in the centre of the house, and rubbed with cocoa-nut oil till the flesh is gone; then the bones are placed in a loft or thrown into the sea. A votive house is near the house as a resting-place for the spirit, and offerings
men were composed chiefly of ecclesiastical and ascetic works. Greek literature was generally neglected, Latin but poorly cultivated; rhetoric was turned into bescant, the liberal arts comprised within a few rules, and the study of philosophy abandoned and decried. This barbarism almost extinguished the light (hence the name "Dark Ages") and life of Christianity, as the influence of the Church in the course of its previous corruption had weakened and was lost. See Ecl. Chron.; Ed., Thol. Dict.; Farrar, Eccles. Dict.

Middle Wall (μεσόγυρος), spoken of the chel or sacred fence ("partition") between the Court of the Gentiles and the interior sanctuary of the Temple (Eph. ii., 14). See Temple.

Middlekauff, Solomon, a German Reformer minister, was born near Hagerstown, Md., in 1818; was educated at Marshall College, Mercersburg, Pa. (class of 1839); studied theology in the theological seminary of the German Reformed Church located in the same place; was ordained in 1842, and became pastor of the Lincolnston charge in North Carolina. He died at the mineral springs, Catawba County, N. C., May 21, 1845. His ministry was brief but blessed. Energetic, mild, and peaceful in spirit, well educated and zealous, his influence was widely felt, and his memory is faithfully cherished.

Middleton, Conyers, a celebrated divine and scholar of the Church of England, was born Dec. 27, 1688, at Richmond, in Yorkshire. His father, the Rev. William Middleton, rector of Hindewell, gave him a liberal education. At the age of seventeen he was sent to Trinity College, Cambridge, of which college he was two years senior, and of which he was scholar. He graduated with the degree of B.A. in 1702, and was shortly after ordained deacon. In 1706 he was elected a fellow of Trinity College, and in 1708 joined with other fellows of his college in a petition to the bishop of Ely, as the visitor of the college, against Bentley (q. v.), the master. Middleton, who was then a young man, did not take any prominent part in this proceeding; but the feelings of hostility to the master originated by these disputes sank deep into his mind, and made him subsequently the most determined and dangerous of Bentley's enemies. Soon after this petition, he withdrew himself from Bentley's jurisdiction by marrying a lady of ample fortune. He subsequently resided for a short time in the Isle of Ely, on a small living in the gift of his wife, but the unhealthiness of the situation induced him to return to Cambridge at the end of a year. In October, 1717, when George I visited the University of Cambridge, Middleton, with several others, was created doctor of divinity by mandate of the regius professor of theology. He was refused to confer the degree unless a fee of four guineas was given to him in addition to the so-called "broad-piece," which had by ancient custom been allowed as a present on this occasion. This demand was resisted by Middleton, who, however, at last consented to pay it under protest. An appeal to court proved unfavorable to Bentley, but still he kept the money. Middleton thereupon sued Bentley for it in the vice-chancellor's court; and Bentley, refusing to pay the money or to acknowledge the jurisdiction of the court, was deprived of his degrees. Bentley petitioned the king for relief from that sentence, and, as he was then a supporter of the Tory ministry then in power, it was feared that a commission might be issued by the crown to inquire into the state of the university. Middleton, to justify himself and his friends, published A full and impartial Account of all the late proceedings in the University of Cambridge against Dr. Bentley, a Monk, a work which long continued to flourish, and is published specimen of a style which, for elegance, purity, and sense, yields to none in the whole compass of the English language. The scrupulous and resentful feeling which prompted every line, is in some measure disguised by the pleasing language, the harmony of the periods, and the veil of scholarship which enlivens the
whole tract" (Monk, Life of Bentley, p. 888). A few months afterwards Middleton published A Second Part of the full and impartial Account of all the late Proceedings, and also A True Account of the present State of Trinity College, Cambridge, containing the great po-

erty of their Master, R. Bentley, late D.D. These books seem to have been written in order to destroy the suspicion which many then had, viz., that the proceed-
ings of the university against Dr. Bentley did not flow so much from any real Jenifer in the man, as from a certain spirit of enmity to his scheme, and from the great property of the person of whose interest he was thought to be. Middle-
ton, in one of his pamphlets, had very imprudently de-

clared "that the fellows of Trinity College had not been able to find any proper court in England which would receive their complaints;" and Bentley, perceiving that his adversary had been guilty of an expression which might be considered as a libel upon the administration of justice in the whole kingdom, brought an action against him, in which the jury returned a verdict of guilty. The court, however, was unwilling to pronounce sentence, and the matter was eventually settled by Mid-

ton's begging pardon of Bentley, and consenting to pay all the expenses of the action.

But Middleton had not done with Bentley yet. The latter, in 1720, published proposals for a new edition of the Greek Testament, with a specimen of the intended work. The former, in 1721, published Remarks, Para-

Although Middleton professed, in the commencement of the pamphlet, that "his remarks were not drawn from him by personal spleen or envy to the author of the Proposals, but by a serious conviction that he had nei-
	

ter balance nor materials proper for the work he had undertaken, and that religion was much more likely to receive detriment than service from it;" the whole tenor and style of the pamphlet showed that it was the result of the most virulent personal animosity. He followed up his attack on Bentley by Some further Remarks; and it must be conceded that these two books against Bentley are written with great acuteness and learning, and, though Bentley accepted to despoil them, they de-

stroyed the credit of his Proposals so effectually that his intended publication of the New Testament came to nothing.

Upon the great enlargement of the public library at Cambridge, a new office of principal librarian was estab-
lished, to which Middleton was elected, notwithstanding a violent opposition. He afterwards travelled through France and Italy, and spent some months in Rome in 1734. After his return, Middleton published his cele-

brated Letter from Rome (1728), in which he attempted to answer the objections of the writer of the pamphlet which was derived from that of their heathen ancestors; and that, in particular, the rites, ceremonies, dress of the priests, etc., in the Roman Catholic Church, were taken from the pagan religion. This work was received with great favor by the learned, and went through four editions in the author's lifetime; by the publication of a new work, Christianity as old as Creation (1731), he not only gave great offence to the clergy, but also ruined all his hopes for preferment. This letter, which was first published anonymously, was soon known to be writ-

ten by Middleton. Pearce (q. v.), bishop of Rochester, replied to it, treating the author as an infidel; and so strong was the feeling against Middleton that he was in danger of losing his degree and office of librarian. From-

ishing, he published a little pamphlet entitled, "God's Government of their Master, R. Bentley, late D.D."

This manifestly Middleton attacked his own belief in Christianity, and disavowed any intention to cast doubt upon its evidences; and thereby saved himself from degrada-

tion, but not from strong suspicion of hypocrisy—a charge which has ever since attached to his name.

Middleton regarded Christianity in scarcely any oth-
er light than as a republication of the law of nature, and endeavored to reduce, as far as possible, everything super-
natural in the Bible to mere natural phenomena. He expres-
sely maintained that there were contradictions in the four evangelists which could not be reconciled (Reflections on the Variations found in the Four Evang-
elists); he accused Matthew of wilfully suppressing or negligently omitting three successive descents from father to son in the first chapter of his Gospel (see vol. ii, 24); he asserted that the apostles were sometimes mistaken in their applications of prophecies relating to Christ (ii, 35); he considered "the story of the fall of man as a fable" (ib. p. 111); and in 1741, in his Life of St. Paul, he declared that the prophecy given at the fall, he did not hesitate to declare (iii, 188) "that men who inquire into things will meet with many absurdities which reason must wink at, and many incredibilities which faith must digest, before they can admit the authority of this prophecy upon the evidence of this historical narrative." Such being the opinions of Middleton, it cannot be expected that, not-
withstanding his assertions to the contrary, that he should have been looked upon as a diabolizer in the fundamental doctrines of Christianity.

While these discussions were going on, Middleton was appointed to the professorship of natural history, which appointment he resigned in 1734. In the following year he published A Dissertation concerning the Origin of Printing in England, showing that it was first introduced and practiced by an Englishman, William Caxton, at Westminster, and not, as commonly supposed, by a for-
eign printer at Oxford. In 1741 he published by sub-
scription a work, A Life of M. Tullius Cicero (London. 2 vols. 4to). There were three thousand subscribers to this work, and the profits arising from its sale were so considerable as to enable Middleton to purchase a small estate at Hilder-
sham, six miles from Cambridge, where he chiefly res-
ided ever since. About the middle of the year he was appointed Principal of Jesus College, and afterwards Middleton published a translation of Cicero's letters to Brutus, and of Brutus's to Cicero, with the Latin text, and a prefatory dissertation, in which he de-
fended the authenticity of the Epistles. In 1745 he published Germania quadrat Antiquitatum erudita Monu-
ments, etc., in which he accounts at some length for the specimens of ancient art which he had collected during his residence at Rome. Two years afterwards he published his Treatise on the Roman Senate, in which he maintained that all vacancies in the senate were filled up by the people. But the work which has a peculiar interest for us is the Poor Poets shortly after, under the title An Introductory Discourse to a Larger Work, designed hereafter to be published, concerning the Miraculous Pow-

ers which are supposed to have subsisted in the Christian Church from the earliest Ages, through several successive Centuries; by which it is shown that we have no sufficient Reason to believe, upon the Authority of the Ancients, that the Catholic Church continued to the Church after the Days of the Apostles (1748). The Introductory Discourse to the work, and the Free Inquiry itself, elic-
ted numerous controversial tracts. Middleton was at-
tacked by Stebbing and Chapman, the former of whom

VI. 86
endeavored chiefly to show that Middleton's scheme was inseparably connected with the fall of Christianity, while the latter labored to support the authority of the fathers. These attacks Middleton repelled by Some Re- marks of Dr. Dodwell (by Dr. Arnaud) (London, 1750) published against the Intarnation. "The discourse," remarks Mr. Orme (Bibb. Bibb. s. v.), referring to the whole controversy, "is worthy of attention, for, though the combatants on both sides carried matters too far, considerable information may be collected from the subject, the character of the fathers, the nature of miracles, and on other points closely connected with the Christian revelation." The controversy began to grow very hot. Besides Stebbing and Chap- man, Parker, Brook, Johnson, Dodwell, Church, and others attacked him, while he was defended by Yates, Jen- kins, Toll, etc. A full list of the principal publications on the subject are enumerated by Kipins in a note to the 6th part of Dodwell's Course of Lectures (see also Orme's Bibb. Bibb.; Strong's Cut. of Engl. Theol. 1800, No. 9441 sq.; Lord Brougham, Men of Letters of the Times of George III, (p. 384). It was declared by Middleton's opponents that the tendency of his inquiry was to de- stroy the evidence of miraculous interpositions; but Middle- don explicitly disavowed such intentions, and should have the benefit of the doubt. This much, however, must be admitted, that he seems never to have been so much pleased as when, by broaching some startling point of dispute, he succeeded in horrifying the minds of his adversaries. According to some, the logical world had recovered from the surprise and indi- gnation into which they had been thrown by the Free Inquiry, its fearless author put forth upon the world an attack upon bishop Sherlock, entitled An Examination of the Lord Bishop of London's Discourses concerning the Use and Intent of Prophecy; with some curious Anecdotes on his late Appendix, or additional Dissertation, containing a further Inquiry into the Mosaic Account of the Fall (1750). In this work he attempted to refute Sherlock's (q. v.) theory of a chain of prophecy running through the different portions of the Old Testament. He was refuted by Dr. Rutherforth, divinity professor at Cambridge; but, Middleton, whose end seems to have been answered, which was to abuse the bishop a little, pursued the argument no further. The obstinate contro- versialist died with the armor on his back and the lance in his hands. He was meditating a general answer to all the objections made against the Free Inquiry; but, being attacked with illness, and immediately after the last of his meditations, in the streets of London, he thought it prudent to accept a small living from Sir John Frederick. A few months after his death was published his Indications of the Free Inquiry into the Miraculous Powers, etc., from the Objections of Dr. Dodwell and Dr. Church. The piece is unfinished, but very able as far as it goes. In 1734-1756, 23 or 24 years after the appearance of the little collected works of Livy, editions of Cicero, were collected and printed in four volumes, 4to, under the title of Miscellaneous Works; among which were inserted the following pieces, never before published, viz., A Preface to an intended Answer to all the Objections made against the Free Inquiry;—Some cursory Reflections on the Dispute, or Dissertation, which happened at Alnwick, between the Apostles Peter and Paul;—Reflections on the Variations, or Inconsistencies, which are found among the Four Evangelists in their different Accounts of the same Facts;—An Essay on the Gift of Tongues, tending to explain the proper Nature and Nat- ural use of it, as it is described and delineated in the sa-cred Scriptures, and as it appears also to have been under- stood by the learned both of ancient and modern times;— Some short Remarks on a Story told by the Ancients con- cerning St. John the Evangelist and Cerinthus the Hero- tician; and on the Use which is made of it by the Moderns, to enforce the Duty of shining Heretics;—An Essay on the allegorical and literal Interpretation of the Creation and Fall of Man;—De Latinarum literarum pronunci- atione dissertatio.—Some Letters of Dr. Middleton to his Friends. A second edition of these Miscellaneous Works was published in five volumes, 8vo, in 1755. "Dr. Mid- dleton," says Parr, in his preface Bellendens, "was a man of no common attainments; his learning was ele- gant and profound, his judgment was acute and polished, his taste was fine and correct; his style was so pure and harmonious, so vigorously flowing without being im- flated, that, Addison alone excepted, he seems to me without a rival." See Leckey, Hist. of Rationalism (see Index in vol. ii); Jortin, Eccles. Remarks, i, 298; Dic- riacci, Miscell. of Literature, Quarrels of Authors, p. 313; Nichols, Ed. Anec. p. 414 sq.; Knox, Essays, ii, 56; N. Amer. Rev.ree, xxxv, 440; Chancellor Kent, Course of Engl. Reading; Macaulay, Crit. and Hist. Essays, ii, 132; Orme, Bibb. Bibb. s. v.; Biogr. Brit. s. v.; Chalmers's Biogra- dict. s. v.; General Biogr. Dict. s. v.; English Cyclop. s. v.; Hook, Eccles. Biogr. s. v.; Darling, Cyclop. Bibl. i, 2957; Allibone, Dict. of Brit. and Amer. Authors, ii, 1273; MacM. Dictionary, xxiv, 257; xv, 461; xxvii, 440 sq.; xxxii, 607; Bickersteth, Christ. Student, p. 298.

Middleton, Brahma, a noted English divine, was born about 1740. He received his education at St. Edmund's Hall, Oxford, but was expelled from that university, together with five other youths, on account of his sympathy with the Methodists. This circumstance caused his removal to Macquown's Asylum of The Shakers. Middle- don then entered King's College, Cambridge, and, after his graduation, became pastor of an Episcopal congregation at Dalkeith, Scotland, and curate successively to Romaine and Cadogan, and at St. Margaret's, Westminster. He was presented to the rectory of Turvey, Bed- fordshire, in 1751, and was thus a predecessor of Leigh Richmond, who was presented to the same rectory in April 1785. He died in 1805. Middle- don was a man of warm piety, and of a Catholic spir- it. He is the well-known author of Biographia Evangelica, or an historical Account of the Lives and Deaths of the most eminent evangelical Authors or Preachers, both British and Foreign, in the several Denominations of Protestants (1753, 4 vols. 8vo). This great biographical work is a collection of invaluable materials, and must immortalize his memory, while doing immense good. Of his other works we mention: Archbishop Leighton's whole Works, with Life (1805, 4 vols.).—Veritas and Insti- tutions of the Pauline of David (1808).—Luther's Com- mentaries on Galatians, Part 1st, in 8vo (1807). See Allibone, Dict. of Brit. and Amer. Authors, ii, 1275; Cooper, Biog. Dict. of Eminent Persons, p. 865.

Middleton, Thomas Fanshawe, D.D., the first English bishop of Calcutta, largely identified with the Anglican Church missionary work in India, only son of the Rev. T. Middleton, rector of Kedleston, Derbyshire, was born at that village Jan. 26, 1768. His early training he received under his father. In 1779 he was ad- mitted to Christ Church, Oxford. In 1780 he proceeded to Pembroke Hall, Cambridge, where he took his degree of B.A. with honors, in January, 1792. Shortly after he received ordination, and entered upon the curacy of Gainborough, in Lincolnshire. Here he edited a periodical work entitled the Country Spectator, which continued to appear for a number of months. Meanwhile Middleton sustaining the paper mainly by his own com- positions. This connection brought him to the notice of Dr. John Pytney, archdeacon of Lincoln, who in 1794 appointed him tutor to his two sons. Middleton in consequence removed first to Lincoln, and afterwards to Norwich, where he became one of the preachers Man- crot in 1799, having previously (in 1795) been presented by Dr. Pytney to the rectory of Tansor, in Northam- pondshire. In 1802 he was presented with the rectory of Bytham, in Lincolnshire. About this time he wrote
his chief work, *The Doctrine of the Greek Article applied to the Criticism and Illustration of the New Testament*, which he published in 1808, with a dedication to Dr. Pretzmann. The object of this work is, first, to establish the rules which govern the use of the article, and to show how it is wrongly applied in the Greek of various passages in the New Testament, many of which are of such a nature that they furnish arguments for or against the divinity of Christ, according to the different views which are taken of the force of the article. Owning to this circumstance, the doctrine of the Greek article has become the subject of warm discussion among many theologians; and some Unitarian divines have strongly opposed the views of Middleton. His chief rules have, however, been received as sound by the great majority of Biblical critics. (A second and improved edition was published by Prof. Schoefield in 1828; and a third by the Rev. Hugh James Rose in 1838.) An abstract of his work is prefixed to Valpy's edition of the Greek Testament.) In the same year in which he published this work he took his degree of D.D. at Cambridge, and removed to his living at Tansor, where he discharged his duties in such a manner as to gain the affection and esteem of his people. In 1809 he was appointed by Bishop Pretzmann to a stall in the cathedral of Lincoln, and in 1812 to the archdeaconry of Huntington. In 1811 he resigned his two livings for the vicarage of St. Pancras, Middlesex, and the rectory of Rottemham, in Hertfordshire. He fixed his residence at St. Pancras, and his work on the divinity of Christ was published at the Church of other distinguished individuals. He was in sympathy with the object of the Society for Promoting Christian Knowledge, and was earnest and uniring in advancing its interests, as well as those of other societies in connection with the Church. The knowledge thus acquired of their plans, resources, and activities greatly aided him in his subsequent career in India, and the discernment and good judgment which he brought to their meetings contributed materially to their efficiency. About this time the Anglican Church established a bishopric in India, constituting Calcutta as the episcopal residence. For this distinguished position Dr. Middleton was selected; and he was accordingly consecrated the first colonial bishop ever set apart by the Anglican Church by the archbishop of Canterbury, May 8, 1814. A short time prior to his departure for Calcutta, bishop Middleton was made a fellow of the Royal Society. He arrived in Calcutta Nov. 28, 1814—a little after the death of the author of *Henry Martyr*, that valued worker in this field. During the voyage Middleton had diligently employed himself in increasing his qualifications for his office, especially by the study of Hebrew and Persian. As bishop of Calcutta he made every effort to promote the interests of Christianity, and to aid the cause of education. He made three visitations of his immense diocese, in two of which he directed his particular attention to the state of the Syrian Christians in the neighborhood of Cochín, on the coast of Malabar. By his efforts the Bishop's College at Calcutta was established for the education of chil- dren of the See. In 1829 he went to the East Indies, and in the same year he made a tour in Asia; and he laid the first stone of its buildings Dec. 15, 1820. He instituted a consistory court at Calcutta, and would have done the same at Madras but for the opinion of the advocate-general of Madras that he regarded such a measure as illegal. Those extended labors and extraordinary exertions, embarrased by daily annoyances from the civil authorities in their application of regulations applicable only to the home clergy, could not result otherwise than in depressing him and diminishing his vigor, especially in India's unhealthy climate, and greatly hastened the end of his days. He died July 8, 1831. He was buried in the churchyard of Calcutta. His successor in the work was the Sainted Reginald Heber (q. v.). Bishop Middleton was large and dignified in form, animated in manner, and generous and kind in disposition. As a preacher he was very impressive, his voice clear and pleasing, his style simple and manly, generally argumentative, and strongly imbued with the doctrines of the Church of England. In accordance with his last desires, bishop Middleton's papers were destroyed, and we have, therefore, none of his greater works exceptual transformation through the office of "the Greek Article," the periodical publication mentioned above, and some sermons, charges, and tracts, which have been collected into a volume, to which a memoir of bishop Middleton is prefixed, by H. K. Bonney, D.D., archdeacon of Bedford London, 1824. See also the Rev. Charles, Life of the Right Hon. Fanthamodell, London, 1831, 2 vols. 8vo); Miss Yonge, Pioneers and Founders, ch. vii; Monthly Review, 1810 (May); Kaye, Christianity in India. (J. H. W.)

Middoth. See Talmud.

Midgard's Serpent, or the World-Serpent (J"ormungand), is, in the mythology of the Norsemen, the great serpent which surrounds the world. As the offspring of Loki (q. v.), the principle of evil, the other gods feared the new-born, and determined to get early possession of it and Fenrir, another of Loki's offspring, and, when secured, Midgard's Serpent was cast into the ocean, where it grew till it encircled the world, biting its own tail. At the end of the world, the world-serpent will fight of among the gods, and he who wins the contest will be the one who, however, will die immediately afterwards from the effect of its venom. The myth of the world-serpent is supposed to signify the deep or main ocean, which, excited by Loki (subterranean fire or earthquake), is thrown upon the land, thus proving scarcely less fatal to the works of man than the direct action of volcanic fire, represented under the form of Fenrir. For further particulars, see Thorpe's Northern Mythology, 180 sq., 161 sq.; Mallet's Northern Antiquities, vol. ii, Fables xvi, xxx, xxvi, xcviii, Keyser's Religion of the North- men; Petersen's Nordisk Mythologi.

Midian (Heb. מִידָן, מִיָּדָן, str. as in Prov. xviii, 18; xix, 13; Sept. מַדְאָעָא v. מַדָאָע; N. T. Μαδαία, Acts vii, 28, where the Auth. Vera. has "Ma- dian"); the Heb. often stands collectively for the "Midianites," as it is frequently rendered in all the versions), the fourth son of Abraham by Keturah, and the progenitor of the Midianites (Gen. xxv, 2; 1 Chron. i, 32). B.C. post 2024. His five sons are enumerated in Gen. xxxv, 4; 1 Chron. i, 38. Of his personal history nothing further is known. See Midianite.

Midianite (Heb. מִידָניָית, מִיָּדָּני; Numm. xxx, 29, used collectively, and so rendered by "Midianites," which is the usual English equivalent for Middain as the origin of Middain, See also Madi- an, a tribe of people descended from Abraham's son Midian (q. v.), a branch of the Arabian dwelling principally in the desert north of the peninsula of Arabia. Southwards they extended along the eastern shore of the Gulf of Aden; and northwards they stretched along the eastern frontier of Palestine; while in the peninsula of Sinaim seem to have afforded them pasture- grounds, and caused it to be included in the "land of Midian." The notion that there were two peoples called Midian, founded on the supposed shortness of the interval for any considerable multiplication from Abraham to Moses, and on the mention of Moses's Cushite wife, seems to be untenable. Even since the question of ob- jection, which is unnecessary, one tribe has often become merged into another and older one, and only the name of the latter retained. See Burton, Gold Mines of Midian and Ruined Midianitish Cities (Lond. 1878, 8vo).

I. History. Midian, though not the oldest, was the most celebrated son of Keturah. What Judah became among the tribes of Israel, Midian became among the tribes of Arabia. It is true we find the other branches of the Keturites spoke of a few times in sacred his-
Midianite, and mentioned in such a way as to prove that as tribes they never lost their individuality; yet the Midianites were the dominant people, and Midian is the great name which always comes out prominently before the historian. Not only so, but the Midianites appear to have been regarded by the semi-nomad rulers of Arabia, combining into a grand confederacy, and then guiding or controlling, as circumstances required, all the Arabian branches of the Hebrew race. This fact comes out incidentally in many parts of Scripture; and we require to keep it carefully in view in order to understand the next.

1. Midian had five sons, who, doubtless, in accordance with Arab custom, became heads of distinct tribes (Gen. xxv, 4; comp. Numb. xxxi, 8). We are told that while “Abraham gave all that he had to Isaac,” that is, made him his heir—head of his house and patrimony—to the sons of the concubines Abraham gave gifts, and sent them away from Isaac his son while he yet lived, eastward, to the land in the east” (ver. 5). This is the first indication of the country occupied by the Midianites and other descendants of Keturah. The expression is not very definite. Abraham’s principal place of residence was at Haran—Mamre and Beersheba. The “country of the east” appears to have included the whole region on the east side of the Arabah or great valley which reaches from the fountains of the Jordan to the Ætolian Gulf. All Arabia, in fact, and even Mesopotamia were included in the “country of the East” (Gen. xxix, 1; Numb. xxxii, 7, etc.). See Exc-Keturat and Selah. The conditions which determined the thirty-five points more clearly to the exact territory of Midian. Hadad, one of the early kings of Edom, is said to have “smiten Midian in the field of Moab.” We may conclude from this that the Midianites were at that time settled on the eastern borders of Moab and Edom. They were, like all the Arabs, a nomad or semi-nomad people; bearing some settlements around fountains and in fertile valleys, but forced to wander in their tents from place to place to secure sufficient pasture for their flocks. The Midianites were an enterprising people. They were not satisfied with the dull routine of pastoral and agricultural life. From the first they appear to have engaged in commercial pursuits. Some districts of Arabia, Eastern Palestine, and Lebanon, yielded valuable spices and perfumes which were in great demand in Egypt, not merely for the luxuries of the living, but for the embalming of the dead. In this profitable trade the Midianites engaged. In the first part of their caravans passing through Palestine from Gilead to Egypt that Joseph was sold by his brethren (Gen. xxxvii, 25 sq.). Slaves at that time found as ready a market in Egypt as they do now. It will be observed that the traders are called by the historian both Ishmaelites and Midianites, the two names being used as synonymous. The reason probably is that these were the dominant tribes in Arabia, and carried on the trade jointly; hence they were known among strangers by both names. It would seem, however, that the merchants in this caravan were true Midianites, though they may have been accompanied by Ishmaelites (ver. 36, 36; but comp. 25, 27). In ver. 36 the Hebrew words for Midianites, and the plural of Midian ("Nidah"); the third son of Keturah (Gen. xxv, 2); while in ver. 28 the word is בֵּית יָד, the regular plural of יִד. There can be little doubt that the Midianites are referred to in both passages, as represented in the Septuagint, Vulgate, Targums, and other ancient versions. See MIDAI. By a similar latitude of expression, the Midianites sometimes appear to be reckoned among the Ishmaelites (Judg. viii, 12; viii, 22, 24); elsewhere they are distinguished from them (Gen. xxv, 4, 12, 22, 23) as being nomads in their habits, so that bands of them often moved from place to place. But the difficulty may be avoided by supposing that the terms “Midianite” and “Ishmaelite” are used as a synonyme of travelling mer-

chant, such as they became in later times. See ISHMAELITE.

2. The next notice of Midian is in connection with the eventful history of Moses—“Moses fled from the face of Pharaoh, and dwelt in the land of Midian” (Exod. ii, 15). He was given to Jethro, the priest of Midian, and brought up by his father and father-in-law. Moses kept his flock. The subsequent incidents of this strange narrative show clearly the region then inhabited by Jethro, and called "the land of Midian." It was the peninsula of Sinai, and it was while watching his flock there on the side of Horeb—Besore seen, the glory of the Lord in the burning bush, and received the commission to return to Egypt for the deliverance of Israel (Exod. iii, 1 sq.). It would appear, from a comparison of the several incidental notices of Jethro given in the Pentateuch, that the peninsula of Sinai was not his settled place of abode. When Israel was encamped at Horeb, Jethro brought thither Moses’s wife and his two sons; and, after a brief stay, we are told that “he went his way into his own land” (Exod. xviii, 1, 27; comp. Numb. x, 29, 30). The Midianites were nomads roaming over a very wide region, but, like most Arab tribes, having one permanent nucleus or capital—Mamre or Beersheba. The name of Midian (and hence the “land of Midian”) was often applied, as that of the most powerful of the northern Arab tribes, to the northern Arabs generally, i.e. those of Abrahamic descent (comp. Gen. xxxvii, 28, but see respecting this passage above; and Judg. viii, 24); and as Besore—see the choice pastures, the fountains, and the wells in the desert were all known to them. This fact throws light on Moses’s urgent request to his father-in-law—“Let us not, I pray thee, forsooth as thou knowest how we are to encamp in the wilderness, and thou mayest be to us instead of eyes” (Numb. x, 31). It should, however, be remembered that the name of Midian (and hence the “land of Midian”) was perhaps often applied, as that of the most powerful of the northern Arab tribes, to the northern Arabs generally, i.e. those of Abrahamic descent.
Israelites in their wanderings in the wilderness, when not miraculously supplied. Apart from this consideration, the Egyptians afterwards working mines at Sarratbet el-Khidhmin, and a small mining population may have found sufficient sustenance, at least in some seasons of the year, in the few watered valleys, and wherever ground could be reclaimed: rock-inscriptions (though of later date) testify to the number of at least passers-by; and their remains of colliery working have recently been discovered. Whatever may have been the position of Midian in the Sinaic peninsula, if we may believe the Arabi chemists and geographers, backed as their testimony is by the Greek geographers (see below), the city of Midian was situated on the opposite or Arabian shore of the Arabian Gulf, on the mountains on the north, and spreading east and west, we have the true country of the wandering Midianites. See SINA.

3. The next occurrence of the name of this people in the sacred history marks their northern settlements on the border of the Promised Land, "on this side Jordan (by Jericho), in the plains of Moab (Num. xxii. 1-4). The Midianites were a wise and a wily people. So long as the Israelites only traversed their outlying pasture-grounds on the west of the Arabah, they were content to cultivate their friendship; but when, in the latter part of their journey, having passed round the southern end of the Dead Sea, and entering the Moabian country by a perpendicular spur of ground, the Midianites were to be met with, the Israelites tried every plan and used every effort to work their destruction. They consulted with their neighbors, the chiefs of Moab, and resolved to bring the prophet Balaam to curse the powerful strangers (Num. xxi. 4-7). Balaam came, and the Lord turned the intended curse into a blessing. The prophet however, adopted a more effectual mode of injuring the Israelites than by the agency of enchantments. He persuaded the women of Midian and Moab to work upon the passions of the Israelites, and entice them to the licentious festivals of their idols, and thus bring upon them the curse of heaven (xxxv. 15). This infamous scheme proved only too successful (ch. xxxvi.), and, had it not been checked by the almost complete annihilation of the Midianites, it would have brought destruction upon the whole host of Israel (xxxv. 17; xxxvi. 2). The vengeance then executed upon Midian was terrible. Their cities and castles were burned; the entire males that fell into the hands of the conquerors were put to death, including the five kings of Midian—Evvi, Rekem, Zur, Hur, and Reba, together with Balaam—and with them all the married females; and the young women and children were reduced to slavery. It has been affirmed that these acts of vengeance are so cruel, so barbarous, that God, according to the nature of his character, have been prompted by a God of love, and that, therefore, the narrative cannot be considered as of divine authority. Those who bring such an accusation against the Scriptures must surely overlook the leading circumstances of the case—they must forget that the God of love is also the God of justice. The whole Midianite nation, male and female, had deliberately combined and conspired, by wit and stratagem, to wean the Israelites from their allegiance to the God of heaven, and not only so, but wantonly to allure them to the commission of the most foul and degrading crimes. Was it inconsistent with justice for the moral Governor of the universe to punish such guilt? Could any punishment less sweeping have freed the earth from crime so deep-rooted and so dangerous? The influence of the Midianites on the Israelites was clearly most evil, and directly tended to lead them from the injunctions of Moses. Much of the danger inherent in their influence may probably be ascribed to the common description of their species, while the Canaanite tribes were abhorred, Midian might claim consanguinity, and more readily seduce Israel from its allegiance.

The details of this war given by Moses afford us some little insight into the nature of the country of Midian, and the occupations of the people. The Midianites were not pure nomads; they had cities and goodly castles (xxi. 10). Their principal town Edom, though relatively thickly studded with the ruins of ancient cities and castles (Wallin, in Journal of R. G. S. xxiv. 115 sqq.; Porter, Damascus, ii. 188; Weistain, Reisebericht über Hauran, etc.; Graham, in Journal of R. G. S. for 1859). These were doubtless the habitations of the Midianites. The whole region around their cities, extending from the Arabian shore to the head of the Arabian Gulf, and the mountains on the north, are barren and dreary and desolate, is barren. In spring and early summer it is covered with vegetation, and it has many rich valleys, a few patches of which are still here and there cultivated by the Arab tribes. Everywhere there are evidences of partial cultivation in former days, and there are also traces of a comparatively dense population (see Porter, Hand-book, p. 501, 508, 592, etc.).

Some time previous to the exodus it appears that the Midianites had allied themselves closely to the Moabites. Sihon, king of the Amorites, made war upon Moab and Ammon, conquered a large part of their territory and made Moab his tributary, and his province possessed of the Midianites. At the same time he made Midian, the ally of Moab, tributary; and hence the five princes of Midian are called by Joshua wassals (בְּנֵי מִדְיָן; Keil on Josh. xiii. 21) or "dukes" of Sihon. The defeat of Sihon by the Israelites secured the freedom of the Midianites; and then they, fearing lest they should in like manner be subdued by Moses, conspired to destroy Israel, and thus brought about their destruction. The entire settlement of Midian was doubtless similar to that of all the nations of Arabia—patriarchal. The nation was divided into a number of tribes, each of which was independent, and led by its own sheik or chief. In time of common danger or of war, the sheiks of the various tribes formed a council, but always acknowledged the presidency of the head of one leading family, who was (and still is) styled the "prince" (ארמך) of the nation. Five of the sheiks of Midian are mentioned in Judges as subjects of Sihon. In Numb. xxxi. 8 they are called "kings" (בְּנֵי מִדְיָן). While in xxi, 4 Moab is said to have consulted with the elders (ָּאֵבַד) of Midian. The great Arab tribes have two classes of chiefs: one class is composed of the rulers of the leading divisions of the tribe, the other class of the other divisions. The former are hereditary, the latter are simply influential or warlike men who, by their talents, have gathered around them a number of families. It would seem to be the former class—the hereditary rulers of Midian—who are called "kings"; while the others, the influential leaders or saviors of the tribes, are termed "elders." In the transaction with Balaam, the elders of Midian went with those of Moab, "with the rewards of divination in their hand" (xxii. 7); but in the memorable words of Balaam the Midianites are not mentioned. This might be explained by the supposition that Midian was a wandering tribe, whose pasturing lands reached wherever, in the Arabian desert and frontier of Palestine, pasture was to be found, and who would not feel, in the same degree as Moab, Amalek, or the other more settled and agricultural inhabitants of the land allotted to the tribes of Israel, the arrival of the latter. But the spoil taken in the war so soon followed, and more especially the mention of the doings of Midian, render this explanation very doubtful, and point rather to a considerable pastoral settlement of Midian in the trans-Jordanian country. Such settlements of Arabs have, however, been very common. In this case the Midianites were evidently tributary to the Amorites, being "dukes of Sihon, dwelling in the country" (יִשְׂרָאֵל); this
The consequent panic of the great multitude in the valley, if it have no parallels in modern European history, is in itself a sufficient reason for supposing that the phrase "a chief house in Midian," throws a strange light over the obscure page of that people's history. The vices of the Canaanites, idolatry and licentiousness, had infected the descendants of Abraham, doubtless connected by successive intermarriages with those tribes; and the prostitution of this chief's daughter, caught as it was from the customs of the Canaanites, is evidence of the ethnological type of the latter tribes. Some African nations have a similar custom; they offer their unmarried daughters to show hospitality to their guests.

4. There is no further mention of the Midianites in history for two hundred and fifty years. During that period they had increased and had concurred in the influence and power, probably by the arrival of fresh colonists from the desert tracts over which their tribes wandered; and they again turned their arms against their old enemies, the Israelites. For seven years they oppressed them so grievously that the people were forced to flee from the open country, and to seek an asylum in mountain fastnesses, in caves, and in fortified cities (Judg. vi, 1, 2). Midian was now at the head of a great confederacy, comprising the Amalekites and the leading tribes of Arabia, called by the sacred historian Ben Ke- demi ("children of the East"); (ver. 3). In early spring the confederates assembled their vast flocks and herds, ascended to the heights of Mount Ephraim, and descended upon the rich plains of Central Palestine, plundering and destroying all before them—"sheep, oxen, asses," property, the young corn, and the luxuriat ants: "For they came up with their cattle, and their tents, and they came as grasshoppers for multitude; for both they and their camels were without number; and they entered into the land to destroy it" (ver. 5). In their distress the Israelites cried unto the Lord, and he sent a deliverer in the person of Gideon (ver. 8-13). The invaders were concentrated on Esdraelon—their flocks covering the whole of that splendid plain, and their encampment lying along the base of "the hill of Moreh," now called Little Hermon (ver. 83; vii, 1, 12). Gideon assembled his band of warriors at the well of Harod, or fountain of Jezreel, situated at the foot of Gilboa, and famed in after-days as the scene of Saul's defeat and death (vii, 1). See Harod. The romance of the meeting in the memory of the memorable campaign have been treated elsewhere [see GIDEON], but the Midianitish side of the story is pregnant with interest. The scene over that fertile plain, dotted with the enemies of Israel, "the Midianites, and the Amalekites, and all the Bene-Kedem, [who] lay along (צְּעַרְּבּ, fell, i. e. pitched their tents) in the valley like locusts for multitude, and their camels were without number, as the sand by the sea-side for multitude" (vii, 12), has been picturequeys painted by Prof. Stanley (Sinai and Palestine, p. 333).

The descent of Gideon and his servant into the camp, and the conversation of the Midianith watch, forms a vivid picture of Arab life. It does more: it proves that as Gideon, or Phrah, his servant, or both, understood the language of Midian, the Semitic languages differed much less in the 14th century B.C. than they did in after-times [see ARABIA]; and we besides obtain a remarkable proof of the consanguinity of the Midianites, and learn that, though the name was probably applied to all or most of the northern Abrahamic Arabs, it was not applied to the Canaanites, who certainly did not understand the language in the sense of the Gibeonites as we understand. The stratagem of Gideon requires an illustration from modern Oriental life. Until lately the police in Cairo were accustomed to go their rounds with a lighted torch thrust into a pitcher, and the pitcher was suddenly withdrawn when light was required (Lane's M. E. G., 2nd ed. p. 120)—a custom affording an exact parallel to the ancient expedient adopted by Gideon.
the nameless hordes who, under the common designation of "the people of the East," Bene-Kedem, harassed the eastern border of Palestine.

To this victory there are subsequent allusions in the sacred writings (Psa. lxxiii, 10, 12; Isa. ix, 4; x, 6); but the Midianites do not again appear in sacred or profane history. The name, indeed, occurs after the exile in Judg. v, 17, and it seems to be still in use among the Arabians. Josephus, however, asserts (Ant. iv, 7, 1) that Petra, the capital of Arabia (i.e. Idumea), was called by the natives Areeceme, from the Midianitish king Rekem slain by Moses (Num. xxxii, 8). Eusebius and Jerome also mention a city Mediam, so named after the tribe, near the Kezd (Qezda) on the east of the Red Sea, from which the district was called; and another city of the same name near the Armon and Areopolis, the ruins of which only existed in their days (Onomast. s. v.; comp. Jerome, Comment. ad Jes. ix, and Ezech. xxv). These were doubtless traditional recollections of the different branches of the Midianitish stock, showing their prevalence throughout Idumea and the Sinaic peninsula as a migratory tribe.

II. Geographical Identification.—From all the above notices, we may gather with considerable certainty that there were at least two main branches of the Midianites. It seems to have been the west portion of the tribe that settled about the eastern arm of the Red Sea, among whom Moses found refuge when he fled from Egypt, and whose priest or sheik was Jethro, who became the father-in-law of the future lawgiver (Exod. iii, 1; Num. x, 29). See Kezdre. These in like manner are usually reckoned along with the Ethipians of Cushite origin. It is certain that some Cushite tribes did settle in and on the outskirts of Arabia, which was therefore called Cash, in common with other districts occupied by Cushite tribes; and, under this view, it is observable that the wife of Moses is called a Cushite (Num. xii, 1), and that some Midianites married Cushites; for these are undoubtedly the Midianites who trembled for fear when they heard that the Israelites had passed through the Red Sea. We do not again meet with these Midianites in the Jewish history, but they appear to have remained for a long time settled in the same quarter, where indeed is the seat of the only Midianites known to Oriental authors. The Arabic geographers of the middle age (Edrisi, Chim. iii, 5, p. 3; Ibn el-Wardi, and Abulfeda, Arab. decr. p. 77; comp. Seetzen, xx, 311) speak of the ruins of an ancient town called Madim, on the eastern side of the Red Sea, which was still to be seen the well at which Moses watered the cedars by Jethro's command. But, otherwise, this is doubtless the same as Midiam, a town in the same district, mentioned by Ptolemy (Geog. v, 19); and Niebuhr conjectures that the site is now occupied by Moliah, a small town or village on the Red Sea, on the Haj road from Egypt (Descript. Arab. p. 577); but, as Rosenmüller remarks (Bibl. Geogr. iii, 224), this place is too far south to be identified with the Midian of Jethro. The Madim of Abulfeda is doubtless that mentioned by Josephus (Ant. xii, 11, 1) as Madime (Madjmēn), situated at the Red Sea, properly identified by Reland (Palest. p. 98, 100) with the modern Madjim, situated about half-way down the eastern coast of the Zalzul Gulf (Forster's Geogr. of Arabia, ii, 116, and Index, s. v.). To the same effect are the notices of the city Madim in Eusebius and Jerome above.

Another branch of the Midianites occupied the country east and south-east of the Moabites, who were seated on the east, or Nezib, or, perhaps, we should say that, as they appear to have formed the system of semi-nomad people, they pastured their flocks in the unsettled country beyond the Moabites, with whom, as a kindred, although more settled tribe, they seem to have been on the most friendly terms, and on whose borders they were situate those "cities and goodly castles which they possessed" (Numb. xxxvi, 10). It is to these Midianites that we must refer the brief statements of a collision with Haidal, one of the early Edomish kings (Gen. xxxvi, 35). These Midianites, like the other tribes and nations who had a common origin with them, were highly hostile to the Israelites.

Midian is named authentically only in the Bible. It has no history elsewhere. The names of places and tribes are found in later Hebrew writings; but the stories of Arabian writers, borrowed, in the case of the northern Arabs, too frequently from late and untrustworthy Jewish writers, cannot be seriously treated. For trustworthy facts we must rest on the Biblical narrative. The city of "Medyven [say the Arabs] is the city of the tribe of Shulm, the side of Tablok, on the shore of Bahr el-Kulsum [the Red Sea]: between these is six days' journey. It [Medyven] is larger than Tablok; and in it is the well from which Moses watered the flock of Shu'eib" (Marzidus, s. v.). El-Makrfit (in his Ḫāṭāt) enters into considerable detail respecting this city and people. The substance of his account, which is full of incredible fables, is as follows: Medyven are the people of Shu'eib, and are the offspring of Medy- vn [Midian], son of Abraham, and their mother was Kantarah, the daughter of Yuktan [Joktan] the Canaanite: she bare him eight children, from whom descended peoples. He here quotes the passage above mentioned, and cites the Arabic name "Medyven" from some other version of the text. He adds that the Arabs dispute whether the name be foreign or Arabic, and whether Medyven spoke Arabic, or, as some say, that they had a number of kings, who were respectively named Abjad, Hawez, Huttif, Kelemen, Sassas, and Karashet. This absurd enumeration forms a sentence common in Arabic grammars, which gives the order of the Hebrew and ancient Arabic alphabets, and the numerical order of the letters. It is only curiously as possibly containing some vague reference to the language of Midian, and it is therefore inserted here. These kings are said to have ruled at Medkech, Western Medjen, Medyven, and at other points in the Yemen; the great historians have magnanimously that Midian penetrated into the Yemen is, it must be observed, extremely improbable, notwithstanding the hints of Arab authors to the contrary: Yakht, in the Moam (cited in the Journal of the Deutsche. Morgenl. Gesellschaft), saying that a southern Arabian dialect is of Midianite origin; and El-Makri (op. Schultens, p. 156) inserting a Midianitish king among the rulers of the Yemen; the latter being, however, more possible than the former, as an accidental and individual, not a national occurrence. The story of Shu'eib is found in the Koran. He was sent as a prophet to warn the people of Midian, and being rejected by them, he was appointed king by Jethro. He is called in the Koran, vii, xxvii, and ii, xvi. He is generally supposed to be the same as Jethro, the father-in-law of Moses; but some, as Sale informs us, deny this; and one of these says that "[he was first called Buted, and afterwards Shu'eib; that he was a comely person, but spare and lean, and of few words." The whole Arabian story of Medyven and Shu'eib, even if it contain any truth, is encumbered by a mass of late rabbinical myths. El-Makrit tells us that in the land of Midian were many cities, of which the people had disappeared, and the cities themselves had fallen to ruin; that when he wrote (in the year 925 of the Hegira) forty cities remained, the names of which are not now being known, and of others lost. Of the former, he says there were, between the Hijaz and Palestine and Egypt, sixteen cities; and ten of these in the direction of Palestine. They were El-Khalasah, El-Santah, El-Medereh, El-Minyeh, El-Aaweaj, El-Khuweyryak, El-Birein, El-Munaj, Dead, El-Masrieh, and El-Santah. Of these cities were El-Khalasah and El-Santah; the stones of many of them had been removed to El-Ghazza (Gaza) to build with them. This list, however, must be taken with caution.

III. Conditions and Customs.—Much of this has already been incidentally mentioned. The whole account of the doings of the Midianites with Israel—and it is
only thus that they find a place in the sacred writings —plainly marks them as characteristically Arab. We have, therefore, not omitted our mention that they were married with Ishmael's descendants, and become nationally one people, so that they are apparently called Ishmaelites; and that, conversely, it is most probable their power and numbers, with such intermarriages, had caused the name of Midian to be applied to the northern Arabian Arabs generally. They are described as traders by Bedawi, or as "peasants" or "pastoralist," anon pastoral or settled Arabs — the "flock" of Jethro; the cattle and flocks of Midian, in the later days of Moses; their camels without number, as the sand of the sea-side for multitude when they oppressed Israel in the days of the Judges — all agree with such a description. Like Arabs, who are predominantly a nomadic people, they seem to have partially assimilated the Israelites' Moab, under the rule of Sihon the Amorite, and to have adapted themselves readily to the "cities" (םירע) and forts (A. V. "goodly castles," הָרֶים), which they did not build, but occupied, retaining even their camels and herds (Num. xxxi, 9, 10), but not their camels, which are not common among settled Arabs, because they are not required, and are never, in that state, healthy. Israel seems to have devastated that settlement, and when next Midian appears in history it is as a desert horde, pouring into Palestine with innumerable camels; and, when routed and broken by Gideon, fleeing "by the way of跳舞, the valley of Auran," in tatters to the east "to the border of Damascus." The characteristic of Midian we think is thus unmistakably marked. The only glimpse of their habits is found in the vivid picture of the camp in the valley of Jezreel, when the men talked together in the camp, and one told how he had dreamed that "a cake of barley-bread tumbled into the host of Midian, and came into a tent, and smote it that it fell, and overturned it, that the tent lay along" (Judg. vii, 18).

The spoil taken in both the war of Moses and that of Gideon is remarkable. On the former occasion, the spoil of 675,000 sheep, 72,000 beehives, and 61,000 asses, seems to confirm the other indications of the then pastoral character of the Midianites; the omission of any mention of camels has already been explained. But the gold, silver, brass, iron, tin, and lead (Num. xxxi, 22), the jewels of gold, chains, and bracelets, rings, ear-rings, and tablets (ver. 60)—the offering to the Lord being 16,730 shekels (ver. 28)—taken by Moses, is especially noteworthy; by the weight of gold alone is computed by the book taken by Gideon; for when he slew Zebah and Zalmunna he "took away the ornaments that [were] on their camels' necks" (Judg. viii, 21), and (ver. 24-26) he asked of every man the ear-rings of his prey, "for they had golden ear-rings, because they [were] Ishmaelites." And the weight of the golden ear-rings that he requested was a thousand and seven hundred [shekels] of gold; besides ornaments and collars, and purple raiment that [was] on the kings of Midian, and besides the chains that [were] about their camels' necks. (The rendering of the A. V. is sufficiently accurate for our purpose here, and any examination into the form or character of these ornaments, tempting though it is, belongs more properly to other articles.) We have here a wealthy Arab nation, living by plunder, delighting in finery (especially their women, for we may here read "nose-ring"), and, where forays were impossible, carrying on the trade southwards into Arabia, the land of gold—if not naturally, by trade—and across to Chaldea, or into the rich plains of Egypt. See ARABIA.

Midlent Sunday (or Mothering Sunday), imperfectly explained in the Antiquitates Vulgaris, is founded on the Roman Hilaria (q. v.), or fest in honor of Cybèle, the mother of the gods, who, the legend tells us, was converted by Christianity into the mother Church, whence, in the second step, the Antiquitates Vulgaris deduces the origin of Midlent. See Eucharis, Ḳ. H. historico-Sacra, i, 194; Foxbrook, British Monarchia, p. 61.

Midrash (Heb. מדרש) is a word applied to the oldest Jewish exposition of the Scriptures—a peculiar, somewhat wild mode of interpretation, which appeals more to the feelings than to the reason.

1. Title and its Signification, etc.—The term מדרש—which is strangely rendered in the text of the A. V. by story (2 Chron. xlix. 22; xxiv, 27), is derived from the root מִדְרָשׁ, to search into, to examine, to investigate, explain, and primarily denotes the study, the exposition, the Holy Scripture, in the abstract and general sense. Thus it is said, "Not the study of it (מִדְרָשׁ), but the doing of the law is the chief thing" (Acts, i. 17). The study or exposition of Holy Writ (מִדְרָשׁין) was effected in earlier periods through public discourse delivered on Sabbaths, festivals, and days of assembly, by the priests, Levites, elders of Israel, and prophets. During the period of the second Temple, when the canonical books and the written discourses of the older prophets became unintelligible to the mass of the people, who spoke Hebrew in Aramaic, these public explications became more formalised and were delivered on a large scale by the lawyers, or Scribes (מִדְרָשׁים), as they are called in the N.T., the directors of schools (מִדְרַשְׁתִּים), graduated rabbis (גָּמָל, only with suffix), or learned men in general and members of societies (מקדשים).

2. Design and Classification.—The design of the Midrash, or exposition varied according to circumstances. Sometimes the lecturer (מִדְרָשׁ, מִדְרָשׁים) confined himself to giving a running paraphrase (מדרש) into the vulgar Aramaic, or the other dialects of the country, of the lessons from the Law and Prophets which were read in Hebrew (see ה pieloxide), thus gradually giving rise to the Chaldee, Syriac, and Greek versions, so that these Targumim may be regarded as being the result, or formal results of the Midrash. The chief design of the Midrash, however, was to propound the Scriptures either logically or homiletically. Hence obtained that twofold mode of expression called the legal or Halachic exegesis, and the homiletic or Hagadic exegesis, and their respective literatures.

1. Legal or Halachic Exegesis.—The object of this branch of exposition is to ascertain, by analogy, combination, or otherwise, the meaning of the law respecting exceptional cases about which there is no direct enactment in the Mosaic code, as it was the only rule of practice in the political and religious government of the Jews under all vicissitudes of the commonwealth, and as the motto of the expositors and administrators of it was "Turn it (i.e. the inspired code) over and over again, for everything is in it, and will be discovered therein" (Acts, v. 22). The laws thus obtained, either by deduction from the text or introduction into it, are called Hakachoth (מִדְרָשׁים, sing. מִדְרָשׁ, from מִדְרָשׁ, to go), the rule by which to go, the binding precedent, the authoritative law, being, as such, the Holy Scripture. Chaldee Paraphrases (Exod. xxxi, 9), and this mode of exposition, which is chiefly confined to the Pentateuch as the legal part of the O.T., is termed Halachic exegesis. These Halachoth (מדרש), some of which are coeval with the enactments in the Pentateuch itself (Deut. xvii, 11), while some are the labors of the Great Synagogue or the Sopherim—Scribes—beginning with Ezra, and terminating with Simon the Just—were for centuries transmitted orally, and hence are also called Shmutha (מדרש(dm), i.e. that which was heard, or that which was received by members of the chain of tradition. These prohibitory
laws or fences (םִּיסְקָר, רְלָד, later דִּינְיָה) which the So- pherim were obliged to make on their own account in consequence of the new wants of the times, without being expressly prescribed in the Pentateuch, are called Sopheric precepts (םִּיסְקָרִים, רְלָדִים, and in the N.T. Tradition of the Elders (פרֹזְפִּיָּה, דַּבְּרֵי קְדֻשָּׁה), Matt. xv, 2; Mark vii, 3), are distinguished from the traditional laws which are decreed from the Bible. The latter are designated Deductions from the Law (דִּינְיָה הַדְּבָרִים, דִּינְיָה הַדְּבָרִים), and are of equal authority with the Biblical precepts. The few learned men who during the period of the Soferim (B.C. 450–300) wrote down some of these laws, or indicated them by certain signs (םִּיסְקָרִים) or hints (םִּיסְקָרִים) in their scrolls of the Penta- teuch, only did so to assist their memory, and the documents are called Secret Scrolls (הַדְּבָרִים, הַדְּבָרִים). These marginal glosses in the MSS. of the law became the basis of the Masorah (מַסְרָה). Gradually, however, these Halachoth were fully written down, and are embodied in the following works.

(1) It was not till the period of the Tanain (an honor- able appellation given to those doctors who transmitted the oral law), B.C. 229–A.D. 229, that the fixing, col- lecting, and redaction of the Halakhic code, as well as of juridico-political and religious practice, or doctrine of human and divine law ( الأمريكية וביי יָדִים, juris) — took place. The first attempt at a compilation and rubri- caration of it was made by Hillel I (B.C. 75–A.D. 8), who classified and arranged the diverse laws under six sedarim (סדרים) or orders. In this he was followed by Akiba (A.D. 29–132), and Simon II b. Gamaliel II, who was the president of the Sanhedrin A.D. 140–163, and whose son R. Jehudah I the Holy, called Rabbi Eliezer (died A.D. cir. 193), completed the final redaction of the code called Mishnah (מִיסְהָנָה).

(2) The Mishnah, however, like the Pentateuch, soon became the subject of discussion or study, as many of its statements and enactments are not Biblical and are cloaked in obscure language, but are derived from antagonistic sources. Hence, like the divine code of the law, which it both supplements and expounds, the Mishnah itself was expounded during the period of the Amora'im, or expounders: an appellation given to the public exposition of the oral law (הַדְּבָרִים,_derived from the Tanain). So that the Mishnah is properly Gemara, viz. the Jerusalem and the Babylon. See Talmud.

(3) Prior in point of age to the compilation of the Mishnah is the commentary on Exodus, Mechilta, which is composed of nine Tractates (תַּרְצָאִים, יִסְשָׁב), subdivided into sections (יסְקִים, יִסְשָׁב), and treating on select sections of Exodus in the following order: The first tract treat on Exod, xxi, 1–xii, 6, in eighteen sections; the second is on xiii, 7–xiv, 31, in six sections; the third is on xv, 1–21, in ten sections; the fourth is on xv, 22–xvii, 7, in seven sections; the fifth is on xviii, 8–xxvi, 27, in four sections; the sixth is on xix, 1–xx, 22, in eleven sections; the seventh is on xx, 23–xii, 22, in eight sections; the eighth is on xxi, 23–xxiii, 19, in two sections; and the ninth is on xxiv, 23–xxvii, 31, in four sections. The first compilation of the Mehilta was probably made under the influence of R. Ish- mael b. Elissa, A.D. cir 90 [see ISHMAEL B. ELISSA], who accounts for the many maxims contained in it, and not to be found elsewhere. It was re-edited afterward, and greatly altered (comp. Geiger, Òber die Gesch., p. 34 sq.). It was printed at Constantinople in 1515; then again at Venice in 1545; then, with a commentary and revised text by M. Frankfurter (Amst.), 1712; but the best edition is that by Landau (Vilna), in 1844. A Latin translation of it by Ugozino is given in his Thesaurus Antiquitatum Sacram (Venice, 1752), vol. xiv.

(4) Commentary on Leviticus, called Siphra, Siphra (שמיר בּ, סְפִּיר בּ), the book; also Siphra D'be Rab (שמיר, סְפִּיר), Siphra of the school of Rab, because Rab = Abba Arekka, the first of the Amora'im, and founder of the celebrated school at Sora, of which he was president twenty-eight years (A.D. 219–247), in its author; and by some it is denominated Bovathel sin Torah Cohani- mism (בּוֹתָא הַשֶּׁלֶם, בּוֹתָא הַשֶּׁלֶם), because the book of Leviticus which it expounds is called by the Jews the Code of the Priests (אֲבֹת הַנְּפָר, אֲבֹת הַנְּפָר), Jezebel, 72 b; Rashi, on Levit. ix, 23. The Siphra is divided into treatises (יסְקִים), which are subdivided into sections (יסְקִים), and these again into chapters (יסְקִים)....
position and age of this Midrash are discussed by Zunz,
Die Gottheitsdienstlichen Vorträge, p. 271-278.

(f.) Midrash on Samuel, called מדרש שמעון [Rabbatza], divided into thirty-two sections (拜师学艺), twenty-four of which are devoted to 1 Sam. and eight to 2 Sam. It is chiefly made up of excerpts from older works, and the compiler is supposed to have lived about the middle of the 11th century. Rashbi is the first who quotes this Midrash (Comment., on Chron., x, 13). It was first published at Constantinople in 1517, and has since been frequently reprinted with the Midrash described below. The best editions of it are the one with the twofold commentary of Joseph and Anan Joseph referred to above, and the parallel passages of the Talmud and Midrashim, etc., by Schrenzel (Stettin, 1860); and the other published together with the Midrash on Proverbs and the commentary of Isaac Cohen (Lemberg, 1861).

(6.) Midrash on the Psalms, called מדרש תהילים [Rabbatza], Haggadot Tehilim (תהלים), or Skochor Tob (אברהם שוחזר תוב), after the words with which it commences. With the exceptions of seven psalms—viz., xiii, xxvi, xxvii, xxviii, cxxiv, cx, and cxxx—this Midrash extends over the whole Psalter. As it contains extracts from the Babylonian Talmud, the Pesikta, Boraitha of R. Eliezer, Tanchuma, and Pesikta Rabbathi, it must have been compiled about the end of the 10th century, most probably in Italy. It was first published at Constantinople in 1512. The portion on Ps. cxix, which extends to the first verses of the letter כ, is called Midrash Alpha Bata, ה诽ח תהלים 알פא באתה ( bạcיתא ה诽ח תהלים), from the fact that this is an alphabetical psalm; it has been published separately (Salonica, 1510). The Midrash on the Psalms has frequently been published together with the Midrash on Samuel, under the title Skochor Tob (אברהם שוחזר תוב), which properly belongs only to that on the Psalms.

(7.) Midrash on Proverbs, called מדרש רבה [Rabbatza], consists of a compilation of those maxims and expositions from former works which are best calculated to illustrate and explain the import of the book of Proverbs. The compiler, who lived about the middle of the 11th century, omits all the references to the original sources, discards the form of lectures, and follows the habit of the whole Midrashic school. The first edition of this Midrash appeared at Constantinople in 1512-17, with the commentary Sera Abraham (Vilna, 1834), and the commentary of Isaac Cohen (Stettin, 1861).

(8.) Midrash Jalkut שְלֹשַׁה האַלְקְעִים (אַלְכָּעִים), or Jalkut Shimon, קַלּוּת שְׁמוֹנִים (שְׁמוֹנִים), i.e., the collection or compilation of Simeon, who flourished in the 11th century. This Midrash, which extends over the whole Hebrew Scriptures, is described in the article CARA in this Cyclopaedia.

III. Method and Plan of the Midrash.—In discussing its method and plan, it must be borne in mind that the Midrash first developed itself in public lectures and homilies; that the ancient fragments of these discourses became afterwards literary commodities, serving frequently as the groundwork of literary productions; and that the Midrashic writers or compilers mixed up other matters and pieces of their own composition with the remnants of expository lectures. The ancient relics, however, are easily discernible by their dialect, diction, etc., and by the authority to whom they are ascribed. That there was a method in them is shown by the erudite and indefatigable Jellinek, than whom there is no greater authority on the subject. He points out the following plan as gathered from the ancient fragments:

1. The lecturer first set forth the theme of his discourse in a passage of Scripture enumerating the particular truth which he wished to unfold, and then illustrated it by a parable, and enforced it by saying which was popular in the mouth of the people. This rule is given in the Midrash itself (comp. Midrash Shemuel, 1 a).

2. The attention of the audience was roused and the discourse encouraged by the lecturer using a foreign word instead of a well-known expression, or by employing a Greek, Latin, Aramaic, or Persian term in addition to the Hebrew (comp. Aruch, s. v., י dışı מדרש ראב"ד). This accounts for the striking fact that so many foreign words occur in the Midrash to express things for which the Hebrew has expressions, and that both Hebrew and foreign words, expressing the same idea, stand side by side (comp. Midrash Rabba on Genesis, c. vii.; Midrash Rabba on the Song of Solomon, 1 a).

3. The lecturer increased the beauty of his discourse by trying to discover analogies between numbers and persons related to each other—e.g., between David and Solomon. Comp. Midrash on the Song of Songs, ibid.

4. The lecture was also rendered more attractive by being interspersed with plays upon words, which were not intended to explain or corroborate a statement, but were simply meant to create a pleasant feeling in the audience. The frequent plays upon words by the rules of hermeneutics is to misunderstand the aesthetics of the Hagadah.

5. It was considered as ornamenting the discourse, and pleasing to the audience, when single words were reduced to their numerical value in order to put a certain point of the lecture in a clearer light. Thus, e.g., the lecturer speaking of Eliezer, Abraham's faithful servant, and being desirous to show that he alone was worth a host of servants, remarked that Eliezer (אברהם נעלה, 1+30+1+1+70+7+200=818) is exactly as much as the three hundred and eighteen young men mentioned in Gen. xiv, 14. Comp. Midrash Rabboth on Genesis, ch. xiii. When it is remembered that the Hebrew letters were commonly used as numbers, it will be easily understood how the audience would be rejoiced to see a word converted so dexterously into figures.

6. To relieve the discourse of its monotony, the lecturer resolved a long word into several little words, or formed new words by taking away a letter or two from the preceding and following words in the same sentence. "If a man is afflicted with the guidance of these esthetic canons," continues Dr. Jellinek, "we shall find in it less arbitrariness and more order. We shall, moreover, understand its method and plan, and often be put in a position to distinguish the original discourse from the literary element of a later date, as well as from interpolations. For the confirmation of our aesthetic canons, let the reader compare and analyze chapters ii, iii, and v of Midrash Rabboth on Genesis" (Ben Chananjah, iv, 388 sq.).

IV. Halachic and Hagadic Rules of Interpretation.—The preceding exposition of the method and plan of the Midrash has prepared us to enter upon the Halachic and Hagadic rules of interpretation which were collected and systematized by Eliezer ben-Jose the Galilean מדרש ראב"ד, one of the principal interpreters of the Pentateuch in the 2d century of the Christian era. According to this celebrated doctor, whose sayings are so frequently recorded in the Talmud and the Sifra, there are thirty-two rules (דרכון מצויה סדרי), whereby the Bible is to be interpreted, which are as follows:

1. By the superfluous use of the three particles גה, מג, and מג, the Scriptures indicate a three-fold manner that something more is included in the text than the apparent words would lead us to imply. Thus, e.g., when it is said, Gen. xxi, 1, "And the Lord visited הִנְי יִשְׁרָאֵל Sarah," the superfluous הִנְי, which sometimes
denotes with, used to indicate that wish Sarah the Lord also visited other barren women. The second, also, is used superfluously in the passages take also your herds, and also (22) your flocks (Exod. xii., 22), to indicate that Pharaoh also gave the Israelites sheep and oxen, in order to corroborate the declaration made in Exod. x., 25; while the superfluous (sin), 2 Kings ii., 14, He also (sin) had smitten the waters, indicates that more wonders were shown to Eliaha at the Jordan than to Elijah, as it is declared in 2 Kings ii., 9. This rule is called הַרְשָׁע inclusion, more being meant than said.

2. By the superfluous use of the three particles הָא, הָא, and הָא, the Scriptures point out something which is to be excluded. Thus, e.g., הָא in Gen. xvi., 23, And Noah only (hain) remained, shows that even Noah was near death, thus indicating exclusion. The superfluous הָא in Only (hain) the fear of God is not in this place (Gen. xx., 11), shows that the inhabitants were not altogether goddess; while הָא in Exod. xvi., 18, And the people stood from (hain) the morning unto the evening, indicates that it did not last all day, but only six hours (Sohbath, 10 a). This rule is called הָא, diminution, exclusion.

3. If words denoting inclusion follow each other, several things are included. Thus in 1 Sam. xvi., 36, Thy servant slew also (hain) the lion, also (hain) the bear, three superfluous expressions follow each other, to show that he slew three other animals besides the two expressly mentioned in the text. This rule is called הָא,  הָא,  הָא, inclusion after inclusion.

4. If words denoting exclusion follow each other, several things are excluded. Thus in Num. xii., 2, Hath the Lord indeed only spoken to Moses? hath he not also spoken to us? the superfluous expressions הָא and הָא which follow each other denote that the Lord spoke to Aaron and Miriam before he spoke to Moses, thus not only without the lawgiver being present to it, but before God spoke to him, and not only did he speak to Aaron, but also to Miriam, so that there is here a twofold exclusion. If two or more inclusive words follow each other, and do not admit of being explained as indicative of inclusion, they denote exclusion. Thus, e.g., if the first word include the whole, while the second only includes a part, the first word is inexpressible by the second. If, on the contrary, two or more exclusive words follow each other, and do not admit of being explained as indicative of inclusion, they denote exclusion. Thus, e.g., if the first exclude four, while the second only excludes two, two only remain included, so that the second exclusive expression serves to include or increase. This rule is called הָא, exclusion after exclusion, and the two exceptions are respectively denominated הָא,  הָא, אָלָא,  הָא, inclusion after exclusion effecting diminution, and הָא,  הָא, אָלָא,  הָא, exclusion after exclusion effecting increase (comp. Petachim, 28 a; Joma, 48 a; Megilla, 29 b; Kiddushin, 21 b; Baba Kama, 60 b; Sanhedrin, 15 a; with Maimon., 34 a).

5. Expressed inference from the minor to the major, called הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא הָא H. An example of this rule is to be found in Jer. xii., 5, If thou hast run with the footmen, and they have smitten thee, [inference] then how shall he chase a horse? 6. Implied inference from the minor to the major, called (לָא) הָא הָא H. This is found in Psa. xvi, 4, He sweareth to his own hurt, and changeth not, hence how much less if he swear to his advantage (comp. Maccoth, 24 a).

1. Inference from analogy or parallels, called הָא הָא H. Thus it is said in 2 Sam. xxxiv, 9,
“There were in Israel eight hundred thousand valiant men,” in contradiction to 1 Chron. xxii, 5, where “a thousand thousand and a hundred thousand men” are said to have been among all Israel. The apparent contradiction is reconciled by xxvii, 1, where it is said, “The children of Israel after their number; to wit, the chief fathers and captains of thousands and hundreds, and their officers who served the king in all matters of the courses, who came in and went out, was, month by month, through all the months of the year, twenty-four thousand in each course.” From this it is evident that the number of these servants for twelve months amounted to two hundred and eighty-eight thousand, and as the chief fathers of Israel consisted of twelve thousand, we obtain the three hundred thousand who were noted in the registers of the king, and therefore are not mentioned in 2 Sam. xxvii, 9. Thus the two apparently contradictory Scriptures are reconciled by a third Scripture. It deserves to be noticed that this ancient interpretation is now generally followed, and that it is espoused by Dr. Davidson, Sacred Hermeneutics (Edinb. 1845, p. 546, etc.).

16. _An expression used for the first time is explained by the passage in which it occurs._ Thus, e.g., Hamannah is the first who in her prayer addresses God as “Lord of Hosts;” whence it is concluded that the superfluous expression _hosts_ indicates that she must have argued to this effect—“Lord of the universe, thou hast erected two worlds (אינבאו נ) ; if I belong to the nether world I ought to be fruitful, and if to the upper I ought to live forever.” Hence the expression is designed for this passage (Berothach, 31 b).

17. _A circumstance is not fully described in the passage in which it first occurs, but is explained elsewhere._ Thus it is stated in Gen. ii, 8, where the garden of Eden is first mentioned, that there was in it “all manner of fruit;” but it is not to be gathered from this passage that there was anything else in the garden; while from Ezek. xxviii, 13, where this passage is further explained, it is evident that there were also precious stones in Paradise. Thus in Exod. xxi, 30 it is forbidden to eat “any beast of the field;” and in Lev. xxi, 8, it is said, “That which is torn he shall not eat,” here also forbidding which is torn in the city. The use of the expression _field_ in the first passage is owing to the fact that beasts are far more frequently torn in the city than in the country; and this is mentioned as the common occurrence. Hence in the expression _field_ everything is comprised—city, country, forest, mountain, valley, etc.

19. _The respective predicates of two subjects in the same passage may refer to both alike._ Thus, “Light is sown for the righteous, and gladness for the upright in heart” (Ps. xxvii, 11), does not imply that the former is without gladness and the latter without light, but what is predicated of one is predicated of the other (comp. Tanach, 16 a).

20. _The predicate of a subject may not refer to it at all, but to the one next to it._ Thus the remark, “This to Judah” (Deut. xxxiii, 7), does not refer to Judah, since it is said further on, “And he said, Hear, Lord, the voice of Judah,” but to Simeon, whom Moses hereby blesses after Reuben.

21. _When a subject is compared with two things, it is to receive the best attributes of both._ Thus, “The righteous shall flourish like the palm-tree; he shall grow up like a cedar in Lebanon” (Ps. xxii, 12)—the comparison is with the best qualities of both (comp. Tanach, 25 a).

22. _The first clause explains by its parallelism the second, to which it refers._ Thus, “A gift in secret pacifieth anger,” in the first hemistich, is the _anger of God_ since it is “and a reward in the bosom strong wrath” (Prov. xxvi, 14), in the second hemistich, refers to the strong wrath of God (comp. Buba Battra, 9 b).

23. _The second clause in parallelism explains the first hemistich, to which it refers._ Thus, “The voice of the Lord shaketh the wilderness; the Lord shaketh the wilderness of Kadesh” (Ps. xxxix, 8). Here Kadesh, though comprised in the expression wilderness of the first clause, is used in the second clause to heighten the strength of the first hemistich, by showing that the wilderness must have been shaken exceedingly, since Kadesh, the great wilderness, was shaken (comp. Deut. i, 16).

24. _A subject included in a general description is excepted from it to convey a special lesson._ Thus, “Joshua, the son of Nun, sent out of Shittim two men to spy secretly, saying, Go, view the land, and Jericho” (Josh. i, 1). Here Jericho is superfluous, since it is comprised in the general term _land_, but it is especially mentioned to indicate that Jericho itself was equal in power and strength to the whole country. Hence that which is excepted teaches something special about itself.

25. _A subject included in a general description is excepted from it to teach something special about another subject._ Thus, “He commanded, Ye shall not make for the life of a murderer who is guilty of death” (Numb. xxxv, 31), is entirely superfluous, since it is included in the declaration already made—“As he hath done, so shall it be done to him” (Lev. xxiv, 19). It is, however, mentioned especially to be a guide for other punishments, since it is concluded from it that it is only for murderers that no redemption-price is to be taken, but that satisfaction may be taken in case of one knocking out his neighbor’s tooth or eye (comp. Kethuboth, 37 b, 38 a).

26. _Parable._ Thus, “The trees went forth on a time to anoint a king over them, and they said unto the olive-tree, Reign thou over us” (Judg. ix, 8), where it is the Israelites and not the trees who said to Ohuboth, Daphsh and Glis, take the kingdom over us. So also the remark, “And they shall spread the cloth before the elders of the city” (Deut. xxvi, 17), is parabolic, meaning that they should make their testimony as clear as the cloth (comp. Kethuboth, 46 a).

27. _The preceding often explains what follows._ Thus, “And the Lord said unto Jehu, Because thou hast done well, executing that which is right in mine eyes . . . thy children of the fourth generation shall sit on the throne of Israel” (2 Kings x, 30), is to be explained by what precedes. Because Jehu destroyed four generations of the house of Ahab—viz. Omri, Ahab, Joram, and his sons, as is stated (comp. ver. 13)—therefore shall four generations of his house remain on the throne.

28. _Antithetic sentences often explain each other by their parallelism._ Thus, in Is. xxx, 16, “But ye said, No; for we will flee upon horses; therefore shall ye be fruitful, and ride upon rapid runners; therefore shall your pursuers run!” the words wherewith they have sinned are put in parallelism with the words of punishment, couched in the same language and in similar expressions.

29. _Explanations are obtained by reducing the letters of a word to their numerical value._ Thus, substituting for it another word
or phrase of the same value, or by transposing the letters (דיליה לירא). For an instance of the first we must refer to the reduction of רצינא to רצינ, given in the preceding section. The second part of this rule is illustrated by examples which show several modes of transposing the letters were resorted to. Thus, Sheshach, is explained by בָּבֶל, Babel (Jer. xxxv. 26; li. 41), and בָּבֶל by בָּבֶל (ibid. li. 1), by taking the letters of the alphabet in their inverse order. If the first letter is expressed by ב, the last letter of the alphabet: ב, the second letter, by ב, the last but one; ב by ב; ב by ב, and so on. This principle of commutation is called Alef-bosh (ב ר), from the first two specimen pairs of letters which indicate the interchange. Or the commutation is effected by bending the alphabet exactly in the middle, and putting one half over the other, and the interchange is ב for ב, ב for ב, א for א, ק for ק. This mode is termed Album (ב א ו ק), from the first two specimen pairs of letters which indicate the interchange (comp. Nedarim, 92 a; Sanhedrin, 22 a).

30. An explanation is to be obtained by either dividing a word into several words, or into syllables, and transposing these syllables, or into letters, and taking each letter as an initial or abbreviation of a word. This rule is termed인데 אינא (י א ב), and is illustrated by the word בָּבֶל being divided into בָּבֶל, the father of many nations; בָּבֶל being divided into בָּבֶל and ב, and the latter transposed into ב, viz. soft and gradable; and by every letter of אינא (י א ב), 1 Kings ii. 8 being taken as standing for a word, viz. י א ב, adulterer; י א ב, Moabit; י א ב, murderer; א י ב, apostate; א י ב, abhorred (comp. Sabbath, 105 a).

31. Words and sentences are sometimes transposed (גָּסְרוּת). Thus 1 Sam. iii. 5, “And ere the lamp of God went out, and Samuel was lying in the temple of the Lord,” the words גָּסְרוּת גָּסְרוּת, in the temple of the Lord, which are placed later in the sentence, evidently belong to הָלַכְתָּ, went out, since no one was allowed to sit down in the Temple except the kings of the house of David, much less to lie down. So also in Psa. xxxiv. where ver. 18 must be taken up to ver. 16 (comp. Kidushin, 78 b; Baba Kama, 106).

32. Whole sentences are sometimes transposed (גָּסְרוּת). Thus, e.g. the record, “And he said unto him, Take me a heifer of three years old,” etc. (Gen. xv, 5, etc.), ought properly to precede ch. xiv, inasmuch as it is anterior in point of time. This reversed order is owing to the fact that the Scriptures in such a case put certain events which occurred earlier in time after later occurrences (comp. Berea choth, 7 b, with Pesachin, 6 b).

Besides these thirty-two rules, the following laws of interpretation must be mentioned:

i. Deduction from Juxtaposition. — When two laws immediately follow each other, it is inferred that they are in similar consequences. Thus it is said in Exod. xxii, 18, 19, “Thou shalt not suffer a witch to live. Whosoever lieth with a beast shall surely be put to death;” whence it is inferred that these two enactments are placed close to each other to indicate the manner of death a witch is to suffer, which the Scriptures nowhere define. Now, as he who cohabits with an animal is, according to the Halachah based upon Lev. xx, to be stoned to death, hence it is concluded that a witch is to die in the same manner.

ii. All repetitions of words, as well as the construction of the finite verb with the infinitive, e.g. יִשָּׁר יָשָׁר, have a peculiar signification, and must be explained. Some, however, maintain that the Bible, being written in human language, employs these repetitions (יִשָּׁר יָשָׁר), in accordance with the custom lopenui (Mishna Baba Me'ila, ii. 9; xii. 8; Giturah, ibid. 81; Jerusalem Nedarim, i. 1; Keneseth Zera, 77 b; Berea choth, 81 b).

iii. Letters are to be taken from one word and joined to another, or formed into new words. Thus, e.g. יִרְאוּת יִרְאוּת, “Then ye shall give his inheritance unto his kinsman” (Num. xxvii, 11), is explained by יִרְאוּת יִרְאוּת, “And ye shall give the inheritance of his wife to him,” i.e. the husband, by taking away the י from יִרְאוּת and the י from יִרְאוּת, thus obtaining the word יִרְאוּת; and it is deduced therefrom that a man inherits the property of his (אָרָא אָרָא) wife (comp. Baba Bathra, iii. 6; Menachoth, 74 a). This rule is called יִרְאוּת יִרְאוּת.

iv. A word is to be explained both with the preceding and following words. Thus, אָנַּחַ בֵּית אָנַּחַ, “And Sariah, Abraham's wife, bare him no children; and she had a handmaid, an Egyptian, whose name was Hagar” (Gen. xvi, 1), is explained, “And Sariah, Abraham's wife, bare no children to him and to herself” (לַחֵית; and then again, to him (i.e. Abraham) and to her (i.e. Sariah) there was a handmaid (לַחֵית) and they are not admitted by some (comp. Sabbath, 32 b; Menachoth, 19 a).

v. The letters of a word are sometimes transposed. Thus, כָּלָן כָּלָן, “our labor” (Deut. xxv, 7), is made to mean our children, כָּלָן כָּלָן, by transposing the נ and the ל.

vi. Letters resembling each other in sound or appearance, or belonging to the same organ of speech, are interchanged. Thus the word מֻסָּרָה, Moses commanded us the law, an inheritance of the congregation of Jacob (Deut. xxxii, 4), is explained, “The law which Moses has given us, is the merciful and merciful (מָסָר יִמָּסָר), of the congregation of Jacob,” by changing the מ to מ in מֻסָּר (comp. Sabbath, 106 b).

The allotment produced by rules v and vi, and which are in the Tanach and post-Tanachic period generally introduced by the remark כָּלָן כָּלָן Read not so and so, but so and so, must not be taken for emendations of the text of various readings, but are simply another mode of obtaining an additional meaning of the text. It was argued that as the literal and limited sense of the Bible, read in the stereotyped order, could not yield sufficiently the divine and inexhaustible mind couched in those letters, every transposition, commutation, etc., ought to be resorted to in order to obtain as much as possible of the infinite idea; especially as every such effort yielded that sense and meaning thoroughly in harmony with what might justly be expected from Holy Scripture. It was therefore regarded as probable that the Bible designed to indicate that in addition to what the regular order and reading of the words conveyed. It must also be remembered that some of these rules, especially those which involved an alteration of the text and a departure from the literal meaning, were not used in Halachic exegesis, and that the liturgical exegesis employs many more than those we have specified. In fact, anything and everything is reported to which can make the text speak comfort and consolation in every time of need, or connect the legends about Scriptural characters with the Biblical record. The puerility and extravagance of many of the rules are obvious, while others are of acknowledged value. See Bala.
V. Importance of the Halachic and Hagadic Exegesis.

—When it is borne in mind that the annotators and punctuators of the Hebrew text, and the translators of the ancient versions, were Jews impregnated with the theological opinions of the Q.T. in that N.T. can hardly be overrated. It is true, and very few will question the fact that every successive English version, either preceding or following the Reformations, reflects the peculiar notions about theology, Church government, and politics of each period and of every dominant party; and that even the most literal translation of modern days is, in a certain sense, a copy of the N.T. of the translators; we must regard it as natural that the Jews, without intending to deceive, or wilfully to alter the text, should by the process of the Midrash introduce or indicate, in their Biblical labors, the various opinions to which shifting circumstances gave rise. Let a few specimens from the Hebrew text, and the ancient versions, suffice to illustrate the Midrashic process, and its paramount importance to Biblical criticism.

1. The Hebrew Text and the Masorah.—The influence of the Halachic and Hagadic exegesis on the formation of the Hebrew text and the Masorah is far greater than has hitherto been imagined, though the limits of this article will be approached by a few samples of a few examples of the question put by Isaiah to Hezekiah, “The shadow has gone forward (ךך) ten degrees; shall it go back ten degrees?” (2 Kings xx, 9) as the Hebrew text has it, is not only grammatically incorrect, inasmuch as the repetition of the ten degrees a second time requires the article, but is at variance with the king’s reply given in ver. 10, from which it is evident that the prophet asked him whether the shadow should go forward on back- wards. Thus, Isaiah, 1, 8, that Hezekiah’s prophecy because it was more difficult and wonderful, and that the original reading was נבר, instead of נבר; and, indeed, this reading is still preserved by the Chaldee, the Syriac, the Vulgate, etc.; is followed by Luther and the Zurich version, whence it found its way into Coverdale, the Bishop’s Bible, and has finally got into the A. V. The mystery about the origin of the present textural reading is solved when we bear in mind the Halachic exegesis that in the passage in question, as we now have it, the brightness of the sun reached that degree of penetration which, for the first time, was considered as safe, and that the day was thus shortened to two hours (סנהדרין, 96 a), in order that his burial might be hasty and without royal honors, and that now these ten degrees went backwards. Hence the present reading, which was effected by the trifling alteration of נבר into נבר, i. e. “the shadow,” the prophet is made to say to the king, “Has once gone forward ten degrees” (i. e. at the time of the new moon) now go backward ten degrees?” Thus the Midrashic exposition of Isa. xxxviii, 8, it may be supposed, gave rise to the textual reading of 2 Kings xx, 9. For the influence of the Halachic and Hagadic exegesis on the Masorah and the various readings, we must refer to Krochmal, More Nochoe Hal- Jewish (London, 1851), p. 189 sq. See Keel and Ko- thor; Kethuboth.

2. The Greek Versions.—That the Septuagint is per- vaded by the Halachic and Hagadic exegesis may almost be seen on every page of this version. A few examples must suffice. Thus, e. g., the Septuagint render- ing of נבר by לארטראיז, in Lev. xi, 47, is only to be explained when it is borne in mind that, according to the Halachah, the prohibition respecting נבר (Exod. xxii, 30, etc.) does not simply refer to animals torn by wild beasts, but to every animal which is sickly and maimed, though belonging to the clean animals allowed to be eaten in Lev. xi; and that one of the sure tests whether an animal is healthy, and hence eatable, is that it does not show evidences of an infallible sign of its sickly condition (comp. Cholin, 24 with 58; Saloman ben-Adereth, Respons. xxviii; Torath Cohah- sim, 124)—hence the Septuagint rendering, “Between those which bear young ones and [for this reason] may not be eaten, and those which bear young ones and may be eaten,” because they belong to the animals proscribed.

Again, the rendering of Jos. xiii, 22, נבר לה א- כירה, by εἰς τῶν Βαλαδῷ, and εἴκενοι τί, in Jos. xiii, 22, ἀπίστως, has caused much perplexity to com- mmentators and given rise to diverse emendations (e. g. ἀποίκισα, Oxf.; ἀποικίσατε ἀπὸ τοῦ, Ald. and Comment.,) as it is once expliable when reference is made to the Hagadah, which is quoted in Jonathan ben-Uziel’s Chaldean Paraphrase of Numb. xxxi, 6, and is as fol- lows: “Balaam flew into the air by his magic arts, and Phinehas threw him down,” so that in ἀποίκισα means in the full (comp. also Rashi on Numb. xxxi, 5; B. ἀποίκισα, 115.), Hence the rendering of εἴκενοι is εἰκενοῖς. The rendering of ἀποίκισα βοῦς ἐν χάλαζων, by ἀποικίσα ἀνθρώποι ἐν χάλαζων (Exod. xii, 19) becomes intelligible when it is remembered that the Halachah not only prohibits the cooking, but the mixing and eating of animals and humans in any form (comp. B. ἀποίκισα, 115.; G. ἀποίκισα, 565; loc. cit.: Cholin, 115.), Hence the rendering of ἀποίκισα is ἀποίκισας. These few specimens suffice, for, greatly important as the subject is, the limits of this article prevent us from giving illustrations of the influence which the Halachic and Hagadic exegesis exercised upon the other Greek versions, as well as upon the Chaldee paraphrases, the Syriac version, the Vulgate, the Arabic, and the expositions of the early fathers.

VI. Literature.—Zunt, Die gottesdienstlichen Vorträge der Juden (Berlin, 1832), p. 55 sq.; Hirschfeld, Halachische Exegese (Berlin, 1840); by the same au- thor, Die halachische Exegese (Berlin, 1847); Sachs, Die religiöse Poesie der Juden in Spanien (Berlin, 1845), p. 141 sq.; Rapaport, Jeruch Millin (Prague, 1852), art. Agada, p. 6 sq.; Frankel, Vorstudien zu der Septuaginta (Leipsic, 1845), p. 179 sq.; by the same author, ἀποίκισα in the Septuaginta (Leipsic, 1851); Altheimer’s Hermentikon (Leipsic, 1851); and Program for the Eröffnung der jüdisch-theologischen Semin- ares zu Breslau (Breslau, 1854); Luzzatto, Oheb. Ger. (Vienna, 1881); Pinner, Vorstudien zum Talmud (Berlin, 1881); Geiger, Uebericht und Vererbung der Bibel (Breslau, 1857); Steinschneider, Jewish Literature (London, 1856), p. 3 sq.; in the L. Quarterly Review, April, 1867, sq. on art. on Talmud; Ginsburg, Historical and Critical Commentary on Ecclesiastes (London, 1861), p. 80 sq. 455 sq.; and the literature there referred to.

Midwife (焌), part. in Piel of ἀπεκκενοί, “to bring forth;” Sept. µαια, Vulg. obstetric; Gen. xxxvi, 17; xxxviii, 28. It must be remarked that ἀπεκκενοί, Exod. 4.
MIEG 248 MIELK

19, "lively," is also in rabbinical Hebrew "midwives," an explanation which appears to have been had in view by the Vulg., which interprets chagody by "ipse obstetricantium," and also by "living creatures," implying that the Hebrew women were, like animals, quick in parturition. Genesius renders "vivi
dae, robustae" (Thes. p. 468). In any case the general sense of the passage Exod. i, 19 is the same, viz. that the Hebrew women stood in little or no need of the midwife's assistance. Parturition in the East is usually easy. See Woman. The office of a midwife is thus, in many Eastern countries, in little use, but is performed, when necessary, by relatives (Chardin, Voy. vii, 23; Harmer, Obs. iv, 425). See Child. It may be for this reason that the number of persons employed for this purpose among the Hebrews was so small, as the passover records (Exod. i, 19) seem to indicate. Knobel and others suggest, the two named were the principal persons of their class. In the description of the trans
action mentioned in Exod. i, one expression, "Upon the stools," receives remarkable illustration from ancient as well as modern usage. On the walls of the palace of Luxor, in Upper Egypt, there is a grand painting, which is faithfully copied in Lepsius's Denkmäler, representing the birth of the eldest son of Thothmes IV, and very possibly the "first-born" of the Pharaoh who was drowned in the Red Sea. Queen Mutmes is represented as receiving a message through the god Thoth, that a child has been born to a child. The mother is placed upon a stool, while two midwives carry her hands, and the babe is held up by a third (Sharpe's History of Egypt, i, 65). Genesius doubts the existence of any custom such as the direct meaning of the passage implies, and suggests a wooden or stone trough for washing the newborn child. But the modern Egyptian practice, as described by Mr. Lane, exactly answers to that indi
cated in the book of Exodus. "Two or three days be
fore the expected time of delivery, the Layeh (midwife) conveys to the house the kursi eliddæh, a chair of a peculiar form, upon which the patient is to be seated during the birth" (Lane, Mod. Egypt, iii, 142). See Stool. The moral question arising from the conduct of the midwives does not fall within the scope of the present article. The reader, however, may refer to St. Augustine, Contr. manduc., xiv, 32, and Quast. in Hept., ii, 1; also Corn. à Lap. Conc. on Ez. i, 2. When it is said, "When a midwife is" (Exod. x, 15, p. 302), "in the midst of them houses," we are probably to understand that their families were blessed either in point of numbers or of substance. Other explanations of inferior value have been offered by Kimchi, Calvin, and others (Calmet, Comment. on Ez. i, 2; Patrick, Corn. à Lap.; Knobel; Schleusner, L. T. V. T. Testamentum, Thesaurus, p. 190). It is worth
while to notice only to refute on its own ground the Jewish tradition which identified Siphrah and Puah with Jochebed and Miriam, and interpreted the "houses" built for them as the so-called royal and sacerdotal fami
lies of Caleb and Moses (Josephus, Antiq. iii, 2, 4; Corn. à Lap. and Crit. Stor. i, c. 16; Schöttgen, Iter. Hebr. ii, 450; De Mees, c. iv). See Buri.

Mieg, Johann Casimir, a German theologian and philologist, was born at Heidelberg Oct. 6, 1712. His father was a professor of theology and minister at the Heiligengeistkirche of that place. He entered the uni
versity of his native place when fourteen years of age; continued his studies at Zürich, Basle, and Berne; re
turned to Heidelberg in 1722, and finished his education at Marburg and Halle. He was appointed a professor of philosophy at Heidelberg in 1733, and in 1748 professor of divinity and philology at Lingen. This position he resigned in 1757, and returned to Heidelberg as professor of theology and preacher. He died Sept. 28, 1764. Some of his most celebrated works are, Disc. de servituis hebræorum et rabinorum, etc. (Heppenheim, 1734, 4to); hoc est: Constitutio

Mieg, Ludwig Christian, a German Reformed theologian, was born Aug. 20, 1668, at Heidelberg, and received his education at his native place and at Basle, where he defended his dissertation "De regulis communicatoris motus." In 1689, during the French war, when Heidelberg was destroyed, he was vicar of the heathen congregation at Münster; having obtained a voyage through the Netherlands, and returned in 1691 to Heidelberg, and was appointed professor of Greek, and minister of the Reformed congregation at Rinteln. In 1694 he was made professor of ecclesiasti
cal history at Marburg, and in 1697 professor of theo
logy. He returned in 1706 to Heidelberg as ecclesiasti
cal counselor, professor of divinity, and first minister of the church of the Holy Ghost; resided his place in 1730, and died Jan. 19, 1740. His most noted works are, Diss. de regulis communicatoris motus (Basle, 1685, 4to); Theses historico-practicæ, etc. (Marburg, 1686, 4to); Diss. historico, qua A. Poggi in praepositiuonem ad pedagogiam ecclesiasticam suam doctoribus conscriptarum examinatur (ibidem, 1696, 4to); Diss. theologici de acerrimo Dei (ibidem, 1699, 4to); Disquisitio theologici de perspicuitate et universalitate institutionis naturalis, ad Pet., iii, 4, 5 (ibidem, 1699, 4to); Diss. de praepositiuone theologici I et II de cura puerorum agn. Hebr. (ibidem, 1700, 4to); Theses historico-practicæ de traditionibus (ibidem, 1700, 4to); Diss. de prophetae pro
misione, Deut. xxviii, 13, contra D. Hugueniunnem (ibidem, 1704, 4to); Oratio de providentia divina circa nascen
tem Universa, Heidelberg, cum elenco Professor, Heidelberg. (ibidem, 1770, 4to). See Düring, Gelehrte Theol. Deutsch
lands, v.

Miel, Jan, a distinguished Flemish painter, was born in a small village near Antwerp in 1599. Lanzi says he was a pupil of Vandyck. He resided some time at Rome, where he studied under Andrea Sacchi, to whom he gave such proofs of genius that he was employed to as
sist in his works at the Palazzo Barberini. Miel, whose disposition led him to the grotesque, introduced something ludicrous into the work, which was deemed unworthy the dignity of the subject, and he was dis
missed. He then visited Lombardy to study the works of Correggio, and also passed some time in Parma and Bologna. On his return to Rome he was employed by pope Clement IX to paste a picture in the ceiling of the Castel Sant'Angelo, the Rock for the glory of Monte Cavallo. He also painted a Baptism of St. Cyrillo for the church of S. Martino de' Monti, and the Annunciation, and some fres
cos of the life of S. Lambert, in S. Maria dell'Anima. Subsequently he was invited to Turin by Charles Emanuel, duke of Savoy, who appointed him court painter, and in whose service he was detained the residue of his life. After his engagement by the duke he painted no more religious works. He was elected a member of the Academy of St. Luke in 1648, and thereafter devoted himself almost entirely to hunting scenes and battle pieces. He died at Turin in 1684. Many of Miel's best works are in the Imperial Gallery at Vienna. See Lan

Mielke, Johann Bertram, a German theologian, was born at Kiel March 24, 1736, where he was also edu
cated. In 1756 the dignity of master of arts was con
ferred upon him as a reward for the defence of his dis
sertation "De regulis communicatoris motus." In 1771 he was appointed deacon at Neustadt, in Holstein; in 1771, second minister at the Fleckenkirche at Preetz, and in 1784 chief minister at Oldenshoh, where he died June 14, 1801. He was very much renowned as editor of Beiträge zur Beförderung der häuslichen Andacht in
Miers, Jacob von. See Jacor.

Migdal-Edar ("tower of the flock"), a place on the route of Jacob (Gen. xxxv, 21), probably about two miles south of Jerusalem, near the Bethel徘徊, where the cluster of ruins called Kirbet Um-Maghalka is now situated (Tobler, Dritte Wanderung, p. 81). See Edar.

Mig'dal-El (Heb. Migdal-El, מגדל אל, "tower of God"); Sept. Μηγδαλη(α) v. f. Μηγδαλη(αί) ή Μηγναλη(αί), a fortified city of the tribe of Naphtali (Josh. xix, 58), "named between Iron and Horem, possibly deriving its name from some ancient tower—the 'tower of El, or God.' By Eusebius (Onomasticon, Μηγδαλη) it is spoken of as a large village lying between Dora (Tantura) and Poselema (Akka), at nine miles from the former, and, it is said, about 2,426 ft. above sea-level, as a castle of Pharaoh, as it may be seen today. Numerous remains of ancient buildings still stand in the village of Sharake, in the province of Bashan, 100 miles north of Acre, on the island of Myceophor (Rosennmüller, Alterth., iii, 260); but it is better (with Forster, Ep. ad Michael. p. 29) to consider it as a mountaneous situation (suitable for a watch-tower on the frontier), and we may then (with Tischendorf, De Israe. per mare rubrum transit, p. 29 sq.; Kutscher, Lepsius u. der Sinai, p. 6 sq.; and other earlier travellers) identify it with Jebel Ataka (see Olin's Travels in the East, i, 850). The only object to this identification that remains, worthy of consideration, is that, according to some travellers, a gentle slope, some two or three miles wide, is covered with this rock, and towards the sea-shore, containing many camel-paths, and offering an easy escape for the Israelites hemmed in by the Egyptians that came down upon them by Wady Tuwaark (Aiton's Lands of the Messiah, p. 120); but it is doubtful whether so extensive a shore existed here anciently (see St. J.). It is true, but even if this margin were not at that time covered by the waves, it may easily have been preoccupied by a detachment of the Egyptian troops sent round by way of the isthmus to cut off the retreat of the Israelites. Herodotus (ii, 159) doubtless alludes to this place under the name of Migdalos, which he describes as a frontier town towards Palestine, where Josiah was slain by Nebuchadnezzar, evidently confounding it with Migiddo. See RED SEA, PASSAGE OF.

Miget, Sr., a prelate of the French Church, was born about the beginning of the 7th century. His life was written in the 10th century by an anonymous hagiographer, and published by the Bollandists, June 6. Another chronicler of the same century, Adson, in his Legenda Sancti Migdolab, obit de Luxeuil, says that St. Miget presided at the obsequies of St. Personne, who was his dearest friend. St. Miget is spoken of as a reformer within the Church. It appears that he introduced great changes in the liturgy of his diocese, and instituted first in the church of Besançon five archdeacons, to whom he gave important privileges. He died about the year 670. His name is found in the Martyrologe Gallican of the date of Aug. 7.—Dunod de Chanage, Hist. de l'Église de Besançon; J-Jacques Chifflet, Vesuntio, pt. ii; Vie des Saints de Franço Comité, by the professors of the college of St. Francis Xavier, i, 226. See Hoefer, Nouv. Biog. Générale, s. v.

Miglicionico. Andrea, a Neapolitan painter, was a pupil of Luca Giordano. According to Dominici, he succeeded to the chair of the Ecole française, and executed many works for the churches at Naples, among which the Descent of the Holy Ghost, in the church of S. Nunziana, is highly commended. He died about 1710.—Lanzi's History of Painting, trans. by Roscoe (Lond. 1847, 3 vols. 8vo. i, 89; Spooner, Biog. Hist. of the Fine Arts (N. Y., 1865, 2 vols. xlvii, 260)).

Mignard, Pierre (1) (called the Roman), an eminent French painter, was born at Troyes in 1610. After receiving some instruction at home, his father placed him in the school of Jean Boucher at Bruges; subsequently under Vouet. In 1636 he went to Rome, to study after Raphael and Michael Angelo; there he remained twen-
ty-two years, painting a number of fine Madonnas, and the portraits of popes Urban VIII and Alexander VII. One of his pupils, Francesco Peri, who painted the Val de Grace, was executed by Mignard. He also adorned the great hall at St. Cloud with mythological subjects. He died in 1695, after having received many distinctions and honors.—Lanzi's History of Painting (Lond. 1847, 3 vols. 8vo), i, 476.

Mignard, Pierre (2), a French architect, and nephew of the preceding, was born at Avignon in 1649. After a series of extensive journeys throughout France and Italy, during which he devoted himself to the study of architecture, he settled in Paris. He built the Abbey de Montmajour, near Arles, which gained him great reputation; and he was intrusted with many important works. Among these may be mentioned the façade of the church of St. Nicholas and the Porte St. Martin. Subsequently the Abbey de Montmajour was destroyed by fire, but was rebuilt precisely according to the designs of Mignard. He was one of the six architects who, in 1671, founded the French Academy of Architecture, of which he was appointed professor. He died in 1725. See Spooner, Biog. Hist. of the Fine Arts (N. Y. 1865, 2 vols. 8vo), ii, 564.

Migron (Heb. Migron', מִֺגוֹרִון, precipice; Sept. in 1 Sam. Mayyũv, in Isa. Mavdv, in v. Mayyũv, apparently reading ṣ for ṣ; Vulg. Magron), a town of Benjamin, which, from the historical indications, must have been between Ai and Michmas, on the route of the invading Assyrian army southward (Isa. x, 28). From Michmas a narrow valley extends northeast out of and at right angles with that which has been identified as the passage of Michmas (q. v.). The town of Migron seems to have been upon and to have commanded the pass through this valley, somewhere between the modern Deir Diwan and Mukhmas (Robinson's Researches, ii, 149). Saul was stationed at the further side of Gibeath (Geba), "under a pomegranate-tree which is by Migron" (1 Sam. xiv. 2), when Jonathan performed his great exploit at Michmas; and this is to be explained (see Rosenmüller, Altert. ii, ii, 170 sq.; Bachian, ii, 114) on the supposition that Migron was on the border (perhaps extending considerably north-west of Michmas) of the district to which Gibeath gave its name. Migron, therefore, was in all probability situated on, or close to, the ravine now called Wady Suweinit. It was a commanding position (Josephus, Ant. 1, viii, 3, he speaks of it as "situm hinc superficiem", f 4), for Saul was able to see from it the commotion which followed the attack of Jonathan on the Philistine camp. The ravine is not quite half a mile in breadth from brow to brow. According to Schwartz (Palest. p. 180), there are extant some ruins about half a mile south of the site of Bethel, which the Arabs still call Burj (Fort) Magron; but no map exhibits here more than a ruined church, and the position is too far north. Keil thinks the Migron of 1 Samuel was a different place from that of Isaiah (Comment. on Sam. ad loc.), but this is an unnecessary supposition. The only locality that seems to correspond with the topographical requirements of the commencement just north-west of Mukhmas, which separates Wady Suweinit from its branch running up directly north to Deir Diwan; and some ancient town appears to be indicated by the sepulchres in the latter valley.

Mihill, Nonius, a minister of the Methodist Episco-pal Church, was born in Sheffield, C. W., about 1823. He was converted at eighteen, while resident at Wilmington, Ohio, and was licensed in his is his class in 1839, when he was placed in charge of West Peru Circuit, which he served with marked ability for two years. At the end of this time he joined the Troy Conference on trial, and was sent to Beekmantown, where he was serving for the third year with great efficiency at the time of his death, Oct. 3, 1841. Mihill was earnestly devoted to the interests of the Methodists and was born by his associates and parishioners. See Minutes of Conferences, 1849, p. 117.

Mih'-Teilh or Mè'-Teilh, an eminent Chinese philosophe, was born about 600 B.C., or, as Legge, "was an original thinker, and exercised a bolder judgment on things than Confucius or any of his followers. He taught that all the evils in society arise from the want of mutual universal love. For example, a prince loves only his own state, and does not love the neighbour; the latter, in turn, still more the state, the statesmen wars against it. "If princes," he asked, "regarded other states as their own, who would begin a war? If every one regarded his neighbor's person as his own, who would be found to rob? If universal love prevailed, all enmities, usurpations, and miseries would disappear. Princes, loving one another, would have no battlefields; the chiefs of families, loving one another, would attempt no collection; men, loving one another, would commit no robberies."

M'yan (m, 1 Chron. xxiv. 9; 8, Neh. x, 7). See Mamin.

Mikkelsen, Hans, a noted Danish Biblical student, author of the first Danish version of the New Testa ment, was originally mayor of Malmoe, in Scania, and subsequently secretary to Christian II of Denmark. When the king was, in 1598, obliged to flee from his dominions and take refuge in Holland, Mikkelsen accompanied him, and it was while there that, at the suggestion of his sovereign, he set himself to the work of translating the New Testament. Driven by the.bgnted jealousy of the papal party in the Netherlands from his place beside the king, he retired to Harderwick, in Guelderland, where he died about the year 1592. His translation, which was published in 1594 (small 4to), professes to be made from the Latin, but this applies only to the four Gospels, in translating which he seems to have followed the version of Erasmus; for the other books he has closely followed the German version of Luther. See Henderson, Dissertation on Hans Mikkelsen's Translation (Copenhagen, 1818); W. L. Alexander, in Kitto, Cyclop. Bibl. Lit. s. v.

Milkoth (Heb. Milkoth, מִילָכֹת, prob. lq. מִלָּכָה, stores, as in Gen. xxx, 37, etc.; Sept. Macedo, Μακεδονία, and Macedo, ἡ Μακεδονία, the name of two men.

2. A descendant of Benjamin resident at Jerusalem, and father of Shimeah or Shimshon, of the family of king Saul, but in what degree of relationship is not clear (1 Chron. viii, 92; ix, 57, 58). B. C. perhaps cir. 1080.

Milknei'ah (Heb. Milkneia, מילקניא, possession of Jehokah; Sept. Macedia or Macediac, a Levitical door-keeper of the Temple and harper in the time of David and Solomon (1 Chron. xxiv. 7)).

B. C. 1014.

2. A descendant of Benjamin resident at Jerusalem, and father of Shimeah or Shimshon, of the family of king Saul, but in what degree of relationship is not clear (1 Chron. viii, 92; ix, 57, 58). B. C. perhaps cir. 1080.

Milkneia (Heb. Milkneia, מילקניא, possession of Jehokah; Sept. Macedia or Macediac, a Levitical door-keeper of the Temple and harper in the time of David and Solomon (1 Chron. xxiv. 7)).

B. C. 1014.

Milkvoath. See Talumud.

Mil'alai (Heb. Milalay, מיללַי, eloquent; Sept. omita; Vulg. Malalai), one of the Levitical musicians who made the circuit of the newly-completed walls of Jerusalem after the exile (Neh. xii, 36). B. C. 446.

Milan, one of the large cities of Italy, capital of Lombardy, situated on the River Oltara, contains a population of 285,945. It is a very ancient city, and is noted for its old Roman and for several important church councils. Milan (Lat. Mediolanum) was originally a town or village of the Insubrian Gauls. It was conquered by the Romans 222 B.C., received the Latin franchise about 89 B.C., and the full Roman franchise 49 B.C. Under the Romans it became a conspicuous centre of wealth and traffic, and the inhabitants were noted for their refined manners and literary tastes.
and the public buildings for their beauty and elegance. In the beginning of the 4th century it was selected as the residence of the imperial court by Maximian. Milan was sacked by the Huns (under Attila) in 452; by the last Frankish king, Chlodwig, in 568; and passed to the Longobards and Franks previous to its subjection by the German Empire. After 961, it was long governed by dukes in the name of the emperors. The feuds of the Guelphs and Ghibellines distracted Milan, like all the other Italian cities. Supreme power became unaccountably vested in the Visconti family, from whom the ascendency of Milan was extended over the whole of Lombardy. From 1545 to 1714, Milan submitted to the successive predominance of France and Austria. Under Bonaparte, it was declared the capital of the Cisalpine republic, of the Italian republic, and, finally, of the kingdom of Italy. In 1815, Milan was restored to Austria, and continued the capital of the Austro-Italian kingdom until the annexation of Lombardy to Piedmont, in 1859, by the peace of Villafranca.

MILAN, ARCHBISHOPRIC OF. We have no trustworthy information as to its early history. There is a vague tradition that Barnabas (q.v.), the colophon of the apostle Paul, established the Christian Church at Milan, and was the first bishop. This account lacks support, and scarcely deserves notice. But though of no historical value, the legend is significant in regard to the position which the archbishopric of Milan held in the controversy between the Oriental and Western Churches; and it is known that the suffragans of the archbishop, and even the archbishop himself, were frequently excommunicated by the Eastern bishops. By clear implication, the storyaman be wittily remarked by Reginald H. "just as Barnabas was the connecting link between Paul and the other apostles, so the Church of Milan attempted to reconcile the Greek and Roman opinions." The first bishop of Milan, of whom we have any historical knowledge, is Auxentius (q.v.), 4th or 5th century. He was the leader of the Arians among the western churches. When the orthodox bishops, at a provincial synod held at Rome in 386, condemned Arianism, they did not dare to pronounce the anathema against Auxentius, because they knew him to be protected by the emperor Valentinian I. Although they were at last prevailed upon by Ambrose to pronounce against Auxentius in their synodal epistle to the Illirian, Auxentius maintained himself in his see until his death. But the divisions thus created in the Church by the Arian heresy (q.v.) rendered the election of a successor to Auxentius no easy matter. The contest was carried on between Catholica and Apostolica, the latter party, who was the consular prefect of Liguria and Emilia, was obliged to proceed himself to the church to exhort the people to order. At the close of his speech the whole assembly, Catholics and Arians, with one voice demanded him for their bishop, and he was constrained to accept the honor of the holy see by his own consent and by the will of his people. His work with great zeal, and soon acquired great influence both with the people and the emperor Valentinian. He opposed the Arians from the very beginning of his episcopacy, and in 382 presided at an episcopal synod at Aquileia, at which the Arian bishops Palladius and Secundus were deposed. Milan, April 4, 397. All succeeding archbishops and bishops were in like manner elected by the people, the Church of Milan not being subject to the Roman bishop until the days of Gregory the Great (q.v.). After the overthrow of the Gothic kingdom, the archbishops of Milan, owing to the religious differences and the feeling of enmity which existed between the people and their conquerors, the Lombards (q.v.), resided at Geneva. But when, in 658, Aribert, the son of duke Gardulf, was chosen king of the Lombards, matters changed. "Rex Heribertus," says Dölönger, "plus et catholicus, Arianorum abolivit hæresem et Christianam fidem fecit crescreere." The Lombards now became enthusiastic churchmen, and the archbishop returned to Milan. But although the archbishop of Milan was henceforth considered the first bishop of the kingdom, crowning the kings with the so-called iron crown, and obtaining increasing power, he nevertheless remained subject to the king, and the inferior clergy to the subordinate judges—in short, the Church was subject to the State. After the downfall of the Longobard kingdom, the archbishops of Milan at the first lost much of their authority. But the houses and quarrels of the 9th, 10th, and 11th centuries, they not only regained their former influence, but became even more independent than ever before. Owing to the then prevailing German policy, large feudal estates were bestowed upon the bishops of Milan, and, during the reign of Charles the Great, the archbishop himself was considered the most influential of the German emperors.

Eriberto di Araggo, who filled the archiepiscopal chair of Milan from 1019 to 1065, was one of the most powerful princes, and though unsuccessful in the revolt which he organized in 1056 against emperor Conrado, his influence was scarcely diminished after his return from the expulsion to which his rebellion had subjected him. At the time of his death, Milan was passing through one of its accustomed civil dissensions, and the election of Eriberto's successor caused great excitement. Erzbischlag, the popular chief (dominus populi), called the citizens together to nominate candidates, and induced them to select four. These four were sent to the emperor Henry III (q.v.), for him to make the appointment; but the faction of the nobles despatched a rival in the person of Guido di Valate, who had recommended himself to the emperor by his learning. The emperor, who was given the coveted dignity, to the great disgust of the popular nominees. Their expostulations were unavailing with the emperor, and both parties returned—Guido to assume an office harassed by the opposition of the people on whom he had been forced, and the disappointed candidates to brood over the wrongs they had experienced. We shall presently see how thoroughly these men avenged themselves on Guido, with whom the independence of the Milanese archbishopric came to an end.

It is historically evident, then, that Milan was at one time completely independent of the papacy. Rome was not even thought of in creating the archbishop, whose spiritual and temporal power were granted by the imperial investiture. But when, soon after, the German popes had rescued the pontificate from the contempt into which it had fallen, its domination over Milan became a necessary step in its progress to universal supremacy. The very same time, was the beginning of the separation of the Milanese clergy. Pope Leo IX (q.v.), and his successors attacked the Milanese on this account, and, in a council held at Rheims by Leo IX in 1049, many laws were enacted against clerical matrimony. Archbishop Guido defended the position of the Milanese clergy, not only by his eloquence, but by a decisive bull which was confirmed by St. Ambrose, to whom the question of the permissibility of sacerdotal marriage had been referred by the pope and bishops. The popes by their emissaries excited great tumults in Milan, inflaming the popular passion against, what they called, the irregularly married clergy. Guido, perceiving the agitation thus produced, and argued in favor of the married clergy. Armed resistance was offered to the papal faction, the result of which was incessant fights and increasing bloodshed. Nicholas II (q.v.), who then occupied the papal chair, sent Hildebrand and Anselm on a mission to Milan, with instructions to lay the passions which led to such deplorable civil strife. The milder Anselm might perhaps have succeeded in this errand of reconciliation, but the unbending Hildebrand refused to listen to aught but unconditional submission to Rome. The quarrel, therefore, waxed fiercer and deadlier (see Arnold, Geist. Archip. Mediolan. lib. iii. c. 9; Landulf, test. lib. iii. c. 26). In 1059 another papal legislation was sent, with full authority to force the recalcitrant archbishop and clergy to submission. An assembly was held, where the legates asserted the papal pre-eminence by taking the
learned to despise, abandoned the imperial party for a time, yet Tedaldo kept his seat until his death in 1086, notwithstanding the repeated excommunications launched against him by Gregory VII (who resided at Tingnano, v. 5, 9; Landulf, Sven. lib. iii. c. 29; iv. 2; Muratori, Antiqu. vol. ii. ann. 1086). With his death the independence of the Milan archbishopric ceased.

At present the clergy of Milan seem to be inclined to follow the lead of the Old Catholic party. Their programme, which contains the following reforms: election of the priests by the parish, the use of the vernacular at all Church-services, reform of Mariolatry and adoration of saints, marriage of the priests, etc., shows a healthy reaction against papal abuses. E. Serra Gropelli may be quoted as an authority on this point. A. G. Felpi.

MILAN, COUNCIL OF. There is no historical proof extant to warrant the assertion that any Church councils or synods were held at Milan 855 A.D. We have no information concerning the synod which is said to have been held at Milan in 844 (see Harloun, Acta Conciliorum et Epistolae de Constitutiones, etc. [Paris, 1715], i. 627 sq.), and very little is known of the synod of 846 (or 847). In that year a council of Western bishops was summoned at Milan, when the so-called Long Crede (pontificale), to be found in Socrates, Hist. Eccl. ii. 18), which had been drawn up by the Arian Council of Antioch (A.D. 845), was rejected. The council also required the deputies who brought it to sign a condemnation of Arius. Of course they left the council in wrath (see J. Dominic, Monas Sacrorum conciliorum sacrae et amplissima collecta, etc. [Florent., 1759], i. 1870). After the death of Constans (A.D. 850), and the victory over Magnentius (A.D. 358), Constantius endeavored to establish Arianism by force in the West. In the synods of Arles (A.D. 854) and of Milan (A.D. 858), he compelled the assembled bishops to subscribe an act of affirmation of Arianism, though most of them were, it is thought, orthodox. Constantius was now sole master of the Roman world, and by bribes, by threats, and by force, the condemnation of Arianism was extorted from the assembled bishops. Even Liberius (q. v.), the successor of Julius I., rejected Arianism, and although he was threatened with deposition from the Episcopate (q. v.), he persisted in his conviction, and was thrown into prison, and was compelled to subscribe to his condemnation (see Mansi, iii. 238 sq.; Hefele, i. 681).

The next council was held A.D. 890, St. Ambrose presiding. It is commonly supposed that in this council the sentence of the Gallic bishops against Ithacius Ursacius (who had caused the death of the Priscillianists by their fiery zeal against their errors) was confirmed by the bishops of Italy. Baronius (as well as the collection of councils) states that this same council condemned Jo- vinian, the author of a new heresy, which decrèted the merit of virginity. St. Jerome reduces his doctrine to the four following points: 1. That virgins, widows, and married women, being baptized, have the same degree of merit, if there be no difference between them in other respects. 2. That they who have been regenerated in baptism cannot be overcome by the devil. 3. That there is no difference in point of merit, between those who abstain from meat, and those who partake of it with thanksgiving. 4. That all those who keep the baptismal statute shall have the same glory in heaven. From these principles other errors were deduced, viz. that there is no difference of degree in sin; that fasting is not requisite; that there will be no distinction of merits in heaven. The fathers of the council condemned
MILE

200 MILE

the opinions of Jovian and his followers, and they were driven out of the city. See Manli, l. c. 690; Giese-

cher, ii. 78 sq. Hefe, Concilien geschichte, ii. 574 sq.

Another council was held at Milan in 451, convened by Eusebius, bishop of Milan, at the request of St. Leo the Great. All the suffragans of Milan were present, in all twenty bishops, among whom were Crispinus of Pa-

via, Maximus of Turin, Ambrosius of Como, Epistola of Milan, and others. See Hefe, l. c. 697, 698, 699 read; the legates then made a report of what was pass-

ing in the East, and especially of the miseries existing from the acts of the Latrocinium of Ephesus; after-

wards the celebrated letter of St. Leo to Flavianus was read, and the council unanimously declared that it con-

tained a contradiction of the doctrine of the Catholic Church upon the subject of the Incarnation (q. v.), and that it was built upon the teachings of the prophets, evangelists, and apostles. At the same time they decreed that all who should oppose this doctrine should be anathema-

sized. Finally, a synodal letter was addressed to the pope filled with expressions of esteem and respect (Man-

ni, ii. 78 sq.; Hefe, Concilien geschichte, ii. 574 sq.).

In A.D. 679 pope Agatho summoned a council at Milan to condemn the heresy of Monothelism (q. v.) (Man-

ni, xi. 174; Hefe, iii. 228). The provincial synods of A.D. 842, 850, 880, and 1009 have no bearing upon the gen-

eral council of the church, but those interested in the subject are referred to Manni, xiv. 790; xc. 599; xlii. 355, and xix. 310; Hefe, iv. 99, 217, 770. Sep-

ember 12, 1287, a synod was held by Otto, the archbishop, assisted by eight of his suffragans, and the deputies of all the chapters of the province. Ten canons were pub-

lished, in which they ordered the observation of the pa-

pal constitutions, and the laws of the emperor Frederick II against heretics. Abbots and abbesses, monks and nuns, were ordered to observe the rule of St. Benedict or that of St. Augustine, and monks were forbidden to enter nunneries. The power of building churches and orato-
ies was declared to be solely in the hands of the bishop (Manni, xxiv. 888 sq.; Hefe, vi. 225; Muratori, Rer. Ital. vol. iv). From 1555 to 1582 six provincial councils were held at Milan. For information concerning their enactments, see Concil. xv. 242, 387, 365 sq., 408, 566, 706; Jo. Hartuini Acta, x. 683, 1140; Christ. Wilhelm-Franch Walch, Entwurf eines vollständigen Historie der Kirchenereignissammlung (Leipzig, 1759).

Milanese Liturgy. The Liturgy of Milan, com-

monly attributed to Ambrose, is substantially the same as that of Rome until the time of Gregory the Great, and appears to have been derived from the same origin. "In the time of Gregory, the Church of Milan did not adopt the chief alteration made by him. From that time, then, the Milanese Liturgy, as a court of Eusebius, may be considered a peculiar rite; and as the Romans gave their sacramentaries the names of Gelasius and Gregory, so the Milanese gave theirs the name of Ambrose; who, in fact, may have composed some parts of it. After the time of Gregory, the Milan Liturgy doubtless received several additions. The earliest ecclesiastical writer who has been cited as speaking of the Ambrosian rite is Wa-

lofred Strabo, who died A.D. 849" (Riddle, Christian Antiquities, p. 417). See Liturgie.

Milani, Aurelliano, nephew of the following, was born at Bologna, Italy, in 1675. He painted in the style of Caracci, and, next to Carlo Cignani, no one did more to maintain the dignity and credit of the Bolognese school. See Manli, i. c. 470. He was one of the earliest and most brilliant in his col-

oring. His principal works in Bologna are the Resurrec-

tion, in the church of La Purita; the Stomning of St. Stephen, in St. Mascarella; and St. Jerome, in St. Maria della Vita. He afterwards went to Rome, where his finest work is the Beheading of St. John the Baptist, in the picture of Bergamaschi. He died in 1748. See Hefe, History of Painting, trat. by Littich (Lon- don, 1847, 3 vols. 8vo), iii. 152.

Milani, Giulio Cesare, a Bolognese painter, who was born in 1621, executed many works for the churches in Bologna and the adjacent cities. His finest productions are the Marriage of the Virgin, in the church of St. Giuseppe; St. Antonio di Padova, in St. Maria del Costello; and a Holy Family, at the Lervi. According to Lanzi, "he was the most eminent of Tor-

re's disciples, and was rather admired in the churches of Bologna, and exerted in many adjacent cities. See Lanzi, History of Painting, trat. by Ricocca (London, 1847, 3 vols. 8vo), iii. 107; Spooner, Biog. History of the Fine Arts (N.Y. 1865, 2 vols. 8vo).

Milbourne, Luke, an English divine, was born at Wroxhall, Warwickshire. He was educated at Pembroke Hall, Cambridge, after which he became rector of St. Ethelburga, London, and lecturer of Shoreditch in 1704. He died April 18, 1720. He published thirty-

one single conversations between 1692 and 1720; several theo-

tological treatises, poems, etc.; and the following work, by which he is best known: Notes on Dryden's Virgil

(London, 1698). Among Milbourne's theological works, we regard as the most important his Legacy to the Church of England (nec. 1686), in which he vindicates her orders from the objections of Papists and Dissenters. This work, it is stated, was undertaken by the special command of archbishop Sancroft and Dr. Lloyd, bishop of Norwich. See Cooper, Biograph. Dict. p. 806; Ellis, Hist. of Shoreditch; Malone's Dryden, i. 214; iv. 638, 645; Johnson, Lives of the Poets, ed. Cum-

ningham, i. 871 sq.; Allibone, Dict. of Authors, ii. 1277.

Mil'cah (Heb. Milakah', מִלָּכָה, advices; Sept. Mal-

akè), the name of two women.

1. The daughter of Haran, and sister of Lot and Is-

cah (or Sarah); she married Nahor (Gen. xii, 29), by whom she had eight sons (Gen. xx. 20, 23), one of whom was Bethuel, the father of Rebekah (Gen. xxiv. 35, 54, 57). She was thus Abraham's sister-in-law, and the grandmother of Jacob's wife, Laban's sister. B.C. cir. 2047.

2. The fourth named of the five daughters of Zelophe-

had, of the tribe of Manasseh (Num. xxvi. 53), who became heiresses for the want of brothers (Num. xxvii, 1), and, having married members of the same tribe (Num. xxxvi. 11), were assigned portions in Gilead (Jos. xvii. 3). B.C. 1819-1812.

Mil'com (Heb. Milkóm, מִלָּכָם, their king, 1 Kings xi. 5; Sept. Μιλακός, Vulg. Moloch), 2 Kings xxiii. 18, Moloch, Molocham; also Malcham, Heb. Malmak', מַלָּמָּק, id., Jer. xlix. 1, 3, Sept. Malak' Vulg. Moloch, "their king;" but this last is the proper rendering in Amos i. 15; Zeph. i. 5; in which latter passage the Auth. Vera. has "Malcham," the principal deity of the Ammonites (Jer. xlix. 1, 8), for whose worship Solut-

donite invaders in the Mosæan country did not desist until it is called the Hill of Offence (2 Kings xxiii. 13). Milcom is usu-

ally regarded as the same as Molech or Moloch, although the latter was worshipped in a different place and man-

Mildew (יוֹםָל, yomol, greemness, i. e. pallor, as the "pallene" by affright, Jer. xxx. 6) is properly a species of fungus or parasitic plant generated by moist-

ure, and corrosive of the surface to which it adheres. In Scripture it is applied to grain, and refers to the pale green or yellowish color indicative of fading or wither-

ing of plants. Deut. xxv. 21; 2 Chron. vi. 29; Amos iv. 9; Hag. ii. 17; in all which pas-

sages it is connected with "blasting". The Arabic ap-

plies the word yromol to human beings as well as to corn, and thus describes the disease called in Europe yellow jaundice. Forskål was informed in Arabia by a Jew that it was the general opinion there that it is a mild bowel complaint, like corn, by which the ears are turned yellow. See Leprosy.

Mile (μίλων), the Greek form of the Latin millari-
MILES 254 MILETUS

um, from mile, a thousand, Matt. v. 41.), a Roman measure of 1000 geometrical paces (passus) of five feet each, and therefore equal to 5000 Roman feet (see Smith's Dict. of Greek and Roman Antiq. s. v. Milliare). Taking the Roman foot at 11.6496 English inches, the Roman mile would be 1618 English yards, or 142 yards less than the English statute mile (see Penny Cyclopaedia). Furthermore, the word passus is omitted. The Roman mile contained eight Greek stadia (Pliny, ii, 21). Hence it is usual with the earlier writers on Biblical geography to translate the Greek "stade" into the English "furlong" in stating the measurements of Eusebius and Jerome, who, like the early itineraries, always reckon by Roman miles. See Furlong. The Talmudists also employed this measure (which they call 372 Ortho, Loc. Rab. p. 421), but estimate it at 7½ stadia (Baba Mezila, xxxiii, 1), as also the Roman historians frequently reckon it, without geographical or mathematical accuracy (Fortuga, Handbuch d. alt. Geogr., p. 655). Mile-stones were set up along the roads constructed by the Romans in Palestine (Keland, Polast. p. 401 sq.), and to this day they may be seen, here and there, in that country (Robinson, Bib. Res. ii, 161, note; ii, 806). The mile of the Jews is said to have been of two kinds, long or short, dependent on the length of the pace, which varied in different parts, the long pace being double the length of the short. (See Carpov, Apparat. p. 679.) See METROLOGY.

Miles, Henry G., a Presbyterian minister, was born in Amsterdam, N.Y., about the year 1811. He was educated in Hudson, Ohio, studied theology in the Union Theological Seminary, New York; was licensed by the New York Third Presbytery, and ordained by the Rochester Presbytery. He received and accepted a call to the Church at Dover, Ohio, and subsequently preached at Hublinsburg, Pa., and Parma Centre and Woodhull, N.Y., where he died, July 21, 1860. Mr. Miles had to struggle with many difficulties, but in all his duties he was conscientious and zealous. As a preacher he was clear and practical. See Fred. Hist. Amm. 1862, p. 189. (J. L. S.)

Miletum (2 Tim. iv. 20). See Miletus.

Miletus (Μίλητος), from the name of a famed son of Apollo, who is said to have founded the city, Apolloled, iii, 1, 9), a city and seaport of Ionia, in Asia Minor, about thirty-six miles south of Ephesus (Cramer's Asia Minor, ii, 386 sq.). The apostle Paul touched at this port on his voyage from Greece to Syria, and delivered to the elders of Ephesus, who had come to meet him there, a remarkable and affecting address (Acts xx, 15-38). "In the context we have the geographical relations of the latter city brought out distinctly, as if it were Luke's purpose to state them. In the first place, it lay on the coast to the south of Ephesus. Next, it was a day's sail from Trogyllium (ver. 15). Moreover, to those who were sailing from the north, it is the direct line for Cos. We should also notice that it was near enough to Ephesus by land communication for the message to be sent and the presbyters to come within a very narrow space of time. All these details correspond with the geographical facts of the case. As to the last point, Ephesus was by land only about twenty or thirty miles distant from Miletus. There is a further and more minute topographical coincidence, which may be seen in the phrase, 'They accompanied him to the ship,' implying as it does that the vessel lay at some distance from the town. The site of Miletus has now receded ten miles from the coast, and even in the apostle's time it must have lost its strictly maritime position (Hackett, Comm. on the Acts, 2d ed. p. 344; comp. Acts xx, 5). In each case we have a low, flat shore, as a marked and definite feature of the scene." Miletus was a place of considerable note, and the ancient capital of Ionia and Caria (Herod. i, 142; Pliny, v. 31). It was the birthplace of several men of renown—Thales, Timotheus, Anaximander, Anaximenes, Democritus (Pomponius Mela, i, 17; Diog. Laertius, Vit. Philon., p. 15, 88, 650). Polymylos (Geogr. v, 2) places Miletus in Caria by the sea, and it is stated to have had four havens, one of which was capable of holding a fleet. (See J. E. Rambach, De Miletio ejusque coloniis [Hal. 1790]; Soldan, Vicinity of Miletus.

Rer. Miles. Comment. [Darmst. 1829]; Schroeder, Comment. de rebus Miles. [Stras. 1837]. "In early times it was the most flourishing city of the Ionian Greeks. The ships which sailed from it were celebrated for their distant voyages. Miletus assists in the progress of the Lydian kingdom and became tributary to Croesus. In the natural order of events, it was absorbed in the Persian empire; and, revolting, it was stormed and sacked. After a brief period of spirited independence, it received a blow from which it never recovered, in the siege conducted by Alexander when on his eastern campaign. But still it held, even through the Roman period, the rank of a second-rate trading town, and Strabo mentions its four harbors. At this time it was politically in the province of Asia, though Caria was the old ethnological name of the district in which it was situated. Its pre-eminence on this coast had now long been yielded to Ephesus. These changes can be vividly traced by comparing the whole series of coins of the two places. In the case of Miletus, those of the autonomous period are numerous and beautiful, those of the imperial period very scanty. Still Miletus was for some time an episcopal see of Western Asia. Ephesus was doubtless promoted by the sitting up of the Meadow." It was noted for a famous temple of Apollo, the oracle of
which is known to have been consulted so late as the 4th century (Apollodorus, De Orig. Deor. iii, 180). There was, however, a Christian church in the place; and in the 5th, 7th, and 8th centuries we read of bishops of Mileitus, who were present at several councils (Magdeburg. Hist. Ecclses. ii, 192; iv, 86; v, 3; vii, 254; viii, 4). The city fell to decay after its conquest by the Saracens, and is now in ruins, not far from the spot where the Meander falls into the sea. (See Blaschung, Erdbeobacht. XII, i, 100; TSchucke, in Mon. III, i, 481.) The exact site, however, is somewhat a matter of uncertainty (Rochemuller, Bibl. Geogr. I, i, 187), owing to the altered character of the coast in modern times; but it appears to be in part covered by the remains now called Palatia, i.e., the palace (Leake, Asia Minor, p. 240). It lies in a triangular plot of ground, bounded by two branches of the river Meander—the ancient Meander. These unite a little to the north of the ruins, and the stream thus formed dissolves through marshy ground into the sea about two miles distant. The harbor is filled up by the alluvial soil brought down by the river, which has already created a delta of no insignificant dimensions. The ruins of the ancient Mileitus are even at the present time striking and picturesque, especially those of the theatre, one of the largest in Asia Minor. Seen from the south-west, it makes still a splendid object; but the south is a mosque, and farther still, in the same direction, a line of ruined arches, once forming an aqueduct. The fragments of a church remain, in which the current tradition of the place asserts that St. John preached the Gospel; but it is unquestionably of a date far later than that of the evangelist. In the plain, between the theatre and the aqueduct, are a few pillars, indicating the site of a temple, probably dedicated to Diana. See Texier, Asie Mineure, p. 316 sq.

Some take the Mileitus where Paul left Trophimus sick (2 Tim. iv, 20; Auth. Ver., "Miletum") to have been in Crete, and therefore different from the above; but there seems to be no need for this conclusion. "This passage presents a very serious difficulty to the theory that there was only one Roman imprisonment. When Paul visited the place on the occasion just described, Trophimus was indeed with him (Acts xx, 4); but he certainly did not 'leave him sick at Mileitus,' for at the conclusion of the voyage we find him with the apostle at Jerusalem (Acts xxii, 29). Nor is it possible that he could have been so left on the voyage from Cesarea to Rome, for in the first place there is no reason to believe that Trophimus was with the apostle then at all; and in the second place the ship was never to the north of Crethus (Acts xxvii, 7). But on the hypothesis that Paul was liberated from Rome and revisited the neighborhood of Ephesus, all becomes easy, and consistent with the other notices of his movements in the pastoral epistles. (See Conybeare and Howson, Life and Epistles of St. Paul, ch. xxvii; Birks, Horæ Apostolicæ.) See further in Schmidt, Res Mileitana (Gött. 1855); Smith, Dict. of Gr. and Rom. Geogr. s. v.; Conybeare and Howson, St. Paul, i, 214 sq.; Tischhartzsch, L'Asie Mineure (Par. 1800), i, 255 sq.; Rawlinson, Herod. ii, 185 sq.

Mileum, a city of Numidia, in the western part of Africa, is celebrated in Church history as a place where, at the beginning of the 6th century, two synods were held. The first of them, which is of little importance, convened Aug. 27, 402. Aurelius of Carthage presided. The canons of Hippo and Carthage were confirmed, and five canons of discipline published, which are contained in the African Code (comp. Codex Canon. Eccl. Afric. p. 85-90). It was decided that the younger bishops should give place to those of older standing, excepting the priates of Numidia and Mauritania, who always took precedence of all other primates of whatever standing (Conc. ii, 1825). The second synod, which was held towards the autumn of A.D. 416, is known as the Concilium Mileitanum. This was a provincial council of Numidia, and was attended by sixty-one bishops of the province. It was chiefly owing to Augustine's (q. v.) influence, and to the happy issue of the synod at Diospolis (q. v.), that the African bishops were absent in a synodal meeting. Having learned the proceedings of the Council of Carthage of the same year, they wrote a synodal letter to pope Innocent I (q. v.), in which, after enlarging upon the enormities of the Pelagian heresy, which denied the necessity of prayer in adult and baptism for children; and after showing how worthy it was of the notice and censure of the Church, they threatened him, since the salvation of Pelagius (q. v.) could not be secured, that he would at least provide for that of others by condemning their heresies. They did not ask the excommunication of Pelagius and Coelewius, as has sometimes been stated, but that they should be commanded to renounce their heresies, and that only the heresies themselves should be condemned. "Hoc gestum," they concluded, "Domino frater, sanctorum et sanctæ ætatis apostolice sedis adhibitæ autoritás." Among the attached letters which accompanied this letter are those of Silvanus, primate of the province of Numidia, Alypius, St. Augustine, Severus of Mileum, Fortunatus of Citha, and Possidius. Another and more confidential letter was addressed to Innocent by five North African bishops, of whom Augustine was one (see Maser, iv, 931 sq.). Pelagius also sent him a letter and a confession of faith, which, however, were not received in due time. Innocent understood both the controversy and the interests of the Roman see. In his reply, which is to be found in August. Epist. p. 182, he commended the Africans for having addressed themselves to the Church of St. Peter, before which it was seemly that all the affairs of Christendom should be brought. He praised the zeal and pastoral care of the African bishops, briefly established the true doctrine of grace, and condemned Pelagius and Coelewius, with their followers, declaring them to be separated from the Catholic Church. "Non solus enim in praedicatione, sed etiam etiam qui conscientiam facient, digni sunt morte; quia non multum interesse arbitror inter committentis animum et conscientiam favorum." He refrained, however, from giving judgment respecting the Synod of Diospolis. He also replied to the letters which Augustine and the four bishops—Aurelius, Alypius,
Evodius, and Possidius—had addressed to him. These letters of Innocent were written in a council held at Rome upon the subject in January, 417, and are to be found in Marsilius (ii. 104.). He had tried to bring the Scholasticism, Ante- Eccles. Afric. Diss. vol. iii.; Norris, Hist. Pelag. i. 10; Hefele, Concilien geschichte, ii. 100; Gieseler, Eccles. Hist. i, 380 sq.; Schaff, Church Hist. iii, 797; Milman, Hist. of Christianity, p. 389, 414 sq.

MILICZ VON KRESNISCH (Kromesko), John, was one of the leading preachers of the Hussite Reformation. Of his early years little is known. The fact that in his mature years he first engaged in the study of the German language, would indicate that his education must have been acquired elsewhere than in a German university; possibly in Italy or at Paris, or in his own country, Moravia. Commencing his public career about 1418, he soon attracted the notice of the emperor Charles IV, who was also king of Bohemia, and became his secretary. At the same time, as canon of the cathedral at Prague, and archdeacon, he occupied a conspicuous ecclesiastical position. Designing, however, all his prospects of promotion, notwithstanding the entreaties of the bishop, he chose a lot of poverty and hardship, that he might more fully imitate the example of Christ. For six months he preached to the people at Bishop-teinitz; but fearing lest his position there was too tempting, in a worldly point of view, he returned to Prague, first officiating in the church of St. Thomas, and afterwards in that of St. Agdeidus, in the old city. At first his hearers were few. Perhaps his Moravian dialect was not attractive. His reproof of sin, and his earnest words, however, soon attracted multitudes. Multitudes thronged to hear him. He preached daily, and often three, and sometimes five sermons. To be more extensively useful, he applied himself to the study of German, that he might address himself to the Germans of Prague. The evils and corruptions of the times doubtless led him to select his themes of discourse largely from the Apocalypse, and the prophets of the Old Testament, and ere long the coming of Antichrist became the burden of his pulpit discourses. He fixed the date of his coming at A.D. 1865-67, nor did he fear to expose the iniquities which, to his view, seemed to herald it. Priests, bishops, and magistrates, and even the emperor himself, were not spared. It is to the credit of John that in his writings he never, even in the spirit of hostile which he provoked in some quarters, he was sustained and befriended by the highest powers in Church and State.

In 1867, on the report that the pope was about to return from Avignon to Rome, Milicz resolved to visit and speak with him. The pope's arrival was delayed; and Milicz went in a boat that he regarded as the voice of the Spirit within him, nailed upon the doors of St. Peter's the sentence which had so long occupied his thoughts—"The Antichrist has come." He zealously warned the people and the clergy to withdraw themselves from iniquity. The inquisitor, encouraged by reports of Milicz's course in Bohemia, ordered his arrest and imprisonment. From his prison he was summoned to preach to an assembly of the clergy, but his full release did not take place till the pope's arrival in Rome in 1868. In free conference with the pope and some of the cardinals who befriended him, he moderated, if he did not modify his views. On his return to Prague, where he succeeded Conrad Walther in the Tein Church, his enthusiastic zeal assumed a new phase. He devoted himself earnestly to the reform of the vicious and abandoned. Scores of prostitutes were recalled to repentance and virtue. The quarters they had occupied, herefore the scandal of the city, were transformed. A chapel to St. Mary Magdalen was erected there, and buildings were provided for the residence and support of the hundreds, if not thousands, that were recovered to the paths of virtue. Milicz's course made him many enemies. Of the clergy, some were jealous of him, and others hated him for his rebukes. Charges were drawn up against him, and forwarded to the pope at Avignon. It is quite significant that these articles, twelve in number, were to the effect that he had written letters to the pope, however, was prejudiced against Milicz, and summoned him to his court, to answer in person. Milicz, promptly responded to the summons. He met a kindly reception, and succeeded in vindicating his innocence. But his career was drawing to a close. He was taken sick at Avignon, and died June 29, 1872. At Prague his decease gave occasion for public and general lamentation.

Of the Christian character and devotion of Milicz, Matthias of Janov speaks in terms that might seem extravagant if the actual results of Milicz's labors did not go so far to justify them. Notwithstanding the envy and malice of his fellow-countrymen, the Christlike spirit of the century, the hostility which he provoked by his sharp rebuke of prevailing iniquity, he does not seem to have laid himself open to the charge of departing seriously from the accepted doctrines and usages of the Church. Indeed, his zeal took more of a practical than a speculative direction, and in this respect only can he be considered as a precursor who prepared the way for Huss.

Of Milicz's writings, some are still extant in manuscript, and some have been preserved by his friend and admirer, Matthias von Janov (q. v.). His Latin works were, Libellus de Antichristo; Gratia Dei, or sermons on the Church and the Papacy, in the Congregations, and Sermones Quadragesimales. Of his Bohemian works, consisting of sermons and postils, one only has been printed, and, though it found a place in the Prohibitory Index, not a copy of it is now known to exist.

A somewhat detailed account of Milicz is given by Neander in his History of the Reformation (ii. 369 sq.). To the other sources of information—besides Bablinsus (Miscell. i, lib. iv, 34) and the writings of Matthias of Janow—to which Neander had access, must be added P. Jordan's Die Vordaufer des Hussenthumus in Böhmen, which presents a concise sketch of Conrad of Waltherhausen, Milicz, and Matthias of Janow. This sketch, really drawn up by F. Palacky, the historian of Bohemia, was published at first in Germany, with the name of P. Jordan affixed, since at the time it was doubtful whether the laws of the press in Austria would permit its publication in any of its states. It was republished, however, in 1868, under the name of F. Palacky, and doubtless furnishes the most trustworthy account extant of the subject of this article. See also Gillett, Life of Huss (see Index in vol. ii); Hardwick, Ch. Hist. p. 379, 389; Gieseler, Eccles. Hist. iii, 184 sq; Riddle, Hist. of the P papacy, ii, 383; Czernovka, Gesch. der evangel. Kirche in Böhmen (Bibl. 1889), vol. i. (E. H. G.)

Militant, Church, a term applied to the whole congregation of faithful men on earth (in distinction from the Church triumphant in heaven), as engaged "to fight manfully" under Christ's banner against sin, the world, and the devil; and to continue his faithful soldiers (milites) and servants until their life's end.

Military Orders is a term applied to those three celebrated fraternities which sprang up in the period of the Crusades (q. v.). They were religious associations which arose from a mixture of the religious enthusiasm and the chivalrous love of arms which seems to have united the characteristics of medieval society. The first origin of such associations may be traced to the necessities of the Christian residents of the Holy Land, in which the monks, whose first duty had been to serve the pilgrims in the hospital at Jerusalem, were compelled, by the necessity of self-defence, to assume the character of soldiers as well as of monks. These were termed Knights of St. John. See Hospitalers. The second, the order of the Templars (q. v.), and the third, the Teutonic Knights, were the outgrowth of the days of the Crusades. See Knighthood. These military or-
MILITZ

MILK

MILITZ. See MILIZ.

Milk is designated by two Hebrew words of distinct signification.

1. בָּשָׂר (bashar), "fat," i.e. rich; Gr. γάλακτος denotes new or sweet milk. This, in its fresh state, appears to have been used very largely among the Hebrews, as is customary among many peoples, and many have cattle, and yet make but small use of milk, and use it principally as meat (Job xxii, 24; Judg. iv, 19).

It is not a mere adjunct in cookery, or restricted to the use of the young, although it is naturally the characteristic food of childhood, both from its simple and nutritive qualities (1 Pet. ii, 2), and particularly as contrasted with meat (1 Cor. iii, 2; Heb. v, 12); but beyond this it is regarded as substantial food adapted alike to all ages and classes. Hence it is enumerated among "the principal things for the whole use of a man's life" (Ecclus. xxxix, 26). It frequently occurs in connection with honey, as a delicacy (Exod. iii, 11; xiii, 5; Josh. vi, 6; Jer. xi, 5; comp. Dio Chrys. xxxvii, 17). In reading of milk in Scripture, the milk of cows naturally presents itself to the mind of the European reader; but in Western Asia, especially among the pastoral and semi-pastoral people, not only cows, but goats' sheep, and camels are made to give their milk for the sustenance of man. That this was also the case among the Hebrews may be clearly inferred even from the slight intimations which the Scriptures afford. Thus we read of "butter of kine, and milk of sheep" (Deut. xxxiii, 14); and in Prov. xxvii, 27, the emphatic intimation, "Thou shalt have goats' milk for food," seems to imply that this was considered the best for use in the simple state (comp. Psa. Iviii, 33; see Russell's A;ippo, ii, 12; Sonini, Procli, i, 329 sq.; Bochart, Hieroz. i, 717 sq.). "Thirty milch camels" were among the cattle which Jacob presented to his brother Esau (Gen. xxxiii, 15), implying the use of camels' milk.

But to be striking scriptural allusion to milk is that which forbids a kid to be seethed in its mother's milk, and its importance is attested by its being thrice repeated (Exod. xxiii, 19; xxxiv, 26; Deut. xiv, 21).

The following are the most remarkable views respecting it: (1.) That it prohibits the eating of the fatness of the goat's delicacy: but we cannot trust the least evidence that the Jews were ever addicted to this disgusting luxury. (2.) That it prevents the kid being killed till it is eight days old, when, it is said, it might subsist without the milk of its mother. (3.) This ground is admitted by those who deduce a further reason from the fact that a kid was not, until the eighth day, fit for sacrifice. But there appears no good reason why a kid should be described as "in its mother's milk," in those days, more than in any other days of the period during which the prohibition is stated. (4.) Others, therefore, maintain that the eating of a suckling kid is altogether and absolutely prohibited. But a goat suckles its kid for three months, and it is not likely that the Jews were so long forbidden the use of it for food. No food is forbidden but as unclean, and a kid ceased to be unclean on the eighth day, when it was fit for sacrifice, and might therefore be fit for food. (5.) That the prohibition was meant to prevent the dam and kid from being slain at the same time. But this is forbidden with reference to the goat and other animals in express terms, and there seems to be no reason why it should be repeated in this remarkable form with reference to the goat only. (6.) Others understand it literally, as a precept designed to encourage humane feelings. But, as Michaelis asks, how came the Israelites to hit upon the strange whim of boiling a kid in milk, and just in the milk of its own mother? (7.) Still, understanding the text literally, it is possible that this was not a common use of milk, but the act of idolaters; but it is evident that Monnides, in his Mose Nekboch, urges this opinion, and addsuces the fact that in two of the above passages the practice is spoken of in immediate connection with the three great annual feasts (Exod. xxiii, 17, 19; xxxiv, 23, 26), although he admits that he "had not yet been able to find it in the Zabian books." This opinion is confirmed by an extract which Cudworth gives (Discourses concerning the True Notion of the Lord's Supper, p. 80) from an ancient Karaite commentary on the Pentateuch; it has been supported by Spencer (De Legibus Heb. ii, 9, § 2), and has been advocated by Le Clerc, Dathie, and other able writers; it is also confirmed by the addition in the Samaritan copy, and in some degree by the Targum. (8.) Michaelis, however, advances a quite new opinion of his own. He takes it for granted that בָּשָׂר, rendered "seethe," may signify to roast as well as to boil, which is hardly disputable; that the kid's mother is not here limited to the real mother, but applies to any goat that has kidded; that בָּשָׂר here denotes not milk, but butter; and that the precept is not restricted to kids, but extends not only to lamb (which is generally granted), but to all other forbidden animals. Having erected these props, Michaelis builds upon them the conjecture that the motive of the precept was to endear to the Israelites the land of Canaan, which abounded in oil, and to make them forget their Egyptian butter. Moses, therefore, to prevent their having any longing desire to return to that country, enjoins them to use oil in cooking their victuals, as well as in seasonings their sacrifices (Monteschti's Kommentar, liii, 210). This is ingenious, but it is open to objection. The postulates cannot readily be granted, and, if granted, the conclusion deduced from them is scarcely just, seeing that, as Geddes remarks, "there was no need nor temptation for the Israelites to return to Egypt on account of its butter, when they possessed a country that flowed with milk and honey" (Critical Remarks, p. 257). See KID.

In its figurative use, milk occurs sometimes simply as the sign of abundance (Gen. xlix, 12; Ezek. xxv, 4; Joel iii, 18, etc.), but more frequently in combination with bread and honey, being a symbol of peace; it occurs about twenty times in Scripture. Thus a rich and fertile soil is described as a "land flowing with milk and honey," which, although usually said of Palestine, is also applied to other fruitful countries, as Egypt (Num. xvii, 19). This figure is by no means peculiar to the Hebrews, but is frequently met with in classi-
MILK

MILL

cal writers. A beautiful example occurs in Euripides (Bacch., 142). Hence its use to denote the food of children. Milk is also constantly employed as a symbol of the elementary parts or rudiments of doctrine (1 Cor. iii, 2; Heb. v, 12, 13); and, from its purity and simplicity, it is also made to symbolize the unadulterated Word of God (1 Pet. ii, 2; comp. Isa. lxv, 1).
The term rendered "milk out" in Isa. lxvi, 11, is γάλα, "milk", which occurs only in that passage, and apparently signifies to suck or draw out something sweet with relish, as milk from the breast; it is put as a symbol of abundant satisfaction.

2. ἔλεμφος, chemah, from ἔλεμφα, to coagulate, is always translated "butter" in the Authorized Version. It seems to mean both butter and curdled milk, but most generally the latter; and the context will, in most cases, suggest the distinction, which has been neglected by our translators. It was this curdled milk, highly esteemed as a refreshment in the East (where it is called lebbeh, see Russell's Aleppo, i, 150; Burchhardt, Trav. ii, 697, 727; Robinson, ii, 405; iii, 574), that Abraham set before the angels (Gen. xviii, 8); and it was the same that Jael gave to Sisera, instead of the water which he asked (Judg. v, 25), "for he was sore weary and thirsty, for he had come three days without water" (Judg. v, 4, 5). It is said to be made from one of the goat-skin bottles which are still used for the purpose by the Bedouins (Judg. iv, 19; comp. Burchhardt's Notes, i, 45). As it would keep for a considerable time, it was particularly adapted to the use of travellers (2 Sam. xvii, 20). In this state milk acquires a power of keeping its strength for a long time, if kept long enough. Isa. vii, 22 is the only text in which the word is coupled with "honey," and there it is a sign of scarcity, not of plenty, as when honey is coupled with fresh milk. It means that there were no fruit or grain, the remnant would have to live on milk and honey; and, perhaps, that the amount of milk newly produced would be insufficient to use it with economy, and hence to curdle it, as fresh milk cannot be preserved for chary use. Although, however, this word properly denotes curdled milk, it seems also to be sometimes used for milk in general (Deut. xxxii, 14; Job xx, 15; Isa. vii, 15). See BUTTER; CHEESE.

Lebbeh is still extensively used in the East; at certain seasons of the year the poor almost live upon it, while the upper classes eat it with salad or meat (Russell, i, 118). It is still offered in hospitality to the passing stranger (Robinson, Bib. Res. i, 571; ii, 70, 211)—so freely, indeed, that in some parts of Arabia it would be regarded as a scandal if money were received in return (Burchhardt's Arabia, i, 120; ii, 100). The method now pursued in its preparation is to boil the milk over a slow fire, adding to it a small piece of old lebbeh or some other acid in order to make it coagulate (Russell, Aleppo, i, 118, 570; Burchhardt, Arabia, i, 60). See FOOD.

Milk and Honey used at Baptism.—The practice of tasting milk and honey at baptism appears to have been founded upon the promises made to the Israelites (Exod.iii, 17; xxii, 3). They were probably regarded as appropriate emblems at this solemn rite of the precepts of the Israelitish law by which we are introduced into that new land—"flowing with milk and honey," the spiritual kingdom of God under the Gospel. The tasting of milk may be supposed to refer especially to the words of St. Peter, "As new-born babes, desire the sincere milk of the word, that ye may grow thereby" (1 Pet. ii, 2); a passage which was applied to baptism. As milk denoted the spiritual nourishment afforded by God's Word, so honey denoted its pleasantness or agreeableness to the mind and heart of a renewed person (Psa. xix, 11; cxix, 105; Rev. x, 9, 10). And the use of honey at baptism may have served to remind believers of the superiority of the Christian dispensation over the Jewish law. Under the latter there was a law against the use of honey at sacrifices, on account of its liability to corrupt. See HONEY. The emblems of milk and honey were in use as early as the third and fourth centuries. Sarcasmus and some others suppose that they were given to the communicant instead of the Eucharist. This, however, is a mistake, for the Eucharist was administered at the same time (Sarcasmus, ap. Sipser. Theaur. pt. ii, p. 293). The words of a sign of this practice would be, "that the communicants became as children adopted into God's family—"Inde susceptioni lacti et mellis concordiam pregustamus" (Tertull. De cor. Mil. c. 3). St. Jerome says this was done in allusion to those passages of the apostle, "I have fed you with milk, and not with strong meat," and to St. Peter's saying above for milk denotes the innocence of children (Comment. in Ex. Ly. i). Clemens Alexandrinus also takes notice of this custom, saying, "As soon as we are born, we are nourished with milk, which is the nourishment of the Lord; and when we are born again, we are honored with the hope of rest by the promise of Jerusalem which is above, where it is said to rain milk and honey: for by these material things we are assured of that sacred food" (Clem. Alexandr. i, 6, 103). We learn further, from the third Council of Carthage, that the milk and honey had a peculiar consecration distinct from that of the Eucharist (Cod. Eccl. Afr. can. 37, ap. Justellum). Nothing else should be offered to the communicants except "the bread and the milk of the Lord but what the Lord commanded, that is, bread and wine mingled with water. But the first-fruits, and honey and milk, which are offered on one most solemn day for the mystery of infants, that is, persons who have never tasted of the large infant's bottle, is a mystical sense, from their new birth, in the African Church. In the time of the Council of Trullo the offering of milk and honey at the altar was forbidden (comp. Conc. Trull. can. 57). See Riddle, Christian Antiquities, p. 930; Ayer, Treasury of Bible Knowledge, p. 581; Coleman, Ancient Christiannity, p. 492; Bingham, Antiquities of the Latin Church, i, 500 sq.; ii, 755 sq.; Eadie, Eccles. Dict.; August, Christi. Archaeology, ii, 446 sq.

MILL (מִיל, milch, the two millstones, from מיל, to bruise, Exod. xi, 5; "mills," Num. x, 8; "millstones," Isa. xlvi, 2; Jer. xxx, 10; "a newer" millstone, Deut. xxvii, 6; μύλων, Matt. xxvii, 21. Each millstone was called מיל, pelach, a slice or piece, as of fruit, in Cant. iv, 8; 1 Sam. xxx, 12; always "piece" of a millstone, Judg. ix, 53; 2 Sam. xii, 21; Job xlii, 24; Gr. μύλος, Matt. xviii, 6; Luke xvii, 2; Rev. xvii, 22, 22). The mill (properly מיל, tachanah, "a grinding," Exod. xii, 4; מיל, techon, "to grind," Lam. v, 13; Gr. μύλων) for grinding grain had not wholly superseded the mortar for pounding it in the time of Moses (Num. xi, 6). See MORTAR. But fine meal—that is, meal ground to the finest flour—was in common use from the time of Abraham (Gen. xviii, 6): hence mills and mortars must have been previously known. See GRITS. The mill common among the Hebrews differed little from that which is in use to this day throughout Western Asia and Northern Africa. It consisted of two circular stones, two feet in diameter and half a foot thick. The lower stone, called the "outer millstone" (Job xli, 16 [24]), and the upper the "rider" (Judg. ix, 53; 2 Sam. xi, 21). The former was usually fixed to the floor, and had a slight elevation in the centre, or, in other words, was slightly convex in the upper surface. The upper stone had a concavity in its under surface fitting to, or receiving from the convexity of the lower stone, and there was a hole in the top, through which the grain was intro-duced by handfuls at a time. The upper stone had an
upright stick fixed in it as a handle, by which it was made to turn upon the lower stone, and by this action the grain was ground, and came out at the edges. As there were neither public mills nor bakers, except the king’s (Gen. xi, 2; Isa. vii, 4–8), each family possessed a mill; and, as it was in daily use, it was made an infringement of the law for a person to take another’s mill or millstone in pledge (Deut. xxiv, 6). See MILLSTONE. On the second day, in warm climates, bread becomes dry and insipid; hence the necessity of baking every day, and hence also the daily grinding at the mills early in the morning. See BREAD. It is worked by women, sometimes singly and sometimes two together, who are usually seated on the bare ground (Isa. xlvi, 1, 2) “facing each other; both have hold of the handle by which the upper is turned round on the ‘nether’ millstone. The one whose right hand is disengaged throws the grain as occasion requires through the hole in the upper stone. It is not correct to say that one pushes it half round, and then the other seizes the handle.

Modern Egyptian Mill.

This would be slow work, and would give a spasmodic motion to the stone. Both retain their hold, and pull to, or push from, as men do with the whip or cross-cut saw. The proverb of our Saviour (Matt. xxiv, 41) is true to life, for scorners only grind. I cannot recall an instance in which men were at the mill” (Thomson, Land and Book, ii, 293). The labor is very hard, and the task of grinding is in consequence performed only by the lowest servants (Exod. xi, 5; comp. Plaut. Merc. ii, 6) and captives (Judg. xvi, 21; Job xxxi, 10; Isa. xlvi, 1, 2; Lam. v, 16; comp. Homer, Od. vii, 168; Suetonius, Tit. c. 51). Grinding is reckoned in the Mishna (Shabbath, vii, 2) among the chief household duties, to be performed by the wife unless she brought with her one servant (Cethaboth, x, 5); in which case she was relieved from grinding, baking, and washing, but was still obliged to suckle her child, make her husband’s bed, and work in wool. Among the Fellahs of the Hauran, one of the chief articles of furniture described by Borchardt (Syria, p. 292) is the “hand-mill, which is used in summer when there is no water in the waddies to drive the mills.” The operation occasions considerable noise, and its simultaneous performance in a great number of houses or tents forms one of the sounds as indicative of an active population in the East as the sound of wheel-carriages in the West. Hence the sound of the mill is the indication of peaceful household life, and the absence of it is a sign of desolation and abandonment: “When the sound of the mill is low” (Exod. xii, 4). No more affecting picture of utter desolation could be imagined than that conveyed in the threat denounced against Judah by the mouth of the prophet Jeremiah (xxxv, 10): “I will take from them the voice of mirth, and the voice of gladness, the voice of the bridegroom, and the voice of the bride, the sound of the millstones, and the light of the candle” (comp. Rev. xvi, 22). The song of the women grinding is supposed by some to be alluded to in the above passage of Ecclesiastes, and it was evidently so understood by the Sept.; but Dr. Robinson says (i, 485), “We heard no song as an accompaniment to the work,” and Dr. Hackett (Bibl. Illustr. p. 49) describes it rather as shrieking than singing. It is alluded to in Homer (Od. xx, 105–119); and Atheneus (xiv, p. 619 a) refers to a peculiar chant which was sung by women winding corn, and mentioned by Aristophanes in the Thesmophoriazusae.

The hand-mills of the ancient Egyptians appear to have been of the same character as those of their descendents, and like them were worked by women (Wilkinson, Anc. Eg., ii, 118, etc.). “They had also a large mill on a very similar principle, but the stones were of far greater power and dimensions; and this could only have been turned by cattle or asses, like those of the ancient Romans and of the modern Cairenes.” It was the millstone of a mill of this kind, driven by an ass, which is alluded to in Matt. xviii, 6 (μικρὸς αὐτοῦ), to distinguish it, says Lightfoot (Hor. Hebr. ad loc.), from those small mills which were used to grind spICES for the wound of circumcision, or for the delights of the Sabbath, and to which both Kimchi and Jarchi find a reference in Jer. xxxv, 10. Of a married man with slen-
In 1821-1822 he published his Elements of Political Economy, a work prepared primarily with a view to the education of his eldest son, John Stuart Mill (q. v.).

In 1829 Mr. Mill came before the public with his Analysis of the Phenomena of the Human Mind, a work on which he bestowed more of the labor of thought than on any other of his productions, and on a subject of special importance to both the historical and the theological mind.

In this work Mill has attempted to resolve all the powers of the human mind into a very small number of simple elements. From an examination of a number of the more complicated cases of consciousness, he arrives at the conclusion that they all resolve themselves into three simple elements or relations, ideas, and the train of ideas.

He then explains what he means by 'ideas' and 'relations': "We have two classes of feeling: one, that which exists when the object of sense is present; another, that which exists after the object of sense has ceased to be present. The one class of feelings I call sensations, the other class of feelings I call ideas" (i. 41).

He begins with the simpler terms of thought and proceeds to the exposition of the more complex ones. "The sensations," he says, "which we have through the external senses are the most simple, at least the most familiar, of the mental phenomena. Hence the propriety of commencing with this class of our feelings" (Analysis, i. 42). He then proceeds to consider what is the nature of ideas, and though he ranges the feelings which we have by the five senses—smell, taste, hearing, touch, and sight; the muscular sensations, and the sensations in the alimentary canal. He next treats of ideas, or, as he calls them, the images of sensation. He then comments on ideas put together or associated in trains, and of the order of association and the causes of that order. He then treats of consciousness and conception, which philosophers, he says, have erroneously created into what they called powers of the mind; whereas, he says, consciousness is merely a name applied to sensations, and to ideas whether simple or complex—to all the feelings of our sentient nature: and conception a name applied only to ideas, and to ideas only in a state of combination. "Imagination," he says, "is the name of a train of ideas. I am said to have an imagination when I have a train of ideas. There is a great diversity of trains. Not only has the same individual an endless variety of trains, but a different character belongs to the whole series of trains which pass through the minds of different individuals or classes of individuals. The different pursuits in which the several classes of men are engaged render particular trains of ideas more common to them than other trains. One man is a merchant, and trains respectively of what he does in which he sells are habitual in his mind. Another man is a lawyer, and ideas of clients and fees, and judges and witnesses, and legal instruments and points of contestation, and the practice of his court, are habitually passing in his mind. Ideas of another kind occupy the mind of the physician; of another kind still the mind of the mathematician. One statesman may occupy a train different from that of any of the classes that have been mentioned, and one statesman with a very different train from another, according as his mind is running upon expedients which may serve the purpose of the day, or arrangement which may secure the happiness of the population from generation to generation. A peculiar character belongs to the train which habitually occupies the mind of the mathematician. The mind of the metaphysician is also occupied by a train distinguished from that of other classes. And there is one man yet to be mentioned, the poet, the peculiar train of ideas which he has is his habitual observation. To such a degree, indeed, have the trains of the poet been singled out for distinction, that the word imagination, in a more restricted sense, is appropriated to them. We do not call the trains of the lawyer, or the trains of the merchant, imagination. We do not speak of them as imagining, when they are revolving.
ing each the ideas which belong to his peculiar occupation; it is only to the poet that the epithet of imagination is applied. His train, or trains analogous to his, are those which received the object of imagination in the real nature of an object of classification, he says:—

"Man first becomes acquainted with individuals. He first names individuals. But individuals are innumerable, and he cannot have innumerable names. He must make one name serve for many individuals." Then, after alluding to the case of "synchronous sensations so connected that the imagination of the instant of time, though numerous, only one, of which the ideas of sensible objects—a rose, a plough, a house, a ship—are examples," he thus proceeds:—

"It is easy to see wherein the present case agrees with and wherein it differs from those familiar cases. The word man, we shall say, is first applied to an individual; it is first associated with the idea of that individual, and acquires the power of calling up the idea of him; it is next applied to another individual, and acquires the power of calling up the idea of him; so of another, and another, till it has become associated with an indefinite number, and has acquired the power of calling up an indefinite number of those ideas indefinite in form, but so blended together, and so connected by the number of the ideas of individuals as often as it occurs; and calling them up in close connection, it forms them into a species of complex idea" (I. 204). From this simple basis he builds up with remarkable dexterity a comprehensive system, all the errors or defects of which we have as yet no distinct idea.

His conclusions are inevitable, if his premises, his representation of the facts of consciousness, be accepted. Sensation, ideation, association, and naming are the elementary processes in his analysis, by which he accounts for all the complex phenomena of the mind—"for abstraction, memory, judgment, ratiocination, belief, and the power of motes. He devotes the latter half of the second volume of his Analysis to the phenomena in which the sensations and ideas are to be considered as not merely existing, but also as existing to action. He treats of pleasurable and painful sensations, and of the causes of the pleasurable and painful sensations, then of the pleasure and pain of the pleasures and sensations, and of the causes of them. He treats of wealth, power, and dignity, and their contraries; of our fellow-creatures, and of the objects called sublime and beautiful, and their contraries, contemplated as causes of our pleasures and pains. Chapter xxii is devoted to the noble things about which chapters xxiv to xxxiv treat. Chapter xxxv is the sole control of will; chapter xxxv (the last) is the task of Mr. Mill's exposition of all these phenomena is mainly grounded on the law of association, by which he means simply the fact that the order of occurrence among our ideas is the order of occurrence among our former sensations, of which those ideas are the copies.

The last publication of Mill was a fragment containing a severe criticism on James Macintosh's dissertation on the progress of ethical philosophy. Mill, who had always exercised a particular championship for the doctrines of Thomas Hobbes (q. v.), was not at all pleased with the uncormmonous manner in which his favorite was handled by Sir James. If Hobbes and Mill are right, then many great names are liable to the charge of error. Mill took a leading part in the founding of University College, London, and gave a powerful intellectual stimulus to a number of young men, some of whom (including his own son, and Grote, the Greek historian) have risen to eminence. He died at Kensington, June 28, 1865. See Engl. Cyclop. s. v.; Amer. Cyclop. xi, 501 sq.; Chambers, Cyclop. s. v.; Lewis, Biog. Hist. of Philosophers, ii, 507; Westminster. Rev. xiii, 365; Blackwood's Magazine, xvi, 671; Allibone, Dict. of Brit. and Amer. Authors, ii, 1279 sq.

Mill, John, D.D., a very learned English divine and Biblical critic, was born at Shapp, Westmoreland, in 1646. In 1661 he became a servitor in Queen's College, Oxford, where he studied until 1668. He was afterwards elected a fellow, and became eminent as a tutor. Having entered into orders, he was greatly admired for his pulpit eloquence. In 1676 he became chaplain to the bishop of Oxford. In 1680 he received from his college the living of Bletchington, and in 1689 was collated to that of Bradwell, in the degree of D.D., and became chaplain in ordinary to Charles II. In 1685 he was elected principal of St. Edmund's Hall, Oxford, and in 1704 was appointed prebendary of Canterbury. He died in 1708. He is famous for having devoted the labor of thirty years to the preparation of a critical edition of the Old Testament, finishing it only fourteen days before his death. It appeared, under the title of 'Hist. Antiq. of the Hebrews,' is an able and valuable work, and was published in 1765. The various readings are reckoned to about 80,000, the text being that of Robert Stephens's edition of 1550. The collection of such a mass of various readings, instead of supplying arms for infidelity, as some seem to have feared, has served to place the uncorrupted integrity of the Scriptures in a stronger and lighter point of view. His works on this subject are contained in his Examen variarum lectionum Joh. Millii (1710), but Dr. Bentley (q. v.), under the signature of Phileleutherus Lipsiensis, ably vindicated the labors of Mill; and Michaelis, Marsh, Harwood, and critical scholars generally, attest the great value of his edition. It has been aptly remarked that 'the infancy of criticism ends with the edition of Gregory, and the age of manhood commences with that of Mill.' Mill's edition ranks next to that of Wetstein in importance and utility, its prologomena being beyond price. See Marsh, Diet. Litter., vii, 9, 10, 18; Wood, Athen. Oecon.; Jones, Christ. Biog., s. v. Brit. and For. Rev. 1871, Feb. art. viii; Lond. Q. Rev. July, 1871; Blackwood's Mag. xxviii, 448; Chambers, Cyclop. s. v.; Allibone, Dict. of Brit. and Amer. Authors, ii, 1279 sq.; Horne, Bibl. Bib., (1839), p. 16; Orme, Bibl. Bib. s. v. See CRITICISM.

Mill, John Stuart, the British philosopher whose writings have had such a profound influence on the intellectual generation, was the son of James Mill (q. v.), and was born in London May 20, 1806. His intellectual training was conducted by his learned father, who, holding that all men are born with equal faculties, and that character is the result solely of association and circum-

stances, would never give the schoolchild a chance to think for himself. In order to test upon him the theories he had espoused and preached. At an age when children are usually weaned, John Stuart began the study of Greek, followed shortly after by arithmetic, with Latin at eight, and logic in his twelfth year, and before he had completed his fourteenth year, as he tells us himself, he had gone over the whole range of ancient literature and philosophy, as well as the most noted of modern historians, civil and ecclesiastical, besides having himself composed volumes of history. Such an education, con-

ducted by a person of his father's ability, could not fail of remarkable results. By it he also gained lasting habits of application, and a wonderful power of sus-

tained and accurate thinking; and by the constant use of his pen he early became master of a style whose point and lucidity are unrivalled among logical and metaphysical writers. But with these advantages there came also a most serious drawback. The training in-

ternationally left one side of his nature untouched. He ignored all culture of the imagination, the emotions, or the sympathies. Of the tender associations, the sweet

charities that cluster about the thought of home, this young philosopher knew nothing. He cannot bring himself to say that he loved his father, and of his
moter he makes no mention whatever. Nor was the solitude of his early life broken by the cheerful intercourse of school. Indeed, he was carefully kept apart from his contemporaries, lest he should be corrupted by their prejudices or their example, insomuch that he was not himself aware that his own education and acquirements were not those of any other boy of his age. As this education, especially with respect to religion, has an important bearing on the life and work of this so justly celebrated man, we quote here at length from his Autobiography:

"I was brought up from the first without any religious belief, in the ordinary acceptance of the term. My father, educated in the creed of freethought, had no prejudices and reflexions been early led to reject not only the belief in revelation, but also the foundation of theology in general. Finding no halting-place in deism, he remained in a state of perplexity until, doubtless after many struggles, he yielded to the conviction that "concerning the original things nothing whatever can be known. This is the only correct statement of his opinion, for dogmatic atheism he looked upon as absurd; as most of those whom the world has considered atheists have always done. These particulars are important, because they show that my father's rejection of all that is called religious belief was not, as many might suppose, primarily a matter of logic and evidence; the grounds of it were moral, and more than in ten cases out of ten spiritual. It is impossible to deprive the world so full of evil was the work of an Author combining infi-

His aversion to religion, in the sense usually attached to the term, was of the same kind with that of LaCretius: he preferred to be called a freethinker to the feeble assuasion of delusion, but to a great moral evil. He looked upon it as the greatest enemy of morality: first, by setting up fictitious religious beliefs, he diverted the energies of men from noble pursuits, and ceremonies, not connected with the good of the hu-

He had no hundred times heard him say that all supposed moral duties were repugnant to man, and that trucd in a constantly increasing progression: that mankind have gone on adding trait after trait till they reached the noblest. He declared that all our moral titles, the dogma of the human mind can devise, and have called this God, and prostrated themselves before it. This is a far more wicked sense, and therefore with the intention, that the great majority of them were to be consigned to horrible and eternally pitiful consequences. It does not seem to have occurred to James Mill to inquire whether what was presented as the creed of Chris-

It is very far from the Christian doctrine of duty and right that is such a theory of morals as this! Still, had he but followed the free and uncontrollable bent of his nature, he would have been a philosopher, and not a lawyer. He has fallen into others than those which subsequently enchanted him, we think that he might have arrived at far higher and more sound results in moral and metaphysical science than he ever attained to. For it may be here remarked that one of the distinctive peculiarities of Mill's was that, for want of a simpler term, must be called his receptivity. Seldom has so powerful a thinker been so subject to the unconscious influence of others; but in him sympathy was more powerful than individuality—he had more of the feminine principle that receives than the masculine power which imparted an impression. Hence through life, whenever his sympathies and affections were excited, his opinions followed.

In 1820 John was first suffered to pass beyond the narrow limit of his father's study, and he was sent for a year to France, where he studied some of the sciences and the higher mathematics. On his return he continued his philosophical studies, and in the winter of 1822-23 he had the pleasure of starting a "Utilitarian Society," where he enjoyed discussions upon some of the heaviest metaphysical topics that occupied the British mind. And he himself tells us that he always dated from them his own "real inauguration as an original and indepen-

He deemed very few pleasures worth the price paid for them; he thought human life a poor thing after the freshness of youth and of unsatisfied curiosity had gone by. He felt certain that if it were possible, and that it might be by good government and good education, it would be worth having; but he never spoke with any enthusiasm about the more immediate objects of the political economists to which he had never known a happy old man, except those who were able to live over again in the pleasures of the young."
Mill remained with the East India Company until its extinction in 1858. In 1865 he was elected to Parliament, and acted with the advanced liberals, but lost his seat in 1868. In 1867 he was chosen rector of Edinburgh University, and in 1869 he married his wife, whom he adored, and married, and in order to be near her grave he removed to Avignon, France, and there spent the remainder of his life. He died May 9, 1873.

While yet a youth we have seen Mill a writer of various essays. They were of such a bold and thoughtful character as to secure him even then a prominent place in the Edinburgh and Westminster Reviews, and from 1834 to 1840 he was editor in chief of the latter. In 1827 he was intrusted with the editorship of Bentham's Rationale of Judicial Evidence. But his great production, he brought out when he was thirty-eight years old, and at once secured by the System of Logic, the Encyclopaedia of Philosophical and Political Science, is a work of such magnitude as to make it unequal to the task of summing up his entire constructive and speculative philosophy. "There are so many points of a speculative nature touched upon, in all the spirit of the Analysis, that he must necessarily be regarded as a partisan of the modern Lockean school of metaphysics" (Morell, p. 252). Mill has developed in his Logic the deductive principle and its application to logic as a science, and thus has lent special value to his work. The last hundred pages are taken up with what the author calls "the logic of the moral sciences," of which he tells us, he makes "an attempt to contribute towards the solution of a question which the decay of old opinions, and the agitation which disturbs European society to its inmost depths, render as important in the present day to the practical interests of human life as it must at all times be complete and universate. It is instrumental to the formation of a similar body of received opinion in moral and political science." The Logic, together with an Examination of Sir William Hamilton's Philosophy (1865), and his editorial corrections and comments on his father's Analysis of the Human Mind, constitute John Stuart Mill's philosophical works. From these it is apparent that, as Dr. Porter says (in Ueberweg's History of Philosophy, ii, 427-429), "Thephysiological foundation on which he builds is the system of James Mill, modified by that of Dr. Thomas Brown. He carefully insists, however, that he neither accepts nor rejects any system of metaphysics, but that the system of metaphysics which he usually applies is substantially that of Lockeanism, and Comte. He does not rigidly adhere, however, either to the metaphysics or to the philosophy which characterizes or controls his conclusions; neither his metaphysics nor his philosophy of belief is something more than an inseparable association of one object with another (compare James Mill's Analysis, xi edition, chap. xi, note); that conception is a term which it is indispensable we should use in our analyses of the conceptions of matter and mind; and that certain key terms are the necessary conceptions in the metaphysics of mathematical and physical sciences, but are themselves the products of induction (comp. Logic, passim). After a long and skilled analysis, he reaches the conclusion that matter must be defined as 'a permanent possibility of sensation', and that an entire series of feelings, with a background of possibilities of feeling.' He concludes that in adhering to this definition we are reduced to the alternative of believing that the mind, or ego, is something different from any series of feelings or possibilities of them, or else of accepting the paradox that something which, ex hypothesi, is but a series of feelings can be aware of itself as a series.' In respect to the belief, in the real existence of the external world, he concludes that it cannot be proved philosophically, and can only be justified by the consideration that the world of possible sensations, succeeding one another according to laws, is much more useful for us in our daily life than the mere supposition that there is an existence outside me; it is an external world (comp. Exam. of Sir W. Hamilton's Philosophy, ch. xi, xii, xiii).

Mill's posthumous publications—Three Essays on Religion; Utilitarianism; and the Utilitarian Controversy (London, N. Y., 1874, 8vo)—teach more clearly, however, than the preceding works that he believed very positively in matter and very hesitatingly in spirit; very strongly in man and very feebly in God; very earnestly in human government and social organization, and not at all in divine providence. Indeed, the perfectibility of man through an enlightened self-interest—by means of popular government and universal education, especially in the elements of political economy and the Malthusian doctrines of population—was the chief article of his philosophical creed" (Dr. Porter, in Internat. Rev. N. Y. 1874, May-June, pt. vi). For further particulars, we refer our readers to Allibone, Dict. of Brit. and Amer. Authors, i, 1280; see also Edinburgh, Rev. July, 1866, art. iv; Jan., 1875, art. iv; Brit. Q. Rev. July, 1866, art. 1875, art. ix; New-England, Oct., 1875, art. 1; Westminster Rev. Jan. 1875, art. i; Christian Q. April, 1874, art. 1; Masson, Recent Brit. Philosophers, ch. x; see also the Life of John Stuart Mill by Bevan; The Human Intellect (see Index); John Stuart Mill, his Life and Works (1873), twelve sketches by J. R. Fox Bourne, W. T. Thornton, Herbert Spencer, and others (reprinted in Popular Science Monthly, July, 1875, art. xiii; and the Autobiography (London and N. Y., 1873, 8vo).
of the same elevated and tender spirit. His sermons were clear, earnest, solemn, and impressive. His sentences were short, often highly rhetorical in structure, and always pregnant with Gospel truth. As a pastor, and in the sick-room, he was not surpassed. But in nothing did he so soar heavenward, and seem so full of divine power, as in public prayer. A number of powerful revivals occurred during his pastorates; and D. Milledoler declined several pressing offers of high positions in the Church. In 1823, with Dr. Gardner Spring, he visited, as commissioner of the General Assembly, the missions among the Tuscaroras, Senecas, and Cattaraugus Indians. In the great benevolent movements of his time he was an earnest actor. He was moderator of the Presbyterian General Assembly in 1808, and president of the General Synod of the Reformed Church in 1823, and was one of the members of the convention that formed the American Bible Society in 1816. He helped to organize and was the first president of the Society for Evangelizing the Dead. He was an original member and corresponding secretary of the United Foreign Missionary Society formed in 1817. He published a number of sermons, public addresses, and other pamphlets. In his old age Dr. Milledoler was most venerable in appearance, elegant in manners, and saintlike in spirit. His snow-white hair, and almost rosy cheeks, and the completeness of his frame, and grace of his walking were sterling qualities which gave his appearance harmony and light. He was a faithful and honest public functionary, a model of religious joyfulness, and the society of his home was a continued example of the Christian. In 1855 he received the degree of D.D. from the university of Cambridge, and the degree of L.L.D. from the University of Oxford. The bishop of Oxford, in presenting him with the degree, said, "We are proud of the privilege of presenting you with an academic honor in recognition of the services you have rendered to your country.

Millelören or Millelören (or Chiliasm), a name given to those who believe that the saints will reign on earth with Christ a thousand years. See MILLENNIUM.

Millenarian Petition is the name of the paper which was presented to king James VI of Scotland (James I of England), as he passed through England on his way to London, by the Puritans. It contained a petition signed by nearly a thousand ministers, and hence the name Millenarian. It prayed for religious and civil liberties, and for the suppression of all religions and alterations in ceremonial as the Puritans had generally contended for. An answer to it was published by the University of Oxford, and the divines of Cambridge thanked their Oxford brethren. The conference at Hampton Court, however, was the result of the famous petition. See Fisher, Hist. of the Restoration, p. 434; Botetourt, in the Parliaments (Harpy s). ed. 1719, p. 228; Fuller, Church History, book x, p. 21. See Puk-}

TANS.

Millennium. This term signifies a period of a thousand years, and in its religious use is applied to the prophetic era mentioned in Rev. xx, 1-7. The Mil- lenarians or Chilians, in ancient and modern times, are characterized by their tenet respecting the second ad- vent of Jesus, which they believe will be accompanied by the resurrection of the martyrs and saints, who will reign with him on earth, in a state of blessedness and rest, for a thousand years, when the resurrection of the wicked will occur, together with the final judgement and eternal rewards. They have differed somewhat among themselves concerning the character of this millennial kingdom, some viewing it as more and some as less spiritual in its nature, employments, and joys. They have also differed in other minor particulars; but in the main opinion relative to the advent, the first resurrection, and the temporal reign of Christ, the various classes of Mill- lenarians agreed. This doctrine is generally attributed to a Jewish origin. Josephus (Ant. xviii, i, 8) says of the Pharisees that they hold to the confinement of the souls of the wicked in an everlasting prison, but that the righteous have power to revive and live again. In a second passage (War 2, 9, 4) the Pharisees hold in a similar manner, for it is not probable that, in this last place, he intends to ascribe to
Egyptian bishop, about the middle of the 3d century, wrote, in defence of the doctrine, a work entitled A Confutation of the Algorists, by which name were designated such as explained allegorically the passages on the resurrection of the dead of which the race of the saints, and of the participation in a temporal, millennial reign of Christ, was early adopted, especially by Jewish Christians. In the Epistle of Barnabas (cir. 100) we find the rest of the seventh day (Gen. ii, 2, 3) symbolically interpreted, with the aid of Psa. xx, 4, and made to prefigure a rest of Christ and his saints, so continue for a thousand years (xxv). The millennial theory was embraced in a sensuous form by Cerinthus (Eusebius, Hist. Eccl. iii, 28; vii, 25). It is found in apocryphal books by Jews and Jewish Christians in the first age of the Gospel— in the Book of Enoch, in the Testament of the Twelve Patriarchs, and in the Syriac Books. It penetrated into the Gentile branch of the Church, and spread extensively. Papias, who is supposed to have been a contemporary of John the Apostle, is mentioned by Irenæus and Eusebius as an adherent of this doctrine. The colossal grapes which Papias supposed that the millennial days would provide supported the Gentile writers in the 2d century. By this time a typical millennial period. It is true that the Chiliasm doctrine wears a Judaic stamp, and arose, in some degree, from Judaic influences; but, as Dorner has observed, there is one marked distinction between the millenarian views of Christians and all Jewish theories of the Messianic kingdom. Christians had made the Messianic idea of the old Israel, the earthly kingdom as limited in its duration, and as introductory to a spiritual and eternal state of being. The triumph of the Gospel through the agency of a present Redeemer was to be attended with the renovation of the earth, and to be succeeded by the everlasting, heavenly blessedness of the righteous, the proper sequel of the last judgment. Tracing down the history of the doctrine, we find that Justin Martyr (cir. 150) received it. In the dialogue with Trypho (c. 80), he says that he himself and “many others” hold that Jerusalem will be built again as a residence for Christ, with the patriarchal saints. He says that there are “many of a pure and devout character who are of this opinion;” but he adds, “I, and all other Christians whose belief is in every respect correct, know that there will be both a resurrection of the flesh and a thousand years in Jerusalem, which will then be rebuilt, adorned, and enlarged, as the prophets Ezekiel, Isaiah, and others declare.” Justin quotes in support of his opinion Isa. lxv. 17 sq.; Gen. ii, 2, in connection with Psa. xx, 3; Rev. xxi, 4,6, and other passages. Irenæus is likewise a millenarian. He speaks (Adv. Har. V, xxxii, 2) of “the times of the kingdom,” when the “righteous shall bear rule upon their rising from the dead;” when also the creation has been renewed. He taught that the vineyards of the kingdom would have an abundance of all kinds of food, from the dew of heaven and from the fertility of the earth.” Here follows the citation from Papias in regard to the colossal fruit of the vine. Tertullian advocated the same doctrine. Notwithstanding the extensive spreading of the millennial tenet, it would be a rash inference to assume that it was universal, or accepted as the creed of the Church. On this point Neander has good observations (Ch. Hist., Torrey’s transl., i, 651). The first decided opponent of whom we have a knowledge was Caius, the Roman presbyter, about the year 200. The census form in which he presented his system was not the only one. This, in opposition to the Sadducees, contributed materially to the strengthening of the apologist. The Alexandria school opposed them with energy, particularly Origen, whose peculiar opinions it was inconsistent. Nepos, an

VI.-O.
the Jews to Palestine, and their conversion to Christia-
nity, is frequently a part of this creed. The coming of
Christ in visible glory is to be signalized, it is held,
by this among other wonderful events. The Chalilastic
tenet forms one of the distinguishing features of the
"apocalyptic" or "millenarian" system of thought, the
nation commonly known as Irvingites. (See the art.
Catholic Apostolic Church, and Irving, Edward,
in this Cyclopaedia.) Christ is to come and gather his
elect together; the Jews are to be brought back to their
ancient land; the Gospel is to be extended by their
inherent vitality, and by the new agencies connected with
the personal presence of the Lord, over the earth. Then
is to follow the judgment and the end of the world.
Such are the main points of the millenarian view, as
cherished by the followers of Mr. Irving.
In the course of the history of the Church many sects
have arisen by whom the speedy coming of Christ to
set up a visible empire has been proclaimed. One of
these is the class designated as "Millritea" (q. v.), the
disciples of William Miller (q. v.). He was born in
Pittsfield, Mass., in 1781, and died in 1849. With slen-
derer resources of learning he began, about the year 1830,
to preach on the subject of the second advent, which he
declared, on the ground of his interpretation of the
prophecies, to be near at hand. The Millerites at length
went so far as to fix a certain day in the year 1843
when the Lord was to appear in the clouds of heaven.
Some gave up their ordinary occupations, and prepared robes
in anticipation of the advent. Christ fell short of their
sections and the sect expired. The later members of this
sect—if sect it is to be called—ceased to
define the precise time of the millenarian advent, but
continued to wait for it as near. See ADVENTISTS.
The Millerites, in common with many other Chalilas,
have supposed themselves to be furnished with the prophetic
with the means of calculating with mathematical accu-
racies the time of the millenarian advent. When we
leave the history of the doctrine, and look at the
exegetical arguments of the several parties, it
becomes plain that they are guided by diverse principles
of interpretation. With respect to certain passages,
millenarians adopt a second sense, or a figurative, trop-
ical interpretation. This is the character of their view
of the sabbatical rest, as predicted in Gen. ii, 3, and
Ps. xc. 4. On the contrary, to the passages in Isaiah
and other prophets which describe Jerusalem as the
centre and resort of worshippers of all nations, promise
Canaan as an everlasting possession to the Jews, and
declare their right to the holy city, they give a literal interpretation.
The same course is pursued by them with regard to Rev. xx., and with
regard to all that is said of the first and the second resur-
rection. They attach often a literal sense to the declara-
tion of Jesus (Matt. xxvi. 29; Mark xiv. 25) in which
he speaks of drinking new wine in his Father's kingdom. They
consider their general view to be favored by Luke
xiv. 14 ("the resurrection of the just"); Luke xx. 35 ("they shall be accounted worthy to obtain that
world and the resurrection of the dead"); by John vii.
38, 44 (which speaks of the resurrection of believers,
who fall asleep in the Lord). The permis of Chalilas
be that the disciples at "the regeneration"—or the resi-
tution of all things, and the deliverance of all things
from corruption—shall sit on thrones, judging the tribes
of Israel (Matt. xix. 28), is confidently referred to as
proving the millenarian hypothesis. So the statements
of John and Paul with respect to Antichrist, and the
sins and perils to immediately precede the advent—cor-
raborated, as they suppose, by the Saviour's own pre-
dictions in Matt. xxiv and xxxv, and the parallel pas-
sages—are brought forward in defence of their position.
The opponents of the millenarians rely principally
upon the prophecies of the Book of Revelation, the
brave evil is spoken of as if it were simultaneous, or
without any considerable interval of time interposed. They
appeal also to the passages in the Gospels and Epistles
in which the general judgment is connected immedi-
ately with the second advent. Their conception of the
prospects and destiny of the kingdom of Christ are de-
rived from passages like the parables of the leaven,
of the mustard-seed, and of the husbandman. That it was
expedient for Christ to go away from his disciples in
order to prepare a kingdom of this kind, and do away with
his invisible presence and influence everywhere, and to the
dispensation of the Spirit, is considered an argument
against the general philosophy on which the millenia-
rian tenet rests. It is thought to be more consonant
with the genius of Christianity, as contrasted with the
Jewish system, to look for a triumph of the Gospel by
the earth by moral forces and by the agency of the Holy
Spirit within the souls of men, than to expect the stup-
endous miracle of Christ's reappearance as a Ruler on
this globe, for the spiritual subjugation of unbelievers
and enemies. Hence those who reject Chalilism give
a figurative rendering to the prophetic passages in the
Apocrypha which are the most plausible argument
for that theory. The tendency of the millenarian theory
to chill the hopes, and thus repress the missionary
activity of Christians, by exhibiting the world as in a process
of deterioration, and by representing the efforts of Chris-
tians to convert the world as a task mankind as fruitless, until the coming
of Christ, constitutes not the least serious objection to
such opinions.
There is in England at the present time an energetic
propaganda of millenarian notions, called the "Prophesy
Investigation Society," which consists of sixty members,
and is formed of prominent Churchmen, and of the
publishers of large volumes of prophetic subjects, add-
ing largely to apocalyptic literature. There are also
numerous journals published in England to support these
views. The most important is the Quarterly Journal of
Prophesy, edited by Dr. Bonar, of the Free Church
of Scotland, which has been published fourteen years,
and has a large and increasing circulation. The Reformer
is a monthly periodical; the Christian Observer, the monthly
journal of the evangelicals, often displays millenarian
views. There are, besides, numerous weeklies of small
circulation, the chief being the Revivalist, originally es-
ablished to promote revivals in personal religion, but
now devoted to the spread of millenarian views.
Nor is the interest in this subject confined to Dissenters
in England or Scotland; a certain class of minds in the
Established Church seems to be as strongly contami-
nated. For many successive years, during Lent, courses of lectures
have been delivered in St. George's Church,
Worcester, and in Mr. Bloomfield's church, by clergyman of the Church of England. The course for
the year 1849 was printed, under the title of The Priest
upon his Throne, being lectures by twelve clergymen
of the Church of England, with a Preface by the Rev. James
Haldane Stewart, M.A., rector of Limpsfield (Lond. 1849).
This is, next to Dr. Brown's Second Coming of Our
Lord, the ablest book against the millenarian doctrine.
One of the latest productions in English is The End of
all Things, or The Coming of Christ, by an anonymous
author, a clergyman of the Church of England. It is
an argument against millenarianism, and is interesting
for its sketch of the rise of the doctrine with the well-
meaning but weak-minded Papists, and its progress
through all the sects and shades of belief, until "more
than half of the evangelical clergy of the Church of
England are at this moment millenarians."
Among the most important writings on the millen-
ianm are Corroli, Krist. (Frankfort, 1871); Dorner, Gesch. d. Person Christi, vol. i; Herzog,
Real-Encyklop. art. Chalilismus. See also the exegeti-
cal criticism in Rothe's Dogmatik, pt. ii, sec. ii. Most
of the recent treatises on doctrinal theology—for exam-
ple, that of Gans, Dogmengeschicht, ii, 477 sq; and
the treatise of Schleiermacher, on the subject of millen-
arianism, in his Dogmengeschicht, are devoted to the
subject. Among the special writers on the subject may
be consulted, on the millenarian side, Mede, Abbadie,
Beverley, Burnet, Hartley, Price, Freer, Irving, Birks,
Bickersteth, Brooks, the duke of Manchester, Beggs,
MILLER

267

MILLER, Armistead, a Presbyterian missionary of African parentage, was born in North Carolina about 1830 as a slave, but was liberated and went to Africa when a boy; was educated in the Alexander High School, Liberia, and afterwards returned to America, and received a theological training in the Ashmun Institute, Oxford, Pa. In 1857 he was ordained by New Castle Presbytey, and soon afterwards went to Africa, and became pastor of Mount Coffee Church, Liberia, where he died, Jan. 15, 1865.—Wilson, Preb. Hist. Almanac, 1866, p. 181.

MILLER, Charles W., a minister of the Methodist Episcopal Church, South, was born in Wayne County, Ind., in 1820. He entered the ministry in 1840, and continued faithful in the prosecution and studies of the work. When failing health obliged him to seek the climate of the Rocky Mountains, he went to Colorado as a laborer for the Church of which he was a member, and acceptedly applied himself to his task. He died in Colorado City, Colorado, April 8, 1872, universally deplored and to be remembered for his activity. Three thousand persons are said to have been converted under his preaching. See F. H. Sutherland, in the Central Christian Advocate (M. E. Ch., South), May 1, 1872.

MILLER, David, a minister of the Methodist Episcopal Church, was born at New Hartford, Conn., Nov. 31, 1816. He entered the ministry in 1816 as a member of the New York Conference. For several years he was chaplain at the State Prison at Wethersfield. In 1855 he was appointed presiding elder of the Hartford District. He died at Bristol, Conn., Dec. 26, 1855. David Miller was a man of good judgment and a practical mind, which aided him in his own affairs and also in giving counsel to others. As a minister he was penal and pure, believing firmly in the religious titles, resting upon him the calumnies of the one determined not to know anything among men save Jesus Christ and him crucified.

MILLER, George D., an Irish divine, distinguished for his eminence in theology, history, and literature, was born at Dublin Oct. 22, 1764. He was educated at Trinity College in his native city, and, after receiving holy orders, soon rose to prominence. In 1801 he was appointed vicar-general of Armagh, and lecturer of modern history at his alma mater. His lectures attracted general attention, and were published in 1816, under the title of Lectures on the Philosophy of Modern History from the Fall of the Roman Empire to the French Revolution (Dublin, 1816, 8 vols.; 1822, 4 vols. 8vo). This work of Dr. Miller "possesses unity of subject, harmony of proportion, and connection of parts; thereby constituting one of the best of modern histories in English, and affording a systematic view of the progress of civilization" (For. Qu. Rev.). "Dr. Miller assumes, as the basis of his system, that all the events of this world have an intrinsic connection, which gives them the coherence and the unity of a moral drama. A single event or period, taken by itself, is a grain of dust in this mighty balance" (Edinb. Rev., 1, 287 sq.). "Dr. Miller," says a prominent critic in the Dublin University Magazine (xii., 572), "advances and establishes his great principle, that God reigneth in the affairs of men, and that the end of the civil and political government is man himself. "In the winter of 1817 Dr. Miller was induced to apply for the head-mastership of the Royal School of Armagh, which was immediately conferred upon him. In conjunction with many able champions of Protestantism, he made a noble stand against the fatal policy of English statesmen, by which Roman Catholics were admitted to political power. While Dr. Miller, in 1793, had hailed with pleasure the commencement of political concessions to the Romish Church, and had even lent a helping hand to these reforms, he now, with deeper philosophy and wider statesmanship, opposed the growing political influence of the Papists. His Letter to Mr. Plunkett on the Policy of the Roman Catholic Question (Lond. 1826) is a fair index to his opinions. In the same year he showed himself the champion of the true faith by attacking the modern Arian opinions in his Observations on the Doctrines of Christianity and on the Arianism of the Romans; and when he proceeded (1831) to discuss these were at their height, he published A Letter to Dr. Pusey in reference to his Letter to the Lord Bishop of Oxford (1840, 4vo). A Second Letter to Dr. Pusey was published in the winter of 1841, and it suffices to say that Dr. Miller was thereafter considered one of the most formidable opponents of the Puseyism. His Case of the Church Education Society of Ireland argued in Reply to Dr. Elrington (Lond. 1847), and his Supplement to the Case of the Church Education Society of Ireland, in Reply to Dr. Elrington, 1847, were most important evidences of what true education ought to accomplish. Blessed with a mind peculiarly cheerful, contented and happy in his disposition, devout in his religion, truly philosophical in his learning, Dr. Miller was beloved and esteemed by all who came into official or private connection with him. He died Oct. 6, 1848. See Memoir of Dr. Miller in Bohn's edition of Miller's History, iv. 5 sq.; Dublin University Mag. xvii. 674 sq.; Edinburgh Review, i. 287 sq.; Allibone, Dict. of Brit. and Amer. Authors, ii. 1282.

MILLER, George Benjamin, D.D., an eminent divine of the Lutheran Church, was born of Moravian parentage at Emmons, Lehigh County, Pa., June 10, 1795. His father, the Rev. George G. Miller, connected with the classical and theological school at Nazareth, and descended from a long line of Moravian clergymen, furnished him with special facilities for intellectual and moral culture. He entered Nazareth Hall as a pupil when only eight years of age, and there he continued his studies for eight years. He then left for Philadelphia, and commenced his career as a teacher in a private school. Subsequently he turned his attention to mercantile pursuits, but he soon discovered that the work was not conducive to his natural tastes and inclinations. In less than a year he resumed his former employment, and became associated with the Rev. Dr. Hazeltine as an instructor in an academy at New Germantown, N.J.
and at the same time continued his theological studies, which had been commenced at Nazareth. In the autumn of 1818 he entered upon the work of the ministry at Canajoharie, N. Y., and again was called to preach by the New York Ministerium, then under the presidency of the Rev. Dr. Quitman. In connection with his pastoral labors he established a classical school, and gave regular instruction. In this position he faithfully labored till 1827, when he accepted a professorship in Hamilton Seminary, N. Y., and again became the colleague of Dr. Hassell, whom he succeeded as principal of the institution in 1830. With the exception of five years spent in the work of teaching and preaching elsewhere, he continued connected with this seminary, either as principal or professor of theology, until his death, devoting all his energies to the preparation of his students for the discharge of their duties in the pulpit and in the schools of his holy ministry. His name will always be as closely identified with the history of the institution as that of its benevolent founder. He died with the harness on, April 5, 1868. Dr. Miller was married to Delia B. Snyder in 1816, and in 1866 commemorated his "golden wedding" with a large number of relatives and friends, who had gathered from different parts of the country to present their congratulations and good wishes, the whole family, twenty-three in number, on the evening preceding the wedding festivities, uniting in the celebration of the Lord's Supper, and the revered patriarch, surrounded by the old and the new, admiringly addressed by the assembled congregation. Dr. Miller was a man of quick, acute, and discriminating intellect. He was distinguished for his accurate and ripe scholarship. As a man of learning, he had few superiors in the country. He had a perfect command of his own vernacular, and spoke and wrote German and French with wonderful facility. He was familiar with the exact sciences, his acquaintance with history was very extensive, and his knowledge of the ancient classics critical and complete. He was also a profound Hebraist, and thoroughly versed in the Scriptures, so that he never found it necessary to use a concordance, but could turn with almost unfailing intuition to the required passage of the sacred page. Dr. Miller was noted as a man of original thought and independent research. As a writer, he was universally commended as clear, accurate, and instructive. The productions of his pen show his power of analysis, of generalization, and of great conclusion. In 1832 he published a sermon, His discourses and erudition and enlarged experience were only surpassed by the loveliness of his Christian character; and his earnest, simple-hearted, active piety made a deep impression upon all who came within the range of his influence. His elevated type of Christian excellence, his high culture, his upholding, modest character, and his singleness of purpose, were the bonds which towards him by the strongest sympathies all men. He was a bright and shining light in the Church, and his name will ever be cherished with the most affectionate interest. All his acquisitions were made subordinate to that which most deeply interested his active mind—the study of divine truths. All his treasures were laid at the Master's feet, and devoted entirely to his service. When, in 1836, he received the distinction of D.D. from Union College, he meekly submitted, remarking to a friend that the letters would serve as a good Scriptural motto, Deo Duce. The Lutheran Church owes to him as much as to any other laborer in this country. The only works published by Dr. Miller are a volume of Sermons on some of the Fundamental Principles of the Gospel, and a text-book on German Grammar, which never reached an extensive circulation. For a more detailed account, see Evangel. Qu. Rev., 1870, Jan. p. 25 sq.; Memorial Volume of Hamilton Seminary. (M. L. S.)

Miller, George W., a minister of the Methodist Episcopal Church, was born near Westminster, Md., in 1826. He was converted at sixteen; entered the ministry of the United Brethren Church in his twenty-fifth year, and travelled for seven consecutive years. He then joined the ministry of the Methodist Episcopal Church, in which he labored until his death, at Pioneer, Ohio, Aug. 10, 1872. He was an earnest and successful worker and a consecrated minister. Miller, Hugh, one of the most noted characters among the English-speaking nations of our century, the champion of the Free Church of Scotland, and the defender of revelation from "scientists," falsely so called, was born of very humble parentage at Cromarty, in Ross-shire, Scotland, Oct. 10, 1805. He was educated at the parish school, where he was distinguished for his fondness for poetry and poetical composition. At that early age he was an extensive reader, and placed under contribution the libraries of the parish. In this way he laid the foundation of an extended knowledge of literature, which availed him in after-life. But the most important portion of his education was the history instruction he received from an uncle who had acquired a taste for the observation of natural phenomena. His poverty proved an obstacle to a collegiate education, and he was obliged to learn a trade in order to secure a livelihood. He determined fortunately, as his later history proved, to become a stone-mason. This occupation unexpectedly fostered the taste he had acquired for the study of natural history; and while hewing blocks of stone in the quarry, he was diligently studying the traces they exhibited of their past history. It was in this way that he prepared himself to become the father of the old red sandstone geology, in which country he principally worked. "It was the necessity which made me a quarrrier that taught me to be a geologist," he himself wrote in after-life. He labored as a quarryman and stone-mason for about fifteen years, constantly improving himself in his leisure hours by reading and study. The publication of a volume of poems which he wrote during that time attracted the attention of some persons, who, by procuring him a situation in a bank of his native village, enabled him to devote more time to his studies. He now commenced contributing to several newspapers. The Church of Scotland was at that time a prey to internal dissensions, which ultimately led to a division. The Independents, who wished to throw off the yoke of the higher clergy, received great support from the people; Miller rendered them great service when the contest came to a close by the decision of the House of Lords in the Auchterarder case, which was in 1830. The publication of his paper, The Scottish People to the Right Honorable Lord Brougham and Vaux on the Opinions expressed by his Lordship in the Auchterarder Case. He contributed to the first congress of the British Association, held at Glasgow in 1840. They were highly praised by Charles Lyell, Murchison, Buckland, and Agassiz, and the name of Miller was by them associated with the title of the old red sandstone, or New Walks in an Old Field (Edinburgh, 1841, 8vo), often reprinted both in England and America. In 1847 appeared his First Impressions of England and its People (3d ed., 1858, 8vo), the result of a tour made during the previous year. Some parts of this book, especially the account of the pilgrimages to Stratford-on-Avon, and the Leasowes, and Olney, and other places, memorable for their literary associations, are among the very finest pieces of descriptive English. A magic style characterized all his works, whether those of a more popular kind or his scientific treatises, such as the Footprints of the Creator (1849), a work suggested by the Vestiges of Creation.
tion, and suberine of the fallacies of that superficial and
plausible book. There was nothing in Miller's work
" says the Edinburgh Review for July, 1858, "which so much surprised the reader as their mere lit- erary merit. Where could this Cromarty mason have acquired his style? Not one of the authors of our day has approached Hugh Miller as a master of English composition, for the equal of which we must go back to the age of the Romans and Goldsmith. In the later part of his life he suffered severely from dis- ease of the brain, and he finally shot himself while in a fit of somnambulism, Dec. 14, 1856. His death caused a most painful excitement. Few men have occupied a higher position in the estimation of his countrymen. He was a noble example of what self-education can do for a man. He was a man of science, and an independent writer, or the man of literature and science, his character must claim the respect and admiration of posterity. The personal appearance of Mr. Miller, or "Old Red," as he was familiarly named by his scien- tific friends, is thus described by one who had the good fortune to see him: "A head of great massiveness, and magnified by an abundant profusion of sub-Celtic hair, was set on a body of muscular compactness, but which in later years felt the undermining influence of a life of unusual physical and mental toil. Generally wrapped in a bulky plaid, and with a garb ready for any work, he had the appearance of a shepherd from the Ross- shire hills rather than an author and a man of science. In conversation or in lecturing the man of original geni- us and cultivated mind at once shone out, and his abundant information and philosophical acuteness were only less remarkable than his amiable disposition, his generous spirit, and his consistent, humble piety." (Liti-
ary Gazette.) His other works are, The Geology of the Bass (1848, 8vo): On certain Peculiarities of Structure in some ancient Canoisa (fishes) (1850): On the Foal Flora of Scotland (1853): My School and Schoolmasters, a very interesting autobiography, in which he re- lates his early history, and his struggles in pursuit of science (1855): The Testimony of the Rocks (1858), in which he discusses the Biblical bearings of geol- ogy, published after his death. "Hugh Miller," says the writer in the Edinburgh Review whom we have al- ready had occasion to quote, "must undoubtedly be re- garded as one of the most remarkable men whom Scot- land has produced. The interest of his narrative, the purity of his style, his inexhaustible faculty of happy and ingenious illustration, his high imaginative power, and that light of genius which is so difficult to define yet so impossible to mistake, all promise to secure for the "Old Red" a position amongst the most admiring of his countrymen." The different scientific works of Hugh Miller mark an important epoch in the progres- s of the study of geology. He was one of the first to popularize the subject. "Besides adding much to our knowledge, and placing things previously known in a clear and pleasing light, Mr. Miller's performance will be very acceptable also to geologists both of the old and the young school." (Lond. Ath. 1845, p. 538.) "But what is in a great degree peculiar to our author is the success- ful combination of Christian doctrines with pure scien-
tific truth" (Agassiz, Introd. to Amer. ed. of Footprints
of the Creator). Miller's major work, "Life and Triumphs of Hugh Miller," by Thomas N. Brown, D.D. (Glasc-
Miller, Jacob (2), a minister of the Methodist Episcopal Church, a native of Germany, came to this country when but seventeen years of age (1832); was converted while a resident of Quincy, III., and con- nected with the German Lutheran Church. Himself the product of a revival, he labored earnestly for the re-
newing of God's love in the hearts of his lukewarm Luth- eran brethren, and in the midst of the world with which he was connected opposed him, and Miller was fin- ally obliged to leave that body. With thirty others, like-minded, he joined the Methodist Episcopal Church. In 1848 he was admitted into the Illinois Conference, and labored with great success until, by reason of failing health, he was obliged to give up a superfluous and unmit-
red labor. In 1860 he was again placed on the active list, and sent to Alton, II., where he labored successfully. In 1866 he was sent to Petersburg Circuit, Ill.; thence to Bushnell, where he died, March 7, 1871. See Minis-
tres of Annual Conferences, 1871, p. 188.
Miller, James, a Presbyterian minister, was born near New Milns, Ayrshire, Scotland, Feb. 4, 1808. He was educated at the University of Glasgow, and is now one of the most distinguished divinity in the theological seminary at Glasgow, and was licensed by Kilmanoch Presbytery of the United Se-
cession Church. Soon after he came to the United States; was ordained in 1841 by the Associate Reformed Presbyterian Church of Ohio as pastor over the Church in Perrysville, Wood County, Ohio, and subsequently removed to Iowa, preaching as opportunity offered, and died Jan. 26, 1867. Mr. Miller was a success- ful and useful minister, and did much to advance the cause of truth. See Wilson, Presb. Hist. Almanac, 1869, p. 274.
Miller, Johann Peter, a German Protestant theol-
gian, was born at Leipzig, April 26, 1728; was edu-
ated at the university at Helmstedt; in 1747 went to Göttingen, and in 1750 became rector of the Latin school at Helmstedt. In 1756 he accepted a similar position at the Lutheran Gymnasium at Halle, but re-
turned in 1756 to Göttingen, as professor of theology, and there died, May 29, 1799. Miller wrote and pub-
lished a continuation of Mosheim's "Sozialgeschichte." His production of value are, Das Reich der Natur und Sitten (Halle, 1757-1762); — Diss. locum ad Roman. S. 28 (Helmstedt, 1747); — Diss. locus antediluvianus de Eodem et Diverso (Götting, 1748, 4to) — Diss. de notabili et nazi-
mo verborum Italia ad verba Christi Matt. xx, 28 addita-
mentum (Ibid. 1749, 4to). — In Minoan Documents and orations tarri generis (Hamburg, 1751, 8vo) — Voll-
ständiger Auszug aus allen neuen Theilen der Mohé-
ischen Sittenlehre der heidnischen Schrift (Halle, 1755, 8vo; 2d auflage, ibid. 1777, 8vo) — Die Hofnung besserer Zei-
en für Schulen (Ibid. 1765, 4to.) — Progr. quo probatur, cum theonemusia Apostolorum nec omnimentionis quasi
MILLER 270  MILLER

oliquam, nec anamartemiam fuisse conjunctam (Güttinger, 1739, 410).

MILLER, John E., a minister of the Reformed (Dutch) Church, was born at Albany in 1792; graduated
at Union College in 1812; was licensed in 1817; 
served the Church as missionary in the South and West
in 1817 and 1818; was pastor at Chester, N. J., Presby-
terian Church, from 1818 to 1821; he held them till the Re-
formed Church, Tempkinsville, Staten Island, until he
died, in 1847, in the midst of a powerful revival of re-
ligion in his Church. Miller was also chaplain in the
Marine Hospital and at the Seaman's Retreat. In
this place he exhibited the highest degree of moral courage
and unostentatious and zealous in times of appalling pesti-
ence, and among sufferers of all kinds. Contagious dis-
ese had no fears for him. He was a simple-hearted,
bold, tender, and faithful preacher of the Gospel; a guile-
less, outspoken, honest soul; a hater of strife; and a
brave, chaste, earnest, uncompromising lover and defender
of the faith once delivered to the saints. His memoir
is to be found in a goodly volume, called An Old Disple-
ied and his Descendants, by Rev. F. M. Kip, D.D., which
contains brief biographies of his patriarchal father (Christian Miller, Esq., of Albany) and several of his
family, who were noted for unusual gifts of mind, char-
acter, and piety. Among the sons was Isaac Livingston
Kip Miller, a youth of unusually brilliant and powerful intellect, and of great promise, who died in
1846, while studying for the ministry. He was the elder brother of W. A. Miller (q.v.). (W. J. R. T.)

MILLER, John Peter, a talented but eccentric American minister, was born in the Palatinate, Ger-
many, about the year 1715; was thoroughly educated in his native land; came to this country in 1729; was li-
censed and ordained by the Philadelphia Synod of the
Presbyterian Church; and in 1731 became pastor of the
German Reformed Church in Tulpehocken, Berks Coun-
ty, Pa., where he labored successfully for about four
years. In 1735 he fell in with an enthusiast by the
name of Deisel, by whom he was immersed, and so be-
came identified with the Seventh-day Baptists. Flying
from the society of the world, he entered upon a solitary
or monastic life at the base of a mountain, near a “lim-
pid spring.” He afterwards, urged by the force of his
trials, entered the cloister of the Seventh-day Baptists at
Ephrata, Pa. “Here, under the name of Jabez, he lived a
quiet life as a Protestant monk, using a board for his bed at night, and devoting himself by day to
what he imagined to be the service of God in severe self-castigation.” See Harbaugh, Fathers of the Ref.
Church, i, 301-311. (D. Y. H.)

MILLER, John Wesley, a minister of the Meth-
odist Episcopal Church, was born in Charleston,
South Carolina, Oct. 27, 1829. He enjoyed a collegiate
education, and entered the ministry in 1850; was,
while licentiate, deacon, and elder, on circuits, stations,
missions, and in the Southern army as chaplain of hospi-
tals, always a faithful, devoted servant of Christ. He
died in the village of Darlington, South Carolina, June
29, 1866. See Minutes of the M. E. Church, South, 1866.

MILLER, Louis Pilkinson, a minister of the Meth-
odist Episcopal Church, was born in Union County, Pa.,
Jan. 8, 1809. He joined the Church in his sixteenth
year. He was soon after impressed by a strong convic-
tion that it was his duty to preach the Gospel to others.
He worked in his father’s fields by moonlight, that he
might visit the village of Darlington, South Carolina, to
establish the station in life. In 1828 he entered the academy at
Milford, New Carlisle, Raysville, Batavia, Madisonville,
Miam, Jamestown, and Mooscow. In 1864 he entered
the army as chaplain, and served until peace was re-
stored. He died in 1872. Mr. Miller was a man of great
humility and piety, and his ministry was a glori-
ous success.

MILLER, Nathan W., a minister of the Methodist Episcopal Church, was born at Washington, Me., Dec.
24, 1831; was converted and united with the Church in
June, 1842. In 1853 he was licensed as a local preach-
er, and in 1859 he was employed by the presiding elder
of the Region of Maine to organize a church at Bar Harbor, where he labored successfully. He entered the itiner-
ancy in 1862 as a member of the East Maine Conference,
and was appointed to North Searsport; in 1864 and
1865, to Beirt Hill, Charleston, and Garland; in 1866,
Malerness, to Gordon; in 1867, to Abbott and Greenville; in 1868,
1869, 1870; in 1871, to Cranberry, and Sandilands, and a circuit of churches he granted a superannuated relation; and in June following
he moved to Benton, where he could be near his family
friends. Here he assisted in the public service as long
as his strength would permit. He died Feb. 22, 1870.
“Brother Miller, as a Christian minister, had clear per-
cussions; a high sense of honor, combined with a deep
sense of obligation; as a citizen, he was kind and oblig-
ing; as a friend, true, trusty, and confiding; as a com-
panion and father, affectionate, kind, and faithful.” See
Minutes of Annual Conferences, 1870.

MILLER, Samuel (I.), D.D., LL.D., an eminent Presby-
terian divine, whose name is cherished as that of one
who materially assisted in laying the foundations of the
Presbyterian Church in this country, was born Oct. 81, 1769,
and died Feb. 17, 1833. He received classical and theo-
logy training under the direction of his father, the Rev.
John Miller, a native of Boston, who early settled as a
Presbyterian pastor in Delaware. Samuel was educated
at the University of Pennsylvania (class of 1789), and
graduated with the highest honor in his class; com-
cemed his studies of theology under his father, and fin-
ished his theological course under the Rev. Dr. Norsbit,
att Dickinson College, Carlisle, Pa.; in 1791 was licensed
to preach, and in 1783 was installed as colleague pastor
with Dr. McKnight and Rodgers over the First Presby-
terian Church in New York City, and, after the dis-
solution, was pastor of the Wall Street Church until
1818. He was instrumental in the establishment of Princeton
Seminary, and subsequently was appointed to the chair
of ecclesiastical history and Church government, which
he held for more than thirty-six years. He died Jan. 7,
1850. Dr. Miller was an extensive author, and published,
Sermons, Fait 1, 1790.—A Discourse on the Christian Religion (1800)—A Brief Retrospect of the 18th Century, 1800, 2
vols., 1805.—Letters on the Constitution and Order of
the Christian Ministry (1807, 12mo).—Discourse designed to
Commemorate the Discovery of New York (1809).—Mo-
noir of Rev. John Rogers, D.D. (1818, 8vo).—Letters on
Unitarianism (1821, 8vo).—On the Eternal Sonship of
Christ (1828).—Lectures at the Seminary (1827).—Let-
ters on Clerical Manners and Habits (1827, 12mo).—Lect-
ures at the Seminary (1830).—Essay on the Utility and
Importance of Creda and Confessions;—On the Office of
Ruling Elders (1851, 12mo).—On Baptism:—Letters on
the Observance of the Monthly Concert in Prison.—Mo-
noir of Rev. Charles Norsbit. D.D. (1840).—The Prim-
itive and Apostolical Order of the Church of Christ in-
dicated (1840, 12mo).—Letters from a Father to his Son
in College (1845).—Thoughts on Public Prayer (1848);—
On Christian Education of Children. Dr. Miller also
contributed a Life of Jonathan Edwards to Sparks’s
American Biography, and has had many other pub-
lications which attest his ability and the value of the
natural qualities that constituted the foundation of his
eminently attractive character. His countenance,
full of generosity and manliness, was indicative of great
purity and nobility of character; his manners were un-
commonly dignified and polished; his conversation brilli-
ant and instructive. He was a valuable man and a system and method. His intellect was naturally clear,
comprehensive, and symmetrical. As a minister, he
was singularly adapted to profit theological students—
his preaching clear, direct, and full of evangelical truth. As a writer, he was eminently qualified; his lectures were luminous expositions of his subject, full of well-digested thought, and arranged with graceful naturalness. As an author, he was at home in almost every field, whether literary or theological. His taste was beyond criticism, insomuch that, in reading his works, one rarely meets with a passage which is not either of the best or being gradually improved. His style is marked by an elegant simplicity—generally easy and flowing, but occasionally rising to the more artful, condensed, and elevated strain. See Life of Samuel Miller, D.D., LL.D., by Samuel Miller (1869); The Biblical Rep. and Princeton Rev. Jan. 1879, p. 33; Amer. Presb. Ref. July, 1860, p. 160; and June, 1861; and especially the Miscellanies, xxviii, 503-531; Sketches of the Lit. of the United States; London Athen. 1835, p. 716; Dr. J. W. Franca's Old New York (2d ed. 1858), p. 57; Life of Archibald Alexander, D.D., by his son, p. 380.

Miller, Samuel (2), a minister of the German Reformed Church, was born in Union County, Pa., March 25, 1813. He was licensed in 1842, and ordained the following year. He first labored in Dauphin, and then in Butler County, Pa. In 1852 he removed to Chambersburg, Pa., where he stood in connection with the publication office of the Reformed Church as associate editor of the Messenger and Kirkzeitung. After laboring there for six years, he returned to the pastoral work, residing for several years in Lebanon, and afterwards in Pottsville, Pa. His health failing, he removed to Philadelphia, where he died, Oct. 11, 1872. Mr. Miller was a man of decided talent, genial spirit, and indomitable energy, patience, and perseverance. He is the author of a work of some merit, entitled Mercersburg and Modern Theology compared, and of quite a number of articles in the Mercersburg Review. See Ref. Church Messenger, Nov., 6, 1873. (D. Y. H.)

Miller, Samuel J., an American divine of some note, figured first as missionary to Africa, and later as agent of the Colonization Society. He died in 1818. He was the editor of the celebrated Report of the Presbyterian Church: The Commonwealth of Pennsylvania as Thatched Green and Others (Phila. 8vo; new ed. 1855, 8vo, p. 96).

Miller, Thomas, one of the pioneer preachers of American Methodism, largely identified with the spread of Methodist doctrine in Maryland, was born about the year 1711. He was an industrious and consecrated preacher, and a member of the Presbytery of 1800 he joined the Methodist Episcopal Church, and soon became an official member; in 1800 he was licensed to exhort and preach. His itinerant life commenced in 1805, under the elder Dr. Chandler, and continued till 1848, nearly forty years. In his early ministry he was healthy and strong, and never spared his strength; in fact, his health and strength served him well through all his ministerial course. He was stationed for twelve years at different times in Philadelphia, and held other important charges. His early education was limited, but constant reading and close application, added to great natural abilities, made him an able minister of the New Testament. He was known by the title of "Old Father Miller" far and wide, and he was loved and honored by all who knew him, both in and out of the Church. He was a good friend to the young, and took great interest in the Sabbath school. He took many a young man by the hand, and helped him to the ministry. He died in 1806.

Miller, Tobias Ham, a Universalist minister and journalist, was born about 1802. In early life he was settled in Maine as an orthodox clergyman, but later he became a firm Universalist. He was the original "Uncle Toby" of the Boston Carpet Bag; was on the Chronicle (Portsmouth) eighteen years, and the Portsmouth Journal twenty years. He died in Portsmouth, New Hampshire, March 30, 1870.

Miller, William, the founder of the Millerites (q. v.), was born at Pittsfield, Mass., in 1811. He enjoyed but slender educational advantages. During the war of 1812 he served as a volunteer with the rank of captain. About 1838, while a resident of Low Hampton, N. Y., he began his career as an apostle of the new doctrine, which taught that the world was coming to an end in 1843. The main argument on which his belief rested was the relative frequency of the 2300 days in Dan. viii, 14, which he regarded as years. Then considering the seventy weeks in Dan. i.x, 24, as the key to the date of the 2300 days of the preceding chapter, and dating the periods B.C. 457, when Artaxerxes, king of Persia, sent up Ezra from his captivity, to restore the Jewish polity at Jerusalem (Ezra vii), Miller supposed that the prophetic year ran from the 2300 days, which his commentators generally do, in A.D. 38, with the crucifixion of Christ, he found the remainder of the 2300 days, which was 1810, would end in 1843. For ten years he held forth to this purport, and succeeded in gathering a large number of followers, which is said to have reached fifty thousand, who awaited, with credulous expectation, the appointed day. The result, however, turning out contrary to the teaching of their apostle, the Adventists, as they are sometimes termed, gradually forsook Miller. He died at Low Hampton, Washington County, N. Y., Dec. 20, 1849. His followers esteemed him as a man of more than common original power, a man of sound and honest reasoner, a humble and devoted Christian, a kind and affectionate friend, and a man of great moral and social worth. See MILLERITES.

Miller, William A., D.D., a minister of the Reformed (Dutch) Church, was born at Albany, N. Y., in 1824; graduated at Union College in 1842, and at the theological seminary of the Reformed Church at New Brunswick in 1846. He was a grandson of the "Old Bishop," and nephew of John E. Miller, whom we have noticed above, and inherited the robust intellect, strong character, and religious peculiarities of his remarkable family. After a brief settlement as pastor of the Reformed Church of Glenham, N. Y. (1846-49), he became professor of languages, and subsequently principal of the Albany Academy, a celebrated classical and mathematical school (1849-56). From 1856 to 1859 he was the useful pastor of the Reformed Church of Rhinebeck, when his health failed from pulmonary disease, of which he died in 1865. Dr. Miller was a highly-gifted man, a thoroughly accurate and critical scholar, an enthusiastic and critical preacher, a logical, practical, and profitable preacher, and a man who always devoted himself completely to his professional duties. He dealt much in careful expository preaching, for which his turn of mind, classical culture, and love of the truth admirably fitted him. Had his life been spared, he would doubtless have risen to higher positions in the Church, But he so greatly admired by his scholarship and services. He was "chosen in the furnace of affliction," and his graces were beautifully developed by the protracted trials of bereavement, disease, and suffering, and especially by being obliged to desist from all labor for Christ, just when he felt most anxious and best qualified for it. His Christian experiences during his last years and in death were delightful and impressive exhibitions of the triumphs of grace. (W. J. B.)

Millerites, or Adventists, as they are sometimes called, are thosemillenarians [see MILLENNIUM] who adhere to the doctrines as expounded by William Miller (q. v.). When in 1838 he first began to proclaim millennial doctrines, the earnestness of his manner, his vivid fancy, and the fact that he was a man of definiteness with the Scriptures, added to his historical, and the bold confidence with which he proclaimed his views, made so deep and wide an impression that he everywhere left in his wake large numbers examining the evidences for themselves. Among his most ardent followers was Joshua V. Himes, a minister of the Christian Church, who, having become a Millerite, commenced, in 1840, without subscribers or funds, the
publication of a semi-monthly journal entitled *Signs of the Times and Exposition of Prophecy*; and, meeting with success, two years later issued a weekly, under the title of the *Advent Herald*, which largely aided in disseminating the doctrines of the Adventists, who now comprise many thousands, in the United States, British America, Europe, and Australasia. This journal was established in Boston, Mass., together with the labors of Mr. Miller, who gave his time, his energies, and his property to the extension of his views, and the efforts of numerous pro patriots that everywhere rose up, soon established great numbers in a belief in the general correctness of Mr. Miller's opinions, and the personal appearing of the Lord was eagerly looked for by some 50,000 followers. Though disappointed at the time set, and frequently from time to time since, there are still many adherents to Miller's views. Their aggregate number is quite respectable, and their efforts for the dissemination of their convictions generous and unselfish. While as a body they make little or no pretension to influence, as individuals they are necessarily close Bible students; are liberal, according to their means, to the poor and for the support of the Gospel; and noticeable in the main for the modesty and uprightness of their walk, and their careful conformity to virtue and to law. They belong to the societies or congregations of the evangelical Church, and are distinguished only for their peculiar belief in the personal coming of Christ, and his bodily reign with his saints on the earth. They have no creed nor form of discipline other than the Word of God, which they regard as a sufficient rule of faith and practice. A large number of them hold the office of lay and clergy, as often as it is deemed necessary for the discussion of such subjects and measures as the interests of the cause may demand; but these are purely voluntary and advisory, and claim to exercise no authority over the conscience of any. 

**General Doctrines of Belief.—** 1. They cannot see, if, according to Isa. vii. 14, Christ was foretold to be born of a virgin, and it came to pass (Matt. i. 25-35) that, as foretold, he was (Micah v. 2). Christ was literally born in Bethlehem (Matt. ii. 1). If, as foretold (Dan. ix. 25),Messiah came at the expiration of seven weeks and sixty-two weeks (Mark i. 10), and if the thirty and two weeks Messiah was literally cut off (Dan. ix. 26). From the land of the living for the transgression of his people, and made his grave with the wicked and with the rich in his death (Isa. liii. 9, 12, 15). Christ was literally crucified. If he forbode that nor did he shed his blood to corruption: if (Psa. cx. i) Christ did sit on the right hand of God, and is to sit there till his enemies be chained, the footstool of his feet (vs. 7) that he might establish his throne and his footstool have literally come to pass, and they think they have, then they cannot see, what reason have to do for doubting that the same rule will be observed in the fulfillment of all other predictions relating to Christ.

2. Prophecy (Gen. xxii. 18) foretels Christ as the seed of Abraham, in whom all the families of the earth shall be blessed. It also promises to the seed of Abraham all the lands of Canaan. It is an extension of our Lord's promise (John xiv. 17, 18), in connection with Abraham himself (Gen. xxii. 8), hence the land is Emanuel's land (Isa. viii. 8). But, when Christ is born in the earth, he is born in a land.

3. Therefore he must return personally to inherit it. Therefore he was foretold to sit forever on David's throne: he is the Son of David according to the flesh (Psa. cxlii. 11). But, while on earth, he never sat on David's throne. He went to Jerusalem, as foretold, on an ass's colt; claimed his rights, and was proclaimed king by the children, but rejected by the rulers (Matt. xii. 23). Hence, for an answer they call his kingdom and reign over the house of Jacob forever (Luke i. 32, 33).

4. Christ has the promise of the ultimate parts of the earth (Gen. xiii. 15), but he did not receive his kingdom, and dominion, to be in the "clouds of heaven." But he has never yet ascended, but remains from the earth. He was "seen in the flesh also in the days of the flesh," in futurity, at his second advent. He cannot have universal dominion till he does. He was foretold to be read in the identical body in which he was crucified and buried, and was so identified (John xx, 24-28). Those who thus identify his person, of flesh and bones, saw him go from earth up into heaven, and a cloud received him out of their sight. They were told by divine authority that this angelic messenger that they saw go into heaven, "shall so come back again in like manner with the cloud, to receive theElect of Israel." This is the second advent of Christ. Those who have part in the first resurrection are saints, and will live forever. The second advent is for the Apostle and for those that lived but the first resurrection, but the time is determined when they are to be raised at his coming, and that is the order of the resurrection (Rom. xv, 23). And the second advent must therefore precede the second resurrection (Rev. i, 5, 7). But, because he was present to cast the beast and the false prophet into the lake of fire, shutting up of the devil in the bottomless pit (Rev. xix. 20), and because he is now in heaven, and because, thus, this is a resurrection of the just, and the Millennial, all the great anti-Chrisian powers are to be put down. The man of sin, however, the son of perdition, is only to be destroyed by the brightness of Christ's coming (2 Thess. ii, 8). The coming of Christ, for his destruction, must therefore be pre-millennial.

5. That there will be two resurrections, a thousand years apart, viz. the "first resurrection" the "resurrection of the just." The "resurrection of life," the resurrection of the just; and the resurrection of the unjust, the resurrection of the unjust, "the resurrection of the unjust, the resurrection of the unjust." 6. That the general view that the millennium will be a thousand years of prosperity, grace, and advancement, and that the new temple of God, the nations of the world, will live under this rule, and that the world will be no longer subject to sin and death, but the kingdom without immortality, which cannot be till the resurrection of the unjust (Rev. xxi). The seventh chapter of Daniel presents, in vision, the Messianic kingdom, and the New Jerusalem, with the divisions and excursions of the fourth empire, which is to last a thousand years, when Christ comes in the clouds of heaven to receive his everlasting dominion, which is also universal. Till the judgment, the little clement of the Gentiles shall be taken from the earth, and the kingdom of God come with power and great glory. There is no peace in the prediction till the coming of Jesus Christ, that he might judge the quick and the dead, and that he might divide the land, that they may see the Son of Man coming in the clouds of heaven with power and great glory. The tares and wheat, the righteous and unrighteous, the wicked and the righteous, shall live till the end of the world, and then they are to be cast off and punished, and the other glorified in the kingdom of God (Matt. xiii. 28-30). For the unverifiable, see Gen. xxviii. 14, and Act. xxvii. 32; and believe in the conversation of the world before the second advent of the Saviour. 10. That the thousand years will be one of judgment rather than probation. For they read in the second Psalm that when the heavens were opened to Christ for his inheritance, and the uttermost parts of the earth for his possession, he is to break them or rule them (Rev. xii. 5, and 13). But by them is thought to mean the potter's vessel, which they consider to be anything else besides conversion. They also read in Psal. cxlix that all the sabbaths of the earth shall be considered to be noble with featers of iron, and execute upon them the judgments written. From Isa. ix and Zech. xiv they believe the temple and the service of the heaven then will be compulsory service. 11. That final and eternal retribution will be awarded to all nations in the Son of Man comes in his glory (Matt. xxv. and Luke xiii).

12. That the promises made to Israel of a yet future and eternal salvation do not cease with the final judgment, but are to be ultimately and perfectly accomplished, and Israel forever dwell there in peace. But that this cannot be fulfilled before the resurrection of the dead and return of Israel, of every generation, including Abraham, Isaac, and Jacob, will be raised to life, and have eternal glory before the coming of Christ. This Ezek. xxxvii declares will be the way the whole house of Israel will be restored; "I will open your graves, and bring you up, and cause you to come upon your own land." The resurrection, according to Paul, is the
bope of Israel." But if the resurrected and glorified Israel act to have the land and dwell therefrom forever, the Jews in flesh and blood, as a nation, cannot have it forever. All the promises, however, of a future return, promise an everlasting possession of the land. But mortal Jews cannot possess it forever—glorified and immortal ones can. Therefore they are the heirs of promise.

13. That the coming of the Lord is at the door for the following reasons, viz.: First, the four great empires are to be succeeded by the kingdom of God; and it is very manifest that the last—the Roman government—has passed its predicted divisions, and must soon end. Second, the waning of the Ottoman or Mohammedan power is another index pointing to the speedy coming of the kingdom of Christ. Third, the universal movements and agitation, the famines, pestilences, earthquakes, the wars and rumors of wars, together with the signs in the sun, moon, and stars, etc., are conclusive evidence of his speedy approach. Fourth, the Gospel, which was to be preached in all the world, for a witness to all nations, is now completing its work.

14. That the advent doctrine, embracing, as it does, the resurrection of the body, the personal and visible appearance and reign of Christ on earth, the restitution of the heavens and earth to their paradisaical state, as the eternal inheritance of the saints, etc., is the only view which will explain and harmonize the Word of God.

The intelligent reader will perceive, however, that most of the above arguments are merely precarious inferences from passages of Scripture whose meaning is greatly disputed. See Millenium. (J. H. W.)

Milles, Jeremiah, D.D., a celebrated English divine and antiquary, was born in 1714, and received his preparatory education at Eton. He studied at Corpus Christi College, Oxford, and took the degree of M.A. in 1735, and that of D.D. in 1747. His uncle, Dr. Thomas Milles, bishop of Waterford and Lismore, collated him to a prebend in the cathedral of Waterford, and presented him to a living near that city. In 1762 Dr. Milles was nominated to the deanship of Exeter, and in 1767 he was chosen president of the Society of Antiquaries. He died Feb. 13, 1784. In the "Archæologia" are several communications by him, particularly one entitled "Observations on the Wardrobe Account of the Year 1685," wherein are contained the deliveries made for the crown of King Richard III.; and another (Archæol. iv. 331 sq.) in which he denies the genuineness of the Apanas medal. In connection with E. Pococke (q. v.), he edited "Inscriptions Antiquae" (1792). He also published some of his sermons. Dr. Milles is, however, best known in the literary world by his edition in defence of the antiquity of the "Poems of Rowley." See Chambers, Cyclopaedia, s. v.; Allibone, Dict. of Brit. and Amer. Authors, ii. 1288.

Millet (1775, d'ochos, so called from the dark-green or smoky color of the leaf; Sept. σιμώνιον, Vulg. milium) occurs in Scripture only in Ezek. iv. 9, where the prophet

is directed to take unto him wheat, and barley, and beans, and lentiles, and millet, and fitches, and to put them into one vessel, and to make bread thereof for himself. All the grains enumerated in this verse continue to form the chief articles of diet in the East at the present day, as they appear to have done in ancient times. The Hebrew word dochos is identical with the Arabic dukhan, which is applied in the present day by the Arabs to a small grain cultivated from the middle of Europe to the most southern part of India. This is the common millet, Panicum milacaeum of botanists, which is sometimes cultivated in England on account of the seeds being used for feeding birds and poultry. But the grain is usually imported from the Mediterranean. In India it is cultivated in the cold weather, that is, in the same season with wheat and barley, and is an article of diet with the inhabitants. The culms are erect, from two to four feet high, the whole plant being very hairy; leaves large, with long sheaths, which involve most part of the culm, panicle oblong, much branched, bending down with the weight of the grain; glumes cuspitate; coroll three-valved, adventitious valve emarginate; seed oval and smooth, colored longitudinally with five streaks. The name, milacaeum, is said to have been applied to this plant from its producing such a quantity of grain, as if one stalk bore a thousand seeds. Tournefort says (Voyage, ii. 95) that in the isle of Samos the inhabitants, in preparing their bread, knead together one half wheat and the other half barley and millet mixed together. It is also an article of diet both in Persia and India. Forskål applies the name dukhan to another corn-grass, which he first found in a garden at Rosetta, cultivated on account of its seed being given as food to birds. Afterwards he found it commonly cultivated in Arabia. It grows to a great size, being about five cubs in height, with seeds of the size of rice. To it he has given the name of Holcus dochos, but the plant is as yet unknown to botanists. The Biblical "millet" is confused by many writers with the broom-corn varieties, which belong to the genus Sorghum, a species of which is the modern Egyptian durra. It is possible that the Heb. dochos includes the common species, Sor-
It is said that on leaving King's he retired to Clare Hall. He died in May, 1466, and was buried in St. Edward's Church, Cambridge. An interesting memoir of Dr. Millington, by George Williams, B.D., was communicated to the Cambridge Antiquarian Society in 1858.

Millon (מִלּוֹן, rebokb, Gen. xxiv. 60, ten thousand, as elsewhere rendered).

Millio (Heb. always with the art. ham-míllo', מיללו, the fullness; Sept. [Alex. i. 1] in Kings i. 5 only יִמֵּלָו; Vulg. Melleo), properly a mound or rampart, as being filled in with stones and earth; hence a fortress or castle; applied to two structures or fortifications:

(1) According to 2 Chron. iv. 7 (Heb. p. 789), a part of the citadel of Jerusalem, probably the rampart or inclosure.

or, as Winet thinks (Wörterb. s. v.), the tertor afterwards called Hippicus (2 Sam. v. 9; 1 Kings i., 15, 24; xix. 27; 1 Chron. xi. 8; 2 Chron. xxxiii. 5). In the last of these texts, where David is said to have restored or fortified the Mill io "offt (not "in") the city of David, the Sept. has το ὁνόμασθαι ῥυπαρίων, "the fortification of the city of David;" in the other passages it has simply ἄξονα, the mound or tower. The Targum merely Chaldaizes the Heb. term (םֵיתְרָם, מֵיתְרָם, vallum).

"Both name and thing seem to have been already in existence when the city was taken from the Jebusites by David. His first occupation, after getting possession, was to build the wall from the Millo to and the house." (A. V. 'inward,' 2 Sam. v. 9). or, as the parallel passage has it, 'he built the city round about, and from the Millo round about' (1 Chron. xi. 8). Its repair or restoration was one of the great works for which Solomon raised his 'levy' (1 Kings i., 15, 24, xix. 27); and it formed the prominent part of the fortifications by which Hezekiah prepared for the approach of the Assyrians (2 Chron. xxxiii. 5)." The same place is probably meant by the "house of Millo," where Josiah was killed (2 Kings xii. 21). Others are of the opinion that Millo was the name of a valley in Jerusalem, which separated ancient Jebus from the city of David, but which was afterwards filled up by David and Solomon (Barclay, City of the Great King, p. 113). Schwarz (Past. p. 241) holds that it was on the eastern declivity towards the spring of Siloam (reading Shiloah for Silla). The most natural impression from the notices is that it was some region or space adjacent to Mount Zion, perhaps the place of the Tyropoeon enclosed by the Cardo wall, the bridge, and the Temple. (See Lightfoot, Works, ii. 189; Hameleveld, Bibl. Geogr. ii. 46 sq.; Ewald, Isr. Gech. iii. 70; Strong, Harm. and Expos. of the Gospels, Append. ii. p. 24; Schulz, Jerusalem, p. 80.) See Jerusal.

(6) The fortress or citadel of Shechem, all the occupants or garrison of which joined in proclaiming Abimelech their king (Judg. ix. 6, 20). See Beth-millo; Silla.

Miles, Abraham, LL.D., a prominent American author, was born in Dutchess County, N. Y., in 1796. After having received a thorough academic education, he opened a classical school in New York City. He had not been long engaged in this pursuit when engaged by the noted Bostonian, Samuel Willard, as his appointed professor of mathematics and philosophy in the Boston Literary and Theological Institute, there established in New York. Three years after, when the institute was transferred to Hamilton, N. Y., Miles severed his connection, and flourished as a highly-esteemed teacher of ancient letters. He died July 8, 1867. Miles issued text-books on the topics on which he gave instruction. The honorary degree of LL.D. was conferred on him by Madison University. He deserves a place here on account of his Compendium of the History of the Ancient Hebrews (1866). See Drake, Dict. of Amer. Biog. s. v.; Appleton's Annual Cyclopedia, 1867, p. 511.

Mills, Henry, D.D., a Presbyterian divine, was born at Morristown, N. J., March 12, 1766; pursued his...
preparatory studies in his native town; graduated at Princeton College in 1802; for a considerable time taught in the academy at Morristown, and also at Elizabethtown. He was a member from Princeton College of the Unitarian Church, and studied theology with the Rev. Dr. James Richards; was licensed by the Presbytery of New Jersey, and in 1816 was ordained pastor of the Presbyterian Church in Woodbridge, N. J. In 1821 he was called to the professorship of Biblical criticism in the theological seminary at Auburn, N. Y., where he continued in the duties of his office until 1835, when he resigned, and was made professor emeritus. He died June 10, 1867. Dr. Mills was a man of marked characteristics—impressive in personal appearance, instructive in conversation, sharp in intellect. As a preacher, his style was simple, chaste, and direct. As a scholar, he was most eminent—thoroughly versed in Hebrew and master of the German language. He published in 1845 Bora Germannica, a Version of German Hymns, as Wilson, Presb. Hist. Almanac, 1866, p. 218.

Mills, Nathaniel B., an early and eminent minister of the Methodist Episcopal Church. He was born in Newcastle County, Del., Feb. 23, 1765; was converted in 1784 under the preaching of Mr. Stone and Mr. Enslow of the Conference in 1787; in 1790 was stationed at Hartford, Conn.; in 1804 at Baltimore; filled various important circuits, etc., until 1835, when he became superannuated. He died in Carroll County, Md., Feb. 20, 1845. He preached with great zeal and success for nearly sixty years. Minutes of Conferences, iii. 694; Stevens, Memorials of Methodism.

Mills, Samuel, a minister of the Methodist Episcopal Church, was born in Northampton County, N. C., in 1789; was converted in 1800; entered the itineracy in 1804; was stationed at Columbia in 1806, at Charles- ton in 1809, at Milledgeville in 1810, and at Camden in 1811, where he died, June 8, 1811. He was a plain, earnest preacher, possessed of good abilities, and a witness for his Master, which the frequent notices based on his hearers. See Minutes of Conferences, i. 406.

Mills, Samuel John (1), a Congregational minister, was born May 16, 1745, in Kent, Conn. He graduated at Yale College in 1764, and was ordained June 29, 1769, in Torrington, Conn., where he resided until his death, May 11, 1838. He published a few occasional sermons, and two sermons on the religious sentiments of Christ, in a volume of discourses entitled Collected Sermons (1797). See Sprague, Annuals of the American Pulpit, i. 672.

Mills, Samuel John (2), popularly called the "Father of Foreign Mission Work in Christian America," an efficient minister of the Congregational Church, was the son of the minister of Torrington, Conn., and was born at Norfolk, Conn., Jan. 1, 1783. He was graduated at Yale College (class of 1809). He next entered the theological seminary, having decided to preach the Gospel, and while at school in Andover his mind was deeply impressed with the importance of foreign missions, and he endeavored to awaken a similar feeling in the hearts of his fellow-students. He united with Judson, Newell, Nott, and Hall in a resolution to undertake a foreign mission. In 1812 and 1818 he and J. F. Schermerhorn made a missionary tour in the Western States. He was ordained, with other missionaries, at Newburyport, June 21, 1815. He ascended in March, 1817, that not a Bible could be found for men or to be given away in New Orleans; he thereupon distributed many Bibles in French and English, and visited the sick soldiers. Finding that seventy or eighty thousand families at the South and West were destitute of a Bible, he suggested at the close of his report the formation of a national society like the British. His efforts contributed to the establishment of the American Bible Society, May 8, 1816. The plan of the United Foreign Mission Society, which, however, accomplished but little, originated with him while residing with Dr. Griffin at Newark, N. J., as did also the African school, which existed a few years at Paripipany, near Newark. He attended the first meeting of the Colonization Society, Jan. 1, 1817, which was established by his and Dr. Finley's exertions, and with whom he was thereafter united in a great work to visit England, and explore the coast of Africa for the society. He sailed in November, 1817, and in a wonderful manner escaped shipwreck on the coast of France. He sailed from England for Africa Feb. 2, 1818, and arrived on the coast March 12. After a laborious inspection of more than two months, he embarked on his return in the brig Success, May 22, 1818. A severe cold, which he took early in June, was succeeded by a fever, and he died at sea, June 16, 1818. He was buried in the depths of the ocean. See Spring, Memoirs of John Samuel Mills (N. Y. 1820, 8vo); Sprague, Annuals Amer. Pulpit, ii. 666; Cyclop. Missionary, p. 263 sqq.; Anderson, Hist. Missions of J. E. For, M. in India (1842).

Mills, Thornton A., D.D., a Presbyterian divine, was born in Paris, Ky., September, 1810. He early enjoyed excellent educational advantages; graduated at Miami University, Oxford, Ohio, in 1830; studied theology for a short time in Lane Theological Seminary, and afterwards privately, and was licensed in 1833. He labored for some time in Franklin County, Ohio, in 1837, was installed minister of the Third Presbyterian Church, Cincinnati. In 1848 he purchased The Watchman of the Valley, and continued to edit that paper, first under the name of Central Watchman, and later of Central Christian Herald, until January, 1858, when it was bought by the Religious Tract Society of Ohio, Indiana, Cincinnati, and Wabash. During 1858 he was the secret agent for the Church Election Committee; in 1854 accepted a call to the Second Church, in Indianapolis; in 1856 was chosen as general secretary of the Permanent Committee of the General Assembly on Education for the Ministry, to which work he devoted the remainder of his life. He died June 23, 1867. Dr. Mills was a man of firm grasp of mind, clear and positive views of truth, and indomitable energy and perseverance. See Wilson, Presb. Hist. Almanac, 1866, p. 220; Meth. Qu. Rev. Jan. 1872, p. 27. (J. L. S.)

Mills, William, an early minister of the Methodist Church, was born in Monmouth County, N. J., Aug. 26, 1747; entered the United States and was ordained a deacon in 1768. He suffered various vicissitudes during the war until he was carried a prisoner to Europe, whence he returned after the war; was converted through Methodist instrumentality in 1792; entered the itineracy at Philadelphia in 1799, and died at Long Branch, N. J., Dec. 5, 1818. He was a most amiable and excellent man, and a very successful preacher. Several extensive revivals resulted from his labors. See Minutes of Conferences, i. 239.

Mills, William Robert, a minister of the Methodist Episcopal Church, was born in Alexandria, Va., July 5, 1816. He enjoyed the advantages of a liberal academical training, and was for some time a student at William and Mary College. At an early age he was converted, and shortly after became fully persuaded of a divine call to the ministry; was licensed to preach, and was admitted into the Baltimore Conference in the spring of 1840. He labored successively on Berwick Circuit; in 1841 on Huntington Circuit; 1842, Northumberland; 1845, Lycoming; 1844, Lock Haven; 1845-46, Penn's Valley; 1847, Northumberland; 1848-49, Warrior's Mark; 1850-51, Huntingdon; 1852-53, Lewiston Circuit; 1854-55, Newport; 1856, Miersburg; 1855-56, Liberty, Md., 1859-60, East Baltimore Station; 1861-62, North Baltimore Station, 1865-65, Altoona; 1866-67, Lewisburg; 1869, Carlisle; 1869, York. In 1872 he was elected to the Philippine Mission; he was a faithful pastor and an eloquent preacher. His sermons evinced deep research, were argumentative, and logically arranged, and enlivened with illustrative incidents. See Minutes of Conferences, 1870, p. 54.

Millstone (227), reel'd, usually a charriot, hence the "upper millstone" or rider, Deut. xxiv, 6; more fully
MILMAN, Henry Hart, D.D., one of the leaders of the Broad Church party in the Anglican communion of our day, an ecclesiastical distinction also, both as a historian and a poet, was the youngest son of Sir Francis Milman, physician to George III, and was born in London Feb. 10, 1791. He was educated at Eton, and afterwards at Brasenose College, Oxford, where he took the degrees of B.A. and M.A., and of which he was elected a fellow. He wrote several poems, and secured much distinction by his efforts. In 1817 he took holy orders, and was appointed vicar of St. Thomas's, Reading. In 1839 Mr. Milman published The Fall of Pagan Rome, a dramatic poem, founded on Josephus's narrative of the siege of the sacred city. This, in some respects its most beautiful poetical production, established his reputation. In 1821 he was elected professor of poetry in the University of Oxford. He now published three other dramatic poems: The Martyr of Antioch, Belshazzar, and Anne Boleyn. In 1827 he published his sermons, delivered as the Hampton Lecture, and entitled The Character and Conduct of the Apostles considered as the Evidence of Christianity (8vo), and in 1829, without his name, The History of the Jews (London, and N. Y. 4 vols., 12mo). This work was liberal a spirit that orthodox ecclesiastics could hardly fail to be offended. Its weak point was a want of adequate learning, especially in the department of Biblical criticism. A new edition, greatly improved, and more critical, yet still far from being very accurate, or built on solid foundations, preceded by an interesting introduction, was published in 1868 (London and N.Y. 8 vols., 12mo). In this new form the work has had a large circulation both among Jews and Gentiles. It is to this day the only worthy record of the "chosen people of God" in the English tongue. In 1840 he came again before the public as a historian; this time with a History of Christianity from the Birth of Christ to the Abolition of Paganism in the Roman Empire (London 3 vols. 8vo; N.Y., Harper's, 1 vol. 8vo). In this work he proffesses to view Christianity as a historian, in its moral, social, and political influences, referring to its doctrines no further than is necessary for explaining the general effects of the Christian religion. A far better work than his previous work, and marks the advance of an accomplished and liberal-minded student. His scholarly attainments received the acknowledgment of the Church by various appointments. In 1849, after having been honored successively with the rectory of St. Margaret's, Westminster, the living of Stockwell, the Priorship of Keveland, he was promoted to the deanship of St. Paul's. This position he held until his death, Sept. 24, 1868. The works already mentioned will secure for dear Milman an honorable place in the literary history of England, but they are by no means his ablest productions. His greatest work, and one of the most valuable productions in the English language, is his History of Latin Christianity, including that of the Popes to the Pontificate of Nicholas V (London. and N.Y. 1852, 4 vols. 8vo); a continuation of the author's History of Christianity, and yet in itself a complete work. To give it that completeness, dear Milman has gone over the history of Christianity in Rome during the first four centuries. It brings the history down to the close of the pontificate of Nicholas V, that is, to 1455. It is a work of great learning, liberalism, and chastened eloquence; it displays a broad grasp of human nature in its religious workings; something of the philosopher and still more of the poet, is seen in the strong and vivid spirit of sympathy with which he deals with men of the most different opinions. The work has secured for its author a position in the first rank of English historians. "No such work," says the Qu.Rev. of London, "has appeared in English ecclesiastical literature—none which combines such breadth of view with such depth of research, such high literary and artistic eminence with such patient and elaborate investigation. For in the first place, we should add the estimate of one of our own historical writers, than whom no greater or more competent critic could be heard; we refer to William H. Prescott (Philip II, ii, 500, n. 69), who says of it: "One of the most remarkable works of the present age, in which the author reviews, with curious condensation and a profound philosophical spirit, the various changes that have taken place in the Roman hierarchy; and, while he fully exposes the manifold errors and corruptions of the system, he shows throughout that enlightened charity which is the most precious of Christian graces, as, unhappily, the rarest." Dear Milman has earned the gratitude of the Christian world by an edition of Gibbon's Decline and Fall of the Roman Empire, which presented the great historian with more ample illustration than he had before received, and set at rest many exceptions taken by Gibbon against Christianity. The notes were further elucidated and verified by Dr. W. Smith, and Gibbon's works are now sought for only in this amended form. Other works of Milman are A Life of Keats, and Hebrew Prophecy, a sermon, published in 1865. He also edited an illustrated review of Horace, with a Life of the poet; translations from the Agamemnon of Aeschylus, Bacchanals of Euripides, etc. He was a frequent contributor to Quarterly and the Nouveau et ancien, particularly in the latter. An edition of his Poetical Works, including Fazio, a tragedy, which has frequently been on the stage, was published in 1840, and, besides the works above mentioned and his smaller poems, contains the Nala and Damayanti, translated from the Sanscrit. Since his death Annals of St. Paul's Cathedral (1868), and Saronic Rolls, Erasmous, and other Essays (1870), have been published. Dear Milman was also an important contributor to English hymnology. Some of his productions are familiar to every English-speaking Christian; in the Anglican Church he is a particular favorite, and as the author of "When our heads are bowed with woe," Bound upon the accursed tree," "Ride on, ride on in majesty," and the more subjective composition, "Brother, thou art gone before us" (from the Martyr of Antioch), has established a household name, and has secured popular love. As he occupied for years the pulpit of one of the largest and most influential of English churches, we append the following poem written by one of his admirers (Oct. 1868): "He was no speaker; he had not the very least of platform tricks; with a superb scorn, he disdained the arts which win fame at public meetings; and in a certain sense he was not a good preacher. He was too refined, too much habituated to limitations, too sensitive, to be this. He flouted the popular statements which must be hurried by the popular preacher. But in a certain sort of preaching he was first-rate. His eulogium on the duke of Wellington—we doubt whether it is published—struck us, as we were fortunate enough to hear it, as equal to the best of the French models of pulpit eloquence." See Vaperens, Dict. des Contemporains, s. v.; Allibone, Dict. of Brit. and Amer. Authors, s. v.; English Cyclopedia, s. v.; Men of the Times, s. v.; Hagenbuch, Hist. Doctrines, ii, 423 sq.; Schaff, Christ in Song, p. 206-209; Lecky, Hist. of European Morals from Augustus to Charlemagne (Preface) (1883); Edenhall, Rev. Jan. 1887; Jan. 1889; Jan. 1890; Lond. Lit. 1854, Oct.; Westminster Rev. 1870, Oct. p. 219; Princeton Rev. 1842, p. 238; Pen Pictures of popular English Preachers (Lond. 1852), p. 175-178.

Milne, Colin, a Scottish divine, noted for his attainments in natural science, was born at Aberdeen, Scotland, about 1744. He was educated at Marischal.
College under the supervision of his uncle, Dr. Campbell, who was both principal and divinity professor at the college. After completing his studies there, Milner entered the University of Edinburgh. He joined the Church of England, and by the aid of the duke of Northumberland obtained the rectory of North Carolina, in 1759. He was a most eloquent and popular preacher, his piety was widely known, and he received the appointment of preacher to the London Hospital, and also the lecturership of Deptford, a position which he held for many years. He died in 1815. His sermon preached at the anniversary meeting of the Royal Humane Society was published in 1772, and another of his sermons in 1788.

Milner, Isaac (1), D.D., an Anglican divine of note, eminent for his piety as well as for his great attainments in divinity and the sciences, was born of humble parentage near Leeds, Yorkshire, in 1751. A boy of six he entered the grammar school of his native place, but the strained circumstances of his family obliged the removal of Isaac, and he was transferred from the schoolroom to the factory. Though apprenticed to a weaver, he continued to devote his leisure hours to study, and gradually acquired sound learning. His brother, the noted Joseph Milner (q. v.), who had enjoyed many educational advantages, was in 1767 appointed a preceptor of the grammar school at Hull. By him Isaac was relieved of his obligation at the factory, and afforded opportunity to continue his studies in the position of assistant to Joseph. In 1770 Isaac was admitted a student at Queen's College, Cambridge, and there received his degree in 1774, and was appointed tutor. He received among his pupils Mr. Fitz and Mr. Wilberforce, with whom he travelled abroad, and became the honored instrument in the conversion of the latter. See Wilberforce. In 1775 Isaac Milner was elected fellow of Queen's College. In 1783, returning to the university, he was chosen professor of natural philosophy, and master of his college in 1786, when he proceeded doctor in divinity. In 1791 he was appointed to the deanship of Carlisle. He was elected vice-chancellor of the university in 1792, and six years afterwards became Luscanian professor of mathematics. He died at the house of Wilberforce, at Kensington Gore, April 1, 1820. Dean Milner wrote several papers in the Philosophical Transactions, and the continuation of his brother's Church History, the following works: Animadversions on Dr. Hume's Impartial History of the Church of Christ (1800, 8vo); Strictures on some of the Publications of the Rev. Herbert Marsh, intended as a Reply to some of Dr. Marsh's Remarks on the Bible against the Rev. Dr. Bogaerts (1813, 8vo); Essays on Human Liberty; Sermons (3 vols. 8vo); besides works of a mathematical kind. "Dean Milner was possessed of very extensive and accurate learning, which he always had at his command. He had great talents for conversation, and a dignified simplicity of manner. His religious and political principles agreed pretty closely with his brother's." See "Mem. Qu. Rev," 1840 (July), p. 407; Jones, "Christian, Biol. s. v.; English Cyclop. s. v.; Allibone, "Dict. of Brit. and Amer. Authors," s. v.; Mary Milne, "Life of Isaac Milner" (1842).

Milner, Isaac (2), a minister of the Methodist Episcopal Church, South, was born in Yorkshire, England, July 2, 1818. His parents were of the old English Wesleyan stock, and young Milner was educated with great piety and care. In his seventeenth year he was converted, and, believing himself called of God to preach the Gospel, he hesitatingly prepared to enter the ministry. While human reasoning held him back, divine love impelled him forward. He began his elementary studies alone, at midnight, and in this way gained his education. Being of a studious habit, he soon acquired a storehouse of knowledge, and was numbered among the promising youths of the ministry. Seized with a desire to visit America, he came to New Orleans in 1848. Many and severe trials awaited him in his new home. He was taken sick of typhoid fever, and for three months he lay hovering between life and death. After his recovery he was for a time a member of the Methodist Conference. He was secretary of the Tennessee Conference, and remained a member of it till his death, which occurred near Columbia, Tenn., June 16, 1872. Isaac Milner was one of the most popular Methodist preachers. He knew no failure; if he ever did, his audience knew nothing about it. In every department he proved himself to be a man of great ability and useful goodness. His voice was full of sonorous vigor and receptive; his memory tenacious; his well-balanced mind, like a rich, productive field, yielded a wealth of thought, independent of the production of other men. His fancy was vigorous, his figures original and bold—always pleasing, often overwhelming. Milner served his church in various ways, but in every department he proved himself not only a workman that needeth not to be ashamed, but a workman of great ability, usefulness, and popularity. See Minutes of the Annual Conferences of the M. E. Church, South, 1872, p. 715 sq.

Milner, John (1), an English nonjuring divine of note, was born near Halifax in 1627 or 1628. He was educated at Christ's College, Cambridge, and after his graduation as a scholar. He was, however, obliged to leave Cambridge and retire to the Restoule, having fallen under suspicion of thecuracy of Beeston, and in 1673 was appointed vicar of Leedes. In 1681 he was chosen prebendary of Ripon, but, on refusing the oaths at the Revolution, he quitted his prebendry and went to St. John's College, Cambridge, where he died, Feb. 16, 1702. Dr. Milner was a prolific writer, and published several controversial theological tracts and critical dissertations upon various portions of the Scriptures. Of his numerous works we mention the following: Church History of Palestine from the Birth of Christ to Diocletian (1688, 4to); — Conjectures in Itaian inscriptions, 1, 2; —De Nethinum sire Net- hernia: —Defence of Archbishop Usher against Drs. Cory and Vossius: —A Cosept of Mr. Locke's Religion: —Animadversions on Le Clerc's Reflections upon our Saviour and his Apostles. See Watson, Halifax; Thoresby, Victoria Leodensis, p. 114 sqq.; Wilford, Memorials; Cooper, "Biog. Dict." p. 869; Allibone, "Dict. of Brit. and Amer. Authors," 1, 1255.

Milner, John (2), D.D., more properly named Milned, was among the foremost American theologians and historians. He was born in London, Oct. 14, 1752. He was educated at the schools of Sedgley Park and Edgbaston, and then went to study theology at Douai. Having taken orders, he was in 1779 attached to Winchester Chapel. Although a zealous Roman Catholic, he refused to join in the efforts made by his Church in England in 1788 and in 1791 to obtain from Parliament the repeal of the ancient laws against Roman Catholics. In after-times he was engaged in numerous controversies, both with Protestant theologians and with members of the Roman Catholic committee, who accused him of too great vivacity in his discussions. He declared against the right of the king to appoint the clergy, and, together with the Irish Roman Catholic clergy, obstinately refused to yield the point to the solicitations of his own party. In 1814 he even took a journey to Rome, to consult with the pope on this point. The esteem in which he was held in the midst of these difficulties is evidenced by the appointment he received in 1803 as apostolic vicar of the midland district, under the title of bishop of Castabula in portibus. Dr. Milner settled at Wolverhampton, where he died, April 19, 1826. He was quite distinguished as an archæologist, belonged to the Antiquarian Society, and contributed many learned papers to the "Archæologia. Excerpta Ecclesiastica, and Survey of the Antiquities of Winchester" (1798, 2 vols. 4to); 2d ed., corrected and enlarged, 1809, 2 vols. 4to);—The End of Religious Controversy.
addressed to Dr. Burgess, Bishop of St. Davids, in answer to his Protestant Catechism (1818; 2d ed., revised, 1819, 8vo; transl. into French under the title Exercices de la Religion Catholique, Paris, 1823, 2 vols. 8vo):—A Vindication of the End of Religious Correspondence from the Character of St. George’s Patron of England (1755, 8vo):—A Treatise on the Ecclesiastical History of England during the Middle Ages (1811, royal 8vo):—Letter to the Author of a Book called A candid and impartial Sketch of the Government of Pope Clement XIV (Lond. 1795, 8vo):—Divine Right of the Episcopacy (1781, 8vo):—The Case of Conscience soled, or the Catholic Claims proved to be compatible with the Coronation Oath (1802, 8vo)—Inquiry into certain Opinions concerning the Catholic Inhabitants and the Antiquities of Ireland (1808, 8vo). Of all the advocates of the papal Church, no one has displayed more learning and acuteness than Milner, though not unmixed with partisan gag and misrepresentation. See Lond. Qu. Rev. 1810 (May), 1811 (Oct.); Rose, New Biog. Dict. s. v.; Darlington, Cyclop. Bibilog. ii, 2771; Hoefer, Nouv. Biog. Générale, xxxv, 554; Allibone, Dict. of Brit. and Amer. Authors, s. v.; Dr. Husenbeth, Life of Dr. Milner, 2 vols. 1821, 1824 (8vo).

MILNER, Joseph, an eminent Anglican divine and ecclesiastical historian, the elder brother of Isaac, was born near Leeds, Yorkshire, Jan. 2, 1744. He was sent to the grammar school at Leeds, where, by his industry and talents, among which a memory of most astonishing accuracy was conspicuous, he gained the warm regard of his master. Milner's father had always been in very narrow circumstances; his death only made the task greater; but, by the assistance of some gentlemen in Leeds, whose children Milner had lately engaged in teaching, and by the offer of the office of chapel-clerk at Catharine Hall, Cambridge, he was enabled to enter that hall at the age of eighteen. In the year 1766 he took his degree of B.A., and gained the chancellor's second gold medal for classical knowledge. He was made assistant in the school, and afterwards the curate of the Rev. Mr. Atkinson, of Thorp Arch, near Tadcaster. While in this place he undertook the completion of a draught of his father's defence of the Roman Church which he had commenced at Cambridge. It was submitted to Dr. (afterwards bishop) Hurd, who highly complimented the author on the talent it displayed, but advised him to defer its publication. On entering into deacon's orders, Milner was elected head-master of the grammar school, and afternoon lecturer of the principal church of Hull. In this position he succeeded beyond the most ardent expectations of his dearest friends, especially in the capacity of an instructor, and the school increased under his care. About the year 1770 Joseph Milner embraced the sentiments of the evangelical party in the Church of England, and the doctor, his brother Isaac, danger of separation upon him, neglect, and in some cases open opposition from many among the upper classes who had once been his admirers and friends; but his church was soon crowded with others, chiefly from the lower orders of the people, in whose sentiments and manners his preaching produced a striking change, and at length he not only recovered the esteem of his fellow-townsmen, but lived to see his own religious sentiments become so popular in the town that many of the pulpits of the churches were filled by his friends and pupils, and he himself was chosen vicar of Hull by the mayor and corporation. He was also, in the year 1797, vicar of North Ferriby, near Hull; subsequently he had been appointed to the vicarship of the Holy Trinity, Cambridge. His election as vicar of Hull occurred only a few weeks before his death, which took place on the 15th of November, 1797. A monument, executed by Bacon, was erected to his memory in the high church of Hull by several of his friends and former pupils. The excellences of Mr. Milner's personal character were of the highest order. He was deeply pious, upright in all his conduct, prodigal in his charities, and amusing in social life. In his political principles he was strongly attached to the established order of things in Church and State. His principal works are Gibbon's Account of Christianity considered (1781, 8vo), in which he not only exposes the sophistry of that learned theologian, but gives the true character of the religion which he had attempted to undermine:—Some Passages in the Life of Wm. Howard (1785, 8vo):—Essays on the Influence of the Holy Spirit (1789, 12mo):—Practical Sermons (1801, 2 vols. 8vo; 2d ed. revised, corrected, and enlarged by Rev. Isaac Milner, D.D., dean of Carlisle, 1801—23, 8 vols. 8vo):—The Way of Salvation, or the Christian Doctrine of Justification explained (Lond. 1814, 24mo): and, lastly, A History of the Church of Christ—a work by which Dr. Joseph Milner is principally known. He lived to complete only four volumes; but the task was taken up by his brother Isaac, who completed it by the addition of another volume, in which he was largely aided by the MS. left at his command. The work extends from the rise of Christianity to the Reformation. The first edition appeared in 5 vols. 8vo, 1794 to 1812, and a second edition in 1810. The latest edition was published at London in 1846, 3 vols. 8vo, and was also translated into French (1836—8, 8 vols. 12mo and German (1840). As it omits nearly all discussion of ecclesiastical controversies, as well as of rites, ceremonies, and forms of Church government—infact, whatever did not agree with the writer's own opinions—Milner's work cannot be well termed a Church history, but its value as a contribution to ecclesiastical history is very considerable; only it should be read with much caution, and constant reference to Dr. Maitland's Strictures on Milner's Church History, and his Notes on Milner's History, etc. Dr. Milner's historical work certainly surpasses most other Church histories previously produced in the use made of the writings of the fathers, though the reverence which the author professes for those venerable men has led him to trust them too much. Most modern critics speak only in derogatory terms of this work, and an English writer of recent times thus comments upon it:—"The principles on which the History of the Church of Christ is written are, in one word, very bad, the popular is poor, the literary merit still poorer, and the critical insight poorest of all. It deserves mention only for the estimation in which it was formerly held." The author of the Natural History of Enthusiasm, in commenting upon the characteristic defects of Mosheim and Milner as historians of Christianity, observes that "Milner gives us the mere husk of history, and Milner nothing but some separated particles of pure farina." A collection of Dr. Joseph Milner's works was published by his brother Isaac (Lond. 1810, 8 vols. 8vo). See Isaac Milner, Life of Joseph Milner, prefixed to his "Sermons;" Perry, Bibliotheca Sacra, Jan. 1850, p. 65; North Brit. Rev., Nov. 1858, p. 186; Bickersteth, Christian Student, p. 520; English Cyclop. s. v.; Darlington, Cyclop. Bibilog. ii, 2771; Hook, Eccles. Biog. s. v.; Allibone, Dict. of Brit. and Amer. Authors, s. v.

MILNER, James D.D., a distinguished divine of the Protestant Episcopal Church, was born at Philadelphia June 20, 1773. He studied for a while at the University of Pennsylvania, but about 1789 turned his attention to jurisprudence. His first settlement as a legal practitioner was at Norristown, but about 1797 he returned to Philadelphia, where he lived until he had lived, as he had been educated, a Quaker; but, as he had not been trained to any great strictness in the customs of the Friends, and as his wife belonged to an Episcopal family, it cost him little sacrifice to change
his denomination. In consequence of his marriage, he had, moreover, been in due form "read out of meeting." In 1805 Mr. Milnor was elected a member of the select council of Philadelphia for two years. In 1807 he was elected for three years to the same body; and in 1808 was re-elected for five years. His name was, in 1810, placed on the roll of the first Presbyterian church in Philadelphia. In 1810 he was elected to the Congress of the United States, as a member of the House of Representatives, from the city and county of Philadelphia: his term there closed March 4, 1813. He was for a long time a man of the world, though in the better sense of that expression: but in 1817 he began to turn his attention to religion. At first he insisted on Universalism, but finally, in 1812, became a communicant in the Episcopal Church. Soon after the expiration of his term in Congress he removed to Norristown, where, while preparing himself to enter the ministry, he acted as lay-reader in St. John's Church by permission of bishop White. He was ordained deacon in St. James's Church, Philadelphia, Aug. 14, 1814, and was admitted to the order of Presbytery in the same place Aug. 27, 1815. On October 21 following he was unanimously elected by the vestry a minister of the United Churches in Philadelphia. He finally received a call from St. George's, and in 1816 took possession of the charge, after much hesitation, and was installed by bishop Hobart Sept. 30, 1816. He was made D.D. by the University of Pennsylvania in 1819. In 1820 he was sent to the British and Foreign Bible Society as a delegate of the American Bible Society, and of various other religious and benevolent institutions. On his return he resumed his charge at St. George's, and continued there until his death, April 8, 1844. Dr. Milnor was distinguished for his dignity and wisdom, and especially for his benevolence and piety. He ardently labored for the advancement of the kingdom of Christ, and his life is full of incident and instruction, "a life attractive to the ardent youth, the man of business, the humble Christian, and the mature theologian." Dr. Milnor published an Oration on Mythology (Philadelphia, 1811): a Thanksgiving Sermon (New York, 1817).—A Sermon on the Death of his Excellency De Witt Clinton (New York, 1829).—Two Sermons in the National Preacher (1838).—A Charitable Judgment of the Opinions and Conduct of Others (New York, 1845). The Rev. John S. Stone, D.D., Memoir of the Rev. James Milnor, D.D. (New York, 1848, 12mo); Prot. Epis. Qu. Rev. and Ch. Register, April, 1865, p. 311; N.Y. Ch. Rev. ii, 51; New-Englander, vii, 122 sq.; Prince- ton Review, 285; Sturges' Journal of the American Pulpit, v, 562; Meth. Qu. Rev. July, 1849, p. 407; Drake, Dict. of Amer. Bap. Soc., p. 132.

Milo of Rheims, a noted character in the ecclesiastical history of the 8th century, flourished as archbishop of Rheims and Trèves. In his early life he was decidedly irreligious; dedicated himself to a soldier's profession, and gained much notoriety as one of Charles Martel's warriors. When the Carolingian was involved in a quarrel with St. Rigobert, the archbishop of Rheims, he ended the dispute by depositing Rigobert, and bestowed the primatial see upon Milo, who soon after succeeded in obtaining possession also of the equally important archiepiscopate of Trèves. He is described as being a clerk in tonsure, but in every other respect an irreligious youth. It is said that pope Boniface interfered and sought his removal, the holy father fearing that he should be the chief of his royal patron's enemies, was unable to oust Milo from his inappropriate dignities; and in 762, ten years after the beginning of his reforms, we find pope Zachary, in response to an appeal for advice, counselling to leave Milo to the divine vengeance (Epist. 142). Nothing more is known of Milo in personal history. See Lea, Hist. of Sacerdotal Celibacy, p. 132.

Milton (1), a French monastic, was born about the beginning of the 9th century. In his youth he submitted to the monastic rules of the abbey of Saint Amand. Some critics have reckoned him among the abbots of that house, but this is an erroneous opinion. Milton was superintendent of the schools attached to Saint Amand, when Charles the Bald confided to him the education of his two sons, Pepin and Drogo. He died June 20, 872. A great number of the poems of Héchin are ascribed to his authorship, but the unlikelihood of the attribution is suggested by his early death. A Vie de Saint Amand, in heroic verse, is preserved in the collection of Bollandus of February 9th. It is to be regretted that we cannot find in this collection a supplement in prose to the Vie de Saint Amand by the monk Baudemond. Héchinus pretends, it is true, that this supplement is not the work of Milton; but the manuscripts, the epitaph of Milton, and the identity of Mabilon as the author of the assertion of Henschenius. This supplement can be found in Surius of February 6th. Mabilon and Bollandus have, besides, published two sermons of Milton on Saint Amand, which are also found in the works of Philip, abbot of Bonne-Espérance. To the writings already mentioned we may add a Homélie sur Saint Præcius, edited by Su- rius, a little poem, Sur le Printemps et l'Été, published by Casimir Oudin, in his Supplementum de Scriptoribus ecclesiasticis a Bellarmino onustis; an epitaph on the princes Drogo and Pepin, in the collection of Bollandus, June 16th, ascribed to Milton by Mabilon; two pieces in the first volume of Surius still unedited; also a poem, Sur la Sibylle, published by Martène, Anecd. i, 44. See Trithemius, De Script. eccles. c. 288; Mabilon, Annal. i, 427; Hist. litt. de la France, v, 409; Hoefner, Nouv. Biog. Générale, s. v.

Milton (2), a French prelate, was born about the beginning of the 11th century. He joined the Benedictine order in the monastery of Saint-Aubin, at Angers. Milton was sent to Rome, as his abbot desired to appoint Urban II, and was by him presented with the cardinal's hat, and made bishop of Palestine. He was finally ordered to return to France, and preach against simony. Milton assisted in 1095 at the Council of Clermont. After the death of Urban II, Milton was appointed by Pascal II papal legate. Milton died about the year 1112. Martène wrote a eulogy upon him, which Mabilon has published in the fifth volume of his Annales. Martène has published, in his Voyage littéraire, ii, 244, some verses of a certain Milton which are believed to be written by the chief bishop of Palestine. See Hist. litt. de la France, x, 30; Hoefner, Nouv. Biog. Générale, s. v.

Milton (3), a French prelate, was born in the latter part of the 11th century. In his youth he lived in strict seclusion, but later embraced the rules of the canons of Prémontré; in 1121 was made abbot of the monastery of Dompmartin; and finally, in 1131, was elected and confirmed bishop of Térouanne. The first act of his episcopate appears to have been the consecration of Simon, archbishop of Saint-Berin. Milton was a strict disciplinarian. In 1148 he assisted in the Council of Rheims, at the trial of Gilbert de la Porre. In 1150 he was engaged in a debate with Thierry, count of Flanders. In 1157, delegated by the sovereign pontiff, he adjusted a dispute which arose between the bishop of Amiens and the abbot of Corbie. He was praised the religious character and wisdom of Milton; others have greatly exalted his humility. Claude la Saussaye has given him a place in his martyrlogy; and Luc, abbot of Saint-Coraille, has dedicated to him his Commentaires sur le Cantique des Cantiques. Thus Milton, who lived in an age fruitful in illustrious prelates, was one of the glories of his province. No one has to this day made a rigorous distinction between his authentic writings and the more numerous works which appear to have been improperly attributed to him. He died July 16, 1158. See Gallia christ. x, col. 1547; 1548; Hist. litt. de la France, xiii, 296; Hoefner, Nouv. Biog. Générale, s. v.

He died at Térouanne, Sept. 14, 1169. *See Gallia

Milton (5), a French ecclesiastic, was born about
the middle of the 12th century. He was sent by
Innocent III to preach a crusade against the Albigens.
Subsequently he led the crusaders, marched under
the walls of Béziers, and besieged and burned that
place, after having slaughtered the inhabitants. Milton
is mentioned for the last time as being present at the
council held at Avignon, in 1309. In the collection
of the letters of Innocent III published by Baluze are
two letters from his legate. They also attribute to
this fanatic a prayer to the Virgin, which has been

Milton, Johann Nicolaus, a German theologian,
was born at Hamburg Nov. 2, 1738; was educated at
the Johanneum, and later at the gymnasium of his
native city. In 1760 he entered the University of Göt-
tingen, where he studied ancient languages and Church
history. He returned in 1764 to Hamburg, and was ap-
pointed in 1766 assistant professor of philosophy. In 1768 he
was appointed minister at Lünburg, and in 1770 at
Wandsbeck, where he died, June 10, 1779. Some of his
important works are, Diss. de scriptuurn erroribus in textu
Hebraico V. T. impresso (Kilouii, 1764, 4to)—Observa-
tiones criticas in aliquot Veteris Fidei loca (ibid, 1765,
4to)—Kritische Untersuchungen über einige Teile des Al-
ten Testaments (Kiel, 1768, 8vo)—Ecclesio 1 Mos.
elia, 10 und Matt. 31, 32 (Hamburg, 1788, 8vo).

Miltiades, an early ecclesiastical writer, noted for
his able defence of the orthodox Church against the
Montanists, is supposed to have flourished towards
the close of the 2d century. Eusebius and Jerome mention
his writings, but there is now no trace of these supposed
valuable productions. He is said to have lived under
Marcus Aurelius (161-190), and under his son and suc-
cessor Commodus (180-192). Miltiades was an able po-
elmic, and waged war successfully, not only against the
Montanists, but also combated Judaism and heathenism
in its various phases. See Eusebius, Hist. Eccles., v, 17.

Miltiades, also called Melichades or Melitades,
a bishop of Rome, was born about the middle of the 3d
turmoil, and filled an active and important part. In a very conspicuous
place by his arduous efforts to protect the rights
and interests of the Roman Church against the many wrongs
enacted by pope Maxentius, and was, besides, prominent
in the protection of Christians during the persecutions.
He succeeded Eusebius on the pontifical throne in 310, and,
in 318, was ordered by the emperor Constantius
the Great, who was opposed to the Donatists, to bring
the Donatist difficulties to a close. In council with
twenty Gallican and Italian bishops, he reinterred Cecilius as bishop of Carthage. For his zeal and exertion
in trying to bring back the Donatists into the union of the
Church he was slandered, but Augustine (Epist. 162) speaks of him as "vir optimus, filius Christianae pa-
ciae et pater Christianae plebis." The Manichaeans also,
who worked secretly at Rome, found in him a watchful
guardian against their doctrines. He was the first pope
to live in a royal palace, which was presented to him by
the emperor Constantine the Great with other rich en-
dowments. Miltiades issued two well-known edicts: the
one interdicting fasting on Sundays and Thursdays, be-
cause the heathens celebrated these days "qui sacrum
jejunnium;" and he also enacted, "Ut oblationes consec-
rate per ecclesias ex consecratu episcopi dirigerentur,
quo declaratur fermentum." The true meaning of the
latter edict has often been a matter of dispute. Mit-
tiades died in 314; it is erroneously reported of him that
he died a martyr. St. Bernard, who described the life
of this pope, makes no mention of the manner of his
death. His remains were interred in the Calixtine
Chapel; but by pope Paul I they were removed "in ca-
pite" to the Church of St. Sylvester. See Bower, Hist.
of the Popes (see Index in vol. vii); D'Artaud, Life and
Sacrifice of St. Sylvester, tr. in English, Y. 1865, vol. iv, roy. 8vo, i, 67; Herzog, Real-Encyklop. lxx, 800; Wetzer u. Welsch,
Kirchen-Lexicon, vol. vi, s. v.

Miltitz, Karl von, a Roman ecclesiastic, celebrated
as the papal chamberlain and legate to the Reformers,
was the son of a Saxon nobleman, and was born about
1490. He became a monk at a very early age, Tréves,
and Missonia. In 1515 he removed to Rome and be-
came papal notary. In 1518, when cardinal Cajetan had
so signaliy failed in bringing "little brother Martin" to
submission, Leo X became aware of the greatness of the
schism likely to occur in the German Church. The
strife against the Latin system had assumed gigantic
portions. Around Luther were now gathered the
great, and the strong, and the learned of the Teutonic
race. Frederick, the electoral prince of Saxony, was
Luther's staunch friend and protector, and Leo X, know-
ing the influence and power of this prince, felt loth to
incur his ill-will by harsh measures against Luther.
Miltitz was therefore dispatched to Saxonia, accompanied
with a valuable present—the consecrated golden rose.
This was to give the electoral prince assurance of the
good intentions of pope Leo towards Saxony, and of his
special friendship for Frederick; at the same time he
was instructed to conciliate Luther, and, if possible, to
make him desist from the whole Lutheran controversy.
In December, 1518, Miltitz arrived in Saxony, but, being
careful to find out first how matters stood, he did not take
the consecrated rose with him on his first call. This
was a mistake on Miltitz's part, for, when the rose after-
wards arrived, the prince acted very coolly, and, instead
of desisting from the projected persecution of the pers-son, commissioned three of his noblemen to receive the pope's gift, and Luther aptly remarked that "zu odor had been lost on the long journey" (see Luther's Briefe, edited by De Wette, i, 108, 109).
Miltitz's special instructions were to conciliate
Luther, and we must acknowledge that he acted with
much policy and skill. He carefully abstained from
visiting cardinal Cajetan, who, by his imperious and ar-
rogant treatment of Luther, had lost all influence with
the electoral prince. When among friends, or even
while staying in public houses, he did not hesitate to
denounce the indulgence traffic, and assured his hearers
that the shameful trade was carried on without the
knowledge of the pope. The German princes, and the
electoral prince and Luther should have put confi-
dence in Miltitz, and that his mission of conciliation
seemed in a fair way to succeed (comp, however, Fisher,
Ref. p. 97, note 2). On Jan. 8, 1519, Miltitz had a con-
fereuce with Luther at Altenburg. The papal legate
received the Reformer kindly, embraced and kissed him,
and then addressed him as follows: "Dear brother Martin,
how much I have been mistaken! I always imagined
you an old doctor, sitting behind the stove, and full of
whims and chimerical notions. But now I see that you
are in the very height of manly strength. Not with
five thousand armed men would I dare to take you to
Rome. All my investigations have shown me that,
wherever one person is for the pope, three are against
him and for you." He then in the kindest manner re-
monstrated against Luther's violence, showing him how
much harm the church had to suffer in consequence.
He failed, however, to procure any recantation, and suc-
cceeded simply in obtaining from Luther an expressio
of subservience. Silence was imposed on him, as
well as on his opponents, and it was agreed to transfer
the whole matter to the judgment of the archbishop of
Tréves. In consequence of this agreement, Luther wrote
to the pope a letter full of abuse against Miltitz, and
went even so far as to declare publicly * that separation
from a Church for which St. Paul and St. Peter, and one
hundred thousand martyrs, had shed their blood, was
not permissible, and that on no account must we resist her teachings and commands" (see Walch, xv, 812).

This attitude of the great Reformer has often been stigmatized by later writers as an act of blind and unreasoning intolerance (see Wetzer u. Helte, Kirchen-Lez. vii, 148; Pallavicini, Gesch. d. Conc. v. Trient); but Luther's design, it must be borne in mind, was not to array himself against the Church, but to vindicate her against what he believed to be an abuse of her sacred name. Luther's movements were so completely churchly that even his enemies cannot deny to him the credit of producing but one perfect poem, and that the poem is Milton's Paradise Lost. Poetry, however, was not the exclusive occupation of Milton's life. He was also a laborious and prolific writer of prose, and was long engaged in religious polemics and political controversy. His writings on the immortality of the body of poetic flowers; but his distinction in his last days was more largely due to his writings as a publicist and theological disputant. Milton is even more remarkable in the phases and circumstances of his life than in the brilliancy of his genius. His mature years coincided with that turbulent period when civil dudgeon first grew high, and passed into the turmoil and strife which constitute once the shame and the glory of English history. The evening glories of the Elizabethan age lingered along the horizon at the commencement of his career; the seer but fainter radiance of the era of Queen Anne was prognosticated before his death. In the wide interval, one name of eminent renown in literature stretches its single and unbroken line of light across the darkened heavens. That name is the name of John Milton. His birth was amid the glories that had ennobled the reign of the maiden queen; he gathered strength for the stern and shifting duties of life throughout the reign of his fellow citizen John James; and he could not, without a strain that seemed echoes from the fairy land behind, he dignified the times of civil warfare and theological contention by prose compositions which occasionally united the grand cathedral harmonies of Hooker with the yet unanticipated magnificence of Burke. In poverty and depression, and blindness and age, he sought consolation from his music on that sacred harp, whose melting and piercing melodies no hand could ever awaken but his own. In character, and in the vicissitudes of his career, he was the true representative of the struggle which fills the seventeenth century. He bridges over the vast abyss between Shakespeare and Dryden, and marks the changing phases of the revolution in Church and State. Hence the consideration of his works can scarcely be severed from the notice of his life, which divides itself into four sharply-defined and well-contrasted periods.

I. Period 1608-1629. — Infancy, and education till he attains his majority, from the fifth year of James I to the fifth year of Charles I.

II. Period 1629-1639. — Completion of education at the university, in retirement and by foreign travel. From his majority to his return from the Continent.

III. Period 1639-1660. — Participation in the turmoil of the times, and public life in England. From 1642 to the 9th of December, 1660. His father, of the same name, was a scrivener, who had been disinherited by his Roman Catholic parents for adopting the Protestant faith. His exertions in pursuit of a livelihood had secured comfort, if not wealth, and had not repressed his tastes for literature and art. Thus may be explained the conjunction of his religious principles, of eclectic fancies, of chivalrous sentiments, of literary and artistic sensibilities, so strangely, and not always congruously, exhibited in the poetry of his son.

That son received the tenderest care and the most solicitous instruction from his hopeful and appreciative sire. He was an intimate friend of his, and was, so to speak, educated at first at home. From his instructor—the eminent scholar and zealous Puritan, Thomas Young—he imbibed his taste for poetry, as he gratefully acknowledged. At the age of thirteen he was sent to St. Paul's...
Milton, London, and after two years was transferred to Christ Church, Cambridge, where he remained, with some interruptions, over eight years. He carried with him to college great proficiency in the classic tongues, and had added to them an acquaintance with Hebrew, French, and Italian, and some skill in music and fencing. These liberal pursuits he continued to prosecute at the university with unusual diligence and with admirable success. One of his chief delights of his studies was to apply himself to his Latin and English poems, by notices in his polemical writings, and by his college exercises, which Mr. Masson has reclaimed from oblivion. From these sources we learn that he was exceedingly handsome, though of slight frame and moderate stature, and was skilled in all manly exercises. He is said to have been called a handsome figure, and many of his contemporaries admired the purity of his character than for his delicate beauty.

Along with his extensive acquirements, Milton bore with him to Cambridge the germ of all his future tastes, the beginnings of all his future accomplishments. In his boyhood he had been "smitten with the love of sacred song." Aubrey states that he was a poet at ten years of age. The love of the Muse grew strong with his growth. His devotion to his native tongue was early displayed. He soon aspiried to the production of a poem which "future ages would not willingly let die." He was already consecrating himself to his high vocation, and disciplining his young genius with parental diligence. In this calm and industrious tenor of life, Milton ripened to his majority.

II. Period 1629-1639.—On the 8th of December, 1629, Milton was twenty-one years of age. On the Christmas day ensuing he produced that magnificent choral song, *The Ode on the Nativity*. Admirable and exquisitely as it is in itself, it is amazing as the composition of a young man who had just assumed the toga virilis, and was in the midst of his college career. Its remarkable merit may be best appreciated by comparing it with the nearly contemporaneous poems of George Herbert, Ben Jonson, and Vaughan; and the same aspect. The ode is equally remarkable for its startling indication at so early a period of the characteristics of his grandest works. The lyric movement of thought and expression, the intricate melody and skill of the metre, the strength and propriety of the epithets, the concentration and point of the language, the harmonies of sound, the dexterous accumulation of suggested names, the solemnity and reverential awe of the whole utterance, are anticipations of his final glories. Grand as is this choral hymn, Milton felt that his powers of song were not sufficiently matured to sustain the yet vague splendor of his conceptions. The *Ode on the Fusion*—the companion piece to the *Paradise Lost*—was never completed. "This subject the author finding to be above the years he had when he wrote it, and nothing satisfied with what was begun, left it unfinished."

These two odes are the first outlines of the *Paradise Lost* and *Paradise Regained*. The self-conscious, patience, diligence, and humility of Milton are as notable as his lordly tone and conscious power. Three years later, just before leaving Cambridge, he laments that "my late spring no bud nor blossom sheweth;" but adds, "It shall be still in strictest measure even so same lot, however moved.

To whom Time lends such grace and the will of Heaven.

Milton was designed for the Church, and had been trained in all secular and theological learning for that holy office. The depression of the Puritans under the stern domination of Laud closed the prospect to the young candidate. He waited long and patiently, in doubt and suspense, with patience and with self-denial, having taken both his degrees. He left the university with credit and honor, and retired to the grateful seclusion of his father's villa at Horton—not far from Eton and Windsor. Here he remained for five years, spending the summer-time of his life in multifarious study. He plunged into the mysteries of Hebrew lore, familiarized himself with the best lessons of history, and carefully perused the whole series of the Greek and Latin authors, from Homer to Ducls and Pharranu.

It was during the earlier half of his residence at Horton that Milton produced his *L'Allegro* and *II Penseroso*, and his two masques, the *Arcades* and *Comus*. These poems were not composed for the noisy public, but as relaxations from study, which embodied the shifting muses. The *L'Allegro* and *II Penseroso* are exquisite imitations of his Latin and English poetry, and photographs of the scenery that surrounded his retreat, lighted up by the bright glow of his changing moods. They reveal also the character and ingredients of the ambrosia on which his mind had feasted from boyhood, and betray the flowers from which the honey was distilled. The subjects, the contrasts, the metre, and the style are all exquisite. Milton showed here, as well as in the poems prefixed from the poetical "Abstract of Melancholy" prefixed by Burton to his quaint *Anatomy of Melancholy*. Other obligations are due to the exquisite "Song on Melancholy" in Beaumont and Fletcher's *Nice Valor*. The same royal seclusion, which ennobles what it appropriates, and which is deservedly the abode of genius, is here again in full possession, and signature all of Milton's compositions. It is his manner. It is his genius. He claims the spoils of learning as his own. He made the triumphs of others the stepping-stones of his fame. To the year 1634 we probably owe the *Arcades*; and it in the certainty owe the more splendid *Comus*. Both were written under circumstances which are curiously illustrative of the social, political, and theological condition of the times, and of the great controversy in respect to dramatic performances. The *Arcades* is a much slenderer performance than the *Comus*, possessing the same general characteristics: purity, grace, fancy, melody, learning, and gorgeous expression. The *Comus* is an almost perfect gem. It is as distinctly unique in its charms as Shakespeare's *Midsummer Night's Dream*. Its authorship was not avowed. It was published by Henry Lawes, in 1637, to escape the constant importunities for copies of the manuscript.

In this year that he was raged with great violence, and many notable deeds occurred. On the 8th of April Milton's mother died; on the 6th of August Ben Jonson expired; on the 10th Edward King, of Christ Church, was lost at sea on his way to Ireland.

The death of Mrs. Milton broke up the family retreat at Horton, and Milton made preparations for foreign travel. He was meditating a great poem—an epic on the Round Table, or on the story of the Trojan Brutas. "Do you ask what I am meditating?" says he, in a letter to Deodati. "By the help of Heaven, an immortality of fame! But what am I doing? I am letting my wings grow, and preparing to fly; but my Pegasus has not yet feathers enough to soar aloft in the fields of air."

One more poem—the last song of his young and fresh life—preceded his going abroad. The admirers of "Rare Ben" honored his memory by a volume of *epicurean*, or funeral eulogies, entitled *Jonson Virtus*. The scholars of Cambridge proposed a similar tribute to the ghost of Edward King. To this collection Milton contributed that finest of elegies, the *Lycidas*. It is the echo of the pastoral music of the ancient Greeks, and recalls the plaintive strains of Boion, while adopting the metrical forms of the Italian canzona.

Not long after this Milton set out on his Continental tour. Northern Europe was closed against him by the Thirty-Years' War, which was ravaging the whole of Germany. France was warring beneath the tyranny of Richelieu, who was consolidating the monarchy at home, and strangling the supremacy of the House of Austria. Milton crossed into France, and in Paris he formed the acquaintance of Groiss; proceeded to Lyons, and, descending the Rhone, reached Marseilles. Thence he followed the littorale to Nice. From Nice he went to Genoa, and to Florence, in which city, the centre of Italian culture, he was welcomed with the highest distinction, and was elected a member of the
Defence of the Remonstrance. Milton, who had assailed the original Remonstrance, and was the grateful pupil of Thomas Young, now brought out Animadversions on the Remonstrance. Before the death of Hall's son followed, to which Milton responded in 1642 by his celebrated Apology for Smectymnuus. These productions thus all hang together. Their object and interdependence are pointed out in the author's Second Defence for the People of England.

In 1643, during the brief superiority of the Cavaliers, Milton, now in his thirty-fifth year, hastily married Mary Powell, a gay, thoughtful, pretty girl of seventeen — "the daughter of Richard Powell, Esq., of Forrest Hill, near Shotover, Oxfordshire, an active royalist." The match was a singular and ill-assorted union. It was unhappy. It could scarcely have been otherwise. The fair maiden, in her young beauty, could not endure the gloomy yoke of her sedate Puritan husband. After the honeymoon was over, she visited her father, and remained all summer, heedless of the entreaties, remonstrances, and commands of her grim lord. He turned to his books, and to the examination of nice points of theological ethics. He studied the nature and obligations of marriage, and soon arrived at the foregone conclusion to divorce his recalcitrant bride. The result of his eager inquiries was The Doctrine and Discipline of Divorce, restored to the Good of both Sexes—published anonymously in 1644. Another fruit of his studies and meditations was the undigested fragment Before concluding his inquiries he proceeded to the practice of his theory by paying his addresses to another fascinating young lady. Mrs. Milton, after a year's absence, sought a reconciliation, entertained forgiveness on her knees, was pardoned, and returned to her repentant home. She did not return to her two nephews, John and Edward Phillips. He was induced to receive other boys also, and accordingly took a large house in Aldersgate Street, and opened a school. Out of his academical employments sprung his Tractate on Education, his Accidence commenced Grammar, and his posthumous work Christian Doctrine, which lay unknown till 1625. (It was edited by the present incumbent of the episcopal chair of Winchester [bishop Sumner]; a translation has also been published.) The first expanded his views on education, which resembled those of Roger Ascham and of John Lyly. The second was a practical exemplification of his method for the use of his school. The third was an expansion and systematization of the religious instructions given by him to his pupils. It has a much higher significance. It presents Milton's peculiar and utterly heterodox theology—which is thoroughly Arian, and in a great measure materialistic. It is the theological preparation for the Paradise Lost and Paradise Regained, and is their best commentary. Indeed, it is impossible to understand the esoteric meaning of those great poems, to estimate their spirit, or to appreciate many of their details, without the continuous illustration afforded by this long-lost treatise in prose. "His active imagination and impetuosity are all its treasury, and in several particulars corrupt it; but though, like Locke, he sometimes mistakes the sense of Scripture, no man had a higher opinion of its supreme authority, nor held more firmly its most vital truths. His name cannot be classed with modern Unitarians."

In 1644 Milton regained his place as a writer before the public with his first prose work, Of Reformation in England, "to prove that the Church of England still stood in need of reformation." He continued the subject in four other works, replying to bishop Hall and archbishop Usher in a short essay, Of Prelatical Episcopacy, and in a more elaborate response, entitled The Reasons of Church Government urged against Prelaty. It is in this latter work that Milton commences the remarkable series of autobiographical sketches whence so much of our information in regard to his tastes, studies, habits, sentiments, principles, and occupations is gathered. Bishop Hall and archbishop Usher had aroused another assailant. Chief among such attacks in that pamphleteering day was a pamphlet designated Smectymnuus, from the initials of its five authors—Stephen Marsh, Edmund Calamy, Thomas Young, Matthew Newcomen, and William Spurston. To this attack bishop Hall replied in a
nearly one half after 1655; and after 1652, when he
became blind, the duties were discharged, first, by Philip
Meadowes, and afterwards by Andrew Marvell. The
appointment called him away from his preparations for
his Arthurian epic, which was published towards the
close of his life as a Historie of Britannie.

His first task under his political taskmasters was Ei-
konoclastes, in answer to the Icon Basilike—the political
testament ascribed to Charles I, and bequeathed by him on
his death bed. It was bold, but persuasive, passionate, and
ugenerous. It was a suitable prelude for the Latin "Apolo-
gies for the People of England" (Defensio pro Populo
Anglicano, Prima e Secunda), composed in 1651 and
1654 as a refutation of the celebrated Eikon Basilike. In
his various "Letters of State"—extending from Aug-
tober 10, 1649, to May 15, 1659—including the "Manifiesto
del Lord Protector" in 1655, there are many lofty senti-
ments and sounding periods; but it would be scarcely
fair to transfer to the secretary the praise for sagacious
or audacious policy, which may belong exclusively to
the Republican councillors, or to the great Republican
sovereign. Cromwell was not a man to borrow his pol-
icy from a subordinate, and from a subordinate aved
into unscrupulous homage by his resolute character.

In the composition of the Defence for the People of
England Milton's sight gave way. As early as 1644 it
had been severely impaired by much study, frequent
vigils, and constant writing. He became totally blind
in 1659. He was warned by his physicians to abstain
from literary labor. He refused to spare his eyes by
the renunciation of what he conceived to be a high pa-
triotic duty. He studied and wrote for his party and
country till "the deep sense" totally darkened his vi-
sion. The assertion of his lofty resolve is imbedded in
his Second Defence for the People of England, and
a touching account of the advancing stages of his blind-
ness is given in a letter to a Greek friend, which is much
less known than his pathetic allusions to his great pri-
vation in the Paradise Lost, the Samson Agonistes, and
two of his sonnets.

Shut out from the light of day, cut off from the direct
pursuit of his official duties, denied personal communion
with his books, the companions of his solitary hours,
Milton's thoughts were turned inwards, employed on po-
ocentric visions, fed with the treasures of his memory.
During the long years of darkness and enforced leisure, he
gradually conceived and moulded and com-
menced his Paradise Lost. When Cromwell died, con-
fusion and anarchy returned, and the hope or fear of the
restoration of the Stuart line occupied the public expec-
tation. The blind seer then resumed his political labors
and labored for several years to prevent the present or-
der in the Church, and to uphold the late scheme of gov-
ernment, in several small publications. His ideas of re-
ligious and civil freedom tolerated only views consonant
in spirit with his own; and would have sought to per-
petuate English freedom and republicanism by rendering
the remnant of the Long Parliament a close, permanent,
and self-renewing oligarchy. His urgent clamors awoke
no echo. His voice was too faint, too wild, too foreign
to the necessities of the country and the time, and to
the wisdom of sober statesmanship, to meet with any
acceptance. Fairfax and Monk insured Charles II's re-
turn to his ancestral throne. Milton's political life wi-
ended. All his hopes, all his dreams, all his cherished
plans, were turned to dust and ashes. Poor, forlorn,
outlawed, helpless, but not wholly dejected, he entered
on the last period of his life in difficulty and danger
and despair.

IV. Period 1669-1674.—The closing years of Milton's life
offer little biographical detail. He was blind, in
want, helpless; shunning the world, and shunned by it.
Vane and other leaders of the lately dominant faction
perished on the scaffold; others were outlawed or ex-
cluded. Milton was threatened with the like fate in con-
sequence of his prompt and virulent denunciation of his
slaughtered monarch. He was spared, tradition says,
through the intercession of Sir William Davenant. He
was compelled to remain in hiding. His second wife,
née Woodcock, had died in 1659, within a year of her
marriage. He took a third in 1665, Elizabeth Marshall,
daughter of Sir Edward Marshal, of Cheshire. She
must have been a young bride, as she survived her hus-
band more than fifty years. Of his second and third
wives, of his daughters in their young womanhood, of his
domestic life, of his intercourse with his still re-
mainng friends, scarcely anything is heard at this pe-
riod. Andrew Marvell and a few other intimates still
consolated his loneliness and obscurity with their fervent
attachment. Dryden, in the flush of his young and
garish reputation, did reverence to him; but the deso-
te poet disappears from public gaze, and communes
with his thoughts, his memories, and his God. "For-
getting the world, and of the world forgot," he worked
out his immortal fame. Content with "audience fit,
though few," he created those wondrous poems, which
were the sublimated essence of his life and learning
and labors—his own undying glory, and the pride of the
English tongue.

When Milton retired from the plague in London, in
1665, to the house which Elwoood, the Quaker, had pre-
Setted to him, at Chalfont, in Buckinghamshire, he ex-
inibited to his friends the MS. of Paradise Lost. It
may have been unfinished. It was sold, April 27, 1667,
to Samuel Simmons, of London, for £5 down, and £6 on
each of three future contingencies. Only two payments
were made, whence it is inferred that less than 2800
copies were disposed of in the seven years preceding his
death. This poem was the crowning labor of the poet's
life. It had engaged his thoughts as early as 1654, and
had occupied his solitary meditations during the ensu-
ing years. It had been completed amid the boisterous
license, and obscene dissonance, and reckless debauchery
of the Restoration. He had poured into it all the wealth
of learning and reflection and observation, and expe-
nence gathered in a studious, thoughtful, and full life—
crystallizing into radiant gems the rich materials he
employed. Like his own Pandemonium,

"Out of the earth a fabric huge
Rose like an exhalation, with the sound
Of dulcet symphonies, and voices sweet."  

From his college days he had contemplated the produc-
tion of a great poem. In penury and wretchedness and
scorn he achieved his ideal, after the lapse of a whole
stormy generation. The currents of his life changed the
course of his fancies. He renounced the charms of old
romance to sing the songs of heaven, and "tell of things
invisible to mortal sight."

Milton selected for his subject the fall of man—a sub-
ject of universal interest—of special interest to all be-
The death invoked came soon. He sank rapidly under attacks of guilt, which became both more frequent and more violent; yet in his paroxysms "he was both with his soul a child, and in his body he remained a man." He was excommunicated by all—he can be judged only by his peers. "It may be doubted," says Walter S. Landor, "whether the Creator ever created one altogether so great an Milton—taking into one view at once his manly virtues, his superhuman genius, his zeal for truth, for true piety, true freedom, his eloquence in displaying it, his contempt of person and of consequence, his readiness to sacrifice his country's. "Milton," says Macaulay, "did not strictly belong to any of the classes which we have described. He was not a Puritan. He was not a Free-thinker. He was not a Cavalier. In his character the noblest qualities of every party were combined in harmonious union. . . . We are not much in the habit of idolizing either the living or the dead; but there are a few characters which have stood the closest scrutiny and the severest tests, which have been tried in the furnace and have proved pure, which have been declared sterling by the general consent of mankind, and which are more valuable to the state, with their image and superscription of the Most High. These great men we trust we know how to prize; and of these was Milton. . . . His thoughts are powerful not only to delight, but to elevate and purify. Nor do we envy the man who can study either the life or the writings of the greatest poet and patriot without aspiring to emulate, not only the sublime works with which his genius has enriched our literature, but the zeal with which he labored for the public good, the fortitude with which he endured every private calamity, the lofty disdain with which he looked down on temptation and dangers, the deadly hatred which he bore to bigots and tyrants, and the faith which he so sternly kept with his country and with his fame." (Essay on Milton.)

MINAARD

The reputed founder of this system is Jaimini—of unknown date—who taught in twelve books, each subdivided into six sub-books, and, sixth, and tenth books, which contain eight chapters each; the chapters, again, are divided into sections, generally comprising several Sūtras or aphorisms, but sometimes only one. The extant commentary on this obscure work is the Bhāṣya of Sābara-svāmin, which was criti- cized by Sābara-svāmin and corrected by the great Mīmāṃsā authority, Ku- mārāsvāmin. One of these works, which had, in its turn, quote several others, apparently lost, has arisen a great number of other writings, explaining and eluci- dating their predecessors. The best compendium, among these modern works, is the Jaiminirya-nighutā-mīśra- śāstrī by Bhāvanīśvara, and the Jaiminiścāca by the learned Mīmāṃsā authority, Kumārāsvāmin. These and these works, which, in their turn, quote several others, apparently lost, has arisen a great number of other writings, explaining and elucidating their predecessors. The best compendium, among these modern works, is the Taittirīya-sūtra, and the Taittirīya-sūtra by the learned Mīmāṃsā authority, Kumārāsvāmin.

MINAARD, Abel, a prominent layman of the Meth- odist Episcopal Church, noted for his great philanthropic labors, was born in Massachusetts September 25, 1814. His father died soon after his birth, and he lost his mother when he was about eight years old, so that as a mere youth he was left alone in the world. His early life was an earnest struggle for success; he was subject- ed to the labors of a laborious occupation; he was compelled to work his own way from poverty to for- tune. He learned the trade of a tanner; but his energy of character soon sought a broader field of action in business operations, which proved successful, and rapidly secured him wealth and influence. In 1846 he went to California; in 1856 removed to Lockport, N. Y.; and in 1866 settled at Morristown, N. J., where he died, Jan. 31, 1871. In early life Mr. Minard was a member of the Free-will Baptist Church, but in the prime of his days he neglected his Church privileges. In the spring of 1870 he united with the Methodist Episcopal Church at Morri- stown, in whose communion he spent his last days. In early life he professed his God that if he would bless him he would give away the tenth part of his income, and he dealt out largely to the poor and to the Church; in later years, fearing that he had not kept the vow fully, he failed not to make compensation for his neglect by numerous private and public benefactions. The churches both of Morristown and Lockport were remembered in his will. He also left a sum, the interest of which is annually applied for the education of four young men in Drew Theological Seminary at Madison, N. J. But the crowning work of his life was the establishment of the "Minard Home," in Morristown (valued at $50,000), for the education of the female orphans of missionaries and
MINARD

home ministers of the Methodist Episcopal Church. See New York Christian Advocate, June 15, 1870; Prof. Brearly, in the Littre's Repository, 1872. (G. H. W.)

Minard, Louis Guillaume, a French ecclesiastical writer, was born at Paris January 31, 1725. Educated at the College of France by the care of Riveaud, with whom he was a favorite pupil, he joined the "Brothers of the Christian Doctrine," and was appointed while still young to some of the superior offices of his congregation. He entered the secular clergy and obtained the benefice of Bercy, near Paris. His tolerance and easy profession of religion brought upon him many admonitions from his superiors; finally, Christophe de Beaumont, archbishop of Paris, suspended him from his sacred functions—having been offended by a book that Minard had written, entitled Panthéographe de Saint Charles Borromée. Minard continued to dwell among his ex-parishioners, devoting all his time to study and to charity. In 1778 he refused the generalship offered him by the lay brethren. In 1785 he became a member of the Presbytery of Paris. He died, poor and infirm, at Paris, April 22, 1798. Besides the Panthéographe de Saint Charles Borromée, condemned by the Sorbonne and his provisor the archbishop of Paris, Minard wrote Aris aux fables sur le schisme dont l'Eglise de France est menacée (Paris, 1785, 8vo). In this tract, written to establish peace with the Jansenists, he says that all parties should unite to establish harmony in the Church, and that the resistance of a part of the clergy to the laws is as injurious to the divine service as to the state. It was replied to by Bernard Lambert la Plaigne, a Dominican Jansenist, who, aided by Mautrot, wrote four Lettres aux ministres de la ci-devant église conciliée (1795-1796). Minard afterwards replied to these by a Supplement to the Aris aux Fidèles. See Nouvelles ecclésiastiques (Utrecht, 1789); Déc. historiques, a. v.

Minaret (or Minar) is the name of a tall turret used in Saracenic architecture. The minaret, as it is called by the Turks, contains a staircase, and is divided into several stories, with balconies from which the priests summon the Mohammedans to prayer—bells not being permitted in their religion [see MOHAMMEDAN] and is terminated with a spire or ornamental finial. The minarets are among the most beautiful features of Mohammedan architecture, and are an invariable accompaniment of the mosques (q. v.). In India, minars, or pillars of victory, are frequently erected in connection with mosques; some of these are lofty and splendid monuments, that of Kutub, at Old Delhi, being 48 feet 4 inches in diameter at the base, and about 250 feet high. They are often built on a plan of a star-like form, and are divided into stories by projecting balconies, like the minarets.

Mincháh (מִינְכָּח), properly a gift (as often rendered) or present (Gen. xxxii, 14; xix. 21; xiii, 11 sq.), especially to nobles and kings (Judg. iii, 15; 1 Sam. xii, 20; 2 Chron. xvii, 5, 11; Ps. xlv, 18; Isa. xxxix, 1; 1 Kings x, 20); hence tribute from a subject obtained from the king (2 Sam. vii, 2, 6; 1 Kings v, 1 [iv. 21]; 2 Kings xvii, 4; Ps. Ixxxii, 10); but specifically offering to God, i.e., sacrifice (Isa. i, 13; 1 Chron. xvi, 29), particularly a bloodless one, "meat-offering," consisting of flour, meal, cakes, with oil and frankincense, burned upon the altar by hands or in connection with a blood offering (Lev. ii, i sq.; vii. 9, etc.). See OFFERING.
(1) The presentative faculty, or the power of recognising the various aspects of the world and of the mind.  
(2) The conservatice faculty or memory, meaning the power of storing up.  
(3) The reproductive faculty, or the means of recalling sleeping impressions or concepts.  
(4) The representatice faculty, or imagination.  
(5) The elaborative faculty, or the power of comparison, by which the mind is enabled to unite, separate, analyse, and perform actions.  
(6) The regulative faculty, or the cognition of the a priori or instinctive notions of the intellect, as space, time, causation, necessary truths, etc.  
Noah Porter divides his "Human Intellect" into four parts:  
(a) He treats of natural consciousness, philosophical consciousness, the sense perception, its conditions, and process; of the growth and products of sense perception.  
(b) He treats of representation and representatice knowledge, by which he means memory, imagining power, etc.  
(c) He treats of thinking and thought knowledge; by which he means the formation and nature of the concept, judgment, reasoning, etc.  
(d) He treats of intuition and intuitive knowledge, in which he discourses on mathematical relations, causation, design, substance, attribute; the finite and conditioned; the infinite and absolute.  
Berkeley and his school teach a pure idealism, which asserts that everything we can take in contact is only mind.  
"We cannot transcend our mind; whatever we know is our own mind.  
Others, again, as Locke, resolve all into empiricism, and look on mind as simply the result of material organization.  
These two views contain the extreme angles to which speculation has run.  
The former is idealism or spirituality, the latter materialism or empiricism.  
The pre-Socratic school of philosophers was materialistic, of which Anaximenes, Pythagoras, Heraclitus, were patrons.  
Between these and Plato, Socrates was a transitional link.  
The post-Platonic philosophers were spiritualistic in the main, notwithstanding French materialism.  
See McCleod, J. S., "Intuition, the Priori, and Intuitionists."  
Dr. McCleod, in his Intuitions of the Mind, makes a triple of parts.  
In part first (which is on the "Nature of the Intuitions of the Mind") he shows that there are no innate mental images; no innate or general notions; no a priori forms imposed by the mind on objects; no intuitions immediately before consciousness as law principles.  
But there are intuitive principles operating in the mind; these are innate convictions of the mind, which are of the nature of perceptions or intuitions.  
Intuitive convictions rise up when contemplations of objects are presented to the mind.  
The intuition of the intellectual consciousness; sense perception, connected to the mind.  
The individual intuitive convictions can be generalized into maxims, and these are entitled to be represented as philosophic principles.  
In part second he shows that the mind begins its intelligent acts with knowledge; that the simple cognitive powers are sense, perception, and self-consciousness.  
It is through the bodily organism that the intelligence of man attains its knowledge of all material objects beyond.  
'The qualities of matter—extension, divisibility, size, density or rarity, figure, incompressibility, mobility, and substance—are known by intuition; and it is by cognition we know self as having being, and as not depending for existence on our observation; as being in itself an abiding existence; as exercising potency in spirit and material being—"Cognito, ergo sum." The primitive cognitions recognize being, substance, mode, quality, personality, number, motion, power. The primitive beliefs recognize space, time, and the infinite. The mind intuitively observes the relations of identity, of whole to part, of space, time, quantity, property, cause, and effect. The motive and moral convictions— as appetites, will, conscience—are involved in the exercise of conscience. In part third he shows that the sources of knowledge are sense, self-consciousness, and intuition.  
But there are limits to our knowledge, ideas, and beliefs. We cannot know any substance other than those revealed by sense, consciousness, or faith. We can never know any qualities or relations among objects except in so far as we have special faculties of knowledge. The material for ideas must be brought from the knowledge sources. These sources are limited, and our belief is limited.  
Professor Bain, in his book, shows that human knowledge falls under two departments—the ob- jective and subjective. By the former, we are marked by the presence or absence of the department, marked by the absence of extension. Subject experience has three functions—feeling, will, thought. The brain is the organ of the mind. The nervous system is only extensions or ramifications of the brain, and through these the mind transmits its influence. In this indwelling system, which is not a channel for the transmission of messages from the mind, are two sets of nerves—the in-carrying, the out-carrying. The intellectual functions are commonly expressed by memory, reason, imagination. The primary attributes of intellect are difference, agreement, retentiveness, or continuance. J. S. Mill propounds a psychological theory of the belief in a material world—postulates, expectation, association, laws, substance, matter. The external world is a permanent possibility of sensation. Then follows the distinction of primary and secondary qualities; application to the permanence of mind, etc.  
The question is both: how the mind is subject, definite, methodic and encyclopedic; and though it may not explain all ideality amply, yet it shows that the nature and functions of mind can only be seen in connection with all the other parts of the human system, just as the nature and functions of a fountain are only seen when considered in connection with the other parts of the commoner.  
We can only understand the nature and office of ducts, glands, veins, or arteries when we view them in their mutual relations, and in their relations with all the other parts of the physical system. We can only understand civil polity, social states, natural phenomena, when taken in their reciprocal relations; and so we can only understand mind when taken in its relations with the other parts of the common man.  
Now if science shows us that there are seven great corresponding qualities or forces in the body, and if Scripture (which reveals what science cannot) shows us that there are seven great corresponding powers in the soul which lie back of and control all powers of body and mind, we conclude that the objects to which science refers are interrelated and forces interlace and overlap each other, so as to constitute a human personality? We do not claim for this theory a scientific status, but is it not worthy of a speculative niche? Our observation shows us that this universe progresses by a duplex method, unfolding and infolding, or evolving and involving. Scripture shows that this unfolding comes from a sevenfold force; science shows that it comes through a sevenfold faculty. The following curious coincidences may not be out of place here, as illustrating a somewhat abstruse problem of this subject. The Revelation by John reveals πνεῦμα, or the seven spirits, as the constituent forces of Deity. The question arises, What are these seven spirits? (Isa. xi, 2; Pan. cxi, 10; Prov. i, 7; Job xxviii, 28). It is held by many influential writers that the spirits mentioned in these references are to be taken in connection with Zechariah's sevenfold lamp (Zechar. iv, 1).  
Delitzsch, in his work on Psychology, endeavours to show that the sevenfold lamp is a symbol of the convictions of the "spirit of fear," i.e. of divine veneration (πνεῦμα), "the spirit of knowledge" (γνώσις), "the spirit of power" (δυναμική), etc.; but these are highly mystical and even fanciful. Whatever, however, may be thought of such abstractions, as to what Scripture says, or is imagined to say, about the sevenfold doxa or soul life,
A sapphire-place [are] its stones, and gold-cods [are] his [that explores it].
A beaten [path thither]—bird of prey has not known it, Nor hawk, or eagle, or dragon.
Sons of rampancy (fierce beasts) have not trodden it, Roarer [lion] has not wedded over it.
On the farthest [of his] horizon:
He has overthrown from [the] foot mountains:
In the cliffs channels has he cleft,
And has interrogated [the] thing to his eye seen.
From trickling (the adjacent) rivers has he stopp'd
While [the] concealed [thing] he shall bring forth [to] light.

The following comments on this passage (which may be a later addition of the time of Solomon), as well as its metalurgy, gives a remarkable insight into the bronze of the time and it is instructive of its pertinence to the subject. See Job, Book 09.

It may be fairly inferred from the description that a distinction is made between gold obtained in the manner indicated, and that which is found in the natural state in the alluvial soil, among the debris washed down by the torrent. This appears to be implied in the expression "the gold that they refine," which expresses the process by which the pure gold is extracted from the ore, and separated from the silver or copper with which it may have been mixed. What is said of gold may be equally applied to silver, for in almost every allusion to the process of refining the two metals are associated. In the present passage there is a specification, which has been pointed out, so far as can be made out from the obscurities with which it is beset, the natural order of mining operations is observed in the description. The whole point is obviously contained in the contrast, "Surely there is a source for the silver, and a place for the gold which men refine; but where shall wisdom be found, and where is the place of understanding?" No labor is too great for extracting from the earth its treasures. The shaft is sunk, and the adventurous miner, far from the haunts of men, hangs in mid-air (v. 4): the bowels of the earth—which in the course of nature grows but corn—are overthrown as an easy way to the silver and gold which the miner pursues in his underground course is unseen by the keen eye of the falcon, nor have the boldest beasts of prey traversed it, but man wins his way through every obstacle, hews out tunnels in the rock, stops the water from flooding his mine, and brings to light the precious metals as the reward of his adventure. No description could be more complete. The poet might have had before him the copper mines of the Sinaitic peninsula. In the Wady Maghārah, "the valley of the Cave," are still traces of the Egyptian colony of miners who settled there for the purpose of extracting copper from the free-standing copper ore, whether in their hieroglyphic inscriptions upon the face of the cliff. That these inscriptions of great antiquity there can be little doubt, though Lepsius may not be justified in placing them at a date B.C. 4000 (Letters from Egypt, p. 346, Eng. tr.). In the Maghārah tablets, Mr. Drew (Scriptures Lands, p. 50, note) "saw the cartouche of Sopus, the builder of the Great Pyramids, and on the stones at Sarḥbit el-Khidîm, in the desert of Sinai, May, 1869." The writer discovered on the mountain exactly opposite the caves of Maghārah traces of an ancient fortress, intended, as he conjectures, for the protection of the miners. The hill on which it stands is about 1000 feet high, nearly insulated, and formed of a series of precipitous terraces, one above the other, like the steps of the Pyramids. The most of these was entirely surf rounded by a strong wall, within which were found remains of 140 houses, each about ten feet square. There were, besides, the remains of ancient hammers of green porphyry, and reservoirs "so disposed that when one was full the surplus ran into the others, and so in succession, so that they must have had water enough to last for years. The ancient furnaces are still to be seen,
and on the coast of the Red Sea are found the piers and wharves whence the miners shipped their metal in the harbor of Abu Zenmeh. Five miles from Sarabit el-Khadim the same traveller found the ruins of a much greater number of houses, indicating the existence of a large mining population, and, besides, five immense reservoirs formed by damming up various wadys. Other mines appear to have been discovered by Dr. Wilson in the granite mountains east of the Wady Mokattan. In the Wady Nasb the German traveller Rüppell, who was commissioned by Mohammed Ali, the viceroy of Egypt, to examine the state of the mines there, met with remains of several large smelting-furnaces, surrounded by heaps of slag. The ancient inhabitants had sunk shafts in several directions, leaving here and there columns to prevent the whole from falling in. In one of the mines he saw huge masses of stone rich in copper (Ritter, Erdkunde, xiii, 786). The copper mines of Phaenoe, in Idu- mea, according to Jerome, were between Zoar and Petra: in the persecution of Diocletian the Christians were condemned to work them.

The gold mines of Egypt in the Bahari desert, the principal station of which was Eschuramit, a few days' journey beyond Wady Allaga, have been discovered within the last few years by M. Linant and Mr. Bonomi, the latter of whom supplied Sir G. Wilkinson with a description of them, which he quotes (Anc. Egs. iii, 229, 230). Ruins of the miners' huts still remain as at Sarabit el-Khadim. “In those nearest the mines lived the workmen who were employed to break the quartz into small fragments, the size of a bean, from whose hands the pounded stone passed to the persons who ground it in hand-mills, similar to those now used for corn in the valley of the Nile, made of granitic stone; one of which is to be found in almost every house at these mines, either entire or broken. The quartz, thus reduced to powder, was washed on inclined tables, furnished with two cisterns, all built of fragments of stone collected there; and near these inclined planes are generally found little white mounds, the residuum of the operation.” According to the account given by Diodorus Siculus (iii, 12-14), the mines were worked by gangs of convicts and captives in fetters, who were kept day and night to their task by the soldiers set to guard them. The work was supervised by an engineer, who selected the stone and pointed it out to the miners. The harder rock was split by the application of fire, but the softer was broken up with picks and chisels. The miners were quite naked, their bodies being painted according to the color of the rock they were working, and in order to see in the dark passages of the mine they carried lamps upon their heads. The stone as it fell was carried off by boys; it was then pounded in stone mortars with iron pestles by those who were over thirty years of age, till it was reduced to the size of a lentil. The women and old men afterwards ground it in mills to a fine powder. The final process of separating the gold from the pounded stone was intrusted to the engineers who superintended the work. They spread this powder upon a broad slightly-inclined table, and rubbed it gently with the hand, pouring water upon it from time to time so as to carry away all the earthy matter, leaving the heavier particles upon the board. This was repeated several times; at first with the hand, and afterwards with fine sponges gently pressed upon the earthy substance, till nothing but the gold was left. It was then collected by other workmen, and placed in earthen...
cilches, with a mixture of lead and salt in certain proportions, together with a little tin and some barley bran. The crucibles were covered and carefully closed with clay, and in this condition baked in a furnace for five days and nights without intermission. Three methods have been given in connection with getting gold and silver: 1. by exposing the fused metal to a current of air; 2. by keeping the alloy in a state of fusion and throwing nitre upon it; and, 3. by mixing the alloy with lead, exposing the whole to fusion upon a vessel of bone-sash or earth, and blowing upon it with bellows or other blast; the last appears most nearly to the present. With the description of Dioscorides (p. 23), this process, known as the cupellation process [see Lead], there seems to be a reference in Psa. xii, 6; Jer. vi, 28—30; Ezek. xxii, 18—22, and from it Mr. Napier (Metals of the Bible, p. 24) deduces a striking illustration of Mal. iii, 2, 5, "He shall sit as a refiner and purifier of silver," etc.

"When the alloy is melted upon a cupel, and the air blown upon it, the surface of the melted metals has a deep orange-red color, with a kind of flickering wave constantly passing over the surface. . . . As the process proceeds, the heat is increased. . . . and in a little time the color of the fused metal becomes lighter. . . . At this stage the refiner watches the surface of the metal, and, with the utmost earnestness, until all the orange color and shading disappear, and the metal has the appearance of a highly-polished mirror, reflecting every object around it; even the refiner, as he looks upon the mass of metal, may see himself as in a looking-glass, and thus he can follow the operation. It is then that the destruction of the golden calf in the desert by Moses: "And he took the calf which they had made, and burnt it in fire, and ground it to powder, and strewed it upon the water, and made the children of Israel drink" (Exod. xxxii, 20). As the highly malleable character of gold would permit an operation which is described in the next verse, it is next to certain impossible, an explanation has been sought in the supposition that we have here an indication that Moses was a proficient in the process known in modern times as calcination. The object of calcination being to oxidize the metal subjected to the process, and gold not being affected by this treatment, the explanation cannot be admitted. M. Goguet (quoted in Wilkinson's Anc. Eg. iii, 221) confidently asserts that the problem has been solved by the discovery of an experienced chemist that "in the place of tartaric acid, which we employ, the Hebrew legislator used natron, which is common in the East." The gold so reduced and made into a draught is further said to have had a most detestable taste. Goguet's solution appears to have been adopted without examination by more modern writers, but Mr. Napier ventured to question its correctness, and endeavored to trace it to its source. The only clue which he found led to the discovery by Strabo of a method in the 17th century, "that if one part gold, three parts potash, and three parts sulphur are heaped together, a compound is formed which is partly soluble in water. If," he adds, "this be the discovery referred to, which I think very probable, it certainly has been made the most of by Biblical critics" (Met. of the Bible, p. 49). The whole difficulty appears to have arisen from a desire to find too much in the text. The main object of the destruction of the calf was to prove its worthlessness and to throw contempt upon idolatry, and all this might have been done without any refined chemical process."

"We have no means of knowing whether the gold of Ophir was obtained from mines or from the washing of gold streams. Pliny (i, 92), from Juba, describes the littus Hammaum on the Persian Gulf as a place where gold mines existed, and in the same chapter alludes to the gold mines of the Sabaeans. But in all probability the greater part of the gold which came into the hands of the Phoenicians and Hebrews was obtained from streams and sabaus. To indicate this. At a very early period Jericho was a centre of commerce with the East, and in the narrative of its capture we meet with gold in the form of ingots (Josh. vii, 21, A. V.)"
In the passage of Job already quoted. Copper smelting, however, is in some cases attended with comparatively small difficulties, which the ancients had evidently the skill to overcome. Ore composed of copper and oxygen, mixed with coal and burned to a bright red heat, leaves the copper in a state, and highest grade, which will follow if the process be applied to the carbonates and sulphurates of copper. Some means of toughening the metal, so as to render it fit for manufacture, must have been known to the Hebrews as to other ancient nations. The Egyptians evidently possessed the art of working bronze or cast perfection at a very early time, and much of the knowledge of metals which the Israelites had must have been acquired during their residence among them.

Of tin there appears to have been no trace in Palestine. That the Phoenicians obtained their supplies from the mines of Spain and Cornwall there can be no doubt, and it is suggested that even the Egyptians may have procured it from the same source, either directly or through the medium of the former. It was found among the possessions of the Midianites, to whom it might have come in the course of traffic; but in other instances in which allusion is made to it, tin occurs in conjunction with other metals in the form of an alloy. The lead mines of Gebel er-Rossas, near the coast of the Red Sea, about half-way between Berenice and Kosseay (Wilkinson, *Handbook for Egypt*, p. 408), may have supplied the Hebrews with that metal, of which there were no mines in their own country, or if they have ever been obtained in the neighborhood of Sinai. The hills of Palestine are rich in iron, and the mines are still worked there, though in a very simple, rude manner, like that of the ancient Samothracians: of the method employed by the Egyptians and Hebrews, we have no certain information. It may have been similar to that in use throughout the whole of India from very early times, which is thus described by Dr. Ure (*Dict. of Arts*, etc., Art. Steel): "The furnace or bloomer in which the ore is smelted is from four to five feet high; it is somewhat pear-shaped, being about five feet wide at bottom and one foot at top. It is built entirely of clay. . . . There is an opening in front about a foot or more in height, which is built up with clay at the commencement, and broken down at the end of each smelting operation. The bellows are usually made of a goat's skin. . . . The bamboo nozzles of the bellows are inserted into tubes of clay, which pass into the furnace. . . . The furnace is filled with charcoal and a lighted coal being introduced before the nozzles, the mass in the interior is soon kindled. As soon as this is accomplished, a small portion of the ore, previously moistened with water to prevent it from running through the charcoal, but without any flux whatever, is laid on the top of the coal, and covered with charcoal to fill up the furnace. In this manner ore and fuel are supplied, and the bellows are urged for three or four hours. When the process is stopped, and the temporary wall in front is broken down, the bloom is removed with a pair of tongs from the bottom of the furnace.

It seems necessary to give this account of a very ancient method of iron smelting, because, from the difficulties which attend it, and the intense heat which is required to separate the metal from the ore, it has been asserted that the allusions to iron and iron manufacture in the Old Testament are anachronisms. But if it were possible among the ancient Indians in a very primitive state of civilization, it might have been known to the Hebrews, who may have acquired their knowledge by working as slaves in the iron furnaces of Egypt (comp. Deut. iv. 20). The question of the early use of iron among the Egyptians is fully disposed of in the following: "In the infancy of the arts and sciences, the difficulty of working iron might long withhold the secret of its superiority over copper and bronze; but it cannot reasonably be supposed that a nation so advanced, and so eminently skilled in the art of working metals as the Egyptians and Sidonians, should have remained ignorant of its use, even if we had no evidence of its having been known to the Greeks and other people; and the constant employment of bronze arms and implements is an argument against the whole knowledge of iron, since we find the Greeks and Romans made the same things of bronze long after the period when iron was universally known. . . . To conclude, from the want of iron instruments, or arms, bearing the names of early monarchs of a Pharaonic age, that bronze alone was used, is neither sufficient nor satisfactory; since the decomposition of iron, especially when buried for ages in the nitrous soil of Egypt, is so speedy as to preclude the possibility of its preservation. Until we know in what manner the Egyptians employed bronze tools for cutting stone, the discovery of them affords no additional light, nor even argument; since the Greeks and Romans continued to make bronze instruments of various kinds long after iron was known to them; and Herodotus mentions the iron tools used by the builders of the Pyramids. Iron and copper mines are found in the Egyptian desert, which were worked in old times, and it is possible that some of the iron tombs about Memphis, dating more than 4000 years ago, represent butchers sharpening their knives on a round bar of metal attached to their apron, which from its blue color can only be steel; and the distinction between the bronze and iron weapons in the tomb of Rameses III., one painted red, the other blue, leaves no doubt of both having been introduced at this period. Iron in Ethiopia iron was much more abundant than in Egypt, and Herodotus states that copper was a rare metal there; though we may doubt his assertion of prisoners in that country having been bound with fetters of gold. The speedy decomposition of iron would be sufficient to prevent our finding implements of that metal of an early period, and the greater opportunities of obtaining copper ore, added to the facility of working it, might be a reason for preferring the latter whenever it answered the purpose instead of iron." See Metal.

Mineralogy. This science, like all others of modern date, was in a very imperfect state among the Hebrews. Hence the sacred writers speak of minerals without any scientific classification, and according to their merely external characteristics. This occasions the utmost difficulty in identifying any but the commonest mineral substances. In precious stones, particularly, this vagueness of name and description precludes the possibility of any certainty as to the actual mineral ingredients. For example, the precious stones to which in most instances no one substance is denoted, but that the name is generic, including all stones of the same general appearance, color, hardness, etc. See Gem. The following is a list of the mineral productions mentioned in the Bible, with their probable modern representatives. For details, see each word in its place.
Minerva.

Minerva, the name of a Roman goddess, identified by the later Greekizing Romans with the Greek Aθηνα, whom they greatly resembled, though, like all the old Latin divinities, there was nothing anthropomorphic in what was told concerning her. Her name is thought to spring from an old Italic word preserved in the roots of many (the mind) and (to warn or advise); and the ancient Latin scholar and critic, Varro (ap. August. De Civ. Dei, vii, 28), regarded her as the impersonation of divine thought—the plan of the material universe, of which Jupiter was the creator, and Juno the representative. Hence all that goes on among men, all that constitutes the development of human destiny (which is but the expression of the divine idea or intention), is under her care. She is the patroness of wisdom, arts, and sciences, the personification, so to speak, of the thinking, inventive faculty—and was invoked alike by poets, painters, teachers, physicians, and all kinds of craftsmen (Ovid, Fast. iii, 865, etc.; August. loc. cit. 18). She also guides heroes in war: and, in fact, every wise idea, every bold act, and every useful design, owes something to the high inspiration of this virgin goddess (Livy, xlv, 38; Virgil, Æn. ii, 615). Popular tradition accounted for her origin as follows: "She was the offspring of the brain of Jupiter, from which she issued in full armor." She was always represented as a virgin. In war she was contradistinguished from Mars (the god of brute force) as the patroness of scientific warfare, and hence, according to the ancient poets, was always superior to him. The favorite plant of Minerva was the olive, and the animals consecrated to her were the dove and the serpent. As she was a maiden goddess, her sacrifices consisted of calves which had not borne the yoke or felt the sting (Tulgentius, p. 601). She had many temples and festivals dedicated to her. Her oldest temple in Rome was that on the Capitol. Her most popular festival was held in March, and lasted five days, from the 19th to the 23rd inclusive. Minerva was popularly believed to be the inventor of musical instruments, especially wind instruments, the use of which was very important in religious worship, and which were accordingly subjected to an annual purification, which took place during the festival just alluded to (Ovid, Fast. iii, 849).

Athene, or Pallas Athene, the Greek goddess corresponding, as we have said, to the Roman Minerva, was one of the few truly grand ethical divinities of Greek mythology. Different accounts are given of her origin and parentage, probably from the jumbling together of local legends; but the best known, and, in ancient times, the most orthodox version of the myth represented her as the daughter of Zeus and Metis. Zeus, we are told, when he had attained supreme power after his victory over the Titans, chose for his first wife Metis (Wisdom); but being advised by both Uranus and Gea (Heaven and Earth), he swallowed her, when she was pregnant with Athena. When the time came that Athene should have been born, Zeus felt great pains in his head, and caused Hephæstus (Vulcan) to split it up with an axe, when the goddess sprang forth—fully armed, according to the later stories. Throwing aside the thick veil of anthropomorphism which conceals the significance of the myth, we may see in this account of Athene's parentage an effort to set forth a divine symbol of the combination of power and wisdom. Her father was the greatest, her mother the wisest of the gods. She is literally born of both, and so their qualities harmoniously blend in her. It is possible that the constant representation of her as a strictly maiden goddess, who had a real, and not merely prudish antipathy to marriage, was meant to indicate that qualities like hers could not be mated, and that, because she was perfect, she was doomed to virginity.
Athene is not represented, however, by the Greeks as a cold, unfeeling divinity; on the contrary, tradition will have it that she warmly and actively interested herself in the affairs of both gods and men. She sat at the right hand of Zeus, assisting by her counsels. She was also regarded as the patroness of poetry, agriculture also she was supposed to protect and cherish; and as a warlike divinity she was regarded as the protectress in battle of those heroes who were distinguished as well for their wisdom as their valor. Pope, in his *Te Deum*, adulates to her twofold character as the protectress of arts and arms, with these words: "There Ceres, graced with both Minervas, shine."

In the Trojan war she fought for the Greeks—who, in point of fact, were in the right. The poets feigned that Neptune and Minerva disputed for the possession of Attica, which the gods promised to him or her who should produce the most useful gift to mankind. Neptune, striking the earth with his trident, produced a warhorse, and Minerva produced the olive (the symbol of peace), by which she gained the victory. She was sometimes called Pallas, Parnethos (i.e. "virgin"), Tritonía or Triotegensia, and other names.

Her worship was universal in Greece, and representations of her in statues, busts, coins, reliefsc, and vase paintings were and are numerous. She is always dressed, generally in a Spartan tunic with a cloak over it, and wears a helmet, beautifully adorned with figures of different animals, the agis, the round argoic shield, a lance, etc. Her countenance is beautiful, earnest, and thoughtful, and the whole figure majestic. There was a celebrated statue of Minerva, called "Falladium," which was said to have fallen from the sky, and on which the safety of Troy depended (Milman, *Hist. of Christianity*, see Index). See G. Hermann, *Dissertatio de Graeco Minerva* (1857); Hartung, *Die Religion der Römer*, ii, 78 sq.; Guigniaut, *Religions de l'Antiquité*; Smith, *Dictionary of Greek and Roman Biography and Mythology*, s. v.; Volmer, *Mythol. Wörterbucb*, s. v.; *Biographie Universelle* (Partie mythologique); *Chambers, Encyclop. s. v.*

**Mingarelli, Fernando**, an eminent Italian theologian, was born at Bologna in 1724. He flourished as professor of theology at the University of Malta for several years. Impaired health finally obliged his return to Italy. He died at Faenza in 1767. He was a member of the Academy of the Arcadians. Mingarelli wrote several works; the most important are, *Vetere monumenta ad classem Ravenosan nuper evoluta* (Faenza, 1756, 4to; notes of Mauro Fattorini and of Banchi); — *Vetenum testimonia de Didymo Alexandriaco complectens, quae in antiquitate nuper detecte edem asservatur* (Bologna, 1764, 4to). *Mingarelli, Giovanni Lodovico*, an eminent Italian bibliographer, the elder brother of the preceding, was born at Bologna Feb. 27, 1722. He held successively the principal offices of the congregation of the regular canons of San Salvatore. Afterwards he was a professor of Greek literature at the College della Sapientia, at Rome. Mingarelli died in 1767. He is visiting the principal libraries of the great papal city, and published some important works which he thus discovered. He died at Rome March 6, 1780. We owe to him, as editor, the *Annotationes literae in Psalmos of father Marini* (Bologna, 1748-49); he added new explanations to the same in the edition in Bologna, 1779. He edited the *Scriptures* of the Roman liturgy, and a life of the author, the exactitude of which is praised by Tiraboschi — *Vetenum Patrum Latinorum opuscula summae antehac edita* (Bologna, 1761) — *Soppia un' opera inedita d'antico teologo lettera* (Venice, 1763, 12mo); and in the Nuova Raccolta Catalogorum, to which Mingarelli adds a great number of additions in the Roman liturgy, and a life of the author, the exactitude of which is praised by Tiraboschi.

There is an analysis of his dissertation in the *Journal de Bollandian*, Jan. 1786; — *Egypiotorum codicum reliquiae* (ibid, 1785, 2 pts. 4to). These catalogues are greatly valued by scholars. He left a number of works in MS. form; they are now kept at Bologna. See Cavalieri, *Vita di Mingarelli* (Novara, 1817, 8vo); *Tipidoro, Biographia degli Italiani*, v. 9.

**Mingrelia**

*Mingrelia* is a *mixed* multitude, such as accompanied the Israelites from Egypt (Exod, xii, 30), and joined them after their return from Babylon (Neh, xiii, 8); but specifically (with the def. article) of the promiscuous mass of foreign auxiliaries, e.g. of Solomon (1 Kings x, 15), of Egypt (Ezek. xxx, 5; Jer. xxxv, 20, 24), of Chaldea (Jer. i, 87).

The phrase "*hā-ereb*", like that of "*the mixed multitude*," which the Hebrew closely resembles, is applied in Jer. xxxv, 20, and Ezek. xxx, 5, to denote the miscellaneous foreign population of Egypt and its frontier tribes, including every one, says Jerome, who was not a native Egyptian, but was resident there. The Targum of Jonathan understands it in this passage, as well as in Jer. i, 87, of the foreign mercenaries, though in Jer. xxxv, 24, where the word again occurs, it is rendered *Aethiopis*; it is difficult to attach any distinctive meaning, or to identify with the mingled people any race of which we have knowledge. 'The kings of the mingled people that dwell in the desert,' are the same apparently as the tributary kings (A.V. 'kings of Arabia') who brought presents to Solomon (1 Kings x, 15); the expression in the two cases has been explained (as in the Targum on 1 Kings x, 15) as foreign mercenary chiefs who were in the pay of Solomon, but Theynus understands by them the sheiks of the border tribes of Bedouins, living in Arabia Deserta, who were closely connected with the Israelites. The 'mingled people' in the midst of Babylonia (Jer. i, 87) were probably the foreign hired or mercenary troops who lived among the native population, as the Targum takes it. Kimchi compares Exod. xii, 38, and explains *hā-ereb* of the foreign population of Babylon generally, 'foreigners who were in Babylon from several lands,' or it may, he says, be intended to denote the merchants, *ereb* being thus connected with the root *ereb* of *Ezek, xxvii, 27*, rendered *merchants* in the A. V., the foreign traders, or merchants of any trade, or merchants.' His first interpretation is based upon what appears to be the primary significaion of the root *ereb*, 'drab, to mingle,' while another meaning, 'to pledge, guarantee,' suggested the rendering of the Targum 'mercenaries,' which Archi adopts in his explanation of 'the kings of *hā-ereb*,' in 1 Kings x, 15, as the kings who were pledged to Solomon and dependent upon him. The second rendering as 'merchants' gives him ' *ereb*, as if to represent the French guarrante. The rendering of the A. V. is supported by the Sept. *εἰρήνητος* in Jeremiah, and *ἐρήμωτος* in Ezechiel. See MIXED MULTITUDE.

**Mingrelia**, an Asiatic province of Russia, situated between the Black and Caspian seas, in the country formerly called Colchis. It covers a territory of 2800 square miles, about 250 of which are watered by rivers. The country is mountainous, but is largely cultivated. Tobacco, rice, and mallet are raised, and a great deal of silk, honey, and wine are produced. Mingrelia became subject to Russia in 1803, but was until 1867 governed by its own prince, called Dadian, who resided in the small town of Mingrelia. The inhabitants of this province are generally inferior in appearance to the mountain-dwellers of the Caucasus. We are told by travellers that they are an ignorant, superstitious, and corrupt people. *Religious Condition.*—The Mingrelsians are ostensibly members of the Greek Church, but their religion consists in a mixture of superstition and heathen worship, directed toward purity and heart devotion. Many of their practices are open to severe censure. They observe four Lents, comprehending (1) the forty-eight days before Easter; (2) the forty days before Christmas; (3) the month pre-
MINIM

MINGRELIA 295

ceding St. Peter's day; and (4) a Lent devoted to the Virgin Mary, and observed for a fortnight. Their chief saint is St. George, who is also the special patron of the Georgians, the Muscovites, and the Greeks. Their worship of images is of such a description that even Romanists declare it deserving the reproach of idolatry. They offer them stages' horns, tusks of boars, pheasants' wings, and other prize articles of hunting; and the church of images is most frequented by them to their wars and hunting expeditions. It is even said that, like the Jews, they offer bloody sacrifices, immolate victims, and, like our Western savages, feast on them in general assembly; that they kill animals at the tombs of their parents, and pour wine and oil over the graves, as the pagans. They abstain from meat on Mondays, out of regard for the moon, and Friday is observed as a holiday. They are exceedingly thievish: theft is not regarded as a crime, but rather a proof of skill that disgraces no one; he who is caught in the act has nothing to fear beyond a trifling fine.

Introduction of Christianity.—Some ecclesiastical historians insist that the king, the queen, and the nobility of Colchis were converted to the Christian faith by a female slave, under the reign of Constantine (Socrates, lib. i. c. 20; Sozomen, lib. ii. c. 7). Others assert that the Mingrelians were instructed in the Christian doctrine by a missionary from the Scythians in Cyrrhus, in their own tongue call Chiasa, and who is said to have lived about A.D. 806. Perhaps religion was extinguished altogether in these regions during the time that elapsed between the fifth and the ninth centuries. The Mingrelians show, on the sea-shore, near the Corex River, a large church in ruins which, according to their statements, St. Andrew preached; but this is to be taken "cum grano salis." In former times the Mingrelians acknowledged the spiritual supremacy of the patriarch of Antioch; but this supremacy has been transferred to the patriarchal see of Constantinepolis. Nevertheless they have two principal cities of their own nation, where they call "tholoi"; one for Georgians, the other for Mingrelians. There were formerly twelve bishoprics. There are only six left at the present time, the other six having been changed into abbeys. The primates or chief bishop of Mingrelia, who resides at Constantinepolis, makes his appearance in Mingrelia only once in his life, and then only for the purpose of consecrating the holy oil, or chrism, which the Greeks call symvorn. The statesmen of some travellers respecting the treasures of the primates and the bishops of the Mingrelians, the splendor of their garments, the extraordinary sum of money they exact for their services, the donations, etc., are at variance with the statements relating to the general poverty of the nation; there is likely to be exaggeration on both sides. What is said of the ignorance and corruption of the clergy in general may be more readily believed. The bishops, who are very loose in their morals, are regarded as acceptable if they abstain from meat, strictly observe Lent, and say mass in conformity with the Greek rite. Priests are allowed to marry, not only before their ordination, but also afterwards, and even to take a second wife, with dispensation. The observances at baptism are very peculiar. As soon as a child is born, the priest anoints him, draws a cross on it with the chrism. The baptism is deferred until the child is two years of age, when he is christened by immersion in warm water; againunctions are made on almost every part of his body; holy bread is given him to eat, and wine to drink. The priests do not stick to the traditional form of baptism, and have been known to use wine for the christening of great people's offspring.

There are in Mingrelia monks of the order of St. Basil, who are called berres. They are dressed like Greek monks, and do not differ from them in their manner of living. A very condemnable abuse is that parents are allowed to engage their children in this state in their tenderest years, when they are themselves incapable of choice. There are also nuns of the same order; they wear a black veil, and observe the same fastings and abstinence as the monks; but they do not submit to clausitation, and make no vows, being thus at liberty to leave the monastic state when so inclined. The cathedral churches are adorned with painted images (no reliefs), covered, it is said, with gold and gems; and the paintings of images in this church are said to be tinged in blood. It is asserted that the Mingrelians are in possession of quite a number of precious relics, brought to them by the Greek fugitives, after the downfall of Constantinepolis; among others they claim to have a piece of the true cross, eight inches long; but the statements of the Greeks and Greeks alone, in this respect, have not yet indicated what subject to caution. The Theatins of Italy in 1627 established a mission in Mingrelia, and so have the Ca- puchins in Georgia, and the Dominicans in Circassia; but the small success which attended these endeavors caused the missions to be suffered to fall into decay, and finally to be abandoned. See Dr. J. Zampli, Relation de Mingrelie; Cerry, Etat present de l'Eglise Romaine; Chardin, Voyage de Perse; and especially Bergier, Dictionnaire de Théologie, iv, 347 sq.

Min'amin (Heb. 'Min'aymin, מִינָאָמִין, from the right hand, or perhaps corrupted from Bonjami), the name of two men. See also MIAIM.

1. (Sept. Bona'vita v. r. Bina'vita, Vulg. Benjamin.) One of the Levites (or priests) who had charge of the distribution of the sacred offerings among the families of the priests, under Hezekiah (2 Chron. xxxii. 15). B.C. 726.

2. (Sept. Min'us, Vulg. Miniam.) One of the priests who returned with Zerubbabel from Babylon ( Neh. xii. 17), and celebrated with trumpets the completion of the walls of Jerusalem (Neh. xii. 41); probably the same else where called MIAIM (Neh. xii. 5) or MIAIM (Neh x. 7).

Minias, Elias, an Eastern theologian and teacher, was born at Liguri, Cephalonia, in 1669, and was educated at Venice. He filled offices as public instructor, and became afterwards clergyman at Constan- tinepolis, Corfu, and the Peloponnesus, and was finally bishop of Calocarya. He died in 1714. His works are: HGregorov (Leipsic, 1718), a treatise on the schism between the Greek and Latin churches: a Latin and German version of it was published at Leipsic in 1843, and at Vienna in 1844: — Διαδραχ αις την άνη και μεγάλην Τεθασαρκοτην και αις αλλας ενωτης νοησιας νωριας (Venice, 1727), and often reprinted.

Minias (or Mina), a, an Armenian prince who belonged to the Roman army, and served under Decius. When that emperor was encamped outside the city of Florence, according to the Florentine legend, this saint was denounced as a Christian, and condemned to be thrown to the beasts of the amphitheatre. A panther was first set upon him, but the saint was delivered from him in answer to his prayers. He was then stabbed, put in boiling oil, and stoned, without being destroyed, for an angel descended to comfort him, and clothed him in a garment of light. Finally he was beheaded. It is said that this severe measure was executed in A.D. 254. Minias is represented dressed as a prince, with scarlet robe and a crown. His attributes are the palm, the lily, and javelin.

Miniature is a picture illustrating the text of a MS.; so called because filling up the outline sketched in vermilion (minium).

Minimus (ordo fratum minimorum S. Francisci de Paula), a religious order in the Church of Rome, founded by St. Francis de Paula, of Calabria, in the year 1453. The new order was called at first Heremitas S. Francisci (Eremita Minimorum fratum S. Francisci de Paula). Pope Sixtus IV, in 1474, confirmed the statutes of the order, thus uniting them in conventual order, and named
Francis superior-general. He enjoined on his disciples a total abstinence from fish and fish dishes; besides which they were always to go barefoot, and not permitted to quit their habit and girdle night or day. Their habit is a coarse, black woollen stuff, with a woollen girdle of the same color, tied in five knots. The order increased rapidly; it gained many disciples, especially in France, where Francis was in high favor with Louis XI. From 1469 on, anony. Psa. 118 (1470, 1471, 1473, 1475, 1476, etc.), 3; the order were established throughout the kingdom, and the friars themselves were called les bons homines (Bonni homines). In Spain they also gained influence, Ferdinand the Catholic building their first monastery for them at Malaga. A new name, "the Fathers of Victory," was bestowed on them, and they were said to be "the most learned among them," and "the least among the brethren," and Christ's words (Matt. xxxv, 40), "Quamdiu fecistis un de his fratrum multis minimis, mibi fecisti," should have a peculiar reference to them. The austerity of the rules is particularly great in the selection of food. The brethren are deprived not only of the use of meat, but also of eggs, butter, milk, and cheese. In 1498 Francis also instituted a new female order of Minims, and subjected it to the guidance of the older order.

For a long time the order had no special rules and regulations, the example of the superior-general serving as a pattern. In 1498 Francis finished his threefold rules, and they were confirmed by pope Alexander VI. Humility and repentance, poverty, fasting, praying, and silence form the principal features of these ascetic rules, and Francis called his brethren Minimus Fratres. This name was chosen by them because they should be "the least among the brethren," and Christ's words (Matt. xxv, 40), "Quamdiu fecistis un de his fratrum multis minimis, mibi fecisti," should have a peculiar reference to them. The austerity of the rules is particularly great in the selection of food. The brethren are deprived not only of the use of meat, but also of eggs, butter, milk, and cheese. In 1498 Francis also instituted a new female order of Minims, and subjected it to the guidance of the older order.

The order is at present divided into thirty-one provinces, of which twelve are in Italy, eleven in France and Flanders, seven in Spain, and one in Germany. In the beginning of the last century that order had about 450 convents. At present their number has greatly decreased. The Minims have passed even into the Indies, where there are some convents which do not compose provinces, but depend immediately on the general. Their principal house is at Rome. The superior of each male house is called corrector; that of each female house correctrix; the superior of the order is called generalis corrector. There are now but few houses for female Minims. The tertiaries of the order are secular persons; but while they are not obliged to retire from society, they are required to observe the abstinence from meat which is prescribed, and have also other obligations, and are subject to the order of the general corrector. Their distinguishing mark is a girdle with only two knots. See Bonnari, *Vest. der geistlichen Ordenstaute. ii, 58 sq.; Wetzler und Webe, *Kirkhin-Lexicon*, vii, 193; Herzen, *Real-Encyklopädie*, iv, 589. (J. H. W.)

Minister, one who acts as the less (from minus or minor) of inferior agent, in obedience or subservience to another, or who serves, officers, etc., as distinguished from the master, maquìer (from magistra), or superior. It is used in the A. V. to describe various official of religious and civil character. The words so translated in the Scriptures are the following:

1. προσερχόμενος, meškărth, which is applied, (1) to an attendant upon a person in high rank, as to Joshua in relation to Moses (Exod. xxiv, 13, Sept. παραστησιν ἀνήρ; Aquila and Symm. δ λευτοχώρων αὐτῷ; comp. Exod. xiv, 18, with the mention of the 870 members of the concourse between i, 1, Sept. ἐπιστρέφων Μωσῆ; Alex. λευτοχῶρος), and to the attendant on the prophet Elisha (2 Kings iv, 43; vi, 15, Sept. λευτοχώρος; comp. 2 Kings iii, 11; 1 Kings xix, 21); (2) to the attaches of a royal court (1 Kings x, 5 [Sept. λευτοχῶρος], where, it may be observed, they are distinguished from the officers of higher rank [πρεσβυτέρος], a more general term, Sept. παῖς], an-

swering to our ministers, by the different titles of the chambers assigned to their use, the "sitting," the "heroes," the "attendants" of the ministers the ante-room in which they were stationed; persons of high rank held this post in the Jewish kingdom (2 Chron. xxii, 8); and it may be in this sense, as the attendants of the King of Kings, that the term is applied to angels in Psa. cxxi, 21 (λευτοχώροι); John (Rev. xiv, 4; comp. Psa. cxxii, 1, 7; Rev. vii, 9, 14), and the "public functionaries" (ad loc.); (3) to the priests and Levites, who are thus described by the prophets and later historians (Jer. xxxiii, 21; Ezek. xiv, 11; Joel i, 9, 18; Ezra viii, 17; Neh. x, 36), though the verb, whence meshărthah is derived, is not uncommonly used in reference to those who perform services in their own houses (Ezek. xxxviii, 31; Deut. xviii, 5, etc.). Persons thus designated sometimes succeeded to the office of their principal, as did Joshua and Eliasha. Hence the term is used of the Jews in their capacity as a sacred nation, "Men shall call you the ministers of our God" (Isa. lix, 6).

2. πρεσβυτέρος, pelach (Chald.), Ezra vii, 24, "minister" of religion, λευτοχώρος (comp. προσερχόμενος, ver. 19), though he uses the word υπάρχων in the same sense, ch. viii, 17. In the n. T. we have three terms, each with its distinctive meaning:

3. λευτοχώρος, a term derived from λευτόν ἰησούν, "public work," and the leuvotouro was the name of certain personal services which the citizens of Athens and some other states had to perform gratuitously for the public good. From the sacerdotal use of the word in the n. T., it obtained a sacerdotal sense of a public functionary, and which is perpetuated in our word "liturgy." The verb λευτοχωρύσει is used in this sense in Acts xiii, 2. It answers most nearly to the Hebrew meshërath and is usually employed in the Sept. as its equivalent. It be
tokens a subordinate public administrator, whether civil or sacerdotal, and is applied in the former sense to the magistrates in their relation to the divine authority (Rom. xiii, 6), and in the latter sense to our Lord in relation to the Father (Heb. viii, 2), and to St. Paul in relation to Jesus Christ (Rom. xv, 16), where it occurs among other expressions of a sacerdotal character, "ministering" (λευτοχωρύστα, "offering up" (ὑποταγόντα, etc.). In all these instances the original and special meaning of the word, as used by the Athenians, namely, with respect to those who administered the public offices (λευτοχωρούαι) at their own expense (Böckh, *Staatshauk. der Athener. i, 480; ii, 62; Potter's Gr. Ati. i, 83), is preserved, though it is considerably modified, yea, sometimes even reversed; forward in the cognate terms λευτοχωρύστης and λευτοχωρυγις, applied to the sacerdotal office of the Jewish priest (Luke i, 23; Heb. ix, 21; x, 11), to the still higher priestly
hood of Christ (Heb. viii, 6), and in a secondary sense to the Christian priest who offers up to God the faith of his converts (Phil. ii, 17, λευτοχωρούς τις πιστεως), and to any act of public self-devotion on the part of a Christian disciple (Rom. xv, 27; 2 Cor. ix, 12; Phil. ii, 20).

4. The second Greek term, ἑρμηνευτής, differs from the others in that it contains the idea of actual and personal attendance upon a superior. Thus it is used of the attendant in the synagogue, the "scribe," Talmudists (Luke iv, 20), whose duty it was to open and close the building, to produce and replace the books employed in the service, and generally to wait on the officiating priest or teacher (Carzov, *Apparat. p. 314*). It is similarly applied to Mark, who, as the attendant on Barnabas and Saul (Acts xiii, 5), was probably charged with the domestic cares and the day-to-day discharge of the chief assistant duties (De Wette, ad loc.); and again to the subordinates of the high-priests (John vii, 32, 45; xviii, 3, etc.), or of a jailor (Matt. xvi, 35—πρεσβυτέρος in Luke xii, 58; Acts v, 22). Josephus calls Moses τόν ἑρμηνευτή τοῦ (Act. iii, 14). Kings are so called in Wis. vi. 4. The idea of personal attendance comes prominently forward in Luke ii, 2; Acts xxi, 16, in both of which places it
is alleged as a ground of trustworthy testimony ("ipsi
ciderunt, et, quod plus est, ministarunt," Bengel). Last-
ly, it is used interchangeably with ἰδιώκοι in 1 Cor.
iv. 18, 5; II. v. 5, 5; in this instance the term is
designed to convey the notion of subordination and hu-
mity. In all these cases the etymological sense of the
word (ἰδιώκω) comes out. It primarily signifies an
under-rower on board a galley, of the class who used
the longest oars, and consequently performed the severe-
duty, as distinguished from the ἱππάρχοι, the rower
upon the upper bench of the three, and from the ναυ-
ιοι, sailors, or the ἵμισταρι, marines (Dem. 1209, 11,
14; comp. also 1208, 20; 1214, 23; 1216, 13; Pol. i. 25,
6): hence in general a hand, agent, minister, attend-
ant, etc. The term that most adequately represents it
in our language is "attendant."

1. The Greek word ἵδιωκός, the one usually
employed in relation to the ministry of the Gospel; its
application is twofold, in a general sense to indicate
ministers of any order, whether superior or inferior, and
in a special sense to indicate an order of inferior minis-
ters. In the former sense we have the cognate term
ἱδιοκός used in Acts vi. 1, 4, both to the minis-
ters of tables and to the higher ministration of the
Word, and the term ἱδιώκος itself applied, without
defining the office, to Paul and Apollos (1 Cor. iii. 5),
to Tychicus (Eph. vi. 21; Col. iv. 7), to Epaphras (Col.
iv. 7), to Timothy (1 Thess. iii. 2), and even to Christ him-
self (Rom. xv. 8; Gal. ii. 17). In the latter sense it is
applied in the passages where the term is translated
distinctly from the bishop, as in Phil. i. 1; 1 Tim.
tii. 8-13. The word is likewise applied to false teach-
ers (2 Cor. xi. 15), and even to heathen magistrates
(Rom. xiii. 4), in the sense of a minister, assistant, or
servant in general, as in Matt. xx. 26. The term ἱδι-
ωκός denotes among the Greeks a higher class of ser-
vants than the χοῖκοι (Athén. xix. 192; see Buttm. Lex.
i. 229; comp. Matt. xxii. 13, and Sept. for ἐναρμόστης,
Esth. i. 10; ii. 2; vi. 9). It is worth of observation that
the word is thus of very rare occurrence in the Sept.,
and then only in a general sense: its special sense,
as known to us in its derivative "deacon" (q. v.),
seems to be of purely Christian growth. See MIN-
ISTERS.

MINISTER. MINISTER is a Latin word applied in that portion
of the Christian Church known as the Western to desig-
icate that officer who is styled διάκονος in Greek. The
word was applied generally to the Anglican clergy about
the time of the great rebellion, since which time it has
come into general use, and is now applied to any preacher
of the Gospel, who is not the pastor of a church or any
other person dependent on him, and living from the con-
ditions of his office, and ῥαβδί is scarcely ever heard in Eng-
lish-speaking congregations of that people. Ministers
are also called divines, and may be distinguished into
tonic, or those who possess controversial talanta; cas-
s, or those who resolve cases of conscience; experi-
mental, those who address themselves to the feelings,
cases, and circumstances of their hearers; and, lastly,
practical, those who insist upon the performance of all
those duties which the Word of God enjoins. An able
minister will have something of all these united in him,
though he may not excel in all; and it becomes every
one of us, who is a candidate for the ministry to get a clear
idea of each, that he may not be deficient in the dis-
charge of that work which is the most important that
can be sustained by mortal beings. Many volumes
have been written on this subject, but we must be con-
tent in this place to offer only a few remarks relative to

1. In the first place, then, it must be observed that min-
isters of the Gospel ought to be sound as to their princi-
plies. They must be men whose hearts are renovated by
divine grace, and whose sentiments are derived from
the sacred oracles of divine truth. A minister without
principles will never do any good; and he who professes
to believe in a system should see to it that it accords
with the Word of God. His mind should clearly per-
ceive the beauty, harmony, and utility of the doctrines,
and while he should be simply impressed with a sense of
their value and importance.

2. They should be mild and affable as to their disposi-
tions and deportment. A haughty, imperious spirit is a
disgrace to the ministerial character, and generally
brings contempt. They should learn to bear injuries
with a calm, and to do good to every one; be courteous to all without censoring to any; be affable
without levity, and humble without pusillanimity; con-
ciliating the affections without violating the truth;
connecting a suavity of manners with a dignity of char-
acter; obliging without flattery; and throwing off all
reservedness running into the opposite extreme of
volubility and trifling.

3. They should be superior as to their knowledge and
talents. Though many have been useful without what
is called learning, yet none have been so without some
portion of knowledge and wisdom. Nor has God Al-
mighty ever sanctified ignorance, or committed it to
his service; since it is the effect of the fall, and the
consequence of our departure from the fountain of in-
telligence. Ministers therefore, especially, should
endeavor to break these shackles, get their minds enlarged,
and stored with all useful knowledge. The Bible should
be well known, and the word should be written, not
merely in the original tongues, but in the original lan-
guages. The scheme of salvation by Jesus Christ should
be well understood, with all the various topics connected
with it. And in the present day a knowledge of his-
tory, natural philosophy, logic, mathematics, and rhet-
oric is peculiarly requisite. A clear judgment, also,
with a retentive memory, inventive faculty, and a facility
of communication, should be obtained.

4. They should be diligent as to their studies. Their
time, especially, should be improved, and not lost by too
much sleep, formal visits, indolence, reading useless
books, studying useless subjects. Every day should
have its work, and every subject its due. Some parts
of the Hebrew Bible, and another in the Greek Testament, to be read every
day. A well-chosen system of divinity should be accurately
studied. The best definitions should be obtained, and
a constant regard paid to all those studies which savor
of religion, and have some tendency to public work.

5. Ministers should be exact as to their benevolence
and candor. A contracted, bigoted spirit ill becomes
those who preach a Gospel which breathes the purest
benevolence to mankind. This spirit has done more
harm among all parties than many imagine, and is, in
our opinion, one of the most powerful engines the devil
has, for making his way on the surface of the world.
and it is really shocking to observe how sects and part-
ties have all, in their turns, anathematized each other.
Now, while ministers ought to contend earnestly for the
faith once delivered to the saints, they must remember
that men always think differently from each other;
that prejudice of education has great influence; that
difference of opinion as to subordinate things is not
of such importance as to be a ground of dislike.
Let the ministers of Christ, then, pity the weak, forgive
the ignorant, bear with the sincere though mistaken zealot,
and love all who love the Lord Jesus Christ.

6. Ministers should be zealous and faithful in their
public work. The sick must be visited, children must
be catechised, the ordinances administered, and the
Word of God preached. These things must be taken
up, not as a matter of duty only, but of pleasure, and
executed with faithfulness; and, as they are of the ut-
most importance, the ministers should attend to them with
all that sincerity, earnestness, and zeal which that im-
portance demands. An idle, frigid, indifferent minister
is a pest to society, a disgrace to his profession, an in-
jury to the Church, and offensive to God himself.

7. Lastly, ministers should be consistent as to their con-
duct. No brightness of talent, no superiority of intellec-
t, no extent of knowledge, will ever be a substitute

VI. 10*
MINISTER OF THE ALTAR

MINISTERIAL EDUCATION

for this. They should not only possess a luminous mind, but set a good example. This will procure dignity to themselves, give energy to what they say, and prove a blessing to those in whom they move. In fine, they should be men of prudence and prayer, light and love, zeal and knowledge, courage and humility, humanity and religion.

Quo. and Princ. Rev. 1854, p. 596, 709; 1859, p. 105, 366; Jan. 1878, art. vi and vii; Universalist Q. Oct. 1875, art. vii; Kitto, Journal, April, 1858, p. 192; Meth. Quart. Rev., July, 1851, p. 450. See MINISTRY.

Minister of the Altar was a title applied in the Church of Rome, since the close of the 12th century, to the provider of pure bread, wine, and water for the mass. The ministrant, as he is called by the clergy, also performs the prayers as a deacon if he is in fact a laical clergyman, a clerk, deacon, or subdeacon was delegated for this position, but now the duty is assigned to boys, except on unusually solemn and festive occasions.

Ministerial Call, a term used to denote that right or authority which a person receives to preach the Gospel. This call is considered as twofold: divine and ecclesiastical. The following things seem essential to a divine call: 1. An ardent, holy, blameless, and constant inclination and zeal to do good; 3. Abilities suited to the work: such as knowledge, aptness to teach, courage, etc.; 4. An opportunity afforded in Providence to be useful. The Methodists hold that no man should seek to enter the ministerial ranks who does not feel especially called to preach the Gospel. They are quite decided on this point. An ecclesiastical call consists in the election which is made of any person to be a pastor. But here those governed by an episcopacy differ from the Presbyterians, Baptists, Congregationalists, etc.; the former believing that the choice and call of a minister rest with the superiors clergy, or those who have the gift of discerning and vesting in them the ministerial blessing; to whom it is of the utmost importance that it should rest on the suffrage of the people to whom he is to minister. See EPISCOPACY; ORDINATION.

Ministerial Education. It is rather an inference than a demonstrable historical fact that in the civil cities of the Jewish schools were maintained for the instruction of priests and Levites in the knowledge and ceremonies of the law. See EDUCATION. It is certain, however, that under Samuel "schools of the prophets" were established for the purpose of training men for the high function of moral and spiritual teaching. Not less than five such schools are named in sacred history; one at Naioth, one at Bethel, one at Jericho, one at Gilgal, and another at Mount Ephraim. The number of the sons of the prophets was often large. Obadiah hid one hundred of them in a cave to save them from the malice of Jezebel, and at the translation of Elijah fifty of the sons of the prophets were present to witness the wonderful scene.

At a subsequent period of Jewish history a species of schools came into vogue, known as the "assemblies of the wise." The Talmud mentions some twelve of these institutions, of which those at Tiberias and Jerusalem were the most celebrated. Nevertheless they were not exclusively for the education of the priests, but also of children and teachers. When Jesus the Christ appeared among men, no inconsiderable portion of his ministry was employed in the instruction and training of his disciples in a kind of peripatetic school, of which nature, as he was the Great Teacher and explaining the things of the kingdom of God. From the Acts and the Epistles it is evident that the apostles imitated their divine Lord in giving personal attention to the instruction of younger disciples designed to succeed them in the holy vocation. As the great Head of the Church had commanded his disciples to "go teach all nations," so Paul, in handing down his apostolical responsibility to the future Church, exhorts Timothy and his successors in this language: "The things that thou hast heard of me among many witnesses, the same commit thou to faithful men, who shall be able to teach others also." (1 Tim. ii. 2).

In harmony with such examples and precepts, it is recorded, in the early history of the Church, that the apostle John spent his advanced years at Ephesus in qualifying youth for the Christian ministry, that Mark founded a ministerial school at Alexandria, and Polycarp another at Smyrna. Similar schools were established at Cесarea, in Palestine; at Antioch, Laodicea, Nicomedia, Athens, Edessa, Nisibis in Mesopotamia, Seleucia, Rome, and Carthage. Less distinguished than these were many episcopal schools connected with the prominent dioceses of the ancient Church. In some of the better periods and phases of monasticism, schools were conducted, in which young ecclesiastics were qualified as missionaries and teachers for the tribes and nations to which they were sent forth. Prominent among these were the schools at Iona, at Bangor, in Wales, and Armagh, in Ireland. During the mediaval period the Waldenses, although few in number and obscure in their seclusion, required all their candidates for the ministry to be diligent students, prescribing to them a course of study, and testing them by specific examinations.

The schools of Charlemagne, and the various universities founded in sequence of the Crusades, appear to have contemplated primarily, though not exclusively, the instruction of ecclesiastics. The University of Prague and that of Strasburg are celebrated for their aid to religion and the diffusion of piety in the Church. Nor must Paris be omitted. All these institutions exerted their influence for the purifying of Christian doctrine, not only in France, but throughout Europe, and mention the names of John Huss and Jerome of Prague; and here let us not forget John Wickliffe, who labored so faithfully at Oxford, and instilled English students with those principles that gave life to the Reformation. D'Aubigné says: "The first rays of the sun on their high gilded spires, shine on the road of the light of faith at Oxford and the antique schools at Cambridge." During the Reformatory period, the Continental universities became the main agencies for the spread of the new doctrines. Wittenberg, then but recently founded, became the nursery, the citadel, of the Protestants. The lecture-rooms of the Reformers were their principal pulpits; and, as has been declared by Melancthon in his Life of Luther, the great cause owes its success to the universities. The University of Heidelberg heard with joy the lectures of the exile Reuchlin. Wittenberg was the starting-point of the great Reformer himself, and from all Europe students flocked thither to sit at the feet of the immortal Melancthon. All the letters of the new cause, in short, were university men—most of them professors, who diffused their opinions through attentive listeners. Calvin, first at Strasburg, and later, sided by Beza, at Geneva, exerted an influence chiefly through the famous schools with which he was connected. Fleury says, in his Life of Calvin: "He was indebted to the academy (at Geneva), which soon became greatly frequented, for the rapid diffusion of his doctrines in Germany, Holland, and France." In passing, we may remind our readers also of those university laborers, the ardent servants for the Christian cause, Erasmus of
MINISTERIAL EDUCATION

From those days to the present all complete universities had had faculties of theology of greater or less extent. Their character and influence we are mainly in so far as they have in view the instruction of ministers.

In the colonial days of this country's history the ministers were, with few exceptions, men who had been trained for the work in Europe, and in a majority of cases were skilled laborers in the vineyard before they left the old country. It has been estimated that there was in the New England colonies, twenty years after the landing of the Pilgrims, a graduate of college for every 240 inhabitants. A few of these graduates were employed in the civil administration of the colonies, but most of them were in the ministry. As the population increased, and the demand increased, the ministry from the rising generation. For this purpose, and this mainly, the university at Cambridge was founded in 1636, and as its motto was chosen "Christo et eclesia" (To Christ and the Church). Amid much sacrifice and denial this school was started, and for years, your churches were without ministers, or the early ministers passed away by death, the ministry was supplied, in great measure, from among the graduates of the college. More than half of its graduates during the first century of its existence, entered into the labors of the ministry. Cotton Mather, in his 'History of New England Churches', 1696, from which it appears that of the 129 pulpits supplied by 116 pastors, of the preachers were graduates of Harvard College. In the charters of several of the oldest colleges it is declared that virtue and religion are the principal objects for the founding of these higher institutions of learning. "The Virginians have souls to be saved" was the plea presented by the pioneers in 1639, when the college was asked for Virginia; "and though the chancellor cursed their souls, saying, 'Let them raise tobacco,' William and Mary granted both a charter and money to the college which served its name. In a few generations all the leading churches in the state grow for training-schools to supply the ministry, founded colleges, until at present full four hundred chartered Christian colleges have grown into life as the outward material expression of the Christian zeal within American bosoms. What is peculiarly strange about American colleges is that all of them have felt more or less constrained to consecrate their work to religion. "Secular and state colleges, so called, many of them, surpass those under denominational control in their vigorous appeals to the religious feelings of the people." Placing some eminent worker of the Christian Church in the presidency, they became less of God's daily college prayers. They require all the students to attend church each Sabbath. They have daily prayer-meetings among the students. These students generally attend Sabbath-schools. The Greek Testament is read in the college lessons. The evidences of Christianity are taught in the classes. Free tuition and other inducements are offered to attract candidates for the ministry to these institutions. Revival measures are introduced. All the means of grace known to the evangelical churches are used as regularly, as frequently, as earnestly in the colleges as they are in any of the congregations of the Church. Under the auspices of the "Evangelical Alliance," has appointed a day of prayer to be observed once annually—now on the last Thursday in January—and many have been the conversions and fruits for the ministry. It is asserted by those who have carefully searched the records of our colleges that nearly one third of their graduates enter the ministry. Of Amherst College, e. g., it is told that "nearly half of its 'alumni,' since the beginning of its career, have left to go outwards to see him, exclaiming, 'I am a lost sinner; what must I do to be saved? The chaplain led him gently to Jesus. The cadet was afterwards bishop Polk." Such is the religious influence upon the higher literary institutions in the United States of America.

Theological Seminaries.—Ministerial education, properly so called, was afforded to but few of the earlier preachers of this country. In the colleges no special advantages were known, except what the instructors could grant by special arrangement. Principally the custom prevailed in some churches of associating ministerial candidates as students with experienced pastors, from which to receive instruction in theology and pastoral duty, and to whom in turn they might render some assistance. In other churches, in which the pressure for ministerial aid was great, young and inexperienced men were associated in actual service with senior ministers, by whom they were expected to be taught. While such modes of instruction and training were the best practicable at an initial period of Church development, and, indeed, not without some intrinsic advantages, yet the increase of general education, and the necessity for more thorough study on the part of ministers, were thought to demand the establishment of a system of institutions specially devoted to ministerial preparation—"the cultivating of sacred learning".

The history of this class of institutions in the United States is limited to the present century, with the single exception of a Roman Catholic seminary in Baltimore, founded in 1791. The first theological seminary of the Congregationalists, that of Andover, was founded in 1867. The dates at which the higher denominations followed these examples are as follows: The Presbyterians at Princeton in 1812; the Protestant Episcopalians at New York in 1817; the Baptists at Hamilton, N. Y., in 1820; the Methodists at Newbury, Vt., in 1843— consolidated with Concord, N. H., in 1847.

The extent to which institutions for ministerial education have since been multiplied is indicated by the following summary, given in the report of the United States commissioner of education for 1886-7.

Of the influence of this class of institutions as a whole, it may be said that it is greatly conducive to the advancement of sacred learning. By the accumulation of libraries, by the classification of studies, by the devotion of able men to special departments, more thorough instruction is provided, and students are enabled to secure, within limited periods, a more thorough acquaintance with the various branches of theological science than is at all attainable by any form of isolated or individual effort. (D. P. K.)

Educational Aid Societies.—In this connection a word must be said about the many educational societies
MINISTERIUM

300

MINISTRY

founded by the various religious bodies to aid young men financially during their preparations for the sacred office of the ministry. The amount of work accomplished by these agencies may be seen from the following items: The American Education Society (including the parent society at Boston and its Presbyterian branches), since its formation in the year 1815, has raised and expended in the work of ministerial education not far from $2,900,000. It has afforded aid to over 3000 young men in their course of education for the ministry. The amount raised by this society for one year was $38,914, and the number of young men assisted for the same year was 432. The American Board of Commissioners for Foreign Missions since its formation has sent out into the great foreign mission field not over 500 ordained ministers. Of these over half have been beneficiaries of the American Education Society. About one third of the Congregational ministers of New England at the present time were aided in their education by this society, while more than one third of that large body of men who have labored so efficiently in connection with the Home Missionary Society were raised up in the same way. The Board of Education of the Presbyterian Church (Old School) has since its formation furnished aid to about 2200 young men. How many of these men have been employed in foreign and home missionary service we have no accurate data to determine. The amount raised by this board from year to year for the purposes of ministerial education is not far from $50,000, and the number of young men now assisted yearly is but little less than 400. There is also an Education Society in connection with the Baptist churches, which has rendered efficient aid in the same great work. In the Methodist Episcopal Church this agency has assumed such vast importance that special provision was made for a "Board of Education" during the American Centennial of Methodism, and there is now (1874) a fund of $100,000, the interest of which is annually expended to aid candidates for the Methodist ministry. There are also educational societies for the same purpose in connection with most of the Annual Conferences. Even the non-evangelical churches support such agencies.

See Knight, Utility of Theol. Seminaries; Kentish, Importance of Min. Education; Clarke (Adam), Letter to a Preacher; Mason, Student and Pastor; Baily, Remarks on Clerical Education; New-England, i. 126; Eclectic Rev. (new series), i, 99; Princeton Rev. v, 55; xv, 567; Christian Examiner, x, 81; Amer. Bible Repository, i, 474; xi, 187; 2d series, viii, 444; x, 462; Evangel. (Luth.) Qu. Rev. 1868, July; Meth. Qu. Rev. July, 1845, art. ii; Jan. 1873, p. 94; Theol. Medium (Cincinnati), xv, 107. The history of the subject is very averse gift of the Holy Spirit (Acts x, 44-47; xix, 6, 7; 1 Cor. xii, 4). Indeed, the technical distinction between clergy and laity in this particular is almost ignored in the New Testament, and we find members of the Church, whether official or private, male or female, expressly and freely exercising their liberty in everything (Acts vi, 8; viii, 1, 4, 8; ix, 20; xviii, 24-28; xxi, 9). This is in accordance with the universal impulse of the newly-converted soul to communicate the glad tidings of his own salvation to others, without waiting for any formal license or authorization. Such evangelization is the very essence of preaching, by whatever name it may be called, or by whatever conventionalities it may be surrounded. We may add that whoever loses this spirit of his early zeal, has lost, be his success or attainments in other respects what they may, the great divine seal of his call to preach. See LAI PREACHING.

The call, as above defined, to preach the Gospel to the best of our ability and opportunity, is one that every Christian should recognise and obey. It is, however, a duty entirely distinct from, although in some cases closely related to, the general question of our vocation in life. It is precisely that part of the call of the ministry which has probably occurred, sooner or later, to every considerate young man of the Church. If earnest and devoted, he is apt to infer the farther duty of giving himself exclusively as an avocation to the work of preaching. The idea having once been vividly presented to his imagination, is likely, in proportion to his
MINISTRY

MINISTRY

conscientiousness, to fasten more and more deeply upon his convictions, while at the same time his judgment of his own information, its infirmities, and his own personal (?) may be totally adverse to the course. Hence he is in a two-fold danger of error; on the one hand he may mistake for a distinctive divine call his own general promptings to do anything, however uncongenial, for the sake of his Master; or, on the other, he may yield to a self-depre-cating modesty, and the force of obstacles, and neglect a real call. Under this balance of arguments, perhaps the safest guides are two—one internal, the other external. In the first place, let him carefully examine his own heart, and see what motive secretly prompts him in this direction. If it be the love of applause, a desire for distinction, a vanity for public prominence, or a wish for glory, this is a mode of subsistence, of course the master must conclude himself to be unworthy and unfit for the holy office. If, again, he is chiefly drawn to the work under a mere sense of consecration if he refuse, we apprehend he has not reached the highest intimation of an incentive to duty in this path. He, like every other believer, of course, must quiet his conscience by being willing to do any duty, even this, if clearly made known; but it does not follow that he is called upon to do any and every disagreeable thing, simply because it would be a cross to him. A better and more decisive, as well as consistent, test, is to ask himself, “Do I seek this place, or is it sought after me, because I am the most exalted and useful one I could occupy? Is it in one in which I feel that I can most effectually glorify God and serve my generation?” If he still have doubt in answering the question, then let him turn to the other outward test. Let him try it, and experiment will soon satisfy him whether his call is genuine or not. This experience will especially determine four points: namely, 1. His natural qualification or disqualification, in point of physical, mental, and spiritual adaptation; 2. His probable measure of success, as evinced by the fruit of his efforts; 3. His greatest lack, and consequent-the point what, by study and care, he should more fully prepare himself in the future; 4. The providential indications, by way of opening, means, etc., for his father progress. The Church, meanwhile, through his friends, fellow-members, and the pastor, will thus have an opportunity of judging on these points, and then advice will not only be welcomed by him, but must in the end be conclusive.

Our result, therefore, under this head is, that while preaching the Gospel in some form, and as a specific work, is the general duty of all believers, it is the sole or exclusive duty of those only who, by undoubted internal and external marks, are divinely called to the office, a calling, by the Church, a calling to the Church, as a Church. This last is the ultimate or determinative sign.

II. Ordination.—The second great and peculiar function of the Christian ministry is the administration of the holy sacraments—namely, Baptism and the Lord’s Supper. Other clerical offices—such as officiating at marriages, funerals, chaplaincy, expounding the Scriptures, dispensing ritual duties, etc.—are entirely subordinate and immaterial to these. The sacraments likewise may, no doubt, lawfully be administered by a lay unordained person, or even by a woman, in case of emergency or private celebration; but, for the sake of propriety and system, they should be a matter of Church order, and this is the meaning of the term “ordination.” This, therefore, is a purely ecclesiastical distinction, which affects the ordained individual only as to certain churchly relations or functions appertaining to himself individually. For this reason it is performed but once, and never again, whether it be executed by the bishop, a presbyter, or neighboring pastors. It is entirely conventional. The true “apostolic succession” is maintained wherever the line is in accordance with the established Church usage in the case.

It will be observed that preaching and “orders” do not necessarily concur in the same person. Hence some churches have ordained elders who are not clergymen. Hence, likewise, there are ordained local preachers and ministers of the Gospel, who retain the use of the ecclesiastical orders, in the Episcopal churches, with the bishop; in the Presbyterian churches, with the Presbyterian Synod; in Methodist churches, with the Annual Conference; among Congregationalists, Baptists, etc., with the congregation itself.

III. Ordination.—This is the last and crowning office of the Christian ministry. It does not necessarily involve the two preceding, for in all churches there are occasionally pastors who are not ordained men. In the Methodist Church there are at least sub-pastors, namely, class-leaders, who have no other clerical functions; and many of the Roman Catholic priests do not preach at all. Or even if they did, their mode of subsistence, of course, must conclude himself to be unworthy and unfit for the holy office. If, again, he is chiefly drawn to the work under a mere sense of consecration if he refuse, we apprehend he has not reached the highest intimation of an incentive to duty in this path. He, like every other believer, of course, must quiet his conscience by being willing to do any duty, even this, if clearly made known; but it does not follow that he is called upon to do any and every disagreeable thing, simply because it would be a cross to him. A better and more decisive, as well as consistent, test, is to ask himself, “Do I seek this place, or is it sought after me, because I am the most exalted and useful one I could occupy? Is it in one in which I feel that I can most effectually glorify God and serve my generation?” If he still have doubt in answering the question, then let him turn to the other outward test. Let him try it, and experiment will soon satisfy him whether his call is genuine or not. This experience will especially determine four points: namely, 1. His natural qualification or disqualification, in point of physical, mental, and spiritual adaptation; 2. His probable measure of success, as evinced by the fruit of his efforts; 3. His greatest lack, and consequent-the point what, by study and care, he should more fully prepare himself in the future; 4. The providential indications, by way of opening, means, etc., for his father progress. The Church, meanwhile, through his friends, fellow-members, and the pastor, will thus have an opportunity of judging on these points, and then advice will not only be welcomed by him, but must in the end be conclusive.

Our result, therefore, under this head is, that while preaching the Gospel in some form, and as a specific work, is the general duty of all believers, it is the sole or exclusive duty of those only who, by undoubted internal and external marks, are divinely called to the office, a calling, by the Church, a calling to the Church, as a Church. This last is the ultimate or determinative sign.

II. Ordination.—The second great and peculiar function of the Christian ministry is the administration of the holy sacraments—namely, Baptism and the Lord’s Supper. Other clerical offices—such as officiating at marriages, funerals, chaplaincy, expounding the Scriptures, dispensing ritual duties, etc.—are entirely subordinate and immaterial to these. The sacraments likewise may, no doubt, lawfully be administered by a lay unordained person, or even by a woman, in case of emergency or private celebration; but, for the sake of propriety and system, they should be a matter of Church order, and this is the meaning of the term “ordination.” This, therefore, is a purely ecclesiastical distinction, which affects the ordained individual only as to certain churchly relations or functions appertaining to himself individually. For this reason it is performed but once, and never again, whether it be executed by the bishop, a presbyter, or neighboring pastors. It is entirely conventional. The true “apostolic succession” is maintained wherever the line is in accordance with the established Church usage in the case.

It will be observed that preaching and “orders” do not necessarily concur in the same person. Hence some churches have ordained elders who are not clergymen. Hence, likewise, there are ordained local preachers and ministers of the Gospel, who retain the use of the ecclesiastical orders, in the Episcopal churches, with the bishop; in the Presbyterian churches, with the Presbyterian Synod; in Methodist churches, with the Annual Conference; among Congregationalists, Baptists, etc., with the congregation itself.

IV. The foregoing ministerial functions many are disposed to add a fourth, namely, administration. This, so far as it applies to the execution of discipline in any particular Church, is merely a part of the pastor; and even here it is very doubtful whether the pastor have legitimately any power beyond that of presiding in meetings, and guiding in a general way the affairs of the Church. His personal influence, of course, is very great; and if the people have confidence in his judgment, his advice will be freely sought and cheerfully followed. But in the actual discharge of an authoritative character, he should be presented and regarded as a “lording over God’s heritage” equally unwarranted by Scripture or ecclesiastical law.

The extension of the clerical administration to the general Church, in distinction from the laity, is a prelat-sculptural characteristic only, and everywhere, of High-Churchism. It is the essence of popery, and is not the less offensive if advocated or practiced by a bishop in any Protestant Church. Even the Episcopal churches, strictly so called, do not hold this theory; the Methodist Church has lately discarded it, and the Presby-terians administer the lay elders to full participation in the highest legislative assemblies.

Referring once more to our Lord’s constitutional behest (Matt. xxviii., 19, 20), we find four duties enjoined upon his disciples: 1. Preaching—that is, evangelization. 2. Disciplining—that is, enrolling as followers of Jesus. 3. Teaching—that is, instructing his followers; and 4. Instruction—that is, inculcation of Christian doctrine in detail. Not one of these is the essential or peculiar, much less exclusive prerogative of the ministry; although the minister, as such, naturally takes the lead in them, devoting himself professionally to them, especially in the more public and formal relations. Of all
MINNI
302
MINOR

the really characteristic functions of the ministry, we
have found—to recapitulate—that the true basis of au-
thorization arises in the Church itself, as the final earthly
decision of qualification and fidelity; and that she
expresses her decision with respect to it through the
ministerial college. Their immediate brethren, who are
her credentials to the second through the ecclesiastical or-
ganism which he thereby enters; and she issues her
mandate respecting the third through the local commu-
nity which thus invites his care.

Min'ni (Heb. Min'ni), מִנְנִי, etymology unknown; 
Sept. μιννίαι, Vulg. Mensi occurs only in Jer. ii, 57 
and so in the Targ. at Psa. xiv. 9, but wrongly, as the 
name of an Armenian province, joined with Ararat: i.e., 
as Bochart well observes (Phaleg, i, 8, p. 19, 20), proba-
bly the Minas (Mavric) of Nicholas of Damascus in 
Josephus (Ant. i, 5, 6), a tract of Armenia overlying 
by the mountain Baris, on which are the traces of the ark. 
Bochart, at sup., compares the region of the Mavraciensi, in the middle 
of Armenia, so called from Manacara, the son of Haigus, 
who is said to have been the founder of Armenia (Moses 
Choreon, i, 11). Less likely is the supposition (Bochart, at 
sup.) that the Greek name Armenia itself sprung from 
מִנְנִי, "mountain of Minni," since it is rather 
derived from Aram (see St. Martin, at sup. p. 259). 
This Minni is more closely connected with the names 
of the Assyrian inscriptions, whom Rawlinson (Herod. i, 464) 
places about lake Urumiyeh, and with the Minas who 
appears in the list of Armenian kings in the inscription at 
Layaard's (Nin. and Bib., p. 401). At the time 
when Jeremiah prophesied, Armenia had been subdued 
by the Medes kings (Rawlinson, Herod. i, 108, 177)."
See Armenia.

Minnis, William, D.D., a Presbyterian divine, was 
born, of Scotch-Irish parents, in Blount County, Tenn., 
Dec. 28, 1799. He was educated at Maryville College, 
Tenn.; studied divinity in the South-western Theologi-
cal Seminary at Maryville; was licensed in 1825, and 
decided in 1828 as pastor of Westminster Church, 
Tenn. In 1834 he was received and installed to the 
charge of Salem and New Market, Tenn.; became a 
member of the United Synod at its organization in 1857, 
and died May 5, 1863. Dr. Minnis was a man of ex-
traordinary energy, thorough in the investigation of 
every subject, clear in the illustration of the deepest 
practical truth, and earnest in the expression of souls. 

Min'nith (Heb. Min'ni'th), מִנְנִית, distribution; Sept. 
in Judg. iii, 18, in Ezeck. xxvii, 27. A town in the country of the Ammon-
ites, to which Jephthah pursued them (Judg. xi, 38), 
celebrated for the excellence of its wheat, which was 
exported to the markets of Tyre (Ezek. xxvii, 17). It 
still existed in the age of Eusebius, four Roman miles 
from Heshbon, on the road to Philadelphia (Onomast., s. 
v. Menai's, Jerome Mammith'). Schwartz (Palest., p. 250) 
thinks it the same with the present Minja, five miles 
east of Heshbon. From Araer to the approach to Min-
nith (מֵנְנִית) seems to have been a district 
containing twenty cities. Minnith was in the neighbor-
hood of Alaba, 6 Roman miles from Tiberius. In this 
vicinity were possibly situated the vineyards in 
which Balaam encountered the angel on his road 
from Mesopotamia to Moab (Num. xxii, 24). An epis-
copal city of 'Palestina secundas,' named Mammith, is 
quoted by Bezan (Palest. p. 211), but with some ques-
tion as to its identification in this neighbourhood. 
The site bearing the name Moinjah is marked in Van de 
Velde's Map, perhaps on the authority of Buckingham, 
at seven Roman miles east of Heshbon, on a road to 
Amman, though not on the frequent track.

MINO, MAESTRO, a distinguished sculptor, flourished 
during the 15th century. The exact dates of his 
birth and death are unknown. He is sometimes called 
MINO DEL REGNO. The statues of San Pietro and San 
Paolo, which are in the sacristy of St. Peter's, at Rome, 
but which until 1847 stood at the foot of the steps of St. 
Peter's, are his work; also the Tomb of Pope Paul II, 
in the Basilica of St. Peter's. See Vasari, Lives of the 
Painters, trans. by Mrs. Foster (Lond. 1860, 5 vol. 8vo). ii, 86.

Minor Canon is the name frequently applied to a 
petty canon, petty prebendary, or sub-canon:
(1) A vicar in priest's orders in the old foundations; 
a representative and an officer who celebrated at the 
high altar in the absence of a canon. Generally there 
were four, occasionally as many as eight. In most 
cases they were the vicars of the four dignity buildings. 
In the Roman Church of England the word designated in 
some instances the prebendaries who were in minor 
orders, and at York a major canon was one who had kept 
the greater residence. At St. Paul's they form a 
college, instituted in 1595, over and above the thirty vic-
ars. The latter sung the matin and lady mass, but the 
minor canons chanted the mass of requiem for their 
founder, as well as the apostles' or high or chapter 
masses, being required in addition to attend all the 
hours. All were priests under a superior, called a war-
den. Their almoner looked after the choristers. The 
two cardinals, who had a double portion, were in the 
priests of the close. They furnished the librarian, sub-
dean, suptor, and divinity lecturer, and the perpetual 
gospel and epistle. In 1578 they wore surplices, dark 
aluminces of calaba, lined with minerive, with a 
black cope and hood, trimmed with silk or linen. 
(2) A subdean or other dignitary, appointed by 
the bishop or chapter in the new foundations; and by 
the original constitution the number equalled that of 
the canons, and the stipend half that of the latter. They 
had a share in the abbatial. In the time of Charles I 
their numbers were reduced. They had no estates of 
their own, and resided in a common hall, along with the 
schoolmasters, lay singers, and choristers. Minor canons 
are removable by the dean and chapter, and are now 
choral substitutes of the canons residuary, officiating in 
turn under their authority, jointly with the dean. 
See Walcott, Sacred Archaeology, a. v.; Staunton, Eccles. 
Dict. a. v. See also Canon, Ecclesiastical.

MINOR, Laurencet BYRD, a missionary of the Protestant 
Episcopal Church, born at King's Castle, Carolina County, Va., Sept. 9, 1818. 
In 1833 he entered the theological seminary of Virginia. Missiona-
eries being required for West Africa, he determined to give 
himself to the work. He was ordained in 1836, and 
sailed from Baltimore for Cape Palmas May 8, 1837. 
Immediately upon his arrival in his new field he 
assumed the charge of a school at Mount Vaughan, Cape 
Palmas. In April, 1839, he visited the Gold Coast, of 
which he gave a graphic account to the Board of Mis-

Digitized by Google
sions. In the same year he returned to the United States on a visit, and while there he married. Shortly after he returned to Africa, to take charge of a small chapel at Mount Vaughan. In 1841 he took part in an exploring expedition, having for its object the establishment of a station in the district of Taboo, and in 1843 he removed his family to that locality; but just as he was about to join his labours there he died. He possessed neither brilliant talents nor a strong intellect, but his devotion to his work made him so earnest and zealous that everything gave way before him. The natives were attracted by the amiability of his character, and his influence over them was most potent and cordial. See H. W. Pierson, American Missionary Memorial, p. 449.

Minor, Melchior Gottlieb, a German theologian, was born at Zilenzendorf, in the Silesian county of Brieg, Dec. 28, 1695; received his preparatory education at the orphan school at Halle, where he distinguished himself by great proficiency in the ancient languages; in 1709 he entered the gymnasium at Zittau, and in 1712 the university. He studied theology and philosophy at Wittenberg; soon afterwards he went to Halle, to study modern languages, civil and ecclesiastical law, and mathematics. Upon the completion of his course in 1715, he returned to his native city, where he got a position as tutor; in 1720 he was appointed minister at Teppelwode, in the principality of Munsterberg; and in 1722 minister at Ladanstadt. Some time after he was appointed councillor of the Prussian consistory, and inspector of churches and schools of the district of Schweinitz. He died Sept. 24, 1748. Some of his most important works are: Das Leben und Leiden, eine Leichenpredigt über Pas. VII, 2, 3 (Landscheid, 1723, fol.): — Das nöthige Wissen eines Christen (Jauer, 1725, 12mo): — Kurze Niebruch von den Alten der Juden, Heiden und Christen, mit einer Beschreibung des der Guadenkirche von Landshut erbauten Alarsa (Landscheid, 1725, 4to): — Hauptnummen der christlichen Lehre (ibid. 1725, 12mo): — Gelehrte Reden und Abhandlungen (Leipsic and Breslau, 2 vols. 1728, 8vo): — Heilige Betrachtungen über die Evangelien (ibid. 1756, 8vo): — Heilige Betrachtungen über die Leidensgeschichte Jesu (ibid. 1757, large 8vo). See Göring, Gelehrte Theol. Deutschland's, s. v.

Minorca (Span. Menorca), one of the Balearic Isles, some twenty-five miles distant from Majorca, the largest of the group, and about 31 miles square, and covered in all a territory of about 300 square miles, and counting 37,280 inhabitants, subject to the Spanish government. The coast of Minorca, broken into numerous bays and inlets, is fringed with islets and shoals, and its surface, less mountainous than that of Majorca, is undulating, without any of its heights pointing to 478 feet above the sea-level. Its chief productions are marble, slate, plaster, the common cereals and legumes, oranges, lilac, lemons, oil, wine, olives, and aromatic herbs. The chief towns are Port Mahon, the capital, and Ciudadela, the former capital, with a population of about 43,000. There are many remains of Celtic civilization on the island. The people of Minorca (Menorquins) are very indolent, the women very stylish and polite. The religious history of the Minorquins is so intimately connected with that of their rulers that we must refer to the article SPAIN.

Minorensis is another name under which the followers of St. Clare are distinguished. See Clare, St.

Minorites, a name of the Franciscan order, derived from the later domination adopted by their founder, Fra' Tommaso. See Francisca. 

Minos, a Cretan hero and lawgiver, figures in Greek mythology and legend. There are many writers who speak of two characters of that name, but Homer and Herodot know of only one Minos, the king of Cnossus, and son and friend of the god Jupiter himself. We are told that he was the brother of the king of Thera, being the same father to the gods, and that when he had acquired the power he was cruel and tyrannical; and that after he had subjected the Athenians he treated them merci- lessly, and required their boys and virgins as sacrifices to the Minotaur (q. v.). Although these legends and fables are of but little interest, Minos deserves a place here as a benefactor of the race; and, if his existence be not mythical, he must be ranked among the wise men of the earth. To him is attributed the creation of Minos, which served as a model for the legislation of Lycurgus, are ascribed. He is said to have dealt out justice, and to have so pleased the gods that he became a judge of the souls which entered the infernal regions. Minos has by some writers on antiquity been identified with Meno (or Meeno), the great Hindh law- giver.

Minotaur (i. e. the Bull of Minos) is one of the most repulsive conceptions of Grecian mythology. He is represented as the son of Pasiphae and a bull, for which she had conceived a passion. It was half man, half bull—a man with a bull's head. Minos, the hus- band of Pasiphae, shut him up in the Cnossian Laby- rhinth, and there fed him with youths and maidens, whom Athens was obliged to supply as an annual trib- ute, till Theseus, with the help of Ariadne, slew the monster. See Minos. The Minotaur is, with some probability, regarded as a symbol of the Phoenician sun- god.

Minshull, Robert, a minister of the Methodist Episcopal Church, was born in Pennsylvania in 1788; entered the Baltimore Conference in 1813; and died in Mercersburg, Pa., July 15, 1828. He was a man of fine talents and great piety and zeal. He was especially useful as a promoter of Sunday-schools and tract socie- ties, and was also an excellent and faithful minister of the W. M. C. and M. S. C. Conference.

Minster signified originally, as in the writings of Cassian, St. Athanasius, and Jerome, the cell of a soli- tary; but the word was extended by Eusebius to embrace the church or the abode of a religious community. (1.) A church of regular canons. (2.) A church formerly served by monks (in Germany the term Minster is still employed, and Marmoutier in France—majus monasterium, or great minster). (3.) A cathedral. (4.) Many large churches, held by secular canons, were dignified by the title of minster. (5.) Paris churches, in 960, were called minsters, and several retain the name. These were the original outposts of the Church, isolated stations of priests living un- der rule and in community, which in time became parishes. Minster Ham is the term applied to a sanctuary- house, in which persons were afforded refuge for three days. If they were burdened with the king's purveyance, they might remain for a longer period.

Minstrel (1797, menagère), one striking the harp, 2 Kings iii, 15; nachbarg, Matt. i, 30, a flute-player, "niper," Par. xvii, s.v.; Cumi was often employed by the Hebrews for sacred purposes, and in the case of Elisha it appears to have conducted to inspiration (2 Kings iii, 15). See Music. It was a usual accom- paniment of funerals likewise (Matt. i, 33; comp. Josephus, War, iii, 9, 5), as it is still in the East (see HACKETT'S Illustr. of Scripture, p. 119). See BURIAL.

The English word minstrel represents the French word minstrelet, which itself is a diminutive of ministre, and is applied to the class of persons who administered to the amusements of their patrons by their skill in music and poetry. Chaucer uses the word minster in the sense of musician (Richard, ii, 6, and Du Cange, Gloss. 2). The class of minstrels had in medi- eval times a social position almost akin to the bard and scald whose Sagas they sung and whose inspiration they imitated at humble distance. Musical sound has been an accomplishment of religious worship in all countries. The expert player on the musical instrument has become associated with the worshipper of yet higher fac-
ulty (see Wilkinson’s Ancient Egyptians, chap. ii, and representations of harpers in the tomb of Rameses III, Thebes; Miller’s Hist. of Art, vol. i, p. 243). The beauty of voice and lovely song, and the art of “playing well on an instrument,” were associated with the functions of prophecy (Ezek. xxxiii, 31–35). Various passages of Holy Scripture show that the skilful performance of sacred music formed a large portion of the education of the sons of the prophets; 1 Sam. 1, 5, 6:

“Thou shalt meet a company (727, Sept. 390s) of prophets coming down from the high place, with a psaltery, a tabret, a pipe, and a harp; and before them [see Psalms v. 7] and sing a psalm. It is not certain whether the prophets were here distinct from the players on instruments, but most probably they were the same individuals as those of whom we read elsewhere, that they “should prophesy with harps, with psaltery, and with cymbals” (1 Chron. xxxv, 1); that they resembled “the sons of Asaph, of Heman, and of Jeduthun, who should prophesy with a harp, according to the order of the king, to give thanks and to praise the Lord” (see also ver. 6, 7). In this passage the performance of sacred song and choral music in the temple received the exalted designation of prophecy. Sacred music, “a joyful noise unto the Lord,” and “cause the Lord upon his instrument of ten strings, and upon the psaltery” (Ps. lxxvi, 1; lxxxvii, 7; xxii, 1–3; c), were charactera of close communion with God. The effect produced upon the auditors is described (1 Sam. x, 6) as being in that instance very remarkable—Saul is assured that when he hears the prophetic minstrelsy, “the Spirit of the Lord will come upon him, and he shall prophesy with them, and be turned into another man.” See ver. 11, and comp. 1 Sam. xix, 20–24, the account of the prophets being instructed by Samuel, and the effect of the holy song under the influence of the Spirit of God upon Saul’s messengers, and afterwards upon Saul himself. It will be seen here how the minstrelsy rose to the highest influences of music, and hence the advice tendered to him by his servants (1 Sam. xvi, 16), “Seek out a man who is a cunning player on a harp, and it shall come to pass that when the evil spirit from God is upon him, that he shall play with his hand and thou shalt be well.” The participial form 222 (from ‘22, in Fiel, which is used of striking the strings of a musical instrument), signifies “a harp,” and is used of “the king’s (king, iil, 15; minstrel).” The effect produced on Saul was remarkable. See Saul. The custom of applying such a remedy to mental disturbance may be traced in other writings. Thus Quinlin. (Inst. Orat. lib. ix, chap. 4) says, “Pythagoreus moris fuit, cum somnum paterent ad lyram prisens letenta, ut si quis oii oii componeret cum comp. Plutarch. De Musico, and Aristotle, Pol. lib. viii, chap. 5; Apollonius Dyscolus, De Musica, quoted by Grotius, ad loc., Tav. et ckladru- us tis dionoikei 1kast. See also King Lear, act. ii, sc. v, where music is used to bring back the wandering mind of Lear. Josephus (Ant. vi, 6, 2), in his account of the transaction, associates the singing of hymns by David with the harp-playing, and shows that though the tragedy of Saul’s life was lightened for a while by the skilful minstrelsy of David, the raging madness soon triumphed over the tranquillising influence (comp. 1 Sam. xviii, 10; xix, 10). Weems’ (Christ, Synopsis, chap. vi, § 3, par. 6, p. 149) supposes that the music appropriate to such occasions was “that which the Greeks called apolmas, which was the greatest and the saddest, and affected the sensations.”

In many references of Holy Scripture the minstrel and the prophet appear to be identical, and their functions the same, e.g. 2 Kings xi, 13, 14. The two functions are clearly distinguished. The prophet Elisha needed the influence of the “minstrel” to sooth the irritation occasioned by the aggravating alliance of Israel with Judah. Not until this effect would be propound the influence guide him to a sound vaticinating of the duty and destiny of the allied forces. The minstrelsy was produced, according to Procopius, by a Le- vite, who sung the Psalms of David in the heart and spirit of the prophet; if so, he was thus the means of producing that condition of mind by which the prophet was lifted above the perceptions of his senses, and the circumstances which surrounded him, into a higher region of thought, where he might by divine grace penetrate the secret of God. Josephus says that the spirit of anger of the Shechinah had departed from him;” Ephraem Syrus, that the object of the music was to attract a crowd to hear the prophecy; J. H. Michaelis, that the prophet’s mind, disturbed by the impetuosity of the Israelites, might be soothed and prepared for divine things, by the sweet music. According to Kell (Comm. on King 1, 859, Eng. tr.) “Elisha calls for a minstrel, in order to gather in his thoughts by the sweet tones of music from the impression of the outer world, and, by pressing the life of self and of the world, to be transferred into the state of internal vision, by which his spirit would be prepared to receive the divine revelations.” This in effect is the view taken by Josephus (Ant. ix, 3, 1), and the same is expressed by Maimonides in a passage which embodies the opinion of the Jews of the Middle Ages. “All the prophets were not able to prophesy at any time that they wished; but they prepared their minds, and sat joyful and glad of heart, and abstracted themselves from the tumults of the world, from melancholy, nor in the midst of apathy, but in the midst of joy. Therefore the sons of the prophets had before them a psaltery, and a tabret, and a pipe, and a harp, and [thus] sought after prophecy” (Deo kachakazak, vii, 5, Bernard’s Creed and Ethics of the Jews, p. 16; see also note to p. 114). Kimchi quotes a tradition to the effect that, after the ascension of his master Elijah, the spirit of prophecy had not dwelt upon Elisha because he was mourning, and the spirit of holiness does not dwell but in the midst of joy. The references given above to the power and dignity of song may sufficiently explain the occurrence. The spiritual ecstasy was often bestowed without any means, but many instances are given of subordinate physical agencies being instrumental in its production (Ezek. ii, 2; iii, 24; Isa. vi, 1; Acts x, 9, 10; Rev. i, 9, 10).

The word minstrel is used of the aileagru who, in Matt. xx, 27, are represented as mourning and making a noise on the death of Jairus’s daughter. The custom of hiring mourners at the death of friends is seen on Etruscan amphore, tombs, and bass-reliefs (see Dennis’s Etruria, i, 295; ii, 344, 354, where music was considered appropriate; and Wilkinson, Ancient Egyptians, ii, 386–393). Skill in lamentation (Amos v, 16; Jer. iii, 10) was not only performed on the flute or pipe, but probably included that accomplishment (Eccles. xi, 5; 2 Chron. xxxxy, 25). See Mourning.

Minstrels’ Gallery, in a church, forms a sort of orchestra for the accommodation of vocal and instrumental performers. It is quite common in Continental churches, but is very rarely met with in England. There is a gallery of this sort over the altar-screen at Chichester cathedral, and another, much larger, in the middle of the north side of the choir of Exeter cathedral. It is supported upon thirteen pillars, between every two of which, in a nichest recess, there is a sculptured representation of an angel playing upon a musical instrument. Among these we observe the harp, the violin, pipe, cornett, triangle, etc. The roof of Outwell Church, Norfolk, and the minstrels’ column at Beverley, also exhibit a great variety of musical instruments anciently used in our churches, independent of the organ and the regal, which was a small portable organ, having one row of pipes giving the treble notes, the second row the pedals, and a small pair of pipes mounted with the left hand.

**Mint** (aileagru, sweet-scented) occurs (Matt. xxiii, 5).

MINUCIUS

2; Luke xi, 42) among the smaller garden herbs which the Pharsees punctiliously tithed. See Anise; Dill. It was much esteemed as a warming condiment by the ancients (Pliny, xix, 47; xxx, 59; xxi, 18; Dioscor. iii, 41; Martial, x, 48, 8 sqq.; the Romans calling it mentha, and the Greeks μυρίζων, as well as the Jews (Mishna, "Oezin., ii, 2; "Okel. viii, 1; also the Talmudic tracts "Shen ve-jebil, vii, 2; "Sheb. vii, 1.; the rabbins call it נָץ; it was even esteemed, for the sake of its odor, upon the floors of houses and synagogues, Buxtorf, "Lex. Heb. p. 1229), and as it still is in Eastern countries (Raff., Delle, Flora Agrest. In des. de Vrango-xir. "Some commentators have supposed that such herbs as mint, anise (dill), and cumin, were not titheable by law, and that the Pharsees solely from an over-strained zeal paid tithes for them; but as dill was subject to tithe (Massereth, iv, 5), it is most probable that the other herbs mentioned with it were also tithed, and this is fully corroborated by our Lord's own words: "These ought ye to have done." The Pharsees, therefore, are not censured for paying tithes of things untithable by law, but for paying more regard to a scrupulous exactness in these minor duties than to important moral obligations."
