This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world’s books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that’s often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book’s long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ **Make non-commercial use of the files** We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ **Refrain from automated querying** Do not send automated queries of any sort to Google’s system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ **Maintain attribution** The Google “watermark” you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ **Keep it legal** Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can’t offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book’s appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google’s mission is to organize the world’s information and to make it universally accessible and useful. Google Book Search helps readers discover the world’s books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at [http://books.google.com/](http://books.google.com/)

NEW.

New, Charles, a British missionary to Africa who suffered martyrdom very recently, was a member of the United Methodist Free Churches of England. He was laboring among the Chagga, whose chief, Mandara, conceived ill-feelings against New, and used him so ill that he died in consequence of the severe treatment he experienced, in the summer of 1875. The British government is at this writing in negotiation with the Chagga to secure indemnity for their brutal conduct towards one of its subjects. Mr. New deserves to be remembered not only for his Christian missionary labors, but also for his service to African exploration.

New-Birth is the technical expression frequently used instead of regeneration to express the change from a natural or irreligious to a Christian living. The Church of England theology defines it as "That thing which by nature a human being cannot have;" "that he may be baptized with water and the Holy Ghost, and received into Christ's holy Church, and be made a lively member of the same." "A death unto sin, and a new birth unto righteousness." In short, it is that change of the moral nature which is requisite for salvation. This requirement, made by the Protestant Church in Christ's name, is undertaken by the person to be baptized. In the Anglican and Lutheran churches, in the case of infants to be baptized, the sponsor or parent assumes the responsibility of so training the candidate for baptism that when, "having come to years of discretion," he recognizes the vows of his baptism, and "lives soberly, righteously, and godly in this present world." An ambiguity has arisen from the difference of sense in which the term "new-birth" is at different times employed. It is used by some (in a sense allied to the above statement) to denote the admission to the privileges with which the Christian Church is endowed: namely, that grace whose tendency is to place us in the way of salvation; by others, to signify the state of mind suitable to those who are born of God, and are in the path that leads to eternal life. See the articles Conversion; justification; regeneration; salvation.

New-Born, a sect which arose in the United States in the early part of the last century. It was originated by Matthias Bauman, a German emigrant, who embarked for America in 1718, and settled in what is now Bucks County, Pa. During the few years which he passed in his adopted country—he died in 1727—Bauman succeeded in drawing around him a small sect who called themselves New-Born, pretending to have received the new birth through mediate inspiration, apparitions, dreams, and the like. Any one who had thus been regenerated was alleged to be like Christ and God, and to be incapable of any longer committing sin. They denied that the Bible is necessary as a means of salvation, and scoffed at the holy sacraments. The privilege of impecableness they believed to be the portion of all who truly belonged to Christ. The New-Birth they held to be that new stone which none kneweth but he that receiveth it. The sect appears to have survived the death of its founder little more than twenty years.

New Britain is the name of one principal and of several subsidiary islands in the Pacific Ocean, situated between lat. 4° and 6° 30' S., and long. 148° and 152° 30' E. The principal island, 300 miles in length, and having an area of 12,000 square miles, lies east of New Guinea, from which it is separated by Dampier Strait. The surface is mountainous in the interior, with active volcanoes in the north, but along the coast are fertile plains. Forests abound in the island, and palms, sugar-cane, breadfruit, etc., are produced. The inhabitants, the number of whom is unknown, are the Negritos. They are well-formed, active, and of a very dark complexion. They are further advised in civilization than is usual among the Polynesians, have a formal religious worship, temples, and images of their deities. New Britain was first seen by Le Maire and Schouten in 1616, but Dampier, at a later date, was the first to land. See for details the articles Negritos and Polynesians.

New Brunswick, a province of British America, originally a part of Nova Scotia, is situated to the north of that province, and to the south-east of Canada. It has an area of 27,322 square miles, with a coast-line of 500 miles in extent. The population of New Brunswick in 1891 amounted to 921,393. The scenery of this province is beautiful, its soil is rich, and the land abounds in mineral wealth. The northern districts of the province, from the Bay of Chaleur to the St. John, are occupied by metamorphic slates. In the south, the carboniferous and new red sandstone systems (including deposits of red marl and gypsum, and extensive beds of coal) prevail. One third of the surface of New Brunswick is underlaid by a bed of coal. Many of the coal-midures, however, are thin and impure; but the coal of Albert County is one of the most valuable deposits of bituminous coal on the American continent, and is apparently inexhaustible. Throughout the province 2842 tons of coal were mined in 1851, and 18,244 tons in 1861; but mining has not yet become an important branch of industry. Gold and silver occur in New Brunswick; copper and iron ore of excellent quality abound; gypsum, plumbago, and limestone are very abundant; and the freestone of the province, unsurpassed for beauty and durability, commands a high price in the United States. In 1861, 42,965 casks of lime, 42,476 griststones, 14,000 tons of building-stone, and 14,000 tons of gypsum were brought into the market. Wild animals abound in the province, the lakes and rivers are well stocked with fish, and along the coasts cod, haddock, salmon, and other fish are caught in great plenty. Indeed, its fisheries are a principal source of income to the province. The autumn—and especially the season called the Indian summer—is particularly agreeable, and the severity of the winter has been
NEW BRUNSWICK

already much mitigated by the clearing of the forests. In the interior, the heat in summer rises to 80°, and sometimes to 90°; and in winter, which lasts from the middle of November to the middle of March, the mercury sometimes falls as low as 40° below zero. At Fredericton, the capital, situated on St. John River, 65 miles from the south, and 150 miles from the north coast, the temperature ranges from 55° below to 55° above zero, and the mean is about 36°. Under its social circumstances New Brunswick is preferable to any territory in the same latitude. Though not much given to agricultural development, a healthy state pervades all classes of society, as may be learned from the fact that the provincial penitentiary of St. John contained only 25 prisoners on Dec. 31, 1873. Whether the province has fourteen jails, and these only contained in all 149 inmates, according to the census of 1871. This unusually high moral status of the community is fostered by a system of free public schools, which was last improved by an act of 1871. The schools are under the general supervision of a chief superintendent of education of the province, with a county inspector for each county, and boards of trustees for the several districts, and are supported by a provincial grant and a county tax equal to thirty cents per head, supplemented by a local tax, which amounts of one dollar in the year. The expenditures from the provincial treasury for school purposes during the year ending April 30, 1874, were $122,667 69. The number of schools in operation during the summer term ending Oct. 31, 1874, was 1049, with 1077 teachers and 46,535 pupils; number in attendance, some portion of the year ending on that date, 60,467; number of school districts, 1392; number of school-houses, 1050. A provincial training and model school is sustained at Fredericton; besides which there is the University of New Brunswick at Fredericton, established since 1860, which embraces in its curriculum a classical course of three years, and special courses in civil engineering and surveying, agriculture, commerce, and navigation. There is an annual scholarship of $60 for one student for each county, who also receives tuition free; and there are five free scholarships, distributed among the counties and cities, exempting from the payment of tuition fees also. In 1872-73 the number of professors was 7; students, 51. The Methodists since 1862 own Mount Allison Wesleyan College at Sackville, which is in connection with the provincial university, and extends similar advantages. It has a literary and scientific, and special classes, and provision is made for theological instruction. A male academy and commercial school, in operation more than thirty years, and a female academy, organized in 1854, are connected with it. In 1873-74 these institutions had 15 professors and instructors (5 professors, 10 instructors), 218 students, and a library of 4000 volumes. The Roman Catholics have the St. Joseph’s College at Memramcook; it has a commercial course of four years, and a classical course of five years, both taught through the medium of the English language. In 1874-75 it employed 18 professors and instructors, and had 149 students, and a library of 1000 volumes.

The first Wesleyan missionary sent out to this country was the Rev. A. J. Bishop, who arrived in the city of St. John, the capital of the colony, Sept. 24, 1791. He found the inhabitants in a state of great destitution, and commenced his labors in the true mission of the Gospel. From this small beginning much good resulted, and the Methodists have become a powerful and a respectable body in the country. The Congregationalists and Baptists, at first, also Episcopalian, have also done much for the spread of the Gospel. Although the work, as carried on by all denominations in New Brunswick, resembles in many respects that of the mother country, there is still a loud call for an increase of evangelical agency to meet the spiritual necessities of the free and populous settlement. In many parts of the colony, as numbers are still so few who seldom hear a Gospel

sermon. The number of the inhabitants in 1871 belonging to the various religious denominations, and the number of churches and buildings attached thereto, are shown in the following table:

Of the Baptists, 27,566 were Free-will Baptists, and of the Methodists, 36,212 were Wesleyans. The principal denominations not named in the table were Adventists (1140), Congregationalists (1180), and Universalists (599).

New Brunswick and Nova Scotia originally formed one French colony, called Acadia or New France. The first settlement within the present limits of New Brunswick was made by the French on the Bay of Chaleurs in 1636. Other settlements were made in 1672 on the Miramichi River, and elsewhere on the east coast. This accounts for the large number of Roman Catholics in the country. In 1713 Acadia was ceded to the English by the treaty of Utrecht. The first British settlement established here was on the Miramichi in 1764, and in 1784 New Brunswick was separated from Nova Scotia, and erected into a distinct colony. The first legislative assembly met at St. John in January, 1786. At the close of the American Revolution about 5000 rovials from the United States settled there, and their descendants now form a considerable portion of the population. In 1867 New Brunswick was made a British province of the Canadian dominion, and is now ruled by a lieutenant-governor, who holds office for five years, assisted by an executive council of nine members, who are all responsible to an assembly of the people. See for further details American Cyclopaedia, s. v.

NEW CALEDONIA, an island of the South Pacific Ocean, belonging to France, and lying about 720 miles east-north-east of the coast of Queensland, in Australia, in lat. 20° 22' S., long. 164° 16' E., about 200 miles in length, 30 miles in breadth, and has a population estimated at 60,703. New Caledonia is of volcanic origin, being a great island, which, from north-west to south-east, by a range of mountains, in which some cases reach the height of about 8000 feet, and is surrounded by sand-banks and coral-reefs. There are secure harbors at Port Balaie and Port St. Vincent, the former on the north-east, the latter on the south-west point of the island. In the valley the soil is fruitful, producing the cocoa-nut, banana, mango, breadfruit, etc. The sugar-cane is cultivated, and the vine grows wild. The coast supports considerable tracts of forest, but the mountains are barren.

The inhabitants of New Caledonia, who resemble the Polynesian race, consist of different tribes. They speak a language kindred to the Australian tongues, and are hospitable and honest. They are a well-formed people, tall and robust, but indolent. Their skin is deep black, and their hair coarse and bushy. They are fond of painting their faces, and even in their domestic life they wear but little clothing. Their huts, built of spars and reeds, thatched with bark, and entered by a very small opening, bear some resemblance to hives.

New Caledonia was discovered by captain Cook in 1774. In 1787 the French government took possession of it, and now it is considered under the same government with Otaheite and the Marquesas Isles. New Caledonia has hitherto been scarcely visited by Protestant missionary enterprise. Some teachers from Samoa attempted to form a community on the Isle of Pines about 1855, but were driven awav. For which reason priests have, however, lingered in this quarter for many
NEWCASTLE

New Christians. See Holy Coat of Tarves; Roman Catholics in Germany; Ronge.

New Christians, a name for Jews who were obliged by the edicts of the Inquisition to embrace Christianity in the 16th century, to avoid unheard-of tortures and death for conscience' sake. Many, rather than quit their homes, embraced the faith for which they had no fervor. (From that time the term New Christians has designated Jewish converts to Romanism.) See Marano. Romanism, however, was not content to make converts. It sought among its followers, inquisitors, finding that, though there were "New Christians" in the land, there were yet Jewish services secretly performed and Jewish practices scrupulously observed, determined to have the property of those rebels or unsubservient ones if it could not own their souls. The inquisitors, on January 14, 1481, following this instance, therefore to have been preceded for some years by the missionary efforts of their ecclesiastics. Very recently the labors of the Roman Catholic missionaries have been crowned with greater success than before. Several thousand natives have embraced Christianity, and formed prosperous settlements, where are now cultivated a variety of vegetables and fruits, including wheat and barley, besides the raising of live-stock. The number of islanders who have embraced Christianity is estimated at 5000. They are peculiarly fond of music, and during the last French revolutionary movement the Communists condemned to penal life were sent to this island. See the (London) Quarterly Review, 1854, pt. i, p. 97 sq.

Newcastle, William Cavendish, Duke of, an English general who fought against the Covenanters, deserves a place here for the part he played in the war of a State Church against nonconforming religionists. He was born in 1592. He was the nephew of William Cavendish, founder of the ducal house of Devonshire; succeeded in 1617 to large estates, and devoted himself to poetry, music, and other accomplishments. In 1620 he was raised to the peerage as Baron Ogle and viscount Mansfield, and in 1628 was created earl of Newcastle-upon-Tyne. At the outbreak of the civil war he sided with the king, to whose treasury he contributed £10,000, and took the field at the head of 200 cavaliers. He was intrusted with the command of the four northern counties; and, raising an army of 10,000 men, he prostrated the power of the Parliament in that part of England, defeated Sir Thomas Fairfax at Atherton Moor, June 30, 1648, and was made Marquis of Newcastle. Subsequently he held the Scots in check at Durham; but was obliged in April, 1644, in consequence of the defeat of colonel Bellasis at Selby, to throw himself with all his forces into York, where for the next three months he sustained an investment by a greatly superior army under Fairfax. Upon the advance of the royal army under Rupert, he joined the latter, with the greater part of the garrison, and endeavored to persuade him that, having raised the siege, he had better do it while the allowance of reinforcements. This advice was disregarded, and the battle of Marston Moor was fought, which ruined the royal cause in the North. Marquess of Newcastle then forced his way with a few followers to Scarborough, set sail for the Continent, and established himself in Antwerp. His estates having been sequestrated by Parliament in 1642, he lived in extreme poverty during the Protectorate; but on the restoration he received substantial honors, and in March, 1664, was created earl of Ogle and duke of Newcastle. Clarendon says "he was a very fine gentleman, active, and full of courage." For further details, see the excellent article on Newcastle by W. A. W. Stephen, in the Dictionary of National Biography. See also Stoughton, Eccles. Hist. of England (Restoration), ii, 58; Stephens, Eccles. Hist. of Scotland, ii, 24, 278; Clarendon, History of the Great Rebellion, vol. i, bk. vi, sq.
humiliated in their own opinion, the New Christians of Portugal, with those from Spain, cherished in their souls the deepest devotion to their ancient faith, but hoped that hypocrisy might be proof against the numberless opportunities of revenge which their riches afforded. Fine art they came which proved St. Bavo a name to be applied to this poor Jewish convert of the Iberian peninsula. In the spring of 1506 the plague raged in Lisbon. The people, suffering all its horrors, were stricken also by famine, and offered up prayers in their churches for divine intercession, and on Sunday, April 19, while celebrating their service in the church of San Domingo, a brilliant light was seen to illumine the figure of Christ. Among those who doubted the miracle was one of the unfortunate apostates, who dared publicly to express his incredulity. This was sufficient to instigate the brutal and superstitious populace, who immediately seized the unhappy man, and burned him to death. It besides proved the spark that fired a horrible persecution of the apostate Jews. During the three following days upwards of 2000 victims were slaughtered; old men, women, and children were not spared, but dragged from their homes to the fires raging in the public squares. Only on the third day of these horrors the authorities were enabled to restore some tranquillity. The king, Don Manuel, who was absent from Lisbon, received the fearful news with profound indignation, and immediately ordered the execution of the least guilty Jew wherever cut to death, among them being two friars who had been the first instigators of the people's fury. The magistrates, who through fear or negligence had not exerted their authority to quell the massacre, had their property confiscated; and, finally, a decree of April 22 condemned Lisbon to the loss of many ancient privileges. In vain the corporation sued the king for mercy; he replied that an example was necessary to punish the ferocity of the bloodthirsty and the pusillanimity of the timid. Yet, notwithstanding these generous actions of the king, and the protection of the Spanish Jews, the sufferings were so terrible that many of them left the Iberian peninsula and sought a home on the Continent, especially in Holland, where they enjoyed unlimited toleration. The prudent king Emanuel, seeing that his realm was likely to lose a large number of valuable citizens, and yet satisfied that it would be impossible to prevent the exodus, finally commanded that all children under fourteen should be detained and converted to Christianity. There can be no doubt that this cruel but politic order induced many Jews to embrace Christianity. The New Christians of Portugal did not hesitate to execute both from Spain and Portugal, and they paint in strong colors the heroic adherence to their religious convictions both of Spanish and Portuguese, and the terrible sufferings they underwent in consequence; nevertheless, the entire action of the New Christians and of their tradition are against this alleged universality of the movement, and, if a change of name had not been made compulsory in the days of persecution, so undoubtedly would be the evidence of names. There are, unquestionably, innumerable families of Jewish lineage in Portugal, and Jewish blood flows in the veins of many noble Portuguese families. It is related that when that foolish bigot, king John (Don Juan III), proposed to his minister Pombal that all Jews in his kingdom should be compelled to wear white hats as a distinctive badge, the sagacious minister made no objection, but when next he appeared in council it was with two white hats. “One for his majesty and one for himself,” explained Pombal, and the king said no more about his proposal. It was during the reign of this king that the Inquisition was introduced into Portugal, but it was milder than in Spain, and the New Christians were suffered so long as they continued in public professions of the Christian faith.

In modern times the descendants of unfortunate apostates, under the name of New Christians, have been gradually losing all traces of the religion of their ancestors. Their family names alone point them out, such as Sequeira, Costa, Marques, Lucas, Pinto, Cardoso, Castro, and many others, now borne by Roman Catholic families. There are still to be found, even in distant provinces of Portugal, some who keep up a few vestiges of former rites, especially the observance of the great Day of Atonement, and the cleaning of their house in the week prior to the Passover, and many treasure the Jewish sacred prayer, the Shemang Israel. See Lindo, History of the Jews of Spain and Portugal, ch. xxii sq.; Da Costa, Israel and the Gentiles, p. 509 sq.; Grütz, Gesch. des Judenthums, viii, 61 sq.; Barium, Romanism, p. 578. (J. H. W.)

New Church. See New Jerusalem Church.

Newcomb, George, a minister of the Methodist Episcopal Church, South, was born in Quincy, Mass., Nov. 8, 1814. Upon attaining manhood he devoted himself to teaching, which vocation he followed for many years. In 1856 he was licensed as a local preacher by the Methodist Episcopal Church. In 1864, impelled by a sense of duty, he went to Beaufort, S. C., to labor among the freedmen as superintendent of schools. In 1867 he united with the Methodist Episcopal Church, South, decided to take active work in the ministry, and joined the South Carolina Conference. He was appointed Circuit-preacher, where he remained for several years. While laboring there he organized several societies on the Combahee River and Ladies' Island. At the Annual Conference of 1870 he was made presiding elder, and assigned to St. John's District, Fla. He knew from experience what privations and hardships mean. He carried the length of the sea in the face of the bitter storms of opposition, surmounted difficulties, and in the pine lands and river bottoms, as well as in the crowded streets of the busy town, his voice was heard heralding forth the words of truth and soberness. The work proved too great for his physical strength, and he was finally obliged to relinquish it, and went North to regain his health. On his way, while at Beaufort, S. C., he fell a victim to yellow fever, and died Oct. 12, 1871. George Newcomb “occupied a large place in the hearts of all who knew him.” See Minutes of Annual Conferences of the Methodist Episcopal Church, South, 1871, p. 10.

Newcomb, Harvey, D.D., a noted Congregational minister, was born at Thetford, Vt., in 1808. In 1818 he removed to Alfred, Vt., and in the following year, though still quite young, he commenced teaching school, and continued in that occupation most of the time for eight years. In the spring of 1828 he became the first editor of a newspaper. In 1830 he published the Buffalo Patriot. In 1850 and 1851 he published the Christian Herald at Buffalo, N. Y., and a paper for children, and for nearly ten years from that period was mainly engaged in writing Sabbath-school books. In 1840 he was licensed to preach, and the following year was made pastor of the Congregational Church at West Roxbury, Mass., and subsequently ministered to the churches at West Needham and Granville. In 1849 he returned for a season to editorial life, being assistant editor of the Daily Traveller for about a year, and the New York Observer for two years. In the fall of 1859, having spent several years in writing, establishing mission Sabbath-schools in Brooklyn, N. Y., and preaching to the Park Street Mission Church of that city, he was installed as pastor of the Congregational Church in Hancock, N. Y., where he continued as laborer in the vineyard with allowed him to remain in active life. He died at Brooklyn, N. Y., Aug. 30, 1862. Dr. Newcomb was an able and useful Christian laborer, whose memory will be revered for many generations yet to come. He labored especially with his pen, and was the author of not less than 178 volumes, a great majority of which had special reference to the wants of children and youth, and had a large circulation; among these were fourteen volumes of Church History. According to a calculation made in 1858, the circulation of his works had then reached
NEWCOMB

nearly sixty-five million pages. His largest work was the Cyclopaedia of Missions (New York, 1854, 8vo; 4th ed. 1856), a book of great value to the student seeking information on American missions, though of assistance also in the general field which it seeks to cover. At the time of its publication it was not only the most comprehensive, but an accurate, and not only on this side of the Atlantic, but also in Great Britain, where it has been freely used in compilations requiring statistics of missions. In our own pages the work is frequently quoted, and its usefulness often made apparent by the lengthy extracts which it affords us. Revised and brought down to date, it would still rank as the best cyclopedia of missions in the English tongue. See Allibone, Dict. of Brit. and Amer. Authors, ii, 1410; Drake, Dict. of Amer. Biog. p. 656; Congreg. Quarterly, 1863, 352 sq. (J. H. W.)

Newcomb, Peter, an Anglican clergyman of note, flourished very near the opening of the last century. He was vicar of Aldenham, Hertfordshire, and died about 1722. Four separate sermons of his were published in 1705, 1710, 1715, 1717, and another four together in 1719; also fifty-two discourses, constituting a catechetical course upon the Church Catechism for the whole kingdom. Died 1702; 1712, 1719. His son of like name, born in 1717, was rector of Shenley, in the same county, and died in 1797. He wrote, History of the Abbey of St. Alban, 738-1389 (London 1738-1796, 2 vols. 4to).

Newcomb, Thomas D.D., an Anglican divine, was born in 1675. But little is accessible regarding his early personal history. He was a great grandson of Spencer, the poet, and seems to have inherited the ancestral love for the muse. In 1734 Newcomb became rector of Stopham, Sussex, and this position he held until his death, about 1765. He was a sound theologian, but a better poet than preacher. His poetical publications have received many encomiums. His best-known production is his Bibliotheca, published in vol. iii of Nicholls's Select Collection of Miscellaneous Poems. See Chalmers's Bibl. Dict. s. v.; Allibone, Dict. of Brit. and Amer. Authors, s. v.

Newcome, Richard, an English prelate, flourished near the middle of the last century. He was canon of Windsor until, in 1754, he was elevated to the episcopate and made bishop of Llandaff, was transferred to the see of St. Asaph in 1761, and died in 1769. He published several of his sermons (Lond. 1756, 1761, 1764, 1765).

Newcome, William, a learned English prelate, counted as one of the most eminent divines of the 18th century, was born in 1729 at Abingdon, Berkshire, where his father, an esteemed Anglican clergyman, was then vicar. William was educated at the grammar-school of his native town, from whence he passed to the University of Oxford, where he became in due time a fellow and tutor of Hertford College, and had Charles James Fox for one of his pupils. In 1765 he was honored with the doctorate in divinity, and in that year accompanied his patron, the earl of Hertford, when he went as lord-lieutenant to Ireland. Newcome was a man of strong and independent mind, but a bishopric, that of Dromore in that country, falling vacant soon after the earl's settlement in Ireland, Newcome was placed in it. Entering the episcopal order thus early in life, it is not extraordinary that he had several translations, which were first to Osney in 1775, then to Waterford in 1779, and finally, in 1782, to Armagh. He died in 1800. A writer of some chapters of bishop Newcome's life assures us that he "diligently and faithfully discharged the duties of his episcopal office, and secured the respect of all parties and of all religious persuasions with his own institution of the Westminster Assembly of Divines, and assisted in drawing up their Catechism, and was also present at the Savoy Conference. He was one of the authors of the celebrated answer to bishop Hall on Episcopacy (Lond. 1641, 4to.). He wrote also, The Duty of such as would worthily serve the Gospel to endeavor Union, not Dissension nor Toleration (a sermon on Phil. ii, 17 [Lond. 1644, 4to])—Sermon on Rev. ii, 8; Farewell Sermons. See Darl. Cyclopedia, Biblioth. ii, 2172; and Sermon on his death by J. F. (Lond. 1679, 4to) ; Stoughton, Eccles. Hist. of the Church of the Restoration, i, 158, 160, 170. (J. H. P.)

New Creation, a term denoting the theory of a restoration of the physical universe as the final abode of glorified humanity. I. Argument for the Doctrine. Predictions of a great and universal renovation are, in a more or less direct form, an almost invariable feature of Biblical Eschatology. Such was the tone of prophecy before Christ's first
NEW CREATION

advent, such that of the apostolic writings, and such that of our Lord's own words as recorded in the Gospels and the Apocalypse. This may be shortly indicated by the words of an ancient prophecy, "Behold, I create new heavens and a new earth; and the former shall not be remembered, nor come into mind [Isa. 65:17; comp. Jer. xxxli. 27]; those of an apostolical epistle, "The heavens shall pass away with a great noise, and the elements shall melt with fervent heat; the earth also and the works that are therein shall be burned up... Never- theless, the promise, look for new heavens and a new earth, wherein dwelleth righteousness" (2 Pet. iii. 10-18); and those of the great Christian prophecy, "I saw a new heaven and a new earth; for the first heaven and the first earth were passed away... And he that sat upon the throne said, Behold, I make all things new" (Rev. xxxi. 1, 5).

That these predictions of a new creation are figurative is an easy explanation, and it may be in some slight degree corroborated by the fact that the kingdom of Christ is a re-creation of human nature in his own person by his resurrection and the works of mankind by their regeneration in holy baptism. Such an explanation, however, reaches but a little way towards drawing out the meaning of the predictions in question, for even if they include that which it refers to (as is not likely from the analogy of our Lord's own prophetical language), these predictions carry beyond and beyond anything apposite to a new creation, not of souls, but of the material earth, its surrounding "Heaven" or heavens, and the works as well as the beings which it contains.

The chief difficulty in the way of belief in such a re- creation is probably the fact that it destroys the idea of a preceding destruction. Looking on the changes which are wrought on the surface of the earth, or which have been wrought during the historic ages, we observe that the whole sum of them, after all the ordinary and all the convulsive operations of nature, has produced a very small effect that is vastly short of anything approaching the magnitude of so stupendous a change as that which would be made by a destructive catastrophe, such as is predicted. The terrific operation of fire on the body of the sun is now, however, well known to scientific observers, as well as the vast and most rapid changes of the earth. There is no difficulty in believing that such changes may be effected on the body of the earth, when we observe enormous craters to be almost instantly created on that of the sun—so enormous that many planets as large as the earth might be encircled, and so powerful that the very granite would melt in the midst of them.

A more formidable objection is one drawn from the moral aspect of such a destruction. Allowing that it is reasonable to set aside the physical difficulty as being confuted by scientific knowledge not less than by a priori reasonings as to Almighty Power, it is consistent with our ideas of God's attributes that the magnificient works of man—works of architecture, engineering, art, and skill—works that betoken the use of God's own gifts of intelligence, and the progress of humanity in the development of those powers and the application of those materials with which the Creator has provided it—that these should be utterly destroyed? Can there be no consecration of man's handbook by which it may be symbolically renovated? Must the very foundations of the earth and all that rests upon them be utterly broken up before the palace of the heavens is to be erected? Would not such a destruction, we are almost tempted to say, be a kind of waste, and contrary to the first principles on which God's providence is ever working?

No doubt such objections as these, and many more such, will arise in thoughtul minds; and no doubt they will be accompanied by a wish to understand the statements of the Bible in some easier way; to adopt a metaphorical meaning, for example, such as would take the new creation of heaven and earth to be a moral regeneration, and the passing away of the old creation as the cessation of sin. But St. Peter appears to have been inspired to meet such objections with a plain contradiction beforehand; for when he is about to speak of the destruction of the earth and the heavens in a manner that quite shuts out the idea of his words being intended to be metaphoric, he prefaces the awful statement by predicting that in the last days there will come scoffers, arguing that, from the apparent firmness and permanence of all things for so many ages, there is no probability of the future destruction. And this argument, he then warns us off from such objections, and leaves little rational ground for supposing a metaphor to have been intended by the words "new heaven and new earth." Perhaps we may be better reconciled to a literal sense of these words if we take into account a few considerations respecting the power and authority of the Creator and his probable purpose in organizing a new creation.

(1.) It is manifest that all things belong to God to deal with as he may think proper: there is no known law by which he binds himself to preserve as it now stands either his creation of his own hands or the handiwork of the race that has created.

(2.) The infinite power of an Almighty Creator, that can call forth a new creation at his will, makes the destruction of many worlds a matter of no importance in the vast scheme of his general purposes and his eternal design, as beholds the bucket and the sea. That a little bucket, and are counted as the smallest dust of the balance: beholds, he taketh up the isles as a very little thing. And Lebanon is not sufficient to burn, nor the beasts thereof sufficient for a burnt-offering. All nations before him are nothing; and they are counted to him less than nothing, and vanity (Isa. xl. 15-17). Or, to use a homely simile, as we often see portions of beautiful columns, mouldings, and carvings built into the rubble of mediæval churches as if they were common stones of no value, and are aware that this was done by building others, by raising, they are good, and by pulling down others which that they were concealing or partially destroying—so we know the great Architect of the universe can replace all that he causes or suffers to be destroyed with a new creation of still greater beauty, glory, magni- tude, and use, without effort and at any moment.

(3.) This seems to lead us to the conclusion that no wise a destruction as that implied by the words of Holy Scripture, the "whole creation groaneth and travaileth together," fallen with fallen man, even in Christ's dispensation degenerating age by age, and removing further destroy the very foundation of the world's stability, in which it first came forth from the hands of the Creator. It is to make room for a perfect creation that this degenerated one is to pass away—to make room for one in which there will be no capacity for degeneration, no trace of imperfection, no stain of a will adverse to the will of God.

By the consideration of truths such as these we may fortify our faith in the word which God has four times spoken by his prophets; and believing that we can see some reason why there should be a new heaven and a new earth, believe also in the truth that there are many others which are beyond our knowledge, and that therefore our safest course is to take the divine proclamation simply and literally as it stands. Whether by an utter destruction and an entirely new creation, or whether (as is more probable) by a regeneration and purification of fire, in some way or other we are to cause the heavens and earth that now are to pass away; and will fulfill his own words, "Behold, I make all things new," in the sense of a material renovation. See CONFESSION, GENERAL.

II. Moral Restoration.—Theory as to the State.—Although it would be venturesome to pursue this idea of a new creation into details, by speculating as to the new features that will characterize the abode of mankind and its celestial surroundings, we are fully justified in following it up as regards our own nature. Respec-
ing human nature, there is no room whatever for doubt. It will be taken into the presence of its Creator after having passed again under his creating hand, renovated into a new condition of being, the body of which belonged to it in its most perfect temporal condition.

(1) First it is to be considered that there will be a new creation of the body. "Flesh and blood cannot inherit the kingdom of God; neither the flesh nor the blood of Christ, nor any other thing beside, can be of any value to gain that kingdom (Cor. xiv. 14)."

(2) It is not difficult to imagine bodies so regenerated that they find their original pattern in the body that rose from the grave three days after death, and afterwards ascended into heaven. It is, in fact, most easy for us to believe this was the re-creation of the Son of God was the new creation of a Man perfect in body and soul, so it was the first step in the new creation of all human nature; and that as we have borne in our bodies the image of the earthy, which is the First Adam, so in our bodies also we shall bear the Image of the heavenly, which is the Second Adam. See RESURRECTION OF CHRIST.

Thus, when the word has gone forth, "Behold, I make all things new," this will be a part of that new creation, that the bodies of the redeemed will be as the glorified bodies of Christ, and not as the bodies of Adam and the first man lost by the fall he regains by his restoration in Christ. Man lost the image of God, but the express Image of the Father took upon him the fallen nature, raised it to its first estate in his own person, and made it possible for it to regain that position in the persons of all men. Man lost by the fall the spirit which was breathed into him so that he became a living soul, but the Holy Spirit descended to dwell in the Church on earth, and to continue the power of the incarnation; and now each sacramentally built up man has the lost soul. But only the man once made perfectly body, soul, and spirit, as in his first creation. See SPIRIT.

But this is a gradual, not a sudden work, and although in the first regeneration of human nature at conversion, and in all the stages of sanctifying edification, the Lord is causing it to go through a process of renovation and re-creation, the climax of that building up of the restored spirit of man will only be attained when the final flat of re-creation goes forth. Under the operation of such a re-creation, that which we sometimes call "the religious faculty" will become supreme among all the mental qualities of our nature. Then, too, all evil passions, all sorrows, all cares, having passed away as part of the former things that have no place in the renewed world, it is reasonable to believe that other mental faculties will have room to develop in a degree for which there has been no sufficient opportunity in this life. But that the spirit of man, the image of the glorified persons will be like the intelligence of an angel. Thus all that is good and noble in the spiritual and intellectual part of human nature will become infinitely more good and noble still. The humblest sinner of this life who attains to the life everlasting will stand as a glorious rarity before the throne of God. The fittest intellect will be so cleared, so vivified and developed, by the making of all things new, that there will be no such thing as ignorance—as we now understand it—possible, nor any bar set up by the will to the attainment of an exalted reach of knowledge.
NEW CREATION

It seems, then, that we must blend together the highest earthly satisfaction and the highest earthly intelligence if we seek for a type of the perfectly renovated inner nature of man; and when we have thus gained some idea of what will be effected by the new creation, we still have to remember that this type of the new-created mind and spirit of man places us only on the threshold of the future, the unfoldment of which can find expression without limit of time and age, dwelling in close communion with the all-holy and all-knowing God; and from the perpetual shining of that “light which no man,” in his mortal condition, “can approach unto,” there must be a never-ceasing growth of saintliness and intelligence, a development of each which is short of the holiness and knowledge of the One who is without bounds.

III. Spiritual Surroundings.—As the renovation of the material world, and of the corporeal and incorporeal parts of man’s nature, will alter all the conditions of what we should call from our present standpoint man’s existence and work in the world, so also it will alter those of his existence in the Church, since among the revelations of that future life which were made to St. John there was a special one of a “New Jerusalem coming down from God out of heaven, as a bride adorned for her husband” (Rev. xxi. 2). We are all familiar with the glorious things which are spoken of this city of our God. Inwrought with our habitual devo tions as they dwell on the future are such words as

“With jasper glow thy bulwarks,

Fair streets with emerald blaze;

The sardius and the topaz.

Quite in thee their ray.”

But we are probably disposed to dwell on these glorious pictures of the holy city without a sufficient recognition of the fact that they represent a development and new creation of the religious life, and especially of that part of it which is associated with divine worship. For this renovation of the religious life and of divine worship is also the glorious climax of our Lord’s incarnation; and therefore the coming down of the New Jerusalem from God is followed by “a great voice out of heaven,” which recalls to our mind the fact that our Lord’s incarnation was a tabernaceling of the Deity in the humanity. “I heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be a God for them” (Rev. xxi. 3).

That same presence of God, therefore, which has been at once the great power of the religious life and the great object of divine worship in the Church militant, will be the same in the Church triumphant. As God is now with his people in worship, the church of which is derived from the incarnation, so will he be with them in a direct presence, the power of which will be to them a perpetual light and an inexhaustible life; and as now God is in his holy temple, and thither we gather that before his altar we may bow down in adoration of his mystical presence, so then, when there shall be no temple in the holy city,—“for the Lord God Almighty and the Lamb are the temple of it” (Rev. xxi. 22)—the glorious and visible presence of him that sitteth on the throne will be that before which the elders will cast down their crowns, and the vast multitude of the redeemed sing forth their hallelujahs.

Thus the Church militant will develop into the Church triumphant; Christ’s first and his second advent will prove to be two stages in the mighty work of new creation. The former things that are to pass away—a degenerate world, a fallen man, an imperfect religious life, a halting worship—all these having derived what good there has been in them from the first stage of the new creation, that good will still remain, even though their distinctive characteristics of evil, weakness, and apostasy have been utterly taken out and annihilated. But God is pleased that there should be a degenerate world, and a fallen man, and an imperfect religious life, and a halting worship no longer, and that these, the second stage of the mighty work of the incarnation will be attained, in the complete fulfilment of the words, “Behold, I make all things new.”

NEW DIVINITY. See Edwards, Jonathan; Presbyterianism; Theology (New England).

Newell, Ebenezer Francis, a pioneer preacher of the Methodist Episcopal Church, was born in Brookfield, Mass., Sept. 1, 1775; joined a Methodist society in St. Andrews, N. B., in 1792; moved to New Bedford, Mass., June 18, 1800; was licen sed as a local preacher, and appointed to Centre Harbor Circuit by the London Quarterly Meeting March 23, 1806; was licensed as a travelling preacher July 25, 1807, and successively held the following appointments: Pembroke, March 20, 1806; Centre Harbor, 1806; Land daff, 1807; Tuf ford, 1808; Hallowell, 1809; Norridgewock, Vt., 1810; Danville, Vt., 1811; Barre, Vt., 1812; Barnard, Vt., 1813; Pittstown, Me., 1814; Bristol, Me., 1815; Durham, 1816; Readfield, 1817; St. Croix, 1818. Located, 1819: Thomaston Circuit, 1821; Norridgewock, 1822; Pittstown, 1822; Dennisville, 1824. In 1825 he was made supervenary, and employed as Conference missionary in behalf of Maine Wesleyan Seminary, resuming work again in 1826-7, and was appointed to Bethel, Me.; Kennebunkport, 1828-9; Kittery, 1830; Brookfield and Belchertown, 1831; Northbridge and Uxbridge, 1837; Brookfield and Belchertown, 1838; Spencer and Leicester, 1855; Hopkinton, 1836; Marlboro and Harvard, 1837; Harvard and Leicester, 1838; North Brookfield, 1839; North Brookfield and Paxton, 1840; Charlton and Springfield, 1841-2. He was finally superannuated in 1842, and died March 8, 1867, at Johnsville, S. C., where he was staying with his son.

Newell, Harriet, the wife of Samuel Newell (q. v.) and daughter of Moses Atwood, of Haverhill, Mass., a celebrated American female missionary, was born Oct. 10, 1795, and received an excellent education. She was naturally cheerful and unrestrained, possessed a lively imagination and great sensibility, and at a very early age evinced a retentive memory and a taste for reading. Before the age of thirteen she received no particular or lasting impressions of religion, but was uniformly obedient, attentive, and affectionate. In the summer of 1806, while visiting at Bradford, she was subject of those solid and serious impressions which laid the foundation of her Christian life. At the age of fifteen she made a profession of religion. When Mr. Newell, along with Messrs. Judson and others, offered himself a missionary to the General Association at Bradford, and was about to go abroad, she asked if he would take her Missions. Her own heart was prepared to quit her native land, and to endure the sufferings of a Christian among heathen people. She therefore readily determined to go, and sailed June 19, 1812, for Calcutta. Finding on their ar rival that the Bengal government would not grant them permission to reside within their territories, the missionaries chose different places of destination, and Mr. and Mrs. Newell proceeded to the Isle of France, Aug. 4 ensuing. There she employed herself assiduously and with earnestness in the promotion of her Redeemer’s cause, by precept and example, and as a tolerably and truly valuable member of society. The uniform piety and seriousness of her mind are forcibly displayed in her letters to her young friends and in her diary. Her health was delicate, but she bore indispension with that calmness and submission to the dictates of God’s will which all the misfortunes of life could not change. She complained much of the want of humidity, and lamented her deficiency in that Christian grace: “she longed for that meek and lowly spirit which Jesus exhibited in the days of his flesh,” Mrs. Newell died of consumption Nov. 6, 1812. She departed in the peace and triumph of an eminent Christian. Her life, written by Drs. Woods, to which are appended several of her let-
Newwell, Samuel, a noted American missionary and Congregational minister, was born July 24, 1784, at Danvers, Mass. He graduated at Harvard College, class of 1807, and studied theology at Andover. As he did not like to travel, as with others, ordered a mission Feb. 6, 1812, in Salem, whence, with the Rev. Mr. Judson, he sailed for Calcutta, where they arrived June 18, but were ordered to leave the country. Mr. Newell sailed for the Isle of France, and arrived Oct. 81. Feb. 24, 1813, he went to Ceylon, where he remained until early in 1814, when he removed to Bombay, where he labored faithfully for the Christian cause until removed by sudden death from cholera, March 29, 1821. In connection with Mr. Hall he wrote The Conversion of the World, or the Claims of a Holy Race; a Memoir of Harriet Newell (q. v.). Mr. Newell was one of the first of the American missionaries in foreign fields, and a signer of the paper which led to the formation of the American Board of Commissioners for Foreign Missions. See Sprague, Anna of the Amer. Pilgr., ii, 338.

Newell, Thomas Marquis, an American Presbyterian minister, was born at Cross Creek, Washington County, Pa., Oct. 16, 1815. He made an early profession of religion and joined the Church. In 1834 he graduated at Washington College, Pa., and in 1836 at the Western Theological Seminary, Allegheny City, Pa. Soon after he was licensed, and in 1840 was ordained and installed pastor of the Presbyterian Church, Ali- bsburg, Va. In 1851 he removed to Jacksonville, Ill., where he taught in the Deaf and Dumb Asylum, meanwhile preaching in the surrounding destitute regions. In 1857 he took charge of the Church of Waynesville, where he labored until his death, May 10, 1865. Mr. Newell was one of the original members in the organization of Bloomington Presbytery in 1859, and was the first commissioner from that presbytery to the General Assembly. As a man he was naturally modest and unassuming; as a preacher, clear, pointed, and experimental; as a citizen, intensely interested in public affairs, giving all his influence against slavery. See Wilson, Preb. Hist. Almanac, 1866, p. 139. (J. L. S.)

Newfoundland. See Theology, N.E. New Fire, a term for the fire kindled on Easter Eve in Romish and Anglican churches for relightining the chancel lamps, which were extinguished on Good Friday, though in some places the Holy fire was continued by the clergy and vestry. In the tenebrae was reserved for the purpose, and in others, as at Rome in 756, in the pontificate of Zozimus, three lamps were concealed, emblematical of the three days in which Jesus lay in the tomb; but usually the new flame was kindled by a burning-glass from the sun, as a type of the Orient on high, or, as it is mentioned in Rev. iv. 10, in the 5th century, from a foint, symbolical of the Rock (1 Cor. x. 4), as at Florencia, from one brought from Jerusalem in the time of the Crusaders. The rekindling of the light was followed under cultivation, and the fire which Christ came to cast upon the earth (Matt. xii. 49). The fire was used to light three tapers branching from a common stock in the form of a lance. See Walcott, Sacred Archaeology, p. 397, 398.

Newfoundland, an island and British colony of north portion of North America, lying in the Atlantic Ocean, at the mouth of the Gulf of St. Lawrence, separated from Labrador on the north by the Strait of Belle Isle (about twelve miles broad), and extending in lat. from 46° 38' to 51° 37' N., and in long. from 52° 44' to 59° 30' W., is 870 miles in length, 290 miles in breadth, about 1000 miles in circumference, and has an area of about 11,000 square miles, or about 23,000,000 acres, of which only about 3,000,000 are act down as good for cultivation, and even of these but little has thus far been much tilled. In 1845 the only crops raised were oats and hay; but within recent years large supplies of grain and vegetable and garden seeds have been imported, and in 1869 the number of acres under cultivation was 41,715. It will now probably not run far from 50,000 acres. The population of Newfoundland has increased rapidly in recent times, and will no doubt in a short time greatly enlarge the figure given in the population. The Newfound- land only counted about 7500 souls; in 1864 it was reported by census 137,382, from which, however, 8651 must be deducted for settlers of the French shores, and 4211 for Labrador. The main employment of these people is fishing, which has proved a very valuable source of income. The mineral wealth of the country is also very great, and has in recent times been greatly developed. Newfoundland's surface is diversified by mountains, marshes, barrens, ponds, and lakes. The mountains in the Avalon Peninsula (stretching southwest from the island northeast of Newfoundland) are marked by an isthmus of only about three miles in width) rise in some cases to 1400 feet above sea-level, while, both here and along the western shore, the height of 1000 feet is frequently reached. The number of the lakes and "ponds" (the latter name being used indiscriminately for a large or a small lake) is considerable, and it has been estimated, though perhaps with some exaggeration, that about one third of the whole surface is covered with fresh water. The "barrens" occupy the tops of hills. The coast-line is everywhere deeply indented with many small harbors, the largest being generous enough to contain the whole British Navy. Of these inlets, the principal, beginning from the northern extremity of the island, are Hare, White, Notre Dame, Bonavista, Trinity, Conception, St. Mary's, Placentia, Fortune, St. George's, and St. John's bays. These bays vary in length from five to twenty miles, and in width from great breadth, and are lined—as indeed the whole coast is—with excellent harbors. The rivers, none of which are navigable for any distance, communicate between the lakes of the interior and the shore, and are narrow and winding; occasionally, however, they are turned to account in driving machinery. The main streams are the Exploit, with its affluent the Great Rattling, and the Humber. The climate of the island is very moderate. In the summer the thermometer rarely ranges above 70°, and in winter it seldom falls below zero. Yet the cold weather remains so steady for seven or eight months that the winters are pronounced severe. Very little activity is manifest during that period of the year. The early history of Newfoundland is involved in obscurity. It was discovered June 24, 1497, in the reign of Henry VII, by John Cabot, and the event is noticed by the following entry in the accounts of the privy-purse expenditure: "1497, Aug. 10. To hym that found the New Isle, £10." It was visited by the Portuguese navigator, Gaspar de Correia, in 1500; and within a few years after that time regular fisheries had been established on its shores by the Portuguese, ...
This page contains a mixture of text and images. The text appears to be discussing the history and geography of Newfoundland and the Hebrides, including references to explorers and early settlements. The text mentions the exploitation of fish and the use of fishing as a significant economic activity. It also notes the importance of the fish in the diet of the local population. The text then shifts to a discussion of political and religious matters, mentioning the jurisdiction of the governor and the role of the legislature. It discusses the establishment of schools and the education system, indicating the importance of literacy and the provision of educational resources.

The text includes several dates and figures, such as 1578, 400 vessels, 1828, and 1835, which are likely relevant to historical events or developments. The mention of 1578 refers to the year of the first recorded visit by English fishermen to the waters around Newfoundland. The year 1828 is significant for the establishment of the first Roman Catholic diocese in the province, and 1835 marks the year of the appointment of the first Roman Catholic bishop in the province.

The text also highlights the importance of the fishing industry, noting the presence of various fishing vessels and the impact on the local economy. It mentions the use of traps and the role of the canoe in the fishing trade. The text further discusses the social and economic activities centered around the fishing industry, such as the sale of fish and the processing of seafood.

Overall, the text provides a comprehensive overview of the historical and cultural context of Newfoundland and the Hebrides, highlighting the significant role of the fishing industry in the region's development. The text is written in a formal tone, using historical references and factual data to present a detailed account of the region's past.
NEW HEBRIDES

In S. lat. between 14° and 20°, and in E. long. between 166° and 170°, and having a total area estimated at 3,700 square miles, are regarded as the most easterly point of the Western division of Polynesia. The group, which was discovered by Quiros in 1606, but not fully known until explored by Cook in 1778, embraces Espiritu Santo (65 miles long by 20 broad), Malicillo (60 miles long by 28 broad), Ambirin, Annatom or Anetemy, Ronaugo, Tanna, with an area of 3,500 square miles. Most of the group are hilly and well wooded, some even mountainous, and present a luxuriant vegetation. The only animal of consequence is a diminutive species of lemu, which when fully grown is no larger than a rabbit. The inhabitants, who are of the Papuan Negro race, number less than 100,000. They are less industrious than the other South Sea Islanders, very fierce, and excessively dirty. Erromango is a well-known name in missionary history, being the scene of the barbarous massacre of the Rev. John Williams—generally called the Martyr of Erromango (Nov. 20, 1800). Two years after the death of Williams the London Missionary Society sent native teachers from the eastern group of Polynesia, and they met a hearty welcome, especially in Annatom. In 1842 European missionaries attempted work at Tanna, but the hostility of the natives to all whites became so intense that slavery for Australia, as was so frequently done, prevented any successful issue. Several of the native teachers were murdered (at Futuna); others remained and labored, but without any apparent result. But the London Society would not see the work abandoned, and frequently sent the mission-ship to the New Hebrides, and furnished teachers when there seemed to be an opening. A new era dawned in 1848, when the Reformed Presbyterians established their mission. By 1852, when only two laborers occupied the field, Christianity gained its first real strong footing, and by 1869 all Annatom, then 3,500 inhabitants strong, was free from the cruelties and extravagances of heathenism, and in close alliance with Christian morals and measures. “Instead of a number of naked savages on the beach, armed with clubs and spears, to dispute your landing, you see a number of quiet, peaceable men and women, with children, in front of their houses, engaged in domestic occupations. The husband may be seen feeding a litter of pigs with coconuts, and the wife kindling the fire to cook the meal for dinner or supper, while the children all have the look of happy contentment in their countenances. The most conspicuous among the houses and villages are the church and school—houses and mission premises. The church is itself a wonder of architecture, constructed by native workmen, under the missionary’s superintendence. It is built of stone obtained on the island, and is beautifully plastered and whitewashed. Lime is obtained from the coral which abounds on the shore. This church is capable of accommodating a thousand natives, when seated closely together, and is pronounced by competent judges to be one of the finest places of worship in the South Pacific. The teachers are expected to give instruction in reading, spelling, writing, and arithmetic. The book used all over the island is the New Testament, or some Gospel in a separate form, such as Mark or Luke, which were printed in a detached form before the New Testament was printed in full. Almost all the natives can read, and some of them very fluently.” (Boston Traveller, June, 1875.)

In 1876, the mission was transferred to the Free Church of Scotland, from whose report for 1885 we cite the following particulars:

ANETEYAN ISLAND: ANETEYAN (north side).—Rev. James Lawrie, ordained missionary; 35 native teachers; 34 children and dependents. PUNI, ISLAND: JEPRA, JEPRA.—Dr. William Green, medical missionary; 8 male native teachers, 1 deacon. The Presbyterian Churches of Canada, Victoria, New South Wales, Australia, Tasmania, New Zealand, and Otago support 17 missionaries, besides the above. There are thus in all 19 European missionaries, and about 150 native teachers. The vernacular languages are the Auytumense and the Futumense.

In Erromango missionary Gordon sought a foothold in 1856, but in 1861 he and his wife fell martyrs to their faith, while many natives who had embraced Christianity were persecuted. Yet Christian teachers and missionaries continue their work, among them a brother of Gordon, and of the population, which in 1867 amounted to upwards of 500, 100 had accepted Christianity and 15 submitted to be baptized; 1,500 inhabitants, has had missionaries since 1858, though native teachers advocated Christianity before that time. Much opposition was encountered there, too, and only recently the work opens more favorably. There are now two stations. Vati is now also subject to missionary labors, and very recently mission work has been attempted on the largest island of the group. This important mission work of the New Hebrides is now virtually under control of the Presbyterian denomination. A mission-ship, entitled the Dogapiog, serves this field, and sustains connection with the Australian colonies. See Grunemann, Mission, pp. 242, 244, 251; Paton, Autobiography (N. Y. 1891, 2 vols. 12mo).

New Holland. See AUSTRALIA.

New Ireland, a long, narrow island in the Pacific Ocean, lying to the north-east of New Britain (q. v.), from which it is separated by St. George Channel; lat. 2° 40'—4° 32' S., long. 150° 20'—152° 50' E. Length about 200 miles; average breadth, 20 miles. The hills rise to a height of from 1500 to 2000 feet, and are richly wooded. The principal trees are cocos on the coast, and in the interior forests of areca-palm. The chief products are sugar-cane, bananas, yams, and cocoa-nuts. Dogs, pigs, and turtles abound. The natives are apparently of the same race as the Australian Negritos (q. v.), but our information about them is extremely
NEW ISRAELITES

No missionary labors have thus far been attempted among them worth mentioning.

New Israelites is the name of a religious sect founded by Joanna Southcott, a countrywoman, near the close of the century in England. Joanna declared herself impregnated by the Holy Ghost with a child who should prove the Siohloh of the world; and, in order to prepare the way for the new dispensation, ordered the strictest observance of the Jewish law. Although after a long time she died in 1814 in her delusion, and the splendid candle which had been prepared for the expected Messiah still remained empty, the New Israelites continued till 1831 to observe the Jewish Sabbath and the ceremonies of the law, in order to receive the hoped-for Messiah in a worthy manner. See Mathias, J. Southcott's Prophecies and Case Stated (Lond. 1832, 12mo).

New Itinerary. See Wesleyan New Connection Methodists.

New Jerusalem Church, a title assumed by a body of Christians adopting the views taught in the theological writings of Emanuel Swedenborg (q. v.). They are theosophists, and their fundamental opinion is that the Lord's work of creation took place in his a.d. 1757, when "the Old Church," or Christianity in its hitherto received form, passed away, and all things became new through revelations made to Swedenborg. This is the reason why the body calls itself "The New Church," or "The New Jerusalem Church."

1. Of God.—The New Jerusalem Church maintains the strictly personal unity of God: one will, one understanding, one operating energy or producing power. Only prominent ideas can be given in so brief a sketch as the present. The infinite, eternal Being, Jehovah, the Lord, is essential divine love or goodness, and essential divine wisdom or truth. From these two fundamental faculties or qualities proceed all his other attributes of omnipotence, omniscience, and omnipresence. He is self-existent, before all worlds, and before the times or spaces were brought forth; therefore is "in space without space, and in time without time." He cannot be apprehended by a merely natural idea, but only by a spiritual idea; nature is separate from him, and yet he is omnipresent in it. His love operates by his wisdom to produce all things.

2. Of Man.—The only divine purpose, in creation, is a heaven out of the human race. For this object and use the worlds were made, and are now sustained, and to the same end are direct all operations of divine Providence: namely, to till heaven with free, intelligent beings, who can reciprocate his love, who can live in accordance with his love, and who therefore will come to God in the fulness of the latter-day glory of the Church. As hereditary evil is no further imputed than as it is made one's own by actual life, so with hereditary good, it is only bias that is inherited, and must be made actual to be appropriated. Thus the life of repentance, obedience, faith in the Lord Jesus Christ, and regeneration, will be just as requisite as ever to every member of the race.

The fall brought in spiritual death only, and not physical death, which was a law of organized bodies from the beginning. At the fall the human race, in all ages risen almost immediately into the spiritual world, add to life and consciousness among the departed. That world is not a locality in some part of the material universe, but a plane of being above, and perpetually distinct from it. The spiritual body is a part of the world, the world is the spiritual being, and each is the vehicle of the living form which gives life and shape to the outward body; consequently, when the outward body in laid aside at death, the man comes consciously into the spiritual world in perfect human form, as the blade of new grain grows forth from within the kernel of seed cast into the ground, and so lives to eternity. Hence all spirits and angels are in human form, with indestructible bodies fitted to their mode of existence, and to the substances of their world, with every sense and faculty in full development. No deceased person ever returns to this world, or resumes a physical body.

3. The Spiritual World. — This is distributed into three great divisions: heaven (courage), the world of spirits (hades), and hell (ghennah). At death all at first go into the world of spirits (hades), intermediate between heaven and hell, where all are together until the judgment, when a separation between the good and evil is effected, the good being elevated into heaven, the wicked finding their abodes in hell.
NEW JERUSALEM CHURCH

NEW JERUSALEM CHURCH

on the principles of selfishness and disorder. The bless-
edness of the former is communicated from the Lord through the medium of their orderly and obedient states of life; and the misery of the latter is the natural results from their evil states of life and companionship. The divine mercy extends even to those in hell, desiring to elevate all to itself, but the bad quality of their life and disposition constantly prevents.

Judgment, in the world of spirits is not effected at once; the very good go sooner to heaven, the very bad sooner to hell. The mixed classes often remain in the intermediate state for long periods, accumulating there sometimes in immense numbers. At the end of each dispensation there is a judgment, which divides this mass, and for the time empties the world of spirits of inhabitants. At the close of the antediluvian period there occurred such a judgment, at the time of the deluge, and another at the close of the Jewish dispensation, when our Lord was on earth. Many of the scenes depicted in the Revelation by John are incidents of such a judgment, the last one—foretold by Daniel, and coincident with the Lord's second advent.

The association between the spiritual and natural worlds is so close that the state of the world of spirits powerfully affects the state of the world of men. When wickedness is growing, he took it into a state that was the influences of the worst kind flow back into this world and grievously afflict mankind. This was the condition of things in an eminent degree before Christ came. Mankind were almost entirely given over to wickedness. The world of spirits was filled with the abode, the fullness of the powers of hell abounded, usurping the whole field to themselves in both worlds.

"A universal destruction stood before the door and threatened." Without divine interposition, all mankind would have perished, both as to soul and body. No flesh could have been saved, the race at length would have been swept from the earth and gone into hell.

4. The Incarnation of Jesus Christ.—Jehovah himself descended, the Lord, our Father, and assumed the human nature, that he might redeem and save men. This was accomplished by the miraculous conception in the womb of the Virgin. In Jesus Christ the fulness of the entire Godhead dwells bodily. The divine Trinity, of essential constituents, is all in him in one person. The two natures, divine and human, are together in him in perfect union; his divine part he clothed upon his human part, and without which he could never appear in the world, and born in time, is called "the Son." The angel said to Mary, "that holy thing which shall be born of thee shall be called the Son of God," and this is "the only begotten of the Father." The Holy Spirit, that which is upon her, is the divine influence which the Lord abides upon the believer and the Church through his glorified human nature.

The glorification of the humanity thus assumed by the Lord is believed to be a doctrine peculiar to this system. This was a progressive work, effected by temptations admitted into his human part. The divine could neither suffer nor be tempted. There was human parentage on one side only, hence the strictly human elements naturally derived in ordinary generation, liable to temptation, and of disorderly bias, existed in him as coming from the mother only, forming thus only an exterior clothing or covering to his spiritual and natural which was the very indwelling of the Father. The external human elements were one by one successively removed and rejected; while the divine elements from within as successively came forth, and down, occupying their places in the human part, forming his human nature and made and made over anew. Thus God became Man, and Man God, in one person. Thus the two natures became and remain perfectly united; Father and Son became one. Hence, since his resurrection and ascension above all the heavens, the letter is no more like the handwriting of another man, but essentially divine in all its constitutions; a glorified, transfigured form, in which, and in which alone, supreme Divinity dwells and is manifested, as a man's soul dwells in his own body, and is manifested through that. Thus "the Lamb" becomes the only object of Christian adoration and worship, as he declares to John in Revelation, "I am He who is, and who was, and who is to come, the Almighty." He alone is worshipped by angels.

The Lord's glorification being thus a real incarnation, the Divinity coming down into the flesh is the great archetype of the Christian's regeneration and sanctification, and the procuring means by which it is wrought out. "For their sakes I sanctify myself, that they also may be sanctified through the truth." It is ours to "follow" him "in the regeneration," and "overcome" even as he "overcame." From those states of temptation, resistance to the influences of hell, combat, and victory in himself, he gives the Holy Spirit, which is a powerful spiritual influence, flowing from his own exercise of love, power, and will in similar states; aiding, strengthening, and healing the faithful believer in his states of trial, temptation, and combat. He took on him the nature of angels, but the seed of Abraham. "For that he himself hath suffered, being tempted, he is able to succor them that are tempted." He "was in all points tempted as we are, yet without sin." Thus he becomes our example of victory and purity and holiness. He was sacrificed himself day by day; his whole life was a sacrificial offering for our sakes, and by his stripes we were healed. Such was the work of reconciliation or atonement.

By the process of glorification he effected also the work of redemption, which was a purely divine work, consisting of a subjugation of the powers of hell, represented and embodied in hosts of wicked spirits or demons, which held mankind in spiritual bondage, and, without relief, would have utterly destroyed them. He executed a judgment in the world of spirits, casting down Satan and his crew. The passion of the cross was the last great temptation which he as greatest Prophet endured, and which completed the work of his own glorification and of the subjugation of the powers of hell, so as to keep them in subjection to his humanity forever, to the perpetual liberation of mankind.

5. The Bible.—The plenary inspiration of Holy Scripture is maintained in a supereminent sense. The Lord is believed to be immanently present in his Word by his Spirit. A clear distinction is made between the two natures of the Word of God, one of the human part to be revealed in immediate, or between that which is dictated or spoken to the prophet and that which is given by infu(d)ed; thus, in the Old Testament, between "the Word of the Lord" and the "Kethubim" of the Jewish Scriptures. The term "Word" is held to have been spoken by a living voice from on high, which contains everywhere within it a spiritual, heavenly, or true Christian sense. The whole "Word," while it is true, literal history, is at the same time what the apostle calls the history of Sarah and Hagar, viz, a divine allegory; in which lessons of salvation were couched under a veil of natural thought and imagery. The law of this figurative or symbolical mode of expression is simple, according to the universal analogy of nature, expressed by the apostle, "the invisible things of the Creator are seen in the things that are made," is called the "law of correspondences." Many applications of this law are so obvious that the Church in all ages has understood portions of the Word according to it. In this system it is applied to the whole "Word," and its universality and uniformity is maintained. The divinity of the written Word is here used in its widest sense, including the five books of Moses, Joshua, Judges, Samuel, Kings, Psalms, and all the prophets. The writers had "open vision," having immediate communication with the spirit of inspiration, exercising a "prophetic" gift, according to apparent truths, or the appearances of truth, while the spiritual sense is always according to genu-
ine truth. To the remaining books, nearly coincident with the "Kethubim" of the Jews, a similar style and meaning is imputed to that generally held among Christians, their entire meaning is conveyed in their plain, grammatical sense. A similar distinction is carried forward into the New Testament. The four Gospels and the Revelation are held to be the divinely inspired "the Word of the Lord," and to contain a "wheel within a wheel," a spiritual meaning within the letter, while the apostolic writings, penned by "men filled with the Holy Spirit" and communicating with heaven, yet do so less immediately than the others, and convey all their meaning only after the spirit has done its work. As external ends are constantly kept in view by the Lord, temporal things being regarded only as they may be made subservient to the interests of the soul. The divine inspection and operation descend to the minutest particulars of every man's life, the object being to regenerate every one who is now in the process of being regenerated, and so to bring him to heaven at last, if possible.

6. The Divine Government.—The providence of the Lord is his government of the world, exercised from love and guided by infallible wisdom; most scrupulously preserving man's freedom in everything, while directing all affairs to the divine end. External ends are constantly kept in view by the Lord, temporal things being regarded only as they may be made subservient to the interests of the soul. The divine inspection and operation descend to the minutest particulars of every man's life, the object being to regenerate every one who is now in the process of being regenerated, and so to bring him to heaven at last, if possible.

7. Salvation.—In order to be saved, all men require spiritual regeneration, in which the desires of the heart and the ideas of the thought are entirely renewed. This is not the means by which the divine intentions are produced; a new creation or new birth, man all the while co-operating by shunning in his life whatever is sinful in the sight of God. While man works externally, God works internally. All merit belongs to the Lord, there is none in man. The superabundant divine goodness or mercy is the imputive ground or forensic basis of forgiveness, which is freely accorded to all, under every dispensation, on the simple condition of repentance and departure from evil. "All his transgressions that he hath committed, they shall not be mentioned unto him" (Ezek. xxviii, 22). As sins are forsaken in the name of the Lord they are remitted. "Repayment is his," being the result of man's own free choice of life; and "effectual calling" depends upon his own perseverance in the way of righteousness. First comes reformation of conduct, and then regeneration of the heart, or, as it is sometimes called, sanctification, a progressive work, continuing to eternity.

The means of salvation, on the part of man, is a life according to the divine precepts contained in the Word. This is an all-inclusive belief, comprehending everything comprehensive, and the only truly comprehensive one that can be used; for he who lives in the effort to obey what is commanded in God's holy Word will be in the right way to procure every element of a pure and righteous life. He will believe the Gospel, have faith in Christ, possess charity in the affections of the will, and show forth good and acceptable works. Religion in the heart, which is love or charity, religion in the understanding, which is faith in genuine truth, and religion in the actions, which are good works, are held to be equally necessary to the Christian life or character; and the degree of purity is marked by the degree of conformity to the precepts of truth one yields in actual life.

8. Sacraments.—Baptism and the Holy Supper are the only two sacraments; they are of divine institution, or permanent obligation, and, like the Word in which they are found, are to be permanently communicated, communicating with heaven. They are means of actual grace, being media of bringing down renewing and sanctifying influences into the minds of worthy recipients. Hence to these they are signs and seals of divine blessing, but bring no good to the unworthy.

9. Eschatology.—One of the most noticeable features of this theology is its doctrine of eschatology. It is maintained that angels and devils, all inhabitants of the other world, indeed all finite spiritual beings, are men, and have originated in material bodies on some earth or planet. Heaven, therefore, owes its increase to the Church on this and other earths. The physical globe being thus needed as a seminary for mankind, where both angels and beings born on earth will, at first, live, and the Great City, or Jerusalem, when heaven, will never come to an end, nor be destroyed, nor have the historical continuity of its affairs broken up, but, with the starry heavens above, will perpetually remain for this use, a monument of the wisdom and goodness of the Creator. The "consummation of the age" spoken of under the Gospel dispensation, to the first Christian age, or closing up of the apostolical dispensation, the second coming of the Lord, and a consequent judgment. These events, it is alleged, have already taken place, or are now in process of being fulfilled. The things foretold in the Book of Revelation by John are at this day receiving their fulfilment. The end of the former dispensation came about the middle of the last century, after all things in the divine providence had been prepared. As explained above, the judgment is a process belonging to the unseen world, being effected upon the moral spirits only. Souls can be regenerate, and so to bring him to heaven at last, if possible.

The second coming of the Lord is not personal, visible, but spiritual. As to its outward means or instrumentality, it consists of a body of new truth or doctrine, disclosed from the true meaning of his own Word. The entrance of this body of doctrine into our world is prefigured by the birth of the man-child in Revelation, and the opening of the book sealed with seven seals symbolizes the opening or explanation, the spiritual or heavenly meaning of the Bible. The Lord comes thus to the rational thought of mankind, creating a new dispensation of light.

The execution of the judgment in the world of spirits in 1755 removed many infidel and obstructing influences that had hindered the progress of the kingdom of mankind. A vast dark cloud of evil hovering over Christendom in the invisible world was disipated, and better influences from heaven began at once to flow in, taking effect over the whole Church, and in all parts of the world. The extraordinary changes that have since taken place, and the new age of light and progress since inaugurated, are regarded as proceeding from this cause, as being visible tokens of the Lord's second advent, and as striking confirmations of Swedenborg's representations. The presumption is that the changes will continue, the opinions of men gradually modifying, until these truths are generally recognised and accepted.

From the divine Word thus opened, explained, and interpreted comes the system of divinity here taught, a revealed system, the one meant by the Lord, and believed and understood by the angels, and thus taught in the Lord's council of angels. The signification of the earth having the heavenly platform, and therefore en-
NEW JERUSALEM CHURCH

will walk by the light of it. It will be composed of all those who acknowledge and approach the Lord Jesus Christ also as the only head of the heavenly earth, and lead a life of obedience to his precepts. It is called the Bride, the Lamb's wife, because it worships the Lord Jesus only, being spiritually conjoined to none but him. As this earth is needed as a seminary for the propagation of the truth in its institution for the human race, marriage is the divinely appointed means to that end; in itself a mystical institution, the very foundation of heaven and the Church. The union of one man with one woman is essential to its very existence. By shunning every impurity as a sin against God, the love between the partners becomes constantly cleaner and purer; the distinction of sex pertains to the soul, the two minds are exactly fitted to form a union, and the spiritual love and friendship of a pair remaining obedient to the divine precepts may continue to eternity. Wedlock is not only more useful than celibacy, but to those who follow a life of righteousness is spiritually purer, and more conducive to regeneration. Every departure from strict conjugal chastity, even in thought, is a diversion towards hell. By some reviewers, Swedenborg has been charged with the sin of impurity in his works; this can be found from the truth. He discriminates very clearly and justly the different degrees of disorder and criminality, but affords not the slightest plea for the least latitude on the part of a Christian. (See the editorial additions below.)

The man who in no wise has an idea of this system, or any of its parts, in a mere statement, arises from its comprehensiveness, and its exhaustive thoroughness in all its particulars. It is pervaded throughout by a profound philosophy of man, the soul, human society, and the universe, which cannot be wholly transferred to other pages of light. It is its nature. It is alleged by its most intelligent students to be perfectly consistent and coherent throughout, and to answer satisfactorily every question which the rational religious mind desires to ask. It has undoubtedly definite teaching on a larger number of points than any other system of theology or philosophy that has ever appeared in the world. For some account of the writings in which it is contained and the literature of Swedensborgians, see the article on Emanuel Swedenborg in this work.

II. History and Organization.—Swedenborg took no steps towards an ecclesiastical organization, nor was there any movement of the kind until many years after his death, the first notices of it appearing about 1780. Since then there has been a steady and nearly uniform increase, not only in the number of adherents, but of churches, being not found in all parts of the Christian world, and to some extent in regions beyond. They are making progress in Sweden, Norway, Denmark, Russia, France, Germany, Switzerland, Great Britain, South Africa, Australia, and the East Indies, as well as in America. In Great Britain Swedenborgianism found its earliest organization under the name of "Theosophical Society" in 1788, and thus continued until 1788, when Robert Hindmarsh (q.v.) and friends hired a chapel in London, and established public worship and preaching according to Swedenborg's doctrines. The example was soon followed in other places, and there is in that country since the beginning of this century a General Conference, which was composed in 1873 of 58 societies, 26 ministers, and 4019 members, holding annual sessions, maintaining publishing and missionary societies and periodicals, besides many churches or congregations not in connection with the general body. There are numbers, too, of clergymen and laymen adopting a large portion of the views while retaining their connection with the other denominations. In Canada there is an association, composed of several ministers and churches, called the "New Jerusalem Church of Canada," with several members, having an "ordained minister," or presiding bishop.

In the United States, where the first Swedenborgian Church was organized in 1792, at Baltimore, Md., a General Convention exists since 1817, incorporated under the law, having associations, societies, and members in nearly all the states in the Union; in 1890 it reported 113 ministers, 154 societies, and 7095 members; it holds annual sessions in different cities, maintains a Board of Publication, with a publishing-house in New York, and three periodicals. A new society has a theological school at Wallingford, Mass., an American New-Jerusalem Sunday-School Union, and a New Church National Church Music Society. No very precise ecclesiastical forms are prescribed in these doctrines, much freedom being allowed in this respect to the individual. The use of ecclesiastical terms, is confined to the practical wisdom of the Church, the power being vested in the whole body of membership. The form principally assumed in this country is a modified or moderate episcopacy, with a ministry in three orders. Each state association has its "ordinating minister," or ecclesiastical overseer, whose office is permanent. In most of the congregations the ministry has assumed a partially liturgical form, and a variety of liturgies, books of worship, and manuals of devotional have been issued in this country and in England. Ecclesiastical organization is not adopted in its own form, and several all forms are found in use, from the simple, extemporaneous modes of the Puritans, to the ritual services of the prelatical churches. In all, however, forms expressed in the exact language of Scripture are preferred. In the General Convention the form of the litany is used; and in the new society meetings of conference are not held by the body. The accredited organ of the New Jerusalem Church in Great Britain is the Intellectual Repository, published in London; in Germany, the Wochen Schrift für die Neue Kirche, at Stuttgart; in Italy, La Nuova Esperienza, in the United States the Journal of a New Church, at New York; and the Neue Kirche, at Baltimore. In England there is also published the Juvenile Magazine, and in this country the little Messenger, for the youth.

There is also a "New Church Congregational Union," composed of ministers and churches, with an aggregate membership of about 1000, preferring that form of organization, having its headquarters at Philadelphia, and maintaining its own Board of Publication, Tract Society, and periodical. There are, too, independent societies or churches, not in association with any general body, with numbers of believers communing in other denominations, and others not in connection with any Church.

Articles of Faith.—The Scriptures, as interpreted by the various and various versions of Swedenborgians, are taken generally as the standard of Swedenborgian doctrine; but a synopsis of their founder's opinions was made at the first organization of the sect in the form of forty-two propositions, taken from his works, and these propositions were embodied in thirty-two resolutions, which were agreed to at the first Conference on April 16, 1879. These thirty-two "Resolutions" have again been condensed into twelve "Articles of Faith," which now form the standard of doctrine in the "New Church." They are as follows:

1. That Jehovah God, the creator and preserver of heaven and earth, the one love and wisdom, and wisdom itself, or good itself, and truth itself: that he is both in essence and in person the Father, Son, and Holy Spirit, which are the essential Divinity, the Divine Humanity, and the Divine Proceeding, answering to the soul, the body, and the wisdom and energy in man: and that the Lord and Saviour Jesus Christ is that God.

2. That Jehovah God himself descended from heaven as divine truth, which is the Word, and took upon him human nature, the purpose of removing from man the powers of hell, and restoring to order all things in the spiritual world, and all things in the Church: that he reformed human society by the power of hell by both spiritual and temporal victories over them, in which consisted the great work of redemption: that for the same acts, which were his temptations, the last of which was the passion of the cross, he united in his humanity divine truth to divine
good, or divine wisdom to divine love, and so returned into his divinity in which he was from eternity, together with and in his glorified humanity, whence he forever knows all things aright, is in deed by himself; and that all who believe in him with the understanding, from the heart, and live accordingly, will be made partakers of the same, or Word of God, is divine truth itself, containing a spiritual sense herefore unknown to men: and that the natural sense of the word is not only syllable, as well as a literal sense, which is the basis of the spiritual sense, and in which divinity is in its fulness, lifted up to his divinity, and so comprehended by the apprehension both of angels and men: that the spiritual and natural senses are united by correspondence, as by the words of natural sense to the pure and sweet image answering to and including a spiritual and divine idea of truth, that the Lord communicates by conversation with heaven and of conjunction with the Lord.

4. That the government of the Lord's divine love and wisdom includes all things that are in heaven and in the world, and is therefore required according to certain fixed laws of order, and extending to the minutest particular of the life of all men, both of the good and of the evil; that in all its operations it has respect to what is infinite and eternal, and makes no allowance of things transitory, but as they are subservient to eternal ends; thus, that it mainly consists with man, in the conjection of things temporal with things eternal, which it is, the only divine providence is to Join man to himself, and himself to man, that he may be able to give him the felicities of eternal life in the laws of eternal life, or also laws of the divine providence, since evil cannot be prevented without the conjection of divine things of life and the divine things of death, and also because it cannot be removed unless it is known, and cannot be known unless it appear: thus that no evil can be prevented but by the Lord, and all the evil is overruled by the Lord's divine providence for the greatest possible good.

5. That good is not life, but is only a recipient of life from the Lord, who, as he loves itself, and wisdom itself, is also life itself, which life is communicable by influx to all in the spiritual world, whether belonging to heaven or to hell, and to all in the natural world, but is received and enjoyed only by every one according to his quality and consequent state of reception.

6. That man, during his abode in the world, is, as to his reason, a kind of sidereal, a representative of the heavenly walk, as it is determined by influences from both, and thus is kept in a state of spiritual equilibrium between good and evil, in consequence whereof he enjoys a share of the freedom of the choice in spiritual things as well as in natural, and possesses the capacity of either turning himself to the Lord and his kingdom, or turning himself away from the Lord, and connecting himself with the kingdom of darkness; and that a man's present state is so far from being of use, the Church would be a mere name, man would possess nothing by virtue of which he could be chargeable on himself.

7. That at man's day is born into evil of all kinds, or with tenacities towards it; that, therefore, in order to his entering the kingdom of heaven, he must be regenerated. By a new, an entirely new, and perfect state in progressive manner by the Lord alone, by celerity and faith as mediators during man's co-operation: that as all men are not capable of being regenerate, certain and consequently saved, every one according to his state; and that the regenerated man is in consequence of this, and of the union with the Lord, with the spirits of hell: but that no one is condemned for hereditary evil, but only for evil that is his own, on account of his life; whence all who die in infancy are saved, special means being provided by the Lord in the other life for that purpose.

8. That repentance is the first beginning of the Church in man, and that it consists in a man's examining himself, both in regard to his deeds and his intentions, in knowing and acknowledging his sins, confessing them before the Lord, and supplying him for good, and beginning a new life: that to this end all evils, whether of affection, of thought, or of life, are to be abhorred and shunned as abominable and execrable, and they are shunned by the spirits, who, in the aggregate, are called the Devil and Satan; and that good affections, good thoughts, and good actions are estimated to a great extent and in proportion as they are conformable to the Lord and his kingdom, or the union with the spirits of hell: but that no one is condemned for hereditary evil, but only for evil that is his own, on account of his life; whence all who die in infancy are saved, special means being provided by the Lord in the other life for that purpose.

9. That charity, faith, and good works are united necessarily to salvation, since charity without faith is not spiritual but natural, and faith without charity is not spiritual but natural: that they are all necessary, and that no good works are merely mental and perceptible things, because without use or effect, and that nothing of faith, of charity, or of good works is of man, but that all is of the Lord, and all the merit is his alone.

10. That Baptism and the Holy Supper are sacraments, not only to signification, by which the things signified,—baptism being an external medium of introduction into the Church, and a sign representative of man's purification—both by water and by the Lord's Holy Spirit, through the medium of baptism, and the Holy Spirit being an internal medium, to those who receive it worthily, of introducing them into a state of salvation and a new life in ecclesia, in communion with the Lord, of which also it is a sign and seal.

11. That immediately after death, which is only a parting, the state of a man is continued, and may also be renewed and raised up again in a spiritual or substantial body, in which he continues to live to eternity, in heaven if his ruling affection is good, and in hell if his ruling affection is evil, according as his life has been good or evil.

Regarding the thing concerning the resurrection of the body, the Lord, which is a coming, not in person, but in the power and glory of his holy Word: that it is attended, like his appearance on the Mount of Olives, as an external thing in the spiritual world, where the wonderful divine operation, commonly expected under the name of the Last Judgment, and declared to be a subversion of the world and the preparing of the way for a new Church on the earth—the first Christian Church having spiritually come to its end or consummation through evils of life and errors of doctrine, as foretold by the Lord in the Gospel; and that this new or second world, in which there will be the crown of all churches, and will stand forever, is what was representatively seen by John when he beheld the holy city, new Jerusalem, coming down out of heaven, prepared, as a bride adorned for her husband.
of the "New Church;" and consequently the second advent of the Lord has even now been realized in a spiritual sense by the exhibition of his power and glory in the church of Boston.

Another important divergence in Swedishborgian belief from other Christians is that respecting holy Scripture, which is so stated by Mr. Hayden as hardly to convey clearly the belief of his Church. A reference to the third article of the Articles of Faith will make it clearer, and yet even it does not fairly cover it, for it omits the statement of the twelfth proposition taken from Swedenborg's A Arcana Coelestia and other "revelations." This statement is that the books of the Word are all those which have the internal sense, which are as follows, viz., in the O. T., the five books of Moses, called Genesis, Exodus, Leviticus, Numbers, and Deuteronomy; the book of Joshua, the book of Judges, the two books of Samuel, the two books of Kings, the Psalms of David, the prophets Isaiah, Jeremiah, Lamentations, Ezekiel, Daniel, Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi; and in the N. T., the four evangelists—Matthew, Mark, Luke, and John—and the Revelation. And that the other books, not having the internal sense, are not the Word (A Arcana Coelestia, n. 103, 294). Mr. Newhall has noted the book of Job, which is not in the O. T., and is difficult to reconcile with the above statement. Thus ten books of the O. T., the Acts of the Apostles, and all the epistles of Paul and the other apostles, are set aside as not part of "the Word of the Lord."

The remaining articles of the Swedishborgian Confession may be passed over without comment, since they deal more with theosophical views of love, wisdom, re
teptance, charity, faith, good works, etc., than with important articles of faith. It may be added here that when, in 1788, it was determined to effect a permanent religious organization of all Swedishborgians, it was thought expedient to establish a settled ministry, and it was arranged, by drawing lots, that Robert Hindmarsh, the printer, should ordain his father, James Hindmarsh, and Samuel Smith, both of them being Methodist preachers who had seceded from Wesley's society. In the year 1818 the eleventh General Conference of the sect settled some doubts which had been raised as to the competency of Robert Hindmarsh to ordain others, seeing he had not himself been ordained, by determining unanimously that Mr. Robert Hindmarsh was virtually ordained by the divine auspices of heaven, he having known the name of the true church, etc. (A. C. p. 72, 810). In 1815 "a trine, or threefold order" of the ministry was established. It consists of the ordinary ministers, ordaining ministers, and a minister superintendent over and in behalf of the New Church at large.

New-Light Anti-Burgheers. See Anti-Burghers.

New-Light Burgheers. See Anti-Burghers.

New Lights, a name frequently given to the early Christians in contempt. In modern times the expression has been applied to some seceding ecclesiastical bodies in Scotland, as, e.g. The Fifth Monarchy Men (q. v.). The Separates (q. v.), a sect of Calvinistic Methodists organized in this country near the middle of last century, were at first known also as New Lights.

Newlin, Thomas, B.D., an eminent English divine, was born at Winchester in 1689. In 1766 he was elected dey of Magdalen College, Oxford; became M.A. in 1718, and actual fellow in 1718. He was presented to the living of Beeding, Sussex, in 1720, and died in 1743. In his writings, he exhibits a noble and upright character, and was especially esteemed for his simplicity of manners and integrity of life. His sermons have always been greatly admired. "There is a zeal and pathos in them which rank them among the most useful sermons and eloquent compositions that have been printed in this language" (Chalmers). Many of his sermons are inserted in Dr. Viscount Knox's Family Lectures, and in Clapham's Collection. Newlin published five separate Sermons (1718-1736):—Eighteen Sermons on Several Occasions (Oxf. 1720, 8vo);—One-and-Twenty Sermons on Several Occasions (Oxf. 1726, 8vo);—and translated from the Latin bishop Thomas Parker's Breviaire de 51 Oeuvres (51 Times, 8vo). See Darling, Cyclop. Bibliographicii, ii, 2174.

Newman, Francis William, an eminent English speculative writer, perhaps the ablest and most noted of modern theists, was born in London in 1805. He received his preparatory training in his own home and at the school of Ealing, and thence passed to Worcester College, Oxford, where he obtained first-class honors in classics and mathematics in 1826, and in the same year a fellowship in Balliol College. This fellowship, however, he resigned, and he returned from the university in 1830, at the approach of the time for taking the degree of M.A., declining the subscription to the Thirty-nine Articles, which was then required from candidates for the degree. He set out on a lengthened tour in the East, and spent nearly three years (1830-1833) in various parts of Turkey, in the course of which he exercised his talent, engaged in missionary work in the East, and finally relinquishing this work for philological and social studies of the Turks. As the result of his observations in that country we have from his pen letters sent at the time, which give a true picture of the present state of Turkey; they were sent forth, entitled Personal Narrative in Letters, principally from Turkey, in the years 1830-1833. Shortly after his return home he was appointed classical tutor in Bristol College (1834). In 1840 he accepted a similar professorship in Manchester New College; and finally, in 1846, his great reputation for scholarship, as well as his general accomplishments, led to his appointment to the chair of the Latin language and literature in the London University, which position he held until 1863, when his numerous literary engagements made it necessary for him to quit the school-room. Yet even while in the professorial chair Mr. Newman was engrossed by numerous and varied engagements; thus he not only became an active contributor to several literary and scientific periodicals, and to various branches of ancient and modern literature, but took also a leading part in the controversies on religion, in which he was the chief single voice hostile, like the other religious opinions, far too much for the change of his opinions. The well-known work, Church, was translated to the History of My Creed (1850, and often; replied to from the orthodox standpoint in Rogers' Eulogion, see answer to the first edition (1853), which in turn elicited a response from Rogers, entitled A Defence of the Eulogion (2nd ed. 1845), and of many essays in the Westminster, Eclectic, and other reviews; but he is also the author of very many sermons, publications, and Commentaries, all of which relate to the fundamental questions of the controversy to which we have referred, as Catholic Union:—Essays towards a Church of the Future (1844):—A State Church not Defendable (1845);—A History of the Hebrew Monarchy (1847);—The Soul as a Sorrow and a Suffering (1849);—Solomon's Song of Songs, a new translation (1857):—Theism, Doctrinal and Practical, or Didactic Religious Utterances (1858). Few men have labored as successfully as F. W. Newman in speculative theological fields. A scholar and a thinker of first-class attainments, he has taken a prominent part in the controversies of the day, and has commanded the respect of his contemporaries. In England especially he has exerted a widespread and powerful influence, though it must be confessed, as it may seem, a benevolent influence. Rather mystical in his religious notions, he has done the most that any Anglican cleric of his day to uphold the best types of Christian manhood, and a personal forgetfulness for Christ's sake. His declarations, however,
would, if successful, take us to the foundations of the Christian religion; thus strongly and strongly contrasting, by his tenacious clinging to its highest as well as humblest associations, with his strong but inconsistent love for the very letter of Scripture, and his profound conviction of the essential truth of Christian-

ianity. With him religion is wholly subjective and in- nate; the tenets of a dispensation of divine truth from any revelation or external source whatever. Not only does he distinguish between religion and theology, as he should do, but, like our own L. Theodore Parker (q. v.), he separates the one from the other, and flings the former with contempt away al- together. His logical consistency we cannot call in ques- tion. Indeed, his power of reasoning has been com- mended alike by friend and foe, and there is the more fault to be found with his premises, which are chiefly some palpable and isolated sophisms. He denies the doctrine of the Trinity, rejects that of eternal punish- ment, and assails the canon of Scripture; but he more- wisely espouses the Arminian view on the doctrine of the will. Indeed, it is generally and reasonably asserted that his estrangement from orthodoxy Christianity was caused by his logical consistencies. He received in his youth. While his early religious views are laid down in Phases of Faith, his work on the Soul is the most complete and the latest exposée of the views in his mature years. That work treats first of the "Sense of the Infinite without us." It shows how this sense is the result of many as well as of a few emotions, as these emotions are begotten by the soul's consciousness of the mysterious and sublime and lovely in the facts of its environment. These are the preparations of the heart for love; for they are antagonistic to our selfish- ness. Even the domestic affections tend to multiply self, rather than to kill out selfishness. Enthusiasm is wanted. Enthusiasm is the life-blood of morality. The sense of order marks the next stage of human aspiration; and this, in turn, is followed by the sense that the eternal order is both good and wise. The sense of personality, which glimmers in the first senti- ment of awe, now floods the spirit with its beams, and culminates in the soul's sense of sin and longing for enfranchisement, evolving under natural and regular conditions a sense of personal relationship with God. Out of this sense of personal relation comes the "prayer of faith," addressed to God in perfect confidence that he will hear and answer it, and from this sense is born the sweet assurance of immortal life. Such is the scheme, and it is carried out with a great deal of force and earnestness. This work was superseded by Theism, which Mr. Newman himself pronounces a satisfactory and sound school of thought as the former work (see Christian Examiner, May, 1866, art. iv). Newman's proof of God is presented as follows: His first axiom is that the omnipresence of the universe, which we discern as animating the universe, is not blind, but intelligent; the second, that God must have all the human spirit's faculties, and more besides; the third, that God observes our moral actions, approves the right and disapproves the wrong; the fourth, that if he approves our rectitude, his must be perfect; the fifth, that the adoration of God is intrinsically suitable to man; therefore such adoration is pleasing to God. These axioms are intuitive, but they are capable of being verified; and, before stating them as axioms, Mr. Newman seeks to verify them. His first test is that of congru- ity; Are they self-consistent, and consistent with known facs? His second test is that of universal reason; the common frame of awe; and his third test is that of practical experience. A postulate from these axioms is that God gives spiritual strength to them that ask for it in prayer. He does not claim this for an intuition. But we pray instinctively, and experience tells us that we never pray in vain.

Who, then—having faith that God is the fountain of holiness; and in whose heart our virtue is so strongly deepening—can doubt that when we pray and surrender our worse, not only thereby do we welcome the better that was within, but the living Source of that better swells the flood of his presence: so that the conscience itself becomes tender and pliable, and stronger, less depriving, enfiling the inward moral forces."—Thiem, p. 196.

It will be seen from this synopsis that there is much in Mr. Newman's work that is likening him to the American theist Parker. In many respects he is a parallel to the latter, and his superior of Parker. The latter's method of reasoning was less formal and exact, and the life, too, not quite so Christ-like as that of the English theist. Newman died in 1876. Aside from Mill, no other English writer should claim so much of the attention of the theological student as F. W. Newman. He was possessed of that un- usual breadth of intellectual tastes and accomplishments which gave such eminence to Mill; and, unlike the lat- ter, he did service to Christian theology by his valuable contribu- tions to the evidences for a deistic faith. Like Mill, Newman was continuously a polemicist to that region of his philosophical attainments, and was especially noted for his mastery of the Oriental tongues, particularly the Arabic. For a list of his publications in these departments we must re- fer again to the Dictionary of National Biography. 1854, July, p. 394 sq.; Oct. art. i; Westminster Review, Oct. 1858; Oct. 1870, p. 220; Ecclesiastic Review, 4th ser., xxvii, 257 sq.; Fraser's Magazine, xxxii, 235 sq.

Newman, Jonathan, a noted pioneer minister of the English Episcopal Church, flourished near the opening of this century. Of his early religious views and literary work we know scarcely anything. In 1791 he finds him laboring in the Wyoming valley, which unites Pennsylvania and New York, and later in Otsego County, N. Y., where he was instrumental in forming the district. This country was at that time wild and sparsely settled, with scarcely any roads and many destitute people. Newman by indefatigable industry succeeded in rallying many to the Christian work, and when the district was formed eighty members were reported as belonging to it. He next extended his labors over the Mohawk valley, and when Garretson (q. v.) came to that region Newman's preparatory work proved more service- able than had been expected. He was a "mighty preacher, and usually in the advance line of attack," and wherever he went he made friends and converts. Newman compiled an account of the opening of the present century. See Peck, Early Methodism, p. 174 sq; Stevens, Hist. M. E. Ch. ii, 293, 320. (J. H. W.)

Newman, Samuel, a minister of colonial days in this country, was born at Bunbury, England, in 1692, and was educated at Oxford University, where he gradu- ated in 1690, and immediately took holy orders in the state establishment. In 1686 he emigrated to America, and, after staying a short time at Dorchester, now Bos- ton, Mass., was chosen minister of the church at Wey- mouth. In 1644 he removed to Rehoboth, and there preached until his death, which occurred July 5, 1666. Newman compiled a Concordance of the Scriptures, and passed through several editions, under the title of the Cambridge Concordance (5th ed. London, 1720, fol.)

Newman, Samuel P., an American educator and rhetorician, was born at Andover, Mass., in 1796, and was educated at Bowdoin College, where he graduated in 1816. In 1834 he was made a professor of rhetoric and oratory in his alma mater, and he held that position until 1839. He then became principal of the State Normal School in Mississippi, and died while in the discharge of the duties of that office at Barre, Mo., Feb. 10, 1842. He published a Rhetor., a treatise on Political Economy, and a series of Southern Ecclesiastic Readings.

Newman, Selig, a noted Jewish scholar, emi- nent as an Hebraist, was born in the city of Posen, Prussian Poland, in 1796, and received the best educa- tion that could be procured in various Jewish colleges
in Prussia. He decided to devote himself to Biblical studies, and even at an early age his renown was so great that he was given an apartment in the Augustine Synagogue of Berlin. He went to London when about twenty-eight years of age, and was soon afterwards appointed minister to the congregation at Plymouth by the late chief rabbi, Dr. Solomon Herschell. Afterwards, for many years, he taught Hebrew in Oxford, and was not only a learned scholar, but also a man of high character. In Oxford he studied under an old law in that university which precludes all other than Protestants from holding that office. Yet for many years the heads of that university, by their own example, encouraged such a sequestration in Hebrew to study under him. When at length several converted Jews came to the university, he was compelled to leave, and to seek a home in America at an advanced age. Among the eminent men who were his pupils in England was Dr. Tait, the present archbishop of Canterbury, who, no doubt, had never been in England, would have placed him upon the mixed learned commission of Christians and Jews now engaged in revising the authorized translation of the Bible. Competent authorities pronounce him to have been the best Hebrew scholar of the present day, and learned rabbi. He had a great interest in the chief institution of Hebrew literature. The late Rev. Dr. Raphael, Prof. Marks, of London, and other eminent Israelites, were among his pupils. In the United States Newman found no official connection, but a young man, who had married his daughter, but based himself mainly with his own writings, on which he was engaged until the hour of his death, Feb. 20, 1871, at Brooklyn, N. Y. His works consisted of a Hebrew and English Lexicon, an Hebrew and English Lexicon, a Hebrew Grammar, a popular work, entitled The Challenge Accepted, being in the form of a dialogue between a Jew and a Christian, and Emendations of the Authorized Version of the Old Testament. His last work, which he had just completed, is still in manuscript, and is an abridged translation of the Bible, with copious notes, intended for the use of Jewish schools and private families. There is every reason to believe that, at his advanced age, the close application he gave to this work hastened his end. His intellect was clear and vigorous to the last. Selig Newman was an enlightened man, opposed to bigotry, but at the same time a strong defender of the religious principles of his faith, and always ready to battle for Judaism. At one time, when the conversionists were most active in England, they selected their most competent advocate to challenge the Jews to a public discussion. Selig Newman was selected by such Israelites, who felt an interest in this discussion as they wished to challenge the Christian advocate, and he did so, the discussion being carried on for many nights in public at the Freemasons' Hall Tavern. He afterwards delivered sermons to the Jews for many Sabbaths at the Jew's Free School, the building being always crowded by anxious listeners, but his duties at Oxford compelled him to relinquish this, to him, pleasurable task. His views on Christianity are embodied in his The Challenge Accepted, a book worthy of the study of Christian apologists. [L. H. W.]

Newmarket, an English market-town, situated in the county of Suffolk, is noted in English ecclesiastical history as the seat of a Church council which is reported to have been held there in July, 1161, by Henry II, king of England, and is denominated Concilium operis Norvegici Mercatus. This ecclesiastical gathering is said to have received the approval of papal commissioners (q. v.), and to have declared against the antipope Victor. Binius and others call this an English council, but Labbe (Concil. x, 1406) contends that the Novum Mercatum is the Neufmarchi in Normandy, in the diocese of Rouen. Inset, in his History of the English Church, ignores this council altogether.

New Moon (נַעַם, 'och'desh, strictly newness; fully נַעַם, beginning of the month) (as in Numb. x, 10; xxviii, 11), since Nissant stands likewise for "a month" (q. v.). Sept. *νόος* or *νήσσις*; Vulg. calendus, a new month or a lunar month, is the name given to the Jews. Many ancient nations celebrated the returning light of the moon with festivities (Isidor. Orig. v, 33; Macrobi. Sat. i, 15, p. 278, Bip. ed.; Tactius, German. vol. ii)—offered sacrifices (Suid. s. v. ἀναξιόσημος; Meursii Græciæ Fernal. v, 211 sq.) and prayers (Demost. In Access. i, 769; Horace, Ædes, iii, 23, 1 sq.), festal Hebr. Or. iii, 19, 9 sq.; comp. Concil. Tr. can. 62; Mansi, x. 974), and made merry (Theophr. Char. 5; Doughti Annal. i, 133; Spencer, Legg. rit. iii, 4, p. 1045 sq.). In the following account of this usage we bring together the Scriptural and the Talmudical notice.

1. Celebration and Sanctity of this Festival. —All that the Mosaic code says on the subject is contained in the two passages enjoining that two young bullocks, a ram and seven lambs of the first year as a burnt-offering, with the appropriate meat-offerings and drink-offerings, and a kid as a sin-offering, are to be offered on every new moon in addition to the ordinary daily sacrifice, and that the trumpets are to be blown at the offering of these special sacrifices, just as on the days of rejoicing and solemn festivals (Numb. x, 10; xxviii, 11–15). It is, however, evident from the writings of the prophets, and from pious legal documents that the observance of the new moon was an important national festival. It is placed by the side of the Sabbath (Isa. i, 13; Ezek. xxvi, 1; Hos. ii, 3), and was a day on which the people neither traded nor engaged in any handicraft-work (Amos viii, 5), but had social gatherings and feasts (Isa. xxcv, 5–24), reported for public instruction, either to the Temple (Isa. i, 13; Ixxv, 23; Ezek. xxvi, 1, 3), or to the houses of the prophets and other men of God (2 Kings iv, 23); and no national or private feasts were permitted to take place, so as not to mar the festivities of the day (Judith viii, 9; Maccab. ii, 10). The Urim and Thummim were placed in the Temple by the Levites while the special sacrifices were offered; and to this day the Jews celebrate new moon as a minor festival. The day previous to it, i.e., the 29th of the month, which is called בִּין תְּמוֹנָת, New Moon Eec, נָמַשׂ (Judg. viii, 6), is kept by the orthodox Jews, in consequence of a remark in the Mishna (Shehoah, 1, 4, 5), as the minor day of atonement, and is observed by reading the Scriptures and prayer, both for the forgiveness of the sins committed during the expiring month, and for a happy new month. It is for this reason denominated בִּין תְּמוֹנָת, since they say that, just as the great day of atonement is appointed for the forgiveness of sins committed during the year, this minor day of atonement is ordained for the remission of sins committed during each month. They resort to the synagogue, put on the fringed wrap, or Tallith [see Frunior], and the phylacteries; whereas the leader of the service recites Psalms, offers a penitential prayer (תְּמוֹנָת), after which he recites Psalms viii, the prayer called Ashre, and the half Kadish. The scroll of the Law (תְּמוֹנָת) is then taken out of the ark, and הָרֹסִים, or Exod. xxxiii, 11–15; xxxiv, 1–10, with the Haphtarah (q. v.), Isa. iv, 6; iv, 1–8, are read, being the appointed lesson for fasts, after which other appointed penitential prayers, together with the ordinary daily afternoons service, conclude the fasters and the fast, when the Feast of the New Moon is proclaimed, which, like all the feasts and fasts, begins on the previous evening. On the morning of the new moon they resort to the synagogues in festive garments, offer the usual morning prayer (תְּמוֹנָת), inserting, however, Numb. xxxvi, 11–15 in the recital of the daily sacrifices, and the prayer נָמַשׂ הָרֹסִים in the eighteen benedictions. The phylacteries which are worn at the ordinary daily morning service are then put off, and the
Hallel, with its appropriate benediction, is recited, all the congregation standing; after which the scroll of the Law (תנך הקדוש) is taken out of the ark, and Numb. xxviii., 1-15 is read in four sections: the first section (i.e. ver. 1-3) being assigned to the priest; the second (ver. 3-5) to the Levite; the third (ver. 6-10) to an Israelite less than the fourth (ver. 11-15) to any one. If new moon happens on Sabbath, two weeks are使命出 the Law are taken out of the ark, from the first of which the ordinary Sabbath lesson is read, and from the other Numb. xxviii., 9-15, or Mapher: and if it happens on a Sunday, 1 Sam. xx, 18-42 is read as the Haphtarot instead of the ordinary lesson from the prophets. Unlike their brethren in the time of the prophets (Amos viii., 5), the Jews of the present day work and trade on new moon.

The new moons are generally mentioned so as to show that they were regarded as a peculiar class of holy days, to be distinctly marked, and hence the solemn feasts and the Sabbath are known by a day of holy convocation. See Trumpets, Feast of.

2. Mode of ascertaining, fixing, and consecrating the New Moon.—As the festivals, according to the Mosaic law, are always to be celebrated on the same day of the month, it was incumbent upon the spiritual guides of the people to ascertain the commencement of the civil month, which was determined by the appearance of the new moon. Hence the authorities at Jerusalem, from the remotest times, ordered messengers to occupy the commanding heights around the metropolis, on the 8th day of the month, to watch the sky; these, as soon as they observed the moon, hastened to communicate it to the synod; and, for the sake of speed, they were even allowed, during the existence of the Temple, to travel on the Sabbath and profane the sacred day (Mishna, Rosh Ha-Shanah, i, 4). These authorities also ordained that, with the exception of gamblers with dice, usurers, those who breed and tame pigeons to entice others, those who trade in the produce of the Sabatical year, women and slaves, any one who noticed the new moon is to give evidence before the Sanhedrin, even if he were sick and had to be carried to Jerusalem in a bed (Rosh Ha-Shanah, i, 8, 9). These witnesses had to appear before the court, called Beth Jasek (בית גせて), specially appointed for it, where they were carefully examined and feasted, so as to induce them to come; and when the authorities were satisfied with the evidence, the president pronounced the word Мишנה, it is sanctified; whereupon all the bystanders had to repeat it twice after him. It is sanctified! It is sanctified! and the day was declared New Moon (Mishna, Rosh Ha-Shanah, ii, 5, 7).

On holding the new moon from his own house, every Israelite had to offer the following benediction: “Blessed be He who reneweth the months! Blessed be He by whose word the heavens were created, and by the breath of whose mouth all the hosts thereof were formed! He appointed them a law and a time, that they should not overstep their course. They rejoice and are glad to perform the will of their Creator. Author of truth, their operations are truth! He spoke to the moon, Be thou renewed, and be the beautiful diadem (i.e. the hope) of man (i.e. Israel), who shall one day be quickened again like the moon (i.e. at the coming of Messiah), and praise their Creator for his glorious kingdom. Blessed be He who renewed the moons” (Sanhedrin, 42 a). Of such importance was this prayer regarded, that it is asserted, “Whoso pronounceth the benediction of the New Moon in its proper form, as if he had been holding converse with the Shekhinah” (ibid.). To this prayer was afterwards added, “A good sign, good fortune be to all Israel! (to be repeated three times). Blessed be thy Creator! Blessed be thy Possessor! Blessed be thy Maker! (repeated three times). As I leap towards thee, but cannot touch thee, so may my enemies not be able to injure me (said leaping three times). May fear and anguish seize them. Through the greatness of thine arm they must be as still as a stone; they must be as still as a stone through the greatness of thine arm. Peace, peace, peace be with us” (Mishna, Sabbath, ii, 2). This prayer, which during the period of the second Temple was offered up by every Israelite as soon as he beheld the new moon, is still offered up every month by all orthodox Jews, with some additions by the rabbins and the Kabbalists of the Middle Ages, and is called in the Jewish ritual מַיֵי עֶשֶׂר יְבִיא הָעֵד אֶלְוִיסֶנֶס, Consecration of the New Moon. When the new moon was not visible on account of clouds, and in the five months when the watchmen in the sentry out, the month was considered to commence on the morning that followed the 30th. According to Maimonides, the Kabbalists altered their method when the Sanhedrin ceased to exist, and have ever since determined the month by astronomical calculation, while the Karaites have retained the method of depending on the appearance of the moon. Astronomical knowledge was not acquired long after the destruction of Jerusalem; unless, with Michaelis and Jahn (Archeol. iii, 304), we find a trace of it, sufficiently obscure, in 2 Kings xxxv, 27 (comp. Jer. ii, 38). See also Paulus, Comment. iii, 548 sqq."

4. Literature.—Maimonides, Jad Ha-Chezaka, Hilkoth Kolleth Ha-Chodesh (translated into Latin by De Veil [Paris, 1688], Amsterdam, 1701) and by Wittet (Jena, 1703); Abrahams, Discours de Principes essentiels et secrètes de l'annulation (Hebrew and Latin, appended by Buxtorf to his translation of The Coevii [Bale, 1659, p. 431 sq.]); Knobel, Commentary on Exodus and Leviticus (in Kurzgefassten ergebnis an Handbuch zum Al. Text. [Leipsic, 1808, 3d ed.], which has a vast amount of classical information is brought together to show that this festival existed among many heathen nations of antiquity; Carpov, Apparit. Hist. Crit. p. 428; Spencer,
NEW PELOGIANS

NEW TESTAMENT

It is well to note that the Pelagians, like the Gnostics, believed in the primacy of the soul. They held that the soul was the original image of God and that it was capable of regaining that image through its own efforts. The Pelagians denied the necessity of grace for salvation and believed that individuals were responsible for their own salvation. This belief in the primacy of the soul and the individual's responsibility for salvation is reflected in the teachings of the New Testament.

The New Testament is considered to be the word of God and is central to the Christian faith. It is believed to be the authoritative source of Christian doctrine and practice. The New Testament is used in the celebration of the sacraments, such as baptism and communion, and in the teaching and preaching of the church. It is also used in the daily lives of Christians as a guide for living a faithful and righteous life.
tion ranges over a period of a thousand years, those included in the latter were produced almost contempo-
ranely, within the compass of one generation—most of them probably between A.D. 50 and A.D. 70. The collection consists of twenty-seven writings, proceeding either from apostles or from persons who were intimately associated with them. At least five of them—five of the works are in the form of historical narratives; four of which relate the history of the Saviour's life on earth with such variety of form, and with such differences in the selection and treatment of materials, as seemed needful to meet the wants of different readers; and the fifth describes a general and systematic analysis and exposition of the Church by the ministry of the leading apostles. Twenty-one are epistolary. Thirteen of the letters expressly bear the name of Paul as their author; nine being addressed to various Christian communities, three—called the Pastoral Epistles—to office-bearers in the Church, and one to a private individual (Philemon). An anony-

mous letter addressed "to the Hebrews" is associated with the Epistles of Paul. Seven other letters—one bearing the name of James, two that of Peter, three that of John, and one that of Jude—are frequently com-

pared as literary imitations of the style of the general (that is, general) Epistles, as having been intended for the use of Christians in general, or as having (most of them at least) no express individual or local destination. The volume closes with a prophetic vision, the Apocalypse of John.

The writings thus associated in the New Testament seem to have at the first glance a somewhat uncon-

nected and desultory character; and it may readily be admitted that the form in which the inspired records of Christianity have come down to us is not that which the wisdom of the original writers have contrived. The Christian revelation has not assumed the shape—

which men might have deemed, a priori, probable or desirable—of an abstract system of truth, of a formal didactic treatise elaborately setting forth doctrines in logical order, like the creeds and confessions in which men have striven at different times to define and com-
prehend the fulness of the scriptural teaching: or en-

joining duties in methodical succession, like those codes of law in which men seek to provide beforehand for every contingency. Its actual form exhibits a far more admirable accommodation to the conditions of human nature than could be otherwise—a life, like that of a life, its experience, its teachings by concrete examples, its presenting Christianity in action. The great majority of those for whose benefit a revelation is given have but little interest in pure theory or relish for abstract truths, and they need it in the form most natural and unexpected. The Christian revolution has, therefore, been expressed by 

them more directly into all the wants of the wants, feelings, and exigencies of their daily life. The form of the New Testament—mainly narrative and epistolary—is one especially fitted to stimulate our attention, to enlist our sympathies, to quicken our human interest in its contents, and to bring the matters of which it treats home to us, not as sub-

jects of theory, but as facts of experience, as personal and practical realities. "The book which shall have a deep and practical influence on real life must reflect its image, must present that real mixture of facts, thoughts, and feelings which is found to exist there."

But we have to recognise in the composition of the New Testament a further peculiarity, deviating from what we should perhaps have expected, but constituting in reality the most remarkable evidence of the divine superintendence that shaped its whole as the books of the New Testament present no formal bond of unity, profess no absolute completeness, make no direct claim, in most cases, to universal acceptance. On the con-

trary, they seem to have originated independently of each other, and to have been prepared with reference to local or temporary objects—to the special circumstances and wants of churches, or even of individ-

uals. Christ himself wrote nothing; and we do not find in what his disciples have left any professed design of giving a full record of his teaching or a con-

tinuous and perfect exposition of his doctrine. No apostle or evangelist avows it as his purpose to furnish an authentic standard of Christian doctrine and duty for all future time. Their works, moreover, bear no direct correlation with one another. Five of them address themselves to matters in which they feel a personal interest, and to persons with whom they have more immediate rel-

ations; and they write seemingly with reference to these alone, betraying no consciousness of any ulterior aim or future application. The Church, however, is shown, the appearance of having been as usual in origin as they are occasional in form. But this very occasional and seemingly accidental character impressed on the indi-

vidual elements of the New Testament as human writings will be found, when we examine them more closely, to yield the highest evidence of the divine origin and purpose of the whole, and to furnish varied means for the illustration and confirmation of their truth. The parts, regarded in themselves, seem isolated and frag-

mentary; but the whole, which results from their com-

bined and arranged, is an inspired book, the parts being explained by the hidden but all-pervading agency of one divine Designer. The several narratives and letters have been obviously produced without any concert among the writers; each bears the stamp of indi-

viduality and independence; and yet, when they are placed in their proper order, they are found so perfectly fitted into each other, to sustain such mutually complementary relations, to be knit by so many links of connection, and to exhibit so entire a harmony of general design, that the unbiassed reader cannot but recognise in their deeper and profounder arrangement, and refer the whole to the common inspiration of one and the same Spirit guiding the several agents in their parts for the furtherance of his own gracious purposes. These occasional writings, proceeding from different authors, and brought together from different localities, con-

stitute, when combined, an organized body fitted jointly together and pervaded by one inward life. "When it is falt,", as has been well said, "that these narratives, letters, visions, do in fact fulfil the several functions, and sustain the mutual relations, which would belong to the parts of one design, coalescing into a doctrinal and ecclesiastical order and scheme, then is the mind of the reader in conscious contact with the mind of God; then the superficial diversity of the parts is lost in the essential unity of the whole; the many writings have become one Book; the many writers have become one Author" (Bernard, Bampton Lecture for 1864, p. 226).

The variety of the individual elements that make up the New Testament serves several important ends. The different parts of Scripture thereby illustrate, support, and explain each other; and it thus carries within itself self-manifest and varied evidence of its truth self-con-

sistent, harmonious, divine. The four narratives of the life of Christ present that combination of substantial unity with circumstantial variety that marks the tes-

timony of independent witnesses; and, written with special reference to the circumstances and wants of their original readers, and bringing into prominence the different aspects of the Saviour's character, they are at once supplement and confirm each other. They present to us, as has been observed, "four aspects, but one portrait; for, if the attitude and the accessories vary, the features and the expression are the same." The Gospel of Matthew—according to early tradition the Hebrew Gospel—exhibits Jesus as the Messiah fulfilling the law and the prophets; that of Mark, deriving its lifelike details from the communications of Peter, and written primarily for immediate use to us in 

rapid but vivid outlines Jesus putting forth his mighty power in action; that of Luke, the close companion of Paul, prepared for the use of the Greek world, portrays
Jesus as the Friend of man, the universal Saviour; while that of John, written late in life at Ephesus for the fuller instruction of those already within the Church, completes the picture by presenting Jesus preeminently as the Son of God, and revealing to us the highest aspects of his life in the circle of his chosen disciples. In the book of Acts we find that the facts of the Saviour's life and death and resurrection have become the fundamental doctrines of the Church; their significance is proclaimed and their power is demonstrated by the fourfold church order, worked out by its organization and training, as developed in the Epistles. The truths announced in the Gospels and proclaimed in the Acts are here expanded, defined, vindicated in opposition to error or misunderstanding, and brought to bear on the manifold relations of life. In the Epistles we find the different aspects of the truth apprehended and applied by men under various phases of experience and with reference to various exigencies; and while the Epistles thus form a practical supplement to the Gospels, they are complementary to each other, and fill up through their combination the perfect image of the faith, hope, and love represented by Paul, Peter, and John.

From various early notices it would appear that the books were, as was natural, first grouped under the two general divisions of evangelic and apostolic writings (notes). A later division on a different basis developed the more detailed information which we obtain from the oldest extant MSS., versions, and catalogues of the books given by the fathers exhibits substantially the same arrangement as that now followed in our Bibles. But few copies contained the whole New Testament; most frequently the Gospels were contained in one volume, the Acts and Epistles in another; while the Apocalypse, which was less employed in public worship, was comparatively seldom associated with the other books. The general order of the books was as follows: Gospels, Acts, the Epistles of Paul, the Epistles of Peter, and the Apocalypse. From this arrangement there are, in all the manuscripts, deviations, especially as regards the position of the book of Acts; and several of the ancient versions and most of the catalogues place the Epistles of Paul, as they stand in the English Bible, before the Catholic Epistles. The order followed within these larger groups seems to have been from an early period very much the same as at present. The four Gospels are almost constantly found in their familiar order; and in the Pauline Epistles the letter to the Hebrews exhibits almost the only variation, being sometimes—and indeed most frequently—omitted, and in the Epistle to the Hebrews, it was usually given at the end (see Scrivener's _Intro. to Criticism of N. T._ p. 60, etc.). The arrangement, in the case of the Gospels, was probably based on the order in which they were supposed to be written; in the case of Paul's Epistles, on the relative importance of the churches or individuals addressed. The Apocalypse always, when received, was placed appropriately at the end. We can hardly fail to recognize the Providence by which the Church has been guided in the internal arrangement of her sacred records, so that they shall be manifestly written in the circle of which are well set forth by one who has recently applied himself to illustrate the value of the order of the New Testament in this respect. The New Testament begins with the person of Christ, and the facts of his manifestation in the flesh, and the words which he gave from his Father; and according as we behold his glory, to discern the drift of his teaching, and to expect the consequences of his work. It passes on to his body, the Church, and the dispensation of his Spirit, and carries us into the life of his people, yea, down into the second place of their hearts; and then translates the announcements of God into the experiences of men, and discovers a conversation in heaven and a life which is hid with Christ in God. It works out practical applications, is careful in the details of duty, provides for difficulties and perplexities, suggests the order of churches, and throws up barriers against the ways of the devil. It shows us things to come, the course of the spiritual conflict, the close of this transient scene, the coming of the Lord, the resurrection of the dead, the eternal judgment, the seat of Christ, and his life everlasting. Thus it is furnished for all emergencies, and prepared for perpetual use" (Bernard, _ut sup._ p. 31).

II. Early History of the Text. —1. The Original Autographs.—The early history of the apostolic writings offers no points of distinguishing literary interest. Externally, as far as it can be traced, it is the same as that of other contemporary books. Paul, like Cicero or Pliny, often employed the services of an amanuensis, to whom he dictated his letters, affixing the salutation "with his own hand" (1 Cor. xvi. 21; 2 Thess. iii. 17; Col. iv. 18). In one case the scribe has added a clause in his own name (Rom. xvi. 22). Once, in writing to the Galatians, the apostle appears to apologize for the rudeness of the autograph which he addressed to them, as if from defective sight (Gal. vi. 11). But even if we pass over these one snap, it does not appear that any special care was taken in the first age to preserve the books of the N. T. from the various injuries of time, or to insure perfect accuracy of transcription. They were given as a heritage to man, and it was some time before men felt the full value of a whole field of mental copies, and the convenience of a written record. It is very probable that the first copies were made by hand; and we may perhaps see in this a providential provision against that spirit of superstition which in earlier times converted the symbols of God's redemption into objects of idolatry (2 Kings xviii. 4). It is certainly remarkable that in the controversy at the close of the 2d century, which often turned upon disputed readings of Scripture, no appeal was made to the apostolic originals. The few passages in which it has been supposed that they are referred to will not bear examination. Ignatius, so far from appealing to Christian archives, distanced the whole, as the Hebrews, the examples of the Jewish Church (rā ayygā—οδ. Philad. 8). Tertullian again, when he speaks of "the authentic epistles" of the apostles (De Frascr. Har. xxvi, "Apud quas ipsa authentica litterae eorum recitant"), uses the term of the pure Greek text as contrasted with the current Latin version (_converio_. xi, "Sciamus plane non sic esse in Graeco authentico"). The silence of the sub-apostolic age is made more striking by the legends which were circulated afterwards. It was said that when the grave of Barnabas in Cyprus was opened, in the 5th century, in obedience to a vision, the body was found incorrupt, still wearing the coat and sandals in which he was written with his own hand. The copy was taken to Constantinople, and used as the standard of the sacred text (Credner, _Einl. s § 39; Assem. Bibl. Or. ii. 81). The autograph copy of John's Gospel (_nîbî rî bâthânuw roû dâhyârûhî)_ was said to be preserved at Ephesus "by the grace of God, and worshipped (_sâbî wârîna_ by the faithful there," in the 4th century (?) (Petr. Alex. p. 518, ed. Migne, quoted from _Chron. Pasch._ p. 5); though according to another account it was found in the ruins of the Temple when Julian attempted to rebuild it (Zahn, _kav._ 14). A similar belief was current even in the last century. It was said that parts of the (Latin) autograph of Mark were preserved at Venice and Prague; but on examination these were shown to be fragments of a MS. of the Vulgate of the 6th century (Dobroszycki, _Fragmentum Progenis Ev. S. M._). In the natural course of things the apostolic autographs would be likely to perish soon. The material which was commonly used for letters, the papyrus-paper to which John incidentally alludes (2 John 12, bâb hirî), was soon put out of use, and the usage of the papyrus (_nîbî bôsîma_), was singularly fragile, and even the stouter kinds, likely to be used for the historical books, were not fitted to bear constant use. The papyrus fragments which have come down to the present time have been
preserved under peculiar circumstances, as at Herculaneum or in Egyptian tombs; and Jerome notices that the library of Pamphilus at Cæsarea was already in part destroyed (ex parte corruptam) when, in less than a century after its formation, two presbyters of the Church endeavored to restore the papyrus MSS. (as the context implies) on parchment ("in membrana"); Jerome, Ep. xxxiv (141), quoted by Tischendorf in Herzog's ENCYCL. "Bibliltext des N.T." p.159). Parchment (2 Tim. iv. 18, ρηματικαν), which was more durable, was proportionately rarer and more costly. In the first age the written word of the apostles occupied no authoritative position above their spoken word, and the vivid memory of their personal teaching. When the true value of the apostolic writings was afterwards revealed by the progress of the Church, then, collections of "the divine oracles" would be chiefly sought for among Christians. On all accounts it seems reasonable to conclude that the autographs perished during that solemn pause which followed the apostolic age, in which the idea of a Christian Canon, parallel and supplementary to the Jewish Canon, was realized, and more especially realized, when the persecution (A.D. 303) copies of the Christian Scriptures were sufficiently numerous to furnish a special object for persecutors, and a characteristic name to renegades who saved themselves by surrendering the sacred books (1 Tim. iv. 13; Acts xxi. 29), bringing with them the hope of escaping, owing to the destruction thus caused, but still more from the natural effects of time, no MS. of the N.T. of the first three centuries remains. Some of the oldest extant were certainly copied from others which dated from within this period, but as yet no one can be placed further back than the time of Constantine. It is recorded of this monarch that one of his first acts after the foundation of Constantinople was to order the preparation of fifty MSS. of the Holy Scriptures, required for the use of the Church, "on fair skins (περι δωτον περι της ακαθορισμενης σωφρονισμενης)" (fair manuscript calligraphy and in beautiful caliphs of vellums. Vide Constit. iv. 36) and to the general use of this better material we probably owe our most venerable copies, which are written on vellum of singular excellence and fineness. But though no fragment of the N.T. of the 1st century still remains, the Italian and Egyptian papyri, which are of that date, give a clear notion of the calligraphy of the period. In these the text is written in columns, rudely divided, in somewhat awkward capital letters (uncials), without any punctuation or division of words. The tota, which was afterwards subscribed, is commonly, but not always, given in the place of accents or breathings. The earliest MSS. of the N.T. bear a general resemblance to this primitive type, and we may reasonably believe that the apostolic originals were thus written.

The MSS. and Recensions. In addition to the later MSS., the earliest versions and patristic quotations give very important testimony to the character and history of the ante-Nicene text. Express statements of readings which are found in some of the most ancient Christian writers are, indeed, the first direct evidence which we have, and are consequently of the highest importance. But till the last quarter of the 2nd century this source of information fails us. Not only are the remains of Christian literature up to that time extremely scanty, but the practice of verbal quotation from the N.T. was not yet prevalent. The eugenic citations in the apostolic fathers and in Justin Martyr show that the oral tradition was still as widely current as the written Gospels (comp. Westcott's Canon of the N.T. p. 125-185), and there is not in those writers one express verbal citation from the other apostolic books. This latter phenomenon is not irreparable to be explained by the nature of their writings. As soon as definite controversies arose among Christians, the text of the N.T. assumed its true importance. The earliest monuments of these remain in the works of Irenæus, Hippolytus (Pseudo-Origen), and Tertullian, who quote many of the arguments of the leading adversaries of the Church. Charges of corrupting the sacred text are urged on both sides with great acrimony. Dionysius of Corinth († cir. A.D. 176, ap. Euseb. H. E. iv. 29), Irenæus (cfr. p. cit. 177; iv. 6, 1), Tertullian (cir. A.D. 210; De Carne Christi, 19, p. 365; Adv. Marc. iv. 9, v. i, p. 391), Clement of Alexandria (cir. A.D. 200; Stromv, vi. 6, & 41), and at a later time Ambrose (cir. A.D. 375; De Spir. S. iii. 10), accuse their opponents of this offense; but with one great exception the instances which are brought forward in support of this charge are generally resolve themselves into various readings, in which the decision cannot always be given in favor of the catholic disputation; and even where the unorthodox reading is certainly wrong it can be shown that it was widely spread among writers of different opinions (e.g. Matt. xii, 27, "nec Filium nisi Pater et qui voluerint Filius revelaverit"; John i, 18, etc.—κατα Δικαιοσυνη). Wilful interpolations or changes are extremely rare, if they exist at all (comp. Valent. ap. Iren. i. 4, 5, add. Στρογελης, Col. i. 18), except in the case of Marcion. His mode of dealing with the writings of the N.T., in which he was followed by his school, was, as Tertullian says, to use the knife rather than subtlety of interpretation. There can be no reasonable doubt that he dealt in the most arbitrary manner with whole books, and that he removed from the Gospel of Luke many passages which were opposed to his peculiar views. But when these last works were written, it is neither possible to have adhered scrupulously to the text which he found. In the isolated readings which he is said to have altered, it happens not unfrequently that he has retained the right reading; and that his opponents are in error (Luke v, 14 om. το διατηρον; Col. ii, 5, olic υδατος; 2 Cor. iv. 7). In very many cases the alleged corruption is a very small reading, more or less supported by other authorities (Luke xii, 38, εσεληνυσατο; 1 Cor. x, 5, Χριστων; 1 Thess. ii, 15, add. διηνου). Where the changes seem most arbitrary there is evidence to show that the interpolations were of a later date than the remains from which they originate. Again, from the preservation of the first variations noticed, which are often extremely minute, in one or more of the primary documents still left we may be certain that no important changes have been made in the text by any of the early codices. These materials for ascertaining the true reading are found to be complete when tested by the earliest witnesses. Yet further: from the minuteness of some of the variations which are urged in controversy, it is obvious that the words of the N.T. were watched with the most jealous care, and that the least divergence from the unaltered text was regarded with scrupulous and faithful piety, to be used in after-time by that wide-reaching criticism which was foreign to the spirit of the first ages.

4. First Critical Labor. — Passing from these isolated quotations, we find the first great witness to the apostolic text in the early Syriac and Latin versions, and in the rich quotations of Clement of Alexandria († cir. A.D. 220) and Origen (A.D. 184-254). See VENUS. The Greek quotations in the remains of the original text of Irenæus and in Hippolytus are of great value, but yield in extent and importance to those of the two Alexandrine fathers. From the extant works of Origen alone no inconsiderable portion of the whole N.T. with the exception of James, 2 Peter, 2 and 3 John, and the Apocalypse, might be transcribed, and the recurrence of small variations in long passages proves that...
the quotations were accurately made, and not simply from memory. The evangelical text of Clement is far from pure. Two chief causes contributed especially to corrupt the text of the Gospels—the attempts to harmonize parallel narratives, and the influence of tradition. The former arose from the efforts of the redactors of the Didascalia of Tattai (cir. A.D. 170). Comp. Westcott, N.-T. Canon, p. 334-38; Tischendorf on Matt. xxvii., 49, and the latter, which was, as has been remarked, very great in the time of Justin Martyr, still lingered. The quotations of Clement suffer from both causes; in the first, the tampering from Matt. (viii., 22; x, 90; xi, 27; xiv, 24; xxii, 37; xxv, 4; x, 26, omitted by Tischendorf Luke iii, 22), and he seems to have derived from his copies of the Gospels two sayings of the Lord which form no part of the canonical text (comp. Tischendorf on Matt. vi, 30; Luke xvi, 11). Elsewhere his quotations are free, or a con- fused mixture of two narratives (Matt. v., 42; vi, 26, 22 sq.; xiii, 37; Mark xii, 43), but in innumerable places he has preserved the true reading (Matt. v., 4, 5, 42, 48; xvi, 22; xii, 17; Mark xii, 25; xxv, 36; Acts ii, 41; xviii, 36). His quotations from the Epistles are of the very highest value. In these traditions there had not prevailed power, though Tattai is said to have altered parts in the language of the Epistles (Eusebius, Hist. Eccl. iv, 29); and the text was left comparatively free from corruptions. Against the false readings of Tattai an important authority is the text of the common version of the MSS. (Rom. iii, 26, 1 Peter i, 20, 1, 17, etc.); the reading of the Epistles in this text from Rom. xvi., 10, to 1 Cor. viii, 11, is to be implied: it may be inferred forward a long list of passages in which he combines with a few of the best authorities in upholding the true text (e. g. 1 Pet. ii, 2; Rom. ii, 17, x, 8; xv, 29; 1 Cor. ii, 13; ii, 3, 5, 8; vii, 2; x, 24). But Origen stands as far first of all the anti-Nicene fathers is critical author as he does in commanding genius, and his writings are an almost inexhaustible source for the history of the text. In many places it seems that the printed text of his works has been modernized; and till a new and thorough collation of the MSS. has been made, a doubt must remain whether his quotations have not suffered by the hands of scribes, as the MSS. of the N. T. have suffered, though in a less degree. The testimony which Origen bears as to the corruption of the text of the Gospels in his time differs from the general statements which have been already noticed as being the deliberate judgment of a scholar, and not the pleas of a controversialist. "As the case stands," he says, "it is obvious that the difference be- tween the text is considerable, not merely in the errors of individual scribes but from the wicked daring of some in correcting what is written, partly also from the changes made by those who add or remove what seems good to them in the process of correction." (Origa, in Matt. xx, 14, § 14). In the case of the Sept., he adds, he removed, or at least indicated, those corrup- tions by a comparison of "editions" (editions, and we may believe that he took equal care to ascertain, at least for his own use, the true text of the N. T., though he did not venture to arouse the prejudice of his con- temporary faith by so doing. The translation ait (in Matt. xxv, 14, ret. int. "In exemplari autem Novi Testamenti hoc ipsum me posse facere sine peric- ulo non putavi"). Even in form in which they have come down to us, the writings of Origen, as a whole, contain the noblest early memorial of the apoc- tolic text. Although there is no evidence that he pub- lished any recession of the text, yet it is not unlikel- y that he wrote out copies of the N. T. text with his own hand (Redepenning, Origenes, ii, 184), which were spread widely in after-time. Thus Jerome appeals to "the readings of Origen" as a witness. (Cod. 9; Gal. iii, 1), and the copy of Pamphilus can hardly have been other than a copy of Origen's text (Cod. 1, Subscription). From Pamphilus the text passed to Eusebius and Euthalius, and it is scarcely rash to believe that it can be traced, though imperfectly, in

According to the image provided, the text discusses the accuracy and preservation of the text of the New Testament, highlighting the influence of tradition and the efforts to harmonize parallel narratives. It mentions the contributions of theologians like Clement and Origen, whose works contain quotations that reflect the state of the text during their time. The text also refers to the early translation work of Origen and the transmission of the text through his copies. The description highlights the importance of Origen's role in preserving and passing down the text, despite the challenges of translation and corruption over time. The text concludes by acknowledging the difficulties in tracing the exact source of the text, while emphasizing the need for a thorough examination of the apostolic language and its influence on later generations. The overall message underscores the significance of accurate text transmission in maintaining the integrity of religious scripture.
uninterruptedly till the fall of the Eastern empire. Meanwhile the multiplication of copies in Africa and Syria was checked by Mohammedan conquests. The Greek language ceased to be current in the West. The preservation of the MSS. of Codex Vaticanus (B) may be taken as a type, present a close resemblance to these. The writing is in elegant continuous (capitals) uncials, in three columns, without initial letters, or iota subscript or ascript. A small interval serves as a simple punctuation; and there are no accents or breathings by the hand of the first writer. Uncial MS. writing continued in general use till the middle of the 10th century. One uncial MS. (S), the earliest dated copy, bears the date 949; and for service-books the same style was retained a century later. From the 11th century downwards curvilinear writing prevailed, but this persisted through several forms sufficiently distinct to fix the date of a MS. with tolerable certainty. The earliest cursive Biblical MS. is dated A.D. 964 (Geosp. 14, Scrivener, Introduction, p. 38, note), though cursive writing was used a century before (A.D. 888, Scrivener, L.c.).

The MSS. of the 14th and 15th centuries abound in the corrections which were afterwards passed upon the early printed books. The material as well as the writing of MSS. underwent successive changes. The oldest MSS. are written on the thinnest and finest vellum; in later copies the parchment is thick and coarse. Sometimes, as in Cod. Cotton. (N. D.), the vellum is stiffened. Papyrus was very rarely used after the 9th century. In the 10th century cotton paper (charita rhodocynous, or Danusceca) was generally employed in Europe; and one example at least occurs of its use in the 9th century (Tischendorf, Not. Cod. Sin., p. 54, quoted by Scrivener, Introduction, p. 24), was the normal material for the common linen or rag paper came into use, but paper was "seldom used for Biblical MSS. earlier than the 15th century, and had not entirely displaced parchment at the era of the invention of printing, cir. A.D. 1450" (Scrivener, Introduction, p. 21). One other kind of material required notice, the parchment in such MSS. was often erasable, or be used afresh (Cic. Ad Fam. vii, 18; Ctes. xii). In lapse of time the original writing frequently gets rubbed out, and lines below it are written over. Here is why precious fragments of Biblical MSS. only a few more than twice as long as the sections in B. This division is found in A, C, R, Z, and must therefore have come into general use some time before the 5th century. The other division was constructed with a view to a harmony of the Gospels. It owes its origin to Ammonius of Alexandria, a scholar of the 9th century, who constructed a Harmony of the Evangelists taking Matthew as the basis round which he grouped the parallel passages from the other Gospels. Eusebius of Cesarea completed his labor with great ingenuity, and constructed a notation and a series of tables, which indicates at a glance to any person to whom the Gospels are familiar, or of more of the other Gospels, and the passages which are peculiar to each. There is every reason to believe that the sections as they stand at present, as well as the ten "Canons," which give a summary of the Harmony, are due to Eusebius, though the sections sometimes occur in MSS. without the corresponding Canons. The Cod. Alex. (A) and the Cottonian fragments (N) are the oldest MSS. which form both in the original order of the hand. The sections occur in the palimpsests C, R, Z, F, Q, and it is possible that the Canons may have been there originally, but the permision (euseb. Ep. ad Car.) or paint with which they were marked would entirely disappear in the process of preparing the parchment afresh.

The division of the Acts and Epistles into chapters came in use at a later time. It does not occur in A. or B, which give the Ammonian sections, and is commonly referred to Euthalius, who, however, says that he borrowed the divisions of the Pauline Epistles from an earlier father; and there is reason to believe that the division of the Acts and Catholic Epistles which he gives was not as early as the division given by D. The Apocrypha was divided into sections by Andreas of Caesarea, about A.D. 500. This division consisted of 24 λύσιν, of which was subdivided into three "chapters" (ἐξομολογίων).

The title of the sacred books are from their nature...

See Commentary.

NEWTON, Alexander, D.D., a Presbyterian divine, was born in North Carolina, Dec. 15, 1803. In 1808 he was called to Bedford, Va.; and while there he was engaged in a careful training at home his studies were carried forward, both classical and theological; and thus fully prepared for the ministry, he was ordained in 1824 by Shiloh Presbytery. In 1829 he emigrated to Livingston, N. Y. There he continued to reside until his death. He was a man of sound and thorough education, who preached until 1830, after which time he was employed in the work of the ministry, as stated supply to the following churches successively: viz., Osborne, Spring Ridge, Shougalo, Oxford, Middleton, Grenada, Chosen, etc. He had an extensive field of usefulness. His labors there were marked by an accurate knowledge of the statutes and procedures of the judicatories of the Church, and took an active part in all the subjects brought before Presbytery, Synod, or General Assembly, in all of which he was acknowledged to be a leader. He died Nov. 27, 1859. Dr. Newton possessed genius, with a large amount of common-sense. He was, however, little known outside of his church, and was not a person of much prominence in the public eye. P. H. G.
may be mentioned his love for drawing and writing verses, in neither of which he was no mean excelsior. On the death of his stepfather in 1666, his mother came to reside at Woolsthorpe with her three children and Isaac, who was now in his fifteenth year. He was recalled from school to assist in the management of the farm. Accordingly on market-days he was sent to Grantham, accompanied by an aged domestic, either to dispose of farm produce, or to purchase such things as were needed by the family. But on these occasions it more frequently happened that Isaac stopped by the way-side, watching the motions of a water-wheel, or some other piece of machinery; or, if he reached the town of Grantham, it was only to resort to the apothecary's garret in which he had resided while he attended the grammar school, and where a few old books afforded him ample entertainment until his trusty companion summoned him to return home. On one occasion, having been sent to market with corn and other products of the farm, young Newton left the sale of his goods to a servant, while he himself retired to a hay-loft at an inn in Grantham, to ruminate over the problems of Euclid and the laws of Kepler, in which situation his uncle happened to find him, probably meditating discoveries of his own which eclipsed the glory of his predecessors. These and other instances having shown the untiility of thwarting his studious disposition, he was shortly after sent back to Grantham school. How long he remained at school this second time does not appear, but when he had attained his seventeenth year it was determined to send him to Trinity College, Cambridge, at the recommendation of his uncle, the Rev. W. Ayscough, who had been himself educated there. Isaac's matriculation took place on June 5, 1669, the year in which Dr. Barrow was appointed to the Greek professorship. This learned man became young Newton's most trusted friend and adviser, and no doubt stimulated the earnest student to the closest application to his books. Newton especially devoted himself to the study of mathematics, and attained a great proficiency. In 1664 he took the degree of bachelor of arts; but the following year he was obliged to remove from Cambridge on account of the plague. This temporary intermission of his studies is most singularly connected with one of his most important discoveries; for in his retirement, sitting alone one day in his garden, the accidental observation of some apples falling from a tree excited in his mind a train of reflection on the cause of so simple a

Birthplace of Newton.

Newton's Study.
press request of Dr. Bentley, and various scientific essays which Brewer had printed in an appendix to his Life. The great philosopher's remains received a resting-place in Westminster Abbey, where a magnificent monument was erected in a conspicuous place to his memory in 1731, with a Latin inscription concluding thus: "Let mortals of all ages see, and reverence as a temple of human nature has existed." A magnificent full-length statue of the philosopher, executed by Roubillac, was erected in 1755 in the antechapel of Trinity College, Cambridge. This work was assisted by a cast of the face taken after death, which is preserved in the university library at Cambridge.

In person Newton was short but well-set, and inclined to corpulence. His hair was abundant, and white as silver, without baldness. His eye was bright and penetrating, till within the last twenty years of his life; but his maintenance, though the sight remained, was excited much expectation in those to whom he was unknown. In his conversation there appears to have been little either very remarkable or agreeable; but we have the testimony of Dr. Pemberton that "neither his age nor his universal reputation had rendered him stiff in opinions, or confined him in his conversations; he was not so much inclined to the effect of patient and continuous thought rather than to any peculiar genius with which nature had endowed him, he looked upon himself and his labors in a very different light from that in which he was regarded by others." He was, "I know not," he remarked, a month before his death, "what I may appear to the world; but to myself I seem to have been only like a boy playing on the sea-shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, while great ocean lay all undiscovered before me." (Turner, Collections relative to the Town of Grantham.)

But while he thus contrasted the littleness of human knowledge with the extent of human ignorance, he was fully conscious of the importance of his own labors, when compared with those of his predecessors and contemporaries, and esteemed, as he was, the surest means to assert and vindicate his rights whenever occasion might require. It were to be wished that, by an earlier publication of his discoveries, he had adopted the most eligible mode of establishing the undoubted priority of his claim. Such a course, by changing the current of events, would have left him less open to the charge of having disregarded the claims of others, or of having suffered their reputation to be prejudiced by his silent acquiescence in the acts of his colleagues. To judge of Newton from the life of him recently published by Sir David Brewster, and compared with Lock's character, one would think that Lock's character had suffered from no instance of human infirmity, and that every action had been dictated by feelings of benevolence and the love of truth. These were indeed the general motives by which he was actuated.

Sir Isaac's principal theological works are, Observations on the Prophecies of Holy Writ, viz. Daniel and the Apocalypse, and his Historical Account of two notable Corruptions of Scripture, mainly composed prior to 1890, but finished in that year, and first published in 1754 under the erroneous title of Two Letters to Mr. Clarke, late the Divinity Professor of the Richmond Institute in Holland (1784). It appears that he had been first published entirely in Horsley's edition of Newton's works, under the title, Historical Account of two notable Corruptions of Scripture, in a Letter to a Friend. That friend was probably Locke, the philosopher of whom Newton congratulates the late Isaac com- ments, 1 John v. 7, and 1 Tim. iii. 16.

The former he attempts to prove spurious, and the latter he considers a false reading. A portion of the work was commented on by the Rev. E. Henderson, D.D., in The Great Mystery of Godliness Incontrovertible, or Sir Isaac Newton's Case for it. In this attempt to prove a Corruption in the Text 1 Tim. iii. 16 (1800, 8vo). Sir David Brewster, in his first edition of his Life of Newton, denied that Newton was unorthodox in
any respect, but further research has revealed the fact that it is calculated much regarding the **suuminæstwo**, and must have entertained Arian views. Yet Brewster in-
nounced that Newton "was a sincere and humble believer in the leading doctrines of our religion, and lived con-
formally to its precepts. . . . Cherishing its doctrines and tesing on its promises, he felt that its duty, as well as his own, was to declare it to the world" (I. Christian Observations). This intellectual strength which had successfully sur-
mounted the difficulties of the material universe. . . .

He added to the cloud of witnesses the brightest name of recent or modern times. Sir Isaac's chief con-
tributions to mankind appear in the form of his great work "Principia Mathematica" (1713) and "Opticks" (1704) —
the latter a second edition of the Principia (1715) respecting space and duration, which was subsequently expanded

into an **à priori** argument by Dr. S. Clarke and the philosophers of his school. It is singular, yet true, that

the subsequent deviation from Locke's principles and method, or, more properly, the recognition of an approp-
riate sphere for **à priori** truth, for which Locke's analysis has failed to provide, should have been largely owing

to the influence of these two eminent physicists. The fact cannot be questioned that speculative philoso-
phy has always been subject to the impulse given to it by Dr. Samuel Clarke and the theologians and philosophers of his school (see Stewart, Fr. Dis. pt. ii, sec. 8). The principal works of New-

ton were collected and published by Dr. Horsley, under the title of Newtoni Opera quæ extant omnia (Lond. 1779). The short biography compiled by Horsley in 1770, although his work had been reprinted in Horsley's edition, reference

is made to the volume. The following were, with few exceptions, first printed in Horsley's edition: tome i,

"Exempla quædam ex Epistolis Newtoni ad Series Philosophiae antiquitatis," "Artis Analyticae Specimina;

"Tome iv, "Letters on various Subjects in Natural Philosophy, published from the Originals in the Archi-

des of the Royal Society; "Letter to Mr. Boyle on the Course of Gravitation;" "Tabulis, Colorum al-

ter, altera Reproducendo;" "De Problematis Ber-

nucciansis;" "Propositions for determining the Motion of a body urged by two Central Forces;" "Four Letters to Dr. Bentley;" "Commencium Epistolicum D. Johan-

nae Collinis, et allorum, de Analyse Promota" (first pub-

lished by the Royal Society in 1718: a new edition ap-

peared in 1729 under the title "Additiones ad Mathematicam Epistolicae."

Tome v, "A short Chronicle from a Manuscript, the

property of the Rev. D. Ekins, dean of Carlisle." The minor works of Newton have been collected and pub-

lished under the title of Opera Philosophica Mathematica, et Philosphica; collected by the Rev. Dr. G. W. Lewis, et

Genev. 3 vols. 4to). After the death of Newton, Dr. Pellet was ap-

pointed by the executors to examine his manuscripts and papers, and to select such as he deemed adapted for

publication. They are eighty-two in number, and con-

tain a great number of letters. But many of those on

theological subjects are mere copies over and over again, and with very slight variations. Of these manuscripts

the only one which Dr. Pellet deemed fit to be printed were the "Chronology" and "An Abstract of the Chron-

ology," the former in ninety-two, the latter in twelve

sheets folio. At the same time he recommended for further consideration those entitled "De Motu Corpora-

norum," "Paradoxical Questions concerning Athana-

sia," "History of the Prophecies," and a bundle of

some mathematical papers. A catalogue of these manu-

scripts was appended to a bond given by Mr. Condrii

to the administrators of Newton, whereunder he binds him-

self to account for any profit he may make by their public-

ation. A list of them is found in Hutton's Dic-

tionary. Those on theological subjects are, with many

other Newton papers, in the possession of the earl of

Portmore. It is not to be supposed that the manuscripts of

Newton and Cotes, relative to the publication of the

second edition of the Principia, preserved in the library

of Trinity College, Cambridge, was published in 1851

under the editorial care of Mr. J. Edleston: the corre-

spondence of Newton with Mr. Pepys and Mr. Milling-

ton is in the possession of Lord Braybrooke; and other

manuscripts are in the Bodleian Library, Oxford. See

Newton, James, an English divine and hymnolo-

gist, was born in Chenes, England, in 1733. He was

early trained in the observance of religious duties. At

the age of seventeen he went to London, and became a member of the church at Mr. West's Chapel. He was

prepared for the ministry by Dr. Llewelyn, and became

about the year 1757 assistant minister in the Pithay

Chapel, Bristol. In 1770 he became classical tutor to

the Bristol Education Society. This office he filled

with honor until his death, April 8, 1790. He pub-

lished several of his sermons and a few hymns, which

have been incorporated in different hymnological

compilations. See Miller's Singers and Songs of the

Church.

Newton, John, "once an infidel and libertine, a

servant of slaves in Africa," as he wrote of himself in his

epitaph, but afterwards an eminently pious and exem-

plary gentleman, was born in 1492, in Essex. He was

deputed by his mother, who was a pious dis-

serter, to the Christian ministry, and his training to that

day was ended when he was but four years old. But

she died when he was scarcely seven years old, and, neglected by his father and stepmother, he forgot his

instructions, fell into the company of idle and vicious boys, and soon

learned their ways. Getting hold of lord Shaftesbury's

Characteristics, he was beguiled by its fair words, and

gradually settled down a confirmed infidel. Having

been accustomed to take voyages with his father, he at

first devoted himself entirely to a seafaring life. Be-

fore he was of age he deserted his ship, was brought

back to Plymouth as a felon, kept in irons, degraded

from his office as midshipman, and publicly whipped.

But sin and severe punishment only hardened him the

more. While on a voyage he obtained leave to ex-

change into a vessel bound for the African coast. His

purpose, as he afterwards declared, was to be free to

sin. He left the ship and lived on the island of Plant-

tains, where he became at last the almost hopeless slave of a slave-trader, who engaged him in the meanest

drudgery of his infamy. He was afterwards sold to his

master's wife—an abandoned woman—kept almost

naked, and half starved. Upon writing to his father,

arrangements were made for his return. The voyage
In the preface to the *Olney Hymns*, which were published in 1779, he disclaims all pretensions to being a poet, and only claims the "mediocrity of talent which might qualify him for usefulness to the weak and poor of his flock." He further states that his hymns are the "fruit and expression of his own experience." It is this that gives a personal interest, and a novel and vivid reality to his hymns quite peculiar to them, and is an important element in their value. "We trace in them the indications of his former wayward and miserable course, and at the same time we find in them the expression of the mind and heart of the mature Christian, and of the Christian minister in the midst of his activity, anxiety, and success." He himself has stated his own views of what hymns should be that are designed for use in public worship, in which the poor and unlearned join as well as the rich and cultivated. "Pernicuity, simplicity, and ease should be chiefly attended to, and the imagery and coloring of poetry, if admitted at all, should be indulged very sparingly, and with great judgment." His own hymns are fit illustrations of these views. He wrote not so much as the poet as the Christian, who must give expressiveness, freshness, and substance to his ideas, and his hymns will doubtless be used while similar experiences in others demand similar expression.

**Newton, Richard, D.D.,** a noted English divine, was descended from a family that had long been of considerable repute and of good fortune. His father enjoyed a moderate estate at Lavendon Grange, in Buckinghamshire, which is now in the family. Richard Newton was born at Yardley Chase, in Northamptonshire, in 1767. He was educated at Westminster School, and elected from that foundation to a scholarship of Christ Church, Oxford, where he afterwards taught with great acceptability and honor. He became M.A. on April 12, 1701, and D.D. on March 18, 1707. He was inducted principal of Hart Hall, by Dr. Albury, in 1710, where he undertook the degree of D.D. on December 7 of that same year. Dr. Newton was next called into lord Pelham's family to superintend the education of the late duke of Newcastle, and his brother, Mr. Pelham, and was esteemed by them with the greatest affectionate regard for him; but being a man of too independent and liberal principles to solicit favors for himself, he never met with any return for his sedulous attentions to them until 1724, when he was promoted to a canonry of Christ Church. Some time prior to this he had been inducted by bishop Compton into the living of Sudbury, in his native county, and he held this living some time after he assumed the principalship of Hertford College, which he filled until his death, April 21, 1755. Newton was honored with the esteem of his king and his country, and was held in great veneration and respect, and as ingenuous a writer as any of that age. In closeness of argument and perspicacity and elegance of language he had not his equal. Never did any private person engage in more trusts, or discharge them with greater integrity. He was a true friend to religion and education, a man of extensive charity, and a model of charity and charity.

No one man was called forth so often to preach in the latter end of queen Anne's time and in the beginning of that of king George I as Dr. Newton. During his residence in the rectory at Sudbury he discharged all the partial duties of a parish minister, with exceeding care and fidelity. Among other particulars, he read the evening prayers of the liturgy at his church on the week-day evenings at seven o'clock, hay-time and harvest excepted, for the benefit of his parishioners. As
principal of Hart Hall he labored faithfully for its prosperity, and in 1740 obtained a charter to convert the school into a college, thus becoming the founder, at a considerable expense to himself, of Hertford College, as the institution was named. He obtained great aid from his numerous friends, but contributed himself about £1,000 at least, which he derived from a publication of his entire works of sermons, in 1739. His professed project was to found a college of the university of Oxford, and to this end he sought the favor of the grand master of Exeter College, afterwards dean of Christ Church and bishop of Bristol, opposed Dr. Newton's project of obtaining a charter; and never, perhaps, were two people better fitted for a controversy, which deserves as much to be collected for the language as Julian's and his adversary. From the first to the last, all his writings were destroyed, excepting a select number of his sermons, which were published in 1784; a few others had already been published during his lifetime. He also had published a Scheme of Discipline, etc., at Hart Hall (Lond. 1720) — University Education (Bib. 1726 and 1733, Ser.) — Plurality Indefensible (ibid. 1748). A second edition of his Plurality Indefensible, which was published in answer to the learned Wharton on Plurality, appeared in 1744. Dr. Newton has not been, and probably never will be, answered. The Moppers of Thumpoor, with a strictly literal translation of the Greek into Latin, etc., with notes and observations on the text in English, was published from his MSS., as arranged before his death, for the benefit of Hertford College, by his successor in the principality of that college in 1754. See also the following: vii, 406—408; Chalmers's History of Oxford; London Gentleman's Magazine, 1792; General Biog. Dict. xi, 216—220.

Newton, Robert, D.D., a Wesleyan preacher greatly noted for his popular oratory, was born at Royston, Yorkshire, of poor but pious parents, Sept. 8, 1780. He was early brought under the influence of the Methodists, but was not converted until seventeen years of age, when, after nine weeks of great mental anguish, he experienced deliverance by Christian faith. In 1798, though possessed of but a limited education, he was received by the British Conference. In 1803 he was appointed to the Glasgow Circuit, and at the same time attended lectures on theology and philosophy at the University of Glasgow. While he received his appointments regularly from the Conference, most of his time was spent in England and Scotland. In 1812, to London, to which he brought the extraordinary pulpit talents which he possessed more prominently before the public. He there became intimately associated with Butterworth and Coke in behalf of the British and Foreign Bible Society. During the years 1817—1820, the editor of The Poor Man's Friend. He was the popular advocate of missions in England. When he began his missionary labor there were but fifty Wesleyan missionaries, with seventeen thousand communicants; he soon increased them to more than three hundred and fifty missionaries and one hundred thousand communicants. The demand for his services became universal throughout England, Ireland, and Scotland. In England and Scotland he was eminently successful, especially in Sheffield, where it is said he broke the spell of Painé's influence which then prevailed among the working classes. During his labor of forty years he probably addressed from year to year a greater number of people than any other man of his time. For forty years he was known in all the cities and large towns of England, and his coming was always hailed with great pleasure by the people. He was four times elected president of the British Conference, and for many years acted as its secretary. In 1839 he was sent as a delegate by the British Conference to the Methodist Episcopal Church of the United States, and during his visit to this country his popularity as a speaker was so great that he attended two crowds when he never preached. He died April 30, 1854. He was the author of Sermons on Special and Ordinary Occasions, edited, with a Preface, by Rev. James H. Bigg, D.D. (Lond. 1855, 8vo); these, regarded simply as pulpit compositions, are entitled to be ranked with the best published discourses which this generation has produced. "It has always seemed to us," says the London Review, July, 1856, p. 563, "that the great popularity of Dr. Newton was very inadequately explained by referring it to those rare physical characteristics, and to that sympathy and depth of feeling, which constitute mainly to the constitution of one of nature's orators, and which were found pre-eminenmly in him. Such qualities may for a time give distinction to those who are otherwise slenderly endowed, but their conjunction with intellectual powers of a high order is required to maintain permanently a widespread influence and reputation. The work of Dr. Newton, with other essential but inferior qualifications, great mental vigor, we find ample evidence in nearly every page of this volume; and we are at no loss to comprehend the causes which enabled him, for nearly half a century, to gather around him, wherever he went, listening and admiring crowds, and which made him the greatest preacher among a body of ministers unequalled for the power and success of their ministry in any period of the Christian Church." See Jackson, Life of Dr. R. Newton (Lond. 1855, 8vo); Corn, Life, Labors, and Travels of R. Newton (1856, 8vo); Stevens, His Methodism, iii, 168, 200, 401, 504; Meth. Quart. Rev. Jan. 1856, art. v; London Quart. Rev. July, 1855, art. i; Wesleyan Magazine, Oct. 1854, and May, 1835.

Newton, Thomas (1), a noted English divine and poet, was born near the middle of the 16th century, and taught as a rector of Little Ilford in Essex. He died in 1607. He is the author of a Notable History of the Saracens (Lond. 1575, 4to) published a number of prose and poetical works, and made translations from Seneca and other authors (1571—1604). He was one of the best Latin poets of his age. See Wood, Athen. Oxon. Bosworth and Laybourne's Philog. Dict. Poet. Autors; Tapster's Dictionary of FAMOUS; Pulteney's Sketches; Brit. Bibliography; Wait's Bibl. Brit. s. v.; Allibone, Dict. Brit. and Amer. Auth. s. v.

Newton, Thomas (2), D.D., an eminent English prelate, was born at Lichfield in 1704. He was educated there and at Westminster School, and at Trinity College, Cambridge, of which he became fellow. He was for some years a city preacher and tutor in the Tyrelle family, but in 1744 he was appointed rector of St. Mary-le-Bow, London, by his friend and patron, Pulteney, earl of Bath. Thomas Newton afterwards became successively lecturer at St. George's, Hanover Life Forces, and then prebendary of Westminster in 1757; next dean of Salisbury and sub-almoner, and bishop of Bristol and canon residentiary of St. Paul's about 1761, and dean of St. Paul's in 1768. He died in 1782. "Bishop Newton," says a contemporary, "was a prelate of not very remarkable powers, natural or acquired; but personally he was without reserve, acceptable in the society of the great, and possessed of a certain amount of general and professional knowledge." The fourth edition of his Works (3 vols. 1782) is complete; that in 6 vols. 8vo (1787) is only complete with his Dissertations on the Prophecies which have remarkably been fulfilled, etc. (10th ed. Lond. 1804, 2 vols. 8vo), which Bickersteth (Christians Student, p. 473) pronounces "a very valuable work;" but which Orme (Bibl. Bibl. s. v.) pronounces "seldom profound or original, though they contain occasionally some correct views of Scripture." Jennings, in Kitto (Cyclopaedia Bibl. Lit. iii, s. v.), says, "By a certain class, who lag behind their age, it is still read and admired. It may, however, be occasionally consulted with advantage"—he might have added on all except Newton's interpretation of the Book of Revelation, where he is altogether contrary and repugnant. The work had been translated into Danish and German, and found circulation in several thousand copies. As a divine he belonged to the supernaturalistic school of his time, and
NEW YEAR

was more positive than Samuel Clarke (q.v.). Bishop Newton also wrote On the Anglican Ritual (Tracts of the Anglican Church, Edinburgh, 1822; second ed., partly reprinted, published by Alexander Chalmers in Lives of Ir. Edward Pocock, etc. (London, 1816, 2 vols. 8vo); and edited Milton's Poetical Works, with notes from various authors. See J. B. Smith, D.D., An Analysis of Bishop Newton on the Propositions (London, 1866, 12mo); Darlow, Cyclop. Biblic., ii. 2185; and the references quoted in the body of the article.

NEW YEAR, or Feast of Trumpets (יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים, הַנַּחַל הָעֲבָדִים), though not one of the three great festivals on which the male population appeared before the Lord in Jerusalem, is nevertheless one of the first among the principal holy days, and as such has been celebrated by the Israelites since the giving of the Law, and is observed by all the people on the same day.

1. Name and Signification, and theImport of this Festival.—In the two passages where the institution of it occurs, this festival is called יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים, remembrance blowing, i.e. of trumpets (Lev. xxiii, 24; Sept. μνήμενα σαλιγγών; Vulg. S.2228). The day of blowing, i.e. the trumpets (Num. xxix, i, Sept. Ιερέα λαμπρότης; Vulg. Dies clangingae et tubarum). To understand this indication, we must examine the import of this festival.

As the first of Tisri, on which this festival occurs, besides being the new moon, is the beginning of that month wherein the festivals most distinguished both for holiness and joy are celebrated, it had to be connected in an especial manner with the import of the month itself. See Festival. Hence, as Maimonides observes, it was made, as it were, a stepping-stone to and a preparation for the great Day of Atonement (More Nebuchim, iii, 49). This is not only indicated by the particle בָּנָךְ (Lev. xxiii, 27), which forms the transition from the feast of New Year to the Day of Atonement, but has been so understood by the unanimous voice of the Jewish Church, which from time immemorial has observed the ten intervening days between these two festivals as days of penitence, and calls them "the ten days of repentance, or humiliation" (מִזֶּה שָׁנָה בְּנַחֲאָל בֵּית יָדִים).

comp. Talmud, Rosh Ha-Shana, 18a; Maimonides, ut sup.; Orach Chajim, sec. 552, 602, 603). Being preparatory to it, the festival of the New Year was to draw the attention of the Jew to the Day of Atonement, by summoning and retiring them up to it. As it is ordained that whenever all Israel are to be summoned to general action—e.g. either to a convocation, journey, war, or an assault—the priests are to blow silver trumpets made expressly for this purpose (Num. x, 1—10), and that these trumpets are especially to be blown at every sacred work in order to summon the people on festivals and new moons to participate in the sacrifices (ver. 10); the festival of the New Year, which is designed to summon the Israelites to the most holy of all works, and to prepare them for the great Day of Atonement, had to be furnished with the sign of this summons in an especial manner. Thus the blowing of the trumpets, which was a secondary thing on other festivals, became the chief and distinguishing feature of this festival. Hence its name, יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים, the day on which the trumpets were especially blown; or, the day on which the blowing was peculiarly characteristic (Num. xxix, 1).

Moreover, as this blowing of the trumpets is a summons to the Israelites to enter upon the work of sanctification, it is accounted to them as a merit in the sight of God, and the inspired Word promises them for it a special remembrance before the Lord (Num. x, 10) and divine help (Ps. cxvi, 15; ver. 9). Hence this festival is also called יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים, the remembrance blowing (Lev. xxiii, 24), i.e. the day on which the blowing of the trumpets, by its summoning the Israelites to effect their reconciliation with God, makes them to be remembered before the Lord, and secures for them divine aid for the holy work before them. The synagogue, however, takes the word יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים more in the sense of remaining (God of the covenant remaining with his people), and for this reason has appointed Gen. xxii, 1—24; xxiii, 1—24, reciting the birth and sacrifice of Isaac, as lessons for this festival (comp. Rashi, On Lev. xxiii, 24, and the article HAPHTarah). That this festival occurs on the day commencing the civil new year, which from time immemorial has been on the first of the seventh month, called Tisri, is not only evident from Exod. xiii, 1; xxiii, 16; xxiv, 22; Josephus, Ant. i, 3, 3; but from the fact that both the Sabbatical year and Jubilee commenced in this month (comp. Lev. xxv, 9; 10; and the article Jubilees). The universal practice of the Jewish nation, who regard and celebrate it as the Festival of the New-Year's Day, is therefore rightly supported by Christian scholars; and the name New Year (יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים), by which this festival is almost universally spoken of in Jewish literature, is far more expressive than the vague appellation, Feast of Trumpets.

2. The Manner in which this Festival was and still is celebrated.—Like the Sabbath, this festival was to be a day of rest, on which all trade and handicraft works were forbidden (Exod. xxiii, 10—12). As the new moon is the new moon, a threefold sacrifice was offered on this festival—viz. the ordinary daily sacrifice, which was offered first; then the appointed new-moon sacrifice [see New Moon, Feast of this;] and last of all followed the sacrifice of this festival, which consisted of a young bullock, a ram, and seven lambs of the first year, with the usual meat-offerings, and a kid for a sin-offering (Num. xxix, 1—6); and which, with the exception of there being one young bullock for a burnt-offering instead of two, was simply a repetition of the monthly sacrifice. All the times that the drink-offering and burnt-offering were offered, the Levites engaged in soul-stirring vocal and instrumental music, singing the eighty-first and other Psalms; while the priests at stated intervals broke forth with awful peals of the trumpets. After the offering up of the sacrifices the service was concluded by the priests, who pronounced the benediction (Num. vi, 23—27), which the people received in a prostrate position before the Lord. Thereupon the congregation, after prostrating themselves a second time in the court, resorted to the adjoining synagogues, where the appointed morning prayer and Psalms were chanted, consisting of Gen. xxi, 1—34; Num. xxix, 1—6; 1 Sam. i, 1—11, 10; Gen. xxvi, 1—24; Num. xxix, 1—6; Jer. xxxi, 2—20. Psalms were recited and the festival prayers were offered, beseeching the Lord to pardon the sins of the past year, and to grant the people in the next year a peaceful and prosperous service. The families then resorted to their respective homes, partook, as on other festivals, of a social and joyous repast, and in the evening again went to the Temple to witness the offering of the evening sacrifice and the incense, and then the lighting of the candlesticke, with which the festival concluded, all wishing each other, "Mey ye be written down for a happy new year," or "Mey the Creator decree for you a happy new year;" to which it is replied, "And you likewise." This wish or prayer to be inscribed on this day in the book of life arises from the fact that the Jews believe that the feast of the New Year is the annual day of judgment, on which all the deeds of men are weighed, whether they be good or evil, the destinies of every individual and every nation are fixed for the ensuing year, and the death and life of every one is determined, as was explained in a manner of detail (Mishna, Rosh Ha-Shana, i, 2; Talmud, in loco). Hence the names Day of Judgment (יִשְׂרָאֵל יַעֲדוּ בֵּית יָדִים) by which this festival is sometimes called. It is a remarkable fact that all the ancient astronomers of the different nations have given the figure of an aged man of stern aspect, holding...
NEW YEAR

a pair of scales in his right hand and an open book in his left, as the sign of the zodiac for this month, thus expressing the religious idea of this festival.

With the exception of the sacrifices which cannot be offered in consequence of the destruction of the Temple, and a few modifications which have been introduced through the shifting circumstances of the nation, the Jewish festival for the new year continues to be observed on the present day to be essentially the same as it was in the days of Christ. The service comprises prayers of a threefold kind as described in the Mishna, which are as follows:

(1). A series of texts are recited bearing on the supreme rule of God, consisting of, σαιράγγελοι τοῦ θεοῦ, θεός ὁ χάριτος σου, and ἔσται σοὶ τὸ βραβεύμα τὸ καλὸν, commencing with τί ποιήσῃ τὰ πάντα ὁ θεός, beginning from where the last leaves off till τί ποιήσῃ τὰ πάντα ὁ θεός. After these prayers have been offered, in which the speedy approach of the kingdom of God is invoked, when all mankind shall possess the true knowledge of their Creator, and unite in the worship of their supreme Benefactor, which are called ἱεράς ἱππεύματα, of Homage, a prayer is recited celebrating the holiness of the day (Ῥαχήτωσις θεοῦ), after which the trumpet is blown.

(2). Then follow prayers acknowledging the omniscience, providence, sovereignty of the Creator, and beseeching him to remember his creatures in pity, and temper his judgment with mercy, which are called τὰ ἱππεύματα, of Remembrance, and after which the trumpet is again blown; and (3) Prayers celebrating that future jubilee when all men will be free from bondage of error, and acquire perfection in the knowledge of their God, which are called τὰ τριαδικά, of Sounding the Trumpet, and after which the trumpet is blown a third time. The service is then concluded with the recital of the ἱεράς ἱππεύματα, and the last three blessings of the Amodus, or Muzaph, ἀνεβεί, ἄνεβεσθαι ἀλα, and ἡ γῆ ἐθραύστηκε, (Rosh Ha-Shanah, iv, 5).

Before the destruction of the Temple the trumpets were blown all day by the priests in Jerusalem, from sunrise to sunset, but since the downfall of the city it has been ordained that the trumpet is to be blown in every city during the synagogal service, and that every Jew is held to observe its sound. Though the Bible says nothing about the kind of trumpet to be used on this occasion, yet it is certain that "the cornet used in the Temple on the feast of New Year was," as the Mishna declares, a "straight horn of a chametz [a kind of antelope, or wild goat], the mouthpiece of which was covered with gold" (Rosh Ha-Shanah, iii, 3, and the Jews to the present day use a ram's horn, to remind God on this occasion of the ram which he sent to be sacrificed instead of Isaac, and of the covenant made with the patriarchs; for which reason also (Gen. xxii. 1-24), recording the sacrifice of Isaac, forms the lesson of this festival. The horns of oxen or calves are unlawful (Rosh Ha-Shanah, iii, 2), as the use of them would remind God of Israel's sin in making the golden calf, which is also the reason why the Jews in the present day no more gild the mouthpiece of the trumpet. Before sounding the trumpet, which is of this shape, the rabbi

blowing of the trumpet, as its sound is believed to call forth Satan, who on this day of judgment appears before God's tribunal to accuse the children of Israel (Rosh Ha-Shanah, 18). This explains the otherwise inexplicable rendering of Numb. xxix, 1 in the Chaldean paraphrase of Jonathan b. Uziel, "It shall be a day of blowing to confound Satan, who comes to accuse you, with the mouth of your mouth."

After evening service, or the afternoon service, they go to a river or stream, which they generally prefer to be out of town, and to contain fish, and recite a prayer called דָּבָר הַיְשׁוּבָה, which consists of the following passages of Scripture: "Micah vii. 18-20; Psa. cxviii, 5-9; xxxiii; and with the earnest recitation of Isa. xi, 9, shake their garments over the water. Four reasons are assigned for this service: (1). It is to pray to God to be as fruitful as the fish. (2). To commemorate the sacrifice of Isaac, which, according to an old tradition, Abraham made on this day; in spite of the wiles of Satan, who sought to prevent the patriarch from obeying the Lord, by causing a mighty stream to arise on Abraham's journey to Mount Moriah, which would have drowned both the father and the son but for the prayers of faith. (3). To remind the people of the sight of the fish that we are as suddenly deprived of our life as these fish are caught in the net (Eccles. ix, 12), and thereby be admonished to repentance. (4). To learn from the fish constantly to direct our eyes upwards.

3. Literature.—Mishna, Rosh Ha-Shanah; and the Gemara, Tractate Sukkah on the 8th, 22-25; Numb. xxix, 1; Abrahanel, Commentry on Exod. xii, 1 sqq.; Lecon, xxiii, 23-25; Numb. xxix, 1; the Jewish Ritual entitled Derech Hez-Chayyim (Venice, 1869), p. 258 sqq.; the Macher for Rosh Ha-Shanah; Meyer, Der Traumserien der und der Dein Geben und Gen (1755), p. 300 sqq. See TRUMPET, FESTA OF.

NEW YEAR, FESTIVAL OF. The custom of celebrating the first day of the year by some religious observance, generally accompanied by festive rejoicing, is of very ancient origin, and appears to have prevailed generally among the nations of antiquity. The Jews, the Egyptians, Persians, Hindis, Chinese, Romans, and the Mohammedans, although differing as to the time from which they reckoned the beginning of the year, all regarded it as a day of special interest. For the Jewish usages, see the preceding article.

The old Roman year began in March, and on the first day of that month the festival Augealia was celebrated, with the salli or priests of Mars carried the sacred shield in procession through the city, and the corn was then divided into five shares and rejected to the Romans; the Romans counted it lucky to begin any new enterprise or to enter upon any new office on new-year's day. The same sacredness was attached to the first day of the year after the change took place in the Roman calendar that made January the commencing month instead of March; and Pliny tells us that on this day in its former form the people wished each other health and prosperity, and sent presents to each other. It was accounted a public holiday, and games were celebrated in the Campus Martius. The people gave themselves up to riotous excess, and all kinds of debauchery. The first Christian emperors kept up the custom, though it was tolerated and afforded the opportunity for idolatrous rites. The Church, however, saw itself finally obliged to condemn these, and prohibited Christians from joining in the social celebration, and ended by making it a religious festival. "It was only," remarks Newman, "to oppose a counter-influence to the pagan celebration that Christian assemblies were finally held on the first day of January, and they were designed to protect Christians against the contagious influence of pagan festivals.

The custom of celebrating the first day of the year from the time of Heraclius has continued to the present day in the various nations. In Persia, the New Year is celebrated with great solemnity; the king, with his courtiers, receives presents from the people and bestows presents on the attendants. This custom is still observed in China, where the New Year is celebrated with great festivity, and the Chinese people address each other by the same words as the Egyptians, saying "Happy New Year."
their duty, especially on this day, to show that as they had in truth been gathered from among the heathen to exhibit in the church of Christ, and thereby to the heathen temper, to substitute alms for new-year’s gifts (the strens), edification from Scripture for merry songs, and fast for riotous feasting. This principle was gradually adopted in the practice of the Western Church, and three days of penitence and fasting were opposed to the pagan celebration of January, until, the time being designated, the festival of Christ’s circumcision was transferred to this season (the first day of January being the eighth day after the nativity), when a Jewish rite was opposed to the pagan observances, and its reference to the circumcision of the heart in opposition to heathen revelry (Ch. Matt. ii. 314, 315). This occurred as early as A.D. 487. In Herrick’s Noble Numbers are three songs, with choruses, for this day, illustrating the religious ceremony, and drawing a consolation therefrom:

"Come, thou, and gently touch the birth
Of him who’s Lord of heaven and earth,
And softly handle him: y’d need, Because the pretty babe doth bleed.
Poor pitted child! who from thy stall
Bringest in thy blood a balm that shall
Heal up the stings of New Year’s fall!"

In the 6th century it became a solemn festival, the Council of Tours in 566 ordaining that “the chant of litanies should on the first of January be opposed to the superfluities of the pagans,” and that the Eucharist, or Mass of the Circumcision, be celebrated on the day. The first mass was held on this day, and it is opposed to the Roman Catholic Church. The day was held as a fast, in opposition to the Roman—then pagan—custom of feasting, dancing, and gift-making. In the time of Numa the day was dedicated to Janus, the double-faced deity, who faced the future while he looked back upon the past. The Romans called him a cake of salty meal, with incense, salt, and wine. They also did something in the way of their art or calling to begin the year industriously, that they might have good-fortune through it. By degrees, however, as the Christian faith and strength increased, and the necessity for the distinction grew less important, the Church, in the 8th century, abrogated the fast, and the earlier and more congenial jovial customs were gradually resumed, and have continued in one good form or another to the present. (Regarding the observance of new-year’s by the Christian Church, see, especially, Alt. Der christliche Cultus, pt. ii, p. 46; August. Denkwürdigkeiten der christl. Kirche, i. 311 sq.)

The Hindos call the first day of the year Prayopayop, the day of the Lord of Creation. It is sacred to Gemini, the god of wisdom, to whom they sacrifice male kids and a cake of millet meal in the full belief that it will secure the individual from danger and adversity. The first intonation of the Myusaca year is designated by “the month of the ears of maize.” From the various facts thus adduced, it is plain that the rites connected with New-year’s day may be traced back to the remotest ages, that they have been celebrated in all nations and ages, and that, though of a festive and cheerful nature, they have never been uniformly of an essential religious character.

The social observances of the first day of the new year have been in substance the same in all ages. From the earliest recorded celebration, we find notice of feasting and the interchange of presents as usages of the day. Suetonius alludes to the bringing of presents to the capital: and Tacitus makes a similar reference to the practice of giving and receiving New-year presents. The offering of presents to the sovereign is some source of personal profit to the sovereign, and so onerous to his subjects, that Claudius limited them by a decree. This custom was continued by the Christian kingdoms into which the Western empire was divided. In England we find many examples of it, even as a part of the public expenditure of the court, so far down as the reign of Charles II; and, as all our antiquarian writers mention, the custom of interchanging presents as common in all classes of society (see Eccleston’s English Antiquities, p. 417, 445). At present the ringing in of the New Year from the belfry of churches is the only open demonstration of joy at the recurrence of the anniversary. This is now a custom also in other countries. In France it still subsists, unveiled by the still popular practice of Christmas gifts. In many countries the night of New-year’s Eve, “St. Sylvester’s Eve,” was celebrated with great festivity, which was prolonged till after twelve o’clock, when the New Year was ushered in with congratulations, complimentary visits, and mutual wishes for a “Happy new year.” This is an ancient Scottish custom, which is still continued in many parts of the country, whereas in the form of wish—“Proest (for the Lat. proest) New-jahr”—“May the new year be happy”—sufficiently attests the antiquity of the
custom. Many religious communions are wont to celebrate the approach of the New Year with a special service, especially the Methodists. In the Roman Catholic Church the Te Deum is still sung at the close of the old year; and New-Year's day is a holiday of strict obligation. For monographs on the ancient customs, both among the Jews and other nations, in this respect, see New-Year, New-Year's Day, p. 117, 118.

New Zealand is the name of a British colony in the South Pacific Ocean, which consists of three volcanic islands, and of a number of islets scattered around the coasts, having an area of about 106,000 square miles, with a coast-line measuring about 4000 miles, on the best-estimated solstice count, and a population (in 1895) of 578,492 Europeans, besides 41,969 natives.

Soil, Climate, and Productions.—Of the whole surface-extent of New Zealand (nearly 70,000,000 acres, little short of the combined area of England and Wales, Scotland, and Ireland), one fourth is estimated to consist of dense forest tracts, one half of excellent soil, and the remainder of waste lands, scorable-hills, and rugged mountain regions. The mountains are mostly clothed with evergreen forests of luxuriant growth, interspersed with fern-clad ranges, and occasionally with treeless, grassy plains. Some of the rich valleys and sheltered dales abound in North Island; and in the east of South Island there are many expansive plains of rich meadowland, and nearly 40,000,000 acres are suitable for cultivation and cattle-breeding.

The soil, although often clayey, has in the volcanic districts more than a medium fertility; but the luxuriant and semi-tropical vegetation is perhaps as much due to excellence of climate as to richness of soil. Owing to the prevalence of light and easily worked soils, all agricultural processes are performed with unusual ease. The climate is one of the finest in the world. The country contains few physical sources of disease; the average temperature is remarkably even at all seasons of the year, and the atmosphere is continually agitated and freshened by winds that blow over an immense expanse of ocean. In North Island the mean annual temperature is 57°; in South Island 52°. The mean temperature of the hottest month at Auckland is 68°, and at Otago 56°; of the coldest month, 54° and 49°. The air is very humid, and the fall of rain is greater than in England, but there are more dry days. All the native trees and plants are evergreens. Forests, shrubberies, and plains are clothed in green throughout the year, the results of which are that cattle, as a rule, browse on the herbage and shrubs of the open country all the year round, thus saving great expense to the cattle-breeder; and that the operations of re-
The system of taboo, or consecration of persons and things by the native priests as sacred and inviolate, so peculiar to the Pacific isles, nowhere attained a greater extent than in New Zealand when first opened to colonization. This was partly a religious and partly a political ordinance, and was so much respected that even in war times hostile tribes left unharmed all persons and objects marked by the sign of the office on their opposite side. Tattooing was practiced, and was made a much more painful operation than in the other Pacific isles; it was performed with a hammer and saw-like chisel. The punctures were stained with vegetable dyes, and the patterns, which extended over the face, body, and arms, were designed or specified in advance. The figures were supposed to denote the rank of the individual wearing them. The women were but slightly tattooed, with a few lines on the lips, chin, and occasionally other parts of the body. The priests were the principal operators, and during the process ancient songs were sung, to encourage, divert the attention, and increase the patience of the sufferers. This tattooing was supposed to make the Maori youth both more terrible in the eyes of his enemies and more acceptable in those of his mistress.

The wars of the Maori were formerly carried on with spears, clubs, slings, and various weapons and objects of war, many of which were of Maori manufacture, according to ethnologists, among lowly civilized people, of stone and wood. Their most remarkable weapon was a spear of nephrite, which descended among the principal chiefs from father to son, and was used only in war. It was called Merimeri, "the fire of the gods," and was sometimes used for scalping prisoners. There are other weapons of nephrite in use among the Maori; they are much sought after, and very costly. The use of firearms is now, however, very general among the Maori, and that they are admitted marionettes has been made but too apparent in their contests with English troops.

The heathen religion of the New Zealanders was largely mythological; temples were wanting; superstition and slighting of hand, however, played an important part in their religious system, and the priest virtually ruled and had his own way in everything. Most puerile practices were thus introduced and freely encouraged to strengthen and perpetuate priestly power. The New Zealanders worshipped various gods, apparently personifications of natural objects and powers, to whom they addressed prayers and offered sacrifices. Their divinities were spiritual and invisible; they had no idols. Many of the gods were deified men, ancestral chiefs of the tribe or nation by whom they were worshipped. They believed in a future state and in their own immortality. There were two distinct abodes for departed spirits, one of which was a place of perfect happiness, evil deeds being punished in this world by sickness and other personal misfortunes. Their priests were supposed to be in communication with their gods, and to express their wishes and commands. Sorcerers were thought to possess great power, and were held in peculiar dread. The moral code was adapted to various social conditions and circumstances. Among chiefs courage, liberality, command of temper, endurance of torture without complaint, revenge of injuries, and absence from insults to others, were regarded as virtues; among slaves, obedience to their masters and respect for the taboo; among married women, fidelity to their husbands. Their idea of Wiro, the evil spirit, was nearly akin to the scriptural idea of the evil one. Sickness, they supposed, was brought on by him, coming in the form of a lizard, and entering the sides, preyed on the vitals. Hence they made incantations over the sick, threatening to kill and eat their deity, or to burn him to a cinder, unless he should come out. With the New Zealanders superstition took the place of medical skill. When a person had a pain in the back, he would lie down and get another one jump over the wound and press on him to remove the pain. A wound was bruised with a stone, and afterwards held over the smoke. In inter-
nal acute diseases the patient sent for a priest, lay down, and died. Dreams and omens were much regarded, and had great influence over their conduct. On important occasions, when several tribes were going to war, an oracle was consulted by setting up sticks to represent the different tribes, and watching the wind to see which way the sticks would fall, in order to determine which party would be victorious. But the person performing the ceremony, by a little juggling, could determine the question as he pleased. The belief in witchcraft, also, almost universally prevailed, and was productive of all the suspicion, cruelty, and injustice which generally accompanies it among a barbarous and superstitious people. A ceremony, called iriri, or roki, was performed by the priests upon infants before they were a month old, and consisted of a species of baptism, sometimes by sprinkling and sometimes by immersion.

The Rev. W. Butler thus relates the ceremony in Newcomb's *Cyclopedia of Missions*, s. v.: "When a child was born, it was wrapped in a coarse cloth and laid in a veranda to sleep; and in a few hours the mother pursued her ordinary work in the field. The child suffered much; and if its mother did not furnish it nourishment enough, it must perish. Large holes were slit in the ear, and a stick, half an inch in diameter, thrust through. When five days old the child was carried to a stream of water, and either dipped or sprinkled, and a name given to it; and a priest mumbled a prayer, the purport of which was said to be an address to some unknown spirit, praying that he may influence the child that he may become cruel, brave, warlike, troublesome, adulterous, murderous, a liar, a thief, disobedient—in a word, guilty of every crime. After this small pebbles, about the size of a pin's head, were thrust down its throat, to make its heart calous, hard, and incapable of pity. The ceremony was concluded with a feast."

Marriage among the New Zealanders, previous to the introduction of Christianity, did not involve any special religious ceremonies. Before marriage, girls not betrothed were permitted to indulge in promiscuous intercourse if they pleased, and the more highly they were esteemed. Married women, however, were kept under strict restraint, and infidelity was punished severely, often with death. Polygamy was permitted, but was not common, and men could divorce their wives by simply turning them out of doors.

The houses of the better class were snug and warm, ornamented with carved wood. They were built of bulrushes, and lined with the leaves of palm-trees neatly plaited together. They were about sixteen by ten feet, and four or five feet long. The entrance was by a low sliding door, and there was one window, four by six inches, with a sliding shutter. Their houses were without furniture, and their cooking utensils a few stones. Their villages were scattered over a large plot of ground, without any order of arrangement.

The language of the Maori, like the Polynesian languages generally, belongs to the Malay family, but it is by far the most complicated. The Maori alphabet comprises only fourteen letters, viz. A, E, H, I, O, P, R, T, U, W, and Ng. Seven tolerably distinct dialects are spoken among them. The language is represented as rich and sonorous, well adapted for poetical expression, especially of the lyric kind. The Maori have an abundance of myths, legends, and traditions, of which a collection has been made by Sir George Grey. They are also passionately attached to music and song.

History of the Country and its Civilization.—New Zealand was discovered by Tasman in 1642, but only one hundred years later it was made generally known to Europeans by the repeated visits of Cook. He surveyed the coasts in 1770. At that time domestic animals, potatoes, and cereals were introduced. In the following decades the visits of Europeans to New Zealand multiplied; whalers established a few small settlements in the country for provisions and shelter. Runaway sailors, escaped convicts from New South Wales, and adventurers of all kinds, formed a sort of colony at Kororarike at the opening of our century. About this time, too, individual Englishmen began to settle on the coast and intermarry with the natives, and some of them, in right of their wives or of purchase. Missionary enterprise began in 1814 by the zealous Marsden (q. v.), under the auspices of the London Church Missionary Society, soon strengthened by three other laborers, and favored by various chiefs, who made grants of land to the missions. The missionaries not only labored to convert the natives, but introduced improved culture among them, and did what they could to protect them from the injustice, fraud, and oppression of the Europeans who visited the islands or had acquired settlements. More effectually to secure this object, a British resident or consul was appointed in 1833, but without any authority. In the mean time a desultory colonization and the purchase of rights to land from the natives for a few hatchets or muskets were going on; and to put an end to this state of anarchy a lieutenant-governor was appointed, who, in 1840, concluded at Waitangi a treaty with the native chiefs, whereby the sovereignty of the islands was ceded to Britain, while the chiefs were guaranteed the full possession of their lands, forests, etc., so long as they desired, and the right of pre-emption, however, was reserved for the crown, if they wished to alienate any portion. Thus New Zealand became a regular colony, the seat of government of which was fixed on the Bay of Waitemata, and called Auckland. The previous year an association, called the New Zealand Company, had made a pretended purchase of tracts amounting to a third of the whole islands, and for a dozen years most of the colonization of New Zealand was conducted under its auspices. The continuance of the Bay of Waitemata is considered to have been on the whole prejudicial to the prosperity of the colony; and after a long conflict with the government, these grants in 1852, all their claims—which the government had never confirmed—on condition of receiving £268,000 as com-

VII.—28**
Since the introduction of Christianity a great change has taken place. The natives have abandoned tattooing, and are now generally clothed like civilized men, and possess flocks, herds, furniture, houses, and cultivated lands. Cannibalism was crowded out, too, by Christianity. It was not remarkable in 1863, when 15,000 soldiers, under English command, contended against 2000 natives, hiding and fighting behind ramparts. Another struggle followed in 1864, and petty rebellions have been frequent, causing great expense and trouble to the colonists, and great demoralization among the converted natives. As they learned to hate the colonists they came to hate their religion, and invented one of their own, called How-howism, those who professed it being called How-hows. It was a most absurd mixture of their old superstitions with some Bible tenets, and a virtual return to heathenism. One Te Kooti made himself famous fighting with a handful of followers against the English from 1866 to 1872, when the pursuit of him was virtually abandoned. Since that time the natives have been more quiet, and the colonists seem more secure, making the effect of King Solomon's Wisdom and conciliation. By the constitution of 1872 the natives were made voters, and eligible to office. Four of them have been recently elected members of the lower house of the Legislature. A noted European traveller, who has recently been among the Maori tribes near Lake Taupo, in the central district of Northern New Zealand, sends a very interesting account of the How-hows in that quarter. These, though maintaining an independent attitude towards the colonial government ever since the last war left them unsubdued, have not testified to the effect of King Solomon's Wisdom. According to his report, the How-howism has toned down from its first blood-thirsty extravagances into a quiet and respectable sort of monothemism. The How-hows have agreed to reject the New Testament in its entirety, but they have accepted the Old, and from their native translations of it erected what is, in fact, a Judaism of their own. They have even dropped the observance of the Sunday to take up that of the Jewish Sabbath; and, in fact, in all things making their practice so different from our knowledge it enables them to go. At the headquarters of the tribe, the Ureweras, who have a great knowledge of Scripture, morning and evening services are invariably recited daily. The services consist chiefly in chanting in chorus verses of the Psalms, and conclude with short extemporaneous prayers by one of the chiefs.

To show the rapid growth of Christianity in these islands, we give the following table, exhibiting the number of communicants in the eastern district, from the year 1840, when the Church consisted entirely of natives who were from the Bay of Islands, principally as teachers:

<table>

Here we have illustrated the fact, seen in almost all missionary history, that while during the first years of a mission the results are scarcely perceptible and the prospects discouraging; yet, when the Gospel fairly gets a hold among the people, however desperate their case might seem, its progress will be rapid and powerful. After twenty years' labor in New Zealand the number of communicants reported was but 8, and they were all at one station; but here is an increase in ten years, in one district, from 29 to 2993!

NEYELAH is the name of a deity worshipped by the ancient Arabs before the days of Mohammed.

Nezi̇âh (Heb. Net'si̇'ach, נְצִיָּח, illustrous; Sept. Naši̇d, Ezra ii, 54; Naši̇d, Neh. vii, 56; v. r. Nezi̇s, Naší̇d; Vulg. Naši, the father of a family of Nethinim who returned from Babylon with Zerubbabel (Ezra ii, 54; Neh. vii, 56). B.C. 536.

Nešîbî (Heb. Net'seḥ, נְשִׁיב, fixed, or a garrison as in 1 Sam. x, 5; xiii, 8, 4; 1 Chron. xi, 6); Sept. Našeṣ (v. r. Nešîbî), a city in the Shephelah or maritime plain of Judah; mentioned between Asnah and Kelah (Joash, xv, 48), in the group in the south-western part of the hilly region (Keil, Comment. at loc.). Eusebius and Jerome give it the same name (Nešîd, Naší̇d), and place it at the ninth (Jerome, seventh) mile from Eleutheropolis towards Hebron (Onomast. v. v. Nešîbî). It is doubtless the present Hele-Naši, situated on a rising ground, at the edge of the plain and mountain tract, and a hill is visible from the road towards Jericho (Rohrb. Bib. Res. ii, 343 sq., 404; ii, 12; Schwarz, Palest. p. 104). It has ruins of considerable extent, especially a massive tower sixty feet square, with the foundations of another great fabric, and broken columns and large building-stones (Porter, Houb. book, p. 298). Todd (v. r. Nešîbî) describes it as "an insignificant cupola with a few ruins" (Utrite Wunderung, p. 150).

Nešîlim; Nešîneth. See Talmud.

Nias, an important East India island to the west of Sumatra, in 18° 54'—1° 35' N lat., and 97°38'—E. long., with an area of about 1575 square miles, belongs to Holland, and had in 1857, when the Dutch took posession, a population of about 110,000. There are several places where ships can anchor and take in provisions, water, etc. On the east coast is the village Nias, and on the west Siloronggung. Little islands and coral reefs lie here and there on the coast, which in some places is steep, while mountain-chains run from the south-east to the north-west. There is a great breadth of excellent farming-grounds than the population, reduced by internal wars and the exportation of slaves, can properly cultivate. They grow rice, cocoa-nuts, bananas, tobacco, sugar-cane, etc., and annually export about 110,000 pounds of pepper. Cattle and horses have been imported, and they pay great attention to the raising of pigs and fowls. Formerly, about 500 Niassers were carried away annually as slaves to Buitavia and other places, and through this traffic has been in great measure suppressed, it is still to some extent carried on clandestinely.

The Niassers are of the Malay race, but fairer than the Malays usually are. They are gentle, sober, and peaceful, remarkably ingenious in handicraft, ornamenting their houses with wood-carvings, carving arms, etc. The women labor in the fields, the children weave mats, while the men look after the live-stock, and hunt the deer and wild swine. They worship a superior deity, and fear a powerful one, who pursues them if they do evil. Polygamy is permitted, but is rare. The gift to the bride's family is from $60 to $500. Divorce is not allowed, and adultery is punished by the death of both parties. Dead bodies are placed in coffins above the ground, and creepers and flowering shrubs planted, which speedily grow up and cover them. Trade is on the increase. For missionary work in Nias, see the art. MAINE in ARCHIPELAGO.

NIBHAY, ANTONIO, an Italian archaeologist of high celebrity, was born at Rome in 1792, and died in that city Dec. 29, 1859. Nibby was one of those who, following the footsteps of Winckelmann, made an elaborate minute investigation of the remains of antiquity a special study. The first work that him known was his translation of Pausanius, with antiquarian and critical notes. In 1820 he was appointed professor of archaeology in the University of Rome. In the same year appeared his edition of Nardini's Roma Antica; and in 1837 and 1838 his learned and admirable Analisi Storiciopagografico-antiquaria della città de' Contorni di Roma, to which was added (1838 and 1840) a description of the city of Rome itself. Among his other writings may be mentioned his Le Mura di Roma diseguate da W. Gell, and a large number of valuable treatises on the form and arrangement of the earliest Christian churches, the circus of Caracalla, the temple of Fortuna at Praeneste, the graves of the Horatii and the Curiatii, etc.

Nishak (Heb. Nishak, נַשְּהָק [v. r. Nishak], and even נַשְּחָק), of uncertain meaning; Sept. Našak or Našāq [v. r. Našaq or Našāq or Ešaq], the last syllable evidently being the Assyrian termination šaqar, or the Babylonian esur; Vulg. Neshak], a deity of the Avites, introduced by them into Samaria in the time of Shalmaneser (2 Kings xvii, 81). There is no certain information as to the character of the deity, or the form of the idol so named. The rabbins derived the name from a Hebrew root nishak (נַשְּחָק), "to bark," and hence assigned to it the figure of a dog, or a dog-headed man (Jerus. Talm. Aboda Zara, iii, 425; Bab. Talm. Sanhedr. 63, 2). There is no à priors immprobability in this; the Egyptians worshipped the dog (Pictarch, De Is. 44), and according to the opinion current among the Greeks and Romans they represented Anubis as a dog-headed man, though Wilkinson (Anc. Egyptii, 440, second series) asserts that this was a mistake, the head being in reality that of a jackal. See AVINAH. Some indications of the worship of the dog have been found in Syria, a colonial figure of a dog having formerly existed between Berytus and Tripolis (Marmarel, in Bohn's Early Travels in Palest. p. 412). A singular trace of this is found in a

Gnostic Representation of a Dog-headed Figure.
having, however, disappeared. The worship of idols representing the human body surmounted by the head of an animal (as in the well-known case of Nias) was common among the Aseyrians (see also Rawlinson, *Anc. Monarchies*, i. 294; Thévenot, *Itin.*, i. 805; La Roque, p. 227; Paul Lucas, *Itin. in Asia Minor* etc., p. 552). In the Sabian books the corresponding notion is that of an evil spirit at the time of the death, while his feet rest on the bottom of Tartarus; but it is doubtful whether this should be identified with the Arite Nibhaaz (Gesen. *Theuris*, p. 842; Iken, *Dissert. de Idolis Nibhazar* in his *Dissertationes*, i. 156 sqq.; Norberg, *Onomasticon*, p. 29; Beyer, *Add. to Selden’s *Zin Syr.*, p. 321).

Niblock, Isaiah, D.D., a Presbyterian minister, was born in Monaghan County, Ireland, in 1794. He studied divinity under the care of John Dick, D.D., professor of theology in the United Secession Church in Glasgow, Scotland, and was licensed to preach in 1817. He came to America in 1818, and commenced immediately to preach in Philadelphia. In December of the same year he was induced to go west of the Allegheny mountains, where he received appointments to supply the vacancies northwest of the Allegheny River for three months. On April 25, 1819, he was called by the united congregation of Butler and White Oak Springs, over which he was ordained and installed, by the Monongahela Associate Reformed Presbytery, in May of the same year. His ministry in Butler County lasted for over forty-five years, during which time many colonies branched off from the field of his labors, whose influence has been felt extensively in building up flourishing congregations in the great West. He died June 29, 1864. Dr. Niblock was a minister of modest disposition and retiring habits. He was an able and faithful expositor of the Scriptures. His life was one of self-denial and arduous labor. See Wilson, *Presb. Hist. Almanac*, 1866, p. 277. (J. L. S.)

Nib′shan (Heb. *Nibšhan*, ניבשָּׁן, [but with the def. article], R. *Nebšähn* or *fortress* [Furst]; Sept. *Nebashon* v. *Nebashon*, a city in the wilderness of Judah, mentioned between S Secah and the “City of Salt” (Josh. xv, 62). It is barely mentioned by Eusebius and Jerome (*Onomast.,* v. *Nebrahm*). It is possibly the ruined site marked on Van de Velde’s *Map as Nibseh* on Baud’s *Map*. It runs up from the Dead Sea not far N. of Ain-Jilb.)

Nicaea. See Nicaean Councils.

Nicaean Councils (Concile Nicæanum). Important ecclesiastical assemblies were held at Nicaea. The first, Nicaea, formerly a city of Bithynia, in Asia Minor, situated on the eastern shore of Lake Ascania. It was built, or rather rebuilt (for an older town had existed on its site), by Antigonus, the son of Philip (B.C. 316), and received the name of Antigonia, which Ly心中inuous changed to Nicaea, in honor of his wife. It was a handsome town, and of great importance in the time of the Roman and Byzantine emperors; all the streets crossed each other at right angles, and from a magnificent monument in the centre the four gates of the city were visible. It was the second city of Bithynia, only twenty English miles from the imperial residence of Nicomedia, and easily accessible by sea and land from all parts of the empire. It became of such importance that it even disputed with Nicomedia the title of metropolis of Bithynia. Under the Byzantine emperors it was long a bulwark against the Arabs and Seljuk, the latter of whom conquered it about 1080. Before the end of the century it was taken from them by the soldiers of the first crusade, but was restored at the next treaty of peace. In 1204, Constantinople having become the seat of the Latin empire, Theodore Lascari made Nicaea the capital of a Greek kingdom or empire in Western Asia, comprehending Bithynia, My- sia, Ionia, and a part of Lydia. He was succeeded by John Ducas Vatatzes (1292-55), Theodore II (1255-59), John Lascaris (1259), and Michael Palaeologus, who in 1261 transferred the seat of power to Constantinople. In 1330 the city surrendered to Orkhan, and was incorporated with the recently founded Ottoman capital. Nicaea is now a miserable Turkish village, 18 mi. (corrupted by the Greeks into Nicophone). It has 1,500 inhabitants, and there is nothing but a ruin. In the Church of St. Mary to the memory of the event which has given the place a name in the history of the world.

I. Two Church councils have been held at Nicaea, but only one of them was properly ecumenical, and it is regarded as the first and most important of such councils. "Next to the apostolic council at Jerusalem," says Schaff, "it is the most important and the most illustrious of all the councils of Christendom" (*CB. Hist.* iii. 650). It was convened by the emperor Constantine in A.D. 325. With the imperial invitation for attendance the different bishops were proffered the service of public conveyances for themselves and two prebendaries and three servants; and when the 318 bishops who had complied with the emperor's request gathered at Nicaea, they were received and the council held in the imperial palace, and its use for future sessions was afforded to the ecclesiastical gathering, as it appears from the records that the sessions, continuing for two months, were held sometimes at the palace and sometimes at a church or some public building. The empire, at that time, had only one council, held every fifth year, by which 1800 bishops (1000 for the Greek provinces, 800 for the Latin), and of these, if 318 attended, as reported by Athanasius (Ad *Afros*, c. 2, et al., *Socrates Hist. Eccles.* bk. viii), and Theodoret (*Hist. Eccl.* i. 7), there were one bishop of the See of Rippleus, a bishopric now called Nicaea—a large number, indeed, if we take into consideration the vastness of the imperial realm and the difficulties of travel in those times. Including the presbyters and deacons and other attendants, the number may have amounted in all to between 1500 and 2000. Most of the Eastern provinces were strongly represented. Besides a great number of obscure mediocrities, there were several distinguished and venerable men, as e.g. Eusebius of Cesarea, who was most eminent for learning; the young archdeacon Athanasius, who accompanied the bishop Alexander of Alexandria, for zeal, intellect, and eloquence. Some, as confessors, until in their body the marks of Christ from the times of persecution; Paphnutius of the Upper Thebaid, Potamon of Heraclea, whose right eye had been put out, and Paul of Neo-Caesarea, who had been tortured with red hot iron, and was on the point of death in his hands. Others were distinguished for extraordinary ascetic holiness, and even for miraculous works; like Jacob of Nisibis, who had spent years as a hermit in forests and caves, and lived like a wild beast on roots and leaves, and Spyridion (or St. Spiron) of Cyprus, the patron of the Ionian Isles, who even after his ordination remained a simple shepherd. The Latin Church, on the contrary, had only seven delegates: from Spain, Hosius or Osio of Cordova, the ablest and most influential of the Western representatives; from France, Nicaeus of Dijon; from North Africa, Cecilian of Carthage; from Pannonia, Domnus of Stridon; from Italy, Eustorgius of Milan and Marcus of Calabria; from Rome, the two presbyters Victor or Vitus and Vincentius, as delegates of the aged pope Sylvester I, who found it impossible to attend in person. A Persian bishop accompanied the bishop Theophanes, who forerunner and teacher of the Gothic Bible translator Ulfilas, were present.

Various theories have been propounded to explain Constantine's aim in calling this council. By some it is explained on the general ground that the Council was (based on Eusebius, *Vita Constanti*, iii. 4); by others it is regarded as intended to restore quiet to the Church, and unite all its parties in the great Trinitarian question on
which the Church was at that time greatly divided—there existing three parties: one, which may be called the orthodox party, held firmly to the doctrine of the deity of Christ; the second was the Ariam party [see Arianism]; and the third, which was in the majority, taking conciliatory or middle ground, and consenting to the use of such christological expressions as all parties could agree upon. Thus the divine nature of Christ in general Biblical terms, and the avoidance of the use of ὀποιονός [see Homooeu- sian], which the Arians decried as unscriptural, Sabelian, and materialistic. According to Pusey, “He [i.e. Constantine] did not understand the significance or more importance to uniformity in keeping Easter as to unity of faith. Indeed, he himself at this time believed in no doctrine but that of Providence, and spared no terms of contempt as to the pettiness of the dispute between Alexander and Arius” (Councils of the Church, p. 102); yet it would seem that Constantine only called a council when he believed it impossible to restore peace between the contending parties, led respectively by Arius and Alexander, and now turned over the case for settlement to the bishops, who appeared to him to be the representatives of God and Christ. Dr. Schaff states after dividing the opinions of the bishops present, that “the council was formed and guided the Church,” and he appears to have hoped that when in council assembled, analogous to the established custom of deciding controversies in the single provinces by assemblies composed of all the provincial bishops, they would be able to dispose of the present controversy.

No complete collection of the transactions of this Nicene ecumenical council have come down to us. Some account of the bishops who composed this assembly is given by Socrates, Sozomen, and Theodoret. It is uncertain who presided, but it is generally supposed that the president was Hosius, bishop of Corduba (Cordova), in Spain. From the reports of two of its attendants, Athanasius and Eusebius of Cesarea, we learn that it was busy mainly with the settlement of the different christological views. The opening sessions were principally devoted, according to these writers, to a consideration of Arian views, and resulted finally in the personal examination of Arius himself. He did not hesitate to maintain that the Son of God was a creature, made from nothing; that there was a time when he had no existence; that he was capable of his own free will of right and wrong. Athanasius, although at the time but a deacon, drew the attention of the whole council by his marvellous penetration in unravelling and laying open the artifices of the heretical views of Arius and his followers; he resisted Eusebius, Theognis, and Mau- ris, the chief supporters of Arius, and evinced him in defence of the true faith that he attracted both the admiration of all Catholics and the bitter hatred of the Arian party. We are told that so great and far-reaching was the influence of Athanasius’s criticism that many of the Arians became doubtful of their own stand-point, and eighteen of them abandoned the cause of Arius. The orthodox themselves became enthusiastic in behalf of their cause, and when Eusebius of Cesarea proposed a confession of faith—an ancient Palestinian confession, which was very similar to the Nicean, and acknowledged the true nature of Christ in general terms, but avoided the term in question, ὀποιονός, consub- stantialis, of the same essence—they rejected it, though the emperor had seen and approved this confession, and even the Arian minority were ready to accept it. They wished a creed which no Arian could lustily subscribe, and especially insisted on inserting the expression homo-ousios, which the Arians so much objected to.

The fathers finally presented through Hosius of Cor- dova another confession, which became the substance of what is now known and owned by the orthodox church as the Nicene Creed. The Nicene Creed and the Apostles’ Creed (q.v.) The following is the Latin text of this creed:

"Credimus in Deum, Patrem omnipotentem, omnium virilutum et inviolabilium Creantorem. Et in Dominum Jesum Christum Filium Dei, natum ex Patre, et Ungenial- num, homo homineque, sub signo unico, quem qua nobiscum ac fiscem nobis humani fiscem, sanctum et salutiferum, qui vel propter nostrum salutem descendit, et incarnatus est ex spiritu sancto, et ex matre virgine Maria, et resuscitavit a mortuis et ascendit in coelo, veniturus ut ad judicium vivit et mortuus. Et in Spiritum Sanctum."
cial synod shall be held twice a year in every province to enact into sentences of excommunication. One synod to be held before Lent, and the second in autumn.

6. But the synod prescribes the prerogatives and privileges of the bishops of Alexandria, Antioch, and other provinces. (The sixth canon of Nicea, according to the revisions of 1510; and 1557, 1571, 1572, 1594, and 1600.)

7. Synods are summoned to meet at Cæsarea, Antioch, and Jerusalem, and at the place where the patriarch resides.

8. The bishops are to be summoned to the synod by the patriarch; but if he neglects to do this, the bishops are to summon themselves.

9. But the synod prescribes the prerogatives and privileges of the bishops of Alexandria, Antioch, and other provinces. (The sixth canon of Nicea, according to the revisions of 1510; and 1557, 1571, 1572, 1594, and 1600.)

10. Synods are summoned to meet at Cæsarea, Antioch, and Jerusalem, and at the place where the patriarch resides.

11. But the bishops are to be summoned to the synod by the patriarch; but if he neglects to do this, the bishops are to summon themselves.

12. But the synod prescribes the prerogatives and privileges of the bishops of Alexandria, Antioch, and other provinces. (The sixth canon of Nicea, according to the revisions of 1510; and 1557, 1571, 1572, 1594, and 1600.)

13. Synods are summoned to meet at Cæsarea, Antioch, and Jerusalem, and at the place where the patriarch resides.

14. But the bishops are to be summoned to the synod by the patriarch; but if he neglects to do this, the bishops are to summon themselves.
The second Council of Nicaea, called also the seventh Ecumenical Council, though falsely so, was assembled Aug. 17, 786, by order of the empress Irene and her son Constantine. Owing to the tumults raised by the Iconoclasts, the party, it was dissolved and reconvened on Sept. 24, 787. The history of the present, says Mr. Paxton, as that the opening of the council was made on Oct. 11. Three hundred and seventy-five bishops were present from Greece, Thrace, Nautolia, the Isles of the Archipelago, Sicily, and Italy. Pope Hadrian and all the Oriental patriarchs were present in the synod, those of Rome taking the first place; two commissioners from the emperor and empress also assisted at it. The causes which led to the assembling of this council were briefly as follows: The emperor Leo (and afterwards his son Constantine Copronymus), offended at the excess of veneration often offered to the images of Christ and the saints, made a decree against the use of images in any way, and caused them everywhere to be removed and destroyed. These severe and ill-advised proceedings raised an opposition almost as violent as that of the Council of Chalcedon (451 A.D.), and the pope (Hadian) defended the use of images, declaring them to have been always in use in the churches, and showing the difference between absolute and relative worship. However, in a council assembled at Constantinople in 734, composed of three hundred and thirty-eight bishops, a decree was published against the use of images. But at this time Constantine Copronymus died, and Tarasius, patriarch of Constantinople, induced the empress Irene and her son Constantine to convocate this council, in which the decrees of the council of 734 at Constantinople were not adnied. The first session was held in the church of St. Sophia. Tarasius, the patriarch, spoke first, and exhorted the bishops to reject all novelties, and to cling to the traditions of the Church. After this, ten bishops were brought before the council, accused of following the party of the Iconoclasts. Three of whom, Basil of Ancrya, Theodore of Myra, and Theodosius of Ammorium, recanted, and declared that they received with all honor the relics and sacred images of Jesus Christ, the blessed Virgin, and the saints; upon which they were permitted to remain in the Church. A council of the see of Alexandria was held in the same year. In the second session the letters of pope Hadrian to the patriarchs of the East were read. The latter then declared his entire concurrence in the view taken of the question by the bishop of Rome, viz. that images are to be adored with a relative worship, reserving to God alone faith and the worship of Latria. This opinion was warmly applauded by the whole council. In the third session the confession of Gregory of Neo-Cesarea, the leader of the Iconoclast party, was received, and declared by the council to be satisfactory; whereupon he was, after some discussion, admitted to take his seat, and with him the bishops mentioned above. Then the letters of Tarasius to the patriarchs of Alexandria, Antioch, and Jerusalem, and their replies, as well as the confession of Theodore of Jerusalem, were read and approved. The passages of Holy Scripture relating to the churhain which overshadowed the ark of the covenant, and which ornamented the interior of the Temple, were read, together with other passages taken from the fathers, showing that God had, in other days, worked miracles by means of images. In the fifth session the patriarch Tarasius endeavored to show that the innovators, in their attempt to destroy all the following the images of the Jews, pagans, Manichaeans, and other heretics. The council then came to the conclusion that the images should be restored to their usual places, and be carried in procession as before.

In the sixth session the repetition of the definition of faith made in the council of Iconoclasts at Constantinople was read. They had there declared that the eucharist was the only image allowed of our Lord Jesus Christ; but the fathers of the present synod, in their repetition, maintained that the eucharist is nowhere spoken of as 'the image of our Lord's body, but as the very body itself.' After this, they proceeded to the passages from Holy Scripture and from the fathers which the Iconoclasts had adduced in support of their views, and in doing so insisted chiefly upon perpetual tradition and the infallibility of the Church.

In the seventh session (not recognized either by Greeks or Latins) was held at Constantinople, to which place the bishops had been cited by the empress Irene, who was present, with her son Constantine, and addressed the assembly. The decree of the council and the passages from the fathers read at Nicaea were repeated, and the former was again subscribed. The Council of Constantinople against image-worship was anathematized, and the memory of Germanus of Constantinople, John of Damascus, and George of Cyprus held up to veneration. Twenty-two canons of discipline were published.

1. That upon the proper observation of the canons of the Church.
2. That forbids those who do not know the patristic books, and with the books of patristic canons. That forbids princes to elect bishops. That forbids anyone to arrogate to any church or alter in which relics are not contained. That forbids those who are not ordained to read in the synaxis from the Ambo. That forbids plurality of benefices, and in dress among the clergy. That forbids double monasteries, for men and for women.

This council was not for a long period recognised in France. The grounds upon which the French bishops opposed it are contained in the celebrated Caroline Books, written by order of Charlemagne. Their chief objections were these: 1. That no Western bishops, except the pope, by his legates, were present. 2. That the council was contrary to their custom, which was to use images, but not in any way to worship them. 3. That the council was not assembled from all parts of the Church, nor was its decision in accordance with that of the Catholic Church. The Caroline Books were answered by pope Adrian, but with little effect so as far as the Gallican Church was concerned, which continued long after this to reject this council altogether. See Labbé, Conc. xvii, 847, 863; xvi., 831, 839; Historia der Ketzerwege, xiv. 419 sq.; Neander, Ch. Hist. iii, 318 sq.

Nicaise, Sr. (Latin, Nicæus) (1), a Christian martyr who lived in the 3d century, was one of the
companions of St. Deniz, and received from him the mission of converting to the Christian faith the people who inhabited the territory of the Velocases (ancient Vexin). Before separating, it is said the apostle of the Parisians confounded upon him the episcopal dignity; but this fact is questioned by some hagiographers. Ursard especially gives to St. Nicaise only the position of bishop. Some say that between the Oise and the Epte the church had been evangelized by him, when, the third day after the martyrdom of St. Deniz, the prefect, Sisinius Fessennius, passed through the village of Ecou, where was found Nicaise, with Quirin and Scobicile, companions of his apostolic labors. The prefect stopped the three evangelists, and, upon their obstinate refusal to sacrifice to idols, had them beheaded, October 11, 285 or 286. A Christian woman, called Plentia, soon after herself a subject for martyrdom, buried the bodies of the martyrs on a small island formed by the Epte, which has since become the borough of Gissy-sur-Epte (vado Nicasii). It follows then from the acts of these apostles of the Vexin that Nicaise never came as far as Rouen. This city, however, considers him as her first bishop. Since the redaction of the new Breviary of Rouen, his day is celebrated with the feast of the bishop on the first Sunday of October. The remains of St. Nicaise and of St. Scobicile were, in the 9th century, brought to Meulan, where a church was erected under the invocation of the first of these martyrs, and the body of St. Quirin was transferred to Malmeidy, in the diocese of Liege. Several localities situated near the cemetery of St. Nicaise, such as "Les vies des Saints," Butler, Lives of the Saints.

Nicaise, St. (2), of Rheims, a Roman Catholic bishop and a Christian martyr, famed especially for his eloquence, was of Gallic origin and is assumed to have been a native of Rheims. The time of his birth is not known. He flourished in the 5th century. Even the date of his accession to the episcopal seat of his native place is unknown. It is only certain that he was the immediate successor of Severus. Fiolord reports that he founded at Rheims the first church in honor of the Holy Virgin, and that he transferred to it at the same time the seat of the bishopric, which was in the church of the Holy Apostles. The year 401 is fixed for the construction of this new cathedral, which Nicaise consecrated by the shedding of his blood when, several years after, the Vandals took and sacked the city of Rheims. When the barbarians appeared before the city to besiege it, Nicaise boldly exhorted his flock to the defence, preaching at the same time repentance and submission to the will of God. When the Vandals had returned in their retreat, Nicaise, identified with his tribe of Gallo-Roman bishops, understood himself the master of Rheims, Nicaise boldly went to meet them upon the threshold of his cathedral, attended by his clergy and singing hymns. They had no regard either for his character or his supplications in favor of the people who surrounded him, and after making him suffer many outrages they beheaded him. The beauty of Eutropia, his sister, who was near him, appeared to disarm the barbarians; but the Christian virgin, fearing more their love than their hatred, excited herself the fury of her brother's executioner, and also received the martyr's crown. Several persons of the clergy and of the people were also put to death, and among this number several distinguished ecclesiastical students. St. Nicaise and his companions were buried in the cemetery of the church of St. Agrippus, which then took the name of the martyr bishop. It is an error of Fiolord, following in 401 other historians, who place the Nicaise contemporaneous with St. Lupus, bishop of Troyes, and with St. Aignan, bishop of Orleans. The latter prelates lived at the time of the invasion of the Huns, under the conduct of Attila, in 451, and not the irruption of the Vandals in 406. Fiolord seems to have hesitated upon the time of the martyrdom of St. Nicaise; for his text bears, Sub cadem Vandalorum vel Hunnorum persecutione. The death of St. Nicaise and his companions is commemorated by the Roman Catholic Church on December 14. See Gallia Christiana nova, 1851, 226; Floiodard, Historia Ecclesiae Remensis; Dom Marlot, Metropolis Remensis historia; Fisquet, France postpontice, Brévaires de Paris et de Rheims; Hoefer, Nou. Bih. Générale, xxxvii, 914; Clemens, Hand-book of Legendary and Mythol. Art, p. 258.

Nicaud and Marcian, two Christian martyrs of the 4th century. Both were Roman military officers of high reputation, and for their efforts were made to induce them to renounce Christianity, but in vain. Crowds of people attended their execution. The wife of Nicaud, being herself a Christian, encouraged her husband to suffer patiently for Christ; but the wife of Marcian, being a pagan, entreated her husband to save his life for the sake of her and of his child. Marcian embraced her and her baby, gently reproving her idolatry and unbelief; and then, together with Nicaud, who also in the most affectionate manner had taken leave of his Christian wife, submitted joyfully to the fatal stroke, which conferred on them the crown of martyrdom, A.D. 306.

Nicaeus (Nicaio, victor), the name of two or three men in Scripture history.

1. The "son of Pathroclus" (1 Mac. viii, 9), a general under Antiochus, Epiphanes, and Demetrius I, who took a prominent part in the wars waged by the Syrians against the Jews, to whom he "bore a deadly hate." He had been a friend of Mamertus, and was compelled by his engagements with the general of Syria, Lysias, when he invaded Judea, B.C. 166 (1 Mac. iii, 38), by the sale of Jewish captives at ninety for a talent, to bring multitudes of slave-merchants to his camp (1 Mac. iii, 41; 2 Mac. viii, 10, 11; Josephus, Ant. xii, 7, 8 and 9). He was, however, most signally disappointed in his expectations, for, in common with his companions in arms, he suffered a disgraceful defeat from Judas Maccabeus, and was compelled to escape in the disguise of a slave to Antioch, where he declared that the Jews had God for their "defender," and that they were "invaluable" (ἀξίωματι), because they followed the laws appointed by him. Four years later, intrusted with a large army by Demetrius, he had ordered "not to spare" the nation of the Jews. According to 2 Mac. xiv, he at first made peace with Judas Maccabeus, "whom he loved from his heart;" but, accused by Alcimus to Demetrius, he was compelled to make him a slave, rescued him by the bishop of the chief council of Lysias, and sent him prisoner to Antioch. According to 1 Mac. vii, 26-32, and Josephus, Ant. xii, 10, 4, Nicanor attempted, at first, by pretence of friendship, to get Judas into his hands. Raphall unites both accounts, regarding the treachery of Nicanor as subsequent to the angry orders he received from Demetrius. Judas, however, discovered the treachery in time, and escaped. Open hostilities immediately commenced, when Nicanor was defeated with the loss of 9000 men, and took refuge in the fortress "which was in Anea," in the island of Samos (1 Mac. viii, 11, 12; 2 Mac. iv, 10, 11, 12; Ant. xii, 10, 4). Josephus, indeed, as the text now stands, represents Judas as sustaining a defeat, and fleeing to the "citadel which was in Jerusalem." But there is evidently an error in the text here, as it contradicts the context, which represents the siege and the taking of the fortress. In the meantime, however, Judas was most of the hands of the Syrian, Nicanor, on coming down from the citadel, and meeting the priests, blasphemed God, and threatened to destroy their temple unless they delivered up Judas, a thing they could not do, even if they were disposed. The army of Judas, unable to hold the Jews under siege, transferred their camp to Beth-boron. Judas also pitched his camp at the village of Adaesa, thirty furlongs off. At length they joined battle, when, Nicanor having fallen...
en among the first, the Syrians were beaten, routed, and slaughtered in their flight. Finding Nicarao on the battlefield, the Jews cut off his head and his right arm by which he "had stretched out so proudly," and hung them up at Jerusalem. His tongue also they cut out and minced, and threw to the birds. The day of the victory, Adar 13, being that before "Mardochaeus' day," they set as a new festival, which is celebrated by the Persians at Adar, 161) (Macc. vii, 43-49; 2 Macc. xv, 26-36; Josephus, Antiq. xii, 10, 5; see also Raphaël's Post. Bib. Hist. of the Jews, ch. iv and vi; Jahn's Hebr. Commenarizeth, § 96, 97, 98). See Maccabees.

2. A Nicarao is mentioned in 2 Macc. xii, 2, as "government" (Greek "εξουσία"); in the time of Antiochus V Epiphanes, and yet as interfering with the Jews in Palestine. But as the above Nicarao mentioned by Polybius cannot be meant, this must either be another person, or some confusion has befallen the author here (see Grimm, ad loc.). In 4 Macc. iii, 20, Nicarao is given as a surname of Seleucus, meaning apparently Seleucus I Nicator.

3. One of the first seven deacons appointed by the Church at Jerusalem along with Stephen (Acts vi, 5), A.D. 29. Dorcathus makes himself to have been one of the seven deacons (Acts vi, 5) at Jerusalem, and according to the pseudo-Hippolytus he "died at the time of the martyrdom of Stephen" (p. 935, ed. Migne).

Nicaragua, a republic of Central America, bounded on the N. by the republic of Honduras, on the W. by the Pacific Ocean, on the N.W. by the republic of Costa Rica, on the S. by the Caribbean Sea, is situated in lat. 10° 45' to 15° 6' N., long. 89° 20' to 87° 31', and has an area of about 58,000 square miles.

General Features. Nicaragua is traversed by two ranges of mountains—the western, which follows the direction of the boundary between Honduras and Nicaragua, the Escuudio, or Blefields, and the San Juan, all of which are situated on the coast of Nicaragua. The eastern coast of Nicaragua is called the Mosquito coast; it formerly constituted an independent territory known as the Mosquito kingdom, and enjoyed the protectorate of Great Britain. It became a part of Nicaragua in 1859, and has since any place devoted to agriculture. The most valuable trees being mahogany, logwood, Nicaragua-wood, cedar, and Brazil-wood. The pastures are splendid, and support vast herds of cattle. The chief products are sugar-cane (softer and juicier than the Asiatic variety), coffee, cacao, indigo, tobacco, maize, and rice, with nearly all the fruits and edibles of the tropics—plantains, bananas, tomatoes, breadfruit, arrowroot, citrons, oranges, limes, lemons, pineapples, guavas, etc. The chief vegetable exports are sarsaparilla, aloes, ipecacuanha, ginger, copal, gum-arabic, caschouchue, etc. The northern part of Nicaragua is rich in minerals—gold, silver, copper, iron, and lead—but the mines are not so carefully worked now as they were under the Spaniards.

Population. Of the 275,815 inhabitants of Nicaragua, 209,000 belong to the uncivilized, and 30,000 (being whites) to the civilized races. The former may be divided proportionately as follows: Indians of unmixed blood, 550 in 1000; mestizos (ladinos, from whites and Indians; zamboos, from negroes and Indians; and mulattoes, from whites and blacks), 400; whites, 45; negroes, 5. The ladino element predominates in Jalapa, Ocoital, Matagalpa, Corinto, Leon, Libertad, Managua, Blefields, Acoyapa, Rivas, and San Juan del Sur; the mulatto in Granada, Nandaime, San Carlos, and San Juan del Norte. Masaya is almost entirely Indian, and Indians occupy a large part of the basin of the two lakes. The coast basins of the Pacific are peopled by Indians of Aztec descent. The uncivilized Indian tribes occupy the river basins of the Atlantic slope; the Panamas, Poyas, and Caracas in the several upper basins of the Coco, Rio Grande, and Mico, the lower basins of which are occupied by Spanish negroes and blacks, Caribe; and the Wawas, Tounglas, and Ramos in the upper basins of the rivers of the same names. Most of the Nicaraguans live in towns, many going daily long distances to their plantations, which are often reached by paths too obscure to escape the notice of the traveller. The principal occupation is the raising of coffee. Large quantities of cheese are made on some of the estates. The Indians, who are generally a sober race, are the principal producers. The half-breeds, as a class, are inolent, trifling, and ignorant. Baptism is considered indispensable, but the marriage ceremony is often omitted. Petty thefts are common, but robberies and murders are unusual. Every few years a revolution breaks out, the population divides into two parties, and all business is suspended until the insurgents are put down or a change of rulers effected. Indeed, the incessant mutual destruction of the communities not so notoriously all but destroyed its material prosperity.

Religious and Educational Status. Education is in a low condition. In 1868 radical changes were effected in public instruction, but the reform was only on paper. The state now supports, besides the Seminary of Leon, the University of Nica, faculties of law, medicine, and theology, and in 1872 with 56 students, and an intermediate course with 102 students; and one at Granada, which has a faculty of law and an intermediate course, with 162 students. At that time there were in the republic 92 male primary schools, with 3,200 pupils, and 9 female primary schools, with 532 pupils. Education is wholly secular, the supreme direction being in the hands of the executive. Instruction is gratuitous, and teachers are paid from the public funds. There is no public library in the country, no museum, and no newspaper. According to the constitution of the state the religion is Roman Catholic, and the republic is, ecclesiastically, a suffragan bishopric subordinate to the archbishop of Guatemala. There are 117 parishes, of which about 100 have incumbents. There are no religious orders, all convents having been suppressed in 1858. Freedom of worship is nominally granted, but is not really practiced to any extent. The Moravians have a mission school at Blefields, and several schools at other places on the Mosquito coast; in all 8 schools, with about 500 pupils of both sexes. The Moravians have a church, and it is the only Protestant church in Nicaragua.

History. Nicaragua was discovered in 1521 by Gil Gonzales de Avila, and conquered by Pedro Arias de Avila, the governor of Panama, in 1522. In 1521—the great year of revolution in Central America—it threw off allegiance to Spain, and, after a desperate and bloody struggle, secured its independence by the help of the "Liberals" of San Salvador. Nicaragua now formed the second state in the federal republic of Central America, but on the dissolution of the union in 1839 it became an independent republic. In 1847-8 a dispute arose between Nicaragua and Great Britain about the Mosquito coast, which led to some hostilities, and was only settled in 1890. Meanwhile, in 1855, a civil war had broken out between the so-called "Conservatives" and "Liberals," which resulted in the victory of the latter, who were, however, obliged to call in the help of the since notorious colonel William Walker, of California, who, at first successful, was finally overthrown by a coalition of the other Central American states. After Walker's expulsion the government was re-established, and in 1858 a new constitution was adopted. By this constitution the republic of Nicaragua is governed by a president, who is elected by universal suffrage, and holds office for four years. There are two legislative cham-
NICARAGUA

born—the Senate and the House of Representatives. Liberty of speech and of the press exists, but is not absolutely guaranteed. Nicaragua took an active part in the war of the Union and Central American States, which resulted in the shooting of president Barrios and the death of Carrera in 1865. Since then the country has been comparatively quiet. P. Chamorro was elected president in 1875.

See BISBEE, J. L. Freistaat Nicaragua (Berlin, 1849); Squier, Travels in Nicaragua (N. Y. 1850); id. Nicaragua, Its People, etc. (Lond. 1852, 2 vols. 8vo); id. in Harper's Monthly, vol. xi; Edinburgh Review, xcv, 287 sq.

Nicarétte (Nicaragua), Sr., a lady of good fortune and family, born at Nicomedia, in Bithynia, was renowned for her piety and benevolence, and also for the numerous cures which her medical skill enabled her to perform gratuitously. She suffered great hardships during a sort of persecution that was carried on against the followers of St. Chrysostom after his expulsion from Constantinople, A.D. 404 (Sozomen, Hist. Eccles., vii, 23; Nicephorus Calliatus, Hist. Eccles., xii, 25). She has been canoized by the Roman Catholic Church, and her memory is celebrated on December 27 (Martyr. Rom.). Bizovius (Nomenc. Sanctor. Profes. Med.), and after him C. B. Carpozvius (De Medicis Gentilium, pro Societate habito), think it possible that Nicarétte may be the lady referred to by St. Chrysostom as having restored him to health by her medicines (Epist. ad Olymp. [4 vols.] ii, 511, ed. Benedict), but this conjecture is founded on a faulty reading that is now amended. See Smith, Dict. of Greek and Roman Bib. and Mythol. xvi; Ludlow, Woman's Work in the Church, p. 30.

Nicasia. See NICARAGUA.

Nicolla di Pisa, an eminent Italian sculptor and architect, is noted not only for his inventive genius and devotion to sacred art, but also as the principal restorer of sculpture in connection with Gothic architecture. The precise dates of his birth and death have not been ascertained. It is probable, however, that he was born near the beginning of the 13th century, as he was greatly advanced in years in 1273, and is reported to have died at Pisa in 1276 or 1277. Nicolla is distinguished among the earliest restorers of sculpture, which he elevated to a much higher state of perfection than he found it. He made a new façade of hard, dry, and grainy marble, in the same style of his predecessors, and introduced a style which, though falling far short of the antique, was based upon similar principles, and evinced a vigorous mind and much feeling, if not always the most refined taste. It is a curious fact, the result of the accidents of the ages, that the portals of the Annonzio church, which are by far the most important works of Nicolla, but is now determined by the best critics of Italian art to have been the production of the following, whom, for completeness' sake, we notice here:

GIOVANNI DI PISA was the son and pupil of Nicolla. He may have been born somewhere about 1293, as at the time of his death, in 1320, he is said to have been "vecchissimo," exceedingly old. We may at least suppose him to have been nearly twenty-five when he was invited to Perugia to erect a splendid monument to Urban IV, who died in that city in 1264. That work gave such satisfaction that he was employed also upon the embellishments of the fountain in front of the Duomo, wherein he displayed extraordinary ability in the architecture, the sculpture, and the bronzes. Scarcely had he completed this work when his father died, and he returned to Italy, this time to take possession of his master's work. One of the first tasks committed to him by his fellow-citizens was that of adorning the small but celebrated church of Santa Maria della Spina, one of the richest and most remarkable specimens of the peculiar Gothic style in Italy. In this façade the most important events in the legend of St. Dominic, and is ornamented with statues of our Saviour, the Virgin, and the four doctors of the Church. The oriel or rid, was added about two hundred years afterwards. Among his other and most excellent works in sculpture are the pulpit in the Baptistery in Pisa, and the famous altarpiece in the most elegant pulpit in Italy. It is of white marble, six-sided, supported by seven Corinthian columns, and adorned with five bass-reliefs of subjects from the New Testament. His next work is the pulpit in the cathedral of Siena, which he continued to work on while he was on the pulpit in Pisa, and when he returned to his master's work in the Spina church. Nicolla died in 1332.
NICE

51

NICE CREED

for in 1278 he began, and in 1280 completed, the re-

nowned Campo Santo, or cemetery, one of the most re-

markable monuments of its period, and that which, to-

gather with the adjoining church of the Holy Sepulchre

and tistery, offers a most interesting group of architectural

studies. The edifice is of marble, and forms a cloister of

to sixty-two arches (five at each end, and twenty-six

on each side), enclosing the inner area or burial-ground;

but neither this latter nor the exterior is a perfect

parapetram, the cloister being fifteen feet longer on

one side than on the other, viz. 430 and 415 feet, and

consequently the ends not at right angles to the sides.

This defect would almost seem to have been overlooked

by oversight, as it could not have been worse, while to

some extent its irregularity was due to the unevenness of

the site. After this, according to Vasari, he went to Siena, where

he made a model or design for the façade of the Duomo;

this, however, is questionable. One of the first com-

missions he received after finishing the Campo Santo

was from Charles I of Anjou, who invited him to Naples,

where he erected the Castel Nuovo, and built Santa

Maria Novella. In 1286 he was employed to erect the

high altar in the Duomo at Arezzo, an exceedingly

sumptuous work, in the Tedsco style, with a profusion of

figures and sculptures, all in marble. This work, and

that of the collatine and Chiesa Nuova, which one of the

cathedrals of Florence, are reckoned by Cigogna as his best pro-

ductions; but another of great celebrity is the marble

pulpit by him in the church of San Andrea at Pistoia,

which, like that by Nicola in the Duomo at Pisa, is a

heaven supported by the four columns. He also exe-

cuted many of the sculptures of the Duomo of Orvieto,

where he employed various assistants and pupils, some

of the latter of whom afterwards became celebrated,

particularly Agostino and Agnolo di Siena. At the

instance of the Perugians, he returned to their city and

executed the mausoleum of Benedict XI. He was also

invited by the citizens of Prato, in 1306, to build the

Capella della Cintola, and to enlarge their Duomo.

Loaded with honors and distinctions as well as years,

he in 1320 closed his life in his native city, and was

there buried within that monument which he had him-

self constructed about forty years before the Campo

Santo, which for others was a burying-place, for him-

self a mausoleum. See Vasari, Livre: Lord Lindsay,

Christian Art; Agincourt, Duca Memory Istoriche;

Rosini, Storia, etc.; Cigogna, Monumenti Sepolcreti

della Toscana, vol. 1; English Cyclopaedia, s. v.; Spoon-

er, Biog. Hist. of the Fine Arts, s. v.

Nice.

See NICEAN COUNCILS.

Nicene Creed is the name applied to a detailed

statement of Christian doctrine which forms part of the

liturgy of the Roman, Oriental, and Anglican churches,

and is also received as a formulary by many of the other

Protestant communions. The creed is given in the

article on that subject. It remains simply to add that

though it is called by the name of the Council of Nices

(q. v.), nearly one half of the present clauses formed no

part of the original Nicene formula, that document

containing a series of anathemas condemnatory of spe-

cific statements of Arius which find no place in the pre-

sent so-called Nicene Creed. It was not even framed by

the fathers of the first general council. They rather

adopted the existing Oriental Creed, as the Roman or

Apostles' Creed was followed by the church of the West.

Eusebius, the historian, exhibited it to the council as the

ancient creed of the Church of Cesar, of which he was the

bishop. Doubtless it had descended in that church from

primitive times. A general like-

ness may be observed between it and the Creed of An-

tioch, as given by Lucian the Martyr (Socrates, Hist.

Eccles. 11, 5; 11, 12). The principal addition made to

it by the fathers of the first general council. They rather

adopted the preceding choral formula, sti Parii, "of one substance with the Father," in order to render the creed all that could be wished for

as a standard of orthodoxy. See ARIANISM. Euse-

bius says, however, that this was no new term: "We

are aware that certain illustrious bishops and writers

among the ancients have made use of this expression,

unius substantiae in connexion with the preceding

"Dei Verbum\q. (\"ibid.\") Athanasius declares the same thing in

his epistle to the African bishops, and states that the

term was incorporated in the Nicene Creed on the au-

thority of ancient bishops: dii majores alium aqvam

ejusdem. In the preceding century Dionysius of

Alexandria still appeals to older writers who used the

expression "oique in paritl inmum us aqvia\ paticor. (Athanasius, De Sent. Doings). Or-

igen, the preceptor of Dionysius, used the word in the

same sense in the Nicene Council, as shown by Ruf-

inus and Pamphilus in the theological controversy of

Territorializing in Latin, while he thought in Greek, as was often the case with him, says that the three persons of the Godhead were "unius substantiae" (Adv. Pra. 11), which was the equivalent for "oique in paritl inmum, as bishop Bull affirms, so also Rufinus, "This substance was shared by the Greek oique in paritl inmum dictur" (De Deprat. lib. Orig). The term itself was coined in the philosophical schools of ancient Greece. Thus Aristotle affirmed the consubstantial
characteristic of the stars, "qum ne 7e kai tainl 

aor,; and Porphyry used it with regard to the sub-

stance of life or matter that is common to the stars with lower animals, "qum ne 7e rob eis 7wv 

xestov xwv ntevcr" (De Abtn, ad sec. Aenid, i, 19). Hence it was adopted by the Gnostic heretics to express the oneness of nature that existed between the psychic seed of the human race and the Demiurgus (Irenaeus, Cont. Mar, 1, 9, Cambridge ed.). The term fell into a certain degree of discredit when Paul of Samosata made use of it in his heretical Christology. He maintained that Christ had no pre-existence before his birth of the Virgin Mary, and that he could only be considered consubstantial with the Father through the dedication of his mortal body. The very gaining of heresy thus helped to establish the high antiquity of the term as used by the Church. The Council of Antioch denied the consubstantiality of the Son in this gross sense, but left no doubt as to their be-

lief in the eternally divine substance of the Word, though they suppressed for a time the term "qum ne 7e rob

as having been rendered suspicious by Paul. Algo-

therefore can there be no doubt that the term was well

known and of familiar use for more than a century be-

fore the Church stereotyped it in her creed at Nices.

The Cesareae Creed contained the clause "God of

God," which was omitted by the fathers at Constantin-

ople, but was afterwards restored to its position. The

insertion of "Filioque" (q. v.) by the Spanish Church

was unauthorized. The final clauses were added at Con-

stantinople, in 381, having been handed down already

in the Nicene formula as being germane to his purpose, stopped

than when he came to the expression of faith in the Holy

Spirit in order that he might assert the hypostatic unity

of each person, and so never completed the words of the

creed. The creed so foreclosed by Eusebius remained

on record as the faith of the Nicene fathers, an anach-

esthesia against all who held Arian notions having been sub-

stituted for the closing words of Eusebius. The creed

did thus formed was used for catechetical instruction, and

was the baptismal confession of faith, as in fact it had

been from the earliest days (comp. Eusebius, Ad Cesare).

But it had no place in the liturgy until the time of

Peter Fullo, bishop of Antioch, who emboldened it in the

service (A.D. 471). Timothy, patriarch of Constantinop-

le, adopted the same course (A.D. 511). In the third

Council of Constantinople (A.D. 553) the creed is made

a part of the liturgy as an antilite to the Arianism of

the Goths. The Gallican Church admitted it soon

afterwards. The question was raised in the Council of

Digitized by Google
Aix (989) whether the Spanish and French churches were right in adopting the Filioque clause in this creed, and it was rejected by Charlemagne to pope Leo, who allowed the creed to be sung, but without the addition; and Walfred Strabo says that the creed was chanted in France and Germany after the condemnation of the Felician heresy in Gaul. Leo the Great, however, in conjunction with the adoption of the Filioque in this creed, in 489 in the presence of the pope, and Photius, at length allowed the use of the clause, and used it in letters to the bishop of Astorga and the monks of Mount Oliver. Charlemagne decreed that the intercalation was to be used; the Council of Toledo (447 and 589) adopted it; and it was inserted by the Catholic Viazzo. In 689 and 749 the pope and an English council accepted the clause. Pope Benedict in 1024, at the request of the emperor, required the creed to be chanted in Italy. It is the custom for the priest alone to intone the words, "I believe in one God." The Nicene Creed was only received into the "Ordo Romanus" by pope Benedict VIII in A.D. 1014. The reason assigned for this long delay is the strict orthodoxy of the Western Church; this making unnecessary a decided expression against Arianism. Its position in the liturgy varies in the different nations. In England and Scotland it is read on the Sunday of the octave of Christ, of the Virgin Mary, apostles' days, and all the principal festivals, but not on week-days or the minor saints' days, when the Apostles' Creed is used. In the English Prayer-book, the Nicene Creed occurs only in the Communion Service; but in the Liturgy of the Mass it has been placed with the Apostles' Creed, in the order of Morning and Evening Prayer, the minister having liberty to use either of them in the ordinary services, and also in the administration of the Communion, when necessary. Hist., iii, 129 sq.; Liddon, "History of Christ," p. 18, 200, 256, 359, 410, 432, 434 sq., 473; Burnett, "Examination of the Thirty-nine Articles," p. 185 sq.; Blunt, "Dict. of Theology," s. v.; Biblical Repository, v. 290; Church Rev. Oct. 1870, p. 983; Meta. Q. Rev. Jan. 1876, p. 329.

Nicephorus Blemmas or Blemmydas, a noted Greek ascetical writer, flourished in the 13th century. According to a recent Russian bibliographer, Nicephorus was born at Constantinople in 1198. He was of a noble and wealthy family; but contrary to his Christian piety, he decided for a life of devotion, and after taking holy orders fell into extreme asceticism. The wealth which came to him from his friends he spent for the good of the Christian cause. At Nicea he built a church at his own expense, and served it as prebendary. Universally beloved by the Christian world, he enjoyed the highest confidence and was intrusted with the most important trusts and responsibilities. From imperial friends he encountered opposition for his censures on concubinage. Under the emperor Theodore Lascaris, the successor of the licentious Ducas, Nicephorus was more favored, and on the death of patriarch Germanus, in 1253, was offered his place. Nicephorus, however, declined the honor. In the religious disputes between the Greeks and the Latins, Blemmas showed himself well-disposed towards the latter. He died as abbot of a convent near Ephesus in 1272. He wrote various works, but all of them were devoted especially to secure the peace of the Church, and this, says Neander, "he was induced to do by a purely Christian interest, separate from all other considerations."

Nicephorus's writings are not all accessible as yet, but twelve works have thus far been determined as his, and have recently been brought out in the Bibliotheca Ecclesiastica continua, Grecorum Theologorum Opera, vol. i (Leips. 1866, 8vo). Nicephorus's principal writings thus far determined are: (1) Opusculum de Procesionibus Spiritus Sancti, etc. In this work he adopts entirely the views of the Roman Catholics on the procession of the Holy Ghost, and alludes to the heresies, which are the more surprising as he wrote a second work on the same subject, wherein he defends the opinion of the Greek Church. Leo Allatius (De Consmis, i, 2) endeavors to justify his stand for this liturgical use of the Creed, before he had formed a thorough conviction on the point, or that some schismatics published their opinions under the name of Blemmidos:—(2) De Procesionis Spiritus Sancti libri ii. This is the second work just mentioned by the French book of 1225. A copy of it is preserved in the library of the emperor Theodore Lascaris, and the second to Jacob, archbishop of Bulgaria (ed. Grece et Latine, by Oelerus Raynalduis, in the appendix to the first volume of his Annales Eclecticis, by Leo Allatius in the first volume of Orthodoxo Graecia Scriptor.)—(3) Epistola ad plurimi primum patris Olympius, et Latine, in the second book of Leo Allatius, De Consens.—(4) Epistulam legem (Augustus, 1005, 8vo.)

There are also many other writings by Blemmidos extant in manuscript in the libraries of Munich, Rome, Paris, and other places. See Cave, Hist. liter. moscov., 1255; Fabricius, Bibli. Graec. xi, 594; Neander, Church Hist. iv, 541 sq.; Hauck, Theol. Jahresbericht, 1807, ii, 253, 254. Nicephorus Callistus Xanthopolus, son of Callistus Xanthopolus, is the last of the Greek Church historians of our own time. He flourished in the Middle Ages. He is frequently denominated the ecclesiastical Thucydides, because of the elegance of his style, and the "theological Pliny," because of the superscription and credulity which are betrayed in his writings. The title of the "History of the West" (of Asia Minor) is enriched at Constantinople near the opening of the 14th century, and was probably a monk of St. Sophia, of which he was librarian. According to his own statement (Hist. Eccles. vol. i, c. 1) he commenced his Ch. Hist. at an early age, and labored at it till he was thirty-six years old. It is dated in the year 1307 by Andronicus Paissologus. As the latter was already well advanced in years, and died in 1277, it is supposed that Nicephorus was still alive in 1356, and therefore during the reign of John Cantacuzenus. We possess no information of his personal history. His work is of great interest, as it is the only contribution to Church history which appeared in the East from the 6th century to the 14th. It is, however, generally condemned in modern times as a compilation of fables and absurdities, and Casaubon says of it, "Historia eius non pluris quam folia farinaria, sed quaedam spectabilium, quae de rebus humanis inveniri non posse timenda." (Comp. Joh. Gerhard, Method, Stud. Theol. p. 298). If we set aside the too great credulity of the author, the work will be judged as not without merits. Says Dowling: "Though he amply partook of the superstition of the age in which he lived, and paraphrased the writers from whom he borrowed, there is an grain of valuable historical information in the style characteristic of the later Greeks, he has transmitted some important facts, of which we should without him have remained in ignorance." (Study of Eccles. History, p. 91-93). In his first chapter Nicephorus speaks of the utility of ecclesiastical history, and gives a list of his predecessors in that line from Eusebius to Procopius and Agathias, with a notice concerning each of them, in which indeed he accuses Eusebius of heresy and Socrates of impurity. He states that each of them wrote only the history of a period, and some often wandered away from the pure doctrine while he intends to give a full and impartial history. The work is divided into eighteen parts, treating of the internal and external history of the Church with reference to the dogmas, doctrines, and usages. Monasticism and the episcopacy are specially considered. The plan was good, commences with the incarnation (σε μοναξίας καθημένος ιστορίαν), and continues to the death of Phocas (611). He, besides, refers to five other parts which were to extend down to the death of Leo Philosophus (811); but of these we find only the headings, which seem to have been preserved by another work in one place. Whether he did not continue his history any further, or whether the other parts of his work are lost,
Nichæorus

is unknown. This, however, is certain, that while he was to have given the whole history of the Church in these eight books, at least he now embodied it in his preface, which embraces only a period of 600 years. As to the nature of the work, it is evident that Nicæorus made extensive use of the early MSS. of ecclesiastical history, merely to bring them to my knowledge of all kinds of materials. He quotes Epiphanius, Eusebius, Jerome, Theodoret, and others, and his tracts are characterized by his learning, statesmanship, political sources, legends, and traditions. He greatly neglected the history of the Latin Church. Thus, while he gives full details concerning Anastasius Sinaita, John Philoponus, and the leaders of the Monophysites, he says nothing of the Pelagians and their controversy. His information on the subject of the Huns, Goths, Bulgarians, Vandals, and Alans is valuable. There is only one Greek MS. known of this history. It was stolen under Matthias Corvinus by a Turkish soldier out of the library of Buda (October) and brought to Constantinople; here it was bought by a Christian, and after many adventures now lies in the imperial library at Vienna. It was published in Latin by John Lange in Erfurt, Nicæorii Hist. Ecclesiastica ( Basel, 1555, fol.; often reprinted, Basel, 1560; Antwerp, 1560; Paris, 1562–73; Frankl. 1608, 1610). The Greek text was subsequently published by P. H. L. Furtwängler (Leipzig, 1830, 2 vols.). Nicæorus is also considered as the author of the Catalogus imperatorum C. Politorum versibus tamaticis Gr. in Labbe’s Bibliothec histor. Byzant. p. 54:—Catalogus patriarcharum Constantinopolitani, ibid. p. 53, “Catalogus patriarcharum Constantinopolitanorum, eiusque annorum historiae et versibus”:—Excidium Hierosol, versibus tamaticis, in Morelli’s Epitome membrantium quod Hieros, sum, in Schiaparelli, ii. 1860:—Synopsis totius script. sacrae ad calorem Epigrammatum Theodori Prodromi (Paris, 1538).—Συνταγμα της του σιναία ιατρικής του Μαρία, in MS. See Lambec. Comment. viii. 159; Oudin Com. de Script. ii. 710; Fabricius, Bibl. Graeca, ed. Harl. vii. 437 sq.; Staudlin, Gesch. d. Literatur d. Kirchengeschichte, p. 111 sq.; Darlington, Cyclo. Bibliographicus, ii. 2192; Cave, Hist. Lit. ad ann. 1838; Dupaquin, Bibliothèque des écrivains ecclésiastiques du quatorzième siècle.

Nicæorus CHARTHOFLAX, an Eastern monk, is supposed to have flourished some time about the close of the 8th or the beginning of the 9th century. Fabricius thinks he is the same as Nicæorus Diaconus et Chisaphylass, who was present at the second Council of Nicea, and was afterwards raised to the patriarchate. He is the only one of the writers of this name who is known, the famous author of the Brevisarius, who was made patriarch in 806. He wrote, Solutionum Epistola I. ad Theodosium monachum, Graeco et Latine, in Leunclavius, Var Graeco-Romanum, also in the twelfth vol. of Biblioth. Patr. Maxim., and in the Ordoxographi. See Cave, Hist. Lit. ad annum 891; Fabricius, Bibl. Graec. vii. 608, 674.

Nicæorus CONSTANTINOPOLITANUS, St., an eminent Byzantine Church historian, and patriarch of Constantinople, was born in that city about 750 or 758. He first attached himself to the court, and held high offices. In 787 he was present at the Council of Nicea, and there defender of the church's position; shortly after his return to the capital he withdrew to a convent, from whence he was called in 806 to become patriarch of Constantinople. Leo Arminius having became emperor in 813, the worship of images was forbidden, and Nicæorus, on account of his exertions in their defence, became unpopular at court, and was finally obliged to resign the patriarchate in 815. He then retired to the convent of St. Theodore, of which he was the founder, and remained there until his death in 828. Nicæorus is sometimes called Homoelogos, or Confessor, on account of his opposition to the iconoclasts. Theodore, the Patriarch, and the Emperor Nicephorus, made him a bishop. He is highly esteemed as the author of several important ecclesiastical productions of intrinsic value and beautiful style. His historical writings, which are his best, are remarkable for accuracy, erudition, and discernment; yet the doctrine of the worship of images is defended in his writings to a tiresome extent, and this course of Nicæorus triumphs the more as it is in contrast with his liberal views on other points. His most important works are: Brevisarium historicum, or Κατηγορίαν παντισχρισμον, one of the best works of the Byzantine period, from the death of Mauricius to the death of Leo IV, and his Chronicle (ed. Petav. Par. 1616; Venet. 1729):—Chronologia compendiosa tripartita, from Adam down to the time of the author (translated by Anastas. Bibliothec., and often published: Par. 1684; Ibd. 1663, cum notis Goarii):—Anarchitica libri quinque, Ibd. 1661:—Bibliotheca opuscula in apud Comment. p. 146:—Bibliotheca, ed. in Bibl. Patr. Lat. iv. 373, 697:—Bibliotheca, ed. in Bibl. Patr. Lat. iv. 577:—Stichometricia librorum sacrarum (in Opp. Petri Pitehei, Par. 1609; also in Critici sacri Angli, t. viii.):—Concess. fol. ad Leonem iij. (in Baron. Annal. ad annum 811; and in Hardouin t. iv. 378):—Canonum ecclesiasticorum xviiii (in Hardouin t. iv.; and Coteler, Monum. t. iii. 445);—Fragmentum de seu synodi (in Combes, Auctar. Nor. Bibl. ii. 903). Banduri prepared a complete edition of Nicæorus’s works, but he died before it was finished. His recent English and French translations of Nicæorus’s works have been brought out by the Bibliothèque de l’E. (1849) and Petræus (1852). See an account of his life in Ignatius, Pol. in Acta ad. Mart. Auctar. Nor. Bibl. ii. 803; Combes, Origen, Constant. p. 159; Oudini Comment. ii. 2; Fabrici. Bibl. Graec. vii. 605 sq.; Newman, latin. Kurtzer, in C. E. L. i. 472; Darlington, Cyclo. Bibliographicus, ii. 2192; See, Cave, Hist. Lit. ad annum 1101; Fabricius, Bibl. Graec. vii. 678.

Nicæorus MOUCACHUS, an Eastern ascetic noted as an ecclesiastical writer, but little known, however, except as an author, flourished about 1100, according to P. Oudin Com. This Nicæorus is a monk, and is the author of Παντα ου παντες οὔτως, De Custodia Cordis, a very interesting and valuable essay, which Possinus published in Greek and Latin, in his Theaurus Aecisticus (Paris, 1648, 4to). See Cave, Hist. Lit. ad annum 1101; Fabricius, Bibl. Graec. vii. 678.

Nicæorus PHILOSOPHUS, an Eastern writer, flourished about 900 at Constantinople, where he enjoyed great esteem for his learning and genius. He wrote Oratio Panegyrica s. Vitæ Antonii Caeci (Caen.) Patriarch C. P., who died in 895 (895), which is printed in Bollandi Acta Sactar. ad diem Februarii. 129. He is the only one of the authors of this name who is known, in his work Cur præparanda sint personæ in Octoechosam et Librum Legum, which is ascribed to one Nicæorus Hieromonachus. The Octoechos was published at Venice (1772-1773, 2 vols. fol.), with a Latin version and a commentary; in the title there stands Leipzig, without a date. See Fabricius, Bibl. Graec. vii. 610; Cave, Hist. Lit. ad annum 895.

Nicæorus PRISKERTT, an Eastern ecclesiastical of uncertain age, flourished at Constantinople, and was connected with the church of St. Sophia. He wrote Vitæ S. Andreae, which is printed in Acta Sactar. ad diem Maii. See Fabricius, Bibl. Graec. vii. 675.

Nicéron, Jean Pierre, a distinguished French ecclesiastical, noted especially as a biographer and bibliographer, was born in Paris, 1711. He studied at the Mazarin College at Paris, and afterwards at the College of Du Plessis. He was received into the Society of the Barnabite Jesuits in 1702, and took the vows in 1704. Ordained in 1706, he became a very useful preacher, and died at Paris July 1, 1773. Nicoleau wrote Mémoires pour servir à l’histoire des Hommes illustres dans la république des Lettres, etc. (Paris, 1739-45, 4 vols in 4, 12mo), a laborious and excellent work, from which all subsequent accounts of the same authors and the same works have been derived. (Biographie universelle, ii. 2192; Brunet, Manuel du Libraire, s. v.) Hallam has made free use of these writings, and not infrequently quotes Nicéron’s estimates of writers in his own Introduction to the Literature of Europe in the 15th.
NICETAS

[8th, and 17th Centuries. In our Cyclopaedia Nicéron's work has frequently proved of great service. Indeed no bibliographical labors can be satisfactorily performed on the periods with which it deals without the aid of Nicéron's labors. See Labbé Gougé, "Éloge de J. Nicéron," Inaugurales pour servir à l'histoire des Hommes illustres, vol. xl.

Nicet, Sr. (1), a Christian martyr of the 4th century, was of Gothic descent, and born near the Danube. Though he had long been a Christian, he met with no molestation on that account until the persecution under Arianism in A.D. 370. That monarch of the Balkans, who ordered an idol to be set about on a chariot through all the places where Christians lived. The chariot stopped at the door of every professed Christian, and he was ordered to pay it adoration. Upon a refusal the house was immediately set on fire, and all within were burned. This was the case with Nicetas, who became a martyr to his Christian constancy, being consumed to ashes in his own house, Sept. 15. 372. See Fox, Book of Martyrs, p. 71; Hardwick, Ch. Hist. of the Middle Ages, p. 293.

Nicetan or Nicetius, Sr. (2), a French prelate and martyr to the Christian cause, died in the first part of the 7th century, probably in 612. He is commemorated on Jan. 8; yet Bullandis has published his acts under the date of Feb. 8. But little is known of the life of this St. Nicetas. He was archbishop of Besançon when St. Colombanus, arriving in Sequiana, found there the monastery of Luxeuil. Later St. Colombanus, pursued by the Gauls assembled through Besançon; St. Nicetas gave the most honorable reception to this illustrious outlaw, and assisted him to retreat into Italy. Nicetas was very zealous in maintaining the purity of the faith in his vast diocese, which he traversed frequently, preaching and instructing the people. Gregory the Great, who had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetan or Nicetius, Sr. (3), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (4), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (5), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (6), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (7), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (8), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (9), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.

Nicetas or Nicetius, Sr. (10), of Trèves, one of the most celebrated prelates of ancient Gaul, lived in the 6th century. His life has been written by Gregory of Tours; it is found in ch. xvii of the Vitae Patrum. At first a monk, then abbot of an unknown monastery, he gained in this position the esteem and friendship of the king. Theodoric, whom, however, according to report, he failed not to reprimand for the looseness of his morals. Gregory, the Great, had great confidence in Nicetas, and consulted him on all important occasions. See Dunod de Charnage, Hist. de l'Église de Besançon, vol. i; Gallia Christiana, vol. xvi, col. 12; L'Abbé Richard, Hist. des Ducs de Besançon et de St. Claude, vol. i.
NICETAS

55

NICETAS

sore heresies and unknown heresies. The last part
of Islamism, the controversy with the Latin
Church, and the inner dissensions in the Greek
Church. The whole is as yet unpublished. The work in its com-
plete form is in the royal library at Paris, and a frag-
ment of it is preserved in the Bibliothèque nationale.
Five parts have been translated into Latin by Petrus
Morinus (Paris, 1561, 1579; Geneva, 1629; Bibli. Patr.,
[Lugd.], 1748, 1754); a fragment in Greek of the twentieth
part against the Agarenes, is to be found in the Syrburgi
Saracemici (Heidelberg, 1590), p. 74. A description of
the contents of the treatise is given in Montfaucon, Pin-
neau, Gr., p. 326, and Fabricius, Bibl. Græc. vi, 429;
but whether the complete work will ever appear is
doubtful. Some minor productions of Nicetas, among
which a fragment on the ceremonies observed when a
Mohammedan adopted the Christian religion, are extant
in different libraries in Europe. See Ullmann, Die
1833); Eilissen, Michael Aikonimos von Chona; Fa-
bricius, Bibl. Græc. vii, 737 sq.; Neander, Chr. Hist., iv,
559, 559, 537; Smith, Dict. of Gr. and Rom. Biogr., ii,
1187.

Nicetas, or Nicæus of Dacia, an Eastern
eclesiastic, who was a bishop of a city called by ecle-
siastical writers Civitas Romana or Renaeensis,
situated in Moesia, somewhere between Naissus and
Sardis, flourished near the close of the 4th century. He
visited Italy about this time, and while at Nola viewing
the tomb of Felix major, a wandering ascetic (q.v.), who
celebrated in a poem still extant the high
talents and virtues of Nicetas, and the zeal with which
this man of God labored in preaching the Gospel among
the barbarians. A.D. 402 Nicetas paid a second visit
to Nola, and it appears from an epistle of pope Innocent
I (not viii., ed. Const.) that he was still living in
A.D. 414.;— The time of his death is as uncertain as
that of his birth. Considerable confusion has been oc-
casioned by the mistake of Baronius, who supposed that
Nicetas the Dorian, mentioned in the Roman marty-
rology under January 7th, was a different person from
the Nicetas Romænus civitas ecipiosus of Gennadius,
and that the latter was the same with the Nicæus of Aqui-
lea, to whom a letter was addressed by pope Leo the
Great in A.D. 458—a hypothesis which forced him to
prove that Aquilea bore the name of Civitas Romana.
But the researches of Holstein, Quezel, and Tillemon
tell have set the question at rest. Gennadius informs us
that Nicetas composed in a plain but elegant style in-
structions for those who were preparing for baptism, in
six books, of which he gives the arguments, and also
Apostolica et Prophetae Læstathum, which is certainly
lost, but we find among the works of St. Jerome
(vol. xi, 178, ed. Vallarsi; vol. v, ed. Bened.) a
tract entitled Oratio pro ad Susannam Lapsum
and among the works of St. Ambrose (vol. ii, 311, ed.
Bened.) the same piece under the name Tractatus
ad Virginiæ Lapsum, although it can be proved by the
most convincing arguments that neither of these
divines could have been the author. Hence it was
conjectured by Cotelerius that it might in reality belong
to the Nicetas, and this opinion has been very
generally adopted, although the matter is involved in
great doubt. See Gennadius, De Viris Illust.
22; Schönemann, Biblioth. Patrum Lat., vol. ii, § 17,
av.

Nicetas, David, commonly called Paphlagon, either
on account of his having been in or having be-
come bishop of Paphlagonia, lived about the year 880.
He is said to have been the author of the
patriarch Ignatius, who died in 878. This
biography is untrustworthy: the end
Ignatius is made to ascend
heaven, and his opponent Photius is accused of all
certain wrongs. As in this the author served the Latin
party, it is easy to understand why his work has been
praised by the Roman Catholic writers. It must be
admitted, however, that the work furnishes some val-
uable materials for the history of the patriarchs.
It has been repeatedly published (Gr. et Lat. ed. Matth.
Raderus [Ingolstadt, 1684]), and in the acts of the con-
ciles, as in Hardouin, v. 555. Another polemic work,
Liber de Muellis de ecclesiis, is attributed to the same
author (Gr. et Lat. apud Allat. Græc. Orthodox. i, 663),
but is not admitted, with but insufficient proofs, to Nicetas.
He is besides considered as the author of a number of hymns,
and panegyrics of saints and martyrs mentioned under his
name in the catalogues of MSS., such as Laudatio s. Barlaam, Encomium in marri. Chryseus, in Ascendentia
in Panteleemonem, etc.; but on account of the many
writers of the same name it is difficult to ascertain their
authenticity. Some of the discourses (Apostolorum encomi, oratio in Marcum evangel. etc.) are given
by Combina, Latine in Bibl. Commentator. Gr. et Lat. in
Auctar. Bibl. patrum notiss. (Paris, 1672), and in Illustri-
trium Christi martyrum triumpha (Paris, 1690).
Nicetas, bishop of Carthage, is called Nicetas a philosopher, but
at present we know of no work of his to justify the ap-
pellation. The Questions in Philosophiam et commen-
tarii in Aristot. categor. et quippe vora Porphyrii, mentioned
by Geiser, are proved by Fabricius to be due to a later
writer. See Allat. De Simtom, p. 102, 111; id. De Phil. § 13; Oulmius, ii, 215; Fa-
bricius, Bibl. Gr. ed. Harl. vii, 747; Hanckins, De
script. Patrum, i, 261; Brucker, Hist. Philos. iii, 548.
(See N. P.)

Nicetas, Nicæus, an Eastern ecclesiastic of un-
certain age, was chartophylax at Nicea. He wrote
De Schismate inter Eccles. Greecos et Romanos, extant
in MS. in Paris and elsewhere; Leo Allatius gives a
fragment of it in De Simomio Photan. Also perhaps
De Assyria et Siciliorum Jesuini et Nuptii Sacerdoc-
ium, which others ascribe to Nicetas Pectoratus (q. V.).

Nicetas, or Nechita, of Nicomedia, an East-
ern prelate, flourished as archbishop of Nicomedia in
the first half of the 12th century. When, in 1136, Anselm,
bishop of Havelberg, was sent by pope Innocent II to
Constantinople for the purpose of effecting a union be-
tween the Eastern and Western churches, Nicetas ap-
peared at this meeting as the defender of the Eastern
views on the doctrine of the Procession of the Holy
Ghost. When Anselm, at a subsequent period, was re-
siding at the court of pope Eugenius III, he drew up, at
the request of that pope, a full account of the confer-
work is for granted, indeed, that we are not presented here
with a set of minutes drawn up with diplomatic accuracy;
still we have every reason to presume that the manner
in which the Greek prelate managed his cause in this
conference has in all essential respects been re-
presented by Anselm. He represents Nicetas as saying
many pointed and striking things against the Latin
Church, such as he assuredly could not have invented
from his own point of view, and would not have put into
the mouth of his opponent. In respect to the contested
point of the procession of the Holy Ghost, Nicetas ap-
ppealed, as the Greeks were ever wont to do, to the pas-
sage in the Gospel of John, and to the inviolable au-
tority of the Nicene Creed. Anselm replies conform-
ably with the doctrine of the Church, as it had been
settled since the time of Vincentius Liriensis. He pre-
presented on the other side the progressive evolution
of that doctrine under the guidance of the Holy Spirit,
acting the Church, by virtue of which the doctrine,
containing as it does in the sacred Scriptures, had in
truth been more exactly defined and explained, and what it
contained in spirit reduced to the form of more precise
conceptions; just as the work of one universal council
is completed in the gradual development of Christian
docctrine by another and later. All this is the work
of the same Spirit, promised by Christ to his disciples
and to his Church; of whom he says that he would teach

NICETAS

many things which the apostles at that time could not understand. Even the doctrine of the Trinity, as explained by the Council of Nice, the doctrine of the divinity of the Holy Ghost, cannot be pointed out as a dogma expressed in so many words in the Bible (lib. ii., c. xii.). Anselm, in agreement for the authority of the Roman Church that all heresies had found their birthplace in the Greek Church; while in the former the pure doctrine had ever been preserved free from alloy amid all the disputes proceeding from that other quarter. To this Nicetas replied, "If the heresies had sprung up in the Greek Church, still they were subdued there; and they could only contribute to the clearer evolution and stronger confirmation of the faith" (lib. iii., c. x). And he endeavored to point out here a substantial advantage of the Greek Church over the Latin, tracing it to the predominating scientific culture which had distinguished the Greek Church from the beginning. "Perhaps the very reason why so many heresies had not sprung up among the Romans was that there had not been among them so many learned and acute investigators of the sacred Scriptures. If that conceit of knowledge by which the Greek heretics had been misled deserved censure, still the ignorance of the Latins, who affirmed neither one thing nor another about the faith, but only followed the lead of others in unlearned simplicity, deserved not to be condemned. All must learn either to blameable negligence in examining into the faith, or to singular inactivity of mind and dulness of apprehension, or to hindrances growing out of the heavy load of secular business." He applies to the Latins in this regard the words in 1 Tim. 1, 7, and to the Greeks what Aristotle says of the usefulness of doubt as a passage-way to truth. Earnestly does Nicetas protest against the inition that the Greek Church might be compelled to adopt what the pope, without a council held in concurrence with the Greeks, could on his own self-assumed authority decree or dispose of. He goes on to say that if such authority belongs to the pope, that all study of the Scriptures and of the sciences, all Greek intellect and Greek learning, were superfluous. The pope alone would be bishop, teacher, and pastor; he alone would have to be responsible to God for all whom God had committed to his charge alone. The Apostolic Creed did not teach men to acknowledge a Roman Church in especial, but one common, catholic, apostolic Church (lib. iii., c. viii.). Though Nicetas defended the use of ordinary bread in the celebration of the Lord's Supper, a custom which had always been handed down in the Greek Church, yet he estimated the importance of this disputed point with Christian moderation (lib. c. c. xviii.). He says that he himself, in case no other bread was to be had, would have no hesitation in using unleavened bread in the mass. "Since, however," he adds, "the number of the narrow-minded far exceeds that of persons well-instructed in the faith, and the undistinguishing multitude easily take offence, it was worthy of all pains that both Latins and Greeks should be induced to join heart and hand in bringing about, in some suitable place and at some suitable time, a general council. Such a council might have the use of ordinary bread by all at the same time should be adopted; or if such an agreement could not be arrived at without giving scandal to one of the two parties, yet all should agree in this, that neither party should condemn the other, and this difference should no longer turn to the injury of holy charity." "Mutual condemnation," says he, "is a far greater sin than this diversity of custom, which is in itself a matter of indifference." Both finally agreed that a general council, consisting of Latins and Greeks, for the purpose of bringing about a reunion of the two churches was a thing greatly to be desired. The irritable state of feeling, however, between the two parties, heightened by the Crusades and the consequences following in their train, and the arrogant pretensions of the popes, who would not lower their tone, put the assembling of such a council out of the question; and, even if it could have been held, it would have failed to bring about the result desired by Nicetas and Anselm. Nothing further of the personal history of Nicetas is accessible to us.

NICETAS PECTORATOR (ο ἐσπαργον), an Eastern ascetic, noted as a Church writer, was, at the time of Michael Cerularius (d. 842), a monk from the Roman Church, a monk in the convent of Studium, near Constantinople. He is mentioned as a pupil of abbot Simeon of St. Mamas. An enemy of the Latins, he sided at once with the patriarchs, and wrote on the custom of fasting on the Sabbath and on the marriage of priests. In 1054 came the Roman ambassadors, and at their head cardinal Humbert and archdeacon Frederick. The cardinal and Nicetas held a conference in the convent of Studium, which ended—the emperor also interfering in the matter—by a retraction on the part of Nicetas of all he had said, a condemnation of the enemies of Rome, and submission to the burning of his works. This is mentioned only by Latin writers (comp. Canis. Lectii, antiqua, iii. pt. i. p. 925, and Vibertus in Vita s. Leonis, ii. 5; Lea, Hist. of Sacerdotal Celibacy, p. 198, note 1; and the review of his works in the Ath. S. in Christiana, v. (1833), 25, by Hase, Theol. Jahreshefte, 1867, ii. 252), but such things occurred so often in the Greek Church that there is no reason to doubt its truth; besides, it did not oblige Nicetas to forewear forever his attachment to the Greek Church. Among his works at present preserved is Liber privatus his, De Asymia, de Substantiarum jujimia et nuptia Sacerdotum, Latine apud Canis. i. c. p. 508, ed. Basnage (cum refutatio Humberti, comp. Allat. De Missa praesentifici. § 2, 16; De purgatorio, p. 870). This book has been recently brought out in the Bibl. Eccles. vol. i. (Leips. 1866, 4to), and is entitled Liber de purgatorio. A copy of this work in Greek is preserved in the imperial library at Vienna. As will be noticed from a preceding article, some critics ascribe its authorship to Nicetas Nicomaius (q. v.). Among the other writings of Nicetas, we notice Carmen Isambicum in Simeonem juniores Grace, in Allat. De Simeon, p. 168—Tractatus de anima, in fragments in Al lat. De symo Phoebus, cap. 14—Capita ascetica, capita de sancta patria, contra blasphemen Armeniorum harexem, de processione Sp. S. de celesti hierarchia, de paradiso terrestre, epistolae, etc., mentioned in Fabricius, Bibl. Graec. ed. Hist. vii. 738, 784. See also A V, pp. 103, 104. A verbis consens., ii, 9, § 6; Cave, Hist. Lit. ii. 136; Schröck, Kirchengesch. xxiv, 219; Neander, Ch. Hist. iii, 583; Herzog, Real-Encyclop. x, 382; and Hauck as above noticed.

NICETAS RITOROT, an Eastern ecclesiastical, by some thought to be identical with Nicetas Paphliago (q. v.), has, among other productions, the following ascribed to him: several Orations known to Allatius: Diatribe in gloriosis Martyrum Panteleimonem: De Certamine et de Inuentione, etc., reliquiariu S. Stephani Polymart tyrrias: Encomium in Magnam Nicholau Myroboleptum et Theosaphygnum. None of these have been published. See Cave, Hist. Lit. D, p. 14.

NICETAS Sidorus, an Eastern writer who violently opposed the Latins, and wrote a small work against them, a Latin translation of which begins, "Non simpliciter antiqua novis venerabiliora," etc., and of which Allatius gives some fragments in De Consensu, 1, 14. See Cave, Hist. Lit. ad ann. 1110.

NICETAS SERMON, an Eastern ecclesiastical, flourished as a contemporary of Theophylact in the 11th
century. He was first deacon of the Church of Constanti- 
aple, and afterwards bishop of Heraclea. He com- 
pised several funeral orations upon the death of 
Gregory Nazianzen; also a commentary, which is in- 
serted in Latin among the works of that father. There 
is besides ascribed to him a catena upon the Book of 
Job, compiled of passages from several of the fathers, 
as Apollinaris, Athanasius, Basil, Ephrem Syrus, Euse- 
bius, Gregory Nazianzen, Gregory of Nyssa, Isidore, 
Julian Halicarnassensis, Methodius, Nylus, Olympiodo- 
ras, Origen, Polychronius Severus, Theophilus of Alex- 
andria, Chrysostom, Cyril of Alexandria, and Didymus 
of Alexandria. This work was printed at London in 
1637 in folio. We have also by the same author sev- 
eral catena upon the Psalms and Canticles, printed at 
Basel in 1552. There is likewise a commentary upon 
the poems of Gregory Nazianzen, printed at Venice 
under the name of Nicetas of Paphlagonia, which is ap- 
parently by the same author. See Cave, Hist. Lit. ad 
ann. 1607; Fabricius, Bibl. Graec. viii, 431.

Nicetas Thessalonicensis, an Eastern ecclesiastic, 
was born at Thessalonica about 1200. He was arch- 
bishop of Thessalonica, and author of Diologoi Senecae 
Societatis, of which Allatius gives a 
fragment in Contr. Holtzinger. He has often been con- 
-founded with Nicetas Acominatus. See Fabricius, Bibl. 
Graec. viii, 756.

Niche is an architectural term derived from the 

Gateway of the Bishop's 
Palace, Peterborough, c. 
1220.

French, and designates a cavity, hollow, 
or recess in a wall or buttress for an image, 
figure, or other erect ornament. Among 
the ancients niches were sometimes square, 
but oftener semicircular at the back, and 
terminated in a half-dome at the top; 
ocasionally small peliments were formed 
over them, which were supported on con- 
sols, or small columns or pilasters placed 
at the sides of the niches, but they were 
frequently left plain, or ornamented only 
with a few mouldings. In the Middle- 
Age architecture niches (often called tole- 
crusades) were extensively used, especially 
in ecclesiastical buildings, for statues. 
The figures in the Early English style 
were sometimes set on small pedestals, and 
canopies were not unfrequently used over 
the heads; they were often placed in suites 
or arranged in pairs, under a larger arch; 
when in suites, they were very commonly 
separated by single shafts; in other cases 
the sides were usually moulded in a simi- 
lar way to windows; the arches of the 
beads were either cinque-foiled, trefoiled,
Nichol, John Pringle, a British astronomer and philosopher, eminent for his services to the Church by seeking to harmonize science and revelation, was born at Brechin, Scotland, in 1804. He was originally educated for the ministry, but turned aside to the study of the natural sciences, especially astronomy, and gained distinction as a writer on scientific subjects. About 1886 he was appointed professor of astronomy in the University of Glasgow. He died in 1859. He published popular works, entitled The Architecture of the Heavens (1859); The Stellar Heavens; The Solar System; and a Dictionary of the Physical Sciences. He wrote also the revisions for the Imperial Dictionary of Biography. His style is vigorous and attractive. "In the combined character of lecturer and popular writer," says a writer in Tait's Magazine (1848), "Dr. Nichol has done more than any modern scientist to uncase science from its mummy cofndements, and to make it walk abroad as a free and living thing. . . . Nichol is the prose laureate of the stars. From his writings ascends hitherto the richest tribute of mingled intelligence of their laws—love for their beauty—admiration for their still, strong order—hope in the prospects of mankind, as reflected in the stars and sea, ever profound and near, of that unseen Power who counts their numbers, sustains their motions, and makes their thousand eyes the organs and the symbols of his omniscience. Professor Nichol's spirit of reverence in all his communications has made him famous throughout all Britain. In this country his writings have not circulated as largely as they deserve. See Littell's Living Age, May 6, 1848, art. 1; and the references in Allibone, Dict. of Brit. and Amer. Auth. s.v. (J.H.W.)

Nicholas I of Alexandria, an eminent prelate of the Eastern Church, flourished near the opening of the 15th century. He was patriarch of Alexandria at a time when the Greek Church was as low as it ever fell, and when Alexandria alone stood forth the worthy representative of orthodox Christianity in the East. Constantinople was in the hands of the Crusaders, Jerusalem under Mohammedan rule, and therefore Alexandria alone was the prop of the Greek Church at this time. Yet even Alexandria's independence from Rome waned under Nicholas I, who was inclined to acknowledge the authority of the all-powerful pope Innocent III, "that mighty pontiff who raised the authority of St. Peter's chair to its highest pitch." Nicholas, indeed, was once thanked by Innocent for "seeking to consolidate both himself (i.e. Nicholas) and those who were suffering captivity (Crusaders) for the name of Christ, by the comforts of the Holy Roman Church." A.D. 1212, when Innocent called the fourth Lateran Council, and Nicholas found it impossible to attend, he sent a deacon named Germanus as his legate to that Western assembly (Innocent, Epit. 15, 34). After the death of Innocent III, Nicholas continued his close relation with Rome under Honorius, notwithstanding the erection of a Latin archbishopric within the Alexandrian patriarchate. Nicholas died about 1228. See Neale, History of the Eastern Church, Patriarchate of Alexandria, ii, 578 sq., 294 sq. (J.H.W.)

Nicholas of Argentine. See Nicholas of Strassburg.

Nicholas of Basle, the great lay-preacher of the Middle Ages, and a leader of the Mystics in the 14th century, the man who taught Tauber (q.v.) that God's illuminating grace was not confined to the Church of Rome or her clergy, but comes to every one of God's people directly from Jesus Christ himself, was the son of a wealthy merchant in Basle, and was born in the year 1308. He was a lad of good abilities and irreproachable conduct, and was from his early years of a decidedly religious disposition. When about fifteen years of age he became oppressed by a great consciousness of sin, and, in order to free himself from the burden under which he labored, he resolved to renounce the world and devote himself to a religious life. Even at this early stage of his career the independence of his character revealed itself, for he does not appear to have remotely contemplated entering a convent or becoming a priest; he renounced the world, but made the renunciation in his own way. For five years he labored to break through the objections of his father. After reaching the liveliest saints and practicing austerities. At length God revealed himself to him, and he found peace. Now he began to feel himself specially inspired by God, and specially taught by the Holy Spirit. Immediately after his conversion he began to study the Scriptures, and found that, although he had obtained a liberal education, nor any instruction in theology, he was able, in the space of thirty weeks, to master and understand the Word of God as thoroughly as many learned doctors of the Church. While separating himself from the Church, and delivering his new doctrine between God and man in the revelation of doctrine, Nicholas did not associate himself with any heretical sects. He had no connection whatever with the Waldenses, although some of his doctrines were the same as theirs, and he was the determined opponent of the men who professed to follow the doctrine of the Seraphim and the Anabaptists. He held the doctrine of the Anabaptist Beghards. He occupied a thoroughly independent position between the Church, on the one hand, and the different sects on the other; and the fact of his being a layman enabled him to do this with greater effect than would have been possible if he had belonged to any religious order. His theology was of a very simple kind, and he had not the perplexing logical mind which prevents a thinker from holding doctrines quite irreconcilable with each other. On most points of doctrine his opinions were substantially those of the old Catholic Church, but along with these he held two doctrines which, when pushed to their logical consequences, would have yielded results entirely subversive of most of the theology of the Church. These were the doctrines of self-renunciation and of private inspiration; and in the view of Nicholas they are so mutually related that when self-renunciation is complete inspiration follows. Nicholas and his followers made the dogma of self-renunciation the principal doctrine of their theology. Prerogativism, it is true, teaches this doctrine too. Nicholas of Basle and his friends, however, differed radically from the reformed theology. The latter teaches simply the renunciation of one's own merit in order to gain by confidence in the merit of Jesus Christ a standing before God and peace of conscience in spite of the sense of sin; making self-renunciation simply the absolute negation of one's own individuality in order to leave all things to God. The doctrine of self-renunciation is the barest and most absolute Quietism (q.v.), and if logically adhered to prevents every kind of human action and exertion. He went so far as to assert that "temptations to sin should always be faced and never shirked, nor are we to pray to be delivered from them; and in the same way it is not right to pray for any alteration of circumstances, nor even for the coming of the kingdom of heaven." The highest form of the divine life in man is, according to Nicholas, "resignation to the will of God, and prayer is a means of bringing about the will of God", hence the believer should only pray for a right and suitable frame of mind and will—that is, a frame of mind and will resigned to whatever is sent or is to be sent by God in his providence—while to pray for a change in one's circumstances, for forgiveness of sins, for freedom from fear, for the coming of the kingdom is, to pray that what God wills may be made subject to us, not that we should be made to submit ourselves to it, and so tends to produce self-assertion, not self-renunciation.

(Comp. the fifteenth and sixteenth articles in the sentence.
Nicholas was a preacher; he also wielded a powerful pen, and wrote much for the edification of his followers. Indeed many were gifted men and friends of God by the influence of his writings. His principal works are, *Buch von den zwei Männern* (these two men were not now known) — *Die Bekehrung Taulers's* — Buch von den fünf Männern (a religious biography of Nicholas himself, and four of his companions). Also *Die Rede eines deutschen Ordens-Ritters* — Von zwei Kloster-Frauen in Baiern und von zwei Klauseinern, Ursula u. Adelheit (the memoir of two nuns in Brabant), believed to be simply a translation from the Welsh or Och Wallon dialect. See Vaughan, *Hours with the Mysics* (1829); Sowerby, *Nicholas and his Work* (York, 1866); *Die Götter-Freunde im 14ten Jahrh.* (Jena, 1854); *Meth. Quart. Rev. January, 1869,* art. i; *Bri. Quart. Rev. October, 1874,* art. 1; Gieseler, *Eccles. Hist.* iv, 184-186; Hodgson, *Reformer und Martyrs* (Phila, 1867), p. 120 sq.

Nicholas of Clemang. See Clemange.

Nicholas of Cuba. See Cuba.

Nicholas Damascenus, an ancient Peripatetic philosopher and writer on Roman history, flourished in the reign of Augustus, and was ambassador from Herod, king of Judea. He wrote a Universal History, in 144 books, of which a few fragments only remain, together with comedies and tragedies of good reputation. See Lardner, *Works* (Index in vol. 12).

Nicholas of England, a monastic who flourished near the close of the 12th century, is noted in the history of Christian doctrine as the decided advocate of the Romish ultramontane view regarding the immediate consecration of Mary. He wrote in the most severe and condemnatory terms against abbot De la Celle, afterwards celebrated as bishop of Chartres. Of the personal history of the monk Nicholas we know only that he died before the close of the 12th century. The part he played in the doctrinal controversy above referred to is given by Neander, *Ch. Hist.* iv, 383 sq. See also Milman, *Hist. of Latin Christianity,* v, 44.

Nicholas of the Flue. See Flue.

Nicholas of Frascati, an eminent Italian prelate, flourished in the opening of the 13th century. We know but little of his personal history. In 1213 we find him mentioned as bishop of Frascati and cardinal, and employed in that year on a mission to England as papal legate. He was sent to bring to completion the arrangements made by Pandulf (q. v.) with King John, and was involved in this mission, for on Oct. 3 he publicly received in St. Paul's Cathedral from John a charter of surrender and the oath of fealty, and somewhat later received full compensation for all damage caused by the royal sequestrations of ecclesiastical property. It was also this cardinal Nicholas who removed the interdict then resting upon England and its king. Nicholas quitted Britain in Sept. 1213, and we hear scarcely anything of him thereafter. He died about 1220.

Nicholas, Henry. See Familists.

Nicholas Hydruntunus, an Eastern ecclesiastic, lived in the beginning of the 13th century, in the reign of Alexius IV Comnenus. Nicholas was distinguished by his opposition to the Latin Church, gained the confidence of his sovereign, and he published several works, of which an account is given by Cave (ad ann. 1201) and Fabricius (Bibl. Graci. xi, 289).

Nicholas Ilyin. See Right-hand Brethren.

Nicholas of Letiomysl. (or Letiomischel), one of the warm advocates of the Hussite movement, flourished as master at the University of Prague near the opening of the 15th century. In the memorable university meeting held on May 28, 1403, to examine the forty-five propositions ascribed to Wickliffe (q. v.), master Nicholas most enthusiastically and ably argued in behalf of the Bohemian party for the English theologian.
He declared that the propositions incorrectly represent Wickliff, and branded these articles as having been falsified by a certain master Hubner, who more rightly deserved to be burned than the two poor fellows who had been burned for counterfeiting saffron (an herb much sought for and used in those days), as he himself, also at the time agreeing to the unconditional acceptance of all the propositions, declared them at this time, and ever afterwards, as having been tampered with and interpolated by master Hubner. Nicholas remained steadfast to the cause of these anti-Reformers, and was much esteemed for the service he rendered to Christian truth, and as an example of holy living. He was called by Huss "the most sagacious counsellor" (Mon. Hussii, ii, 42). See Neander, Ch. Hist., v, 246; Gillett, Life and Times of John Huss, i, 38.

Nicholas of Lyra. See Lyra.

Nicholas of Methone, an Eastern ecclesiastic, to whom a number of works are attributed, was bishop of Methone in Messenia. His writings, as far as known, are polemical essays on the person of Christ, the exarchist, the use of unleavened bread, the procession of the Holy Ghost, against the primacy of the pope, but especially against the heathenish Platonism of Proclus. All attempts to establish the personality of the author, or the exact time when he wrote, have heretofore proved unsuccessful. As Cave says, he lived at this time, and in the last century, and looked upon him as a contemporary of Theophylact, bishop of Bulgaria, and of Nicetas of Heraclea. Cave, however, observes that some of the works may have been written by another, more modern, Nicholas. Others, among them Fabricius, place him in the latter half of the 12th century. This is also the opinion of Ullmann, who observes that in the midst of the controversy between the Eastern and the Western churches, during the reign of Manuel I, a symbol was held in 1196 at Constantinople, in which a Nicholas, bishop of Methone, was present, according to Allatius (De perf. consens., p. 689). Nicholas was until recently known only as the author of Ανατρεπὴς τῆς Ψυχολογίας στοιχείων Πράξεως Πλατανωκός, Refutatio institutionis theol. Procli Platonici (primum ed. J. Th. Voemel, Francf-ad-M. 1825); and Nicolai Methonensis Aneclota (p. i, ii, ed. Voemel, Francf. 1825-26); and it appears from these works that he was an independent disciple of the ancient fathers, whom he studied and expounded with great perspicacity. He opposed heathen Platonism, while at the same time he was close to Christian and to the mystical Platonism which had been handed down from the Areopagists and others. Hence his doctrine concerning God is altogether ideal and transcendental. Nicholas considers the negative definitions of God as more correct than the positive. He regards God as so infinitely above man that the latter can have no conception of him. The small Aneclota begins with the expression, "The world is unfinished; the divine act of creation is ever enduring, and admits of no distinction of past or future. Were we to consider it as having a beginning or an end, we lose the apprehension of the divine activity, and thus represent the divine nature and power as subject to change. Yet the results of creation are finite; but this does not imply a change in the creative energy, only a variation in the proportion between its emitting and retaining properties" (κατὰ προθώλην καὶ σωτηριοποιίαν, Aneclot, i, 10). His views bear a great resemblance to those of Origen. On the doctrine of the redemption he goes much beyond all the ancient expositors, and seeks to prove dialectically the necessity of this divine means of grace. "Humanity," says Nicholas, "lay in the hands of Satan; it possessed within itself nothing possible but means of getting free from this bondage, since every sinner would have had first of all to free himself from this strange power, an effort which none could accomplish. Redemption could only come from the innocent and almighty, hence from God himself, and at the same time could only be accomplished in human form, and by the undergoing of human sufferings and death." From these principles results the necessity of the coming of a God-man, when it is admitted, moreover, that this could not be done by himself alone. This forms a simplified counterpart of Anselm's theory, and similar views are expressed by subsequent Greek writers, for instance, very explicitly by Nicholas Cabasilas. Ullmann on this account believes that Nicholas made use of Latin sources. His criticisms on Proclus have been even more important in determining the fact that the first place in which the Greek Church of that time there were persons who in their attachment to the later Platonism deduced from it antichristian and anti-ecclesiastical consequences, while otherwise the polemics on the question had no practical result. The assertion of some of the earlier Greek theologians that the θεογνοσία, as such, is not immortal, but obtains immortality only from its connection with the πνεύμα, was repeated by our Nicholas in the Greek Church (comp. his Refut. p. 297, 298). A work by Nicholas on the exarchist was published: Grecum cum Ierugiae Iacob ai, etc. (Paris, 1650), and in Auctorio Duomoio, ii, 872). His other works remained in MSS. until 1866, when a Russian priest at Leipzig brought out the Bibliotheca Eccles. contiones Graecorum theologorum operarum, the large bulk of which in vol. i is devoted to Nicholas of Methone. There are eight of his productions in this abridgment, in which the personal history is cautiously approached, as but little is known of it. Thus, the soundest modern critic of Middle-Age Greek theology, pronounces these writings of Nicholas of Methone as among the best products of that epoch of Byzantine theology. As to the time of Nicholas's activity (cave holds that it is well-nigh impossible to speak with certainty until more of his writings are made accessible to modern critics. He refuses to reject or accept either Cave's or Ullmann's opinion on this point. See Fabricius, Bibli. Gr., (ed. Harl.) xi, 290; Ullmann, Dogmatik d. griech. K. im 12. Jahrh. in Stud. u. Krit. of 1885, p. 647 sq.; Hagenbach, Hist. of Doctrines, i, 385; ii, 16, 34, 41; Cellier, Hist. des Auteurs Sacrés, xiii, 558, 558, 571 sq.; Migne, Patrologia Graecae, vol. xxv.

Nicholas of Monod (Peloponnesus), an Eastern ecclesiastic, flourished as bishop of Monod towards the close of the 11th century. Little is known of his life, but there is a tradition that he was a contemporary of the Emperor Constantine Phocas. He was the author of a number of works, some of which have come down to us in Latin, but others are extant in the original language. His writings are some of the most distinguished men of his time. His theology is strongly impregnated with Neoplatonism. Thus, while pretending, like the pseudo-Denis the Areopagite, that we can give ourselves an idea of God by means of theology, and that theology is sufficient to express the divine, he enters into the greatest details upon the Trinity, upon the relation of the three persons who compose it, etc. We have of his works, Libellus de corpore et sanguine Christi, Greek and Latin, in vol. ii of the Bibliotheca Patrum of Du Duc (Auctarium Ducamnum) (1624, folio). Among those of his works which remain unpublished we note, Tractatus tres de processione Spiritus Sancti—De primatu papae, etc. See Ullmann, Nicolasus von Methone, in Theol. Studien und Kritiken of 1838; Seelen, Nico-laus. See also, Anatome Contactus inreas, De virtutibus, and satisfactiones doctrinae (Heidelberg, 1868, 4to).

Nicholas of Münter. See Families.

Nicholas (St.) of Myra (Lat. Sanctus Nicolas; Ital. San Nicola, or Nicolo di Barri; Ger. Der Heilige Nikolaus, or Nikolas), a highly popular saint of the Roman Catholic Church, especially in Italy, and reverenced still with greater devotion by the Eastern Church, and particularly the Russian Church, which regards him as a special patron, is believed to have been one of the early bishops of Myra, in Lycia. Very few historical data are accessible regarding the personal history of this saint. There was a bishop of the name of Nicholas much venerated in the East as early
as the 6th century; a church was dedicated to him in Constantinople about A.D. 500. The precise date of his episcopate is a subject of much controversy. According to the popular account, he was a confessor of the faith in the last persecution under Maximianus, and having survived until the Council of Nice, was one of the bishops who took part in that great assembly. This, however, seems highly improbable. His name does not occur among the signatures to the decrees, nor is he mentioned along with the other distinguished confessors of the faith who were present at the council, either by the historians or, what is more important, by St. Athanasius. He may with more probability be regarded as a bishop of the 4th or 5th century, and to the reign of Justinian, in whose time several of the churches of Constantinople were dedicated to St. Nicholas. His great popularity and the devotion paid him rest mainly on the traditions, both in the West and in the East, of the many miracles wrought through his intercession. In the Greek Church he ranks next to the great fathers. In the West he began to be revered in the 10th century, and since the 12th has been one of the most popular of the saints in all Catholic Europe. What the historical records do not furnish is more or less fiction. The stories of St. Nicholas are numberless, and many of them have even been treated in art. According to these legends Nicholas was born of illustrious Christian parents, when they had been many years married without having children; and it was thought that this son was given by God as a means of reconciling them. When he was twelve years old, the Church and the poor, as well as for the prayers they had offered. Their home was in Panthæa, a city of Lycia, in Asia Minor. The very day of his birth this wonderful child arose in his bath, and, joining hands, praised God that he had brought him into the world. And from the same day he would only take the breast on Wednesday and Friday, thus knowing how fast from the time he knew hunger. On account of his holy disposition his parents early dedicated him to the service of the Church. While still young Nicholas lost both father and mother, and he regarded himself as but God's steward over the vast wealth of which he was possessed, and he did many noble acts of charity. At length he determined to go to Palestine. On the voyage a sailor fell overboard and was drowned, but Nicholas rescued him and restored his life; and when a storm arose, and they were about to perish, the sailors fell at his feet and implored him to save them, and as he prayed the storm went down. After his return from Palestine Nicholas dwelt a little while in Asia Minor, where he became of great humility. At length the bishop of Myra died, and a revelation was made to the clergy to the effect that the first man who should come to church the next morning was the man whom God had chosen for their bishop. So when Nicholas came early to church to pray, as was his custom, the clergy led him into the church and consecrated him bishop. He showed himself well worthy of the dignity in every way, but especially by his charities, which were beyond account. Many acts of such wonderful import are told of him that they may well be believed to be the inspiration of an enthusiastic mind. At one time Constantine sent certain tribunes to put down a rebellion in Phrygia. On their journey they stopped at Myra, and Nicholas invited them to his table; but as they were to take their seats he heard that the prefect was about to execute three innocent men, and the people were greatly moved thereat. Then Nicholas hastened to the place of execution, followed by his guests. When he arrived the men were already kneeling, with their eyes bound, and the executioner was ready with his sword. St. Nicholas threw his arms round the wrists of the prisoners, and besought their release. The tribunes looked on in wonder, but no one dared resist the good bishop. Even the prefect sought the saint's pardon, which was granted after much hesitation. After this, when the tribunes went their way, they did not forget St. Nicholas, for it happened that while they were on their way in Phrygia they poisoned the mind of Constantine against them, so that when they were returned to Constantine he accused them of treason, and threw them into prison, ordering their execution the next day. Then these tribunes called upon St. Nicholas, and prayed him to deliver them. That same night he appeared to Constantine in a dream, and commanded him to release those whom he had imprisoned, and threatened him with God's wrath if he obeyed not. Constantine not only released them, but sent them to Myra to thank St. Nicholas, and to find out who was so powerful a person, with a cup of the holy wine which was written in letters of gold, and bound in covers set with pearls and rare jewels. Also certain sailors who were in danger of shipwreck on the Ægean Sea called upon Jesus to deliver them, for the sake of St. Nicholas, and immediately the saint appeared to them, saying, "I am here! I am, my sons; put your trust in Him, whose servant I am, and ye shall be saved." The sea became calm, and he took them into a safe harbor. Hence those who are in peril invoke this saint, and seek aid from him. His life was spent in doing all manner of good works. When he was about to depart this life, he left wealth and joy, and he was buried in a magnificent church in Myra. The miracles attributed to St. Nicholas after his death were quite as marvellous as those he is said to have performed while yet alive. Thus we are told, for example, that a man who greatly desired to have a son but who was already old prayed for a boy, and while they were absent in Phrygia the first time he took his child to church he would give a cup of gold to the altar of St. Nicholas. The son was granted, and the father ordered a cup to be made; but when it was finished it was so beautiful that he decided to retain it for himself, and had another less valuable made for St. Nicholas. At length he went on the journey necessary to accomplish his vow, and while on the way he ordered the little child to bring him water in the cup which he had taken for himself. In obeying his father the boy fell into the water and was drowned. Then the father sorely repented of his covetousness, and repaired to the church of St. Nicholas, and offered the second cup; but when it was placed upon the altar it fell off and rolled on the ground, and this it did the second and third time; and while all looked on amazed at the wond'rous event, and cried child stood, on the steps of the altar with the beautiful cup in his hand; and he told how St. Nicholas had rescued him from death, and brought him there. Then the joyful father made an offering of both cups, and returned home joyous and happy, and the whole story has often been told in prose and poetry, as well as represented in art. Again, a Jew of Calabria, having heard of all the wonderful deeds of St. Nicholas, stole his image from the church, and set it up in his own house. Whenever he left his house he put the care of his goods in the hands of the saint, and threatened that if anything should befall them in his absence he would chastise the saint on his return. One day the robbers came and stole his treasures. Then the Jew beat the image, and cut it also. That night St. Nicholas appeared to the robbers all wounded and bleeding, and commanded them to restore what they had stolen; and they, being afraid at the vision, did as he bade them. Then the Jew was converted by this miracle, and was baptized. Another rich Christian merchant, who dwelt in a pagan country, had an only son who was made a captive, and was obliged to serve the king of the country as a cup-bearer. One day, as he filled the king's cup, remembering that it was St. Nicholas's day, he wept. Then the king demanded the cause of his grief, and when the young man told him, he said to him, "My son, how is thy St. Nicholas to be thanked to thee from my hand!" And the moment the palace was shaken by a whirlwind, and St. Nicholas appeared and caught the youth by the hair, and set him in the midst of his
own family, with the king’s cup still in his hand. It happened that at the very moment when he arrived his father was giving food to the poor, and asking their prayers for his captive son. It is necessary to keep these traditions in mind when regarding the pictures of St. Nicholas, for in two different pictures there appears a boy with a cup, so that it is important to distinguish them by the accessories. Sometimes it is a daughter who is rescued from captivity.

The tomb of St. Nicholas was a famous resort for pilgrims for centuries. In 807 the church was attacked by Abcem, commander of the fleet of Harun Al Raschid. But the watchfulness of the monks prevented him from doing harm, and, putting to sea, he and his whole fleet were destroyed in punishment for their sacrilegious attempt. The remains of the saint rested in Myra until 1084, although several attempts were made by different cities and churches to possess themselves of these sacred relics. At length, in the year mentioned, some merchants of Bari, who traded on the coast of Syria, resolved to obtain the remains of which they had heard such great wonders. At this time Myra was desolated by the Saracens, and the ruined church was guarded by three monks. The remains were taken without difficulty and carried safely to Bari, where a splendid church was erected for their resting-place. The Venetians, however, claim that they have the true relics of St. Nicholas, brought home by Venetian merchants in 1100. But the claims of Bari are generally acknowledged, and the saint is frequently mentioned as St. Nicholas of Bari.

It is a curious fact that in the Russian Church the anniversary of Nicholas’s translation to Bari is still observed as a festival on May 9th. In Greek pictures he is represented like a Greek bishop, with no mitre, the cross in place of the crosier, and the persons of the Trinity embroidered on his cope. In Western art he has the bishop’s dress, the mitre, the cope very much ornamented, and the crosier and jewelled gloves. His attributes are three balls, which are on the book at his feet or in his lap. They are said to represent the three purses which he threw into the window of a poor noldeeman, or three loaves of bread, emblematic of his feeding the poor; or, again, the persons of the Trinity. The first interpretation is the most general. See Nicholas of Tolentino. He is chief patron of Russia, patron of Bari, Venice, and Freiburg, as well as many other towns and cities, numbers of them being seaport places. He is regarded in Roman Catholic countries as the especial patron of the young, and particularly of scholars. In England his feast was celebrated in ancient times with great solemnity in the public schools, Eton, Sarum Cathedral, and elsewhere; and a curious practice, founded upon this characteristic of St. Nicholas, still subsists in some countries, especially in Germany. On the vigil of his feast, which is held on December 6, a person in the appearance and costume of a bishop assembles the children of a family or of a school, and distributes among them, to the good children gilt nuts, sweetmeats, and other little luxuries in a bowl of gold conduct a dramatic piece, sometimes called the redoubtable punishment of the “Klausnaut.” Numberless biographical sketches and narratives of his miraculous deeds abound. Some of them are in printed, others in MS. form. The most noteworthy are, Leonis imperat. orat. gr. prod. (Tolos. 1644); An- dres Christiani ejusdem Loci, ed. Com- be (1664); Vita et Metaphraste, et aliis collecta a Leonardo Justiannio, tom. i, ap. Lipom et ap. Surium, 6 Dec.; Ni- colas Stwithe, in tom. ii Auctor. noci Combeia. For other notices, especially those in MS. form, see Fabri- cianum, Biblioth. Rerum v. Herti, x, 298; idem, Thes. mon., Mémoires Ecclesiastiques, vi, 769, 785, 952. See also Ceillier, Histoire des Auteurs Sacres, xi, 347 et al.; Stanley, Lect. on the Hist. of the East, Ch. p. 200, 224; Clement, Hand-book of Legendary and Mythological Art, s. v.; Broughton, Bibliotheca Historica Sacra, vol. ii, s. v.; Brand, Popular Antiquities of Great Brittain, i, 413–31.

Nicholas (St.), surname Peregrianas, was an ascetic of note, especially in Apulia. He was a native of Attica, in Greece. His history is purely tradition- ary, and the dates, as well as the statements, are uncertain. His parents are said to have been poor, and he was not taught to read or bred to any trade. When he was eight years of age his mother sent him out to take care of sheep. From this time he began to sing aloud, Kyrie eleison, which he did night and day; and this act of devotion he continued all his life. His mother, according to the legends, thought he was pos- sessed of the devil, and carried him to a neighboring monastery, where the monks shut him up and chastised him, but could not hinder him from singing his song. He suffered punishment patiently, and immediately be- gan again. Returning to his mother, he took a hatchet and knife, and, clambering up a mountain, cut branches of a cedar, and made crosses of them, which he stuck up in the highways, and in places inaccessible, praising God continually. Upon this mountain he built a hut, and dwelt there some time all alone, working continually. Then he went to Lepanto, where a monk joined him- self to him, and never forsook him. Together they went into Italy, where Nicholas passed sometimes for a holy man, and sometimes for a madman. He fasted every day till evening; his food was a little bread and water, and yet he did not grow lean. The nights he usually passed in prayer, standing upright. He wore only a short vest reaching to the knees, his head, legs, and feet being naked. In his right hand he carried a light wooden cross, and a script at his side, to receive the money which people gave him, and workmen usually laid out in fruit, to distribute to the boys who went about with him singing along with him Kyrie eleison. His oddities caused him to be ill-used sometimes, even
by the orders of the bishops. He is said to have performed various miracles, and to have exhorted the people to repentance. At last falling sick, and visited by multitudes who came to beg his blessing, he died, and was buried in a cathedral with great solemnity, and according to custom a great number of miracles were wrought at his tomb. See also, Historia Ecclesiastica, 1763; Jortin, Eccl. Rom. III, 443; Cellier, Hist. des Actes Sacre, xii, 438.

Nicholas de Pistorio, a monastic who labored for the Christian cause in the missionary field, flourished in the second half of the 18th century. He was a member of the Dominican order, but allied himself with the celebrated Father Cincin INTOAC, who accompanied him in his missionary tour to Persia and India. Nicholas de Pistorio died in India some time after 1291. His memory is revered in all the churches of Christ for his great zeal in the cause of the Master.

Nicholas of Pskoff or Plescow, a Russian hermit who flourished in the second half of the 18th century, and whose legend was written by Horsey in 1570, was a great favorite of the people, and was believed to have supernatural power, because he went about unchained and unshod, enduring unmoved extreme heat and cold, and performed many other extraordinary things. He was noted also for saying nothing at all. He is particularly remembered as the saviour of his native town from the destruction threatened by czar Ivan. This prince came to Plescow with the savage intention of massacring the whole population there, as he had already done at Novgorod. According to the traditionary story, it was early morning when the czar approached the town. The bells of the churches—those voices of Russian religion—were sounding for matins, and for a moment his hard heart was melted, and his religious feeling was stirred. The hut of the hermit was close by, and he ran out, seized him and brought him to the church. The holy man, in return, sent him a piece of raw flesh. It was during the great fast of Lent, and Ivan expressed his surprise at such a breach of the rules of the Church.

"Irasko, Ivasko," that is "Jack, Jack"—so with his accustomed rudeness the hermit addressed his terrible sovereign—"thou thinkest thou it unlawful to eat a piece of beast’s flesh in Lent, and not unlawful to eat up so much man’s flesh as thou hast already done?" At the same time he pointed to a dark thunder-cloud over their heads, and threatened their destruction by it, if he or any of his people touched a piece of flesh in that city, which God by his good angel was preserving for better purpose than his rapine. Ivan trembled and retired, and Plescow was saved. See Strah, Gesc., Russland, iii, 213 sq.; Horsey, Trava, (1891), i, 161 sq.; Karaman, Hist. of Russia, i, 635 (11 vol. svo, to 1618); Monrup, Hist. Russa Church, p. 119.

Nicholas the Sophist, a Christian philosopher who flourished under the emperor Leo I, and down to the reign of Anastasius, consequently in the latter part of the 5th century, was a pupil of Proclus. Suidas (v. NIK.) mentions two works of his: Προμενευτωρ and Μελωρια βιοτωριακ. Part of the Προμενευτωρ had been published previously as the work of Libanius, but has more recently appeared as the work of Nicholas in Walch’s Rheto, Grac, i, 266-420. Suidas (v. NIK.) mentions another Sophist, a native of Myra, in Cilicia, and a pupil of Lactarius, who taught at Corinth in the 14th century. He preached the dyophysite and Melior. See Fabricius, Bibl. Grac. vi, 184; Westermann, Geschichte der griech. Beredtumtel, § 104, n. 10.

Nicholas of Strasburg, a German mystic, was reader in the Dominican convent of Cologne about the beginning of the 14th century. He was a pupil of Thomas de Cantimpo and de Strassburg, and was consecrated by pope John XXII at Strasburg, Freiburg, etc. In 1326 pope John XXII appointed him minister et minister, giving him the superintendence of the convents of his order in Germany. There are thirteen sermons of his extant, published in Pfeiffer, Deutsche Mystiker, p. 261 sq.; the third and fourth are not complete. These sermons are not mystical, but rather of a practical character, insisting on inward piety and on the practice of the Christian virtues. They are, however, rich in images and allegories. Nicholas of Strasburg has been confused with another Nicholas, who flourished some time later. The latter was born in 1357, became a Carthusian monk, and lived at Chemnitz in 1440. He died in 1457. Pex, in his Bibliotheca Ascetica (vol. iv, Regensburg, 1724), gives the title of the writings of this Nicholas.

Nicholas (Sr.) of Tolentino, a Roman Catholic ascetic for the 13th century, whose personal history is enshrined by mythical cobweb, was born in the little town of St. Angelo, near Ferno, in 1239. His parents, the legend goes, had prayed earnestly to St. Nicholas for a son, and as they believed that this son was given them through the intercession of this saint, they named him Nicholas, and dedicated him to the service of the Church. At an early age he took the habit of an Augustinian friar, and so great was the austerity of his life that it has been said that “he did not live, but languished through life.” He was successful in his vocation; his words and his visions are numberless. He never allowed himself to taste animal food, and when he was very weak he refused a dish of doves that his brethren brought him, and waved his hand above the dish, when the doves arose and flew away. St. Nicholas of Tolentinio died on Ascension Tuesday that at the hour of his birth a brilliant star shot through the heavens from St. Angelo, where he was born, and rested over the city of Tolentino, where he afterwards lived. In the year 1302 a plague visited the city of Cordova, and according to legend the governor caused the image of St. Nicholas of Tolentinio to be carried through the streets of the city in solemn procession on the day which was observed as the festival of that saint. Father G. de Navas, bearing a crucifix, met the procession, when the figure of Christ stooped from the cross and embraced that of St. Nicholas, and immediately the plague was stayed. He is also represented in art as restoring a child to life, and doing many other miracles. He is painted in the black habit of his order, with a star on his breast; he often bears a crucifix wreathed with lilies, typical of the purity and austerity of his life. Several of these are characteristic also of the representations of Nicholas of Myra (q. v.), with whom this Nicholas appears to have become partially confounded. See Clement, Hand-book of Legendary and Mythological Art, etc.

Nicholas’s-day (Sr.), a festival observed by the Romish and Greek churches on December 6, in honor of St. Nicholas of Myra (q. v.).

Nicholas I, pope of Rome, one of the most celebrated of the Western pontiffs, who, next to Gregory the Great, may be regarded as the founder of the modern papacy, and the first advocate of the infallibility of the bishops, by giving authority to the Isidorian decreals, is surnamed "the Great." He is the author of the stupendous work Ἰωάννης Μελαρίς, concerning the establishing of the papacy of Rome as a secular and sovereign power, supreme to all others. He was a native of Rome, and the descendant of a noble family. The time of his birth is not exactly known; it falls near the opening of the 9th century. He early took holy orders, and was consecrated cardinal deacon by pope Leo IV. On the death of pope Benedict III, in A.D. 858, Nicholas became the choice of the papal conclave, and was at once elevated to the chair of St. Peter without consent or consultation of the secular power, and thus became the first customarily elected pope. The emperor of Germany, Louis II, then, too, king of Italy, was at that time at Rome, and he was therefore present at the consecration of the papal candidate. Besides being consecrated, Nicholas submitted to coronation. This was a new ceremony in
NICHOLAS

64

NICHOLAS

popedom. The fascinating successor of Benedict comprehended that the empire of Charlemagne was fast breaking up, and that this was his opportunity to secure greater power over the temporalities of the world. He therefore submitted to this additional ceremony to place himself by outward pomp and circumstance at least on a par with the Eastern princes. Superior to the dignity of his ecclesiastical office, the same prince would of course enjoy supremacy also as a secular ruler, and for this elevation Nicholas I now strove. That he succeeded may be learned from the impression left by him on his times, as we are told it in the Regni. Chron. ed ann. 898, pt. 1, p. 576, and in the-History of Gregory I to our time at least. He was high-priest on the throne of St. Peter to be compared to Nicholas. He tamed kings and tyrants, and ruled the world like a sovereign: to holy bishops and clergy he was mild and gentle, to the wicked and unconverted a terror; so that we might truly say a new Elias arose in him.

The earliest incident of importance in his pontificate is his conflict with Photius (q. v.), who had been intruded into the see of Constantiople after the deprivation of Ignatius (q. v.). As soon as installed, Nicholas sent an embassy to Constantinople to urge Michael III to restore Ignatius to the patriarchal see, and to at the same time to declare the churches of Illyricum, Apuléa, Calabria, and Sicily, which the court of Constantiople had detached from the see of Rome during the schism of the Iconoclasts, and which, after that schism, were known by the name of Empires, to be reannexed to the Roman Empire. The members of the clergy of Constantinople had not been restored (Thomassin, Disciplina de Eglise, vol. i.); the allegiance which the Roman pontiffs had paid to Charlemagne and his successors as emperors of the West had greatly widened the breach between the Roman see and the Byzantines; it was therefore hardly to be expected that the Eastern emperor would consent to Nicholas’s propositions. Rather did he altogether ignore the word from Rome, and when Nicholas excommunicated Photius, he, in return, at a council assembled at Constantinople, anathematized Nicholas and his followers, asserting at the same time that “since the seat of the empire had been removed from Rome to Constantinople, the primacy and privileges enjoyed till then by the Roman see had become transferred unto that of the new capital.” The legates of Nicholas returned to Rome without having effected anything, the answer of the pope being the same as that which he had received from the emperor. It remained for Basil the Macedonian (q. v.), to effect the change asked for; but it was brought about, not because Rome had asked for it, but rather because the new ruler deemed it best to reinstate Ignatius (q. v.), and thereby to strengthen his own authority. The question encountered. Nicholas had been appealed to by the unjustly divorced wife of Lothaire, king of Lorraine, the younger brother of emperor Louis, and had appointed legates to inquire into and report upon the case; and the legates—the archbishops of Treves and Cologne—in a council held at Metz in 883, having exceeded their powers by giving a sentence in favor of Lothaire, the pope declared their sentence null, and in a new council called at Rome in A.D. 864, deposed and excommunicated them. Louis now espoused their cause, and marched his troops to Rome, in order to enforce satisfaction. After some hostile demonstrations, the emperor, terrified, it is said, by his own sudden illness, and some fatalities which befell his followers, desisted from the enterprise, and withdrew his troops. Nicholas, once satisfied that he had his opponent in his power, constrained Louis to make submission; the papal decree was enforced, and Theutberga was formally reinstated in her position as wife and queen. Though by these acts Nicholas did not absolutely advance unexampled pretensions to supremacy in behalf of the Roman see; he yet increased more than all his predecessors his power to confirm it by the favorable juncture and auspicious circumstances which he seized to assert and maintain that authority. But this vast moral advancement of the popedom was not all which the Roman see owes to Nicholas I; she owes the questionable boon of the recognition of the False Decretals as the law of the Church. Nicholas I not only saw during his pontificate the famous False Decretals take their place in the jurisprudence of Latin Christendom: if he did not promulgate, he was at least a most active and zealous supporter of them as authentic documents; he gave them the weight of the papal sanction. It was on this false principle that the Roman Church established the great principle which Gregory I had before announced of the sole legislative power of the pope. Every one of these papal epistles was a canon of the Church; every future bull therefore rested on the same irrefragable authority. Duty and obedience to the pope became the duty and obedience of the Church. The papacy became a legislative as well as an administrative authority. Infallibility was the next inevitable step, if infallibility was not already in the power asserted to have been bestowed by the Lord on St. Peter, by St. Peter handed down in unbroken descent, and in a plenitude which could not be restrained or limited to the latest of his successors. (See the articles DECRETALIA, INCINARUM DE RHRMIS, AND INFALLIBILITY; and, besides the literature appended to these articles, comp. Jervis, Hist. of the Ch. of France, i, 393; 298 sq., p. 394 [298 sq., p. 394]. The Popes, p. 298 sq. et al.) During the reign of pope Nicholas I the Bulgarians and their king, Bogoriz, were converted to Christianity, and submitted to the authority of Rome (comp. Maclear, Hist. of Christian Missions during the Middle Ages, p. 281 sq.). Nicholas is also acknowledged by the Roman Church to have added significantly to the Church the disputed suffiato (q. v.) clause (comp. Lumby, Hist. of the Creeds [London, 1875, v. 3], p. 37 sq.). Nicholas died Nov. 13, 867. He was afterwards canonized. He wrote about one hundred epistles, which, it is said, were not to be found in manuscript (v. XV.); a life of his is given in Murer, R. R. Hist. So. vol. iii, pt. ii, p. 301. See Giesebrecht, Quellen d. frh. Pabst-Gesch. in the Allgem. Mon.-Schr. Feb. and April, 1892; Hardouin, Acta Concill., etc., vol. v; Hist. litter. de la France, vol. v; Gesn, Merkwiirkz. u. d. Leben u. d. Eugen- stinische Staats-Kirche seiner Zeit (Berlin, 1857).

Nicholas II, Pope, figures like the preceding as most zealous advocate of papal supremacy. His original name was Gerard of Burgundy, and he was a native of that country. His accession to the pontificate was an election, and for a time held the archbishopric of Florence. In 1059 he was elected successor to Stephen IX in the pontificate. An opposite faction had chosen John, bishop of Velletri, who assumed the pontifical office under the name of Benedict X. The Council of Sutri, however, disavowed him, and he was obliged to resign his claim. The principal opponent of this rival pope was Hildebrand [see GREGORY VII]; he had determined that Gerard of Burgundy should succeed Stephen IX, and the word of this wily churchman was law. The imperial party, which by request of the Roman nobles had consented to the advancement of the bishop of Velletri, was won over to the Hildebrandian candidate by Hildebrand himself; and the imperialists afterwards consented not only to the degradation, but also to the disfranchisement of their own candidate from all ecclesiastical offices. Hildebrand was the legitimate and rightful or legitimate successor of the see of Rome under the guidance of the man celebrated in history as pope Gregory VII. Pope Nicholas II himself was a man of ordinary ability, and but little activity. His pontificate, is true, witnessed the two great changes in the papal policy which carried the four hundred and twenty years. The first was the power of the influence of the crown, which was vested in the person of the pope, and the alliance with the Normans [see PAPACY]; yet these changes were effected mainly through the
exerctions of Hildebrand—the man behind the throne. The former of these changes was brought about immediately by the accession of Pope Nicholas II, the antecedent of the Lateran Council (q. v.), which he summoned A.D. 1059. The decree was ostensibly published to restore the right of election to the Romans, but it contained a remarkable variation from the original form. The cardinal bishops (seven in number, holding sees in the neighborhood of Rome, and consequently suffragans of the pope as patriarch or metropolitan) were to choose the supreme pontiff, with the concurrence first of the cardinal priests and deacons (or ministers of the parish churches of Rome), and afterwards of the laity. Thus elected, the new pope was to be crowned, first by Henry, “now king and hereafter to become emperor,” and to such of his successors as should personally obtain that privilege. The decree is truly the foundation of that celebrated mode of election in a conclave of cardinals, which has ever since determined the headship of the Church (see Conclave; compare Cartwright, On Papal Conclaves [Edinb. 1868, 12mo], p. 11–13). It was intended not only to exclude from citizenship those who had, indeed, justly forfeited their primitive right, but as far as possible to prepare the way for an absolute choice by the papacy, with a view to the necessary exercise of full control; reserving only a precursory and personal concession to the emperors, instead of their ancient legal prerogative of confirmation. It was, indeed, provided, in effect, that future emperors should exercise the right of confirmation if they should have previously obtained and obtained, whenever it was believed that an emperor was hardly likely to sue for this privilege; and even should the custom of seeking it be established, occasions would not fail to arise in which popes might feel themselves able and willing to refuse it. This bold innovation was made at a favorable moment, when, in fact, there was no emperor who could protest against it. Nicholas took an oath from his new vassals the Normans, whereby they pledged themselves that after his death they would recognise and defend as pope no other than the one who should be elected by the cardinals in accordance with the new regulations. In truth popehood was restored to Italy, to Rome. The great organized and simultaneous effort of the higher clergy to become as it were the chief feudalatories, and to choose their monarch, was thus made possible. Yet the decree of a council would have proved of little avail if it had been more than words, had not the papacy secured command also of some strong military force to maintain its independence against domestic and foreign foes. Either the emperor must still dictate, or the Roman barons overawe the election. The pope, with all his magnificent pretensions, was not sufficiently well provided for on foreign resources for his maintenance on his throne. The second great act of the pontificate of Nicholas II therefore was the conversion of the hostile and unbelieving Normans into the faithful allies, the body-guard of the pope. Another important event in the reign of Nicholas II is the controversy with Berenger of Tours (q. v.) regarding the real presence of Christ in the eucharist. See Transubstantiation. It was settled favorably to Romanism. Though Berenger afterwards, when he became the avowed head of adversaries, recanted and reassumed his former position, the effect of the Lateran decree was, for a time at least, almost to suppress his doctrine. Pope Nicholas II died in 1061. See Vita Nicolai II Papae, ec Cardinale Aragoniae, in Muratori, Rerum Italicarum Scriptores, iii, 301; Baronius, Annals Ecclesiastici, xxii, 148; Jahn, Reptae pontificis Romanorum, p. 384–389; Bower, Hist. of the Popes (see Index in vol. vii); Riddle, Hist. of the Papacy, ii, 115 sq.; Milman, Hist. of Latin Christianity, iii, 295 sq.; Hallam, Middle Ages (Smith's edition), p. 389 sq.; Höfler, Gesch. der deutschen Kaiser, ii, 369; Wetzer u. Welle, (K. C.), Kirchen-Lexicon, vii, 589–588.

Nicholas III, Pope, was originally John Cajetanus, of the noble house of Orsini, and bore the surname of "the Accomplished," because, as his Italian contemporaries alleged, "in him met all the graces of the handomest clerks in the world." Cajetanus was a man of talent of a high order, and took a prominent part in ecclesiastical affairs. In the papal chair he distinguished himself especially by his activity against the schismatics and heathens. He sent legates to Michael Palæologus, and missionaries to the Tartars. He compelled the rulers of Anjou, king of Sicily, to resign his office of vicar of the empire, and from the pope received letters dated with it to relinquish the supreme power which that title gave him in the city, and caused himself to be elected senator, thereby advancing the interests of the papacy; but he intoned the discharge of the office to his relatives, and thus deprived the throne of moral and trustworthy officers, his relatives seeking simply to enrich themselves. Under pope Nicholas III's rule the power of the Romish see was further greatly increased, by his inducing the new Roman emperor, Rudolph of Germany, to consecrate Hapgood as bishop of a number of its former possession which the emperor had a vocation to consecrate from Rome. (See Fontainni, Del Dominio Temporale della Santa Chiesa, and his controversy with Muratori on the subject.) Pope Nicholas III was laboring to secure the union with the Greek Church resolved on at the Council of Florence in course of time. But in 1289. A truce entitled De electione dignitatum is attributed to him. He embattled Rome considerably, and built a splendid palace near the church of St. Peter. See two short biographies in Muratori, Rerum Italicarum Scriptores, vol. iii, 305 sq.; also Leo, Gesch. der ital. Staaten, iv, 637 sq.; Baronius, Annals Ecclesiastici, xxii, 436; Bower, Hist. of the Popes (see Index in vol. vii); Riddle, Hist. of the Papacy, ii, 283 sq.; Milman, Hist. of Latins Christianity, iv, 185 sq.; Hefele, Conciliengesch. vi, 141 sq., 161 sq., 178, 188; Wetzer u. Welle (K. C.), Kirchen-Lexicon, vii, 583–585.

Nicholas IV, Pope (originally Jerome), was born of lowly estate at Ascoli, in the Papal States. At an early age he joined the Franciscans, and became general of the order in 1274. He was made cardinal by Nicholas III, and in 1296 was elected pope three times before he decided on accepting the office. He upheld the pretensions of Charles II of Anjou to the crown of Sicily against Alphonso of Aragon, and crowned the former. In a meeting of the nobility called by his legates at Tarascon, 1296, he decreed that Alphonso should renounce his claims on Sicily, and made an appointment with the brother, who actually reigned there; and in exchange Alphonso was to be released from the ban pronounced against him, and Aragon declared a fief of the see of Rome. James, however, having succeeded his brother on the throne of Aragon, refused to recognize the acts of the assembly of Tarascon, and therein the ever-ready but now almost powerless body of excommunication was hurled against him by the pope. The part which Nicholas played in this whole transaction is dishonorable and discreditless to Romanism, which has never censured it. Not only did he unjustly visit James with the ban of excommunication, but unrighteously absolved Charles from a promise he had made, and which he, more honorable in thought than his ecclesiastical friends, regarded as binding, and was prevented from performing only by the pope's direct command. King Edward of England and Alphonso of Aragon had arranged terms for the release of Charles, then their captive. Within one year Charles was bound by it to procure peace between France and Aragon, and, if not successful, to renounce his claim over Sicily. The pope not only crowned Charles king without reference to the result of the mission he had sworn to perform, but when Charles of Valois refused to relinquish his
pretensions to Aragon, and king Philip to surrender the cities which he had seized in that kingdom; and Charles of Anjou believed himself bound to return to his caprors, the pope interfered, and issued a decree against his return.

"This was as monstrous an exercise of the absolving power," says Milman justly, "as had ever been advanced in the face of Christendom: it struck at the root of all that the fathers of the Church had done; and it was clearly, in fact, that no treaty was to be maintained with any one engaged in what the Holy See considered an unjust war; that is, a war contrary to her interests. It declared that all obligations entered into by a person in captivity were null and void, even though the acts had been done and the advantages given for their performance" (Hist. of Latin Christianity, vi, 175).

Polemics, the last possession of the Christians in Palestine, having fallen into the hands of the Mohammedans, Nicholas IV sought actively, but in vain, to organize a crusade. He also sought to obtain the aid of the Moguls in that undertaking, and sent them missionaries of his order for that purpose, among them John of Monte Corvino (q. v.).

Pope Nicholas IV died April 4, 1292, bewailing the tumults of the time and the failure of Europe to relieve the Christians in the East. He wrote commentaries on the apostles, and the Apocalypse, the Abigail, and issued several bulls in favor of the Franciscans. See Vita Nicolai Pape IV, ab Hieronymo Rubo compositione, etc. (Pisa, 1761, 8vo); and the biography in Muratori, Rerum Italicarum Scriptores, iii, 612; Wetzet u. Welte (R. u. W.), vii, 624; 656; Milman, Hist. of Latin Christianity, vii, 173 sq.; Hefele, Conciliengesch. vi, 110, 190 sq., 233 sq., 239.

Nicholas V, Pope, one of the ablest and most esteemed incumbents of the papal chair, distinguished alike for his scholarship, tolerant views, and his stern integrity, was originally called Tommaso Parentuccio, also Tommaso da Sarzana, and was born at Sarzana, near Genoa, in 1398. He was educated at the high schools in Bologna and Florence, and was noted there for his zeal as a student. He entered the priesthood at the age of twenty-five, and rapidly rose to positions of honor. He was employed by successive popes in several important diplomatic missions to different countries, and discharged his trust most creditably. He was made bishop of Bologna by pope Eugenius IV; in 1443 he was made archbishop of Bologna; at Dun, 1446, this same pope presented him with the cardinal's hat, and upon the death of Eugenius IV, the ability and prudence which had marked his course as papal legate during the troubled period of the councils of Basle and Florence, and in the difficult negotiations with the German and other powers, which were therefore thrown upon him out as a proper person for the pontificate, and he was consequently chosen for this office on March 6 of that year. The Council of Basle was in session at the time. It readily recognised him as pope. There was, however, a schismatic party in the Western Church which supported at this time a rival pope, under the name of Felix V. He had been elevated to the pontificate by vote of the Council of Basle in 1439. The schismatics, it is true, had in the mean time been reduced to a small number. Yet Nicholas respected even his feeblest opponents, and by kindness finally won them over, as well as their head, the rival pope, and thus restored peace, at the request of the Greeks who, by the abdication of Felix V in 1449. When dethroned the antipope was treated by Nicholas, as before, with courtesy and respect. He was made a cardinal, next in honor to the pope, and was appointed perpetual legate of the Holy See to Germany. His cardinal's robes were received into the Sacred College, and all his collations of benefices were confirmed. But not only was the reign of pope Nicholas V signalized by the abdication of this the last of the antipopes: every part of Christendom, with the exception of the still unsubdued Hunsites of Bohemia, paid regard to Nicholas, who made Venice a worthy son of the Church, and a proper incumbent in the chair of St. Peter. Indeed his reign, though brief, was marked by events of great moment, which exerted a controlling influence upon the history of Europe for the next fifty years, and, notwithstanding his hasty temper, he restored once more, by the mildness and equity of his government, the glory of the papacy. Not only Rome, but all Italy enjoyed unwonted tranquillity during his reign. As if influenced by the example of that first Christian emperor, Constantine, it is a curious fact that the states and sovereigns of Italy seemed for a while to forget their feuds, and Italy enjoyed several years of internal peace: a rare occurrence in the history of the Middle Ages." In 1450 pope Nicholas V celebrated the jubilee for the third time, and the papal treasury was much enriched by the prodigious number of strangers which the occasion drew to Rome. In the same year he succeeded in making peace between king Alphonso of Naples and the republic of Venice. One of the most important events, however, of his reign was the coronation of the emperor Frederick III in 1452, on which occasion the latter swore to uphold the pope and the Romish Church at all junctures. Nicholas V was less fortunate in his transactions with Austria, in which his interference profited neither him nor the emperor: the pope having taken on the emperor's side, his envoys were expelled and he was accused "ab eo perum instructo ad eundem inquisuto innumandumque magis," or to a general council, and even dared to pronounce the election of the pope as having been irregular. The most painful event that occurred during the reign of Nicholas V was the death of Conti, a powerful magnate, by the death of his son in 1453. It produced a melancholy impression upon his mind, from which he was unable ever after to recover. Self-reproach and shame because of his failure to send forward the fleet and the land forces which he had prepared for the relief of the besieged city are said to have hastened his death. He succeeded to the city, it is generally believed, in the hope that the Greeks, when pressed beyond measure, would ratify the union of the Council of Florence on the condition that he would come to their rescue. But he delayed too long; and during the three remaining years of his pontificate he earnestly endeavored to rally and unite the Christian princes in a league for the recovery of the captured city. He failed, notwithstanding the efforts of the eloquent John of Capistrano (q. v.). As a patron of learning, pope Nicholas V did invaluable service to literature. Indeed, in the pontificate of this pope an important change took place in the pontificate of Nicholas V lies in the eminent service which he rendered to the revival of letters dating from his age. The comparative repose in which he found the world at his accession enabled him to employ, for the discovery and collection of the scattered remains of antiquity, and another method, which was practically beyond the resources of his predecessors. He despatched agents to all the great centres, both of the East and of the West, to purchase or to copy every important Greek and Latin MS. The number collected by him was above 5000. He enlarged and improved the Roman University. He remodelled, and may almost be said to have founded, the Vatican Library. He caused translations to be made into Latin of most of the important Greek classics, sacred and profane. He invited to Rome the most eminent scholars of the world; and extended his especial patronage to those Greeks who, from the dissatisfaction of their native country drove to seek a new home in the West. Nicholas V, too, enriched Rome with many fine buildings, and restored the bridges, as well as the aqueduct of the Aqua Vergine; and in his dying hour, March 24, 1455, he could appeal for judgment to his personal knowledge of the cardinals, to the world, even to higher judgment, regarding his acquisition and his employment of the wealth of the pontificate: "All these and every other kind of treasure were not accumulated by avarice, nor by simony; nor by largesses, nor by parsimony, but by industry through the grace of God, my most Merciful Creator, the peace of the Church, and the perpetual tranquillity of my pontificate" (comp. Black).
Nicholas, the Antiope, whose original name was Peter di Corbario (or Coreura), was born in the island of Corfu, and destined to be the most illustrious member of his family. A man of such rigid austerity that no charge could be brought against him by his enemies but hypocrisy. The one imputation was that he had lived in wedlock for five years before he put on the habit of St. Francis. He took the vows with his wife's consent. He had won the confidence and esteem of the people as an ecclesiastic, and was therefore regarded by the emperor Louis of Bavaria as a proper person to fill the papal chair (1292) in antagonism to John XXII, his most formidable opponent. Nicholas, V, the pope, who could do was to excommunicate and debar the emperor, and call upon the electors to choose another. Of course he had no attention to the claims of the pope, John XXII, the only offerer of the throne, was not considered in the choice of the pope, and he found himself obliged to retire from that place in Aug. 1289; and, as the influence of the Guelphs continued to gather strength throughout Italy, he was forced to quit the country altogether, and to return to Germany in 1292. His pope was soon delivered up to the legates of John, who compelled him to perform a solemn act of abjuration, and then sent him to Avignon, where he was confined as a prisoner under the watch of a guard of fifty horsemen, and kept secluded from intercourse with the world, but allowed the use of books and all the services of the Church. He lived about three years and a half in this state, and died a short time before his triumphant rival. See Milman, Hist. of the Popes, vii, 103-111; Bower, Hist. of the Popes, vol. viii; Riddle, Hist. of the Papacy, ii, 892 sq.

Nicholites, a sect of philosophers who professed nearly the same principles as the Quakers, and were ultimately incorporated with them, flourished in Maryland (Caroline Co.) in the latter half of the 18th century. Their chief support and founder was Joseph Nichols, a man possessed of strong powers of mind and a remarkable faculty of argument. He was a lover of truth, and a husbandman by occupation. His vivacity and humor caused his company to be much sought after, and gave him great influence over his companions. On the first day of the week, and at other times of leisure, many collected to hear his entertaining conversation. At one of these convivial meetings he was accompanied by an intimate friend, who was taken ill and died suddenly at the place where they were assembled. This solemn warning was through divine mercy made effectual in awakening the mind of Joseph Nichols, showing him the uncertainty of life, and producing a radical reformation in his character. His mind became enlightened and imbued with heavenly truth, and, being called to a holy life, he yielded obedience to the impressions of divine grace. When his neighbors came around him as usual with seeking mitigating entertainment, he appeared more serious, and proposed that they should spend their time more rationally than they had done, and that a portion of the Scriptures should be read. They assented to his suggestions, and for some time their meetings were gradually increasing in numbers of enthusiastic thoughtfulness, until at length he was led to appear among them as a preacher of righteousness. His meetings attracted much attention, and crowds assembled to hear him. His ministry being attended with heart-searching fervor, many were so moved by it that they embraced the new doctrine, and lived conforming their lives to the dictates of that holy principle which he inculcated, believing it would lead out of all error and into all truth. Such was the authority and effect which he sometimes spoke, and the deep feeling that pervaded the audience, that some would cry out audibly, and even prostrate themselves in the meeting. He travelled as a minister through the districts on the eastern shore of Maryland, in some parts of the western shore, and in Pennsylvania and Delaware. In his meetings he sat in silence until he believed himself called to speak. Sometimes, feeling no special qualification, the meetings terminated in silence. When asked whether he would preach that day, his answer was, "I mean to be obedient." His meetings were frequently held under the shade of trees, sometimes in private houses, and occasionally in the meeting-houses of Friends. As he continued to hold meetings for divine service, a change in the habits and appearance of the people became conspicuous. He insisted on the doctrine of self-denial, and the subjugation of every appetite or desire that would lead the soul away from God. Hence the Nicholites were content to live in plain in their dress, and to furnish their houses; they bore a decided testimony against war, slavery, oaths, and a stipendiary ministry. On account of these testimonies, some of them suffered by the loss of their property and imprisonment. William Dawson, for his testimony against a hiring ministry, was convicted of libel and fined, and sentenced to lose his place of residence. He and James Harris were the first among them to set an example of justice towards the African race held in bondage. They liberated their slaves, and their example being soon followed by others, it became an established principle among the Nicholites that none of their members should hold slaves or even hire them of their masters. Some of them carried their zeal still further, among whom was James Horney, who refused to eat with slaveholders, or to partake of the produce raised by the labor of slaves. The Nicholites applied to the Legislature of Maryland and obtained an act authorizing them to solemnize their marriages according to their own order, and without the aid of a priest; also allowing them the privilege, in judicial cases, of affirming instead of taking an oath. In this act they were joined by "New Quakers," or New Nicholites; but the appellation which they gave themselves was Friends. Joseph Nichols was not permitted long to continue with the flocks he had gathered, being called away by death. He had given evidence of his sincere piety by the practice of abstinence from the superfluities of life, and to encourage the same was encouraging to sufferers. He had been remarkable for his liberality and kindness to the poor, inasmuch that it was reported of him that he took off his coat and gave it to a poor slave who attended meetings without one; thus literally fulfilling the precept, "he that hath two coats let him give to him that hath none." Those who had been convinced and proselyted by his ministry, feeling the necessity of some organization, concluded to establish a regular order of Church discipline, which was effectuated about the year 1780. About this time several persons among them applied for admission in the ministry, and exercised their gifts to the edification and comfort of the members. Ground was purchased and held by trustees for the use of the society, and three meeting-houses, in Caroline Co., Maryland, were built, in which divine worship was held on First-days, and in the middle of the week. Their practice was to sit in silence in order to hold communion with the Father of Spirits, and wait for his aid to enlighten and strengthen them, without which they believed no acceptable worship could be performed. They also held meetings for discipline, and such a form of organization was arranged as resembled similar in principle to those established in the Society of Friends. After the Nicholites had continued as an independent association about twenty years, some
Nichols, George, an American educator and divine, was born at Reading, Mass., near the opening of this century. He was educated at Yale College, class of 1824, and immediately after graduation entered the divinity school connected with that high school, and there completed his theological studies in 1828. He taught for a while, but was finally ordained, and called to the pastorate at Chicopee Falls. He left this charge to return to the task of teaching at Springfield, Mass., which he did from Nov. 19, 1830, until Dec. 18, 1831.

Nichols, Chabod, D.D., a Congregational minister of some note, was born at Portsmouth, N. H., July 5, 1784. He was educated at Harvard University, class of 1802; then studied theology at Salem; and from 1805 to 1809 taught in his alma mater in the mathematical department. January 7, 1809, he was made associate pastor, with the Rev. Dr. Deane, of the First Congregational Church, Portland, and after his colleague's death became sole pastor, continuing so until 1855, when he was given the assistance of a colleague. He then made Cambridge his residence, only attending to his pastoral obligations as his health would permit. He died Jan. 2, 1859. He was for many years vice-president of the American Academy of Arts and Sciences. In his theology he was a Unitarian of the conservative school. He published in 1830 a work on Natural Theology, containing some original views and ideas; in 1831 he left a work never completed for the press entitled Hours with the Evangelists (Boston, 1809-64, 2 vols. 8vo), which embraces an argument for the Christian revelations and miracles, directed mainly against the Straussians, and a series of critical and philosophical ideas on the principal epoch of the life of Jesus. A volume entitled Remembered Words from the Sermons of the Rev. I. Nichols appeared in Boston in 1860.

Nichols, James, a Presbyterian minister, was
Nichols, John, an American missionary to India, was born at Aitrim, N. H., June 20, 1790; graduated at Dartmouth College in 1818. Two years before, during a revival of religion in college, his mind became permanently affected with religious truth. He yielded his heart to Christ, and on being convinced that it was his duty to serve him in the Gospel, entered the theological seminary at Andover, Oct., 1818. He was ordained at Boston, with the missionaries Swift, Graves, Parsons, and Buttrick, Aug. 2, 1817. He sailed for Bombay with his wife Sept. 5, 1817, and arrived Feb. 19, 1818. After toiling in his benevolent work nearly seven years, he died of a fever at Bombay Dec. 10, 1824. See Memoirs of American Missionaries, s. v.

Nichols, John Cutler, a Congregational minister, was born at West Brookfield, Mass., Nov. 17, 1801, and was educated at Yale College, class of 1824. He then entered upon the study of theology in the Yale divinity school, and graduated in 1830. He was ordained at evangelist by the Brookfield Associate Oct. 12, 1831, and went to labor in Canada. In 1834 he was called as pastor of the Second Congregational Church in Stonington, Conn., and remained in that charge until 1839. In 1840 he was offered and accepted the pastorate at Lebanon, Conn., and in 1854 he left the minster, as engaged in teaching, and was then employed at Lynn, Conn., until his death, Jan. 8, 1868. See Congreg. Qu. vol. x.

Nichols, Joseph. See Nicholsites.

Nichols, Warren, a Presbyterian minister, was born at Reading, Mass., Jan. 26, 1808. He was the child of pious parents, and in his eighteenth year was converted, and from that time devoted himself to preparing for the work of the ministry. In 1828 he graduated at Williams College, Mass., and in 1832 at Andover Theological Seminary. After preparing for the ministry in New York, he left in 1833 for the Mississippi valley, under the patronage of the New Hampshire Missionary Society, and labored for a short time at St. Charles, Mo. In 1834 he removed to Illinois, where he was actively engaged five years, a part of the time in connection with Dr. Nelson, in his institute for training young men for the ministry. In 1839 he went to Ohio, where he labored as a missionary for six years. At length failing health compelled him to retire from the ministry, and in 1845 he removed to Litt Ohio. During his last years he labored as a minister for the American Bible Society. He died June 7, 1862. Mr. Nichols was a man of much energy, large views and a good citizen, and a faithful minister. See Wilson, Presb. Hist. Almanac, 1856, p. 306. (J. L. S.)

Nicholson, David B., a minister of the Methodist Episcopal Church, was born in the county of Fredrick, N. C., Feb. 1, 1809. He was converted and joined the Church at the age of nineteen. He soon after determined to enter the ministry, and was received on probation in the Virginia Conference in 1831; he was afterwards ordained deacon and elder, and for the space of eleven years supplied many important charges. In 1842 he was appointed presiding elder of the Newber District, and was continued in that office for the next twenty-five years, except the years 1861 and 1862, when he was in charge of the Magnolia Circuit. He was several times elected to the General Conference, and was twice called to preside over his own conference in the absence of the bishop. He died April 15, 1866. In all his official career—quarterly, annual, and general conferences—his prudence and soundness of judgment created a great confidence in his opinions upon all matters touching the interests of the Church. His business habits were correct and unswerving; withal, to time, he was elected a trustee of most of the institutions of the Church. His integrity in all departments of action was of a stern and lofty style. He dealt justly, he loved mercy, he walked humbly in the sight of God. He was a good, faithful, devout man, citizen without reproach, a Christian of great purity of heart and life. See Min. of Ann. Conf. M. E. Church, South, 1866-1869, p. 18.

Nicholson, John, a minister of the Methodist Episcopal Church, was born at Lewes, Del., Nov. 2, 1807; was converted in Philadelphia; joined the Philadelphia Conference in 1829; in 1833 was set off with the New Jersey Conference; in 1838 was returned to the Philadelphia Conference; 1838-41 was stationed in Philadelphia, and there he died, Oct. 11, 1843. John Nicholson was a man of study, of method, and of power. His prayers were the intercessions of the most devout students of his time in the ministry of his Church. His talents were substantial rather than splendid, and his ministry in demonstration of the spirit and of power. Many conversions and much good resulted from his labors, and his memory is precious. See Minutes of Conference, 1841. (G.L.S.)

Nicholson, William (1), a noted English prelate, was born near the close of the 16th century, and was educated at Magdalen College, Oxford. After taking holy orders, he was first rector of Landseilawr, 1629; subsequently canon-resident of St. David's, and archdeacon of Brecknock; elected at the Revelion, but elevated to the bishopric of Gloucester in 1660-1661, and held that see until his death in 1672. He maintained and defended the Church of England against its enemies in the days of its adversity, and is said to have been a person of great learning and piety. He was greatly admired by Dr. George Bull for his knowledge of the fathers and the schoolmen, and for his large stores of critical learning. He wrote, Apology for the Discipline of the Ancient Church of England (Lond. 1657-59, 4to);—Esenia, etiam, or an Exposition of the Acts of Parliament, delivered in the Assembly of the Commons, 1671, fol., very rare;— A Pleine but Full Exposition of the Catechism of the Church of England (Lond. 1661, 1662, 1668, 1678, 1896, 4to; new ed. 1844, 8vo). See Nelson, Life of Bishop Bull, p. 206; Stoughton, Eccles. Hist. of England (Church of the Restoration), i, 492; Tulleich, Rel. Theol. of England, i, 361.

Nicholson, William (2), D.D., a learned English prelate, son of Joseph Nicholson, rector of Hemland, in Cumberland, was born at Orton, in that county, about 1655. After a preparatory training he was sent to Oxford, and entered Queen's College in 1670. He took the degree of B.A. in 1675-6, and M.A. in 1679. He was soon after invited by Sir John Williams, then the civil governor of the island, to accompany him in his travels in Germany. Nicholson also visited France, and on his return to England wrote on what he had seen abroad. He was made fellow of his college in 1679. As the college was then in the same college, and then secretary of state to Charles II., to accompany him in his travels in Germany. Nicholson also visited France, and on his return to England wrote on what he had seen abroad. He was made fellow of his college in 1679. A few months after this, his name was recommended to Dr. Edward Rainbow, bishop of Carlisle; he was presented with a province and deaconry in that church; and afterwards (1702), having greatly distinguished himself in the literary world, was promoted to the see of Carlisle. Bishop Nicholson was deeply engaged in the Hungarian controversy, which began in 1717. In 1718 he was translated to the bishopric of Londonderry, in Ireland. Still continuing in favor at court, he was, Jan. 28, 1726, raised to the archbishopric of Cashel, and made primate of Munster in the room.
NICKEL

of Dr. William Palfiser; but he was prevented from entering that city by the instruction of his friends by his sudden death, which occurred at Derry, Feb. 13, 1727. Brown Willis observes, in relation to his character, that he was a man of very great learning, to whom the world is much indebted, not only for what he has published on antiquity, but in the universal sciences. He was an enthusiastic admirer of the subject, and such as is requisite for an antiquarian. He frequently fails, however, into mistakes for want of sufficient accuracy, not only in respect to manuscripts, which might be excusable, but in regard to printed and common books. The respect and esteem the character he gives of many authors appears not to be free from prejudice. The best known of his learned writings are his Descriptions of Poland, Denmark, etc.; the English Historical Library (1686); and especially his Treats on the Bangorian controversy, entitled A True State of the Controversy between the present Bishop and Dean of Carlisle. He also published a Sermon preached in the cathedral church of Carlisle, and some other sermons preached at different times, but these have never been collected into a volume. See Hook, Eccl. Bib. vii, 416-421;erry, ibid. x, 307; Steggall, Hist. of the Ch. of Scotland, iv, 61, 112, 133 sq; Allibone, Dict. of Brit. and Amer. Auth. ii, a. v.; Gen. Bib. Dict. a. v.

Nickel, Goswin, a noted Jesuit, flourished as general of his order near the middle of the 17th century. He was successor to Alexander Gottfreid, who died in March, 1631. The diocese which the order cherished against the latter was considerably intensified against him, too, though it cannot be contemplied any radical reforms, generally speaking, was wont to insist obstinately on his own views, and in his manner and conduct was rough, repulsive, and wanting in due respect for others. By this he very soon offended the self-love of powerful members of the order so profoundly and so sensibly that the congregation general of 1661 took steps against him, such as might have been thought impossible, if we consider the monarchical character of the institute. He was finally deposed, and is seldom heard of after. For details as to the Jesuitical intrigues to bring about his deposition, see Kanke, Hist. of the Papacy, ii, 247.

Nickell, James Haggard, a Presbyterian minister, was born Aug. 1, 1829. He was educated at Cumberland College, Princeton, Ky., class of 1844; studied theology privately; was licensed in 1854, and ordained in 1855, by the Presbytery of Louisville. He was pastor of the Presbyterian Church of Salem, Sharon, and Liberty churches, in Kentucky, until 1860, when he removed to Salem, Marion County, Ill., and there labored under his death, Nov. 20, 1864. Mr. Nickell was learned in Biblical and theological science, using his knowledge with rare skill. As a man, he possessed all the requisites which constitute a perfect gentleman; as a preacher, he was dignified, earnest, and impressive. See Wilson, Presb. Hist. Almanac, 1866, p. 301. (J. L. S.)

Nickerson, Heman, a minister of the Methodist Episcopal Church, was born in Orono, Me., Sept. 3, 1797, and there spent his childhood and youth, enjoying the privileges of the common schools, and being trained in habits of industry and virtue by pious parents. When twenty-one years of age, under the labors of Rev. Enoch Mudge, he experienced religion and united with the Methodist Episcopal Church. Soon after he felt called to preach, and in 1812 was received into the New England Conference. At the organization of the Maine Conference he was one of the original members, and soon took a prominent position among his brethren. After filling important charges he was appointed presiding elder, and sustained the responsibilities of that office twenty years. With the exception of three years, from 1828 to 1831, his life was spent in the itinerant work. Poor health obliged him to take a superannuated relation in 1866, and that he was justified in this step is evident from the rapid decline of his health, and his death occurring in December, 1869. "Heman Nickerson was distinguished for the purity and nobility of his Christian character, and the great quality of mind and heart. A good judgment, clear perceptions of the truths of the Gospel, a firm adherence to the doctrines and polity of the Church, and a manly utterance of his sentiments, made him a useful minister of the Gospel. His Christian character was one of the principal qualifications of human character enabled him, when presiding elder, to put the right man in the right place. He was highly esteemed by his brethren in the ministry as a safe counsellor and a judicious friend. In difficult questions his opinion was sought and highly prized. Four times was he chosen a delegate to the General Conference." See Minutes of Annual Conference, 1870, p. 147.

Nicklausenau, John. See John of Nicklausenau.

Nicobulus, an Eastern ecclesiastical of whose personal history we know scarcely anything, was a friend and relative of Gregory Nazianzen. Nicobulus is noted as the author of a poem, addressed to his son of the same name, in reply to one by Gregory, in which the latter had begged him to allow his son to leave his native country for the purpose of studying eloquence. The poem of Nicobulus is found among those of Gregory, beginning Tienov tni yap, mivos tivd tayl avayetov. See Fabricius, Bibl. Graec. i, 311.

Nicodemites was the name given, in the times of the Reformation, to temporizing Frenchmen, who, although reformers at heart, complied with Roman rites and customs, thus going to Christ secretly, and in the spirit of Nicodemus. Calvin wrote several tracts against this class. His The Strange Veneration of the Church of France towards Roman Rites (in Calvin’s Tracts, translated from the original Latin by Henry Beveridge, Edinb. 1684-51, 3 vols. 8vo). See Hardwick, Reformation, ch. ii, p. 118 note 8; Darling, Cyc. Bibl. i, 556.

Nicodemus (Νικοδημος, conqueror of the people), a Pharisee, a ruler (ἀρχων, the usual title for a member of the Sanhedrim), of the Jews, and teacher (the article in τον Ισραηλ, is probably only generic, although Winer and bishop Middleton suppose that it implies a rebuke) of Israel (John iii, 1, 10), whose secret visit to our Lord was the occasion of the discourse recorded by the evangelist. The name was not uncommon among the Jews (Josephus, Ant. ii, 8), and was used in some instances from the Greeks. In the Talmud it appears under the form נוֹכְדְּמֵי, and some would derive it from נוֹכָדָם, innocent, נון, βολ, i.e. "Scoleris purus"; Wetstein, N.T. 150. In the case of Nicodemus ben-Goron, the name is derived by R. Nathan from a miracle which he is supposed to have performed (Otho, Lex. Rab, s. v.).

Nicodemus is only mentioned by John (yet some German rationalists have sought or rather forced a comparison with the rich young man of Mark x, 17-24), who narrates his nocturnal visit to Jesus, and the conversation which then took place; at this the evangelist may himself have been present. A.D. 26. The high station of Nicodemus, and the arowed scorn under which the rules concealed their inward conviction (John iii, 2) that Jesus was a teacher come from God, are sufficient to account for the secrecy of the interview. A constitutional timidity is discernible in the character of the inquiring Pharisee, which could not be overcome by his oscillating desire to believe Whom one knew to be not only a heretic but also a danger and a nuisance. Perhaps John, seeing him the promised Messiah. Thus the few words which he interposed against the rash injustice of his colleagues are cautiously rested on a general principle (John vii, 50), and betray no indication of his faith in the Galilean whose acknowledgment of him brought him the sovereign blessing of Christ’s love, manifested on the cross, had made the most timid disciples bold. Nicodemus did not come forward with his splendid gifts of affection until the ex-
NICODIUS, GOSPEL OF

amplae had been set by one of his own rank and wealth, and station in society (xix. 39). See Haele, Leben Jesu, p. 106 sq.; Volbeding, Indeks Programmatis, p. 32.

In these three notices of Nicodemus a noble candor and a simple love of truth shine out in the midst of hesitation and fear of man. But Niemeyer (Charakt. i, 119 sq.) has endeavored to guard the apparent impiety of Nicodemus but was reckless of proof. We can easily believe the tradition that after the Resurrection (which would supply the last outward impulse necessary to confirm his faith and increase his courage) he became a profound disciple of Christ, and received baptism at the hands of Peter and John. All the rest that is reported of him is very uncertain. It is said, however, that the Jews, in revenge for his conversion, deprived him of his office, beat him cruelly, and drove him from Jerusalem; that Gamaliel, who was his kinsman, hospitably sheltered him until his death in a country house, and finally gave him honorable burial near the body of Stephen, where Gamaliel himself was afterwards interred. Finally, the three bodies are said to have been discovered August 5, A.D. 415, which day was set apart by the Romish Church in honor of the event (Phot. Bibliothek, ii, 65). See also Lardner, Euseb. i. 11; Lardner, Euseb. i. 11.

If the Nicodemus of John's Gospel be identical with the Nicodemus ben-Goriôn of the Talmud (see Delitzsch in the Zeitschr. f. luth. Theologie, 1854, p. 643 sq.), he must have lived till the fall of Jerusalem, which is not impossible, since the term yôpûs, in John iii. 4, may not have originated with John. It is impossible to say how the arguments for their identification are both are mentioned as Pharisees, wealthy, pious, and members of the Sanhedrin (Taanith, f. 19, etc.), and that the original name (altered on the occasion of a miracle performed by Nicodemus in order to procure rain) is said to have been Ἱονίας, which is also the name of one of the twelve chalcidians of Christ mentioned in Jos. f. 48, I (Otho. x. v. Christi). Finally, the family of this Nicodemus are said to have been reduced from great wealth to the most squalid and horrible poverty, which, however, may as well be accounted for by the fall of Jerusalem as by the change of fortune resulting from an acceptance of Christianity.

NICODIUS, GOSPEL OF (Evangelium Nicodemum), sometimes called the ACTS OF PILATE (Acta Pilati), an early forgery which circulated in the 8d and 4th centuries [see APOCRYPHA], is composed of the two oldest narratives of the Gospel history belonging to the category of the apocrypha, and not tainted with heresy. They are called the "Protevangel of James" and the "Acts of Pilate." The latter consists of two distinct parts: the one relates the events in the pre-Christ, the other describes the descent of Jesus into hell. These two parts do not bear the same date; the first is earlier than the second, though both belong to a remote Christian antiquity. They were subsequently put together under the name of "the Gospel of Nicodemus." The "Acts of Pilate" come before the "Descensus ad inferos." The two writings are always treated in old MSS. The same facts are differently narrated in them. The words of the chief upon the cross are not the same in both (Tischendorf, Prolegomenen, p. 65). The name of Nicodemus, given to the completion of these two writings, dates from the Middle Ages. We have two editions of the "Acts of Pilate." The first is the oldest. Justin Martyr quotes from it directly (Apol. i. 35; i. 48. See also Tertullian, Apol. 21). The "Protevangel of James" narrates the circumstances which preceded the birth of Mary, the mother of Christ. The narrative is a parody on the birth of John the Baptist. Many of the names are the same, and, as Anna is a young woman of piety and sanctity in years, are made, by the special favor of God, fruitful in their holy age (Protevangel. Jacobi, c. 6). This miracle is the foreshadowing of the high destiny awaiting the child, who is none other than Mary. She grows up like a lily beneath the shadow of the altar, in the midst of young companions pure as herself. She is the foster-child of the priestess, who watch over her education till the day of her marriage. In order to ascertain to whom she is to be intrusted, the high priest sends a number of pious Israelites. A white dove springs from the rod of the old carpenter Joseph, who is marked out by this miraculous sign, and who is the birthright of the virgin (ibid. c. 9). The annunciation takes place as in the Gospel. The circumstances of the birth of Christ are borrowed from St. Luke, with this difference, that Mary brings forth the divine child in a cavern and not in a stable. The sole design of the narrative is to give emphasis to the dignity and virginity of Mary. We have in it the first attempt to draw her out of the wise obscurity in which she is enveloped in the canonical Gospels, an attempt characterized by the asceticism which pervades all the sacred legends. The apocryphal gospels of the following age, such as the "Pseudo-Matthæum," the "Coptic Gospel of the carpenter Joseph," the "Arabic Gospel of the Childhood of Mary," and, lastly, that of the Nativity, enlarge upon those of the earlier period, and exalt more and more the part assigned to the mother of Jesus. We mention them only to show in what direction the Christian legend was tending from its very first essay in the "Protevangel of James."

The "Acts of Pilate" do not bear the stamp of any particular school. The anonymous writers endeavor to make the events contemporaneous with the life and times of their respective authors. His trial before the Roman proconsul is expanded by the addition of a multitude of details. The sick whom he has healed appear at the bar of the tribunal, and one after another make their depositions in his favor, relating what he has done for them. His resurrection is afterwards established by the testimony of the soldiers placed as a guard around the sepulchre, and further by the evidence of Joseph of Arimathea, to whom Christ appeared in the prison into which the Jews had thrown him, and from which he was delivered by miracle. This outline is filled up in a very ingenious manner. It is just possible that some true incidents of the trial of Jesus may have been preserved by tradition, but it is impossible to distinguish with any certainty the true from the false. Nicodemus plays in all these scenes the part of the impartial judge—the character assigned to him in the fourth Gospel. The second part of this curious writing is occupied with the events that took place in the abode of the dead, during Christ's descent into it. This narrative is ascribed to the two sons of the same name, who came out of their tombs in the train of the risen Redeemer. While hell and its king are confounded and crushed beneath the foot of the Redeemer, the saints of the old covenant hail him with rapture; each one of them, from Adam to John the Baptist, recognizing him as the long-expected object of their hope. The great prophet repeat in his presence the most sublime oracles, in order to show how in him all are fulfilled. All the scenes of the invisible world are described in strains of glowing grandeur, almost Dantesque. The writing closes with a juridical comparison between the two sacred books—the Old Testament and the events which have just taken place at Jerusalem. This is the legal apology; the question of Christianity is debated after the fashion of an ordinary law case. We subjoin a specimen, describing the entrance of the converted thief into Hades:

"And while the holy Enoch and Elias were relating this, behold there came another man in a miserable figure, carrying the sign of the cross upon his shoulder. 6. And when the thief beheld him, the thief said to the tempter, Art thou for my countenance like a thief? and why dost thou not also make me a son of the day? The tempter answered, said, Ye say right, for I was a thief, who committed all sorts of wickedness upon earth. 8. And the Just One answered the tempter, and said: What things are the surprising things which happened in the creation at the crucifixion of the Lord Jesus? 9. And I believed him to be the Christ, and things, and the Angels, and the Son of man. 10. And I prayed him, saying, Lord, remember me when thou comest into thy kingdom. 10. He presently regarded my
supplication, and said to me, Verily, I say unto thee, this day shall be with me in paradise. 11 And he gave me this sign of the cross, saying, Carry this, and go to paradise; and if the angel who is the guard of paradise will not admit thee, show him the sign of the cross, and say unto him, as Christ did, Go, and he shall send thee to me. 12 When I did this, and told the angel who is the guard of paradise all these things, and he understood, he opened the gates of paradise, and took me, and placed me on the right hand in paradise. 13 Saying, Stay here a little time, till Adam, the father of all men, shall come, and with all his followers and all the angels which are the holy and righteous servants of Jesus Christ, who was crucified. 14 When they heard all this account from the third angel, and with one voice, praised the angel, saying, O Almighty God, the Father of everlasting good- ness, who gave such favor to either of his elect, and sent down such favors to those who were sinners against thee, and hast brought them to the mercy of paradise, and hast placed them among large and spiritual provisions, in a spiritual and holy life. Amen.

The Anglo-Saxons likewise possessed in their native idiom this pseudo-gospel. Probably it was considered a valuable supplement to the inspired records of the blessed Saviour's life. See Soames, Anglo-Sax. Church, p. 252; Presemes, Early Years of Christianity, vol. iii (Heresy and Doctrine), p. 175 sq.; Fabricius, Cod. Apoc. N. T. 1, 213; Thesendorff, Evangelia Apocrypha, p. 293. The best edition is by Thilo, Cod. Apoc. i, 478. See Gospels, Spurious.

Nicolaiz, Christoph Friederich, an eminent German Rationalist, noted as a writer on aesthetics and other subjects, was born on Oct. 18, 1768, at Berlin, Germany, where his father was a bookseller. At the age of sixteen, just as he was beginning to make some proficiency in his studies, he was obliged to abandon them, being sent to Frankfort-on-the-Oder for the purpose of learning the bookseller's business, which was such was his eagerness for information, his love of reading, and his perseverance, that he employed every moment of leisure, his evenings and the early part of every morning, in study, and, without other assistance than that of books, made himself a proficient in Greek, Latin, and English, and likewise acquired a knowledge of some parts of mathematics and philosophy. On his return to Berlin, in 1782, his attention to business did not interrupt his self-imposed studies, of which both English and German poetry then formed a considerable part; and in 1753 he produced his Briefe uber den jetzigen Zustand der Schönen Wissenschaften, wherein he impartially discussed the pretensions of the two literary sects headed by Bodmer and Gottsched, the former advocating pure German, and the latter favoring a dependence on French taste and influence. Nicolaiz exposed the errors of both, and approved the literature of his own country, which he was led by his keen criticism. Indeed the work excited considerable attention, and led to his intimacy with Lessing and Moses Mendelssohn. After the death of his father he retired from business, leaving it to his brother, and determined to content himself with his own slender means in preference to the pecuniary advantages he was reaped by sacrificing his literary leisure and enjoyments. The unexpected death, however, of his elder brother, in 1788, put an end to this short interval of tranquil study, he being obliged to carry on the business for the benefit of the family in general. But this event increased his diligence and economy of time, and led to his connection with several literary enterprises, which he had before projected. In conjunction with Mendelssohn he had already commenced (1757) the Bibliothek der Schönen, the purpose of which was to best belles-lettres journals in the language, which was afterwards continued, till the end of 1802, under the title of the Neu Bibliothek, etc. With Lessing and Mendelssohn, he established, in 1798, the Briefe der Neuesten Literatur; and in 1760 projected the Allgemeine Deutsche Bib- liothek, of which periodical he continued the editor till it reached its 107th volume. At the head of this periodical Nicolaiz played no unimportant part in that epoch of German history known as "the period of enlightenment." The truth is, Nicolaiz possessed great abilities in certain directions. He was an able executer, and knew how to gather about him the best of his country's talents. The appliances of the "Universal German Li- brary" are conceded even by his severest opponents to have been remarkable. It by no means confine itself to home talent. It commanded a survey of the litera- ture of England, Holland, and France, and appeared in these lands received its immediate attention, and was reprinted or magnified according to its relations to the peculiar creed of Nicolaiz and his collaborators. And what was this peculiar creed? The sun- dersing of humanity and Christianity. Not the making of Christians in order to have men, but the making of men to become Christians or anything else they chose; and all this was claimed in the name of liberty of thought and of Protestantism. By appealing to the people in the name of the latter Nicolaiz betrayed an interest in Christianity, but it appears that he simply sought the moral development before he desired the religious training. So long as the work of purify- ing the public mind from the filth of superstition, and emancipating it from prejudices remained to be done, usefulness of the latter was the primary effect. But let us hear the good of his countrymen in ethical and aesthetic directions; but when the victory over traditional absurdities had been gained, and the positive replenishment of the public mind with a nobler content became the main problem, his influence was most pernicious. An adequate illus- tration of his being a clever master of bold and unscrupulous arguments, which he used with great and undue acerbity against all who would oppose him or reject his plans. He was especially vio- lent against the heroes of German philosophy, the very men who labored for the solution of the great problem which was before the German people, the substitution of a positive for a negative principle, the part in which, as we have already said above, Nicolaiz failed. He was op- posed by such men as Herder, Goethe, Schiller, Lavat- ter, and Fichte. These men were laboring for the solu- tion of a problem which he misunderstood. Of course they wrote simply in defence, yet they grew hot in the contest; and in determining the historic estimate of Nicolaiz, these writers should be granted no greater influence than the hostile criticism by Plato and Soc- rates of the Sophists should have in determining the historic estimate of the Sophists. Nicolaiz obei- n's view of Protestantism, making due allowance for acerbity of tone in an opponent so decided as Fichte: "His (i.e. Nicolaiz's) Protestantism was a protestation against all truth which pretended to remain with the Jews in the land of the true, the truth which is against every religion which by faith put an end to dispute. To him religion was only a means of education for the head, in order to furnish materials for never-ceasing talk, but by no means a matter of the heart and the life. His liberty of thinking was freedom from all that was not thought, the licentiousness of empty thinking, without substance and aim. Liberty of judgment was to him the right of everyburger and ignorant man to give his opinion about everything, whether he understood it or not, and whether or not there was either head or talk in which he was interested. In the bibliothek, the rationalistic Hase even goes so far as to declare that under Nicolaiz's management it "exercised an absolute sway as a tribunal of literature, and always exerted its secret influence in opposition to the ancient tenets of faith, and rejected everything which extended the limits of its own head, whether in morality, or on the ground of a liability either to the reproach of superstition or the suspicion of Jesuitism." The truth is, if we carefully estimate Nicolaiz's system, we find that it pre- sided to regard Christianity only as a historic development, and the only propitio- tuous, and not of a popular system of instruction as to the best way to become hap- py in this world and the next. In consequence of the power possessed by the opposition among the influential classes, and its continued adherence to the general basis
of Christianity, it would neither be discarded as a heresy, nor did it attempt to set up a peculiar Church of its own. By the thinkers of Protestantism it was looked upon as simply one among many theological views, and as heterodox by the side of orthodoxy. Yet, as Hagenbach has well said of the labors of Nicolai and his contemporaries, "In the confusion of the universal culture and popular illusionism, and in this intellectual activity, who would dare to say there was nothing but vanity and destructive sentiment and effort? Nay, who would derive it with cold and careless precision?" Not so with Nicolai. He must frankly confess that, with this perverted tendency, there was also a noble impulse towards something better than European humanism in general had previously possessed—an impulse to escape from the diminutive forms of a contracted and commonplace life into universal humanity, and to attain a safe and joyful consciousness of it. It was a tendency which we still call by the beautiful name of "the public good." Nicolai did not contribute much to the Bibliothek himself, but the management alone of such a periodical, so largely circulating and lasting in its day, shows him to have been indefatigable, as in the meanwhile, notwithstanding all his other avocations, he produced many works. Among those most important in their bearings on religion and theology are, Soebeltha Nöthander (1773, etc.), a sort of religious novel, which had great success, and was reprinted in French and Swedish; a sharply satirical performance—Geschichte eines dicken Mannes (1794), against the disciples of the Kautian philosophy, to which Nicolai objected that all its new views were incorrect, and all its correct views not new—Sympronias Gundert (1799), a satire against the Kantiants. Besides these there are worthy of our notice, an Autobiography, published in the Bildnis jetzt lebender Berliner Gelehrten; and a work entitled Üblich meine gelehrte Bildung, über meine Kenntniss der Kritischen Philosophie und meine Schriften dieselbe betrachtend, and über die Herausgabe von Kants, J. E. Erhardt, and Fichte (Berlin, 1799). Nicolai died in Berlin in 1811. See Jürgen's Lexikon deutscher Dichter u. Provenienz (iv, 32); Gückingk, Nicolai's Leben, etc. (Berlin, 1820); Koberstein, Gesch. d. deutschen National-Literatur (in Index); Kurz, Gesch. d. deut. Lit. vol. ii; Fichte (J.), Nicolai's Leben u. Sonderbare Meinungen (Tubingen, 1801); Hase, Ch. Hist., p. 539; Ueberweg, Hist. of Philos., ii, 118; Hurnt's Hagenbach, Ch. See also the peculiar view of Dr. Hurnt, Hist. of Rationalism, p. 117, 118.

Nicolai, Jean, a French Dominican theologian, was born at Monza in 1584. He took the vows of the Dominican Order at the early age of sixteen, and his degree of D.D. at Paris in 1822. For twenty years he filled with high reputation the divinity chair in the house belonging to his order in the Rue St. Jacques, and became its prior in 1616. He spent a considerable portion of his time in commenting on the works of Thomas Aquinas, whose principles he attempted to reconcile with such as widely differ from the genuine notions of the Augustinian school; hence his criticisms have been the subject of the following of his contemporaries and St. Augustine. In 1657 he published S. Thoma Aquinatis Expositio continua super quatuor Evangelistas, etc., in folio, with numerous notices; he afterwards edited the whole in 19 vol. folio. He also published the Pantheon de Sancho, father of Charles V, in 1655, 8 vol. He was also author of Gallia Digniss adversus propugnatorum Cataloniae ascensorum vindicata, etc. (Paris, 1664). See Hoefer, Nouv. Biogr. Générale, xxxix, 959; Nicéon, Mémoires, vol. xiv, s. v.

Nicolai, Melchior, an eminent German theologian, who flourished during the beginning of the 17th century as a university professor at Tubingen, was identified with the Lutheran controversy which was carried on in his time between the theologians of Giessen and Tubingen concerning the κίνωνων and κρίμα of the divine attributes. The theologians of Tubingen (Lake Ooslnder, Theodore Thummius, and Melchior Nicolai) supposed that in Christ, during his state of humiliation, continued to possess the divine properties of omnipotence, omnipresence, etc., but concealed them from men. The divines of Giessen (Munzer and Feuerbeutel) asserted that he voluntarily laid them aside. For further particulars, see Dornes, Doctrine of the Person of Christ, vol. ii, p. 179 sq.; Schaff, Koch, ibid., 180 sq.; comp. Thummius Trium Fratrum sapientiae (Tubingen, 1623-4), and Nicolai, Considerati Theolog. vol. iv; Questions controvarurium de profundissima s. Christi (ibid. 1622, 1624); Hagenbach, Hist. of Dogtrines, ii, 353; Gass. Gesch. der Prot. Dogmäkti, i, 277.

Nicolai, Philip, a distinguished German theologian, noted also as a hymnologist, was born at Mengerhausen, in the principality of Waldeck, Germany, Aug. 10, 1856. His father was a Lutheran pastor. Philip followed him in his profession, and commenced his ministry in 1676 as assistant to his in native village, taking an interest to go to England, it was of a for the Papists. In 1596 he removed to Unna, in Westphalia. In 1601 he became pastor of St. Catharine's Church, Hamburg, where he died Oct. 26, 1668. While at Unna the city was visited by a fearful plague, which carried off most of his young sons. His mind becoming greatly affected by the appalling events happening around him, he was led to think much of death, heaven, and eternity. In the study of Augustine's City of God, and the contemplation of the eternal life, he became so absorbed that he remained chaste and well in the midst of the surrounding distress. In 1598 he published his meditations for the benefit of others. The work is entitled Freudenempfeng des ewigen Lebens, or "The Joyous Mirror of Life Eternal." To this he appended two hymns that speedily gained a remarkable popularity. One has for a title, "Of the Voice at Midnight, and the Wise Virgins who met their Heavenly Bridegroom"—Wacht auf! ruft uns die Stimme, or, in the English version: "Awake, awake, for night is flying; The watchmen on the walls are crying Wake, Jerusalem, at last!"

For this he composed a choral, which was afterwards used in Mendelssoh'n's "Elijah," to the words, "Sleepers, wake, a voice is calling." His other noted hymn was The 21st Psalm, a spiritual Sonnet on the King's Soul concerning her Heavenly Bridegroom—Wie schön leuchtet der Morgenstern; in English, "O, morning star, how fair and bright!" The choral which he composed for this was so popular that it was often chanted by city choirs, and it was invariably used at weddings and certain joyous festivals. These are but two of the three hymns which he is known to have written; the third is not preserved. They mark an era in German hymnology. Hitherto the hymns of the Reformation had been distinguished by their simplicity and appropriateness to church use; their models were the Psalms of the Old Testament, and they were addressed to God the Father through our Lord Jesus Christ, or to the Holy Trinity; or, in case of hymns of sorrow and penitence, to the Saviour. But from the time of these hymns of Nicolai the mystical union of the soul with Christ became a vortice subject, and a class of hymns appeared finding their spiritual ground in the Song of Solomon and the Apocalypse, and called in Germany "Hymns of the Love of Jesus." They are for the most part vivid expressions of the sense of fellowship with Christ, of his presence and loving-kindness, of his actual love and care for him, which are among the deepest and truest, and at the same time most secret expressions of the Christian life. Gerhardtz, "the prince of German hymnists," belonged to this school. For more than fifty years it gave the prevalent tone to sacred song, and its results are...
is still seen in some of the tenderest and most spiritual hymns in use in the churches. Nicolai's complete works were published in 1617 by Dedekurn, and consist of four volumes in German and one in Latin. Their merits are very unequal. The history of the kingdom of Christ, which he wrote in Latin, and which was translated into Greek by him, is a mere history of the world and of the Church, compiled from Ezekiel, Daniel, and the Apocalypse, in which, he makes, for instance, the locusts (Rev. ix. 7) to mean the Calvinists, and announces the end of the world for the year 1670. His Freundenpfeif, to which we have already referred above, is a good and remarkable work, the exegesis of which is indeed more fanciful than correct, but which evinces a thoroughly religious and evangelical spirit. In the same strain is his Theoria vitae aeterna. The remainder of this work consists of sermons, which are remarkable neither for their form nor for their substance, and of a great number of controversial pieces. The most important of these works are, Grundesde f. Ubiquitisti (1604), and De rebus antiquis Germanicorum gentium (1578). It is not, however, as a theologian, but as a hymnologist that Nicolai is chiefly known. He was long in charge of the Christian Church. See Curtze, Nicolai's Leben u. Lieder (Halle, 1859); Weis, Theorie u. Gesch. des Kirchenliedes; Koch, Gesch. des Kirchenliedes; Winkworth, Christian Singers of Germany; Miller, Singers and Songs of the Church; and Nicolai's Christliche Lieder.

Nicolaitana (Nicoatairai), a class or sect mentioned twice in the New Testament (Rev. ii, 6, 15). In the former passage the conduct of the Nicolaitans is condemned; in the latter, the angel of the Church in Pergamos is censured because certain members of his Church held their doctrine. In 1850, the first author extant who refers to these passages, says that Nicolai, one of the seven deacons of the Church in Jerusalem (Acts vi, 5), was the founder of the sect (Contra Heres. i, 26). But Epiphanius (Adversa Haeres. i, 25), with whom Tertullian, Hilary, Gregory of Nyssa, and other fathers agree, says that Nicolai had a beautiful wife, and, following the counsel of perfection, he separated himself from her; but not being able to persevere in his resolution, he returned to her again, as a dog to his vomit; and not only so, but justified his conduct by licentious principles, which laid the foundation of the sect of the Nicolaitans. But the practice of putting away wives for the sake of sanctity belongs to a later period; nor can we conceive that taking back his wife would be considered a crime, in view of Paul's instructions (1 Cor. vii, 5, 6). Suspicions have been thrown on the whole story by other statements, that all the Gnostics derived their origin from Nicolai; which is too absurd for controversy. Clement of Alexandria has preserved a different version of the story (Strom. iii, 4, p. 225, ed. Potter), which Eusebius copies from him (Hist. Eccles. iii, 29), and which is repeated by Augustine and other ancient writers: "The apostles," they say, "reproached Nicolai for jealousy of his wife, who was beautiful; whereupon Nicolai produced her, and said, Any one might marry her who pleased. In this affair the deacon let fall the expression, 'that we should abuse the flesh;' which, though employed in a good sense by him, was perverted to a bad one by those who would gain to their licentiousness the sanction of a respectable name, and who from thence styled themselves Nicolaitans." Who can believe that a sect should take its rise and its name from a casual expression by a man whose obvious sense and whose conduct were opposed to the peculiarities of the sect? Grotius supposes that Nicolai, being reproved for jealousy of those Christians who saluted his wife with the kiss of peace, ran at once to the other extreme, and imitated the custom of the Laodiceans and of Cato, permitting others to have intercourse with her, affirming that it was no crime when both parties consented. This is improbable, and unsupported by testimony. Nor is there sufficient evidence to connect the Nicolaitans of the apostolic age in any way with the Gnostics of succeeding centuries. The ingenious conjecture of Michaelis is worthy of consideration, who supposes that by Nicolaitans (Rev. ii, 6, 15) the same class of persons is intended whom Peter (2 Epist. ii, 15) describes as followers of the way of Balaam, and those of their number in Acts vii, 11 as being a Greek translation of their Hebrew designation, the noun Νικολαος (from νικεω and αοι) being a literal version of נוכליאון, that is, נוכליאון, the master of the people; or, according to another derivation, the devourer of the people (so Hengstenberg, as if from נוכליאון). See Balaam.

The custom of translating names, which prevailed so extensively in modern Europe, was undoubtedly practiced also among the Jews, as the example in Acts xix, 26 (to which others might be added) shows. Accordingly, the Arabic version, published by Erpenius, renders the words ra'iyar wa'la Nicolaitan, the works of the Sha'abiyyes, the Arabic Sha'abi being apparently the name for Balaam. The whole analogy of the mode of teaching which is laid stress upon the signification of names would seem to look, not for philological accuracy, but for a broad, strongly marked paronomasia, such as men would recognize and accept. It would be enough for those who were to hear the message that they should perceive meaning the two words to be identical. Against the Conybeares (vi, 6) has the advantage of being the first to suggest this identification of the Nicolaitans with the followers of Balaam. It has been adopted by the elder Vöringa (Dissert. de Argum. Epist. Petri poster. in Haeae Theormuras, ii, 987). Hengstenberg (in loc.), Sior (Words of the Roon Lord, p. 125, Engl. trans.), and others. Lightfoot (Ezech. in Act. Apost. vi, 7) suggests another and more startling paronomasia. The word, in his view, was chosen, as identical in sound with נוכליאון, "let us eat," and as thus marking out the special characteristic of the sect. The only objection against this identification arises from the circumstance that in the passage Rev. ii, 14, 15 both "they that hold the doctrine of Balaam" and "the Nicolaitans" are specified apparently as distinct. Yet even there the collocation of the two classes of heretics seems to imply some agreement between them, though not identity. See Janus, De Nicolaitis; Heumann, De Nicol. et Cath. Euseb. eccl. episc. in Act. Erdururum (1712), p. 179 sq.; Storr, Apost. der Offenbar. p. 369; Münchener, Ueder die Nicol. in Gabl. Journal, v, 17 sq.; Scheffler-Tiburtius, De Nicol. (1825).

"We are now in a position to form a clearer judgment of the characteristics of the sect. It comes before us as being the sect opposing the church, and a very formidable sect, the controversy which threatened at one time to destroy the unity of the Church, and afterwards to taint its purity. The controversy itself was inevitable as soon as the Gentiles were admitted, in any large numbers, into the Church of Christ. Were the new converts to be brought into subjection to the whole Mosaic law? Were they to give up their old habits of life altogether--to withdraw entirely from the social gatherings of their friends and kinsmen? Was there not the risk, if they continued to join in them, of their eating, consisting mainly of the ordinary food of the Jews, turning the sacraments into the sacrifices of a false worship, and of thus sharing in the idolatry? The apostles and elders at Jerusalem met the question calmly and wisely. The burden of the law was not to be imposed on the Gentile disciples. The apostles did not wish to impose on them anything offered to idols and from 'fornication' (Acts xx, 20, 29), and this decree was welcomed as the great charter of the Church's freedom. Strange as the close union of the moral and the positive commands may seem to us, it did not seem so to the synod at Jerusalem. The two sins were very closely allied, especially in the closest proximity of time and place. The faithless impurity which overspread the empire made the one almost as inseparable as the other from its daily social life. The
NICOLAS messages to the Churches of Asia and the later Apostolic Epistles (2 Peter and Jude) indicate that the two evils appeared at that period also in close alliance. The teachers of the Church branded them with a name which expressed their true character. The men who did and taught such things were followers of Balaam (5 Pet. ii. 15; Jude 11). They, like the false prophet of old, 'brought down the redeemed with the words they had made their 'liberty' a cloak at once for cowardice and licentiousness. In a time of persecution, when the eating or not eating of things sacrificed to idols was more than ever a crucial test of faithfulness, they persuaded men more than ever that it was a thing indifferent (Rev. ii. 13, 14). This was bad enough, but there was a yet worse evil. Mingle themselves in the orgies of idolatrous feasts, they brought the impurities of those feasts into the meetings of the Christian Church. There was the most imminent risk that its Agape might become as full of abominations as the Bacchanalia of Italy had been (2 Pet. ii. 12, 13, 18; Jude 7, 8; comp. Livy, xxxix, 8-19). Their sins had already brought scandal and discredit on the 'way of truth.' All this was done, it must be remembered, not simply as an indulgence of appetite, but as the expression of a 'true,' accompanied by the boast of a prophetic illumination (2 Pet. ii. 1). The trance of the son of Boar and the sensual debauchery into which he led the Israelites were strangely reproduced. These were the characteristics of the followers of Balaam, and worse.—J. H. J. Joachim. The traditions about Balaam, however, need not, as some suppose, be traced back to the traditions about Balaam, no; they point to the same distinctive evils. Even in the absence of any teacher of that name, it would be natural enough, as has been shown above, that the Hebrew name of igomnoushy should have its Greek equivalent. If there were such a teacher, whether the prosethe of Antioch or another, the application of the name of his followers would be proportionately more pointed. It confirms the view which has been taken of their character to find that stress is laid in the first instance on the 'deeds' of the Nicolaitans. To hate those deeds is a sign of life in a Church that otherwise is weak and faithless (Rev. ii. 6). To tolerate them is most unholy to beget the glory of having been faithful under persecution (Rev. ii. 14, 15). Comp. Neander's Apostelgesch. p. 260; Gieseler's Eccles. Hist. p. 29; Alford on Rev. ii. 6. See Neander, Ch. Hist. i. 492; Gericke, Anc. Ch. Hist. p. 179; Killen, Anc. Ch. p. 206; Burton, Eccles. Hist. 1st century, p. 274, 278, 281, 301, 308, 305; Hase, Ch. Hist. p. 33. See NICOLAS.

NICOLAS (NICOLAS, conqueror of the people; comp. Nicodemus), a native of Antioch in Pisidia, who, when the Church was still confined to Jerusalem, became a convert; and being a man of honest report, full of the Holy Ghost and of wisdom, he was chosen by the whole multitude of the disciples to be one of the first seven deacons, and he was ordained by the apostles (Acts vi. 3). The name Balaam is perhaps (but see Gesenius, Thesaur. p. 210) capable of being interpreted as an Hebrew equivalent of the Greek Nicolos. Some commentators think that this is alluded to by John in Rev. ii. 14; and Vitringa ('Obs. Sacr. iv. 9) argues forcibly in support of this opinion. See Balaam.

"A sect of Nicolaitans is mentioned in Rev. ii. 6, 15; and it has been questioned whether this Nicolaitans was connected with them, and, if so, how closely. The Nicolaitans themselves, at least as early as the time of Ireneus (Contr. Haer. ii. 23, § 3), seem to have claimed him as their founder. Epiphanius, an inaccurate writer, relates (Ad. Haer. i. 2, § 25, p. 76) some details of the life of Nicolas the deacon, and describes him as gradually sinking into the grossest impurity, and becoming the originator and head of the Nicolaitans and other immoral sects. See also when Gobat (Phœn. Bibl. 223, p. 291, ed. 1824) states—and the statement is corroborated by the recently discovered Phœn. Philosoph. bk. vii. § 36)—that Hippolytus agreed with Epiphanius in his unfavorable view of Nicola. The same account was believed, at least to some extent, by Jerome (Ep. 147, vol. i, p. 1072, ed. Vellari, etc.) and other writers in the 4th century. But it is irreconcilable with the traditio account of the character of Nicolas, given by Clement of Alexandria (Strom. i. iii. 4, p. 167, Sybyl and apud Euseb. H. E. iii. 29; see also Hammond, Annalit. on Rev. ii. 4, 5). Nicolaus is mentioned by the apostle in his Epistle to the Ephesians. He states that Nicolas led a chaste life, and brought up his children in purity; that on a certain occasion, having been sharply reproved by the apostles as a jealous husband, he repelled the charge by offering to allow his wife to retain the dignity of the wife of any other person, and that he was in the habit of repeating a saying which is ascribed to the apostle Matthias also—that it is our duty to fight against the flesh and to abuse ( impassionātātēn). His words were pervertedly interpreted by the Nicolaitans as an authority for their immoral practices. "Theodore (Bar. F. iii. 1), in his account of the sect, repeats the foregoing statement of Clement, and charges the Nicolaitans with false dealing in borrowing the name of the deacon. Ignatius, who was contemporary with Nicolas, is said by Stephen of Antioch to have known him. The name Nicolaus is the same as Clement, Eusebius, and Theodoret, touching the personal character of Nicolai. Among modern critics Cotelerius, in a note on Comm. Apos. vi. 8, after reciting the various authorities, seems to lean towards the favorable view of Nicolaus. The work of the Nicolaitans on Ecclesiastical History, lect. xii, p. 364, ed. 1833) is of opinion that the origin of the term Nicaitans is uncertain, and that 'though Nicolaus the deacon has been mentioned as their founder, the evidence is extremely slight which would convict that person himself of any immorality.' Tillemont (H. E. ii. 47), possibly influenced by the facts that no honor is paid to the memory of Nicolaus by any branch of the Church, allows perhaps too much weight to the testimony against him; rejects peremptorily Cassian's statement—to which Neander (Plantin of the Church, 6. 2, p. 339, ed. Bohn) gave his adhesion—that 'some other Nicolas was the founder of the sect,' and concludes that if not the actual founder, he was so unfortunate as to give occasion to the formation of the sect by his indirect speaking. Grotius's view, as given in a note on Rev. ii. 6, is substantially the same as that of Tillemont.' For monographs, see Volpelière, Index Programmatum, p. 46, 74, 77. See NICOLAIAN.

Nicolai, Pére, a French preacher, was born in Dijon. His family name was Federt. He belonged to the Order of the Minims, and was made prior of a convent and provincial. He died in 1649 at Lyons. We have of his works, L'Esprit du Christ et le religieux (Lyons, 1688, 3 vols. 8vo);—Panégyriques sur les mystères de Notre-Seigneur et de la Sainte Vierge (ibid. 1688, 2 vols. 8vo);—Panégyriques des saints (ibid. 1693, 2 vols. fol.);—Sermons under different titles (ibid. 1685 to 1696, 14 vols. 8vo). His Corœme has been translated into Italian (Venice, 1772, 2 vols. 4to). See Denis de Génes, Bibl. des Capucins; Papillon, Bibl. des auteurs le théologie, etc.

Nicolaius, a scholastic philosopher, was born in the 12th century, probably in the French city after which he is named. He is sometimes confounded with a cardinal Nicolas who flourished near the opening of the 12th century. It is a question, too, whether he be not the same person as a disciple of Gilbert de la Porre, discovered by Martin and Durand in their second Voyage litteraire, and designated by a manuscript note as having expounded more clearly the opinions of his master. It would seem, however, that the superior of the order, and, likewise, for a disciple of Gilbert de la Porre would not have failed to use his books, as M. Petit-Radet has well pointed out, the sophistical language of the school, from which the writings of Nicolas appear free. It is possible, nevertheless,
that he may have been one of the disciples of this illustrious master. We have few other hints regarding the life of Nicolas d' Amiens. A letter of the year 1512 tells us that about the year 1165 he still possessed no benefice. A prebend had been promised to Nicolas by Thierry, bishop of Amiens, and when Thierry was suddenly removed by death, the pope ordered his successor, Robert, to fulfill immediately this promise. Nicolas enjoyed great credit at Rome. But by what services he had gained the powerful patronage of Alexander we are unable to say. Nicolas died after 1204. His writings now known are a Chronique, signalized by Mountaunou in the library of the Vatican, and a treatise contained in the same library, also in the imperial library at Trier, under the title of Ars fidei catholicon. This treatise has never been published. It is contained in MS. No. 6506. It commences with these words: "Incipt prologus in Aricem fidei catholicon, editam a Nicolao Andranensi." In the prologue the author addresses himself to pope Clement III (1187 to 1191), which tells us at what date Nicolas d' Amiens composed his book. The object of the work is to oppose a barrier to the invasion of heresies, and the author declares that he will use only arguments of a logical order to combat them. Formerly, it is true, the text of a papal authority has authority, but the Scriptures have fallen into contempt; henceforth everything must be proved according to the principles of Aristotle, and to make faith agree with reason. It is an undertaking from which the author does not shrink. He divides his treatise into five books: the first is upon the Supreme God; the second upon the world, the angels, the creation of man, and free will; the third, upon the Son of God; the fourth, upon the sacraments; the fifth, upon the resurrection. At the commencement of each book, following a procedure peculiar to himself, he places several series of definitions, of theses, of universally admitted propositions (communes animi concep- tiones), which shall serve as foundations to his theorems. Then he reason in this manner. The definition of Cause is thus conceived: "Cause is that which gives being to another object called the Causa." The first universally admitted proposition is this: "Everything derives its being from the generating principle of the Cause." The first theorem is this: "All that which is the cause of the cause is the cause of the caused; either, for example, the caused A, its cause B, or the cause of A B. If it first declaring the definition of Cause, he infers the hypothesis, the first proposition twice reproduced, and again the definition of Cause. Thus the theorem is demonstrated. That said, the author passes to the following theorem, which he demonstrates in still briefer terms. His fourth theorem (book first) is thus conceived: "Neque super unam formam super formam sine subiecta materia actu posse esse:" This is a rash proposition. It conforms, it is true, to the principles of Aristotle; Aristotle does not admit the actuality of the first of forms, the soul, to the state of a separate substance; but is Nicolas d'Amiens of the same opinion? No, undoubtedly not. Here, then, he declares a proposition, all the consequences of which he does not suspect. At the same time it is certain that he rejects the thesis of matter without form, considered as anterior in order of generation to unformed matter; which is the thesis of the Platonicians, reproduced later by Duns Scotus. Nicolas d'Amiens is a very moderate realist, insomuch as realism had just been condemned by the Church in the person of his master, Gilbert de la Porree. He prudently expresses himself upon the theorem of the divine attributes: "Deus est potentia dieci dictare potest; sapientia qua dictatur sapientibus, caritas qua diligere; ceteraque nomina quae divinae divinae dicuntur competere, de Deo licet impropre praedicat divinam esse esse etiam." These are the express terms of St. Thomas arguing against Gilbert de la Porree before the Council of Lyons.
NICOLAS his titles, his rights, and obtained from Frederick II, in the month of December, 1231, a diploma full of menaces against the metropolitan authority. Nicolas summoned him before his tribunal, and demanded an account of his abuses. The viscount at first resisted; yet as his power was not so formidable as that of the citizens, Nicolas, himself, without the aid of the emperor, soon brought him to sign in four copies the condemnatory statutes. This occurred in 1232. About the same time Nicolas, having difficulty with the count de Montbeliard, who had permitted some usurpation of the domains of the monks of Lure, hesitated not to excommunicate him. Nicolas, then, was evidently a vigilant and firm prelate. In the month of August, 1230, he was in Mayence, where, as prince of the empire, he sat in the councils of Frederick II. He died Sept. 7, 1235, while returning from this city. In the last century, a manuscript work of Nicolas de Flavigny was found preserved in the archives of Chartres, entirely entitled Commentarii et acta historica Nicolas Crucipontiani. It is not known where this work is now stored. The authors of the Histoire littéraire de la France have omitted the name of this writer. See Dunod de Charnage, Histoire de l'Eglise de Besançon, i, 396; Haullier Bréhols, Histo. des Papes, Frederick II, vol iv; Gallia Christiana etes, vol i.

NICOLAS DE FLÜE. See FLÜE.

NICOLAUS VON HOF (NICOLAU A CURIA), better known as Nicolaus Decius, a contemporary of Luther, was, like him, first a monk in connection with the Konish Church. From 1519 to 1522 he was prior of the monastery at Stettin, in Wolfsbultel. In July, 1522, he left his position, because he had joined in the Reformation, and went to Brussels, where Gottschalk Cruse or Crutius, a personal friend of Luther, especially attracted him by his evangelical preaching. For a time Nicolas occupied himself as a schoolmaster at Bruns- wick, but in 1528 he became a Lutheran pastor at Stettin, where he died, March 21, 1541. He is best known as the author of two hymns, which are still in use in the German Church, and have also been translated into English. The one, the most celebrated of his hymns, is his "Allein Gott in der Höh sei Ehr," said to be a free rendering of the old hymus anglicus, "Gloria in excelsis Deo" (an old Greek psalm). Many passages of this hymn had early come into use in the Eastern Church as the "great doxology," and was introduced into the Latin Church about the year 860 by St. Hilary, bishop of Poitiers (q.v.). The German version was published in 1529, and was designed to take the place of the Latin "Gloria." An English translation is to be found in the Moravian Hymn-book, No. 165, where it is erroneously ascribed to Selnacker ("To God on high all glory be"). The other hymn, a very popular communion hymn, is his "O Lamm Gottes unschuldig," based on John 1, 29, and founded on the ancient Latin hymn, "Agnus Dei, qui tollis pecata mundi, misericordia nobis." It is translated in Jacob's Psalmodia Germanica, i, 16 ("O Lamb of God, our Saviour") (London, 1722), and by Porter in Schaff's Christ in Song, p. 588. See Koch, Gesch. d. deutschen Kirchenliedes, i, 419 sq; Theolo- gischer Universal-Lexikon, z. v. Decius; Miller, Singers and Songs of the Church (London, 1889), p. 88; Herzog, Real-Encyclopädie, xix, 402; Deutsche Zeitzeitschrift für christl. Wissenschaft u. christl. Leben (published by Schneider, Berlin, 1866); Knapp, Evangelischer Lieder- schatz, 1827, a. v. (B. P.)

NICOLAS DE LITRA. See LITRA.

NICOLAS DE NAHOONNE, superior-general of the Car- melite Order, was born in Narbonne, or, as some suppose, in Toulouse. He was elected vicar-general of the order in the East of France, in the year 1290, or prior-general of all the congregation, after the death of Simon Stock, in 1255. Almost all the other circum- stances of his life are unknown, or related in terms which render them doubtful. Thus several writers of the or- der, in composing obscure traditions, have even attributed to him the authorship of his historical and devotional work to celebrity is a work still unpublished, which the biblio- graphers call Segesta ignea (the fiery arrow). As he recounts in it, in terms full of bitterness, the faults, the disorder and the Oriental Carmelites, and the misfortunes which attended their long and ignominious existence, it has been several times quoted by the enemies of monastic institutions. See Catal. Bibl. Cotton, p. 90; Hist. littér. de la France, x, 129.

NICOLAS, Henri, a Dutch Anabaptist, was born in Leyden towards the close of the 16th century. We have few details of his life. We encounter him as the Anabaptist leader after Ords had retired from that position. Nicolas believed himself called to found a new religion, which he named the House of Love. He declared himself superior to Moses, who had taught only hope, also to Christ, who had preached only faith, while he, Nicolas, brought to men the doctrine of charity. That doctrine, however, was not sufficient for him. His writings from eternal happiness all those who would not believe in him. His principles, expressed by himself in some writings, such as the Evangeliwm regni, Sententiae docu- mentales, Prophecy spiritus amoris, Fiscus super terram publicatur, etc., found some adherents among the lower people of Holland. In 1540 he engaged in a discussion with T. H. Volkorn Kornheert, who also wished to es- tablish a new faith. In the last quarter of the 16th century, the sect of Familists [see ANABAPTISTS], which had become his followers, after David Joris abandoned them, but was not numerous, ventured to make proselytes in England. They joined themselves to the Dutch congregation in London, but the severe edicts pronounced against them by queen Elizabeth rendered their attempts at proselytism futile, and they soon died out. See Hoorneck, Summa contraercruramrum; Al- ling, Theologia Historica; Camden, Annales (anno 1580); Fuller, Ch. Hist. ix, 3, § 88; Wright, Queen Elizabeth and her Times, ii, 163. (J. H.W.)

NICOLAS, Michel, a Protestant French Rational- ist, was born May 22, 1810, in Nieme. After having studied at Geneva and Strasbourg, he completed his edu- cation in Oxford, from 1830 to 1834. He was professor at the universities of Halle, Berlin, and Heidelberg. He was nominated suffragan pastor at Bordeaux in June, 1834, and pastor in title at Metz in 1835; he afterwards went to Montauban, where from 1838 he occupied the chair of philosophy in the faculty of Protestant theology. Deep- ly versed in the Oriental languages and ecclesiastical matters, he is justly regarded as one of the most instruc- tive and laborious writers of the Reformed Church of France. He died in 1874. We have of his works, In- struction Chrétienne à l'usage des catholiques (Metz, 1838, 1839), Réponse à la lettre de l'abbé Laffargue sur le saint siège (ibid. 1838, 8vo);—De la Destillation du savant et de l'homme de lettres (Paris, 1838, 8vo), translated from the German of Fichte:—De l'Édificatrice (Paris, 1840, 8vo), a refutation of the attacks of Pierre Leroux in his Observations historiques et philosophiques (ibid. 1842, 8vo), translated into English:—Jean-Bon Saint André, sa vie et ses écrits (ibid. 1845, 12mo), this notice contains two articles of that conventionalist, and among other things the recital of his captivity upon the shores of the Black Sea.:—Introduction à l'Étude de l'historic de philosophie (ibid. 1840-41, 2 vols. 8vo);—Considérations générales sur l'idée et le développement historique de la philosophie Chrétienne (ibid. 1861, 8vo), translated from the German of H. Ritter:—Notice sur la vie et les écrits de Laurent Angévici de la Beaumelle.
NICOLAUS DE V-name, 5-8, 8vo), which was sharply criticised by M. Nizard in the *Annales de l'École normale* (Oct. 8, 1858); *Histoire littéraire de Nice* (1854, 3 vols 12mo) — *Histoire des artistes nés dans le département de l'Art (1859, 12mo)—Des doctrines religieuses des Juifs pendant les deux siècles antérieurs à l'âge chrétien* (Paris, 1860, 8vo)—*Études critiques sur la Bible* (1862), a work of great merit for its scholarly treatment of the subject, and *Le Pont de l'art de la Renaissance* (1862), the first attempt by any writer to counteract the prevailing *Histoire littéraire de Nice* (1854, 3 vols 12mo) — *Histoire des artes nés dans le département de l'Art (1859, 12mo)—Des doctrines religieuses des Juifs pendant les deux siècles antérieurs à l'âge chrétien* (Paris, 1860, 8vo)—*Études critiques sur la Bible* (1862), a work of great merit for its scholarly treatment of the subject, and *Le Pont de l'art de la Renaissance* (1862), the first attempt by any writer to counteract the prevailing controversy regarding the authorship of the Pentateuch as carried on between the schools of De Wette and Ewald and the extreme Rationalists about 1833 in Germany. Prof. Nicolas may be classed among the moderate Rationalists together with Neumüller and Pohl in Germany, who had much that was akin to the conservative spirit of Perpignan. M. Michel Nicolas founded, in connection with Mieuss, Michel and Emile Bignon, *L'Annuaire, revue de la Monnaie*, in which he inserted several articles; and he contributed to different periodical publications, such as *l'Économiste, Le livre économe, La Revue théol., de Strasbourg; Le Courrier du Gard, Le Bulletin de la Société du Protestantisme Français, La Liberté de penser, La Revue germanique, etc.* He was also one of the collaborators of the *Novelle biographie générale*. See Hoefner, * Nou. Bio. Générale*, No. 9, *Crit. Hist. of Free Thought*, p. 304, 445. (J. H. W.)

Nicolas de Constantinois, an Eastern prelate, flourished near the opening of the 12th century. He was patriarch from A.D. 1084 to 1111, and wrote several decrees and letters, of which an account is given by Cave (Hist. Lit. ii, 150, ed. Basil.). See also Fabricius, *Bibl. Græc. xi, 285.*

Nicolas Hagonothodorus, an Eastern prelate, flourished as archbishop of Athens in the 12th century, in the reign of Manuel Comnenus. He is known as the author of a commentary on the Basilica. See Fabricius, *Bibl. Græc. xi, 633; Smith, Dict. of Greek and Roman Biog. and Mythol. s. v.*

Nicole, Nicolas, a French architect, noted in ecclesiastical architecture, was born of poor parents at Besançon in 1701. He was first apprenticed to a blacksmith; but on visiting Paris he determined to relinquish his occupation, entered the free school of Bondel, and after studying some time under that master he returned to Besançon, and was commissioned to erect the church of Refuge, of which the beautiful façade has often been engraved. He afterwards executed the plan for the college of the University of Besançon, which was invited by the authorities of that city to superintend the execution of the work. The church of the Magdalene, at Besançon, is also the work of Nicole, but it was not completed. These two latter works have been justly criticised as to the details. Nicole had a very lively imagination, and drew his designs with great facility; but his edifices have none of that ever-attractive simplicity which pre-eminently distinguishes the antique. Nicole was honored with the confidence of several successive intendants of the province of France - Comte, and was consulted concerning all architectural projects. He died at Besançon in 1784.

Nicco, Pierre, a celebrated Jansenist, and distinguished inmate of Port-Royal (q. v.), was born at Chartres, France, Oct. 19, 1625. At the age of fourteen, when he is said to have had a complete command of Greek and Latin, his father sent him to Paris to study philosophy and theology. Here he became acquainted with the recluses of Port-Royal, who, desirous of attaching themselves to a man of such promise, induced him to join their order. Nicole {then} began then to devote part of his time to the instruction of the youth brought up in the said institution. After studying there for three years he applied for a license; but the principles he had imbied were not approved, either by the theological faculty of Paris, or that of any other Roman Catholic university, and he had to remain content with the degree of doctor of philosophy awarded him by the Sorbonne. Having thus been forced upon him by want of employment by the state he devoted to the interests of the community of Port-Royal, where he resided a while, and helped Dr. Arnaud [see Arnaud] in writing several works in defence of Jansenius, and of his doctrine. In 1694 Nicole went with Arnaud to Chatillon, near Paris, where he was opened against the Calvinists and the relaxed Cassidists, for the avowed purpose, according to Jervis, of giving public proof of his zeal for the true faith. In 1676 Nicole was induced to seek again for holy orders. He was refused a licence by the bishop of Châlons, who disapproved of Nicole's Jansenistic opinions. Nicole was, however, evidently rather rejoiced at anoyed at thus being afforded an excuse for remaining in a position where he was not too near the very in the battle of controversy. Yet in his own province, as a clerical and polemical logician, he was bold and uncompromising; and it was not from the defence of his principles, but from their too conspicuous championship, that he shrunk. In consequence of a letter he had addressed to pope Innocent XI for the bishops of St. Pons and Auras, and of the death of the duke of Longueville, the 1676, Nicole was obliged to leave France in 1679, and returned to Belgium. He came back, however, in 1685, and took a great part in two celebrated quarrels of the time—that of the studies suit to monastic institutions, where he joined Mabillon in maintaining devotion to piety and learning in place of pure asceticism; and that concerning quietism, in which he opposed the devotees of that mental epidemic. He was a man of simple habits and candid mind, and some ludicrous incidents have been told arising out of his absence of mind. He died Nov. 11, 1695. His works are many and voluminous. He was the principal author of *La Logique, ou l'Art de Penser* (1668), known as the Port-Royal Logic. Of the first three volumes *de la logique* *de l'Eschatologie*, which is generally associated with the name of Arnaud, Nicole is known to have been the principal writer (see Jervis, ii, 14, 15). Hume admired the logical clearness with which Nicole in this work showed the impossibility of one mind sufficiently examining all subjects connected with religion, to form a creed for itself on the principle of private judgment; and stated that the doctrine of Nicholas was improperly set up as a system of metaphysics, and that it was his to him the sceptical argument in his *Dialogues on Natural Religion.* Nicole's principal works are, *Les imaginations et les visions, ou lettre sur l'histoire imaginaire* (1691); *Pensees* (Paris, 1691, 1698); *Traité de la grace* (1716, 2 vols 12mo); *Essais de morale, continus en divers traités sur plusieurs devoirs importants* (Paris, 1783, 25 vols in 26, 12mo), which is an able exposition of the subject from the Cartesian standpoint. See Gounet, *Hist. de la vie et des ouvrages de Nicole* (1728, 12mo); Besançon, *Vie de Nicole* (Hist. du Port-Royal, iv); Saviers, *Vies des Philosophes Modernes* (vol.i); Nicétou, *Memoires* xxix, 280-333; *Nouv. Dict. Hist. etc. s. v.; English Cyclop. s. v.; Jervis, Hist. Ch. of France (Lond. 1827, 2 vols 8vo), ii, 101 sqq.; Hagenbach, *Hist. of Doctrines*, vol. ii, § 228, p. 124; and the literature appended to the article Port-Royal. (J. N. P.)

Nicoletus, Paulinus, an Augustinian monk of Udine in Friuli, also called Venetus from his long residence in Venice, studied at Oxford in 1390, was distinguished as a philosopher and subtle theologian, became general of his order in 1412, taught in the principal universitie of Italy, and was tonsured a Jesuit in 1427, and died at Venice or Padua, June 1428. He wrote a number of theological treatises, for which see Jocher, *Geschicht-Lehrbuch*, s. v.

Nicoll, Alexander, a noted English prelate, was
Nicol, Robert, an English writer of poetry of a religious coloring, was born in Pershott, Berkshire, in 1814. He worked too hard and too fast for his constitution, and paid the penalty by an early death, which occurred in 1857. He published a volume of Songs and Lyrics (1835). A second volume of his poems, with numerous additions and a memoir of his life, was published by Mrs. Johnstone (1842, 12mo; 3rd ed. 1852, 12mo; 4th ed. 1857, 12mo). Among his best pieces are "We are Brethren" and "Thoughts of Heaven." See Tail's Maga- zine, May, 1819, pp. 276-278; Moniteur universel, xxxii. sq.; Allibone, Dict. of Brit. and Amer. Authors, s. v.

Nicolle, Charles-Dominique, a French educator of note, was born in Pissy-Porville Aug. 4, 1758. He commenced his studies in the College of Rouen, and came to Paris to finish them in the College of Sainte-Barbe, where he was professor and prefect when the Revolution broke out. He then withdrew from the education of the son of M. de Choiseul-Gouffier, in 1790 Nicolle conducted this pupil to his father, ambassador from France to Constantinople. Three years after Ni- colle went to St. Petersburg, and there founded a board- ing-school, which soon attracted the children of the first nobility, and with that capital, and in the direction of which he was aided by other French ecclesiastics, particularly by the abbé Pierre Nicolas Salandre, who died vicar-general of Paris July 18, 1839. The duke de Richelieu, founder and governor of Odesse, called the abbé Nicolle to that city, who was then given by the emperor Alexander the title of visitor of all the Catholic churches of Southern Russia. Later Nicolle became the director of the Richelieu Lyceum, and he displayed an admirable devotion during a frightful pestilence which desolated Odessa in 1812. Certain business took him again to Paris, and in 1817, at the request of Louis XVIII, he became one of his honorary amonisters. On his return to Russia, the abbé Nicolle was so much annoyed by the Russian clergy, jealousy of his success, that he laid down his com- mission and returned to France, where he received in 1820 the distinction of being a member of the Royal Public Instruction. Feb. 27, 1821, he became rector of the Academy of Paris, and co-operated with his brother in restoring a house of education destined to replace the ancient College of Sainte-Barbe, and which has become the College Rollin. The rectoryship of abbe Nicolle furnish- ed a curious episode in the history of French public instruction. Nov. 18, 1822, he presided for the first time over the opening session of the medical faculty, where Desgenettes pronounced the funeral eulogy of Dr. Hallé, an incipient, himself, of the medical chair. A few months afterwards he was asked to succeed him, but, however, they knew by reputation as the particular friend of the duke de Richelieu, then very unpopular in his capacity of responsible minister. This agitated fig- ure which they saw in the presidential chair, instead of the manly and fearless form of Cuvier, excited at first, feelings of derision and murmurs. Where it was necessary to impress respect upon a hostile and almost sedulous au- dience, the abbé flattered through weakness, promising his good will to this undiscredited crowd, who did not wish it, and who replied by furious clamors to the obse- quious discourse which the rectory itself dictated. Desgenettes came afterwards, and, far from calming, only exasperated the malicious passions which animated the assembly. One phrase, in which the orator alluded to the Christian death of Prof. Hallé, was awkwardly repeated by him three times, and, exaggerated by gest- ures, increased the exhibition of a scandalous dislike. No poor comedy was ever more hissed. A few days after, the School of Medicine was dissolved, and illu- trious professors were forever excluded from it, with the exception of Desgenettes and Antoine Dubois, who enter- ed it again after the Revolution of 1830. The office of rector having been suppressed in 1824, abbé Nicolle retained his position in the Royal Council of Public In- struction, and was re-elected in 1826. He was an officer of the Legion of Honor after May, 1825, and became in 1827 honorary canon of Paris and vicar- general of that diocese. He died in Soisay-sous-Engien (Seine-et-Oise) Sept. 2, 1835. After his return to pri- vate life he occupied himself with writing his ideas upon education, and published them under the title of Plan d'éducation, ou projet d'un college nouveau (Paris, 1833, 8vo). See Frappes, Vie de l'Abbe Nicolle (1857, 8vo); De Beaurepaire, Notice sur l'Abbe Nicolle (1859, 8vo).

Nicolle, John, a renegade English theologian of the 16th century, who originally held a vicarship in Walmington, Essex, and afterwards turned over to the Presbyterians. After two years he returned to England, renounced Catholi- cism, and wrote in English the lives of certain wicked popes, cardinals, bishops, monks, and Jesuits. He after- wards travelled over France; and, finally, relapsing once again to Rome, he died at Rome in Latin, about 1568, a public confession of his mendacity. See Jö- cher, Gelehrten-Lexikon, s. v.

Nicolopoulos, Constantine, a Greek philologist of note, was born at Smyrna in 1786, of a family original- ly from Andrinka, in the Morea. He commenced his studies in Smyrna and finished them in Bucharest, under the skilful Hellenist Latziros Photiadis. Nicolopoulos early made himself known by his poems in modern Greek. He went to France while young, and earned his living by private lessons; he afterwards taught Greek literature in the Atheneum of Paris, and finally became attached to the library of the Institute. He had, through economy, and by imposing upon himself great priva- tions, made a rich collection of books, which he de- signed for the city of Andrinka. In 1840 he obtained a pension, and, preparing to retire to Greece, he sent to that country several boxes of books; but in besieging the Greeks of him to arm them to do the same, from them, he inflicted upon himself a wound which soon became aggravated in an alarming manner. Nic- olopolou was carried to the hospital named L'Hôtel- Dieu, Paris, where he died, June 15, 1841. He had made no will, and left no heirs. The Domaine caused the rest of his library to be sold at a villainous price. The masterpiece of Nicolopoulos is an Ode sur le prin- temps (Greek, with a French translation, Paris, 1817, 8vo). He was the collaborator of several literary jour- nals, and of the Revue encyclopédique, to which he furnis- hed, among other articles, a "Notice sur la vie et les écrits de Rhigas." He undertook himself a periodical review in modern Greek, entitled L'Abelle, which had three numbers, 1819-21; later he published at his own expense, and to be distributed gratis to the students of Athens, a work of thirty-eight volumes, called Jupiter Pan-hellenien — one number appeared (Paris, 1835, 8vo). He placed at the head of the Dialogue sur la révolu- tion Grecque de Greg, Zakli a "Discours adres- tées à tous les jeunes Grecs sur l'importance de la litera- ture et de la philosophie grecque". In 1815 a review of his work appeared in the Echo de F. Pevrard (Paris, 1814-18), and of the Almageste of Ptolomeus published by the abbé Halma (1817). A musical ama- teur and pupil of Fetzis, Nicolopoulos was the editor of the Hindochristianos, a small publication of panthe- tique ecclésiastique of Chrysanthou de Medyote, and of the
NICOLOSIUS

Nicoles, a collection of noted hymns of the Greek Church collected and arranged by Gregorio Lampadarios (1821, 8vo). He was corresponding member of the Archæological Institute of Rome. See La Presse, Dec. 18, 1841; Querard, France Littér. a., t. v., Pétis, Biographie Universelle des Musiciens, s. v.

Nicolaius, Johannes Baptista, D.D., a Sicilian priest and geographer, was born Oct. 14, 1610. He became a great linguist, made himself beloved for his prudence and eloquence, was a long time maintained by Benedict Maximilian, margrave of Baden, and afterwards chaplain at St. Maria Maggiore in Rome. He wrote several geographical works, and died at Rome Jan. 19, 1670. See Jöcher, Gelehrten-Lexikon, s. v.

Nicola, William, an English prelate, was born at Stratford Nov. 1, 1591. He studied at Oxford. After filling various ecclesiastical offices, he became bishop of Gloucester in 1660, and died Feb. 5, 1672. He wrote several theological works, which are enumerated by Jöcher, Gelehrten-Lexikon, s. v.

Niccol, or Seuvin, John, an English Jesuit, was born at Northampton in 1581. He became a preacher, was driven from his native country, and died as a penitentiary at Loreto, Nov. 4, 1622. He wrote a few theological works, for which see Jöcher, Gelehrten-Lexikon, s. v.

Nicoluccius, Johannes Dominicus, an Italian Dominican of Meldola, in the diocese of Forli, who was skilled especially in canon law, flourished about 1585, and wrote two or three theological works, which are enumerated in Jöcher's Gelehrten-Lexikon, s. v.

Nicomachus of Gerasa, in Arabia (Eastern Palestine), a Neo-Byzantine philosopher who flourished in the times of the Antonines, probably from about 140 to 150 A.D., is noted as the author of Arithmetica (Paris, 1558; Leipsic, 1817; and again in 1861, 1866, and 1867, in which he teaches the pre-existence of numbers before the formation of the world in the mind of the Creator, where they constituted an archetype, in conformity with which he ordered all things. Nicomachus thus reduces the Pythagorean numbers, as Philo reduces the ideas, to thoughts of God. Nicomachus defines number as definite quantity (πληθυνός ὅμοιος, I. 7). In the theologis, he explains the mystical signification of the first ten numbers, according to which number 1 was God, reason, the principle of form and goodness, and 2 the principle of inclusion, or change, or matter and evil, etc. The ethical problem for man, he teaches, is solved by retirement from the contact of impurity, and reunion with God. He indirectly exercised no small influence on European studies in the 15th and 16th centuries. Boethius did but abbreviate Nicomachus's larger work on arithmetic, now lost. See Smith, Dict. of Class. Nat., ii., 115; Fabricius, Bibl. Græc, v. 629.

Nicomédès, a Christian of some distinction at Rome, who, during the rage of Domitian's persecution, A.D. 98, did all he could to serve the afflicted followers of Christ: comforting the poor, visiting the confined, exhorting thewavering, and confirming the faithful. For thus acting he was seized by the fercious hand of power, sentenced as a Christian, and scourged to death; through which he passed to meet the approving sentence of his Lord. See Fox, Book of Martyrs, p. 14.

Nicon, a monk of Rhabthus in Palestine, who is said to have compiled, about 1060, a work in Greek containing an abstract of Scripture, ecclesiastical law, etc., which has never been published in full. See Cotearius, Monum. Ecles. Græc, fabricius, Biblioth. Græc, 31. 275. See also NICON.

Nicion is the name given by Russian dissenters to the orthodox members of the Established Church who accepted the reforms introduced by patriarch Nic- con in 1654. See the article NIKON.

Nicolopolis (Νικοπόλις, city of victory), a city mentioned in Tit. iii. 12 as the place where, at the time of writing that epistle, Paul was intending to pass the coming winter, and where he wished Titus to meet him. Titus was at this time in Crete (Tit. i. 5). The subscription to the epistle assumes that the apostle was at Nicopolis when he wrote; but we cannot conclude from this the form of expression. We should rather infer that he was elsewhere, possibly at Ephesus or Corinth. He urges that no time should be lost (παρακολουθεῖν αὐτοῖς); hence we conclude that winter was near.

Nothing is to be found in the epistle itself to determine which Nicopolis is here intended. There were cities of this name in Asia, Africa, and Europe, and many of them have been mentioned in this connection. The question, however, is in reality confined to three of these places at most. One Nicopolis was in Thrace, near the borders of Macedonia. The subscription (which, however, is of no authority) fixes this place, calling it the Macedonian Nicopolis: and such is the view of Chrysostom and Theodoret. De Wette's objection to this opinion (Pastoral Briefs, p. 21), that the place did not exist till Trajan's reign, appears to be a mistake. Another Nicopolis was in Cilicia; and Schrader (Der Apostel Paulus, i. 115-119) pronounces for this; but this opinion is quite excluded by a peculiar thing in the apostle's view of the Gospel. We have little doubt that Nicopolis of the apostle's view is correct, and that the Pauline Nicopolis was the celebrated city of Epirus ("scribit Apostolus de Nicopolis, quae in Actis loco lertis, f. 7. Jerome, Proem, ix, 195). For arrangements of Paul's journeys, which will harmonize with this, and with the other facts of the Pastoral Epistles, see Birk, Hora Apostolicae, p. 296-304; and Conybeare and Howson, Life and Epistles of St. Paul (2d ed.), ii. 564-578. It is very possible, as is shown above, that Paul was arrested at Nicopolis, and taken thence to Rome for his final trial. It is a curious and interesting circumstance, when we look at the matter from a Biblical point of view, that many of the handomest parts of the town were built by Herod the Great (Josephus, Ant. v. 5, 5). It is likely enough that many Jews lived there. Moreover, it was gveniently situated for apostolic journeys in the eastern parts of Achaia and Macedonia, and also to the northward, where churches perhaps were founded. St. Paul had long before preached the Gospel at least on the confines of Illyricum (Rom. xvi. 19), and soon after the very period under consideration Titus himself was sent on a mission to Dalmatia (2 Tim. iv. 10).

This city was founded by Augustus in commemoration of the battle of Actium, and stood upon the place where his land-forces encamped before that battle. From the mountain of Epirus, on the north, a promontory jects some five miles in the line of the shore, and is there separated by a channel half a mile wide from the opposite coast. This channel forms the entrance of the Gulf of Ambracius, which lies within the promontory. The naval battle was fought at the mouth of the griff, and Actium, from which it took its name, and where Antony's camp was stationed, stood on the point forming the south side of the channel. The promontory is connected with the mainland by a narrow isthmus. Upon it Augustus encamped, his tent standing upon a
height, from which he could command both the gulf and the sea. After the victory he enclosed the place where his tent was pitched, dedicated it to Neptune, and founded on the isthmus the city of Nicopolis (Dion Cass. lii: Strabo, vii, p. 324), and made it a Roman colony. It was not more than some thirty years old when visited by the apostle, and yet it was then the chief city of Western Greece. The prosperity of Nicopolis was of short duration. It had fallen to ruin, but was restored by the emperor Julian. After being destroyed by the Goths, it was again restored by Justinian, and continued for a time the capital of Epirus (Mamertin, Julian, 9: Procopius, Bel. Goth. iv, 22). During the Middle Ages the new town of Pireà was built at the point of the promontory, and Nicopolis was deserted. The remains of the city still visible show its former extent and importance. They cover a large portion of the isthmus. Wordsworth thus describes the site: "A lofty wall spans a desolate plain; to the north of it rises, on a distant hill, the shattered stones of a theatre; and to the west the extended, though broken, line of an aqueduct connects the distant mountains with the main subject of the picture—the city itself" (Greece, p. 229 sq.). There are also the ruins of a medieval castle, a quadrangular structure of brick, and a small theatre, on the low marshy plain on which the city chiefly stood, and which is now dreary and desolate (Journal of R. G. S. iii, 92 sq.; Leake, Northern Greece, i, 185 sq.; Cellarius, Geogr. i, 1080). The name given to the ruins is Paleopreà, or "Old Preà." See Bowen, Athos and Epirus, p. 211; Merivale, Rome, iii, 327, 328; Smith, Dict. of Greek and Roman Geogr. s. v.; Lewin, Life and Epistles of St. Paul (4to ed.), ii, 358 sq; Krenkel, Paulus der Apostel (Leipsic, 1869), p. 108.

Nicquet, Honarwat, an ascetic French author, was born in Avignon August 29, 1585. Admitted in 1602 into the Order of the Jesuits, he taught rhetoric and philosophy during several years; his superiors, informed of his merit, called him to Rome, where they intrusted to him the double duties of censor of the books and theologian of the provost-general. On his return to France he devoted himself to the pulpit, and sought less to please than to reach and edify his hearers. Then he directed successively the colleges of his order at Caen, Bourges, and Rouen. In this latter city he established, under the name of Œuvres de la Miséricorde, a charitable society designed to aid the poor and the sick. He died at Rouen May 22, 1667. We have of his works, Le Combat de Grèce, ou falsifications foites pour Grèce en la translation Française du Nouveau Testament (La Flèche, 1621, 8vo; Alençon, 1638, 8vo):—Apoloie pour l'ordre de Fonterraud (Paris, 1641, 8vo):—Histoire de l'ordre de Fonterraud (ibid. 1642, 4to; Angers, 1642, 1696, 4to); it was composed at the entreaty of the nuns of this order, and dedicated to their superior-general, Jean Baptiste de Bourbon:—Gloria Beati Roberti de Arbrissello (La Flèche, 1647, 12mo); the life of this personage is already found in French in the preceding work:
NID, COUNCIL OF

Ttitulus sancte Crucei, seu historia et mysterium tituli Crucei (Paris, 1648, 1675, 8vo; Anvers, 1670, 12mo) — Physis de haecce et de persona ecleesiastica (Strasbourg, 1648, 4to) — De sancto angelico Gabriele (ibid., 1638, 8vo) — La Vie de Nicolas Gilbert, instituteur de l’ordre de l’Annonciade (Paris, 1655, 8vo) — De viae sanitatis Solange, viera et martyre (Bourges, 1635, 8vo) — Le Serviteur de la Vierge, ou triomphe de la dévotion envers la mère de Dieu (Paris, 1629, 4to) — Strenuea ecclesiasticae salutis animi (ibid., 1661, 8vo) — Nominem sancti Augustini (Paris, 1661, 4to) — Iconologia Maris Virginis (ibid., 1661, 4to) — Iconologia Mariæ (ibid., 1667, 8vo). He felt in manuscript a collection entitled Epitome seu Nomenclator sanc- torum ecclesiasticorum, compiled by the library of the novitiate of Rouen. See Sollevol, Bibl. script. Sac. Jev. p. 350, 351; Lelong, Bibl. Hist. de la France, v. 82.

Nid, Council of (Concilium Niddanum), was an ecclesiastical assembly convened A.D. 705 near the River Nid, in Northumbria, by Bertwald of Canterbury, assisted by Bos, bishop of York, John of Hugastuld, and Eadfrid of Lindisfarum. Several abbeys, and the abbess St. Elfrida (daughter of Oswy, king of Northum- berland), were present, together with Wilfred, whom Bos succeeded in the bishopric of York. Wilfred was reconciled with the other bishops of the church; but it does not appear that he was restored to his episcopate, which Bos retained until his death, and after him John of Hugastuld (or Hexam) was translated thither. See Eddius, cap. 57; Labbe, Conc. vi., 1889; Wilkins, Conc. i., 67; Landon, Manual of Councils, s. v.; Soame, Hist. of the Anglo-Saxon Church, p. 88; and the Anglo-Saxon Church under the Latins, p. 376.

Niddui (שוממה), the lesser sort of excommunication used among the Hebrews. He who had incurred this was to withdraw himself from his relations, at least to the distance of four cubits. It commonly continued thirty days. If it was not then taken off, it might be prolonged for sixty or even ninety days. But if within this term the excommunicated person did not give satisfaction, he fell into the cherem, which was the second sort of excommunication; and thence into the third sort, called shammatha, the most terrible of all. See Aethamema.

Nider, Nieder, or Nyder, John, a distinguished German Roman Catholic theologian, was born towards the close of the 14th century. He joined the Dominicans at Colmar in 1400, then went to study philosophy and theology at Vienna, in Austria, and was ordained at Cologne. He afterwards returned to Vienna, and became prior of the Dominican convent of Nuremburg and Wurzburg in 1428. In 1429 he accompanied the imperial diet, and of the Dominicans on a tour through France, and attracted such attention by his preaching that he was sent as delegate to the Council of Basil in 1431, of which he was one of the most distinguished theologians. Appointed by that assembly to convert the Hussites, he at first undertook to do so by mildness and persuasion: he wrote them letters full of encouragement and of good advice, went himself to see them at Egra, and induced them to present their complaints to the council. The conferences, opened with the representa- tives of Bohemia, led, however, to no result. But in a second mission, in which Nider took part with ten other nuncios, he showed none of his former moder- nization. He was one of the ecclesiastical leaders of the crusade which desolated Bohemia, burning towns and villages, destroying the country, and murdering thou- sands of people. After his return to Basil he broke off his connection with the council, and even refused to have anything more to do with it. Nider died in 1438, according to Cavo, and in 1440, according to Echard. Among his numerous works we notice Preceptorum divinae sapientes recepta (Brieg, 1472, fol.); De veritate Sexto (Strasbourg, 1476; Paris, 1507, 1516, et al.); — Manuale confes- sorum (Paris, 1478, fol.; 1488, 1518, 4to) — Tractatus de lepra morali (Paris, 1473, fol.; 1488, 4to; 1514, 8vo) — Contra perfidias Judaeos (Brieg, 1475, 4to) — Castiga superstites (Paris, 1478, 4to; Rome, 1604, 8vo) — Aurei sermones toto in anno (Spire, 1479, fol.) — Alphabeticum divini amoris (Alost, 1487, 8vo; Paris, 1510, 1526, 4to); this work was sometimes attributed erroneously to Germon — Sermones (Strasburg, 1489, fol.) — Deuere de mortuorum date (Strasbourg, 1490, 4to) — De modo bene vivendi (Paris, 1494, 16mo) — De reformatione religiosorum (ibid., 1512, 12mo) — De con- tractibus mercatorum (ibid., 1514, 8vo) — Formicarium, seu Dialogus ad essem Christianum eximio conditum formicos inclusurum (Strasburg, 1517, 4to; Paris, 1519, 4to) — De varia bine (Rouen, 1502, 8vo). Nider was a profound writer; and all that he says on sorcerers and magic in the Formicarium he had learned from a judge at Berne and from a Bene- dietine monk. Lentfert considers Nider as the author of De visionsibus et revelatioibus (Strasburg, 1517). See Blois, Annales dyale.; Echard et Quétif, Dict. d’Hist. et de Lit. du ord. prisc. i., 792; Touron, Hist. des hommes ill. de l’ordre de St. Dominique; Dupin, Bibl. des auteurs eccl. XV. sicle; Lentfert, Hist. del concile de Constance, lib. v. Quicherat, Proc. de Jeanne d’Arc, iv. 502; Wesenberg, Gesch. der Kirchenvorschriften, ii, 106, 507: Neander, Ch. Hist. v., 801. (J. N. P.)

Niðhöggr, a name for the huge mundane snake of the Norse myth. It is commonly represented as gnawing at the root of the ash Yggdrasil, or the mundane tree. In its ethiopic import, as Mr. Gross alleges, Niðhöggr, composed of nið, which is synonymous with the German neid, or envy, and hogg, to hew, or gnaw, signifying the envious gnawer, involves the idea of all the repugnance that the destroyers of the root of life. See Thorpe, Northern Mythol. vol. i; Keyser, Reli- gion of the Northmen.

Niebuhr, Barthold Georg, one of the most acute critics of modern times, noted for his valuable contributions to philology and history, and for his scholarly criticisms of classical institutions, was born at Copenhagen Aug. 27, 1776, and was the son of Karsten Niebuhr (see the next article). When two years old Barthold’s parents removed to the little Holstein town of Meldorf, and there he spent his youthful days. The quiet of the country afforded him grand opportunities for study; besides, he enjoyed favorable association with the most eminent scholars of the land, who were wont to frequent the house of Karsten Niebuhr. The aptitude for learning which Barthold Georg Niebuhr displayed almost from infancy led him to be regarded as a juvenile prodigy; but, unlike many other precocious children, his powers of acquiring knowledge kept pace with his years. At the age of six he was conducted to the University of Kiel, and after two years later to that of Göttingen, to study law. Thence he proceeded in his nineteenth year to Edin- burgh, where he devoted himself more especially to the natural sciences. On his return to Denmark he held several appointments under the Danish government, but his strongly pronounced hatred of Napoleon led him to enter the Prussian civil service in 1806. In 1810 he exchanged his public position for the post of histori- ographer to the king, and in the same time was elected a member of the Royal Academy of Sciences. Shortly afterwards he was made a lecturer in the then newly opened university at Berlin. In this position his treatment of Roman history, by making known the results of the new and critical theory which he had applied to the elucidation of obscure historical evidence, established his position as one of the most original and philosophical of modern historians. He was now the acknowledged master of more than twenty languages, and in the possession of a mass of facts by the aid of which he saw all the advantages augmented again by an unusual intuitive sa- gacity, it was generally conceived, fitted him well for
the task of the true historian, that is, the sifting of the real from the false historical evidence. But satisfied with these remarkable qualifications, he embraced his earliest opportunity to visit Rome, and as Prussian ambassador at the papal court, from 1816 till 1823, seized the occasion for testing on the spot the accuracy of his conjectures in regard to many questions of local and social histen. When he returned from his travels he took up his residence at Bonn as adjunct professor, and by his admirable lectures and expositions contributed very materially to the development of classical and archaeological learning at that German high school. He availed himself of every means for promoting and embodying in his teaching the latest archaeological speculations. He was acquainted with this view that he set on foot the Rheinishe Museum, a philological repository, in which the shorter essays and scattered thoughts of learned men might be given to the world. The first volume of this appeared in 1827, under the joint editorship of Bieck, Niebuhr, and Brandis, three of the greatest lights in the field of philological science. At the same time he undertook, and that mainly for diversion (he was now busy with his life-work, the History of Rome), a new edition of the Byzantine historians. He was thus employed when the French occupation and the dissolution of the university induced him to abandon his literary pursuits. Niebuhr's sensitive nature, unstrung by physical debility, led him to take an exaggerated view of the consequences of this movement, and to anticipate a recurrence of all the horrors of the former French Revolution, and the result was to bring about a state of mental suffering and bodily prostration which ended in his death, Jan. 2, 1831. Among the many important works with which Niebuhr enriched the literature of his time, the following are some of the most noteworthy: Romische Geschichte (Bers. 1811-1832, 5 vols.; 2d ed. 1827-1842; 1853); the two volumes have been translated by J. C. Hare and C. Thirlwall, and the third by Dr. W. Smith and Dr. L. Schmitz—Grundzüge für die Verfassung Niederlands (Bers. 1832)—Griech. Geschichten (Hamb. 1842), written for his son Marcus—the Kleine historische und philologische Schriften (Bonn, 1829-1848, 2 vols.) contain his introductory lectures on Roman history, and many of the essays which had appeared in the Transactions of the Berlin Academy. Besides these, and numerous other essays on philological, historical, and archaeological questions, Niebuhr cooperated with Bekker and other learned annotators in the Rheinishe Museum, published a collection of ancient book fragments and literary notes, Discourses historiques (Paris, 1821), and was a constant contributor to the Rheinische Museum, the Archiv, and other literary journals and societies of Germany.

It is difficult to conceive a more excellent and delightful person than Barthold Niebuhr appears to have been; there are few of whom we have read who have combined so blameless a character and so amiable a disposition with such boundless acquirements and such brilliant intellectual qualities. His History of Rome is perhaps the most original historical work that this age has produced. To understand what he has done in this work, we should keep in mind the state of knowledge on the subject before his time, and not go so far as the stricter sort of sceptical critics, like e.g. the late Sir George Cornewall Lewis, who does not hesitate to declare Niebuhr's effort to construct a continuous Roman history out of such legendary materials as we possess as, on the whole, a failure. The disjointed ruins had lain for ages in social neglect. His return from Rome, Niebuhr's results, to adopt whatever he has written, and sometimes even to receive as established truths as serious and irreproachable. The work of geniuses, in reconstructing from the scattered fragments a stately fabric, which, if it is not identical with the original structure, is at least almost perfect and complete in itself. Macaulay approved of Niebuhr's theory, and Dr. Arnold never ventured to venture from him except where he manifested evidence not accessible to Niebuhr. There cannot be a greater mistake than to suppose, as some have done, that Niebuhr was a sceptic whose sole delight was to destroy the history of man and the admiration of his works. He has actually done more than any other student of antiquity towards extracting truth and certainty from the misty and mystical legends of early tradition, and towards substituting rational conviction for irrational credulity. The great object which he proposed to himself was the development of the original and authentic history of the world, and his discovery of a true image of the past by getting rid of the deceitful influence of the present. This view he often expresses in very plain terms. Thus, he says in his introductory lecture on Roman history (Kleine Schriften, p. 98), "As there is nothing which Eastern nations find more difficult to conceive than the idea of a republican constitution, as the people of Hindostan cannot be induced to regard the East India Company as an association of proprietors, or in any other light than as a sovereign, just so is it with even the acutest of the moderns when they seek to view the history of Rome. Reading is the most trilling part of it; the chief business is to domesticate ourselves in Greece and Rome at the most different periods. Would that I could write history so vividly as to discriminate what is fluctuating and uncertain, and so real and vivid what is confused and indefinite. One can never hear one, when he heard the name of a Greek of the age of Thucydides or Polybius, or a Roman of the days of Cato or Tacitus, might be able to form a clear and adequate idea of what he was." The very existence of such a general design presupposes a lively fancy and active imagination; but though these are qualities often possessed by shallow and superficial persons, they are very rarely combined with that extensive and minute learning for which Niebuhr was distinguished. The range of his acquisitions was really wonderful. In the words of one of his most ardent admirers, while he left his work before him, it never sunk out of sight behind history what he possessed he always retained; what he once knew became a part of his mind, and the means and instrument of acquiring more knowledge; and he is one of the very few examples of men gifted with a memory so tenacious as to seem incapable of losing anything, who at the same time have had an intellect so vigorous as in no degree to be oppressed or enfeebled by the weight of their learning, but who, on the contrary, have kept it in orderly array, and made it minister continually to the plastic energy of thought" (Phleg. Mus. i. 271). Some statements must, however, be made from this general eulogy. While Niebuhr's great work has been neglected or censured, with equal injustice, by persons who have been too indolent to encounter the labor of studying it or incapable of appreciating the method of critical investigation which the author has adopted, it may be doubted, on the other hand, whether many scholars, both in Germany and England, have not been too willing to acquiesce in all Niebuhr's results, to adopt whatever he has written, and sometimes even to receive as established truths as serious and irreproachable. The work of geniuses, in reconstructing from the scattered fragments a stately fabric, which, if
before he had examined all the evidence; one consequence of which is that, under the influence of his own crying passion, he has sometimes extracted a meaning from a passage which the words do not contain, and at other times arbitrarily rejects evidence when it interferes with his own hypothesis. It is true that this same power and his intuitive sagacity have sometimes enabled him to supply a link in the chain when desirable evidence was wanting, and the certainty of his conjectures in such cases is at once felt by the symmetry and consistency which they impart to the whole fabric of the theory.

It must be remarked that Niebuhr's style is very faceted. It is generally deficient in perspicuity, and though eloquent passages and striking descriptions are found here and there, it wants that sustained dignity which we mark in the writings of some other distinguished historians. He occasionally, too, betrays very crude and ill-formed opinions on the internal policy of other countries: witness his remarks on the relative position of England and Ireland. But with all the drawbacks which the most rigorous criticism can exact, the feeling with which we contemplate his character and attainments is one of almost unmixed admiration. One rare combina­tion of the man of business, the scholar, and the man of genius. If he had had no other claim to celebrity, he would have deserved to be mentioned among the general linguists whose attainments have from time to time astonished the world. Indeed, he was recognised as the chief of philologists in the most cultivated countries. Except the very pleasing picture of his mode of living has been given by the late professor Sandford, who visited him at Bonn in 1829 (see Blackwood's Magazine for Jan., 1838, p. 90 sq.); a warm testimony to the benevolence of his heart is furnished by Lieber in his Reminiscences of Niebuhr; and we see the whole man in all his relations, social, literary, and political, in the highly interesting collection of his letters, edited by Madame Hensler (Lebenszweckten siler Barthold Georg Niebuhr, aus Briefen desselben, etc. (Hamburg, 1838, etc.), or even more completely in Miss Winkworth's admirable translation of that work (with important additions and valuable essays by Bunyan, etc. (3 vols. 1852). See also Blackwood's Magazine, 1859, i, 542 sq.; 1856, i, 244-251; 1860, i, 546; 1866, ii, 290, 291; Edinburgh Review, ix, 245, 49 sqq.; The (Lond.) Quart. Niebuhr, Karsten, a distinguished German traveller in the Orient, noted for his valuable contributions to the modern researches of Oriental customs, etc., was born at Lüdingworth, in the duchy of Lauenburg, March 17, 1763, of humble but worthy parentage. His early educational advantages were rather limited, but a thirst for knowledge kept him busy in study, even while employed as a tiller of the soil. He was especially fond of mathematics, and achieved such success in the study of geometry that he was considered so proficient to fill the position of land-surveyor in his native district. The little income secured from this position he laid out in books, and by the aid of a good library fitted himself for the university. He was admitted at Göttingen, and there studied until, in 1786 or 1787, he was offered a position in a team of students in Pons. About 1760 he entered the Danish service, and in the year following was offered employment by the Danish government in a scientific expedition to Arabia, which was then going out at the expense of that government for the purpose of enlarging Biblical knowledge, especially of the Old-Testament Scriptures. The project originally contemplated only the mission of a single

Arabic scholar, but it was finally extended to include a mathematician for purposes of astronomical observation (and for this place Niebuhr was chosen), a naturalist, a draughtsman, and a physician. Niebuhr delayed the expedition eighteen months in order to fit himself properly for the task, and, as the result proved, this step was truly proper, for he alone lived to return from the expedition. From his investigations we have obtained the valuable results of that liberal act of the Danish king, Frederic V, and his learned minister, count von Bernstein—most noble patrons of learning. The other members of the expedition to which Niebuhr belonged were the noted Orientalist of that time, Christian Frederic Freiherr Forskal as naturalist, Christian Charles Cramer as physician, and George William Baurenfeind as painter or draughtsman. By the royal instructions for the expedition, a perfect equality was established among the five members; and they were enjoined to decide every difference of opinion regarding their course by plurality of voices, or, if votes should be equal, by lot. They sailed from Copenhagen in January, 1761, in a frigate of the Danish royal navy, and arrived, not without some accidents, at Constantinople, whence, after a short stay, they proceeded to Jerusalem, and thence to Alexandria, ascended the Nile, and reached Cairo in November, 1761. Having carefully explored the Pyramids and other antiquities of Lower Egypt, they crossed the desert to Mount Sinai and Suez, embarked at that port in an Arab vessel, and landed at Lohela, in Arabia Felix, situated on the west of the Red Sea. At Exoorgus, December 22, 1762. They crossed the country, mounted on asscs, the usual conveyance, and, after visiting several places of interest, finally arrived at Mocha, where the phylologist von Haven unfortunately died, in May, 1763. The survivors, after proceeding to Sana, the capital of Yemen, were favorably received by the imam; but they had meanwhile lost another of their number, the naturalist Forskal, who died on the road. His companions returning to Mocha, there embarked in an English vessel for Bombay, on the voyage to which place the painter Baurenfeind expired; and at Bombay Niebuhr had the affliction of burying the last of his fellow-travellers, the physician Cramer. The fact is admitted by Niebuhr that his ill-fated friends persisted in living after the European manner under the burning sun of Arabia; and it may be surmised that their deaths were hastened through the necessity of abstaining for which the Dunes in their tropical colonies are remarkable, even above all other people. Niebuhr himself, who had suffered severely from illness with the rest of his party, after their return to Europe, lived out a life of isolation and research in countries in which he was travelling, and thenceforth enjoyed excellent health. Sailing from Bombay, he visited Persia, including the ruins of Persepolis; ascended the Euphrates; proceeded by way of Bagdad and Aleppo to the Syrian coast; embarked for Cyprus, returned from that island to Constantinople, saw Jerusalem and Damascus; passed through Aleppo, and over Asia Minor to Constantinople; and finally returned to Copenhagen in November, 1767. Niebuhr was welcomed in Denmark as he deserved. The government undertook at its charge the engraving of all the plates of his books, and presented him with a diamond失眠, and a free gift; and he was left to publish the result of his labors at his own cost and for his own profit. Resolving to commence with the description of Arabia, he printed, in the year 1772, his volume under the title By, and returned to it from time to time. From each of his books, every writer, from the historian Gibbon almost down to the present day, whoever has had occasion to treat of the ancient and modern aspects of that country. The depth of research, the fidelity of delineation, and the accuracy of detail which it exhibits on the geography of Arabia, and the treating character and in December, its inhabitants, have rendered this work of Niebuhr
NIEDERMeyer, Louis, a musical composer, who deserves a place here for his devotion to the cultivation of music, was born on April 27th, 1814, in the canton of Vaud, Switzerland. His father, a native of Würzburg, had settled and married in Switzerland; himself gifted with much natural talent for music, he was the first teacher of his son. The latter, at the age of fifteen, was sent by his parents to Vienna, where he received for two years lessons upon the piano from Moscheles, and in composition from Forster. After having published in that city several of his essays, consisting of morceaux for the piano, he went to Rome, continued there the study of composition under the direction of Fioravanti, master of the pontifical chapel; and after wards went to Naples, where Zingarelli undertook the completion of his musical education. It was during his sojourn at Naples that the young artist wrote his first opera, entitled Il Re per amore. Niedermeyer had conceived the idea of founding, like the ancient institution, a school for sacred music, designed to form—by the study of the chefs-d’œuvres of the great masters of the 16th, 17th, and 18th centuries—singers, organists, and choirmasters, and composers of sacred music. With the support of Fortoul, then minister of public instruction and of worship, he obtained a subsidy from the state, and in the course of the year 1838 he opened his school, associating with himself M. Dietrich as inspector of the studies. The results obtained soon began to attract musical scholars, and the school became filled up. It was also with the design of propagating among all classes a taste for good religious music that he established in 1836 the journal La Maîtrise, the direction of which he abandoned in 1858; now entrusted to M. D’Ortigue. He was occupied with a large work upon organ accompaniment for church music, which was soon to appear, when death suddenly came, on March 14, 1861. This composer, whose talent has more than one trait of resemblance with that of Schubert, has produced between twenty and thirty works, of which the following are some of the most remarkable:—

1. Masses in D major, B flat, E flat, C minor, E flat, A minor.
   2. Requiem in F minor.
   3. Missa in modum canticae.
   4. Missa in modum canticae, for ten voices.
   5. Messa in modum canticae, for eight voices.
   7. Magnificat, in E minor.
   8. Magnificat, in E flat.
   9. Magnificat, in G minor.
   10. Missa in modum canticae, for four voices.

The music of Niedermeyer, a great number of pieces of religious music for singing and for the organ. In the music that he has written for the piano, we remark particularly a brilliant rondo with accompaniment for four hands, fantasias for four hands, fantasia for four hands upon the Hungarian air, with an accompaniment by the organ; and the Fantaisie in E flat major for pianoforte and orchestra, Bellini, etc. See Félix, Biographie universelle des Musiciens; Castil-Blaze, L’Académie impériale de Musique, l’histoire littérale, musicale, etc.; Varepero, Dictionnaire universel des Contemporains; Documents particuliers.

Niedner, Christian Wilhelm, D.D., a noted German theologian, distinguished especially as a Church historian, was born in August, 1797, at Oberursel, in Hesse-Cassel, and was the son of a minister. He was educated at Leipzig, where he began his studies in 1816. In 1829 he was honored by his alma mater with a professorship in theology, and he held that position until 1850, when he removed to the Wittenberg high school. In 1859 he accepted the professorship of theology in the university at Berlin, and was shortly after made councillor of the Brandenburg Consistory. He died Aug. 13, 1866. Few men of recent date have done so much for historical theology as Prof. Niedner. He labored to bring about with the new Christian devotion to secure everywhere the genuine historical evidence, and for this purpose even founded a magazine, the Zeitschrift für historische theologie, in 1845, which at the close of the year 1875 was discontinued. His principal work is his Lehrbuch d. christl. Kirchengeschicht. (Leips., 1846, and often; new edition prepared just before his death [Berl., 1866, 8vo]), which is something between a text-book and a manual, presenting not merely a dry collection of thoughts, but an abundance of elementary views of individual subjects. He has also published several small text-books on Church history, history of doctrines, and history of philosophy, which are highly esteemed for the thorough scholarship they evince. (J. H. W.)

Niello-work (i.e. Black work, from Latin nigellum) is the technical term for a method of ornamenting metal plates in imitation of pencil drawing, by engraving the surface, and rubbing in a black or colored composition, so as to fill up the lines and give the effect to the intaglio picture. It is not quite certain when this art was originated; Byzantine works of the 12th century still exist to attest its early employment. This art must have been known at quite an early date in Christian countries. The English nielle plates and the research Nicophrus of Constantinople sent, in 511, to pope Leo two jewels adorned with niello. Marseilles was eminent in this art during the reigns of Clavus II and Dagobert. As an art it is claimed to have been
Testamento adregnun colorum vocacione (ibid. 1655, 4to);—Centuriae thesaurum panophysicarum (Giesean, 1658, 4to);—Commentarius in Jovem Anet-Grotianum (ibid. 1658, 1659, and 1694, 4to);—Metaphysicus contractis (ibid. 1662, 8vo);—Ostentio quod Carolus Magnus in quam pulchrum et gloriosum regnum finxit supellex antiquitatis (Frankfort, 1670, 8vo);—Carolum Magnus exhibitus confessionis (ibid. 1679, 8vo);—Justinus philosophus exhibitus veritatis in Augustana confessione (ibid. 1688, 8vo); and a large number of theological dissertations. See Moller, Cimbrina literaria, vol. ii; Fipping, Memorial, theologorum.

Níphelm, in the old Scandinavian cosmogony, was a place consisting of nine worlds, reserved for those who die of disease or old age. Hela, or death, there exercises her despotick power. In the middle of Níphelm, according to the Edda, lies the spring, which comes, from which flow twelve rivers. See Anderson, Norse Mythology (Chicago, 1875, 12mo), p. 187 et al.

Niefo (Lat. Niphus), Augustinus, an Italian philosopher and commentator, was born about 1478 at Jopoli, in Calabria (although he signed himself Serenacum, as if a native of Sessa). He had scarcely commenced his studies before he formed the resolution to flee home to escape ill treatment. At Naples he met a citizen of Sessa, who took him to his home to be the preceptor of his children. In teaching his pupils Niefo instructed himself, and later he accompanied them to Pavia, where he followed a philosophical course. He next went to Florence, and shortly after went to Naples, where he became professor of philosophy. His celebrity commenced with a treatise, De intellectu et daemonibus, in which he maintained, following the sentiment of Avresses, that there is but one universal soul, one single intelligency, and that no spiritual substance exist, with the exception of those who preside over the movement of the heavens. These doctrines, borrowed from a vague Neo-Platonism—the Alexandrine pantheism then prevalent—justly scandalized the theologians; but the bishop of Pavia interposed, and Niefo was left to promise that he would correct his book. He afterwards proved his orthodoxy by writing against the philosophical treatise Pomponio. In 1518 Leo X called him as professor to the academy at Rome. Niefo was afterwards created Count Palatine, and received permission to bear the title of cardinal, the arms of the house of the house of the Medici. Several of his works indeed are signed Augustinus Niphus Mediceus. Notwithstanding these favors, he did not remain at Rome. He went to teach at Pisa, then at Bologna, and finally, in 1525, at Salerno, where he passed the remainder of his life. He died in the middle of the 16th century. Niecoron mentions forty-four of his works, which have scarcely any interest to-day; they consist largely of commentaries upon Aristotle and Avresses. The original treatises of Niefo have but little more importance than his commentaries; it will suffice to quote a few of them: De Intellectu libri sex et De Daemonibus libri tres (Venice, 1508, 1527, fol.; the 1st ed. in 1492)—De immortalitate animae, adversus Petrum Pomponatium (ibid. 1518, 1524, fol.; in this work, undertaken by the order of Leo X, Niefo has proposed to demonstrate that, following the principles of Aristotle, the soul's immortal:—Opuscula moralisti et politico (Paris, 1645, 4to). See Paul Jove, Elogio, No. 92; Toppi, Bibliotheca Napolitana; Naudé, Notice sur Niefo, Introduction to Opuscula moralist. Bayle, Dictionnaire, s. v.; Niecoron, Notice sur Niefo, and a Notice sur C'est un des charmants, illustres, vol. xviii; Tiraboschi, Storia della Letteratura Italiana, vol. vii, pt. i, p. 340; Glin- guené, Histoire littéraire d'Italie; Hoefer, Nouve. Nigel of Ely, an English ecclesiastic of the 12th century, was a native of Normandy. His uncle Roger was bishop of Salisbury and chancellor of England, while
NIGER

his brother Alexander was bishop of Lincoln. He is said to have studied under Anselm of Laon. Appointed treasurer of king Henry I, he gained the favor of that prince, who at the death of Hervey presented him with the bishopric of Ely. Nigel was subsequently elected by the clergy, but not caring to assume the charge of government, he resigned the see. The English ecclesiastical writers give an unfavorable account of his morals. In order to live in grand style he despoiled the churches and convents, and his conduct drew severe rebukes from Thomas, archbishop of Canterbury. After the death of Henry, Stephen ascended the throne, and he showed himself less partial to Nigel, who then took part in various conspiracies of the lords against Stephen. His goods were sequestered, and he himself was banished from the kingdom. Being allowed to return he resumed his office, but was interdicted by Adrian IV for new excesses, and died May 30, 1169. Nigel had a natural son named Richard, who was afterwards bishop of London.

It is known that one of the great cares of Gregory VII had been the reform of the manners of the English episcopate. What is related to us of Nigel proves sufficiently that this reform had not then been effected. See Hist. litt., vol. i., p. 401; Angl. hist. script. i., 366; Piper, Monumental Theology, § 78; Innet, Hist. of the Eng. Ch. vol. ii, bk. ix, § 10, 16 and 19.

Niger (Ni'va, i.e. Lat. niger, or black) is the additional or distinctive name given to the Symeon (Σω-

muos) who was one of the teachers and prophets in the Church of Antioch (Acta xxiii., 1). He is not known except in that passage. The name was a common one among the Romans; and the conjecture that he was an African proselyte, and was called Niger on account of his complexion, is unnecessary as well as destitute of any support. His name, Symeon, shows that he was a Jew by birth; and, as in other similar cases (e.g. Saul, Paul—Silas, Silvanus), he may be supposed to have taken the other name as more convenient in his intercourse with foreigners. He is mentioned second among the five who officiated at Antioch, and perhaps we may infer that he had some pre-eminence among them in point of activity and influence. It is impossible to decide (though Meyer makes the attempt) who of the number were prophets (προφήται), and who were teachers (διδασκαλοί). See Simon.

Night (νύστας, ὠραίη, with ἡ παραγγελία, ἡ ὄραμα, ἡ ὀρά-

τα, věčné), the period of darkness, from sunset to sunrise, including the morning and evening twilight, as opposed to the period of light (Gen. i, 5). Following the Oriental sunset is the brief evening twilight (νυσθέριον, Job xxiv, 15, rendered “night” in Isa. v, 11, xxi, 4; lix, 10), when the stars appeared (Job iii, 9). This is also called “evening” (παλάντιον, ἠρώτιον, Prov. viii, 9, rendered “night” in Gen. xxiii, 27; Job vii, 4), but the term which especially denotes the evening twilight is γιαντία (Gen. xv, 17; A. V. “dark.” Ezek. xii, 6, 7, 12). Ereth also denotes the time just before sunset (Deut. xxi, 11; Josh. viii, 29), when the women went to the spring (Gen. xxv, 11), and the time of the evening (τῆς ἡμέρας, Gen. xxiv, 63), the time of prayer. This period of the day must also be that which is described as “night” when Boaz winnowed his barley in the evening breeze (Ruth iii, 2), the cool of the day (Gen. iii, 8), when the shadows began to fall (Gen. vi, 4), and the wolves prowled about (Hab. i, 8; Zeph. i, 15). The time of midnight (μήδε κατὰ τὴν νύστας, Ruth iii, 7, and ἡμέρας τῆς νύστας, the plural form, Exod. xi, 4), or greatest darkness, is called in Prov. vii, 9, the pupil of night (παιδίων τῆς νύστας, A. V. “black night”). The period between midnight and the morning twilight was generally selected for attacking an enemy by surprise (Judg. xvi, 19). The morning twilight was denoted by the same term, νυστερίον.

Night-hawk

as the evening twilight, and is unmistakably intended in 1 Sam. xxxi, 12; Job vii, 4; Ps. cxix, 147; possibly also in Isa. v, 11. With sunrise the night ended. In one passage (Job xxvi, 10, νυσθέριος) “darkness” is rendered “night” in the A. V., but is correctly given in the margin. See Dāx.

As figuratively the term of human life is often called a day in Scripture, so in one passage it is called night, to be followed soon by day: “The day is at hand” (Rom. viii, 12). Being a time of darkness, the image conveys a shadow of death, in which the beasts of prey go forth to devour, night was made a symbol of a season of adversity and trouble, in which men prey upon each other, and the strong tyrannize over the weak ( Isa. xxi, 12; Zech. xiv, 6, 7; comp. Rev. xxi, 20; xxii, 5). Hence continued day, or the absence of night, implies a constant state of quiet and happiness. Night is also put, as in our own language, for a time of ignorance and helplessness ( Micah iii, 6). In John ix, 4, by a natural figure, night represents death. Children of the day and night of darkness, are respectively the Son of God and the children of light: they belong to the light, they walk in the light of truth; while the children of the night walk in the darkness of ignorance and infidelity, and perform only works of darkness (1 Thess. v, 5). See Nīght-Watch.

Night After the Night (Nitzḥ), the ancient Hebrews and Romans deified Night, and called her the daughter of Chaos. Orpheus reckons her the most ancient of the deities, and calls her the mother of gods and men. The poets describe her as clothed with a black veil, and riding in a chariot, attended by the stars. The sacrifice proper to her was a cock, being a bird that is an enemy to silence. Night had a numerous offspring, as Madness, Contention, Death, Sleep, Dreams, Love, Deceit, Fear, Labor, Emulation, Fate, Old Age, Darkness, Mis-

try, Complaint, Partiality, Obstinacy, etc. All this is plainly shown by the Scriptur. Night has left us many remarkable statues of the goddess Night. “We see,” he says “a woman holding in her right hand a white child sleeping, and in her left a black child, asleep likewise, with both its legs distorted. The inscription tells us what they are, though we might easily guess without it. The two children are Death and Sleep, and the woman is Night, the nurse of them both.” See Broughton, Hist. of Religion; Smith, Dict. of Classical Biog. and Mythol. ii, 1218.

Night-hawk is the rendering in the Author. Ver. of the Greek Σακτίμος, τακτίμας (apparently from τακτίμα, to act violently), the name of one of theunclean birds mentioned in the Pentateuch (only Lev. xi, 16; Deut. xiv, 18; Sept. Λαλάγος, Vulg. nocuens). Bochart (Hieros. ii, 830) has rendered it in Hebrew "māšarîm" (מָשָּׂרֵים) in "male ostrich," the preceding term (נְזֵקְנֹת, bāš-

yāhāḇāḏ, A. V. "owl"), signifying the female of that bird. The etymology of the word points to some bird of prey, though there is great uncertainty as to the particular species indicated. The Sept., Vulg., and perhaps Onke-

los, understand some kind of "owl;" most of the Jewish Scribes indefinitely. Under the word "a raping bird," Gesenius (Thesaur. s. v.) and Rosenmuller (Schul. ad Lev. xi, 16) follow Bochart. Bochart's explanation is grounded on an overstrained interpretation of the ety-

mology of the verb chānām, the root of tachām; he re-

stricts the meaning of the root to the idea of acting "uncontrollably," and thus comes to the con-

clusion that the "unjust bird" is the male ostrich. But it is not at all probable that Moses should have specified both the male and female ostrich in a list which was no doubt intended to be as comprehensive as possible. See Dārāu. The ancient Greeks and Romans the frequent occurrence of the expression "after their kind" or an argument in favor of this assertion. Michaelis believes some kind of swallow (Hirundo) is intended: the word used by the Targum of Jonathan is by Kitto (Pict. Dict. Lev. xi, 16) and by
Oedemann (Vernich. Samt. i. p. 8. c. iv) referred to the swallow, though the last-named authority says, "it is uncertain, however, what Jonathan really meant." Buxtorf (Lex. Rabbin. s. v. נמס) translates the word used by Jonathan, "a name of a rapacious bird, karryjo." It is not easy to see what claim the swallow can have to represent the tachmē, nor is it at all probable that so small a bird should have been noticed in the Levitical law. The rendering of the A.V. rests on no special authority, though from the absurd properties which, from the time of Aristotle, have been ascribed to the night-hawk or goatsucker, and the superstitions connected with this bird, its claim is not unfairly desitute of every kind of evidence. As the night-hawk of Europe (Caprimulgus Europaeus), or a species very nearly allied to it, is an inhabitant of Syria, there is no reason for absolutely rejecting it in this place, since it belongs to a genus highly connected with superstitions in all countries; and though a voracious bird among moths (Phalena) and other insects that are abroad during darkness, it is absolutely harmless to all other animals, and as wrongfully accused of sucking the elders of goats, as of being an indicator of misfortune and death to those who happen to see it by past them after evening twilight; yet, besides the name of goat-sucker, it is denominated night-raven, as if it were a bulky bird, with similar powers of mischief to those which day-birds possess. Other provincial names for this bird are māk-hawk, night-jar, churn-owl, fern-owl, etc. The night-hawk is a migratory bird, inferior in size to a thrush, and has very weak talons and bill; but the gape or mouth is wide; it makes now and then a plaintive cry, and preys on the wing; it flies with the velocity and action of a swallow, the two genera being nearly allied. Like those of most night-birds, the eyes are large and remarkable, and the plumage is a mixture of colors and dots, with a prevailing gray effect; it is finely webbed, and entirely noiseless in its passage through the air. Thus the bright eyes, wide mouth, sudden and inaudible flight in the dusk, are the original causes of the superstitious fear these birds have excited; and as there are in southern climates other species of this genus, much larger in size, with peculiarly contrasted colors, strangely disposed feathers on the head, or paddle-shaped simple plumes, one at each shoulder, projecting in the form of two additional wings, and with plaintive loud voices often uttered in the night, all the species contribute to the general awe they have inspired in every country and in all ages. We see here that it is not the bulk of a species, nor the extent of injury it may inflict, that determines the importance attached to the name, but the opinions, true or false, which the public may have held or still entertain concerning it. The night-hawk is abundant in Western Asia; and from its peculiar jarring note, and its strange manner, in all ages has been thought, if not only a bird of evil, but a harbinger of misfortune; and round and round a tree, or continually passing and repassing before the eye at short intervals, it is generally viewed with superstitious awe by the uneducated.

These movements, however, are prompted by the instinct to capture large insects, which are either attracted round the blossom of the tree, or are playing to and fro in a circumscribed space.

As the Sept. and Vulg. are agreed that tachmē deserts any mention of owl, it is probably safer to follow these versions than the modern commentators. The Greek γαλατζία is used by Aristotle for some common species of owl, in all probability for the Strix flammea (white owl) or the Syrmium striolus (tawny owl); the Veneto-Greek reads vuxvrapo, a synonyme of gocrat, Aristotel. s. pl. τος γαλατζιος Plinius, long-eared owl); this is the species which Oedemann (see above) identifies with tachmē. "The name," he says, "indicates a bird which exercises power, but the force of the power is in the Arabic root sharmah, 'to tear a face with claws.' Now it is well known in the East that there is a species of owl of which people believe that it glides into chambers by night and tears the flesh off the faces of sleeping children." Hasselquist (Trav. p. 196, Lond. 1766) alludes to this nightly terror, but he calls it the "Oriental owl" (Strix orientalis), and clearly distinguishes it from the Strix otus, Lin. The Arabs in Egypt call this infant-killing owl muṣūna, the Syrians bana. It is believed to be identical with the Syrmium striolus, but what foundation there may be for the belief in its child-killing propensities we know not. It is probable that some common species of owl is denoted by tachmē or the Strix flammea in some meridionalis, which is extremely common in Palestine and Egypt. The goatsucker is thus confounded with owls by the Arabian peasantry, and the name muṣūna more particularly belongs to it. But that the confusion with the gāratz, or ḥātī, is not confined to Arabia and Egypt is sufficiently evident from the Sciracov names of the bird, being black, lek; Polish, lek; Lithuanian, lehola; and Hungarian, egel; all clearly allied to the Semitic denomination of the owl. See Night-monster.

If γαλατζία is the true equivalent of tachmē, we can be at no loss for the species; for the Greeks applied that term to an owl with eyes of a glistening blue color. This is true only of the white or barn owl (Strix flammea), all the other European owls having eyes of a brilliant yellow or fiery orange. The white owl is abundant in Palestine and in the regions surrounding the Levant; it is indeed spread over the whole of Western Asia, Asia Minor, and North Africa; it is, however, from its remote regions have been considered distinct, their differences are too slight to build upon them with certainty a specific diversity. See Owl.

Night-monster occurs in the margin of the Auth. Ver. at Isa. xxxiv, 14, as the rendering of the Hebrew ḥātī, from the word gāratz, night. The text has ṣeved-owl, but the marginal reading is preferable. The word doubtless refers to the night-spectres or ghosts, supposed by superstitious Hebrews to frequent the desert. The Sept. renders ḥorox η αγορα, which, as Bochart (Hieros. pt. ii, lib. vi, p. 840) shows, refers, not to animals, but to ghostly appearances. (See also also Buhl, p. 1140; Chal. Comment. in xiii, 22; xxxiv, 14.) See Spectre.

Night-vision (γαλατζία, Isa. xxix, 7, etc.; Chal. γαλατζία, Dan. ii, 18, etc.). The perplexing but fascinating subject of the vision of sleep has in all ages attracted the observation and speculation; but the laws which govern the countless images and fancied experiences of this "realm of dream" are even now imperfectly understood. The subject owes its importance, in Biblical studies, to two facts: first, that these visions were often made the means of divine revelation; and, second, that even when uninspired, they were highly valued and diligently studied by many characters in Scripture history. On the immediate case of dreaming, however, the views of the ancients
The Hebrew word בדיאכר in Isa. lxv. 4 is explained by the Sept. and Jerome as an allusion to the heathen custom of the East. In the time of the ancients there was in order to receive prophetic dreams from them, and especially revelations of the means of curing the sick (comp. Did. Sic. i, 25; Cic. De Divin. i, 43, 96); but this is an error (see Gesen. Comment. ad loc.). It appears from Josephus (Ant. xvii, 6, 4) that the later Jews were in the habit of healing by visions (esp. in the time of the first century, iii, 8, 3). Much value is still ascribed to them in the East. (See Tavernier, Reisen, i, 271; comp. also Knobel, Prophtisam. d. Hebrer, i, 174 sq.; Schulte, Reise in das Morgenl. i, 402; Eenemoor, Gesch. d. Magie, i, 112 sq.) See Vision.

Night-watch (רוהטש, akhmûrâh), Ps. xliii, 6; cxix, 148, a watch, as elsewhere rendered; so the Gr. φωτισμός. The Israelites, Greeks, and Romans divided the night into parts of several hours each, at the expiration of every one of which a change of guards took place (Diss. De plur. noctis et dies, in his Kleines Schriftum, p. 127 sq.; Suidas, s. v. φωτισμός). The ancient Hebrews, before the captivity, divided the night into three watches, like the Greeks. The first, which continued until midnight, was denominated רוהטש רחא, rosh akhmûrâh (Lam. ii, 19); the second was denominated רוהטש קית-לאכון, ashmôrâh ha-kittônâh, and continued from midnight till the crowning of the cock (Judg. vii, 19); the third, called רוהטש בוק, ashmôrâh ha-boker, the morning watch, extended from the second watch to the rising of the sun (Ideler, Chron. i, 466). These divisions and names appear to have originated in the watches of the Levites in the tabernacle and Temple (for these, see Midrash, i, 1 sq.; Exod. xiv, 21; 1 Sam. xi, 11). During the time of our Savour the night was divided into four watches of three hours each (Jerome, On Matt. xii), a fourth watch having been introduced among the Jews from the Romans, who derived it from the Greeks (Lippeis, De Milit. Rom. p. 123; Veget. De Re Mil. iii, 8; Censorin. c. 24; Pliny, v, 18). The Romans announced the beginning of each by the sound of a trumpet. This division became so familiar to the Jews that Josephus (Ant. vi, 6, 5) makes Gideon (Judg. vii, 19) announce his armament in the fourth watch. The second and third watches are mentioned in Luke xii, 88; the fourth in Matt. xiv, 25; and the four are all distinctly mentioned in Mark iii, 55: "Watch, therefore, for ye know not when the master of the house cometh; at even (îpî), or the watch (רוהטש), or the cock-crowing (אכטראפמיוויא), or in the morning (πρω), the early watch." Here the first watch was at even, and continued from six till nine; the second commenced at nine, and ended at twelve, or midnight; the third watch, called by the Romans gallicum, lasted from twelve to three; and the morning watch closed at six. See COCK-CROWING. Talmudists, however, reckoned only three watches (Babil. Berachoth, i, 6; Otho, Ezech. Robin. p. 468 sq.), calling the fourth the morning of the next day. But this was perhaps only for the purpose of preserving nominally the ancient custom of the Hebrews (but Lightfoot, Hor. Hebr. p. 364). The Roman custom was certainly in use among the soldiers of Herod (as is plain from Acts xii, 4; comp. Fischer, Probus, de Vi. Laticc. p. 452; N. T. iv, 416 sq.; Carpzov, Appar. p. 247 sq.). It is still customary in the East to divide the night by the crowning of the cock, which is tolerably regular (Schubert, i, 402 sq.). The city watchmen are mentioned in Cant. iii, 5; v, 7; comp. Ps. cxviii, 1. See WATCH.

NIGHT-WATCH (רוהט-ואה, death-watch, or vigil). It was the custom for the faithful to observe a night-watch in order to make intercession for their souls; but in 1843 this practice was forbidden in England—as it had degenerated into an occasion for assignations, thefts, revels, and buffooneries—
In private houses under pain of excommunication, the relations of the dead and those who said psalms alone excepted. In 1663 these wakes were kept in churches under the close supervision of the parish clergy. The wake still lingers in Scotland, Ireland, and Wales. See also Wakes.

Nightingleale, Joseph, an English dissenting divine, was born in Lancashire in 1775. He became a Wesleyan minister at Macclesfield, and soon settled at London, where he supported himself principally by his literary exertions. At the time when he published his Portraiture of Methodism (Lond. 1807, 8vo)—in many points a caricature—he had become a convert to Unitarianism, but he wrote, besides the above-mentioned work, A Portraiture of the Roman Catholic Religion, or an unprejudiced Sketch of the History, Dogmatics, Opinions, Discipline, and Present State of Catholicism (Lond. 1812, 8vo)—The Religions and Religious Ceremonies of all Nations accurately and impartially described; including Christians, Mohammedans, Jews, Brussilians, and Pagans, of all Sects and Denominations (ibid. 1821, 12mo)—Report of the Trial Nightingleale vs. Stockdale, in an Action for a Libel, contained in a Review of the Portraiture of Methodism (ibid. 1809, 8vo). See Darley, Egentown, vol. i. p. 289, ii. p. xxxvii, and Pont. in Acta S. B. De Brit. in Am. Authors, vol. ii. (J. N. F.)

Nigrante Tectum Fallow is the beginning of an evening hymn (hymnus vespertinus) by Magnus Felix Emmodius (q. v.), bishop of Pavia (Ticinum), in which he died July 17, 521. Besides a number of theological works, he also wrote poems, among which are some hymns, which were published by Schott and Simond (Pavia, 1611), and which are also found in the Bibliothèque Patrum Latins. This evening hymn has been translated into German by Rambach, Anthologie christl. Geistl., Mg. 34, and by Königsfeld in his Lateinische Hymnen u. Geistl., 2d series, p. 67 sq. (Bonn, 1855).

Nigrinus, Bartholomew, a Roman Catholic divinity, who flourished in Poland near the middle of the 17th century, was born of Socinian parents, and having been successively a Lutheran, and a minister of the Helvetican confession at Dantzig, finally obtained much influence at the Polish court under king Vladislaw IV, after having accepted the Romish faith. The king was anxious to bring about in his realm the religious union of all his subjects, and thus to close the fearful strife which then threatened to end in a war for conscience’ sake. Nigrinus, having obtained access to the monarch, represented to him that it was an easy thing to unite all Christian confessions. The king supposed that an indirect way of uniting all, and that such a thing would be of benefit to all, would be through the use of a common language, a common persuasion must be well acquainted with all differences and causes of controversy, and consequently put faith in the feasibility of the project. Nigrinus further maintained, before the king and several bishops, that it would be possible to attain his object by means of a friendly discussion between some chosen men of the different confessions; and the king, giving heed to Nigrinus’s persuasions, resolved to gather in a friendly meeting (colloquium charitatis) a number of divines of all the Christian confessions. Primate and pope consented, and it was finally called to convene at Thorn, Oct. 10, 1644. The date was later extended to Aug. 28, 1645; but when it convened it was soon made evident that a union of Protestants and Romanists was out of the question, the latter refusing to give up communion in one kind, the former to accept papal supremacy; and after several pro-tesses had been made on both sides, the insutility of continuing the discussions became evident, and the colloquium was closed November 21 with much less solemnity than it had been intended. Instead of producing, as had been hoped, a reconciliation of the adverse confessions, or even a union of the few, it had increased their mutual acrimony; and each party published pamphlets charging its opponents with that ill success which was fairly attributable to none, because produced by the very nature of things. After this we hear no more of Nigrinus. See the articles Poland and Thorn (J. H. W.)

Nigrondi, Girolamo, a learned Italian ecclesiastic, was born in 1563 at Genoa. At eighteen years of age he entered the Society of Jesus, taught rhetoric, philosophy, and theology, and became successively prefect of studies in the College of Milan, rector of the colleges of Cremona, Verona, Cremona, and Genoa, and superior of the monastic house of Genoa and that of Milan. He died in Milan January 17, 1625. We have of his works, Orationes xxv (Milan, 1608, 4to; Mayence, 1610, 8vo)—Sur la Manière de bien gouverner l’Etat (Milan, 1610, 4to, in Italian)—De omnibus sequiturus Jesu contra fluctua-rum asecrator illustratus (ibid. 1618, 1616, 4to; Cologne, 1617, 4to)—Dissertatio sive collectio de cultu vetera (Milan, 1617, 12mo; 3d ed. Dillingen, 1621, 8vo); it contains some curious details of the boots from which the emperor Caligula took his surname, and has been reprinted several times (Amsterdam, 1667, and Leipzig, 1733, 12mo) with an analogous work, Colossus antiquus et mysticus, by Benoît Baldinu.—Tractatus ascetici xii (Milan, 1621, 8vo; Cologne, 1624, 4to); these treatises at first appeared separately:—De liberorum amatoriorum literis, quae, per gentes, multique saecula pervenientes, in cultura, imaginum, et historiarum historiae, et interpretibus (Cologne, 1630, 12mo)—Dissertatio de aulis et cultis: aepigraphiae fuga (Milan, 1627, 8vo), under the anagram of Lucius Nennius:—Historiae dissertatio de S. Ignatii Loyola et B. Coetano Thieneo, iusstitiæ ordinis clericolorum reguli (Cologne, 1630, and Naples, 1631, 4to)—Fasciculus itineris in usque ad annum 1632 (Cologne, 1634, 4to). See Colleoni, Romain de la Société de Jésus (printed at Rome in Italian, 1694, 4to). See Sotwell, De Script. Ord. Soc. Jes.

Nihil Proboenda, a title given at Bangor to unen- dowed canonsries, held by the precentor, chancellor, and three canons, who were maintained by corrodies, pensions, and oblations.

Nihilism appears in philosophical and theological literature in three distinct forms.

I. In its first form it is a certain theory of knowledge of its nature and extent, and of the reality of existence. It is the doctrine that we can have no knowledge of real things or existence, that nothing can be really known, and in its extreme form it is the denial of all existence itself. Nihilism is the result of continued and extreme philosophical scepticism (q. v.). As philosophy has ever had an intimate connection with theology, and has always involved scepticism in a greater or less degree, so in its extreme form it has become inextricably connected with philosophical and theological thought of almost every age. Among the first developments of Greek philosophy we find the nihilism of Georgias, one of the Sophists, and a contemporary of Socrates. He taught (1) that nothing exists; for if anything were, its being must be eternal or eternal; but it cannot be derived, whether from the existent or from the non-existent (according to the Eleatics); nor can it be eternal, for then it must be infinite; but the infinite is nowhere, since it can neither be in itself nor in anything else, and what is nowhere is not. (2) That if anything were, it could not be known; for if knowledge of the existent were possible, then all that is thought must be, and the non-existing could not even be thought of; but such an error would be as great as if one should affirm that a continent were to be found on the sea, which is absurd. (3) That if knowledge were not possible, it could not be communicated, for every sign differs from the thing signified; how can any one communicate by words the notion of color, seeing that the ear hears not color, but sounds? In contrast with this extreme form of philosophy, Parmenides, in the previous century, had made the reality of existence the leading tenet of his philosophy. Only being is, taught, and of the one true existence we may attain
convinced knowledge by thought. In the philosophy of Plato, which has exercised a large and lasting influence upon Christian thought, the idea, his fundamental conception, is pure archetypal essence, having an objective and real existence, and not merely an existence in thought. In Plato's philosophy appears the logically hail reason. If a relation is to be converted to objective reality, which is the one refutation of all nihilism. But there were poetical, fanciful elements in his philosophy, which by some were transformed into scientific, dogmatic formulas, and led to a sceptical reaction, and to nihilism, such as that of Pyrrho. See Pyrrho. See Scepticism. According to some, we were inaccessible to human knowledge, and it is our duty to abstain from judging. His followers taught that “our perceptions and representations are neither true nor false, and can therefore not be relied upon. The grounds of every proposition and its contradiction should show themselves equally strong.” But then all these principles, after being applied to the assertions of those who believed in the truth and reality of knowledge and existence, were finally to be applied to their own principles in order that in the end not even these should rest upon the ground of truth and reality; and so that those propositions, in which they professed to assert truthfully the falsity or uncertainty of other propositions, were themselves equally false and untrustworthy. Thus this nihilistic scepticism destroys itself.

Kant, incited by Hume's scepticism, undertook, in his *Kritik der reinen Vernunft*, a more thorough examination of the nature of knowledge than had hitherto been given. Its object was to establish the distinction between phenomena and real things, or “things-in-themselves.” The latter have a real objective existence, but out of relation to time, space, or causality, and hence out of the realm of all experience. He ascribes to these real things the function of affecting the senses, and thus giving the material of thought or the substance of phenomena.

In this was a realistic element, while in their independence of space and time there is an idealism (q.v.). As to phenomena, their substance is given through impressions of the senses, which are derived from the things in themselves. But the forms under which we have a knowledge of these phenomena are a purely subjective product of the mind itself, by virtue of its spontaneity. They are forms of intuition, viz., space and time, and forms or categories of thought, twelve in number, such as unity, reality, causality. As to the extent of our knowledge, in Kant's critique the things-in-themselves are unknowable for man. Only a creative, divine mind, that gives them reality at the same time that it thinks them, can have power to control, to shape, to determine, to make being co-ordinate. The existence of nihilism in the thought of the centuries subsequent to Augustine is evinced by the arguments with which theologians were constantly opposing it, and by the scepticism apparent in the writings of philosophizing theologians, as of Duns Scotus, who doubted in philosophy, but who yet in religion received the teachings of the Church on faith independently of philosophical reasoning. Descartes was led—by comparing the different notions and customs of different nations and parties, by general philosophical methods, especially by the great remoteness of all demonstrations in philosophy from mathematical certainty—to doubt the truth of all propositions received at second hand. He began his philosophizing with universal doubt, with a nihilism which refused to acknowledge the certainty of any presuppositions or traditional opinions. He then set himself at work to discover if possible one proposition which is fully certain and beyond all doubt. One thing in the midst of his universal doubt was certain, and that, he says, is the fact that I do really doubt, or, as doubting is a species of thinking, that I do really think; and therefore that I do exist. Even admitting the existence of a powerful being bent on deceiving me, yet I must exist in order to be able to be deceived. When I think that I exist, this very act of thinking proves that I really exist; *Cogito, ergo sum.* From the clearness and distinctness which belong to this first truth, and which alone make us assuredly certain of it, Descartes deduced clearness and distinctness of perception as a criterion of the truth and certainty of knowledge. Belief may be mistaken, but the invention of the means to the end is not. Thus Hume, again, we find scepticism and the human understanding to be the very nearly pure nihilism. Knowledge consists in impressions and ideas or thoughts, all derived from the senses and from experience, and so subjective as to give us little or no knowledge of objective realities or existences. The only reality derived in some way from the relation of cause and effect is simple, bare succession. There is in the idea no knowledge of a real necessary causal nexus, either in its nature or as a fact. We only know that certain things are connected according to a constant rule, and that in all the idea of cause and effect is purely fictitious, or utterly inaccessible to the curiosity and investigation of man.
NIHILISM

Empirical objects or the phenomena which exist in our consciousness in the form of mental representations. In what we can exist only relatively, but must be, if we make abstraction of ourselves as knowing subjects, or even only of the subjective constitution of our senses generally, all the qualities, all the relations of objects in space and time, yes, and even space and time themselves, disappear; as phenomena they cannot really exist per se, but only in us, what may be the character of things in themselves, is wholly unrecognizable. And our subjective, positive existence, remains wholly unknown to us. We can now perceive to what extent Kant in his philosophy had overcome nihilism. We have a true and valid knowledge of everything in our experience, in our consciousness. What is in our consciousness, the phenomena, is real, and we have a real and truthful knowledge of it. Furthermore, there is a real objective existence of things, otherwise there would be no phenomena, and no objects of thought. But beyond this there is much of the ignorance and uncertainty of nihilism. For the forms of our knowledge are the condition of the object, they are not purely subjective, there is no knowledge in our mind of the object, that is the condition of the object. To negate the reality of knowledge is thus relative to the human mind. It is conditional only, only the forms of our understanding which is in the form of it is received. As the a priori judgments upon which all our knowledge is based arise from the constitution of the mind itself, a change in the constitution of the mind that might involve a change in these fundamental a priori judgments and forms, and thus in the knowledge which is built upon them. They thus have for us a regulative force, but perhaps only a relative truth and validity. Man must use them; they are the condition and law of all his intellectual processes; but he is not thereby authorized to assume that they hold good as the laws of all of which may be supposed to be constituted differently from those of human beings, or that they hold true of the knowledge which such beings acquire. On the contrary we know that our knowledge of the object, thence it hath been the fact, which lies at the basis of all true philosophy, of certain universal and necessary a priori or intuitive truths. But in assuming that these truths are the product of the mind's own creative activity, independent of all experience, he gave to all our knowledge an unverifiable relativity, and introduced an element akin to nihilism. To this it has been justly objected that these truths are not given independently of all experience, but are so connected with and derived from our experience of the external objective world as to give us necessarily a truthfulness which is the same as the thing it is; and that our knowledge in its forms and conceptions corresponds to the forms under which the world of reality exists. Hamilton also, following Kant and Schleiermacher, while asserting that we cannot think the infinite and unconditioned, yet concedes that we know the same by faith. Those who distinguish faith or feeling from the intellect, as an ultimate source of knowledge and ground of certainty, assume that the act of this faith or feeling is not intellectual, whereas it is in fact pre-eminently an intellectual act and power, conditioning all the special acts and cognitions of which the mind is capable. Some of the more recent German philosophers, as Chalybes and Lotze especially, rest their confidence in the fundamental assumptions of the human intellect upon ethical grounds. We must believe, they say, with Christian Naturphilosophen, on the authority of experience in her indications, and therefore true. We assume that goodness and veracity regulate both the objective relations of the universe which we study, and the subjective constitution of the intellect which interprets it. For those reasons we rely upon the categories both of thought and being. In truth, the Christian Natural Philosophy has, in the face of the nihilism to the view of Kant and subsequent philosophers, we have had occasion to notice the idea of the relativity of our knowledge as involving something of
Nihilism, or nescience. This idea has become a prominent doctrine in modern philosophy, and has been held and applied in different ways by Ullrich and others in Germany; by Manuel in his Lámites de Religions Thought; by Mill, Tyndall, Huxley, and Herbert Spencer. It is the doctrine that the mind does not perceive things, but the relations of things of things utterly unknown in the eyes of Kantian philosophers. The view is that adopting this doctrine, it is admitted by Dr. McCoabh and others that there are senses in which man's knowledge is relative. He can know, for instance, only so far as he has a capacity of knowing. In this sense man's knowledge is all relative to himself. A man who has only the senses of smell and color, the idea of the color red is a truth that man has the capacity of discovering relations between himself and other things, and between one thing and another. Again, it is also true that he cannot know all things; he cannot know all about any one thing. But what is said that we know relations only, and not things, it is replied that "it is inconceivable that we should know relations between things unknown. Relations between things unknown can never yield knowledge. If the things were to cease, there would be no relation; and if the things were unknown, then the relations would be unknown. The sun and earth were unknown to me, I could never know a relation between them. A relation is a relation of things known—so far known—known by reason of that relation. We know in what relation we stand to God, because we so far know God and know ourselves. The subtler form of indigence in our day proceeds on the principle that man knows nothing of the nature or reality of things, or that he can know nothing except relations between things unknown. It makes human reason proclaim that it cannot discover any truth beyond and above the phenomena of sense and experience. It does not deny directly that there is a God, but it declares that God, if there be a God, is and must be unknown. In meeting this fundamental scepticism, we need to maintain the veracity of the human faculties, and to show that the same powers which guide correctly in the business of life and in the pursuits of science are legitimately fitted to conduct to a reasonable belief in One presiding over the works of Nature and providentially guiding our lot."

See Ueberweg, Hist. of Philosophy, i, 78 sq., 205 sq.; Pottels, The Human Intellect; McCoabh, Ideas of the Mind; also Christianity and Positivism; Blackie, Four Phases of Morals, p. 296 sq.

II. In its second form nihilism is a certain theory of the incarnation. In this sense it is also called nihilism. The name was applied to the views of Peter Lombard, a thirteenth-century Dominican friar (lib. iii, dist. 5—7). See Lombardus. The conception of Lombard is an outgrowth of the fundamental ideas of the Antiochian school, and of the theories of John of Damascus and Abelard. It stands in contrast with the theory of adoption. See Adoptionism. Abelard especially made prominent the idea which underlies the Christology of Lombard, viz. that God is absolutely immutable, unchangeable. The proposition which occasioned the charge of nihilism was: "Christus, secundum quod est homo, non est alicuius." Christ, the Son of God, did not become anything by the assumption of human nature, because no change can take place in the divine nature; "Deus non factus est alicuius." His language was not always clear and definite, and was by some falsely interpreted as affirning that Christ had become something new. In his view, the divine nature did indeed assume the human—that is, it took the human form to itself, but did not bring it into union with itself, so that it became in any intimate and peculiar sense its own. He implies that in the incarnation no human being of body and soul was formed. There was not a production of one nature or of one soul out of the different elements of body, soul, and divinity, but the Logos simply clothed itself with body and soul as with a garment (indumen-
of the Protestant theologians inspired in him an aversion to Lutheranism, which was to him Protestantism. In 1618 he accompanied two young gentlemen to the University of Jena, and some time after was made preceptor through the favor of the duke Bernard of Saxe-Weimar. In 1622 Nihus went to Cologne, there embraced Romanism, and entered into orders. After having for some time directed the college of the professes of that city, he was in 1629 nominated abbot of Mindleik. At the approach of the Swedish army he retired to Hol- land; later he became bishop of Myre and suffragan of the archbishop of Mayence. He died in Erfurt, March 2, 1677. Some of his works, Disputations logicae (Helmstedt, 1612, 8vo) — De aestimatione publicorum formarum (ibid. 1616, 4to) — Epistola philologica excurse narrationem Pom. Mele de navigazione (Hannau, 1622, 4to) — Ars Nova, dicto Scrittura unico lucranda et posthifera plasmator in partes Lutheranorum, dicta non nihil et suggestae theologae Helmetetensae (Hilesheim, 1633) — a work which drew the author into a violent polemic with George Calixtus — Epigrammata (Cologne, 1642, 12mo) — Anti-critici de Fabricia crisis dominicca (ibid. 1644, 8vo) — De cruce epistola ad Bartholdium (ibid. 1645, 4to) — Hypocritia quo diluorimus contra Catholicos: De veritate et aequitate in matrimonio (ibid. 1649, 4to) — Tractatus chronographicus de nominibus Asiae provinciis ad Tigrum, Exphratam, et Mediter- raneum et Rubrum maria (ibid. 1658, 8vo) — Nihus, who published several other works of controversy against Wedel, also on some technical questions, was deposed by Leon Allace, to which he joined dissertations of his own, such as Adnotaciones de commissione Orientalizum sub unico specie, etc. See Bayle, Hist. Dict. s. v.; Rotermund, Supplement zu Jocher, Gelehrten-Leizikon, s. v.

Nikifor, a Russian prelate of note, flourished after the opening of the 12th century. He was a Greek by birth, and came to Russia in 1106. He rapidly rose to the highest ecclesiastical distinction, and finally became metropolitan of Kiev and all Russia. He died in April, 1121. He is spoken of by contemporaries as a learned but modest man, who wielded a powerful influence among Russian ecclesiastics. Of Nikifor’s works the following remain: Official Letters to the Grand Prince Waldimir Wsewolodowitc Monomach, upon the Separation of the Eastern and Western Churches: Upon Fasting and Conscience. The first is to be found in M.S. in the Danish Historical Library. The Second is printed in the first volume of the Memora- bilia, which were published by the Moscow Historical and Antiquarian Society. See Cox’s Otto, History of Russian Life (Oxford, 1839, 8vo), p. 304. (J. H. W.)

Nikkel, J. van, a Dutch painter of interiors who flourished about 1650. He was a good artist in prospective, and painted interiors of churches in the style of Van Vleit, which possess considerable merit. They are signed J. van Nikkel.

Nikodim, a Russian monastic, greatly distinguished as a Church writer, flourished in the first half of the 18th century. He was a Dane by birth and a Lutheran by descent, and before his union with the Greek Church was called Adam Burchard Selj. He was educated at the German universities, where he pursued studies in medicine and belles-lettres, as well as in philosophy and theology. In 1722 he made a journey to St. Petersburg; became a teacher at several clerical schools, and served some time as secretary to the count Lesocz; adopted, in the year 1744, the Greek faith, on which occasion he received the name of Nestor, and one year later became a monk, when the additional name of Nikodim was given him. He died in 1746, and was buried in the monas- tery of Alexander Nevski. Ever after his first coming to Russia he had occupied himself upon the Russian language, and directed his attention towards Russian history. He collected in M.S. and books all that had ever

NIHLISISTS 95

Vogt, Moleschott, Bichter, and others, whose writings have had a pre-eminent influence in their doctrines. The most important promoter of these principles was Alexander Herzen, who in 1834, while a student at the University of Moscow, was arrested, with some of his associates, on account of their socialist tendencies. He left Russia in 1847, and established a publishing-house in Paris, where he published Russian translations of the writings of Louis Blanc, Mazzini, and kindred authors. Although not strictly the leader of the Nihilists, yet it was unquestionably he who gave the chief impulse to political and social radicalism in Russia. The leaders of this secret party were very greatly influenced also by the writings of the French Societies of Saint-Simon, Pierre Leroux, Proudhon, Louis Blanc, and especially by those of Fourier and our own Robert Dale Owen.

These Nihilists believe that in human progress it is not only possible but absolutely necessary to begin at once with the present complicated social phenomena, in the way of a sudden and complete social reform, or with a revolution. They believe that this has precedence over all other agencies of progress. In regard to political questions, they regard the idea of federalism with favor, but are very strict in their antagonism against the extreme patriotic pretensions of the Panславists, and against the principle of nationality as a special political theory. During the demonstration by the students of St. Petersburg in February and March, 1869, the radical political platform of the Nihilists was published in a pamphlet, which was reprinted and other in great numbers, with very nearly the same form and contents. Socialistic and revolutionary circulars greatly excited the more educated Russian youth, and finally aroused the government to persecutions, which began with the arrest of the chief instigator of the St. Petersburg disturbances, Sergius Netschajew, the instructor in religion at the Seregowski church-school in the city. About the same time young men made journeys into the interior, in order to study the "real wants" of the people, and to influence them by their advice and sympathy. In the cities they joined the "Sunday-school movement," and affiliated in organizing schools, and in teaching and in giving lectures and exhibitions for their benefit, until they were closed by the government. In St. Petersburg, in Moscow, and in the larger provincial towns, the nihilist associations protested against the action of the government and of the nobility in the matter of the emancipation of the serfs. In consequence of this the government at various times undertook persecutions against the Nihilists. In August, 1871, after an extraordinary trial, Netschajew and many others were convicted and sentenced to criminal activity of the party nearly suppressed. Yet towards the close of that year traces of nihilist conspiracies were thought to have been discovered, and numerous arrests were made.

Nihilists is the name given to a sect of German mystics who flourished in the 14th century, and, according to the Russenbroek, held that neither God nor themselves were born nor hell, action nor rest, good nor evil, have any real existence. They denied God and the work of Christ, Scripture, sacraments — everything. God was nothing; they were nothing; the universe was nothing.

Some hold doctrines such as these in secret," adds Ritschel. "They conform to no rules, as they are not made to set the example for every kind of insane and foolish subordination." See also the article Nihilism. Sometimes the term Nihilists is used to denote Annihilationists (q. v.).

Ninus, Barthold, a learned German theologian, a convert to Romanism, was born in 1569 at Wolpe (duchy of Brunswick), where his father was mayor. He finished his preparatory studies entered the service of Corn. Martin, professor of theology at Helmstädt, who obtained for him a pension which enabled Nihus to pursue his studies at the university. The violent disputes
been written about Russia; laihored himself uninterruptedly in copying and translating his different materials, and occupied himself in this way with some important works. The following work was printed by him at Revel in the Latin language, Schediasma Literarum de Scriptoribus qui Historiam Politico- Ecclesiasticam Rossiae scriptis illustraverunt, where he gave, in alphabetical order, an accurate catalogue of almost all the works which had been written in the Russian language, and a Russian translation of this small but useful book appeared at Moscow in 1815, and it may still be consulted with profit, notwithstanding the recent and more complete works of this kind by Meiners, Adelung, and the learned director of the imperial library at St. Petersburg, Baron M. P. von Moser. Another little work of his, A Historial Mirror of Russian Monarchs, from Rurik to the Empress Elizabeth Petrovna, was written in Latin verse; the original has been lost, but the Russian translation is printed in the first part of the "Ancient Russian Library." The third and most important of his works, De Rossorum Hierarchia, in five books, contains some very important and interesting information respecting Russian Church history, with a sketch of its earliest origin. The original manuscript is preserved in the archives of the office for foreign affairs, and a translation of it is in part of the "Ancient Russian Library." The works that he has left besides, unfinished or unpublished, cause deep regret that he did not live as long as the monk Nestor, the father of Russian history, whom he had taken for a model. Besides the above-mentioned works, the manuscript of Moscow possess a Dictionary of all the Pictures of the Virgin Mary, and several Historical Notices on Russian Monasteries; and the library of St. Alexandre-Nevski a treatise upon medicine, some Souvenirs of his travels, written half in Latin, half in German and Danish, and a Recueil, forming fifteen volumes, of different pieces, mostly relative to the history of the Russian Church, several of which are perhaps unique. See Dict. Hist. des ecrits de l'Eglise Grce-russe; Gretch, Essai d'histoire de la Litttrature Russe; Sopkof, Essai de Bibliographie Russe; Cox's Otto, History of Russian Literature (Oxford, 1899), p. 306, 307.

Nikomeko, Aaron Ben-Elia (also called רְמִיתָא, the Second), a noted Jewish savant of the Karaitic sect, was born about the year 1300 at Cairo, the centre of Karaitic learning in Egypt. When thirty years of age he went to Nicomedia, whence he received the surname of Nikomekar (גִּימֵיתָא). He wrote, רְמִיתָא, "The Tree of Life," a system of religious philosophy according to the doctrines of the Karaites (q.v.), in 114 chapters. It was first published by professor Belzitz, of Leipzig, in 1841, under the title Aaron b.-Eliaus aus Nikomeden, des Kairiers, System der Religionsphilosophie, etc. — רְמִיתָא, "The Crown of the Law," a commentary on the Pentateuch, of which some portions, with a Latin version and learned notes, have been published by Prof. Rosegarten, of Jena, Libri Coronae legis; id est Commentarii in Pentateucho Karaitico ab Aaron ben Eliau concrrecti, etc. (Jena, 1824). This work commentary has been published by A. Firkowitsch (Empatoria, 1866-67, 4 vol.); נִמְיָה וֹלְיָיָי, or נִמְיָה וֹלְיָיָי, "The Book of Precepts," giving in twenty-five treatises all the prayers and rites of the Karaites. Portions of this work have been published by S. Schupart, Secta Karaurian dissertationibus aliquot historico-philosophico adunbrata (Jena, 1701), as well as by Trigland, Danz, and Lahnhausen. This work was also published by A. Firkowitsch (Empatoria, 1866). — נִמְיָה וֹלְיָיָי, "Rules for the Slaughtering of Animals," in twenty-six chapters; portions of which by Delitzsch published in the L. B. d. Or. 1840, No. 16 sq. Nikomeko died in 1839. See Fürst, Bibl. Jud. i, 22 sq. De Rossi, Dizionario storico degli autori Ebrei, p. 247 sq. (German translation); Bamberg, History of the Jews, p. 685 (Taylor's translation); Grätz, Gesch. d. Juden (Leips., 1873), vii, 268 sq.; Jost, Gesch. d. Juden in Europa, u. a. d. J. u. Chron. 1301, 322; Gesch. d. Karäerhema, ii, 281 sq.; History of the Karaites, J. P. 200 sq.; Zeiger, Jüdische Zeitschrift, 1869, p. 199 sq.; Ueberweg, History of Philosophy (New York, 1872), i, 428; Delitzsch, L. B. d. Or. 1840, Nos. 13, 18, 23, 45, 46, 45, 52; but above all his prolegomena to the בִּרְכָּת מש.in (B.F.)

Nikon, St., surname Metanikte (from his frequent introduction of the word μετανοεῖν, to repent, in his homilies), was a learned ecclesiastic, flourished in the 18th century. He had lived in a monastery on the borders of Pontus and Paphlagonia, and in 961 went as a missionary into Armenia. He went also as a missionary to Crete. He afterwards lived in Lacedemon and Corinth. He died in 998. His life, which was written by a Lacedemonian abbot, father Simmond translated into Latin, and Baronius has freely made use of it in the tenth volume of his Annales, under the years 961-998. To Nikon is attributed a curious and interesting little treatise in the Greek language, On the impious Religion of the Mustachted Arians, which will be found of use in illustrating the state of manners, as well as the ecclesiastical history of that country. It is inserted in Latin in the 25th volume of the Biblioth. Patr., and is also given in Ceteriatus, Patr. Apostol. vol. ii, in a note to Const. Apostol. (lib. ii, cap. 24, p. 295, 280). See Nixon.

Nikon of Russia, a prelate mentioned in ecclesiastical history, is of uncertain character, and frequently denominated the Luther (though perhaps more accurately the Wolsey, or better still the Chrysostom) of the Russo-Greek Church, was born in May, 1055, in a village near Nisimei Novgorod, of parents in humble life. He finished his education from the priest of a monastery in the monastery of St. Macarius. He afterwards became a priest at Moscow; but the taste which he had acquired while in the convent of St. Macarius for monastic life and discipline was so strong that, although he was now married, having taken that step at the urgent solicitation of his friends, he determined to separate from his wife, who had proved a faithful companion for nearly ten years, aé, persuading her to enter the convent of St. Alexei at Moscow, he himself set out for the hermitage of Anserche, on the island of Solowetz, in the White Sea, and was, in 1646, made hegumen of the Nikone- chenian monastery. The desolation of the place and the severity of the discipline served rather to increase than to abate the ardor of the new recluse; but the zeal of the brethren led to dissensions, and Nikon was embroiled in bitter strife. Being desirous of replacing his eyesight, he went to a stone eye-surgeon at Akron and Elizar, the founder and head of the community, were despatched to Moscow to collect contributions for the purpose; but on their return Elizar took the money into his own keeping, and manifested no intention of applying it to the intended purpose. This led to remonstrances and alterations, and to such persecution on the part of Elizar that Nikon pushed off from the island in a small boat; and, after incurring great danger, was driven to the island Kj, at the mouth of the Onega, where he set up a wooden cross. At the same time he declared that the monastery of the Holy Cross and its satellite of which may now be seen the magnificent cloister of the Holy Cross. Associating himself with a community called the Kosheker hermits, he so distinguished himself by his superior sanctity and severity of life that on the death of their abbot or principal he was raised to the dignity of abbot, and was, about 1644, having occasion some two years afterwards to take a journey to Moscow, to arrange some affairs of this community, he was there brought to the notice of the czar Alexei Mikhailovich, who was so struck with the greatness of Nikon's intellect and holiness, that he ordered the community to keep his presence unknown, his eloquence and understanding, and his strict and virtuous life, that he caused him to be appointed
archimandrite of the Novospassky convent at Moscow. A monk's career was thus suddenly opened to him; his influence with the sovereign increased daily, and he took advantage of it to become the intercessor for poor widows, orphans, and the persecuted and oppressed. In 1648 he acquired the dignity of metropolitan of Novgorod, and he attached the people of that city to him so less strongly that they were disposed to rise in revolt against the tsar. He was a violent popular insurrection at very imminent peril to his own person; and when he had successfully broken the uprising, he secured permission from the czar to go into the prisons, and to set at liberty not only those persons who had trivially committed petty lawless acts, but all real criminals whom he found sincere in their repentance. Nikon was also a liberal distributor of alms to the poor; he gave them provisions during the time of the famine which took place, and ordered the erection of many almshouses. On feast-days he always preached, and his sermons were attended by crowds of people from distant parts, who were often moved to tears by his eloquence. It was about this time, too, that Nikon, perceiving the necessity of reformatory measures in the Church of Russia, opened his movement to that end with his revision of the liturgy. He introduced into the churches the psalmody of the Greek service and of Kieff, and gave a more costly fashion to the holy utensils and other furniture of the churches. He was anxious to increase the respectability of the clerical professions, and to make them worthy to be the object of more devotion. In 1652, after the death of the patriarch Joseph, Nikon's services received further recognition from the government by his elevation to the vacant patriarchate. He was thus enabled to carry on his philanthropical and reformatory works upon a still larger scale. He now took measures for the improvement of the Church books, and for making them more exact and faithful copies of the Greek originals. He called on that account the general assembly of the Church in 1654 and 1655. By this council the old Slavonic versions, some of which were over two centuries old, were compared with the Septuagint. The council declared the original Slavonic version correct, and that the differences observed in the copies then in general use resulted from the carelessness of the copists. A new edition was made at Moscow, and signed by Nikon, so as to conform to the original. This, however, gave rise to a division in the Church; those who adhered to the old customs received the name of Raskolnik, and these schismatics remain to this day. Raskolnikism; Russia. Nor were these the only measures. He set himself earnestly to work on his jubilee project of endeavoring to root out all abuses of the Russian hierarchy, and even lobbied for the adoption of temperance principles. In his own person, as we have already seen, Nikon exhibited the doctrines he preached. He was noted for unhoused monsignificance, self-denial, and abstemious habits. In the furtherance of his object it is not natural to suppose that he broke through many practices of Church and State, to which long custom had probably given an almost religious consecration. Thus through his intervention the Oriental seclusion of the female sex was at first restricted. The Church's attempt to root out all abuses of the Russian hierarchy, and even lobbied for the adoption of temperance principles. Palmer makes out that the Russian state during Nikon's rule was erastian, its couriers tyrannical, Greek patriarchs vernal, and that Nikon had not a fair trial, and was in the right in the special points in dispute. Those who judge Nikon more critically question whether the patriarch should not have accepted the situation in which he found himself, and saved the Russian Church from a schism which has continued to this day, and that he lacked that wisdom and policy which men need in high places of trust, both in civil and ecclesiastic stations.

Nikon's most important literary labor was the improvement of the Slavonic Church books, and setting them in accordance with the original Greek. In 1664 he despatched the hieromonach, Arsenj Suchanoff, into the East, and purchased through him more than five hundred manuscripts of Greek books dating from the 11th to the 17th century. He also made provision for the translation of a number of historical and geographical works from foreign languages into the Russian. Some of these signed by his own hand are still preserved in the synodal library. He also drew up a collation of the Russian chronicles, the Stufen books, and the Greek chronologists, which reaches to the year 1630, and is well known by the name of The Chronicle of Nikon. Of this codex the Academy of Sciences of St. Petersburg published a fine edition in eight volumes, 1677-1792. He also wrote several dogmatical and theological pieces, which he composed in his lifetime. Among these were a notice of a Table (Skrijal) of Dogmatic Studies (Moscow, 1656, 4to) — Sermons (ibid. no date [1654]; reprinted in Novikov in the "Ancient Russian Library," 24 ed. vol. vii) — The Intellectual Paradise, which contains a description of the monasteries of Mount Athos and of Vaiidai (Vladai, 4to) — A Canon, or book of prayers to attract the Rakonilki to the Church (no name of place, no date, 4to). See Ivan Choucharin, Vie du tres-saint patriarche Nikon (St. Petersburg, 1837); Backmeister, Biirge z. Lebenbegag. d. Patriarchen Nikon (Riga, 1798); Strahl, Beitrage z. russ. Kirchengesch. Nile, the one great river of Egypt; constituting, in fact, that country by its alluvial banks. In treating of it we give the ancient as well as the modern accounts, and especially the Scriptural relations. See EGYPT.

1. Shishour, שִׁשְׂחוּרь, šîshō'ûr,LUK 19:22 "black." The idea of darkness conveyed by this word has, as we should expect in Hebrew, a wide sense, applying not only to the color of the hair (Lev. xiii, 31, 37), but also to that of a face tanned by the sun (Cant. i, 5, 6), and that of a skin black through disease (Job xxx, 30). It seems, however, to be indicative of a very dark color: for it is said in the Lamentations, as to the desolated Nazarnes in the besieged city, "Their visage is darker than blackness" (iv, 8). That the Nile is meant by Shishor is evident from its mention as equivalent to Yeor, "the river," and as a great river, where Isaiah says of Tyre, "And by great waters, the sowing of Shishor, the harvest of the river (מְנִי) [is] her revenue" (xxxi, 5); from its being put as the western boundary of the Promised Land (Josh. xiii, 9; 1 Chron. xxiii, 1), instead of the territory of Ephraim (Gen. xv. 18), and from its being spoken of as the great stream of Egypt, just as the Euphrates was of Assyria (Jer. ii, 18).

If, but this by no means certain, the name Nile, Nilo, be really indicative of the color of the river, it must be compared with the Sanskrit Niduk, "blue," especially, probably "dark blue," also even "black," and must be considered to be the Indo-European equivalent of Shishor. The signification "blue" is noteworthy, especially as a great conflux, which most nearly corresponds to the Nile in Egypt, is called the Blue River, by Europeans, the Blue Nile. See Nile.

2. Yeor, יֵהָרָ נ, ye'ōr, is the same as the ancient Egyptian ATUR, AUR, and the Coptic Eвро or Iuro. It is important to notice that the second form of the ancient Egyptian name alone is preserved in the later language, the second radical of the first having been lost, as in the Hebrew "har;" so that, on this double radical, it is probable the proper Semitic form was in use among the people from early times. Yeor, in the singular, is used of the Nile alone, excepting in a passage in Daniel (xii, 5, 6, 7), where another river, perhaps the Tigris (comp. x, 4), is intended by it. In the plural, יֵהָרָ נ, this name is applied to the branches and canals of the.
NILE

Nile (Ps. lxxvii, 44; Ezek. xxix, 3 sq.; xxx, 12), and perhaps the tributaries also, with, in some places, the addition of the names of the country, Misraim, Masoor, סֶֽנֶּגֶר (Isa. vi, 18, A. V. "rivers of Egypt"); בַּֽשְׁבַּיִּים (xix, 6, "brooks of defence");.xxxvii, 25, "rivers of the besieged places"); but it is also used of streams or channels, in a general sense, when no particular ones are indicated (see Isa. xxxiii, 21; Job xxviii, 10). It is thus evident that this name specially designates the Nile; and although properly meaning a river, and even used with that signification, it is probably to be regarded as a proper name when applied to the Egyptian river. The latter inference may perhaps be drawn from the constant mention of the Euphrates as "the river" but it is to be observed that Shihor or "the river of Egypt," is used when the Nile and the Euphrates are spoken of together, as if Teyr or could not be well employed for the former, with the ordinary term for river, nakĥr, for the latter. See STREAM.

3. "The river of Egypt," בַּֽשְׁבַּיִּים, is mentioned with the Euphrates in the promise of the extent of the land to be given to Abraham's posterity, the two limits of which were to be "the river of Egypt" and "the great river, the river Euphrates" (Gen. xv, 18). See EGYPT, RIVER OF.

4. "The Nachal of Egypt," בַּֽשְׁבַּיִּים, has generally been understood to mean "the torrent" or "brook of Egypt," and to designate a desert stream at Rhinocorus, now El-Arish, on the eastern border. Certainly אֶֽרְיִשְׁלָם usually signifies a stream or torrent, not a river; and when a river, one of small size, and dependent upon mountain-rain or snow; but as it is also used for a valley, corresponding to the Arabic wady, which is in like manner employed in both senses, it may apply like it, in the case of the Guadalquivir, etc., to great rivers.

This name has been held by some to signify the Nile, for it occurs in two cases parallel with those where Shihor is employed (Numb. xxxiv, 5; Josh. xv, 4, 47; 1 Kings viii, 65; 2 Kings xxiv, 7; Isa. xxxvii, 12), both designating the easternmost or Pelusiac branch of the river as the border of the Philistine territory, where the Egyptians likewise put the border of their country towards Kanaan or Kanaan (Canaan). It remains for us to decide whether the name signify the "brook of Egypt," or whether Nachal be a Hebrew form of Nile. On the one side may be urged the improbability that the middle radical should not be found in the Indo-European equivalents, and which it is not one of the most prominent letters; on the other, that it is improbable that nakĥr, "river," and nachal, "brook," would be used for the same stream. If the latter be here a proper name, Nilak must be supposed to be the same word; and the meaning of the Greek as well as the Hebrew name would remain doubtful, for we could not then positively decide on an Indo-European signification. The Hebrew word nachal might have been adopted as very similar in sound to an original proper name; and this idea is supported by the forms of various Egyptian words in the Bible, which are susceptible of Hebrew etymologies in consequence of a slight change. It must, however, be remembered that there are traces of a Semitic language, apparently distinct from Hebrew, in geographical names in the east of Lower Egypt, probably dating from the Shepherd period; and therefore we must not, if we take nachal to be here Semitic, restrict its meaning to that which it bears or could bear in Hebrew. See BROOK; RIVER.

5. "The rivers of Cush," יִֽשְׁבַּיִּים, are only mentioned in the extremely difficult prophecy contained in Isa. xviii. From the use of the plural, a single stream cannot be meant, and we must suppose "the rivers of Ethiopia" to be the confluent or tributaries of the Nile. Gesenius (Lex. s.v. יִֽשְׁבַּיִּים) makes them the Nile and the Astaboras. Without attempting to explain this prophecy, it is interesting to remark that the expression, "Whose land the rivers have spoiled" (ver. 7), if it apply to any Ethiopian nation, may refer to the ruin of great part of Ethiopia, for a long distance above the first Cataract, in consequence of the fall of the level of the river. This change has been effected through the breaking down of a barrier at that cataract, or at Sililis, by which the valley has been placed above the reach of the fertilizing annual deposit. But the verb יִֽשְׁבַּיִּים should rather be rendered "have cut up," and refers to the intersection of the alluvial country by the channels of the river. See GISON.

6. The Nile is sometimes poetically called a see, סֶֽנְגֶר (Isa. xlvii, 2; Nah. iii, 6; Job xii, 31), but we cannot agree with Gesenius, Theatra, s. v., that it is intended in Isa. xiv, 5: this, however, can scarcely be considered to be one of its names. See SEA.

7. By some the Gishon, גִּשְׁוֹן, one of the rivers of Eden, is thought to have been the Nile; but the boundaries of that locality were far away from Egypt. See GISON.

II. Course, General Description, and Characteristics of the Nile.—1. This great river, or rather its principal branch the White Nile (for its upper streams consist of several branches), according to one of the latest discoveries, has its origin in the northern end of the lake Victoria Nyanza, on the eastern side of it, which is situated about 36° south latitude, and which is known to have only one feeder of importance on its eastern side, viz. the Kiditee River, and none on the western. It is about 36° east of the Mountains of the Moon, and the issue of the Nile

Map of the Sources of the Nile.
from Victoria Nyanza presents the appearance of a small cascade, which was named by the late captain Speke "Ripon Falls," after the nobleman who presided over the Royal Geographical Society when his expedition was planned. According to Sir Thomas Baker, however, who visited that region in 1864, the real source of the White Nile is pure fresh water, rising in the mountains of Uganda near Lake Tanganyika, and passing through a vast desert which appears to be the largest in the world. From this point it flows about 1,000 miles north-west of the Victoria Nyanza. Mr. Stanley, the exploring correspondent of the N. Y. Herald, claims to have determined that the true source of the Nile is the Chambeshi, while according to others it is Lake Tanganyika, still farther south, which is the true source of the Nile. It is not yet fully determined. The Hindus call the source of the Nile Amara, the name of a district north-east of the Nyanza, which leads us to suppose that the ancient Hindus must have had some communication with both its northern and southern ends (Speke’s Journal of Discovery of the Source of the Nile, p. 466, 467, etc.).

Great, however, as is the body of water of this river, the longer of the two chief confluent, it is the shorter, the Brill el-Azrek, or Blue River, the Akasap of the ancients, which brings down the alluvial soil that makes the fertile oases of Egypt and Nubia. The Brill el-Azrek rises in the mountains of Abyssinia, and carries down from them a great quantity of decayed vegetable matter and alluvium. The two streams form a junction at Khartum, now the seat of government of Sudán, or the Black Country under Egyptian rule. The Brill el-Azrek is here a small rapid river, with high, steep mud banks like those of the Nile in Egypt, and with water of the same color; and the Brill el-Abiad is broad and shallow, with low banks and clear water. Farther to the north another great river, the Atbara, rising, like the Brill el-Azrek, in Abyssinia, falls into the main stream, which for the remainder of its course does not receive any other tributary. Throughout the rest of the valley the Nile does not greatly vary, excepting that in Lower Nubia, through the fall of its level by the giving way of a barrier in ancient times, it does not inundate the valley on either hand. From time to time its course is impeded by cataracts or rapids, sometimes extending many miles, until at the First Cataract, the boundary of Egypt, it surmounts the last obstacle. Below Syene it continues its course for 500 miles, until a little below Cairo the river divides itself into two branches, one flowing to Rosetta, the other to Damietta, containing between them the present Delta, at the apex of which was "the land of Goshen," where Jacob and his family had their settlement. Above the Delta its average breadth may be put at from half a mile to a mile, excepting where a tongue of land increases the distance. In the Delta the branches are usually narrower. Ancient authors speak of five, seven, and occasionally of innumerable mouths of the Nile; but the "septem ostia Nilii," mentioned by Virgil (Eneid, vi, 800) and other Roman writers, seven centuries after Isaiah (xi, 15) had prophesied regarding "the seven streams of the river," show that it was commonly recognised as having seven mouths at its exit to the Mediterranean Sea. The names of these are as follows: (1) The Canopic; (2) Bolbitine, at Rosetta; (3) Sebennitic, at Mendes; (4) Stetic; (5) Phantic, at Damietta; (7) The Pelusiac, which is the most eastern mouth of the seven.

As regards the geological formation of the river's bed, for several hundred miles, from the inner boundaries of the Delta to within a short distance of the First Cataract, this district is composed of "beach sand," what is known as "marine" or nummulitic limestone. Over this there is a later formation of the tertiary, which contains marine deposits and forests of dicotyledonous trees. Underneath, the limestone rests on a sandstone of permian or triasic age. The sandstone, in turn, is famous breccia de verde of Egypt; and the breccia is a group of various rocks, consisting of gneisses, quartzes, mica-schists, and clay-slates, which surround the red granite of Syene (Hugh Miller's Travels, p. 412, 413). The bed of the Nile is cut through these layers of rock, which in some places confines it on both sides, and even obstruct its course, causing the formation of rapids and cataracts. For scarcely have the waters of the White Nile, which come from the very heart of Africa to the Mediterranean, become confounded with those of the Blue Nile, which flows down from the mountains of Abyssinia to the eastward, when their united torrent is opposed by the sands and rocks of the great Sahara desert, and from that point the Nile flows along a daurious course through a desert of 800 miles until it reaches the Mediterranean Sea, without receiving a single tributary. Thus it dif-

fuses fertility and life over vast districts, always ex-

panding its waters, and never receiving any accession to them from the heaven above or the earth beneath; so that when it reaches Cairo the bulk and volume of its tide is scarcely one half of that which flows amid the rocks and cataracts of Syene (Osburn's Mon. Hist. of Egypt, i, 3).

In Upper Egypt the Nile is a very broad stream, flowing rapidly between high, steep mud banks, that are formed by the constant rush of the water, which gave rise to the ancient custom of time to time washing portions away, and stratified by the regular deposit. On either side rise the bare yellow mountains, usually a few hundred feet high, rarely a thousand, looking from the river like cliffs, and often honeycombed with the entrances of the tombs and temples, a great city of ancient Egypt. So that we can understand the meaning of that murmuring of the Israelites to Moses, "Because [there were] no graves in Egypt, hast thou taken us away to die in the wilder-

ness?" (Exod. xiv, 11). Frequently the mountain on either side approaches the river in a rounded promon-

tory, against whose base the restless stream washes, and then retreats and leaves a broad bay-like valley, bounded by a rocky curve. Rarely both mountains confine the river in a narrow bed, rising steeply on either side from a steep rock-cut channel through which the water pours with a rapid current. Perhaps there is a remote allusion to the rocky channels of the Nile, and especially to its primeval bed wholly of bare rock, in that passage of Job where the plural of Yeor is used, "He cutteth out rivers (בּנִים) among the rocks, and his eye seeth every precious thing. He bindeth the floods from overflowing" (xxviii, 10, 11). It must be observed here also the allusions to the Nile, especially to its animals and products, in this book, so that the Nile may well be here referred to, if the pas-

sage do not distinctly mention it. In Lower Egypt the chief differences are that the view is spread out in one rich plain, only bounded on the east and west by a range of low mountains, and, unlike the mountains above, though essentially the same,ke, and that the two branches of the river are narrower than the undivided stream. On either bank, during Low Nile, extend fields of corn and barley, and near the river-side stretch long groves of palm-trees. The villages rise from the level plain, standing upon mounds, often an-

cient sites, and surrounded by palm-groves, and yet higher dark-brown mounds mark where of old stood towns, with which often "their memorial is perish" (Psa. ix, 5). The villages are connected by small canals or lines of roads. During the inundation the whole valley and plain are covered with sheets of water, above which rise the villages like islands, only to be reached along the half-ruined dikes. The ac-
spect of the country is as if it were overwhelmed by a de-

sert; in the vast waste of the plain there is no sign of once al-
lude to this striking condition of the Nile. Jeremiah says of Pharaoh-Necho's army, "Who [is] this [that]
NILE

101

cometh up as the Nile [Yeer], whose waters are moved as the rivers? Egypt riseth up like the Nile, and [his] waters are moved like the rivers; and he saith, I will go up, I will march right up by the north, and I will go up to Babylon and destroy that which serveth me, and the inhabitants thereof" (xlvi, 7, 8). Again, the prophecy "against the Philistines, before that Pharaoh smote Gaza," commences, "Thus saith the Lord; Be hold, waters rise up out of the north, and shall be as an overflowing stream (nuziol), and shall overflow the land, and all that is therein; the city, and them that dwell therein" (xlvi, 1, 2). Amos, also, a prophet who especially refers to Egypt, uses the inundation of the Nile as a type of the utter desolation of his country. "The Lord hath sworn by the excellency of Jacob, Surely I will never forget any of their works. Shall not the time come that I shall punish even? no, the time cometh that I shall punish, saith the Lord, and make this city desolate; and the houses thereof become waste, and the dwell therein; and shall rise up wholly as the Nile (-hash); and it shall be cast out and drowned, as [by] the Nile (םִינָה זְרֵעָה) of Egypt" (viii, 7, 8; see ix, 5).

Of old the great river must have shown a more fair and busy scene than now. Boats of many kinds were ever passing along it, by the painted walls of temples, and the gardens that extended along the light summer path. The king sated a pleasure-galley, a square sail, white or with a variegated pattern, and many ears, to the little papyrus skiff, dancing on the water, and carrying the seers of pleasure where they could shoot with arrows, or knock down with the throw-stick the wild-fowl that abounded among the reeds, or en grin the fishes and jellies of the noblest lakes both of Egypt and the crocodile. In the Bible the papyrus-boats are mentioned; and they are shown to have been used for their swiftness to carry tidings to Ethiopia (Isa. xviii, 2).

2. The most remarkable and distinctive peculiarity of the Nile is its annual overflow, which is the great source of Egypt's fertility, and the failure of which necessarily causes famine: for Egypt may be truly termed "a land without rain," as was noted by Zechariah (xiv, 17, 18), though occasional showers are known to fall in Lower Egypt. The country is therefore devoid of the constant changes which make the husbandmen of other lands look always for the providential care of God. "For the land, whither thou goest to possess it, is not as the land of Egypt, from whence ye came out, where thou sowedst thy seed, and wateredst [it] with thy foot, as a garden of herbs: but the land, whither ye go to possess it, a land of brooks of water set up by the hand of the Lord, a place of brooks and valleys, and drinketh water of the rain of heaven; a land which the Lord thy God careth for: the eyes of the Lord thy God are [are] always upon it, from the beginning of the year even unto the end of the year" (Deut. xi, 10-12). The cause of the inundation was the occasion of great perplexity to the ancients; but it is now ascertained beyond all dispute to be the periodical rain of the tropics, the same cause which produces the inundations of the Indus and the Ganges. According to Herodotus (ii, 19), the Nile begins to increase about the summer solstice, and continues to rise for a hundred days, and then decreases for the same term, and continues low all the winter until the return of the summer solstice. This is confirmed by the reports of modern travellers. According to Pococke, the Nile began to rise at Cairo, A.D. 1714, June 30; A.D. 1715, July 1; A.D. 1728, June 30. "So precisely is the stupendous operation of its inundation calculated," says Bruce, "that on the 25th of September, only three days after the autumnal equinox, the Nile is generally found at Cairo to be at its highest, and begins to diminish every day after." At the Cataracts, however, the first rise is perceptible some time before the end of May or the beginning of June, which led Seneca to say that "the first increase of the Nile was observable about the islands of Phile." In proportion as we get farther south, we find the inundation commences earlier, so that at Khartoum, according to some, it is said to begin "early in April." In the beginning of the inundation the waters of the Nile acquire a green, stiinky appearance, occasioned by the vast lakes of stagnant water which are formed by the overflow. The inundation of the Nilotic province is a mirror of the whole Nile. These, having stagnated in the tropical sun for more than six months, are carried forward by the new inundation, and once more forced into the river. The continuance of this state seldom exceeds three or four days. The sufferings of those who are compelled to drink the water in this stage are very severe. But or twelve days elapse before the development of the last and most extraordinary change in the waters of the Nile, when it assumes the perfect appearance of a river of blood, which the Arabs call the Red Nile. It is not the result of the green mixture, at all deleterious, as the Nile water is always said to be more refreshing than during this period of the inundation. "Perhaps," says a modern traveller, from whom we have already quoted, "there is not in nature a more exhilarating sight, or one more strongly exciting to confidence in God, than that of the Nile. Day by day and night by night its turbid tide sweeps onward majestically over the parched sands of the waste, howling wilderness. There are few impressions I ever received, upon the remembrance of which I dwell with more pleasure, than that of seeing the first burst of the Nile into one of its great channels of life and motion. All nature shouts for joy. The men, the children, the buffaloes, gambol in its refreshing waters, the broad waves sparkle with shoals of fish, and fowl of every wing flutter over them in clouds. Nor is this all; the Nile is of service to the crocodile and the crocodile to the Nile. The moment the sand becomes moistened by the approach of the fertilizing waters, it is literally alive with insects innumerable. It is impossible to stand by the side of one of these noble streams, to see it every moment sweeping away some obstruction to its majestic course, and warming as it flows, the heart to expand with love, joy, and confidence in the great Author of this miracle of mercy." As all the wealth of the country may be said to depend on the inundation of the river, which Herodotus has condensed in this terse definition, "Egypt is the gift of the Nile," it is of the utmost importance to the inhabitants to register the periodical rise and fall of the overflow. This has been done for ages by means of an instrument termed a "Nilometer," or "Nilocone." Several Arabian authors mention that this was originally a column of eight faces of blue and white marble, of which the foot is on the same plane with the bottom of the river. This pillar is divided into twenty kicks of twenty-two inches each. Of these kicks the two lowermost are left without any division, to stand for the quantity of sludge which the water deposits there. Two kicks are then divided, on the right hand, into twenty-four digits each; then on the left, four kicks are divided into twenty-four digits; then on the right four, and on the left another four; again four on the right, which completes the number of eighteen kicks.
from the first division marked on the pillar, each peak being twenty-two inches. Thus the whole, marked and unmarked, amounts to something more than thirty-six feet English." As soon as the inhabitants at Cairo perceive the mixture of the rain-water from the tropics with the Nile at that city, they begin to announce the rise of the river, having then five peaks of water marked on the nilometer. When the whole eighteen peaks are filled, all the land of Egypt is fit for cultivation.

The lowest level of the water in the present day, which, according to the statements of the most experienced boatmen, does not change from year to year, and therefore represents the actual level of the Nile, independently of its increase by the falls of rain in the mountains in which its sources are situated. The mean rise above the lowest level at the present time is thirty-eight feet eight inches; and therefore in the time of Moris (nearly 2000 years B.C.) the mean height of the river at the cataract of Semne, during the inundation of the Nile, was twenty-three feet ten inches above the mean level of the Mediterranean (Versammlung der Kénigliche Preuss. Akad. der Wissenschaften, 1844). The inundations of the Nile are very various, and when deficient or excessive by even a few feet cause great damage and distress. The rise of the river during a good inundation is forty feet at the First Cataract, about thirty-six at Thebes, gradually decreasing until at the several mouths it does not reach above four feet. If the river at Cairo attain to no greater height than eighteen or twenty feet, the rise is scanty; if only to two or four more, insufficient; if to twenty-four feet or more, up to twenty-seven, good; if to a greater height, it causes a flood. Sometimes the inundation has failed altogether, as was doubtless the case in the seven years' famine during the vicereignty of Joseph. A hieroglyphic record of a famine in Egypt prior to the destruction of Sesostris I has been discovered at Thebes, and deciphered by Dr. Birch of the British Museum. The person entombed states that he was governor of a district in Upper Egypt, and is represented as saying, "When in the time of Sesostris I the great famine prevailed in all the other districts of Egypt, there was corn in mine." Bunsen supposes that this is a record of the "seven years' famine;" but, independent of the reign of Sesostris I, not agreeing with the time of Joseph's vicereignty according to Biblical chronology, the fact of there being corn in Upper Egypt during the great famine has been disapproved by that memorable 'dearth' recorded in Scripture, which "was in all lands, and over all the face of the earth, while in all the land of Egypt there was bread." There is mention in the Chinese annals of a famine which lasted seven years, during the reign of the emperor Ching-taug, who was on the throne at the time of the descent of the Israelites to Egypt, and which very probably refers to the "seven years' famine" mentioned in Scripture (History of China, by Martineau, Complet, and Du Halde). There is a record also of a "seven years' famine" in Egypt during the reign of the Pharaoh Khallfeh El-Mustansir bilib, when the rise of the Nile was not sufficient to produce the crops of the country. It was probably to the inundations of the river that the Egyptian priest referred in his conversation with Solomon when he told him that "there had been many inundations before" the one special deluge of which Solomon had made mention (Plato, Timaeus, ch. v).

As the river Nile, especially during the inundation, is always impregnated with alluvium, which it deposits on the soil at the rate of nearly five inches in a century, it has been said by some in the sceptical school to show that man has been a denizen of this earth for many thousand years prior to the time which Scripture allows. Some excavations have been made at the suggestion of Mr. Leonard Horner—who does not attach any importance to the time of Adam, observing, "If there be no fallacy in my reckoning, this fragment of pottery, found at a depth of thirty-nine feet, must be held to be a record of the existence of man 13,571 years before A.D. 1854." In the boring at Bes-
soussie fragments of burned brick and pottery were brought up from a depth of fifty-nine feet. The late Baron Bunsen considered that this discovery "established the fact that the Egyptian civilization was enjoyed by men who made use of pottery about 11,000 years before our Christian era" (Egyp's Place in Univ. Hist. vol. ii, p. xxiii). The most distinguished writers have, however, decided against this conclusion. Sir Gardner Wilkinson observes that "as there is no possibility of ascertaining how far the statue stood above the reach of the inundation when first put up, we have no base for any calculation." Champollion, the father of Egyptology, wrote, "I have demonstrated that no Egyptian monument is really older than the year 2200 before our era." Sir Charles Lyell, in his recent work on The Geological Evidences of the Antiquity of Man, tells us that if such boriings were made where an arm of the river had been silted up, the fragments of pottery and brick might be very modern; and he considers that "in every case where we find monuments buried to a certain depth in mud, as at Memphis and Heliopolis, it represents the era when the city fell into such decay that the ancient embankments were neglected, and the river allowed to inundate the site of the temple, obelisk, or statue." "An old indigo planter" relates his experience in a letter to the Times (June 9, 1870) on the discovery of fragments of pottery in the bed of the Ganges: "Having lived many years on its banks, I have seen the stream encroach on a village, undermining the bank where it stood, and deposit, as a natural result, bricks, pottery, etc., in the stream. It is certain that the depth of the stream where the bank was breaking was above forty feet; yet in three years the current of the river drifted so much that a fresh deposit of soil took place over the debris of the village, and the earth was raised to a level with the old bank." What took place on the Ganges might have equally occurred on the Nile. The fact also that the Grecian honeysuckle was unexpectedly discovered on some of these supposed pre-Adamite fragments, together with the supposition that burned brick is a certain indication of Roman times, completely sets aside the arguments which infidelity would faintly draw from any discovery supposed to be hostile to the supremacy of God's Word.

With reference to the qualities of the water from the Nile, all antiquity acknowledges its excellence; and the Egyptians drank it without ever being injured by the quality. Aristoph. in the Hist. Anim, vii, 4, says, "they give birth to three or four children at a time, nor is this of rare occurrence." And Pliny (Nat. Hist. vii, 8) observes, "that three born at a birth is undoubted; though to bear above that number is considered as an extraordinary phenomenon except in Egypt." The peculiar sweetness of the water is due to the purifying influence of the mud with which it is at all times charged; but which readily settles or is removed by filtration. So valuable are the properties of the Nile water esteemed by the habitans that they frequently preserve it in sealed vases, and drink it when it is old with the same pleasure that we do old wine. There is an anecdote of Pescennius Niger, who, when his soldiers in Egypt complained of wanting water, exclaimed, "What! do you long for wine, when you have the water of the Nile to drink!" It is recorded on a monument of the Emperor Claudius at Philadelphia, king of Egypt, B.C. 265-257, when he married his daughter Berenice to Antiochus, king of Syria, that he used to send her water from the Nile, which alone she was able to drink.

III. Divine Honors paid to the Nile.—Considering the paramount importance of these communications, from a religious point of view, it was not unnatural for the ancient Egyptians to regard the river in very much the same light as that in which the Ganges is viewed by the Hindoos. Heliodorus (Ethiop. lib. ix) tells us that the Egyptians paid divine honours to the river, and revered it as the first of their gods, or he adds, "They declared him to be the river of heaven, since he watered the earth without the aid of clouds or rain." The god of the Nile, according to Osburn, was an impersonation of Nu or Noah. His name was written in the hieroglyphics hp-mu, and on the most ancient monuments hr-ro-mu, signifying "the waters whose source is hidden." This name often occurs in monuments of the eighteenth and nineteenth dynasties, where he is represented as a fat man of different colors, with a cluster of water-plants on his head, and holding in his hands stalks and flowers, or water lilies, indicative of the inundation at Philæ he is termed "the father of the fathers of the gods." He was often represented with the Nile issuing from his mouth. On the tomb of Pharaoh Rameses III there is a device in which the river in its three different courses is shown. Three of the streams diverged, the largest of which is divided into smaller streams, and on the ground, showing that this god underwent three different changes in the four districts of the four regions at the three states of the Nile, which were considered accordingly, so that the deity was shipped in a different image at each change of the river. The principal festival of the Nile was at the summer solstice, when the inundation was considered to have commenced; at which season, in the dog days, by a cruel and idolatrous custom, the Egyptians sacrificed red-haired persons, principally foreigners, to Typhon, the peculiar god of the dog-star, who was worshipped chiefly at Heropesis, Busris, etc., by burning them alive, and scattering their ashes in the air for the good of the people (Plutarch, Ias. et Osr. i, 38). Hence Bryant sagely conjectures that these victims may have been chosen from among the Israelites during their sojourn in Egypt! See NILUS.

IV. Scriptural Prophecies respecting the Nile.—In addition to the numerous incidental allusions noticed above, various instances are given where the history of the Egyptian character are mentioned in Scripture as having happened in connection with the Nile. The seven well-favored and ill-favored kine of which Pharaoh dreamed, in the dream which Joseph interpreted, are said to have been sent through the land of Egypt (Gen. xl. 6-7). Pharaoh's daughter, being a most lively figure, representing things exactly conformable to the state of the country, enriched as it was by the inundation of the Nile; and without this the beasts would have had no grass to feed them, much less to fatten them. The banks of the river are enlivened by the women who come down to draw water, and, like Pharaoh's daughter, to bathe, and by the herds of kine and buffaloes which are driven down to drink and wash, or to graze on the grass of the swamps. It was into this river that the male children of the Israelites were cast by command of the cruel king who had recently ascended the throne, and who "knew not Joseph" (Exod. i, 22). The mother of Moses hid her child in an ark of bulrushes, which she laid in the flags by the river's brink, beside which Pharaoh's daughter came to bathe, when her maidsens were present, it was walking along the bank, and thus the child was preserved. Two of the plagues which God inflicted upon the Egyptians were intimately connected with the waters of the Nile which they esteemed so precious (Exod. vii, 17, 18; viii, 1-3). Nearly a thousand years later in Israel's history Isaiah was inspired to well justify the name of Egypt in the prediction of the Nile: "The Egyptians will I give over into the hand of a cruel lord, . . . and the river shall be wasted and
dried up... The paper reeds by the brooks shall wither and be no more. The fishes shall also mourn, and all they that carp against the brooks shall lament, and they that spread nets upon the waters shall languish (Isa. xix, 4-5). Though history shows how truly the prophecy respecting the Egyptians being given over into the hands of cruel lords (the word is in the plural number, lords, though the adjective rendered cruel is singular) was accomplished in the time of petty tyrants who ruled in Egypt, according to Herodotus, about a century after the time of Isaiah, the expression may also be understood to denote the decay of Egypt's strength by metaphors taken from the decrease of the river Nile, upon the overflowing of which the plenty and prosperity of the country depended. The story of the ford of Egypt is described (Ezek. xxix, 3) as "a dragon lying in the midst of many waters," and boasting of his strength, as his predecessor did in the days of Moses, "My river is my own," etc., which was fulfilled in the person of Pharaoh-hopra (mentioned in Jer. xlvii, 8), or Apries (as he was called by the Greeks), who profanely boasted, as Herodotus (ii, 169) tells us, that "there was no God who could cast him down from his eminence." In the Thebaid crocodiles are found, and during Low Nile they may be seen basking in the sun under the sycamores, etc. The paper reeds are said in the prophecy to grow by the "mouth of the brooks," i.e. by the side of the brooks; expressed elsewhere (Gen. xxi, 3; Exod. ii, 3) by "the brink of the river," when referring to the Nile. Paper was an invention of the Egyptians, and was first made of a reed which grew upon the banks of the Nile, as Ovid (Metamorph. i) describes it. Papyrus septurnis ruminat Nil."

The monuments of the early dynasties represent the Nile as a stream bordered by flags and papyrus-reeds, the covert of innumerable wild fowl, and bearing on its waters the flowers of the various-colored lotus. At the present time there are scarcely any reeds or water-plants to be seen in Egypt—the papyrus having become extinct, and the lotus being now unknown—as the prophet distinctly foretold they should be "no more." When it is recollected that the water-plants of Egypt in Isaiah's time and much later were so abundant as to be a great source of revenue to the country, the exact fulfillment of his predictions is a valuable evidence of the truth in reference to the "sure word of prophecy." We have already seen how much foretold the coming of the Jews and of the rise of the Sabaean and the Nabataean empires; and although this was doubtless a natural result of the wasting of the river, its cause could not have been anticipated by human wisdom. "The Nile," says Dio- crates Siculus (lib. i), "abounds with incredible numbers of all sorts of fish," which once formed a main source of "revenue" (Isa. xxi, 3), as well as amusement to the inhabitants of the country. The Israelites in the desert looked back with regret to the fish they had left behind them. "We remember the fish which we did eat in Egypt freely, but now our soul is dried away, and there is nothing at all beside this meat before our eyes" (Num. xi, 4, 5). The fisheries of Egypt have long ceased to be of the productive nature they once were, in accordance with the prophetic announcement that the "fishes shall mourn and all the anglers shall lament for their locusts." There is one more prophecy in Isaiah respecting the Nile, the fulfillment of which is still in the future: "When Jehovah shall set his hand again the second time to recover the remnant of his people which shall be left from Assyria, and from Egypt, and from the islands of the sea, and shall again bring upon the house of David, the king, and upon his mighty wind shall he shake his hand over the river, and shall smite it in the seven streams, and make men go over dryshod" (Isa. xi, 11-15). Now, considering that it is not probable that R. Kylau and others have understood this of the Egyptians, it is clearly necessary to hoping to make a comparison of the parallel passages (Isa. xix, 5; xxiii, 9), that none other than the river Nile can be intended. As by the "tongue of the Egyptian sea" must be meant the bay of the Mediterranean Sea into which the Nile, and not the Euphrates river, "the source of the streams," flows, so by the "seven streams" it must necessarily point to that famous river, which in ancient and modern times alike has been recognised as the "seven-mouthed Nile." Now, as for a long period there, are no navigable and unobstructed branches but the two great ones, the White Nile and the Blue Nile, which originate in Ethiopia. This change was prophesied by Isaiah: "And the waters shall fail from the sea, and the river shall be wasted and dried up" (xix, 5). The prophets not only tell us of the future of the Nile, they speak of it as it was in their days. epicurus likens Pharaoh to a crocodile, fearing no one in the midst of his river, yet dragged forth with the fish of his rivers, and left to perish in the wilderness (xxix, 1-5; comp. xxxiii, 1-6). Nahum thus speaks of the Nile, when he warns Nineveh by the ruin of Thebes: "Art thou better than No-Amon, that wast among the rivers, [that had] the waters round about it, whose rampart [was] the sea, [and] her wall [was] from the sea?" (iii, 8). Here the river is spoken of as the rampart, and perhaps as the support of the capital, and the situation, most related to the Egyptian coast, in the city of Thebes, is indicated. See No-AMMON. But still more striking than this description is the use which we have already noticed of the inundation, as a figure of the Egyptian armies, and also of the coming of utter destruction probably by an invading force. In the New Testament there is no mention of the Nile. Tradition says that when our Lord was brought into Egypt his mother came to Heliopolis. See Os. If so, he may have dwelt in his childhood by the side of the sacred river which witnessed so many events of sacred history, perhaps the coming of Abraham, certainly the rule of Joseph, and the long oppression and deliverance of Israel their posterity.

Ruperti et Schlichtholtz, Brem. 1794); Hartmann, Geogr. von Afrika, i, 72 sq.; Uberti, Geogr. von Afrika, i, 97 sq.; Le Pere, id. xviii, i, p. 555 sq.; Beke, Sources of the Nile (Lond. 1860); Werne, Sources of the White Nile (Ibid. 1849); Baker, Zinc of the Nile (Ibid. 1860); McCulloch, Guerzette, & c.; Smith's Dict. of the Bible, s. v.; Smith's Bible Dictionary of the Bible; and the recent works there cited.

Niles, Nathaniel, a Congregational minister, was born April 3, 1741, at South Kingston, R. I. He graduated at the College of New Jersey in 1766; studied theology under Dr. Bellamy: entered the ministry, but never settled in any place as pastor. Residing for some time in Norwich, Conn., he was several times sent to the state legislature. After the Revolution he settled in Orange County, Vt., then a wilderness, and there spent his life, filling many important public stations, being a judge in the supreme court; speaker in the House of Representatives, 1784; member of the United States Congress, 1791 to 1793; and six times presidential elector. He wrote in his own house and in-school-books around the country, seldom receiving any compensation for his labors, which were continued until his strength failed. His death occurred Oct. 31, 1828. Mr. Niles published Four Discourses on Secret Prayer (1778);—Two Sermons on Sin and Its Consequences (1772, 1773), etc.—Two sermons entitled The Perfection of God the Fountain of Good (1777):—A Sermon on vain amusements; and A Letter to a friend concerning the doctrine that inipement sinners have the natural power to make themselves new hearts (1809); besides numerous articles for newspapers and the Theological Magazine. See Sprague, Amnels of the Amer. Pulpit, i, 716.

Niles, Samuel (1), a Congregational minister of colonial days, was born at Block Island, Mass., May 4,
NILUS (Νιλός), Sr., of Constantinople, is the ascetic and the monk, was a religious writer of the 9th century. He belonged to one of the most distinguished families in Constantinople, and rose to be governor of that city. He subsequently resigned his office, and with his son Theodulus retired to a monastery on Mount Sinai, while his wife and daughter went into Egyptian nunneries. His son was killed in an attack of the Arabians and the Berbers, and the convent he had founded was destroyed by the Persians. His body was burned and his ashes thrown into the Nile. His name is a common one in Egypt, and the whole of his body has been preserved in a whole. The best edition is that of Suarez, entitled Sotposium patris nostri Nilob abbatiae Tractatus seu episcopa ex codicibus manuscriptis Vaticanis, Cassinianis, Bibliothecis, Barberinianis et Alampiatae erutus. J. M. Suarezius Graecae nunc primum edito, Latine versis ac notis illustratus (Rome, 1693, fol.).

Nileus, the great river of Egypt, which even in the most ancient times received divine honors from the inhabitants of that country. This deity was more especially worshipped at Niopolis, where he had a temple. Herodotus mentions the priests of the Nile. Lucian says that its water was a common divinity to all the Egyptians. From the monuments it appears that even the kings paid divine honors to the Nile. Champollion refers to a painting of the time of the reign of Rameses II, which exhibits this king offering wine to the gods of the Nile, who in the hieroglyphic inscription is called Isis, the mother of Osiris, and the guardian of the passage which contains the praise of the god of the Nile represents him at the same time as the heavenly Nile, the primitive water, the great Nilus whom Ciceron, in his De Natura Deorum, declares to be the father of the highest deities, even of Ammon. The sacredness which attached to the Nile is one among the ancient Egyptian traditions is still preserved among the Arabs who have settled in Egypt, and who are accustomed to speak of the river as most holy. Mr. Bruce, in his travels in Abyssinia, mentions the Agowa Geer, Geeset, or Sef, the first of which terms signifies father. It is also called Ab, “father,” and has many other names, all implying the most profound veneration. The idolatrous worship may have led to the question which the prophet Jeremiah asks: “What hast thou to do in the way to make me tread on the sanctuary of the land?”

Niles, Samuel (2), a Congregational minister, son of the preceding, was born Dec. 14, 1743, at Braintree, Mass., where his father was then pastor. Niles, Jun., graduated at the College of New Jersey in 1769; studied under Dr. Bellamy; entered the ministry Nov. 7, 1770, and was ordained, Sept. 25, 1771, pastor in Abington, Mass., where he remained until his death, Jan. 16, 1814. He published two occasional sermons. See Sprague, Annals of the Amer. Pulplt., i, 718.

Niles, William Walker, son of Judge Nathaniel Niles, of Vermont, was born at West Fairlee Nov. 29, 1786; graduated at Dartmouth College, studied at Andover Theological Seminary, entered the ministry of the Congregational Church, and subsequently took orders in the Protestant Episcopal Church. He died at LaFayette, Ind., in 1854. He was a zealous advocate of the cause of temperance.

Nilo, an anniversary festival among the ancient Egyptians in honor of the tutelary deity of the Nile. Helioborus alleges it to have been one of the principal festivals of the Egyptians. Sir J. G. Wilkinson thus describes the Nile: "It took place about the summer solstice, when the river began to rise and the anxiety with which they looked forward to a plentiful inundation induced them to celebrate it with more than usual honor. Libanius asserts that these rites were deemed of so much importance by the Egyptians that unless they were performed at the proper season and in a becoming manner by the persons appointed to this duty, they felt persuaded that the Nile would refuse to rise and inundate the land. Their full belief in the efficiency of the ceremony secured its annual performance on a grand scale. Men and women assembled from all parts of the most populous towns, the towns and the villages, grand festivities were proclaimed, and all the enjoyment of the table were united with the solemnity of a holy festival. Music, dance, and appropriate hymns marked the respect they felt for the deity; and a word of comfort or a prayer was passed by the priests through the villages in solemn procession, that all might appear to be honored by his presence and aid, which invoked the blessings he was about to confer." Even at the present day the rise of the Nile is hailed by all classes with excessive joy. See Nile.
and was poisoned by Stephania, the widow of Crescentius. When St. Nilus died, Sept. 28, A.D. 1002, he despaired his brethren to bury him in peace, and secret the place where they laid him. This they did; but his disciple, Bartholomeo, built the convent which Nilus had not wished to do, and received the gifts he had refused. The magnificent convent and church of San Basilio of Grotta Ferrata was built, and St. Nilus is regarded as its founder. The rule is that of St. Basil, and their mass is recited in Greek, but they wear the Benedictine habit as a dependency of Monte Cassino. The finest Greek library in all Italy was here, and is now in the Vatican, and Julius II changed the convent to a fortress. In 1610, Domenichino was sent by cardinal Odoardo Farnese to decorate the chapel of St. Nilus, which he did with paintings from the life of the saint.

Nilus of Rhodes, an Eastern prelate of note, flourished as metropolitan of Rhodes about A.D. 1600, and was a native of Chios. He was the author of several works, of which the most important is a short history of the nine ecclesiastical councils, published by Justellus as an appendix to the Novocomum of Photius (Paris, 1618, 4to), by Voelius and Justellus in Biblioth. Jur. Canonicum (1661, fol.), ii, 1155, and by Harlouin, Concilia, v, 1472. Nilus also wrote some grammatical works, of which an account is given by Passow, De Nilo, grammatico ad hue graecam quae grammaticae antiquae graecorum scriptor. (Vratissl. 1831—32, 4to).

Nimbus (from the Latin, cloud, hence glory) is the name given in sacred art to the disk or halo which encircles the head of the sacred personage who is represented. It appears universal in those religions of which we possess any artistic remains—the Indian, the Egyptian, the Etruscan, the Greek, and the Roman. It appears on Hindu monuments of the most remote antiquity. The Hindu goddess Maya is surrounded by a semi-aureole of light, and from the top of her head-dresses and the neighborhood of her temples issue groups of stronger rays. The coincidence of this decoration with the Christian cruciform nimbus may be accidental. It occurs likewise in Roman sculpture and painting. The emperor Trajan appears with it on the arch of Constantine; in the paintings found at Herculaneum it adorns Circe as she appears to Ulysses; and there are many examples of it in the Vatic of the Vatican. Hence its origin is involved in some obscurity; but a consideration of its various changes of form leads to the conclusion that it originally meant to indicate light issuing from the head. The importance attached to an appearance of that kind, in remote times, as an augury of good, appears in many classical legends. It is illustrated in the second book of the Iliad by the flame descending upon the head of the young Jules, which Archilochus, verses it in religious coun- lism, s.w with joy, and which proved to be an augury of good, though the other bystanders were alarmed at it.
NIMBUS

"Ecce levis summo de vertice eius null
Fundiere impen apice, tacitu innoxia molles
Lambiri flamma comas, et circum tempora pass.
Nos paviti trepidare menti, cernimus fragraneum
Excurre, et sanctos retinguerre fonsibus ignes."

In the Hebrew Scriptures we trace, in the absence of representations, the same symbolized idea in the light which shone upon the face of Moses at his return from Sinai (Exod. xxxiv, 29-35), and in the lights with which the Lord is clothed with a garment (Psa. ciii, 1, Vulg.; civ, 1, Auth.Vers.); and in the N. T. in the Transfiguration of Christ (Luke ix, 31), and in the "crowns" of the just, to which allusion is so often made (2 Tim. iv, 8; 1 Pet. v, 4; Apoc. iv, 4). Nevertheless, the nimbus, strictly so called, is comparatively recent in Christian art. It was originally given in Christian art to sovereigns and allegoric personages generally as the symbol of power or distinction; but with this difference, that around the heads of sainthood and orthodox kings or emperors it is luminous or gilded; round those of gentile potentates it is colored red, green, or blue. About the middle of the 8th century it begins to appear, and earliest on these glasses, as the special attribute of Christ; later it was given to the heads of angels, to the evangelists, to the other apostles, and finally to the blessed Virgin and all saints.

Antique Representation of the Cure of the Palmied Man.

but not as their invariable attribute till the 7th century (see Buonarroti, Vosi Antichi). What must seem strange, however, is that the nimbus does not appear at all on the sarcophagi, the most ancient of Christian monuments. This, together with the fact that the nimbus did not come into constant use in the West until the 8th century, leads to the supposition that it was borrowed by the Christian Church from the classical customs referred to above. After the 6th century we find the nimbus very frequent in Christian symbolism, more particularly in the Eastern Church, where it was far more generally used, until the cultivation of sacred art by the Western Church made it almost a necessary appendage of all representations of God or of the saints.

Mosaic in St. Aquilinias at Milan.

In connection with the nimbus may also be mentioned two analogous forms—the Aurole and the Glory. The former is an illumination surrounding not the head only, but the entire figure. If the figure be upright, the aureole is commonly oval, when it is called the resaca plate, and is supposed to contain an allusion to the ichtyys. With a seated figure it becomes circular, and is occasionally divided by radiating bands, in the form of a wheel; sometimes it takes a quatrefoil form. It is commonly gold, but occasionally also is in colors. The glory is a combination of the nimbus and the aureole, and is chiefly seen in Byzantine pictures, and those of the early South German school.

The Latin word nimbus appears to agree in significations with the Greek ἄφαίρης, of which ἄφαρ is the original root, and which is used to express snow, shower,
and even sometimes hail; it also signifies the place in which they are formed, i.e. clouds. Isidore of Seville, in his *Origines*, describes the nimbus as a transverse band of gold, sewed on the veil, and worn by women on their forehead. The glory is constantly adopted by artists, both in painting and sculpture, as a characteristic attribute of the Saint. The term also signifies the entire figure. As an attribute, it serves to denote a holy person, in the same manner as the crozier or the sceptre distinguishes a bishop or a king. The etymology of the word has been little regarded by artists, for the nimbus, which ought always to have the character of a cloud, and is even frequently depicted as a circular halo, assumes the form of a circular disk, sometimes opaque, sometimes luminous, and sometimes transparent. It has the shape of a triangle or a square; that of several jets of flame; or of a star, with six, eight, twelve, or some other number of rays. It is, therefore, a symbol of divine retribution, and is used in the iconography of the Virgin. There is scarcely, perhaps, a single instance in which the shape of the nimbus agrees entirely with the idea which that word seems intended to convey. See Didron, Christian Iconography, i, 22 sq.; Siegel, Christliche Alterthümer, i, 406, 457; ii, 301 sq.; Walcott, Sacred Architeture, i, 261, 262; Martigny, Dict. des Antiquités Chrét., p. 435-437.

**Nimetulahtes**, an order of Turkish monks, so called from their founder, Nimeta-lahi, famous for his doctrine and the austerity of his life. The Nimetulahtes originated in the 77th year of the Hegira, and are not represented beyond the territory of the extensive eastern Asiatic countries. They assembled once a week to sing hymns in praise of God. The candidates for this order are obliged to continue shut up in a chamber for forty days, where their daily allowance is but four ounces of food, and no one is permitted to visit them. At the end of this fast the other devotees take the novice by the hand and perform a kind of dance, in which they make several extravagant gestures. During this exercise the novice commonly falls down in a trance, and at such time the Mohammedans say he receives some wonderful revelations. See Broughton, Hist. of Religion, s.v.

**Nim'raḥ (Heb. Nim'raḥ, נֵימַרְחַ), assigned by both Gesenius and Fürst to a root signifying limpid, and different from that of נַמָּרָה, a panther; Sept. Ναμπρα, τ. v., Ναμπρα, Αγβρα, a place mentioned, in Numb. xxxii, 36, among those which formed the districts of "the land of Jazer and the land of Gilead," on the east of Jordan, petitioned for by Reuben and Gad. These towns appear, from the way in which they are grouped, to have been the remains of the Israelites' encampment in the plain of Moab. It is manifestly the same city which is afterwards mentioned as having been rebuilt by the Gadites, and which is called Beth-nimrāḥ (ver. 36). The prophet Isaiah and Jeremiah, in pronouncing a curse upon Moab, say, "the woe of Nimraḥ shall be desolate" (Isa. xxv, 6; Jer. xlviii, 34); and they group Nimrāḥ with some of the same places mentioned in connection with it by Moses, as Hebron and Elea-leh; there can be no doubt, therefore, that the same town is referred to. It is worthy of note that the name Nimraḥ and Nimrāḥ occur in several localities east of the Jordan (Porter, *Hand-book*, p. 508, 510, 520); but most of these are not in the required position. The statements of Eusebius and Jerome regarding this city are confused and contradictory. In the *Onomasticon* (s. v. Nimraḥ), Eusebius says of Nēβra that it is "a city of Reuben in Gilead, now a large village in *Katana* (νυφιον), called Aborina." There must be a corruption of the text here, for Jerome writes the name Nēmraḥ, and says it is still a large village, but does not give its locality. Of Nēmraḥ (Eusebius, *Neapolis*), both state that it is now a village called Aborina, in the south of Gilead, north of Zoar. But under Bethannahm (Eusebius, *Bethannahm* or *Bethannahm*), which they identify with Nimraḥ, they say that "it is this day the village of Bethannahm in the fifth mile north of Libias." All these notices may have been originally intended for the same place, and the corruption of the text has created the confusion (Rendel, *Palaestina*, p. 649, 650). About two miles east of the Jordan, near the road from Jericho to es-Salt, are the ruins of Nimrā, on the banks of a wady of the same name. The ruins are now desolate, but near them are copious springs, and in the vicinity of the place there is a monument of the entire figure. As an attribute, it serves to denote a holy person, in the same manner as the crozier or the sceptre distinguishes a bishop or a king. The etymology of the word has been little regarded by artists, for the nimbus, which ought always to have the character of a cloud, and is even frequently depicted as a circular halo, assumes the form of a circular disk, sometimes opaque, sometimes luminous, and sometimes transparent. It has the shape of a triangle or a square; that of several jets of flame; or of a star, with six, eight, twelve, or some other number of rays. It is, therefore, a symbol of divine retribution, and is used in the iconography of the Virgin. There is scarcely, perhaps, a single instance in which the shape of the nimbus agrees entirely with the idea which that word seems intended to convey. See Didron, Christian Iconography, i, 22 sq.; Siegel, Christliche Alterthümer, i, 406, 457; ii, 301 sq.; Walcott, Sacred Architeture, i, 261, 262; Martigny, Dict. des Antiquités Chrét., p. 435-437.

**Nim’tim, the Waters of (Heb. Nim’tim, נִימְטִימָ), prob. plur. of Nimraḥ [q. v.], i.e. limpidity; according to others, pantiers; Sept. in Isa. Νιμπρα, τ. v. Νιμπρα and Νεβρα; in Jer. Νεβρα, τ. v. Νεβρα, a stream or brook (not impossibly a stream with pools) within the country of Moab, which is mentioned in the denumination of that nation uttered, or quoted, by Isaiah (xxv, 6) and Jeremiah (xlviii, 34). From the former of these passages it appears it has been famed for the abundance of its grass. It is doubtless the same with the Beth-nimrāḥ (q. v.) of Num. xxxii, 36. A name resembling Nimrāḥ still exists at the south-eastern end of the Dead Sea, in the Wady en-Nemeirah and Būrj en-Nemeirah, which are situated on the beach, about half-way between the southern extremity and the promontory of el-Lissan (De Saulcy, Voyages, i, 284, etc.; Setteens, ii, 394). This may be the Bēthnēmarim of Eusebius and Jerome. See NIMRĀAH.

**Nim’ro’d (Heb. Nimro’d, נִימְרָוד), probably from the Persic Nabhor, i. e. Lord; which corresponds to the Sept. Νεβρα, τ. v. (Nebrois, Νεβροις), the name given by Moses to the founder of the Babylonian monarchy (Gen. x, 10; comp. Hegewisch, *Ueber d. Aramäer*, in the *Berl. Münstcrb.,* 1794, p. 216 sq.). B.C. cir. 2450.** The name Nimro’d makes him the son of Cush (on the omission of his name among the children of Cush, ver. 7, see Rosemiller on ver. 10), an origin brought by some to indicate that the original people of Babylon came from the south (comp. Euseb. *Chron. Armen. i*, 20 sq.; Tuch, *Gen. p. 200*, the Egyptian or Hamitic region, expelling the Semitic peoples (Asshur) from Shinar, and built Babylon, then, overflowing northward, founded Nineveh. (In Gen. x, 11 the marginal reading of the A. V. is preferable: ניווֹד ינ, went forth to Assyria [see Northeimer, *Hebr. Gram. ii, 95*].) Nimro’d was a mighty hero (יווּד, Gen. x, 8) and hunter before the Lord (comp. Schiller, *Kleine Pros. Schrif. i, 378 sq.*). The later Oriental traditions enlarge this account. We have Nimro’d the builder of the tower of Babel, which he represents as an act of blasphemous impiety. This arises from the old etymology of the name (as if from נִי, to rebel; Gesen. *Theatr. s. v.*), and agrees with the remarkable fact, that, according to the Persian astrology (Chron. Pasch. p. 58; Celten, Hist. p. 14 sq.; comp. Hyde, *Ad Ulysshep. p. 84 sq*.; the constellation of the *Gromm*—that is, Orion [q. v.]—was named from Nimro’d; and some have identified Nimro’d with the Greek Orion (comp. Movers, *Phön. p. 471; Baur, *Amos*, p. 351), who was also a giant (Odys. xi, 509 sq.; comp. *Hyde, Ad Ulysshep. p. 84 sq*.; *Oceanis*) and a mighty hunter (Odys. xi, 574). The Hebrew *בֹּז* (bōz) is rendered Orion (Isa. xiii, 10; Job xxxiii, 31) by the Syriac and the Sept. The word means a fox, an impious person, applied naturally to a proud blasphemer; and the *bāzim* or "bands of Orion" (Job xxxiii, 31) may be explained in the same way (see Michael, *Spect. i, 269 sq*.; *Scheffer, Einr. p. 428 sq*.). All we know of him serves to place Nimro’d in the earliest period of Asiatic antiquity, and he cannot be regarded as a mere astronomical figure. But
The strongest opinion is that of Von Bohlen (Genesis, p. 126), who makes him the same with Merodach-Baladan, King of Babylon (Babylon; cf. Diodor., viii. 36, note). The only subsequent notice of the name Nimrod occurs in Mic. vi. 6, where the "land of Nimrod" is a synonyme either for Assyria, just before mentioned, or for Babylonia.

There is no ground for regarding Gen. x. 9-11 as a later interpolation, an opinion maintained by Vater, Schumann, and others, and virtually adopted by Prof. Rawlinson. Nimrod is there briefly characterized thus: "He began to be a mighty one in the earth. He was a mighty hunter before the Lord: wherefore it is said, Even as Nimrod before the Lord." This narrative is so brief that it is rather obscure. For the Hebrew word rendered "mighty" the Sept. gives yiqqéo, as if in allusion to his physical stature in connection with his power, or to Gen. vi. 4, as if the old antediluvian Titans had been reproduced in Nimrod. It is hard to determine in what sense the phrase a “mighty one” or a “mighty hunter” is used. If the name Nimrod be a Semitic one, it then plainly means “let us rebel or revolt;” but if it be, as some suppose, a Persian word, its meaning is at present unknown. Much depends on the sense of the phrase "before the Lord." Many, like Perizonius, Bochart, and others, give it only an intensive meaning—Deo judici, or quasi maxime—that is, in the Lord’s estimation he was a mighty hunter. But with Hengstenberg we demur to the notion that the Hebrew superlative absolute can be expressed only by the Greek epithet (as in Gen. vii. 7). The phrase is by no means parallel to the so-called absolute superlative in such phrases as “trees of the Lord” (Ps. cxv, 16), or “a city great to God” (Jonah iii, 9), or “a child fair to God” (Acta vii, 20). The instances quoted by grammarians and lexicographers will not sustain the usage, and Northheimer shrinks from the full vindication of it (Heb. Gram., p. 791). For example, the phrase occurs in Gen. xxvii, 7, “That I may bless thee before the Lord,” that is, in his presence and with his seal and approval. A similar phrase, in which the same God is used, is found in Isa. lxi, 14, “That I may walk before God,” that is, in the enjoyment of his blessing and protection. And so in many places in which the idiom is not to be diluted into a mere superlative. Abarbanel, Gesenius, and Van Bohlen explain the clause “before the Lord” as meaning here “whom God favors.” Prof. Hengstenberg, in his well-known rebellion, as far as the external language of Scripture concerning Nimrod is laudatory rather than the contrary” (Ancient Monarchies, i. 217). But the preposition κατα has often, as Gesenius admits, a hostile sense—in front of, for the purpose of opposing (Num. xvi, 2; 1 Chron. xiv, 8; 2 Chron. xx, 10); and the Sept. gives it such a sense in the verse under consideration—συντριβον—against the Lord.” The Targums and Josephus give the preposition this hostile meaning. The context also inclines us to that. That the mighty hunting was not confined to the chase is apparent from its close connection with the building of eight cities. Such indeed denies that such a connection is indicated by the η in ver. 10, and Keil as readily asserts it; but there is no need to lay stress on any consecutive force in the conjunction—the connection and its results are apparent in the context. The statement in hunting must have coexisted with valor in battle. What Nimrod did in the chase as a hunter was the earlier token of what he achieved as a conqueror. For hunting and heroism were of old specially and naturally associated with one another. Assyrian, Babylonian, and other sovereigns, one of whom, Darius, inscribed his exploits in hunting on his epitaph (Strabo, xv). The Assyrian monuments also picture many feats in hunting, and the word is often employed to denote campaigning. Thus Tigrath-pileser I hunted the people of Bisitum, and one of his ancestors does the same thing. Both are represented as holding “the mace of power,” a weapon used in hunting, and at the same time the symbol of royalty. Sargon speaks of three hundred kings he hunted, and Sennacherib, and “hunted” the people of Bilu-Nipru. Bilu-Nipru means Babylon, and nipru, from nippur, to hunt, may be connected with Nimrod, or Nebrod, as in the Sept. the name is spelled. The chase and the battle, which in the same country were connected so closely in after-times, may therefore be virtually associated or identified here. The meaning then will be, that Nimrod was the first after the flood to found a kingdom, to unite the fragments of scattered patriarchal rule, and consolidate them under himself as sole head and master; and all this he did in defiance of Jehovah, for it was the violent intrusion of Hamitic power into Sumeria that is here. The old hero’s might and daring passed at length into a proverb, or became the refrain of a ballad, so that hunters and warriors of more recent times were ideally compared with him—"Even as Nimrod the mighty hunter.”

Concerning the later life of Nimrod, the Scriptures give not the slightest information, nor even ground for conjecture. But, after seventeen or more centuries, a dubious and supersitious narrative got into credit, of which the earliest promoter that we know was Ctesias, but which was afterwards amplified and transmitted by many compilers of ancient history down to our own times. Rollin, Shuckford, and Prideaux seem to have given it a measure of credit. It is briefly to this effect: Some make Nimrod to be Belus, and consider Nin (for Nimrod) as the Greek term for the Sumerian (or Babylonian) terminations) to have been his son; others identify Nimrod and Ninus. It is further narrated that Ninus, in confederacy with Arias, an Arabian sovereign, in seventeen years spread his conquests over Mesopotamia, Media, and a large part of Armenia and other countries; that he married Semiramis, a warlike companion and a continuator of his conquests, and the builder of Babylon; that their son Ninus succeeded, and was followed by more than thirty sovereigns of the same family, he and all the rest being effeminate voluptuaries; that their indolent and licentious character transmitted nothing to posterity; that the crown descended in this unworthy line one thousand three hundred and sixty years; that the last king of Assyria was Sardanapalus, proverbial for his luxury and dissipation; that his Median viceroy, Arbaces, with Bellis, a priest of Babylon, conspired against him, took his kingdom by surprise, and stroyed it, according to the horrid practice of ancient conquerors—those pests of the earth—while the miserable Sardanapalus perished with his attendants by setting fire to his palace, in the 9th century before the Christian era. Some part of the true history lies intermingled with error or fable in this legend, especially the concluding part of it, is probable. Mr. Bryant is of opinion that there are a few scattered notices of the Assyrians and their confederates and opponents in Eupolemus and other authors (of whom fragments are preserved by Eusebius), and in an obscure passage of Di- odoros. To a part of this series, presenting a previous subjugation of some Canaanites, of course Hamitic, nations to the Assyrians, a revolt, and a reduction to the former vassalage, Mr. Bryant thinks that the very remarkable passage, Gen. xiv.; 1-16, refers; and he supports his argument in an able manner by a detailed and geographical considerations (Anc. Mythol. vi. 195—208). But whatever we know with certainty of an Assyrian monarch commences with Pul, about B.C. 760; and we have then the succession in Tiglat-pileser, Shalmaneser, Adad-nirari, and Esarhaddon. And unhappily it is most probable that the Assyrian kingdom was absorbed by the Chaldaean-Babylonian. — Kitto. The chief events in the life of Nimrod, then, are (1) that he was a Cushite; (2) that he established an empire in Shinar (the classical Babylonia), the chief towns being Babylon, Erech, Accad, and Calneh; and as the empire extended this empire northward along the course of the
Tigris over Assyria, where he founded a second group of capitals, Nineveh, Rehoboth, Calah, and Resen. These events correspond to and may be held to represent the salient historical facts connected with the earliest stages of the great Babylonian empire.

1. There is abundant evidence that the race which first held sway in the lower Babylonian plain was of Cushite or Hamitic extraction. Tradition assigned to Belus, the mythical founder of Babylon, an Egyptian origin, inserting as it described him as the son of Poseidon and Libya (Diod. Sic. i. 28; Apollodor. ii. 1, § 4; Pausan. iv. 23, § 5); the astrological system of Babylon (Diod. Sicul. i. 81), and perhaps its religious rites (Hosteiun. ap. Josephus, Ant. i. 4, § 5) were referred to the same quarter; and the legend of Oannes, the great teacher of Babylon, rising out of the Erythraean sea, preserved by Syncclius (Chronogr. p. 28), points in the same direction. The name Cush itself was preserved in Babylonia and the adjacent countries under the forms of Cossae, Cisia, Cuthah, and Susiana or Chuzistan. The earliest written language of Babylonia, as known to us from existing inscriptions, bears a strong resemblance to that of Egypt and Ethiopia, and the same words have been tried in both countries, as in the case of Mirikh, the Meroe of Ethiopia, the Mars of Babylonia (Rawlinson, Herod. i. 442). Even the name Nimrod appears in the list of the Egyptian kings of the 22nd dynasty, but there are reasons for thinking that dynasty to have been of Assyrian extraction. Putting the above-mentioned considerations together, we leave no doubt as to the connection between the ancient Babylonians and the Ethiopian or Egyptian stock (respectively the Nimrod and the Cush of the Chaldean table). More than this cannot be fairly inferred from the data, and we must therefore withhold our consent from Bunsen's view (Biologia, v. 69) that the Cushite origin of Nimrod betokens the westward progress of the Scythian or Turanian races from the countries eastward of Babylonia; for, though branches of the Cushite family (such as the Cossae) had pressed forward to the east of the Tigris, and though the early language of Babylonia bears in its structure a Scythic or Turanian character, yet both these features are susceptible of explanation in connection with the ordinary history of progress of the Cushite race.

2. The earliest seat of empire was in the south part of the Babylonian plain. The large mounds which for a vast number of centuries have covered the ruins of ancient cities have already yielded some evidences of the dates and names of the founders, and the highest antiquity to the towns represented by the mounds of Niffer (perhaps the early Babyl, though also identified with Calneh), Warka (the Biblical Erech), Mugheir (Ur), and Senkerch (Ellasar), while the name of Accad is preserved in the title Kizzu-Akkad, by which the founder or embattler of these towns was distinguished (Rawlinson, i. 435). The date of their foundation may be placed at about B.C. 2200. We may remark the coincidence between the quadruple groups of capitals noticed in the Biblical title, and the title Kipr or Kiprat-ara, assumed by the early kings of Babylonia, and supposed to mean "four races" (Rawlinson, i. 438, 447).

3. The Babylonian empire extended its sway northward along the course of the Tigris at a period long anterior to the rise of the Assyrian empire in the 13th century B.C. We have indications of this extension as early as about 1800, when Shamas-Iva, the son of Iami-dagon, king of Babylon, founded a temple at Killeh-shergat (supposed to be the ancient Ahashur). The existence of Nineveh itself can be traced up by the aid of Assyrian monuments to about the middle of the 15th century B.C.; and though the historical name of its founder is lost to us, yet tradition mentions a Belus as king of Nineveh at a period anterior to that assigned to Ninus (Layard's Nineveh, ii. 231), thus rendering it probable that the dynasty represented by the latter name was preceded by one of Babylonian origin.

It is impossible with certainty to identify Nimrod with any names as yet deciphered on the Assyrian monuments. Von Bohlen throws discredit on the whole story by identifying him with the historical Merodach-baladan. Remembering, however, that the Septuagint and Josephus write the name Neburo or Nebrodes, we have the least difficulty in identifying the deified Nimrod with Nipru, Bul-Nipru, or Bel-Nimrod, signifying "the lord," "the hunter." Enu, another title, being the corresponding or Cushite term for Bel, Bel, or Baal. That Babylon is called the city of Bul-Nipru, and its fortifications are named in Nebuchadnezzar's inscriptions In-gur-Bilu-Nipru. The chief seat of his worship as a god was at Nipru (Niffer or Calneh) and at Calah (Nimrud). The son of Bel-Nipru and his wife Belitis or Bela-Niprata, was Nin, the Assyrian Hercules, and sparsely connected with Nineveh. Whether this identification be accepted or not, it may be added in conclusion, that the shadow of Nimrod has never left his country. The famous ruined palace is named after him, and so is a temple—the Bira; a dam across the river is called Sukur-el-Nimrud; and Layard tells us that when the head of one of those singular figures was laid bare, his attention was turned to it by the wild exclamation, "O bey! hasten to the diggers; they have found Nimrod himself!" while the workmen were amazed and terrified at the sudden apparition. Arabian story prances of him as a worshipper of idols and the persecutor of Abraham. See Frösteuleh, De venitores Nimrod (Altdorf, 1706): Jour. Soc. Lit. April, 1860.

Nimrud. See Assyria; Babylonia; Nineveh.

Nim'ah (Heb. Nim'akì, נים. אנה; Sept. Na-moì, v. g. Na-mosei, Na'mosei, Ἀμασεία, the grandfather
Nin

Nin is the name of an Assyrian divinity. He represents the classical Hercules, and is spoken of as "the champion who subdues evil spirits and enemies." He is given the form of a huge bull, man-headed and winged. A representation of Nin is now in the British Museum, in the Assyrian transactions. See Nin.

Ninde, William W., a minister of the Methodist Episcopal Church, was born at Lyons, N. Y., Dec., 1809; was converted at Cazenovia Semi-nary about 1815; entered the Genesee Conference in 1828; was set off with the Oneida Conference in 1829; and from that to the Black River Conference in 1835; and stationed in Oswego in 1835-6; and in Syracuse, 1837-5. In 1843 he was made presiding elder of Rome District, and attended the General Conference at New York in 1844 as a reserve delegate, in place of George Gary, missionary to Oregon. He died at Delta, N. Y., Feb. 27, 1846. Ninde was a man of rare eloquence and power in the pulpit. A creative imagination, a sound judgment, respectable culture, large knowledge, and the sweet baptism of sanctifying grace made him one of the most independent, and at the same time one of the most persuasive preachers of his conference; and his pastoral and administrative excellencies were such as "Ninde," says Dr. George Peck, in his Life and Times (N. Y. 1874, 12mo), was one of the most gifted of our young ministers. His discourses were eloquent, and often powerful, overwhelming. He was a devoted, earnest Christian. He died early, but his name is still held in grateful remembrance" (p. 196). He was some time secretary of his conference, and his early death was a loss to the Church. See Minutes of Conferences, iii, 624; Black River Conf. Mem. p. 94; Sprague, Annals of the Amer. Pulpit, vol. vii. (G. L. T.)

Nine Days' Devotion. See Novena.

Nine Lections is the name of a liturgical service in the Roman and Anglican churches. Three lections are said on each of the three mornings: the first three taken from Holy Scripture; the second from the acts of a saint; the third from homilies of the fathers. Justin Martyr alludes to the commentaries of apostles and writings of prophets, the third Council of Carthage to the passions of martyrs on their anniversaries, the Council of Constantinople to the lections, and St. Jerome to the works of S. Ephrem, as being read in the sacred assemblies. The nine had reference to the orders of angels, with whom the Church joined in adoration, and, as a tripled three, bare allusion to the Holy Trinity. But from the time of Cassian there were twelve leasons, until Gregory VII reduced them to nine, with eighteen psalms, on Sundays, except Easter and Pentecost; on festivals, nine psalms and nine lessons; on feasts, twelve psalms and three lessons; in Easter-week and Whitsun-week, three psalms and three lessons, according to ancient use. Among these days were included the Epiphany, the Circumcision, Conversion of St. Paul, Purification, St. Matthias, the Annunciation, St. Philip and St. James, St. Barnabas, St. Peter, All Saints', St. Andrew, and sixty-eight other commemorations of saints and holy days, such as the Exaltation of the Cross and the Name of Jesus. See Walcott, Sacred Archdology, p. 400, Palmer, Orig. Lit. vol. i, bk. i, p. 10, Bingham, Christian Antiquities, xiv, 3, § 2.

Nine Worthies of the World. (a) Heathen: (1) Hector of Troy; (2) Alexander the Great; (3) Julius Caesar; (4) Constantine; (5) Julius Macæbas; (6) Christians: (1) King Arthur; (2) Charlemagne; (3) Godfrey of Bouillon. Their arms are on duke Robert's tomb at Gloucester.

Nineteenth Day of the Month. In the morning service of the Church of England and the Protestant Episcopal churches it is directed that on the nineteenth day of any month the Vespere Exultet (or Psalm beginning, "O come, let us sing unto the Lord") shall not be said or sung. The reason is that it occurs on that day in the regular portion of Psalms, and would thus occasion an unnecessary repetition.

Nin'evë (Nínëve v. r. Ninivâr; Sept. Noâvë), the Gracised form (Luke xi. 32; Tob. 1, 3, etc.; Judith i, 1, etc.) of the name of Nineveh (q. v.).

Nin'ëveh (Heb. Ninâveh, נינאוה; Sept. Noâvë or Nin'ëvë, v. r. Ninûv; Vulg. Ninive), the capital of the ancient kingdom and empire of Assyria; a city of great power, size, and renown, usually included among the most ancient cities of the world of which there is any historic record. In the narrating the city we bring together the ancient and the modern notices, especially the Scripture relations.

I. Name.—This, if Shemite, signifies dwelling of Nin; but it is probably of foreign etymology. In cuneiform (q. v.) it is written 𒈠𒆜𒆜𒆜𒈠. Josephus Grecizes it Ninâvë (Ant. ix, 10, 2), Ptolemy Ninôs or Ninôve (viii, 21, § 8), Herodotus Ninôs or Ninôce (i, 193; ii, 150); while the Romans wrote it Ninus (Tact. Ann. xii, 43) or Ninere (Ann. Marci-anus, xviii, 7). The name appears to be derived from that of Nin, the god of the city, Nin, Ninuri, Ninura, Ninurta; yet it is conjectured, with the Greek Hercules, and occurring in the names of several Assyrian kings, as in "Ninus," the mythical founder, according to Greek tradition, of the city. In the Assyrian inscriptions Niniveh is also supposed to be called "the city of Bel." Fletcher, rather fancifully, taking Nin as meaning "a floating substance or fish," and nereh "a resting-place," supposes the city to have been built nigh to the spot where the ark of Noah rested, and in memory of the deliverance provided by that wondrous vessel (Notes from Niniveh, i, 90). The conception that the city being Niniwed, its mythical founder, is not opposed to the statement in Gen. x. 11; for the city might be named, not from Ninrod, its originator, but from a successor who gave it conquest and renown. In the Assyrian mythology Ninus is the son of Nimrod.

II. History.—1. From Biblical and Later Accounts.—The first reference to Niniveh in Scripture is in Gen. x. 11, "Out of that land went forth Ashur and built Niniveh," as it is rendered in our version. The other and better version is "Out of that land of Nimrod went he (Nimrod) to Assyria, and built Niniveh, Rehoboth, and Calah, and Resen between Nineveh and Calah; the same is a great city." The translation which we have adopted is that of the Tar-gums of Onkelos and Jonathan, and is defended by Hyde, Bochart, Le Clerc, Tuch, Baumgartjen, Keil, Delitzsch, Knobel, Kalisch, and Murphy. The other exegesis, which makes Ashur the subject of the verb, has support from the Septuagint, the Syrian version, and the Vulgate, and has been adopted by Luther, Calvin, Grotius, Michaelis, Schumann, Von Bohlen, Ege Smith, and is apparently preferred by Rawlinson. The arguments in its favor are not strong; yet it contains or implies the reason why the country was named Assyria after its first settler. It is also a plausible theory of Jacob Bryant, that Nimrod by his conquests forced Ashur to leave the territory of Shinar, so that, thus expelled and overpowered by the mighty hunter, he went out of that land and built Nineveh (Ancient Mythology, vi, 192). Hence Assyria was subsequently known to the Jews as the "land of Nimrod" (comp. Mic. v. 3). It has been believed to have been first peopled by a company from Babylon.

The kingdom of Assyria and of the Assyrians is referred to in the O. T. as connected with the Jews at a very early period; as in Numb. xxiv, 22, 34, and Psa. lxxxiii, 8: but after the notice of the foundation of
NINEVEH

Niniveh in Genesis no further mention is made of the city until the time of the book of Jonah, or the 8th century B.C., supposing we accept the earliest date for that narrative [see JONAH, BOOK OF], which, however, according to some critics, must be brought down 500 years later, or to the 5th century B.C. In this book neither Assyria nor the Assyrians are mentioned, though the king who sent the prophet was being termed the "king of Niniveh." Assyria is first called a kingdom in the time of Menahem, about B.C. 770, Nahum (II B.C. 645) directs his prophecies against Nineveh; only once against the king of Assyria (iii, 19). In 2 Kings (xix, 36) and Isaiah (xlii, 15-17) the city is first distinctly mentioned as the residence of the monarch. Seennach-erib was slain there when worshipping in the temple of Ninurta his god. In 2 Chronicles (xxxvi, 21), where the same event is described, the name of the place where it occurred is omitted. Zedekiah, about B.C. 630, occupies the capital and the kingdom together (ii, 18); and this is the last mention of Nineveh as an existing city. He probably lived to witness its destruction, an event impending at the time of his prophecies. Although Assyria and the Assyrians are alluded to by Ezekiel as far back as the time of the Exile, it is not as the city, but as the land, to which a curse is spoken (Ezek. i, 22); Diocletian, whose miserable ruin prophecy had been fulfilled (ch. xxxi), yet they do not refer by name to the capital. Jeremiah, when enumerating "all the kingdoms of the world which are upon the face of the earth" (ch. xxxvi), omits all mention of the nation and the city. It is true that Nebuchadnezzar speaks of the Chaldaans, which may lead to the inference that the date of his prophecies is somewhat later than that usually assigned to them. See HABAKKUK, BOOK OF.

The fall of Nineveh, like its rise and history, is very much veiled in obscurity. But the account of Ctesias, preserved in Diodorus Siculus (ii, 27, 28), has been thought to be substantially correct. It may, however, be observed that Mr. Rawlinson, in his latest work (The Ancient Monarchies, i, 621), says that it "seems undeserving of a place in history." According to that account, Cyrus, the Median monarch, aided by the Babylonians, under Nabopolassar, laid siege to the city. His first efforts were in vain. He was more than once rebuffed and obliged to take refuge in the mountains of the Zagros range; but, receiving reinforcements, he succeeded in routing the Assyrian army, and driving them to shut themselves up within the walls. He then attempted to reduce the city by blockade, but was unsuccessful for two years, till his efforts were unexpectedly assisted by an extraordinary rise of the Tigris, which swept away a part of the walls, and rendered it possible to enter the town from the riverside. The Median monarch, now master of the city, passed his victorious forces over the Tigris, captured Sardis, in despair, burned himself in his palace. With the ruthless barbarity of the times, the conquerors gave the whole city over to the flames, and razed its former magnificence to the ground. The cities dependent on Nineveh, and in its neighborhood, appear to have incurred a like fate, and the excavations show that the principal agent in their destruction was fire. Calcined sculptured alabaster, charcoal and charred wood buried in masses of brick and earth, slabs and statues thrown with heat, were objects continually encountered by Mr. Layard and his fellow-laborers at Khorsabad, Nineveh, Nabhul, and Kuyunjik. From a comparison of these data, it has generally been assumed that the destruction of Nineveh and the extinction of the empire took place between the time of Sennacherib and that of Esarhaddon and Antiochus. The exact period of these events has consequently been fixed, with a certain amount of concurrent evidence derived from classical history, at B.C. 606 (Clinton, P. A. Hellen. i, 269). It has been shown that it may have occurred twenty years earlier. See ASSYRIA. The city was then laid waste, its monuments destroyed, and its inhabitants scattered or carried away into captivity. It never rose again from its ruins. This total disappearance of Nineveh is fully confirmed by the records of profane history. There is no mention of it in the Persian cuneiform inscriptions of the Achaemenid dynasty. Herodotus (i, 198) speaks of the Tigris as "the river upon which the town of Nineveh formerly stood." He must have passed, in his journey to Babylon, very near the site of the city —perhaps actually over it. So accurate a recorder of geography as Herodotus would not have omitted the city, if not to describe, any ruins of importance that might have existed there. Not two centuries had then elapsed since the fall of the city. Equally conclusive proof of its condition is afforded by Xenophon, who, with the ten thousand Greeks who encamped during his retreat on, or very near, its site (B.C. 401), describes it as "a large town that has been forgotten, or at least he does not appear to have been acquainted with it, for he calls one group of ruins "La- riessa," and merely states that a second group was near the deserted town of Mespila (Anab., iii, iv, § 7). As he describes Mespila by "six parasangs, or nearly three times their actual dimensions. Ctesias placed the city on the Euphrates (Prop. i, 2), a proof either of his ignorance or of the existence of that river in that part of the country. Later he led Diocletian Siculus into the same error (ii, 27, 28). The historians of Alexander, with the exception of Arrian (Ind. 42, 8), do not even allude to the city, over the ruins of which the conqueror must have actually marched. The only notices of it in the Armenian history of Ardashir and Hakan, relate only to the ruins which they do not visit them. It is evident that the later Greek and Roman writers, such as Strabo, Ptolemy, and Pliny, only have derived any independent knowledge they possessed of Nineveh from traditions of no authority. They concur, however, in placing it on the eastern bank of the Tigris. During the Roman period, a small castle or fortified town appears to have stood on some part of the site of the ancient city. It was probably built by the Persians (Amm. Marcell. xxiii, 22); and subsequently occupied by the Romans, and erected by the emperor Claudius into a colony. It appears to have borne the ancient inscrptional name of Nisibis, as well as its corrupted form of Ninos and Ninas, and also at one time that of Hieropolis. Tacitus (Ams. xii, 13), mentioning its capture by Mebeardes, calls it "Ninos;" on coins of Trajan it is "Ninus," on those of Maximinus "Niinva," in both instances the epithet Claudopolitan being added. Many Roman remains, such as sepulchral vases, bronze and other ornaments, sculptured figures in marble, terra-cottas, and coins, have been discovered in the rubbish covering the Assyrian ruins; besides wells and tombs, constructed long after the destruction of the city. The remains of the old town, however, appear to have been in its turn abandoned, for there is no mention of it when Heracleius gained the great victory over the Persians in the battle of Nineveh, fought on the very site of the ancient city, A.D. 627. After the Arab conquest, a fort on the east bank of the Tigris bore the name of "Ninawoi" (Rawlinson, As. Soc. Journal, xii, 418). Benjamin of Tudela, in the 12th century, mentions the site of Nineveh as occupied by numerous inhabited villages and small townships (ed. Asher, i, 91). The name remained attached to the ruins during the Middle Ages, and from them a bishop of the Chalma Church derived his title (Assemani, iv, 450); but it is doubtful whether any town or fort was so called. Early English travellers merely allude to the site (Purchas, ii, 1857). Niebuhr is the first modern traveller who speaks of "Nimiyah" as a village containing the ruins which he describes as "a considerable hill" (ii, 353). This may be a corruption of "Niebu Nimus," the Prophet Jonah, a name still given to a village containing its apotheosis. Mr. Rich, who surveyed the site in 1830, does not mention Nimiyah, and no such place now exists. Tribes of Turcomans still settle in the ruins, and Chaldean and Syrian Christians, dwell in small mud-built villages, and cultivate the soil in the country around the ruins; and occasionally a tribe of wandering
Kurds, or of Bedouins driven by hunger from the desert. They either paid tribute or were among them. After the Arab conquest of the west of Asia, Mosul, at one time the flourishing capital of an independent kingdom, rose on the opposite or western bank of the Tigris. Some similarity in the names has suggested its identification with the Mesepia of Xenophon; but its first actual mention only dates from 1280 (BesPRIMARY). It was sometimes known as Athur, and was united with Nineveh as an ecclesiastical see of the Chaldean Church (Assenami, iii, 269). It has lost all its ancient prosperity, and the greater part of the town is now in ruins.

Traditions of the unrivalled size and magnificence of Nineveh were equally familiar to the Greek and Roman writers, and to the Arab geographers. But the city had fallen so completely into decay before the period of authentic history that no description of it, or even of any of its monuments, is to be found in any ancient author of trust. Diodorus Siculus asserts (ii, 8) that the city formed a quadrangle of 150 stadia by 90, or altogether of 480 stadia (no less than 60 miles), and was surrounded by walls 100 feet high, broad enough for three chariots to pass upon, and pierced by 15,000 towers, each 200 feet in height. According to Strabo (xvi, 737) it was larger than Babylon, which was 385 stadia in circuit. In the O.T. we find only vague allusions to the splendor and wealth of the city, and the very indefinite statement in the book of Jonah that the king of Nineveh was very great; in fact, the book is silent as to all that related to God, or “for God” (i.e. in the sight of God), of “three days’ journey;” and that it contained “sixscore thousand persons who could not discern between their right hand and their left hand, and also much cattle” (iv, 11). It is obvious that the accounts of Diodorus are for the most part absurd exaggerations, founded upon fabulous traditions, for which existing remains afford no warrant. It may, however, be remarked that the dimensions he assigns to the area of the city would correspond to the three days’ journey of Jonah—the Jewish day’s journey being 20 miles—if that expression be applied to the circuit of the walls. “Persons not discerning between their right hand and their left” may either allude to children or to the ignorance of the whole population. If the first be intended, the number of inhabitants, according to the usual calculation, would have amounted to about 600,000. But such expressions are probably mere Eastern figures of speech to denote vastness, and far too vague to admit of exact interpretation.

The political history of Nineveh is that of Assyria (q.v.). It has been observed that the territory included within the boundaries of the kingdom of Assyria proper was comparatively limited in extent, and that almost within the immediate neighborhood of the capital petty kings appear to have ruled over semi-independent states, owning allegiance and paying tribute to the great lord of the empire, “the King of Kings,” according to his Oriental title, who dwelt at Nineveh. (Comp. Isa. x, 8: “Are not my princes altogether kings?”) These petty kings were in a constant state of rebellion, which usually showed itself by their not paying the apportioned tribute—the principal link between the sovereign and the dependent states—and repeated expeditions were undertaken against them to enforce this act of obedience. (Comp. 2 Kings xvi, 7; xvii, 4, where it is stated that the war made by the Assyrians upon the Jews was for the purpose of enforcing the payment of tribute.) There was, consequently, no bond of sympathy arising out of common interests between the various populations which made up the empire. Its political condition was essentially weak. When an independent monarch was sufficiently strong to throw off his allegiance, the empire soon came to an end. The fall of the capital was the signal for universal disruption. Each petty state asserted its independence, until reestablished by some warlike chief who could found a new dynasty and a new empire to replace those which had fallen. Thus on the borders of the great rivers of Mesopotamia arose in turn the Babylonian, the Assyrian, the Median, the second Babylonian, the Persian, and the Seleucid empires. The capital was, however, invariably changed, and generally the seat of the conquering race. In the East men have rarely rebuilt great cities which have once fallen into decay—never perhaps on exactly the same site. If the position of the old capital was deemed, from political or commercial reasons, not more advantageous than any other, the population was settled in its neighborhood, as at Delhi, and not amid its ruins. But Nineveh, having fallen with the empire, never rose again. It was abandoned at once, and suffered to perish utterly. It is probable that, in conformity with an Eastern custom, of which we find such remarkable illustrations in the history of the Jews, the entire population was removed by the conquerors, and settled as colonists in some distant province.

2. Monumental Records.—From the annals of Tiglath-Pileser I to the time of Assur-bani-pal, Nineveh was the seat of the mighty kings of Assyria, Ashur, or Kalah Shergbat, as early as the nineteenth century B.C., by Shamas-iva, a son of Ismi-dagon, who was one of the early kings in the series answering to the great Chaldean dynasty of Berosus, and from this circumstance may be inferred to have ruled over Assyria. In the sixteenth century B.C. (i.e. in the time of his dynasty), the city occupied the position of an unimportant dependency of Babylon, not being mentioned in one single legend, and not furnishing the Chaldean monarchs with one of their royal titles. At what period Assyria was enabled to achieve her independence, or under what circumstances she achieved it, we have no means of knowing, but the date at which, for several reasons, we may suppose it to have been accomplished is approximately B.C. 1273. Probably an Arabian conquest of Babylon, which caused the overthrow of this Chaldean dynasty in the sixteenth century, furnished the Assyrians with an opportunity of shaking off the Babylonian yoke, but it was not till three centuries later that they appear to have gained a position of importance. During the period of Assyrian subjection to Chaldea, and long after she became an independent empire, the vice-regal, or the royal city, was probably Ashur, on the west bank of the Tigris, sixty miles south of Nineveh, the name of which is still preserved in the designation given by the Arabs to the neighboring district. It may perhaps be as well to observe that the four kings in Gen. xiv., according to Josephus, were not only conquerors in the time of the Assyrian king, who had then, he says, dominion over Asia. But this is very improbable, and is really contradicted by recent discoveries, which show, at least negatively, that Assyria was not then an independent power. Sir H. Rawlinson thinks that he has found the name of a king (Kudur-Mapula or Kudur-Mabuk) stamped upon bricks in Babylonia which corresponds to that of Chedorlaomer, and supposes that this king was the Elamitic founder of the great Chaldean empire of Berosus. Mr. Stuart's theory is without support, that the expedition of Chedorlaomer was directed against the power of the Egyptian kings of the fifteenth dynasty and their Phenician allies or subjects. Josephus also calls Chushan Rishathaim—who in Judg. iii is said to have been king of Mesopotamia—king of the Assyrians; but this again demands an earlier rise of the Assyrian power than the monuments warrant us in assuming. The first known king of Assyria is Bel-lush or Belukh, who, with three others in succession, viz., Pudil, Iva-lush, Shalmanor or Shalmarish, is reputed to have reigned thirty-one years. According to Josephus, this king had been slain off. The period from 1273 to 1200 may be assigned to the reign of these kings. They have left no other record but their names upon bricks, etc., which are found only at Kalah Shergbat; and the
character in which these are inscribed is so ancient and so mixed with Babylonian forms that they are assigned to this period, though the same effects might possibly have been produced at a later period of Babylonian ascendency.

After these names, we are enabled to trace a continuous line of six hereditary monarchs, who, with the exception of the last, are enumerated on the oldest historic monument found in Assyria, and this is the octagonal prism of Kalah Sherghat, on which Tiglath-Pileser I records the events of the first five years of his reign, and traces back his pedigree to the fourth generation. He calls himself the son of Assur-rish-ilu; the grandson of Nairi; the great-grandson of Assur-dapal-il, whose father was Nin-pal-kura, the supposed successor of Shalamabar or Shalmanishar. Of his great-grandfather he relates that, sixty years previously, he had taken down the temple of Anu and Iva before alluded to, which had stood for 641 years, but was then in a ruined condition. His father seems to have been a great conqueror, and perhaps was the first to raise the character of the Assyrian arms, and to gain a foreign reputation. But whatever fame he acquired in this way was eclipsed by that of his son, who says that he won victories in Capadocia, Syria, and in the Mediterranean. The reign of this monarch, called Nairi, who probably dwelt at the north-west of Assyria proper, are conspicuous among his conquests. Now it so happens that the date of this king can be fixed in a remarkable way, by a rock inscription of Sennacherib, which speaks of the country north of the mountains, which would include the region of Tiglath-Pileser II.

The first Assyrian dynasty to occupy the throne of Assyria 418 years before the tenth year of his own reign, and as Sennacherib was reigning towards the end of the eighth, or the beginning of the seventh century B.C., we may learn from this same rock inscription that Tiglath-Pileser was himself defeated by Merodach-adan-akhi, the king of Babylon, who carried away with him images of certain Assyrian gods, showing that Babylon at this period was independent of Assyria, and a formidable rival to her power. Of Assurbanipal I, the son and successor of Tiglath-Pileser, nothing is known. Only one record of him has been hitherto discovered, and this was found at Kuyunjik. This name was softened or corrupted by the Greeks into Sardanapalus. After this king a break occurs in the list of successors, and the monument was not continued. It is thought, however, not to have been long, as Assurbanipal-akhi is supposed to have begun to reign about 1030, and therefore to have been contemporary with David. This monarch, and the three kings who succeeded him, were obscure and unimportant, not being known for anything else than their adding to the fame of the two palaces at Kalah Sherghat. Their names are Assurbanipal-Il, Iva-lush I, and Tiglath-Nin.

With the last of these, however, Asshur ceased to be the royal residence. The seat of government was transferred by his son Asshur-bani-pal to Calah, now supposed to be represented by Nimrud, forty miles to the north, near the confluence of the upper Zab and the Tigris, and on the east bank of the latter river. The reason of this change is not known; but it is thought that it was connected with the extension of the empire in the direction of Armenia, which would demand greater vigilance in thatquarter. This king, Sardanapalus II, pushed his conquests to the shores of the Mediterranean, levied tribute of the kings of Tyre and Sidon, and therefore perhaps of Ezekiel, the father of Jeremiah. He was also the founder of the north-west palace at Nimrud, which is second only to that of Sennacherib, at Kuyunjik, in magnificence and extent. The next monarch who sat on the Assyrian throne was Shalman-bar, the son of Sardanapalus. He reigned thirty-one years, spread his conquests farther than any of his predecessors, and recorded them on an obelisk now in the British Museum. In his reign the power of the first Assyrian empire seems to have culmi-

He carried his victorious arms over all the neighboring countries, imposing tribute upon all the provinces of Babylonia, Mesopotamia, Syria, Media, Armenia, and the scriptural kingdoms of Hamath and Damascus. The latter under Benhadad and Hazael are alike conspicuous among his vanquished enemies. But what is of paramount interest in the records of this king is the identification of the Hebrew king Abijah, the successor of Solomon, with the Palas called Pylon, the latter being at Bagdad and the former in the north of Ireland. It is supposed that Jehu is the son of Khumri or Omri, either as being king of Samaria, the city which Omri built, or as being descended from the founder of that city to strengthen his position to the throne, possibly even as being descended from him on the mother's side.

Shalmanu-bar was the founder of the central palace at Nimrud, and probably reigned from about 900 to 850 or 860. He was succeeded by his second son Shamash-iva, his eldest having made a revolt during the lifetime of his father. The palace he built at the northern end of the town was with difficulty quelled by his younger brother. The annals of Shamas-iva extend only over a period of four years. At this time the history is enveloped in much obscurity; but it is probable that the reign of Sennacherib, which occupied the position of Tiglath-Pileser II, that reigned after the death of his son and successor, Iva-lush III, that the first Assyrian dynasty comes to a close, and the reigns of these two princes are all we have to fill up the interval from 850 to 747, which is about the time it is supposed to have ended. Iva-lush is perhaps the full of Scripture. Among those from whom he received tribute and confirmed the people of Khnunir, i.e. Samaria; and Menahem gave full 1000 talents of silver to confirm the kingdom in his hand. There is a statue of the god Nebo in the British Museum which is dedicated by the artist, "to his lord Iva-lush and his lady Sammuraat." This personification is in probability the Semiramis of the Greeks, and her age remarkably agrees with that which Herodotus assigns her, viz. five generations prior to Nitocris, who seems with him to represent Nebuchadnezzar. He also speaks of her as a Babylonian princess; and since Iva-lush has no successor, she may be the reign of Babylon," he may very likely have acquired it in right of his wife, or reigned conjointly with her. But we cannot here replace conjecture by certainty. As we are altogether ignorant of the causes which terminated the first Assyrian dynasty or established the second, the instability of the new dynasty, and the difficulty with which it may account for the difficulty above mentioned with respect to the period from the death of Shalmanu-bar and the end of the first empire. Tiglath-Pileser II, who founded the second empire, appears before us "without father, without mother." Unlike the kings before him, he makes no parade of his ancestry in his inscriptions, from which circumstance we may fairly assume that he was a usurper. Much uncertainty has arisen about the date of his accession, because he states that he took tribute from Menahem in his eighth year, which would make it B.C. 767 or 768 (the Chronicles, whereas there is more likely that it was connected in some way with the change of events in Babylon that gave rise to the era of Nabonassar, or 747. However, the Sept. gives the reign of Manasseh thirty-five years instead of fifty-five, this diminution of twenty years would exactly reconcile both, else it is possible that the said inscription Menahem may be by mistake for Pekah, since he is joined with Rezin, whom Scripture always couples with Pekah. The annals of Tiglath-Pileser II extend over a period of seven years, and record his victories at Hanacca, on the black river; his capture of the town of Qara, when he invaded Babylon, took the city of Sepharvaim or Sepa, and slew Rezin, the king of Syria. It was this
king whom Abaz met at Damascus when he saw the altar of which he sent the pattern to Urjiah the priest at Jerusalem. Of Shalmaneser, his probable successor, little is known but what has come down to us in the sacred narrative. His name has not been found on the monuments. Shalmaneser twice invaded Israel; upon the first occasion it seems that Hoshea the king bought him off by tribute, but subsequently revolted upon hearing of the capture of Beth-shan, the chief city of the kingdom of Israel. Upon this Shalmaneser again invaded Israel, and besieged Samaria for the space of three years. He is supposed to have died or to have been deposed before the city surrendered, and to have left the final subjugation of it to his successor. This was Sargon or Sargina, who is probably the same as the Sargon mentioned in II Kings xxvii. 21, as an object of God's grace, who received the viceroyalty of Damascus and Lilibah, which had again fallen under the power of Egypt. While he was warring against Lachish he heard of the agreement that Hezekiah had entered into with the king of Egypt, and sent a detachment of his army to attack the city and take it under siege, and when Shalmaneser returned, he took Lachish, and besieged Jerusalem for three months, and then marched off to his capital, Damascus. The same persons have been supposed to be the conquerors of Sennacherib's successes in the Levant, and against whom he was contending; but before the decisive battle could be fought, the Angel of the Lord had smitten in the camp of the Assyrians 185,000 men. Sennacherib, with the rest of his army, fled in dismay, and the Egyptians perhaps commemorated his disaster in the manner related by Herodotus (ii, 141). It is not a matter of surprise that this event is unnoticed on the Assyrian monuments. In all probability the murder of Sennacherib by his sons did not immediately follow his defeat at Lilibah, but this also we have no means of ascertaining. Of Sargon, rayngzon, the original of Tell el Fule, who seems to have been regent in Babylon, and was probably dead, Esarhaddon, or Asshur-akh-iddina. He was celebrated for his victories and his magnificent buildings. He carried on his father's war with Egypt, which country, as well as Ethiopia, he seems to have subdued. He is also thought to have reigned in his own person at Babylon, and perhaps to have held court indifferently either at Nineveh or Babylon, which would account for Manasseh being carried by the captains of the king of Assyria to Babylon (2 Chron. xxxiii. 11); but in B.C. 671, this Manasseh, after his deposition, was appointed on the throne of Babylon by Saoduchinus, who was either a rebel or a viceroy appointed by Esarhaddon. About the year 660 his son Asshur-bani-pal, or Sardanapalus II, succeeded to the throne of Assyria, and with him began the fall of the empire. He may have reigned till 640; but he feebly resisted the conquests of his predecessors, and appears to have contented himself with hunting. He was succeeded by his son Asshur-emit-il, the last king of whom any records have been discovered. Under him Assyria was hastening its downfall, with which he was, however, evidently preparing for the final attack. If he was not the last king, he was the last but one, and the Sarcus of Berosus, perhaps his brother, may have succeeded him, or else we must consider Sarcus to be identical with Asshur-emit-il, who fell in battle with the warlike Sardanapalus of the Greeks.

III. Present Ruins.—Previous to recent excavations and researches, the ruins which occupied the presumed site of Nineveh seemed to consist of mere shapeless heaps or mounds of earth and rubbish. Unlike the vast masses of brick masonry which mark the site of Babylon, they showed externally no signs of artificial construction, except perhaps here and there the traces of a rude wall of sun-dried bricks. Some of these mounds were of enormous dimensions, looking in the distance rather like natural elevations than the work of men. Upon these, and here and there, were scattered innumerable fragments of pottery—the unerring evidence of former habitations. Some had been chosen by the scattered population of the land as sites for villages, or for small mud-built forts, the mound being then used as the common ground, the marauding parties of Bedoutins and Kurds which for generations have swept over the face of the country. The summits of others were sown with corn or barley. During the spring months they were covered with grass and flowers, briel by the winter rains. The Arabs call these mounds "Tell," the Turcomans and Turks "Yp-
peh," both words being equally applied to natural hills and elevations, and the first having been used in the same double sense by the most ancient Semitic races (comp. Hebrew 'ṣār, "a hill," "a mound," "a heap of rubbish" [Ezek. iii, 15; Ezra ii, 59; Neh. vii, 61; 2 Kings xix, 12]). They are found in vast numbers throughout the whole region watered by the Tigris and Euphrates and their confluentes, from the Taurus to the Persian Gulf. They are seen, but are less numerous, in Syria, parts of Asia Minor, and in the plains of Armenia. Wherever they have been examined they appear to have furnished remains which identify the period of their construction with that of the alternate supremacy of the Assyrian, Babylonian, and Persian empires. They differ greatly in form, size, and height. Some are mere conical heaps, varying from fifty to one hundred and fifty feet high; others have a broad, flat summit, and very precipitous, cliff-like sides, frayed by deep ravines worn by the winter rains. Such mounds are especially numerous in the region to the east of the Tigris, in which Nineveh stood, and some of them must mark the ruins of the Assyrian capital. There is no edifice mentioned by ancient authors as forming part of the city, which we are required, as in the case of Babylonia, to identify with any existing remains, except the tomb, according to some, of Ninus, according to others, of Sardanapalus, which is recorded to have stood at the entrance of Nineveh (Diod. Sic. ii, 7; Amynth. Frag.) and Bellawat. It is scarcely necessary to observe that all these names are comparatively modern, dating from after the Mohammedan conquest. The respective position of these ruins will be more evident in the accompanying map. We will describe the most important.

(1.) The ruins opposite Mosul consist of an enclosure formed by a continuous line of mounds, resembling a vast embankment of earth, but marking the remains of a wall, the western face of which is interrupted by the two great mounds of Kuyunjik and Nebbi Yunus. To the east of this enclosure are the remains of an extensive line of defences, consisting of moats and ramparts. The inner wall forms an irregular quadrangle with very unequal sides—the northern being 2333 yards, the western or the river-face, 4333, the eastern (where the wall is almost the segment of a circle) 5300 yards, and the southern but little more than 1000; altogether 13,200 yards, or seven English miles and four furlongs. The present height of this earthen wall is between forty and fifty feet. Here and there a mound more lofty than the rest covers the remains of a tower or a gateway. The walls appear to have been originally faced, at least to a certain height, with stone masonry, some remains of which have been discovered. The mound of Kuyunjik is of irregular form, being nearly square at the southwest corner, and ending almost in a point at the north-east. It is about 1300 yards in length, by 500 in its greatest width; its greatest height is 96 feet, and its sides are precipitous, with occasional deep ravines.
or watercourses. The summit is nearly flat, but falls from the west to the east. A small village formerly stood upon it, but has of late years been abandoned. The Khur, a narrow but deep and sluggish stream, sweeps around the southern side of the mound on its way to join the Tigris. Anciently dividing itself into two branches, it completely surrounded Kuyunjik. Nebbi Yunus is considerably smaller than Kuyunjik, being about 530 yards by 430, and occupying an area of about 40 acres. In height it is about the same. It is divided into two nearly equal parts by a depression in the surface. Upon it is a Turcoman village containing the apocryphal tomb of Jonah, and a burial-ground held in great sanctity by Mohammedans from its vicinity to this sacred edifice. Remains of entrances or gateways have been discovered in the northern and eastern walls (b and c). The Tigris formerly ran beneath the western wall, and at the foot of the two great mounds. It is now about a mile distant from them, but during very high spring floods it sometimes reaches its ancient bed. The western face of the enclosure (a) was thus protected by the river. The northern and southern faces—b and d—were strengthened by deep and broad moats. The eastern (c), being most accessible to an enemy, was most strongly fortified, and presents the remains of a very elaborate system of defences. The Khur, before entering the enclosure, which it divides into two nearly equal parts, ran for some distance almost parallel to it (f), and supplied the place of an artificial ditch for about half the length of the eastern wall. The remainder of the wall was protected by two wide moats (k), fed by the stream, the supply of water being regulated by dams, of which traces still exist. In addition, one or more ramparts of earth were thrown up, and a moat excavated between the inner walls and the Khur, the eastern bank of which was very considerably raised by artificial means. Below, or to the south of the stream, a third stream, excavated in the compact conglomerate rock, and about two hundred feet broad, extended almost the whole length of the eastern face, joining the moat on the south. An enormous outer rampart of earth, still in some places above eighty feet in height (g), completed the defences on this side. A few mounds outside this rampart probably mark the sites of detached towers or fortified posts. This elaborate system of fortifications is regularly defended against the attacks of an enemy. It is remarkable that within the enclosure, with the exception of Kuyunjik and Nebbi Yunus, no mounds or irregularities in the surface of the soil denote ruins of any size. The ground, is, however, strewed in every direction with fragments of brick, pottery, and the usual signs of ancient population.

(2.) Nimrud consists of a similar enclosure of consecutive mounds—the remains of ancient walls. The system of defences is, however, very inferior in importance and completeness to that of Kuyunjik. The indications of towers occur at regular intervals: 108 may still be traced on the northern and eastern sides. The area forms an irregular square, about 2351 yards by 2095, containing about 1000 acres. The northern and eastern sides were defended by moats, the western and southern walls by the river, which once flowed immediately beneath them. On the south-western face is a great mound, 700 yards by 400, and covering about 60 acres, with a cone or pyramid of earth about 140 feet high rising in the north-west corner of it. At the south-eastern angle of the enclosure is a group of lofty mounds called by the Arabs, after Nimrod's lieutenant, Arthur (comp. Gen. x. 11). According to the Arab geographers this name at one time applied to all the ruins of Nimrud (Layard, Nine, and its Remains, ii. 245, note). Within the enclosure a few slight irregularities in the soil mark the sites of ancient habitations, but there are no indications of ruins of buildings of any size. Fragments of brick and pottery abound. The Tigris is now one and a half miles distant from the mounds, but sometimes reaches them during extraordinary floods.

(3.) The enclosure-walls of Khorsabad form a square of about 2000 yards. They show the remains of towers and gateways. There are apparently no traces of moats or ditches. The mound which gives its name to this group of ruins rises on the north-west face. It may be divided into two parts or stages, the upper about 650 feet square and 30 feet high, and the lower, adjoining it, about 1350 by 300. Its summit was formerly occupied by an Arab village. In one corner there is a pyramid or cone, similar to that at Nimrud, but very inferior in height and size. Within the interior are a few mounds marking the sites of propylaeum and similar detached monuments, but no traces of considerable buildings. These ruins were known to the early Arab geographers by the name of "Saraf," probably a traditional corruption of the name of Sargon, the king who founded the palaces discovered there.

(4.) Sherif Khan, so called from a small village in

Plan of Kuyunjik and Nebbi Yunus.
neighborhood, consists of a group of mounds of no great size when compared with other Assyrian ruins, and without traces of an outer wall. Sakatniah is an enclosure of irregular form, situated upon a high bank overlooking the Tigris, about 8000 yards in circuit, and containing an area of about 410 acres, apparently once surrounded by a ditch or moat. It contains no mound or ruin, and even the earthen rampart which marks the walls has in many places nearly disappeared. The name is derived from an Arab town once of some importance, but now reduced to a miserable village inhabited by Turcomans.

2. The greater part of the discoveries which, of late years, have thrown so much light upon the history and condition of the ancient inhabitants of Nineveh were made in the ruins of Nimirūd, Kuyunjik, and Khorsabad. The first traveller who carefully examined the supposed site of the city was Mr. Rich, formerly political agent for the East India Company at Baghdad; but his investigations were almost entirely confined to Kuyunjik and the surrounding mounds, of which he made a survey in 1820. From them he obtained a few relics, such as inscribed pottery and bricks, cylinders, and gems. Some time before a bass-relief representing men and animals had been discovered, but had been destroyed by the Mohammedans. He subsequently visited the mound of Nimirūd, of which, however, he was unable to make more than a hasty examination (Narrative of a Residence in Kurdistan, ii, 131). Several travellers described the ruins after Mr. Rich, but no attempt was made to explore them systematically until M. Botti was appointed French consul at Mosul in 1845. While excavating in the mound of Khorsabad, to which he had been directed by a peasant, he discovered a row of upright alabaster slabs, forming the panelling or skirting of the lower part of the walls of a chamber. This chamber was found to communicate with others of similar construction, and it soon became evident that the remains of an edifice of considerable size were buried in the mound. The French government having given the necessary funds, the ruins were fully explored. They consisted of the lower part of a number of halls, rooms, and passages, for the most part wainscoted with slabs of coarse gray alabaster, sculptured with figures in relief, the principal entrances being formed by colossal human-headed winged bulls. No remains of exterior architecture of any great importance were discovered. The calcined limestone and the great accumulation of charred wood and charcoal showed that the building had been destroyed by fire. Its upper part had entirely disappeared, and its general plan could only be restored by the remains of the lower story. The collection of Assyrian sculptures in the Louvre came from these ruins.

The excavations subsequently carried on by MM. Place and Frenel at Khorsabad led to the discovery, in the enclosure below the platform, of propylaea, flanked by colossal human-headed bulls, and of other detached buildings forming the approaches to the palace, and also of some of the gateways in the enclosure-walls, ornamented with similar mythic figures. M. Botti's discoveries at Khorsabad were followed by those of Mr. Layard at Nimirūd and Kuyunjik, made between the years 1845 and 1850. The mound of Nimirūd was found to contain the ruins of several distinct edifices, erected at different periods—materials for the construction of the latest having been taken from an earlier building. The most ancient stood at the north-west corner of the platform, the most recent at the south-east. In general plan and in construction they resembled the ruins of Khorsabad—consisting of a number of halls, chambers, and galleries, panelled with sculptured and inscribed alabaster slabs, and opening into the other by doorways generally formed by pairs of colossal human-headed winged bulls or lions. The exterior architecture could not be traced. The lofty cone or pyramid of earth adjoining this edifice covered the ruins of a building the basement of which was a square of 165 feet, and consisted, to the height of 20 feet, of a solid mass of sun-dried bricks, faced on the four sides by blocks of stone carefully squared, bevelled, and adjusted. This stone facing singularly enough coincides exactly with the height assigned by Xenophon to the stone plinth of the walls (Anab. iii, 4), and is surmounted, as he describes the plinth to have been, by a superstructure of bricks, nearly every kiln-burned brick bearing an inscription. Upon this solid substructure there probably rose, as in the Babylonian temples, a succession of platforms or stages, diminishing in size, the highest having a shrine or altar upon it (Layard, Vii, and Doh. ch. v). A vaulted chamber or gallery, 100 feet long, 6 broad, and 12 high, crossed the centre of the mound on a level with the summit of the stone-masonry. It had evidently been broken into and rifled of its contents at some remote period, and may have been a royal sepulchre—the tomb of Ninus or Sardanapalus, which stood at the entrance of Nineveh. It is the tower described by Xenophon at Larissa as being 1 plethron (100 feet) broad and 2 plethra high. It appears to have been raised by the son of the king who built the north-west palace, and whose name in the cuneiform inscriptions is supposed to be identified with that of Sardanapalus. Shalmanusar or Shalmaneser, the builder of this tomb or tower, also erected in the centre of the great mound a second palace, which appears to have been destroyed to furnish materials for later buildings. The black obelisk now in the British
Museum was found among its ruins. On the west face of the mound, and adjoining the centre palace, are the remains of a third edifice, built by the grandson of Shalmanasar, whose name is read Iva-lush, and who is believed to be the Pul of the Hebrew Scriptures. It contained some important inscribed slabs, but no sculptures. Esarhaddon raised (about B.C. 680) at the south-west corner of the platform another royal abode of considerable extent, but constructed principally of materials brought from his predecessor's palaces. In the opposite or south-east corner are the ruins of a still later palace built by his grandson Assur-bani-ili, very inferior in size and in splendor to other Assyrian edifices. Its rooms were small; it appears to have had no great halls, and the chambers were panelled with slabs of common stone, without sculpture or inscriptions. Some important detached figures, believed to bear the name of the historical Semiramis, were, however, found in its ruins. At the south-west corner of the mound of Kuyunjik stood a palace built by Sennacherib (about B.C. 700), exceeding in size and in magnificence of decoration all others hitherto explored. It occupied nearly 100 acres. Although much of the building was destroyed to be employed in the fortifications of Babylon, many of the rooms were examined, and much has altogether perished, about 60 courts, halls (some nearly 150 feet square), rooms, and passages (one 200 feet long) have been discovered, all panelled with sculptured slabs of slabslaber. The entrances to the edifice and to the principal chambers were flanked by groups of winged human-headed lions and bulls of colossal proportions—some nearly 20 feet in height; 27 portals thus formed were excavated by Mr. Layard. A second palace was erected on the same platform by the son of Esarhaddon, the third king of the name of Sardanapalus. In it were discovered sculptures of great interest and beauty, among them the series representing the lion-hunt now in the British Museum. Owing to the sanctity attributed by Mohammedans to the supposed tomb of Jonah, great difficulties were experienced in examining the mound upon which it stands. A shaft sunk within the walls of a private house led to the discovery of sculptured slabs; and excavations subsequently carried on by agents of the Turkish government proved that they formed part of a palace erected by Esarhaddon. Two entrances or gateways in the great enclosure-walls have been excavated—one (at b on plan) flanked by colossal human-headed bulls and human figures. They, as well as the walls, appear, according to the inscriptions, to have been constructed by Sennacherib. No propylea or detached buildings have as yet been discovered within the enclosure. At Sherif Khan are the ruins of a temple, but no sculptured slabs have been dug up here. It was founded by Sennacherib, and added to by his grandson. At Selamityah no remains of buildings nor any fragments of sculpture or inscriptions have been discovered.

The most recent explorer in this field is Mr. George Smith, of the British Museum. The commencement of Mr. Smith's studies and researches in the field of Assyrian archaeology practically took place in the year 1866, when he engaged in the examination of Sir Henry Rawlinson's casts and fragments of inscriptions in the British Museum with a view to the elucidation of several questions in the Old-Testament history. He first lighted upon a curious inscription of Shalmaneser II, giving an account of the war against Hazael, king of Syria, and relating that it was in the eighteenth year of Shalmaneser. Since he received tristles from Jehu. His next labors were devoted to the cylinders containing the history of Asshur-bani-pal, the Sardanapalus of the Greeks. The annals of this monarch were then in considerable confusion, but by dint of patient comparison of the various copies, Mr. Smith at length succeeded in obtaining a fair text of the earlier part of these inscriptions. Pursuing his investigations, he discovered several important fragments of the annals of Tiglath-Pileser, containing notices of Azariah, king of Judah, and of Pekah and Hoshea, kings of Israel. In the course of his work he discovered materials from the end of the Assyrian canon, several accounts of the early conquest of Babylonia by the Elamites, and a religious calendar of the Assyrians, in which every month is divided into four weeks, and the seventh days marked out as Sabbath days, to which no work was to be performed. During 1870 he was occupied with preparing the large work on the history of Asshur-bani-pal, giving the cuneiform texts, translations, and translations, which was published in 1871. In 1872 Mr. Smith discovered the tablets containing the Chaldean account of the Deluge, which had attracted a good deal of attention both at home and abroad.

The interest taken in these discoveries prompted the proprietors of the London Telegraph newspaper to advance the sum of one thousand guineas for fresh researches at Nineveh, Mr. Smith to conduct the expedition. He accordingly started from London Jan. 29, 1873, and on March 2 arrived at the ruins of Nineveh. After an excursion to Bagdad and Babylon, he returned to Nineveh about April 1, and commenced excavations on the mound of Ninmrod on the third of that month. His work was now on a smaller scale, and was directed to the temple of Nebu. Here he discovered some inscriptions, but most of them were duplicates of texts already known. Excepting the stone basement of the temple and a few chambers around it, the whole was in ruinous conditions. After the city had declined, this part of the mound appears to have been used as a granary. A large tunnel was bored through the walls and chambers on the eastern face. This was found packed with grain, black and rotten from age. In the central part excavations had been made for tombs, destroying considerable portions of the temple. The more prominent parts of the building were of large square red bricks of stone at the bottom, and sun-dried bricks at the top. On each side of the entrance stood a colossal figure of Nebu, with cross arms, in the attitude of meditation. In one of the eastern chambers Mr. Smith discovered a fragment of the reign of Tiglath-Pileser, but there was nothing else of great interest in the neighborhood. Many of the inscriptions have suffered very much since the excavations of Mr. Layard. The explorations at Ninmrod were closed on May 8, without any important results, and Mr. Smith proceeded to prepare for his researches among the ruins of Nineveh, opposite the town of Mosul. After commencing operations on one of these mounds, with a view to recover inscribed terra-cotta tablets, Mr. Smith found several valuable inscriptions, which served in some de-
giving the names of six new Babylonian kings, and some curious details of early Babylonian history. At a subsequent date was found a new portion of the sixth tablet of the Deluge series.

NINEVEH

The excavations were carried on over what Layard calls the library-chamber of the south-west palace. Upon removing the top earth from a section of the palace around the region of the library-chamber, Mr. Smith was rewarded with a variety of discoveries of a valuable character. At first nothing turned up but modern objects, coins, pottery, and glass, but on going deeper the Assyrian cuneiform tablets were of frequent occurrence. In front of one of the entrances Mr. Smith discovered the lintel of a door-way, formed of a block of stone six feet long, and sculptured along the face. In the center was an ornamental cup or the handle; on each side stood a winged griffin or dragon; and over the cup and the dragon was an ornament of honeyuckles. This curious lintel is the first Assyrian object of the kind which has been discovered, and it is no wonder that when lifted out of the excavation it excited a thrill of pleasure. Many fragments were found along the floor of a long gallery, including syllabaries, bilingual lists, and mythological and historical tablets.

There was a beautiful bronze Assyrian fork, with two prongs joined by an ornamental shoulder to a shaft of spiral work, ending in the head of an ass. This is a fragment of an Assyrian idol. Asshur-bani-pal, king of Assyria, 722-732, and near it is a stone jar, whose handle in the form of a two-headed ape is an ornament of the people in the refinements of life. Near by was found part of a curious astrolabe and fragments of the history of Sargon, king of Assyria, B.C. 722. In one place, below the level of the floor, Mr. Smith discovered a fragment of an Assyrian idol of Asshur-bani-pal, containing new and curious matter relating to his Egyptian wars, and to the affairs of Gyges, king of Lydia. From this part of the palace he also gained the shoulder of a colossal statue, with an inscription of Asshur-bani-pal. In another spot he obtained a bone spear-head, a fragment of an ostrich egg, and a section of the seven evil spirits. Near this was found a bronze style, with which the cuneiform tablets were probably impressed. In another part of the excavation there were the remains of crystal and alabaster vases, and specimens of the real seal. One of these was a clay impression of the real of Sargon, king of Assyria.

Mr. Smith left Mosul on April 4, and after various interesting excursions arrived at Alexandria toward the end of May, and finally reached London on June 9. The most important result of the excavation was the discovery of several thousand tablets containing the history of the Deluge. There is still much required to complete the series, but in their present state they form one of the most remarkable collections of inscriptions yet discovered. The whole number of inscriptions discovered by Mr. Smith, during the four months in which he was engaged in excavation, amounted to over 6,000, besides many other objects of great archaeological interest. In many instances they comprised very important texts and antiquities. The majority of the fragments form parts of texts of which the other portions were already in the British Museum, and the new fragments afford data for the completion or enlargement of those inscriptions. In no branch of cuneiform inquiry have the late researches added more to our knowledge than in the early Babylonian history. It is uncertain how far back the records of Babylonia extend, and the limits of the kingdom afford materials for the construction of a satisfactory scheme. There is no doubt, however, that they reach up to the 24th century B.C., and some scholars are of opinion that they stretch nearly two thousand years beyond that period. The principal excavations in the Near East required these earlier expeditions to the country in order to ascertain its true historical history. The new inscriptions favor the opinion that the country gained a prominent place in the world much earlier than some have supposed. Valuable data have been added to the period of Assyrian history con-
temporary with the kings of Judah and Israel. On the comparative chronology of the Assyrian and Jewish kingdoms, Mr. Smith’s expeditions have added nothing to our previous knowledge. Of the later Babylonian period—the time of Nebuchadnezzar and his successors—there are a few new dated documents and some useful inscriptions belonging to the succeeding Persian empire. The most valuable of the later inscriptions is that which fixes the date of the rise of the Parthian empire, which has so long been a doubtful point among chronologists.

4. The Assyrian edifices were so nearly alike in general plan, construction, and decoration that one description will suffice for all. They were built upon artificial mounds or platforms, varying in height, but generally from 30 to 50 feet above the level of the surrounding country, and solidly constructed of regular layers of sun-dried bricks, as at Nimrud, or consisting merely of earth and rubbish heaped up, as at Kuyunjik. The mode of raising the latter kind of mound is represented in a series of bas-reliefs, in which captives and prisoners are seen among the workmen (Layard, *Mon. of Nin.,* 2d series, pl. 14, 15). This platform was probably faced with stone masonry, remains of which were discovered at Nimrud, and broad flights of steps (such as were found at Khorasan) or inclined ways led up to its summit. Although only the general plan of the ground floor can now be traced, it is evident that the palaces had several stories built of wood and sun-dried bricks, which, when the building was deserted and allowed to
fall to decay, gradually buried the lower chambers with their ruins, and protected the sculptured slabs from the effects of time and weather. The depth of the rubbish above the alabaster slabs varied from a few inches to about 20 feet. It is to this accumulation of rubbish above them that the bass-reliefs owe their extraordinary preservation. The portions of the edifices still remaining consist of halls, chambers, and galleries, opening for the most part into large uncovered courts. The partition walls vary from 6 to 15 feet in thickness, and are solidly built of sun-dried bricks, against which is placed the panelling or skirting of alabaster slabs. No windows have hitherto been discovered, and it is probable that in most of the smaller chambers light was only admitted through the doors. The wall, above the wainscoting of alabaster, was plastered, and painted with figures and ornaments. The pavement was formed either of inscribed slabs of alabaster, or large flat kiln-burned bricks. It rested upon layers of bitumen and fine sand. Of nearly similar construction are the modern houses of Mosul, the architecture of which has probably been preserved from the earliest times as that best suited to the climate and to the manners and wants of an Oriental people. The rooms are grouped in the same manner around open courts or large halls. The staircases, usually surmounted by ornamental spires, are for wainscotting the apartments, and the walls are constructed of sun-dried bricks. The upper part and the external architecture of the Assyrian palaces, both of which have entirely disappeared, can only be restored conjecturally, from a comparison of monuments represented in the bass-reliefs, and of edifices built by nations, such as the Persians, who took their arts from the Assyrians. By such means Mr. Fergusson has, with much ingenuity, attempted to reconstruct a palace of Nineveh (The Palaces of Nineveh and Persepolis restored). He supposes that the upper stories were built entirely of sun-dried bricks and wood—a supposition warranted by the absence of stone and marble columns, and of remains of stone and burned-brick masonry in the rubbish and soil which cover and surround the ruins; that the exterior was richly sculptured and painted with figures and ornaments, or decorated with enamelled bricks of bright colors, and that light was admitted to the principal chambers on the ground-floor through a kind of gallery which formed the upper part of them, and upon which rested the wooden pillars necessary for the support of the upper stories. The capitals of these pillars, the friezes and architectural ornaments, he restores from the stone columns and other remains at Persepolis. He conjectures that curtains, suspended between the pillars, kept out the glaring light of the sun, and that the ceilings were of wood-work, elaborately painted with patterns similar to those represented in the sculptures, and probably ornamented with gold and ivory. The discovery at Khorsabad of an arched entrance of considerable size and depth, constructed of sun-dried and kiln-burned bricks, the latter enamelled with figures, leads to the inference that some of the smaller chambers may have been vaulted.

The sculptures, with the exception of the human-headed lions and bulls, were for the most part in low relief. The colossal figures usually represent the king, his attendants, and the gods; the smaller sculptures, which either cover the whole face of the slab, or are divided into two compartments by bands of inscriptions, represent battles, sieges, the chase, single combats with wild beasts, religious ceremonies, etc. All refer to public or national events; the hunting-scenes evidently revers the scenes and personal valor of the king and the head of the people—"the mighty hunter before the Lord." The sculptures appear to have been painted—remains of color having been found on most of them. Thus decorated, without and within, the Assyrian palaces are a marvel of magnificence, not however, devoid of a certain grandeur and beauty, which no ancient or modern edifice has probably exceeded.

Among the small objects, undoubtedly of the Assyrian period, found in the ruins, were copper vessels (some embossed and incised with figures of men and animals and graceful ornaments), bells, various instruments and tools of copper and iron, arm (such as spear and arrow heads, swords, daggers, shields, helmets, and fragments of chain and plate armor), ivory ornaments, glass bowls and vases, alabaster urns, figures and other objects in terra-cotta, pottery, parts of a throne, inscribed cylin- ders and seals of agate and other precious materials, and a few detached statues. All these objects show great mechanical skill and a correct and refined taste, indicating considerable advance in civilization.

These great edifices, the depredations of the national records, appear to have been at the same time the abode of the king and the temple of the gods—thus cor- responding, as in Egypt, with the character of the mon- arch, who was both the political and religious chief of the nation, the special favorite of the deities, and the interpreter of their decrees. No building has yet been discovered which possesses any distinguishing features to mark it specially as a temple. They are all precisely similar in general plan and construction. Most proba- bly a part of the palace was set apart for religious wor- ship and ceremonies. Altars of stone, resembling the Greek tripod in form, have been found in some of the chambers—in one instance before a figure of the king himself (Layard, Nin. and Bab, p. 351). According to the inscriptions, it would, however, appear that the As- syrian monarchs built temples of great magnificence at Nineveh, and in various parts of the empire, and pro- fusedly adorned them with gold, silver, and other pre- cious materials.

IV. Site of the City.—Much diversity of opinion ex- ists as to the identification of the ruins which may be properly included within the site of ancient Nineveh. According to Sir H. Rawlinson, and those who concur in his interpretation of the cuneiform characters, each group of mounds we have described represents a separate and distinct city. The name applied in the inscriptions to Nimrud is supposed to read "Khakhu," and the ruins are consequently identified with those of the Calah of Genesis (x, 11): Khorsabad is Sargina, as founded by Sargon, the name having been retained in that of Sarghan, or Saraun, by which the ruins were known to the Arab geographers; Sherif Khan is Tar- bisi. Selamityah has not yet been identified, no inscription having been found in the ruins. The name of Nineveh is limited to the mounds opposite Mosul, including Kuyunjik and Nebbi Yünus. Sir H. Rawlinson was at one time inclined to exclude even the former mound from the precincts of the city (Journ. of As. Soc.
Furthermore, the ancient and primitive capital of Assyria is supposed to have been not Nineveh, but a city named Assur, whose ruins have been discovered at a little to the northeast of the Tigris, about sixty miles south of Mosul. It need scarcely be observed that this theory rests entirely upon the presumed accuracy of the interpretation of the cuneiform inscriptions, and that it is totally at variance with the accounts and traditions preserved by sacred and classical history of the antiquity, size, and importance of Nineveh. The area of the enclosure of Kuyunjik, about 1800 acres, is far too small to represent the site of the city, built as it must have been in accordance with Eastern customs and manners, even after allowing for the extreme exaggeration on the part of ancient writers. Captain Jones (Topography of Nineveh, in the Journ. of R. Asiatic Soc. xxv. 324) computes that it would contain 174,000 inhabitants, fifty square yards being given to each person; but the basis of this calculation would scarcely apply to any modern Eastern city. If Kuyunjik represents Nineveh, and Nimrud Calah, where are we to place Resen, "a great city between the two? (Gen. x. 12). Scarcely at Selamlyeh, only three miles from Nimrud, and where no ruins of any importance exist. On the other hand, it has been conjectured that it must have occupied a very large area, and frequently very distant from one to the other. Nineveh might thus be compared with Damascus, Isaphan, or perhaps more appropriately with Delhi, a city rebuilt at various periods, but never exactly on the same site, and whose ruins consequently cover an area but little inferior to that assigned to the capital of Assyria. The primitive city, the one upon which Nineveh was originally founded, may possibly have been that occupied by the mound of Kuyunjik. It is thus alone that the ancient descriptions of Nineveh, if any value whatever to be attached to them, can be reconciled with existing remains. The absence of all traces of buildings of any size within the enclosures of Nimrud, Kuyunjik, and Khorsabad, and the existence of propylaeas forming part of the approaches to the palace, beneath and at a considerable distance from the great temple, is in favor of the conjecture. Even Sir H. Rawlinson is compelled to admit that all the ruins may have formed part of "that group of cities which, in the time of the prophet Jonah, was known by the common name of Nineveh" (On the Inscriptions of Nineveh, in the Journ. of R. Asiatic Soc.). But the existence of fortified palaces is consistent with Oriental custom, and with authentic descriptions of ancient Eastern cities. Such were the residences of the kings of Babylon, the walls of the largest of which were sixty stadia, or seven miles, in circuit, or little less than those of Kuyunjik, and considerably greater than those of Nimrud. See Babylon. The Persians, who appear to have closely imitated the Assyrians in most things, constructed similar fortified parks—or paradises, as they were called—which included royal dwelling-places (Quint. Curt. i. 7, c. 6). Indeed, if the interpretation of the cuneiform inscriptions is to be trusted, the Assyrian palaces were of precisely the same character; for that built by Esarhadon at Nebbi Yûnis is stated to have been so large that horses and other animals were not only kept, but even fed there. It is also stated that "he fortified the siege, fortified thy strong holds," and "repair thy fortified places." They were probably surrounded by the dwellings of the mass of the population, either collected in groups, or scattered singly in the midst of fields, orchards, and gardens. There are still sufficient indications in the curious survey of the sites of such habitations. The fortified enclosures, with which the residences of the king, his family or immediate tribe, his principal officers, and probably the chief priests, may also have served as places of refuge for the inhabitants of the city at large in times of danger or attack. According to Diodorus (ii. 9) and Quintus Curtius (v. 1), there was land enough within the precincts of Babylon, besides gardens and orchards, to furnish corn for the wants of the whole population in case of siege; and in the book of Jonah, Nineveh is said to contain, besides its population, "much cattle" (v. 11). As at Babylon, no great consecutive wall of enclosure comprising all the ruins, such as that described by Diodorus, has been discovered at Nineveh, and no such wall ever existed, otherwise some traces of so vast and massive a structure must have remained to this day. The River Gomel, the modern Khana-Su, lay close to the eastern boundary or defence of the city. As to the claims of the mound of Kalah Sherghát to represent the site of the primitive capital of Assyria called Assur, they must rest entirely on the interpretation of the inscriptions, which are supposed to declare, by one Shamas-Iva, the son and viceroy, or satrap, of Išmi-Dagon, king of Babylon, who reigned, it is conjectured, about B.C. 1840. Assyria and its capital reigned subject to Babylonia until B.C. 1727, when an independent Assyrian dynasty was founded, of which fourteen kings, or more, reigned at Kalah Sherghát. About B.C. 980 the seat of government, it is asserted, was transferred by Sardanapalus (the second of the name, and the Sardanapalus of the Greeks) to the city of Kalikhu or Calah (Nimrud), which had been founded by an earlier monarch named Shalmanasar. There it continued about 250 years, when Sennacherib made Nineveh the capital of the empire. See Assyria. These assumptions seem to rest upon very slender grounds; and Dr. Hincks altogether rejects the theory of the Babylonian character of these early kings, believing them to be Assyrian (Report to the Trustees of the Brit. Mus. on Cylindeers and Terra-Cottas). It is believed that on an inscribed terra-cotta cylinder discovered at Kalah-Sherghát the foundation of a temple is attributed to this Shamas-Iva. A royal stela erected by the king and his father is built upon a brick from some ruins in Southern Babylonia, and the two kings are presumed to be identical, although there is no other evidence of the fact (Rawlinson, Herod. i. 456, note 5); indeed the only son of this Babylonian king mentioned in the inscription is called Arwen, a name entirely different from that of the presumed viceroy of Assur. It is by no means an uncommon occurrence that the same names should be found in royal dynasties of very different periods. The Assyrian dynasties furnish more than one example. It may be further observed that no remains of sufficient antiquity and importance have been discovered at Kalah Sherghát to justify the opinion that it was the ancient capital. The only sculpture found in the ruins, the seated figure in black basalt now in the British Museum, belongs to a later period than the monuments from the north-west palace at Nimrud. Upon the presumed identification above indicated, and upon no other evidence, so far as we can understand, an entirely new system of Assyrian history and chronology has been constructed, of which a sketch has been given under the title Assyrian History, also Babylonian History. It need only be pointed out here that this system is at variance with sacred, classical, and monumental history, and can scarcely be accepted as proven until the Assyrian ruins have been examined with more completeness than has been possible. No inscription has been found that of the cuneiform inscriptions has made far greater progress. It has been shown how continuously tradi-
tion points to Nineveh as the ancient capital of Assyria. There is no allusion to any other city which enjoyed this rank. Its name occurs in the statistical table of Karnak, in conjunction with Nahrina or Mesopotamia, and on a fragment recently discovered by M. Mariette, of the times of Thothmes III, or about B.C. 1490 (Birch, Trans. of R. Soc. of Lit. ii, 345, 2d series); and no mention has been found on any Egyptian monument of such cities as Asshur and Calah. Sir H. Rawlinson, in a paper read before the Royal Society of Literature, has, however, contended that the Naharin, Saaenkar, and Assuri of the Egyptian inscriptions are not Mesopotamia, Singar, and Assyria, and that Nin-i-ii is not Nineveh at all, but refers to a city in the chain of Tauros. But these conclusions are altogether rejected by Egyptian scholars. Further researches may show that Sennacherib’s palace at Kuyunjik, and that of Sardanapalus at Nimrud, were built upon the site, and above the remains of very much earlier edifices. According to the interpretation of the inscriptions, Sardanapalus himself founded a temple at “Nineveh” (Rawlinson, Herod. i, 462), yet no traces of this building have been discovered at Kuyunjik. Sargon restored the walls of Nineveh, and declares that he erected his palace “near to Nineveh” (Bibl. p. 474), while Sennacherib only claims to have rebuilt the palace, which were “rent and split from extreme old age” (Bibl. p. 473), employing 300,000 men, captives from Chaldaea, Syria, Armenia, and Cilicia, in the undertaking, and speaks of Nineveh as founded of old, and governed by his forefathers, “kings of the old time” (Fox Talbot, in Bellini’s cylinder. Journal of the As. Soc. vol. xxiii). Old palaces, a great tower, and ancient temples dedicated to Ishtar and Bar Muri, also stood there.

V. Prophecies relating to Nineveh, and Illustrations of the O. T.—These are exclusively contained in the books of Nahum and Zephaniah; for although Isaiah foretells the downfall of the Assyrian empire (ch. x and xiv), he makes no mention of its capital. Nahum threatens the entire destruction of the city, so that it shall not rise again from its ruins: “With an overrunning flood he will make an utter end of the place thereof.” “He will make an utter end; affliction shall not rise up the second time” (i, 8, 9). “Thy people is scattered upon the mountains, and no one gathereth them. There is no healing of thy bruise” (iii, 18, 19). The manner in which the city should be taken seems to be indicated. “The defence shall be prepared” (ii, 5) is rendered in the marginal reading “the covering or coverer shall be prepared,” and by Mr. Vance Smith (Prophecies on Assyria and the Assyrians, p. 242), “the covering machine,” the covered banner. It is to be represented in the bas-reliefs as being used in sieges. Some commentators believe that “the overrunning flood” refers to the agency of water in the destruction of the walls by an extraordinary overflow of the Tigris, and the consequent exposure of the city to assault through a breach; others, that it applies to a large and devas-

ting army. An allusion to the overflow of the river may be contained in Nah. ii, 6, “The gates of the rivers shall be opened, and the palace shall be dissolved,” a prophecy supposed to have been fulfilled when the Medo-Babylonian army captured the city. Diodorus (iii, 27) relates of that event that “there was an old prophecy that Nineveh should not be taken till the river became an enemy to the city; and in the third year of the siege the river, being swollen with continued rains, overflowed the walls; and broke down the wall for twenty stadia; then the king, thinking that the oracle was fulfilled and the river become an enemy to the city, built a large funeral pile in the palace, and collecting together all his wealth and his concubines and eunuchs, burned himself and the palace with them all: and the enemy entered the breach that the waters had made, and took the city.” Most of the edifices discovered had been destroyed by fire, but no part of the walls of either Nimrud or Kuyunjik appears to have been washed away by the river. The Tigiris is still subject to very high and dangerous floods during the winter and spring rains, and even now frequently reaches the ruins. When it flowed in its ancient bed at the foot of the walls a part of the city might have been overwhelmed by an extraordinary inundation. The likings of Nineveh to “a pool of water” (Nah. ii, 8) has been conjectured to refer to the moats and damps by which a portion of the country around Nineveh could be flooded. The city was to be partly destroyed by fire: “The fire shall devour thy bars,” “then shall the fire devour thee” (Nah. iii, 15, 18). The gateway in the northern wall of the Kuyunjik enclosure had been destroyed by fire as well as the palace. The population was to be surprised when unprepared, “while they are drunk as drunkards they shall be devoured as stubble full dry” (Nah. i, 10). Diodorus states that the last and fatal assault was made when they were overcome with wine. In the bas-reliefs cavorting scenes are represented, in which the king, his courtiers, and even the queen, reclining on couches or seated on thrones, and attended by musicians, appear to be pledging each other in bowls of wine (Botta, Mon. de Nis, pl. 63-67, 112, 115). The captivity of the inhabitants, and their removal to distant provinces, are predicted (Nah. iii, 18). Their dispersion, which occurred when the city fell, was in accordance with the prophetic custom of the age. The palace-temples were to be plundered of their idols, “Out of the house of thy gods will I cut off the graven image and the molten image” (i, 14), and the city sacked of its wealth: “Take ye the spoil of silver, take the spoil of gold” (ii, 9). For ages the Assyrian edifices have been despoiled of their precious metals, and whole bars of silver were, according to tradition, taken to Ecbatana by the conquering Medes (Diod. Sic. iii). Only one or two fragments of the precious metals were found in the ruins. Nineveh, after its fall, was to be “empty, and void, and waste” (Nah. ii, 10). “It shall come to pass that all they that look upon thee shall flee from thee.
and say, Nvineh is laid waste" (iii. 7). These epithets describe the present state of the city. But the fullest and most vivid and poetical picture of its ruined and deserted condition is that given by Zephaniah, who probably lived to see its fall: "He will make Nvineh a desolation, and dry like a wilderness. And flocks shall lie down in the midst of her, all the beasts of the nations: both the cormorant and the bittern shall lodge in the upper lintels of it; their voice shall sing in the windows; desolation shall be in the thresholds; for he shall uncover the cedar work. . . . how is she become a desolation, a place for beasts to lie down in! every one that passes by her shall hiss and wag his hand" (Zeph. ii, 13, 14, 15). The canals which once fertilized the soil are now dry. Except when the earth is green after the periodical rains the state of the city, as well as the surrounding country, is an arid yellow waste. Flocks of sheep and herds of camels may be seen seeking scanty pasture among the mounds. From the unwashed swamp within the ruins of Khorsabad, and from the reedy banks of the little streams that flow by Kuyunjik and Nimrud, may be heard the croak of the cormorant and the bittern. The cedar-wood which adorned the ceilings of the palaces has been uncovered by modern explorers (Layard, Nin. and Bab., p. 857), and in the deserted halls the hyena, the wolf, the fox, and the jackal now lie down. Many allusions in the O.T. to the dress, arms, modes of warfare, and customs of the people of Nvineh, as well as those of the Jews, are explained by the Nvineh monuments. Thus (Nah. ii, 9), "The shield of his mighty men is made red, the valiant men are in scarlet:" the shields and the dresses of the warriors are generally painted red in the sculptures. The magnificent description of the assault upon the city (Layard, Nin. and its Rem., vol. i, pt. ii, ch. v): the mounds built up against the walls of a besieged town (Isa. xxxvii, 38; 2 Kings xix, 82; Jer. xxiii, 24, etc.), the battering-ram (Ezek. iv, 2), the various kinds of armor, helmets, shields, spears, and swords, used in battle and during a siege; the chariots and horses (Nah. iii, 8), are all seen in various bas-reliefs (Layard, Nin. and its Rem., vol. ii, pt. ii, ch. iv and v). See CHARIOT. The custom of cutting off the heads of the slain and placing them in heaps (2 Kings x. 8) is constantly represented (Layard, i, 184). The allusion in 2 Kings xix, 86, "I will put my hook in thy nose and my bridle in thy lips," is illustrated in a bas-relief from Khorsabad (ibid., p. 576).

The interior decorations of the Assyrian palaces are described by Ezekiel, himself a captive in Assyria and an eye-witness of their magnificence (xxiii, 14, 15): "She saw men of sculptured workmanship upon the walls; likenesses of the Chaldeans pictured in red, girted with girdles upon their loins, with colored flowing head-dresses upon their heads, with the aspect of princes all of them" (Layard, Nin. and its Rem., ii, 807); a description strikingly illustrated by the sculptured likenesses of the Assyrian kings and warriors (see especially Botta, Mon. de Nin., pl. 12). The mystical figures seen by the prophet in his vision (ch. 1), uniting the man, the lion, the ox, and the eagle, may have been suggested by the eagle-headed idols, and man-headed bulls and lions (by some identified with the cherubim of the Jews), and the sacred emblem of the "wheel within wheel" by the winged circle or globe frequently represented in the bas-reliefs (Layard, Nvineh and its Remains, ii, 455).

VI. Ninevite Art.—The origin of Assyrian art is a subject at present involved in mystery, and one which offers a wide field for speculation and research. Those who derive the civilization and political system of the Assyrians from the Chaldeans would trace their architecture to the same source. One of the principal features of their architecture, the artificial platform serving as a substructure for their national edifices, may have been taken from a people inhabiting plains perfectly flat, such as those of Shinar, rather than an undulating country in which natural elevations are not uncommon, such as Assyria proper. But it still remains to be proved that there are artificial mounds in Babylonia of an earlier date than mounds on or near the site of Nvineh. Whether other leading features and the details of Assyrian architecture came from the same source, is much more open to doubt. Such Babylonian edifices as have hitherto been explored are of a later date than those of Nvineh, to which they appear to bear but little resemblance. The only features in common seem to be the ascending steps of the temples or tombs, and the use of enameled bricks. The custom of paneling walls with alabaster or stone must have originated in a country in which such materials abound, as in Assyria, and not in the alluvial plains of southern Mesopotamia, where they cannot be obtained except at great cost and great labor. The decorations of kiln-burned bricks and of wooden columns would be common to both countries, as also such arrangements for the admission of light and exclusion of heat as the climate would naturally suggest.

In none of the arts of the Assyrians have any traces hitherto been found of progressive change. In the architecture of the most ancient known edifice all the characteristics of the style were already fully developed; no new features of any importance seem to have been introduced at this period. The palace of Sennacherib only excels those of his remote predecessors in the vastness of its proportions, and in the elaborate magnificence of its details. In sculpture, as would probably be the case in painting also, if we possessed the means of comparison, the same thing is observable as in the remains of ancient Egypt. The earliest work of Sennacherib discovered show the result of a lengthened period of gradual development, which, judging from the slow progress made by untutored men in the arts, must have extended over a vast number of years. They exhibit the arts of the Assyrians at the highest stage of perfection which they probably ever attained. The only change we can trace, as in Egypt, is one of decline or "decadence." The latest monuments, such as those from the palaces of Sennacherib and his son, show perhaps a closer imitation of nature, especially in the representation of animals, such as the lion, dog, wild ass, etc., and a more careful and minute execution of details than those from the earlier edifices; but they are wanting in the simplicity yet grandeur of conception, in the invention, and in the variety of treatment displayed in the most ancient sculptures. This will at the same time give a comparison of the ornamental details of the two periods. In the older sculptures there occur the most graceful and varied combinations of flowers, beasts, birds, and other natural objects, treated in a conventional and highly artistic manner; in the later there is only a constant and monotonous repetition of rosettes and conventional forms, without much display of invention or imagination (comp. Layard, Mon. of Nin., 1st ser., especially pl. 5, 8, 43-48, 50; with 2d ser., passim; and with Botta, Monumenta de Ninive). The same remark applies to animals. The heads of the early period are ideal, and, to a certain extent, conventional representation of the beast—not very different from that of the Greek sculptor in the noblest period of Greek art (Layard, Mon. of Nin., 2d ser., pl. 2). In the later bas-reliefs, such as those from the palace of Sardanapalus III, now
in the British Museum, the lions are more closely imitated from nature without any conventional elevation; but what is gained in truth is lost in dignity.

The same may be observed in the treatment of the human form, though in its representation the Assyrians, like the Egyptians, would seem to have been at all times more or less shackled by religious prejudices or laws. For instance, the face is almost invariably in profile, not because the sculptor was unable to represent the full face—one or two examples of it occurring in the base-reliefs—but probably because he was bound by a generally received custom, through which he would not break. No new forms or combinations appear to have been introduced into Assyrian art during the four or five centuries, if not longer period, in which we are acquainted with it. We trace throughout the same eagle-headed, lion-headed, and fish-headed figures, the same winged divinities, the same composite forms at the doorways.

In the earliest works, an attempt at composition, that is at a pleasing and picturesque grouping of the figures, is perhaps more evident than in the later—as may be illustrated by the lion-hunt from the N.W. palace, now in the British Museum (Layard, Mon. of Nin, pl. 10). A parallel may in many respects be drawn between the arts of the Assyrians from their earliest known period to their latest, and those of Greece from Phidias to the Roman epoch, and from Italy from the 16th to the 18th century.

The art of the Nineveh monuments must in the present state of our knowledge be accepted as an original and national art, peculiar, if not to the Assyrians alone, to the races who at various periods possessed the country watered by the Tigris and Euphrates. As it was undoubtedly brought to its highest perfection by the power of the Assyrians, and is especially characteristic of them, it may well and conveniently bear their name. From whence it was originally derived there is nothing as yet to show. If from Babylon, as some have conjectured, there are no remains to prove the fact. Analogies may perhaps be found between it and that of Egypt, but they are not sufficient to convince us that the one was the offspring of the other. These analogies, if not accidental, may have been derived, at some very remote period, from a common source. The two may have been offshoots from some common trunk which perished ages before either Nineveh or Thebes of Egypt were founded; or the Phoenicians, it has been suggested, may have introduced into the two countries, between which they were placed, and between which they may have formed a commercial link, the arts peculiar to each country, however the original development of the arts of the two countries appears to have been affected and directed by very opposite conditions of national character, climate, geographical and geological position, politics, and religion. Thus, Egyptian architecture seems to have been derived from a stone prototype, Assyrian from a wooden one, in accordance with the physical nature of the two countries. Assyrian art is the type of power, vigor, and action; Egyptian that of calm dignity and repose. The one is the expression of an ambitious, conquering, and restless nature; the other seems to have been formed for itself alone and for eternity. In a late period of Assyrian history, at the time of the building of the Khorsabad palace (about the 8th century B.C.), a more intimate intercourse with Egypt through war or dynastic alliances than had previously existed appears to have led to the introduction of objects of Egyptian influence into Assyria, and may have influenced to a limited extent its arts. A precisely similar influence proceeding from Assyria has been remarked at the same period in Egypt, probably arising from the conquest and temporary occupation of that country under a king whose name is read Ashur-bani-pal, mentioned in the cuneiform inscriptions (Birk, Trans. of R. Soc. of Lit., new series). To this age belong the ivories, bronzes, and nearly all the small objects of an Egyptian character, though not apparently of Egyptian workmanship, discovered in the Assyrian ruins. It has been asserted, on the authority of an inscription believed to contain the names of certain Hellenic artists from Idalion, Citium, Salamin, Paphos, and other Greek cities, that these artists had been at all times more or less shackled by religious prejudices or laws. For instance, the face is almost invariably in profile, not because the sculptor was unable to represent the full face—one or two examples of it occurring in the base-reliefs—but probably because he was bound by a generally received custom, through which he would not break. No new forms or combinations appear to have been introduced into Assyrian art during the four or five centuries, if not longer period, in which we are acquainted with it. We trace throughout the same eagle-headed, lion-headed, and fish-headed figures, the same winged divinities, the same composite forms at the doorways.

The art of the Assyrians, especially their architecture, spread to surrounding nations, as is usually the case when one race is brought into contact with another in a lower state of civilization. They appear to have crossed the Euphrates, and to have had more or less influence on the countries between it and the Mediterranean.

Monuments of an Assyrian character have been discovered in certain parts of Syria, and further researches would probably disclose many more. The arts of the Phoenicians, judging from the few specimens preserved, show the same influence. In the absence of even the most insignificant remains, and of any implements which may with confidence be attributed to the Jews, there are no materials for comparison between Jewish and Assyrian art. It is possible that the bronze and ivory discovered at Nineveh were of Phoenician make, like the vessels in Solomon's temple. On the lion-weights, now in the British Museum, are inscriptions both in the cuneiform and Phoenician characters. The Assyrian inscriptions seem to indicate a direct dependence of Judæa upon Assyria from a very early period, perhaps even as late as the development of the "houses" of Solomon (comp. 1 Kings vi, vii, 2 Chron. iii, iv; Joseph. vii, 2; Ferguson's Palace of Nineveh; and Layard, Nin. and Bab. p. 642); it would appear that there was much similarity between them and the palaces of Nineveh, if not in the exterior architecture, certainly in the interior decorations, such as the wall panels or wainscoted with sawn stones, the sculptures on the slabs representing trees and plants, the remains of the walls above the skirting painted with various colors and pictures, the figures of the winged cherubim on the door-posts and over the doors, and very much inferior in size to the Assyrians. Of objects of art (if we may use the term) contained in the Temple we have the description of the pillars, of the brazen sea and of various bronze and copper vessels. They were said to be of Assur or Assyria. Phæ prophesies of a Jewish woman of the tribe of Naphtali (1 Kings vii 14), a fact which gives us some insight into Phœnician art, and seems to show that the Jews had no art of their own, as Hiram was brought from Tyre by Solomon. "Th
Assyrian character of these objects is very remarkable. The two pillars and "chapiters" of brass had ornaments of lilies and pomegranates; the brazen sea was supported on oxen, and its rim was ornamented with flowers of lilies, while the bases were graven with lions, oxen, and cherubim on the borders, and lilies on the ledges with cherubim, lions, and palm-trees. The veil of the Temple, of different colors, had also cherubim wrought upon it (comp. Layard, Nis. and Bab. p. 588, in which a large vessel, probably of bronze or copper, is represented supported upon oxen, and Mon. of Nin. ser. 2, pl. 60, 65, 68, in which vessels with embossed rims apparently similar to those in Solomon's temple are figured; also ser. 1, pl. 8, 44, 48, in which embroideries with cherubim occur).

The influence of Assyria to the eastward was even more considerable, extending far into Asia. The Persians copied their architecture (with such modifications as the climate and the building-materials at hand suggested), their sculpture, probably their painting and their mode of writing, from the Assyrians. The ruined palaces of Persepolis show the same general plan of construction as those of Nineveh—the enframements formed by human-headed animals, the Skirting of sculptured stone, and the inscribed slabs. The various religious emblems and the ornamentation have the same Assyrian character. In Persia, however, a stone architecture prevailed, and the embossed friezes in inscribed material have resisted to this day the ravages of time.

The Persians made an advance in one respect upon Assyrian sculpture, and probably painting likewise, in an attempt at a natural representation of drapery by the introduction of folds, of which there is only the slightest indication on Assyrian monuments. It may have been partly through Persia that the influence of Assyrian art passed into Asia Minor, and thence into Greece; but it had probably penetrated far into the former country long before the Persian domination. We read in the Hebrew Bible of one village of Gibeon, which, as in those of Lycia and Phrygia, and in the archaic sculptures of Bruchide. But the early art of Asia Minor still offers a most interesting field for investigation. Among the Assyrians the arts were principally employed, as among all nations in their earlier stages of civilization, for religious and national purposes. The colossal figures at the doorways of the palaces were mythic combinations to denote the attributes of a deity. The "Man-Bull" and the "Man-Lion" are conjectured to be the gods "Nin" and "Nergal," presiding over war and beasts of prey, and other similar divinities. These figures, so constantly repeated in the sculptures and as ornaments on vessels of metal or in embroideries, Nisroch and Dagon. The bass-reliefs almost invariably record some deed of the king, as head of the nation, in war, and the victory of his men. The royal imagery of the east is in the vase palaces-temples to the gods. Hitherto no sculptures specially illustrating the private life of the Assyrians have been discovered, except one or two incidents, such as men baking bread or tending horses, introduced as mere accessories into the historical bass-reliefs. This may be partly owing to the fact that no traces whatever have yet been found of their burial-places, or even of their mode of dealing with the dead. It is chiefly upon the walls of tombs that the domestic life of the Egyptians has been so fully depicted. In the useful arts, as in the fine arts, the Assyrians had made a progress which denotes a very high state of civilization. When the inscriptions have been fully examined and deciphered, it will probably be found that they had made no inconsiderable advance in the sciences, especially in astronomy, mathematics, navigation, and hydrography.

Although the site of Nineveh afforded no special advantages for commerce, and although she owed her greatness rather to her political position as the capital of the empire, yet, situated upon a navigable river communicating with the Euphrates and the Persian Gulf, she must have soon formed one of the great trading stations between that important inland sea and Syria and the Mediterranean, and must have become a depot for the merchandise supplied to a great part of Asia Minor, Armenia, and Persia. Her merchants are described in the account of Ezekiel (ch. xxvii. 4) as trading in blue cloth and embroidered work (such as is probably represented in the sculptures), and in Nahum (iii. 16) as "multiplied above the stars of heaven." The animals represented on the black obelisk in the British Museum and on other monuments in the river, the double-humped camel, and various kinds of apes and monkeys occur, and the communication, direct or indirect, with the remotest parts of Asia. This intercourse with foreign nations, and the practice of carrying to Assyria as captives the skilled artists and workmen of conquered countries, must have contributed greatly to the improvement of Assyrian manufactures. Affairs of state are frequently represented on the monuments: the king in his glory going to war; receiving booty or captives, or making a treaty of peace; behind him the eunuch with beardless double chin, carrying a fly-flapper or an umbrella. The government was despotic; it was centred in the king. The provinces were ruled by satraps, and their state and retinue were so magnificent that the monarch boasted, "Are not my princes altogether kings?" In a country vanquished, the conqueror secured some memorial of his victory in the inscription on some object of stone, rock or on stone blocks. His name and martial achievements are duly registered, and his person is figured in priestly robes. Several of these memorials are now in the British Museum.

Little is known of the dwellings of the people: they easily fell into ruin, and lay buried in the mass—the bricks or mud of which they were built fast dissolving into earth or soil. Nor do the monuments throw light on the subject, for they are filled with scenes from the chase or war—fields, trees, and fortresses. But there is a strip of a tomb from Assur, one of the most interesting inscriptions. In one of these tombs, the dwellings of the common sort were built of mud, without windows, and had either a flat roof, or one rising into a cone, with an opening at the top—while the houses, though closely arranged, yet stand separate from each other.

The ornamental arts had reached a high state in ancient Nineveh. Many seals and cylinders have been recovered. The sculptures and paintings are full of expression and life, freer and more natural than those of Egypt. The Assyrian artists did not excel in modeling, but in figure, and in the arrangement of groups. The Assyrian art is characterized by an undue flatness or want of breadth in the sile view, as if they were intended only to be seen directly in front. But their genius developed itself in bass-reliefs, and they used this art for every purpose to which it could be applied, for it is not only to the modern world. Through this art—in which so many scenes taken from nature and life, as war, religion, the chase, daily occupations, kitchen utensils, cooking and feasting, are represented—we have come to know the ancient Assyur with some familiarity and completeness. Bass-reliefs have been traced back, as at Nimrud, to the period of Assur, king of Judah, ten centuries before Christ. At first the work is rude but spirited, gradually it throws off its stiffness and conventionality, and appears at its best in the days of Asshur-don or his son, about B.C. 640. The vases or urns of clay are beautifully moulded, and resemble Egyptian pottery. Some of the bronzes are of graceful symmetry. Metallic ornaments, ear-rings, bracelets, and clasps display great taste and skill. Chairs and couches of beautiful design, and often inlaid with ivory. The lion was a sort of national emblem; and a frequent ornament on furniture, weights, and jewels is his head or claws, warranting the imagery in the bold challenge of Nahum (ii. 11): "Where is the dwelling of the lions, and the feeding-place of the young lions, where the lion, even the old lion, walked, and the lion's whelp?" Vessels
NINEVEH 128 NINEVEH

such as bowls and bottles of glass, both transparent and beautifully colored, have been found, and a magnifying lens of rock-crystal was discovered at Nimród. The garments of the better class were woven of linen, wool, or silk, and, though capacious in size, were worn with stately gracefulness. The silk of the country was famous, and was spun by a large silkworm not found elsewhere. Pliny speaks of the Assyria bombuz as a becoming dress for women (Hist. Nat. xi. 23).

The Assyrians seem to have been fond of music, and various musical instruments are sculptured on the monuments. We have the harp, with eight, nine, or ten strings; the lyre, of no less than three kinds; the guitar, the double-pipe, the tambourine, cymbals, dulcimer, drums, and trumpets. See MUSICAL INSTRUMENTS. Bands of musicians formed an important part of military and religious processions, and in such bands there appear to have been leaders or persons that kept or indicated the time.

Delineations of ships, both for war and trading, are found. The imports must have been extensive: "Thou hast multiplied thy merchants above the stars of heaven" (Nah. iii. 16; Ezek. xxvii. 23, 24). Gold and other metals, ivory, precious stones, and spices, seem to have been brought into the country in abundance, and the exports also may have been on a large scale. The Phenician mariners, according to Herodotus (i. 1), brought home Egyptian and Assyrian merchandise. The productions of her looms were celebrated, as were also several of her perfumes. Horace refers to the Assyrian nard: "Asyriacque nardo potamus uincti" (ii. 11); but, as Rawlinson says on this point, these odors may have only been conveyed by her from other regions, for she must have been rather a spice-seller than a spice-producer (Ancient Monarchies, ii. 199). There are representations of the implements of husbandry, and of the various forms and means of irrigation. Irrigation sometimes a trine human figure in the centre, and this symbol is generally found in immediate connection with the sovereign. The sacred tree was also associated with Assur—connected perhaps with the Biblical Asherah, rendered "grove" (q. v.)—and perhaps also derived ultimately from the Edenic tree of life. Other Assyrian gods were Anu, often placed after Assur, Bil or Bel, Hea or Hoa, Mylitta or Belitis, Sin or the Moon, Shamas or the Sun, Vul or Iva the wielder of the thunderbolt, Gula the sun-goddess, Nin, after whom the capital was named, and whose symbol is the winged bull, Marduk, Nergar, Ihsar, and Nebu. Some of these gods were borrowed from Chaldea. Each god was usually associated with a corresponding goddess; and the god and his idol, made of metal, clay, or stone, were identified, as in the challenge of Rabshakeh (Isa. xxxvi. 19, 20). Sacrifice was offered to them, and altars of various shapes have been found. Solemn processions were made, and the king appears to be also a priest—his person was divinely sacred, and his palace seems also to have been the temple—though there was at the same time a regular priestocracy. Fasting, as seen in the book of Jonah, may not have been an uncommon ordinance. The prophet Nahum styles Nineveh "the mistress of witchcrafts," and many superstitious forms of ascertaining the will of Heaven must have been in constant practice. Layard mentions that dark spots resembling blood are seen on the walls which form the entrance to the oldest palaces in Nimród. The nation appears to have been intensely religious; religious symbols are found not only on the robes and armor of the king, and on the columns and friezes of public buildings, but also on chariots, trappings of horses, and on ordinary household furniture—hangings, tables, chairs, and couches. The sensual or phallic symbols, so common in classical countries, are not found in Assyria; yet, if the worship of Belitis in Assyria resembled at all her worship in
Babylon (Herod. i, 99), it must have been grossly lascivious, as women were required to go once in their lives to her temple, and prostitute themselves to the first man who wished them. The prophet Nahum calls Nineveh "the well-favored harlot, that selichet nations through her whoredom;" but this language may refer, in Jewish apocalyptic style, to shamed-face and proselytizing idolatries.

Associated with the national worship were those composite animal figures, with the grotesque appearance of which we are now so well acquainted. The idea embodied in 1900 B.C. in strange forms unknown to the ancient and Eastern world. Modifications of such figures are found in the sphinxes of Egypt, and have also been sought in the cherubim. See Cherub. These figures guard the sacred thresholds in Nineveh, as if such a function needed the strength of a bull, the courage of a lion, the intelligence of a man, and the winged speed of an eagle. In Assyria and Egypt they occur as outer guardians and representatives, whereas in the Hebrew worship they were concealed in the dense gloom of the holy of holies. Perhaps, apart from the special human relations of the Hebrew cherubim, the generic idea underlying the strange symbol was that the noblest creatures on earth are claimed by God as his servants; that their highest duty and honor are to be near him, and to keep his temples from profane intrusion; and that the divine service in its ideal possion is such as combines in it the various properties of intellect and power, which those forms in their composite unity symbolize.

VIII. Race and Language.—Sprung from Asshur, the Assyrians were a Semitic race, whatever may have been the original connection of Nineveh with the Cushite Nimrod. Herodotus (vii, 68) says of them, "By the Greeks they were called Syrians, and by the barbarians Assyrians." This blunder has been repeated even by Niebuhr and others. But the names are quite distinct, Syria being נ鏤י, or Tyre, as it is given in English, and Assyria being אֵת, a very different word. In fact Asshur means the country, an Assyrian, the national divinity, or the town; the determinative נ before it showing when it signifies the god. The Assyrians were thus allied to the Phoenicians, Syrians, northern Arabs, and Kurds, and they were not unlike the latter in general physiognomy, except that they were apparently more robust in limb and heavier in feature. The tongues of these races are similar, too, in structure. The elementary shape of the letter is the wedge נ, of various forms, and placed in all directions—upright, horizontal, diagonal. The alphabet is syllabic in structure—the vowels representing the sounds a, i, and u, and the majesty of the sixteen consonants producing each six syllables, either as they precede or follow the vowel. Each simple vowel sound may also combine with two consonants, but the number of such double combinations is limited to about 150. This alphabet, so far as ascertained, has at the utmost 250 different characters. Another set of characters is called determinative, and is prefixed to certain names; thus נ shows that the next word is a man's name. So, too, the plural is marked by י and the dual by ס. The difference between an ideographic and a phonetic sign may be illustrated in this way: If we write the phrase "Ivan I," the I in Ivan has its usual power as a vowel-sound; but the I after it has no sound, it merely carries with it or represents the idea of first. The tongue itself is Semitic, allied to Hebrew, Phoenician, and Chaldean. Thus its conjunction ע and, is the Heb. conjunction and, as in Hebrew, it signifies "if." Its first personal pronoun is בק, Heb. נ, its second is בק, Heb. נ; also is "father," Heb. נ.
some believed to be the original form of all other cursive writing used in Western Asia, including the Hebrew, appears to have been occasionally employed in Assyria, probably for documents written on parchment or papyrus, or perhaps leather skins. The Assyrian cuneiform character was of the same class as the Babylonian, only differing from it in the less compact nature of its forms. Although the primary elements in the later Persian and so-called Median cuneiform were the same, yet their combination and the value of the letters were quite distinct. The latter, indeed, is but a form of the Assyrian. Herodotus terms all cuneiform writing the "Assyrian writing" (Herod. iv. 87). This character may have been derived from some more ancient form of hieroglyphic writing; but if so, all traces of such origin have disappeared. The Assyrian and Babylonian alphabet (if the term may be applied to above 250 signs) is of the most complicated, imperfect, and arbitrary nature—some characters being phonetic, others syllabic, others ideographic—the same character being frequently used in differently. This constitutes one of the principal difficulties in the process of decipherment. The investigation first commenced by Grotefend (Heeren, Asiatici Notios, vol. ii. App. 2) has since been carried on with much success by Lassen and Westergaard in Germany, by MM. Oesnouf and Oppert in France, and by Sir H. Rawlinson, Dr. Hincks, Mr. Norris, and Mr. Fox Talbot in England (see papers by these last-named gentlemen in the Transactions of the Royal Irish Academy, in the Journal of Sacred Literature, and in the Athenaeum). Although considerable doubt may still reasonably prevail as to the interpretation of details, as to grammatical construction, and especially as to the rendering of proper names, sufficient progress has been made to enable the student to ascertain with some degree of confidence the general meaning and contents of an inscription. The people of Nineveh, as we have seen above, spoke a Semitic dialect, connected with the Hebrew and with the so-called Chaldean of the books of Daniel and Ezra. This agrees with the testimony of the O.T. But it is asserted that there existed in Assyria, as well as in Babylon, a more ancient tongue belonging to a Turanian or Scythic race, who are supposed to have inhabited the plains watered by the Tigris and Euphrates long before the rise of the Assyrian empire, and from whom the Assyrians derived their civilization and the greater part of their mythology. It was retained for sacred purposes by the conquering race, as the Latin was retained after the fall of the Roman empire in the Catholic Church. In fragments of vocabularies discovered in the record-chamber at Kuyunjik words in the two languages are placed in parallel columns, while a centre column contains a monographic or ideographic sign representing both. A large number of Turanian words or roots are further supposed to have existed in the Assyrian tongue, and tablets apparently in that language have been discovered in the ruins. The monumental inscriptions occur on detached stelae and obelisks, of which there are several specimens in the British Museum from the Assyrian ruins, and one in the Berlin Museum. They are in four manners: on the island of colossal human-headed lions and bulls, upon parts not occupied by sculpture, as between the legs; on the sculptured slabs, generally in bands between two bas-reliefs, to which they seem to refer; and, as in Persia and Armenia, carved on the face of rocks in the hill-country. At Nimrud the same inscription was found almost exactly on nearly every slab in the north-west palace, and generally repeated on the back, and even carried across the sculptured colossal figures. The Assyrian inscriptions usually contain the chronicles of the king who built or restored the edifices in which they are found, records of his wars and expeditions into distant countries, of the amount of tribute and spoil taken from conquered tribes, of the building of temples and palaces, and invocations to the gods of Assyria. Frequently every stone and kiln-burned brick used in the building bears the name and titles of the king, and generally those of his father and grandfather are added. These inscribed bricks are of the greatest value in restoring the royal dynasties. The longest inscription on stone, that from the northwest palace of Nineveh containing the records of Sardanapalus, has 392 lines; that on the black obelisk has 210. The most important bitherto discovered in connection with Biblical history is that upon a pair of colossal human-headed bulls from Kuyunjik, now in the British Museum, containing the records of Sennacherib, and describing, among other events, his wars with Hezekiah. It is accompanied by a series of bass-reliefs believed to represent the siege and capture of Lachish (see Layard, Nim, and Bab, p. 148-153). A long list might be given of Biblical names occurring in the Assyrian inscriptions (ib. p. 626). Those of three Jewish kings have been read: Jehu, son of Khuuni (Omri), on the black obelisk (see Layard, Nineveh and Babylon, p. 613); Menahem on a slab from the south-west palace, Nimrud, now in the British Museum (ib. p. 617); and Hezekiah in the Kuyunjik records. The most important inscribed terra-cotta cylinders are those from Kalah Sarghbat, with the annals of a king, whose name is believed to read Tiglath-Pileser—not the same mentioned in the 2d book of Kings, but an earlier monarch, who is supposed to have reigned about B.C. 1100 (Rawlinson, Herod. i. 407); those from Khorsabad containing the records of Sennacherib; those from Kuyunjik, especially one known as Bellino’s cylinder, with the chronicles of Sennacherib; that from Nebbi Yihus with the records of Esarhaddon, and the fragments of three cylinders with those of his son. The longest inscription on a cylinder is of 820 lines. Such cylinders and inscribed slabs were generally buried beneath the foundations of great public buildings. Many fragments of cylinders and a vast collection of inscribed clay tablets, many in perfect preservation, and some bearing the impressions of seals, were discovered in a chamber at Kuyunjik, and are now deposited in the British Museum. They appear to include private letters, accounts, inscriptions from private documents, vocabularies, astronomical and other calculations, calendars, directions for the performance of religious ceremonies, lists of the gods, their attributes, and the days appointed for their worship, descriptions of countries, lists of animals, grants of lands, etc. In this chamber was also found the piece of clay bearing the seal of the Egyptian king So or Sabaco, and that of an Assyrian monarch, either Sennacherib or his son, probably affixed to a treaty between the two, which having been written on parchment or papyrus, had entirely perished (Layard, Nim. and Bab, p. 156). IX. Treatise of the Destruction—It is strange that so many representations of burial occur on the monuments, that no tombs have been discovered in the mound at Layard, indeed, regards the great cone at Nimrud as a royal tomb, but no human remains have been found, and theories about the tombs, and of the burial at Ninlir and Mueger are a burial
NINEVITE

place. Ariean (De Exerc. Alexand. vii, 22) says that the tombs of the Assyrian kings were constructed in the marshes south of Babylon, and Chaldea appears really to have been the ancient necropolis of Assyria. Warka, the old Erech, is, in fact, a vast cemetery, and in the lower Chaldean cities in successive choral cities of immense extent" (Lotus, Chaldaea and Susiana, p. 198, 199).

X. Literature.—The chief authorities on the subject are Botta’s Monuments de Ninive (Paris, 1849-50), Layard’s Nineveh and Babylon (1853), and his Niniwah et Babylone (1858), with his Monuments de Ninive (ibid. 1851-3); Prof. Rawlinson’s Four Great Empires and Notes to Herodotus: Rich’s Babylon and Persepolis; Chwolson, Uber die Ueberreste der alt-babylonischen Literatur (St. Petersburg, 1859); Bonomi’s Nineveh and its Palaces; Ferguson’s Palaces of Nineveh and Persepolis Restored; Vaux’s Nineveh and Persepolis (Lond. 1850); Oppert’s Elements de la Grammaire Assyrienne (Paris, 1850); Les Fustes de Sargon (ibid. 1865); Chronologie des Bab. et Assy. (1857); Oppert et Menant, Grande Inscription de Khorsabad (ibid. 1865); “The Assyrian Verb,” some papers by Dr. Hincks in the Journal of Sacred Literature (1859, 1855); Brandis, Rerum Asyr. Temp. Emen- dat. (Bonn, 1858), and his über den histor. Gewinn, etc.; Marc. Niebuhr, Geschichte Assyr.; Fox Talbot, Assyrian Texts Explained (Lond. 1856); Menant, Les Ecritures Asyriennes (Paris, 1859); while, in the more recent works of auf- neiform discovery is fully given): Jones’s Topography of Nineveh, in Roy. As. Soc. Journal (1855); J. Black- burn, Rise and Ruin of Nineveh (Lond. 1829); T. W. Bo- sanquet, Fall of Nineveh (ibid. 1853); Journal Soc. Lit. April, 1851; April, 1853; April, 1860; Fletcher, Notes of Residence at Nineveh (Lond. 1850); G. V. Smith, Prophecies relating to Nineveh (ibid. 1857-8); Feest, Les Ruines de Ninive (Paris, 1864); Bretschneider, Ninive et Naboum (Munich, 1861); Tuch, De Ninive urbe (Leips. 1849); Pole, Anc. Hist. and Mod. Exposers of Nineveh (Ninive in der modernen Welt, ibid. 1849); Mingan, Menant (ibid. 1849); Smith, Hist. of Assur-bani-pal (ibid. 1872); Amyria from the Earliest Time (ibid. 1875); Recent Assyrian Discoveries (ibid. 1875); and the literature cited in the last-named work, p. 6 sq., especially Col. Rawlinson’s various monographs. See Blackwood’s Magazine, 1835, i, 458, 462; 1856, ii, 739; Meth. Quar. Rev. Oct. 1849, art. ii; Newman, Thrones and Palaces of Babylon and Nin- eveh (N. Y. 1876); Lond. Qu. Rev. Dec. 1848; Fraser’s Mag. April, 1849; North Brit. Rev. May, 1853. Comp. also the works cited under ASSYRIA; CUNEIFORM.

Nin’evite (Ninivitig, Luke xi, 30; “man of Nin- eveh,” Matt. xii, 41), an inhabitant of Nineveh (q. v.).

Ninian or Nynian, Sr., called in the Roman Martyr. “NINIAN,” is the apostle who introduced Christian religion into Scotland [or “southern land”], and flourished in the latter half of the 4th and the beginning of the 5th century. He was a Briton, and of noble birth; but had been educated at Rome, and there ordained a bishop. The exact time of his preaching in Scotland is unknown. His labors appear to have commenced in Cumeria, and to have extended over the greater part of the district as far north as the Grampian Hills, his see being fixed at Candida Casa, or Whitburn, in the modern Wigtownshire. His death is placed by the Bollandists in 432; his festival is September 16. Whether Christianity had been introduced among the Picts before the time of Ninian has been a subject of controversy; but although the details of the legendary account are uncertain, it seems, beyond all question, that some Christians were to be found, at least among the Southern Picts, in what is now known as the Lowlands of Scotland, from the end of the 2nd century. Nevertheless, either their number was originally very small, or the rising Church had fallen away under adverse circumstances; and it is certain that when Ninian appeared among them the Picts were in the main a pagan people. Bede (Hist. Eccl. iii, 4), speaking of the conversion of the Northern Picts, mentions a tradition to the effect that the Southern Picts had been converted by the preaching of bishop Nynian, a Briton, who had been educated at Rome. Yet Bede further states that the Picts only joined the Romish Church in the 5th century, and that the great missionaries of the 7th century were in no way connected with Rome. Moreover the name of the church he is said to have founded, that of St. Martin, does not seem to denote in any way a Romish origin. See Inneti, Hist. Eng. Ch. ii, pt. i, ch. ii, n. 10; x, 11; Stanley, Lect. on Hist. of Ch. of Scotland, p. 28; Soanes, Hist. Angle-Saxon Ch. p. 72.

Ninimo, Joseph, a Presbyterian minister, was born near Norfolk, Va., in 1798. He was educated at Hampden-Sidney College, Prince Edward, Va., and at the theological seminary of Princeton, N. J., in 1827; was licensed and ordained in 1828; and labored as stated supply for the Church in Richmond, Va. In 1839 he removed to New York Presbytery, and was stated sup- ply at Sweet Hollow, L. I. Afterwards he labored at the following places: in 1837-40, at Red Mills, N. J.; in 1840-46, at Somers, N. Y.; in 1846-49, at North Salem, N. Y. In 1849 he removed to Huntington, N. Y., where he operated a school, and his name after that time is not connected to teaching. He died April 19, 1865. Mr. Ninimo was a devout, faithful, and exemplary minister, and his ca- reer was laborious, useful, and honorable. See Wilson, Presb. Hist. Almanac, 1867, p. 185. (J. L. S.)

Nino de Guereva, Don Juan, a Spanish painter, was born in Madrid February 8, 1632. His father, don Luis, was captain of the guards of the viceroy of Ar- gon, bishop of Malaga, don Antonio Henriquez. This prelate took charge of the family of his favorite noble- man, and brought him into his diocese. It was at Malaga that young Nino studied; from that time he often held the pencil as the pen. Educated in phi- losophy, Nino at first passed himself off as a layman; but the bishop, who loved him like a son, not wishing to oppose his vocation, confided him to the care of a Flemish captain, whom Quilllet calls "Manrique, a painter of credit in Malaga, and one of the best pupils of his compatriot Rubens." The progress of Nino was rapid. In 1645 his protector confided him to marquis de Montebello, one of the most distinguished amateurs of Madrid, who soon placed him in a condition to follow the lessons of Alano Coan. This celebrated master admitted him to his friendship, and often worked with him. Nino, in a short time, acquired such skill that the artist, who decorated the Augustins of Cordova and Gran- nada (1652-1667). In 1676 Nino returned to Malaga, where he made many paintings for churches and por- traits—a style in which he succeeded very well. His touch shows a certain timidity; but his compositions have a lovely character, and his coloring has freshness. He remains one of the best representatives of the His- pano-Flemish school. All the religious monuments of Malaga, and some of Cordova, Granada, Madrid, and Seville, possess his paintings, which are also found in the most complete galleries. He died in Malaga De- cember 8, 1696. We quote especially of this artist three admired masterpieces in Malaga: in the church, Faith, or the Triumph of the Cross, remarkable for the ex- pression and the good disposition of the numerous fig- ures which it represents in it.—Cherty, surrounded by personages who have most distinguished themselves by this virtue; this painting is the worthy companion of the preceding;—and in the cathedral, Saint Michael, become popular by numerous copies and engravings. Seville also possesses a large number of paintings by Nino, among others a Holy Family, sometimes attrib- uted to Rubens. We have in Paris an allegorical paint- ing of his, representing War giving Place to Peace and Study. Nino combines the grandeur and correctness of Cano with the admirable coloring of Rubens, and yet in some of his works he differs even so widely from these
NINETH-HOUR SERVICE

NIPHONT

great masters as to be compared to Vandyck. See Raphaël Mengs, Obra (Madrid, 1780); Felipe de Guevara, Los Comentarios de la Pintura (ibid. 1788); Pons, Viaje en España; Don Antonio Palomino de Velasco, El Museo pictórico (Cordova, 1715, 3 vols.); Spooner, Hist. of the Fine Arts, i, 380, s. v. Guevara.

Ninth-hour Service is the technical term for a divine service celebrated in some Christian churches. Canonical hours were introduced at an early period. The first of these was mututina, the morning service, about daybreak; the second at nine o'clock, called terciá, or third hour; the third at twelve o'clock, being the noon-day service; the ninth-hour service following at three in the afternoon. The fathers of the 3d and 4th centuries seemed to lay peculiar stress on this service as the most important of all. It was considered the hour of Christ's death; the hour when Cornelius was praying; the time when Peter and John went up to the Temple, "being the hour of prayer," i.e. the usual time of the Jewish evening sacrifices. The custom of alternating divine service at this hour seems to have been general in apostolic and patristic days, and in close relation to the Jewish observance. The Council of Laodicea expressly mentions the ninth hour of prayer, and orders that the same service be used as was appointed for the evening prayer. Chrysostom, too, must have reference to it in his mention of those hours of public prayer, for the third, in all probability, means the ninth hour, or None, as it is sometimes called.

Niobe (Νιόβη) is the name of a Greek female deity. She was the daughter of Tantalus (according to the most popular version of the story), the sister of Pelops, and was the wife of Amphion, king of Thebes. She was so proud of the number of her children that she boasted herself as superior to Leto (Latona), who had but two children. The number of those of Niobe is usually given as seven sons and seven daughters. Apollo and Artemis (Diana) so heartily espoused the cause of Leto that they killed the children of Niobe with their arrows. Zeus (Jupiter) metamorphosed Niobe into a stone, and placed it on Mount Sipylos in Lydia. During the summer this stone always shed tears (see Homer, H. xxiv). The story of Niobe was a favorite subject of ancient art. A group representing Niobe and her children was discovered at Rome in 1563, and is now at Florence. Some of the sculptures are very beautiful. Even the ancient Romans were in doubt whether the work proceeded from Scopas or Praxiteles.

Niobites is the name of a party of Alexandrian Mss. They were formed under the leadership of an Alexandrian rhetorician or sophist named Stephen Niobites (Νιόβης or Νιόβης), who attempted to revive the older Monophysite doctrine in opposition to the modified form of it maintained by Damian, Monophysite patriarch of Alexandria (A.D. 570-808), who belonged to the school of Severus and the Phakeiotatrai (q. v.). The particular opinion brought forward by the Niobites was that the qualities belonging to human nature could not continue in the human nature of Christ after its amalgamation with or absorption into the divine nature. He thus took up the position that there was no logical ground for the Subordinationism compromise doctrine of Apollinarius and Monophysitism, and that the Jacobites ought to revert to the creed which they held before Severus came to Egypt—that which Diocletian had maintained in opposition to the Council of Chalcedon. The Niobite party was driven out of Alexandria by Damian after the death of Niobites, who settled at Antioch, before the death of Damian, they gradually came around to the orthodox opinions, and became energetic supporters of the Chalcedonian doctrine. See Assemani, Biblioth. Orient., ii, 72; Baur, Gesch. der Dreieinigkeitslehre, ii, 92-95; Neander, Ch. Hist., iii, 554.

Niphon or Nipon. See JAPAN.

Niphon of Constantinople, an Eastern ascetic who, near the beginning of the reign of emperor Manuel Comnenus (middle of the 12th century), headed a movement for the reform of the Church practices. He joined the Bogomiles (q. v.), and is believed to have approved of many of their heretical excommunications. As an ascetic, pious and strict life he was paid universal reverence. He is described as a man well versed in the Holy Scriptures, to the study of which he devoted his time mainly. Niphon's adherence to Bogomilian ideas has on this account seemed strange, but it is possible that he was educated under Bogomilian influences, and thus harmonized their views with Biblical teachings. He made public his peculiar views, and was by an ecclesiastical synod condemned to perpetual confinement in a monastery. But the patriarch Cosmas restored Niphon to liberty; and he stood high in the estimation of that prelate, insomuch that he made him his confidant and table-companion. The friendship of such a man would lead us to judge favorably of Niphon's character, for all the accounts agree in describing Cosmas as a person of great piety and worth; of a strict life, self-denying love, and a benevolence which prompted him to give away everything, to the very raiment which he wore. Similarity of disposition, and a like dissatisfaction with the corrupt state of the Greek Church, may perhaps have made Cosmas the friend and protector of Niphon, who would not abandon Niphon, notwithstanding that the latter had been condemned by an ecumenical synod, but persisted in declaring that he was a holy man, the sentence of deposition was passed upon him also. He signified to the synod his abhorrence of the corrupt Church, saying that he was like Lot in the midst of Sodom. Niphon flourished for a while, and died finally in comparative obscurity. See Neander, Ch. Hist., iv, 563-564. (J. H. W.)

Niphont, bishop of Novgorod, a Russian prelate of note, flourished near the middle of the 12th century. He died at Kiev April 18, 1156. He is considered as one of the continuators of the Chronicles of Nestor. Herbertstein has inserted in his Commentaries a series of questions, some of them being of the strangest character, which were submitted to Niphont, who replies which he made them to—replies which at present serve as law to the Russian clergy. The catalogue of the manuscript library of count Tolstoi contains, under No. 204 and 212, two sermons attributed to this bishop. See Talitchchef, Hist.
Buddhism, all these definitions convey out the one idea, that the blessings promised in the condition of Nirvāṇa are tantamount to the absolute extincion of the human soul, after it has obeyed in this life all the injunctions of Buddhism, and become convinced of all its tenets on the nature of the world and the final destination of the soul.

There are four paths, an entrance into any of which secures either immediately or more remotely the attainment of Nirvāṇa. They are: (1) Sowān, which is divided into twenty-four sections; and after it has been entered there can be only seven more births between that period and the attainment of Nirvāṇa, which may be in this world or in the formless, or in the deva-hells, or into which he who enters will receive one more birth. He may enter this path in the world of men, and afterwards be born in deva-loka; or he may enter it in a deva-loka, and afterwards be born in the world of men.

It is divided into twelve sections. (2) Anagāmi, into which he who enters will not again be born loka; he may, by the apparitional birth, enter into a brahma-loka, and from that world attain Nirvāṇa. This path is divided into forty-eight sections. (4) Arys or Aryahat, into which he who enters has overcome or destroyed the lower hindrances. It is divided into sixty sections. Those who have entered into any of the paths can discern the thoughts of all in the same or preceding paths. Each path is divided into two grades: (a) the perception of the path; (b) its fruition or enjoyment. The world of men, Nirvāṇa, or any loka, of all the elements of existence, may be reached is thus pointed out by Dr. Spence Hardy in his Eastern Monachism: "The unwise being who has not yet arrived at a state of purity, or who is subject to future birth, overcome by the excess of evil desire, rejoices in the organs of sense, ayatana, and their relative objects, and commends them. The ayatana therefore become to him like a rapid current to carry him onward towards the sea of repeated existence; they are not released from old age, decay, death, sorrow, etc. But the being who is purified, perceiving the evils arising from the sensual organs and their relative objects, does not rejoice therein, nor does he commend them, or allow himself to be swallowed up by them. By the destruction of the 108 modes of evil desire he has released himself from birth, as from the jaws of an alligator; he has overcome all attachment to outward objects; he does not regard the unauthorized precepts, nor is he a scepct; and he knows that there is no ego, no self. By overcoming these four errors he has released himself from the cleaving to existing objects. By the destruction of the cleaving to existing objects he is released from the bonds of theOuterworld, or any other being. By the destruction of birth he is released from old age, decay, death, sorrow, etc. All the afflictions connected with the repetition of existence are overcome. Thus all the principles of existence are annihilated, and that annihilation is Nirvāṇa."

Although this is the orthodox view of Nirvāṇa, according to Buddhism is it necessary to point out two categories of different views which have obscured the original idea of Nirvāṇa, and even induced some modern writers to believe that the final beatitude of the oldest Buddhist doctrine is not equivalent to the absolute annihilation of the soul. The first category of these latter, or, as we may call them, heterodox views, is that which confounds with Nirvāṇa the preparatory labor of the mind to arrive at that end, and which regards the Nirvāṇa as the absolute extinction of thought, or the cessation, to thought, of all difference between subject and object, virtue and vice, etc., or certain speculations on a creative cause, the conditions of the universe, and so on. All these views Buddhism itself rejects, as appears from the work Lam-kasatāra, which relates his own experience, the final annihilation of Nirvāṇa before the Bodhisattva Mahāmati. The erroneousness of these views is obviously based on the fact that the mind, even though in a state of un-
consciousness, as when ceasing to think, or when specu-
lation, is still within the pale of existence. Thus, to
obviate the mistaken notion that such a state is the
rest of the real, Buddha immediately proceeds his
reminder, in contradistinction to the "Nirvana with a
remainder of substratum" (i.e. without a rest of exist-
ence)," meaning by the latter expression that condi-
tion of a saint which, in consequence of his bodily and
mental austerities, he immediately precedes his real Nir-
vana, but in which, nevertheless, he is still an occupant
of the material world. The second category of heter-
odox views on the Nirvana is that which, though
acknowledging in principle the original notion of
Buddhist saints, represents it as a non-existent compro-
mise with the popular mind. It belongs to a later
period of Buddhism, when this religion, in extending
its conquests over Asia, had to encounter creeds which
abhorred the idea of an absolute nihilism. This com-
promise coincides with the creation of a Buddhist
pantheon, and with the distribution of Buddhist saints
into three classes, each of which has its own Nirvana;
that of the two lower degrees consisting of a vast num-
ber of years, at the end of which, however, these saints
are born again; while the absolute Nirvana is reserved
for the highest class of saints. Hence Buddhist sal-
vations vary. We must either sink to the lowest, or rise
to the middle, or rise to the highest, and hence the lowest,
or Parinirvana, the middle, or Madhur-
Parinirvana, or the highest extinction of the soul; and
as those who have not yet attained to the highest Nir-
vana must live in the heavens of the two inferior classes
of saints until they appear in this world, their condi-
tion of Nirvana is assimilated to that state of more or
less material happiness which is also held out to the
Brahmanical Hindus before he is completely absorbed
into Brahman. When, in its last stage, Buddhism is
driven to the assumption of an Abh, or primitive Buddha,
as the creator of the universe, Nirvana, hence the meaning
of the absorption into him, ceases to have any real affin-
ity with the original Buddhist term" (Chambers).

The word itself, as we have seen above, means nothing
more nor less than extinction or blowing out. And however
much Max Müller may argue against this term as giv-
ing expression to Buddha's own gospel, the oldest liter-
ature of Buddhism will scarcely suffer us to doubt that
Gautama intended in its use to express absolute annih-
lation, the destruction of all elements which constitute
existence. The learned Burnout (Histo, de Buddha-
isme, p. 61) underestimates the ground lost, for there is
none better competent to judge in this question than he
is; yet Müller comes forward and, in approving this
statement, impeaches its accuracy by stating that the
Buddhist literature truly teaches such a doctrine, but
that the people cannot receive it, must be held back by
the writings of the apostles (which we believe in the in-
spiration of the Scriptures can hardly understand), so
that the gospel of Buddhism must be examined apart
from the personal utterances of Gautama, who Miller insists
never taught the doctrine of annihilation, because "rela-
"tion has never been founded by such teaching," and
because, too, a man like Buddha, who knew man-
kind (2), must have known (2) that he could not with
such weapons overturn the tyranny of the Brahmanas. He
therefore concludes thus: "Either we must bring
ourselves to believe that Buddha taught his disci-

ple two diametrically opposed doctrines on Nirvana—
"an exoteric and esoteric one—or we must allow that
view of Nirvana to have been the original view of the
founder of this marvellous religion which corresponds
best with the simple, clear, and practical character of
Buddha." A very lofty morality—indeed the Nation (N. Y.
Feb. 15, 1877) well answers to this statement of Müller—
"does not necessarily imply conventionally proper meta-
physical opinions, nor is the greatest charity inconsist-
ent with the logical carrying on of one's investigations
for their own sake; and it is to be hoped that religious
"teachers, of all men, should seek to extend their influ-
ence rather by what they consider to be the truth than by
what might be especially useful as a 'powerful
weapon. The last remark sounds strange as coming
from someone who has studied the term in as much
depth as the author of the Nation. Müller is not
refuted by his own words on p. 248, where he shows
how in their belief they escaped, by means of Nirvana,
transmigration and the misery of living." We might
add, this sounds as if Buddha, like Muhammad, had enjoyed
the high plane of Christian ethics, and could have been
expected to comprehend the wants only partly understood
with the light afforded by Jesus Christ's teachings and labors.
Surely Buddha would do for the Messiah of the world if he could have done
and taught as Max Muller would have us believe. The
truth is, it is not a question of a simple syllogism, not
not upon a relative, but an absolute empty Nothing; a
philosophical myth, such as Strauss attempted in the 19th
century, but with different motives. In his still more
recent publication, as translator of the Dhammapada, or
"Path of Virtue," Müller returns to the argument in favor of Gautama's doctrine of a Hereafter as a hereafter: as follows:

"1. That though the Abhidhamma Pitsara favors the negative view, the affirmative may easily be proved from the Citta and Vinaya, and especially from the Dhamma-
pada. The Abhidhamma Pitsara is of course a book that contains the notion, not of Buddha, but of his followers. 2. That it is stated that Buddha saw his disciples after his death and even in their huts, or Madhur-
Parinirvana, or the highest extinction of the soul; and
as those who have not yet attained to the highest Nir-
vana must live in the heavens of the two inferior classes
of saints until they appear in this world, their condi-
tion of Nirvana is assimilated to that state of more or
less material happiness which is also held out to the
Brahmanical Hindus before he is completely absorbed
into Brahman. When, in its last stage, Buddhism is
driven to the assumption of an Abh, or primitive Buddha,
as the creator of the universe, Nirvana, hence the meaning
of the absorption into him, ceases to have any real affin-
ity with the original Buddhist term" (Chambers).

This statement of his case, which is a more consistent
one, has been made the subject of special inquiry by
D'Alwis (Review of Max Miller's Dhammapada, Cey-
on, 1871), a member of the Royal Asiatic Society, and
an Orientalist of no mean order, and the result is its
complete refutation. In the first place D'Alwis proves
that the Abhidhamma properly belongs to the discourses of
Buddha, and that the "three baskets," as the differ-
et parts of the code are called, should not be regarded
as one whole. Moreover, the negative side of the ques-
tion may be proved from the Citta and Vinaya, as
well as from the Dhammapada; for the "non-exist-
ence of an absolute Creator and of a soul was the
foundation of the Buddhist doctrine of Nirvana; and
therefore there could be no condition of the soul after
the final destruction of the elements and the germs of
existence, or Nirvana." The third point, he shows,
rests only on legendary tales, and is in direct contradic-
tion to the canon which professor Müller himself says
must be our only authority. The fourth point is proved
through his bowing the difficulty inherent in all the
attempted definitions of Nirvana, the inaccuracy of Max Müller's interpretations, and that
the expressions used in the Dhammapada, when taken
with the other admitted doctrines of Buddhism, do
clearly prove that Nirvana means nihility. See Müller,

Nī'ṣāna (Heb. Nisam, ניסא, from netz, נץ, a flo-ner, or as Gesenius and Fritsch think, after Beney, from the Persian nes, new), the first month of the Hebrew sacred
year, called Anin in the Pentateuch, for which it is
substituted only in the time of the Captivity (Neh. 2,
2 sq.; Jer. 52, 1; Bar. 5, 11; Not in A. V., Not in Ech.).
On the first day of the month the Jews fasted for
the death of the children of Aaron (Lev. x, 1-3).
On the tenth day was observed a fast for the death
of Miriam, the sister of Moses, and every one provided
himself with a lamb for the Passover. On this day
the Israelites passed over the Jordan, under the con-

Digitized by Google
uct of Joshua. On the fourteenth day, in the even-
ing, they sacrificed the Paschal lamb; and the day fol-
lowed, being the fifteenth, the Passover was celebrated (Exod. xiii, 18). The Asiatic Church, when appoint-
ing the Paschal observance, therefore selected the four-
teenth of Nisan. She could associate no other date with το χειρισμό. The observance of this fourteenth day of the month was to delay, Christians of this race since the time of Christ, and to give rise to the term Quattordicianum (q. v.); but the observance, it should be borne in mind, was in commemoration of the death, not of the last supper, of Jesus. On the sixteenth day of Nisan the Hebrews offered the sheaf of the ears of barley, as the first-fruits of the harvest; and the twenty-first of the same month was the Passover. On the twenty-sixth day they fasted in memory of the death of Jesus, and on this day they began their prayers to obtain the rains of the spring. Lastly, on the twenty-
inth they called to mind the fall of the walls of Jeri-
cho. See Mothu.

Nisbet, Alexander, a Scotch divine, noted as a
Biblical student and as an Orientalist, flourished in the
second half of the 17th century as pastor at Irvine—a
town which has been fortunate enough to enjoy the
pastoral labors of other Scotch expositors, such as Dick-
son and Hutcheson. Nisbet died about 1690. He pub-
lished a Brief Exposition of the Second and Epi-
istles General of Peter. "Succinct and senten-
tious in its character, it is at the same time solid and
useful." In 1694 a posthumous work appeared under the
title, An Exposition, with Practical Observations
upon the Book of Ecclesiastes. The latter is regarded as
the most important of his works, and is worthy of con-
sultation, being lucid and judicious. The argument of
each chapter is drawn up at length and with some care.
Some attention is given to the precise meaning of the
more important Hebrew terms used by the sacred writ-
ers. His exegesis is deep and practical, such as we
might expect from one who, according to the recom-
modation prefixed to it by Ralph Rogers and J. Spaul-
ding, "by assiduous study of the Scriptures, did so trav-
ail in birth towards the forming of Christ in his hearer
that he may be said to have died in childbearing to
Christ.

Nisbet, Charles, D.D., a noted Presbyterian
divine and educator, was born at His Majesty's Tamil
Jan, 21, 1736. His father's worldly circumstances were
so straitened that he was barely able to pay the ex-
 pense of fitting Charles for college; but the youth sur-
mounted all difficulties, and finally entered the Uni-
versity of Edinburgh in 1755, supporting himself as a pri-
vate tutor. He was a gentlemanly family; and when the
university he passed to the divinity hall, where he re-
mained six years, depending for a living upon his con-
tributions to some of the periodicals of the day. He
was licensed to preach the Gospel by the presbytery of
Edinburgh on Sept. 24, 1759, and was made pastor of a
Church in the Skirlis of Glasgow; but after remaining
there two years he received a call from Montrose,
which he thought proper to accept. He was ordained on
May 17, 1764, by the Presbytery of Brechin, within
whose bounds the Church of which he became pastor
was situated. He was settled as co-pastor with the
Rev. John Cooper; but the senior pastor was so old and
infirm that nearly all the labor devolved upon the junior
colleague. Nesbet engaged with great zeal and alacrity
in his work, and very soon intrenched himself in the
confidence and good-will of his large and intelligent
congregation. He was a divine of the highest order,
known as an able exponent of the Church's faith, a
body of Scotch Presbyterians—by no means a popular
class; yet he enjoyed the universal respect of his as-
soiates, and counted many friends even among the
Moderates (q. v.). In April, 1784, Dr. Nesbet was chosen
president of the newly founded Dickinson College at
Carlisle, Pa., and reached Philadelphia with his family
on June 9, 1785. Almost immediately after he had en-
tered on the duties of his office, both himself and se-
veral of his family were attacked by a fever, which threat-
nened for some time to cut short his life. The alarms
finally resolved to return to his native country, and the
trustees consented with great regret and reluctance to
accept his resignation of the office. As the season
was unfavorable for crossing the ocean, he determined
to spend the summer in the north, and in October had so far recovered his health and spirits that he was not
unwilling to return to the presidential chair. Ac-
cordingly, on May 10, 1786, he was unanimously chosen
again to the office, and he resumed his labors with great
acility. He immediately commenced four different
courses of lectures, one on the Creed, another on the phi-
losophy of the mind; a third on moral philosophy; and
a fourth on belles-lettres, including a view of the prin-
cipal Latin and Greek classics. In addition to this, he
delivered a course of lectures on systematic theology,
for the special benefit of those students who had in view
the Christian ministry, and he shared equally with Dr.
Davidson the labor of supplying the pulpit of the Pres-
byterian Church in Carlisle. Dr. Nisbet died Jan. 18,
1804. He was remarkable for integrity, simplicity,
frankness, and disinterestedness. His mind was of a
very singular acuteness; his facility in the use of lan-
dings was unparalleled; his memory suffered nothing to escape
from it; his wit was alike effective and inexhaustible.
His sermons were rich in evangelical truth, logically
and perspicuously presented; but his manner was not
nearly so attractive. He had great individuality, and
his character, in all its peculiarities, is not likely to be
reproduced. Dr. Nisbet's posthumous works were pub-
lished about 1806, and his Memoirs, by Dr. Samuel Miller,
appeared in 1840. See Duyckinck, Encyclop. of A mer.
Lit. ii, 59; N. Y. Observer, Sept. 27, 1866.

Nisibis is the name of the place in Mesopotamia
in which the most noted of the Nestorian schools has
been located. It arose out of the ruins of the school of
Edessa, where Nestorianism found its first-fruits. We
have already referred to both these schools in the arti-
cle Nestorianism (q. v.). Those seeking further infor-
masion will do well to consult Asseman, Bibl. Vat. tom.
iii, pt. ii, p. 429, 427; ch. xv is devoted to similar in-
situtions.

Nisim, Council of (Concilium Nisimense), (1)
was held in July, 1096, by pope Urban II, who presided,
assisted by four cardinals and several bishops. Six-
teen canons were published, being for the most part the
same as those of the Council of Clermont, which the
pope confirmed in all subsequent councils. Of these
canons 2 is directed against those who assert that it is
not lawful for monks to exercise sacerdotal functions.
Canon 12 forbids the marriage of little girls (puellulae)
under twelve years of age. Mansi declares that the
matter of the clergy of St. Saturninus at Toulouse, who
claimed the fourth part of the oblations made in that
church, which canonically belonged to the bishop, and
was opposed by the bishop Isarn, was discussed in this
council; no decision was pronounced in the synod, but
subsequently Urban II compelled Isarn to give way.
Moreover, it was council king Philip II, having promised
to quit Bertrand, was absolved.

(2) Another council was held at the same place
about the year 1284. By this body a long constitut-
ion was drawn up, relating to baptism, penance, the
excommunication of the married clergy, the marriage
due to churches, alienation of Church property, the
conduct of the clergy, wills, burials, tithes, marriages,
ecommunications and interdicts, perjury, the Jews,
and other matters. This is spoken of by ecclesiastics
as only a diaconal synod. See Labbé, Concil. x, 604.

Nis'roch (Heb. Nisroch), נִרְוֹךְ, usually referred to
the root מִזְרָךְ, eagle, with Persian ending ?ך or ?ך,
in tensi, i.e. great eagle; but, according to Bohlen, per-
haps a Sanscrit word, from nis, "night," and ro'pis,
NISROCH

"Light," i.e. the light of night, i.e. the moon [see Gesen. Thesaurus, p. 892]; Sept. Nisroj, 2 Kings xix. 37; Nisroj, Isa. xxxix. 28; v. r. Miceroy, Ezik. xix. 32; Amsroj, an idol worshipped by the Assyrians, in whose temple Sennacherib was worshipped when as
assassin by his sons, Adrammelech and Sharezer (2 Kings xix. 37; Isa. xxxix. 28). Adopting the above Semitic derivation of the name, Mr. Layard has dis
covered an eagle-headed figure in the ruins of Nineveh (at Nimrud), which he supposes to be the Nine
avian Nisroch; and one quite similar has since been dug out at Khorsabad (Nineveh and its Remains, ii, 449; Nineveh and its Palaces, p. 219 sq.). A Zoroas

trian oracle speaks of God "as he that has the head of the hawks." But there are many great if not insuperable difficulties in the way. The name Nisroch is not found on any of the inscriptions; and nis has not in Assyrian the meaning which it has in Hebrew. No name of any god on the sculptures at all resembles Nisroch, and the hawk-headed figure is more, as professor Rawlinson says, "an attendant genius than a god" (Four Great Empires, ii, 283). Sir Henry Rawlinson even affirms that "Asshur had no temple at Nineveh in which Sennacherib could have been worshipp

 Niagara Falls is a natural hydraulic feature, and was named after Sir Henry Rawlinson, who studied its geological and geographical features.

NISSIM

n. 637). The Jewish rabbis pretend that Nisroch was an idol formed from one of the boards of Noah's ark (Rashi on Isa. xxxix. 28; Kimchi on 2 Kings xix. 37); while others suppose it was an image of the dove which Noah sent out from the ark (Gen. vii. 8), and have sought confirmation in Lucian's statement (De Dea Syrta, c. 42) that the Assyrians sacrificed to the dove. Many other theories are noticed in Iken's Dis
sert. de Nisroch, Idolo Assyriam. (Brem. 1747). See also Ideler, Urspriung der Stermmanen, p. 416; Creuzer, Symbol. i, 723 sq. Selden confesses his ignorance of the deity denoted by this name (De Dea Syrta, synst, ii, c. 10); but Beyer, in his Abhandlungen (p. 329-330), has col
lected several conjectures (see Kulenkamp, De Nisroch Idolo Assyriam, Rom. 1747). One is mentioned as more probable by Winer (Reulac, a. v.), that it was the constellation Aquila, the eagle being in the Persian reli
gion a symbol of Ormuzd. Parkhurst, deriving the word from the Chaldee root ḫaṣar, seraf (which occurs in Dan. vi in the form נַּשָּׁר, šērazāqā, and is ren
dered in the A. V. "president"), conjectures that Nis
roch is the name of a divine creation of the seal impressions of Nineveh and Babylon, and substantially identical with Molech and Molcon, which are both derived from a root similar in meaning to seraf. Josephus has a curious variation. He says (Ant. x, 1, 5) that Sennacherib was buried in his own temple, called Anasr (אָנָסר, spurious form of אָנָשׁ,(lat. Anasrus, "Bearer of the Bear")), and he may be inferred from these various renderings that the Hebrew name has been in some way corrupted, and that the initial consonant N or M is a corruption. In that case the real name is something like Amansr or Ansar (Niebuhr, Gesch. Assur, p. 181; Brandis, Histor. Gesch. p. 195). This would at once connect the winged circle and the sacred tree, and who is usually called by his worshippers "Asshur, my lord." It has been thought that the reading Nisroch has arisen from taking as a phonetic sign the determinative which is usually prefixed to the name of a god.

Nissel, Johann Georg, a noted Biblical scholar, flourished near the middle of the 17th century. He was a native of the Palatinate, but settled in Holland, and devoted himself to the prosecution of Oriental learning. He prepared and printed at his own expense and with his own types an edition of the Hebrew Bible, which appeared in 1659, and again in 1662, with the title, Sacra Biblia Hebraica ex optimis editionibus dilecti
genter expressa, et forma, litteris, versuumque distinctione commendata (Leiden, Bat. 1659). The second edition has a preface signed by Heidcn, Cocceius, and Hoornbeck, in which the work is commended in very high terms. Few more beautifully printed editions of the Hebrew Scriptures have appeared; and it presents with great accuracy the text of the best editions. Nissel's Biblia has had a peculiar importance of the having the Megilloth be

the Torah and the Nebiim Roshinim, as in the Bemberg Bibles. The text is divided into verses, with Latin headings to the chapters. Nissel edited also some portions of the Scriptures in Ethiopic, but not, it is said, very accurately.

Nisanim ben-Jacob ben-Nissim (Kulal Chumad), a rabbin of note for his Talmudical knowledge, was born about 960. He was a pupil of Haja Gaon at Sora, and afterwards became himself the teacher of the noted Alfas. Nissim succeeded his father in the rabbinate of Kahirwan, where he died in 1040. He wrote הָלָּו בָּנָי הַבַּטְשַׁר הָאָמַר יִנְסַי הָטַּו הָנָּבַי, a key to difficult points in the Talmud. It was probably originally written in the pecuniary, since its Hebrew translation is a good many Arabic words are retained. It was later published from a very ancient MS. by J. Goldenthal, with short scholia, entitled נסניאים ינשא דו (Vienne, 1847): הָלָו בָּנָי הַבַּטְשַׁר הָאָמַר יִנְסַי הָטַּו הָנָּבַי, a long penitential prayer, which is yet to be found in the ritual of Spanish Jews; it was translated into Italian by D. Ascarelli (Venice, 1610), and into Spanish by D. L. de Barrius, under the title Dios Simplicissimus (1686), a collection of stories (Ferrara, 1857, and often since). Some other works of his are still in MS. See Fürst, Bibl. Jud., iii, 35 sq.; De Rossi, Dizionario storico degli antichi Ebrei (German transl. by Hamberger), x, 1; Wolff, Bibl. Hebr. iii, 901, No. 1613 s; Schorr, in Geiger's Wissenschaft, Zeit
ekritik, v, 431-435 (Grünew., 1844); Frankel's Zeit
ekritik, 1867, p. 309; Rapaport, Biography of Nissim ben

Jacob, and history of his works (A. C. 1821); Landau, Zeitschr. d. j. Jacob ben-Nissim u. s. Söhnen des Rabbein Nisnem in der L. b. d. Or. 1846, c, 3, 4. (B.P.)
NISISM

NISISM, the name of imaginary demons or genii whom the inhabitants of Molucca, Ambonaya, etc., consult on every affair of importance. On these occasions twenty or thirty persons assemble, and then they summon the Nito by the sound of a little consecrated drum, while some of the company light up several wax tapers. After some time he appears, or, rather, one of the assembly officiates as his minister. Before they enter on the consultation he is invited to eat and drink. After the oracle has made his reply, they eat up the remainder of the provisions prepared for him. Besides these public consultations, there are also private ones. In some corner of the house they light up wax tapers in honor of the Nito, and set something to eat before him; and the master of each family, it is said, always attaches great value to anything that has been consecrated to their Nito. With the thought that his spirits are taken to the Nito's ceremonies, these islanders laugh at religion, placing it only in a servile fear lest some misfortune should befall them if they should fail in their obedience and respect to the Nito. See Broughton, Hist. of Religion, s. v.

NITRE

NITRE, notner, from *Nid*, to tremble; Sept. n̄idōpov, Prov. xxy, 20; virēps, Jer. ii, 22; Attic žirēps, Plato, Timæus, 60, D), a word occurring in...
Scripture only in the two places above referred to, where the substance in question is described as effervescing with vinegar, and as being used in washing; neither of which particulars applies to what is now, by a misappropiation of this ancient name, called "nitre," and which in modern usage means the saltpetre of commerce, but they both apply to the natron, or true nitrum of the ancients. The similarity of the names which is observable in this case is regarded by Gesenius as of great weight in a production of the East, the name of which passed to the article itself into Greece. Both Greek and Roman writers describe natron by the words given in the Sept. and Vulg. Jerome, in his note on Prov. xxvi, 20, considers this to be the substance intended. Much has been written on the subject of the nitrum of the ancients; it will be enough to refer the reader to Beckmann, who (Hist. of Inventions, ii, 482, Bohn's ed;) has devoted a chapter to this subject, and to the authorities mentioned in the notes. It is uncertain at what time the English term nitre first came to be used for saltpetre, but our translators no doubt understood thereby the carbonate of soda, for nitre is so used by Holland in his translation of Pliny (xxx, 10), in contradiction to saltpetre, which he gives as the marginal explanation of aphronitrum. The word neither thus might be more properly rendered natron, a substance totally different from our nitre, i.e. nitrate of potash, or saltpetre. The original word neither is what is known among chemists as "carbonate of soda." It is found native in Syria and India, and appears there as the produce of the soil. In Tripoli it is found in crystalline incrustations of from one third to half an inch thick. Captains Iruby and Mangies found lumps of this salt on the south-east shore of the Dead Sea. Natron, though found in many parts of the East, has ever been one of the distinguishing natural productions of Egypt. Hasselquist (Trac. p. 275) says that natrum is dug out of a pit or mine near Kanta in Egypt, and is mixed with lime, and is of a whitish brown color. The Egyptians used it (1) to put into bread instead of yeast, (2) instead of soap, and (3) as a cure for the toothache, being mixed with vinegar. Strabo and Pliny mention two lakes in the valley of the Nile, beyond Memphis, where it was found in great abundance (Strabo, Geogr., [Oxford ed.], vii, p. 1139; Pliny, Hist. Nat. v, 9), and describe the natural and manufactured nitrum of Egypt (ib., xxxi, 10). This substance, according to Herodotus, was used by the Egyptians in the process of embalming (iii, 76, 77). The principal natron lakes now found in Egypt, six in number, are situated in the barren valley of Rough-Red-Neck, "the Waterless Sea," about fifty miles west of Cairo, where it both floats as a whitish scum upon the water, and is found deposited at the bottom in a thick incrustation, after the water is evaporated by the heat of summer. It is a natural

Specimen of the Codex Nitriensis (containing Luke xx, 9-10: "τόν αὐτόν ἀπέβαλεν..." and Psalms, p. 360. See Alcalá.)
were very faint, but they have been deciphered and translated by Tischendorf and Tregelles, the former of whom has published an edition of them (in his Monumenta sacra Inedita, vol. ii). The letters are bold, and of the ancient form. The Ammonian sections stand in the text, and the lacunae in Tischendorf's edition of the Euchologion are now effaced. See Tregelles, in Horne's Introd. iv., 183; Scrivener, Introd. p. 114. See MANUSCRIPTS, BIBLICAL.

Nitschmann, Anna, daughter of David Nitschmann, sen., a distinguished deaconess of the Moravian Church, was born Nov. 24, 1715, in Moravia; died May 21, 1760, at Herrnhut, in Saxony. From her fourteenth year she devoted herself to the service of God among her own sex with great earnestness and zeal, laboring in Germany, France, England, and America. She was possessed of extraordinary gifts, and composed many beautiful hymns which are still in use in the Moravian Church. (E. de S.)

Nitschmann, David, the first bishop of the Remained Moravian Church (q. v.), was born Dec. 27, 1696, at Zaschenthal, in Moravia. At the age of twenty-seven years he fled to Herrnhut, in Saxony, and took an active part in the renewal of the Church, laboring at the same time as one of its itinerant evangelists. In this capacity he visited his native country, Bohemia, and was a part of Germany, England, and Denmark. At Copenhagen he became acquainted with Anthony, a slave from the West Indies. The account which this man gave him of the heathen ignorance of the negroes in those islands excited his liveliest sympathy, and led to the inauguration of the extensive and well-organized missionary work of the Moravian Church. On Aug. 21, 1732, Nitschmann and Leonard Dober (q. v.) set out for St. Thomas, determined to sell themselves as slaves, if there were no other way of reaching the negroes. After his return to Europe Nitschmann elected Bishop of, to which office he was consecrated by Dr. Ernst Jablonski (q. v.) and consecrated him, March 18, 1755, at Berlin, thus transferring the episcopal succession of the Ancient Moravian Church (q. v.) to the Renewed. In the same year Nitschmann sailed to Georgia with a colony of Moravian emigrants. Among his fellow-passengers were John and Charles Wesley. His piety, and especially the calmness which he and his brethren displayed in the midst of a terrible storm, made a deep impression upon the heart of the former, and prepared the way for an intercourse with the Moravians that culminated in the historic fellowship between him and Peter Bohler (q. v.). Nitschmann returned to Europe in 1736. The next twenty-five years of his life were spent mostly on episcopal journeys in many parts of the continent of Europe, in Great Britain, the West Indies, and America. He undertook not less than fifty sea voyages. His labors in America, where he spent altogether about twenty-three years, were particularly arduous and successful, both among white men and Indians. He died October 5, 1772, at Bethlehem, Penn., which settlement he had founded in 1740. Zinzendorf says of him: "His conversion was genuine, his walk and conversation were simple, and his manners open-hearted. Over against the world, however, he bore himself with authority. His missionary spirit knew no rest, and his success in founding churches was extraordinary."

See D. Nitschmann in einem kurzen Umriss dargestellt (Rothenburg, 1842); The Moravians, vol. vi (1865). Nathan Lane, Geschichte der. Brüder-Genossen (1883). (E. de S.)

Nitschmann, John, a bishop of the Moravian Church (q. v.), was born at Schöna, in Moravia, in 1703. In 1723 he fled to Herrnhut, in Saxony, and took an active part in the renewal of the Church. He was consecrated to the episcopal office in 1741, and labored zealously in the work of establishing the Church in 1741–1746; Middle Germany, 1757–1769; and Holland, 1769 to the time of his death, May 6, 1772. He was distinguished by his great simplicity and sound judgment. He had the gift of ruling the Church. As a preacher he was very popular. (E. de S.)

Nitsch, Karl Immanuel, one of the most profound evangelical theologians of the 19th century, was born Sept. 21, 1787, at the Saxon town of Born, near Leipzig. He was educated at the University of Jena, a Church superintendent, and a professor at Wittenberg, destined Kari from infancy to the priestly office, and personally superintended his education until his sixteenth year. He then placed him in the excellent classical school at Hirta, where young Nitsch soon distinguished himself both for his industry of character and for thoroughness of scholarship. He became so imbued with the classic languages as to be more ready and fluent in them than in his vernacular. At the age of nineteen he began his university course at Wittenberg, whether his vocation was to be in philosophy rather than in theology. But the pious Hugen-ner won him over for theology. For a few years his mind was powerfully wrought upon and perplexed by conflicting currents of thought—by Kant, Fichte, and Schelling, by the "romantic" poets, and by the influences of the "mediation theology"—essentially an independent further development and complementing of the better tendencies of the Reformation. To the creative development of this position Nitsch consecrated fifty years of earnest ecclesiastical and academic life. At the age of twenty-three he began his career as privat-dozent at Wittenberg, and as assistant pastor at the cathedral church of the place. As pastor he soon met with severe trials—during the French occupation of the place in 1813–14—being left for months, with only a single helper, in pastoral charge of the beleaguered town. His faithful care of the sick and dying during these long months contributed largely to enrich and deepen his religious life. The removal of the university to Halle interrupted his academic labors. In 1817 he resumed them in the newly established theological seminary at Wittenberg. Having already obtained some reputation for a number of erudite dissertations, he was now honored with the theological doctorate by the Berlin faculty. His lectures in the seminary and on Church history were held in several branches. Afflicted in his health by his twofold office, he was forced to ask relief in 1819, and served for a time in the rural parish of Remberg. In 1821 he accepted a call to the young university of Bonn. Here he opened a course of teaching in the years 1821–27, one of the most successful academic and churchly labor. He stood and worked by the side of such men as Lichte, Sack, Bleek, Brandis, Niebuhr, etc. Systematic theology was here his chief field. Basing himself upon Schleiermacher's Dogmatics, he began to give positive form to the views which he afterwards gave to the public in his two master works, Christian Doctrine and Practical Theology. The former work presents Christian doctrine and life, dogmatics and ethics, as an inseparable unitary whole, in their mutual interpenetration. The latter presents the Church life in the historical process of transforming the world into the kingdom of God. In 1828 Nitsch lent Ullmann and Umbreit an active hand in establishing the Studium und Kirchen, to which he contributed some essays of epoch-making character, e.g. on the Immanence of Trinity (1841), and especially his "Protestant Reply to the Schoolmen," and his "Theological Criticism of the Dogmatics of Strauss." In the last two essays he gave scientific expression to the essence of Christianity as distinguished from the opposite errors of Romanism and mythism. Nitsch soon obtained such a name that students from all parts of Europe sat at his feet. He found the "pearl" of the whole university. His power, however, lay not in the beauty of his style, for this was to the student at first both obscure and repellant, nor in any outward expression of
piety, but in the profound and deep flow of genuine scientific Christian thought. As university-preacher, he exercised for years a potent influence on the whole life of the university. This pastoral office formed the basis of an active and wide influence, affecting the Church life of the two provinces, and promoting the Prussian Church. The Lutheran and Reformed churches, for which Nietzsche had earnestly labored ever since its inauguration in 1817. He finally became its acknowledged first champion. This reputation contributed to his call to Berlin in the spring of 1847. He was now sixty years of age, but twenty years vigorous life lay yet before him. The political convulsions of 1848 called out heroic conduct from Nietzsche as rector of the university. His firmness contributed largely to checking the mad waves of radical demagogy, both in the university and in the Church. In politics he was conservative—progressive. After the revolution he was elected twice to the Prussian Chamber, where he opposed the extreme reactionism of the Stahl party. In this interest he also effectually labored in the columns of the newly established Wochenblatt. To check the tide of Neo-Lutheranism he joined Muller and Neander in 1850 in the publication of the Zeitschrift für chr. Wissenschaft. In 1857 he saw his favorite scheme of Church union assumed a more encouraging phase, and a decided check put to the confessional tendency; and he welcomed the Evangelical Alliance as the dawning realization of his own long cherished ideal. In the tender green of June 16, 1858—the congratulation day of his fifty years of university labor—brought him abundant evidence from far and near that evangelically Germany honored him in the rector Germaine of the day. At the age of seventy-five he began the old and to the end compelled, one of one, to lay down the many offices which had accumulated themselves upon him—first his lectures, then his charge of the Homiletical Seminary, then his seat in the Consistory, and, lastly, the pastoral office in the church of St. Nicolai, of which he had been made proctor in 1855, though he closed his life before the acceptance of his resignation. He died Aug. 21, 1868. One of the chief labors of his latter years was the completion of his elaborate work on Praktische Theologie. He had begun it at Bonn, and the volumes followed each other in 1848, 1851, 1857, and 1867. It is the greatest of his works—rich in practical wisdom, largely drawn from active experience in Church life, a rich storehouse for the pastor—the testament of its author to posterity. Nietzsche must be regarded as one of the leaders of that school of thought in German theology which sought for a greater religious reformation. Like these, and as the latter, Nietzsche endeavored to reconcile faith and science, not by forced and unnatural methods, but by pointing out their distinctive spheres, and by exhibiting in his own spiritual life that union of reason and reverence for which he argued in his writings. In theology his position will be best understood when we say that Nietzsche subordinated dogma to ethics, or, rather, that he accepted and prized chiefly those dogmas that result from an ethical apprehension of Christianity. In many respects Nietzsche and Bunsen labored in common, especially in advancing their political and religious obligations as citizens of a Church united with the State. The high Lutheran party having denounced liberal politics as irreligious, Nietzsche and Bunsen came forward with others to vindicate them on liberalgrounds, and not without success. Nietzsche's System der christlichen Lehre appeared first in 1829, was enlarged, in 1833, and between then and 1851 in four further constantly enlarged and enriched editions. He also published several volumes of lectures and sermons, remarkable for their extraordinary richness of thought. See Hoffmann, Leben Nietzsche, 1869 (Berlin, 1868); the elaborate article by Dr. Beyschlag in Stud. u. Krit. 1869, No. iv.; Meth. Qu. Rev. Oct. 1873, art. iii.; Schwarz, Gesch. der neuesten Theologie, p. 387 sqq.; Kahnis, Hist. of Germ. Protestantism, p. 257. (J. F. L.)

Nietzsche, Karl Ludwig, father of the preceding and likewise a noted German theologian, though not equally famous, was born in 1754, and was educated at Jena and Halle. After preaching for some time he became professor of theology at Wittenberg University, and there so distinguished himself that he was placed in charge of the homiletical seminary, and made general superintendent of religion. He died in 1881. He wrote a "Disertation on the Sense of the Apostles' Decree, Acts xx, 29," in the Commentationes Theologicae, vol. vi, and various other pieces in current periodicals and collections. The full story of his life and writings is given in Herzog, Real-Encyclopaedie, x, 387-392, by his son, Karl Immanuel, of whom we have treated above.

Nivelle, Gabriel Nicolas, a French theologian noted as a polemic, was born at Paris in 1857. While yet quite young he was appointed commendatory prior of St. Germain, in the diocese of Nantes. He studied theology in the seminary of St. Magloire, where he continued afterwards to reside, and became one of the most zealous among the appellants. He drew up petitions, visited members of the clergy in Paris, and kept up active communications with the prisoners in republican gaols. After the fall of the Coup d'état of Dec. 2, 1851, he composed and published a letter to the bishop of St. Magloire, he retired, in 1728, to the Val de Grace; and in 1730 was for four months a prisoner in the Bastille, where he still, however, continued his efforts. He died at Paris Jan. 7, 1761. He wrote La Constitution Unigueuse défendue à l'Eglise universelle, ou recueil général des notes d'appel intermédiaires au futur concile général de cette constitution et des Lettres Pastorales officielles (Cologne, 1737, 4 vols. fol.);—also, in making use of the memoirs of abbot Boucher, Relation de ce qui s'est passé dans les assemblées de la Faculté de théologie au sujet de la Constitution Unigueuse (7 vols. 12mo). He was one of the writers of the Histoire ou les six Colonies sur la Constitution Unigueuse (1714 sqq., 7 vols. 4to), and of the Cr de la Foi (1719, 5 vols. 12mo). He also published two posthumous works of Petilhel: Essai politique de l'acceptation et du fond de la Constitution Unigueuse (1749, 3 vols. 12mo), and Tracté de la liberté (1754, 2 vols. 12mo). See Néron des défenseurs de la vérité ('supplement).

Nivers, Guillaume-Gabriel, a French priest and composer of sacred music, was born in 1617, in a village in the environs of Melun. He was at first placed as choir-boy at Melun, and learned music in the collegiate church of the town. He then entered the seminary of St. Sulpice, and proceeded to St. Sulpice studies in the college of Meaux, then at Paris, where he entered the seminary of St. Sulpice to pursue a theological course. Carried away by his taste for music, he took lessons upon the harpsichord from Chambonnieres, and in a short time acquired a proficiency which caused him to be appointed, at the age of twenty-three, organist of St. Sulpice. Two years after he entered the king's chapel in the capacity of tenor. In 1667, one of the places for organist at this chapel, having become vacant, was given to Nivers, who still continued to fulfill the same duties in the church of St. Sulpice. Several years later he was made master of music to the queen and organist of the Royal House of the young ladies of St. Cyr, when, in 1688, Madame de Maintenon founded that establishment. It was Nivers who held the harpsichord when, for the first time, the organist of this institution refused to play before the king Regnault's Es- ther and Athalie, the choruses of which had been set to music by Moreau. We are ignorant of the precise date of Nivers's death; but we have proof that he was still living in 1701, by an approbation that he gave in the same year to a certain edition of Handel and Autophoniase printed at the house of Ch. Ballard. Nivers was then eighty-four years old. This learned and laborious musician has left a large number of works. We have, La gamme du Si; nouvelle méthode pour apprend-

dire à souffrir sans nuance (Paris, 1646, 8vo). This book, of which several editions have appeared under different titles, has contributed powerfully, by its brevity and the greatness of its aim, to the spread of the new movement, even by its very obscurity of expression by change of note, which was still in vogue in the time of Nivers, notwithstanding the efforts of other musicians of the latter part of the 16th century to abolish it—Méthode certaine pour apprendre le plain-chant de l'Église (ibid. 1657)—Tratté de la composition musicale (ibid. 1657, 8vo)—Influencia en la vida chas de Gregorian (ibid. 1685, 8vo). Nivers gave in this dissertation, as well as in the following works, an impression of his perfect knowledge of ecclesiastical music:—Chants d'Église à l'usage de la paroisse de St. Sulpice (ibid. 1657, 12mo)—Les Chants de Messe de St. Thomé et de St. Quintin pontifices mazzini autoritati editum; cujus modulatio concinna dispositio; in unum grammaticum ordinatione Sancti-Augustini, etc. (ibid. 1658, 4to)—Anti- plonumarian Romanum juxta Breviariam Fil Quinti, etc. (ibid. 1658, 8vo)—Pothasiones D. N. J. C. cum benedictione verbi placitis (ibid. 1670, 4to)—Legons de Ténèbres selon l'usage Romain (ibid. 1640, 4to). This collection and the preceding have been united in one volume, having for a title Les Passions avec l'Exultet et les Leçons de Ténèbres de M. Nivers (ibid. 1689, 4to)—Chants et Motets à l'usage de l'Église ordinaire et célébrations de la maison de Saint-Louis à Saint-Cyr (ibid. 1692, 4to). A second edition of this work, arranged and enlarged by several motets by Clerembault, has been published (ibid. 1728, 2 vols. 4to)—Livre d'Orgue, contenant cent pièces de tous les tons de l'Église (ibid. 1663, 4to)—Deuxième Livre d'Orgue, etc. (ibid. 1671, 4to)—Troisième Livre d'Orgue (ibid. 1675, 4to). Other books of organ pieces by the same author have appeared at more recent periods. These pieces, correctly written, in a style which recasts that of the German organists of the 17th century, made the head the reputation which Nivers enjoyed in his time as composer. See Bourdetil, Histoire de la Musique; De la Borde, Essai sur la Musique; Choron and Fayolle, Dictionnaire historique des Musiciens; Patrie, Histoire du Part musical en France, etc., Biog. Univ. des Musiciens.

NIX, Richard, an English prelate who flourished in the days of king Henry VIII, was born about 1564. He was educated with great care for the service of the Church, and after taking holy orders rose rapidly to positions of trust. He was finally made bishop of Norwich, and through his influence to the Reformatory movement. He is by Burnet and Soames accused of very bad habits. The last-named ecclesiastical historian says that bishop Nix was licentious and cruel, and that his zeal to suppress the Reformatory movement was "tempered by little or no sense of decency. Even he made a jest of the sufferings to which those exposed themselves who were liable to be questioned for heresy, and called such persons men savoring of the frying-pan" (Hist. Ref. i, 677-8). In 1634 proceedings were instituted against the bishop for a change of the old ancient correspondence which he had for some time held with the pope, and pleading guilty he was committed to the Marshalsea. He contrived, however, to make his peace with the government, and was soon after pardoned. He was blind in his old age, and died about 1640. (J. and P. C.)

NIXII, DH, a name applied among ancient Romans to those deities who assisted women in childbirth. Three statues were erected on the Capitol bearing this name.

NIXON, John, a minister of the Methodist Episcopal Church, was born in the County of Tyrone, Ireland, in April, 1779. His parents were converts of John Wesley. Young Nixon was a model of all the virtues associated with reading of the Scriptures, and early experienced justifying grace. He soon commenced praying and exhorting in public, and after a time was employed to fill vacancies for the travelling preachers. He was finally appointed to a circuit, and travelled four or five years. In 1820 he emigrated to this country, and preached in Connecticut, under the influence of Dr. Asbury. In 1821 he was a member of the New-York Conference, when he was admitted on trial. For the term of about twenty years he continued in the regular work, filling many appointments on circuits with various success. For a number of years he was on the superannuated list, and in gradually declining health, resulted in his death at Caroline, Tompkins Co., N. Y. "He was," says his brother, "seemingly to the last, and died extremely happy." Nixon, Marcus de, an Italian missionary, discoverer of Sonora, lived between 1510 and 1570. He was trained at the Jesuit College of St. Ignatius at Rome, and in 1547 was sent as missionary to New Spain, then governed by don Antonio de Mendoza. This viceroy, yielding to the entreaties of his friend, the venerable bishop of Chiapa, Barceló de Las Casas, consented to send some missionaries into New Galicia to assist the natives that the Spaniards wished neither to make war upon them nor reduce them to slavery, but only to convert them to the Roman Catholic religion. Marcos de Niza was appointed chief of this peaceful mission, and departed for Mexico, March 7, 1540. The expedition encountered no opposition and was well received by the governor of New Galicia, and yet Niza sent to the viceroy a marvellous account of his discoveries. He boasted of the fertility and richness of the countries he had traversed, as well as of the civilization of their inhabitants. He thus excited the ambition and curiosity of Cortés, and he was sent to the regions he had described, but neither the king who resolved the conquest of them; but each wished to appropriate it to himself to the exclusion of the other. Mendoza, however, was the most diligent; and while Cortés was soliciting in Spain, he gave the order to don Francisco Vasquez de Coronado, governor of New Galicia, to set out upon the head of one hundred and fifty cavaliers, two hundred foot-soldiers, and several field-pieces. Marcos de Niza guided the expedition, which departed from Culiacan in April, 1540. This expedition was still more disastrous and unprofitable than the former; and Niza returned with Coronado to Culiacan, after a voyage, estimated by Gomera, of three thousand miles. According to the relation of Niza, "he had seen along the coast vessels with prows ornamented with figures of gold and silver, whose captains made them present to him, that they had been thirty days at sea, thirty days," which shows, he adds, that they came from China, and had known America for a long time. The following year Niza and another Franciscan made a new voyage into Sonora; but they have left no detail upon this third excursion. The expeditions of Niza and Cortés continued to give the Andes and the north-east of New Spain, produced no serious result, and destroyed none of the fables which were circulated about the countries situated between the Rio Gila and the Colorado. The false reports of these travellers of the existence of the great kingdom of Tataraxan, or of the immense city of Quivira, upon the shore of the fantastic lake of Teguayo, rapidly found credence. They doubted the existence of the El Dorado, which they placed under the 41st degree of latitude. Other adventurers also were eager to renew the attempts of Niza. Numerous catastrophes alone could discourage them. We find the Relacion de lo verdadero Francisco Marcos de Niza in the collection of Remusio (iii, 228); and Hackluyt, in his Voyages, etc. (iii, 363-375), has also published A Relation of the Rev. Father Friar Marcos de Niza touching his Discovery of the Kingdom of Cerral, or Cisola, situated about 300 of Lat. to the North of New Spain. Ramusio has also given the Relatione che mando Francesco D. Vasques de Coronado, copiato no generale della gente, che fu mando in nome di sua maestà a questa navigatione in queste meravigliose viaggio dalla ventidie di Aprile di questo anno MDXI, que parti da Culicacan per ianacchi e di quel che trovo nel paese dove andava (Venice, 1606, 3 vols. fol.).
ed about the middle of the 12th century, is noted as the author of a poem in praise of God, inserted in Koegarten's Trüba Carmenorum Orientalium, with notes. One of his minor poems, anonymously by his traffic in false testimonials of churchmanship maintained with the Jesuit, is imputed to the German poet Schiller. Nizami died in 1181.

Nizhny Novgorod, a Russian Catholic priest who flourished in Bohemia near the 17th century as pastor of St. Albert, in the new town of Prague, and with his pretended miracles his traffic in false testimonials of churchmanship maintained with the Jesuit, is imputed to the German poet Schiller. Nizami died in 1181.

Nizubursky, Lorenza, a Roman Catholic priest who flourished in Bohemia near the opening of the 17th century as pastor of St. Albert, in the new town of Prague, and with his pretended miracles his traffic in false testimonials of churchmanship maintained with the Jesuit, is imputed to the German poet Schiller. Nizami died in 1181.

Nizolius, Mabius, of Berello, an Italian philosopher, flourished near the middle of the 16th century. He was born about 1498, and died in 1567. He was a Nominalist of no mean order, and is frequently quoted by Leibniz, who saw much of merit in his writings, though he was annoyed by Nizolius's opinions. He is described as a Jesuit, but his extremes nominalistic doctrine that the genus is only a collection of individuals—by which doctrine the possibility of scientific demonstration on the basis of universal propositions is destroyed, and only induction, as the mere collation of similar experiences, is left remaining as the organ of method. Nizolius exhibited his scholasticism in his Theosaurus Ciceronianus, and particularly in his Anti-barbarus sive de veris principiis et verae rationis philosophandae contra pseudo-philosophos (Paris, 1565, ed. G. W., 1607) [Frankfort, 1670 and 1674]. Nizolius maintained the nominalistic doctrines, that only individual things are mere substances; that species and genera are only subjective conceptions by means of which several objects are considered together; and that all knowledge must proceed from sensation, which alone can be known.

Njembe, a female association among the natives of Southern Guineo, corresponding to Nuf (q.v.) among the males. The proceedings of this institution are all secret. The women consider it an honor to belong to the order, and put themselves to great expense to be admitted. "During the process of initiation," as we learn from Dr. Hilton, "all the women go, wearing nothing, to the order paint their bodies in the most fantastic colors. The face, arms, breast, and legs are covered over with red and white spots, sometimes arranged in circles, and at other times in straight lines. They march in regular file from the village to the woods, where all their ceremonies are performed to music on a crescent-formed drum. The party spend whole nights in the woods, and sometimes exposed to the heaviest showers of rain. A sort of vestal-fire is used in celebration of these ceremonies, and it is never allowed to go out until the fire is all quenched, and the body, are really feared by the men. They pretend to detect thieves, to find out the secrets of their enemies, and in various ways they are useful to the community in which they live, or are, at least, so regarded by the people. The object of the institution originally, no one knows, was to keep the women in subjection on the part of their husbands; and as their performances are always veiled in mystery, and they have acquired the reputation of performing wonders, the men are, no doubt, very much restrained by the fear and respect they have for the goddess who is supposed to be their patroness."

Njord or Njord, an ancient Scandinavian divinity who reigned over the sea and winds. The Edda ex-
horts men to worship him with great devotion. He was particularly invocated by seafarers and fishermen, and was therefore propitiated by them. He dwells in the heavenly region called Nostun, and by his wife Skadi he became the father of the god Frey and the goddess Freya. He was accounted very aright, and able to dispense wealth in abundance to those who invoked him. See Theop., Northern Myth. vol. i, Anderson, Norse Mythol. ch. vi, esp. p. 541–3.

Nkazyja, a small shrub, whose root is employed in Northern Guinea in the detection of witchcraft. Half a pint of the decoction of the root is the usual dose, and if it acts freely as a diuretic, the party is considered to be innocent; but if it acts as a narcotic, and produces vertigo or dizziness, it is a sign sure of guilt. "Small sticks", says Mr. Wilson, "are laid down at the distance of eighteen inches or two feet apart, and the suspected person, after he has swallowed the draught, is required to walk over them. If he has no vertigo he steps over them easily and naturally; but, on the other hand, if his brain is affected, he imagines they rise up before him like great logs, and in his awkward effort to step over them is very apt to reel and fall to the ground. In some cases this draught is taken by proxy, and if a man is found guilty, he is either put to death or heavily fined, and banished from the country."

No (Heb. n. 31), doubtless an Egyptian word, and signify (according to Jahnkossi, Oppes, i. 168) portions of the land, a city of Egypt (called by the natives Topa, according to Champollon, Gramm. Egypt. p. 136, 138), mentioned by this name alone twice by the prophets (Ezckel. xxx. 14 sq.; Jer. xlv. 25), and generally supposed to be the same elsewhere (Nah. iii. 8), cannot now fully be No-Amon (q.v.) (see Geœen, Top. p. 854 sq.; Young, Rudiments of an Egyptian Dictionary, p. 80 sq.), a famous city of Egypt, thickly peopled, and strongly situated, which at the time of Nahum (B.C. cir. 720) had recently been taken by a mighty conqueror (Nah. iii. 8 sq.). The Sept. translates the name by Diospolis, which was the name of two cities in Egypt: the one in Upper Egypt, better known as Thebes, famous in Homer's time (Il. ix. 388), and often mentioned by Strabo (i. 9, 35; xvii. 805, 815) and Pliny (v. 11; xxxvi. 12; xxxvii. 54), and for which a separate name or district was named (Plut. iv. 5, 78). The other city of the name, mentioned by Strabo (xvii. 802) as being surrounded by lakes. Some refer the words of Nahum (L.c.) to the latter, Diospolis the lesser (so Koenen, Nahum: Vatic. philol. et crit. exposit. [Harder. 1806]; Champollon, l'Egypte, ii. 121); but most interpreters, following the Egyptian signification of the name, as given above, understand the prophet to mean Thebes. The latter opinion, supported by the seventy Alexandrian translators, seems to be certainly correct, as the prophet could not speak of any city less than Thebes as equal to Nineveh. The "waters round about her" (Nah. iii. 8) refer doubtfully to the canals, with which Thebes, like so many other cities on the Nile, was surrounded for protection (comp. Zorn, Hist. et Antiq. Urbis Theb. [Sedim. 1727]; Opusculo, ii. 322 sq.; also in Ugolini, Theb. vii; Rosenmuller, Scholi. vii, iii. 299 sq.). This city was one of the oldest and most ancient of all in Egypt (Diod. Sic. i. 50; comp. xiv. 45), and in very early times was the residence of the kings of Upper Egypt during several dynasties. In the days of its grandeur it lay on both banks of the Nile (Strabo, xvii. 816), in a valley about ten geographical miles in width, the corn of which was carried from four to six stories high, with many splendid and wealthy temples, the chief being that of Jupiter Ammon (Herod. i. 182; ii. 42), whose numerous priests were famous for their astronomical knowledge (Strabo, xvii. 816). The colossal statue of Ammon stood in the western part of the city of Thebes, a..."
baptism (נַפְלוּת), and a sacrifice (םַחֲבָּרָה). Comp. Tambal, Bunchedin, 56 a; Rashii on Aboda Zara, 51 a; Maimonides, Talmud, Ha-Chesed, Hilchot Melachim, ix, 11; Molaui, Israilite Generals, p. 56; Buxtorf, Lexicon Talmudicum et Rabbinicum, s. v., "Pharisaic sacrifice." "Son of the O. and N. T. ii, 45-7. (Wheeler's ed. Lond. 1863.)

Noahische Gebote; Schenkel, Bibel-Bearb., s. v. Noah, iv, 441; Hamburger, Reallexicon der Bibel und Talmud, i, 789 sqq. (Breislag, 1872).

1. A Levite, the son of Binnui, who assisted Meroth and others in weighing the precious vessels of the Temple which Ezra brought back to Jerusalem (Ezra viii, 32). B.C. cir. 450. A. H. cir. 300. B. C. cir. 450.

2. A professed prophetess, who, in conjunction with the Samaritan enemies of the Jews, endeavored to terrify Nehemiah from the work of building the wall at Jerusalem (Neh. vi, 14). B.C. cir. 443.

Noah, the name of two persons in the Bible.

1. (Heb. No'ach, נוֹעָכָ; the same as τό ἰός, consolation or peace; Sept. and N.T. Nōs, as Matt. xxiv, 37; Josephus, Nōs.) The tenth in descent from Adam; son of Lamech, and second father of the human family; born B.C. 3115, A.M. 1058. In the following account of this patriarch we largely follow the Scripture narrative with modern illustrations.

2. Noah's first act after he left the ark was to build an altar, and to offer sacrifices. This is the first altar of which we read in Scripture, and the first burnt sacrifice. Noah, it is said, took of every clean beast, and of every clean fowl, and offered burnt offerings on the altar.

Then the narrative adds with childlike simplicity: "And Jehovah smelled a smell of rest (or satisfaction)," and Jehovah said in his heart, "I will not again curse the ground any more for man's sake; for the imagination of man's heart is evil from his youth; neither will I again smite any more every living thing as I have done." Jehovah accepted the sacrifice of Noah as the acknowledgment, on the part of man that he desires reconciliation and communion with God; and therefore the renewed earth shall no more be wasted with a plague of waters, but so long as the earth shall last seed-time and harvest, cold and heat, summer and winter, day and night, shall not cease. See Rashi.

Next, God makes provision that the animal food was not eaten before the flood, but only that now the use of it was sanctioned by divine permission. The prohibition with regard to blood reappears with fresh force in the Jewish ritual (Lev. ii, 17; vii, 26, 27; xvii, 10-14; Deut. xii, 16, 23, 24; xv, 28), and seemed to the apostles so essentially human as well as Jewish that they thought it ought to be enforced upon Gentile converts. In later times the Greek Church urged it as a reproach against the Latin that they did not hesitate to eat things strangled (αὐτοκοτίας in gather κατά τοὺς ψυχικάς τεκνίας). See DiCecco.

Next, God makes provision for the security of human life. The blood of man, in which is his life, is yet more precious than the blood of beasts. When it has been shed by an obedient man, the latter were called the blood of man: and man himself is to be the appointed channel of divine justice upon the homicide: "Whoso sheddi
man's blood, by man shall his blood be shed; for in the image of God made he man. Here is laid the first foundation of the civil power. So, as the priesthood is declared to be the privilege of all Israel before it is made representative in certain individuals, so here the civil authority is declared to be a right of human nature itself, before it is delivered over into the hands of a particular estate. 

Thus with the beginning of a new world God gives, on the one hand, a promise which secures the stability of the natural order of the universe, and, on the other hand, consecrates human life with a special sanctity as resting upon these two pillars—the brotherhood of men, and monarchy of holiness.

Of the seven precepts of Noah, as they are called, the observance of which was required of all Jewish proscylytes, three only are here expressly mentioned: the abstention from blood, the prohibition of murder, and the recognition of the civil authority. The remaining four—the prohibition of idolatry, of blasphemy, of incest, and of theft—rested apparently on the general sense of mankind. See NOACHIAN PRECEPTS.

3. Noah for the rest of his life betook himself to agricultural pursuits, following in this the tradition of his family. From this time we find him planted in a vineyard, and some of the older Jewish writers, with a touch of poetic beauty, tell us that he took the shoots of a vine which had wandered out of Paradise wherewith to plant his vineyard. Armenia, it has been observed, takes its name, "Armenia," from the color of the vine. Xenophon (A. a. h. iv. 4, 9) speaks of the excellent wines of the country, and his account has been confirmed in more recent times (Ritter, Erdk. x. 554, 319, &c.). The Greek myth referred the discovery and cultivation of the vine to Dionysus, who, according to one version, brought it from India (Diod. Sic. iii. 32): according to another, from Phrygia (Strabo, x. 469). See BACCHUS.

Asia, at all events, is the acknowledged home of the vine. See GRAPE. Whether in ignorance of its properties or otherwise we are not informed, but he drank of the juice of the grape till he became intoxicated, and shamefully exposed himself in his own tent. One of his sons, Ham, mocked openly at his father's disgrace. The others, with dutiful care and reverence, endeavored to hide it. Noah was not so drunk as to be unconscious of the indignity which his youngest son had put upon him. It is particularly noticed that he planted a vineyard. Thucydides (4) speaks of the effects of his intoxication, he declared that in requital for this act of brutai, unfeeling mockery a curse should rest upon the sons of Ham, that he who knew not the duty of a child should see his own son degraded to the condition of a slave. It was this curse which his youngest son incurred, a blessing on the other two. It ran thus, in the old poetic or rather rhetorical and alliterative form into which the more solemn utterances of antiquity commonly fell:

Curse be Canaan.

On the other hand:

Blessed be Jehovah, God of Shem,
And let Canaan be their slave.
May God enlange Japheth,
And let him dwell in the tents of Shem,
And let Canaan be their slave.

Of old a father's solemn curse or blessing was held to have a mysterious power of fulfilling itself. And in this case the words of the righteous man, though strictly the expression of a wish (Dr. Faz Smith is quite wrong in translating all the verbs as futures; they are optatives), did in fact amount to a prophecy. It has been asked why Noah did not curse Ham instead of cursing Canaan. It might be sufficient to reply that at such times men are not left to themselves, and that a divine power, as it were, provided Noah's lips then as it did the hands of Jacob afterwards. But, moreover, it was surely by a righteous retribution that he, who as youngest son had dishonored his father, should see the curse light on the head of his own youngest son. The blow was probably heavier than if it had lighted directly on himself. Thus the curse, in the wise wisdom of the lesson taught practically which the law afterwards expressly enunciated, that God visits the sins of the fathers upon the children. The subsequent history of Canaan shows in the clearest manner possible the fulfilment of the curse. When Israel took possession of his land, he blessed the son of Ham when Tyre fell before the arms of Alexander, and Carthage succumbed to her Roman conquerors, he became the slave of Japhet: and we almost hear the echo of Noah's curse in Hambigal's Agamemnon faustorum Carthaginiis, when the head of Hissrugul, the king of Carthage, was contorted and torn into the Punic lines. It is uncertain whether in the words "And let him dwell in the tents of Shem," "God" or "Japhet" is the subject of the verb. At first it seems more natural to suppose that Noah prays that God would dwell there (the root of the verb is the same as that of the noun Shechem). But the blessing of Shem has been spoken already. It is better, therefore, to take Japhet as the subject. What, then, is meant by his dwelling in the tents of Shem? Not, of course, that he should so occupy them as to thrust out the original possessors; nor that he should ever be able to live there in comfort and peace; but, it would seem, that Japhet may enjoy the religious privileges of Shem. So Augustine: "Labiatem Deus Japheth et habitat in tempori sem, id est, in Ecclesiis quas filii Prophetae Apostoli construxerunt." The Talmud further describes the privileges of the descendants of Japhet as comprehending the use of the sacred language in sacred things, such as the translation of the Scriptures. Thus Shem is blessed with the knowledge of Jehovah, and Japhet with temporal increase and dominion in the first instance, with the further hope of sharing afterwards in spiritual advantages.

4. After this prophetic prelude we hear no more of the patriarch but the sum of his years. "And Noah lived after the flood three hundred and fifty years. And thus all the days of Noah were nine hundred and fifty years: and he died." Some have inferred, from the fact that he lived so long after the flood, and is nowhere mentioned in the history of that period, that he must have gone to some distant land, and have even identified him with the Chinese Fohi (Schuckford, Consect. i. 99), or the Hindit Menu (Sir William Jones, Works, iii. 131 sqq.). Others, referring to the deluge in Genesis the various traditions which may have been the incident, and the nations preserved of a similar early catastrophe, have thought Noah to be the same with Xisuthras of the Chaldees (Alex. Polyhist, Chronic of Eutheus); the Phrygian Not of the celebrated Apamean medal, which, besides the bright gold, is inscribed with a sun, a seven, and a dove with an olive-branch in its mouth (figured in Bryant's Anc. Myth. vol. iii. the Mones of the Lydians (W. J. Hamilton's Asia Minor, iii. 388); the Decapolis of the Syrians and the Greeks, of whose deluge the account given by Lucian is a copy almost exactly circumstantial of that in the book of Genesis (Dios Synaia; Luciani Opp. iii. 457 [ed. Reitz]; Bryant, i. 28), and have referred to him many statements in the Greek mythology respecting Saturn, Janus, and Bacchus; the traditions of the aboriginal Americans, as stated by Clavigero in his History of Mexico; and many others. See Flood. Mr. Geo. Smith has lately brought to light the Aseyrian account of the deluge.

About two miles east of Zakhile is the village of Kerak, not far from which, on the last declivity of Lebanon, there is a round mosque. This is erected over still older relics, which are held in great reverence by Moslems and Christians, as being the reputed tomb of the patriarch Noah (Thomson, Land and Book, i. 333). The structure is evidently the remains of an ancient aqueduct, but popular credulity has invested it with a character of eminent sanctity; relics have been built around it, and at a certain season of the year the Maronites, in particular, perform pilgrimages to visit it. In his old age, they relate, Noah entreated of God, as a
peculiar favor, that he might be allowed to end his days on Mount Lebanon, and there to prepare his place of sepulture. The patriarch’s prayer was granted; but shortly before his death he committed some transgression, and God cut off a part of his tomb, by severing a huge mass from the mountain Noah had chosen. He could not be buried at full length, and it was necessary to double his legs under his thighs, to fit his remains to their diminished bed. Now this so-called tomb is at least sixty feet long.

See Demstoffer, De auctoritate praeceptorum Noah. (Lips. 1711); Eisenberg, De doctrina sub Noacho (Hal. 1754); Frischmuth, De Noahi praeccept. (1646-7); Maitland, History of Noah’s Day (Lond. 1862); Olmsted, Noah and his Times (Boston. 1854).

2. (Heb. Noah, נָוֹה, motion, Sept. Noáh.) The second name of the five daughters of Zelophehad, son of Hefer, of the half-tribe of Manasseh (Num. xxxvi, 33), B.C. cir. 1618. As their father had no son, the daughters applied for, and Moses, under divine direction, promised them an inheritance in the Promised Land in their father’s right (Num. xxvii, 1 sq.). This promise was redeemed by Joshua in the final apportionment (Josh. xvii. 3). See Hark.

Noah’s Ark. The precise meaning of the Hebrew word (תּוֹדָּה, têdôh) is uncertain. The word only occurs here and in the second chapter of Exodus, where it is used of the little papyrus boat in which the mother of Moses intrusted her child to the Nile. In all probability it is the old Egyptian that we are to look for its original form. Bunsen, in his vocabulary (Egypt’s Place, i, 482), gives ṭu, “a chest,” ṭp, “a boat,” and in the Copt. Verb. of Exodus, lxi, δ, δ, ṭôth is the rendering of têdôh. The Sept. employs two different words. In the narrative of the Flood they use Ἐκβάσθης, and in that of Moses ἴσος, or according to some MSS. ἴσος. The Book of Wisdom has σχῆμα; Berosus and Nicol. Damascus, quoted in Josephus, πλάτων καὶ λαοφόρη. The last is also found in Lucian, De Dea syr. c. 12. In the Syllibine Verses the ark is διαβάστων δόμα, ἱσος, and Εκβάσθης. The Targum and the Koran have each respectively given the Chaldee and the Arabic form of the Hebrew word.

This “chest,” or “boat,” was to be made of gopher (i.e. cypress) wood, a kind of timber which, both for its lightness and its durability, was employed by the Phenicians for building their vessels. Alexander the Great, Arrian tells us (vii, 19), made use of it for the same purpose. The planks of the ark, after being put together, were to be protected by a coating of pitch, or rather bitumen (בּוֹז, Sept. דֶּרֶךְ וּרְכָּב), which was to be laid on both inside and outside, as the most effectual means of making it water-tight, and perhaps also as a protection against the attacks of marine animals. Next to the material, the method of construction is described. The ark was to consist of a number of “nests” (חֵּטִים), or small compartments, with a view, no doubt, to the convenient distribution of the different animals which were to supply their food. These were to be arranged in three tiers, one above another; “with lower, second, and third (stories) shalt thou make it.” Means were also to be provided for letting light into the ark. In the A. V. we read, “A window shalt thou make to the ark, and in a cubit shalt thou finish it above;” words which, it must be confessed, convey no very intelligible idea. The original, however, is obscure, and has been differently interpreted. What the “window,” or “light-hole” (מְנָב, têdôh), was, is very puzzling. It was to be at the top of the ark apparently. If the words “unto a cubit (מְנָב, têdôh) shalt thou finish it above” refer to the window, and not to the ark itself, they seem to imply that this aperture, or skylight, extended to the breadth of a cubit the whole length of the roof. Knoell’s explanation is different. By the words, “unto a cubit (or within a cubit) shalt thou finish it above,” he understands that, the window being in the side of the ark, a space about a cubit was left between the window and the overhanging roof of the ark, which Noah removed after the flood had abated (viii, 13). There is, however, no reason to conclude, as he does, that there was only one light. The great objection to supposing the window was in the side of the ark is that then a great part of the interior must have been left in darkness. Again we are told (viii, 13) that when the flood abated Noah removed the covering of the ark, to look about him to see if the earth were dry. This would have been unnecessary if the window had been in the side. “Unto a cubit shalt thou finish it above” can hardly mean, as some have supposed, that the roof of the ark was to have this pitch; for, considering that the ark was to be fifty cubits in breadth, a roof of a cubit’s pitch would have been almost flat. Taylor Lewis (in the Amer. ed. of Lange’s Genesis, p. 296) ingeniously maintains that the aperture was at the peak or ridge of the roof. But if so it could not have been merely an open slit, for that would have admitted the rain. Are we then to suppose that some transparent, or at least translucent substance was employed? It would almost seem so. Symm. renders the word דַּוָּנָם; Theodoret has merely דַּוָּנָם; Gr. Venet. φωτανός; Vulg. fenestrum. The Sept. translates, strangely enough, ἱπτανόμενης πυράς τὴν ημέραν. The root of the word indicates that the têdôh was something transparent, probably, the Talmudic explanation that God told Noah to fix precious stones in the ark, that they might give as much light as mid-day (Sanh. 108 b). A different word is used in chap. viii. 6, where it is said that Noah opened the window of the ark. There the word is תּוֹדָה (chôlôd), which frequently occurs elsewhere in the same sense. Certainly the story as there given does imply a transparent window, as Saalschütz (Archäol. i, 311) has remarked, for Noah could watch the motions of the birds outside, while at the same time he had to open the window in order to take them in. An objection to this explanation is the supposed improbability of any substance like glass having been discovered at that early period of the world’s history. But we must not forget that even according to the Hebrew chronology the world had been in existence 1656 years at the time of the flood. Fast strides must have been made in knowledge and civilization in such a period of time. In the sea-arts, and especially in those countries where two or more centuries have reached a ripeness of which the record, from its scantiness, conveys no adequate conception. The destruction caused by the flood must have obliterated a thousand discoveries, and left men to recover again by slow and patient steps the ground they had lost. A still more serious objection to this exposition of the passage is the necessity of ventilation, which would require an open space for the passage of air as well as light. The
challah may therefore, in accordance with Oriental custom, more naturally denote merely a lattice in the tebah. Supposing, then, the tebah to be, as we have said, a skylight, a skylight forming the whole length of the ark (and the fem. form of the noun inclines one to regard it as a collective noun), the chal-
alles might very well be a single compartment of the larger window, which could be opened at will. A dif-
f erent word from either of these is used in vii, 11, of the windows of heaven, ἱσταλήμα, ἱσταλήμα (from ἱσταλ-, "to interweave"), lit. "networks," or "gratings" (Genesis. The other explanation plausible is that the tebah in question consisted of a space in the siding left open all along for a cubit's depth just beneath the projecting eaves. See Window. But besides the window there was to be a door. This was to be placed in the side of the ark. "The door must have been of some size to admit the larger animals, for whose ingress it was mainly intended. It was not doubt above the highest level, however, of the enough, and the animals ascended to it probably by a sloping embank-
ment. A door in the side is not more difficult to un-
derstand than the port-holes in the sides of our vessels" (Kino, Bible Illustrations, Antediluvianos, etc. p. 142). The Jewish notion was that the ark was entered by means of a ladder, and the steps of a ladder, the story goes, Og, king of Bashan, was sitting when the food came; and on his pleading himself to Noah and his sons to be their slave forever, he was suffered to remain there, and Noah gave him his food each day out of his own the ark (Pirke R. Eliezer).

Of the shape of the ark nothing is said; but its di-
mensions are given. It was to be 300 cubits in length, 50 in breadth, and 30 in height. Supposing the cubit here to be the cubit of natural measurement, reckoning from the elbow to the top of the middle finger, we may get a rough notion of the size of the ark.

The cubit, so measured (called in Deut. iii, 11 "the cubit of a man"), must of course, at first, like all natural measurements, have been inexact and fluctuating. In later times no doubt the Jews had a standard com-
mon cubit, as well as the royal cubit and sacred cubit. We shall probably, however, be near enough to the mark if we take the cubit here to be the common cubit, which was reckoned (according to Mich., Jahn, Gesen., and others) as equal to six hand-breaths, the hand-
breadth being 34 inches. This, therefore, gives 21 inches as the length. See Cubits. According to this our ark would be 55 feet in length, 87 feet 6 inches in breadth, and 52 feet 6 inches in height. This is very consider-
ably larger than the largest British man-of-war. The Great Eastern, however, is both longer and deeper than the ark, being 680 feet in length (691 on deck), 83 in breadth, and 58 in depth. Solomon's Temple, the propor-
tions of which are given (1 Kings vii., 2), was of the same height as the ark, but only one fifth of the length, and less than half the width. Augustus (De Civ. D. liv. xvi) long ago discovered another excellence in the proportions of the ark, and that is that they were the same as the proportions of the perfect human figure, the length of which from the sole to the crown is six times the width across the chest, and ten times the depth of the recumbent figure measured in a right line from the ground.

It should be remembered that this huge structure was only intended to float on the water, and was not, in the proper sense of the word, a ship. It had neither mast, sail, nor rudder; it was, in fact, nothing but an enormous floating house, or oblong box rather, "as it is very likely," says Sir W. Raleigh, "that the ark had fumans plantas, a fumans plantas, and not a proper form of a ship, with a sharpness forward, to cut the waves for a better speed." The figure which is commonly given to it by painters, there can be no doubt, is wrong. Two objects only were aimed at in its construction: the one was that it should have ample stowage, and the other that it should be able to keep steady upon the water. It was never intended to be carried to any great distance from the place where it was originally built. A curious proof of the suitability of the ark for the purpose for which it was intended was given by a Dutch merchant, Peter Jansen, the Mennonite, who in the year 1609 had a ship built at Hoorn of the same propor-
tions (though of course not of the same size) as Noah's ark (see Michaelis, Or. Bibl. xviii, 27 sq.). It was 120 feet long, 30 broad, and 12 deep. This vessel, unsuitable as it was for quick voyages, was found remark-
ably well adapted for freightage. It was calculated that it would hold a third more lading than other ves-
sels, without requiring more hands to work it. A similar experiment is also said to have been made in Denmark, where, according to Reyher, several vessels called "dev ten," or floats, were built after the model of the ark.

Noah's Ark, from the Catacombs of Rome.

Noailles, Louis Antoine de, a Roman Catholic prelate of great note in French ecclesiastical affairs, was born May 27, 1651. Having entered the Church at an early age, he was, while quite young, made abbot of Aubrach; in 1675 he became D.D.; bishop of Cahors in 1679; of Chalons in 1680; and finally archbishop of Paris in 1695. At the beginning of the Queretist difficulties he interfered as mediator between Bossuet and Fénelon, against both of whom he wrote subsequently. In 1700 he was appointed cardinal, through the influence of Louis XIV. While yet bishop of Chalons, he had ap-

The Reformation moralis with which Quezel had preface his edition of the N. T. (1655); this turned out a source of many antipathies to him afterwards, the more so as he subsequently condemned the Exposition de la Foi of the abbe de Barros, another Jansenist work — thus rejecting what he had formerly commended. He after-

a later order that he was in the construction: the one was that it should have ample stowage, and the other that it should be able to keep steady upon the water. It was never intended to be carried to any great distance from the place where it was originally built. A curious proof of the suitability of the ark for the purpose for which it was intended was given by a Dutch merchant, Peter Jansen, the Mennonite, who in the year 1609 had a ship built at Hoorn of the same proportions (though of course not of the same size) as Noah's ark (see Michaelis, Or. Bibl. xviii, 27 sq.). It was 120 feet long, 30 broad, and 12 deep. This vessel, unsuitable as it was for quick voyages, was found remarkably well adapted for freightage. It was calculated that it would hold a third more lading than other vessels, without requiring more hands to work it. A similar experiment is also said to have been made in Denmark, where, according to Reyher, several vessels called "dev ten," or floats, were built after the model of the ark.

The mathematical investigations on the subject of the ark, begun by Origen (Homil 2 on Gen), its dimensions and cubical capacity (Lamy, De Tuberacu, etc.), etc., p. 170 sq.; Buteo and Hostus, in the Craticus Sacri, viii, 68 sq.; Silberschlag, Geogenie, ii, ch. 3; Donut, in Scheuchzer's Phys. Sacra, i, 128 sq.; Heidegger, Hist. Patriarch., i, 491 sq.; Wideburg, Mathes. Bibl., i, 59 sq.; Schmidt, Bibl. Mathemat., p. 280 sq.), have not been productive of satisfactory results (see Cramer, in his Smyth. Denkm., p. 276 sq.; Blomdahl, De congregations animal, in arcum [Gryph. 1785]; Otho, Lex. Rabb., p. 461), owing chiefly to the uncertainty of the Hebrew measurements (see Theus, Althebr. Musaeus, p. 213 sq.). Yet a strange fancy on the subject may be seen in the Theol. Annual, for 1809, p. 307. The general tradition of antiquity was that its remains were preserved on the Kurish mountains (Be-

friends of the Jansenists. The Jesuits immediately set in motion all their influence to have Noailles brought to condign punishment. The object they had at heart was the acceptance of the pope's bull and the degradation of the prelates who had ventured on demurring; and they induced pope Clement XI to address a brief to cardinal Noailles in April, 1714, summoning him to accept the bull within fifteen days, purely and simply and without comment; after the lapse of which term, if still refractory, the brief declared that "he would strip him of the dignity of cardinal." Louis XIV, though in favor of the acceptance of the bull, yet resented this threatened exercise of the pope's authority against the archbishop of Paris, and would not permit the brief to have public course. This, however, did not quench the dispute, which became more and more envenomed; until, in November, 1716, the pope coerced the cardinals into subscribing a letter he had himself drawn up, whereby they promised to exhort their colleague Noailles to submit, and which was accompanied by a brief directed to the regent Orleans, wherein the pope declared that if this appeal were disregarded no further mercy could be expected. This brief the clergy were inhibited by royal veto from receiving; and in March, 1717, four bishops lodged with the Sorbonne a formal appeal, in the matter of the bull Unigenitus; the general council of this appeal to cardinal Noailles approved as quite canonical, although he himself still abstained from the same step. But when it seemed certain that in Rome the proceeding of the bishops was about to be censured, Noailles himself lodged, though for a time secretly, a similar appeal to the pope, melius inforamndus, and to the general council, in the matter of the bull, and of the pope's refusal to explain it. Manifestly here was an act of possibly very deferential, but decidedly very distinct resistance to the will of the pope, who was on his part little disposed to publish his views. Arguments were now exchanged between Rome and Paris, but no form of explanation which Noailles could suggest found acceptance with the pope; and at last, on March 3, 1718, there appeared a decree of the Holy Office condemning severely the appeal of the four bishops and of cardinal Noailles. This was followed up by tides of the frequent issue of a brief pronouncing those schismatics who did not accept the bull simply and purely; whereupon Noailles, to have the start of the pope, convened a general assembly of the chapter of Notre Dame, to whom he made public his appeal. The verdict was a sentence of excommunication, and Noailles was expelled from the French prelate in refusing to accept papal dictation implicitly, it would appear as if the desire to wreak the uttermost vengeance on his head was arrested by the sense of the practical difficulties that stood in the way of its accomplishment. In spite of the pope's animosity and the fanning action of the Jesuits, it was found desirable to let the matter drop. Cardinal Noailles, though censured and fulminated against, escaped further persecution, and continued archbishop of Paris to his death, before which he had reconciled himself with his adversaries by a compromise due mainly to the regent Orleans's influence. Noailles accepted the bull Unigenitus Oct. 11, 1728. While his actions in this case may have been consistent, his whole life may be said to have been checkered considerably by a most inconsistent course. He was for a time a Jansenist, and at least a most zealous supporter of that sect. Placed in positions of trust, and endangered in these by opposition from Rome and the Jesuits, he wavered frequently in his tasks, and would only go forward when assured of the protection of the court, or those in whose favor he stood, hence in 1709, cases of his consent to the suppression of the Port-Royal (q.v.) community, the closing of the abbey in the October following, and the removal of its inmates accompanied by circumstances of great cruelty, though he himself had long befriended the Port-Royalists, and was really in sympathy with them. That he ordered this work of destruction simply from weakness, he acknowledged himself in after-life; and the memory of these unjust deeds no doubt plunged him into great depths of anguish. In solemn testimony of his repentance he would have the work undone; but that his first work was so well done that it could never be changed for better or for worse! He had lived to please the master who gave him bread, and he had wronged those who had hoped to find in him a friend and protector; and in his death, he had not the power to recompense them, and there remained for him only a hoary age, full of remorse for unjust acts and an inconsistent life. Jervis has well summed up Noailles's life and work: "His moral character was stainless, his pietie unquestionable, his pastoral zeal universally acknowledged; but the sweetest and most charming character of him was a mingled mixture of high intellectual depth and solidity of judgment. He labored, consequently, under great disadvantages as an administrator" (Hist. Ch. of France [Lond. 1872, 2 vols. 8vo], ii, 89). Cardinal Noailles died May 4, 1729. See S. No-No. AMON. The manner in which this ancient city is mentioned in the several passages of the Bible is deserving of the notice of the student of Scripture geography. The first passage in which it occurs is Jer. xvi, 25: "I will punish the multitude of No, נו́ לִבָּן, לַעֲנָה, to the Amoun from No" (Sept. τὸν Ἀμών τὸν νότιον αὐτῆς; Vulg. super tumultum Alexandriae, where the reference seems to be rather to the Egyptian deity Amun, who was worshipped at No, than to the people of that city (which would make נו́ נו́, "multitude"). The next passage is Ezek. xxx, 14, 15, 16: "I will execute judgments in No (גֶּזֶז, be-No;) in Δεύτερη (in Alexandria): "I will cut off the multitude of No (גֶּזֶז, ἐθ καὶ φυγὴ Δέσποτα, in Alexandria): "I will cut off the multitude of No (גֶּזֶז, ἐθ καὶ φυγὴ Δέσποτα, in Alexandria); "No shall escape (נִבְּדָה, in No;) in Δεύτερη (in Alexandria). The different renditions are equally remarkable. Memphis was identical with the Noph of the Bible. The Hebrew word rendered "multitude" in ver. 15 is different from that in Jeremiah; perhaps it may be a corruption of Ammon. Διονυσίας was the Greek equivalent of No-Almon, and identical with Thebes. This passage is Nahun,ם, and is very important.
not merely as giving the full name of the city, but also describing its position. It is thus rendered in the A.V., "Art thou better than populous No, that was situated among the rivers, that had waters round about it, whose rampart was the sea, and her wall was from the sea?" "Populous No" is in Hebrew יָבִא, Nōb-No (Sept. μηδερα Ἀμών; Vulg. Aegypti Amun), that is, "No of Amon," in which Amon was the supreme deity, and of which he was protector. See Amon.

Critics are not agreed as to the meaning of the word Nōb; but it would seem from this passage that the translators of the Sept., who were themselves resident in Egypt, regarded it as equivalent to the Egyptian nō, that is, ἐγχώνο, "a measuring-line," and then = μῆχ, a part or portion (see Gesen. Thes. p. 886). The second part of the first form is the name of ament, the chief divinity of Thebes, mentioned or alluded to in connection with this place in the passage of Jeremiah, and perhaps also alluded to in that of Ezekiel. The second part of the Egyptian name is the city, ḥa-amen, "the abode of Amon," is the same. But how are we to explain the use of No alone? It thus occurs not only in Hebrew, but also in the language of the Assyrian inscriptions, in which it is written نمو, according to Sir Henry Rawlinson ("Illustrations of Egyptian History and Chronology," etc., Trans. Roy. Soc. Lit. [2nd ser.] vii. 166). Sir Henry Rawlinson identifies Nī with Amon. The whole paper (p. 137) is of great importance, as the glyph of Amon, illustrating the reference in Nahum from the Egyptian Monuments.

Figure and Hiero-squ. of the name of Amon, illustrating the reference in Nahum, from the Egyptian Monuments. The reference to the capture of Thebes, by showing that Egypt was conquered by both Esarhaddon and Ashur-bani-pal, and that the latter twice took Thebes. If these wars were after the prophet's time, the narrative of them makes it more probable than before seen that there was a still earlier conquest of Egypt by the Assyro-Babylonians, conjectures that Thebes was called petu-amoun, "the abode of Amon," or still nearer the Hebrew, nāmoun, the city of Amon, like nāsi, the city of Isis, or as Gesenius prefers, ma-amoun, the place of Amon (Theauser, s. v.), are all liable to two serious objections, that they neither explain the Egyptian name nor afford an explanation of the use of No alone. It seems most reasonable to suppose that No is a Semitic name, and that Amon is added in Nahum (L.c.) to distinguish Thebes from some other place bearing the same name, or on account of the connection of Amon with that city. Thebes also bears in ancient Egyptian the common name of du-ba, of doubtful signification, which is rendered by Thebes. The whole metropolis, on both banks of the river, was called Tan (see Brugsch, Geogr. Inschr. i. 175 sq.). See No.

Various opinions have been entertained as to the site of this city. That it was in Egypt all admit. The Sept. identifies it with Diospolis; but there were two places of this name—one in Lower Egypt, near the sea, and encompassed by the marshes of the Delta (Strabo, xviii. p. 802); and with this Champion and others identify No (P. Egypt. ii. 131); and Gesenius (L.c.) well observes that it would not then be compared in Nahum to Nineveh. The other was Thebes, in Upper Egypt, which is probably the place really referred to in the Sept. For No, Jerome in the Vulg. reads Alexandria (as also the Chaldean, and Abstemius), but the town of Alexandria was not in existence in the time of Jeremiah; and yet it appears from the words of Nahum (L.c.) that No had been already destroyed in his day (see Bochart, Opera, i. 6). This and the evidence of the Assyrian record leave no doubt that it is Thebes. The description of Amon, as "standing among the rivers, the waters round about it" (Nah. L.c.), remarkably characterizes Thebes, the only town of ancient Egypt which we know to have been built on both sides of the Nile; and the prophecy that it should be rent asunder (Ezek. xxx. 16) cannot fail to appear relevant and significant to the observer who stands amid the vast ruins of its chief edifice, the great temple of Amen, which is rent and shattered as if by an earthquake, although it must be held to refer primarily, at least, rather to the breaking up or capture of the city (comp. 2 Kings xxiv. 4; Jer. iii. 7), than to its destruction. See THESBA.

Nad (Heb. נֹב, prob. on elevation; Sept. νόβος, Νόβα, νοβακάρ, v. s. Νάμος, νοβας, etc.; Joseph. μαντᾶς, Ant. vi. 12. 1), a sacerdotal city in the tribe of Benjamin, situated on some eminence near Jerusalem. When David fled from the court of Saul at Gibeah, we are told that "he came to Nōb, to Ahimelech the priest" (1 Sam. xxvi. 1). It appears from the narrative that the talismanic sword and the ark of the covenant were located in that city, for David got part of the showbread which was kept before the Lord (ver. 4; comp. Exod. xxv. 30; Luke xxiv. 5-9). David's visit was fatal to Nōb. Doreg the Edomite, Saul's shepherd, had given him this information, and consequently he was summoned before the mad king, and sentence pronounced upon him, "Thou shalt surely die, Ahimelech, and all thy father's house." Not an Israelite, however, would raise a hand against the priests of the Lord; and Doreg, the stranger spy, became the tyrant's executioner. He slew on that day fourscore and five persons who did wear a leather ephod; and Nōb, the city of the priests, smote he with the edge of the sword, both men and women, children and sucklings, and oxen, and asses, and sheep (1 Sam. xxvii. 9-19). The position of Nōb is incidentally indicated in this narrative. It lay south of Gibeah, for David was on his way to Philistia when he called at Nōb (1 Sam. xxvi. 10); the narrative shows, too, that it was close to Gibeah. It would be a long time naturally before the doomed city could recover from such a blow. It appears, in fact, never to have recovered. It is said it was on one of the roads which led from the north to the capital, and within sight of it, is certain from the illustrative passage in which Isaiah (x. 28-32) describes the approach of the Assyrian army:

"He came to Il, passed through Migron, to Michmetha, neither reserving a part of it.

They cross the pass, Gebah is our night-station;
Terrified is Ramah, Gibeah of Saul fleeing.
Shirek with thy voice, daughter of Gallim;
Listen, O Laish! Ah, poor Anathoth!
Madmenah escapes, dwellers in Gebim take flight.
Yet this day he halts at Nōb:
He shakes his hand against the mount, daughter of Zion,
The hill of Jerusalem.

In this spirited sketch the poet sees the enemy pouring down from the north; they reach at length the neighborhood of the devoted city; they take possession of one village after another; while the inhabitants flee at their approach, fill the country with the din of war and distress. It is implied here clearly that Nōb was the last station in their line of march, whence the invaders could see Jerusalem, and whence they could see, as they "shook the hand" in proud devotion of their enemies. Left-foot also mentions the process of invasion (Opit. ii. 47); and that Jerusalem was at Nōb stood within sight of each of others. It was occupied after the capture by Benjamin, and is grouped with Anathoth (Neh. xi. 32).

Eusebius and Jerome strangely confound Nōb with Nohah, a place in the east of Bashan (Onomast., s. v. Nabbe); though Jerome in another place (Epist. Paulina,
Nobah, a town on the plain of Sharon, somewhere between Antipatris and Nicopolis, a theory which is almost as wild as the former. It does not refer to the present 150 Nobah (Num. xxii, 30). This town was mentioned in the list of Gad and Reuben in Num. xxxi, 42, on the ground of being the same as Dibon, Medeba, and Jobgbeh. But if Jobgbeh be, as elsewhere (ii, 504, note 4) suggests, el-Jeibebeh, between Amman and es-Salt, then it is in the same district. In any case, the lists of Gad and Reuben in Num. xxxii are so confused that it is difficult to apportion the towns of each in accordance with our present imperfect topographical knowledge of those regions. Ewald also (ii, 592 note) identifies Nobah of Num. xxxii, 42 with Noua or Newe, a place fifteen or sixteen miles east of the north end of the Lake of Gennesaret (Ritter, Jordan, p. 356). But if Kenath and Nobah are the same, and Kenadacat be simply the identification is both unnecessary and untenable. Schwartz (Palest, p. 228) likewise finds Nobah in the village Kenath, in the mountain of Haarun, one day's journey north of Tell-Haarun. See Kenath.

Nobilì, Roberto D. (in Latin of Nobilì, an Italian Jesuit, noted as a missionary, was born at Mont Pellicane, in Tuscany, in Sept., 1577. He was a relative of pope Marcellus II., and nephew of the celebrated cardinal who studied at Rome and at Naples, and in 1590 joined the Jesuits, who sent him as a missionary to India. Arrived in Asia, he at once applied himself to the study of the oriental languages, and in a short time acquired a good command of the Badaga, Burmese, Malay, and Tamil dialects, the most generally used in India. He now commenced preaching in the southern provinces; and, in order to gain more influence, he did not hesitate to represent himself as a foreign Brahman. He assumed the dress and practiced the customs of that class, and thus succeeded in converting thousands of the Christians and a certain number of natives. Some of his colleagues, however, accused him of practices closely resembling idolatry. The affair was carried before the court of Rome. Nobili secured the approbation of the inquisitors at Goa and of the Pope himself, and gained his release; pope Gregory XV authorized the converted (?) Brahmans to continue to wear the marks and the dress of their caste. This toleration naturally increased the number of adherents to the mission. In 1651 Nobili retired to the college of Malpoora, where he died, Jan. 16, 1656. According to the different languages in which he was acquainted, with Catechismus ad Britanniam conversionem in partem V dicitur: — Scientia omnium, liber in quo, præter catholici fidem vertitur ad animas pertinentes, omnibus Orienter errore, circa fatum et transmigrationem animorum conueniuntur. — Apologia contra proba quibus adversus deum quibus ab eis occultis objectur, ubi coram objecta in eorum secta apte rectorum et demonstratur: — Liber de Signis et legibus utilissimus: — Lucerna spiritus: — De vita aeterna: — De Fide pro instauranda puella: — Compendium catechismi: — Dialogus in quo transmigratio animorum impugnatur: — Regula perfectionis: — Vita E. V. Mariae vero Tomaloci, qui in omnibus locis et ab omni hominum genere carenti solvit, pro consolatione animorum suarum: — Opuscula: — Concessa variae, etc. Mr. Weiss, together with the Hindus of Pondicherry, considers Nobili as the author of the Ezraveda, a modern imitation of the Vedas. See Parigi, Notizie dell' Ecole di R. de Nobili, etc. (1868). Nobilius. See Nobili.

Nobilius QuoqueteccatorvBvs are the first
Herzog, also, acknowledged that those words would lead to the end of the 12th century, rendering them thus:

"Indeed, 1100 years are now passed away since the hour was written when we are in the last time, and under the
standing the allusion to be to 1 John ii, 18, the date of that
which epistle the author must have of course distin-
ghushed from that of the birth of Christ; so that, if the
verse are genuine, they lead to a date which lies fully
eleven centuries later than that of 1 John. The ques-
tion, however, has recently been a new light thrown on
the discovery, in 1862, by Mr. Bradshaw, a fellow of
King's College, Cambridge, of the Waldensian MSS.
which Morland in Cromwell's time collected in the val-
leys and brought to Cambridge, but which had long
been given up for lost. In February of that year Mr.
Bradshaw, desiring to classify them in the library of
the university. Now volume B of the collection is a MS.
of the Nobla Leizcon of the 15th century, and it
contains verses 6, 7, in common with the Geneva and
German codices heretofore known, but before the word
there is an erased passage, under which the numer-
ical 4 is still clearly discernible. This Morland Cod-
ex, therefore, had originally the reading, Ben ha mil et
4 cent aux, etc.', etc. Another volume of the Morland MSS.
contains a fragment of the Nobla Leizcon, in which ver.
6 reads thus, Ben ha mil et exx aux compiti everniement.
We have already seen in the readings of the verses 6
and the question arises, Which of the two readings is
the genuine one? In an article on the Waldenses in
his Real-Encyklopadie, Herzog thinks the question is
now settled conclusively against the older date. As
the Waldenses, for their adhesion to the Reformed
Church in 1532, fell resolutely and for practical ob-
jects into the way of altering passages in their older
writings which did not agree with the Reformed Con-
fession, so as to bring them into conformity to it; may
more, as with Leger (in his Histoire generale des Eglises
Evang. des vidalies et de l'Apocalypse, vol. i, 375) the
practice began of ascribing fabulously old dates to the
Waldensian writings, and even falsifying manuscripts
with that design; so Herzog sees here an instance of
a similar falsification. The reading, mil et cent aux, is a
corruption of the text; in the expanse of the Morland
Codex we have the genuine of the corruption before
our eyes. The reading, mil et quatre cent aux, is undoub-
etly the true one, and thus the date of the composition
falls as low as the 15th century. From these reasonings
and conclusions of Herzog, professor Ebrard expresses
his entire agreement. Herzog himself has also pub-
lished the Morland MSS., the genuineness of the reading, mil
et cent aux. Dr. Herzog has done his best to defend
his position in a reply to Ebrard, but Ebrard has come
forth with an able rejoinder to the whole, and the
whole question may now be held to be thoroughly sifted.
For our own part, we think that Ebrard has decidedly
the best of the argument. He has confuted with complete
success the rash assertion that the earlier date found in
some of the MSS. was a deliberate falsification; and
he has been able to give a probable and satisfactory
explanation of the fact that in the two Morland MSS.
the later date should have taken the place of the older.
We agree with him in thinking that Dr. Herzog has
surrendered his former opinion of the age of the Nobla
Leizcon too soon and without sufficient reason. See
Brii, and For. En. Rev. July, 1865, p. 654, 655; (Gieseler,
Eccles. Hist. ii, 380; Neander, Ch. Hist. iv, 616; Las.
1865, i, 160; iii, 65; 1864, vol. ii.

Noble Linnaeus F., an eminent antislavery lead-
er and reformer, was born in Fayetteville, N. Y., in
1802. Early in life he espoused the abolition cause,
and was identified with the laborers of Gerrit Smith, James
G. Birney, Beriah Green, and other earnest workers in
that cause. He was first publisher and one of the
founders of the National Era, an antislavery journal
published at Washington, D. C. He was also engaged
in the temperance reform; and every reform of a civil.
Noble

moral, or social character found in him a cordial sup-
porter. He died Jan. 26, 1873, in Fayetteville, N. Y.
See Appleton's Annual Cyclop. 1875, p. 560.

Noble, Mark, an English divine, was born about 1781 as rector of Kere in Kent, where he died May 26, 1827. He published Memoirs of the House of Medici (1797), Lives of the English Bishops (1786), and other secular historical works. He was a fellow of the Society of Antiquaries and a contributor to the Archaeologia. See Appleton's Annual Cyclop. 1875, p. 554.

Noble, Oliver, an American divine of some note, was born at Hebron, Conn., about 1742, and was edu-
cated at Yale College, class of 1757. He was ordained to the work of the ministry in 1758, and became pastor of the Congregational Church at Coventry, Conn., where he remained until 1761. In 1762 he accepted a call to the pastorate at Newbury, Mass., and in 1783 resigned this place to accept the same position at Newcastle, N. H., where he labored until his death in 1792. He published a discourse on Church Music (1774), and on The Boston Massacre (1775).

Noble, Samuel, an English Swedeborgian min-
ister, was born in London in 1779. In his early life he proved himself a delightful and learned, and earned quite a reputation for his artistic skill. Brought to a knowledge of Swedenborgianism, he became a most enthusiastic adherent and advocate, and about 1820 entered the ministry. He preached with much success, but is noted especially by his writings. He died in 1854. He is the author of a work on The Plenary Inspiration of the Scriptures, and the Principles of their Composition (London, 1829). The author's object is to meet the objections urged against the divine origin of the sacred volume. The work consists of six lectures, greatly enlarged; originally delivered at Alston Hall, London. Like other Swedenborgian writers, he contends for a double sense of God's Word, founded on the immutable relations of things natural to things spiritual. A subsequent publication of his, entitled An Appeal in behalf of the Doctrines of the New Church (2d ed. 1800), is made up of another course of lectures, embodying pretty much the same views. He also published Important Doctrines of the Christian Religion (1848, 8vo) — Divine Law of the Ten Commandments (1848, 8vo) — Book of Judges (1856, 8vo) — a volume of his Sermons (1846) and a volume of his Letters, as, so translated into English Swedenborg's Heaven and Hell.

Nobelman is the rendering of the A. V. at John iv, 46, of βασιλεύς, which is somewhat various in sig-
nification: 1, descended from a king; 2, belonging to the court; 3, a soldier of the king, in which sense it often occurs in Josephus. The second signification seems, however, to be the prevalent one; and the Greek interpreters also favor it. See Robinson, X.-T. Lex. s. v. Münster found it likewise in inscriptions. The Syriac has here "a royal servant;" the Ethiopic, "a royal house-servant." This person was, therefore, probably of the court of Herod Antipas, who reigned over Galilee and Perea (Tholuck on Matt. iv, 19; Luke 3:15; John vi, 40). Some writers have conjectured that this "nobelman" was Chuzu, Herod's steward, whose wife afterwards became an attendant on Jesus (Luke viii, 3), and is thought to have been converted on this occasion; but of this there is no evidence.

Nocca, a false god of the ancient Goths, Getes, etc. He is the same as Neptune of the Greeks, and was sup-
posed to preside over the sea. Worms relates that in some parts of Denmark they call him Nicken, and pre-
tended that he appeared sometimes in the sea and in deep rivers, like a sea-monster having a human head, especially to those unhappy wretches who were in im-
mortal danger of being drowned. They said likewise that persons drowned, being taken out of the water,

Nobod (Heb. nbd,", flight; Sept. Na-
thalis; Vulg. Nobod), the name of an Arab tribe

were found to have their noses red, as if some one had squeezed their faces and sucked the blood, which they ascribed to Nocca. See Broughton, Hist. of Religions, s. v.

Noceti, Carlo, an Italian litterateur, was born about 1695 in Pontremoli. Admitted among the Jes-
uits, he taught theology in the Roman College, and in 1736 became coadjutor of P. Turano in the functions of penitentiary of St. Peter and examiner of bishops. He cultivated with success Latin poetry, and held relations with several savans and litterateurs of his time. He died in Rome in 1756. We have of his works, Ecloges, printed with those of Rapin (Rome, 1741, 8vo) — De Iride et Aurora boreali carmina (Ibid. 1747, 4to); this edition, given by Bosco, has been reproduced with
out the notes in the Poems of the Breviary of P. Oulins; Rousier, in his Mot. I. 1749, and others, has criticized so much of these poems — Veritas vivificans (Ibid. and Lucas, 1768, 2 vols.), this is a criticism upon the Theologia Christiana of P. Ocsonia, a Dominican monk, who had declared war against the rationalism and remin-

Nocturna is the name of a night service of prayer

anciently held. In the Roman Breviary the Psalter has the title of nocturna in connection with the first office of the night, and the name of each portion is called a nocturn. These were de-

cided to be read at the nightly assemblies with other

services, appointed in order for the various nights. The nocturnal services themselves were derived from the earliest periods of Christianity. We learn from Pliny, as well as from Justin Martyr, and other writers of the first three centuries, that the Christians in those times of persecution were in the practice of holding their as-

semblies in the night. Terrullian mentions nocturna convectiones, which are generally supposed to mean the prayers before day, a kind of ordinary night service, held before it was light. The nightly as-

semblies of Christians were common at that time, probably because they feared opposition in daytime. Pliny, in his letter to Trajan, says, "The sum of their crime or error was, that they were accustomed to meet before it was light, and to sing a hymn to Christ, as to God." Afterwards, when persecution ceased, these nocturnal meetings were continued, partly to keep up the spirit of devotion in the ascetics, or such as had betaken them-
selves to a stricter life; partly to give opportunity to meet in secret to observe a seasonable time of devo-
tion; and partly to counteract the secret meetings of the Arians, who adopted these nightly meetings, and by their popular piety on such occasions promoted the spread of their heresy. In most ancient times the noc-
turnas were accompanied by the celebration of the Lord's Supper, and this custom also was observed in later times. The nocturnas now form part of the Matins (q. v.). See Farrar, Eccles. Dict. s. v.; Eden, Theol. Dict. s. v.; Palmer, Origins Liturgiae, 1, 282; Proctor, Commentary on Book of Common Prayer.

Nod (Heb. nb, flight; see below; Sept. Na-

bod), the land east of Eden to which Cain fled after the mur-
der of his brother (Gen. iv, 16). The name is plainly akin with the verb nb, tob, to flee; and means simply the land of exile or flight. It was, therefore, fruitful to seek for a connection of this name in Asia. Such a connec-
tion must depend entirely upon that of Eden, which is uncertain. Von Bohlen, however, would follow an in-
mitation of Michaelis, and understand it as a name of India (Gen. p. 59). (Calmet, s. v.; Schmidt, Bibl. Geog.
p. 442; Robinson, Alterthum, 1, 1, 215 sq.; Tuch, Grm. p. 111.) See CAIN.

Nobod (Heb. nbod, nobility; Sept. Na-

bod, nobod), the name of an Arab tribe
mentioned only in 1 Chron. v. 19, in the account of the war of the Reubenites, the Gadites, and the half of the tribe of Manasseh against the Hagarites (ver. 9-22):—

"And they made war with the Hagarites, with Jetur, and Naphish, and Nodab" (ver. 19). In Gen. xxv. 11, and 1 Chron. i. 31, Jetur, Naphish, and Kedemah are the last three sons of Ishmael, and it has been therefore supposed that Nodab was also one of his sons. But we have no other mention of Nodab, and it has been surmised, in the absence of additional evidence, that he was a grandson or other descendant of the patriarch, and that the name, in the time of the record, was that of a tribe sprung from such a descendant. The Hagarites, and Jetur, Naphish, and Nodab, were pastoral people, for the Reubenites dwelt in their tents throughout all the east (land of) Gilead (ver. 10), and in the war a great multitude of cattle—camels, sheep, and asses—were taken. A hundred thousand men were taken prisoners or slain, so that the tribes must have been very numerous; and the Israelites "dwelt in their steads until the captivity." If the Hagarites (or Hagarreens) were, as is most probable, the people who afterwards inhabited Hejer [see HAGGARINES], they were driven southwestward through the northern and eastern province of Arabia, bordering the mouths of the Euphrates and the main tracts surrounding them. See I Thum. v. 18; Jetur; Naphish. Calmet (after Jerome, Quast. H. b. Lib. 1, Paralip.) has suggested that Nodab is another name for Kedemah, and, in some apposition to the fact that the list in Genesis mentions in order "Jetur, Naphish, and Kedemah;" while in Chronicles we have "Jetur, Naphish, and Nodab." Forster, who adopts this view, advances another argument in its favor. He says, "This Ishmaeliditish tribe, being known as a very general Arab usage, being designated, in the one instance by its patronymic, in the other by its nom de guerre. For, 1. The signification of the word Nodab, in the Arabic idiom, is 'the vibration of a spear'; 2. The natives of the coast of the Persian Gulf, in the vicinity of Kudamah, were famous for the manufacture of spears; and, 3. Nodab is expressly mentioned by the author of the Kamis, a writer of the 15th century, as a then existing Arab tribe" (Geog. of Arabia, i. 311 sq.). This reasoning is scarcely conclusive; but there is at least some probability in the theory. See ARABIA; ISMAILIA.

Noë (Noah), the Gracised form (Tob. iv. 12; Matt. xxiv. 36; Luke xxi. 26, 27) of the name of the Patriarch Noah (q. v.).

Noë, Marc-Antoine de, a French prelate, was born of noble parentage, in April, 1724, in the château de la Gremenuaide, now commune of Ste. Soulle (Charente-Inférieure), and was educated in Paris, where he studied theology in the Sorbonne. On leaving his licentiate, he became successively vicar of Albé, then of Rouen, under M. de La Rochefoucauld, archbishop of that city after the other of these dioceses, and in Oct., 1756, abbé commendatory of Simone, in the diocese of Auch. Sent in May, 1762, to the general assembly of the clergy of France, M. de Noë was called, Jan. 6, 1763, to the bishopric of Elzas; having been consecrated on June 12 following. This seat gave him the presidency of the states of Béarn and the title of first counsellor to the Parliament of Pau. He regarded his revenues, which amounted to 27,000 livres, as the patrimony of the poor; and distributed them to those unfortunately reduced to extreme poverty by the effect of a terrible epizooty. He then opened two boxes—one for those who could give, the other for those who could only lend, and put 30,000 livres in the first, and 15,000 livres in the second. His example was followed, and many other dioceses did the like. No one could avert repairs. Deputed in 1789 to the States-general by the particular states of Béarn, he protested against the reunion of the three orders, withdrew into his diocese as soon as he believed the instructions of his constituents were compromised, and was not a party of the Constituent Assembly. Soon the seat of Lescar was suppressed, and a Benedictine, Barthelemi-Jean-Baptiste Sanadon, professor of literature in the College of Pau, was consecrated bishop of the Lower Pyrenees, where Lescar is situated. The bishops of Léglise, consecrated at Oloron, M. de Noë, who had not left Lescar, protested against this innovation, and, yielding to violence, passed into Spain. The war constrained him to leave St. Sebastian, where he had found an asylum, and to seek refuge in England. In 1801 he resigned his see, in order to facilitate the execution of the command, on his return to France was nominated, April 9, 1802, to the bishopric of Troyes. His conciliatory spirit had already caused all differences to cease, and to rally all hearts in this diocese, when death removed him, Sept. 22, 1802.

The third day previous to his death, we learn that Bonaparte had designated him to Pius VII for the cardinalship. The eulogy of M. de Noë was proposed to the concourse by the Museum of Yonne, and the Academical Society of Aube united, which decreed the prize, in honor of the concourse, and the second premium to M. Humbert. Bishop Noë loved letters, and cultivated them with success; he understood Hebrew and Greek, and had studied thoroughly the great models of antiquity. It was to them that he owed much elegance of style and purity prevalent in the few writings he has left among the historical discourses and discours sur l'état futur de l'Église (1788,12mo).

It had been composed to be pronounced at the general assembly of the clergy of 1785; but it was known to contain singular ideas, and in it was the question of a renouvellement de la défection de la gentilité, de nouveaux règnes de Jesus Christ. This doctrine, although clothed with some garb of prophecy, approached too near millenarianism; and M. de Noë was requested not to pronounce this discourse. His brother had it printed later, followed by a Recueil de passages upon the intermedial advent of Jesus Christ, and by Remarques furnished by P. Lambert, a Dominican, an ardent defender of this system:—

Traduction d'un discours de Pâris, preserved by Thuylides, and inserted in the translation of Isocrates by abbé Auger:—divers Mendements. The Guerres de M. de Noë have been collected (Lond. 1801, 12mo); and M. Augus has given a new and complete edition of them (Par. 1849). This last edition contains especially an Éloge d'Euvards, by Isocrates; an Éloge de l'Éloge des guerriers morts dans la guerre du Péloponèse, is preceded by a Notice historique sur M. de Noë. It is to be regretted that in it are not found the Guerres de David, by M. de Noë; and D'Hérodote d'Euvards, due de Parme, pronounced at Paris in 1766, a Panégyrique de St. Théodoric, preached at Toulouse, and a Sermon sur l'auvinne. M. de Noë was one of the four bishops who, in 1765, refused their adherence to the acts of the assembly of the clergy, on the subject of the bull Unigenitus; but he was far from favoring Jansenism. See Lacce de Lencival, Éloge de M. de Noë (Paris, 1805, 8vo); Augus Notice historique introductory to his works; France pontifica.

No'oba (Noëbá), a corrupt Gracised form (1 Eadrit. v. 31) of the name elsewhere given (Eraa ii, 48) as Ne'koda (q. v.).

Noël (or NOWELL), a word which occurs very frequently in old carols, is by many supposed (and with good reason) to be derived from some other name of Christmas, which word Noël was used as a cry of joy, and was "sung at Angers during the eight days preceding Christmas," and now the word Christmas is thus expressed in the modern French also. The Portuguese, Irish, and Welsh terms for Christmas eventually come from this source. But, on the other hand, Noël
is very frequently used in the sense of news or tidings, and, besides, was used as a "joyful exclamation not absolutely confined to Christmas." The following lines from "Anthemopiede book of Godly and Spiritual Songs," seem to strengthen this interpretation:

"I come from heaven to tell you a great thing that ever befell; To you this tyrthives I bring."

And, again, in a 16th century carol:

"Galleryth of greth degree, Come downe from the Treeye, To Nazereth in Galilae.

With Nova."

Christmas evergreens, the holly and the ivy, form the subject of many an old carol. The "Holly Carol," most popular and familiar to us, details at length the various symbolical references this favored evergreen bears to the incarnation of Christ the Lord, e.g.:

"The holly bears a berry As red as any blood, And Mary bore sweet Jesu Crist To do poor sinners good. The holly bears a prick As sharp as any thorn, And Mary bore sweet Jesu Crist To save us in the morn."

See Christmas; Nativity.

Noëll, a French clergyman of the Roman Catholic Church, flourished as abbé of St. Nicholas of Angers from 1089 until his death in 1096. It was during his government that pope Urban II came to Angers and consecrated the church of St. Nicholas. At the time abbe Noël was near the end of his life—he died only a few days later. The authors of the Histoire littérature de la France attribute to Juhel d'Artins, abbé of La Couture, in Mans, a Histoire des miracles de saint Nicolas, bishop of Myre, a considerable fragment of which is found in No. 498 of the MSS. of St. Germain. This attribution is erroneous and the work ought to be attributed to abbe Noël. Some extracts from the MSS. of St. Germain, published in the Gallia Christiana, clearly demonstrate it as his work. See Hist. lit. de la France, t. viii; Gallia Christiani, t. xiv, col. 475, 670.

Noël, Baptiste Wrothesley, D.D., an eminent English dissenting divine, was born July 10, 1739. He was the youngest son of Sir Gerard Noël-Noël, bart., and the baroness Barham, and was educated at Trinity College, Cambridge, where he graduated with distinction in 1756. Having been ordained to the priesthood in the Church of England, he was appointed one of the chaplains to the queen, and became pastor of St. John's Chapel, Bow, in 1767. He soon secured a reputation as one of the most popular and influential ministers in England, and his name was identified with almost every Christian movement of the time. About the year 1748 Mr. Noël brought himself to accept the immersion theory; and his decided dissent from the views inculcated by the Church of England on baptism caused him to sever his connection with that Church. He was publicly immersed, and joined the ministry of the Baptist Church. About this time he published his Exposition of the Union of Church and State, and also that on Christian Baptism, defending length of which he had taken. In 1869 he retired from his pastoral duties of the John Street Chapel, London; but, despite his advanced years, engaged actively in evangelistic labors, and became one of the founders and promoters of the Midnight Mission. He was ever thus busily engaged in promoting Christian labors. Indeed his zeal for religion never flagged. He died Jan. 19, 1878. As a preacher he was fervent, spiritual, tender; and, although his addresses were extemporaneous, his flow of thought was clear and consistent. His eloquence always attracted large audiences. Of his personality, Dr. Stevens thus wrote in Letters from Europe: "His (i.e. Noël's) features are very symmetrical, and present a really beautiful profile. He is not very clerical in his appearance. . . . He has light hair, light-blue eyes, and, in fine, the general aspect of a good rather than a great man. . . . Baptism Noël is one of the best and most agreeable men I have met in Europe." Of his preaching, Dr. Tyng says, in Recollections of England (1847), p. 542: "He is certainly a most interesting and delightful preacher; altogether in his manner mild and persuasive in his manner, yet sufficiently impressive, and sometimes powerful, having a very clear and consistent flow of thought; decidedly evangelical in doctrine, though less deep and instructive in doctrine than I had expected." Besides the publications already mentioned, Mr. Noël brought out an occasional sermon through the English Missionary Tracts on the First Five Centuries of the Church (1839);—Sermons on the Unconverted (1840);—Christian Missions to Heathen Lands (1842);—Sermons on Repentance (1843);—Case of the Five Church of Scotland (1844);—Meditations in Sickness and Old Age (5th ed. 1845);—Protestant Thoughts in Rhyme (2d ed. 1845);—Messian;—Sermons on Isaiah (1847);—Notes of a Tour in Switzerland (1847);—Infinit Piety (4th ed. 1848);—Sermons at St. James's and Whitehall Chapel: Christ's Faith, Hope, and Joy; Gospel of the Grace of God (1849);—Essay on External Act of Baptism (1850)—Christianity compared with Unitarianism (1851);—Letters to Furrant on the Church of Rome (1852);—Notes of a Tour in the Valleys of Piedmont (1855);—Essay on the Duty of Englishmen to the Hindus (1856);—Freedom and Slavery in the Universe; and Redemption of Sin (1858);—and Case of George William Gordon, of Jamaica (1866). See the Lond. Q. Rev. xxxiv, 382, 404; N. Y. Eccles. Mag. xvi, 237; Eccles. Rev. 4th ed., xxvii, 640; Brit. Q. Rev. Feb. 1849. Interesting information respecting the pupil ministries and philanthropic labors of this excellent man will be found in the Metropolit. Pulpy (1839), ii, 36-59; Pen Pictures of Pop. Engl. Preachers (1852), p. 58-81; Fish, Pulpy Elegance of the 19th cent. p. 541, 542.

Noël, François, a Belgian Jesuit missionary, was born in 1651 at Helstdrub, in Hainault. In 1670 he entered the order, and in 1684 was sent to China, where he spent the greater part of his life. He went twice to Rome to confer on the subject of Chinese ceremonies. The last years of his life were spent at Lille, where he died in 1729. He wrote Observaciones mathematicae et physicae in India et China facta ab anno 1684 usque ad annum 1708 (Prague, 1710, 4to);—Sinensae imperii clas- sis, minimum adulgii catholici schola tempestatum, librum tertium, Sacramentorum, Mencius, Filialis observanciae et par- vulorum schola et Sinico in Latinitatem traductum (ibid. 1711, 4to; transl. into French by Plouquet, Paris, 1784-85, 6 vols. 8vo); a rather diffuse translation of the Chinese;—121. He is the author of a work, De Chinae et Sinico, (4to; Paris, 1711, 4to); the author represents Chinese doctrines as closely resembling Christianity;—Vita Jesu Christi; Epistola Mariana (often reprinted), and Vita S. Ignatii de Loyola, together, under the title of Opuscula poetica:—Theologia P. Franciscii Saureri suarum, in which it is united a abridgment of Lessius's Dissertation et jurid. et of Sanchez's De Mortuismo;—Memoriales circa veritatem facti, cui infra dictum Alexandri VII, editum 23 Mart. 1565 (it is translated into French in the Let- trets cldimense), etc. See Guehels, Lectures, iii, 201; Beker, Bibliothèque des oeuvres de la Compagnie de Jésus.

Noël, Gerard Thomas, elder brother of the Rev. B. W. Noel (q. v.), was born Dec. 2, 1782, and was like- wise educated at Cambridge University, and became, too, a clergyman of the Established Church. In 1884 he was canon of Winchester. In 1840 he became vicar of Romsey, where he died, Feb. 24, 1851. He is principally known as the author of the favorite hymn, "Human nature's Eden reum" which was appended, with a few others, to a work written by him, entitled Aeneid, or Sketches in Italy and Switzerland (2d ed. 1813). He was also the author of a Selection of Psalms.
NOEL 155

NOETUS

and Hymns from the New Version of the Church of Eng-
land and others, corrected and revised for Public Wor-
ship (3d edit. 1820). This consists of 220 hymns and
most of the Psalms. Several of the hymns are by Mr.
Noel. He published Fifty Sermons for the Use of Fam-
ilies (2 vols.; new edit. 1830), and also separate Ser-
mons. After his death his sermons preached in Romsey
appeared in a large volume under the direction of the
Rev. R. Kenyon, Romsey, 1859. He also published
Miller, Singers and Songs of the Church; Ype-
Smith, Intro. to Theology, p. 546, 545.

Noel, Leland, an English divine, and brother of the
preceding and of Baptist Noel, was born Aug. 21,
1796, and was educated at Trinity College, Cambridge.
He took the degree of D.D. in 1833, and was pastor of
the church of St. John, Rutlandshire, in 1832. He held
this place for life, and was also made honorary canon of
Peterborough cathedral in 1850. He died Jan. 5, 1871.

Noel, Elias Mercer, D.D., a Baptist minister, was
born in Essex County, Va., Aug. 12, 1788. He
studied medicine, and law, and sought to prac-
tice in this profession at Louisville, Ky. In 1811 he
turned his attention to theology, and was finally or-
ained in 1818 as pastor of the Church at Big Spring,
Woodford County, and afterwards took charge of the
Church at Frankfort. During his ministry there he
was instrumental in establishing a number of churches
in the adjacent country. In 1833 he became pastor of
the Church in Lexington. In 1810 he had the honor to
be appointed circuit judge of the Fourth Judicial Dis-
trict, in which he resided. Mr. Noel all his life greatly
ennobled himself in behalf of education, African colo-
ization, and was the original pro-
jector of the Baptist Education Society of Kentucky,
of which he was president for several years. He died
May 5, 1839. See Sprague, Annuity of the Amer. Pulpi,
p. 27.

Noell, Edwin P., a Presbyterian minister, was born
in North Carolina in 1804. His parents removed to
Tennessee, and gave him such an education as that sec-
tion of country afforded. He studied theology in the
Union Theological Seminary at Marysville, Tenn.,
and was licensed and ordained as pastor of a Church in Jas-
pur County, Tenn., in 1833. In 1835 he accepted a call
to the Church in Knoxville, Ill.; in 1837 removed to
Columbia, Mo., and thence to Rochport, where he had
charge of a school, but sickness unfitness him for active
usefulness. He afterwards moved to the South-west, and
located at Bolivar, Puck. County, where he became the
first Presbyterian minister who preached south of the
Osage. He organized a Church near Bolivar, and one
twenty-five miles distant, in Green County, near Spring-
field, to which charges he preached for about four years,
suffering all the privations incident to a life of poverty
in a new settlement. During this time he received
some little aid from the Home Missionary Society. At
length he moved with his family to Ray County, and
preached to the Plum Grove Church. In 1850 he moved
to Troy, Lincoln County, and continued to labor there
until his death, March 22, 1866. Mr. Noell possessed
the gift of natural and acquired abilities, and a simple and
instructive manner of presenting the truth. See Wil-
son, Preb. Hist. Almanac, 1866, p. 112. (J. L. S.)

Noetians is the name of the followers of Noetus
(q.v.). They affirmed that their founder was Moses, and
that his brother was Aaron, and taught that Christ
was the Father himself, and that the Son was begotten
and suffered and died. See, however, for details the
article NOETUS, and compare the articles MOPS-
OPHYSITI AND ANTITRINITARIANS.

Noetus or Noetus, a Christian philosopher of the
3d century, noted as the founder of a heretical body
of Christians, monophysite in tendency, was a native of
Asia Minor—Hippolytus (Ref. ix, 11) says of Smyrna;
and so says Ephesians (in Symposia, I, ii, 11), but
in the body of his work (Har. lib. viii) says he is of Ephesus.
In all probability Noetus was a native of Ephesus and
a presbyter of Smyrna. In his early life he was one of the
most prominent advocates of the Patripassian her-
esy. In his views, which he published about A.D. 200,
he appeals, like Praxeas, to Rom. ix, 5, where Christ is
called the one God over all. Being called upon to de-
fend his doctrine before a council of presbyters at Smyr-
na, he denied or evaded the charge; but presently,
appealed to the bishops of Asia Minor about ten years
afterwards maintained the doctrine charged to him, and on a sec-
ond summons before the synod avowed it, and claimed
that it enhanced the glory of Christ. He was excom-
nunicated, and then gathered followers, and formed a
school for the propagation of his doctrine; shortly after
which he died (Hippolytus, Dial. against Noetus; Epi-
phanius, Har. lib. vii.). The author of Prokostasian
states that he was condemned also by Transilius, bishop of the Chalcedonians in Syria (Prokost. Har. xxvi).
From what Epiphanius and Theodoret say, it seems
that the manner in which Noetus made Christ to be
both the Father and the Son has been understood
by the ancients, and the moderns too, in a worse sense
than was necessary. For they tell us that Noetus be-
lieved the Father and the Son to be one and the same
person; that he confusedly named both the Son and
the Father, as if he viewed in himself and apart from
Christ, but being the Son if viewed and as perceived
with the man Christ. From this exposition of his views
consequences are frequently, and, as we think, unjustly
drawn which are discreditable to the reputation and
talents of Noetus; though his system, so far as it
can now be ascertained from the writings of the an-
cients, was this: 1. Very explicit declarations of Scriptur-
put it beyond all question that, besides that God
who is called the Father of all things, there are no gods.
2. But those who distinguish three persons in God mul-
tiple gods, or make more than one God.
3. Therefore that designation of persons in God must be rejected as being false.
4. Yet the Holy Scriptures clearly teach that God was in Christ, and that Christ was the supreme God, from whom all things originated.
5. To bring the two representations into harmony, therefore, we must believe that the God who is in Christ is that supreme God whom the Scriptures call the Father of mankind.
6. This Father, in order to bring relief to fallen men, pro-
curred from the Virgin Mary a man free from all
sin, who in a peculiar sense is called the Son of God. That man the Father so united with himself as to make of himself and the Son but one person, shall not be of the union, whatever befall or occurred to that Son, or
that divinely begotten man, may also be correctly predi-
cated of the Father, who took him into society with his
person.
9. Therefore the Father, being coupled with the Son, was born, suffered pains, and died. For
al-
though the Father be present in the Son, as he remains still the Father, he may also be called the Father of
the union, whatever befall or occurred to that Son, or
that divinely begotten man, it was said that the Father suffered "rationes divine nature," but "rationes
humanae nature" quae sola possibilis erat. "But," says
Blunt, "the expression is amis of his. The beginning of Noetus' doc-
trine begin with ascribing passibility to the Divine Nature
itself? The Noetians advance statements under this
manner—that one and the same God is the Creator and
Father of all things, and that when it pleased him
he appeared to just men of old. Therefore it is that, according to the same account, as Neander says, 'there is one God the Father, who appears or reveals himself when he will, and is invisible when he will: he is visible and invisible, begotten and unbegotten; and we may add, is mortal and immortal. The subsequent statements, it is true, refer to the supposed incarnation of the Father, but it may be asked whether that supposed incarnation, with its consequences, is not in accordance with a presupposed attribute of passibility in the Deity itself.' This charge seems reasonable, too, when it is seen that the other position can be derived from the doctrine of the Deity itself. 

The original principle of the universe Heracleitus believed to be living eternal fire, self-kindled and self-extinguished. In the following passage he asserted, as Hippolytus states, that the prime world is itself the Demiurge and Creator of itself: 'God is day, night, summer, winter, war, peace, surfeit, famine.' Noretus says that the universe is divisible and indivisible; generated and ungenerated; mortal and immortal; reason, eternity, Son, Father, Justice, God. In one form of manifestation, it was held that all things of the Primal Principle in time are contrasted with its nature and existence in eternity. The derivation of the doctrine from the core of the universe will scarcely hold good unless Noretus be understood to attribute to it, and that itself which Heracleitus contributed to the Primal Principle. Whence, after quoting the pantheistic passages from Heracleitus, Hippolytus stated that the doctrine that, according to the same account, the Father is unbegotten and begotten, immortal and mortal, is not to be inferred that to be unbegotten and begotten, to be immortal and mortal, was attributed by Noretus to the Godhead itself, independently of the supposed incarnation of the Godhead; in short, that he held the Father to be visible and possible, that there was required the addition to the creed which was made by the Church of Aquileia, affirming the Father to be invisible and impossible. A further proof of this is found in the twelfth anathema of the Synod of Sirmium, A.D. 351, which, summoned to deal with Photinus, condemned the very errors of the Sabellian school. It can hardly be doubted that the following words were directed against the Noretics, who were Sabellianus ante Sabellium: 'Si quis unicum Filium Dei crucifixum audienti deletamatem ejus corruptionem vel passibilitem aut demunatum vel dumunatum adinterfectionem sustinuisse dicat: anathema sit.' 

The Monarchian controversy arose from the interaction of the doctrine of the Father with the doctrine of Christ: and the afflication of Noretus to Heracleitus is a strong proof of the truth of this assertion. In the Refutation no notice is taken of that which is mentioned in the Discourse, and by Epiphanius, namely, that Noretus alleged himself to be Moses, and his brother to be Aaron— or, as Philaster gives the assertion, Elias; and it was probably nothing more than an arrogant comparison. 

From Hippolytus (Ref. ix, 2; Wordsworth, Hipp. and his Age, p. 84-91) we learn that Epiponus, a disciple of Noretus, aided by Cleomenes, a disciple of his own, disturbed the peace of Zephyrinus, and that Zephyrinus, an illiterate and covetous man, was bribed into licensing Cleomenes as a son, and then became his convert. Irreparable, however, as well as ignorant—governed generally by his successor Callistus, who tried to hold a balance between the orthodox and heretical sects, and acted upon now by Cleomenes, now by Sabellius—Zephyrinus was swayed to and fro. There was an endless conflict and confusion throughout the remainder of his long episcopate (see Milman, Lat. Christ. i, 1, 83, ed. 1867). 

The Church of Smyrna formed its theological school at Smyrna must be gathered from this history, for the date assigned by Epiphanius is clearly inadmissible. The tenor of the narrative of Hippolytus leads to the conclusion that Zephyrinus fell into heresy some time before his death, which was in A.D. 219. Allowance must be made for the action of Epiponus and Cleomenes before Zephyrinus joined them, and for that of Epiponus alone. Consequently the establishment of the Noretic school may be well placed at A.D. 205-210. 

Many of the stations of the supposed incarnation of the Father, but it may be asked whether that supposed incarnation, with its consequences, is not in accordance with a presupposed attribute of passibility in the Deity itself.' This charge seems reasonable, too, when it is seen that the other position can be derived from the doctrine of the Deity itself. 

The original principle of the universe Heracleitus believed to be living eternal fire, self-kindled and self-extinguished. In the following passage he asserted, as Hippolytus states, that the prime world is itself the Demiurge and Creator of itself: 'God is day, night, summer, winter, war, peace, surfeit, famine.' Noretus says that the universe is divisible and indivisible; generated and ungenerated; mortal and immortal; reason, eternity, Son, Father, Justice, God. In one form of manifestation, it was held that all things of the Primal Principle in time are contrasted with its nature and existence in eternity. The tenor of the narrative of Hippolytus leads to the conclusion that Zephyrinus fell into heresy some time before his death, which was in A.D. 219. Allowance must be made for the action of Epiponus and Cleomenes before Zephyrinus joined them, and for that of Epiponus alone. Consequently the establishment of the Noretic school may be well placed at A.D. 205-210.
some Réflexions, by PP. de Tournemine and Societé, in the Journal de Trévoux (June, 1709), to which Nolin replied by Observations (same journal, Jan. 1710) :— Deux Dissertations, l'une sur les Bibliques Françaises, et l'autre sur l'éclaircissement de la Dissertations anonyme de l'abbé de Longemon et des Lettres choisies de Simon touchant les antiques des Chaldéens et les Egyptiens (Par. 1710, 8vo). In the first he has done little more than abridge the Histoire des traditions Françaises de l'Écriture de Lallouët, and in the second he examines a plank of plagiarism :— Lettres sur la nouvelle édition des Septante, par J.-Em. Grobe, in the Jour. des Scen. (Supplement, Dec. 1710). See Morédu, Grand Dict. Hist. s. v.

Nolin, Jean Baptiste, a French engraver who devoted himself somewhat to sacred art, was born at Paris in 1657. He studied under Puelly, and afterwards visited Rome for improvement, where he engraved several plates after the great masters, among which was the Miracle of the Loaves, after Raphael. He also executed several plates in important secular works.

Nollard Brothers is an association of religious persons who devote themselves to the care of the dying, and minister to them in spiritual things so far as the laity have this right in the Roman Catholic communion. They do not everywhere go by this name, but the same dress usually distinguishes them. They wear a robe, a scapular, and gray mantle. In many respects they closely resemble the Beguines (q. v.) and the Lollards (q. v.).

Nolley, Richmond, a Methodist Episcopal minister, was born in Virginia about 1790; emigrated early in life to Georgia; was converted in 1806; began to preach in 1807, when he was received into conference and sent to Edisto Circuit, where he did good service among the slaves; in 1809 he was stationed at Wilmington, N. C.; in 1810, at Charleston, S. C., where he labored studiously in spite of severe persecution. In 1812 he was sent on a mission to the Tchombgie country, in pursuance of which he endured almost incredible hardships, and formed a vast amount of labor for the souls of the half-savage population. "For two years he ranged over a vast extent of country, preaching continually, stopping for no obstructions of flood or weather. When his horse could not go on, he shouldered his saddle-bags and pressed forward on foot. He took special care of the children growing up in a half-savage condition over all the country, catechising and instructing them with the utmost diligence, as the best means of averting barbarism from the settlements" (Stevens). In 1814 Nolley was appointed to the Annual Circuit of the truth of the religion which he preached. See Minutes of Conferences, i, 275; Biographical Sketches of Methodist Ministers, p. 218; Summers, Sketches of Meth. Ministers in the South, p. 230; Stevens, Hist. of Meth. Episcopal Church, vol. iv (see Index). (J. H. W.)

Noltenius, Johann Arnold, a German Protestant theologian, was born at Sparrenberg, in Westphalia, April 16, 1683. His family had been driven from Holland by the persecutions of the duke of Alva. After studying theology at Franeecke and Duysburg, he became pastor in Hanover in 1709; in 1718 he was appointed professor of theology at Frankfurt-on-the-Oder; in 1729, chaplain to the king; and afterwards Church counsellor and governor of the young princes. He died at Berlin March 2, 1740. As a court-preacher Noltenius gained an enviable notoriety; as a man he was highly respected for his straightforward and consistent walk. He wrote De justicia sanctorum in mundo et ingenios (Bremen, 1718, 4to) :— Argumentum pro veritate religiosae Christianae, ex miraculis desumptum (Frankf.-ad-O. 1718, 4to) :— In prophetiam Zephaniah (ibid. 1719, 1720, 4to) :— Miscell. Prefigten (ibid. 1772, 4to) :— and several articles in the Bibli. Bremensis : among them a curious letter, in 1724, in which he gives an account of the chemical miracle operated in Berlin in imitation of that of St. Januarius at Naples. See Hering, Beiträge z. Gesch. d. Reform. Kirche in Brandenburg, i, 60; Chaufepié, Nouv. Dict. Hist. s. v.; Cass-Doyen, Gesch. iii, 126. (J. N. P.)

Nominism, See Antinomianism.

Nominism (from Lat. nomen, "a name") is the doctrine that general notions, such as the notion of a tree, have no realties corresponding to them, and have no existence but as names or words, and nothing more (futura vocis). Sir William Hamilton says, "The doctrine of nominism, as it is called, maintains that every notion, considered in itself, is singular, but becomes, as it were, general, through the intention of the mind to make it represent every other resembling notion, or notion of the same class. Take, for example, the term man. Here we can call up no notion, no idea, corresponding to the universality of the class or term. This is manifestly impossible; for as sum involves contradictory an, but, and as contradictions cannot coexist in one representation, an idea or notion adequate to man cannot be realized in thought. The class man includes individuals, male and female, white and black, and copper-colored, tall and short, fat and thin, straight and crooked, whole and mutilated, etc.; and the notion of the class must, therefore, at once represent all and none of these. It is therefore evident, though the absurdity was maintained by Locke, that we cannot accomplish this; and this being impossible, we cannot represent to ourselves the class man by any equivalent notion or idea; and we can only, in order to call up such individual image, and consider it as representing, though inadequately representing, the generality. This we easily do; for we can call into imagination any individual, so we can make that individual image stand for any or for all appointed to us by the mind, which it does enroll in the essential points which constitute the identity of the class. This opinion, which, after Hobbes, has been in modern times maintained, among others, by Berkeley, Hume, Adam Smith, Campbell, and Stewart, appears to me not only
debate about words and names and questions, which gave strain therewithal, if not utterly muddying. Assuming either that there is no authority or standard in such matters, or that the authority of certain ecclesiastical superiors ought to be submitted to without murmurs or dispute, they pronounce their disapprobation on all discussions of such subjects, and on the parties who engage in them. The English Reformed Church, therefore, the doctrine of conformity should be called in question at all. Those who profess high spirituality look on the subject as unworthy of their regard, and as fit for those only who mind the carnal things of the kingdom of God. Dissenters, as well as others, frequently speak of it as being an essential matter, and a subject deserving of profound consideration; and while they luxuriate in the privileges which their forefathers purchased for them at so dear a rate, almost pity and condemn the measures which procured them. Yet it is impossible for any one to form a correct view of English nonconformity for nearly three hundred years without an acquaintance with the controversy which the question of conformity has provoked, and with the characters and principles of the men who engaged in it. We therefore give space here to a historical treatment of English nonconformity.

Nonconformity in the Anglican fold is almost coeval with the English Reformation. Nonconformists of England may be considered under three heads. 1. Such as absent themselves from divine worship in the Established Church; and who, in their whole way of thinking and of living, are of no other persuasion. 2. Such as absent themselves on the plea of conscience; as Presbyterians, Independents, Baptists, etc. 3. Internal Nonconformists, or unprincipled clergymen, who applaud and propagate doctrines quite inconsistent with several of those articles which they promised on oath to defend.

Before the Reformation, and for some years after the beginning of Queen Elizabeth's reign, there was no organized body of separatists from the Church of England. In many respects the Lollards closely resembled the Puritans of Elizabeth's time; and it is probable that, notwithstanding the check received from the singular law of Henry IV, many held the principles of Wickliffe down to the time of Henry VIII. But Lollardism, though it had its convulsives and schisms, did not secede and organize itself into a sect. The Christian Church of England, (Hals, of Church History, p. 525) and the Cambridge party (ibid. p. 597), who, if not Lollards in name, do not spring from the Lollards, were still parties in the Church. Yet Lollardism, which contributed largely to form in England the state of the puritanism that produced the English Reformation, was also that influence to which many were ascribed much of the revolutionary spirit and zeal which engendered nonconformity. Again, the followers of the Anabaptists cannot be considered as by themselves an organized body of separatists. After the taking of Münster, in 1535, Anabaptists found their way through Holland into England. The first notice of them in English history is in 1538. The English who joined them were treated by Elizabeth just as she treated the foreigners themselves—being ordered to depart the realm. Notwithstanding the order, several remained and joined the French and Dutch congregations in London, and in towns near the coast. From these there can be little doubt sprang the sect of Baptists, who may be distinguished from their parent stock in 1620, when they presented a petition to Parliament, declaring the false notions of the Anabaptists; and who first became an organized sect under Henry Jesse in 1640. Nonconformity proper first begins with the refugees from Frankfort and Geneva. They brought back with them a new doctrine, discipline, and worship, and gradually the spirit they introduced permeated the dissenting parties in the established church until nonconformity resulted.

Nonconformity cannot, clearly then, be traced to any sect that may have found shelter in England, and it is necessary to review the early history of the establishment to find traces of its origin. It will be remembered that it was in the reign of King Edward VI that the English Reformed Church first received a definite constitution. During the time of Henry VIII it remained in a great measure unsettled, and was subject to continual variation, according to the caprice of the king. As the Reformation in the Church of England was not followed by the establishment of the new faith, it was Episcopal in its government, and retained in its worship many of those forms and observances which had been introduced in the days of Roman Catholic ascendancy. In the first of these particulars it resembles, and in the second it differs from the Swiss, and the Dutch Reformed. During the temporary restoration of the Roman Catholic faith under the administration of Philip and Mary, great numbers of the persecuted disciples of the Reformed faith sought refuge in France, in the Netherlands, Switzerland, and other parts of the Continent. Of those who fled to Germany, some observed the ecclesiastical order established by Edward; others, not without warm disputes with their brethren, had their beginning at Frankfort, adopted the Swiss mode of worship, preferring it as more simple, and more agreeable to Scripture and primitive usage. Those who were of this latter class were called Téthistes. The distinction has been permanent, and the name has been perpetuated. Queen Elizabeth's accession to the throne, in 1558, opened the way for the return of the exiles to the land of their fathers. It was natural for each sect that wished to retain any of the services of the established church at home the systems of worship to which they had been respectively attached while abroad; and the controversy which had been agitated by them in a foreign country immediately became a matter of contention with the great body of Protestants in their own. It suited neither the views of the enthusiasts nor those of those who wished to realize the wishes of the Nonconformists, or Puritans, as they began to be called, by giving her sanction to the opinions which they maintained, and assenting to the demands which they made. The plain and unpretentious method of religious service which they recommended did not accord with that love of show and pomp for which she was remarkable; and the policy of the early part of her reign, in which she was supported by the high dignitaries both in the Church and State, was to conciliate her Roman Catholic subjects, who, in many cases, were of the number of the Nonconformists. The liturgy of Edward VI having been submitted to a committee of divines, and certain alterations betraying a leaning to Popery rather than to Puritanism having been made, the Act of Uniformity was passed in 1558, by which the clergy were enjoined to ordain and publish such further ceremonies and rites as might be deemed advisable, forbade, under severe penalties, the performance of divine service except as prescribed in the Book of Common Prayer. For some years the contest had turned principally on the question of ecclesiastical dress; but this action of the queen caused separate congregations to be formed in 1566, in which the Prayer book was wholly laid aside, and the service was conducted by the book of the English refugees at Geneva. Among the leaders of these separatists, Cartwright held that presbyters assembled in synod had an authority the same in kind with that of bishops. He was the founder of the Presbyterians, aided in his enterprise by the influence and example of Scotland, which had well learned the lessons of Geneva. Brown found the essentials in the congregation, and denied the authority both of bishop and synod. From him descend the Independents, Robinson being the founder of the separate sect. In later times the Quakers appear in considerable numbers. There were some minor sects, such as the Family Love, or so-called Anabaptists; but the four sects—Presbyterians, Independents, Baptists, and Quakers—with the popish recusants, made up the great body of Nonconformists until the rise of
NONCONFORMITY

events which make the history of the 17th century one of the most melancholy pages of the annals of England.

Queen Elizabeth died in 1603, and was succeeded by James VI of Scotland. From one who, like him, had been the member of a Presbyterian Church, and had on more than one occasion expressed his decided attachment to its principles and worship, the Nonconformists might reasonably expect a better treatment than they had met with in the preceding reign. But their expectations were bitterly disappointed. In compliance with their petitions, a conference was indeed appointed and held at Hampton Court, at which nine bishops and as many dignitaries were present on both sides, and a judgment was selected by James, on the other. The king himself presided, and took part in the debate. But no good results ensued. The Nonconformist representatives were loaded with insults, and dismissed in such a manner as might well give birth to the darkest anticipations regarding the fate of the party to which they belonged. Shortly after a few slight alterations of the national rubric were made, and a proclamation issued requiring the strictest conformity. In 1604 the Book of Caesons was passed by a convocation, at which bishop Bancroft officiated, and severer temporal penalties against the Puritan divines, and was followed up by unsearing persecutions. In spite, however, of all the means employed for its eradication, the cause of Nonconformity advanced. In the Church itself there were many of the clergy who held the Puritan opinions, though it is said that the free exercise of them was not openly permitted. But the number of such was largely augmented by the alteration which James made in his creed—from Calvinism to the doctrines of Arminius.

The son and successor of James, Charles I, adopted towards the Nonconformists the policy of his predecessors. His haughty temper and despotic disposition speedily involved him in difficulties with his Parliament and people. In carrying into execution his designs against Puritanism, he found an able and zealous assistant in Archbishop Laud, under whose arbitrary administration the proceedings of the Star Chamber and High Commission Court were characterized by great severity. Many Puritans sought for safety and quiet in emigration; and the colony of Massachusetts Bay was founded by them in the New World. But a proclamation by the king put a stop to this self-annihilation; and thus even the miserable consolation of emigration was denied. Hundreds of Puritan clergymen were ejected from their cures on account of their opposition to the "Book of Sports," published in the previous reign. Calvinism was denounced by royal authority, and severe restrictions laid on the modes and times of preaching. But a change was approaching. In 1644 Laud was declared guilty of high-treason, and beheaded; and about five years after Charles shared the same fate. The Parliament abolished Episcopacy and everything in the Church that was opposed to the model of the Genevan Church. During the Protectorate, Presbytery continued to be the established religion. Independency, however, prevailed in the army, and was in high favor with Cromwell. Under his government the Quakers and Baptists flourished unmolested; and other sects, the followers of the whipcord, and others, came into existence. All were tolerated. Episcopacy only was proscribed; and the Nonconformists, in their hour of prosperity, forgetful of the lessons which adversity should have taught them, directed against its adherents severities similar to those of which they themselves had been the objects. On Nov. 8, 1645, an "act of declaration" was passed by the Lords and Commons, who then claimed to be the Parliament of England, declaring that the "word 'presbyter,' that is to say 'elder,' and the word 'bishop,' do in the Scripture intend and signify one and the same function;" and that, "it being an usurpation on
NONCONFORMITY

the part of bishops for them alone to ordain, henceforth
ordination was to be given by presbyters," under cer-
tain rules respecting examination and trial which were
laid down in the ordinance; and then it was enacted
that all persons who shall be ordained presbyters ac-
cording to this Directory "shall be forever reputed
and taken, to all intents and purposes, for lawful and suf-
ciently authorized ministers of the Church of England" 1
(Quishworth, Hist. Congreg. p. 112). At this time the
parochial clergy were rapidly and very generally driv-
en from their parishes. Many were notoriously loyal
to the crown and to Episcopacy, and had to flee for
their lives because they would not take the covenant
and the engagement; many were imprisoned (some with
 Особия, cruelly; twenty were kept under hatches in a ship on the Thames); and it is believed that not a few were "sent to plantations"
by the early Christians were sent to the mines. There were also "committees for inquiry into the scandals immoralities of the clergy," and as the least talent of loyalty to Church or king, the use of the
Prayer-book, or the refusal of the Directory was scanda-
laus and immoral in the estimation of these commit-
tees, they turned out most of those clergy who were not
got rid of by other means. The consequence of all these
effects on the Church. Nearly the whole of the episco-
copal clergy were deprived of their benefits during the
early years of the great rebellion. A few tempo-
rized, a few were protected by influential laymen, and a
few escaped notice; but the number of those who thus
retained their places was very small, and it is probable
that the popular estimate of the Church in the reign of
the clergy ejected by the parliamentary party at
8000 to 10,000 was correct. As the episcopally ordained
clergy were thus driven away from their churches, their
parsonages, their tithes, and their glebes, the Presbyterian
anglicans and Independents stepped into the vacated benefits,
and were securely settled in them by the authority of
the ordinance of Parliament which is quoted above.

Thus it came to pass that between the years 1648 and
1660 most of the parishes throughout England and
Wales received for their incumbents ministers who had
not received episcopal ordination, the number of such
amounting to about 10,000 at the time of the Restora-
tion.

The Restoration, in 1660, placed Charles II on the
throne of his ancestors, and led to the restitution of the
old system of Church government and worship. At first
Attitude, indeed, by a comparatively small but yet noisy party, to prevent the reintroduction of the episcopal system in its integrity; but the great body of
the laity being strongly exercised against this attempt,
it was at once defeated. One of the first proceedings of
the new king was to prevent the Publication of the Act for
the conforming and restoring of ministers (12 Car. II, c. 17),
which enacted that "every minister of the Church of
England who had been ejected by the authority of the
rebellion Parliament should be restored to his benefice
by Nov. 25, 1660; provided he had not justified the
king's murder or declared against infant baptism." Under
this act, many of the non-episcopal ministers had to retire from the livings into which they had been
instated, that the old persecuted, poverty-stricken clergy,
who had been turned out of them fifteen or sixteen years before, might be restored to their homes and their
flocks. Some even of those who had been episcopally ordi-
adained had also to retire; and thus Richard Baxter had
to give way for the return of the old and rightful vicar of
Kidderminster, whose place he had not unworthily held
for half a generation. But half a generation of exile,
was the result. The recreation of the Church was traced as
an act of the old clergy to return to their parishes, and most of
these were left occupied by non-episcopal incumbents
until the Act of Uniformity came into force. This act
was passed Aug. 24, 1662, and by it all who refused to
obey the rules, as well as to subscribe the tenets of the
Church of England, were deprived of its com-
munion, and in consequence exposed to many disad-
vantages and to cruel sufferings. "This act of Parlia-
mament," says Blunt, who seeks to defend the Anglican
system, "notwithstanding all the mischiefs which had
befallen it, was on the general ground of Uniformity
which had been passed since the Reformation, and
having its parallel in several 'ordinances' of the Parlia-
ment which were passed during the rebellion. It is,
moreover, absolutely necessary that, if the Church sys-
tem was to be restored, the parliament should en-
force the first principle of the system—that of episco-
copal ordination. But it was under the consideration of Parliament (especially of the House of Lords, which
received a formal request to hasten it from the House
of Commons) for several months; and it was so con-
stantly special and strongly urged by the bishops and
incumbents, as well as to deal justly with the principles
of the Church. The former were not, therefore, 'eject-
ed,' as has been so often represented; but opportunity
was given to them of retaining the benefits which they
held without any difficulty if they were willing to con-
form to those principles which had already been main-
tained, and which could not be given up, respecting
episcopal ordination, the use of the Prayer-book, and
decent loyalty to the crown. The conditions thus im-
posed were stated as follows in the Act of Uniformity:
If or you do sign or subscribe the said Tenets or any of
them hath and enjoyeth any ecclesiastical benefice or
promotion within this realm of England, shall
openly and publicly before the congregation there
assembled declare his unfeigned assent and consent to
the use of all things in said book contained and prescribed,
in these words, or to the like effect. 2 I, A, B, do here declare
my unfeigned assent and consent to all and everything
contained and prescribed in and by the book entitled
The Book of Common Prayer, etc. Every such incumb-
ent, or any one to be admitted to an incumbency there-
after, was required to subscribe the following declara-
tion:

1. If A, B, do declare that it is not lawful, on any pre-

occurrence whatsoever, to take arms against the king; and that
I do abhor that trumpery position of taking arms by his
authority against his person or against those who are
commissioned by him: and that I will conform to the
Tenents of the Church of England as it is now by law es-
tablised. And I do declare that I do hold there is no ob-
ligation upon me, or on any other person, from the oath
commonly called "The Solemn League and Covenant," to
endeavor any change or alteration of government, either
in Church or State; and that the same was in itself an un-
lawful thing; and that I will and do declare war against the
known laws and liberties of this kingdom. 3

It was also provided that no person who is now in-
cumbent and in possession of any parsonage, vicarage,
or benefice, and who is not already in holy orders by
episcopal ordination, or shall not before the feast of St.
Benedict in the next ensuing year, subscribe the said
form of episcopal ordination, shall have, hold, or en-
joy the said parsonage, vicarage, benefice, with cure or
other ecclesiastical promotion, within this kingdom of
England or the dominion of Wales; but shall be utterly
disabled and ipso facto deprived of the same and all his
ecclesiastical promotions shall be void, as if he was
naturally dead. 4 The Act of Uniformity, therefore, to
secure the integrity of the Church system, on the one
hand, and to secure the vested interests acquired by long
possession on the part of the non-episcopal incumbents
on the other, was an act of great ingenuity in the latter
who still remained, that, if they would be or-
dained, accept the Prayer-book, and renounce their
engagement to destroy episcopal government, or to bear
arms against the crown, the right to retain their ben-
ecies. The great majority accepted the terms that were
offered by the Convention, many of them taking upon
themselves to carry out the system of the Church of
England according to its long-established principles. The
Nonconformists who did not accept these liberal terms
offered by Parliament have been paraded before the world
for two centuries as amounted in number to one in twenty
of the contemporary writers of authority, as, for example, bishop
Kennett, in his Register and Chronicle, the great store-house of information respecting the years 1660–1663, of which the main contents are so large; but Calamy, in 1720, published an *Abridgment of Baxter’s Life and Times*, the ninth chapter of which is occupied with biographical notices of some of the Nonconformists, and in which he gives the number of 2000 as correct. When this chapter was added, in 1721, four volumes of *The Suffering of the Clergy*, Calamy compiled a "Continuation" of his former work, which was published in 1721 in two volumes, and in which he still maintained that 2000 Nonconformists were ‘ejected’ by the Act of Uniformity. A critical examination of Calamy’s evidence shows, however, that he has much overstated his case, the number being not much more than one third of what he alleges it to be; and as so much has been made of the matter by dissenting writers, it is worth while to show what is the real conclusion furnished by his evidence. The list of ejected ministers printed by Calamy may be distributed under the seven following heads: (1) Those who were actually dead before the time of election arrived; (2) those who yielded up their places to the dispossessed episcopal incumbents; (3) curates and lecturers, whose appointments were not being maintained who were unprovided for by the ‘ejected’ from any by the act; (4) cases in which the list sets down two incumbents for the same benefice; (5) cases in which bishops’ registers show that other men than those named in the list were in possession; (6) in which bishops’ registers show that no benefices were to be lost, but whom he includes among the ejected from benefices; (7) those who may have been deprived by the operation of the Act of Uniformity. By the help of Newcourt’s *Repertorium* of the diocese of London, those ministers whom Calamy names as ejected from benefices in that diocese may be distributed under these seven heads as follows:

<table>
<thead>
<tr>
<th>Number given by Calamy.</th>
<th>Number actually ejected.</th>

</table>

The number of those who it is possible may have been ejected is thus, taking the general average, only 483 per cent. of the number given by Calamy for the diocese of London. If this proportion be regarded as the average number ejected throughout England and Wales, that number will thus be increased from 2000 to 867. It seems improbable, therefore, that the number of Nonconformist ministers who were ipso facto deprived of their parishes on St. Bartholomew’s day was much or any over 800; and as contemporaries allege that some of these were men of property; that some made good marriages; that some returned to the trades which they had left for the pulpit; and that great kindness was shown to those who were poor by the bishops and nobility (Kennett’s *Register*, p. 886, 919), it may be concluded that much exaggeration has been used by those who have turned the event to the discredit of the Church. Among those who thus refused to accept the terms offered by the Act of Uniformity, there was also a large number who continued to attend the ministry of the Church, and whom Baxter calls ‘Episcopal Nonconformists.’ ‘These,’ he says, ‘are for true parish churches and ministers reformed, without swearing, promising, declaring, or subscribing to any but sure, clear, necessary things; desiring that Scripture may be their canon; taking the capstone of their foundation for the communicants and Church, and the rest for heirs and catechised persons; desiring that the magistrate will be judge as to whom he will maintain, approve, and tolerate; and the ordainer judge of whom he will ordain; and the people be free consensers, to whose pastoral care they will trust their souls, desiring that every presbyter may be an overseer over his flock, and every Church that hath many elders be one incumbent, president, for unity and order; and that goodly dioceses may (without the sword or force) have the oversight of many ministers and churches, and all these be confederate and under one government of a large class among the laity for some time after the Restoration’ (Dict. Hist. Theol. a. v.).

But whatever difference of opinion may exist as to the real number of those who were visited with suffering by the Act of Uniformity, there is certainly ground for the indifference with which some historians have deigned to treat those men in supposing that their consciences were more tender than they need be, for it must be remembered they were men of as extensive learning, great abilities, and pious conduct, as ever appeared. Mr. Bogue truly represents them as "worthy, learned, pious, orthodox divines, who did not throw themselves out of service, but were forcibly ejected." Mr. Bogue thus draws their character: ‘As to their public ministrations,’ he says, ‘they were orthodox, learned, learned, learned, and their sermons fell upon the ears of the learned and popular preachers. As to their moral qualities, they were devout and holy; faithful to Christ and the souls of men; wise and prudent; of great liberality and kindness; and strenuous advocates for liberty, civil and religious. As to their intellectual qualities, they were learned, eminent, and useful; and as to their moral acts they were driven from their homes, from the society of their friends, and exposed to the greatest difficulties. Had the government of the last century been content with requiring subscription from those who desired to remain as ministers of the establishment, without proceeding to the passing of obnoxious, persecuting, and iniquitous acts against those whose consciences forbade their compliance with the requirements of the Act of Uniformity, dissent would not, in all probability, have taken such deep root in the minds of the people, nor would it have obtained the power to which it has at this time arrived. The burdens of Nonconformists were very greatly increased by another enactment, under the same reign, entitled the “Conventicle Act,” whereby they were prohibited from meeting for any exercise of religion above three persons, under any other manner than allowed by the liturgy or practice of the Church of England. For the first offence the penalty was three months’ imprisonment, or a fine of £5; for the second offence, six months’ imprisonment, or £10; and for the third offence banishment to some of the American plantations for seven years, or £100; and in case they returned, death penalty without benefit of clergy. By virtue of this act the jades were quickly filled with dissenting Protestants, and the trade of an informer was very gainful. So great was the severity of these times, says Neale, that they were afraid to pray in their families if above four of their acquaintances attempted only to visit them, were present; some families scrupled asking a blessing on their meat if five strangers were at table. But this was not all. In 1665 an act was brought into the House to banish them from their friends, commonly called the “Oxford Five-Mile Act.” This act was to be followed by which all dissenting ministers, on the penalty of £40, who would not take an oath (that it was not lawful, upon any pretence whatever, to take arms against the king, etc.), were prohibited from coming within five miles of any city, town, corporation, or borough, or any place where they had exercised their profession, or from teaching any school. Some few took the oath; others could not, and consequently suffered the penalty.”
Yet even this was not all. Two more enactments under this sovereignty were made, the so-called Corporation and Test Act, the last named of which was passed "for preventing dangers which may happen from popish recusants." But as it enacted that "all in place or office, civil or military, under the crown, or in receipt of any salary by patent or grant, shall take the oaths of supremacy and allegiance, and shall receive the sacraments of the Lord's Supper within three months after admittance," it virtually directed itself with equal severity against Protestant dissenters, for it excluded from offices of trust in the state those who refused to receive the eucharist according to the rubric of the Church of England. After this time dissension flamed in a very deep-seated state, and had to struggle with various fortunes. In 1673 "the mouths of the High-Church pulpit speakers were encouraged to open as loud as possible. One in his sermon before the House of Commons told them that the Nonconformists ought not to be tolerated, but to be cured by vengeance. He urged them to set fire to the fagot, and to teach them by scourges or scorpions, and open their eyes with gull." Such were the dreadful consequences of this intolerant spirit, that it is supposed near 8000 died in prison in the reign of Charles II. It is said that Mr. John Parkinson, called the "wonderfully collected" man, who had suffered between Charles II and the Revolution, which amounted to 60,000. The same persecutions were carried on in Scotland; and there, as well as in England, many, to avoid molestation, fled from their country. But, notwithstanding all these painful and forlorn prospects, they were not extinguished. Their very persecution was in their favor. The infamous character of their informers and oppressors; their own piety, zeal, and fortitude, no doubt, had influence on considerate minds; and, indeed, they had additions from the Established Church, which several clergymen in this reign deserted as a persecuting Church. Anglican divines appear as apologetic in behalf of king Charles and his extravagant measures; and, lest we stand accused of representing only the side of the Nonconformists, we here insert the apologies offered by one of the ablest Anglican historians, the Rev. John Henry Blunt, who says: "The statutes passed by Charles II against nonconformity proceed on two principles, which used to be thought undeniable, viz., that the Church of England was the only true church and had the same body under its two aspects; and that the government of such a Christian state has the duty of training its subjects in Christian truth and religious practice. Rulers, it was thought, were bound to enforce the observance of Church laws as well as the laws of a secular polity. Now the former of these was, at the end of the 16th century, no such Utopian notion as it now appears to be. For the first ten years of Elizabeth's reign Papists frequented the English service, and it might have been even unreasonably hoped that such a reformation was possible. It would reach the whole nation in the Established Church. So long as this theory of the identity of the Church and nation appeared not impossible to realize (and there is no wonder that patriotic statesmen were slow to relinquish it), it followed inevitably that temporal penalties were added to spiritual censures, that breaches of Church bounds were met by strict enactments. Rebellion against the Church was also rebellion against the State; and, in point of fact, secession from the Church was accompanied by insurrection against the government. The conspiracy of Hacket and Coppinger was but the forerunner of the disturbances of A.D. 1642. Political parties and independent congregations would lead, it was well known, to the overthrow of temporal as well as spiritual thrones. Rebellion against the sovereign began with disobedience in religion, and disobedience in religion was political within a large circle of its receptivity; these was, and thirty years from Elizabeth's accession to the Revolution are the attempt to realize the high ideal of the true union and coincidence of Church and State." During the reign of king James the Nonconformists for a while at least enjoyed more or less liberty. He, suddenly changing his course, though simply for the purpose of restoring popery, granted universal toleration, and preferred Nonconformists to places of trust and profit. Toleration truly came only in the reign of king William, when the Act for the Toleration of his religion was passed (in 1689), and thus was granted immunity to all Protestant dissenters, except Socinians, from the penal laws to which they had been subjected by the Stuart dynasty. The benefits conferred by this measure were indeed substantially much abridged by the "Occasional Clauses" in the Bill of Rights, which bound all civil officers those Nonconformists who, by communion at the altars of the Church, were by the provisions of the Test Act qualified to hold them, and by the "Schism Bill," which restricted the work of education to certificated churchmen. But after the accession of George I, he being fully satisfied that these hardships had been brought upon the dissenters for their steady adherence to the Protestant succession in his illustrious house, against a Tory and Jacobite ministry, who were paving the way for a popish pretender, procured the repeal of them in 1701. But his reign was the period of those remissions which, by the removal of the "Test Act," and by the passing of the acts relating to registration and marriage, dissenters have been allowed the peaceful enjoyment of the rights of conscience. Though religious liberty now prevails in Britain, it must be confessed that the great subject of nonconformity remains still to be agitated, and the great questions which it has provoked cannot be considered as yet finally settled. The Puritans, under the Tudors, became Nonconformists under the Stuarts, and Dissenters under the family of Hanover. They have been men of the same principles substantially throughout. In maintaining the rights of conscience, they have contributed more than any other class of persons to set limits to the power of the crown, to define the rights of the subjects, and to secure the liberties of Britain. They have wrested a rod of iron from the hand of despotism, and substituted in its place a scepter of righteousness and mercy. They have converted the divine right of kings into the principles of a constitutional government, in which the privileges of the subject are secured by the same charter which guards the throne. They have been the voice of conscience, the despair of privilege, and therefore, to be regarded as unimportant by any friends of British freedom. The Nonconformist controversy contributed greatly to ascertain the distinct provinces of divine and human legislation; to establish the paramount and exclusive authority of God, and of the revelation of William III, over the power of any created man; to define the undoubted claims of civil government to the obedience of its subjects in all matters purely civil. To the same controversy we are indebted for the correct and scriptural sentiments which are now extensively entertained of the kingdom of Christ. The intermixture of heavenly and earthly things does indeed still prevail, and its pernicious tendency is yet imperfectly estimated by many; but considerable progress has been made towards the full discovery of the entire spirituality of the Messiah's kingdom. Its independence of secular support and defense; its resources both of propagation and maintenance; its uncongeniality with the principles, spirit, and practice of earth-born men, are now much more generally admitted than they once were. In fact, the ablest defenders of national independence in the latter half of the 18th century entirely abandoned the doctrine of divine right, and boldly avow that they are no part of Christianity, but only a human expedient for its propagation. A conference of the leading Nonconformists of England was held in London in Feb. 15, 1786, for the purpose of ascertaining the views of the various sects of dissenters which are to come before the present Parliament, namely, the
Burials Bill, the legality of clerical fellowships, and the administration of the Endowed Schools Act. Mr. O'Connell began. He meditated over the subject for some time, and then brought a bill for amending the burial acts before Parliament. He advocated giving the English dissenting minister full privilege to officiate at funerals in the parish churchyards, just as the Episcopal ministers in Scotland are. This was followed up in the succeeding year, when the measure passed and the English Church service was read at the grave. The Hon. Lyulph Stanley, in an address upon clerical fellowships, said that there were 171 such fellowships in the University of Cambridge, and 108 at Oxford. Resolutions in support of the Nonconformist position upon all these subjects were passed. In the evening a large public meeting, presided over by Mr. McArthur, M.P., was held at Exeter Hall. There is evidently a strong move in England for separation of Church and State.

Nonius (or Nuñe), Fernán, also called El Pescador, from Pintia Viccencorum, the former name of Vallisoletum, now Valladolid, where he was born, of noble parentage, about 1470, was, although a knight of the military order of Sant' Iago, devoted with much ardor to literary pursuits and the diffusion of learning in Spain, where he promoted the study of the Greek, after that of the Latin language had been rendered easy by Nebrisresis (Antonio Lebrjia). Among the many eminent literary persons who followed Nebrija's steps, Fernán Nuñez was one of the first to receive further instruction from Philipus Beroaldus and Giovani, a celebrated Greek refugee. On his return to Spain, Nuñez brought back numerous Greek books with him; and cardinal Cisneros, who admired his talents, appointed him as Librarian and Director of the Public Library of Athens and writers of Greek at the University of Alcalá, and moreover intrusted to him and to Lope de Asturiga the Latin version of the Septuagint. Endowed with a lofty spirit and a high patriotic feeling, which were fostered by the writings of antiquity which he expounded, he engaged in 1521 with the unsuccessful Comuneros of Castile against the tyranny of Charles V, or rather his courtiers, a set of unprincipled foreign adventurers, who took advantage of the young prince's vanity and inexperience. Being obliged to leave Alcalá, he took refuge at Salamanca, in which university he taught Greek, Latin, rhetoric, and the natural history of plants and animals. He died in 1558, above the age of eighty, at Salamanca, and left to that famous seminary his select library. He wrote for himself the following epitaph: "Maximum vitae, bonum morum." Besides the share that he had in the translation of the Constitutions and the Glosas of the Four Books in Senecon Philosophi Opera, the text of which writer he restored—Observationes in Pomp. Melan.: Observationes in Hist. Nat. C. Plin., which have often been reprinted—Glosa sobre las Obras de Juan de Mena, which is full of classical learning—Letters to Zurrin: De Refranez y Proverbes de Glosadoz, which he composed the midst of his infirmities, a valuable book of
the commentator of Cervantes, as Nafus was well acquainted with Spanish proverbs, and skilful in applying them.

Nonjurants, a party in the Church of Scotland who in 1712 refused to take the oaths of abjuration, an oath which, adorning the Pretender, promised to support the succession to the crown as settled by act of Parliament, one condition being that the sovereign should be declared the Church of England. See ABJURATION. Many stumbled at the oath as being wholly inconsistent with the Covenant. See COVENANT. Principal Carstairs and others took it, but along with a declamation and a protest. The jurants were branded as traitors to their country and to the crown, and their features of schism were rapidly multiplying. Woodward, Broom, and many well-known evangelical preachers belonged to the nonjurants. The Assembly had twice to interfere to preserve peace, and after five years the oath was altered. In 1719 the oath was modified, in accordance with an address from the Nonjurors themselves; but a few (including T. Boston, who wrote Reasons for Refusing the Abjuration Oath in its latest Form) still resolutely declined it. See CAMERONIANS; MAHOMMEN; OATH.

Nonjurors is the name applied to those English and Scottish Episcopalian who from religious scruples would not, at the Revolution of 1688, take the oath of allegiance. The Orange prince had already promised to bear true allegiance to King James; and although many persons thought that his departure from the kingdom had released them from that allegiance, there were others who considered the oath to be still binding, and the more so because it bound them to the king's direct heir, as well as to himself, that heir being now the infant prince of Wales, and not the princess of Orange. Some, on reflection, adopted the principle indicated (though at a much later date) by Nicolson, bishop of Carlisle. "Whenever," he writes, "a sovereign de facto is universally submitted to and recognised by all the three estates, I must believe that person to be lawful and rightful monarch of this kingdom, who alone has a just title to my allegiance, and to whom only I owe an oath of fealty" (Epist. Correspond. ii, 387). But although in modern times this principle might be conceded by many persons without hesitation, it was not so easy to act upon it in an age when the displacement of one sovereign by another was a rare occurrence. Hence the clashing of the two oaths was a real difficulty to the consciences of a large number of the clergy, as well as of large numbers of the laity. Difficulty it was well stated in a letter written by Dr. Fitzwilliam, canon of Windsor and rector of Cottenham, to lady Russell, and dated May 13, 1689: "What now I shall do in this present emergency I am irresolv'd; but if, having first debated it myself with my advisors and with my friends, it shall seem most expedient to make such a retreat, I will depend upon your honor's mediation for that favor. . . . It may be I have as sad thoughts for the divisions of the Church and as ardent desires for its peace as any: and let my tongue cleave to the roof of my mouth if I prefer not Jerusalem before my chief joy. But I cannot esteem it a good way to seek the attainment of this by any act which shall disturb my own peace. . . . In the mean time I treat you, very good madam, not to call bogging at an oath clashing against another, as far as I can discern, which I formerly took an unnecessary scruple. I believe, were you under such an engagement, your tenderness and circumspection would be rather greater than mine. The former oath of allegiance runs thus:"

"I will bear faith and true allegiance to his majesty king Charles, or king James, and his heirs and successors, as lawful and defend. I will bear faith and true allegiance to the king's highness (George), and his heirs, and defend. I will bear faith and true allegiance to the crown, and to my power shall assist and defend all jurisdictions, privileges, pre-eminences, and authorities granted or bestowed to the king's highness, his heirs and successors, or united and annexed to the imperial crown of this realm."

Now I am informed by the statute 1 Jac. c. 1, that lands, tenements, and hereditaments belonging to the imperial crown, and by 12 Car. II. c. 30, § 17, that the laws of the realm, and all other and more absolute and fundamental laws of this kingdom neither the peers of this realm, nor the commons, nor both together, in Parliament or out of Parliament, nor the people collectively nor representatively, nor any persons whatsoever, be held or ought to have any coercive power over the kings of this realm. The present oath runs thus:

"I will bear true allegiance to their majesties, king William and queen Mary."

Now let any impartial person resolve me whether one of these, king James having abdicated, be his heir or lawful successor, or could be made so had the people met either collectively or representatively, which they did neither" (Lady Russell's Letters [ed. 1792], p. 405).

No one can complain that men who had such scruples of conscience on this subject should be willing to give up their bishoprics and their parishes rather than do an act which they considered as willful perjury. Macaulay says: "I have been assured by members of the universities who incurred the penalties of the law were about four hundred in number. Foremost in rank stood the primate and six of his suffragans—Turner of Ely, Lloyd of Norwich, Frampton of Gloucester, Lake of Chichester, White of Colchester, and Ken of Bath and Wells. Thomas of Worcester would have made a seventh, but he died three weeks before the day of suspension. On his deathbed he adjoined his clergy to be true to the cause of hereditary right, and declared that those divine who tried to make out that the oaths might be taken without rupture of jurisdiction from the high doctrines of the Church of England seemed to him to reason more Jesuitically than the Jesuits themselves." It may be added that Hickes and Jeremy Collier and Dodwell also belonged to the number.

Nevertheless, the nonjuring bishops were still left responsible for the care of souls in their dioceses, and the nonjuring priests for the care of souls in their parishes. Yet there does not seem to be any instance on record of either bishop or priest endeavoring to carry out their responsibilities in any such complete manner as the pretended nonjurors who made a pretense on behalf of their scruples that they could not be excluded from their sees or parishes by order of Parliament, as that would appear to give to the state ecclesiastical authority which it did not possess. Sancroft issued a convention of the suffragans to consecrate Burnet to the bishopric of Salisbury, and under the commission the consecration took place on May 31, 1689. But after this act of Parliament had come fully into force, Sancroft made no further attempt to carry out his duties or to assert his spiritual jurisdiction, only remaining at Lambeth until he was turned out, which was little if anything more than an assertion of his temporal rights to his benefices; rights which possibly an act of Parliament could really extinguish. Many of the other bishops, and any number of the clergy, seem to have been surprised into yielding their spiritual charges, and so letting their sees and parishes practically lapse into the hands of those whom they considered unlawful intruders. They vacated their spiritual charges as James had vacated his throne, and yet claimed to be still the rightful occupants of the posts which they had vacated. Thus if there was a grave error on the part of Parliament in omitting to provide for others doing what Parliament itself could not do in omitting to release the nonjuring clergy from their spiritual responsibilities, there was also a grave error on the part of the latter course as if they had been so released. And while this latter course went far to free us from under their feet as regards the claim which the nonjurors asserted, styling themselves the only rightful
representative of the Church in the dioceses and parishes committed to them, so it went far to justify Tillotson and his party of the insurrectionists, assuming November 3 to be rightfully possessed of posts which had thus been suffered to lapse into their hands. Even so far the Nonjurors cannot be altogether exonerated from a share in the confusion—very nearly approaching, if not actually amounting to a schism—by the six constitutions which were drawn up or enforced in the dioceses of four hundred parishes, where they were thus provided each with two pastors. Macaulay adds: "Most of them passed their lives in running about from one Tory coffee-house to another, abusing the Dutch, hearing and spreading reports that were a month old, and an old story would certainly be heard, and questioning whether the bishops would or would not be consecrated Jeremiah Collier, Samuel Howes, and Nathaniel Spinkes—Scotland thus once more contributing an element of schism to England. Hickes died in 1716, and Collier becoming the leader of the now formally constituted Nonjurors in 1721. Henry Gandy was the one who had been consecrated by him and the other two schismatical bishops on Jan. 23, 1716. In the following year began the dispute among the Nonjurors respecting the 'usages.' Collier wrote a tract entitled Reasons for restoring some improvements and directions as are in the Communion Service of the first English Reformed Liturgy, etc. In this he advocated the reintroduction into the Communion Service of the mixed cup, of the invocation of the Holy Ghost, of the Prayer of Omission, and of prayers for the departed, these always having been used by Hickes, who celebrated them with the Communion Office of Edward VI, first book, and by Collier himself, while Brett and the Scottish bishop Campbell strongly supported the practice. A division thus sprang up in the now small body of Nonjurors, Spinkes and Gandy leading one party, which wished to retain the use of the last book of Common Prayer; Collier and Brett leading another section, which used the first book: the former party being called 'Nonusagers,' and the latter 'Usagers.' The two parties remained separate, each consecrating several bishops, from the year 1718 to 1748. This concordat was dissolved in 1741, and the usages of both sects continued to be 'Usagers' and others 'Nonusagers.' The sect lingered on during the whole of the 18th century, but with continually diminishing numbers, and with continually increasing divisions. Few priests seem to have been ordained among its members, but the consecration of bishops was kept up at last in a very irregular and reckless manner until nearly the close of the century. Among them were men of great learning, whose works have been of high value to the Church, especially Hickes and Dodwell as theologians, Collier and Carter as historical writers, Brett as a high authority in liturgical theology, Kettlewell, Nelson, and Law as devotional writers, whose influence deeply affected the religion of the Church for a century and a half. The Nonjurors appear to have always held their services in private houses, and many of their clergy practiced puritanism, and took an active part within the diocese of the last of their regular bishops, died in 1779; Cartwright, one of the last of the irregular section, practiced as a surgeon at Shrewsbury, and was reconciled to the Church at the abbey there in 1799. Booth, the last of the Portland sect, died in Ireland in 1794. Small congregations of Nonjurors are said to have existed some years later. Many of the last of the Nonjurors, however, attended their parish churches, only reserving to their consciences the privilege of using Prayer-books which had been printed before the Revolution.' A close intimacy was always kept up between the Nonjurors of England and the Episcopalians of Scotland, and they were mixed up with the Jacobite party to a dangerous extent, some of them even suffering for high treason in 1716 and 1745. Not a few of them went over to the Roman Catholics; and when an act was passed against recusants, the Nonjurors were included. The strong desire for catholic reunion which thus impelled them to seek it somewhere, although their political feelings would not permit them to seek it in the Church of England, also led to an attempt in 1716 to bring about "a concordat between the orthodox and catholic remnant of the British churches and the catholic and apostolic Oriental Church." The full particulars of this have been printed in Williams's Old Test. Church of the East, 1716, p. xxxxxxiv; but the correspondence on the subject fell through in 1725. The Episcopalian Nonjurors in Scotland ceased to be such after the death of prince Charles
NONNA 170  NON-RESIDENCE

in 1788, and in 1792 they were relieved from various
capital charges and restrictions. Presbyterian Nonjurs, too,
were and are in Scotland; but these Scottish Epis-
copalian, perhaps, are called Nonjurs improperly any
longer, for their ground of difference from the Estab-
lishment is more on account of ecclesiastical than polit-
ic grounds. See History of Church, p. 289.

REFORMED PRESBYTERIAN.
Nonna. This word is regarded by some as equiv-
alent to matrona, a matron, and sancta virgine, a holy
widow; but by others is considered to be the Greek νο-
vικ, νηγις, a virgin. These nonas were also denoted
sanctimoniales, virgines Det et Christianae, ancilia Deti, nobiles
es ecclesiae. Before the regular and systematic estab-
lishment of monastic institutions, we find the spirit of
asceticism and monastic in the Church: virgins were
set apart by solemn ceremonies, were required to devote
their lives to religious pursuits and were subject to
formal rules, which were entered in the Church-registers, were called canonical,
and often had their maintenance from the Church.
They are to be distinguished from the order of deacon-
escs (q. v.). As early as the 8th century this office
ceased. Afterwards many offices of charity which the
deaconesses had been accustomed to perform for the
sick and poor were discharged by the sisters of the
Church. See NUN; SISTERHOOD.
Nonnotte, Claude François, a noted French Jes-
suit, was born at Besançon in 1711, and died in 1793.
He wrote much, but is celebrated as the author of Les
Erreurs de Voltaire (Paris, 1763, 2 vols. 12mo).
It is a work of great merit, and elicited theHighest
rejoinders from the great French infidel philosopher.
Nonnus (Νοννος), a Greek poet, flourished at Pa-
nopoli, in Egypt, near the beginning of the 5th century
of the Christian era. We have no particulars respect-
ing his life, except that he became a Christian when
he was advanced in age. He was the author of two
works in Greek, which have come down to us, the Di-
omistes and the Dionysiaca, in verse of eight lines each.
The former work gives an account of the adventures
of Dionysus from the time of his birth to his return from
his expedition into India; and the early books also con-
tain, by way of introduction, the history of Europa and
Cadymus, the battle of the giants, and numerous other
mythological narratives. The latter, which contains
eight books, and is written in hexameter verse, has been
condemned by Daniel Heinsius, Joseph Scaliger, and other
critics, for its inflated style, and has been pro-
nounced to be unworthy of perusal; but it must be ad-
mitted that it contains passages of considerable beauty,
and supplies us with information on many mythological
subjects which we should not be able to obtain else-
where. It appears probable that this work was written
before Nonnus became a Christian. The best edition of
this Dionysiaca is that of Graff (Leips. 1819-26, 2 vols.
8vo). D. Heinsius wrote a dissertation on this au-
thor, which was published at Leyden in 1616, with
the text of the Dionysiaca. Six books of this poem, from
the eighth to the thirteenth inclusive, were published
by Moser, with a preface by Breuer (Heidelberg, 1689).
A French translation of the Dionysiaca was published
at Paris in 1625. The Paraphrase of St. John, which
is a poor performance, and has been very unfavorably
criticised by Heinsius in his Aristarchus Sacer (Ley-
den, 1627), was published for the first time at Venice in
1601. It is entitled Βιβλιον του αριστερού πατρείου
της εικονορασίας. This is the Latin edition of it by Passow
(Leips. 1843). This work, however, is of some value,
as it contains a few important readings, which have
been of considerable use to the editors of the Greek Tes-
aments. It omits the history of the woman taken in
adultery, which we have at the beginning of the eighth
chapter of John's gospel, and which is considered by
Griesbach and many other critics to be an interpolation.
In xix, 14 Nonnus appears to have read "about the
Apostles" (τους ἀποστόλους) (see Griesbach on
that passage). There is also a Collection of Histories
or Fables, which are cited by Gregory Nazianzen
in his work against Julian, and which are ascribed to
some critics to the author of the Dionysiaca. But
Bentley, in his Dissertation on Plutarch, has given
poor support to this view. The Collection was com-
piled by another individual of the same name. There
were several other writers of the name of Nonnus, of
whom an account is given in Fabricius, Bibl. Græca,
viii, 601, 602, ed. Harles. See Osrub, Nonna de Pa-
period, (1617, 4to). Hoefler, Nouv. Biog. Chil. xxxvii,
229; Fenny Cyclop. s. v.; Engl. Cyclop. s. v. (J. F. P.)
Non-Placet See Placeta.
Non-Possumus. See PossUMUS.
Non-Residence is a term used in Church law
to describe the act of not residing in the local precents
wherein the churchman who holds an office in any Church
office has his residence. See Residence. Council of
Aegy, yet more stringent with the inferior clergy, sentenced to suspension from
commission for three years a presbyter or deacon who should be absent for three weeks.
During the civil war, the church was in a deplorable state and its dignity was in danger of being
lost. The whole substance of the legislation of the Roman Church on the subject, however, is compressed in the decrees of the
Council of Trent, which are mainly contained in the decrees of the twenty-second and following sessions.
"Of the Power of the Bishops," for all the Church dignitaries, and others charged with the
cure of souls. Without entering into the details, it will suffice to say that for all the penalty of absence, with-
out just cause and due permission, consists in the for-
feiture of revenues, in a proportion partly varying with the
state of the absent clergyman, and partly according to the duration of the absence. For each class, moreover,
a certain time is fixed, beyond which, during twelve months, absence cannot be permitted. The duty
is imposed on persons named in the law of reporting to them the ecclesiastical superiors cases of prolonged absence.
The same legislation has been confirmed by most of the recent concordats, and is enforced by the civil law of
every country. In England, the penalties for non-resi-
dence are regulated by 1 and 2 Vict. cap. 106. Under
this act, an incumbent absenting himself without the
permission from the bishop for a period exceeding three, and not
exceeding six months, forfeits one third of the annual
income; if the absence exceed six, and does not exceed eight months, one half is forfeited; and if it be of the whole
state, three fourths of the income are forfeited.
The persons excluded from the obligation of residence
by the canon law are sick persons, persons engaged in
practising the theological sciences in approved places of
study, and canons in immediate attendance upon the
bishop ("canones a liertae") who ought not to exceed
two in number. By the act of 1 and 2 Vict. cap. 106,
the maintenance of the deans and canons of Oxford, Oxford, the wardens
of Durham University, and the head-masters of Eton,
Westminster, and Winchester schools are generally ex-
emptied, and temporary exemptions from residence are recognized in other cases, which would be tedious to detail. In the Roman Catholic Church, besides the general legislation, most of the provincial and diocesan statutes contain special provisions on the subject of non-residence. This legislation would seem superfluous for Christian men, for it must be granted that nothing can reflect more discredit on a clergyman of a parish than to receive the emoluments without ever visiting his parishioners, and being unconcerned for the welfare of their souls; yet this in England has been a reigning evil, and proves that there are too many who care little about the flock, so that they may but live at ease.

**Non-Resistance.** See Divine Right: Passive Obedience; Retaliation; Self-Defense; War.

**Non-Subscribers.** See Unitarians.

**Nonusers.** See NonJoruba.

**Noogony** (from voice, mind, and γόγγον, begetting) is a term used by Kant (Kritik der reinen Vernunft) in reviewing the Lockian and Leibnizian theory of sensations. He says, "Leibnitz has intellectualized sensations, Locke has sensualized notions, in that system which I might call a noogony, in place of admitting two different sources of our representations, which are obvious only in the common language.

**Noology** (from voice, mind, and λόγος, a word) is a term proposed to denote the science of intellectual facts, or the facts of intellect, in distinction from pathologic (psychological), which is to deal with the science of the "phénomènes affectifs," or feeling or sensibility (see PaUe, Sur la Sémantique, p. 30). The use of the term is noticed by Sir W. Hamilton as the title given to treatises on the doctrine of first principles, by Calo- via, in 1651; Meyer, in 1662; Wagner, in 1670; and Zeidler in 1680; and he has said, "The correlations, metaphysics and metaphysic, would afford the best philosophical designations; the former for an intuitive principle, or truth at first hand, the latter for a demonstrative proposition, or truth at second hand. Noology or noologica, diastology and diastologic, would be also technical terms of much convenience in various departments of philosophy." The French philosopher, M. Ampère, proposed to designate the sciences which treat of the human mind Les Sciences Noologiques: "If, instead of considering the objects of our knowledge, we consider its origin, it may be said that it is either derived from experience alone or from reason alone; hence empirical philosophers, and those which Kant calls Noologists: at the same time, the principles of Aristotelian and Plato-Aristotelian ancients, and Locke and Leibnitz among the moderns" (Henderson, Philosophy of Kant, pp. 172). See Noogony.

**Noon,** a rendering in Gen. xxxii, 16, and elsewhere, of הָעָרָב, bethelight, i.e. either the dividing point between the growing and maturing lights of morning and evening (Præter, s. v.), or the moment when light is double and is bright (Genesis). By a natural metaphor, the word is sometimes employed to designate prosperity and happiness (Amos viii, 9; Zeph. ii, 4). See DAY.

**Noon-day Service,** the service in the early Church at mid-day, and in which, Basil says, the ninety-first Psalm was read.

**Nootkans, or Ahts,** a family of tribes on Vancouver's Island and the mainland near it, embracing the Aht proper (of whom the Moowachi are the tribe called Nootkan by Captain Cook, and others since), on the western side of this island, numbering 3500; the Quaw, then sixteen or seventeen tribes, on the western and eastern sides of the island, and on the mainland, also estimated at 3500; and the Cowichans, on the eastern side of the island, numbering 7000. The Ahts are nearly the only tribe of the same name on the coast of America between the Queen Charlotte Islands and San Salvador, 300 miles to the west, and 1500 to the east of the island; being longer than any tribe of the same name in other parts of the world. The Ahts own a rich and important mythology, especially that relating to the sea, in which the sun and moon are personified, worship the sun and moon, and believe in a mighty supernatural bird, Tootchoo. They are divided into clans, and a man cannot marry in his own, or in that of his own clan to a beast; children belong to the mother's clan. They build houses very large, stretching a hundred feet, having a row of posts in the middle and at each side, with string-pieces on them. These are permanent; but the cedar slabs and mats covering the sides and roof are carried as they move from one fishing ground to another. The canoes of the large tribe are long dug-outriggers; and they are expert fishers, taking salmon, herring, halibut, and whales; they also hunt, and gather for food shell-fish, sea-weed, and camash roots. They make blankets of cypress bark, rain capes of white-pine bark, curiously hats of cedar and pine bark, and woven mats, bags, and boxes, nets, and boxes, for holding the posts of their houses, and wooden masks used in war and in their dances. They hang up their dead chiefs and children in boxes, or coffins, in trees, or sometimes lay them on the ground and heap sticks over them. Burial is more rare. The Ahts are cruel and treacherous, and have frequently destroyed vessels, besides constantly killing traders, thus provoking repeated chastisements from the whites. The Cowichans, although allied to the Ahts, are semi-civilized, readily adopting the ways of the whites; and both men and women prove useful to the settlers and farmers, and have made some progress in agriculture. Among these tribes Protestant and Catholic missionaries have found encouragement. The most extended Aht vocabulary is in Spoor's Science and Studies of Savage Life (London, 1865).

**Noph** (Heb. אַבָּה, a'váh; Sept. Μίπραις; Vulg. Memphis, Isa. xix, 13; Jer. ii, 16; Ezek. xxx, 13, 16; doubtless identical with בִּבְל, Moph; Sept. Μυδῆς; Vulg. Memphi, Hos. ix, 6), a city of Egypt, better known by its classic name Memphis. These forms are contracted from the ancient Egyptian common name, Μαναφρ, or Μαναφρα, "the good abode," or perhaps "the abode of the good one," also contracted in the Coptic forms memph, memph, mende, mende (Memphitic), memphi (Sahidic); in the Greek Μίπρας, and in the Arabic مفيدة. The Hebrew forms are to be regarded as representing colloquial forms of the name, current with the Semites, if not with the Egyptians also. As to the meaning of Memphis, Plutarch observes that it was interpreted to signify either the haven of good ones or the sepulchre of Osiris (hence also, "place of Osiris"). In Egyptian "Mnnw-ri, or Mnnw-ri, a city-Rabou Osiriaou, De Iside et Osiride, 20). It is probable that the epithet "good" refers to Osiris, whose sacred animal Apis was here worshipped, and here had its burial-place, the Serapeum, whence the name of the village Bursir (Po-Hears or the "abode of Osiris"), now represented in name, if not in exact site, by Abâ-Sir, probably originally a quarter of Memphis. As the great upper Egyptian city is characterized in Nahum as "situated among the rivers" (iii, 8), so in Hosea the lower Egyptian one is distinguished by its Necropolis, in this passage as to the fugitive Israelites: "Mizraim shall gather them up, Noph shall bury them;" for its burial-ground, stretching for twenty miles along the edge of the Libyan desert, greatly exceeds that of any other Egyptian town. See Brugsch, Geogr. Inscr. i, 234 sq. See MEMPHIS.

**Noophah** (Heb. נופפאח, nophpâh; the Samar. has the article, הָעוֹפָּה; Sept. αἱ γενανέες, v. p. αἱ γενάες; Vulg. Nophpe), a place mentioned only in Num. xxxi, 30, in the remarkable song apparently composed by the Amorites after their conquest of Hebron from Moabites, and therefore of an earlier date than the Israelitish invasion. It is named with Dibon and Medeba, and was possibly in the neighborhood of Hebron. A name very similar to Noophah is Nohn, which is twice mentioned; once as bestowed by the conqueror of Israel on the Amorites, the inhabitants of a place named as Noph, situated more than seventy miles distant from the scene of the Amorithic conflict), and again in connection with Jog-
NORBEG

behaviour, which later, from the mode of its occurrences in the year 1817, he had learned to have been in the neighborhood of Heshbon. Ewald (Gesch. ii, 298, note) decides (though without giving his grounds) that Nophah is identical with the latter of these. In that case the difference would be a dialectical one, Nophah being the Moabitish or Amoritish form. See Nobah.

Norberg, Matthias, a Swedish Orientalist of note, was born in 1747; flourished at the high school in Lund as professor of the oriental languages; and died in 1826. He is the author of several valuable contributions to Oriental philology. His most noted work is a treatise On the Religion and Language of the Sabræans (1780).

Norbert, St., a noted German prelate of the Middle Ages, was born at Xanten in 1080. He was of good descent, but early displayed a marked religious fervor. His parents, being wealthy, finally settled down and determining on a Christian life, he joined the secular canons of the collegiate church at Xanten. He was then for some years chaplain of the emperor Henry V. Suddenly he left the court, and began doing strict penance for his former excesses. After some time he joined the Benedictines; and, as he was by then the archbishop of Cologne, he set out travelling, to preach mortification and repentance. For this he was accused of fanaticism before the Council of Fritzlar in 1118. As he was gaining but few proscenit, he went to join pope Gelasius in Languedoc, by whom he was received, and authorized to continue his preaching. He afterwards travelled through Hainault and Brabant, declining the bishopric of Cambrai, which was offered to him. In 1120 Bartholomew, bishop of Laon, called him to that city to reform the canons regular, whose discipline, he said, had become much relaxed. Failing in this task, Norbert became disgusted with the world, and retired into a wilderness. Here he was joined by some disciples, and thus was laid the foundation of the Order of the Premonstrants (q.v.). Immediately upon the organization of the order it made converts; and after an existence of only four years Norbert had under his orders nine convents, following strictly his rule. He thus acquired great reputation both in the Church and in the State, and was sent on a mission to the emperor at Spire, by the count of Champagne, in 1126. The archbishopric of Magdeburg being at the time vacant, the emperor proposed Norbert, and he was accepted. It is said to have long resisted; but at last he accepted the appointment, still retaining, however, the title of abbott of Premontré and the government of the abbey until 1128. He took part in the Council of Rheims in 1131, and had several conferences with St. Bernard, in which he asserted his opinion that the coming of the Antichrist was near at hand. The latter years of his life were employed in the service of the party which during the schism maintained the claims of Innocent II; and he accompanied the emperor to Rome when he went to establish that pope in the Vatican. Norbert died on his return from that journey, June 6, 1134. He was canonized by pope Gregory XIII in 1582. We find a sermon of Norbert, besides some less important fragments, in the Bibl. Patr. (ed. Lyon) xxi, 116. Le Paige, in his Bibl. Premonstratensia, states that Norbert wrote many other works not extant at present. See Hugo, Vie de St. Norbert (Luxemb. 1704); Gallia Christiana, i, 625, 643; Bibl. Prémonstr., p. 304; Bollandists (June), i, 809; St. Bernard, Epist. 273; Hist. littér. de la France, xi, 243; Migne, Nouv. Encycl. Théologique, ii, 111; Hase, Ca. Hist. p. 229 sq.; Neander, Ca. Hist., i, 206, 244; Milman, Hist. Lat. Christianity, iv, 208; v, 142; Hardwick, Ch. Hist., M. A., p. 237.

Norden, Frederick Louis, a noted Danish traveler, was born at Glücksstadt, in Schleswig-Holstein, in 1768. He was educated for the army, and for a time figured in its service. He excelled in mathematics, and particularly in drawing, and was employed by the Danish king in travelling, and in examining the construction of ships. He visited, as a philosopher and a man of science, the first countries in Europe; and having passed into and explored Egypt, he published, on his return to Denmark, an account of his travels in Egypt and Nubia, which is interesting, correct, and accurate. It is written in French, and entitled Voyage d'Egypte et de Nubie (Copenh. 1752, 1755, 2 vols. fol.). The first volume consists entirely of plates, being a succession of the monuments of the 33rd, the 34th, and 35th dynasties, down to Derr, and a succession of views of the scenery along the banks of the river, forming a kind of panorama of the Nile; besides plans and sections of the pyramids, temples, and other remarkable buildings. The second volume contains the text, which is written in a plain, unpretending style. The editors have added a biographical notice of the author. Norden was the first traveller who explored Egypt as an artist, and his drawings gave the first tolerably correct idea of the stupendous monuments of that country. His work was translated into English, and published, enlarged by Dr. Peter Templeman, in London (1757), in 2 vols. fol. Langlès published a new and corrected edition of the original French (in 3 vols. 4to) at Paris in 1768–96.

Nordheimer, Isaac, Ph.D., one of the most noted Hebrewists of modern times, and a philosopher of no mean note, was born at Prozent, in Silesia, the parents, in 1744, the Rev. Jacob Nordheim of Apoldorf, a village not far from Erlangen, Germany. He received the rudiments of his education at a Jewish school of his native place, and having acquired that proficiency in Jewish learning which fitted him to become a rabbinist, he went, in 1782, to Heidelberg, where he studied at the Gymnasium of Wurzburg, to acquire a knowledge of classical literature, theology, and philosophy, in accordance with the demands made in the present day of a Jewish public teacher. After remaining two years in the gymnasium, he was transferred (1780) to the University of Wurzburg, where he left in 1782, and went to complete his studies at the high school in Munich, where he took his degree as doctor of philosophy in the autumn of 1784, and afterwards sustained, pro forma, the public examination required of Jewish theologians, Assured by two American pupils, who took private lessons of him in 1882, that he could find a pleasant home in the United States of America, and more rapidly secure positions of trust and influence, Nordheimer left his home in 1885 for America, and arrived in New York in the summer of the same year. He soon received from the mayor of that city the degree of doctor of divinity as professor of Arabic and other Oriental languages, and acting professor of Hebrew. He also soon after received the appointment of instructor in the Union Theological Seminary, New York City, though he remained steadfast to the faith of his forefathers. High repute was early obtained by him, especially his work in the Hebrew tongue, made him a desirable instructor and associate. He was the teacher of many divines now eminent in this country, and enjoyed the companionship of Dr. Alexander, Robinson,素材, and other noted Biblical scholars. He died Nov. 8, 1842. On his way to this country, on shipboard, Nordheimer had begun the construction of a Hebrew grammar on a philosophical basis. In 1888 he brought out the first volume of it, and in 1841 the second volume (2d ed. with additions and improvements, N. Y. 1842, 2 vols. 8vo). In a review of this work in our number of Dec. 25, 1875, we write: "a new work requires no painful effort of memory to keep its parts in order; the perusal in it of the most thoroy part of Hebrew grammar opens a vista superior in clearness, extent, and beauty to that exhibited by any other writer. Nothing but the fear of being thought to deal in sweeping panegyric prevents our speaking in the highest terms" (Princeton Rev. [1838] X, 197 sq.). Horne (in his Bibl. Bib. [1889] p. 197 sq.) does not hesitate to pronounce it "the most elaborate and philosophical Hebrew grammar in the English language." The truth is, Nordheimer had made his own a chapter of the active laws of language generally, and thus he was able to master the intricate Hebrew, and to simplify its study. He re-
duced the Hebrew declensions from Stuart's thirteen and Gesenius's nine to four; entered into the working and make-up of the verb, and analyzed and accounted it one of the grounds that the regular verb could not, without violation of all proper laws of speech, repudi- cate their consonants sufficiently, especially when gu- tural, to give the intensive sense required, and that there- fore new ones, called irregular, but normally constituted, had to appear in the Latin. To this observation belong all parts of the verb, and in all parts of the Hebrew speech, lifted the obscurity from the language of the ancient writings, and made its study an intellectual pleas- ure and profit. Besides this great work, he published A Grammatical Analysis of Select Portions of the Hebrew and Greek Originals of the Holy Scriptures, being an Introduction to the Book of Ecclesiastes, in the Biblical Repository (July, 1838). Of this work Prof. Rood, who was for ten years president of the theological seminary at Gilmanton, N. H., writes: 'I think Nord- heimer's masterly power, that in which he excelled other writers—such as the Kimchi, Ewald, Gesenius, and Prof. Stuart—consisted in the magnificence and absolute perfection of his analyses. I think that this talent was so much a part of his nature that he may have been quite unconscious of it. When his mind was upon a subject in a direct way, that is, the exercise of this faculty, it seemed like an eagle soaring over the heights, and yet perceiving all below into three elements, and throw aside all but the indispensable.' He also contributed several valuable arti- cles to the Biblical Repository. Dr. Nordheimer also left some works in M. S.: A Plural and Singular Grammar, in German;—A rabic Grammar, in German;— A larger A rabic Grammar, in English;— A Transla- tion and Exposition of the Book of Ecclesiastes, in Ger- man;—Hebrew Concordance, incomplete;—Philological Memoirs, etc. It is to be greatly regretted that Nord- heimer did not live to complete his Concordance; the lit- tle of it extant proves the master-minded that conceived it, and gives promise of a great and valuable work. Like his grammar, it would have brought honor to American scholarship. We are glad to say that he prided himself in his new country, and honored his scholarly associ- ates. His criticisms on Roy's Hebrew Lexicon in the Biblical Repository (April, 1838), art. vi, in which he takes occasion to condemn that book because it may prove "a reproach to the literary character of the country in which it was produced" (p. 400), evince that he did not count the contributions to our linguistic historiography. See Dr. Robinson, in the Bibliotheca Sacra (1849), p. 389—390; Mill, Reminiscences of Dr. Isaac Nordheimer, in the New-Englander (July, 1874), art. iv. See also Allibone, Dict. Brit. and Amer. Auth. a. v.

Nordin, Karl Gustaf, a modern Swedish prelate, was born at Stockholm in 1749, and was educated at Up- sala. After taking holy orders he rapidly rose to places of distinction, and was finally made bishop of Hernosand. He died in 1812.

Nordlingen, Heinrich of, a celebrated mystic of the Middle Ages, flourished towards the close of the 14th centuiy. He was a Dominican; but when brought in contact with Tauler at Strasbourg he became a most faithful adherent of that mystic teacher. When Tauler was attacked, because he would not quit the Alsatian capital while the ravages of the black death continued, Nordlingen defended him, and took occasion to express his joy over the great work which the Lord wrought through him in the hearts of the people. He was a man of muchVir, and remarked that he would prefer to die by the black vomit rather than to do anything against the Lord (comp. Heusmann opuscula [Norbim. 1747], p. 383).

Nordlingen thereafter experienced persecution from the power of the emperor. He writes, 'I have been before the prince of Transylvania, and he treated me so that I have no longer any safe residence in this country' (ibid., p. 381).

Normand, Leon, a Jewish-French scholar of some prominence, was born at Hegenheim, Alsace, about 1835. In consequence of the revolution in 1848, his parents emigrated to Germany and settled in Bav- aria, where Leon visited the high school. He continued his studies at the lyceum in Strasbourg, where he also cultivated his Talmudic studies under the direction of rabbi Moses Uttenheim. He then visited the rabbinical school of Metz, where he graduated with the honors of a rabbi; subsequently he attended several courses of a Grammar (1858).— The Polish student, in the Ph. D. for a special attachment for the late Prof. Munk, and became one of his best-beloved pupils. He received several calls as minister, which he declined, because he did not wish to leave the intellectual centre at Paris. At the foundation of the "Alliance Israélite Universelle," he was elected its secretary, an occupation congenial to his nature. Later he resigned that position, and officiated in several schools as a religious teacher. In 1870 he published his book, Textes classiques, which deals with several important Hebrew passages of Scripture. He died at Paris in July, 1872. His untimely death was caused by the accident due to the Franco-Pussian war. His family he had sent out of the country during that time of trial. He was kind, genial, and affectionate, ever active in the relief of distress and in giving assistance to the poor, and in sympathy with all movements undertaken in the cause of humanity and progress. See Jewish Times (N. Y. Aug. 9, 1872). (J. H. W.)

Norens, Giacomo, a noted Italian metaphysician, was born at Nicosia, in the island of Cyprus, and flour- ished as professor of moral philosophy at the University of Padua, where he had been educated. He died in 1598. He was the author of several critical and philo- sophical works.

Norham, Council at, was convened by Roger, archbishop of York and papal legate, in 1154, to deter- mine the relation of the Scottish ecclesiastics to the English archiepiscopacal see over which Roger presided. It will be remembered that when pope Gregory divided the whole British island into two ecclesiastical prov- inces, he confided to the archbishop of York all the dioceses north of the Trent and the Humber, and that there were no episcopal sees in the country now called Scot- land, if we except Galloway and Glasgow, and both of these were uniformly admitted to belong to the province of York. To these part of the fabric of the English Church. By the middle of the 12th century, how- ever, the Scottish Church had so largely developed that its ecclesiastics sought independence from the English metropolitan; and the Council of Norham was con- vened to determine, if possible, the question of York's supremacy over the Scotch dioceses. The council fail- ing to agree, the case was carried to Rome and settled by a formal bull, which declared the Church of Scotland exempt from all jurisdiction but that of the apostolic see itself. The bishopric of Glasgow, the most impor- tant of all Scotland, was also filled by the pope about this time. See Russell, Hist. of the Ch. in Scotland, i. 107 sq. See also Scotland.

Noris, Enrico, a distinguished Italian prelate, noted as a theologian and archaeologist, was born of English parentage at Verona Aug. 29, 1631. He studied philo- sophy and theology with the Jesuits at Rimini. The influence of St. Augustine so influenced his mind that he was led to join the Augustines at Rimini. His zeal and learning soon attracted the attention of his superiors, and he was called by the general to Rome, where every facility was afforded him to continue his studies. He became professor successively at Pavia, Perugia, and Rome, and was frequently attacked by the Jes- uits as inclining to Jansenism, but the grand-duke of
NORTIOLI 174 NORMAN ARCHITECTURE

Tuscany chose him for his theologian, and appointed him professor of theology in the University of Pisa. The queen of Sweden appointed him also member of the academy she had just founded at Rome. Innocent XII made him librarian of the Vatican, and created him cardinal in 1695. This high position did not shelter him from the accusations of the Jesuits, which continued even after his death, Feb. 28, 1704; but they never succeeded in making him lose the confidence and friendship of the pope. Noris wrote Historia Pologiana, et dissertatio de synodo v acumenica, etc. (Padua, 1673, fol.; Leips. 1677, fol.; new ed., with the addition of five historical dissertations, Louvain, 1702, fol.). Macedo and Hardouin attacked with great violence this work, which, by defending the doctrine of Augustinian concordance, grace, could be considered as favorable to Jansenism. Noris answered; but, although his answer was approved by the court of Rome, his work was placed in the Index in 1747 by the Spanish Inquisition, and kept in it for ten years, in spite of the representations of pope Benedict XIV.—Dissertatio duplis de dubius nonius Dioecletiani et Licini, cum auctoriologico de vo- tes, etc. (Padua, 1673, 4to.):—Conotopha Poliesana Coti et Lucii Caesaris dissertatissimae illustrata (Venice, 1681, fol.; and in Burmann, Theaurus antiqu. Ital. vol. viii.):—Epistolae consilia, in qua collega Lega consiliol, etc. (Bologna, 1688, 4to.):—Annae et Episcopi Cyro-macedo- num, etc. (Florence, 1689, 4to.; 2d ed. 1692, fol.; augmented by the two following, which were first published in 1691)—De Piusculi Latinarum cyclo annorum locatibus, commentis, etc. (Rome, 1698, 4to.), etc. The complete works of Noris were published by Maillet, Peter, and Jerome Ballerini (Verona, 1729-41, 5 vols. 8vo). The fourth volume contains a history of the Dominicans, which Noris had left unpublished. See Bianchini, Vite degli Araceli, vol. i.; Ballerini, Vite de Noris, in the above-mentioned complete edition, vol. iv.; Nicera- ton, Mem. vol. iii.; Chaufepie, Diet.; Fabronii, Vite Ital- iarum, vol. vi.

Noritoli, a name applied by Tertullian to cathe- chumenae (q. v.), because they were just entering upon that state which made them candidates for eternal life.

Noris, Francesco, a noted Orientalist, was a convert from Judaism, his name formerly being Zelig Korn. He was born at Kollin, in Prussia, in the year 1804. He studied philosophy, especially the ancient languages, wrote for different periodicals, while residing at Leipsic, Halle, and other places, and died in 1850. Noris was a voluminous writer, and some of his works will always be consulted with profit by theological and philosophical students. The most important of his writings are, Bruninum et Rabbinum, etc. Indien das Stamm land der Hebräer und ihrer Fabels (Meissen, 1836):—Mythen der alten Perser, als Quellen christl. Glauben- lehren (Leips. 1835):—Die Weihnacht- u. Ostefest er- klärt aus dem Sonnenkult der Orientalen (ibid, 1838):—Rabinische Quellen und Parallelen zu neuteutschieren Schriftstellen, mit Benutzung der Schriften von Licht- fool, Fettein, Menasch, Schöttgen, Dana u. a. (ibid. 1839):—Vergleichende Mythologie zum näheren Ver- ständniss der Bibelstellen (ibid. 1836):—Der Propheton Ichitas, ein Sonnenmythus (ibid. 1837):—Das Leben Moses aus dem astronomischen Standpunkte betrachtet (ibid. 1838):—Hebräisch-chaldäisch-rabinisches Wörterbuch (L. Grimm, 1842):—Ethischlogischem-symbolisch-mytholo- gisches Rechel-Wörterbuch für Bibelforscher, Archäologen, etc. (Stuttgart, 1848, 4 vols.):—Des Mytopog, oder Des- tung der Geheimnisse, Symbolen und Feste der christl. Kirche (Leips. 1858):—Die Götter Syriens (Stuttgart, 1842). See Fürst, Bibl. Judæa, ii, 204 sq.; Stein- scheider, Bibliographisches Handbuch, p. 150, No. 1453 sq. (B. P.)

Normal Year. See Year.

Norman Architecture is that species of architectural style which is counted a part of the Romanesque (q. v.), and which, as its name implies, originated among and was chiefly used by the Normans (q. v.). Soon after their conquest of the north of France they began to erect very large churches and cathedrals in memory of their victories. Their conquests supplied them with the means for erecting such large edifices, which they desired as monuments worthy of their great conquests. They accordingly expanded the dimensions of many of the small churches then common in France, while to a great extent retaining the style of the buildings. They seem also to have borrowed some of their ideas from the Rhine. See Gothic Architecture.

The leading characteristics of the Norman, or, as it is sometimes called, Anglo-Norman architectural style, are size and massiveness, combined with simplicity. The Normans evidently adopted the old Latin plan (derived from the Basilica) of central and side aisles, and at the east end they invariably placed a semicircular apse. They seized on the tower as a distinguishing feature, and developed it as their style progressed. In the early period they used but few moldings, and these were principally confined to small features, such as the string, impost, abacus, and base, the archways being either perfectly plain or formed with a succession of square angles, and the capitals of the pillars, etc., were for the most part entirely devoid of ornament. Sculpture was very sparingly used before the 12th century, and was frequently added to the earlier buildings at some later period. As the style advanced, greater lightness and enrichment were introduced, and some of the later specimens exhibit a profusion of ornaments. The moldings were but little varied, and consisted principally of round and hollows, with small fillets, and sometimes splay intermixed. A very common mode of decorating buildings in this style was with rows of small shallow niches or panels, which were often formed of intersecting arches, and some of them were frequently pierced to the interior. The doorways were often very deeply recessed, and had several small shafts in the jambs, which, when first introduced, were cut on the same stones with the other parts of the work and built up in courses, but at the latter end of the style they were frequently set separately, like the Early English, and occasionally were also banded; in many doorways, particularly small ones, the opening reached no higher than the level of the springing of the arch, and was terminated flat, the tympanum or space above it being usually filled with sculpture or other ornament. The windows were not usually of large size, and in general appearance resembled small doors; they had no Mullions, but sometimes
NORMAN ARCHITECTURE

Late Norman Doorway, Middleton Stoney, Oxford, c.1120.

they were arranged in pairs (not unfrequently under a larger arch), with a single shaft between them; towards the end of the style they were occasionally grouped together in threes, like the Early English. The pillars at first were very massive, but subsequently became much lighter; they were sometimes channelled, or moulded in zigzag or spiral lines, as at Durham Cathedral; in plan they differed considerably, though not so much as in some of the later styles; the commonest forms were plain circles, or polygons, sometimes with small shafts attached, and a cluster of four large semicircles with smaller shafts in rectangular recesses between them. The buttresses were most commonly broad, and of small projection, either unifying with the face of the parapet, or terminating just below the cornice; sometimes they had small shafts worked on the angles, and occasionally half-shafts were used instead of buttresses. Spires and pinnacles were not used in this style, but there are some turrets, of rather late date, which have conical tops, as at the west end of Rochester Cathedral, and in Normandy several small church towers have steep pyramidal stone roofs. It was not till towards the end of the Norman style that groining on a large scale was prac-

ticed; at an early period the aisles of churches were vaulted with plain groining without bosses or diagonal ribs, but the main parts had flat ceilings, or were covered with cylindrical vaults, as at the chapel in the White Tower of London. The Norman arch was round, either semicircular or horse-shoe, and sometimes the impost moulding or capital was considerably below the level of the springing, and the mouldings of the arch were prolonged vertically down to it; this arrangement was common in the arches round the semicircular apses of churches, as at St. Bartholomew's, in West Smithfield, London; it was not till the latter part of the 12th century when the Norman style was in a state of transition into Early English, that the pointed arch was commonly introduced, but some buildings erected at this period retained the Norman characteristics in considerable purity. The best example in the British realm of an early ecclesiastical structure in this style is the chapel in the White Tower of London; later specimens are to be found in very many English cathedrals and parish churches; the churches of Ilkley, Oxford, and Barfreston, Kent, are striking examples of late date; the latter of these shows considerable signs of the near approach of the Early English style.

The Norman style of architecture prevailed from about the beginning of the 10th century till the death of William the Conqueror, near the end of the 11th century. In Normandy there are many examples, the churches at Caen being well-known buildings of the date of the Norman style of architecture. This style was brought into England by the Normans at the Conquest, 1066. They there extended the scale of the buildings, as they had done in Normandy, preserving, however, many local peculiarities of the Saxon style which they found in the country. The chapel in the White Tower of the Tower of London is, as we have said, the earliest example of pure Norman work in England. There are, however, it may be added, many buildings, both in England and Scotland, which date from before the end of the 12th century, when the pointed style began to be used. Durham, Lindisfarne, Canterbury, Dunfermline, are partially Norman, besides many other churches and castles. There are some buildings of this style dating back even to the time of Edward the Confessor, or earlier still, but the style is so very rude that it can hardly claim the name of Norman. The Anglo-Norman is heavier than the French style, the French having the finer and more refined tastes that those of French works. To relieve this heaviness, the chevron, spiral, and other grooving were cut in the piers. The mouldings and forms of doors, windows, etc., are the same as those of Normandy. There is one remarkable difference in the plans of the Early Norman churches in the two countries: in France the apse at the east end is always semicircular; in England this form was gradually given up; and towards the end of the style the square east end was universally adopted. See Milman, Hist. of Latin Christianity, viii, 436, 437; Parker, Glossary of Architecture, s. v.; Milner, Eccles. Arch. of England during the Middle Ages (Lond. 1811, 8vo), ch. iii.

NORMANS

Norman, Geor. See Sweden.

Normans (i. e. Northmen, or Norse-men), a name generally limited in its application to those sea-rovers who established themselves in that part of France called after them Normandy, is sometimes applied also to the early inhabitants of Norway, and is often extended to embrace in its meaning; as it did in the Middle Ages, those numerous Saxon tribes who inhabited the peninsula of Jutland, and in the 9th and 10th centuries invaded Russia, Iceland, Norway, Sweden, Denmark, France, Germany, Netherlands, and even landed in England, and possibly, too, were the first Europeans who set foot on the American shore. The Germans and French called the piratical hordes who ravaged their shores Normans or Northmen; the Saxons, usually
NORMANS 176

Danes or Eastmen. They were also distinguished by the
latter as Mark-men (from Dan-mark), as Ask-
men (i.e. men of the asken-ships), and as the Heathen.
The primary cause of the plundering expeditions south-
ward and westward across the seas, undertaken by the
Norse Vikings (vikingar meaning either "warriors," or
more probably dwellers on the seas, i.e. bays or berths), as
well as the lands under the old name of "sea-kings," was doubtless the over-population
and consequent scarcity of food in their native homes;
besides, the reliance for a life of warlike adventure, con-
joined with the hope of rich booty, strongly attracted
their attention to this part of the world as the old
Norseman's religion lasted (i.e. till about the end of the 10th
century)—death in battle was not a thing to be dreaded,
for the slain hero passed into a region of eternal triumph
in the Walhalla of Odin. Finally, discontent with the
ever-increasing power of the greater chiefs, or kings,
induced many of the nobles with their followers to seek
new homes.

The invasions of these heathen warriors into France
were most numerous from the death of Charlemagne
at the beginning of the 10th century. The invaders remained
mostly heathen, but those who had already some
knowledge in connection with his followers who consented
to be baptized, and to acknowledge the king of France for his sovereign, on which condi-
tion they received a portion of land. The most im-
portant of these invasions was that of 912, under the
guidance of the Norwegian chief Hrolf, better known as
Roland, son of Rollo, and grandson of Norderoyd, and
belonging to the sixth generation of William the Conqueror.
King Charles III, it is said, offered Rollo a considerable ter-
ritory on the north of France, and his daughter Gisela
for wife, on the condition of his advancing no farther
into the country, and defending the kingdom against
further invasions from his countrymen. Rollo accepted,
the treaty was concluded at St. Clair, or the Epte
(A.D. 912), and the Normans took possession of the northern portion of France, from the Andelle to the sea,
which was from them called Normandy. Rollo was soon
after baptized by archbishop Francho of Rouen, together
with his followers. A certain archbishop Arvauus, of
Rheims, is said to have been very active in the conver-
sion of these Normans. Still the mass of the people
remained heathen; the occasional conversions were mostly
the result of temporal considerations, and the converts
not seldom returned to their idolatry. The continuance
of idolatry was the fruit of Rollo that after his baptism he continued to worship his former deities along with the true God. Under
the reign of his son the Normans had already become fully
identified with the French, having even adopted the language of the latter. This continued to attach them more to the religion of the French; and it is said that their count, William, went so far in his
enthusiasm for Christianity as to contemplate retire-
ment into a convent. Fresh arrivals of heathen Nor-
mans would occasionally, however, stop for a moment
all progress. At the same time with Rollo's invasion,
another army of the Normans had landed upon the
western coasts of France, and established itself strongly
near the mouth of the Loire. A part of them settled,
in 921, in Brittany and round Nantes. See FRANCE.

The invasions of the Normans into England were still
more numerous and important; they sought at an early
time to secure a permanent footing in that country.
The first invasion we find recorded took place in 787;
after 795 they became quite common. Numerous battles
which took place between the Anglo-Saxons and the
Normans in 882 and 883 show that the latter had al-
ready advanced far inland, and were trying to establish
themselves permanently. Here, as in France, we find
their leaders gradually embracing the Christian faith
in exchange for land secured to them. One of their prin-
cipal invasions was that led by the renowned Ragnar
Lodbrok. After a long struggle they succeeded in
securing the whole western portion of England, and
from thence they gradually spread into other parts of
the country. Finally, the Anglo-Saxon king, Alfred,
succeeded in making a treaty by which the Normans
received about half the country, on the condition of
their king, Guðrun, submitting to baptism, and recogniz-
ings the king Alfred as his suzerain. The English chron-
icles consider Alfred as having converted the Danes;
yet Northemar remained still heathen, and in their time
the Normans led the heathen in the name of Christian.
From a treaty concluded by Edward, Al-
fred's successor, with the subsequent Danish king, Guð-
run, it appears however that Christianity was already
the state religion of the Danish population in England
and in the treaty part of the Danish people who accepted
the form of Christianity imposed on such as fell back into idolatry, laws for the
security of Church property, etc., prove that it was
legally recognised. We also find Normans holding
high offices in the Church. Fresh invasions of the
 Normans and intrusions into the territory of the Anglo-
Saxons continued during the 10th century. Their
frontiers were gradually extended, and finally, in 1016,
the Dane Canute was recognised king of England.

On the throne, he sought to heal the disensions
existing between the two parties by his mild and mod-
erate government, but he was not free from religious
pressures concerning ecclesiastical subjects. The Christian
religion was alone recognised, but needed the support
of the government in order successfully to resist the influ-
ence of the heathen Norman emigrants; thus, in 1019,
archbishop Ælfræth of Canterbury, having been made
archbishop of York, was formally constituted the bishop of
Dublin; and seculars who were incensed at the zeal he had displayed for their
conversion. The Norman dynasty founded by
Canute was of short duration; the brother of the last
Anglo-Saxon king, Edward the Confessor, ascended
the throne of England thirty years after Canute, but
he never fully succeeded in conciliating the Normans; and
under his successor, Harold II, the French Normans in-
vaed the kingdom, under the guidance of William the
Conqueror, in 1066. Thus England fell again under
Norman rule; yet the conquerors adopted the customs,
laws, and language of the conquered, and the Norman
element exercised no marked influence on religious or
ecclesiastical matters. See ENGLAND.

In Ireland the Norman invasions commenced about
the end of the 8th century, and after many efforts they
 succeeded in 922 in founding there a kingdom, of which
Dublin, the capital city, was the chief. They were
whites, and established a dynasty of Norman princes. They also founded less important settlements which they had much trouble in defending against the native inhabi-
tants. We possess but little information con-
cerning the particulars of their conversion, but most of the Irish had been converted to Christianity,
and were now named Christians in the middle of the 11th century.

Iceland was discovered by the Northmen in 860, and
settled in 874. In 876 or 877 Greenland was discovered,
and a colony was planted there by Eric the Red in 983–
988.

It is from the latter country that, according to Ice-
lantic sagas, the Northmen went out and discovered
America in 986, touching at Newfoundland; and that in
1031 thirty-five men went out again to further pursue
the discovery, under the leadership of Leif, son of Eric
the Red, and besides visiting Newfoundland, they
touched at what is now supposed to be Nova Scotia and
the coast of New England. At the last-named land
they wintered, and returned to Greenland, their vessels
freighted with timber. In the following year Leif's
brother Thorvald visited, it is supposed, Mount Hope
Bay, R. I. In 1004 these Northmen explored the coast
eastward, but had a skirmish with the Indians, and lost
their leader. In 1005 they returned to Greenland; but
in 1007 Karlsefni, a rich Icelandar, set sail for the
New England coast—by them called Vinland (Vine-Land)—
with three ships, one hundred and fifty men, and some
three women, and wintered on the New England
coast; but the hostility of the natives finally obliged
him to quit the country. The old Icelandic MSS.
NORMÆ

177

NORRIS

make visits to Vinland or to Markland (Nova Scotia) in 1121, 1125, and 1147. The truthfulness of the sagas is disputed by the bishops, because of the traditions of Bremen, almost contemporary with the voyage of Thorfin, states, on the authority of the Danish king Eithunson, that Vinland was so called because of the vines which grew wild there. The latest documentary evidence, however, is the Venetian narrative of Nicolò Zeno, who sailed with the Genoese ships that met with fishermen there who had been on the American coast. (See Anderson, America not discovered by Columbus.)

In Russia the Northmen were called Varangians, or Varangians of Russia. A Northman, called Norm, in 882, and founded the dynasty which gave sovereigns to Russia until 1598. About 865 the Varangians appeared with a fleet before Constantinople, and it was not until an alliance was made between Vladimir the Great, who adopted Christianity, and the Greek emperor (887) that the invasions ceased. Soon afterwards a Varangian body-guard was adopted at Constantinople, and from that time till the fall of the Eastern empire the Byzantine sovereigns trusted their lives to no other household troops. The Code Pliagem of Iceland gives the title Duke of the Varangian Guard in the 11th century at 900. Among the antiquities in the museum of Christiania are Byzantine coins of 842-867, found in ploughing the fields of Agerhusen, in Norway.

The invasions of the Normans in Southern Italy during the 11th century are of no special interest, from an ecclesiastical standpoint, as these invaders were already Christians. We must only notice that by their recognition of the papal supremacy over Naples and Sicily, as also by the aid they gave to the Roman see against the Roman-German empire, they signally contributed to establish and increase the temporal power of the popes. See Maurer, Die Rechts- u. Verwaltungsstr. d. Norskgrenen Stammes. d. Christenthum (Munich, 1855, 1856, 3 vols.); Palgrave, The History of Normandy and of England (Lond. 1857-1857, 2 vols.); Dipping, Histoire des Expeditions Maritime des Normands et de leur Establishment en France au 10e Siecle (2d ed., 1849, 2 vols.); Wheaton, History of the Northmen from the Earliest Times to the Congress of England (Lond. 1831); Worsam, Minder om de Danske og Normendene i England, Skotland, og Irland (Copen. 1861); Lappenberg, Gesch. von England (Hamb. 1834-1867); Hardwick, Ch. Hist. M. A. p. 105, 102, 129-132; Hambledon, A History of England, in the Middle Ages (4th ed.); Index in vol. viii.; Hill, Eng. Monasticism, p. 222-224, 247, 267; Maclear, Hist. Christian Missions in the M. A. p. 229-301, 276, 277.

Note, or, as they are also termed, the Paros of the Northern mythology, were three young women, by name Urd, Verdande, and Skuld, i.e. Past, Present, and Future. They sit by the Uriar-wells under the world-tree Yggdrasill, and there determine the fate both of gods and men. Every day they draw water from the spring, and with it and the clay that lies around the wells sprinkle the ash-tree Yggdrasill, that its branches may not rot and wither away. Besides these three great norns, there are also many other Santorhizones, both good and bad; for, says the prose Edda, when a man is born there is a norn to determine his fate; and the same authority tells us that the unequal destinies of men in the world are attributable to the different dispositions of these three norns. These three are assimilated to the genie of classic mythology. Women who possessed the power of prediction or magic also bore this name. See Norse Mythology.

Norojental, a sect of dissenters from the Russo-Greek Church (q. v.), who are strongly in favor of marriage, in opposition to those who prefer a life of celibacy.

Norris, Robert, an Anglican divine who flourished in Scotland near the opening of the 18th century as pastor at Dundee, in the diocese of Brechin, is noted for his severity against Presbyterianism and all advocates of the Kirk. He was at one time recommended for the bishopric of Falsburgh, but the theme failed. He was, however, afterwards made bishop of Angus, and as such flourished until about 1760. He found much opposition in his diocese, and died respected by a few, but hated by many. See Stephens, Hist. of the Church of Scotland, iv. 306, 307, 222-224.

Norris, Edward, a divine of American colonial days, was born in England about 1589, and came to this country in 1639. In the whole country he had been a teacher and minister in Gloucester; in the colonies he devoted himself entirely to pulpit labors. In 1640 he was made pastor at Salem, Mass., and served that charge until his death, April 10, 1689. He was tolerant, did not join in the persecution of Gorton and the Anabaptists, and withstood the witchcraft delusion of 1651-54; but in 1658 he wrote in favor of making war with the Dutch. He published in London in 1636 a treatise on Asking for Temporal Blessings, and The New Gospel not the True Gospel, etc. (1638, 4to), a reply to John Trask's True Gospel Vindicated (Lond. 1636). See Drake, Dict. of Amer. Biog. p. 662.

Norris, Edwin, an eminent English ethnological and philological writer, was born at Taunton Oct. 24, 1795. In 1814, immediately after the restoration of peace, he travelled for some time on the Continent as private tutor in a family, chiefly in the south of Italy. After his return to England he was appointed in 1826 Envoy Extraordinary to India, to which he re-tired with a pension in 1836, in consequence of the arrangements connected with the renewal of the charter. In the same year his extensive knowledge of languages led to his election as assistant secretary to the Royal Asiatic Society, an office which involved the chief share in the editing of the society's Transactions. In 1847 he received from government the appointment of translator to the Foreign Office. He was appointed in 1856 principal secretary to the Royal Asiatic Society. A short time before he had been made editor of the Ethnographical Library, undertaken in 1856, to embrace accounts of voyages to savage countries and other contributions to ethnographical science. The last edition of Pritchard's Natural History of Man appeared with additions under his superintendence in 1855. A Grammar of the English Language, from a MSS. by the Rev. E. M. M. Stannard, was published in 1840, with additions by E. Norris, and a Grammar of the Borma or Kapuri Language (Lond. 1853, 8vo) was developed by him from a series of dialogues sent home from Borneu by Richardson, the African traveller, who died before his return to England. In addition to these acknowledged works, Mr. Norris was frequently engaged in superintending the publications of the Bible Society in the Tahitian and other languages, and was a contributor to the Penny Cyclopaedia, the Penny Magazine, and other works of large circulation. His reputation is, however, chiefly founded on papers which appeared in the Transactions of the Royal Asiatic Society. In one, in 1845, "On the Kapur-di-Giri Rock Inscription," he pointed out the method of deciphering an alphabet which was previously unknown, and the discovery was characterized by Prof. H. H. Wilson, in a paper which accompanied that of Mr. Norris, as "an unexpected and interesting accession to our knowledge of the palaeography and ancient history of India." A paper "On the Assyrian and Babylonian Weights," and another "On the Sythian Version of the Behistun Inscription" are of peculiar value. Henry Rawlinson's papers on the cuneiform inscriptions, sent from Persia and published in the society's Transactions, passed through Mr. Norris's hands as editor. The chief result, however, of his Oriental studies is his Assyrian Dictionary. Three volumes of this work were published in Great Britain in 1870 and 1871, and the 4th volume in 1873. It contains 60,000 words, comprising the letters Aleph to Nun. Much of the con-
The contents of these volumes has no doubt become antiquated, and many of the tentative meanings assigned to words may be found to be incorrect. Yet it will always be acknowledged to contain a great amount of useful and trustworthy information, showing on every page the vast extent of Mr. Norris's reading; while those who use his work cannot but admire the singular candor and modesty with which he places before his fellow-students the results of his inquiries. The works of libertarians, mentioned, while they are the principal, are by no means the sole fruits of Mr. Norris's philological labors.

For some time he paid considerable attention to the Celtic dialects, and in 1859 published in two volumes the text and translation of three Cornish dramas, constituting by far the greater portion of the existing relics of Cornish literature. Of other publications, we may mention *A Specimen of the Vat Language of West Africa* (1851) — *A Grammar of the Boror or Kamari Language* (1852); and *Dialogues, and a Small Portion of the New Testament in the English, Arabic, Hebrew, and Boror Languages* (1853). A disposition naturally modest and retiring impeded the recognition of Mr. Norris's merits in the great world (his only honors were a foreign membership of the German Oriental Society and a Bond honorary degree of doctor of philosophy); but the persistent efforts of his admirers, who have carefully studied any of his works, will withhold their tribute to such a rare union of excellences. Edwin Norris died Dec. 10, 1872. See *English Cyclop. s. v.; Allibone, Dict. of Brit. and Amer. Authors, s. v.; Fresh. Rev. Apr. 16, 1873, p. 365.*

**Norris, Henry Handley**, an English divine, was born about 1711; studied at Newcomb's School, Hackney, and at St. Peter's College, Cambridge, where he graduated B.A. in 1737, and M.A. in 1806. He subsequently became perpetual curate of St. John's Chapel, Hackney, which was erected into the district rectorate of South Hackney in 1831; he was afterwards made prebendar of Llandaff in 1819, and of St. Paul in 1825. He died in 1851. His chief works are, *A Practical Exposition of the Tendency and Proceedings of the Bible Society* (2d ed. Lond. 1814, 8vo); — *A Respectful Letter to the Earl of Liverpool on the Bible Society* (Lond. 1822, 8vo); — a vindication of it was published in 1823 — *The Origin, Progress, and Existing Circumstances of the London Society for Promoting Christianity among the Jews; an Historical Inquiry* (Lond. 1825, 8vo) — *The Good Shepherd; a Sermon on John x, 11* (funeral of the ven. archdeacon Watson) (Lond. 1829, 8vo).

**Norris, John (1), an English divine and Platonist philosopher**, was born at Collingborne Kingston, Wilts., in 1657. He studied at the University of Oxford, where he graduated, and of which he became fellow in 1680. He was an ardent admirer of Plato, and translated Robert Warwycs *Effiges amoris in English under the title of The Picture of Love Unveiled* (Lond. 1689, 12mo). This work is one of a series into which Henry More (q. v.), the most eminent Platonist philosopher of England at that time, and with two distinguished women — lady Masham and Mrs. Astell; but when, a few years afterwards, the tendency of Locke's philosophy to one extreme of belief provoked a controversy which travelled the length and breadth of Europe, he was found with the opposite party — followers of Des Cartes and Malebranche. In 1689 he was appointed to the curacy of Newton St. Lo, and in 1691 was transferred to that of Bemerton, near Sarum, where he died in 1711. Norris was a fine writer, a profound Thomist, and his sentiments are commonly just. "His philosophical activity," says Tulloch, "only commenced with the termination of the Cambridge movement. He carried it forward to another age, but he did not himself belong to the latter." (Clerk, *History of the English Philosophy*; s. v.; *Dict. of Christ. Authors*; *History of Philosophy*). Sir Henry Maine, in his *Principles of Human Knowledge* and the author of *The Theory of the Idea, or Intelligent World* There may have been no indebtedness on the part of the Dublin idealist to the idealist of Bemerton, but the impulse of thought is the same; the line of Platonic speculation runs forward from one to the other. Norris has commended his arguments to pass out of sight, and Berkeley is a familiar name to every student of philosophy. But Norris, although half forgotten, is really as striking and significant a figure in the history of English philosophy. He was an idealist of the most complete and perfect kind of the Old School." (Rational Theology and Christian Philosophy, ii, 458, 454). His principal works are, *An Account of Reason and Faith in Relation to the Mysteries of Christianity* (London, 1897, 8vo), written in refutation of Toland's *Christianity not Mysteries.* "He attempted to prove, says Franck, "not that reason deceives us, for if this were so there would be no longer any distinction between truth and error, but that it is not sufficient for us in the measure we possess, not being so extensive as truth itself, or as the truths we need to know for our guidance and our support, and that, besides our instinctive and immediate knowledge, we have another. We are not to choose between reason and some other power contradicting her assertions, but only to examine whether any dogma in which we are asked to believe is a revealed dogma or not; whether it is to be regarded as a result of the human mind, or whether there are historical proofs that it emanated from a divine source, and has been imparted to us by supernatural means." Reason, according to Norris, is simply the exact measure of truth; i.e. divine reason, which differs only from human reason in degree, not in nature. In his *Discourse towards the Theory of the Idea, or Intelligible World* (Lond. 1701–4, 2 vols. 8vo), to which we have referred above in the quotation from Tulloch, Norris gives a complete exposition of Malebranche's system — the theory that we perceive all things in God, whose thoughts, to use such a term, are our ideal forms — which he greatly admired, and he refutes with great power the assertions of Locke and of the sensualists. Besides the above, he wrote *Hierocles upon the Golden Verses of the Pythagoreans* (Oxf. 1862, 8vo); — *An Idea of Happiness* (Lond. 1868, 4to); — *Carnival of Knaves and Biggotism Delineated and Disabused* (ibid. 1868, 8vo); — *Tractatus adversus reproductiones absolutae decrevit* (ibid. 1868, 4to); — *Poems and Discourses occasionally written* (ibid. 1864, 8vo); — *A Collection of Miscellaneous, consisting of Poems, Essays, Discourses, and Letters* (Oxf. 1865, 16mo); — *An Essay on Joy and Regulation of Love, a Morav Essay, in two Parts; to which are added Letters, Philosophical and Moral, between the Author and Dr. Henry More* (Oxf. 1868, 8vo) — *Reason and Religion, or the Grounds and Measures of Devotion considered from the Nature of God and the Nature of Man* (Lond. 1690, 8vo); — *Upon the Conduct of Human Life with Reference to the Study of Learning and Knowledge* (ibid. 1690–91, 8vo); — *Christian Blessness* (ibid. 1690, 8vo); in 1691 he wrote a defence of this work, which had been attacked by the Separatists: — *Practical Discourses upon several Divine Subjects* (ibid. 1691–98, 4 vols. 8vo; often reprinted); — *Two Treatises concerning the Divine Light* (ibid. 1692, 8vo); directed against the Quakers; — *Spiritual Counsel, or the Father's Advice to his Children* (ibid. 1694, 8vo); — *Letters concerning the Love of God* (ibid. 1695, 1706, 8vo); — *A Philosopher for the World, or the Importance of the Soul* (ibid. 1708, 8vo); Dodwell wrote an answer to this work at the close of his *Natural Mortality* of the Human Soul (1708), and pretends to prove his position by texts of Scripture: — *Treatise concerning Christian Humility* (ibid. 1693, 8vo); — *Concerning Humility* (ibid. 1710, 8vo). NORRIUS 179  NORSE MYTHOLOGY

Norris, John (2), an English philanthropist to whom Cambridge University is greatly indebted, was born April 24, 1651, in Strengma. After having studied in several universities of Germany and Holland, he became in 1680 secretary of the count de la Gardie; in 1681 he was appointed professor of Oriental languages in Upsala, and was called in 1680 to teach them in the University of Lund. In 1684 he returned to Upsala, where he occupied successively the chairs of metaphysics, the Greek language, and theology. He afterwards travelled over Denmark and Germany, and was appointed the professor of Oriental languages of the churches of that city, and in 1703 bishop of Gothenburg. He was justly regarded as one of the most skilful philologists of Sweden. He died May 21, 1708. He was of his works, De Hellenismo Judaeico (Stockholm, 1680); De orientali cultura cognitione in rerum Germanicarum (ibid. 1688); — De Socrates (ibid. 1686); — De censure Romano (ibid. 1886); — De origine Gotho-

ruum (ibid. 1687); — De Fadere Amphitheciento (ibid. 1888); — De sacrositico Romano Pompianico (Upsala, 1688); — De ecclesiis veterum Christianorum Siculorum (ibid. 1689); — De censura & censura democratica (ibid. 1688); — De sertate Aretap-
gitico (ibid. 1689); — De cruvo veterum (ibid. 1692); — De causis deficiens suae Romanae (ibid. 1705); — De typographia (Hambug, 1740, 8vo); — reprinted in the Monumenta Carolina (ibid. 1693), the improvements and additions in several of his dissertations collected with his funeral orations (Stockholm, 1738, 4to). Norris also edited the Schola rhetoricorum of Phoebammon; the De figuris sententiae et elocutionis of Alexander; the Discourses and Letters of the monk Thedulus; two Discourses of Aristotle, etc. See Filosofiska Minnen (Stockholm, 1836); — Memoria viorum in Suecia erudissimorum (Leip-

gsic, 1781); Norrelius, Vita Norrmannii (Stockholm, 1788).

Norse Mythology. I. The religion which was cherished by the Norsemen of Norway and Iceland, before the introduction of Christianity in these countries, was the so-called Asa-faith. It took its name from the asa, as the gods were called, which it presented as objects to whom man owed reverence and worship. In its most original form this asa-faith was common to all the Teutonic nations, and it spread itself over England, the most of France and Germany, as well as over Denmark, Sweden, Norway, and Iceland. It must have sprung into existence in the ancient eastern homesteads of the Teutonic family of nations before they divided into two groups—the southern, or Germanic, and the northern, or Nordic. Hence we might in one sense speak of a Teutonic mythology. This would be the mythology of the Teutonic people, as it was known to them, say four or five hundred years before Christ, while they all lived together in the East, without any difference of customs or religious disposition, so that in one sense we must recognise a distinct German, a distinct English, and a distinct Northern mythology, and we must even draw a distinction between the mythological systems of Den-
mark, Sweden, and Norway. How this Teutonic my-
thology developed, and what characteristic forms it as-
sumed in Germany, England, Denmark, etc., we cannot know accurately, for time has left us but scattered frag-
ments of the system of common myth which these races received. The different branches of Teu-
tonic mythology died and disappeared as Christianity gradually made its way, first in France, about five hun-
dred years after the birth of Christ, then in England, one or two hundred years later; still later in Germany, where the Emperor Charlemagne by Christianizing the country about the year 800 after Christ, were the last heathen people. In Norway, Sweden, Denmark, and Iceland the asa-faith flourished longer and more independently than else-
where, and had more favorable opportunities for com-
peting its development. The pagan religion flourished in the north of Europe until about the beginning of the 11th century; or, to speak more accurately, Christianity was not completely introduced into Iceland before the year 1000; in Denmark and Norway some twenty or thirty years later, while in Sweden, paganism was not completely rooted out before the year 1150. In all of these countries, excepting Iceland, the overthrow of heathenism was more or less abrupt and violent. The eradication of the heathen religion was so complete that it was either wholly or to a great extent oblitera-
ted from the minds of the people. But the asa-faith in its Norse form is well-preserved in the countries where it is preserved for us by the Norsemen, who emigrated from Norway and settled Iceland. In the Icelandic lit-

erature we have a complete record of it. The introduc-
tion of Christianity in Iceland was attended by no vio-

lence. While in the other countries the moral and former system of government prevailed, and the people were compelled by their rulers to accept the
gospel of Christ, the Icelanders enjoyed civil liberty, had a democratic form of government, and accepted the new religion of Christianity with enthusiasm. At the Althing, or Parliament, which convened at Thingvolls in the summer of 1000; and in this way we are able to account for all the heathen and vernacular literature that was put into writing and preserved for us by that remarkable people, who inhabited the island of the ice sea. 

In studying the mythology of the Norsemen, we have for our guidance not only a large collection of rhapsodies, or religious lays, composed in heathen times (before the year 1000), but also a complete system of theogony and cosmogony, written down, it is true, after the heathen era of the Norses and Vikings, but still furnishing in internal evidence of having been written without any mixture of Christian ideas.

2. The religious lays or rhapsodies are found chiefly in a collection well known by the name of the “Elder,” or “Sæmund’s Edda.” This work was evidently collected from the mouths of the people in the same manner as Homer’s Iliad, and there exists a similar uncertainty as to the person who reduced it to writing. It has generally been supposed that the songs of this Elder Edda were collected by Sæmund Frode (the Wise), who was king of Iceland in the year 1056, and died in 1138; but all the old traditions make Iceland ante-diluvian in date at least, and the book that cannot have been written earlier than the year 1240. In the Elder Edda there are thirty-nine poems; these are in no special combination one with the other, but may be divided into three classes: 1. purely mythological poems; 2. mythological didactic poems; 3. mythological historical poems. The Elder Edda presents the Norse cosmogony, the doctrines of the Odinic mythology, and the lives and deeds of the gods; but it also contains a cycle of poems on the demigods, and mythical heroes and heroines of prehistoric times. It gives us as complete a view of the Norsemen’s mythological world as Homer and Hesiod give us of the Greek mythology, but it includes, not as Homer does, worked up into one great poem, but rather as the rhapsodists of Greece presented to Homer’s hands the materials for that great poem in the various hymns and ballads of the fall of Troy, which they sung all over Greece. Norseland never had a Homer to mould all these poems into one lordly epic; but the poems of the Elder Edda show us what the myths of Greece would have been without a Homer.

The system of theogony and cosmogony is found in the so-called Younger Edda, or as it is also called, Snorre’s Edda, a work that was written by Iceland’s great historian, Snorre Sturlason, who was born in the year 1178, and died in the year 1241. The Younger Edda is mostly prose, and is intended as a sequel to and elaboration upon the Elder Edda. Both the Eddas complement each other, and a careful study of both is necessary for the scholar who desires to understand fully the religion of our Northern ancestors in the heathen period. The Younger Edda consists of two parts: Gylfaginning (the deluding of Gylfi) and Brautskapaler (the conversations of Brage, the god of poetry, or the treatise on poetry). Gylfaginning tells how the Swedish king Gylfi makes a journey to Asgard, the abode of the gods, where Odin instructs him in the old faith, and gradually unfolds to him the myths of the Norsemen. The Younger Edda is a prose synopsis of the whole asa-faith, with here and there a quotation from the Elder Edda, by way of proof and elucidation. It shows a great deal of ingenuity and talent on the part of its author, and is the most perspicuous and intelligible system of the Norse mythological world down to us from those dark days of the Middle Ages.

3. The following is a brief synopsis of the Norse heathen faith: In the beginning there were two worlds. Far to the north was Niflheim (the nebulous world), which was cold and dark, and in the west of it was the well Hvergelmer, where the dragon Nidogg dwells. Far to the south was Muspelheim (the fire world), which was bright and flaming, and in the midst of its intense light and burning heat sat Sur, guarding its borders. The earth lay between these two worlds and was Ginnungagap (the yawning abyss), which was as calm as wind-still air. From the well Hvergelmer flowed twelve ice-cold streams, the rivers Elivoga. When these rivers had flowed far into Ginnungagap, the venom which flowed with them hardened and became ice; and when the ice stood still, the vapor ascended from the venom gathered over it and froze to rime; and in this manner were formed in the yawning gap many layers of congealed vapor. That part of Ginnungagap that lay towards the north was thus filled with thick and limpid ice and snow, and everywhere within were fogs and gales. But the southern side of Ginnungagap was lighted by sparks that flew out of Muspelheim. Thus while freezing cold and gathering gloom proceeded from Niflheim, that part of Ginnungagap which looked towards Muspelheim was hot and bright; and when the heated blasts met the frozen vapor, it melted into drops, and by the might of him (the supreme God) who sent the heat, these drops quickened into life, and were shaped into the likeness of a man. His name was Ymer; he was a giant, and he became the father of a race of frost giants and mountain giants. Together with the giant Ymir, Njord and Odin agreed to give him a new name and home, by whose milky Ymer was nourished. This cow licked rime-stones, which were salt; and the first day that she licked the stones there came at evening out of the stones a man’s hair, the second day a man’s head, and the third day the whole body was born, and he was Bure. He was fair of face, great and mighty. He begat a son, by name Bor. Bor took for his wife a woman whose name was Bestla, a daughter of the giant Boitorn, and they had three sons: Odin, Vile, and Ve. Odin became the father of the bright and fair aas, the rulers of heaven and earth, and he is, says the Younger Edda, the greatest and lordliest of all the gods. Odin, Vile, and Ve slew the giant Ymer; and when he fell, so much blood flowed out of his wounds that in it was drowned all the race of giants save one, who with his wife escaped in a skiff, and from this descended new races of giants. The sons of Bor dragged the body of Ymer into the middle of Ginnungagap, and of it they formed the earth. Of his blood they made the ocean; of his flesh, the land; of his bones, the mountains; of his hair, the forests; and of his teeth and jaws, together with his bones, they made the mountains and pebbles. Of his skull they formed the vaulted heavens, which they placed far above the earth, and decorated with red-hot flames from Muspelheim to light up the world; but his brains they scattered in the air, producing the evening and morning stars, the meteors and meteoric clouds. Round about the disk of the earth they let the deep ocean flow, the outward shores of which were assigned as dwellings of the giants, and were called Jotunheim and Utgard. As a protection against the giants, the creative powers made of Ymer’s eyebrows a bullwalk, called Midgard (the middle, garden), a route by which they drove from heaven to earth the sons of Bor made the bridge called Bifrost, which we now recognise as the rainbow.

The dark and gloomy Night, who was the offspring of giants, married the aas-son Delling (day-break), and they became the parents of Day, who was light and fair like his father. Odin gave Night and Day two horses and two cars, and set them up in the heavens, that they might drive successively one after the other, each in twenty-four hours’ time, round the world. Night rides first with her steed Rimsfaxe (rim-mane), and then she drives up the earth with the sun, that the earth may be flooded over with the warm rays of the sun, that the earth with the foam of his bit. Day follows after with his steed Skinfaxe (shining-mane), and all the sky and earth glister from the light of his mane. 
The aas formed the sun and moon of sparks from Ymer’s eye, and in the fire world landed the chariots of these two grand luminaries athwart the sky. The daughter, whose name is Sol (sun), drives the
NORSE MYTHOLOGY

chariot of the sun; and the son, whose name is Mâne (moon), drives the chariot of the moon. Hence it is that sun is feminine and moon masculine in the North-European languages. Sol and Mâne speed away very rapidly, for two giants, the one named Skol and the other Hate, both disguised as wolves, pursue them for the purpose of devouring them; and these giants will at length overtake the sun and moon, and accomplish their greedy purpose.

Dwarfs were bred in the mould of the earth, just as worms in a dead body or, in the language of the Edda, they were quickened as maggots in the flesh of Týr. By the command of the gods, they got the form and understanding of men; but their abode was in the earth and in the rocks. Four dwarfs—Austre (East), Vestre (West), Nordre (North), and Sutre (South)—were appointed by the gods to bear up the sky. Of the race of dwarfs, Moderogar and Durtin are the chief ones.

In the northern extremity of the heavens sits the giant Hrungnevald (corpse-swallow), in the guise of an eagle. The strokes of his wings produce the winds and storms.

There were not yet any human beings upon the earth, when the sons of Bor—Odin, Horni (Vile), and Loder (Ve)—were walking along the sea-beach, they found two trees, and made of them the first human pair, man and woman. Odin gave them life and spirit; Huner endowed them with reason and the power of motion; and Lager Loder brought them clothing, hearing, vision, and a fair complexion. The man they called Ask (ash), and the woman Embla (elm). The newly created pair received from the gods Midgard as their abode, and from Ask and Embla are descended the whole human family.

The gods dwell in Asgard. In its midst are the plae of Ida (Idavolla), the assembling-place of the gods, and Odin’s high-seat, Hlidskjalf, whence he looks out upon all the worlds. But above the heavens of the sun are still higher heavens, and in the highest of these stands the imperishable gold-roofed hall Gimli, which is brighter than the sun.

The gods to whom divine honors must be rendered are twelve in number, and their names are Odin, Thor, Balder, Ty, Brage, Heimdal, Hod, Víðar, Veir, Útir, Forseta, Lok. In this list Njord and Frey are not mentioned, for they originally belonged to another class of gods called vanas, or sea-gods, and were received among the asat by virtue of a treaty in which Njord was given as a hostage, and Frey is his son.

Of goddesses, we find the number twenty-six, and Vin and Sigdis are the chief ones. Four others are Frigg, Freya (a vana goddess, a daughter of Njord), Sif, Nanna, Idun, Saga and Siggyn.

Odin’s hall is the great Walhalla; spears support its ceiling; it is roofed with shields, and coats of mail adorn its benches. Thither and to Vinogod Odin invites all men wounded by arms or fallen in battle. For this reason he is called Valfæther (father of the slain), and his invited guests are called einherjers. The latter are waited upon by valkyries (maids of slaughter).

The dwelling of Thor is Thrudvang, or Thrudheim. His father is Odin, his sister is Freyja, his wife is Sif, and his sons are Hymir, Odhinn, and Runic. Fjord and Lichan are the lives of Ydal. Baldr lives in Breidablik, where nothing impure is found. Njord dwells in Noatun, by the sea. Heimdal inhabits Himingiborg, which stands where the bridge Bifrost approaches heaven. Forsete has Glitter for his dwelling, whose roof of silver rests on columns of gold. The chief goddess, Frigg, wife of Odin, has her dwelling-place in Fenari; and Freya, the goddess of love, dwells in Folkvang, and her hall is Serryrmyn. Saga dwells in the great Sokvekeb, under the cool waves; there she drinks with Odin every day from golden vessels.

The Norse mythology presents nine worlds: Muspelheim, Asheim, Ljasalafheim, Vanaheme, Mannheim, Jotunheim, Svartralfheim, Helheim, and Nifheim. The highest is Muspelheim (the fire world), the realm of Surt, and in its highest regions Gimle is situated. The lowest is Nifheim (the mist world), the realm of cold and darkness, and in its midst is the fountain Hvergelmer, where the dragon Nidhogg dwells. Between the two is Mannheim (the home of man) or Midgard, the round disk of the earth, surrounded by the great ocean. Ask and Embla got this for a dwelling-place. Far above is Asheim (the home of the gods), forming a vault above the earth. Here we find Idavolla and Hlidskjalf. Beyond the ocean is Jotunheim (the world of giants). This world is separated from Asheim by the river Iling, which never freezes over. North of Iling above the earth is Vanaheme (the world of the light elves), and between it and Asheim is Vanaheme (the home of the vana, or sea-deities). Proceeding downward from the earth, we come first to Svartralfheim (world of the dark elves); next to Helheim (the world of the dead, hell); and finally, as before stated, to Nifheim. From Mannheim to Helheim the road leads down by the north through Jotunheim over the sream Gjoll, the bridge over which river (the Gjoll bridge) is roofed with shining gold.

The ash Yggdrasil is the holiest of all trees; its everlasting green branches embrace the whole world. Yggdrasil springs from three roots. One root is in Hvergelmer, in Nifheim, and the bark of this root is gnawed by the dragon Nidhogg, and all his reptile brood. The second root is in Jotunheim, over the well of the wise giant, Meðra. The third root comes from the trunk of the god Mimer, who wielded the sword Hjalpr. He came to the well in the middle of the world, and there he gave in pawn for a drink from the fountain, and every morning Mimer drinks from his glittering horn the mead that flows over Odin’s paw. The third root of Yggdrasil is among the asat in heaven; and beneath this root is the sacred fountain of Urd. Here dwell the three persons, or fates: Urd (the Past), Verdande (the Present), and Skuld (the Future). They nurse the tree Yggdrasil by sprinkling it every morning with the pure water of Urd’s fountain. These norms preside over the births and determine the destinies of men. Their messengers (both good ones and bad ones), accompany man from the cradle to the grave, and are the authors of men’s fortunes and misfortunes. Nothing can change the fate of the norms. Urd and Verdande weave the web of man’s life, and stretch it from east to west, and Skuld tears it to pieces.

In the topmost bough of the ash Yggdrasil sits an eagle that is very knowing, and between the eagle’s eyes sits a hawk, by name Vedaföln. A squirrel, whose name is Rataatok, runs up and down the tree, seeking to cause strife between the eagle and the serpent Nidhogg. Four stages of the squirrel lie on the branches of the tree, and feed on its buds. Their names are Dain, Dvalin, Duney, and Durathor. But there are so many serpents with Nidhogg in the fountain Hvergelmer that no tongue can count them. The dew that falls from Yggdrasil upon the earth men call honey-dew, and it is the food of bees. Finally, two swans swim in Urd’s fountain, and are the parents of the race of swans. Thus all tribes of nature partake of this universal tree.

Odin (or Allfather) is the highest and oldest of the Barings. From him the race of asat is descended. His hall is the famous Walhalla, to which he invites all men bitten by weapons or fallen in battle. The daily amusement of his invited guests is to ride out every morning to fight and slay each other, but in the evening they quicken again into life and ride home to Walhalla, where they are nourished by the flesh of the boar Sæherim, and where valkyries (maids who pick up those fallen in the battle-field) wait upon them with bowls flowing with meat. By the side of Odin stand two wolves, Gere and Freke; on his shoulders are perched two ravens, Hugvog and Heardak, vulture (memory), who every day fly out and bring back to their master messages from all parts of the world; and he rides a gray eight-footed horse, by name Sleipner. Odin has a famous ring called Draupner, which was made for
him by skilful dwarfs, and as he speeded forth to the Seld of battle he wears a golden helmet and resplendent armor. His names are about two hundred in number, for the various peoples among whom he came never called him by the same name. Odin is the god of poetry, the associate of Saga (history), and the inventor of the runic alphabet. His name comes down to us in the name of the Fourth day of the week, Wednesday (Odin's-day).

**Next to Odin is Thor. He is a son of Odin and Odin's wife Jord (Earth). He is the strongest of the gods; his dwelling is Thrudvang, as before stated, and his hall is called Bifrost. All thralls come to him after death. Thor rides in a chariot, which is drawn by two goats, named Tanngyst and Tanngrisser; hence he is called Oku-Thor (chariot-Thor). He is also called Norðr, or the bellowing thunderer. The mountains thunder and are rent in twain, and the earth is wrapped in flames beneath his thundering chariot. When he girls himself with Megingjardar, his belt of strength, and puts on his steel gloves, his strength is redoubled. He is frequently in conflict with the giants, who tremble at his huge hammer, Mjolner, which was formed from the wounds of the mountains. He is the father of Thor, who is golden, the boy Thjalfe, and girl Roskva, are his servants, and accompany him on all his wonderful exploits. Thor is the father of Modge (strength) and of Moge (courage), and he is the stepfather of Ull.

He is frequently called the protector of Asgard and Midgard, and is generally looked up to as a mighty god. The fifth day of the week is Thursday (Thor's-day), is named after him. His most celebrated adventures are his duel with Heungrar, his visit to Geirrod, his visit to Strymner, his fishing for the Midgard-serpent, and his slaying of Thyrm.

**Baldur** is a son of Odin and Frigg. He is so fair that rays of light seem to issue from him. He is the favorite of both gods and men, and the comforter of those who are in trouble. His wife is Nanna, and his dwelling is Breidablik, where nothing impure can come. Baldur is the mildest, the wisest, and the most eloquent of all the gods, and his nature is such that the judgment he has pronounced cannot be altered.

**Njord** was born in Vanachem, among the wise vas, but was received by the vasas when the vasas made a treaty with the vas and gave the vasas Hemen. Njord is the ruler of the winds; he subdues the sea and fire, and distributes wealth among men; he should be invoked by sailors and fishermen. His wife is Skade, a daughter of the giant Thjasse. But Njord and Skade do not agree. Njord dwells in Noatun, near the sea. Skade dwells in an island of her father's, where, when she rides on her skews (snow-shoes) down the mountains, and hunts the wild boar with bow and arrow.

**Frey** is the son of Njord, and rules over rain and sunshine and the fruitfulness of the earth. He should be invoked in order to obtain good harvest, peace, and wealth. He is good-natured and kind-hearted; he causes sorrow to no one, but releases the prisoners from their chains. His dwelling is Alheim. He rides with the boar Gold-enbristles, or sails in his splendid ship Skildbladder, which was made for him by the same skilful dwarfs who made Odin's ring and Thor's hammer. To obtain the giant's daughter Gerd, he gave away his trusty sword, and hence he has no weapon in the last conflict of the gods in Ragnarok. In the Elder Edda there is a beautiful poem describing how Frey fell in love with Gerd, the daughter of Gymer and Aurbo, and sent his servant Skirnir with his sword to get her.

Ty, after whom Tuesday (Ty's-day) has its name, is the one-handed god, and the most valiant of the vasas. All brave men should invoke him. Ty gave a splendid proof of his intrepidity when the gods tried to persuade the Fenris-wolf to let himself be bound up with the chain Glitter. The wolf, fearing that the gods would not unloose him again, consented to be bound only on the condition that while they were chaining him he should keep the right hand of one of the gods between his jaws. Ty did not hesitate to put his hand in the monster's mouth; but when the Fenris-wolf perceived that the gods had no intention to unchain him, he bit Ty's hand off at that point which has ever since been called the wolf's joint—that is, the wrist.

**Norse Mythology** is the name of the art of poetry. He is celebrated for his wisdom, but especially for his correct forms of speech. Runes are engraved on his tongue, and he wears a long, flowing beard. Brage's wife is Idun, who keeps in a box the apples which the gods, when they feel old age approaching, have only to taste of to make themselves young; the boy says that they will preserve their youth until Ragnarok. The giant Thjasse, once by the cooperation of Loki, succeeded in capturing Idun, but the gods compelled Loki to fetch her back.

**Frigg** is the white god with golden teeth, is the protector of the gods, and dwells in Himinbjorg, where the rainbow (Bifrost) reaches the heavens; he stands there at the borders of heaven to prevent the giants from crossing the bridge. He requires less sleep than a bird, and, sees, by night as well as by day, a hundred miles around him. He has his ear that no sound escapes him, for he can even hear the grass growing on the earth, and the wool on the backs of the sheep. When he blows his horn (the Gjoll-horn) all the worlds resound.

**Hod** is a son of Odin, and becomes accidentally the play of the good Balder.

**Vidar** is a son of Odin and the giantess Grid. He is the summoned the Silent. He is almost as strong as Thor, and the gods place great reliance on him in all critical conjunctures. He has a shoe for which material has been gathered through all ages. It is made of the scraps of leather that have been cut off from the toes and heels in cutting patterns for shoes. These pieces must be thrown away by shoemakers who desire to render assistance to the gods in the final conflict, where Vidar avenges Odin by tearing the Fenris-wolf to pieces.

Vidar dwells in the uninhabited land of Varsheim across the sea from Frankland.

**Vale,** the skilful archer, is the son of Odin and Rind. He was born in the western halls; he slays Hod immediately after the death of Balder, and rules with Vidar after Ragnarok.

**Ull** is the stepson of Thor; he is the god of the chase and of running on skews (snow-shoes); is invoked for success in duels, and dwells in Yial. His father is not named.

**Forseti** is the son of Balder and Nanna. He settles all disputes among gods and men. He dwells in Glethner, the silver roof of which is supported by columns of gold. When he arbitrates the cases of mass, he is clothed in the firmament, the goddesses, the queen of the vass and asyvins. Odin is her husband. She sits with him in Hidskijalf, and looks out upon all the world. She exacted an oath from all the things that they should not harm Balder. Her dwelling is Fensal.

**Freya** is next to Frey in importance. She is Njord's daughter and Frey's sister. She is the goddess of love, and Friday is named after her. (Comp. Dés Vene.) She rides in a carriage drawn by two cats, and dwells in Volkvang, where she has a hall called Sesrymner. When she rides to the field of battle, she shares the fall in equally with Odin. Her husband, Od, went far away and wandered through many lands, but she weeps golden tears of longing for him. She is also called Vanadis—that is, goddess of the vass and the many names which were given to her are accounted for by the fact that she visited many different peoples in search of her husband.

**Sigr** is the goddess of history; she dwells beneath the cool billows of Sokvabek, where she and Odin every day quaff mead from beakers of gold.

**Loki** is the wife of Nanna, the wife of Balder, and Sigr the wife of Locke; but besides these there are several goddesses of less importance, who serve as handmaids either of Frigg or of Freyja.
Valkyries, maidens of the slain, are sent out by Odin to every battle to choose guests for Valhalla and to determine the victory. Surrounded by a halo of flashing light, they ride in bloody armor with shining spears through the air and over the sea. When their horses shake the mane, dew-drops settle in the deep valleys, and hail falls upon the seas.

The ruler of the sea is Egor, also called Hymer and Hfer. He is a giant, but is still the friend of the asas. When the gods visit him, as they do every harvest, his halls are illuminated with shining gold. His wife, Ran, is the mistress of all the sea sailors. The daughters of Egor and Ran are the billows. They are hostile to sailors, and try to upset their ships.

4. The following is an outline of the Norse mythological legends. In the beginning of the world there was a glorious time of peace and happiness among gods and men, but giantesses came to Asgard, and the asas united themselves with them. Then their happiness was ruined, the atmosphere was infested with guile, and strife began in heaven and on earth—a strife which was to last until the destruction of both. The giants attack the asas, and make use of his strength and cunning; but he usually plots together with the giants for the purpose of bringing ruin upon the asas.

With the giantess Angrboda, Loke became three children in Jotunheim. These are the Fenris-wolf, the Midgard-serpent, and Hel, the goddess of death. The asas knew that these children of Loke would cause them great mischief. Therefore they bound the wolf on a barren holm (rocky island), and put a sword in his open-stretched mouth. The Midgard-serpent they cast into the deep ocean, where he encircles the whole earth and bites his own tail. Thor once caught the Midgard-serpent on his hook, and would have slain him with his hammer had not the giant Hymer, who was with him, cut off the fishing-line. Hel was thrust down into Niflheim, and Odin commanded that all who died of sickness or old age should go to her. Her dwelling is called Angishj; it is large and terrible. It is in the most infernal part of Hel's region, where her palace is called Angishj, the table Famine, the waiters Slowness and Delay, the threshold Precipice, and the bed Care. Hel herself is half blue and half white, and of a grim and ghastly appearance. The English word "hell" is derived from or connected with her name.

The greatest sorrow was caused to gods and men by Loke, when he by his cunning brought about the death of Baldr. Baldr was tormented by terrible dreams, indicating that his life was in peril; and thus he communicated the alarm to the asas. The latter and inanimate things not to harm him. Frigg exacted an oath from all things that they should not harm Baldr. But still Odin felt anxious, and, saddling his horse Sleipner, he descended to Niflheim, where he asked and learned of the fate of Baldr. When it had been made known that nothing in the world would harm Baldr, it became a favorite pastime of the gods at their meetings to put him up as a mark and shoot at him. But it vexed Loke to see that Baldr was not hurt; so he assumed the form of a woman, and the asas were amazed, and asked if all things had sworn to spare Baldr. From Frigg he learned that he had neglected to exact an oath from a slender twig called the mistletoe. Loke im- mediately went and pulled this up, proceeded to the place where the gods were assembled, and induced the blind god Hod to throw the mistletoe at his brother, and do him honor as the rest of the gods did. Loke himself guided Hod's hand; the twig hit Baldr, and he fell down lifeless. The asas were struck dumb and speechless; they did not know what to do. Finally Loke, who had got Odin's horse, to Hel, to persuade the goddess of death to permit Baldr to return to Asgard. Hel promised to release him on the condition that all nature would weep for him. The gods then despatched messengers to all the races, and to all the sea sailors, and to all the earth dwellers, and to all the birds and beasts to weep, in order that Baldr might be delivered from the power of Hel. All things very willingly complied with one request—men, animals, the earth, stones, trees, and all metals—just as we see things weep when they come out of the frost into the warm air. When the messengers were returning with the conviction that their mission had been quite successful, they found on their way home a giantess who called herself Thokk. Thokk would not weep, and Hel kept her prey. But this Thokk was none else than Loke in disguise.

Baldr's wife, Nanna, died of grief on her husband's funeral. Loke's son, Vale, though at that time but one night old, avenged Baldr by slaying Hod, who had been the immediate cause of his death.

Pursued by the gods, Loke now fled upon a mountain, there he could look out upon the world in all directions, and when he saw the gods approaching in search of him, he changed himself into the form of a salmon, and sprang into a waterfall near by, called the Vrananger Force. But Odin had seen him from Hliðskjalf, and by means of a filchet he captured him. Having Loke in their power, they dragged him without pity into a cavern, wherein they placed three sharp-pointed rocks, boring a hole through each of them. Having also seized Loke's children, Vale and Narfe, they changed the former into a wolf, and in this likeness he tore his brother to pieces and devoured him. The gods then made cords of his intestines, with which they bound Loke on the points of the rocks, one cord passing under his shoulders, another under his loins, and a third under his hands; and when this was done they transformed these cords into fetters of iron. Then the giantess Skade took a serpent, and suspended it over him in such a manner that the venom should fall into his face, drop by drop. But Sigyn, Loke's wife, stands by him, and receives the drops as they fall in a cup, which she empties as often as it is filled. But while she is emptying it, venom falls upon Loke's face, and he shrinks from the touch of the serpent, and twines his body about so violently that the whole earth quakes and quivers. Such, says the Norseman, is the cause of earthquakes. There will Loke lie until Ragnarok, which is not far off.

5. Intimately connected with these traditionary narratives are the Norse views as to the future. The time will come when the whole world shall be destroyed, when gods and men shall perish in Ragnarok, or the twilight of the gods. Increasing corruption and strife in the world are the signs that this great and awful event is approaching. Continuous winters rage without any intermission of summer, and the air is full of tempestuous storms, snow and darkness, and these are signs that Ragnarok is near at hand. The sun and moon are devoured by the giants heretofore mentioned, who pursue them in the guise of wolves, and the heavens are stained with blood. The bright stars of the firmament tremble, and the mountains topple down with a tremendous crash. Then all chains and fetters are severed, and the terrible Fenris-wolf gets loose. The Midgard-serpent writes in his giant rage, and seeks land upon the tumultuous waves. The ship Naglar, which has been constructed of the branches of the forest, sinks in a moment, and the waves, carrying the army of frost-giants over the sea, and the giant Hrym is its helmsman. Loke, freed also from his chains, comes at the head of the hosts of
Hel. The Fenris-wolf advances and opens his enormous mouth. His lower jaw reaches the earth, and the upper one touches the skies; he would open it still wider had he the room to do so. Fire flashes from his eyes and nostrils. The Midgard-serpent, placing himself by the side of the Fenris-wolf, vomits forth floods of poison, which destroy the heathen earth. In the midst of this confusion, crashing, and devastation, the heavens are rent in twain, and the sons of Muspel come riding through the opening in brilliant array. Surt rides first, wrapped in flames of fire; his flaming sword outshines the sun itself. Bjofn (the rainbow) breaks as they ride over it, and all direct their course to the great battle-field called Vigrid.

Meanwhile Heimdall arises, and with all his might he blows the horn of Gjoll to awake the gods, who assemble without delay. In his embarrassment Odin rides to Mimer's fountain, to consult Mimer as to how he and his warriors are to enter into action. The great ash Yggdrasil begins to quiver; nor is there anything in heaven or on earth that does not fear and tremble in that awful hour. The gods and all the einherja of Valhall stand waiting. They regard the gods as having come forth to the field of battle, led on by Odin, with his golden helmet, resplendent cuirass, and flashing spear, Gungnir. Odin places himself against the Fenris-wolf. Thor stands by Odin's side, but can render him no assistance, as he must himself fight with the Midgard-serpent. Frey encounters Surt, and fearful blurs are exchanged ere Frey falls, and he owes his defeat to his not having that trusty sword which he gave to his servant, Skirnir, when sent him to ask the hand of the giantess Gerdr. On this last day of the world, the dog Garm, which had been chained in the Ginnungagap, also breaks loose. He is the most fearful monster of all, and attacks Ty, and they kill each other. Thor gains great renown for killing the Midgard-serpent, but he retreats only nine paces before he falls dead, having been suffocated by the floods of venom which the dying serpent vomits forth upon him. The Fenris-wolf swallows Odin, but Vidar immediately advances, and, setting his foot upon the monster's lower jaw, he seizes the other with his hand, and thus tears and rends him till he dies. Vidar is able to do this, for he wears the shoe previously described in this sketch. Loke and Heimdall fight a duel, and kill each other. The world is now enshrouded in an unuttered fury, when Surt flings fire and flame over the world. Smoke wreathes up around the all-nourishing world-ash Yggdrasil, the high flames play against the heavens, and earth, consumed, sinks down beneath the sea.

But after all the world has thus been consumed in flames, the earth, completely green, rises a second time from the sea. Cascades fall, and the eagle soars on lofty pinions in pursuit of his prey. The gods come together on the plains of Idar, and talk about the powerful Midgard-serpent, about the Fenris-wolf, and about the ancient runes of the mighty Odin. The fields, unseen, yield their harvests, all ills cease, and the heavenly gods live in peace.

Vidar and Yale survive Ragnarok. Neither the flood nor Surt's flames did any harm, and they dwell in the plains of Isar, where Asgard formerly stood. Thitir came also the two sons of Thor (Mole and Magne), bringing with them their father's celebrated hammer, Mjolnir. Homer is there also, and comprehends the future. Balder and Hod converse together; they call to mind their former decays and the gods they have passed through; they talk about the fight with the Fenris-wolf and with the Midgard-serpent. The sons of Hod and Balder inhabit the wild Wind-home.

The sun brings forth a daughter more lovely than herself, the child born in the hither (in the horse language); before she is swallowed by the wolf Skol, and when the gods have perished, the daughter rides in her mother's heavenly chariot.

During the conflagration of Ragnarok, a woman by name Lif and a man by name Lifthrasir lie concealed in the so-called forest of Hodinnir. The dew of the dawn serves them as food, and so great a race shall spring from them that their descendants shall soon spread over the whole earth.

The golden-armed Gimle does not perish in the conflagration of the world. This hall outshines the sun; it is in the uppermost heaven, and in it

"The virtuous Shall always dwell, and evermore Delights enjoy" (Elder Edda).

Towards the north, on the Nida Mountains, stands a hall of shining gold, and this the dwarfs occupy after Ragnarok.

But there is also a place of punishment for the wicked. It is a place far from the sun, a large and terrible cave, and the doors of it open to the north. This cave is built of serpents wriggled together, and the heads of all the serpents turn into the cave, filling it with streams of poison, in which perjurers, murderers, and adulterers have to wade. The suffering is terrible; gory hearts hang outside of their breasts; their faces are dyed in blood; strong venom-drakes fiercely run through their hearts; their hands are riveted together with ever-burning stones; their clothes are wrapped in flames, and remorseless ravens keep tearing their eyes from their heads.

"Then comes the mighty one To the great judgment; From heaven comes he, Who guides all things. Judgments he uttereth, Strife he appeaseth, Laws he ordains To the great judgment" (Elder Edda).

Or, as it is stated in the lay of Hynlde of the Elder Edda, after she (Hynlde) has described Heimdall, the sublime protector of the perishable world:

"Then comes another Yet more mighty: But Him dare I not Venture to name. Few look further Than to where Odin Goes to meet the (Fenris-wal)" (Elder Edda).

In various passages of the Old Norse literature, like the one just quoted, there are allusions to the unknown God, who was before the beginning of time, and at the end of time he enters upon his eternal reign, and it seems that when he comes to the great judgment the punishment of the wicked in that terrible cave (Nastrad) will cease.

6. The above are the main points in the religion of the Norsemen. A complete interpretation is difficult, but the leading features are easily discernible, and are as follows:

The chaotic world-mass is produced by the blending of heat and cold, and this chaos quickens into the form of the giant Ymir. The asas are the beneficent forces and elements in nature. They separate from the evil and destructive elements (the giants), conquer them by their divine power, and create from them the world, thus producing the earth and its inhabitants.

The power of the world is in the power of the asas, while they themselves are in some respects subject to the decrees of the mighty norns, the goddesses of time and fate. Everything in nature that is good, beautiful, and true is the work of the asas; but the power of the giants manifests itself in all the evil, disturbing and destructive elements of nature. The asas limit but do not destroy the power of the giants. The life of the world is a constant struggle between these contending forces. The asas try to defend what advantage they have, but the giants are constantly seeking to disturb them and to bring ruin upon them. The asas frequently employ the giants for the purpose of elevating and fortifying themselves, but thereby they only weaken their own power. The cunning giant-god, Loke, whom the asas have adopted, deceives and
NORTH 185

betrays them. The power of the giants keeps increasing, and grows more and more threatening to the ancients and to the world.

The contest is finally decided in the last great struggle in Ragnarok, where both parties summon all their strength, and where ancients and giants mutually slay each other. The battle is named Ginnungagap, named by flames from the same primordial source whence the first sparks of life originally came.

But the world is destroyed only to rise again in a more glorious condition. In the reconstruction and regeneration of the world the victory of good over evil is complete. After Ragnarok the divine powers are gathered in that Supreme Being, that unknown God, who was faintly seen from the beginning, but whom no one ventured to name; and the evil being, who so long has cursed the earth, sinks, together with death, into the unfathomable abyss, never to rise again.

For a complete presentation of the religion of the ancient Norsemen, see Anderson, Norse Mythology, or the Religion of our Forsfathers (Chicago, 1875); Keyser, Religion of the Northmen; Thorpe, Northern Mythology (London, 1852, 8 vols. 8vo); Müller, Chippa from a German Woman's Point of View (New York, 1873); and Ch. Ramel, April, 1872, art. viii. See also the articles Mythology; Teutonic Mythology. (R. B. A.)

North is the rendering which the A.V. gives in Job xxxii. 9, for the Hebrew mezarim, בְּמֵצָרִים; properly, as the margin reads, scattering winds, i.e. winds which scatter the clouds, and bring clear, cold weather. (The Sept. has ἀποσπάζον, the Vulg. aeretus.) But Alemon and Michaelis understood mezarim to mean a constellation, and the same as Massaroth (q. v.).

The Hebrews considered the cardinal points of the heavens in reference to a man whose face was turned towards the east; the north was consequently on his left hand (Gen. xxii. 14; Josh. xv, 10; Judg. xxi. 19; Jer. ii. 14); but in the left hand (Gen. xix. 15; Job xxxii. 9). They also regarded what lay to the north as higher, and what lay to the south as lower; hence they who travelled from south to north were said to "go up" (Gen. xiv, 25; Hos. viii, 9; Acts xviii, 9; xix, 3), while they who went from north to south were said to "go down" (Gen. xii, 10; xxvi, 3; xxxiii, 1; 1 Sam. xxx, 15, 16; xxxiv, 1; xxvi, 2).

Elsewhere the word north in our version stands for the Hebrew teswq, תִּשְׁוָה, which is used in several senses: 1. It denotes a particular quarter of the heavens; thus, "fair weather comes out of the north" (Job xxxvi. 29); literally, "gold cloud," which our version, which the Sept., as well as most critical authorities, correctly renders, Figuratively, as meaning the golden splendor of the firmament, i.e. "fair weather" (comp. Zech. iv. 12, "gold-colored oil"). The Sept. gives the "cloud having the lustre of gold," which perhaps corresponds with the Boreas Αἴα, the gilded athar, or sky, of an old Greek tragicall, quoted by Grotius. The same Hebrew word is used poetically for the whole heaven in the following passage: "He stretcheth out the north (literally, the concealed, dark place) (like τὸ ζυόρν, in Homer; Odys. iii, 365; πρὸς ζυόρν, Pindar, Nemee, iv, 112) over the empty places" (Job xxxvi. 7; Sept. ζυόρν). Hence the meaning probably is that the north wind clears the sky of clouds; which agrees with the fact in Palestine, to which Solomon alludes, "the north wind driveth away rain" (Prov. xxv, 23). Homer speaks of the "North wind, producing clear weather" (Il. xv, 171; Od. v, 296). Josephus calls it αἰατρόσαρρος, "that wind which most produces clear weather" (Ant. xv, 9, 6); and Heychius, ἵππιδεογ, or "auspicious;" and see the remarkable rendering of the Sept. in Prov. xxv, 16. The word occurs also in the same sense in the following passage: "Their fire turned about to the north" (Eccles. i, 6); "A whirlwind out of the north" (Ezek. i, 4). 2. It means a quarter of the earth (Psa. evii, 3; Isa. xiiiil, 6; Ezek. xx, 47; xxxii, 30; comp. Luke xii, 32). 3. It occurs in the sense of a northern aspect or direction, etc.; thus, "looking north" (1 Kings vii, 25; 1 Chron. ix, 24; Num. xxxiv, 7); on "the north side" (Psa. xlvii, 2; Ezek. viii, 14; xl, 44; comp. Rev. xxi, 18). 4. It is used as the conventional name for certain countries, irrespectively of their true geographical situation, viz. Babylonia, Chaldea, Assyria, and Media, which are constantly represented as being to the north of Judea, though some of them lay rather to the east of Palestine. Thus Assyria is called the north (Zeph. ii, 13), and Babylonia (Jer. i, 14; xvi, 10, 20, 24; Ezek. xxii, 17; Judith xvi, 4). The origin of this use of the word is supposed to be found in the fact that the kings of most of these countries, avoiding the deserts, used to invade Judea chiefly on the north side, by way of Damascus and Syria. Thus also the kings of the north that were "near" may mean the kings of the north, the Tyrians and the cities of Carthage, of which the people were reckoned by Xenophon among the peoples that were subjected or oppressed by the king of Babylon, and perhaps others besides of the neighboring nations that were compelled to turn to the Babylonian yoke (Jer. xxv, 26). By "the principal or next index of the north" (Ezek. xxi, 27) the Sept. understands the Tyrians and their allies (xxvi, 16), joined here with the Zidonians, their neighbors. "The families of the north" (Jer. i, 15) are inferior kings, who were allies or tributaries to the Babylonian empire (comp. xxv, 14; xi, 22). The "king of the north" (Jer. xxvi, 8) may mean a still inferior class of people, or nations dependent on Babylon. But the "king of the north" is the king of Syria; opposed to the king of the south, i.e. Egypt (Dan. xi, 16-15, 40).

5. The Hebrew word is applied to the north wind. In Prov. xxvi, 16, the impossibility of concealing the qualities of a contentious wife is compared to an attempt to bind the north wind. The invocation of Solomon (Cant. iv, 16), "Awake, oh north, and come, thou south, blow upon my garden that the spices may flow out," and which has occasioned much perplexity to interpreters, seems well explained by Hosea, as simply alluding to the effect of winds from opposite quarters in dispersing the fragrance of aromatic shrubs (ver. 13, 14) far and wide in all directions. A fine description of the effects of the north wind, in winter, occurs in Ecclus. xili, 20, which truly agrees with the "horrible Boreas" of Ovid (Met. i, 65), and in which reference is made to the coincident effects of the north wind and of fire (ver. 21; comp. v, 3, 4), like the "Boreas penetrabile frigus adutor" of Virgil (Georg. i, 80); or Milton's description,

"The parching gale
Burns fierce, and cold performs the effects of fire." Farnese, II, 6, 15.

Josephus states that the north wind in the neighborhood of Joppa was called by those who sailed there Μιληδόνοιον, "the black north wind," and certainly his description of its effects, on one occasion, off that coast is appalling (War, iii, 9, 3). See Notas.

North, Brownlow, a noted English lay preacher, was born shortly after the opening of the present century, and was educated and fitted for business life, but studied at the University of Oxford, and was by his friends, who were of the nobility, intended for the ministry; but he himself, preferring a gay and worldly life, chose the mercantile profession. About 1854 he was suddenly and marvelously impressed with his obligation to his Master, for which purpose he became a Christian, and a Christian missionary worker for the Church. He began his Christian labor in a very modest and quiet manner, but he soon became known and distinguished in more ways than one. His earliest Christian labors were in behalf of the sick. After 1861, while he distributed tracts, he gradually gave himself up to the labor of saving souls, and went about addressing the people in houses, churches, and streets. His earnestness and enthusiasm soon made him
popular, and he frequently was listened to by crowds. In 1850 the general council of the Free Church of Scotland licensed him to preach as an evangelist. He died in the midst of his work at Tillechewan, Scotland, whither he had gone to fulfill a preaching engagement, in December, 1875.

North, John, D.D., a learned English divine, son of Baron Dudley North, was born in London Sept. 4, 1645. Destined for an ecclesiastical life, he was educated at Cambridge University, and there took all his degrees. He then taught Greek in his alma mater, and in 1677 succeeded the famous Isaac Barrow as principal of Trinity College. During the exercise of these duties he continued the collection of the fine library begun by his predecessor. He died in Cambridge in April, 1695. Dr. North was noted for his scholarship, especially a profound acquaintance with the philosophy of Plato; he published a valuable edition of certain writings of that philosopher (Cambridge, 1673, 8vo), and assisted on the Fragmata Fytalograia of Galen. "North was a high Tory, an advocate of absolute monarchy, a severe disciplicanarian, and an austere man in his personal habits. Although his opinions accorded with those prevalent in the university, his conduct as head of a college made him unpopular" (Stoughton, Eccles. Hist. of England, ii, 235). See Roger North, Letters of Sir Roger North and Dudley North, ed. John North (London, 1740, 1742, 5 vols. 8vo); Allibone, Dict. of Brit. and Amer. Authors, s. v. (J. H. W.)

North Side of the Church. The east was regarded as the gate of the prince (Exod. xlviii, 1-3); the south as the light of life, and the soft, warm wind (Acts xxvii, 18); the west as the domain of the people; but the north, as the source of the cold wind, was the abode of Satan. In some Cornish churches there is an entrance called the devil's door, adjoining the font, which was only opened at the time of the renovation made in baptism. In consequence of these superstitions and its sunless aspect, the northern parts of the churchyards are usually devoid of graves. The north side of the altar corresponds to the Greek βότριον μικρὸς and the Latin sinistrum cornu.

Northampton, Councils of (Concilium Northam-ptonense), were held in the 12th and 13th centuries. 1. The first of these, convened Oct. 13, 1164, condemned the bishops, canons, and clergy, for perjury, though it is very clear that the verdict was consequent on a royal threat which promised severe penalties to all who should uphold the prelate. See Wilkins, Concil. i, 483; Labbé, Concil. x, 1483. 2. Another council convened in 1176, by order of cardinal-legate Hugues de Saint-Quentin, was attended by many English and Scottish clergy, who debated the right of authority of the archbishop of York over them. See Wilkins, Concil. i, 483; Labbé, Concil. x, 1496. 3. A third council was held Nov. 2, 1283, by cardinal-legate Octobenus, and condemned all the bishops and priests who had sided with Simon, earl of Leicester. See Wilkins, Concil. i, 762; Raynal, iii, 181.

Northumberland, Earl, Henry Percy, assumed the Wizard, figures in ecclesiastical history for the part he played in the Gunpowder Plot. He was born in 1563, and was a son of Henry, the eighth earl, who died in the Tower in 1585. In the battle against the Invincibile Armada in 1588 he commanded a ship. He was a cousin of Thomas Percy, an accomplice in the Gunpowder Plot (1605); and although the earl himself was a Protestant, he was confined many years in the Tower on suspicion. He acquired the appellation of Wizard by his study of the occult sciences in prison. He died in 1622.

Norton, Andrews, a distinguished American theologian and scholar, was born at Hingham, Mass., Dec. 21, 1786. He graduated at Harvard College in 1804, and afterwards applied himself to the study of theology, but never became a regularly settled minister. He was made tutor in Bowdoin College in 1809; afterwards (1811) tutor and (1813) librarian in Harvard University; and was later appointed Dexter professor of sacred literature in the same institution (1819). He held this office until failing health obliged him to retire in 1830, and he lived the remainder of his days at Cambridge, where he led a retired and pious retirement, varied by cordial and generous hospitality. He died at Newport, R. I., Sept. 18, 1853. Dr. Norton was, after Dr. Channing, the most distinguished American exponent of Unitarian theology. He was a clear and perceptive lecturer, an able and conservative critic, and virulent writer. Rejecting the doctrine of the Trinity, and protesting against Calvinism, he also opposed the school of Theodore Parker and the naturalistic theology. Besides his contributions to the General Repository and Review, the North American Review, and Christian Examiner, his most important publications are, The Evidence of the Genuineness of the Gospels (2d ed. Cambridge, Mass., 1846, 3 vols. 8vo; London, 1847, 2 vols. 8vo). The author's arrangement of the work is as follows: Part I. Proof that the Gospels remain essentially as they were originally composed. Part II. Proof that the Gospels are historical and ascribed to their true authors. Part III. On the evidences for the genuineness of the Gospels afforded by the early heretics. It is a contribution to American Biblical literature of the very highest order. No person of a sound mind or a catholic spirit can feel any objection to the lucidity and strength of its reasoning, and the precision and purity of its dictation. Professor Peabody, in a review of it in the North American Review (xlv, 206-222), says: "Norton has placed beyond dispute the authorship of our canonical Gospels; and this point being established, little is left for the defending the Christian faith; for if our Gospels were written by the men whose names they bear, the authenticity of their records and the divine mission of their great Teacher hardly need the show of argument." (See Dr. Davidson's Lectures on Biblical Criticism, p. 399 sq.; Elish. Rev. 4th. ser. xxiii, 423; London, Christ. Reformer; Lond. Proprietary Review; Amer. Bibl. Repos. xi, 265 [by Moses Stuart]; Boston Christian Review, iii, 58; and the articles [by A. Lamsen] in Christ. Exum. xii, 921; xxxvi, 146; xliii, 104). Norton wrote also A Statement of Reasons for not Believing the Doctrine of Transubstantiation concerning the Nature of God and the Person of Christ (Cambridge, 1838, 12mo; new ed. with a Memoir of the Author by Dr. Newell [Boston, 1856, 12mo]):—On the latest Form of Infidelity (1839; see Prent. Rev. xii, 31), a work which was answered by a champion of Transcendentalism, to which Norton had contributed (see preceeding note). These controversies over the Scripture History (Boston, 1832, 1 vol. 8vo):—Internal Evidences of the Genuineness of the Gospels. Part I. Remarks on Christianity and the Gospels, with particular Reference to Strauss's "Life of Jesus." Part II. Portions of an unfinished Work (ibid. 1853, 8vo):—A Translation of the Gospels, with Notes (ibid. 1855, 2 vols. 8vo):—A task which, in the judgment of some, did not prove creditable to Prof. Norton. See Darling, Cyclop. Bibl. ii, 2215; Men of the Times, s. v.; Trimmer, Guide to Amer. Literature, s. v.; and especially Allibone, Dict. of Brit. and Amer. Authors. A.D.

Norton, Asahel Strong, D.D., a Congregational minister, was born at Farmington, Conn., Sept. 29, 1765, and was educated at Yale College, class of 1790; then entered upon the studies of the ministry, and was ordained at Clinton, N. Y., in 1798; holding successively several important pastorates in Western New York, and entering upon the Disciples of Christ as an important influence. Dr. Norton died May 10, 1833, at Clinton. He was one of the founders of Hamilton College, situated at that place. See Sprague, Am. ii, 332.

Norton, Herman, an American Presbyterian minister of some note, was born in New Hartford, N. Y.
NORTON

187

NORWAY

July 2, 1799. When about seventeen years old he was
converted at Auburn, N. Y., and, being poor, he was pro-
vided for by friends of the Presbyterian Church which he
had joined, and sent to Hamilton College, and after-
wards to Auburn Theological Seminary, to fit himself
for the ministry. As soon as he had entered the min-
istry he commenced preaching the Gospel, at first as an
evangelist, in which capacity his labors were very suc-
cessful. In 1817 he was elected a Deacon of the State of
New York, and in this capacity he served with distinc-
tion. Subsequently he preached at Cincinnati and elsewhere.
Wherever he went, his labors were eminently useful to
the conversion of sinners, and to the aiding of believers
in their spiritual life. In the year 1848 Mr. Norton was
chosen corresponding secretary of the American Prot-
estant Society, and thenceforward made New York
the home of his family and the centre of his labors. His
zeal and success in the work of evangelizing the rural
population of the country, in connection with that so-
ciety as its chief officer, are well known. He was at
one time corresponding secretary of the Presbyterian
Medical Society, and general agent for the collection of
funds. When the American Protestant Society, the Foreign Evange-
elical Society, and the Christian Alliance were united,
and became the American and Foreign Christian Union,
Mr. Norton was chosen one of the corresponding secre-
taries. In the discharge of the duties of his office he
labored as faithfully as his health permitted, till his
death, December, 1851. In the sufferings of the exiles
from Madeira he took a very deep interest. It was
greatly owing to him that so many of them came to
this country. His efforts in their behalf were increased
from the time of their landing in New York till the last
company left for Illinois, in the month of November,
1830. The excellent volume from his pen, entitled
Proceedings and Facts concerning the Persecutions at
Madeira, in which the history of that suffering people is faith-
fully given, has been extensively read, and is an endur-
ing monument of his heartfelt interest in their behalf.
His remains rest in the same tomb where lie those of
five of those excellent people, one of whom was the de-
mort and greatly beloved Da Silva. Norton also pub-
lISHED: A Discourse on the Christian and Jewish Faiths
Facts about the Protestant.—The Christian and
Deist, an excellent work; and several Tracts relating
to Romanism, published by the society of which he was
secretary. See Christian Union, January, 1851.

Norton, John (1), an eminent Presbyterian di-
\ncine minister, was born in 1829; educated at the Univer-
sity of Cambridge; and, after taking holy orders in the Anglican Establishment, was
made curate of Stamford. A lecture was at that time
supported at Stamford by a number of pious ministers.
Through their labors Mr. Norton, who was himself a
preacher, though, like many others, ignorant of his own
character, and unacquainted with the truth as it is in
Jesus, was impressed with a sense of his sin, and by the
agency of the Holy Spirit was brought to repentance.
The view of his own heart and life, compared with the
holy law of God, almost overwhelmed him with despair;
but at length the promises of the Gospel administered to
him inexpressible joy. His attention had been hitherto
occupied in literary and scientific pursuits, but he now
devoted himself exclusively to the study of theology;
and being by his own experience acquainted with re-
pentance, he was enabled to minister to others during
these subjects with zeal and effect. He soon became
eminent. He adopted the creed and practice of the
Puritans, and in 1635 emigrated to New England. He
was first settled in the ministry at Ipswich, but was after-
twards prevailed on to remove to Boston. In 1632 he
was appointed one of the two agents of the colony to
address king Charles on his restoration, but they did
not fully succeed in the objects of their mission. He
wrote the History of New England, and died in 1655
somewhat irascible, but being taught by the grace of
God to govern his passions, his renewed heart rendered
him meek, courteous, and amiable. Still a mistaken
zeal for the truth made him, as it made his contem-
poraries, prone to persecution. He wrote, The Orthodox
Evangelist, or a Treatise wherein are many great evangelical
Truths are briefly discussed, etc. (London, 1654, 4to)—
The Sufferings of Christ (1658) —The Heart of New Eng-
land rent by the Blasphemies of the present Generation,
or a Brief Tractate concerning the Doctrines of the Quak-
ers (1660) — and a number of Political Tracts, etc.

Biog. s. v.; Allibone, Dict. of Brit. and Amer. Authors,
v. e.

Norton, John (2), an American Presbyterian min-
ister, nephew of the preceding, was born about 1660,
was educated at Harvard University, class of 1671, and,
after entering the ministry in 1685, became second pas-
tor at Hingham, Mass. He died in 1716. He was
noted as a pulpit orator of no mean order, and generally
beloved by his people. See Lincoln, Hist. of Hingham.

Norton, John (3), a Congregational minister, was
born at Berlin, Conn., in 1716, and was educated at Yale
College, class of 1737. He then pursued a course in the
theology of his denomination in Southfield, Mass., where
he was ordained in 1741. He settled as pastor at Bernardston,
Mass. During the colonial war he was chaplain at Fort Massa-
chetts, and at the time of its capture was taken to Cana-
da. He remained there one year, and returned to
Boston. Nov. 28, 1748, he was installed pastor of the
Congregational Church at East Hampton, Conn., where
he labored nearly thirty years. He died March 24, 1778.
Norton published a narrative of his captivity at
Boston (1748; a new edition, with notes by S. G. Drake,
was brought out in 1770).

Norton, Noah, a Baptist minister, was born near
the close of the last century. He was early converted;
ordained for the ministry in 1822; and became pastor of
the Second Church in Providence, Me. In 1836 he be-
came pastor of the Church in Brunswick, and died in 1851. "He was a good minister of Christ." See Amer.
Baptist Register, 1862, p. 419.

Norway (Norweg. Norge), the western portion of
the Scandinavian peninsula, which, together with Swe-
eden, forms the great kingdom of Sweden and Norway, is situated between 56°
58′ and 71° 10′ N., and between 5° and 28° E. long.
It is bounded on the E. by Sweden and Russia, and on
every other side is surrounded by water, having the
Skager Rack to the S., the German Ocean to the W.,
and the Arctic Sea to the N. Its length is about 1,100
miles, and its greatest width about 250 miles; but be-
tween the latter of 67° and 68° it measures little more
than 25 miles in breadth. The area is given as 122,580
square miles, and the population (in 1885) as 1,806,900.
The whole of the Scandinavian peninsula consists of a
mass of mountainous masses, which, in the southern and
western parts of Norway, constitutes one continuous
tract of rocky highlands, with steep declivities dipping
into the sea, and only here and there broken by narrow
tracts of arable land. Of the numerous summits which
lie along the coast one of the line of perpetual snow, the highest, known as the Gaalhogig, has
an elevation of 8,000 feet. The mean level of the
range, which seldom rises more than 4,000 feet above
the sea, is occupied by extensive snow-fields, from which
glaciers descend to the edge of the sea, while here and
there the coast is bordered by the following inlets:
Fiords (L. firths), some of which, as the Foden Fjord, penetrate
upwards of seventy miles through the rocky masses.
These inlets run, in many cases, through the middle of
long and broad finely wooded valleys, enclosed by rocky
walls, which are either quite bare, or covered with
lichen or mosses or stunted brushwood, among which
falls of water pour perpendicularly down the mountain-side. The Scandinavian range consists principally of primitive and transition rock, and exhibits almost everywhere the effects of glacial action, the glaciers and moraines presenting the same appearances as in the Swiss alpine district. The numerous islands which skirt the coast of Norway, and must be regarded as portions of the same mountainous mass, present the greatest contrast to the continental mass. Some of these, as the islands of Alsten and Donnes, rise perpendicularly from the sea with peaks penetrating beyond the snow-line, which lies here at an elevation of 4000 feet. Norway abounds in falls of water, which form so characteristic a feature of the Norwegian scenery, and give with their various sinuosities a coast-line of upwards of 8000 miles, form the outlet to numerous rapid streams and waterfalls, which leap or trickle down the edges of the treeless fields or mountain data above.

The peculiarly favourable climate of Norway necessarily gives rise to great varieties of climate in different parts of the country. In the influence of the sea and of the Gulf Stream, and the penetration of deep inlets into the interior, greatly modify the severity of the climate on the western shore, and render it far superior to that of the other Scandinavian countries in the same latitude. On the coast generally rain and fog prevail; while in the region near the North Cape storms are almost incessant, and rage with extraordinary violence. In the interior the air is clear and dry. The longest day, which in the south is eighteen hours, may be said to be nearly three months in the high latitudes of the northern districts, where the longest night lasts almost an equal length of time. In Norway proper the winters as a rule are long and cold, and the summers, which rapidly follow the melting of the snows, short; May and June are particularly pleasant. On the islands, however, the heats of summer are often insufficient to ripen corn. The protracted winter of the northern regions follows almost suddenly on the disappearance of the sun, when the absence of solar light is compensated for by the frequent appearance of the aurora borealis, which has a pleasant effect in the nights of these parts and allows the prosecution of ordinary occupations. It is estimated that one thirty-eighth of the area of Norway lies within the region of perpetual snow, while a large extent of the mountain districts affords no produce beyond scanty grasses, mosses, lichens, and a few hardy berry-yielding plants. Only birch and juniper grow north of 67°, which is the boundary of the pine. The Scotch fir, Pinus sylvestris (Norwegian, Farn), and spruce, P. abies (Norwegian, Grom), cover extensive tracts, and, with birch, constitute the principal wealth of Norway. The hardier fruits, apples, cherries, cherries, and raspberries, are abundant and excellent of their kind. Hemp, flax, rye, oats, and barley are grown as far north as 65°; but although agriculture has been more systematically pursued of late years, the crops are not always sufficient for home consumption, and hence it is found absolutely necessary to import annually considerable quantities of corn and potatoes.

In 1812 there was so great a famine that the people made bread from the bark of elm. In the northern parts, in the upper valleys, the rearing of cattle constitutes an important branch of national industry. The cattle are reared on grass in summer and in winter on corn. The farming is carried on from the distant farms to the pasture-lands in these high mountain valleys, known as Seterdale, where they remain till the approach of cold weather obliges the herdsmen to return with their charges to the shelter of the farms. Although the cattle and horses are small, they are generally strong and capable of bearing much hard labor. The fisheries of Norway are of great importance, and not only yield one of the most important articles of home consumption, but at the same time contribute to the revenue of the state. Fish is caught in almost every stream and lake of the interior, as well as in the fjords of the coast, and in the bays and channels which encircle the numerous islands skirting the long sea-line of Norway. Salmon, cod, herring, and mackerel, bream, hake, and cod-fish are found in the latter alone giving employment to some 16,000 or 18,000 men. The mineral products, which comprise silver, copper, cobalt, iron, chrome ironstone, etc., yield an annual return of nearly $800,000. The richest mines are situated in the south. Latterly some productive copper-smelter have also been opened in northern counties. Ship-building in all its branches is almost the only industrial art that is extensively and actively prosecuted. In many parts of the country there are absolutely no special trades, the inhabitants of the small fishing-ports, less than the inmates of the widely separated farms, employ themselves during the long winter by spinning, weaving, knitting, spinning, and making the articles of clothing and the domestic implements required in their households. The fauna of Norway includes the bear, wolf, lynx, elk, otter, reindeer, red-deer, seal, the elder-duck, and many other birds of the blackcock, capercailzie, and a great variety of small game.

Government, etc.—Although Norway constitutes one joint kingdom with Sweden in regard to succession, external policy, and diplomacy, it is in all other respects an independent state, having its own government, legislative machinery, finance, army, navy; the king is indeed commander-in-chief of all the forces of the country, whether military or naval; but he can neither augment nor decrease their number, nor proclaim peace or war, without the assent of the Norwegian Parliament (Storting), which consists of natives of the country; nor, except in time of war, can he bring foreign soldiers within the frontiers, or send native troops out of Norway. He must visit Norway once every year; and, in his absence affairs are administered in the name of his representative, who may be a Swede, and who is chosen by popular suffrage. The population is divided into twenty amts, or administrative circles, subdivided into fifty-five bailiwicks, and each of these is presided over by a rural magistrate. Norway has a representative government, based on the constitution which was established in 1814, and modified in 1862. The king, who holds the office of supreme head of state, but is subject to the will of the people and allows the prosecution of ordinary occupations. It is estimated that one thirty-eighth of the area of Norway lies within the region of perpetual snow, while a large extent of the mountain districts affords no produce beyond scanty grasses, mosses, lichens, and a few hardy berry-yielding plants. Norway's government—Although Norway constitutes one joint kingdom with Sweden in regard to succession, external policy, and diplomacy, it is in all other respects an independent state, having its own government, legislative machinery, finance, army, navy; but he can neither augment nor decrease their number, nor proclaim peace or war, without the assent of the Norwegian Parliament (Storting), which consists of natives of the country; nor, except in time of war, can he bring foreign soldiers within the frontiers, or send native troops out of Norway. He must visit Norway once every year, and, in his absence affairs are administered in the name of his representative, who may be a Swede, and who is chosen by popular suffrage. The population is divided into twenty amts, or administrative circles, subdivided into fifty-five bailiwicks, and each of these is presided over by a rural magistrate. Norway has a representative government, based on the constitution which was established in 1814, and modified in 1862. The king, who holds the office of supreme head of state, but is subject to the will of the people and
be frank, yet cautious and reserved, honest, moderate, religious, and superstitious, more from an inveterate love of clinging to the traditions of their ancestry than from fanaticism. Their love of country, and their irrepressible fondness for the sea, by the very anomaly which these apparently contradictory propensities exhibit, show them to be the true descendents of the sea-roving Northmen of old. Of late years emigration has on the contrary increased, which threatens to be a serious evil so to thin popula-
ted a country as Norway, but which is easily explained by the small portion of land capable of cultivation. The general diffusion of education, and the perfect equality and practical independence which they have known how to preserve, as well as the religious and political freedom belonging to their nominal incorporation with the other Scandi-
navian kingdoms, give to the poorest Norwegians a sense of self-respect and self-reliance which distinguishes them favorably from those of the same class in other countries. The population of Norway is chiefly rural, only about eleven per cent. living in towns. Christians, the principal city, has not more than 125,000 inhabitants, while Bergen and Trondhjem have respectively only 63,000 and 24,000. The physical character, and conse-
quently climatic relations of Norway, leave a very small proportion of the soil capable of being cultivated (two per cent.) of the area capable of being cultivated; for it may be stated generally that the valleys are the only habitable and agriculturally productive parts of the country, the mountain-ridges which separate the low-
lying lands being covered with bare masses of gneiss and granite or are steep deserted mountains. The soil most favorably adapted for tillage is juniper, fir, aspen, birch, and stunted beech.
There are few villages, and the isolated farm-
steads are often separated from one another by many miles. The cultivators of the land are in most instances also the proprietors, less than one third of the whole number being tenants only. The peasants, more es-
cially in the amts remote from towns, retain their an-
cient provincial costumes, which are, for the most part, highly picturesque, consisting, among the women, of ample woolen skirts and brightly colored knit bodices, fastened and adorned with silver or brass clasps and buckles. Music is much cultivated by all classes of the people, and the national songs and melodies which are the favorites are for the most part of a melancholy char-
acter. Danish is the language in ordinary use both in writing and speaking, although dialects nearer akin to the modes of speech of the whites of Greenland and the people of the Labrador and of the native inhabitants of Labrador and thus, in fact, to revive the ancient Norse, or Ice-
landic, which has been preserved in Iceland in almost perfect purity since its first introduction into the island in the 9th century by colonists from the Scandinavian mother-lands.

History, Ecclesiastical, and Religious.—The early history of Norway is comprised in that of the other Scandina-
vian countries, and is, like theirs, for the most part fab-
ulous. It is only towards the middle of the 10th cen-
tury, when Christianity was introduced, that the myth-
ical obscurity in which the annals of the kingdom had been previously plunged begins to give place to the light of historical truth. The introduction of Christiani-
ty, which was the result of the intercourse the Nor-
wegians had with the more civilized parts of Europe through their maritime expeditions, destroyed much of the old nationality of the people, and the heroic spirit which they had hitherto cherished, although the sanguinary feuds which had raged among the rival chiefs of the land can scarcely be said to have lost their fe-
ocity under the sway of the milder religion. The first introduction of Christianity into Norway is gener-
ally ascribed to Hakon, a prince of the country, before
the middle of the 10th century. This person had re-
ceived a Christian education at the court of Athelstan, on the king of England, and after his return to his own land, he found his countrymen zealously devoted to the worship of Odin; and having himself embraced Christianity, he was under the necessity of worshipping in secret. At length, having gained over some of his most intimate friends to the side of Christianity, he resolved, as he had become the leader of the kingdom's profession of Chris-
tianity as the religion of the country. Accordingly, he proposed, A.D. 990, before an assembly of the people, that the whole nation should renounce idolatry, and worship the only true God, and Jesus Christ his Son. He suggested also that the Sabbath should be devoted to religious worship, and to the study of the Holy Scrip-
ture. These royal propositions were indignantly re-
jected both by nobles and people; and the king, to conciliate his enraged subjects, yielded so far as to take part in some of the ancient sacred rites and customs. In parti-
cular, as at the celebration of the Yule festival, he consented to eat part of the liver of a horse, and to drain all the cups drunk to his honor. In consequence of this sinful participation in manifest idolatry, he was soon after seized with the most painful remorse, and he died deeply penitent for the scandal he had brought upon Christianity.

In a short time, however, the way was opened for the more effectual admission of the Christian religion by the elevation to the throne of Olaf I, a Norwegian king, who was favorable to Christianity. "This Olaf," to quote from Neander, "had traveled extensively in foreign lands: in England, Greece, and England, and the neighboring parts of Northern Germany. By in-
tercourse with Christian nations, in his predatory ex-
cursions, he had obtained some knowledge of Chris-
tianity, and had been led, by various circumstances, to see a divine power in it. In some German parts he had be-
come acquainted, among others, with a certain ecclesi-
asian from Bremens, Thangbrand by name, a soldier-
priest, whose temper and mode of life were but little suited to the spiritual profession. This person carried about with him a large shield, having on it a figure of Christ on the cross, embossed in gold. The shield at-
tracted Olaf's particular notice. He inquired about the meaning of the symbol, which gave the priest an opportu-
tunity of telling the story of Christ and Christianity. Observing how greatly Olaf was taken with the shield, Thangbrand made him a present of it, for which the Norse chief very readily repaid him in gold and valu-
ables. He moreover promised to stand by him if he should ever need protection. In various dangers by sea and on the land, which Olaf afterwards encountered, he be-
lieved that he owed his life and safety to this shield; and it became a badge of his assertion of his power and strength. At the Scilly Isles, on the south-
west coast of England, he received baptism, and returned to Norway, fully resolved to destroy paganism. In England he had met again with the priest Thangbrand. Olaf took him back to Norway in capacity of a court 
clergyman; but no good resulted from his connection with this person of doubtful character. Inclined of his own accord to employ violent measures for the destruc-
tion of paganism and the spread of Christianity, he was only confirmed in this mistaken plan by Thangbrand's influence." On reaching Norway, and taking possession of the government, Olaf directed his chief efforts to-
wards the introduction of Christianity as the religion of the country. He everywhere destroyed the heathen temples, and invited all classes of the people to submit to baptism. Where kindness failed, he had recourse to the sword. On his landing, he impartially cut the heads of his subjects were cut short in the year 1000. He died in a war against the united powers of Denmark and Sweden.

Norway now passed into the hands of foreign rulers, who, though favorable to Christianity, took no active measures for planting the Christian Church in their
newly acquired territory, and the pagan party once more recovered the nominal rights. But this state of matters was of short continuance. Olaf the Thick (usually Banned the Saint), who delivered Norway from her foreign rulers, came into the country in 1015, when already a decided Christian, with bishops and priests whom he had brought with him from England. He resided for a season at Christen, a name of a town underly upon the monasteries, and accordingly the obdurate and refractory were threatened with confiscation of their goods, and in some cases with death itself. Many professed to yield through fear, and submitted to be baptized; but they continued secretly to practice their pagan ceremonies. In the province of Dalhousie the country was headed by one named Gudbrands, who assembled the people, and persuaded them that if they would only bring out a spiritual statue of their great god Thor, Olaf and his whole force would melt like wax. It was agreed on both sides that the party should try the power of its own god.

The night preceding the meeting was spent by Olaf in secret prayer. Next day the colossal image of Thor, adorned profusely with gold and silver, was drawn into the public place, where crowds of pagans gathered around the image. The king stationed beside himself Kolbein, named the strength, a man of great stature and great bodily strength. Gudbrands commenced the proceedings by challenging the Christians to produce evidence of the power of their God, and pointing them to the colossal image of the mighty Thor. To this boastful challenge the bishop answered by denouncing the worshipping a blind and dead god, and calling upon them to lift their eyes to heaven, and behold the Christian's God as he revealed himself in the radiant light. At the utterance of these words the sun burst forth with the brightness of effulgence, and at the same moment Kolbein demolished the idol with a single blow of a heavy mallet which he carried in his hand. The monster fell, crumbled into fragments, from which crept a great multitude of mice, snakes, and lizards. The scene produced a powerful effect upon the pagans, many of whom were from that moment convinced of the utter futility of their idols. The test was, however, in which Olaf had conducted his government, prepared the way for the conquest of the country by Canute, king of Denmark and England. The banished Olaf returned, and, raising an army composed wholly of Christians, made arrangements for the conquest of this state. He fell mortally wounded in battle, Aug. 31, 1000—a day which was universally observed as a festival by the people of the North in honor of Olaf, whom they hesitated not to style a Christian martyr. This monarch, whose memory was long held in the highest estimation, had labored zealously for the spread of the ancient rites, but this state of things was annihilated.

Named Skopele equipped a squadron of five vessels, and sailed, accompanied by his three sons, for Jerusalem, but died at Rome, where he had stopped to perform his devotions. The expedition was continued by his sons, none of whom survived the journey. The fame of this exploit, and the marvellous tales of other pilgrims, led Sigurd, the king of Norway, to undertake a pilgrimage there, and, for the purpose and as a show of force, to equip an avenerous desire of plunder, the royal pilgrim was set out with a fleet of sixty vessels, surmounted with the sacred banner of the cross, and manned with several thousand followers. After wintering in England, where they were hospitably treated by Henry I, the Norwegian party returned to Norway, where they met with many hardships, plundering various places, and barbarously murdering tribes of people who refused to become Christians, they paid the accustomed visit to Jerusalem and the other holy places. Sigurd, on his return home, was solicited by the king of Denmark to join him in an attack upon the inhabitants of Smalund, who, after being nominally converted to Christianity, had relapsed into idolatry, and put to death the Christian missionaries. The king of Norway responded to the invitation, and, passing into the Baltic, punished the rebels, took their country and drove them into the booties. After a reign of twenty-seven years, Sigurd died in 1130. From this period Norway became, for more than a century, a prey to barbarous and destructive civil wars. In the midst of these internal commotions, the inhabitants of the islands were occupied with the worship of Thor, as afterwards known as pope Adrian IV, arrived in Norway as legate from the Romish see. The chief object of his mission was to render the kingdom ecclesiastically independent of the authority of the archbishop of Lund—an arrangement which was earnestly desired by the Norwegian kings. An archbishop of this see was accordingly erected at Trondhjem, and endowed with authority, not only over Norway, but also over the Norwegian colonies. Rejoicing in their spiritual independence, the people readily consented to pay the accustomed tribute of Peter's pence to Rome, but they strenuously resisted the offer of the pope's legate to insist upon the celibacy of the clergy. "In various other things," says Saurer, "the papal legate reformed the manners and customs of the nation during his stay, so that there never came to this land a stranger who was more handsome or more voracious than the master of the crown. Peter's pence was accordingly imposed on the inhabitants of the islands by the papal legate, and the Church of Norway had now accepted a metropolitan at the hands of the pope of Rome, and this acknowledgment of subjection to the Romish see was soon followed by other concessions which seriously compromised the liberties of the country. The ambivalent prelate of the new See was soon imposed on Norway, but the people were patient and obedient to add to the influence and authority of the priory. With this view he succeeded in bringing it about that the realm was hereafter to be held as a fief of St. Olaf, the superior lord being represented by the archbishops of Trondhjem, whose consent was made indispensable for filling the vacant throne. On the demise of the reigning king, the crown was to be religiously offered to St. Olaf, in the cathedral where his relics were deposited, by the bishops, abbots, and twelve chieftains from each diocese, who were to nominate the successor with the advice and consent of the clergy. Thus taking advantage of the incessant contentions for the sovereignty by which the country was agitated and disturbed, the Romish primate secured for the see of Trondhjem a perpetual control over the future choice of the Norwegian kings and queens. When the last of the Norwegian kings made a pilgrimage to Rome, the crown was declared an ecclesiastical fief, and the government almost converted into a hierarchy. A young adventurer named Sverre seized on the crown of Norway, and his title was ratified by the sword as well as by the general acquiescence of the nation. The prince, however, refused to perform the usual ceremony, being afraid of the royal displeasure, fled to Denmark. Thence he transmitted an appeal to Rome, in consequence of which
the pope launched the thunders of the Vatican against Sverre, threatening him with excommunication unless he instantly desisted from his hostile measures against the prince. The sovereign, having been educated for the priesthood, was well skilled both in canon law and ecclesiastical, and he found no difficulty, therefore, in showing both from Scripture and the decrees of council how it was his right to full and free dispute between kings and their subjects. Anxious for peace, however, Sverre applied for a papal legate to perform the ceremony of his confirmation, but was refused. The king was indignant at this proceeding on the part of Rome; and reproaching the Roman ambassadors, he accused him for the manner of his pontificate. As a last resource, the enraged monarch summoned together the prelates of the realm, and caused himself to be crowned by bishop Nicholas, who had been elected through his influence; but the proceeding was condemned by pope Alexander III, who excommunicated both the royal and the clerical offender. Deputies were soon after despatched to Rome, who succeeded in obtaining a papal absolution for the king; but on their return they were detained in Denmark, where they suddenly died, having previously pledged the papal butchers of Sverre, by the emissaries of the German university. The important document thus found its way into the hands of Sverre, who read it publicly in the cathedral of Trondheim, alleging that the deputies had been poisoned by his enemies. The whole transaction seemed not a little favourable to the interests of the German university in Norway. The pope with having forged the bull, and procured the death of the messengers; and on the ground of this accusation the kingdom was laid under an interdict (q.v.). Bishop Nicholas now abandoned the king, whose cause he had so warmly espoused, fled to the priory in Denmark, and there raising a considerable army, invaded Norway; but Sverre, aided by a body of troops sent from England by king John, succeeded in defeating the rebels. The king did not long survive this victory, but worn out by the harassing contests to which for a quarter of a century he had been subjected, died about this time.

It had for a long time been the evident tendency of the government of Norway to assume the form of a sacerdotal and feudal aristocracy. This tendency, however, was arrested to some extent by the first princes of the house of Hoved, who asserted the rights of the monarchical against the encroachments of the clergy and the nobles. But it was more difficult to contend with the Romish see, which has often been able to accomplish more by secret machinations than in open warfare. When the king of Denmark, after the death of the archbishop of Trondheim had been invested of controlling the choice of the mon兄弟 on every vacancy, the papal Church induced the crown to confirm the spiritual jurisdiction of the prelates with all the ecclesiastical endowments, even to the exclusion of lay founders from their rights of patronage. The prelates were allowed to coin money, and maintain a regular body-guard of one hundred armed men for the archbishop, and forty for each bishop. One concession was followed by another; and the archbishop of Trondheim, taking advantage of the youth and inexperience of Erik, son of Magnus Hakonsson, who ascended the throne in 1290, at the age of twelve, extorted from him at his coronation an oath that he would render the Church independent of the secular authority. Having gained this point, the arduous prince proceeded to act upon it by publishing an edict that imposed new fines for offences against the canons of the Church. The king's advisers refused to sanction the bold step taken by the prince; and to vindicate his spiritual authority, he excommunicated the royal councillors. The king in turn banished the prince, who withdrew out for a time to lay his cause before the pope. When on his way home again he died in Sweden, and his successor having acknowledged himself the vassal of Erik, the contest was terminated, and the pretensions of the clergy reduced within more reasonable limits. In the latter part of the 14th century, the three kingdoms of Norway, Denmark, and Sweden were united under one sovereign; and this union of Calmar, as it was called, existed nominally at least from 1397 to 1521, during which long period there was an incessant struggle for superiority between the crown and the clergy.

Reformation in Church and State.—So harassing were the repeated encroachments of the Romish hierarchy to the Norwegian government and people, that the Reformation was gladly welcomed as likely to weaken the power and abridge the prerogatives of the papists. Many Norwegian vikings had lived in the universities of Heidelberg and other German universities, where they had imbibed the doctrines and principles of the Reformers, and on their return home they found both rulers and people ready to embrace the Reformed faith. But what tended chiefly to facilitate the progress of the Reformation in Norway was the election of Christian III to the throne by the lay aristocracy of the kingdom. As he had himself been educated in the Protestant faith, his accession was violently opposed by the archbishop of Trondheim and the other Romish prelates. The zeal of the king, however, was so great that the latter was opposed by the bishop, and he resolved to introduce the reformed worship as the religion of the state. A recess was accordingly passed and signed by more than four hundred nobles with the deputies of the commons, providing for the temporal and spiritual government of the bishops should be forever taken away, and the administration of their dioceses confided to learned men of the Reformed faith, under the title of superintendents. 2. That the castles, manors, and other lands belonging to the prelates and monasteries should be annexed to the crown. 3. That their revenues should be reformed; the regular clergy who might not choose to be secularized should be allowed to remain in their respective cloisters, upon condition that they should hear the word of God, lead edifying lives, and that their surplus revenues should be devoted to the support of hospitals and othernecessary establishments. 4. That the rights of lay patronage should be preserved; the clergy to act from the peasants only their regular title, one third of which should be appropriated to the support of the curate, one third to the proprietor of the church, and the remaining one third to the poor, and schools of learning. The king consulted Luther upon the manner of carrying this recess into effect, and by his advice, instead of secularizing the Church property, he reserved a certain portion for the maintenance of the Church, and for the benefit of the poor and charity; but a large part of the ecclesiastical lands ultimately came into the possession of the nobility by successive grants from the crown. Thus fell the Romish hierarchy in Denmark and Norway; and its destruction marked the epoch of the complete triumph of the lay aristocracy over the other orders of the state, which they continued to enjoy until the revolution of 1660.

The cause of the Reformation met with little opposition in Norway. From its first introduction it continued to hold its ground, and to diffuse itself among all classes of the people with the most gratifying rapidity. The Church became strictly Lutheran, and, though nominally episcopal, the bishops were vested only with the power of superintendents. Matters went on smoothly without any peculiar occurrence to disturb the ordinary course of events. But towards the end of the last century the Church was much quickened, spiritually, through the efforts of Hans Nielsen Hauge (q.v.), a remarkable person, who has earned for himself the honorable appellation of the Norwegian Reformer. Hauge was not a dissenter from the established Lutheran Church, but by his writings, nor his writings did he teach any difference of doctrine. He enforced purer views of Christian morality, while he taught at the same time the doctrines of the Church.
He called for no change of opinion or of established faith, but for better lives and more Christian practice among both clergy and laity. And he taught only the doctrines of the Church, casting out the fables and wicked imaginations of men—lifting up his voice against the coldness, the selfishness, the worldliness, and the asceticism of the clergy—for even into Norway theology had made its way, though it had not been taught. This is all he knew, and he thought it all he wanted to know. The people were content with it, and he was content with them.

The political connection which, ever since the union of Calmar, had subsisted between Norway and Denmark, was brought to a close in 1814, Bernadotte, king of Sweden, having received Norway in compensation for the loss of Finland. Norway was united with Sweden and the Danes were united with the Swiss and the Dutch. It was a most unfortunate event, and it has never been able to recover from it.

The Church of Norway is divided into two parts: the northern and the southern. The northern part is divided into five dioceses, and the southern into seven. The archbishop is the head of the Church, and he is assisted by a bishop and a number of priests. The Church is governed by a council, which consists of the archbishop, the bishops, and the priests.

The political connection which, ever since the union of Calmar, had subsisted between Norway and Denmark, was brought to a close in 1814, Bernadotte, king of Sweden, having received Norway in compensation for the loss of Finland. Norway was united with Sweden and the Danes were united with the Swiss and the Dutch. It was a most unfortunate event, and it has never been able to recover from it.

Norway was united with Sweden and the Danes were united with the Swiss and the Dutch. It was a most unfortunate event, and it has never been able to recover from it.
delegates from all parts of the country, and while the great audience was from the masses, the decisions were rigid and in the whole bearing on the future life of the nation. The king attended the sessions, and listened very earnestly to the proceedings. The delegates declared that the members of a Church have a full right to express their opinions; that they should enjoy perfect liberty of conscience; that in case of being wronged, they have the right to appeal to the civil authorities; and that if their appeal does not meet with favor, they have the right to organize themselves into an independent Church. There is every prospect that this convention will have the final effect of changing the old laws of Norway, and, among other changes, of calling them into aное, establishing a new church for the majority of the protestant churches that have been set up persistently against missions from non-Scandinavian or non-Lutheran churches. Two missions are supported in Norway by American Protestants, but they are more or less watched by the Swedish authorities. The Bap-

tists have been measurably successful; the Methodists are increasing in numbers, and acquiring much property. Their headquarters are at Christiania, under the superintendence of a regularly appointed pastor.

As the ecclesiastical organisation has hitherto been an over-entails the whole management of ecclesiastical matters has been left to the individual parishes, and the clergy have been, in every case, the men of the parish or to the prost or the probar (q.v.). The proposed alterations will in all probability yet become the law of the land, thus admitting the lay element into the govern-

ment of the Church, and give general and broad religious liberty. The clergy consist of three orders—bishops, prostors, and priests—differing from each other not in rank, but in official duty. The priest is required to preach, to administer the sacra-

ments, to dispense confirmation, and to preside at the board which in every parish manages the poor-fund. The bishop, who is also a priest or clergyman of a parish, is bound, in addition to the discharge of his ordi-

nary clerical duties, to make an annual visitation of the different parishes within his circuit, to examine the children in the different schools, and also the candidates for confirmation. He also has the duty of the visitation of the ecclesiastical affairs of the parish. Of all these things the prost or must render a regular report every year to the bishop. The bishops, of whom there are six in Norway, are required to visit their bishoprics with the utmost regularity; but from the large number of parishes and the visits of the bishop, every church can only visit the whole in the course of three years. At the invitation of the bishop, all the children attending school assemble in the church to be examined, along with the candidates for confirmation, and those young people who have been confirmed since the last visita-

tion. The ceremony of confirmation is performed in the Norwegian Church by the minister of the parish once or twice a year. The ordination of a clergyman belongs exclusively to the bishop, but it is not con-

sidered as communicating any special gifts or graces. The ordination of the priest or clergyman is performed by the prost or. Students of theology, after attending a university for a certain time, are allowed to preach, although they may not have completed their studies.

The directory for the public worship of God in the Norwegian Church is given in the form of a minute bearing on the future life of the nation, the year 1583, with its appendix, the Almogåg of 1588. The rules there given are based upon the book of liturgy (Ordinances), which was compiled by a royal committee in the year 1537, and revised by Luther himself. Though it has not, in its present shape, the same ful-

ness and completeness as the corresponding materials and the frame and order of the Norwegian liturgy very much resemble those of the Deutsche Messe of 1528, that hand-book of liturgy in which Luther, not satisfied with his own formularies, endeavored, like Misa of 1528, laid down the principles of an evangelical service for the guidance of such congregations as acknowledged him as their leader into the truth of the Holy Scriptures. The sermon keeps its place as the central part of public worship, and constitutes, together with the lessons from Scripture, hymns and prayers, the chief part of it, while the communion is the highest. The liturgy arranges the service in three parts. In the first, the opening part of it, the congregation turn to God in prayers and songs, confessing themselves to be in the name of the Lord, and expressing their hope that God, for Christ's sake, will visit them, and satisfy their spiritual hunger. In the second part, the main body of the service, the worshippers receive the gifts of the Holy Spirit through the Word of God and the sacraments. To this part belong the lessons of "the epistle" and "the gospel," the sermon, and the ministration of the sacraments, when there are persons to be baptized or communicants—all interwoven with hymns and short prayers. In the concluding part, the congregation give thanks through prayers and praise to the Most High for his blessings, inspire his grace, satisfy their souls with what he has promised, and show it forth in fruits of grace, and finally they re-

ceive the benediction. The Church of Norway admin-

isters the Lord's Supper as often as it is asked for. The form largely resembles that of the Romish Church, and, though in spirit, is still the wafer and the unleavened bread. But as an ecclesiastical body, it has repudiated the popish doctrine of consubstantiation, with its con-

sequences—adoration of the elements, and the idea of an atomizing sacrifice, prepared and offered up in the Lord's Supper. To be sure, it has been said that it is difficult for any but a hair-splitter to perceive the difference between the Lutheran and the Roman Catholic doctrine of "the real presence;" but the reason for this difficulty might be found, not so much in the matter itself, as in the want of investigation on the side of the observer. Many appear to think that the right name for the Lutheran doctrine of "the real presence" would be consubstantiation, as if it taught a commixture of the substances. The truth is, that the Lutheran Church has never tried to explain the mysterious union, in which it believes, between Christ's body and blood and the elements of the Holy Supper. The Church of Norway, like every other Protestant Church, confines itself to repudiating consubstantiation (see Schmid, Dogmatik d. Ev. Luth. Kirche [1880], p. 439, 445, 591) as well as transubstantiation, and all other such palpable deviations from the truth, involving more or less the idea of a physical, local, and circumscriptive manner of presence of the body and blood of Christ, but not the possibility of substituting any other idea or mode of expression for that of "the real presence."
partaking of it. The power to absolve is not consider-
ed, moreover, to belong to the clergyman as an indi-
vidual, but to be vested in the Church, in whose name
the forgiveness of sin is pronounced. Absolution, then,
according to this view, is not a power given to the
clergy, but to the Church or body of believers which is
represented by the clergy. Before the act of absol-
ution, a sermon is usually preached, the object of which
is to prevent any other than true penitents from applying for absolu-
tion. The rite itself is thus performed. The penitents
kneel before the altar, and the clergyman, laying his
hands on their heads, utters these words, "I promise
you the precious graces of all your sins, in the
name of God the Father, God the Son, and God the
Holy Ghost." Having received the absolution, the
penitents retire to their seats, and a hymn is sung, at
the close of which the clergyman chants the words of
the institution of the Holy Supper, the congregation
again kneeling before the altar, and then the elements
are distributed.

With relation to schools, Norway has a very credita-
ble history. Provision is made for the instruction of
all classes of the people. Wherever thirty children
can be found, a school is to be established in a regular
school-house; and to provide for remote and thinly settled districts, "ambulatory
schools" have been established by law, whose teachers
travel from one farm to another, giving instruction to
the children of each in turn, and living with the peas-
ants, as was probably the case almost instantly after
they found it advantageous to have, perhaps, a young
Norwegian who cannot at least read and write.

One reason undoubtedly for the general fundamental
education there is the system of compulsory attendance
on school. Every child is required by law to be in the
school from seven or eight years of age to the
time of confirmation, which is usually in the fifteen
years—parents or guardians of such children as may ab-
sent themselves being subject to a fine. In the very
lowest of these schools instruction is given in read-
ing, knowledge of the Christian religion, selections re-
lating to history, geography, and knowledge of nature,
writing, arithmetic, and singing. The law declares that
all common-schools shall maintain a Christian charac-
ter, and religious instruction be considered of primary
importance. The school is always opened and closed
with prayer or singing, or both. Of course there are
no such restrictions of grades of the public schoo1s, as the pub-
lc, high schools, the normal, Latin, high
civic schools, and the like. In these higher schools pub-
lic opinion has demanded—and it has been sanctioned
by recent law—a reduction in the attention paid to the
study of languages and science. No matter what the
study of modern languages and natural science—a part
of the great movement that is reaching all lands. The
old Norse tongue and the English are both made obliga-
tory branches of study. The schools of Norway cul-
minate in the national university at Christiania.

Indeed, it may be claimed that the inner life of the Church
of Norway has been not a little affected by the founding
of the university in Christiania in 1811, and the sepa-
ration of the country from Denmark in 1814. Previ-
ously the clergy were uniformly educated at the Uni-
versity of Copenhagen, where German rationalism pre-
vailed to a melancholy extent. Danes were frequently
appointed to the pastoral charge of parishes, to the great
annoyance of the people, who were most unwilling to receive
their ministrations. But from the time that the
Norwegian students of theology had the privilege of
taking the degree in their national university it seemed
to be infused into them, and that era may be
dated the dawn of a true spiritual light in the Church of
Norway. Two excellent men, Hensele and Stenersen,
disciples of the celebrated Danish theologian Grundtvig,
were the first to influence the theological studies.
Hauge also, both by his sermons and his printed treatises, had done much to revive true re-
ligion among the people; and the Haugeaner, being
allowed perfect freedom of worship, have spread them-
theselves over a great part of the country, and are recog-
nised, wherever they are found, as a quiet, inoffensive,
pious people. It is an important feature in the Norwe-
genian Church at the present time that a large number of
both the clergy and laity are disciples of the Danish
theologian Grundtvig, and hence receive the name of
Grundtvigians. Not that they are the Lutheran Church,
but they entertain peculiar opinions on several points of doctrine, somewhat analogous to
those of the High-Churchmen in the Church of Eng-
land. They hold, for example, that the act of ordinat-
ions is a peculiar grace, and hence main-
tain extreme views as to the sacredness of the clergy
as distinguished from the laity. They hold high opin-
ions as to the value of tradition, and attach a very great
importance to the Apostles' Creed, which they regard as
inspired. With respect to many portions of Scripture,
they are doubtful as to their inspiration; but they have
no doubt as to the inspiration of the Creed, and that it
contains enough for our salvation. Accordingly they
are accustomed to address to the people such words as
these: "Believe in the words in which you are bap-
tismally committed, and you have the Bible a useful, and even a necessary book for the
clergy, but a dangerous book for laymen. They hold a
very singular opinion as to the importance of "the liv-
ing words," and maintain that the Word preached has
quite a different effect from the Word read. They even
maintain that they must study the Word with the help of
the Word of Grace, which they must read twice a day,
and must come by hearing, referring in proof of
their statement to Rom. x. 14. Even in the schools
which happen to be in charge of Grundtvigians we find
this principle carried into operation, everything being
taught by the living voice, and not by the written
book. Grundtvig, the founder of this class
of theologians, who died Sept. 2, 1872, lacking but
a few days of ninety years, was bishop, and resided at
Copenhagen. He was the head of a large body of disci-
ples, not only in Norway, but to a still greater extent
in Denmark. Many of the most learned clergymen
in both countries really belong to this school.

The Church establishment comprises, according to
Thaarsrup, six bishops, the oldest of whom is primate, 80
proests, and about 440 pastors of churches and chapels.
There are 440 protestants or parishes, some of them of
large extent, containing from 5000 to 10,000 inhabitants,
and requiring four or five separate churches or chapels.
The incomes of the bishops may be reckoned about $4000,
and of the rural clergy from $800 to $1000. The sources
from which these are derived are a small assessment of
the estates, assessed for the support of the Church; the
tithes, and the large sums raised for the support of the
Church, and a considerable amount of private and pub-
lic charity, and fees for marriages, christenings, and
funerals, which are pretty high. There are far prices,
as in Scotland, by which payments in grain may be
converted into money. In every prestitige there are
several farms, besides the glebe, which belong to the
living, and are let for a share of the produce, or at
a small yearly rent, and a fine at each renewal. One
of these is appropriated to the minister's widow, as a kind
of life annuity. The Norwegian clergy are a well-in-
formed body of men, possessing much influence
over their flocks, and conspicuous in the discharge of their
duties. According to the census of 1866, the population
was composed of 1,696,651 Lutherans, 3662 seartarians,
1538 Mormons, 316 Roman Catholic, 15 Greek Catho-
lics, and 25 Jews. The Romanists and Jews have only
in very recent times secured permission to settle in Nor-
way, and are, as far as is known, confined to the new city
of Christiania (Oslo).
which should be read with corrections in April, 1869, p. 490-485; and the excellent articles by the Rev. Gideon Düren in the "Methodist." (N. Y. Aug. 16, 1862).

NORZI, JEDIDJA SALOMON, ben-Abraham, a learned Italian rabbi, was born in Mantua about 1560, and derived his family name (יִדוֹדִיא סַלְוָמוֹן) from the fact that his parents resided in Norzi, or Norica, a small town in the district of Spoleto. He studied under Samuel Casas, and, through his great piety and profound learning, was elected to the co-rabbinate, first with Luzzato Shalom Cases, who died in 1630, then with Eliezer Casas, and from 1634 up to the time of his death, which occurred after 1626, was co-rabbi with Jacob Chajim Casas. As early as 1588 Norzi was favorably known among his literary co-religionists by his work on the jurisprudence of the Hebrews, which was published at Mantua in 1697. The work, however, to which he consecrated all his life was the study and expurgation of the text of the Bible, and with this design he undertook several long voyages to collect ancient MSS. of the Old Testament and of the Masorah. The results of his patient researches, and which immortalized his name, are embodied in a critical and accumulated edition of the entire Hebrew scriptures. To render his critical labors as complete as possible, and to edit the Hebrew text in so perfect a condition as thorough learning and conscientious industry could make it, Norzi left no resource untouched. He searched through the Midrashim, the Talmud, and the whole collection of rabbinic literature, for various readings. He compiled all the Masoretic works, both published and unpublished; he collated all the MSS. to which he could get access, among which was the MS. from Toledo of the year 1277, now Cod. de Rossi 782; he compared all the best printed editions, and availed himself of the learning and critical labors of his predecessors and friends, especially of the MS. work called מְאֹדוֹר, The Masorah, the Hedge of the Law, by Meier ben-Todoros Abulfesa of Borgos, and of the co-operation of his friend Menacham di Lonzano of Palestine, who also furnished Norzi with important MSS. from his own library; and though he lived to finish the work to which he had consecrated his life, having completed it in 1626, and called it יָדוֹדִיא סַלְוָמוֹן, The Repatrie of the Breach, after Isa. viii., 12, he did not live to see the fruit of his labors printed, as he died near 1630. His work remained in MS. for about 112 years. The commentary was then edited by Raphael Chajim Basila, and published for the first time, with Hebrew text, under the altered title יָדוֹדִיא סַלְוָמוֹן, A Gift-offering, the Oblation of Solomon (the name of Norzi, meaning being an abbreviation of יָדוֹדִיא סַלְוָמוֹן) (Mantua, 1742-44, 4 pts., and 2 vols. 4to). Basila, the learned editor, added some notes, and also appended a list of 900 variations. A second edition appeared in Vienna in 1816. The commentary on the Pentateuch alone, with the Hebrew text, appeared in Dobrothan in 1804; on the Prophets and the Hagiographa, with the Hebrew text, in Wilna about 1899. The work of Norzi marketh a progress in Biblical exegesis, but it has no longer any value. Norzi also wrote a treatise on the accents, entitled קָשָׁיָה מִיְּמָ標準 (which he quotes in his commentary on Gen. i, 11; Numb. xi, 15; I Sam. xv, 6; Esth. i, 6; ii, 8; Isa. xxxviii, 2; Eccles. ii, 7; and a treatise on the letters אֹו בּ, called בּותֵמ בּוֹךְ בּוֹךְ, which he quotes in his commentary on Gen. i, 11; but these have not as yet been translated into English. See Schachermayer, Catalogus Lib. Hebr. in Bibliotheca Bodleiana, col. 2276-77; Fürst, Bibliotheca Judaica, iii, 39 sq.; Eichhorn, Einleitung in das Alte Testament; Rosenmüller, Handbuch für die Literatur der biblischen Exegese; and Ginsburg in Kitto, s. v.}

**Nose (נֶזֶז), properly breathing-place, or the member by which we breathe (Numb. xi, 20); also in the dual (נֶזֶזֵי), the two nostrils. The same word likewise signifies anger (Prov. xxii, 24), as often shown in the breathing; and the face (Gen. iii, 19), so called from its most prominent feature; and in 1 Sam. i, 5 for two persons; a portion for two faces, i.e. a double portion (see Gesenius, s. v.). See Nostrii.**

**Nose-jewel (נֶזֶז מְנַצֵּם), so rendered by the Author. Vers. in Isa. iii, 21; elsewhere ear-ring [q. v.], as Gen. xxiv, 22; Judg. viii, 24; but not in Prov. xi, 22 [see below]). It properly means simply a metallic ring, as of gold, and in some passages (e. g. Job xiii, 11; Prov. xxiv, 12) the true rendering may be doubtful, but in Gen. xxiv, 47; Isa. iii, 21, and Ezek. xvi, 12, it refers to a ring for the nose, a frequent ornament of Eastern women [see Woman]; and in Prov. xi, 22, "The jewel of gold in a swine's mouth" is plainly an allusion to it. These rings were set with jewels and hung from the nostril, as ear-rings from the ears, by holes bored to receive them. Ezekiel (xvi, 12), "I will put a jewel on thy forehead [Heb. nose], and ear-rings in thine ears, and a beautiful crown upon thine head." They also put rings in the nostrils of oxen and camels to guide them by: "I will put my hook in thy nose, and my bridle in thy lips" (2 Kings xix, 28; see also Job xii, 2). Travellers in India tell us that many females wear a jewel of gold in their nostrils, or in the septum of the nose; and some of them are exceedingly beautiful, and of great value. From the septum, or middle filament, is a pendant, which sometimes contains three rubies and one pearl; and it nearly touches the upper lip. The left nostril is pierced, and contains a ring about an inch in diameter; another lies flat on the nose, and occasionally consists of a fine pearl surrounded with rubies. The nose-ring is also worn by a few of the women of the lower orders in Cairo, and by many of those in the country towns and villages both of Upper and Lower Egypt. It is most commonly made of brass, is an inch to an inch and a half in diameter, and has usually three or more colored glass beads, generally red and blue, attached to it. It is almost always passed through the right ala of the nose, and hangs partly below the mouth, so that the wearer is obliged to hold it up with one hand when she puts anything into her mouth. It is sometimes of gold. To the eyes of those who are unaccustomed to it, the nose-ring is certainly no ornament. It is mentioned in the Mishna, Shabb. vi, 1; Ken. xi, 8. Layard remarks that no specimen has been found in Assyrian remains (Nin. and Bab., p. 202, 544). For other notices, see Bührhardt, Notes on Bed. i, 31, 229; Niebuhr, Descr. de l'A. R. p. 57; Vogues, i, 133; ii, 56; Chardin, Voy. vili, 200; Lane, Mod. Eng. i, 78; App. iii, p. 226; Saebachitz, Hebr. Arch. i, 3, p. 25. See Ring.**

**Nossairians is the name of a particular sect of Shitais (q. v.), or followers of Ali, among the Mussulmans, who believe that the divinity has been joined and**
united with some of their prophets, particularly Ali and Mohammed ben-Hanishah, one of his sons; for these sectaries held that the age of the last true religion was not yet up in one and the same person. This doctrine is rejected by the other Musulmans, who reproach the Nossairians with having borrowed it from the books of the Christians. The Arabic term Nossairian given to these sectarians signifies Nasaraeans, a name given to the Christians who blended the observations of Judaism with the laws and principles of Christianity. See Broughton, *Hist. of Religion*, s. v.

Nosselt, Johann August, D.D., a German theologian, was born at Hallo May 2, 1734. He was educated at the university of his native city, and from 1757 taught philosophy and theology in his alma mater, and became in 1779 director of the seminary. He died March 10, 1807. He ranks with the neologist of Germany, but is an able expositor of such difficult texts as do not contain fundamental points of Christian doctrine. His writings are numerous, mostly hermeneutical, exegetical, and theological. The most noted are *Opuscula ad Interpretationem Sacraeum Scripturarum et ad Historiam Ecclesiasticam* (Halle, 4 vols. 8vo), and *Ecclesiasticae ad Sinic. Scrip. Interpretationem* (ibid. 4 vols. 8vo). His other valuable works are, *De vera et alia ad doctrina scripturarum tertiakam* (ibid. 1757, 1759, and 1768, 4to); *Verheißung der Wehreit und Göttlichkeit der Christen* (ibid. 1767, 1769, 1771, and 1773, 4to); *Historia Paraphraseda Erami in Novum Testamentum* (Berlin, 1780, 4to); *Anweisung zur Kenntniss der besten Bücher in allen Thieren der Theologie* (Leips. 1779, 1780, 1791, and 1800, 8vo);—a great number of dissertations and programmes. See Niemeyer, *Leben Nosselts* (Berlin, 1809); Rotermund, *Supplement to Jöcher*, s. v.

Nostrodamus (Nostre Dame), Michael, a notable astrologer, and the most celebrated of modern seers, flourished in the 16th century. Among the generations immediately following his own time he almost rivaled the oracular fame of Merlin in the dim Middle Ages, and nearly equaled the mystical reputation of the ancient sibyls. In the period of the French Revolution his vaticinations were often cited; nor were they wholly denied notice and influence in so recent an era as the revolutionary commotions in the middle of the current century. The prestige of the name, the rarity or inaccessibility of the oracular texts, and the more direct oracles of Delphic obscurity, prolonged the renown of the prophet, while readily permitting bold forgeries or violent adaptations to new occurrences. Such is the fortune of all vulgar prophecy.

1. Life—Nostrodamus was born Dec. 14, 1505, in the commune of St. Rémy, in Provence, which is now included in the Department of Bouches-du-Rhône. His family was reputed to be of Jewish descent, and of the tribe of Issachar, wherefore they predicted his gift of prophecy. His father, Jacques Nostre-dame, was notary of St. Rémy. His mother Renée’s grandparents had been noted for their knowledge of mathematics and physics, which, in the earlier part of the 15th century, meant chiefly astrology, alchemy, and magic. One of these grandparents had been physician, or wonder-worker, to the weak but amiable Réne, titular king of Jerusalem and the Two Sicilies, and count of Provence. The king had held the same responsible position with Renée’s son, John, the daring and adventurous duke of Calabria. From his maternal grandfather, the son of one of these court-ecclesiastics and star-gazers, the young Michael received his first instruction. The youth was so remarkable that he was sent to school at Avignon. Thence he proceeded to Montpellier to study philosophy and medicine. From this great medical school he proceeded to Narbonne, Toulouse, and Bordeaux in succession. At Bordeaux he commenced the practice of his profession when he was twenty-two years of age. Four years later, in 1550, he returned to Montpellier to obtain his degree, which he took with great distinction. Going thence to Toulouse, he was induced to remain there by the residence in that place of his familiar friend, Julius Caesar Scaliger. Here he lived for a respectable century and had three children. In a very few years his wife and children all died, and he became a wanderer in Italy and Sicily. In 1544 he married a second time, and settled at Salon; but in 1546 he was detained, at the public expense, by the city of Aix; whence he was restored to the sufferer of public displeasure, which he was again raging with great violence. After three years thus honorably employed he returned to Salon de Croux. His life appears to have always been respectable, and surrounded with respectable associations, though often vagrant. His home, however, continued to be Salon; and here his family of three sons and a daughter was brought up.

Nostrodamus acquired his first oracular reputation by the production of almanacs, in which "he did so admirably hit the conjunction of events that he was sought for far and near," like an African rain-drother. The popularity and success of these almanacs threatened to be damaging to the fame they had acquired for him. They tempted the ingenious fraternity of booksellers to vend spurious almanacs with the attraction of his name. This gave him occasion to complain that many false prophecies had been and based upon him, and to the astrologist, M. de Carcencières, believed that it furnished the foundation for the piquant epigraph of Étienne Jodelle, his contemporary: "Nona damus, cum falsa damus, nam fallere nostrum est, cum falsa damus, nil usus Nostrodamus."

Nevertheless, the supposed familiarity of Nostrodamus with the secrets of futurity was largely bruited about, and readily believed in the credulous and nefarious age of Catherine de Medici. The confidence of Nostrodamus in his own oracular gifts was strengthened; and he employed his time in completing and preparing for the press the first series of his Centuries of Prophecy. It was published at Lyons in 1555, and was preceded by a *Preface*, dated March 1, of that year. The work contains the singular and very ambiguous prediction of the remarkable death of Henry II by the lance of Montgомерy, which happened more than four years later. It cannot be imagined that this was deemed applicable at the time of its appearance to the king, who was in the vigor of manhood. But the fame of Nostrodamus, either through his own work or the work of others, was great, and the court turned toward the court of the court, and he received an invitation from Henry to visit the royal abode. On his arrival he was treated with great consideration, was liberally compensated for his fatigues, and was sent to Blois, to see the royal princes and to report upon their destinies. Having satisfied to the satisfaction and accorded the favor of the crown, Nostrodamus returned to Salon, and employed himself in the manufacture of more oracles. In the course of the ensuing two years he completed his *Ten Centuries*, corresponding to the ten ages of the Sibyl, by adding three more *Centuries* to the seven hundred prophecies first published. These additional *Centuries* have the merit of surpassing their rude predecessors in obscurity, triviality, and apparent sinlessness. They were dedicated to Henry II in what is called by his English translator a "Summary Epistle," which is dated June 27, 1558. This dedication is marked by even greater assurance than its predecessor. Its tone is more confident, its pretensions loftier, and its indications more meaningless.

These thousand prophecies constituted only a part of the oracular calculations of Nostrodamus. He refers to fuller declarations in his "other prophecies, written in *soluta oratione,*" or prose. These prose predictions, however, never saw the light, except such as were introduced into his almanacs. The assertion of their existence may have been only a convenient provision for the manufacture of mystical almanacs. The oracles of the French renaissance had transpired to which they were to be applied. It certainly afforded a tempting and plausible foundation
for the forger of later prognostications, and their attribution to Nostradamus.

Henry II did not long survive this declaration of the last three Centuries, being able to live within four months of the commencement which celebrated the restoration of peace between France and Spain. This strange and fatal casualty was probably to have been foretold by Nostradamus in the following quatrain:

"Le lion jaune en vieux sarments,
En champ étant avec un guerrier duelle,
Dans cage d'Or l'ai lié crevés,
Deux jeux m'aies, puis mourir cruelle."

This prediction, so singularly accomplished, or so violently wrested to imply its accomplishment, greatly augmented the renown of Nostradamus, and attracted multitudes of gazing vipers, often of the highest distinction, to his humble abode at Salon. The duke of Savoy came in October, 1559; and about two months later his affliction deepened, the princess Margaret of France. In the year 1564, in the long progress which preceded the death of the Conference of Bayonne, Charles IX was welcomed by him to salon in the name of the town, and he was summoned to meet his majesty at Aries or Lyons. He was appointed physician in ordinary to the king, and was gratified with a royal donation of two hundred crowns of gold, while the queen-mother, Catherine, bestowed upon him a purse of nearly equal amount.

Nostradamus did not long enjoy his honors. He died of dropsy at Salon July 2, 1566. The time of his death was said to have been anticipated exactly by him. In the Calendar of 1567, a letter was said to have been written to the pope at the end of June, "Hier est mort cet homme"—death about this time. Had the work been published—it had it ever been discovered in that age—this entry might have been supposed to be only a modified transcript of the observation of Joannes Lydiaus (De Signis, for June 30): "Chenit, short so it will well have been transmitted among the mediæval traditions of signs, days, and portents.

Nostradamus was buried in the church of the Franciscans at Salon, and a mural tablet was erected by his widow to his memory.

2. Works—The Ten Centuries of the Prophecies of Nostradamus were his chief production, and the sole cause of the long celebrity of his name. He wrote prophecies in prose never published, except such as were contained in his series of Astrological Almanacs (1550-1563) to claim that he already been noted. He was the author of some other works, which have long ceased to be sought after, and which are now almost entirely forgotten. These are, De Fardements et Senteurs (1552), a cookery book:—Livre de Recettes Curieuses entretenir le sou du corps (Poitiers, 1556), hygiene:—Des con- fines (Antwerp, 1557), cosmetics for beautifying the hands and face:—Paraphrases de Galen (Lyons, 1557), translated from the Latin.

After his death appeared the Eleventh and Twelfth Centuries of his predictive quatrains, which are almost certainly spurious, being those later accessories which are always engendered by popular collections of oracles.

3. Prophecies.—The vaticinations of Nostradamus which secured his fame are in verse, and are written in quatrains of rough, rude, unintelligible, and incorrigible French, in tottering and halting metre, with rugged, harsh, and often unmanageable rhymes, clattering or jingling at the ends of the alternate lines. M. de Garençières, the English editor and translator of these oracles, asserts, of his own knowledge, that they were used as crabbed texts for the instruction of children in French in the first six months of their nativity. It was a time when education sought insurmountable difficulties for months, rather than to level the high roads of learning, and to make the rough places smooth. They remain for the most part incapable of comprehension, and are scarcely rendered more perspicuous by the English version or the explanatory comments of M. de Garençières.

Notwithstanding their unintelligibility—probably on account of their unintelligible and consequent pliancy—the prophecies of Nostradamus were long in vogue, and continued to be the occasion of general and supposititious forms, till a very recent period if it can be said that they are totally discredited even now. It is unnecessary to discuss on the present occasion the character of the fraudulent pretensions and the hallucinations, the deliberate artifices and the diseased temperament which generate oracle-mongering. Usually such pretensions are entirely fraudulent; but frequently honest delusion is so strangely amalgamated with the growing habit of only half-recognized deception that it is impossible to consider the prophetic mania as anything else than a real mental distemper. The vaticinations of Nostradamus seem to have sprung from a fixed and immutable; from such a morbid frame of mind; though increasing renown, the deference paid to him, the encomiums of an accepted profession, and the apparent accomplishment of several of his predictions, may have easily in-duced him in the flush of success to chance and obscurity, and deliberately to delude others, while seeking to delude himself also. A person believed to possess supernatural knowledge or powers cannot extricate himself from the consequences of the popular credulity which he has encouraged, and by which he maintains himself in a delusive state.

An elaborate apology for Nostradamus, in seven formal chapters, is offered by M. de Garençières as an introduction to his English version of the Centuries. This may be passed over with little notice, though the fourth chapter consists of "prophecies not to be fulfilled until Nostradamus was enlightened by the Holy Ghost." If the prophet aimed at deception, his interpreter was thoroughly deceived. If the prophet was himself deluded, the delusion of his translator was even more complete than his own.

The prophecy of Nostradamus in his own age and among his own people was eminently respectable, and on other grounds than his oracular endowments. He was an educated, regular, and successful practitioner of medicine. His sons obtained honorable distinction in the province in which they had been born and brought up. There is no stain on the character of the man or of his family. There is an air of sincerity in the declarations of Nostradamus, even when most extravagant, that induces hesitation in ascribing them to shameless effrontery and imposture. He seems on many occasions to have claimed no more than the truth. He was, in spite of his endowments, very little esteemed by his apologists; but he usually ascribes his pre-vision to mathematical science and to astrological calculation. He evidently trusted much to luck; and especially to the luck of being perfectly incomprehensible in his thoroughly impenetrable farrago of names, symbols, types, and dark utterances. He had also great confidence in congenital adaptation for his marvellous mission, in his ancestral gifts, and in the "hereditary word of occult predictions." There was a craze in the blood, which both favored self-delusion and presented the appearance of honest intent.

There is, however, one broad shadow of conscious concealment and insincerity which lies over the whole series of these Centuries. He constantly denounces the Reformers and the Reformed religion, and predicts their confusion and overthrow—no erroneous forecast, so far as France was concerned. He died in the avowed profession of the old faith, though he had apparently lived with little regard to the external requirements of any religion. He was buried in a monastic church. Nevertheless there is a hint in his writings that his real sentiments were in strong opposition to the教义s of belief and that, like his contemporary, Rabe-lais, he disclaimed his actual though lukewarm opinions in a cloud of enigmatic sentences, or cloaked them by distinguishable signs. He says, in his Prefatory Letter, "that if I should relate what should happen hereafter, those of the present reign, sect, religion, and faith would
find it is disagreeing with their fancies that they would condemn that which future ages shall find and know to be true, ... which hath been the cause that I have written what may be found in the future ages, pen from paper. But afterwards I was willing to enlarge myself in dark and obscure sentences, declaring the future events; chiefly the most urgent, and those which I foresaw (whatever human mutation happened) would not offend the hearers, all under dark figures more than prophetical. The last sentence is very significant, and the parenthesis somewhat singular for a professed prophet.

It would be venturing much too far to suspect Nostradamus of any real attachment to the cause of the Reformation; but, in the midst of his revolution with Protestant proclivities in the south of France, he may have acquired a distaste for Catholicism, and, prophet as he was, may have expected or apprehended the ultimate overthrow of the ancient creed. It is not so much as an illustration of his religious views as it is for a manifestation of intentional deception that this inconsistency has been noted.

This inconsistency, if such it be, is by no means the only incongruity which occurs in the prophetic volume of Nostradamus. Many of his quatrains were manifestly composed after the events to which they seem designed to refer. Some predictions can be discerned to be unquestionably false. On the other hand, it must be admitted that many have met with apparently marvellous accomplishment. This may be due to that luck which the seer recognised as a genuine constituent of prophetic inspiration; or it may be due to the impossi-

4. Prophecies strangely accomplished.—It is not meant that there is anything more than an accidental coincidence between the prophecies of Nostradamus and the events by which they have been ostensibly verified. The verification is ascribed to no inspiration, to no nat-

ural or supernatural endowments, to no astrology, to no other science or art, but to that supreme source of Nostradamus's renown—to luck (Hêta Fortuna). With this we are disposed to agree, but there is much interest in getting a few of the remarkable and often clear instances of the realization of these prophecies. Thus, too, will be afforded some slight taste of the peculiar flavor, some knowledge of the curious fabric of his prophetic strains.

5. Literature.—The principal editions of the prophe-

cies of Nostradamus are, Centuries de Nostradam (Lyon ou Troye, 1568, sm. 8vo); Nostradamus, Les Vies Centuries et Prophéties, avec la Vie de l'Auteur et des Observations sur ses Prophéties (Paris, 1667); Centuries de Nostradamus (Amsterd. 1668); Les Vrais Centuries de M. Michel Nostradamus (Paris, 1562, 8vo)—a forgery directed against cardinal Mazarin; Garençieres, The True Prophecies or Propagulations of Michael Nostradamus (Lon. 1672, fol.). This work is without commemora-

tion in Allibone's Dictionary. It has furnished the chief foundation for the present article. Of works on the life or the prophecies of Nostradamus, the following deserve mention: Trone du Condoutel, Abris de la Vie de M. Nostradamus, s. a.; Edification des véritables Quatrains de Maistre Nostradamus, Docteur et Professeur en Médecine, etc. (Anonymou); Badius, Virtutes morai Magistri Nostradi (Geneva, 1560); Clavigny, Com-

mentaires sur les Centuries de Nostradamus (Paris, 1596, 8vo); Guynaud, Concordance des Prophéties (ibid. 1688, 12mo); La Clerc de Nostradamus: Essai et Introduction à un véritable sens des prophéties de ce fameux auteur (Bib. 1710); Huet, Vie de Nostradamus (Aix, 1712, 12mo); Jauriet, Vie de M. Nostradamus, Apologie et
Historie (Amsterd. 1656); Astruc, Mémoires pour servir à l'Histoire de la Faculté de Montpellier (Paris, 1767); Berton, Anciennes conscriptions, recueillis dans les archives de la provoyance instancée de l'homme, sur les ordres, les sièges, les prosties, et particulièrement sur Nostredamus (ibid. 1806, 8vo); Bareste, Nostredamus (4th ed. ibid. 1842). There is a notice of the prophet and his predictions in Morholt Polyhistor (Ps. i. lib. i. c. § 329, 4th ed. 1732, 4to). Some collections of his predictions that may be conceived to have been realized are pointed out in the Companion to the British Almanac, 1840. Adelung has given Nostredamus a place in his Hist de la Folie Humaine, vii, 105 sqq. (R. F. H.)

Nostri (sometimes נָשִׂים,aph, properly nose [q.v.]; but distinctively נָשֶׁה, nechira'gim, Job xlii, 20; whereas the kindred נָשָׂה, na'char, Job xxxii, 20, signifies a snorting, as the fem. נָשָׂה, na'charah, is rendered in Jer. xvi, 16).

Notable Crime is, in the Anglican Establishment, any offence committed in the ordering of deacons and priests which is of a sufficiently serious character to justify suspension of the ordination of a candidate. The bishop, at the beginning of the ordination service, requires that if any of the people know "any impediment or notable crime" in the person about to be ordained, "for which he ought not to be admitted to" the order of deacon or priest, the accuser shall come forth and declare "what the crime or impediment is." By "notable" is to be understood something of a highly flagrant and scandalous nature, known to the accuser as a sufficient reason, if proved, for the rejection of the candidate. Hence, in the rubric following the bishop's demand, the words "notable crime" are made synonymous with "great crime"—with such a crime as will justify the bishop in delaying ordination till it is disproved. Similar remarks will apply to the use of the word "notorious" in the rubric before the Holy Communion.

Notaras, Chrysanthus, an Eastern prelate of note, was born in the Morea about the middle of the 17th century. Descending from a noble Byzantine family, and nephew of Dositheus, patriarch of Jerusalem, he was destined for the high duties of the Greek Church. He received a liberal education, which he perfected by traveling in Italy and France. In Paris he received lessons from the astronomer Cassini, and formed connections, too, with several learned theologians. On his return to Constantinople he was appointed archbishop of Cesarea, and Feb. 8, 1707, patriarch of Jerusalem. Although rarely residing in his diocese, Notaras was a zealous bishop, and the reconstruction of the temple of the Holy Sepulchre in 1719 is due to him. He died at Constantinople in 1722, leaving the reputation of one of the most pious, beneficent, and learned prelates of the Greek Church. His principal work is a collection of treatises in modern Greek Upon the Rites and Dogmas of the Oriental Church (Tergwisk, in Wallachia, 1715); among them are excellent treatises "Upon the Dignity of the Oriental Church," "Upon the Origin and Propagation of Christianity in Russia," "Upon the four Greek Patriarchs of the Ottoman Empire," and "Upon the Patriarchs of Russia." He also compiled a Geography in modern Greek (Paris, 1716, fol.). Notaras published in 1710 the History of the Patriarchs of Jerusalem, by his uncle Deostheus. See Journal des Savans, ann. 1726: Jöcher, Geläutet-Lexikon, s. v.; Hoefr, Nouv. Biog. Générale, xxxviii, 296.

Notaricon (from the Latin notarius, a short-hand writer, one who among the Romans belonged to that class of writers who abbreviated and used single letters to signify whole words) is one of the thirteen Cabalistic rules (comp. Temurah, a. v. Aitbach), which is employed when every letter of a word is taken as an initial or abbreviation of a word. Thus, for instance, every letter of the word הָרֵעְשֵׁה, the first word in Genesis, is made the initial of a word, and we obtain הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה הָרֵעְשֵׁה Hallelujah, we are made free!"

Lyft up your eyes to heaven, or Lyft up your eyes to heaven, or To the almighty and most high King, or To the almighty and most high King, or See also Na'char, Na'charah, as rendered in the RSV, Sâ'nâ, is made free, or Lyft up your eyes to heaven, or See also Na'char, Na'charah, as rendered in the RSV, Sâ'nâ, is made free, or To the almighty and most high King, or See also Na'char, Na'charah, as rendered in the RSV, Sâ'nâ, is made free, or To the almighty and most high King, or...
NOTES OF THE CHURCH

works, Translatio corporis sancta Helena. This treats of St. Helena, the mother of Constantine, whose re-
membrance the above 13th century church is founded. In order to sustain this pretension Notcher composed a treatise in nineteen chapters, from which Mabillon, the authors of the Galila Chrisiana, and the Bollandists published fragments more or less extended. See Galila Christ. tom. ix.; Mabillon, Ant. tom. xiii.; Isaac et Al. tom. vi.; Bollandus, August 18; Hst. Lit. de la France, vii. 581.

Notes of the Church, those marks by which a true Church may be recognised. Four are generally added: Unity, holiness, catholicity, and apostolicity. It is to these marks that Romanists refer in support of their pretension that the Church of Rome is the only true Church. Bellarmine gives the following: Catholicity, antiquity, duration, amplitude, episcopal succession, apostolical agreement, unity, sanctity of doctrine, efficacy of doctrine, holiness of life, miracles, prophecy, admission of adversaries, un-
happy end of enemies, temporal felicity. Palmer, who has written a High-Church treatise on the sub-
ject, says: "The necessity of devising some general notes of the Church, and of not entering at once on controversial debates concerning all points of doctrine and discipline, was early perceived by Chris-

tian theologians. Tertullian appeals, in refutation of the heresies of his age, to the antiquity of the Church derived from the apostles, and its priority to all heretical communities. Ireneaus refers to the unity of the Church's doctrines, and the succession of her bishops from the apostles. The universality of the Church was more especially urged in the controversy with the Donatists. St. Augustine reckons among those things which attached him to the Church: The consent of na-

tions, authority founded on miracles, sanctity of morals, antiquity of origin, succession of bishops from St. Peter to Clement, and the very name of the Catholic Church. St. Jerome mentions the continual duration of the Church from the apostles, and the very appellation of the Christian name. Luther assigned as

Notes of the true Church the true and uncorrupted preaching of the Gospel, administration of baptism, of the eucharist, and of the keys; a legitimate ministry, public service in a known language, and tribulations internally and externally. Calvin reckons only truth of doctrine and right administration of the sacraments, and seems to reject succession. Later theologians adopt a differ-
ter, the issue of these responses. Dr. Field admits the fol-

lowing notes of the Church: Truth of doctrine, use of

sacraments and means instituted by Christ, union under

lawful ministers, antiquity without change of doctrine,
lawful succession—i.e. with true doctrine, and universal-

ity in the successive sense, i.e. the prevalence of the Church successively in all nations. Bishop Taylor ad-

mits as notes of the Church: Antiquity, duration, suc-

cession of bishops, union of members among themselves and with Christ, sanctity of doctrine, etc. The Con-

stantinopolitan Creed gives to the Church the attributes of "One, Holy, Catholic, and Apostolical." A High-

Churchman unchuches without hesitation other com-

munities that want some of his extra-scrilal criteria; but theorists on this subject are not agreed among themselves. See CHURCH; FUNDAMENTALS; NOVA-

TIANS.

Nothelm (us), a noted English prelate of the An-

glo-Saxon period, was born near the close of the 7th century, taking his degree at St. Alban's, and was prebendar of a presbytery in London, and was there distinguished for his learning and literary taste. The Venerable Bede, who fell in with Nothelm, appreciated him, and made him one of his literary assistants. For a while Not-

helm resided at Rome, and improved his opportunities by the study of the patristic archives relating to the history of the Anglo-Saxons. The material thus obtained proved of invaluable service to the English

Church chronicler of those times. Nothelm is also noted for his discussion with Bede regarding the Book of Kings. In 785 Nothelm was devolved to the see of Canterbury, and in the year following received the pallium from pope Gregory III. The Saxon chronicler and the continuator of Bede place Nothelm's death in 789; (other but more modern) authorities state that it was 794 or 795. The day on which he died was differently fixed on the 17 or 16 Kal. Nov., that is, on the 16th or 17th day of October. He was buried at Canterbury. Bede and Pits attribute to him several books, which he is stated to have composed chiefly from the materials he brought from Rome. Their genuineness is so problematical that it is unnecessary to repeat their titles. See Wright, Biografia Bris-

Notitia, the name given to the record or chart of the great divisions or provinces, etc., of the empire and the Church.

Notker. There are several persons of this name mentioned in Church histories. The most important among them are:

1. St. Notker, known Ballabius, or "the stam-

merer," a learned German monk, who was born about 830 at Elgau, in Northern Switzerland. At an early age he entered the convent of St. Gall (q. v.). His tal-

tents attracted the attention of the emperor Charles the Great, who was induced by the nobles to make notker prior of St. Gall, but Notker always declined. He died April 16, 912. He wrote, Liber de interpretibus divinarum Scripturarum (Hamburg, 1736, 8vo); and in Petz, Theaurus anecdoto-

rum:—Liber sequenarianus, in the same collection:—

Noticia de illustribus viris, ibid. p. 291 sq.;—Scriptores variæ variorum:—S. Frikollus historia (in

Goldast, Scriptores Alamanici);—Hymnus (in Canisius, Lactationes);—and a treatise on the value of letters in music (in Gerbert, Scriptores). The Gestis Caroli Magni has been erroneously attributed to Notker.

2. Notker, surname Lobos, or Teutonicus, a learned German monk, was born about the middle of the 10th century. He was a nephew of Ekkehard I, who wrote a Latin paraphrase of Walltharius's German poem. He entered at an early age into the convent of St. Gall (q. v.), where he made rapid progress, obtaining even a good mastery of the Greek language, which was a rare accomplishment at that time. He became the head of the school. We have still a Latin poem by one of his pupils, with notes and corrections in Notker's handwriting (see Pertz, Monumenta, vol. ii.). In his teach-

ings he seems to have adopted the 10th century German language, and vainly sought to establish the custom of doing so (see his letter to the bishop of Sion in Grimm's Göttinger Gebiete Aetzien, 1885). Notker also translated into German several portions of the Bible, and some of the classics. It has been erroneously asserted by some that he merely supervised these translations, and that they were made by his pupils. He died June 29, 1022. Among his translations we find some of the Psalms in Hattenius (Denkmäler) and in Graeff (Württemberg Psalms [Quedlinburg, 1869]); De Consolatione Boethii, published by Dr. Breu (Berlin, 1832); De sapientia et philosophia Martini nobis (ibid. 1847); the Cat-

egories and Hermeneutica of Aristotle (ibid. 1887). He also wrote a treatise on rhetoric in Latin, published in Haupt (Zeitschrift, vol. iv.). Among his translations which have been lost we notice that of the Book of Job; the Deiosis of Virgil; the Anecdota of Cicero; the Dictionari of Catu, etc. This Notker is by some con-

sidered as the author of the little treatise on music men-

tioned under the preceding; as also of one on logic in Haupt (Althlautische Blätter, vol. ii.). See Ekkehard, Casus S. Galli; Acta Sanct. Feb. and April; Oudin, Scripto-

res ecclesiastici, v.; Galiga Christianorum Vitae et Monumenta (J.N.B.);—

Notman, John, a noted architect, deserves a place here for his distinguished labors on ecclesiastic structures.

He was born in Edinburgh, Scotland, July 22,
NOTRE DAME

201

NOTT

1810. In 1831 he came to the United States, and settled at Philadelphia, where he died, March 3, 1865. In ecclesiastical architecture he stands among the best representatives of modern times. In the United States he ranked first in this department. Says a contemporary: "Notman possessed great enthusiasm for his art, as well as poetic sensibility; and in his works he seemed to address himself not as much to the senses as to the soul." One of his chief works is St. Mark's Church, in Philadelphia. It is one of the very best specimens of Gothic architecture in the United States. Indeed, Mr. Notman may well be spoken of as the American student of mediæval architecture. Other noted specimens of his work are the façade of the Roman Catholic Cathedral on Logan Square, Philadelphia, and the Church of the Holy Trinity, of which the doorway is especially admired. Laurel Hill Cemetery of Philadelphia—one of the handsomest burial-grounds of the United States—owes its beauty to the good taste of Mr. Notman.

Notre Dame (i.e., Our Lady) is the old French appellation of the Virgin Mary, and therefore the name of a number of churches dedicated to the Virgin Mary in different parts of France, and particularly of the great cathedral of Paris. See also the following article.

Notre Dame, Congregation of, is the name of a Roman Catholic female order, whose members are frequently called "Sisters of the Congregation of Our Lady." The origin of the sisterhood is doubtful. Some ascribe its foundation to Fourier, others to Aix le Clerc, the first devotee of this Congregation. She flourished in the second half of the 16th century in a little village in Lorraine, that part of France recently annexed to Germany. The establishments of the Congregation were first opened in the beginning of the 17th century. In 1614 a convention was held of the different members, and a confirmation of the order asked for from the pope, and the request was granted by a special bull from Pope Paul V, February, 1615; further enlarged in privileges, March, 1617. A change in the rules and constitution was made in 1645, and received the approval of Pope Innocent X. The Congregations of Our Lady have flourished ever since in Europe, and especially in Belgium and France. In America they have their head-quarters in Montreal, where they number 431 professed sisters, 80 novices and postulants, and 15,337 pupils in the foundation, a number of free schools, which they direct principally in Canada and British America. The only establishments in the United States known to be connected with that at Montreal are the "Convent and Academy of the Ladies of the Congregation of Notre Dame," at Portland, Me., of which reputation are 14 pupils and 90 pupils and 846 pupils in two parochial schools, of which the ladies have charge; and St. Joseph's Convent, at Cambridgeport, Mass., with 7 sisters, who have charge of schools with 375 pupils. Other establishments, however, as those at Waterbury, Conn., and Bourbonnais Grove, III., may also belong to this Congregation, The Catholic Almanac, under January 12, says: "Margaret Bourgeois, founder of the Sisters of the Congregation, died at Montreal, 1706." There are, however, in the United States many others who are styled in the Catholic Directory of 1871 "Sisters of Notre Dame," or "Poor School-Sisters of Notre Dame," or "Poor School-Sisters of Notre Dame," possibly all belonging with those who are thus reported from Milwaukee: "Convent of the School-Sisters of Notre Dame, Mother House and Novitiate, corner of Milwaukee and King; Sister Mary Joseph, superior; Members, 65; novices, 88; postulants, 89; mission-houses, 78; with 620 sisters, having under their charge, throughout the United States, 27,900 parish school-children, over 1875 orphans, 640 boarders." The establishments named in the Catholic Directory for 1871 as belonging to the "School-Sisters of Notre Dame" are in Baltimore and Annapolis, Md.; Philadelphia, Tacony, and Allegheny City, Pa.; Chicago, Ill.; Milwaukee and Elm Grove, and twelve other places, Wisconsin. To these the Directory for 1870 added Rochester, N. Y.; and Pittsburgh, Pa. The "Poor School-Sisters of Notre Dame," as the "Sisters of the Congregation," are reported at Boston (including East and South Boston and Boston Highlands), Lowell, Salem, Lawrence, Chicopee, Holyoke, Mass.; Waterbury, Conn.; New York City, Rochester, and Buffalo, N. Y.; Newark, N. J.; Philadelphia and Pittsburgh, Pa.; Cincinnati and Columbus, Ohio; Louisville, Ky.; Detroit, Mich.; Green Bay, Wis.; Mankato and Hohah, Minn.; West Point, Iowa; Chicago, Henry, and Bourbonnais Grove, Ill.; St. Louis, Mo.; New Orleans, La.; San Francisco, Pueblo of San José, and Maryville, Cal. See Histoire du Clergé Secular et Regular, iii, 394-396; Barnum, Romanism as it is, p. 927, 928.

Notte, Eliphlet, D.D., LL.D., an eminent Presbyterian divine, and one of the most noted of American educators, deservedly spoken of as "one of the historical monuments of this country"—a man, in short, of very extraordinary character—was born at Ashford, Windham Co., Conn., June 25, 1778. His early training was received under the watchful and intelligent supervision of a most excellent mother. At the age of four years he had read the Bible through, and so insatiable was his thirst for knowledge that, under the direction of his mother, he was constantly adding to his acquisitions from every source within his reach. At one time he was thoroughly bent on becoming a physician, but being present on a certain occasion when a cancer was to be cut from a woman's breast, his services were put in requisition as some part of the process was to be carried through it, he faint ed; and this was an effectual damper upon his zeal for Habit of one of the Congregation of Notre Dame.

VII.—7º
the medical profession. At sixteen he taught school at Pautapany, Lord's Bridge; and at eighteen he took charge of the Plainfield Academy, and at the same time pursued his classical and mathematical studies under the Rev. Dr. Benedict. On leaving Plainfield he became a member of Brown University, Providence, R. L., where he remained about two years, and then entered Harvard College. He graduated in course, but received the degree of master of arts in 1793. He then studied theology under his brother; was licensed by the New London Congregational Association in 1796; labored for some time as a missionary in the western part of the state, bordering upon Otsego Lake; was school-teacher and minister at New York and Barnwell; in 1795-1797; and pastor of the Presbyterian Church in Albany, 1798-1804. In Albany his was the principal church, and most of the leading men in the state, such as Hamilton, Burr, Livingston, and others, resorted to it, and many of them were his intimate friends. When the news of the duel between Hamilton and Burr reached Albany, Dr. Nott was at Schenectady, attending a meeting of the Board of Trustees of Union College. He was requested to make the melancholy event the subject of discourse the next Sabbath, and this sermon on Hamilton and Burr was listened to with profound attention. He was the pulpit orator, making at the same time a profound impression on the public mind, and assisting greatly to bring lasting odium on the bloody practice of duelling. In 1804 he was chosen president of Union College. When he took charge, the college was in a straitened condition; it was without funds, buildings, or library, and was in debt, and all its friends were disheartened. The task was great, but he was adequate to the work; for he succeeded beyond all expectation in raising funds and providing for the pressing needs. He soon exhibited high qualities as an executive officer and disciplinarian, and gathered around him an able faculty. Students began to pour in from every state in the Union, and during his long incumbency upwards of four thousand young men graduated. Union College is emphatically of his own formation. From 1804 till the time of his death he was senior college president in the United States. In 1811 he was moderator of the General Assembly of the Presbyterian Church. He died Jan. 29, 1866. Dr. Nott published a number of baccalaureate and other sermons, addresses, etc. also, *Counsell to Young Men on the Formation of Character, and the Principles which lead to Success and Happiness in Life.* —Lectures on Temperance (1847), of which a new edition, edited by Amasa McCoy, appeared in 1857. These lectures constitute a most efficient argument for the disuse of all intoxicating liquors. He also extended his researches in the domain of natural history; and in the "Digest of Patents" will be found thirty in his name granted for applications of heat to steam-engines, the economical use of fuel, etc. George R. Crooks, D.D., in the New York Methodist (Feb. 9, 1866), says of him: "Perhaps no American educator, no American preacher, who has seen the dawn of 1865, has had so unique a history,—few, probably, so effective a career. Intellectually he was a remarkable man,—many-sided, and superior on most sides. His mechanical genius is well known, and one of the most famous iron manufactures (the Andover iron works)—he was the excited many a curious inquiry, originated in one of his inventions, which, by its economical peculiarities, was first known as a 'novelty.'" He was a great financier, and enriched himself and Union College by his masterly skill and enterprise. But these talents were secondary with him—pastimes of his varied mind. In the higher activities of intellect he commanded not only the respect, but the admiration of all who knew him. He was notably perspicacious, and his luminous mind never failed to throw at least a new light on whatsoever subject he touched. It was owing to his sagacity and research, which the highest intellects have hitherto failed to solve, and which are deemed insoluble—one upon which no additional explanatory light could be expected—still he could give it, at least, original illustration, poetical relief, practical corollaries, that compelled all hearers to say, in the words which Addison puts in the mouth of Cato over Plato's argument on the soul, 'Thou reasonest well.' He had no small amount of intellectual courage, and was not afraid of the 'bugbear' imputation of philistinism, or of common sense, or of new theories. Some of our best evening converses with him has been upon themes transcending the usually allowed limits of speculation, and when his winged but ever serene mind seemed to soar with the sweep and steadiness of the eagle. But such was the strength of his religious faith, and the humility of his piety, that in the presence of the living image he knew him to trench with any recklessness on the mysteries of revealed truth. As a preacher he was pre-eminent. The present generation has not been able to appreciate him fully in this respect, for he was past his prime, and his parish was remote from the metropolis, when it began to turn a critical eye upon him. Still, in some of his latest appearances in the desk, before the Church or before his college, his transcendent power has commanded wonderful admiration. He was oratorical without being declamatory, and a more finished orator no man could have been. He had the ever present pencil, and could transcribe any discourse to the desk without his manuscript, and deliver it without the least apparent effort of recollection. His most striking characteristic as a preacher was his perfect grace of manner, toned by a perfect graciousness (if we may so speak) of religious feeling. Strong, serene, dignified, beautiful in language (sometimes to hear, clear in thought and argument to transparence itself, appropriate in every modulation and gesture, he impressed one as a consummate master of the art of speaking. And what one could not fail to remark was the fact (indisputable) that this perfection of manner was in no way in the least servile or conventional, but the natural accomplishment, but entirely natural—an expression of the natural symmetry of his intellectual and moral nature. No man was happier in short impromptu or extemporaneous addresses, but he took beaten gold into the pulpit; he prepared his sermons studiously and prayerfully, yet delivered them with a facility that may be characterized as altogether felicitous. And the moral impression of his sermons was always profound." "This remarkable man," said another, "was pre-eminentely distinguished for his indomitable force of character. Whatever he undertook he never gave up, however repugnant the object was or however improvident or inapropos causes to give way before him. Happily this greatness of soul was controlled by Christian principles and an all-authoritative conscientiousness, else would he have been a scourge rather than a blessing to his race. But as greatness has its own peculiar faults, so these fell to him, at least in a mitigated degree. Yet those who were his pupils in the noonday of his power still remember him with something of an idolatrous sentiment. He has, scarcely less than any contemporary, impressed his own character upon that of his age and country, and his influence will run on indefinitely. . . . He has accomplished more than any man living. He has done more for the frame partook somewhat of the energy of his character; and, long beyond the term of ordinary old age, death approached him only by slow and measured stages. Peace to his spirit! honor to his memory!" "Of his last days and hours, the Rev. Dr. Barbour, in *The Southern Pulpit,* says: 'The last of all said: "He was ever to the end a little child before God, most pleased to sit at Jesus' feet, and confiding firmly, gratefully, in the sovereignty and loving-kindness of his gracious Lord. In his dying hours, when he felt that the end could not be afar, his parting words were devoted to his countrymen and counsellors. "Fear God, and keep his commandments"—the counsel and legacy of his mother to himself, which had begun and controlled his entire religious life. When utterance
was difficult, the spirit only not gone, he said: 'One word, one word—Jesus Christ;' and the very last, the phrase through his lips was, 'Most merciful God.'" See Memoirs of Eliphalet Nott, D.D., LL.D., by C. Van Sanford, D.D., with contributions and revision by Prof. Taylor Lewis (N.Y. 1876, 12mo); Wilson, Presbyterian Hist. Almanac (1867), p. 155; Allibone, Dict. of Brit. and Amer. Authors. s. v.; Bishop Alonso Potter's Letters and Journal, of This Country, and the States (1845), p. 296; Methodist Quart. (1855), p. 716; Address at the Funeral of the Rev. Dr. Nott, by the Rev. T. Boardman, D.D. (3d Y., 1855), p. 760; Delia of Amer. Book. s. v.; Presb. Reunion Memorial Volume, p. 124 sq.

Nott, George Frederick, D.D., a learned English divine and an accomplished scholar, was born in 1769. He studied at Christ Church, Oxford, and was elected fellow of All-Souls. He became successively perpetual curate of Stowe Canon, Devonshire, in 1807, then vicar of Broad Windsor, Dorsetshire, which he exchanged for Woodchurch, prebendary of Winchester, in 1810, and rector of Harrietsham in 1812. He died in 1842. Dr. Nott wrote, Religious Enthusiasm considered, in Eight Sermons preached in 1802 at the Lecture founded by John Bratton, A.M. (Oxford, 1808, 8vo).—The Proper Modes of Studying the Scripture: an Ordination Sermon (1811, 8vo). He also edited the works of the earl of Surrey and Thomas Wyatt, with copious illustrations (1815, 2 vols. 4to). See Darling, Cyclop. Biblio., ii, 2216. (J. N. F.)

Nott, Handel Gershon, an American divine of some note, was born in Saybrook, Conn., Nov. 10, 1779; graduated from Yale College in 1828; took a theological course in the Yale Seminary; and in 1826 was settled over the First Congregational Church in Nashua, N. H. Subsequently he became a Baptist, and accepted the position of agent of the American Bethel Society, and was for three years Bethel chaplain in Buffalo. Later he preached in Bath, Waterville, and Kenedburnport, Maine, remaining at the latter place for a period of twelve years. His health demanding a change, he accepted a call at Aron, N. Y., in July, 1890; and after a few years removed to Rochester, where he continued to reside until his death, May 3, 1872.

Nott, Henry Junius, an American educator, was the grandson of Benjamin Junius, Abijah Nott, and was born on the Peocres River, South Carolina, Nov. 4, 1797. He was educated at South Carolina College, class of 1812. He then went abroad and studied jurisprudence, but shortly after his return accepted the professorship of philosophy and language in his alma mater. On his way home from New York he was shipwrecked, and perished at sea, Oct. 13, 1837. Mr. Nott was a frequent and valued contributor to the Southern Review. He also published Novelties of a Traveller (New York, 1834, 12mo).

Nott, Samuel (1), D.D., a Congregational minister, brother of Dr. Eliphalet Nott, was born Jan. 23, 1777. He graduated at Yale College in 1790; was ordained pastor in Franklin, Conn., March 13, 1792, where he remained until his death, May 26, 1852. He did full parochial duty until his ninety-fourth year, and was in many respects a worthy branch of that noble family to which he belonged. He published a number of sermons and papers. See Sprague, Annals of the Amer. Pulpit, ii, 190.

Nott, Samuel (2), a noted American missionary of the Congregational Church, was born at Franklin, Conn., in 1788; was educated at Union College, class of 1808; and studied divinity at Andover Theological Seminary, where he graduated in 1810. He was ordained Feb. 6, 1812, and went out to India with the first band of missionaries sent to that country by the American Board of Foreign Missions. He returned from India in 1816, and taught in New York until 1822. In 1823 he became pastor at Galway, N. Y.; in 1829 he removed to Wareham, Mass., where he preached until 1849, and then taught for one year. He died at Hartford, Conn., June 1, 1869. Mr. Nott wrote, Sixteen Years' Preaching and Procedure at Wareham, Mass. (1845, 8vo).—Slavery and the Remedy, etc. (1856, 8vo). Notus (Auster), the south or south-west wind. It brought rains and fog.

Figure of Notus (from the sculptures at Athens).

Nouet, Jacques, a French Jesuit, was born at Mans in 1605. He entered the order about 1625. After completing his studies he devoted himself successively to teaching and to preaching, in which he was at first very successful. But having ventured to attack in the pulpit the dogmas of Antoine Arnauld, La Fréresse communion, he was at first silenced by a sharp answer of Arnauld, and afterwards obliged to apologize publicly before an assembly of bishops. Nouet now renounced preaching, and became successively rector of the colleges of Alençon and Arras. He died at Paris in 1680. He wrote, Remerciements du consistoire de R. aux théologiens d'Alençon, disciples de St. Augustin, against abbot Lenoir:—Là présence de Jésus-Christ dans le trieu- saint sacrément, pour servir de réponse au ministre qui a écrit contre la persévérance de la foi (2d ed. Paris, 1667, 18mo). It is claimed that Lurenne was converted to the Romish Church by reading this work. Nouet's reputation, however, rests chiefly on his accute works, such as Traité de la dévotion à l'ange gardien (Paris, 1661, 12mo; an Italian translation of it was published at Bologna)—and the most important of them all, L'Homme d'Oraison, comprising a number of works published at various times, and entitled L'Omale d'Oraison, sa conduite dans la voie de Dieu, contenant toute l'économie de la méditation, of l'oraison effective et de la contemplation (Paris, 1674, 2 vols. 8vo) ...—L'Homme d'Oraison, ses méditations et ses entretiens pour les jours de l'année, fragments of which were published by Muguet in 1677, 1678, and 1688 (complete by Hérisant, 1765, 10 vols. 8vo; Paris, 1780; Lyons, 1800 and 1845, 12mo) ...—L'Homme d'Oraison, ses lectures spirituelles pendant tout le cours de l'année (Paris, 1679, 4to) ...—L'Homme d'Oraison, ses entretiens (1765, 1780, 1820, 1845, 6 vols.). He wrote also, Méditations et entretiens sur le bon usage des indulgences et sur les préparations nécessaires pour gagner le jubé (Paris, 1677 and 1701, 4to) ...—Retraite pour se préparer à la mort (ibid. 1673, 8vo) ...—Méditations spirituelles (ibid. 1809, 12mo) ...—Solitude de nuit jours du réservé père Jacques Nozet, in MS. at the Imperial Library at Paris, under the No. 3920. Dr. Pusey translated one of Nozet's works under the title of Life of Jesus Christ in Glory (London, 1847, small 8vo). See Avertissement sur quelques sermons prêchés à Paris, the works, vol. xxii; les Desports, Bibl. du Motie; B. Hauriez, Hist. littéraire du Motie, iv, 297.

Nouelleau, Jean-Baptiste, a French ascetic writer, was born June 24, 1605, in Saint-Brieuc. Descended from a religious family, he was educated at Rennes and Nantes, and at the age of twenty entered into the Congregation of the Oratory. In 1639 he took possession of the archdeaconry of Saint-Brieuc,
and in 1640 of the prebend, which he held until his death. He was a pious man — learned, and of au-
test manners; a true model of piety, but with an ardent and restless character, carried away by a reformatory zeal which no consideration could arrest. He rendered to M. de Vilazol, his bishop, efficient service in the missions of Brittany; but he did not find in the latter's successor, M. de la Barre, a protec-
tor so benevolent. At the request of the chancellor, Boucherat, he was forbidden to preach, and he ap-
pealed in vain from this sentence. He then began to preach in the streets. Excluded in 1644 from eccle-
siastical duties in the diocese, he sought a desert place, and exercised upon his body long macerations. Fasting almost continuously, fatique and excessive au-
teritie shortened his days. He died in Saint-Brieuc, 1672. Nouelle composed upon morality, theology, and the reform of the clergy a great number of arti-
cles, of which the principal are, *Contradiction contre blanphématiques* (Paris, 1645, 4to) — *Pratiques de l'Oraison* (Saint-Brieuc, 1645) — *L'Esprit du Chris-
tianisme*, tiré de cent paroles choisies de Jésus-Christ (Paris, 1645) — *L'Idée du vrai Christien* (ibid. 1646) — *Paroles tirées dans les exercices divins de M. de No-
seau le Dauphin* (ibid. 1645, 12mo) — *De gratia Dei et Christi* (ibid. 1645, 4to) — *L'Amiable composi-

**NOUMENA** (Gri. νομονέα) is a philosophical term used by Kant in his *Kritik* to express the objects of the understanding, in distinction from the *phantomena*, which he understands to designate simply objects of the sense. The use of the term has been necessitated by the desire to give a strict metaphysical distinction of sensual and intellectual conceptions. Kant, it will be remembered by the philosophical student, rejects the Leibnizian view of an intellectual phenomenalism. For details the articles KANT and LEIBNITZ may be consulted. See also *Ueberweg, Hist. of Philosophy,* p. 1, 115, 157, 172, 175, 176, 216, 299, 255, 201, 262, 421, 530, 531.

**Noureddin Mahmud, Malek-al-Akéd, one of the most illustrious men of his time, and the scourge of the Christians who had settled in Syria and Palestine, was born at Damascus Feb. 21, 1116. His father, Qasim, and his mother, originally granddaughters of Mosul and Diarbeirk on behalf of the Seljuk sultans, had establish-
ed his independence, and extended his authority over Northern Syria, including Homs, Edessa, Hamah, and Aleppo. Noureddin succeeded him in 1140, and, the better to carry out his ambitious designs, changed the seat of government from Mosul to Aleppo. Count Jos-
celin of Edessa, thinking the accession of a young and inexperienced sovereign afforded him a favorable oppor-
tunity of regaining his territories, made an inroad at a large of force, but was signally discomfited under the walls of Edessa, his army, with the exception of 10,000 men, being completely annihilated. The re-
port of Noureddin's success being conveyed to Western Europe, gave rise to the second crusade. The Crusaders were, however, foilied by Noureddin before Damascus, and, being defeated in a number of partial conflicts, abandoned their enterprise in despair. Noureddin next conquered Tripolis and Antioch, the prince of the latter territory being defeated and slain in a bloody conflict near Rugia (June 29, 1149), and before 1151 all the Christian strongholds in Syria were in his possession. He then cast his eyes on Egypt, which was in a state of disorder after the death of the caliph of the Fatimites, and, as a preliminary step, he took possession of Damascus (which till this time had been ruled by an independent Seljuk prince) in 1166; but a terrible earthquake which at this time devastated Syria, levelling large portions of Antioch, Tripolis, Ha-

**NOVALIS, Friedrich, a German literary character, whose real name was Von Hardenberg, is noted in the history of philosophy, belles-lettres, and also in hym-
nology and religious literature generally. He was born**
NOVALIS
205

NOVALIS

at Wiesbaden, in Mansfeld territory, near Eisleben, May 2, 1772, of Moravian parents. In 1790 he entered the University of Jena, and continued his studies at Leipsic and Wittenberg. In 1795 he settled at Weis-

seid, in Thuringia, and there he devoted himself to the mining industry. He was to have been married shortly after his location, but his affianced died just be-

fore the important change in his life was to take place, and he married her memory by combining into a rounded whole the speculative idealism of Shelley, the weird romant-

icism of Chatterton, and the ardent piety of Kirke White. As a leader of the romantic school of German literature, his influence on the belief and tastes of the German mind was like that of his contemporaries Coleridge and Wordsworth, whose influence for the future, how-

ever, bore in mind, for an understanding of this statement, that German literature at that time bore the marks either of the old scholasticism, or of the materialism introduced from France, or of the classic culture introduced by Lessing and his coadjutors. The element then revived was the mediæval element of chivalry, the high and lofty courage, the delicate aes-

thetic taste, which had marked the Middle Ages. Her-

der (q. v.), to whom Germany owes much, disgusted with the stoical and analytic spirit of the Kantian phi-

losophy, and weary of the blind attempt to throw the mind back to an appreciation of old history, and especially had manifested an enthusiastic admira-

tion of Hebrew literature; but now, as if by one general movement, the public taste was turned to an apprecia-

tion of the freshness of feeling and the elements of character which were included in the Christianity of the Mid-

dle Ages (see Farrar, Crit. Hist. of Free Thought, p. 239, 240). If the works thus far mentioned are remarkable for singular combination, his Geistliche Lieder (spiritual songs) are no less so for their perfect simplicity and pure spirit of devotion. The tender ardor of romance has certainly nowhere been expressed more beautifully than in the spiritual songs of Novalis, which form a favora-

ble contrast to the insipid moralizing rhymes of the pe-

riod of the Illuminati; and though they do not bear the stamp of Church hymns, still they are well adapted to be sung in quiet solitude, even within the heart. Those who have not access to the German may find two spec-

imens in good English version in Saunders' Evenings with the Sacred Poets (new ed. rev. N. Y. 1870, 12mo), p. 108. But by far the most important of Novalis' writ-

ing, his Dichtungen are not only the most beautiful, but a better insight into his philosophical notions. It is in these that he touches upon many points in morals, physics, and philosophy. Indeed, he develops in them somewhat at large a philosophical system, and there can be no doubt that he would have figured promi-

nently as a German philosopher had he not died so young.

If we examine all the writings of Novalis in order to determine how far in what particulars he has influenced German religious thought, we find him completing the cycle of mysticism which sprang from the mixed influence of Fichte (q. v.) and Jacobi (q. v.). Schlegel, in whom it first manifested itself, took refuge from the abyss of scepticism, to which his extreme subjective principles led, in an objective revelation, as the organ of eternal verities otherwise unknown. Schleiermacher, while making human consciousness the supreme arbiter and test of truth, yet would assimilate them all to the perfect mind of Christ, the divine man, the type of infinite purity and love. Novalis, pro-

ceeding one step further, regards it as the true pur-

port of philosophy to destroy the individual, the finite, the subjective, and make us all ourselves to become one with the infinite and all-perfect mind. To him the foundation of all philosophy is faith, that is, an inward light which reveals to us the infinite and the real, a direct perception of the Divinity; an irresistible conviction of the presence of the great Spirit of the uni-

verse in all we see, hear, and feel and do. This bu
is to him but the reflection, or the dream of faith—one which pictures to us truth only in dim, unreal, and fantastical forms. It is only to that kind of mind and that of the body are we drawn; we are absorbed in the Divine, that we rise to the full light of truth, and gaze upon things as they are. In Novalis, accordingly, we never see the idealist taking his stand upon the principles of a purely subjective philosophy; but we see him, having left the road, and introduced the additional element of a higher faith, completely over- comeing the subjective point of view, sinking the individual self in the great Spirit of the universe, and evincing the Divine idea, and the power and might of the Eternal, in harmony with God (comp. Morell, Specul. Phil., in the 19th Cent. p. 622).

Tieck edited the works of Novalis and sketched the life of his friend soon after his demise. But three quarters of a century's search and criticism have discovered many complementing and correcting traits for the general portrait, and brought to light a quantity of valuable letters and fragments. A near relative has recently edited these in a new work on Novalis, on occasion of the centenary of his birth. The general results are: Novalis was not so near Roman Catholicism as Tieck and Schlegel asserted, but he retained his hatred of Romanism till his death; and the severe strictures by Hagenbach in his German Rationalism, p. 346-349; and Hurnt's transl. of Ch. Hist. 18th and 19th Cent. ii, 283 sq.) Novalis's so-called Mariolatry hymns were not the free expression of his personal religion, as an integral part of his completed mediæval romance, Heinrich von Ofterdingen. His heart ever remained true to his Moravian training, though his theology assumed a less fettered form, somewhat in the (subsequent) manner of Schleiermacher.

The suspicion that he was a Roman Catholic at heart could only have arisen from the fact that, at the scene of elevation at which Novalis habitually dwelt, the little geometrical fancies which cut up the great field of Christianity into petty angular sectarian garden-spots were almost invisible. To very many this Nachlese (see below) will prove very welcome, especially to all who love to see in the Christian life a vital synthesis of ethics and aesthèse.

Novara, Pietro da. "There are some pictures at Domodossola," says Lanzi, "that make us acquainted with an able architect of the 12th. They are preserved in Castello Sylva, and in other places, and have the following inscription, 'Ego Petrus filius Petri Victoris de Novaria hoc opus piaei, 1370.'" Doubtless he is the same Pietro de Nova (s. v.).

Novarrini, Luigi, an Italian theologian of note, was born at Verona in 1394. He received at baptism the name of Girolamo, which he changed to that of Luigi the 15th cent. He sent himself to the Theological Faculty of Bologna. After having studied theology and entered the priesthood at Venice, he returned to his native city, where he occupied different positions in his order. He died at Verona in 1566. Of his value as a writer, Niccioni says: "His natural vivacity would not allow him to polish his productions; he placed none of his works on paper all that he found in his collections upon the subject of which he was treating, whether good or bad; the desire of using all he had gathered often caused the shoemaker, the ironmonger, or any other who served to sell his books. He also thought more of making large and numerous works than of composing good ones." Most noteworthy of his works are, Electa sacra (Venice, Lyons, and Verona, 1627-1645, 5 vols. fol.); vol. ii, which, in a diffuse and mystical style, contains a eulogy of the Virgin, has had three editions—Bononiense domicaus, hoc est defectu mundi letitia (Verona, 1630, 12mo)—: Scholastiam sacro—prophana (Lyons, 1635, fol.)—Descriptio ejus SS. Patrum ecclesiasticonque scriptorum monimenta prompta (ibid. 1637, 2 vols. fol.)—: Mattutus, Marcus, Lucas, et Ioannes expositi (ibid. 1642-1643, 2 vols. fol.)—: Summa fidei Catholicæ (ibid. 1646-1647, 2 vols. fol.)—: Ad monachos et sacerdotes in ultimam judgmentem (ibid. 1646, 12mo), etc., etc. He also published a number of treatises on the evangelists and the Acts of the Apostles—: Paulus exponens (Verona, 1644, fol.)—: Omnium scientiarum anima, hoc est axiomatica physico-theologica (Lyons, 1644, 3 vols. fol.)—: Moesos exponens (Verona, 1646-1649, 2 vols. fol.)—: Encyclopaedia apostolica (Venice, 1645, fol.)—: Admiranda orbis Christiani (ibid. 1669, 2 vols. fol.)—: this compilation, in which are found many fabulous things, has been edited by the care of J. B. Bagatta, a Theatins monk. See Silio, Hist. Clericorum Regul. pt. iii; Niccolini, Monumenta, vol. xi, s. v.; Hoefer, Nouv. Biog. Générale, vol. 90, pp. 396 et seq.; 397 sq.; 400 sq.

Novo Scotia, a province of the Dominion of Canada, situated between lat. 48° 26' and 47° 5' N., and long. 69° 40' and 66° 25' W. It consists of the peninsula of Nova Scotia and the island of Cape Breton, separated by the Strait of Canso, on the south-west and south-east by the Atlantic Ocean, and on the north-west by the Bay of Fundy and New Brunswick, with which it is connected by an isthmus 14 miles wide, separating Northernumberland Strait from the Bay of Fundy. It is 250 miles long from north-east to south-west, 85 miles in average breadth. Its area, according to the Canadian census of 1871, is 16,956 square miles, and that of Cape Breton is 4775 square miles; of the entire province 21,731 square miles. The capital, commercial metropolis, and largest city is Halifax, with 29,582 inhabitants (1871). The province was incorporated in 1758. Its population in 1871 was 178,610; in 1881 it was 194,672. Of the total population in 1871, 163,581 were born in the province; 10,129 in New Brunswick, 2306 in Prince Edward Island and Newfoundland, 577 in other parts of British America, 2299 in the United States, and 25,882 in the British Isles, of whom 14,316 were natives of Scotland, 7558 of Ireland, and 4006 of England and Wales; 13974 in the Provinces of Canada, 118,590 in English, 82,851 in Irish, 32,883 in French, 31,942 of German, 6212 of African, 2868 of Dutch, 1775 of Swiss, and 1112 of Welsh origin, and 1666 were Indians (Miamms and Malacites). The entire province has a coast line, not counting indentations of land, of 1170 miles. The shores of the peninsula are indented with a great number of excellent bays, and harbors, and between Halifax and the Strait of Canso alone there are twenty-six commodious havens, twelve of which will accommodate ships of the line. Stretching along the Atlantic coast, from the St. Lawrence to the extremity of Nova Scotia, the distance is about twenty miles, in a range of highlands, and about 60 miles from the Atlantic coast are the Cobquid Mountains, 1100 feet in height, which traverse the peninsula from the Bay of Fundy to the Strait of Canso. The soil in the valleys is rich and fertile, producing all the fruits of temperate and southern climates; and especially in the north, the uplands are also fertile. The climate is remarkably

Digitized by Google
healthy, its rigor being modified by the insular character of the province and by the influence of the Gulf Stream. The mean temperature for the year is 42° at Pictou, and 43.5° at Windsor. The extreme limits of the thermometer may be stated at 15° Fahr. in winter, and 95° in the shade in summer. The province abounds in mineral riches, including gold, coal, and iron. Of the entire area of the colony, 10,000,000 acres are considered good land, and of these 1,000,092 are under cultivation. The principal agricultural products are hay, wheat, barley, buckwheat, oats, rye, Indian corn, potatoes, and turnips. The waters around the colony abound in fish, as mackerel, shad, herring, salmon, etc., and the fisheries are pursued with ardor and with increasing success.

Religious Status.—The Church of England is recognised by the ancient laws of the province as the Established Church. This legal recognition was effected in 1758; but though various civil enactments, as to the limits of parishes, appointment of churchwardens and vestrymen, were obtained thereby, nothing beyond the mere name of an establishment has for many years existed. The permanent endowment of Windsor College, under the exclusive control of this Church, has been discontinued by the state; so that, in effect, the only paltry support given to the Church is the endowment of the bishop retains, ez-officio, a seat in the legislative council of the province. The number of adherents to this Church in 1881 was 60,255. The list of clergy contains one bishop, one archdeacon, besides ordained missionaries and missionaries of the church in foreign parts, and in forty different towns and settlements. Four of the clergy are connected with Windsor College, three with Halifax Grammar School, and one is an agent for the Colonial Church and School Society. Until recently large annual remittances for the support of the clergy and college professors had been received from the British Society for the Propagation of the Gospel in Foreign Parts, and even, it is understood, from grants of the Imperial Parliament of Great Britain and Ireland. The foreign aid is now greatly curtailed, and will, it is expected, in the course of a few years altogether cease. The effect of this change of policy has been far from disastrous. A large portion of the wealth of the province is found within the pale of this Church, and nothing is wanting to secure permanent and growing prosperity but the prudent management of its internal resources. The mean temperature of the year is 42°, and the efforts made to sustain in thorough efficiency the Diocesan Society and the Foreign District of the Society for Promoting Christian Knowledge.

Under the general title of Presbyterians are grouped the adherents of all three distinct churches, or, as they are generally termed, Free Church, United Presbyterian, and Episcopal. The oldest, largest, and most influential of these bodies in Nova Scotia is that which arose from the two secession churches, Burgher and Anti-Burgher. A union was happily effected between the adherents of these bodies and the Presbyterian Church in Nova Scotia in the year 1817. Only one Presbyterian minister remained aloof, and he was personally favorable, while his congregation, being originally independent, was unfavorable to the union. The first Presbyterian minister removed from the church in Nova Scotia in the year 1771. A permanent settlement was made before the first presbytery was formed in 1786, under the designation of Presbytery of Truro. Nine years afterwards another was formed in Pictou, and so designated. At the period of the union above referred to there were three presbyteries in the province, and there were thirty-two and twenty-five congregations. The great impediment all along experienced by this Church has been the difficulty of obtaining an adequate supply of ministers and of making them fit for the service of the church in Nova Scotia. The Presbytery of Truro, in 1816 a society was formed to procure the establishment of an academy for the training of native youth for the ministry and other learned professions. The basis proposed was sufficiently liberal to unite all dissenting bodies, and the means of support was to be endowed by the state. This effort was for a time apparently successful, but never so much so as to acquire the character of permanency. Ultimately it became a bone of contention, introduced bitter animosity and religious hate into the surrounding community, and became a watchword for igniting the mob, and thus to form an effectual barrier to ecclesiastical union on the part of the different Presbyterian bodies. Eventually all connection with this institution was abandoned by the Presbyterian Church of Nova Scotia, and then it became a matter of dire necessity with that Church to provide and maintain an educational institution out of her own resources. Several years, however, elapsed before this step was taken. In 1845 measures were initiated with a view to the erection of a theological seminary, as preparatory to the divinity hall. The Free Church Presbyterians sustain a college at Halifax, also an academy and a theological seminary. Altogether the Presbyterians are the most powerful body in the province (see statistical table below).

The Baptists have been nearly as long in the country as the Presbyterians. They have met with much success in the province, and rank third in numbers among the different religious bodies. They support a college and several elementary schools, and send missionaries to foreign parts. The Wesleyan Methodist body was started by missionaries from the mother country as early as 1768. No permanent organization was effected until 1786. A theological school is supported by them, and many academies and one college. The Congregational Church started as early as any of the foregoing, but its success has been very limited thus far.

The following table, from the census of 1881, gives the number of adherents of the principal denominations:

<table>
<thead>
<tr>
<th>Denomination</th>
<th>Adherents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baptist</td>
<td>83,761</td>

<tr>
<td>Total</td>
<td>460,573</td>
</tr>
</tbody>
</table>

Of the Baptists 19,092 are Free-will Baptists, and of the Methodists 38,683 are Wesleyans. Among the miscellaneous are included 4958 Lutherans, 2538 Congregationalists, 1555 Christian Conference, 869 Adventists, 647 Universalists, and 848 Bible Believers. Besides the denominational efforts of each of these evangelical bodies, they severally unite in general schemes of benevolence and Christian philanthropy. The Nova Scotia Bible Society, and other auxiliaries of the British and Foreign Bible Society, enlist the sympathies of all but the Baptists, and are very generally supported. The Halifax Naval and Military Bible Society is in like manner dependent upon the Christian public generally. The Micmac Missionary Society, while its principal agent and missionary is Baptist, meets with the approbation of all. The Nova Scotia Sabbath Alliance consists of the leading ministers and members of all the leading Protestant denominations in Halifax.

Educational Status.—Nova Scotia has a system of free public schools, organized in 1864. The schools are under the general superintendence of the provincial superintendent, with inspectors for the several
Nova Scotia counties, and are immediately managed by boards of commissioners for the counties, and of trustees for the different sections or districts. The number of schools in operation during the summer term ending Oct. 31, 1874, was 1763; number of teachers, 1744 (602 males and 1142 females); number of pupils registered, 79,910; and number of pupils for whom accommodation is provided, 48,902. Included in the above figures are ten county academies, with 45 teachers and 2614 pupils enrolled during the year. Aid was granted from the provincial treasury to four special academies, having 14 teachers and 570 pupils, and also to Mount Alli- son male and female academies in New Brunswick. There are five colleges, as follows, with their statistics for 1874:

These receive small grants from the provincial treasury, as does also Mount Allison College in New Brunswick. In Dalhousie University a medical department was organized in 1868, which in 1874 had 11 professors and 29 students. In Halifax is situated the theological department of the Presbyterian Church of the lower provinces of British North America. The Halifax School of Medicine was incorporated in 1873. The provincial normal and model schools are at Truro. The number of teachers in the normal school in 1874 was 4; of pupils, 119. In the model school there were 9 teachers and about 550 pupils. The census of 1871 enumerates five young ladies' boarding-schools, with 146 pupils. The total expenditure for educational purposes in 1874 was $619,561 87; viz.: public schools, $255,221 40; normal and model schools, $4738; special academies, $265,970; colleges, $53,337 47. Of these sums, $175,013 65 was derived from the provincial treasury, viz.: for public schools, $157,480 65; for normal and model schools, $4738; for special academies, $6500; for colleges, $6000. Of the expenditure for public schools, $107,501 89 was derived from the provincial government, and $297,627 from the town and county authorities, in the different school sections. The number of newspapers and periodicals published in the province in 1874 was 38, viz.: 4 daily, 5 tri-weekly, 24 weekly, 1 bi-weekly, and 4 monthly.

History.—Nova Scotia is supposed to have been visited and "discovered" by the Cabots in 1497. Its first colonists were a number of Frenchmen, who established themselves here in 1604, but were afterwards expelled by settlers from Virginia, who claimed the country by right of discovery. Under the French settlers it bore the name of Acadia (Acadie); but its name was changed for the present one in 1621, when a grant of the peninsula was obtained from James I by Sir William Alexander, whose intention was to colonize the whole country. Having found, however, that the localities they had fixed upon as suitable for settlement were already occupied, the colonists returned to the mother country. In 1654 the French, who had regained a footing in the colony, were subdued by a force sent out by Cromwell. By the treaty of Breda the country was ceded to the French in 1667, but it was restored to the English in 1713. After the middle of the 18th century strenuous efforts were made to advance the interests of the colony. Settlers were sent out at the expense of the British government. The French, who had joined the Indians in hostilities against the English, were either expelled or completely mastered; and Cape Breton, which at an earlier period had been disregarded by Nova Scotia, was reunited to it in 1819. Nova Scotia was incorporated with the Dominion of Canada July 1, 1867, and is represented in its Senate by 12 senators, each of whom must be a citizen thirty years of age, and possessable in the province of Nova Scotia. In 1867 there were five representatives sit in the Canadian Parliament for Nova Scotia. Nova Scotia has also its own provincial Parliament and lieutenant-governor. See Haliburton, Historical and Statistical Account of Nova Scotia (Halif., 1829); Martin, History of Nova Scotia, etc. (London, 1837); Akins, Selections from the Public Documents of the Province of Nova Scotia (Halifax, 1869); Amer. Cyclop. s. v.; Blackwood's Mag. 1864, i, 12; 1868, ii, 158; Anderson, Hist. Col. Church (see Index in vol. iii).

Novatian (Novatianus) of Rome, the first anti- pope, and one of the most noted characters in the Church of the 5th century, and the founder of a sect called after him [see Novatians], was, according to Philostorgius—whose statement, however, has not been generally received with confidence—a native of Phyrgia. From the accounts given of his baptism, which his ene- mies alleged was irregularly administered, in consequ- ence of his having been prevented by sickness from receiving imposition of hands, it would appear that in early life he was a Gentile; and probably previous to his conversion to Christianity he was devoted to Stoic philosophy; though it does not appear that this supposi- tion is supported by the testimony of any ancient writer. There can be no doubt that after his conversion he at once devoted himself zealously to the support of the Christian cause, and became a presbyter of the Church at Rome; that as an officer in the Church he insisted upon the rigorous and political exclusion of the Lapsi, the weak brethren who had fallen away from the faith under the terrors of persecution; and that when made aware that Cornelius, a man held in the highest estimation among the Roman presbyters, and also some others, were widely at variance with him on this subject, he became a leader in the provincial attacks on this same Cornelius as successor to the departed Fabian in the bishopric of Rome; and that when Cornelius was, notwithstanding his veto, elevated to the pontificate, June, A.D. 251, about sixteen months after the martyr- dom of Fabian, he (i.e. Novatian) disowned the au- thority of the new pontiff, and himself consecrated bishop by a rival party, was condemned by the council held in the autumn of the same year; and, after a vain struggle to maintain his position, was obliged to give way, and became the founder of the Novatian sect (see the following article). We are told by the Church—principle advocates of Rome and England that Novatian was a man of unscrupulous, treacherous, and wolf-like disposition; that his ordination was per- formed by three illiterate prelates in an obscure corner of Italy, whom he gained to his purpose by a most equitable article; that the mother republic only per- ceived, confessed, and lamented their error; and that those persons who had at first espoused his cause soon returned to their duty, leaving the schismatic almost entirely alone. We must observe that these ac- counts are not generally received by Protestant writers. Then, however, and perhaps Cornelius, being contained in a long letter from that pope to Fabius of Antioch, preserved in Eusebius; that they bear evident marks of personal rancor; and that they are contradicted by the circumstance that Novatian
was commissioned in 250 by the Roman clergy to write a letter in their name to Cyriac, which is still extant; by the respect and popularity which he unquestionably enjoyed after the assumption of the episcopal dignity, even by those who did not recognise his authority; and by the fact that a numerous and devoted band of followers espoused his cause for several centuries, converting, as it were, the whole Christian world, and flourished for more than two hundred years. Cornelius indeed inveighs against him with much bitterness in the Epistle to Fabius (preserved in part by Eusebius, Hist. Eccles. i. vii, c. 45, p. 244 etc.), but still he does not condemn him; he does not even condemn him, when he died, Novatian was not only not accused of any criminal act, but was commended, even by those who viewed him as warring against the interests of the Church, as byCyriac, Jerome, and others, on account of his eloquence, his learning, and his philosophy. See Cyriac, Epist. iii. and iv. Nearly all the charges which Cornelius brings against him, great as they may seem to be, relate to the intentions of the mind, which are known only to God; and some of the charges reflect more disgrace on Cornelius himself than on Novatian. The latter has been accused of ambition; the former of anxiety. The anxiety was quite voluntary merely because Cornelius received more votes for the vacant bishopric, which he himself coveted. This is an old charge, and it has acquired so much strength and authority by age that all the moderns repeat it with entire confidence; and they tell us that Cornelius and Novatian were interested in the opinion of their adversaries; that the latter, failing of an election, disturbed the Church in his last for office. "But," says Mosheim, "I have no hesitation in pronouncing this a false accusation; and I think that there is no good proof that Novatian acted in bad faith; or that he made religion a cloak for his desire of dignity. His enemy, Cornelius, does indeed say this (in his Epist. ap. Eusebius, Hist. Eccles. i. vii. c. 45, p. 244). But the very words in which he is here accused carry with them his acquittal; for Cornelius clearly shows that he concealed his ambition, which long remained unknown (p. 514). But Cornelius supplies us with still stronger testimony to the innocence of his adversary; for he acknowledges that when they were deliberating at Rome respecting the choice of a bishop, and Novatian declared that he wished some other person than Cornelius might be chosen, he affirmed, with some degree of reserve, that his adversary's desire was merely a wish for the office. Now whoever neither does nor attempts anything that could awaken a suspicion of his being ambitious, and moreover declares on oath that he has no desire for the episcopate, cannot possibly be a competitor for the episcopal office. But some may say, The imputation is true, and Novatian was actuated with a design to exhibit great show of modesty, yet he opposed the election of Cornelius in order to secure the appointment to himself. To this many things might be said in reply. I will mention only one. Novatian was not a man to whom a suspicion of perjury can be attached; he was a man whom even his enemies pronounced upright, inflexible, and rigorous, and whom no one ever charged with impiety towards God, or with being of a perverse and impious disposition. What, then, could Cornelius have designed by writing to Fabius, and probably to others, that Novatian had long been actuated with a desire for the episcopal office? I answer to confirm a conjecture, and that a very dubious and intangible one. He reasoned in this manner: Novatian, on being expelled from the Church, allowed himself to be created bishop by his adherents; therefore he had long coveted the office of a bishop, although he pretended to the contrary. How fallacious and unworthy of a bishop such reasoning is I need not here show. There would indeed be a little plausibility in it, though very slight, if Novatian, immediately after the election of Cornelius, had wished his friends to consider that he had long been actuated with a desire of the bishopric, and had made use of the power to effect. But he postponed all movements for erecting a new Church, and patiently awaited the decision of the approaching council. But after he had been condemned and excluded from the Church, together with his adherents, he thought there could be no sin in his taking the oversight of his own company. The invidious representations of this affair by Cornelius cannot at this day be refuted, owing to the want of documents; yet, as they are not of an enemy, they are not to be received implicitly by those who could have seen for themselves the truth." (Hist. of Christianity in the First Three Centuries, ii. 60 sq.). From the account Cornelius gives of Novatian, the latter appears to have been of a melancholy temperament, and consequently gloomy, austere, and fond of re- tirement. Robert of Corei, the first bishop of the Roman Church said they found in the man what Cornelius calls (ap. Eusebius, p. 242) τὸν ἐκωμισμένον καὶ λειφόροντα; which Valerius translates, "aborrentem ob omni societate feriatem, et lupinam quamdam apel- citiam." He therefore shunned society, and was willing towards even his friends; i. e. he was harsh, austere, and ungracious in his intercourse (p. 515). That these things were objected to him with truth is reasonable; for manners like these are entirely accordant with his principles. He was led to embrace Christianity by a certain mendicant monk who had fallen, and from whom he hoped to be recovered by the Christians. At least so appears what Cornelius has stated (nor will any who are familiar with the opinions and phraseology of the ancient Christians understand Cornelius differently): Ἀμπερρός τῷ πιστεύσας γένεστε ὁ Σάμανώτας, διώκεται γὰρ διὰ τοῦ γένους ὁ Διανάους ὁ ἀμπερρός ἀντί τὸν Κέρνουλινον; namque iniuriam credendii ipsi Satanas in ipsis ingressus atque in ipso aliquamdiu commodatus). This, in our style and mode of speaking, would be: "A deep and settled melancholy had fastened on his mind; and the Christians who knew him said that an evil spirit had possessed him, and that if he could profess Christ the evil spirit would go out of him; so, from a hope of recovering his health, he professed Christianity." Perhaps his melancholy was attended with convulsions. This may strike some as a hasty and unwarrantable construction of the statement; but it is not credible that Novatian himself, being a Stoic philosopher, would refer his malady to an evil spirit. This notion was instilled into him by the Christians; who, undoubtedly, were desirous of bringing a man of such correct morals to become a Christian; and they gradually made him a convert to the tenets of their faith by the means of his habits, and to their exhortations. By the regulations of the ancient Church, he could not, however, be baptized so long as he appeared to be under the power of an evil spirit. Exorcists were therefore sent to him, to expel the foul daemon by their prayers. But they failed of success; The execution of his words, and Novatian being actuated with a desire of the bishopric while under their operations, was baptized in his bed, when apparently about to die. On recovering from the attack, he seems to have hesitated whether he should in health confirm what he had done in his sickness, and thus persevere in the Christian religion; for, as Cornelius invidiously says of him, he could not be persuaded to submit to the other rites prescribed by the Church, and be confirmed by the bishop, or be signed, as the term used expresses it. For this pertinacity and disregard of the Christian regulations, unquestionably the only sensible cause may have been that his mind was fluctuating between the philosophy he had before followed and the Christian religion which he had embraced from a hope of recovering his health. Nor can we wonder at this disturbance; for the Christians had assured him of the restoration of his health by the exorc- ista who had failed in the undertaking. Nevertheless the bishop, Fabius perhaps, a while after, made him a presbyter in his Church, contrary to the wishes of the whole body of priests and of a large part of the Church. (See Cornelius, ap. Eusebius, l. c. p. 265.) It was alto- gether irregular for a man who was actuated with the power to admit a man to the priaestly office who had been baptized in bed; that is, who had been merely sprinkled,
and had not (p. 516) been wholly immersed in water in the ancient method. For, by many, and especially by the Roman authorities, the baptism of infants (so they called those who, lest they should die out of the Church, were baptized on a sick-bed) was accounted less perfect, and indeed less valid, and not sufficient for the attainment of salvation. This also was even more strange and unheard of, that a man should be admitted among the members of the Church by a priest who rashly pronounced as invalid those who disregarded the laws of the Church, and pertinaciously rejected the authority and confirmation of the bishop. The belief of that age was that the Holy Spirit was imparted by the confirmation or signing of the bishop; so that all those lacked the Holy Spirit whose baptism had not received the confirmation of the bishop. The statement that Novatian was raised to the rank of a presbyter immediately after receiving baptism: Πιστεύεται του προσευτή του εκ θρήσκους [which is not badly translated by Valesius: "un peremptorium baptizerum"—properly, "as soon as he had believed"], very possibly said to be by the favor of the bishop; for it was an irregular elevation certainly, as Novatian had not yet been made deacon. The truth, then, it would seem, is rather that Novatian was hurriedly put into places of responsibility, in order to save him from apostasy; and, once in the Church, he contended zealously for her purity; and that in his endeavor to save the Church from irregularities he opposed Cornelius, and was thus driven on against his natural inclination to "contend for what he conceived to be the purity of the Church." Cleared from the imputations of Cornelius and his friends, Novatian rises up before us like some old prophet, solemnly denouncing the hideous corruptions of the Church, yet unable with his small band to make head against that ecclesiastical type of its time. In the Catholic Church, he says, "transmitted by the succession of bishops, ceases to be truly catholic as soon as it becomes stained and desecrated through the fellowship of unworthy men." One feels that it is not going too far to affirm that whatever of heavenly vitality there is in the Church in those days, is in him, the "schismatic" Novatianists. Rome's policy was to confound the distinction between the visible and the invisible Church, and so to rule without Christ, and without the Spirit, and without the Gospel. Novatian and his brave few, taught but by God and not by man's traditions, protested against such confusion, and maintained the cause of the living against the dead. They were suppressed. The attempt to reform failed. The Spirit was quenched; and Rome quietly resented itself in its old paganism under a Christian nomenclature, having a strength succeeded in throwing off as uncongenial the last relics, if not of apostolic faith, at least of apostolic life.

The career of Novatian after the termination of his struggle with Cornelius is unknown; but we are told by Eusebius (Hist. Eccl. iv. 29) that he suffered death under Valerian; and from his Pædæum of the middle of the 4th century, we learn that the Novatians boasted that their founder was a martyr. Novatian's distinguishing tenet was the absolute rejection of the efficacy of repentance, and he therefore denied that any power to forgive and grant pardon resides in the mysteries to great offenders, but that at the same time he exHORTed them to repentance, and referred their case directly to the decision of God—views which were likely to be extremely obnoxious to the orthodox priesthood, and might very readily be exaggerated and perverted by the influence of his party who, forsook of spiritual pride, arrogated to themselves the title of Καθολικοί, or PuriTans—an epithet caught up and echoed in scorn by their antagonists. It is necessary to remark that the individual who first proclaimed such doctrine was a Novatian himself, but an African presbyter of Cyrene. His name was Novatus: See Novatus. The following is the account of Novatian given by the late Mr. Robinson in his Eccl. Res. p. xvi. "He was," he says, "an elder in the Church of Rome; a man of extensive learning, holding the same doctrine as the Church did, and published several treatises in defence of what he believed. His address was eloquent and insinuating, and his morals irreproachable. He saw with extreme pain the intolerable depravity of the times, 'as a pious Christian,' as he says in one of his treatises written about 20 B.C., that forty years were carossed by one emperor and persecuted by another. In seasons of prosperity many persons rushed into the Church for base purposes. In times of adversity they denied the faith, and reverted again to idolatry. When the equal was over, they came again, the Church being, as it were, the vice of depravity, and vices by example. The bishops, fond of proselysts, encouraged all this, and transferred the attention of Christians to vain shows at Easter, and other Jewish ceremonies, adulterated too with paganism. On the death of bishop Fabian, Cornelius, a brother elder, and a violent partisan for taking in the multitude, was just in nomination. Novatian opposed him; but as Cornelius carried his election, and he saw no prospect of reformation, but, on the contrary, a tide of immorality pouring into the Church, he withdrew, and a great many with him, Cornelius, irritated by Cyprian, who was just in the same condition, through the remonstrance of virtuous men at Carthage, and who was exasperated beyond measure with one of his own elders, named Novatus, who had quitted Carthage and gone to Rome to espouse the cause of Novatian; and the process of excommunication passed against Novatian. In the end Novatian formed a Church, and was elected bishop. Great numbers followed his example, and all over the empire Puritan churches were constituted, and flourished through the succeeding two hundred years. After the death of the church first arranged them to lurk in corners and worship God in private, they were distinguished by a variety of names, and a succession of them continued till the Reformation." See Waldenses and Mennonites. The same author, afterwards alluding to the vile calumnies with which the Catholic writers have in all ages delighted to asperse the character of Novatian, thus proceeds to vindicate him: "They say Novatian was the father of anti-pope, and yet there was at that time no pope in the modern sense of the word. They charge Novatian with being the parent of an innumerable multitude of congregations of Puritans all over the empire, and yet he had no other influence over any than what his good example gave him. People everywhere saw the same cause of complaint, and groaned for relief; and when one man made a stand for virtue, the crisis had arrived; people saw the necessity of the cure and promised it to themselves; to their own relief. They blame this man and all the churches for the severity of their discipline, yet this severe discipline was the only compact of the primitive churches, and it was the exercise of this that rendered civil coercion unnecessary.

Jerome informs us that Novatian composed treatises
NOVATIANS • 211 • NOVATIANS

De Pascha; De Circumcisione; De Sacerdotio; De Sabbato; De Orationes; De Cibis Judaicis; De Insania; De Attali; and many others, together with a large volume of other works, containing in the opinions of Tertullian on this mystery. Of all these, the following only are now known to exist: 1. De Trinitate s. De Regula Fidei, ascribed by some to Tertullian, by others to Cyprian, and inserted in many editions of its works. That it cannot belong to Tertullian is sufficiently proved by the style and by the mention made of the Sabellians, who did not exist in his time; while Jerome expressly declares that the volume De Trinitate was not the production of Cyprian, but of Novatian. The piece, however, does not altogether lose its value, since it is regarded as a mere transcript of the opinions of Tertullian, but is an independent exposition of the orthodox doctrine, very distinctly embodied in pure language and animated style:—De Cibis Judaicis, written at the request of the Roman laity at a period when the author had appealed to the fury of the Decian persecution (A.D. 249-257), probably towards the close of A.D. 250. If composed under these circumstances, as maintained by Jackson, it refutes in a most satisfactory manner the charges brought by Cornelius in reference to the conduct of Novatian at this epoch, as well as those of the heresy reprobated by him. In these respects with regard to meats are binding upon Christians, but strongly recommends moderation and strict abstinence from flesh offered to idols:—3. Epistola, two letters, of which the first is certainly genuine, written A.D. 250, in the latter part of the Decian persecution, a vacancy occurred in the papal see in consequence of the martyrdom of Fabian on Feb. 13, A.D. 250. The best editions of the collected works of Novatian are those of Welchem (Oxon. 1724, 8vo) and of Jackson (Lond. 1728, 8vo). The latter is in every respect superior, preserving more correctly the eternal text, very useful pro-legomena, notes, and indices. The tracts De Trinitate and De Cibis Judaicis will be found in almost all editions of Tertullian, from the Persian impression of 1545 downwards. The work recently discovered in one of the monasteries of Mount Athos, and published by Mr. Miller at Oxford in 1851, under the title of Opera Philosophorum, is by some ascribed to Novatian. See Jerome, De Viris Ill. 10; Philostorgius, Hist. Eccles. vili, 15; Eusebius, Hist. Eccles. iv, 48; Pacian, Ep. 3; Ambrosius, De Pann. ill, 3; Cyprian, Epist. 44, 45, 49, 50, 55, 56, 59, 69, 70; Victor, adv. Zenonem; 99, 100; Valensius; Sozomen, Hist. See also the literature appended to the article Novatians.

Novatians, or Novatianists, is the name of a powerful Christian sect, a sort of dissenters from the Church of Rome, who owe their origin to Novatian (q. v.). They have been misrepresented in many respects by devoted Romanists and other extreme High Churchmen for their doctrinal views. There is no good reason for such a view, as will be apparent to any one inquiring carefully and discriminately into the character of Novatian himself, and those who were prominently associated with him in defending the personal character they held regarding the lapsed. There does not now remain to us, unfortunately, from any original authority, a detailed account of the rise and progress of this sect. Its history must be gathered from unsystematic notices in Cyprian's epistles; from some few epistles of particular bishops and doctors of the Roman, African, and Eastern churches extant among Cyprian's works; from the remains of some tracts and epistles of Dionysius of Alexandria, preserved by Eusebius; from Pa- cian's epistles; from Ambrose's treatise, De Penitentia; from a few conciliar determinations; from the occasional notes of Socrates and Sozomen; and from statements of particular points of doctrine or history by Jerome, Augustine, and Basil. By far the greater part of the remains of these authors, therefore, are not by Eusebius, for they come from opponents, and consequently in this chapter of Church history there is likely to be much more distortion, by reason of the prepossession of the historian, than in other chapters.

In the article Novatian we have indicated that the distinguishing tenet of the sect was that no one who after baptism had fallen away from the faith by the commission of great sins, or through dread of persecution, could, however sincere his contrition, be again received into the bosom of the Church, a doctrine grounded upon the utter teaching of Paul, "it is impossible for those who were once enlightened, and have tasted of the heavenly gift, . . . if they shall fall away, to renew them again unto repentance" (Heb. vi, 4-6). The Novatians, however, did not deny that a person falling into any sin, how grievous soever, might obtain pardon by repentance, for they thought the Church had power to remove or to suspend the Church, as a symbol of heaven, from sinners unto its communion, as having no power of remitting sins but by baptism, which, once received, could not be renounced.

In close connection with this tenet was another, that they could not look upon a Church as anything short of an assembly of unoffending persons; persons who, since they first entered the Church, had not defiled themselves with any sin which could expose them to the external punishment of this error. They held that all associations of Christians that allowed great offenders to return to their communion (that is, the greatest part of the Christian commonwealth) as unworthy of the name of true churches, and as destitute of the Holy Spirit; thus arrogating to themselves alone the appellation of a pure Church. And this was expressed publicly to proclaim; for they assumed to themselves the name of Caesappi (the Pure), thereby obviously stigmatizing all other Christians as impure and defiled; and, like the Pharisees among the Jews, they would not suffer others to come to their communion. Authority should be thereby defiled; and they rebaptized the Christians who came over to them, thereby signifying that the baptisms of the churches from which they differed were a vain and empty ceremony. In baptizing, however, they used the received forms of the Church, and had the same belief concerning the Father, Son, and Holy Ghost, in whose name they baptized. Cyprian rejected their baptism, as he did that of all heretics; but it was admitted by the eighth canon of the Council of Nice. The Novatians also held the unlawfulness of second marriages, against which they were as severe as against apostates, denying communion forever to such persons as married a second time, after baptism, and treating widows who married again as adulteresses. They are also said to have had other disagreements with the Church as it was then constituted, but the assertion is based upon no certain support, and is probably altogether untrue.

In examining Novatianism, it is necessary to take into account, if it be heretic in tendency by declaring against the Church-membership of the lapsed, first, who were meant by the lapsed; and, secondly, whether the lapsed were considered excluded by baptism, or also from heaven and eternal salvation. As to the first question, it may be stated that the contest between Cornelius and Novatian, in its origin, related solely to those who had fallen away in the Decian persecution. Yet it is no less certain that Novatian, as
Cyprian gravelly charges upon him (Epist. lii, p. 74), placed all persons whatever, whose conduct showed a departure from all the forms of righteousness, in what he called the same predicament; and he inflicted the same penalties on the Libellatici as on the Sacrificati and the Thrifificati. As the laws of the ancient Church considered certain other transgressors, especially adulterers and murderers, as equally guilty with the apostates, Novatian also seems to have comprehended them all in one sentence, and to have ordered the Church doors to be forever closed against others, as well as against apostates. Those writers of the 4th and 5th centuries who mention this Novatian doctrine, whether they refute it or only explain it, all so understand it, telling us that Novatian prohibited all persons guilty of any great fault from readmission to the Church. And this rule certainly was practiced by the Novatian churches in those centuries. This is most explicitly affirmed by Asclepiades, the Novatian bishop of Nice, in the 4th century (Socrates, Hist. Eccles. i. vii. c. 25, p. 267). In nearly the same manner Aecius, another Novatian bishop, explains the views of his sect (ibid. i. c. 10, p. 38). He says that from the times of Decius there prevailed among his people this austeræ lex (asporë- pòs) et post bovem ejusmodi criminis administratur, quia peccat ad mortem crucis scripturae pronuntiant, ad divinorum mysteriorum communemem admirati optionem. "None of the ancients has left us a catalogue of the sins which the Novatians accounted mortal; and, of course, it is not fully known how far their discipline reached, though all pronounce it very rigid. They did not punish vicious mental habits, such as avarice and the like, but confined themselves, it would appear, to acts contravening any of the greater commands of God, or what are called crimes. But, beyond a question, the Novatian discipline, in its maturity, refused to commune, not only with apostatizing Christians, but also with all persons guilty of gross sins. This principle of the Novatians, in itself, appears to be of no great moment, as it pertained merely to the external discipline of the Church; but in its consequences it was of the greatest importance, as being in the highest degree adapted to rend the Church, and to corrupt religion itself. The Novatians did not dissemble and conceal these consequences, as other sects did, nor did they deny, but avowed them openly. In the first place, they admitted no one to their communion who had been guilty of any capital crimes; they must have held that the visible Church of Christ is a congregation of holy and innocent persons. This theory might have been borne with provided they had allowed that salvation was also attainable in the other churches, but they thought it impossible to gain admission to the Novatian community, even by penitence; although they might hold its attainment to be more difficult than in the churches denying restoration to the lapsed. But this they utterly denied, or at least represented as extremely dubious and uncertain. They certainly did not hold out to sinners a sure and unchangeable hope of salvation. They would not indeed have the persons whom the Church excluded sink into utter despair; but, while committing their case to God alone, and urging them to persevere in their penitence through life, they declared that the lapsed might hope, but must not feel assured, or that they were unable to promise anything certain in regard to the judgment of God. This surely was sufficiently hard and discouraging. One utterly uncertain of his salvation is not much happier than one who is in despair, for he must pass his life in continual fear. In what condition those of the lapsed were placed, whom the Novatians admitted to penitence is manifest; they remained through life in the class of penitents. They could therefore be present at the public discourses to the people, for this was allowed to penitents; and in a particular place distinct from the rest of the faithful, they could manifest the sorrows of their heart in the sight of the brethren; and they could live and converse with their kindred and relations; but from the common prayers and from the sacred supper they were excluded. This was the case with regard to the total deprivation of hope of salvation hereafter. Yet, notwithstanding this clearly established fact, a great number of modern writers tell us that Novatian cut off all those who fell into the greater sins after baptism, not only from the hope of readmission to the Church, but likewise from the hope of eternal salvation. But this is not true. They have respectable authorities for their assertion in writers of the 4th and 5th centuries, namely, Eusebius (Hist. Eccles. i. vii. c. 45, p. 241), Jerome (In Isostasia- num, c. 2), and all those who affirm (and there are many) the lapsed, not only from the Church, but from the hope of eternal salvation. A careful examination of the best and most trustworthy of the controversy makes it appear rather that Novatian was not so destitute of clemency, and that those who so represent him attribute to him a consequence which they deduce from his principles, but which he did not allow. Let it be remembered, too, that very many in that age believed that the road to heaven was open only to members of the Church, and that those who were without the Church must die with no hope of eternal salvation; and therefore they were in a very perilous state. And they regularly opposed the lapsed, and they refused to the Church the unfaithful or the lapsed Christians, when alarmingly sick, without any penances or satisfaction, lest they should perish forever. Cyprian decides (Epist. lii, p. 71) thus: "Extra ecclesiam constitutus, et ab uniceplânte aliquo uniceplânte deparvum Dios eum temporibus temporis, peremptoriter." And as there were many holding this doctrine, they most likely reasoned thus: Novatian would leave the lapsed to die excluded from the Church; but there is no hope of salvation to those out of the Church. Therefore it appeared to them that the unfaithful or the lapsed, not only from the Church, but also from heaven. Novatian, however, rejected this conclusion, and did not wholly take from the lapsed all hope of making their peace with God. For this assertion, our first great authority is Cyprian, who otherwise exaggerates the Novatian error quite too much. He says (Epist. lii, p. 76): "O heretica institutis ineffectis et vana traditio! hortari ad satisfacitionis penitentiam et subtrahere de satisfaciatione medicinam, dicere fratribus nostris, plange et lacrymas funde, et diebus ac nec- nibus ingeniosum, et pro abluendo et purgando deditis nos autem sacramentis semel purgatae esset post omnia ista mories; quiaque ad pacem pertin- ent facies, sed nullum pacem quam queris acerbis. Quis non statim pereat, quis non ipsa desparis de- fictat, quis non animus suam a propositum lamentationum avexit? non enim una virtus, qui statim recidereus dixit, ut ahs vehemus et a us dimitamus et ahs potemur. Quod si invenimus (in the Scriptures) a penitentia aegre innumere debere prohiberi . . . administratus est plenaria ira et penitentia fructus dolentibus non neg- nundus." So, then, Novatian exhornt sinners ejected from the Church to purgation, not to recover over their sins—in short, to exercise penitence. But why did he so, if he believed there was no hope of salvation for the lapsed? Undoubtedly he urged sinners to tears and penitence, that they might move God to have compassion on them, or, as Cyprian expresses it ("ut delictum abluenter et purgaret"), to wash and purge away their sin. Therefore he did not close up heaven against them, but only the doors of the Church; and he believed that God had reserved to himself the power of pardoning the greater sins committed after baptism. This opinion of the Novatian bishop Aecius, as the Council of Nice, in the presence of Constantine the Great, according to the test- imony of Socrates (Hist. Eccles. i. c. 10, p. 39), thus stated the doctrine of his sect: 'Εξί μετανοιαν μην ἐλαττωνίως ἅπάντα ἀπεφραγμένα γενέσεως, μην μέρος τῶν ἔργων, ἀλλὰ μέρος τῶν ίσης δικαιοσύνης, δύναμιν κομίναι συγχρώσεως άμαρ-
NOVATIANS

213

NOVATUS

"Ad postentiam quidem invitando esse pec- catores, remissionis vero spem non a sacerdotibus expec- tare debere, verum a Deo, qui solus jus potestatem habet dimittendi peccata." A similar statement by Aposeleidas, another Novatian bishop, is found in Socrates (b. i. vii. c. 25, p. 367): "Eum ipsum quippe sacer- dotem condamni reliquimus." Socrates himself (l. iv. c. 28, p. 245) obviously explains the doctrine of Nov- atian in the same manner. In short, most authors have ascribed to Novatian a denial of the possibility of salva- tion following even the most severe acts of shedding blood or trying deadly sins. That this is an exaggeration is shown by Petavius, and our limits compel us to refer to his Essay, Novatian denied that the Church can reconcile them.

The schism which Novatian had formed in the Ro- man Church was not confined to Rome nor Italy, not even to the West (comp. Eusebius, Eccles. Hist. bk. vi). It made its way into the East, and subsisted a long time at Alexandria, in several provinces of Asia, at Constanti- nople, in Scythia, and in Africa. The Novatians abounded particularly in Phrygia and Pamphylgia. Constantine seems to have favored them a little by a law of the year 326; they did not have all not their burials, burials, provided they never belonged to the Catholic Church. But in a famous edict about the year 331 he sets them at the head of the heretics, forbidding them to hold public or private assemblies, confiscating these places, and even condemning them to banishment. This edict, however, was modified in its effect as to the Novatians by means of Acæius, their bishop, who resided at Constantinople, and was in great esteem with the emperor on account of his virtuous and irreproachable life. Subsequent emperors were anything but indulgent to them. A law of the younger Theodo- sius, A.D. 423, decreed the same penalties against them as against the other sects. He had previously, in A.D. 418, enacted a severe law against a branch of the Nova- tian sect, who bore the name of Sobbaetius (or Proto- puscles), so called after one Sobbaetius, who near the beginning of the 6th century separated from the other Novatians because he thought the feast of Easter should be celebrated at the same time with the Jewish Pas- sover. From the 9th century the sect gradually died away, and only slight relics remained in the 6th cen- tury.

The formal actions of the Church of Rome against the Novatians were as follows: Immediately upon the consecration (Blunt, p. 888) of Novatian a council was called at Rome by Cornelius in A.D. 251. Sixty bish- ops and as many presbyters assembled. Novatian and his adherents were enjoined to be admitted into the Church, and it was decreed that the brethren who had fallen were to be admitted to the remedies of repent- ance (Euseb. Hist. Eccles. vi. 43). Eusebius states that the epistles of Cornelius show not only the transactions of the Council of Rome, but the opinions of those in Italy and Africa. The opinions of the Africans were delivered in a council, A.D. 551, mentioned by Cyprian, Epist. lixii; and Jerome speaks of three councils, supposing that the opinions of the Italians were formally delivered also in an Italian council. At Antioch likewise a council was held to discuss the question of the clergy. The council met in 252, and it was held by his successor, Demetrius (Euseb. Hist. Eccles. v. 46). The Council of Nicea assigned to the Cathari their place in the Church upon reconcilia- tion. Canon eighth decreed that those already ordained should not be ranked among the clergy upon written promise that they would adhere to the decrees of the Catholic Church; that is, that they would communicate with those who had married a second time, and those who had lapsed under persecution, to whom a term of penance had been granted. If they had once been there were no clergy, they were to remain in their order; where there was a bishop or priest of the Catholic Church, that bishop was to retain his dignity, the No- 

vian bishop having the honor of a priest, unless the bishop should think fit to allow him the nominal honor of episcopate; otherwise the bishop was to provide for him the place of a deacon or, of a priest, so that there should not be two bishops in one city. The Council of Laodicea, A.D. 367, directs that Novatians who have not been received into the Catholic Church be anathematized all heresy, especially that in which they have been engaged. Their communicants having learned the creeds, and having been anointed with the chrism, may then partake of the holy mysteries (can. 7). The Council of Chalcedon, A.D. 451, recognizes the discipline of Novatian, who call themselves Cathari, if they give in a written renunciation of their errors and anathematize heresy, by sealing them with the holy chrism on the forehead, eyes, nose, mouth, and ears, with the words, The seal of the gift of the Holy Spirit" (can. 7). The Council of Toledo (Toletana, in Numid. A.D. 418, de- creed: "Ut venientes a Novatianis vel Montanensibus per impositionem semper auferantur, ex eo quod rebaptizantur" (Brun's Canones Apost. et Concil. i. 154). The sixth of Carthage (A.D. 419) enforced and explained the Ni- cene decisions (canones 1-9); the second of Aries (A.D. 423) directed that all the Novatians be excluded from the communion without undergoing penance for his disbe- lieving and condemning his error (can. 9). Of these the Constantinopolitan canon is to be noticed as determining against St. Basil the validity of Novatian baptism. In the Nicene council, this canon is considered to be erroneous and 47 involve this point. There are several difficulties regarding their interpretation; but thus much seems to be clear, that Basil proceeded on the general principle of the invalidity of lay baptism, and argued that the Cathari had no longer the communication of the Holy Ghost, having broken the succession; that, being schis- matics, they were laymen; he ordered them (at least such as had received only Novatian baptism) to be re- ceived into the Church by baptism. The first council of Aries (A.D. 414) had laid down the principle that those baptized in the name of the Holy Trinity should be received by the imposition of hands" (can. 8).

NOVATUS of CARTHAGE, an Eastern ecclesiastic who flourished in the 3rd century, is thought to have originated the Novatian heresy of which Novatian was the leader. Novatus is said to have rebelled against the episcopal authority of Cyprian, whom he had opposed from the time his name was mentioned for the see of Carthage. Novatus fled from Carthage to Rome to avoid the sentence of Cyprian, and there became an as- sociate and coadjutor of Novatian, procured him many friends, and in the end sealed the death warrant of the heresy, to which he had contributed as much as any other. He was a man of the old school, eloquent, man a adept at kindling the passions, who was influenced, undoubtedly, by his hatred of Cyprian, the partisan of Cornelius. Novatus also urged Novatus to embrace and defend the party of Novatian with all his might and power. He traveled there on the invitation of the Bishop of Carthage. He had repaired to Rome as to a haven of security, in order to be safe from the shafts of Cyprian and the Africans. But if Cornelius, the intimate of his
lapsed, whom in Africa he patronized, except their persuasion that he was one of the five presbyters who deserted Cyprian at Carthage; for Cyprian complains of them that they were too indulgent towards the lapse.

Nova Zembia (Russ. Nova Zemlya, "New Land"), the name given to a chain of islands lying in the Arctic Ocean (lat. between 70° 80' and 75° 80' N., and long. between 46° E. and 56° W.), and now, under the authority of the government of Archangel. Length of the chain, 470 miles; average breadth, 56 miles. The most southern island is specially called Nova Zembla; of the others, the principal are Matthew's Land and Little Land. These were discovered in 1555, and are not very rocky, and desolate—the vegetation being chiefly moss, lichens, and a few shrubs. The highest point in the chain is 8475 feet above the level of the sea. Mean temperature in summer, at the southern extremity, 35.5°C; in winter, 32°C. Nova Zembla has no permanent inhabitants; but, as the coast is warm with whales and walruses, and the interior with bears, reindeers, and foxes, they are periodically frequented by fishermen and hunters.

Novabahar, the Arabic name of a famous temple or mosque which the ancestors of the Barmaedes, one of the most illustrious families of Persia, founded in the town of Bokhara, in the Moslem state of the Kaakar, a rent of the temple of Mecca. This mosque was covered with silk, and surrounded with sixty chapels, in which the pilgrims, who resorted thither in great numbers, performed their devotions. Those who had the care of this mosque had the name of Barmek, from that of the founder. See Broughton, Hist. of Religion, s. v. See KAABA.

Novelli, CAT., PSEUD. called J. MONROE, from the place of his nativity, an eminent Italian painter and architect, who flourished at Palermo near the middle of the 17th century, left many works both in oil and fresco in his native city, the most remarkable of which is his great picture of the marriage at Cana, in the refectory of the fathers Benedettini, which is particularly commended. He resided a long time at Palermo, where he painted many works for the churches, the most noted of which is the vault of the church of the Conventuals, wholly executed by himself in several compartments. Guarietii eulogizes him for his style, and says he was diligent in studying nature, correct in design, graceful in his forms, and rich in his coloring, with a slight imitation of Spaguedetto. Lanzi says, "The people of Palermo confer daily honor on him; since, whenever they meet a foreigner of taste, they show him something else in this city than the works of this great man."

Novello, VINCENT, an English organist and composer of Italian descent, was born in London Sept. 6, 1781, and died at Nice in September, 1861. At the age of sixteen he became organist of the Portuguese chapel in London, and under his direction the music there became noted for its excellence. He was one of the original founders of the Philharmonic Society, and a member of the Royal Society of Musicians. He composed largely, though without inspiration. His principal claim to distinction rests on the service he rendered to the art of music by editing and bringing to public attention a vast number of classical works of old as well as modern composition.

Novels (novello) is the name applied to the ecclesiastical enactments of Justinian, which were added to the Institutes, and consisted of those new receipts and constitutions which formed Justinian's own contributions to imperial jurisprudence. Novels, let it be understood, were not part of the Justinian Code, but laws framed subsequently to the original constitution. See Justinian. Many of the novels treat of woman's relation to the Church, a point not carefully considered in the Code, for it was only after Christianity had fairly asserted itself in the empire that woman came to be re-
Novena is the term applied in the Church of Rome to a nine-days' devotion on some peculiar or extraordinary occasion; as e.g. in honor of some mystery of the redemption, or in honor of the Virgin Mary, or of some saint, in order to obtain any particular requiting blessing. The special service offered on such occasions is also called Novena. Thus there is a "Novena to St. Joseph," in the Garden of the Soul. It begins thus: "O glorious descendant of the kings of Judah! Inheritor of the virtues of all the patriarchs! Just and happy St. Joseph! Listen to my prayer. Thou art my glorious protector, and shalt ever be, after Jesus and Mary, the object of my most profound veneration and my tender confidence. Thou art the most hidden, though the greatest saint, and art peculiarly the patron of those who serve God with the greatest purity and fervor. In union with all those who have ever been most devoted to thee, I now dedicate myself to thy service; beseeching thee, for the sake of Jesus Christ, who vouchsafed to obey and obey thee as a son, to become a father to me; and to obtain for me the filial respect, confidence, and love of a child towards thee. O powerful advocate of all Christians! whose intercession, as St. Teresa assures us, has never been found to fail, deign to intercede for me now, and to implore for me the particular intention of this novena. (Specify it.) Present me, O great saint, to the adorable Trinity, whom thou hast so glorious and so intimate a correspondence." This novena specially and repeatedly beseeches St. Joseph under many titles, as "Guardian of the Word Incarnate," "Spouse of the ever-blessed Virgin," etc., ever after the curved conclusion, with the words: "Assist me, O Lord: I beseech thee, by the merits of the spouse of thy most holy Mother, that what our unworthiness cannot obtain, may be granted me by his intercession and his mediatorial intercession with God the Father in the unity of the Holy Ghost, world without end. Amen." Mordidle (Lat. novem, "nine," and dies, "day") is the name of a custom which prevailed among the heathens of repeating their mourning for the dead on the third, seventh, and ninth days, and hence called a mordidle. On these days they were accustomed to offer milk, wine, garlands, etc., to the mourners. The practice was first instituted by Tullus Hostilius. The imitation of this custom by Christians is condemned by Augustus, who animadverts on the superstitious observance of nine days of mourning. Noveneillia was also a name among the Romans for the sacrifice which they offered at the close of the nine days devoted to mourning and the solemnities connected with the dead. See Mourning.

Novenalles (or Novensides) Dei are mentioned in the solemn prayer which the consil Decius repeated after the pontifex prior to his devoting himself to death for his country (Livy, viii, 9). Instead of Novenas, we also find the formula novena in Kanche, which we may infer that it is some compound of insides. The first part of this compound is said by some to be novus, and by others novem (Arnob. iii, 38, 39), and it is accordingly said that the Novenales were nine gods to whom Jupiter gave permission to hurl his lightnings (Arnob. iii, 38, 39. Hist. i, ii, 52). But this is false, though it may have applied to the Etruscan religion, nowhere appears in the religion of the Romans. We are therefore inclined to look upon Novenales as the compound of novum and insides, so that these gods would be the opposite of Indiges, or those who were aware of it to serve as rivets in the family. This is the explanation of Cincius Alimen tus (ap. Arnob. iii, 38, etc.), and seems to be quite satisfactory.

Novi or Infantes was the name by which the early Christian Church designated its newly made con-

verta, and they continued to be called such until Easter week, when, on the "great Sabbath," and on the octave of Easter, they laid aside their white garments, and appeared with the rest of the Church, after having been solemnly baptised by the bishop, to be consecrated to their baptismal vows. See Eusebius, Man. of Ch. Hist. (Anc. Ch. Hist.) p. 298.

Novice (νεώτροφος, a neophyte), one newly converted (literally, newly planted), not yet matured in Christian experience (1 Tim. iii, 9). The ancient Greek Institutes of the Church, or "Catechetical Catechism," contain an important rule for the admission of novices. "A neophyte must be not less than one year old, and the person who enters as a novice must have attained the age of puberty. Richard, in the Bibliothèque Sacré, article Novice, describes the qualities required, according to the canons of the Council of Trent, for the admission of novices. These qualities are health, moral integrity, dispositions for a monastic life, intellectual capacity, etc. No married person can be admitted unless by the consent of both parties; no person who is encumbered with debts, or whose assistance is necessary for the support of his parents, is admissible. Widowers and widows, unless their labor is required for the support of their children. After the termination of the year of probation, the novice, if he (or she) persists in his vocation, and his conduct and capacity have proved satisfactory, may be admitted into the order, vowing eternal love and respect for the religious living for life. Ducange, in his Glossarium, article Noviti, quotes the 34th canon of the Council of Aquis grana, A.D. 817, in which superiors of monasteries are cautioned against admitting novices with too great facility, and without a full examination of their dispositions, morals, and mental and bodily qualifications. But in after-ages, as the number of monasteries was multiplied beyond measure, prudential restrictions were disregarded, and all means were resorted to in order to induce young people to enter the monastic profession, and parents often forced their children into it against their will. The misery and guilt which resulted from this practice are well known; but few perhaps have exhibited them in so vivid and fearful a light as a modern Italian writer, Manzoni, in his Promessi Sposi, in the episode of "Gertrude." It was in order to guard against such abuses and their fatal results that the Council of Trent (sess. 25, can. 17) prescribed that female novices, after the expiration of their novitiate, should leave the walls of the monastery and return to their friends, and be carefully examined by the bishop of the diocese, or by the bishop's suffragans, in order to ascertain that they were under no constraint or deception; that they were fully aware of the duties and privations of the monastic life, and that they voluntarily chose to enter it. These humane precautions, however, have been evaded in many instances; and it
may be doubted whether a very young person should be allowed to bind himself for life by irrevocable vows. Some authors designated the catechumens as novitiis, novitiis, tirones Det. See Penny Cyclop. s.v.; Edin., Eccles. Cyclop. v.; Rarm., Eccles. Dict. s. v.; Hill, History of England, p. 15; Wollcott, Sacred Archaeology, s.v.; Lea, Hist. Celibacy; Ludlow, Woman's Work in the Church, p. 95, 126, 158, 175. See Nophytte;Novl. (J. N. P.)

Noviomagius. See NASSAU.

Novis, AUGUSTIN DE, an Italian canonist, was born in Lombardy, and lived in the 15th century. He taught law in Pavia, became canon, and left among other works De priscis ecclesiasticis constitutis, which was printed (Florence, 1500, 6d.). See Fabricius, Bibliotheca Latina mediæ ævi, i, 400.

Novitiate, the time of probation, as well as of preparatory training, which in all religious orders precedes the solemn Profession (q. v.). Under the head of MONACHISM will be found the general principles by which the training for the "religious" life is regulated. It will be enough to refer here to the article Novice.

Novojertz is the name of a sect of dissenter from the Russo-Greek Church (q. v.) who are strongly in favor of marriage, in opposition to those who prefer a life of celibacy. See Plato, Hist. Russin Ch. (Index).

Nowell. See Novl.

Nowell, Alexander, an English theologian of note, was born at Readhall, Lancashire, in 1567 or 1568. He studied at Brasenose College, Oxford, on which he was elected fellow in 1540. He next went to London, where he was appointed second master of Westminster School, then recently established. In 1550 he was ordained, and in 1551 was made prebendary of Westminster. In 1553 he was elected to the House of Commons by the borough of Loos, in Cornwall; but his seat was contested, and in the same year, as under Mary, who was now the ruler of England, the whole Reformed establishment—bishop, chapter, and school—was swept away. Nowell not only lost his position at the school in Westminster, but was compelled to leave England, to avoid the persecution then raging against the Protestants. He retired to Strasburg, where he met Jewell, Sands, Grindal, etc. He returned to England when Elizabeth ascended the throne. He now became successively Bishop of Grindal, Professor of Middlesex, and Dean of St. Paul in 1560, and canon of Windsor in 1594. He died at London Feb. 13, 1602. He was a learned and pious divine, and a zealous promoter of education. Part of his income was devoted to establishing a school in Lancashire, and endowing thirteen scholarships in Brasenose College, Oxford. He took part in the assembly of 1568, which revised the articles of the Church of England. He wrote Catechismus, sive prioru instituto disipianique pietatis Christianae, Latinë explicantae (Oxon. 1836, 8vo; also in Excubition Theologica, vol. i, an English translation is given in Richmond, Fathers, viii, 1; and extracts in Burrow, E. J. Summary)—Christianæ pietatis præma instititus ad usum schularum Latine scripta (ibid. 1795, 8vo); this is an abridgment of the former, and known as the "Middle Catechism;" it was edited by bishop Gaver—Catechismus parum puero primum qui eductor proponendum in scholis (Lond. 1578, 8vo); this is Nowell's "Smaller Catechism;" extracts from it are given in Churton's Life of Nowell: it appears to have been the original of the "Church Catechism," which is now in use. In 1801, he wrote the book in the course of the Holy Eucharist (Tracts of Anglic. Fathers, i, 82). See Ralph Churton, Life of Nowell (Oxf. 1809, 8vo); Burnet, Hist. Ref. ii, 391; iii, 452; Froude, Hist. of Eng. vi, 113; vii, 400; viii, 139; Soane, Elizabethan History, p. 51, 252, 297; Wordsworth, Eccles. Brev. (see Index in vol. iv); Hardwick, Hist. of the Ref. p.
and force of a character already well matured." But he by no means confined himself to his strictly ministerial labors. A thorough student, he took his rank as a scholar from the time of his college graduation, and constantly pursued independent researches in the original languages of the Scriptures. Indeed, he was regarded as one of the best Hebrew and Greek scholars in the country, and was well versed in other Oriental languages. In 1840 he was recalled to his alma mater, and made Hancock professor of Hebrew and other Oriental languages, and Dexter lecturer on Biblical literature, which he held until the time of his death, June 3, 1868. Dr. Noyes published new translations of the Book of Job (1827); The Psalms; The Prophets (8 vols. 12mo); and Proverbs, Ecclesiastes, and Canticles (1846); also several occasional Sermons, and numerous articles in the Christian Examiner, and shortly after theological essays from various authors, and prepared a Hebrew Reader. His translation of the New Testament (The New Testament: translated from the Greek Text of Tischendorf; by George B. Noyes, D.D.) [Boston: American Unitarian Association, 1863] was complete, and preached, as pastor of Bethel Church, Boston. While in Prof. Abbott, the scholarly librarian of Harvard University, greatly assisted Dr. Noyes in the preparation of this work for the press; and after the doctor's decease Prof. Abbott revised the proof-sheets, and added some of the most valuable notes. Sept. 1869: "We can heartily recommend this translation of the N.T. by Dr. Noyes as a useful help to critical students, and as a valuable contribution to the work of revising our English Scriptures. . . . In the death of Dr. Noyes, which occurred in June, 1868, Biblical learning lost one of its most diligent and successful cultivators. It was his purpose, we believe, had his life been spared, to translate the entire Old and New Testaments." See Christian Examiner, July, 1868, art. vi.

Noyes, George S., a young minister of the Methodist Episcopal Church, was born about 1840, was converted in 1857 at Ipswich, Mass., and shortly after entered the ministry. Noyes studied at Wilbraham Academy, and then entered the New Hampshire Conference. After filling several important appointments in that Conference, he was transferred to the New England Conference, and succeeded father Taylor, the noted preacher and influential member of the ministry, and had the reputation of being one of the most eminent men of his time. He published The Temple Measured (London, 1847, 4to); A Catechism (reprinted in 1797); Moses and Aaron (1861).

Noyes, James (1), a noted clergyman of the Protestant Episcopal Church, was born in Wilts, England, in 1698, and was educated at Christ Church, Oxford. He entered the holy order on April 25, 1698, and after preaching for a while in the mother country came to America, and preached at Mystic (now Beverly), Conn. In 1698 he was made rector at Newbury, Mass., and preached there until his death, Oct. 22, 1698. Mr. Noyes was much esteemed by his congregation, and had the reputation of being one of the most eminent men of his time. He published The Temple Measured (London, 1847, 4to); A Catechism (reprinted in 1797); Moses and Aaron (1861).

Noyes, James (2), a Congregational minister, was son of the preceding. He was born at Newbury, Mass., March 11, 1640; was educated at Harvard University class of 1669; prepared for the ministry, and began to preach in 1664. He was made first minister of Stonington, Conn., Sept. 10, 1674, and he preached there until his death, Dec. 30, 1719. He was one of the first trustees of Yale College, and took a prominent part also in the history of the college.

Noyes, Nicholas, a Congregational minister, was born at Newbury, Mass., Dec. 22, 1647. He was educated at Harvard University, class of 1667, and immediately after graduation began to preach. He was first pastor at Haddam; in 1688 he became pastor at Salem, Mass., where he preached until his death, Dec. 13, 1711.

Mr. Noyes lived at Salem when the witchcraft excesses were agitating the community of that place. He was severe in his denunciations of the wild fanatics who believed in those extravagant supposed spiritual manifestations, and advocated their public prosecution. Later in his life he was a supporter of the Salem trials, and greatly regretted that he had been a party in the illiberal treatment of the poor fanatics. A letter of his, with an account of James Noyes, is in Mathew's Magnolia. He published a Poem on the death of Joseph Green, of Salem (1716).

Noyon, Council of (Concilium Norvicense), an important ecclesiastical gathering of the Middle Ages, was convoked in consequence of a dispute between the French king, St. Louis, and bishop Milo, of Beauvais, in 1233. The prelate claimed that the king had violated his rights by bringing to punishment in Beauvais certain ecclesiastics who had raised a sedition there, in which murder had been committed. The bishop laid the province under an interdict, upon which the cathedral chapters made complaint that it had been done without their consent; and in a council held at St. Quentin on the Sunday before Christmas, at which eight bishops were present, the interdict was suspended. From this decision the bishop of Beauvais appealed to the pope, but he died before the question had been settled; it was not until some years after that his successor confirmed the removal of the interdict, and made peace between St. Quentin and Beauvais. See Labbé, Conc. xi. 443; Mansi, note; Raynalii, ii. 48.

Another Church council was convoked at Noyon, July 26, 1844, by John of Vienne, archbishop of Rheims, and six bishops. Seventeen canons were published, relating chiefly to ecclesiastical immunities and the defence of the clergy.

4. Directs that in all churches divine service shall be conducted after the example of the cathedral church.
5. Excommunicates those lords who forbade the monks to buy any lands in the interdict, and to till their lands.
6. Directs that those clerks who submit voluntarily to the sentence of the secular judges, and who pay the fines inflicted upon them by such judges, shall be punished.
7. Forbids prelates and other ecclesiastics, etc., publicly to solenmize (at solemnization in public) miracles which they assert to have recently been done, without the consent of the ordinary.
8. Excommunicates those lords who stripped off the vestments and shaved the heads of ecclesiastics accused of crimes.
9. Excommunicates lay persons who pretended to be clerks and assumed the tonsure.
10. Condemns the execrable actuations of the proctors in the ecclesiastical courts.
See Labbé, Conc. xi. 1899.

Ntoupi, a name which is given to excommunicated persons by the Greek Christians, because (as the uneducated and superstitious among them pretend) the bodies of the Ntoupi do not rot in the earth, but swell and sound like a drum whenever they are touched or moved. In confirmation of this ridiculous notion, they tell the following story: Mohammed II, having heard much of the efficacy of excommunication in the Greek Church, ordered Maximos, the patriarch of Constantinople, to procure him the sight of the body of an excommunicated person. The patriarch, at a loss how to satisfy the grand-seignior's request, communicated it to his clergy, among whom some of the most ancient remembered that under the patriarchate of Gennadius the body of a man who had been excommunicated for slandering the patriarch, had been taken up a considerable time after her death, and been found entire, and then buried a second time. Maximos, being informed of the place where this lady was buried, sent there a sultan, who spent some time in whose presence the grave was opened, and the corpse was found whole, but black, and puffed up like a bladder. The officers having made a report thereof, Mohammed was astonished thereat, and ordered the body to be transported to a chapel of the church Panmuccac. A few days after, by the sultan's command, the
cassion was presented to the patriarch to take off the
communication. Accordingly the patriarch, having
repeated the absolution, there was heard a cracking
noise of the bones and nerves; whereupon the officers
shut the body up again in the chapel, and visiting it
some days after, found it crumbled to dust. They add,
that the site of this tomb is considered of this miracle, acknowl-
edged the Christian religion to be very powerful.

See Broughton, Hist. of Religions, s. v.

Nubia. See Abyssinia; Egypt; Ethiopia.

Nucli, Allegretto, an old Italian painter of the
14th century, is noted as the author of several works
of ecclesiastic art. There are, e. g., in the church of St.
Antonio in Fabriano some histories of that saint,
divided into pictures in the early style, resembling the
school of Giotto, inscribed "Allegretto Nuits de Fu-
briano hoc opus fecit, 1366."

Nucci, Alvanzino, an Italian painter, was born at
Citta di Castello in 1652. After studying in his native
place he went to Rome, and became the pupil of Niccolo
Ciricigano, and was his ablest scholar. Nucci assisted
his master in almost all the works he executed in the
Vatican. Nucci also painted many works by himself in
the churches and palaces at Rome. He afterwards
went to Naples, where he painted for the churches.
He wrought with great facility and dispatch in a style re-
sembling his master, though he was inferior to him in
grandeur. Lanzi commends his Murder of the Innocents
in the church of St. Silvestro, at Fabriano. He died in
1629.

Nudipedia (Lat. nudus, "naked," and pes, "foot"), a procession and ceremonies observed at Rome in
case of drought, in which the worshippers walked with
bare feet in token of mourning and humiliation
before the gods. This practice was followed at Rome in the
worship of Cybele, and seems also to have been adopted in
the worship of Isis.

Nudipōde or Escalcaseat is the name of a super-
stitious sect mentioned generally by the ancient herosi-
gologists under the name of Escalceati. They thought it
a duty of religion to walk barefoot, pleading in support
of their notion the command given to Moses and Joshua,
and the example of Isaiah (Philostorgius, De Hares. lxxi; Augustine, De Hares, lxxvi). They called
Gymnopodae by the author of Prudentestasis (lxxviii).

Nulatenses (i.e., nunciores located is the name of
titular bishops without a see.

Number is the rendering in the A. V. of several
Hebrew words, but especially of ה' and ו'פ; Gr. αριθμός.

1. Mode of Expressing Numbers.—We know very
little of the arithmetical of the Hebrews, save that their
trades and public service required some skill at least in
numeration (Lev. xxv, 27, 50; Matt. xxvii, 32 sq.), and
that large sums are sometimes mentioned which could
only be obtained by addition and subtraction. Indeed, they
seem to have been somewhat versed even in frac-
tions (Geuenis, Lebrgeb, p. 794). After the captivity
the Jews had lost the faculty of expressing new
numbers. They were called "Samarian coins" (Eckhel, Doct. Num. vol. i, c. iii, p. 468; Geuenis, Lebrgeb, p. 24 sq.); and they had probably done so in earlier ages, since the Greeks, who received their alphabet from the Phoenicians, al-
ways practiced the same method (Faber, Progr. Literar. odin pro vocib. in num. a script. V. T. Chrestem, in Ossoli, 1775). Yet it has been thought that the He-
brews sometimes used distinct characters for numbers,
as such are actually found on Phoenician coins (Swinton, in the Philolog. Trans. I, 791 sq.) and in the Pal-
duced do not prove the use of such characters before the
captivity; the letters of the alphabet served the pur-
purpose sufficiently well; and the instance of the Greeks
is an indirect proof that the Phoenicians had at first no
figures. It is by this use of letters to express numbers, and by the interchange in copying of one with another
(as מ, ' and ו, etc.), that we can best explain some of
the too vast numbers in the earliest books of Scripture,
and the well as the discrepancies in some of the
(rhymes or anagrams in the Dead Sea Scrolls; (Curtius, Gr. Lexikon, p. 102 sqq., ed. Vogel); for in-
stance, in the length of the threatened famine (2 Sam.
xxiv, 13, and 1 Chron. xxvi, 12), and in the age of Aha-
iah at his accession (2 Chron. xxii, 2, and 2 Kings
viii, 26). Yet great prudence is requisite in applying
this principle to details. (See Eichhorn, Einl. ins. A.,
Tab. i, 296 sq.; Curtius, Gr. Lexikon, p. 102 sq.)
(Novatian, De opud. eccl. p. 60 sq.; Movers, ut sup., p. 60 sq.) Nor is it always easy to ex-
plain even thus the great number of people given in
some of the enumerations without supposing a tendency
to exaggeration in some copyist. It is not necessary,
however, to suppose any error in the 600,000 men who
went out of Egypt (Exod. xii, 37, and 2 Kings viii, 21),
or the 150,000 fighting men in Israel and Judah in the time of David (2 Sam. xxiv, 9), seems very strange.
This would require at the least a population of four millions in Palestine, or more than the
seven feet to the mile. Of the whole 900,000 men there were
the 1,160,000 men in the army of Jehoshaphat (2 Chron. xvii, 14), besides the garrisons in walled cities.
In these and a few other instances we must suppose a
corruption of the letters representing the numbers, such
as often occurred in the Early Hebrew history (Movers,

2. Sacred Numbers.—The frequent and significant use
of certain numbers in the Scriptures demands notice.
See Bähr, Symbol. i, 128 sq.; Kurtz, in the Studien u.
Krit. xxv i., 7 (1844), p. 218 sq.; and on the symbolic use
of Biblical numbers, see ibid. 1842; ii, 80 sq.; Jahrb. für
deutsche Theologie (1864), vol. ii.

First, the number seven, which was also considered
holy by other ancient nations; as by the Persians, the
Hindus (Bohern, Ind. ii, 247); and the early Germans
(Guizot, Deutsche Reckteihentw., p. 218 sq.). Among
the Hebrews every seventh day was hallowed to the Lord,
every seventh year, after the time of Moses, was ac-
counted a Sabbath, and the seventh new moon of the
year was celebrated with peculiar solemnities. Between
the great feasts of the Passover and Pentecost seven
weeks intervened; the Passover itself lasted seven days,
and on each day a sacrifice of seven lambs was
offered. The feast of Tabernacles and the great day of
Atonement also occurred in the seventh month, and the
former occupied seven days. Seven days was the legal
time required for many Levitical purifications, as well
for the consecration of priests. The blood of the most
important sin-offerings was sprinkled seven times. Seven
days was the usual time for mourning the dead, or for
wedding festivities. The Jewish doctrine of later times
numbered the week as the period of seven weeks (see amakaspandah). In the oldest books the number seven is
continually made prominent. (See Gen. vii, 2 sq.;
vi, 10, 12; xxix, 27, 30; xxxii, 3; xii, 2 sq.; Exod. vii,
22; Numb. xxxii, 1; Josh. vi, 4, 6, 8, 15, 13; Judg. xvi,
8, 15, 19; 1 Sam. x, 8; xii, 3; xiii; 6, 1 Kings viii, 65;
xvii, 39; 2 Kings vii, 10, 14; 1 Chron. xxiv sq., 14.
One of the workings of seven covetousness between God and his people, see Geues, Carm. Samar. p. 47.)

Seven is frequent in the prophetic symbols (Ezech. xxxix, 9,
12, 14; xi, 22, 26; xiii, 22 sq.; xiv, 26; xiv, 21, 25; 2 Chr. xiii, 28; Ezeki. xiv, 24 sq.; Amos vii, ix, 14 sq.), and in the
amakaspandah. (See comp. Dan. iv, 20, 22.)
The number seven also is frequent in the apocalyptic books
xv, 54, 36 sq.; Acts iii, 3; xxi, 8; Rev. l, 12 sq.; vii,
that forty is particularly used as a round number in the Old Testament (For its use among the Persians, see Gesenius, Lehrged., p. 700; Rosenmüller, Execk. iv, 27). The Jews, therefore, who went down into Egypt, the years of the captivity, the elders chosen by Moses to assist in judicial duties, were each seventy in number; and at a later period there were reckoned seventy nations and as many languages in the world (Gen. x, 29; xxviii, 1). The frequent use of the number seventy in Scripture, and its typical significance, is a very early period. Within the three days of Preparation, the three days of the perfect or holy sacrifice, sacrifice we find ten only in the number of the commandments and the measures of the Tabernacle (Exod. xxvii, 27; 1 Kings vii and vii); and the designation of the tenth day occurs in the ritual but twice (Exod. xii, 8; Lev. xvi, 29; comp. Ewald, Isr. Aethert., p. 364). Ten is a very early number. Only at a later period did the number ten assume a peculiar importance in the Jewish liturgy. It was the least number that could eat together the Paschal lamb (Josephus, War, vi, 9, 5). A synagogue must be built in a town which contained ten Jews: only ten persons could repeat the church-prayer "Shemot." (see Mishna, Megillah, iv, 3; comp. i, 8). The Jews, then, easily found this significance of the number in the Scripture (see Mishna, Perke Aboth, v, 1-6; comp. Philo, Opp. i, 243, 259, 382; ii, 55, 183 sq., 355). The decalogue afforded an obvious parallel. (Jer. xxxii, 40; 470; Bahr, p. 182 sq.). The origin of the decimal system is evidently from the use of the fingers in counting.

Fire appears chiefly in forfeitures and holy offerings (Exod. xxii, 1; Lev. v, 16; xxii, 14; xxv, 15; Num. v, 7; xviii, 16). But in conventional phrase it is commonly meaning "sacred," after the symbolism of the five fingers (Gen. xviii, 28; xlii, 24; xxv, 12; 1 Sam. xvi, 20; xxi, 4; 1 Cor. xiv, 19). Yet even here symbolic interpreters find a deep meaning (see e.g. Kurtz, at sup. p. 380).

Four, although a mysterious number among the Pythagoreans (Reinhold, Greek. d. Philos. i, 82), and although Bahr (p. 155 sq.) has sought to establish its peculiar significance, is not prominent in the Old Testament. The four winds and the four points of the compass may perhaps be connected with the supposition that the earth was four-sided; but this is not certain, and the famous "tetragrammaton," or four-fold letters (Jehovah, יְהֹוָה) cannot be connected with it. The form of the square does indeed appear frequently (Ezek. xlii, 16 sq.; xlxii, 2; xlviii, 16; Rev. xxi, 16), but we must suppose it to have been selected simply as the most regular form that could be conceived; and the same application applies to the cubical shape of the holiest part of the Tabernacle and in the Temple. But Bahr (p. 176 sq.) explains that the number four is prominent among the Israelites both of the world and the manifestation of God; and he is followed by Keil (on Kings, p. 80 sq.) and Kurtz (p. 342, 367 sq.).

The number three first reaches its full significance in the faith of the Christian Church, although in antiquity it already often occurs as the symbol of supreme divinity (Bahr, p. 146 sq.;LOBECK, Agathopim., p. 387; comp. Servius, ad Virg. Eclog. viii, 75; Plat. Legg. iv, p. 716). It is not at all strange that it frequently occurs in ordinary life, as it expresses the simplest possible group: the middle and two sides; the beginning, middle, and end (so Dion. Hal. iii, p. 150); the vanguard, main body, and rear of an army, or the centre with two wings. This threefold division of an army was customary among the ancient Hebrews (Judg. vii, 16, 20; ix, 4; 1 Sam. xi, 11). The number three is also prominent, not in a literal sense, but in the form of the number three in repeating calls and exclamations, for the sake of emphasis, without any religious significance (as Jer. vii, 4; xiii, 22). But its use in some instances is more remarkable (see Exod. xxiii, 14; Deut. xvii, 16; Num. xvi, 24 sq.; Isa. vi, 8), and the explanation in the Apocalypse (1, 4; 5, 1) that the name Jehovah (יְהֹוָה) seems to show an allusion in it to the Trinity (see above). The three-fold prayer observed by the latter Jews may have had a kindred origin. The number three also occurs often in the
ancient genealogies, especially in the heads of kindred races (comp. Cain, Abel, Seth; Shem, Ham, and Japheth, etc.; see Lengerke,肯, p. 20, Intro.). But the triangle, which in other ancient nations was so important as a symbol, is not found in Hebrew antiquity. It is generally thought to be used as a round number, numerus absconditus in the Bible, in which the two sides of the tribes in Israel (Josh. iv, 1 sq.; Exod. xxxviii, 21; 1 Kings vii, 25; comp. Apoc. xxi, 12), which is a sufficient historical ground.

On the whole, then, it appears that among the Israelites, as in other ancient nations, certain numbers assumed very early a peculiar significance, especially in religious service; but it is in vain to seek for a numerical symbolism, based on speculation, and worked out into a system. (For the use of round numbers and national numbers among the ancient Italians and others, see Niebuhr, Hist. of Rome, vol. ii; among the Germans, Grimm, Deutscher Rechtsträger, p. 207 sq. see Arithmetic.)

Number of the Beast in Rev. xiii, 18. This is described as "the number of a man," i.e. humanity computed, or according to some usual standard or mode, and to signify 666 (καὶ ὅτι ὁ άνθρωπος). The Beast is the first comer in its hostility to the kingdom of God. The name of the number is plainly the number made up by the numerical power of the letters composing the name added together. But here the proposed interpretations are multitudinous. That suggested by Ireneus (C. H. K. l. c. c. 29, 30), followed by many Protestant interpreters—among the rest, but very sceptically, by Alford—is one of the (but not the oldest, viz. λατινος = Latin, i.e. beast, or kingdom—a 3, a 1, + 300, x 5, t 10, f 90, x 5, c 200 = 666. Some have suggested an abbreviation of resurgent, with reference to Julian; Bossuet, Diodes Augustus; Hengstenberg, Adonikam, because it is said (Ezra ii, 13) the sons of Adonikam were 666 (comp. ad loc.); Benary, יегист, יęb, or, dropping the final mem in Nero, to suit the various reading, giving therefore either 666 or 616. This interpretation is favored by Stuart. Bengel refers the 666 to the number of the years the Beast was to exercise his dominion; but that suggestion is the name of his number (see Stuart's Com. on the Apoc. excurs. iv); and for the full literature on the subject, Rabett's άληθινος; Clarke, on the same; and Thom's Number of the Beast). The first solution proposed above seems to be the best confirmed. On the subject of numbers generally, see Stuart's Com. on the Apoc. Intro. § 7, excurs. ii. See Revelation. Book vi.

Numbering. See Census.

Numbers, Book vi, the fourth book of Moses, so called in the Septuagint (Αριθμον), in the Vulgate (Numeri), and modern versions, from the double enumeration of the Israelites in ch. i-iv and in ch. xxvi. In the Hebrew it is called Be-midbar, יבמבדבר, i.e. in the desert, this word occurring in the first verse; and sometimes Vo-gedolteh, יבכגדלת, from the initial word. It is divided by the Jews into two parts, and in the English and modern versions into thirty-six chapters. See Pentateuch.

I. Contents.—The book may be said to comprise generally the history of the Israelites from the time of their leaving Sinai, in the second year after the Exodus, till they entered into Canaan, the western and northwestern borders of the Promised Land in the fortieth year of their journeys. It consists of the following principal divisions:

1. The preparations for the departure from Sinai (i, 1-31, 10).—(a) The object of the encampment at Sinai has been accomplished; the covenant has been made, the law given, the sanctuary set up, the priests consecrated, the service of God appointed, and Jehovah dwells in the midst of his chosen people. It is now time to depart in order that the object may be achieved for which Israel has been sanctified. That object is the possession of the Promised Land; this must be accomplished by peaceable means, but by the forcible expulsion of its present inhabitants; for "the iniquity of the Amorites is full," they are ripe for judgment, and this judgment Israel is to execute. Therefore Israel must be organized as Jehovah's army; to this end the requisitions will be made which will enable the campaign to be started. Hence the book opens with the numbering of the people (ch. i-iv). This comprises, first, the census of all the tribes or clans, amounting in all to six hundred and three thousand five hundred and fifty, with the exception of the Levites, who were left behind with the rest (ch. i); secondly, the arrangement of the camp and the order of march (ch. ii); thirdly, the special and separate census of the Levites, who are listed by God instead of all the first-born, the three families of the tribe having their peculiar offices in the Tabernacle, in addition to the Levites which were made when the Egyptians were in the wilderness (ch. iii); fourthly, the form of the priestly blessing (vi, 22-27).

(c) Events occurring at this time, and regulations connected with them (ch. vii, i-10). Chapter vii gives an account of the offerings of the princes of the different tribes at the dedication of the Tabernacle; ch. viii of the consecration of the Levites (ver. 89 of ch. vii and vers. 1-4 of ch. viii seem to be out of place); ch. ix, 1-14, of the second observance of the Passover (the first in the wilderness) on the fourteenth day of the second month, and of certain provisions made to meet the case of those who by reason of defilement were unable to keep it. Lastly, ch. ix, 15-28, tells how the cloud and the fire regulated the march and the encampment; and x, 1-10, how two silver trumpets were employed to give the signal for public assemblies, for war, and for festival occasions.

2. March from Sinai to the borders of Canaan. (a) We have here, first, the order of march described (x, 14-29); the appeal of Moses to his father-in-law, Hobab, to accompany them in their journeys—a request urged probably because, from his desert life, he would be well equipped to give them spots to encamp in; next, the message which also would have influence with the various wandering and predatory tribes who inhabited the peninsula (29-32); and the chant which accompanied the moving and the resting of the ark (vers. 30, 31).

(b) An account of several stations and of the events which happened at them. The first was at Taberah, where, because of impatient murmurings, many of the people were destroyed by lightning (these belonged chiefly, it would seem, to the moloty multitude which came out of Egypt with the Israelites); the loathing of the people for the manna; the complaint of Moses that he cannot bear the burden thus laid upon him, and the appointment in consequence of seventy elders to serve and help him in his office (x, 10-29); the quasi sent, and the judgment following thereon, which gave it its name to the place—on the division, Kibrocheth Haven (the graves of last), xi, 31-35 (comp. Psa. lxxvii, 30, 31; cvi, 14, 15); arrival at Hazereth, where Aaron and Miriam are jealous of Moses, and Miriam is in consequence smitten with leprosy (xii, 1-10); the sending of the spies from the wilderness of Paran, their report, the refusal of the people to enter Canaan, their resolution in consequence, and their rash attack upon the Amalekites, which resulted in a defeat (xii, 16-xxxvi, 45).

3. A brief notice of fixed dates and events which trans-
alarmed the king of Moab, who, distrusting his superiority in the field, sent for a magician to curse his enemies; hence the episode of Balaam (xxxii, 1-xxiv, 25). Other artifices were employed by the Moabites to weaken the Israelites, especially through the influence of the Moabitish women (xxx, 1), with whom the Midianites (ver. 6) are also credited. This evil was at last quelled by the intervention of Phinehas (xxx, 7, 8). A second numbering of the Israelites took place in the plains of Moab preparatory to their crossing the Jordan (xxxvi). A question arose as to the inheritance of daughters, and a decision was given thereon (xxvii, 11-13). Moses is warned of his death, and retirement is appurred (xxxvi, 12-23). Certain laws are given concerning the daily sacrifice, and the offerings for Sabbaths and festivals (xxxviii, xxxix), and the law respecting vows (xxx); the conquest of the Midianites is narrated (xxxix); and the partition of the country east of the Jordan amongst the tribes of Reuben and Gad, and the half-tribe of Manasseh (xxxii). Then follows a recapitulation, though with some difference, of the various encampments of the Israelites in the desert (xxxiii, 1-49); the command to destroy the Canaanites (xxxiii, 50-56); and the bounds of the Promised Land and the cities appointed to divide it (xxxiv); the appointment of the cities of the Levites and the cities of refuge (xxxv); further directions respecting heiresises, with special reference to the case mentioned in ch. xxvii, and conclusion (xxxv, 1-30).

II. Integrity and Elements.—This, like the other books of the Pentateuch, is supposed by many critics to consist of a compilation from two or three, or more, earlier documents. According to De Wette, the following portions are the work of the Elohist (q.v.): Chapter i, 1-xx; xii, 5-16 (in its original, though not in its present form); xv, xvi, 1, 11-23, 24 (7); xvii, xix, xx, 1-18, 22-29 (except perhaps xxvi, 8-11); xxxii, 5, 28-42 (vers. 1-4 uncertain); xxxvii, xxxviii. The rest of the book is, according to him, by the Jehovist, or later editor. Von Lengerke (Kenaan, p. lxxxi) and Stithner (§ 28) make a similar division, though they differ as to some verses, and even whole chapters. Vaihinger (in Herzog's Encyclopädie, art. Pentateuch) finds traces of three distinct documents, which he ascribes severally to the pre-Elohist, the Elohist, and the Jehovist. To the first he assigns ch. x, 29-36; xi, 1, 12, 16 (in its original form); xx, 14-21; xxi, 4, 9, 13-35; xxxii, 33-42; xxxii, 55, 56. To the Elohist belong long ch. i, 1-xx, 8; xi, 1-12, 16; xiii, 1-xxi, 13; xx, 22-29; xxi, 10-12; xxxi, 1; xxxi, 1-xxxii, 54; xxxii, 1-32; xxxii, xxxvi, 19. To the Jehovist, xi, 1-16; xvi (ibid.); xxxv, 1-30; xxvii, 20-34. But the grounds on which this distinction of documents rests are in every respect most unsatisfactory. The use of the divine names, which was the starting-point of this criticism, ceases to be a criterion; and certain words and phrases, a particular manner or coloring, the narrative of miracles or prophecies, are supposed to decide whether a passage belongs to the earlier or the later document. Thus, for instance, Stithner alleges as reasons for assigning ch. x, 1-16 to the Jehovist, the coming down of Jehovah to speak with Moses, xiv, 17, 25; the pillar of cloud, xvi, 5; the relation between Joshua and Moses, xx, 28, as in Exod. xxxii, xxxvii, the seventy elders, xi, 16, as Exod. xxvii, 1, and so on. So again in the Jehovistic section, xiii, xiv, he finds traces of "the author of the First Legislation" in one passage (xiii, 2-17), because of the use of the word הָאָרָא, signifying "a tribe," as in Numb. i and vii. He is led also by the use of the implementer, as in Exod. xxvii, 27; xxxiv, 31; and that הָאָרָא is not peculiar to the older documents has been shown by Keil (Com. on Joshua, § xii). Von Lengerke goes still further, and cuts off xii, 2-16 altogether from what follows. He thus makes the story of the spies, as given by the Elohist, strangely misplaced. We only
hears of their being sent to Canaan, but nothing of their return and their report. The chief reason for this separation is that in xiii, 27 occurs the Jehovistic phrase, "flowing with milk and honey," and some references to other earlier Jehovistic passages. The narrative again finds a repetition in xiv, 38-39 of xiv, 11-25, and accordingly gives these passages to the Elohist and Jehovist respectively. This has more color of probability about it, but has been answered by Ranke (Untersuch. ii, 197 sq.). Again, ch. xxi is supposed to be a combination of two different accounts, the original or Elohist document containing having contained only the story of the rebellion of Korah and his company, while the Jehovist mixed up with it the insurrection of Dathan and Abiram, which was directed rather against the temporal dignity than against the spiritual authority of Moses. But it is against this view that, in order to justify it, vers. 12, 14, 27, and 32 are treated as interpolations. Besides, the discrepancies which it is alleged have arisen from the fusing of the two narratives disappear when fairly looked at. There is no contradiction, for instance, between xvi, 19, where Korah appears at the tabernacle of the congregation, and ver. 27, where Dathan and Abiram stand at the door of their tents. In the last passage Korah is not mentioned; and even if we suppose him to be included, the narrative allows time for his having left the Tabernacle and returned to his own tents before the statement is made that the 250 men who offered incense were destroyed by fire, and who had, as we learn from ver. 2, joined the leaders of the insurrection, Korah, Dathan, and Abiram, militant against the narrative in ver. 29, according to which Dathan and Abiram and all that aspired to Korah were swallowed up alive by the opening of the earth. Further, it is clear, as Keil remarks (Einleitung, p. 94), that the earlier document (die Grundskrift) implies that persons belonging to the other tribes were mixed up in Korah's rebellion, because they say to Moses in vers. 21, "Art thou come among us as a foreigner; and hast thou set thyself to be a judge upon the face of the earth," says the historian (ver. 3). The pretext for the outbreak of this feeling on the part of Miriam and Aaron was that Moses had married an Ethiopian woman (a woman of Cush). This was probably, as Ewald suggests, a second wife married after the death of Zipporah. But there is no reason for supposing, as he does (Gesch. ii, 229, note), that we have here a confusion of two accounts. He observes that the words of the brother and sister, "Hath the Lord indeed spoken only by Moses, hath he not also spoken by us?" show that the real ground of their jealousy was the apparent superiority of Moses in the prophetical office; whereas, according to the narrative, their dislike was occasioned by his marriage with a foreigner and a person of inferior rank. But nothing surely can be more natural than that the long pent-up feeling of jealousy should have found vent upon the marriage as a pretext to begin the quarrel, and then have shown itself in its true character in the words recorded by the historian.

It is not perhaps to be wondered at that the episode of Numbers, xxii, 20-xxiv, 25 should have been regarded as a later addition. The language is peculiar, as well as the general cast of the narrative. The prophecies are vivid, and the diction of them highly finished: very different from the rugged, vigorous fragments of ancient poetry which meet us in ch. xxii. On these grounds, as well as on the score of the distinctly Messianic character of Balaam's prophecies, Ewald gives this episode to his Fifth Narrator, or the latest editor of the Pentateuch. This writer he supposes to have lived in the former half of the 8th century B.C. and hence he accounts for the reference to Assyria and the Cypriotes (the Chittim); the latter nation about that time probably infesting as pirates the coasts of Syria, whereas Assyria might be joined with Eber, because as yet the Assyrian power, though hostile to the southern nations, was rather humbler than otherwise to Jehovah. The allusions to Edom and Moab as vanquished enemies have reference, it is said, to the time of David (Ewald, Gesch. i, 148 sq. and comp. ii, 277 sq.). The prophecies of Balaam therefore, on this hypothesis, are urtexta of these events, put by his mouth by a scurrilous writer of the time of Isaiah, who, finding some mention of Balaam as a prince of Midian in the older records, put the story into shape as we have it now. But this sort of criticism is so purely arbitrary that it scarcely merits a serious refutation, not to mention that it has been entirely rejected on the ground that in prophecy there is no such thing as prediction. We will only observe that, considering the peculiarity of the man and of the circumstances as given in the history, we might expect to find the narrative itself, and certainly the poetical portions of it, marked by some life and personal interest. But it is not surprising that this episode is not by the same writer as the rest of the book of Numbers, there appears no valid reason to doubt its antiquity, or its rightful claim to the place which it at present occupies. Nothing can be more probable than that, as a matter of course, if the people of Israel were of a creative spirit, they would have found its way into the Book of the Law. At all events, the picture of this great magician is wonderfully in keeping with the circumstances under which he appears and with the prophecies which he utters. This is not the place to enter into all the questions which arise as regards the character of this prophet. It was at this time that a heathen became a prophet of Jehovah we are not informed; but such a fact seems to point to some remains of a primitive revelation, not yet extinct, in other nations besides that of Israel. It is evident that his knowledge of God was beyond that of most heathen, that he was the greatest among the magicians in whose name the people of Israel might be found in his death among the true servants of Jehovah; but because the soothsayer's craft promised to be gainful, and the profession of it gave him an additional influence and in thanks the eyes of the people, Jehovah gave the people who wished to him at his higher vocation. There is nothing more remarkable in the early history of Israel than Balaam's appearance. Summoned from his home by the Ephrathite, he stands by his red altar-fires, wearing his dark and subtile sorceries, or goes to seek for enchantment, hoping, as he looked down upon the tents of Israel among the accursed groves of the valley, to with them with his word, yet constrained to bless, and to forestall their future greatness. See Balaam.

The book of Numbers is rich in fragments of ancient poetry, some of them of great beauty, and all throwing an interesting light on the character of the times in which they were composed. Such, for instance, is the blessing of the high-priest (vi, 24-26):

"Jehovah bless thee and keep thee: Jehovah make his countenance shine upon thee, And be gracious unto thee:

Jehovah lift up his countenance upon thee, And give thee peace."

Such, too, are the chants which were the signal for the commencement of those people journeyed, and for it to rest when they were about to encamp:

"Arise, O Jehovah! let thine enemies be scattered: Let them that hate thee flee before thee."

And,

"Return, O Jehovah, To the ten thousands of the families of Israel"
In ch. xxi we have a passage cited from a book called "The Book of the Wars of Jehovah." This was probably a collection of ballads and songs composed on different occasions by the watch-fires of the camp, and for the most part, though not perhaps exclusively, in commemoration of the victories over all her enemies. The title shows us that these were written by men imbued with a deep sense of religion, and who were therefore foremost to acknowledge that not their own prowess, but Jehovah's right hand, had given them the victory when they went forth to battle. Hence it was called "The Book of the Wars of Jehovah," but "The Book of the Wars of Jehovah." Possibly this is the book referred to in Exod. xviii, 14, especially as we read (ver. 16) that when Moses built the altar which he called Jehovah-Nissi (Jehovah is my banner), he exclaimed, "Jehovah will have war with Amalek from generation to generation." This expression may have given the name to the book. The fragment quoted from this collection is difficult, because the allusions in it are obscure. The Israelites had reached the Arnon, "which," says the historian, "forms the border of Moab, and separates between the Moabites and Amorites." Wherefore it is said, he continues, "in the Book of the Wars of Jehovah:" Vaheb in Suphah and the torrent-beds; Arnon and the slope of the torrent-beds Which flow to Beth-jaal. And which leasheth on the border of Moab."

The next is a song which was sung on the digging of a well at a spot where they encamped, and which from this circumstance was called Beor, or "The Well." It runs as follows:

"Spring up, O well! sing ye to it: Well, which the princes sing, Which the nobles of the people bore With the sceptre-of-office, with their staves."

This song, first sung at the digging of the well, was afterwards sung at the burial of the person who first came to draw water. The maidens of Israel chanted it one to another, verse by verse, as they toiled at the bucket, and thus beguiled their labor. "Spring up, O well!" was the burden or refrain of the song, which would pass from one mouth to another at each fresh coil of the rope, till the full bucket reached the well's mouth.

But the peculiar charm of the song lies not only in its antiquity, but in the characteristic touch which so manifestly connects it with the life of the time to which the narrative assigns it. The one point which is dwelt upon is that the leaders of the people took their part in the work, that they themselves helped to dig the well. In the new generation, who were about to enter the Land of Promise, a strong feeling of sympathy between the people and their rulers had sprung up, which augured well for the future, and which left its stamp even on the ballads and songs of the time. This little carol is fresh and lusty with young life; it sparkles like the water of the well whose springing up first occasioned it; it is the expression, on the part of those who sung it, of lively confidence in the sympathy which the leaders of the people manifested in this one instance, might be relied upon in all emergencies (Ewald, Gesch. ii, 264 sq.). Immediately following this "Song of the Well" comes a song of victory, composed after a defeat of the Moabites and the occupation of their territory. It is in a taunting, mocking strain, and is commonly considered to have been written by some Israelite bard on the occupation of the Amoritish territory. Yet the manner in which it is introduced would rather lead to the belief that we have here the translation of an old Amoritish ballad, which was assimilated by us that when Israel approached the country of Sihon they sent messengers to him, demanding permission to pass through his territory. The request was refused. Sihon came out against them, but was defeated in battle. "Israel," it is said, "smote him with the edge of the sword, and took his land in possession, from the Arnon to the Jabbok and as far as the children of Ammon, for the border of the children of Ammon was secure (i.e., they made no encroachments upon Ammonitish territory). Israel also took all these cities, and dwelt in all the cities of the Amorites in Heshbon, and in all the cities of the Amorites in Gilead (i.e., nearer towns and villages). Then follows a little sketch of Amoritish history. A foreigner would be surprised to see the city of Sihon, king of the Amorites, and he had waged war with the former king of Moab, and had taken from him all his land as far as the Arnon. Wherefore the ballad-singers (bawwār al-kāmil) say:"

"Come ye to Heshbon, Let the city of Sihon be built and established! For it was built from Heshbon a flame out of the stronghold (Ṭūr Yūsuf) of Sihon, Which devour Ar of Moab! The lords of the high places of Israel, Woe to thee, Moab! Thou art undone, O people of Chemosh! He (i.e., Chemosh thy god) hath given us up his sons as fugitives, And his daughters into captivity, To Sihon king of the Amorites. Then we cast them down; Heshbon perished even unto Debir. And we laid (it) waste unto Nophah, which (reacheth) unto Medeba.""

If the song is of Hebrew origin, then the former part of it is a biting taunt. "Come, ye Amorites, into your city of Sihon, and build it up again. Ye boasted that ye had burned it with fire and driven out its Moabitish inhabitants; but now we have come in our turn and have burned Heshbon, and have driven you out as ye once burned it and drove out its Moabitish possessors."

III. Credibility.—There have frequently been raised strong doubts against the historical veracity of the book of Numbers, although it is impressed with indubitable marks of the age to which it refers, and is of perfect authenticity. The numerical statements in ch. i—iv are so accurate that they are everything of necessity. There might be no motive for any fabrication of this description. The numbering of the people is in perfect harmony with Exod. xxxviii, 26. The amount is here stated in round numbers, because a general survey only was required. When requisite, the more exact numbers are also added (iii, 39, 45). A later writer, therefore, certainly has affected to possess the most exact knowledge of those circumstances, and consequently would have given, not round, but particularly definite numbers.

The account of the setting apart of the tribe of Levi has been long regarded as a fiction, but this account is strongly confirmed by the distribution of the cities of the Levites (Num. xxxv; Josh. xxii). This distribution is an undeniable fact, and the existence of these Levitical towns may be appealed to as a document proving that the Levites were really set apart. Our opponents have vainly endeavored to find contradictions; for instance, in the system of tithing (ch. xviii), which, they say, is not mentioned in Deuteronomy, where the tithes are applied to different purposes (Deut. xii, 6, 7, 17—19; xiv, 22 sq.; xxvi, 12—15). But there were two sorts of tithes: one appointed for the maintenance of the Levites, and the other to defray the expenses of public banquets, of which the Levites also partook on account of their position in society (comp. Neh. xiii, 10; Tobit i, 7).

It has been asserted that the book of Numbers contradicts itself in ch. iv, 2, 5, and viii, 24, with respect to the proper age of Levites for doing duty. But the first of these passages speaks about carrying the tabernacle, and the second about performing sacred functions in the tabernacle. To carry the tabernacle was heavier work, and required an age of thirty years. The functions within the tabernacle were comparatively easy, for which an age of twenty-five years was deemed sufficient.

The opinions of those writers who deem that the book of Numbers had a mythical character are in contradiction with passages like x, 26 sq., where Hobab is re-
quested by Moses to aid the march through the wilderness. Such passages were written by a conscientious reporter, whose object was to state facts, who did not confine himself merely to the relation of miracles, and who does not conceal the natural occurrences which preceded and followed thevellus events in chronological order. How are our opponents able to reconcile these facts? Here again they require the aid of a new hypothesis, and speak of fragments loosely connected.

The author of the book of Numbers proves himself to be intimately acquainted with Egypt. The productions mentioned in ch. xi., 6 sq., are, according to the most accurate investigations, really those which in that country chiefly served for food. In ch. xiii and xxxii we find a notice concerning Zoan (Tanis), which indicates an exact knowledge of Egyptian history, as well in the author as in his readers. In ch. xvii, 2, where the writing of a name on a stick is mentioned, we find an allusion characteristic of Egyptian customs (comp. Wilkinson, Manners and Customs of the Ancient Egyptians, i., 888).

The history of the rebellion of the sons of Korah (xvi, 17) has certainly some coloring of the marvellous, but it nevertheless bears the stamp of truth. It is absurd to suppose that a poet who wrote ch. xvii, 6 sq., in order to magnify the priestly dignity, should have represented the Levites themselves as the chief authors of these criminal proceedings. This circumstance is the more important, because the descendants of Korah (xxvi, 11) afterwards became the most influential of the most important and influential families. In this position we find them as early as the time of David; so that it is inconceivable how anybody should have entertained the idea of inventing crime to be charged upon one of the ancestors of this illustrious family.

Many vestiges of antiquity are found in ch. xxi. The whole chapter, indeed, bears a characteristically antique impress, which manifests itself in all those ancient poems that are here communicated only in fragments, as required for the illustration of the narrative. Even such critical sceptics as De Wette consider these poems to be relics of the Mosaic period. But they are so closely connected with history as to be unintelligible without a knowledge of the facts to which they refer. Narratives like the history of Balaam (ch. xxii—xxiv) furnish also numerous proofs of their high antiquity. These confirmations are of the greatest importance, on account of the many marvellous and enigmatical points of the narrative. Compare, for instance, the geographical statements, which are uncommonly accurate, in ch. xxii, i., 36, 39; xxiii, 14, 15, 27, 28; see Hengstenberg's Geographia Sacra, vol. ii., p. 381. The nations particularly mentioned in Balaam's prophecy—the Amelekites, Edomites, Moabites, and Kenites—belong to the Mosaic period. In ch. xxiv, 7, it is stated that the king of Israel would be greater than Agag; and it can be proved that Agag was a standing title of the Amalekites, and that consequently there is no necessity to refer this declaration to that king Agag whom Saul vanquished. The Kenites, at a later period, disappeared entirely from history. A prophet from Mesopotamia was likely to make particular mention of the Amalekites (ch. xxiv, 22). There is also a remarkable prediction that persons sailing from the coast of Chittim should subdue Ashur and Eber (xxiv, 24). The inhabitants of the West should vanquish the dwellers in the East. The writers who consider the predictions of Balaam to have been written after the events to which they refer bring us down to so late a period as the Grecian age, in which the whole passage could have been inserted only under the supposition of most arbitrary dealings with history. The truth of the Biblical narrative here asserts its power. There occur similar accounts, in which it is strikingly evident that they proceeded from the hands of an author contemporary with the events: for instance, ch. xxxii, in which the distribution of the transjordanic territory is recorded; and even the account, which has so frequently been attacked, concerning the Havoth-jair, the small towns, or rather tent-villages of Jair (xxxii, 41, 42; comp. Judg. x, 4; Deut. iii, 14), is fully justified on a closer examination.

The list of stations in ch. xxxiii is an important document for the decipherment of the Biblical imagination. This list contains a survey of the whole route of the Israelites, and mentions individual places only in case the Israelites abode there for a considerable period. It is not the production of a diligent compiler, but rather the original work of an author well versed in the circuit not of a single period, but of a remote antiquity. The author would certainly have avoided the appearance of some contradictions, such as that in Numb. xxxiii, 30, 31, comp. with Deut. x, 6. This contradiction may be better removed by observing that the book of Numbers speaks of the expedition of the Israelites during the second year of their wanderings, and the book of Deuteronomy of their expedition in the fortieth year. The list of stations contains also important historical notices; those, for instance, in Numb. xxxiii, 4, 9, 14, 38. These notices demonstrate the accurate historical information of the author.

The great fact, which is the basis of the narrative of this whole book, namely, the sojourn of the Israelites during forty years in the wilderness, is not open to any just objection. The manner in which the narrator states this fact we have mentioned above. All that strictly historical is, the essentially objective, the most befitting the law-giver himself. Modern criticism has chiefly taken offence at the statement that Jehovah had announced all this as a punishment to be inflicted upon the people. This, they say, is incomprehensible. However, the fact stands firm that the Israelites really abode forty years in the wilderness. This fact is proved in the Scriptures by many other testimonies. Hence arises the question how this protracted abode was occasioned, and what induced Moses to postpone or give up the conquest of Canaan. De Wette says that such a resignation, in giving up a plan to which one has devoted the full half of a life, is not human. Goethe asserted that by such a representation the picture of Moses is entirely disfigured. All this renders the problem of our opponents the more difficult. De Wette says, "Who knows what happens beyond the horizon that lies so long hid?" This question would amount to a confession of our entire ignorance concerning the real turning-point of the history of Israel, and would make an enormous and most striking gap in universal history. It is incredible that no tradition should have been preserved in which was told what event it was to which the whole which had been disfigured. It is incredible that there should have been communicated only what was comparatively insignificant. If that were the case, the traditions of Israel would form a perfectly isolated phenomenon. Thus the history of Israel itself would be something incomprehensible. Either the history is a concealed, or the astounding fact is, indeed, a truth. The resignation of Moses, and the sojourn of the people in the wilderness, can be explained only by assuming an extraordinary divine intervention. A merely natural interpretation is here completely futile. The problem can only be solved by assuming that the whole proceeded from the command of God, which is unconditionally obeyed by his servant, and to which even the rebellious people must bow, because they have amply experienced that without God they can do nothing.

IV. Commentarius. — The exegetical helps on the entire book of Numbers alone are not numerous. Besides those of the Church fathers, contained in their works, we specify the following: Chrysostom, Exercitationes (Vittem, 1572, 1590, 8vo); Atterrissi, Commentarium (Lond. 1618, fol.); also in Dutch (Amst. 1667, fol.); Lorinus, Commentarius (Lugd. 1622, fol.); Patriarch, Commentary (Lond. 1699, 4to); Jaroslav, *WNK* (in Mendelssohn's Ponta-
of intelligence; on the contrary, life, in order to be capable of resisting the principle of death which is in him, must be incorporeal and immutable, eternally present, independent of time, simple, and unable to experience modifications, either by its own will or by the will of other beings. Life, is then, a spiritual principle (ψωσις) identical with the first God, who exist in himself and through himself, and who is known (τὸ ὄνομα τοῦ Θεοῦ) by the name of the One (τὸ όνομα τοῦ Θεοῦ).

But as this absolute and immutable principle cannot be active and creative, it is necessary to admit a second God (ὁ ἐνεργός Θεός, ὁ θεός τοῦ θεοῦ) proceeding from the first, who, as bond and author of matter, communicates his energy to the intellectual essences, and infuses his spirit through all creatures. This second God contemplates the first (μαρτυρεῖ τοῦ πρῶτου), and it is upon the ideas that he sees in the sovereign good that he arranges the world. The first God communicates his ideas to the second, without depriving himself of them, the same as we communicate our knowledge (ἰστορίαν) to another without losing anything. We see that Numinus attributes to his second God a double duty: first, to contemplate the ideal; secondly, to arrange the world upon this ideal. This duality of God led the philosopher to double his second God, and he thus obtained a Trinity. These connections between these two Gods, which are at the same time two and one, are not clearly established in the fragments which remain to us of Numinus. As for his theories upon the soul, they are still more uncertain; but the little that we know of them shows that in his psychology, as in his metaphysics, Numinus confounded the theories of Plato with the Oriental theories, accorded very little place to scientific investigation, and delivered himself too much to his own imagination.

Numidicus of Carthage, a Christian martyr of the early Church, flourished in the African city after which he is named near the middle of the 4th century. For his execrable conduct in the persecution, Bishop Cyprian made him a presbyter. It is related of Numidicus that, after having inspired many with courage to suffer martyrdom, and seen his own wife perish at the stake, he had himself, when half burned and covered under a heap of stones, for the body of her father, in order to bury it. Great was her joy at finding him still giving signs of life, and her filial assiduities finally succeeded in completely restoring him. We know little else of the personal history of Numidicus. He died near the close of the century. See Neander, Ch. Hist. i, 138.

Numismatics (Lat. nummum and nume-mon-e-y), the science which treats of coins and medals. A coin is a piece of metal of a fixed weight stamped by authority of government, and employed as a circulating medium. A medal is a piece struck to commemorate an event. The study of numismatics has an important bearing on history. Coins have been the means of ascertaining the names of forgotten countries and cities, their position, their chronology, the succession of their kings, their usages, civil, military, and religious, and the style of their art. On their respective coins we can look on undoubtedly accurate representations of Augustus, Julius Caesar, Augustus, Nero, Caracalla, and read their character and features.

The metals which have generally been used for coin-
markable series of so-called "encased" coins struck in Magna Graecia, of which the reverse is an exact repetition in concave of the relief of the obverse. These coins are thin, flat, sharp in relief, and beautifully executed.

2. The inscriptions on the earliest Greek coins consist of a single letter, the initial of the city where they were struck. The remaining letters, or a portion of them, were afterwards added, the name, when in full, being in the genitive case. Monograms sometimes occur in addition to the name, or part name, of the place. The first coin bearing the name of a king is the tetradrachm (or piece of four drachmai) of Alexander I of Macedon.

Among the early coins of Asia, one of the most celebrated is the stater Daricus or Daric, named from Darius Hystaspis. It had for symbol an archer kneeling on one knee, and seems to have been coined for the Asian colonies of Asia by their Persian conquerors. In the reign of Philip of Macedon, the coinage of Greece had attained its full development, having a perfect reverse. One of the earliest specimens of the complete coin is a beautiful medal struck at Syracuse (fig. 3).

with the numeral I. Of the fractions of the as, the sextans, or sixth part, generally bears the head of Mercury, and the uncia, or ounce piece (fig. 4), that of Minerva; these pieces being further distinguished by dots or knobs, one for each ounce. There were circular pieces as high as the decussis, or piece of twelve asses, presenting a head of Roma (or Minerva), but none are known to have been coined till the weight of the as had diminished to four ounces. The Roman uncial coinage extended to the other states of Italy, where a variety of types were introduced, including mythological heads and animals. In the reign of Augustus, the as was virtually superseded by the sestertius, called by numismatists the first bronze, about the size of an English penny, which was at first of the value of 2½, afterwards of 4 asses. The sestertius derived its value from the silver denarius, of which it was the fourth. The half of the sestertius was the dupondius (known as the second bronze), and the half of the dupondius was called the asarium, an old name of the as. The asarium is known to numismatists as the third bronze.

Silver was first coined at Rome about B.C. 261, the standard being founded on the Greek drachma, then equivalent in value to ten asses; the new coin was therefore called a denarius, or piece of ten asses. The earliest silver coin at Rome has on the obverse the head of Mars (differing from Minerva by having wings attached to the helmet); on the reverse is a quadriga or biga, or the Dioscuri. Among various other types which occur in the silver of the Italian towns subject to Rome are the horse's head and galloping horse, both very beautiful. During the social war the revolted states coined money independently of Rome, and used various devices to distinguish it as Italian and not Roman money.

The earliest gold coins seem to have been issued about B.C. 90, and consisted of the sculpum, equivalent to 20 sestertii, and the double and treble sculpum. These pieces bear the head of Mars on the obverse, and on the reverse an eagle standing on a thunderbolt, with the inscription "Roma" on the exergue. The large early republican coins were cast, not struck.

a. The Family Coins begin about B.C. 170, and about B.C. 80 they entirely superseded the coins first described. These families who successively held offices connected with the public mint acquired the right first to inscribe their names on the money, afterwards to introduce symbols of events in their own family history. These types gradually superseded the natural ones; the portrait of an ancestor followed, and then the portrait of a living citizen, Julius Caesar.

b. Under the empire the copper sestertius, which had displaced the as, continued the monetary standard. A magnificent series exists of the first bronzes of the emperors from Augustus to Gallicanus. While it was the privilege of the emperors to coin gold and silver, copper could only be coined ex seutiusconsulto, which from the time of Augustus was expressed on the coins by the letters S.C., or EX S.C. The obverse of the imperial coins bears the portraits of the successive emperors, sometimes of the empress or other members of the imperial family; and the reverse represents some event, military or social, of the emperor's reign, sometimes allegorized. The emperor's name and title are inscribed on the obverse, and sometimes partly continued on the reverse; the inscription on the reverse generally relates to the subject inlaid: and towards the close of the 5th century the exergue of the reverse is occupied by the name of the town where the coin is struck. The coins of Augustus and those of Livia, Antonia, and Agrippina the elder have much artistic merit. The workmanship of Nero's sestertii is vary very superfluous. The coin of Vespasian of Titus commemorates the conquest of Judea. The Colossus appears on a sestertius of Vespasian. The coins of Trajan are noted for their architectural types. Hadrian's coins commemorate his journeys. The coins and medals of Antonine, Marcus Aurelius, and the two Faustines are well executed, as are also those of Commodus, of whom a remarkable medallion relates to the conquest of Britain. There is a rapid falling off in design after the time of Commodus, and base silver comes extensively into use in the reign of Caracalla. Gallienus introduced the practice of coining money of copper washed with silver.

The colonial and provincial money of this period was very inferior to that coined in Rome. In the coins of the provinces which had been formed out of the Greek empire the obverse bears the emperor's head, and the reverse generally the chief temple of the gods in the city of coinage; the inscriptions are in Greek. In the imperial coins of Alexandria appear such characteristic devices as the heads of Jupiter Ammon, Isis, and Canopus, the sphinx, the serpent, the lotus, and the wheat ear. Colonial coins were at first distinguished by a team of oxen, onwards by barytes, the number of which indicated the number of legions from which the colony had been drawn.

After the time of Gallienus the colonial money and the Greek imperial money, except that of Alexandria, ceased, and much of the Roman coinage was executed in the provinces, the name of the town of issue appearing on the obverse. Diocletian introduced a new piece of money, called the follis, which became the chief coin of the lower empire. The first bronze disappeared after Gallienus, and the second disappears after Diocletian, the third was diminished in size, and the fourth disappeared at the fall of the empire. With the establishment of Christianity under Constantine a few Christian types are introduced. The third bronze of that emperor has the Labarum (q. v.), with the monogram IHS. Large medallions, called contorniati, incised with a deep groove, belong to this period, and seem to have been prizes for distribution at the public games. Pagan types recur on the coins of Julian; and after his time the third bronze disappears.

The money of the Byzantine empire forms a link between the subject of ancient and that of modern coins. The portrait of the emperor on the coin of the 10th century is supported by some protecting saint. The reverse has at first such types as Victory with a cross, afterwards a representation of the Saviour or the Virgin; in some instances, the Virgin supporting the walls of Constantinople. Latin is gradually superseded by Greek in the inscriptions, and wholly disappears by the time of Alexius I. The chief gold piece was the solidus or nomisma, which was long famed in commerce for its purity, and circulated largely in the west as well as the east of Europe.

II. Jewish Coins. — The oldest extant Jewish coins are held by the best authorities to belong to the period of the Asmonæan princes. About the year B.C. 189 Antiochus VII (Sidetes), the son of Demetrius I, granted to Simon Maccabeus, "the priest and prince of the Jews," the right of coining money. This was to be "with his own stamp," and to be current "in his own Shkel of Simon Maccabeus.
and though Aaron's rod is said to have produced almond-blossoms, and the flower on the reverse of the shekel resembles rather the hyacinth than the almond-blossom, yet regard being had to Jewish feelings, and the probability that the dies were engraved by Greek artists, it will seem safer to accept the common belief on the subject than any other. The half-shekel resembles the shekel, and they occur with the dates of the first, second, third, and fourth year of Simon.

The copper pieces bear a different stamp. A coin has been found in copper of the type of the silver shekel, having the date of the fourth year of Simon; but there seems to be every reason to believe that this was either plated or intended to be so, and therefore a counterfeit. The other copper coins known are parts of the copper shekel—the half, the quarter, and the sixth. The entire copper shekel has not been found. The half-shekel bears on the obverse the legend, "In the fourth year—one half," two bunches of thickly leaved branches, between which is a totally different type. Obverse, "The Redemption of Simon," a cup like that on the silver shekel. Reverse, "In a fourth year," a bundle of branches between two citrons. The palm-tree on these coins is well chosen as an emblem of the country. In subsequent times the captive Juda was represented as sitting under a palm-tree; and the palm-branch appears on many of the coins struck by the Jewish princes. The palm-branch, the myrtle, the willow, and the citron composed the token which every Israelite was commanded to bear in his hand at the feast of tabernacles. This was called the "lulav"—a word which simply means a palm-branch, and this is represented on the copper coins just described. While the lulav was borne in the right hand, the citron or etrog was carried in the left. This, too, appears on the coins of Simon Maccabaeus; and thus the whole of the coinage of this great man becomes highly symbolical, and was calculated to keep up the national feeling which he had so powerfully excited. On the murder of Simon in the year B.C. 185, his son John, who assumed the name of Hyrcanus, succeeded to the dignity of high-priest, and ruled for nearly thirty years. Of this prince we have a great number of coins; but they are only of copper, and are of the same type as those of Simon, with another type from those of his illustrious father. Obverse, in five lines, surrounded by a wreath of laurel or olive, "John, High-Priest, and the Confederation of the Jews." Reverse, two cornucopiae, between which is a poppy-head, a pomegranate, or perhaps a date. There are several varieties of this coin, one of which bears over the obverse inscription the Greek letter A, which is supposed to indicate an alliance between John and Antiochus Sidetes or Alexander Balas. The type of the cornucopia is of Egyptian origin, and may on these coins be intended to indicate the continued prosperity of the country.

The next coins are those of Judas Aristobulus, which offer the same type as those of John Hyrcanus. They do not bear the title of king; although Judas is said by Josephus to have styled himself (Ant. xx, 10, 1). He reigned only one year, and his coins are very rare. They have been erroneously ascribed to Judas Maccabaeus.

To Judas Aristobulus succeeded his brother Alexander Janneus, B.C. 105. He is called in the Talmud Jason, and on his coins Jonathan or Jehonathan. His coins, which are numerous, have a peculiar historical interest. They may be divided into two classes—first, those with Hebrew inscriptions on the obverse and Greek on the reverse; and, secondly, those wholly Hebrew. The bilingual coins present—obverse, "The King Jehonathan," a half-opened flower; reverse, an anchor with two cross-trees, within an inner circle; BASIAQE ALEXANDR ("of the King Alexander"). Another has—obverse, a palm-branch; reverse, a flower. Another the Hebrew inscription "Jonathan the King," written in the intermediate spaces of a star with eight rays. See Alexander Janneus. The anchor was borrowed from the coins of the Seleucidæ. The star is supposed by some to allude to the prophecy of Isaiah, "There shall come a star out of Jacob," and to indicate that the king imagined himself to be accomplishing that prophecy.
Another Coin of Alexander Janneus.

Later Coin of Alexander Janneus.

Copper Coin of the Queen Alexander.

Copper Half Shekel of Antigonus (or Mattathias).

Priest and the Confederation of the Jews." Another, which seems to be a half-shekel, bears the Greek name and title within a wreath. Reverse, "Mattathias, High-Priest," a single cornucopia, on each side a leaf. Another, the obverse of which is obliterated, bears a single cornucopia, with the name and title in Greek in two straight lines. This is probably a quarter of a copper shekel. From these coins it is manifest that the name Antigonus is the Greek equivalent of Mattathias.

In the year B.C. 56 Herod I. assumed the Great, after the execution of Antigonus, ascended the throne. Considering the position and resources he attained, there could scarcely fail to be coins with his image and superscription. It will be observed, however, that since the silver coinage of Simon Maccabee, no issue has appeared in that metal. The Romans prohibited, in all countries subject to their dominion, the coinage of gold, and permitted that of silver only to a few important cities, among which Jerusalem was not included. The money, therefore, of Herod and his family is all of copper. The coins of Herod the Great do not exhibit his head. The most common represents on the obverse what it seems most reasonable to call a helmet with cheek-pieces; above it, on each side, a palm-branch; in the centre between them is sometimes a star. Reverse, a tripod, BAIAXIEDELOYO, with a sheaf of the tripod the year of the reign, on the other a monogram. See HEROD THE GREAT. Another gives the legend round the helmet, and the Macedonian shield on the reverse. Another presents the name and titles round a caduceus, with the date and monogram in the

Medium-size Copper Coin of Herod the Great.

Smallest Coin of Herod the Great.

Coin of Herod Archelaus.

Copper Coin of the Queen Alexander.

Copper Half-Shekel of Antigonus (or Mattathias).

Bearing his name in Greek, and evidently to be assigned to him, as they express the title of ethnarch. They are various in type, displaying the anchor, the helmet, the galleon with five oars, the prow of a ship, the caduceus, and the bunch of grapes, from which hangs a leaf. They are all of small size.

Herod Antipas succeeded in A.D. 4, and his reign terminated in A.D. 39. He is distinguished by the title tetarch. His coins exhibit—obverse, a palm-branch, with his name and title; reverse, a wreath encircling the name of the city which he built on the Lake of Gennesareth, and called after the reigning emperor "Caesarea." Others give on the reverse the name of Germanicus Caesar in a wreath.
Herod Philip II was the son of Herod the Great and Cleopatra. He reigned over Auranitis, Batanea, and Trachonitis, with some parts about Jannies, from B.C. 4 to A.D. 34. We have a few coins of this prince; more of Philip II. They exhibit the head of Tiberius on the obverse, and on the reverse a tetradrachm temple with the name and title of Philip as tetarch. The temple represented is that which Herod the Great had built near Panium, and dedicated to Cæsar. See PHILIP.

Herod Agrippa I, called in the Acts Herod the king, and on his coins Agrippa the Great, reigned from A.D. 37 to A.D. 44. Of his coinage we have many types. One of these only is Jewish. It bears—obverse, ΒΑΣΙΛΕΩΣ ΑΓΡΙΠΠΑ; the name is spelled with one Π, and the legend surrounds an umbrella fringed at the edge; reverse, three ears of corn springing from one stalk; in the field the date A.D. year 6. There are several coins of Agrippa I not bearing Jewish types, some of which call him the Great, and others designate him as Philo-Cæsar or Philo-Clauudius. Some coins bear the name and titles of Agrippa on the reverse, with those of the reigning emperor surrounding his portrait on the obverse. Of this class we have pieces of Caligula and Claudius, and on a coin of the latter the Jewish king is represented as sacrificing at an altar to one or more heathen deities. Mr. Madden (Jewish Coinage, p. 110), who seems to doubt the attribution of the coin to Agrippa I, supposes the temple to be that of the god Manna at Gaza. If it be a coin of Herod Agrippa, both it and the act which it commemorates must have been in the highest degree distasteful to his Jewish subjects.

Herod King of Chalda—A few small coins bearing the name of Herod the King written round a single cornucopia, have been attributed to this prince by Cavedoni and Levy (Jed. Mœnum, p. 82).

Agrippa II.—The king Agrippa of the Acts, from A.D. 48 to A.D. 100. We have one coin with a portrait of Agrippa II, and the title of king; it bears on the reverse an anchor. This is assigned by Mr. Madden to the year 68; and he adds (Jewish Coinage, p. 116), "the right of striking coins with his head must have been peremptorily put an end to, as in the next year and all future years his coins appear either with the symbolic head of the town at which they were struck, or with that of the reigning emperor. Thus Agrippa II appears on the reverse of Nero, Vespasian, Titus, and Domitian; and one coin corroborates the information of Josephus (Ant. xx. 9, 4), that Agrippa changed the name of Cesarea Philippi to Neronias, in honor of Nero, from whom he had received considerable ascensions of territory. Another coin is still more interesting. It is a small copper piece, bearing its name γαλακτικ written round a dot on the obverse, and on the reverse an anchor with the date FT. R.K. year 26 (Ca-
states that this man’s tyranny drove the Jews into open revolt. Of these last three procurators we have no coins.

The revolt occasioned by the intolerable oppression of Gessius Florus established for a time an independent government at Jerusalem; and Eleazar, the son of Ananias the high-priest, refused to offer sacrifices for the welfare of the Roman empire, massacred the Roman garrison, and remained for some time a master of Jerusalem. This was in A.D. 66. Eleazar struck silver coins bearing on the obverse a vase, with the words round it “Eleazar the High-Priest;” to the right of the vase a palm-branch; reverse, a cluster of grapes, “First Year of the Redemption” of Israel. Others, of copper, bear the legend “The Liberty of Zion,” and the date “Year Two.”

Another, with similar obverse, bears on the reverse the name “Simon” in a wreath. This later, of which only one specimen exists, is considered a forgery, but an imitation of a genuine coin. If so, it would intimate from the spring of Siloam; and when the priests arrived with it at the water-gate, they blew the trumpet. Another with obverse, a cluster of grapes; “Simon;” reverse, a palm-branch, “Second Year of the Deliverance of Israel.” Another has on the obverse “Simon,” in a wreath; reverse, a three-stringed lyre instead of the pitcher. Some with this type of the lyre have no date. Copper coins of the same period appear bearing the name of Simon: obverse, “Simon,” the name divided by a palm-tree; reverse, “The Deliverance of Jerusalem;” a vine-leaf. Another with a cluster of grapes instead of the vine-leaf. Another with the date of the second year. Another with “Jerusalem” instead of Simon. Another similar, with date of the second year.

Simon the son of Gamaliel is believed to have struck coins; and those are attributed to him which bear the title of Nasi—chief or prince, used in the later age of the Jewish polity to signify prince or president of the Sanhedrin. One is of a large size, and probably struck on a large brass Roman coin. It bears the legend “Simon Prince of Israel,” in a wreath clasped with a gem; and reverse, a vase with two handles; “First Year of the Redemption of Israel.” Other coins are of the usual size—the half-copper shkel: “Simon Prince of Israel,” written on the two sides of a palm-tree; reverse, vine-leaf; “First Year of the Redemption of Israel.” A similar coin has the date of the second year. To the same prince must be attributed coins with the same legends, but bearing on the obverse a palm-branch within a wreath, and on the reverse a lyre with three, five, or six strings.

Coins occur also in copper without any name: obverse, a vase with two handles; “The Year Two;” reverse, a vine-leaf; “The Deliverance of Zion.” Another with the “Year Three.” These are thought to have been struck by the authority of the Sanhedrin.

Another coin of the period of this first revolt, bearing the vine-leaf and the palm-tree, may possibly belong to Ananus or John of Gischala; but this is a matter of conjecture. This revolt terminated in the taking of Jerusalem by Titus and the destruction of the Temple.

The coins struck by Vespasian and Titus to commemorate the capture of Jerusalem, though not Jewish coins, still merit some notice here. They are of all metals and sizes, and many are of very beautiful workmanship.
They exhibit on the obverse the head of the emperor, with his titles, and usually the date of his tribunician power. On the reverse is the figure of the captive Judaea, generally sitting on the ground under a palm-tree, and in one instance the hands bound behind the back. On the gold and silver the legend, where there is one, of the reverse, is simply “Judaea,” or “Judaea devicta;” on the brass, “Judæa capta,” “Judæa devicta,” and “Judæa navalis.” This coin refers to some victories gained over a body of Jews who had built a few small vessels and committed piracies on the coasts of Syria, Phoenicia, and Egypt. On the brass coins which commemorate the conquest, the captive sometimes appears guarded by a Roman soldier; sometimes a captive Jew stands on one side of the palm-tree, with his hands tied behind his back, and the female figure seated on the ground on the other. A coin of this kind was also struck by Domitian. See Money.

During the reign of the last emperor of the Flavian family the Jews were treated with great severity; and among the many acts of leniency which characterized the accession of Nerva, one was that he abolished the Jewish tribute, and struck a coin with the remarkable legend “Fisci Judæici colunmia sublata,” the words written round a palm.

But the Jews continued their rebellions, and in the reign of Hadrian a war broke out under the leadership of the celebrated Simon Barcooch (the son of a star). Of this leader we have, it appears, a curious and interesting series of coins, and they are the best ever struck by the Jews as an independent people. Till recently many of them, if not all, have been attributed to Simon the son of Gioras, whose money has already been noticed; but the fact that many are struck on Roman denarii of Trajan affords a proof not to be gainsaid that they belong to the later chief. They display the same types as the coins of the earlier revolt. Obverse, “Simon,” within a wreath. Reverse, the pitcher and palm-branch; “The Deliverance of Jerusalem” struck on a denarius of Vespasian, the legend of which is partly legible. Others of the same type exhibit traces of the legends of Titus, Domitian, and Trajan. Another type—“Simon,” round a cluster of grapes; reverse, the son of Gioras; but they bear traces of being struck on coins of Vespasian, and the presence of the star above the temple seems to point them out as belonging to Barcooch. There is also a copper coin struck on a piece of Trajan, and identifiable in like manner: obverse, “Simon,” on either side of a palm-tree; reverse, “The Deliverance of Jerusalem;” a vine-leaf.

III. Christian Coinage.—That with which we are specially concerned is the numismatics of the first centuries of our era, or prior to medieval times. Strictly this ought to begin with Constantine the Great, because from his time the adoption of the Christian religion was recognized on the coins of the empire; but there are some anterior circumstances which scientifically prepared the way for this feature.

1. Christian Numismatics before Constantine.—Three signs of Christianity have been noted by numismatists on the medals prior to the period in question: namely, the monogram of Christ, the representation of the deluge, and the formula “in pace.” We will briefly recapitulate these leading facts relating to each in this connection.

a. A medallion with the effigy of Trajan-Decius, struck at Monna, in Lydia, presents this very curious peculiarity: at the top of the reverse, which represents Bacchus in a car drawn by two panthers, the letters X and P of the Greek word APX, which made part of the legend, are found combined in such a manner as exactly to form the monogram of Christ, ΧΡ. I have now to speak of certain medals of Apamea, in Phrygia, of the effigy of Septimius Severus, and of Macræius and Philip his father, which bear on the reverse a double scene, usually referred to the deluge. On these medals we discover, first in the ark, and afterwards out of it, the figures of a man and a woman, which were formerly regardeil as those of Deucalion and Pyrrha; but the two birds in the same connection, and especially the dove with the olive-branch, are foreign to the story of the son of Prometheus. It still remains a difficultly to explain the relation of the Jewish tradition with the heathen city of Asia Minor, and with the early Church (Eckhel, Doctr. Num. iii, 137). Its occurrence in the Catacombs of Rome is probably to be explained as a symbol of salvation by the Gospel “ark of safety.” See Noah’s Ark.

b. We have now to speak of certain medals of Apamea, in Phrygia, of the effigy of Septimius Severus, and of Macræius and Philip his father, which bear on the reverse a double scene, usually referred to the deluge. On these medals we discover, first in the ark, and afterwards out of it, the figures of a man and a woman, which were formerly regarded as those of Deucalion and Pyrrha; but the two birds in the same connection, and especially the dove with the olive-branch, are foreign to the story of the son of Prometheus. It still remains a difficulty to explain the relation of the Jewish tradition with the heathen city of Asia Minor, and with the early Church (Eckhel, Doctr. Num. iii, 137). Its occurrence in the Catacombs of Rome is probably to be explained as a symbol of salvation by the Gospel "ark of safety." See Noah’s Ark.

c. Finally, there remains a bronze denarius of the empress Salonina, wife of Gallienus, on the reverse of which is the albegata, a denarius of Vespasian, the legend of which is partly legible. Others of the same type exhibit traces of the legends of Titus, Domitian, and Trajan. Another type—“Simon,” round a cluster of grapes; reverse, the son of Gioras; but they bear traces of being struck on coins of Vespasian, and the presence of the star above the temple seems to point them out as belonging to Barcooch. There is also a copper coin struck on a piece of Trajan, and identifiable in like manner: obverse, “Simon,” on either side of a palm-tree; reverse, “The Deliverance of Jerusalem;” a vine-leaf.

III. Christian Coinage.—That with which we are specially concerned is the numismatics of the first centuries of our era, or prior to medieval times. Strictly this ought to begin with Constantine the Great, because from his time the adoption of the Christian religion was recognized on the coins of the empire; but there are some anterior circumstances which scientifically prepared the way for this feature.

1. Christian Numismatics before Constantine.—Three signs of Christianity have been noted by numismatists on the medals prior to the period in question: namely, the monogram of Christ, the representation of the deluge, and the formula “in pace.” We will briefly recapitulate these leading facts relating to each in this connection.

a. A medallion with the effigy of Trajan-Decius, struck at Monna, in Lydia, presents this very curious peculiarity: at the top of the reverse, which represents Bacchus in a car drawn by two panthers, the letters X and P of the Greek word APX, which made part of the legend, are found combined in such a manner as exactly to form the monogram of Christ, ΧΡ. I have now to speak of certain medals of Apamea, in Phrygia, of the effigy of Septimius Severus, and of Macræius and Philip his father, which bear on the reverse a double scene, usually referred to the deluge. On these medals we discover, first in the ark, and afterwards out of it, the figures of a man and a woman, which were formerly regarded as those of Deucalion and Pyrrha; but the two birds in the same connection, and especially the dove with the olive-branch, are foreign to the story of the son of Prometheus. It still remains a difficulty to explain the relation of the Jewish tradition with the heathen city of Asia Minor, and with the early Church (Eckhel, Doctr. Num. iii, 137). Its occurrence in the Catacombs of Rome is probably to be explained as a symbol of salvation by the Gospel "ark of safety." See Noah’s Ark.

b. We have now to speak of certain medals of Apamea, in Phrygia, of the effigy of Septimius Severus, and of Macræius and Philip his father, which bear on the reverse a double scene, usually referred to the deluge. On these medals we discover, first in the ark, and afterwards out of it, the figures of a man and a woman, which were formerly regarded as those of Deucalion and Pyrrha; but the two birds in the same connection, and especially the dove with the olive-branch, are foreign to the story of the son of Prometheus. It still remains a difficulty to explain the relation of the Jewish tradition with the heathen city of Asia Minor, and with the early Church (Eckhel, Doctr. Num. iii, 137). Its occurrence in the Catacombs of Rome is probably to be explained as a symbol of salvation by the Gospel "ark of safety." See Noah’s Ark.

c. Finally, there remains a bronze denarius of the empress Salonina, wife of Gallienus, on the reverse of which is the albegata, a denarius of Vespasian, the legend of which is partly legible. Others of the same type exhibit traces of the legends of Titus, Domitian, and Trajan. Another type—“Simon,” round a cluster of grapes; reverse, the son of Gioras; but they bear traces of being struck on coins of Vespasian, and the presence of the star above the temple seems to point them out as belonging to Barcooch. There is also a copper coin struck on a piece of Trajan, and identifiable in like manner: obverse, “Simon,” on either side of a palm-tree; reverse, “The Deliverance of Jerusalem;” a vine-leaf.

III. Christian Coinage.—That with which we are specially concerned is the numismatics of the first centuries of our era, or prior to medieval times. Strictly this ought to begin with Constantine the Great, because from his time the adoption of the Christian religion was recognized on the coins of the empire; but there are some anterior circumstances which scientifically prepared the way for this feature.
exploits and civil enterprises, and probably already some Christian symbols; and that when he at length founded a new metropolis of the empire, he freely placed upon his coins, and on those of his sons the Cæsars, either the monogram of Christ or other signs appropriate to the true religion. See Cavedoni, Ricerche medaglie di Constantino (Modena, 1858); Foucault, Essai sur les Médailles de Constantin (Paris, 1858); Garucci, Numismatici Constantinianni (Rome, 1858). This last savant thus classifies the coins of this period:

a. A certain number of these bear the legend "Virtus exercitus," and a fact worthy of remark, although but little observed hitherto, is that three of these pieces belong to the two Licinius. We are entitled to believe that the coins comprising this series were struck between the years 321 and 325.

b. To an age but little later belong a series of very interesting pieces with the images of Constantine, the father, and Crispus and Constantine the younger, bearing on the reverse several signs of Christianity, and the legend "Victoria late proc. perp." Several copies

Coin of the Emperor Constantine. (Obverse: bust of the emperor, with the inscription "Imp. Constantivs Aug.;" helmeted head, on the helmet two monograms of Christ, separated by a band which supports the plume. Reverse: the legend as above, with winged figures and a shield.)

struck at Sicilia or Arles have in place of the monogram two stars composed of the letters I and X, i.e., Jesus Christ.

c. The legend "Gloria exercitus" is read on a great number of pieces of Constantine the younger, of the Constantinian his sons, and of Dalmatian his nephew, with various Christian symbols, of the general type below.

Later Coin of Constantine. (Obverse as above. Reverse: two helmeted soldiers, each holding a spear and furnished with a shield; between them the Constantinian labarum.)

d. There are some pieces with the legend of Constantinople, or else of Rome or the Roman people, which have been assigned to Constantine or his sons.

e. Finally, we have some medals of consecration, on which the title "dacia" is given to Constantine. Eckhel was not aware of this epithet being attributed to Constantine and a number of his successors after their death.

3. Numismatic of the Successors of Constantine down to Julian the Apostle.—The most important of the changes that appear in these coins, and one that seems to have taken place in the very year that followed the death of Constantine, is the introduction of the symbols of eternity, the a and a, gradually amplified, and with various legends and devices, as in the preceding and following example.

Coin of Vetranio, colleague for six months with Constantine II. (Obverse: bust of Vetranio, diadem and beard to the right, with inscription "D. N. Vetranivs P. F. Aug." Reverse: legend "Salutator reipublicae;" Vetranio holding the labarum surmounted by a cross; Victory crowning him.)

Large Bronze Coin of Magnentius. (Obverse: bust of the emperor to the right, with inscription "D. N. Magnentivs P. F. Aug." Reverse: the monogram of Christ occupying the whole field, and in its best type, with the legend "Salutis D. N. Aug. et Caes.")

4. Christian Numismatics after Julian the Apostle to Augustus (or the end of the empire of the West).—Some antiquarians attribute to Julian a bronze medallion containing a figure of the Christian monogram; but if the piece be genuine it must belong to the very first portion of his reign. All his other coins, and they are very numerous, either bear no religious symbol, or else the figure of some of the pagan deities, as Apollo, Jupiter, Nilus, the Genius of Antioch, Anubis, etc.

Under Jovian, the immediate successor of Julian, Christianity resumed on the public coins its place, for the moment usurped, but not again to be lost. Jovian's coins bear new Christian types, and various devices, some equestrian, and generally the legend "Adventus Augusti."

Valentinian I, Valens, Procopius, Gratian, and Valentinian II introduced little modification into the signs of Christianity on their coins. The most common type is the ever-present labarum in the hand of the emperor, and the simple letter X in place of the full monogram of Christ. The following are notable examples:

Coin of Valentinian I. (Obverse: bust of the emperor, diadem, front view: inscription, "D. N. Valentinianvs D. F. Aug." Reverse: figure of Victory sitting, and holding in her right hand a cross and a globe; legend, "Restitutor reipublica.")

Coin of Gratian. (Obverse: diadem and bust of the emperor to the right, holding a spear; inscription, "D. N. Gratianvs P. F. Aug." Reverse: the emperor in military dress on a ship of war, Victory at the helm; on one side a cross, on the other a crown; legend, "Gloria Romanorum.")
NUMISMATICS

Under Theodosius I, justly called the Great, and who had the distinguished honor of definitely establishing the Christian faith throughout the empire, few new types of coinage are found.

Coin of Placella, wife of Theodosius I. (Obverse: diadem of bust of the empress to the right; inscription "Æl. Placella Aug." Reverse: Victory seated, holding on a shield the sign of Christ, with the legend "SALVS AUGIBVLCNB.")

The medals of the tyrant Maximus, those of his son Victor, and likewise those of Eugenius, a usurper like them, have the marks of Christianity more rare, and those that occur are of the common type.

 Honorius and Arcadius, on dividing the empire of their father, adopted the same types of money; it even appears that for a certain time the same coins served for both portions of the empire. A notable innovation is due to these two princes, namely, the introduction of the monogram of Christ on the sceptre. The usual legend is "Æl. Antonia Aug." Two empresses bore the name of Eudoxia—one the wife of Arcadius, the other of Theodosius II. The common inscription is "Æl. Eudoxia." A gold piece bearing the legend "SALVS Orientis, Felicitas Occiden-
tis," is believed to belong to the former.

Under Placidia, a daughter of Theodosius, and successively wife of Ataullphus and Constantius, we may note hitherto unusual symbols of Christianity. The following is an example:

In the time of Valentinian II and Theodosius the younger the cross appears on almost all the pieces in various positions, and completely replaces the two forms of the monogram of Christ. The latter prince, who ruled the East, was entitled to as little credit as his colleagues for valor in arms. Nevertheless he obtained compliments on coins.

The brief occupancy of the throne by Petronius Maximus and Avitus has left no traces on numismatics.

In the East, under Marcus and Leo, we see reproduced the familiar types of the preceding reigns. At Rome Majorianus is frequently represented with the monogram of Christ on his shield, or on a spiral upon his left arm, and on the reverse a subdued dragon.

Anthemius and Leo generally have a nimbus and toga, with a long cross like a spear and a globe; sometimes both emperors diademed and in military dress, clasping hands, with a tablet between their heads sur-

mounted by a cross on which is inscribed "Pax.

In all that we have hitherto found, nothing perhaps has been so remarkable as the pious seal exhibited in the legend "SALVS undulata" surrounding the cross on a gold piece of Olybrius.

No innovation in the types of Christian coins occurs during the following reigns of Zeno, Glycerius, Julius Nepos, or Romanus Augustulus, with whom the empire of the West expired. The usual type of his money is a cross in a crown of laurel.

5. From the Fall of the Western Empire to the End of the Sixth Century.—Under Anastasius I the early Roman type disappears almost completely from the coinage to give place to the Byzantine character, which it preserves, although with many modifications, down to the capture of Constantinople. Numismatic art fell there-

after, especially that in copper, into a great decadence, and after Honorius into complete barbarism. Anastasius ordered that his pieces of copper should express their value in Greek or Roman numerals.

Copper follis of Justin I, with the monogram of Christ on the breast of the emperor.

The coins of the Gothic kings who occupied Italy from 476 to 558, and those of the Vandals who reigned in Africa from 429 to 534, take their place in the Byzantine series, since they generally bear the effigy of the contemporary emperors of the East, Anastasius, Justin I, or Justinian I. They often have the cross on the reverse side. The same is the case with the autonomous medals of Ravenna and Carthage of the same period.

The coins of Justin II do not differ from those of the three preceding emperors, at least when that prince is the sole figure on them. Occasionally, however, he is represented with his wife Sophia, and the legend "Vita." The reverse of some coins of Tiberius Constantine presents for the first time those elevated crosses, or on a globe, of which the type becomes very frequent a little later, especially after the time of Heraclius.

We thus arrive at the year 582, which is near the close of the period we are considering. Indeed, up to the time of Phocas, who begins the seventh century (602), Christian numismatics present no new feature. In the course of this century, that is to say, after Heraclius up to Justinian II, the legend "Dexa adjusa Romania" appears, with the cross very variously formed. Under the latter prince, too, Byzantine money began to bear the Constantinian motto in Greek, iverp πινε, which appears already under Nicephorus I in the hybrid form "Justin Chrestos nicia."

-In the eighth century the Byzantine money assumes still more decided marks of debased Christianity, by admitting, in place of pious legends, the images of Jesus Christ, of the Virgin Mary, angels, and the saints. We are passing the borders of antiquity in order to give a complete view of the numismatics of the Eastern empire. The following examples will suffice for the purpose.
Gold Coin of Justinian II (A.D. 705), bearing on the reverse the bust of the Saviour, with the cross behind the head, the book of the Gospel in the hand, and the legend "De, IHS rex regnantis."

Coin of Leo VI, "the Wise" (A.D. 888), bearing on the reverse the bust of the Virgin Mary, the hands extended, with the letters MR inscribed on one side of the veiled head and θγ on the other, and the legend "Maria."

IV. Literature.—In addition to the works above noted, and those cited under Coin and Money, see BAYER, De nummis Hephaistos-Samar (Valen. 1781; with supplement. Vesicle, 1790); Hardouin, De nummis Hierodulius (Par. 1628); Walsh, Notice de Coins illustrant la Christiit (Lond. 1829); Ziebich, De nummis antiquis sacris (Viebris, 1745); Ring, Early Christian Numismatica (Lond. 1873); De Saulety, Numismatique de la Terre Sainte (Par. 1874); Knight, Numism. veteri. in Museo Britannico (Lond. 1890); Madden, Jewish Coinage (Ibidi. 1894); Eckhel, Doctrina Numorum Vetus (Vincna, 1783-1820); Mionet, Description des Medailles antiques Grecs et Romans (A.D. 1860-1893); Henin, Numismatic Anecdotis (Ibid. 1830); Grassett, Alte Numismatik (Leips. 1822, 1855); Prime, Coins, Medals, and Seals (N. Y. 1861); Vaillant, Numismatica Imperatorum Romanorum (Par. 1674); Ackerman, Numismatic Illustrations of the N. T. (Lond. 1846); Cavedoni, Numismatica Biblica (1800-1850-1855; transl. in German, with additions by Werthoff, 1855, 1856); Levy, Judische Münzen (Bresl. 1862); Humphreys, The Coin Collector's Manual (Lond. 1889).

ναιν (Heb. 711) [once Nón, 712, 1 Chron. vii, 27; A.V. "Non"]). Arising branches or descendent; in the Syriac and Chaldean, a fish, because of its prolifereus; Sept. Núnv v. r. Našů, Našk, an Israelite of the tribe of Ephraim (B. C. cir. 1600); father of Joshua, the great leader of Israel, who is usually called Joshua Bin-Nun (732-72, not 732), the son of Nun, e. g. Numb. xi, 28; xiv, 6. Of the life of Nun no account is given. Some of the early English versions write the name Naur, after the Sept. Num, which Geuenius (Thee, ii, 804) thinks an error of transcription for Naun Naivy; but Ewald (Ib. Gesch. ii, 226) thinks to be taken from another pointing in the Hebrew (732, nayón), or perhaps it is an omission of the final N. See JOSUA.

Nun (Latin, nonnae; Greek, poviq) is not exclusively used for females, for we find it used in Latin, in the Middle Ages, both under the masculine and the feminine form, as Nouns, Nonae. Dوقعus furnishes many instances of the use of the masculine form. The word may be considered as equivalent to sanctus, sanctus, sanctus, in the origin of the word
life, cut off her hair, which God hath given her for a memorial of subjection, let her be anathema, as one that disannuls the decree of subjection;” and Theodosius the Great added a civil sanction to confirm the ecclesiastical decree made against this practice. Although the virgins were not ordained to a special office in the Church, as the deaconesses were, they were of great esteem in the Church, and had some particular honors paid to them. They were specially protected by the law, and ladies of high rank were accustomed to entertain them, and to seek their salutations and embraces. The mother of Constantine used to wait upon them at her own table and do them service. The widows of the Church were generally under the same laws and rules as the ecclesiastical virgins were concerning their habit, consecration, profession, and maintenance. Religious communities sprang up in the Church soon after the institution of these ascetic congregations of females, and nuns proper dwelt under rule in special residences. Pachomius erected such residences in the 4th century in Egypt—the first one being built on the island of Tabenna in the Nile. They soon spread through Europe, and became a common institution. See Monasticism.

Modern Practice.—The consecration of a nun in the Roman Church is a great ceremony. The habit, veil, and ring of the candidate are carried to the altar, and she herself is conducted to the bishop, who, after mass and an anthem (the subject of which is that she ought to have her lamp lighted, for the Bridegroom is coming), pronounces the benediction; then she rises up, and the bishop consecrates the new habit, sprinkling it with holy water. When the candidate has put on her new habit, she presents herself before the bishop, and says, on her knees, Ancilla Christi sum, etc.; then she receives the veil, and afterwards the ring, by which she is married to Christ; and finally the crown of virginity. When she is crowned, an anathema is pronounced against all who shall attempt to make her break her vows. The Latin form for the benediction and consecration of virgins occupies twenty-five pages in the Pontificale Romanum of 1818. The key of the whole is given in these questions which the pontiff (—bishop or other minister dignified who presides) puts to them in the beginning of the service to be answered affirmatively:

“Do you wish to persevere in the purpose of holy virginity?”
“Do you promise that you will preserve your virginity forever?”
“Do you wish to be blessed and consecrated and be trusted to our Lord Jesus Christ, the Son of the Supreme God?”

After various genuflexions and prostrations and chanting and prayers and sprinklings with holy water, nuns go up two at a time to the pontiff, who puts the veil upon each nun’s head, saying:

“Receive the sacred veil, by which you may be known to have despised the world, and to have truly and humbly, with all the striving of your heart, subjected yourself forever as a bride to Jesus Christ; and may God guard you from all evil and bring you through to eternal life.”

After further chanting and prayer, they go up again in pairs, and the pontiff puts a ring on the ring-finger of each nun’s right hand, declaring her espoused to Jesus Christ, upon which the two chant:

“I have been betrothed to him whom angels serve, whose beauty sun and moon admire.”

Afterwards each nun has a crown or wreath put on her head by the bishop, with a similar declaration and chanting. Then follow prayers, chanting, and two long nuptial benedictions upon the nuns, who first stand humbly inclined, and then kneel. Then the pontiff, sitting on his seat and wearing his mitre, pronounces the following anathema:

“By the authority of Almighty God, and of his blessed apostles Peter and Paul, we firmly and under threat of anathema forbid any one to lead off these virgins or religious persons from the divine service, to which they have been subjected under the banner of chastity, or to plunder their goods, lest them possess these in quiet. But if any one shall have dared to attempt this, let him be cursed in his house and out of his house; cursed in the city and in the country, cursed in watching and sleeping, cursed in eating and drinking, cursed in walking and sitting; cursed be his flesh and bones; from the sole of his foot to the top of his head let him have no soundness. Let there come upon him the curse of man, which the Lord through Moses in the law sent upon the sons of iniquity. Let his name be blotted from the book of the living, and not written with the just. Let his part and inheritance be with Cain that slew his brother, with Dathan and Abiram, with Ananias and Sapphira, with Simon the sorcerer, and Judas the traitor; and with those who said unto God, ‘Depart from us, we desire not the path [knowledge] of thy ways.’ Let him perish at the day of judgment, let everlasting fire devour him with the devil and his angels, unless he shall have made restitution, and come to amendment: let it be done, let it be done.”

The remaining services consist principally of the mass, the delivery of the breviary to the nuns, and their return to the gate.
of the monastery, where the pontiff formally presents them to the abbess. The pontiff then returns to the church, and closes the whole with the beginning of the Gospel according to John. The "Ceremony of Reception" takes place, among the Sisters of Mercy, etc., when the novice takes the white veil; the "Ceremony of Profession" follows in the fourth yard, and the novice drapes herself in the white veil with a promise "to persevere until death."

Fosbrok's British Monachism distinguishes the profession from the consecration of a nun thus:

"The applicant for any woman, whether virgin or not, to be admitted to the Oblates of Mercy, is received and instructed by the Mother Superior, and is prepared to enter the order, usually within a year after the period of probation and change of the habit; but consecration could only be made by the bishop. Nunhood is only consecrated at the altar of the church, even if not consecrated till twenty-five; and this veil could only be given on festivals and Sundays. In the year 1261 Pope Leo ordered that a nun should receive the veil, consecrated by a bishop, only when she was a virgin."

The following description of the ceremonial of a novice taking the vows is from the pen of an eye-witness of the scene as it took place in Rome:

"By particular favor we had been furnished with billets for the best seats, and, after waiting half an hour, two footmen in rich liveries made way for the young company. Whilst they were passing in and out of the nave, her dark hair blazing with diamonds. Supported by her mother, she advanced to the altar. The officiating priest was a venerable monk, a fine old bishop, who, with his cape over his silver miter, and his crozier in his hand, looked like a relic of the world for a foretaste of the Joys of heaven. The solemn benediction of the cardinal was repeated three times. She was received by the alter at the feet of the cardinal, solemnly adjured that world whose pleasures and affections she seemed so well contented to enjoy, and pronounced those vows which severed her from them forever. As her voice in soft desire chanted these fatal words, I believe there was not an eye in the whole of that vast church numbed by tears. The diamonds that sparkled in her dark hair, her veil, which, even with this fall luxuriantly flowed down her shoulders. The grace that was to enshroud her was opened. The abbess and her black train followed her, her hand was clasped by theirs, and the strain of welcome. It said, or seemed to say, 'Sister spirit, come away.' She renounced her name and title, and assumed a new appellation, received the solemn benediction of the cardinal, and the last embraces of her weeping friend, and passed into that bourne whence she was never to return. A panel behind the high-altar now opened, and she appeared at the grate again. She was now decked with her ornaments and her splendid attire, her beautiful hair was mercilessly severed from her head by the fatal shears of the abbot, and they hastened to insert the veil, in sober robes of violet and the novitiate veil. Throughout the whole ceremony she showed great composure and firmness, and it appeared that her eyes were moist with tears of ardent emotion. She afterwards appeared at the little postern of the church, when the benediction was pronounced, and the praise and congratulations of all her friends and acquaintance, nay, even of strangers, of all who were expected to pass the vestry doors, were repeated to her, and the assembling voices of the choir amounted to a soft song. The description here given refers to the first profession of a nun on the taking of the white veil, a step which forms the commencement of the novitiate or year of trial, and is irrevocable. But the profession, properly so called, or the taking of the black veil, is the conclusion of the novitiate, and the commencement of the regular life of the professed nun. When once this ceremony has been gone through, the step, both in the eye of the Roman Church and in the eye of the civil law in Roman Catholic countries, is beyond recall. The individual who has taken the black veil is a recluse for life, and can only return to the world from her vows by death. She is then attended, which thus seals the nun's doom for life is attended, of course, with peculiar solemnity and interest. We give a graphic account of it from the pen of the Rev. Hobart Seymour, as contained in his Picturage to Rome:

"In a short time the masses were finished, and before long we were ushered into the nave of the church, and to the sight that met us. It was the scene. The cardinal-vicar, to whose province the Roman Church is always said, the veil covered with a shroud to screen it from the world, was held up by his mitre, held his crozier, and seated himself in front of the high-altar. He was robed in silver dress brocaded with purple, a high miter upon his head, and the cross of Christ entered. She was led into the chapel and along the aisle by the princess Borgese. They knelt for a few moments at the side-altar, and then the princess conducted her to the cardinal-vicar. They both knelt to him, and as the candidate bent her head long, rich tresses of chestnut hair fell upon her breast, and they were cruelly richly darkened in gold. Her head was adorned with a diadem of diamonds, beneath which fell a profusion of long and rich hair, and the richness of her rich dress in all the most costly and splendid in Italy. There was a profusion of the most valuable lace, and a long train of crape mantle was hooded upon her head. The dress by those of whose persons is said that their visits are few and far between. It was an angel, or, rather still, a seraph. It had the appearance of a little girl of eight years of age, a pretty, gentle thing that seemed frightened at the altar. It had a wreath of no earth-born, but finger-made flowers upon its head. It had a short, a very short, dress of pale-blue silk, to show it was some young girl of twenty-one, in all its arms and its neck and its legs were covered, not, as in mortals, with skin, but with a silken texture that was colored like flesh; and on her shoulders she had what might be called a hood, for it had two wings, regular feather wings, projecting from the shoulders, and wound within and without. There could be no doubt that, if not an infant angel, it was a real serif or seraph, descended from the skies to wait on the Pope, and on the cardinal-vicar, and on the reverend confessors, attired in their monkish dress, approached, kissed the hand of the cardinal-vicar, and received from him the ring of office. She was thus admitted to deliver an address or sermon to the destined novices. The arms of the altar, the feet of the cardinal, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverend confessor of the altar, and the reverend bishop of the altar, and the reverent
maid of about forty years of age. She was the maid of the lady of the house, and had joined the nunnery of the Dominican order, and had now changed the service of the princess, where she was a domestic, for a life in a monastery, where she was a nun. A striking instance of the influence which these devoted virgins exercised upon the Church or the world; and we may well believe that, shut up in their cloisters and confined to a dull routine of daily duty, they could exercise but little. They would chant their offices, copy their books, and dwell with themselves in foolish pride, displayed the jewels of the family."

On the continent of Europe nunneries were not done away with as soon as the Reformation was introduced. Those who are at all familiar with the history of the 16th century must be well aware how much the spirit prevailed the practice of religious reforms. Monastic foundations, among other institutions, were suffered for some time after the new doctrines had been widely disseminated, and the "evangelical doctrine" was received by and preached in many a convent. This was not without its effect upon the simpler people, and it soon became incompatible with their existence. Stranger still is the story of the Cistercian abbey of which Heyck speaks (vol. v, pt. iv, ch. 55) as situated in Frauenburg, in Westphalia, which was partly Roman and partly Lutheran, and of which the abbesses were of both denominations alternately; adding that there were various other abbey ruins in the same country, both of men and women, which were wholly Lutheran. Of the "Secular Canons"—a body closely analogous to the Beguines (q. v.)—he tells us (vol. vi, pt. iv, ch. 50 sq.) that at St. Stephen, two miles from Zwickau, there were two nunneries, one of the middle of the 16th century to 1869; that at Gandersheim, Quedlinburg, Herford, and elsewhere in Germany, they were Lutherans in his time. He speaks in like manner of some Danish convents (vol. vi, pt. iv, ch. 55) where the nuns had long since forsaken the Reformed doctrines, continued to live in communities under a superior, such as those of St. Dominic at Copenhagen. See, however, the article SISTERHOODS.

The following orders of nuns, among others of lesser note, were in England prior to the Reformation: 1. The Nuns of the Order of Fontevrault, of which the abbess of Fontevrault was superior: they had their first establishment at Nuneaton, in Warwickshire, and possessed only two other houses. 2. The Nuns of the Order of St. Clare, or, as they were denominated from their scanty endowments, "the poor Clare." St. Clare was born in the same town, and was contemporary with St. Francis; and the nuns of St. Clare, observing the Franciscan rule, were sometimes called Minoresses, and their house, without Aldgate, in London, was called the Minorises. Blanche, queen of Navarre, first introduced them into England, and they are called Nuns of Great Siste, or of the Holy Souls, instituted by Bridget, duchess of Niercia, in Sweden, about the middle of the 14th century. They followed the rule of St. Augustine, with some additions. There was but one house in England belonging to the Brigitines, or the celebration of the festival of the Virgin Sepulchre in the course of the year. See under the respective names of the orders.

The religious houses in England were mercilessly treated at the Reformation. In reference to Scotland, Cunningham says, in his Church History, "It was not to be expected that the supine mind, ever susceptible of religious impressions, should withstand the tendency to monasticism at that time so prevalent. At Edinburgh, Berwick, St. Bathans, Coldstream, Eccles, Haddington, Aberdeen, Dunbar, and several other places, there were nuneries; and within these ladies were connected with many of the noblest families." In 1665 the Five-mile Act came into operation throughout the country. The nuns of Scotland revered as the first of their order in that country a legendary St. Bridiga, who is said to have belonged to Caithness, to have resided in the north of Scotland, and finally to have died at Abernethy in the 6th century. Church chroniclers relate that before Coldingham was erected into a priory for monks it had been a sanctuary for nuns, who acquired immortal renown by cutting off their noses and lips, and to themselves equated to some piratical Danes who had landed on the coast. The sisterhood of Lincluden were of a different mind, for they were expelled by Archibald, earl of Douglas, for violating their vows as the brides of heaven, and the house was converted into a collegiate church in the year 1613. History contains no record of the influence which these devoted virgins exercised upon the Church or the world; and we may well believe that, shut up in their cloisters and confined to a dull routine of daily duty, they could exercise but little. They would chant their offices, copy their books, and dwell with themselves in foolish pride, displaying the jewels of the family."

"As a natural thing, however, the convent (so far as Rome is concerned) is neither, on the one hand, a terrestrial paradise inhabited by angels, nor, on the other, is it given over to vice and abominations. The reason is, that the monastic life is a discipline of the mind, and that the nuns, who take the veil: 1. Young girls, who become interested in religion, and, blindly following the path of piety, believe the priest's declamations against conjugal love and domestic affection as unholy and tending to eradi- ciate the regard of men, are yet conscious of an irresistible need of loving some object, and therefore seek to be loved, as they say, by the Lord Jesus Christ, who is represented as a young man of marvellous beauty and most winning look, with a heart shining with love, and who, as we hear, died for his love to his bride. The young women, educated from childhood in the nuninery, remain there, and become nuns without knowing why, and give up with clarity a world which they have never seen.

Dr. De Sanctis alludes to some cases of notorious immor- tality, and says: "As a natural thing, however, the convent (so far as Rome is concerned) is neither, on the one hand, a terrestrial paradise inhabited by angels, nor, on the other, is it given over to vice and abominations. The reason is, that the monastic life is a discipline of the mind, and that the nuns, who take the veil: 1. Young girls, who become interested in religion, and, blindly following the path of piety, believe the priest's declamations against conjugal love and domestic affection as unholy and tending to eradi- cicate the regard of men, are yet conscious of an irresistible need of loving some object, and therefore seek to be loved, as they say, by the Lord Jesus Christ, who is represented as a young man of marvellous beauty and most winning look, with a heart shining with love, and who, as we hear, died for his love to his bride. The young women, educated from childhood in the nunenery, remain there, and become nuns without knowing why, and give up with clarity a world which they have never seen.

Dr. De Sanctis alludes to some cases of notorious immor- tality, and says: "As a natural thing, however, the convent (so far as Rome is concerned) is neither, on the one hand, a terrestrial paradise inhabited by angels, nor, on the other, is it given over to vice and abominations. The reason is, that the monastic life is a discipline of the mind, and that the nuns, who take the veil: 1. Young girls, who become interested in religion, and, blindly following the path of piety, believe the priest's declamations against conjugal love and domestic affection as unholy and tending to eradi- cicate the regard of men, are yet conscious of an irresistible need of loving some object, and therefore seek to be loved, as they say, by the Lord Jesus Christ, who is represented as a young man of marvellous beauty and most winning look, with a heart shining with love, and who, as we hear, died for his love to his bride. The young women, educated from childhood in the nunenery, remain there, and become nuns without knowing why, and give up with clarity a world which they have never seen.

In regard to health, Dr. De Sanctis divides the con- vent of Rome into two classes: 1. Those in which the inmates have no other occupation besides prayer; 2. Those in which they are employed in instructing the young. Of nuns in the former class of convents Dr. De Sanctis writes: "They go without necessary food; they wear hair-cloth which they love; they desire restoratives; they refuse to give themselves remedies which would arrest disease, and this from a false modesty which forbids the communicating of their ailments to the physician. Many have I known of such procedure. You will call these nuns poor victims of delusion, and I shall think with you; but I cannot say that the doctrines of the convent are termed 'holy martyrs of sacred modesty.'"

In this class of convents are some where the rigor of discipline tends under the most sacred laws of nature, as is the case of that called Vice Sepulchre (=buried alive), of which Dr. De Sanctis thus speaks: "When a youth I resided in the neighborhood of this convent, and I remember that one day the pope, Leo XII, made an unexpected visit to the institution. It excited much curiosity in the quarter to know the occasion of this visit, which as was follows: A woman had an only daugh- ter, and it happened that during these visits, she became a nun, often to the institution, and with a mother's tears besought that she might be allowed, if not to see, at least to hear the voice of her daughter. What request more just and more sacred from a mother? But what is there of sacredness and justice that fanatizism does not corrupt? The question was put by the usual word of the convent. Her mother that, if she did not cease to importune her, she would refuse to speak to her even on the church (once a year) when she would be allowed to do so. That day at length arrived; the widowed mother was the first to present herself before the priest; he condescended, and she told him that she could not see her daughter. In despair she asked, Why? No answer. Was she sick? No reply. Was she dead? Not a word. The miserable mother conjured her daughter that she was dead. She ran to the superiors to obtain at least one interview with her, and was told that her daughter was dead. She went to the pope; a mother's tears touched the breast of Leo XII, and he promised her that on the next visit he would be there. She waited and ascended the fact. She did so, unexpectedly to all. Those doors, which were accustomed to open only for the admit- tance of the religious, opened at her request, and the convent of the Church of Rome. Seeing the wretched mother who was there on her knees, he called her to him and ordered her to follow him into the nunery. The daughter, who,
NUNC DIMITTIS

by an excess of barbarous fanaticism, thought to please Heaven by persecution of heretics; a new wave of nature, concealed herself upon hearing that her mother had entered the convent. The pope called together in a hall the entire hierarchy, and commanded them to lift the veils from their faces. The mother's heart throbbed with vehemence; she looked anxiously from face to face, but her daughter was not there. She believed now that she was dead, and, with a piercing cry, fell down in a swoon. She was revived, but when she was revived, she asked the mother superior whether the daughter was dead or alive. She replied, at length, that she had seen the daughter again. It was a vision only too visible, in virtue of the obedience due to him, and upon pain of mortal sin, that the nun came forth. This occurred about the men's name (from Rom. 11:13), which might have resulted in Parricide, is denounced in the vocabulary of monasticism "virtue in heroic degree."

See Augustines; Monachism; Monasteries; Sisterhoods.

Nunc Dimittis are the first words of the Latin king of Simeon. "Lord, now lettest thou thy servant depart in peace," appointed as one of the hymns to be used in the rubric of the Church of England, and in the Protestant Episcopal service after the second lesson at evening prayer, was used in place of certain traditional hymns. It is found in the apostolic constitutions. Even at the present day this hymn is repeated at evening prayer in the patriarchate of Constantinople. After the second evening lesson out of the epistles of the holy apostles this hymn is most commonly used. The author of it is still unknown to be his as the missal of Simeon, the saint, son of the famous rabbi Hillel, a man of eminent integrity, and one who opposed the then common opinion of the Messiah's temporal kingdom. The occasion of composing it was his meeting Christ in the temple when he came to the offering there, wherein God fulfilled his promise to him that he should not die till he had seen the Messiah; taking Jesus therefore in his arms, inspired with joy and the Holy Ghost, he sang this "Nunc dimittis." This hymn comes very properly after the second lesson, which is always taken out of the New Testament, wherein is contained and delivered that Gospel, the enjoyment and participation of which is the ground and foundation of the whole hymn. It should be added that this hymn is addressed to God; and, since it may be used as the personal address of every devout Christian, no one should repeat it in a careless manner.

Nuncio is the term designating an ambassador from the pope, or a prince or state; or a person who attends on the pope's behalf at a congress, or at an assembly of several ambassadors. A nuncio, in fact, is the pope's ambassador, as the internuncio is his envoy extraordinary. A nuncio has a jurisdiction, and may delegate judges in all the states where he resides, except in France, where he has no authority beyond that of a simple ambassador. Sometimes a nuncio is invested with the functions of a legatus natus. See Legates.

During the temporal power of the pope, nuncios or papal ambassadors were sustained at all the courts of the Continent in the interest of the Roman Church, or for the purpose of intercourse with other temporal powers; since the derenonyme of the pope as temporal sovereign these have been obstinately continued, and are gradually being turned into focal points of Jesuitical propaganda. In Germany, in the present conflict with the papacy, the nuncio maintained at the court of Bavaria is believed to be the head of the Ultramontane movement in all Germany. See Papiac; Ultramontanism.

The ambassador to a republic or to the court of a minor sovereign is called Internuncio or Internuntius.

Nundinae or Nundinal Letters. The Romans used letters called litera nundinales, eight in number, to denote the dies profecti, nundinae, in their calendars. The nundinae, or market-days, happened every ninth day. In imitation of them, the European nations have adopted seven domenical or Sunday letters, one of which occurs every Sunday throughout all the months of the year. See Dominical Letter.

Nundy, Gopinath, a Presbyterian native missionary to the Hindoos, was born of respectable parents belonging to the Kayath caste, in Calcutta, India, in 1807. At an early age he was instructed in the Bengalee, his own vernacular language, and when perfected in this he was sent to the School Society's institution to study English. The intercourse which surrounded him during his English studies were of the most pernicious character. A native minister of Calcutta thus refers to him while under these trying circumstances: "While he was quietly carrying on his studies, the beginnings of the great mighty moral revolution were perceptible in native society. The study of European literature and science disclosed to a few young men the absurdity of the prevailing religion of the country. The godless system of education pursued in the Hindoos college produced its inevitable fruit. Free-thinking was the order of the day." In order to check this licentiousness of opinion, and to give a right direction to the newly aroused native mind, a course of lectures on the evidences and doctrines of Christianity was delivered. The result was that Gopinath, with many other young men, was convinced of the necessity of Hinduism, and determined to become a Christian. He soon after made a profession of religion, and in 1833 accompanied archdeacon Corrie, afterwards bishop of Madrid, to the North-west, and took charge of an English school at Futtelpore. During 1837-38 a fearful famine prevailed in India, and a large number of orphans were to be cared for. His services at this time were invaluable, and from 1838 to the time of his death he was in the employment of this mission. In 1844 he was ordained, and was stationed at the cantonment of Futtelpore, and subsequently, in 1855, at Fultogur, where he remained until his death, March 14, 1861. Mr. Nundy was a man of great energy and decision of character; as a missionary, very laborious and efficient. See Wilson, Presb. Hist. Almanac, 1862, p. 112. (J. L. S.)

Nunes, Barreto (Belchior), a Portuguese Roman Catholic missionary, was born in Oporto in 1520. Having entered the Order of the Jesuits in 1548, he departed, although still young, for India. St. Francis Xavier received him at Goa. His merit was recognised, and soon he became superior of the residence of Baca. A little later he was nominated provincial of his order to India; this was for him the assured pledge of new labors and new victories. He was successively sent to Malacca and Japan, then returned to the coast of Coromandel. Assisted by forty Portuguese, he went to the sovereign of Bango, and resolutely undertook to convert a celebrated Nestorian bishop known by the name of Mar Joseph, who filled the mountains of Malabar with his doctrine. It is affirmed that his efforts were crowned with success. There are few missionaries who have thrown so much light over the East as Nunes. He died August 10, 1571. The most of his letters remain in manuscript, with the exception of the Carta escrita en 1554, on his arrival in India, a letter in which he reports the circumstances which accompanied the death of St. Francis Xavier, as well as his funeral ceremonies. The letters of Nunes Barreto, translated into all the languages of Europe, still circulate in manuscript, and singularly enough contribute to shed much light on matters in the extreme East. See references in the following article.

Nunes, P. Leonardo, another missionary settled in India, who must not be confounded with the former, was born in San-Vicente-do-Beira. He was one of the five monks who accompanied Thomas de Souza to Brazil in 1549; the savages whom he catechised, wishing to place his apostolic activity under a canopy, had him Abare Rebe (the father who flies). He was shipwrecked and drowned June 30, 1554. See Barbosa
NUÑES-TORRES, DAVID, a great Talmudical scholar, was born in the second half of the 17th century, either at Lisbon or Amsterdam. In the last-named place he was for many years president of the academies Abi Jethomim and Keter Shem Tob. Towards the end of the year 1690 he was called to the Hague as rabbi of the Portuguese congregation, which position he held until his death, which occurred in 1728. Besides some sermons which he published in 1690 and 1691, under the title Sermones de David Nuñes-Torres, Preceptor de celebre irmandade de Abi Jethomim (Amsterdam, 1693, 4to), he wrote the Hebrew Bible, with the commentary of Rashii and the Vulgate (Amst. 1700, 4 vols.)—the Shulchann Aruch of Jos. Karo (q.v.) in connection with Sal. Jeh. Leone (ibid. 1688)—the היסכפנ of Mainmonides (q.v.), in 4 vols. (ibid. 1702). See Fürst, Bibl. Jud. iii, 41; Wolf, Bibl. Hebr., iii, 201; xiv, 809; Memor. d. Lit. Portuguese, iv, 287; Catalogus libros, ed. Dan. Nuñes-Torres, varii, gen& eis editionis (Hague, 1728); Kayserling in Frankel's Monatschrift, 1864, p. 317 sqq. (B. F.)

Nuñes, Fernando, a noble Spanish Protestant, was a descendant of the house of Guzman, and flourished in the early part of the 17th century. He sacrificed his prospect of civil honors to the love of study; was actively engaged in a censure of the Protestant doctrines, which he finally embraced. Nuñes was of the Order of St. Iago, and was commonly called among his countrymen "the Greek commentator" (Argensola, Anales de Aragon, p. 332). His notes on the classics are praised by Lipius, Gronovius, and other critics, who usually cite him by the name of Pictavius of Valladolid, his native city. That he did not confine his attention to ancient learning appears from his having published in 1602 an edition of the poems of his countryman, Juan de Mena, with notes. Cyprian de Valera quotes from a collection of Spanish proverbs published by him under the title of Refrane Españoles (Dos Tratados, p. 288). Marineo extols the erudition of Nuñes as far superior to that of Lebrizá; but, in the first place, he expresses this opinion in a letter to the object of his panegyric; and, in the second place, he had been involved in a quarrel with Lebrizá, in which his countryman, Pedro Martyr, was not disposed to take his part (Martír: Epist. ep. xxxv). In the edition of the Bible, in various languages, perfected by cardinal Ximenes, in imitation of Origen's enterprise, Nuñes was goaded on by the papists, and he defended himself with great zeal. Indeed, Nuñes was reputed in his time the best Spanish Orientalist. It is said that in 1535, when an enthusiastic scholar visited Spain, he found Hebrew neglected, and could not meet with a single native ac- quainted with Arabic except the venerable Nuñes, who still recollected the characters of a language to which he had paid some attention in his youth (see authorities in McCrie). The time of his death is not known to us. It must have occurred before 1560, for in that year we find his widow, with three of her daughters and her son, residing at Seville for the first time. Their tragic story is thus related by McCrie: "As there was no evidence against them they were put to the torture, but refused to inform against one another. Upon this the preeding inquisitor called one of the young women into the audience-chamber, and after conversing with her for some time, professed an acquaintance with her person. Having repeated this at another interview, he told her that he could be of no service to her unless she imparted to him the whole facts of her case; but if she intrusted him with these, he would manage the affair in such a way that she and all her friends should be set at liberty. Falling into the snare, she handed him a little unsuspecting girl confessed to him that she had at different times conversed with her mother, sisters, and aunt on the Lutheran doctrines. The wretch immediately brought her into court, and obliged her to declare judicially what she had owned to him in private. Nor was this all: under the pretense that her confession was not sufficiently ample and ingenious, she was put to the torture by the most excruciating engines, the pulley and the wooden horse; by which means evidence was extracted from her which led, not only to the condemnation of herself and her relations, but also to the seizure and conviction of others who afterwards perished in the flames." See McCrie, Ref. in Spain, p. 64 sqq., 67, 73, 270.

Nuñes, Juan, an old Spanish painter who flourished about 1656. He was a scholar of Sanchez de Castro, and probably assisted with the character of his father in his day; but most of his works have been destroyed. There is a picture by him in the cathedral of Seville, in an excellent state of preservation, representing The Body of Christ in the arms of the Virgin, with St. Michael, St. Vincent, and other figures. This work is in the stiff Gothic style prevalent at that time; but it deserves praise for its rich and beautiful draperies.

Nuñes, Don Pedro Villavicencio, a Spanish painter of note, was born at Seville of a noble family in 1635. He studied design as an accomplishment, but was more exclusively devoted to painting, and was induced to enter the school of Murillo, though without the intention of practicing painting. He was greatly beloved by that master, and studied for some time in his school; after which he visited Malta for the discharge of his duties as a knight of St. John, and studied under Mattio Preti, called il Calabresse. Nuñes followed for a short time the vigorous style of that master, but afterwards returned to the tender and harmonious coloring of Murillo. According to Bermudez, he was distinguished in portraits, and painted children in a beautiful manner, and was introduced to Murillo. He presented several of his pictures to the academy of Seville, where he died in 1700. There is a Holy Family by him at Alton Towers, the seat of lord Shrewbury, which partakes of the dark style of Petro.

Numeriers, convicts for nuns. The origin of societies for female recluses, or nuns, was probably contemporary with that of monasteries, and both advanced together. The numeriers, or convicts, as they are generally termed, though with less accuracy, since convent properly signifies a religious house for either men or women, are generally devoted to some form of work for the Church. (For an account of their houses and their work in the United States at the present time, see article Monachism). The rules of the different numeriers differ widely, but all agree in requiring absolute obedience of all the members. It is only necessary here to specify a few particulars peculiar to the religious orders of females. Of these the most striking perhaps is the strictness, in the regularly authorized orders of nuns, of the "cloister," or enclosure, which no extern is ever permitted to enter, and beyond which nuns are never permitted to pass without express leave of the bishop. The superior of a numerier is termed abbess, princess, or mother superior. The authority of the mother superior is very comprehensive; but it is strictly defined and separated from that of the priest. The officers are, ordinarily speaking, elected by chapters of their own body, with the approval of the bishop, unless the convent be one of the class called exempt houses, which are immediately subject to the authority of the Holy See. The ceremony of the solemn blessing or inauguration of the abbess is reserved to the bishop, or to a priest delegated by him. See NUNN.

Nuptial Deities are those gods among the ancient heathen nations who presided over marriage cer- monies. These included some of the most eminent as well as of the inferior deities. Juno, Jupiter,
Venus, and Diana were considered so indispensable to the celebration of all marriages that the names of both gods were worshipped on such occasions. Jupiter joined the bride and bridegroom together in the yoke of matrimony; Dionysus conducted the bride to the house of the bridegroom; Viripulca received the solemn vow, and the just celebration that the wife might never leave her husband, but abide with him on all occasions, whether in prosperity or adversity. See Marriage.

The Roman Massal has a “Mass for the Bridegroom and Bride,” which may be said on certain days as a votive mass, after the nuptial ceremony. It has its own introit, gradual, tract, epistle (Eph. v. 22–23), gospel (Matt. xix. 3–6), and prayers; but the commemoration of it may be introduced into the mass for a Sunday, etc. The following is its nuptial benediction:

“The God of Abraham, the God of Isaac, and the God of Jacob be with you, and himself fulfill his own blessing in you; that you may see your children’s children to the third and fourth generation, and afterwards have eternal life without end, by the help of our Lord Jesus Christ, who, with the Father and the Holy Ghost, liveth and reigneth God, world without end. Amen.”

The priest solemnly admonishes them to be faithful to one another, to remain chaste in the time of prayer, and especially of fasts and solemnities, to love one another, and to keep themselves in the fear of God; and then sprinkles them with holy water; after which the mass is finished in the usual manner. The nuptial benediction is withheld, mass is not celebrated, nor is solemnization of marriage in the church allowed, where one of the parties is a heretic or schismatic. See Matrimony.

Nuptials relate to betrothal, dowry, virginity, wedding, paranymphs, marriage-supper, bride and bridegroom, wedlock, etc. (each of which see in “ace”). For monographs, see Volbeding, Index Programmatis, p. 153.

Nura, an ancient goddess among the Chinese, worshipped before the time of Confucius. She presided over the war of the natural elements, stilling the voice of storms, and establishing the authority of law. She caused the world to spring from the primitive chaos, and out of the elemental confusion brought natural order.

Nuremberg (Ger. Nürnberg; Lat. Norimberga or Norico), a fortified city of the Bavarian province of Middle Franconia, situated in 49° 28′ N. lat. and 11° 5′ E. long, and now having a population of 114,891, is noted for its magnificence as the seat of five of the most important Church councils, two of which in the Reformation period decided the fate of the new movement. Aside from this relation to ecclesiastical history, Nuremberg is famed as one of the most remarkable and interesting cities of Germany, on account of the numerous remains of medieval architecture which it preserves in its picturesque streets, with their gabled houses, stone balconies, and quaint ironwork. Indeed, no city retained until the Austrian-Prussian war of 1866 a stronger impress of the characteristics which distinguished the wealthy burgher classes in the Middle Ages; and its double lines of fortified walls, separated from each other by public walks and gardens, and guarded by seventy towers, together with the numerous bridges which span the Pegnitz, on whose banks the city is built, gave it distinctive features of its own. At present the demonlithy of the surrounding country, and interesting for its ancient landmarks, and there remain only the houses to trace the age of this quaint old city, once an independent sovereignty. Among the most remarkable of its numerous public buildings are the old palace or castle, commanding from its high position a magnificent view of the surrounding country, and interesting for its ancient architecture and for its gallery of paintings, rich in gems of early German art; the town-hall, which ranks among the noblest of its kind in Germany, and is adorned with works of Giuseppe and Guido della Vegg; the noble Gothic fountain opposite the cathedral by Schönhofer, with its numerous groups of figures, beautifully restored in modern times; and many other fountains deserving notice. Of its numerous churches, the most remarkable is the St. Lawrence, a Gothic structure, built between 1270 and 1310, with its beautiful transept, its lovely towers, its noble towers and doorway, and the celebrated stone pyx, completed in 1506, by Adam Kraft, after five years’ assiduous labor. Other notable Protestant churches are those of St. Elisabdis, St. James, and St. Egidius, all designed for their work by the same architect. The church of the Holy Ghost, which was restored in 1850, contained the jewels of the imperial German crown from 1424 until 1906, when they were removed to Vienna. The Roman Catholic church, or Frauenkirche, is remarkable for its richly ornamented Gothic portal.

Nuremberg, Diets of. The most important of the Church councils convened here during the Reformation, and of special interest, are the diets held in 1522 and 1523. After Solimans the Turk had made a successful invasion into Hungary, Charles V convened a diet at Nuremberg March 22, 1522, to devise means for the defense of the empire against the Turks. The diet, however, was opposed to the war, and most of the members opposed the course of events. The emperor then dissolved the diet, and by the Edict of Worms, 1521, proscribed the protestants, and opposed to the diet, and by the Edict of Worms, 1521, proscribed the protestants, and Augustus the Strong, Elector of Saxony, invited him in the next diet to “protect and maintain the dignity and majesty of the apostolic see, and with it the peace of Christendom, as his ancestors had done.” Frederick, in his answer (Corp. Rerum Hister., cc. xii. 76, 77), declared that the emperor was in error, and that the war did not concern the protectorate of Christ and the peace of the empire were his principal aims, but that it was evident that Luther and his adherents should be opposed by reason, and not by force. Adrian V, the pope, instructed Chieregati, to be present on the representation of the emperor, adherent only in external, but as politically dangerous persons, “attacking all authority under the plea of evangelical liberty.” In another brief he addressed the elector as the friend of the most dangerous heresy, and even declared that he alone was answerable for the many who were falling away from the union of the Church; reminding him that his family owed their elevation to pope Gregory V. He also forbade him, under penalty of ecclesiastical and temporal punishment, to continue his protection to Luther. Adrian addressed similar briefs to duke Henry of Mecklenburg, and to the cities of Utrecht, Brunse, Cambrai, and Dantzig. Emperor, emperor of Saxony, was not present at the diet, but was represented by his chancellor, Hans von Plauinitz (Plantitz), a friend of Luther, who acquired great influence over the diet, which opened Dec. 15, 1522. Chieregati presented to the diet a papal brief full of invective against Luther. He demanded the forcible repression of heresy, and fiercely denounced the Lutheran preachers of Nuremberg, demanding not only their arrest, but their transfer to Rome, to be judged there. This, however, he found the diet unwilling to grant; and the assembly having moreover returned a firm answer to the pope’s request, the diet recessed early in 1523 to have received new instructions from Rome. He now appeared again before the diet, this
time insisting on the enforcement of the decrees of the Diet of Worms for the suppression of Luther's heresy, but declaring, on the other hand, that the bad state of the emperor was due to the want of discipline in the clergy, confessing that bad example had been given sometimes by popes themselves, which had been eagerly followed by their subordinates. The pope himself freely acknowledged the need of reform in the Church, and declared his willingness to effect it if only he were relieved of the violation of the concordats, but he, Adrian, could not consider himself liable for the faults of his predecessors, and would keep all the engagements he contracted himself. These declarations of the papal legate disinterested both parties. The Roman emperor therefore asked the pope for the via media of the state of the Church, and denouncing his predecessors as faithless. The evangelical party, on the other hand, scoffed at the reforms which Adrian would be likely to introduce. The legate gave his instructions to the state, which appointed a committee to draw up an answer to Chieresgati. On Jan. 19, 1529, the reply was submitted to the diet, and by it amended. As a whole it was strikingly opposed to the views of the pope, and seemed to favor the Protestant principles. The complaints of the Romanists on account of the non-representation of the states or the violations by the conduct of the Roman court, whose abuses had only been fully shown up by Luther, the immorality of the clergy, high and low, the violation of the concordats, etc.: altogether it made eighty-one different points. It was further demanded that a free council should be held within a year at Strasbourg, Cologne, Mayence, Metz, or some other city of Germany, engaging that neither Luther nor his adherents should create any disturbance, either by preaching or writing. To these remonstrances Chieresgati answered by pointing out the necessity of holding up the dignity of the papal see for the welfare of Christianity, and insisted on the execution of the terms of the Edict of the Diet of Worms. As the states wished to have him attend to their list of grievances, he suddenly left (Feb. 28), and these had to be sent after him; and the states now declared that should this not be attended to they would be obliged to take the matter into their own hands. These articles were declared to be the decisions of the diet March 6, 1529; yet Philip von Felletzsch, the envoy of the elector of Saxony, protested against the stipulation that Luther and his adherents be punished, meaning that the emperor could himself not have written down the prohibition of the new movements, and regulation he considered as directed against the Reformation, although the diet had, in fact, silently cancelled its resolutions by the effect of the Edict of Worms. Luther himself wrote to elector Frederick, representing him that he should ask for the same freedom to defend himself as in the opposition party, and attacked him that the stipulation not to publish anything until the settlement of the difficulties could not apply to the publishing of the Bible nor the preaching of the Gospel, as the Word of God could not be thus bound. The diet had completed its business and the threat of the pope; its appeals to the emperor remained without effect, the latter being angry at the pope's interference in his affairs with France, and Adrian himself died of grief at the failure of his efforts Sept. 14, 1529. (See Planck, Gesch. d. Deutsch. protest. Lehrbegr., ii, 100 sq; Saig, Volletacht. Hist. d. Auffah. Conf., i, 65 sq.)

The state of things in Germany, the relation of the emperor to the empire and to foreign countries, and the change which had just occurred in the papal see, led to another diet, which convened at Nuremberg Nov. 11, 1529. Nuremberg had long seemed a long time ago, and Frederick was only prevailed upon by Ferdinand himself to be present. Here the elector received a brief from the new pope, Clement VII, recommending to him cardinal Lorenzo Campeggio as his legate to the diet. The cardinal was the worthy tool of his master, who, from his residence at the Papal Court, had bought only to uphold the power of the see of Rome, and to use temporal power for personal or political purposes. The diet was finally opened January 14, 1524. Campeggio had not yet arrived. On his journey he had ample occasion to observe what progress the Reformation was making, and how slight was the hold the Romish Church yet retained among the people; but this only made him more resolute in abating nothing from his demands of the diet. He reached Nuremberg Feb. 14, 1524. The Holy Roman emperor, which was sent to the Diet by the Emperor, and which was in the presence of the pope, sent a present to the emperor, and the pope, and even to the pope and the emperor and the electors of Saxony, requesting him to serve the interests of the see of Rome. On his arrival Campeggio was not received by the states, but only by the clergy, and in the name of the assembly of the bishops at Bamberg and Trier. From the first, the majority in the assembly determined itself on the proposition, on which the object of furnishing assistance to the king of Hungary, of contributing to the war against the Turks, and of removing the seat of government from Nuremberg to Eisingen. On this point the majority went as much against the wishes of the emperor as on others against those of the papal legate. The emperor, in the capacity of the imperial party, Haunart, announced clearly that his master's diet dissatisfied, and the pope, and the emperor, and the assembly of the see of Rome, as a body, to the king of Hungary, of contributing to the war against the Turks, and of removing the seat of government from Nuremberg to Eisingen. On this point the majority went as much against the wishes of the emperor as on others against those of the papal legate. The emperor, in the capacity of the imperial party, Haunart, announced clearly that his master's diet dissatisfied, and the pope, and the emperor, and the assembly of the see of Rome, as a body, to the king of Hungary, of contributing to the war against the Turks, and of removing the seat of government from Nuremberg to Eisingen. classes, leading them to insubordination, irreligion, etc. He insisted on the Edict of Worms being strictly carried out. Feltzsch, count Bernard of Solms, and count George von Wertheim protested; but the emperor, who found it for his advantage to please the pope, sent direct orders to the states; he was, however, prevented, by complications with France, from injuring the Reformation as deeply as had at first been feared. The states believed that the emperor was not the man to do anything "so far as they could" in their own way, did not prove very strict, and the pope complained bitterly of it to the emperor and to the kings of France and of England. He even threatened to excommunicate Frederick as a heretic. His legate was in the mean time seeking to organize a league to restrain the movement. He went to see the evangelical princes and states, and even attempted, but in vain, to gain Melancthon to his side (Corr. Reform., i, 657-672).

The Reformation all this time was rapidly gaining ground. In 1542 and 1543 two other diets were held at Nuremberg, but they were of less importance, both in a political and in a religious point of view. In 1542 the emperor was in a very critical position, being at war with the Turks and with France, while at home the war of Brunswick was on the eve of breaking out, on account of the demands of Henry the Wolfenbüttel against Brunswick, which had called to its assistance John Frederick of Saxony and the landgrave of Hesse. It was feared at one time that all the princes belonging to the league of Smealcad would unite and make war on the Roman Catholic states, but they proved that their only object was to defend their own state, without reference to religious questions. All these difficulties, together with the dissatisfaction arising from promised reforms not having been carried out, led to another diet being summoned for Nov. 14, 1542; it was afterwards postponed to December, and formally assembled on January 31, 1543 (according to Seiden, lib. xx, 483; Ranke, iv, 285; but according to Seckendorf [p. 416] in the early part of February). King Ferdinand came, on January 17, to take part in it. Charles V was represented by Frederick of the Palatinate, John of Navarre, and Christopher, bishop of Augsburg, all persons at least distasteful to the evangelical party. Bishop Christopher died suddenly during the conference, and was replaced by Otto of Truchses. King Ferdinand had repeatedly invited the elector of Saxony, through Dr. Andreas Conerizza, to be personally present at the diet. Count Todelmann, representing the emperor and his brother to act as leniently as possible towards the evangelical states. Still the Roman Catholics clearly evinced their old opposition to all reform, and thus the other party was obliged to act with vigor. At the opening of the diet King Ferdinand put forward the necessity of carrying on the war against the Turks with increased energy, and of protecting Hungary and the neighboring regions; after that, assistance was asked against the French, who had invaded the Netherlands. On February 5 Granvelle addressed the diet, representing the exigencies of the war against the Turks, praised the emperor for all he had done for the country, and promised in his name that he would devote his life, if need be, to overcome the enemies of Christianity, if the states would help him in the war against France. The evangelical princes and states of Woltemde protested; but the emperor, who, to the imperial commissioners a list of their grievances. They complained of the peace of Nuremberg having been broken by the imperial charter of justice, and of the promised reforms not having been carried out. They also charged the empire with the oppression of that court, and that they rejected its arbitrary decisions, for instance, in the case of the affairs of Brunswick, etc. They also required religious liberty, which was incompatible with that tribunal. All the questions started by both parties gave rise to numerous debates. Duke Ulrich of Wurtemberg sought to uphold the views of the imperial commissioners against the evangelical party by means of political considerations. He attached himself especially to the affair of Brunswick, and thought to organize a league of Bavaria, and of Hesse. Leonard Eck drew up the articles of the bond, into which other states were to be afterwards admitted. These articles did not suit either the landgrave of Hesse or the elector of Saxony, and they both demanded first of all that Bavaria should be pledged to render no assistance to duke Henry, and this put an end to the plan. The mistrust of the evangelical party was greatly increased by letters of duke Henry having been discovered, in which he spoke of the emperor intending soon to restore him in his government, and to give his son privilege, or would not take Henry's part. To this was added that Ferdinand and the imperial commissioners commenced agitating the question of the forthcoming council which was to be held at Trent; that they insisted that duke Henry, who was claiming his estates back, should not be denied his rights; the evangelical party answered that they did not accept this council, nor would they attend it, and declined, since they were given no sure guarantees of peace, to take any further part in the proceedings of the diet. The resolution of the diet was signed on April 28, without the participation of the evangelical states. They repeated the demand for a reform, postponed the settlement of the Brunswick affair until the return of the emperor, and renewed the assurance given by the Diet of Spires, in 1542, of a peace of five years. The evangelical states declined recognizing these decisions, as they had been drawn up without their participation, and also because they did not receive sufficient guarantees of the promised peace being kept. They at the same time declared themselves unwilling to take any part in the Turkish war, and announced their intention of sending a deputation to the emperor, to present him their propositions. The resolutions were never acted upon, but gave rise to numerous conferences between the two parties, in which all the questions at issue were repeatedly discussed. See Seckendorf, Hist. Luther, p. 416; Seiden, De statu Reip., lib. xxv, 483-486; Neudecker, Urkunden, p. 661 sq.; id., Merkblatt, Aventisschen, p. 525 sq.

Nurse (properly νηήρη, one Hen, τινηροχ, nutris nutrix; fem. ἱγιενή, one's mother, τινηροχ, nurse; from τινηρό, to carry [see Is. ix, 4]; usually χετρον, megæth, fem. part. Hiph., from τινηροχ, "suck," with τινηρο, γυνη φρονεσσα [Exod. ii, 7]; in the N. T. τινηροχ, nutrie [1 Thess. ii, 7]). Moses applied this term to himself in relation to Israel, though only to express his inability to fulfill what it required, or his sense of oppression under the responsibility involved in it (Num. xix, 15). But more commonly it is applied to women, and much more apparently in the same manner and with the same regard that is usual among ourselves. It is clear, both from Scripture and from Greek and Roman writers, that in ancient times the position of the nurse, wherever one was maintained, was one of much honor and importance [see Gen. xxvi, 59; xxxvi, 8; 2 Sam. iv, 4; 2 Kings xi, 2; 2 Macc. i, 29; comp. Homes, Od. ii, 361; xix, 15, 251; Eurip. Iphigen., oppid.; Hopp, ibid.; fol.; Virgil, En. vii, 17]. The same term is applied to a foster father or mother, etc. [Num. xi, 12; Ruth iv, 16; Is. xxx, 28]. In great families male servants, probably eunuchs in later times, were intrusted with the charge of the boys [2 Kings i, 5; see also 2 Kings, iv, 65, 'Tegg's ed.; Mrs. Poole, Engle, in Egyp., iii, 201]. See Child.

In Christian times nursing the sick has ever been the special care of pious females, and many have devoted themselves to this work, in hospitals and elsewhere, both in war and peace, with religious earnestness.
Among the Roman Catholics this is one of the special duties of the "Sisters of Charity."

Nut is the rendering of the A. V. of two Heb. words.

1. Botim, בּוֹתִים, occurs only in Gen. xiii, 11, where Jacob, wishing to conciliate the ruler of Egypt, sends by his sons a present, and along with other articles mentions "nuts and almonds." This and the various translations of this term Celsius enumerates walnuts, hazel-nuts, pine-nuts, peaches, dates, the fruit of the terebinth-tree, and even almonds; but there is little doubt that pistacchio-nuts is the true rendering. From the context it is evident that the articles intended for presentation were the products of Syria, and that they were probably less common in Egypt. The Sept. and Vulg. render by terebinth, the Persian version has pustch, from which it is believed the Arabic fustak is derived, whence the Greek πυρσακια and the Latin pistacia. The Heb. word botim is very similar to the Arabic batam, which we find in Arabian authors, as Ehases, Serapion, and Avicenna. It is sometimes written batam, boton, botin, and albotin. The name is applied specially to the terebinth-tree, or Pistacia terebinthus of botanists, the τιρυανις και πυρσακια of the Greeks. This is the true yielding pistacia, a native of Syria and of the Greek Archipelago. See Oak. The tree yields one of the finest kinds of turpentine, that usually called Chio or Cyprus, which, employed as a medicine in ancient times, still holds its place in the British pharmacopoeia. From being produced only in a few places, and from being highly valued, it is usually adulterated with the common kinds of turpentine. In many places, however, where the tree grows well, it does not yield turpentine, which may account for its not being noticed as a product of Palestine; otherwise we might have inferred that the turpentine of this species of pistacia formed one of the articles sent as a present into Egypt. The name batam is applied by the Arabs both to the terebinth and to the tree. It appears, however, to be sometimes used generically, as in some Arabic works it is applied to a tree of which the kernels of the seeds are described as being of a green color. This is the distinguishing characteristic of another species of pistacia, the P. eba, of botanists, of which the fruit is well known to the Arabs by the name of batuk. This, in 1100, gave the origin to the Greek πυρσακια, said by Dioscorides to be like pine-nuts. Besides these edible kernels, the pistacia-tree is described in the Arabic works on Materia Medica as yielding another product somewhat similar to the turpentine of the batum, but which is called alak el-ombat, a resin of the embat, as if this were another name for the pistacia-tree. This brings it much nearer the botim of Scripture. The botim of the Talmud is considered by annotators to be the pistacia (Celsius, Hierobot, i, 26). Bochart for this and other reasons considers botim to be the kernels of the pistacia-tree (Chamaan, i, 10).

The pistacio-nut-tree is well known, extending as it does from Syria to Afghanistan. From the latter country the seeds are carried as an article of commerce to India, where they are eaten in their uncooked state, added to sweetmeats, or as a dessert fried with pepper and salt, being much relished by Europeans for the delicacy of their flavor. The pistacchio-tree is most common in the northern, that is, the cooler parts of Syria, but it is also found wild in Palestine. Syria and Palestine have been long famous for pistacchio-trees, see Dioscorides (i, 177) and Pliny (xvil, 5) says, "Syria has several trees that are profitable for the nut; among the others is the well-known pistacia;" in another place (xv, 22) he states that Vitellius introduced this tree into Italy, and that Flaccus Pompeius brought it at the same time into Spain. The district around Aleppo is especially celebrated for the excellence of the pistacchio-nuts, see Russell (Hist. of Aleppo, i, 82, 2d ed.) and Galeen (De Frac. Alia, 2, p. 812), who mentions Ber-

Pistachio-nuts (Pistacia Vera).
where they are grown, and, as we have seen, they form articles of commerce from Afghanistan to India—a hot country like Egypt. They are also exported from Syria to Europe in considerable quantities. They might therefore have well formed a part of the present intended for Joseph, notwithstanding the high position which he occupied in Egypt.

2. *Egyp.*, Ἠβραϊκά; Sept. *καρποῦ*; Cebus. *καρπόν*. This word occurs in the Song of Solomon (v, 11): “I went into the garden of *nuta*,” where probably what is known as *English walnut*, or in the American market as “Meadow nuts,” is intended. The Hebrew name is evidently the same as the Persian *gair*, and the Arabic *jew*, both of which, when they stand alone, signify the walnut, *gour-ben* being the walnut-tree; when used in composition they may signify the nut of any other tree; thus *jew-s-deh* is the nutmeg, *jew-s-hinda* is the Indian or coconut, etc. Abul Fadil (in Celsus) says, “The Arabs have borrowed the word *jews* from the Persian; in Arabic the term is *Chaf*, which is a tall tree.” The *Chaf* or *Chasf* is translated by Freytag “an esculent nut, the walnut.” The Jewish rabbis understand the walnut by *Egyp.*. The Greeks employed *καρπόν*, and the Romans *nucem*, to denote the walnut (see Celsus, Or. Athen. Sec., ii, 65; Ovid, *Nux Elegia*; Celsus, *Herbol. i, 29*); which last remains in modern languages, as Ital. noce, Fr. noix, Span. nuez, and Ger. *nuss*. The walnut was, however, also called *καρπόν* βασαλείου (Diosc. i, 179), royal nut, from its excellence, and also *πυγνεύς*, or Persian, having been introduced into Greece from Persia: the name *juglana* has been derived from *Jorja glanes*, the scorn, or nut of Jove. That the nut was highly esteemed in the East we learn from Abulpharagius, who states that Al Mahadi, the third caliph of the Abbasides, “was buried at the foot of the walnut-tree under which he used to sit.” That it is found in Syria has been recorded by several travellers. Théveton found it in the neighborhood of Mount Sinai, and Belon says of a village not far from Lebanon that it was “well shaded with oak and walnut trees.” That it was planted at an early period is well known, and might be easily proved from a variety of sources. According to Josephus (War, iii, 10, 8) the walnut-tree was formerly common, and grew most luxuriantly around the lake of Gennesareth; Schulze, speaking of this same district, says he often saw walnut-trees growing there large enough to shelter four-and-twenty persons. See also Kitté (*Phys. Hist. Nat.* p. 250) and Burchardt (*Syria*, p. 260).

The walnut, or *Juglana regia* of botanists, belongs to the natural family of *Juglandae*, of which the species are found in North America and in Northern Asia. The walnut itself extends from Greece and Asia Minor over Lebanon and Persia, probably all along the Hind Kush to the Himalayas, and is abundant in Cashmire (*Him. Bot.* p. 342). The walnut-tree is well known as a lofty, wide-spread tree, which affords a grateful shade, and of which the leaves have an agreeable odor when bruised. It seems formerly to have been thought unwholesome to sit under its shade, but this appears to be incorrect. The flowers begin to open in April, and the fruit is ripe in September and October. The tree is much esteemed for the excellence of its wood; and the kernel of the nut is valued not only as an article of diet, but for the oil which it yields. Being thus known to and highly valued by the Greeks in early times, it is more than probable that, if not indigenous in Syria, it was introduced there at a still earlier period, and that therefore it may be alluded to in the above passage, more especially as Solomon has said, “I made me gardens and orchards, and planted trees in them of all kind of fruits” (Ecclesiastes, vi, 5).

*Nuts* or *Bazurgus* is the name of a class of Gypsies who dwell in Hindostan. A late intelligent writer has, with much plausibility, endeavored to trace from them the origin of the Gypsies of the West. They are both wandering tribes, and have each a language understood by themselves, but principally fortune-telling (by palmistry and other means), and are alike addicted to thieving. The Gypsies are governed by their king; the Nuts by their *padar batah*. They appear to be equally indifferent on the subject of religion, and in no respect particular in their food, or the manner in which it is obtained. According to a list furnished by captain Richardson, the languages adopted by these people would appear to possess a very strong affinity to each other. “The Bazurgus are subdivided into seven castes, viz. the Cham, Athiba, Bynas, Pushtute, Kalkkr, Dorut, and Gungwarte; but the difference seems only in name, for they live together and intermarry as one people. They say they are descended from four brothers of the same family. They profess to be Mussulmans; that is, they undergo circumcision; and at their weddings and burials a girt and mollah attend to read the service; thus far, and no further, are they Mussulmans. Of the Prophet they seem to have little knowledge; and though in the creed, which some of them can indistinctly recollect, they repeat his titles, yet, when questioned on the subject, they can give no further account of him than that he was a saint or pir. They acknowledge a God, and in all their hopes and fears address him, except when such addresses might be supposed to interfere with Sanyar’s department—a famous musician, who flourished, I believe, in the time of Akbar, and whom they consider as their tutelary deity; consequently they look up to him for success and safety in all their professional employments. These consist of playing on various instruments, singing, dancing, tumbling, etc. The two latter accomplishments are peculiar to the women of this sect. The notions of religion and a future state among this vagrant race are principally derived from their songs, which are beautifully simple. They are commonly the production of Kubier, a poet of great fame, and who, considering the nature of his poems, deserves to be better known. He was a weaver by
ngets

NUVOLONE

trade, and flourished in the time of Shir Shah, the
Cromwell of Indian history. There are, however, vari-
ous and contradictory traditions relative to our humble
philosopher, as some accounts bring him down to the
time of the Mughals, and others assign him to the
time of Asoka. There are various stories of his life,
and a number of legends connected with his name.

Nuts

Leved on the girls of each set as often as they may have
attracted the notice of persons not of their own caste.
This, from their mode of life, must be a tolerably pro-
ductive duty. When the parties return from their ex-
ntravagances to their natal town, the greedy agent of the
bittah, who convenses his people, and they continue eating
and drinking till the whole is expended. When any of
the surdars are suspected of giving in an unfair statement
of their profits, a punchaet is assembled, before whom
the supposed culprit is ordered to undergo a fiery ordeal,
burying his tongue to a piece of red-hot iron; if it
burns him, he is declared guilty. A fine, always con-
sisting of liquor, is imposed. If the liquor be not im-
mEDIATELY produced, the delinquent is banished from
their society, hooted and execrated wherever he comes;
his very wife and children avoid him. Thus oppressed,
he soon becomes a suppliant to the nadar bittah. Some
of the women of the Bazzurges are, I have heard, ex-
tremely handsome, and esteemed as courtesans in the
East accordingly; though I must confess I have not
seen any who, in my opinion, came under that descrip-
tion as to person or character."

Nuvra, an ancient goddess among the Chinese, was
worshipped before the time of Confucius. She presided
over the war of the natural elements, stilling the vio-
lence of storms and establishing the authority of law.
She caused the world to spring from the primitive
chaos, and out of elemental confusion brought natural
order.

Nuvolone, Carlo Francesco, a distinguished
Italian painter, the eldest son of Panfilo Nuvolone, was
born at Milan in 1608. He studied under his father,
but finished his education in the school of Giulio Cesare
Procaccini, although he did not adopt the style of either,
but became a faithful follower of Guido. The forms of his
figures are elegant, and the air of his heads graceful, with
a remarkable sweetness and harmony of tints, so that he
deserves the name which he still enjoys of "the Guido
of Lombardy." His Madonnas are in much request for
private collections. Nuvolone also painted many portraits
for the nobility, which possess great excellence; and he was
selected to paint the queen of Spain when she visited
Milan in 1649. Lanzi mentions his fine picture of the
Miracle of St. Peter in S. Vittore at Milan; and says he
painted many other works in excellent taste, at Milan,
Parma, Cremona, Piacenza, and Como. He died,
according to Orlandi, in 1651, though Bryan says
1661.

Nuvolone, Giuseppe, called Il Panfilo, an emi-
tive Italian artist, the younger son of Panfilo Nuv-
olone, was born at Milan in 1613. Like his brother,
Carlo Francesco, he studied first under his father
and afterwards under Giulio Cesare Procaccini. Lanzi
says that in his works may everywhere be traced a
composition and coloring derived from the school of
Procaccini. His compositions are copious, and the
oppositions of his lights and shadows are conducted
with great intelligence and vigor; but his taste is
often inferior to that of his brother, and his shadows
are occasionally dark and sombre. He wrought
with great facility, and was indefatigable in the prac-
tice of his profession during a long life, painting until
his last years, and his latter works have lost much of
their purity. There are many of his paintings in the
cities of Lombardy; also in Brescia and other Venetian
cities, among which Lanzi mentions his fine picture
of St. Domenico ransacking a Dead Man, in the
capella grande at Cremona. This work of art is animated
by the most natural expression, and adorned with
beautiful architecture. He died in 1703.

Nuvolone, Panfilo, a Cremonese painter, flour-
ished, according to Zaist, about 1608. He studied
under Cav. Gio. Battista Trotti, called Il Malosso,
and was among the ablest disciples of that master.
true, six systems of Hindu philosophy, viz. the Nyaya, Vaiseshika (q. v.), Sankhya (q. v.), Yoga (q. v.), Fe-
danta (q. v.), and Mimansa (q. v.); but, as we have
said in the article MIMANSA, the term philosophical
system is generally applied to all of them, and it
should also be stated that the Vaiseshika is in some
sort supplementary to the Nyaya, and the two are fa-
miliarly spoken of as one collected system, though we do
not so treat them here. Accordingly it is customary
to speak of Hindu philosophy as being divisible into
the Nyaya, Sankhya, Yoga, and Vedanta. These were
Nyavartins, too, if we follow the commentators, differ more in ap-
pearance than in reality. Assuming each of them im-
plicitly the truth of the Vedas (q. v.), and proceeding
to give on that foundation a comprehensive view of
the totality of things, the three systems differ in their
point of view of the universe; viz. as it stands in rela-
tion severally to sensation, emotion, and intellect.

The adherent of the Nyaya system, starting from
the premise that we have various sensations, inquires what
and how many are the channels through which such
varied knowledge flows. For believing that there are five
different channels, he imagines five different ex-
ternals adapted to these. Hence his theory of the five
elements, the aggregate of what the Nyaya regards as
the causes of affection. The student of the Sankhya,
struck with the fact that we have emotions, with an eye to
the question, conceives our impressions as due to our
quality. Are they pleasing, displeasing, or indifferent?
These three qualities constitute for him the external;
and to their aggregate he gives the name of Nature.
With the former he agrees in wishing that he
were well rid of all three; holding that things pleasing
and things indifferent are not less incompatible with
man's chief end than things positively displeasing.
Thus, while the Nyaya allows to the external a sub-
stantial existence, the Sankhya admits its existence
only as an aggregate of qualities; while both allow
that it is not necessarily and essentially the same as the
Vedanta, rising above the question as to what is pleas-
ing, displeasing, or indifferent, asks simply what is and
what is not. The categories are here reduced to two
— the Real and the Unreal. The categories of the Ny-
aya and the Sankhya are merely scaffolding to reach
this pinnacle of philosophy, others in other systems.
The Nyaya and the Sankhya are simply introductory to the
great system of the Vedanta. With this introductory
element we must content ourselves at this place, and
now enter upon a consideration of the Nyaya (proper)
system, which may be already familiar to our read-
ers.

The Vedanta, rising above the question as to what is pleas-
ing, displeasing, or indifferent, asks simply what is and
what is not. The categories are here reduced to two
— the Real and the Unreal. The categories of the Ny-
aya and the Sankhya are merely scaffolding to reach
this pinnacle of philosophy, others in other systems.

knowledge of 'that whereof the matter is seen,' and knowledge of 'that whereof the matter is unseen' (revelation).

2. The objects or matters about which the inquiry is concerned (pramanya). These are: a. The real (caitya). It is composed of parts, a framed substance, not inchoative, and not consisting of the three elements, earth, water, and fire, as some say, nor of four, or all the five elements (viz. air and ether, in addition to the former), as others maintain, but merely earthy. b. Organs of sensation (indriya): from the elements, earth, water, light, air, and ether, they are smell, taste, sight, touch, and hearing. c. Their objects (arthaka). They are the qualities of earth, etc., viz. odor, savory, color, tangibility, and sound. d. Understanding (buddhi), or apprehension (unpalabhi), or conception (jada), terms which are used synonymously. e. Activity (prarabdhi), or that which originates the utterances of the voice, the cognitions of the understanding, and the actions of the body. f. The organ of imagination and volition (manas). Its property is not to giving rise simultaneously to more notions than one. g. Activity (prarabdhi), or that which originates the utterances of the voice, the cognitions of the understanding, and the actions of the body. h. Faults or failings (dosha), which cause activity, viz. affection, aversion, and bewilderment. i. Transmigration (rebirth), the becoming body after having divided the right body of the soul, which commences with one's first birth, and ends only with final emancipation. It does not belong to the body, because the latter is different in successive births, but to the soul, because it is eternal. j. Fruit or retribution (phala), or that which accrues from activity and from the effects of sin or goodness of the form of pain or pleasure.

L Pain (daksha), or that which has the characteristic mark of causing vexation. It is defined as 'the occurrence of birth,' or the originating of 'body,' since body is associated with various kinds of distress. Pleasure is not denied to exist, but, according to the Nyaya, it deserves little consideration, since it is ever closely connected with pain. m. Absolute deliverance or emancipation (apavarga). It is annulling of pain, or absolute cessation of one's troubles once for all. 

(As before) 'Instruments of right notion,' and 'the power of the Nyaya house.' The Nyaya house studies the investigation of the following topics. 3. Doubt (samayoga). It arises from unsteadiness in the recognition or non-recognition of some mark, which, if we were sure of its presence or absence, would determine the subject to be so or so, or not to be so or so; but it may also arise from conflicting testimony. 4. Notice (pratyaya), or that by which a person is moved to action. 5. A familiar case (drishtanta), or that in regard to which a man of an ordinary and a man of a superior intellect entertain the same opinion. 6. Tenet or dogma (diddhanta). It is either 'a tenet of all schools,' i.e. universally acknowledged, or 'a tenet peculiar to some school,' i.e. partially acknowledged; or 'a hypothetical dogma,' i.e. one which rests on the supposed truth of another dogma; or 'an implied dogma,' i.e. one the correctness of which is not expressly proved, but tacitly admitted by the Nyaya. 7. The different members (aryagrama) of a regular argument or syllogism (nyaya). 8. Conflation or reduction to absurdity (tarka). It consists in directing a person who does not apprehend the force of the argument as first presented to him, to look at it from an opposite point of view. 9. An affirmation of a sentiment. It is the determination of a question by bearing both what is to be said for and against it, after having been in doubt. The next three topics relate to the topic of controversy, viz. 10. Discussion (vada), which is defined as consisting in defending by proofs on the part of the one disputant, and controverting by objections on the part of the other, without discordance with respect to the principles on which the conclusion is to depend; it is, in short, an honest sort of discussion, such as takes place between two sentiments, or his pupil, and where the debate is conducted without ambition of victory. 11. Wrangling (jala), consisting in the defense or attack of a proposition by means of tricks, futilities, and such like means; it is therefore a kind of discussion where the disputants are merely desirous of victory, instead of being desirous of truth. 12. Carrying (sahid), when a man does not attempt to establish the opposite side of the question, but confines himself to carrying disingenuously at the arguments of the other party. 13. Fallacies, or semiances of reasons (aakhyayana), five sorts of which are distinguished, viz. the erratic, the contradictory, the equally available on both sides; that which, standing itself in the need of proof, does not differ from that which is to be proved, and that which is added when the time is not that when it might have availed. 14. Tricks, or unfairness in disputation (nalah), or the opposing of a proposition by means of assuming a different sense from that which the objector well knows the proponent intended to convey by his terms. It is distinguished as verbal misconstruing of what is ambiguous, as perverting, in a literal sense, what is said in a metaphorical one, and by the same means for which, therefore, objections (jana), of which twenty-four sorts are enumerated; and, 16, failure in argument or reason of defeat (mukhakha-sthana), of which twenty-two distinctions are specified.

The great prominence given by the Nyaya to the method, by means of which truth might be ascertained, has sometimes misled European writers into the belief that it is merely a system of formal logic, not engaged in metaphysical investigations. But though the foregoing enumeration of the topics treated by it could only touch the surface of the work, yet the reader of the Nyaya, it will sufficiently show that the Nyaya is intended to be a complete system of philosophical investigation; and some questions, such as the nature of intellect, articulated sound, etc., or those of genus, variety, and individual, it has dealt with in a masterly manner, well deserving of notice on speculation. That the atomic theory has been devolved from it will be seen under the article VAISHEISHIKA. On account of the prominent position, however, which the method of discussion holds in this system, and the frequency with which the Nyaya, as a whole, meets with the syllogism, it will be expedient to explain how the Nyaya defines the 'different members of a syllogism' under its seventh topic. A regular argument consists, according to its, of five members, viz.: a, the proposition (pratijna), or the declaration of what is to be established; b, the reason (hetu), or 'the means for the establishing of what is to be established;' c, the example (udakaraana), i.e. some familiar case illustrating the fact to be established, or, inversely, some familiar case illustrating the impossibility of the contrary fact; d, the application (upapagraha), or 'the restatement of that with respect to which something is to be established;' and, e, the conclusion (nisparmanam), or 'the restating of the proposition because of the mention of the reason.' An instance of such a syllogism would run accordingly thus: a, This hill is fiery, b, for it smokes, c, as a culinary hearth, or (inversely) not as a lake, from which vapor is seen arising—vapor not being smoke, because a lake is invariably devoid of fire; d, accordingly the hill is smacking; e, therefore, it is fiery.

The founder of the Nyaya system passes under the name of Ganges. The short form of the name is Ganga, which would mean a descendant of Gotama. There is, however, nothing as yet known of the history of this personage or the time when he lived, though it is probable that the work attributed to him is, in its present shape, later than the work of the great grammarian
NYCTAGES 249

NYMPHE

Painit. It consists of five books or adhyâyás, each divided into two 'days', or diurnal lessons, which are again sub-divided into sections or topees, each of which contains several aphorisms or sûtras (q.v.). Like the text-books of other sciences among the Hindús, it has been explained or annotated by a triple set of commentaries, which, in their turn, have become the source of more popular or elementary treatises. Mr. Banerjea, in his Dialogue on the Hindu Philosophy (Lon. 1861, 8vo), considers the Buddhists' system as closely resembling the Nyaya system, and points out its similarity to and differences from that of Kapila (q.v.). The latter agrees with the Nyaya in that it makes all souls eternally subject to the same law of life. Its evil to be overcome is the same, viz. transmigration; and its method of release is the same, viz. Buddhism, or knowledge. They differ in that the Nyaya assumes beyond that of Kapila a third eternal and indestructible principle as the basis of matter, viz. atoms. It also assumes the existence of a supreme soul, Brahma, who is almighty and all-wise. The Sanscrit text of the Sûtras of Gotama, with a commentary by Vyasa-nâtha, has been edited at Calcuta (1859); and the first four books, and part of the fifth, of the text, with an English version, an English commentary, and a translation of the Fifth Book, were printed at the Sanscrit Academy of Calcutta, by the late Dr. J. R. Ballantyne (Alahabad, 1850–54). This excellent English version and commentary, and the celebrated essays on the Nyaya by H. T. Colebrooke (Trans. of the Royal Asiatic Society, vol. i, Lond. 1817; and Hymns of the Vedas, vol. i, Lond. 1837), and Ballantyne, Christianity contrasted with Hindu Philosophy (Lon. 1839, 8vo), are the best guides for the theological student who, without a knowledge of Sanscrit, would wish to familiarize himself with the Nyaya system. See Thom- son, Outlines on Thought (Appendix on Hindu Logic, Lond. 1857); Ballantyne, Lectures upon the Nyaya Philosophy; Division of the Categories of the Nyaya Philosophy, in the Bibliotheca Indica, No. 33 and 35; Dictionary of the Technical Terms of the Nyaya Philo- sophy (Bombay, 1875); Barthelmy Saint-Hilaire, Mémorial sur le Nyaya; Bibliothèque Sacra, 1861, p. 673–697.

NYCtâgés (from νυκτάς, to nyctes, to nyph, to nyphos, to nyphar), is the name which was given in the early Church to those who repudiated the night hours of prayer on the ground that as the day is divinely ordained for work, so the night, which is only for rest, is for sleep. De Hierar. (iv.); De Hierar. (v.); Ebd. (c.); In Bibl. (xxiv., 1557). They are also spoken of under the name of Dormitantes by St. Jerome in his treatise against Vigilantius.

NYCtELIA (from νυκτῆλια, the name given to the festivities of the ancient Greeks observed in honor of Bacchus, were so called, from νυκτῆλιος, because the sacrifice and other ceremonies were performed in the night. These festivities were celebrated every three years in the beginning of spring, with lighted torches, drinking, and the worst of impurities, for which reason the Romans prohibited the observance of them in Italy. See Brough- ton, Hist. of Religion, s. v.

Nyder, Johannes, a celebrated Dominican, who flourished during the Hussite Reformation, is noted as one of the embassy selected by the Council of Basle to debate at Egra, in Bohemia, the case of the Hussites. But little is known of his personal history, but in the excited period of ecclesiastical strife in which he struggled he played no unimportant part in the defence of the papal cause. See Jenkins, Life of Cardinal Julian, p. 187 sq.

Nye, Philip, an English theologian, was born about 1596, in Sussex. He studied at Oxford, entered the Church, and was at first settled at St. Michael, and later at St. John's College. It is said that he was a learned, mild pulpit orator. Having ventured to oppose the doctrines of the Established Church, he was obliged to retire for some years to Holland. Appointed pastor of Kimbolton in 1640, he was one of the most zealous advocates of Presbyterianism, and afterwards joined the Independents, when they were in the ascendency. In December, 1647, he was sent by the leaders of the army, together with Marshall, to the castle of Carisbrooke, to inform the king of the vote deposing him from the throne. A few days after he was despatched to all the offices, but left at liberty. He died at London Sept. 27, 1672. Wood and Calamy represent him as a violent, dangerous man; but Stoughton, himself an Independent, pays him high tribute, and says that Nye, though one of the ablest and most active of the denominations, had no power to do any hurt to the cause of the church. He was particularly regarded by the Royalists, and even by Parliament. Nye wrote some controversial works. See Wood, Athenae Oxon.; Calamy, History of Dissenting Churches; Hook, Eccles. Biog. n. s.; Stoughton, Eccles. Hist. of England (Ch. of Restor.), i, 45, 91, 194, 297; Fletcher, Hist. of the Independents, iii, 187; iv, 31, (J. H. W.)

Nymphè or Nymph (Gr. νυμφή) is, in classic mythology, the name of a numerous class of inferior female divinities, though they are designated by the title of the goddesses, and in the New Testament the meetings of the gods in Olympus. They are described as the daughters of Zeus, and were believed to dwell on earth in groves, on the summits of mountains, in rivers, streams, glens, and grovethes (Homer, Odyssey, vi, 125, etc.; xii, 515; Il. xx, 9; xvi. 415). They were usually served by their companions, the nymphs, in their approaches to them, with wine, with weeping in their grovethes purple garments, and kindly watching over the fate of mortals (Odys. vi, 105; ix, 104; xii, 107, 586; xvii, 243; Il. vi, 420; xvi, 416). Men offer up sacrifice either to them alone, or in conjunction with other gods, such as Hermes (Odys. viii, 360; xvii, 240; xix, 450). From the places which they inhabit they are called ὄρνονυμα (Odys. vi, 105), ὄρνητας (Il. vi, 420), and νυμαῖς (Odys. xii, 134). The nymphs, whose number is almost indefinite, may be divided into two great classes. The first class embraces those who must be regarded as a kind of inferior divinities, recognised in the worshippers of nature. The early Greeks saw in all the phenomena of ordinary nature some manifestation of the Deity; springs, rivers, woods, mountains, groves, trees, and all such objects were regarded as spirits with whom they were in a sort of communion or sympathy, and who were said to be the gods of the various divinities of nature. The second class of nymphs are personifications of tribes, races, and states, such as Cyrene, and many others. The nymphs of the first class must again be subdivided into various species, according to the different parts of nature in which they are representatives.

1. Nymphs of the Watery Element. Here we first mention the nymphs of the ocean (Οὐρανίων ή Οὐρανίων ὄμοιας, νυμφάδα θαλασσών), who are regarded as the daughters of Oceanus (Heiod. Theog. 546, etc., 564; Æschyl. Prom.; Callim. Hymn. in Dion. 18; Apollon. Rhod. iv, 1414; Sophocles, Philoct. 1470); and the next the nymphs of the Mediterranean, or Inner Sea, who are regarded as the daughters of Nereus, whence they are called Neridea (Heiod. Theog. 240, etc.). The rivers were represented by the Panomedei, a part of them, as Acheloides, Amryides, Ismenides, Amnisides, Pactolides (Apollon. Rhod. iii, 1219; Virgil, Æn. v, iii, 70; Pausan. v, 5, 6; i, 51, 2; Callim. Hymn. in Dion. 18; Ovid, Met. vi, 16; Steph. Byza. s. v. Ἄμφρες). But the nymphs of fresh water, springs, lakes, and rivers, were designated by the general name Naiades, though they have in addition their specific names, as Ἀμφρες,
Nymphæa

Nymphaeum

Nymphæa (νυμφαῖς; Vulg. Nypheam), a wealthy and zealous Christian in Laodicea (Col. iv. 15). A.D. 57. His house was used as a place of assembly for the Christians; and hence Grotius, making an extraordinarily high estimate of it, has probably said that the man who must have lived in a rural district; nor is there any good reason for the supposition of Chrysostom that the Church consisted solely of the family of Nymphæus (comp. Rom. xvi. 5; 1 Cor. xvi. 19; Phil. ii. 3). In the Vatican MS. (B) this name is taken for that of a woman (αἵρητη); and the reading appears in some Latin writers, as pseudo-Amrose, pseudo-Anselm, and has been adopted in Lachmann's N. T. The common reading, however (αἵρετος), is found in most MSS., and is the only one known to the Greek fathers. The Alexandrian and Sinaitic MSS. (A and N), and that of Ephraem Syrus (C), do not determine the sex (αἱρετός). The difficulty presented by the plural in the text is easily explained by referring it to Nymphæus and his family (constructio ad sensum), or αἴρετος may refer to the ἄδελφοι.

Nymphidilanus (Νυμφιδιάνας) of Smyrna, a Neo-Platonist, lived in the time of the emperor Julian, and was a friend and correspondent of Maximus and Claudianus, a grandson of the emperor Julian, who was greatly attached to Maximus, made Nymphidilanus his interpreter and Greek secretary, though he was more fit to write declamations and disputations than letters. He survived his brother Maximus, and died at an advanced age (Eunapius, Vit. Soph. 187).

Nymphæum, COUNCIL OF (Concilium Nymphæense), an ecclesiastical council of some importance, was held in April, 1294, under the emperor John, who was then at Nymphæum. In 1238 Gregory IX had sent four legates to Germany, the patriarch of Constantinople, in order, if possible, to effect a union between the churches. The legates, who did not arrive before the beginning of the year 1294, were received with much honor, deputies from the emperor and the patriarch meeting them on the road. They first held a discussion with the Greeks at Nicsea, after which they proceeded to Constantinople to abide the issue of a conference between the four Oriental patriarchs. They were then invited to a conference at Nymphæum, where a discussion was again opened upon the two subjects of the procession of the Holy Spirit and the number of elders in the church. The legates insisted that the words "filioque" were used rather in explanation than as an addition, showing both from Holy Scripture and the writings of the fathers that.

Nymphaeum was the name of a fountain of water placed in the atrium of a church, in which the people were accustomed to wash their hands and faces before they entered. It was variously called κρήνη, φαλά, φιάλα, κυδωνίαν, λεπτόνια, νυμφαῖα, etc. Most care is taken to prove that the practice of sprinkling with holy water at the entrance of the church is derived from that which was considered, by the earlier Christians, as a symbol of purification. But at its introduction it was recognised as a Grecian rite, and is to be traced, with the greater number of papal ceremonies, to the heathen. See MARRIAGE.
OAHU, one of the principal of the Hawaiian or Sandwich Islands group, is situated in 156° W. long. and between 21° and 23° Lat., with a population in 1873 of 20,871, of whom 3129 were foreigners. It is twenty-five miles W.N.W. of Molokai, the most romantic and fertile of the whole group, and its port is the best in the islands. Honolulu, on the south side of Oahu, is the residence of the king and seat of government. Oahu abounds richly in soil, and the Japanese farmers, who cultivate it, are the most prosperous of the island. In the north-western portion of the island may be seen a lake, sixty miles in circumference, which is connected with the sea, and on its shore are small villages, which are inhabited by the chief of the island and his followers. The American Board have seven stations on this island. See SANDWICH ISLANDS.

Oak is the rendering in the A.V. of four Hebrew words (םַפְרָד, דָּשָּׁם, דָּשָׁם, דָּשָׁם) (in the plural, however, only so rendered), which are all from the same or cognate roots (םַפְרָד, דָּשָׁם, דָּשָׁם, דָּשָׁם), significant of strength. We take each of these in regular order, and then give a general statement of the subject. For the various opinions upon the meaning of these kinds of terms, see Genesis, Theological, p. 47, 51, 103; and Stanley, Sinai and Pal. p. 519. See TREE.

1. עֵץ (םוֹפְרָד, Sept. πάτροδος; Alex. πατρόδος; Aq., Syr., Theod., ἐλέυθ., Vulg. cupressus) occurs only in the singular number in Gen. xiv, 6 ("El-paraun"). It is uncertain whether it should be joined with Paran in forming a proper name, or whether it is to be taken separately, as the "terebinth," or the "oak," or the "grove" of Paran. Onkelos and Saadia follow the Vulg., whence the "plain" of the A.V. (margin) (see Stanley, Sinai and Pal. p. 519, 520, App.). Rosenmuller (Schol. ad l. c.) follows Archi (Comment. in Pind. ad Gen. xiv, 6), and is for retaining the proper name. Turovsky gives a collective form of it: קָכָּלָה, קְכָלָה, and קָכָּלָה. Elum, the second station where the Israelites halted after they had crossed the Red Sea, in all probability derived its name from the seventy-palm-trees there; the name דָּשָּׁם, which more particularly signifies an oak, being here put for any grove or plantation. Similarly the other double form, דְּלָכָה or דְּלָכָה, may refer, as Stanley (Sinai and Pal. p. 20) conjectures, to the palm-grove at Akaba. The plural קָכָּלָה occurs in Isa. i, 29, where probably "oaks" are intended; in Isa. lxi, 5, and Ezra xxxi, 15, any strong, flourishing trees may be denoted. See ELUM.

2. עֵץ (םוֹפְרָד, Sept. πάτροδος, ἐλέυθ., Aq., δρῶς, Δίνυρα, δρῶς [δρῶς συνίστασθαι, Symm.]; πάτροδος in Hos. iv, 13 [δρῶς συνίστασθαι]; Vulg. terebinthus, quercus; A.V. "oak," "elah," "tell-tree" in Isa. vi, 13; "elms" in Hos. iv, 18). See ELAM.
OAK

"Abraham's Oak," near Hebron. (From a photograph taken by the editor in 1874.)

vored with some valuable remarks from Dr. Hooker, who says, "The forests have been so completely cleared off all Palestine that we must not look for existing evidence of what the trees were in Biblical times and antecedently. In Syria proper there are only three common oaks. All form large trees in many countries, but very rarely now in Palestine; though that they do so occasionally is proof enough that they once did." Abraham's oak, near Hebron, is a familiar example of a noble tree of one species, the prickly evergreen oak (Quercus pseudo-coccifera [see Tristram, Nat. Hist. of the Bible, p. 369]). Dr. Robinson (Bib. Res. ii, 81) has given a minute account of it; and "his description," says Dr. Hooker, "is good, and his measurements tally with same writer remarks, "We have oaks in Lebanon twice the size of this (Abraham's oak), and every way more striking and majestic." Dr. Hooker has no doubt that Thomson is correct in saying there are far finer oaks in Lebanon; "though," he observes, "I did not see any larger, and only one or two at all near it. Cyril Graham told me there were forests of noble oaks in Lebanon north of the cedar valley." It is evident from these observations that two oaks (Quercus pseudo-coccifera and Q. agilops) are well worthy of the name of mighty trees; though it is equally true that over a greater part of the country the oaks of Palestine are at present merely bushes. The oaks of Bashan probably belong to the

Evergreen Oak of Palestine (Quercus pseudo-coccifera).

Great prickly-cupped or Valonia Oak (Quercus agilops).
species known as Quercus ilicifolia, the Valonia oak, which is said to be common in Gilead and Bashan. It rises on a stout gnarled trunk, from one to two yards in circumference, to the height of twenty to thirty feet; a rather round-headed, densely leaved tree, giving an open park-like appearance to the landscape. The wood is said to be excellent, and the tree is, like other timber in Syria, indiscriminately cut for house-fitting and fuel. Its acorns form the valonia of commerce, for which 150,000 cwt. are yearly imported into England for the use of tanners. Another species of oak, besides those named above, is the Quercus infectoria, which is common in Galilee and Samaria. It is rather a small tree in Palestine, and seldom grows above thirty feet high, though in ancient times it might have been a noble

tree. It is also called the Kermes oak (Quercus cocciifera), from an insect (kermes, of the genus coccus) which adheres to the branches of this bushy evergreen shrub in the form of small reddish balls about the size of a pea. This affords a crimson dye, formerly celebrated, but now superseded by cochineal. This dye was used by the ancient Hebrews; for the word told (22710), which denotes a worm, and particularly the kermes worm, denotes also the dye prepared from it (Isa. i. 18; Lam. iv. 5), and is accordingly rendered ezezuvow in those passages where it occurs. For a description of the oaks of Palestine, see Dr. Hooker's paper read before the Linnean Society, June, 1861.

The oak is, in fact, less frequently mentioned in the original than in the A.V., where it occurs so often as to suggest that the oak is as conspicuous and as common in Palestine as in this country. But in Syria oaks are by no means common, except in hilly regions, where the elevation gives the effect of a more northern climate; and even in such circumstances it does not attain the grandeur in which it often appears in our latitudes. Indeed, Syria has not the species (Quercus robur) which forms the glory of our own forests. The "oaks of Bashan" are in Scripture mentioned with peculiar distinction (Isa. ii. 18; Zech. xi. 2), as if in the hills beyond the Jordan the oaks had been more abundant and of larger growth than elsewhere. Of these the Syrians used to make their oars (Ezek. xxvii, 6; comp. Theophr. Plant. v, 8; Val. Flacc. ii, 644; Strabo, iv, 190), and idolaters their images (Ism. xiii, 14). They are abundant even at the present day. In the hilly regions of Bashan and Gilead, Burckhardt repeatedly mentioned forests of thick oaks—thicker than any forest he had seen in Syria, making a grateful shade, and imparting to the scenery a European aspect (p. 348). On the lower slopes of the Syrian mountains oaks are numerous, and the inhabitants employ their branches in the construction of the flat roofs of their dwellings (p. 386). Oaks of low stature are frequent in the hills and plains near the sources of the Jordan (p. 45, 312, 315); and some of large dimensions are found in different parts of the country, beside the natural reservoirs of water fed by springs (p. 198, 315). On the lower slopes of Lebanon low oak-trees are numerous, and the inhabitants employ their branches in the construction of the flat roofs of their dwellings (p. 4, 7, 18, 198, 312, etc.).

Lord Lindsay also makes frequent mention of oaks in Palestine. He confirms their existing abundance in the countries of Bashan and Gilead. He calls them "noble prickly oaks," and "evergreen oaks," and remarks a variety of the latter with a broader leaf than usual (Travels, ii, 192, 124, 157; see also Pococke, East, iii, 270; Hasselquist, Trav. p. 554). But oak-trees are by no means wanting on the west of the Jordan, in the proper Land of Canaan. Lord Lindsay describes the hills of southern Judea about Hebron as covered to the top with low shrubs of the prickly oak. Fine park scenery, composed chiefly of prickly and evergreen oaks, occurs between Samaria and the Carmel. The same trees are seen on the southern prolongations of that mountain, and on the banks of the Kishon. The thick woods which cover Mount Tabor are composed chiefly of oaks and pistacio-trees; and oaks are found in the valleys which trend from that mountain (Lindsay, ii, 51, 77, 85). Hasselquist found groves of the Kermes oak (Quercus cocciifera) in the valleys beyond the plains of Acre, on the road to Nazareth (Travels, p. 153). Under oaks the dead were buried (Gen. xxxv, 8; comp. 1 Sam. xxxi, 13; 1 Chron. xi, 12); offerings were made to idols (Hos. iv, 13; comp. Virg. Geor. iii, 382; Ovid, Met. vii, 745 sq.); Kiesling, De Superstitione Israel, sub quercub. cult. [Leips. 1748], and national assemblies were held (Judg. ix, 6, 87). Single oaks of great height served also as landmarks (1 Sam. x, 9), and bore a distinguishing name (Judg. ix, 6, 37; where תְּנֵס, oak, is mistakenly rendered plain in the English version). See MEONNIM; OAK-WORSHIP.

Oak of Reformation. During the turmoil which preceded the Reformation various insurrections took place in different parts of England. The insurrection in Norfolk was headed by one Ket, a tanner, who assumed to himself the power of judicature under an old oak, called thence the Oak of Reformation. The rebels were 20,000 strong; but the earl of Warwick, with 6000 foot and 1500 horse, quickly dispersed them. Several of the leaders were executed, and Ket was hanged in chains.

Oak-worship. The oak has in all ages been looked upon as the most important of all the trees of the forest. Groves of oak-trees were even in the earliest times reckoned peculiarly appropriate places for religious services. As we learn from Ezek. xxiii, 38, the people of Tyre were likewise the scene of idolatrous practices. Altars were set up under them (Josh. xxiv, 26), and, probably in the East as well as in the West, appointments to meet at conspicuous oaks were made, and many affairs were transacted or treated of under their shade, as we read in Hdt. and Diodorus. The橡 tree is very common among the Hebrews to sit under oaks (Judg. vi, 11; 1 Kings xiii, 14). Jacob buried idolatrous images under an oak (Gen. xxxv, 4), and Deborah, Rebekah's nurse, was buried under one of these trees (Gen. xxxv, 8; 1 Chron. xxiv, 22). Abraham was born under an oak (Gen. xiv, 22). Vergil, in the Aeneid, has the oak under which one of the kings of Spain was crowned (p. 412). Idolatry was practiced under oaks (Isa. i, 29; lxxvi, 5; Hos. iv, 13). Idols were made of oaks (Isa. xliii, 14). See BAAL; GROVE.
Among the ancient Greeks the oak, as the noblest of trees, was sacred to Zeus, and among the Romans to Jupiter. Oak-worship, however, was one of the most remarkable peculiarities of the religion of the northern nations. The inhabitants of the holy city of King K(3,7),(997,984)(5,7),(997,984), and the Gauls to which the sacrificial oak in their annual voyages to the Black Sea in June. The oak was considered by the Hieria as the symbol of the abode of the gods. Winifred, an apostle of the Germans, cut down an enormous oak which was sacred to Thor; and such was the horror and judgment were expected to fall upon the head of the impious missionary. "The gods of the ancient Prussians," says Mr. Gross, "showed a decided predilection both for the oak and for the linen. The ground upon which they stood was holy ground, and was called Romowe. Under their ample shade the principal gods of the Prussians were worshipped. The most celebrated oak was at Romowe, in the country of the Nattages. Its trunk was of extraordinary size, and its branches so dense and diffuse that neither rain nor cold could penetrate through them. It is affirmed that its foliage enjoyed an amaranthine green, and that it afforded amulets to both man and beast—under the firm belief of the former at least that thus employed it would prove a sure preventive against every species of evil. The Romans, too, were great admirers of oak, and it appears they had their Luci in most parts of the city." "As Jupiter," to quote from the same intelligent writer, "gave oracles by means of the oak, so the oaken crown was deemed a fit ornament to deck the majestic brow of the god, contemplated as Poiesis, the king of the city. The origin of the oaken crown as a symbol of Jupiter is attributed by Plutarch to the admirable qualities of the oak. 'It is the oak,' says he, 'which among wild trees bears the finest fruit, and which among those that are cultivated is the strongest.' Its fruit has been used as food, and the honey gathered from it as a sweet secretion. When the oak was personified under the name of a nymph named Melissa. Meat, too, is indirectly furnished in supplying nourishment to ruminant and other quadrupeds suitable for diet, and in yielding bahlen, with which the feathered tribes are secured. The exulant properties of the fruit of some trees, as the Quercus cœlularis, and the many useful qualities of their timber, may well entitle them to the rank of trees of life, and to the distinction and veneration of suppliers of the first food for the simple wants of man. Hence, on account of its valuable frugal productions recognition of the oak is genealogically known as the sagus, a term which is derived from σαγειν, to eat. There was a period in the history of mankind when the fruit of the oak, the neatly encaised acorn, formed the chief means of subsistence; and the Chasian oak of the Pelasgic age have justly been immortalized on account of their alimentary virtues. It was then, according to Greek authors, that the noble oak was cherished and celebrated as the mother and nurse of man. For these reasons Jupiter, the munificent source of so great a blessing, was adored as the benignant foster-father of the Pelasgic population. In the blissful and hallowed oak-tree, according to the puerile notions of those illiterate people, dwelt the food-dispensing god. The ominous rustling of its leaves, the mysterious notes of the feathered songsters among its branches, announced the presence of the divinity to astonished and admiring votaries, and gave hints and encouragement to those whose interest or curiosity prompted them to consult the oracle. For this reason odoriferous fumes of incense were offered to the oak-god under the Dodonian oak.1"

The religious veneration paid to the oak-tree by the original natives of Britain in the time of the Druids is well known to every reader of British history. The Druids esteemed the oak the most sacred object in nature, and they believed the mistletoe also which grew upon it to partake of its sacred character. Hence originated the famous ceremony of cutting the mistletoe, which took place at the beginning of the year. See Mistletoe. We have reason to think that this veneration was brought from the East, and that the Druids who came to Britain, having plundered the sacrifices under a sacred oak, continued the custom. The Druids received these sacrifices in Oriental countries. In fact, since in hot countries nothing is more desirable than shade, nothing more refreshing than the shade of a tree, we may easily suppose the inhabitants would resort for such enjoyment to "where'er the oak's thick branches spread A deeper, darker shade."

The Supreme Being, whom the Druids termed Hassus or Mighty, was worshipped under the form of an oak. See Druids.

Oakes, Uriah, president of Harvard College, was born in England in 1631, and brought to America in his childhood. A sweetness of disposition exhibited itself very humble, like the fifth ear of corn which hangs near the ground. He was graduated at Harvard College in 1649. He soon after returned to England, and was settled in the ministry at Titchfield, in Hampshire; but being silenced in 1662 as a nonconforming divine, he longed for employment on this side the Atlantic. The church of Cambridge, on the river Great Ouse, in the county of Hunts, in 1668, sent a deputation to England to invite him to become their minister. He accepted in 1671, and was also placed at the head of Harvard College April 7, 1675, still however retaining the pastoral care of his flock. On Feb. 2, 1680, the corporation appointed him president, and commissioned him to be inaugurated, and to devote himself exclusively to this object. He died July 25, 1681. Mr. Oakes was a man of extensive erudition and distinguished usefulness. He excelled equally as a scholar, as a divine, and as a Christian. By his contemporaries he was considered as one of the most resplendent lights that ever shone in this part of the world. In the opinion of Dr. Mather, America never had a greater master of the true, pure, Ciceronian Latin, of his skill in which language a specimen from one of his commencement orations is preserved in the Magna Charta. With all his greatness he was in the fifteenth ear of corn which hangs near the ground. He published an artillery-election sermon, entitled, The Unconquerable, All-Conquering, and more than Conquering Christian Soldier (1672);—Election Sermon (1675);—A Sermon at Cambridge on the Choice and Suffering of the Grace of Redemption.—A Fast Sermon (1680);—A Discourse on the Elegy on the Death of Rev. Mr. Shepard, of Charlestown (1677), pathetic and replete with imagery. See Holmes, Hist. of Cambridge: Peirce, Hist. of Harvard University: Allen, Amer. Biog. s. v.; Sprague, Annals American. Pulpit, vol. v. .

Oannes, the name of a Babylonian god, who, in the first year of the foundation of Babylon, is said to have come out of the Persian Gulf, or the old Erythrean Sea, adjoining Babylon. He is described as having the head and body of a fish, to which were added a human head and feet under the fish's head and at the tail. He lived among men during the daytime, without, however, taking any human food, and retired at sunset to the sea from which he had emerged. Oannes had a human voice, and instructed men in the use of letters and in all the principal arts and sciences of civilization, which he communicated to them. Such is the account of him given by the Sumerian and Babylonian kings. Many legends are said to have come out of the Persian Gulf: one, called Aeneidos or Idolion, in the reign of Amenon, the fourth king of Babylon; another in that of the fifth king; and the last, called Oedacn (or Ho Dagon), apparently the Phoenician Dagon, under the sixth. Many questions of Oannes, resembling one of the fish, having the upper part of a man and the lower of a fish, or as a man covered with a fish's body, have been found in the sculptures of Kuirjik and Khorsabad, as well as on many cylinders and gems. Oannes is supposed to have
symbolized the conquest of Babylonia by a more civilised nation coming in ships to the mouth of the Euphrates; but he is apparently a water-god, resembling in character the Phoenician Dagon and the Greek Proteus and Triton. See Heliadus, Apud. Phot. Cod. 279, p. 335, 84; Richter, De Deorum; Cory, Anc. Fragm. p. 30; Bunsen, Egypt's Place, i. 706; Layard, Nineveh, p. 346; See Dagon.

Oates, Titus (alias Ambrose), a noted character in English ecclesiastical history, was born about 1620 at London. He was the son of a ribbon-haver, who, having escaped from the Anabaptists among whom he had preached, after the Restoration conformed to the doctrines of the English Established Church, took orders, and held a benefice. Titus was educated at Merchant Taylors' School in London, and at the University of Cambridge. Having received ordination, he was made chaplain to the duke of Norfolk, who also settled him in a small living. He was subsequently accused of perjury, but he escaped conviction, and became chaplain in one of the king's ships, from which he was disgracefully expelled. Shortly afterwards, he embraced Roman Catholic doctrines. Later he entered the college at St. Omer, and resided for some time among the students. On his return from a mission to Spain in 1677, the Jesuits, who were heartily tired of their convert, dismissed him from their seminary; and it is probable that resentment for this dismissal was accompanied by a perception of gain, induced him to contrive the atrocious scheme known as the "Popish Plot," which alone has preserved his name in history. The English people were in Oates's time greatly agitated by religious controversy. It was generally asserted and believed that king Charles was at heart a Roman Catholic; and his brother, the duke of York, afterwards James II., was an active and avowed zealot on the same side. The growing confidence of the Roman Catholics was unconcealed; and with or without special reason, the cry so often since heard arose, and was everywhere echoed, that the "Protestant religion was in danger." In this fevered state of general feeling Oates saw his opportunity, and dexterously and boldly availed himself of it. In September, 1678, he made a disclosure before Sir Edmundbury Godfrey, a noted and active justice of the peace, and afterwards before the council and the House of Commons, to the effect that the pope felt himself entitled to the possession of England and Ireland on account of the heresy of prince and people, and had accordingly assumed the sovereignty of these kingdoms; that power to govern them had been delegated by the pope to the Society of Jesuits, who, through Oliva, the general of their order, had issued commissions appointing various persons whom they could trust to the chief offices of state, both civil and military. Lord Arundel (he said) was to be chancellor; lord Powis, treasurer; lord Bellasis, general of the papal army; lord Stafford, paymaster; Sir William Godolphin, privy seal; and Coleman, secretary of state. All the dignities, too, of the Church he alleged to be newly appropriated, and many of them to Spaniards and other foreigners. Two men, named Grove and Fickering, he declared, were hired to shoot the king, and Sir George Wakeham, the queen's physician, had engaged to poison him, the queen herself being privy to the scheme. He also stated that the Roman Catholics were to rise in different districts of the kingdom; and that every means would be adopted for the extirpation of Protestantism." His evidence was confirmed by two men named Tonge and Bedloe, especially the latter, who was of low extraction and bad reputation. (For the list of persons, both Jesuits and men of importance in the kingdom, who suffered imprisonment and execution through the accusations of Oates, we must refer to the general histories of the time.)

Notwithstanding the almost universal credence which was given to him at the time, it has subsequently been placed beyond doubt that the plot which Oates pretended to reveal was an infamous fabrication. His circumstances, his character, the nature of his evidence, the manner of its production, not at one time but at several times, though he had previously professed to have told all that he knew, the mode in which the first disclosure was made, together with inconsistency and errors, evidently betray imposture. It may be urged that the universal credit given to Oates's evidence at the time is a strong proof that his story was true. There are circumstances, however, which account for the ready belief with which his accusations were received, although they do not prove their truth. The English Protestants had long apprehended an attempt on the part of the Roman Catholics to restore their religion and re-establish their power; and an anxiety on this account had latterly been augmented in some degree by the conduct of the king, and in a still greater degree by the duke of York's open profession of the old religion, and his attachment to its adherents. Moreover, there were immediately connected with Oates's disclosure two events giving it an apparent corroborative, which was eagerly assumed to be real by the feverish minds of contemporary partisans. The first of these was the sudden and violent death of Sir Edmundbury Godfrey, the magistrate who had taken Oates's depositions. No proofs could be adduced to show the manner of his death, whether he committed suicide or was murdered; but the fact that he had taken Oates's evidence, and had...
been active in searching out the supposed plot, was suf-

ficient to convince the Protestants, excited as they were, that he had been murdered by Roman Catholics, partly out of revenge and partly to aid the escape of their con-
spirators. The second apparent corroboration of Oates's evidence—which, though not a real thing, had at the time an influence in maintaining its credibility—is that it led to the discovery of a plot, though not such a plot as he disclosed (see Hallam, Const. Hist., ii, 571). Oates denounced Coleman, the secretary of the dowry of York; and upon searching his house there were found among his correspondence, in the Fore Chaise papers at which proved a combination for the purpose of re-establishing Roman Catholicism in England. That it was a plot, that it was on the part of the Roman Catholics, and discovered through Oates, was sufficient in the state of public opinion then prevailing to secure him, etc. (public disclosure, though Coleman's plans did not coincide with the schemes which Oates pretended to have discovered.

During the closing years of the reign of Charles II, Oates was protected by the government, and received a pension of £200 a year. In the following reign, as might be expected, his enemies revenged themselves. The duke of York had not long succeeded his brother on the throne before Oates was tried and convicted of perjury, sentenced to imprisonment for life, and to be whipped and stand in the pillory at intervals. The punishment was enforced with such dash and brutality as to leave no doubt that it was intended, under cover of carrying out the sentence, to take away his life. He survived, however; and after much urgent petitioning he was, after the accession of King William, declared by Parliament the subject of an illegal trial, and therefore pardoned and granted anew a pension of £200 a year. He was not much heard of after this event, and died in 1705 in comparative obscurity. Oates is considered as the author of Eiusdem Basiensis, or the Picture of the late King James drawn to the Life (Lond. 1686, 4to, 8d ed.):—

"The Popish damnable Plot against our Religion and Liberties, etc. (ibid. 1686, 8vo).—A Collection of Letters and Other Writings under the Name of the King's Petition, published by authority [ibid. 1679, fol.). The True Speeches of Thomas Whitehead, Provincial of the Jesuits in England; John Harcourt, pretended Secretary of London; John Freeman, Procurator for the Jesuits in England; John Harris and Anthony Turner, all Jesuits and Priests, before their Execution at Tyburn, June 20, 1673, etc. (ibid. 1679, fol.).—The Report of the Committee upon the Complaint of Mr. Peter Norris (ibid. 1680, fol.).—The Popish damnable Plot against our Religion and Liberties, etc. (ibid. 1680, fol.).—A Collection of Letters and Other Writings under the Name of the King's Petition, published by order of the House of Commons [ibid. 1681, fol.). See State Trials, x, 1079-1830; Evelyn, Diary; North, Examinations; Burnet, Hist. of his Own Times, vol. i; Crosby, Hist. of the Bishops; Neal, Hist. of the Puritans; Collier, Eccles. Hist. (see Index in vol. viii); Hume, Hist. of Scotland; Macaulay, Hist. of England; Darling, Cyclop. Biog., ii, 1224; Allibone, Dict. of Brit. and Amer. Authors, s. v., Knight, Pict. Hist. of England, iii, 717 sq., and especially the article in the English Cyclopaedia.

Oath (Jewish), an appeal to God, or to authorities recognised by the respective adjurers, or to anything esteemed sacred, in attestation of an assertion or in confirmation of a given promise or a duty undertaken. The following statement as to Hebrew oaths gives the ancient information with whatever light modern research has thrown on the subject. For Swete, "oath" is the rendering in the A. V. of two Hebrew words, alak, הָרִצָה, and shebaskh, הָרִצָה, each of which is used in the three significations:- 1. An oath as an appeal to God in attestation of the truth of a statement (Neh. x, 30; Exod. xx. 10, 11). 2. A sworn covenant (Gen. xxvi, 28; 2 Sam. xxii. 7). 3. A curse or imprecation (Num. v, 21; Dan. iv. 11). In the first of these senses, which answers to our word "oath," the Sept. renders both words by ἵππος, and the Vulg. by juramentum or jujuramentum; while in the last sense we have the rendering of ἤππος, maledictio.

The two words ἤππος and ἱππος, however, are by no means synonymous. They denote two different modes of swearing, or rather two classes of oaths. Thus ἤππος (from ἤππος, to lament, to weep, to express woe; or, according to Gesenius, Thesaur. p. 44, 99, akin with ἴππος, God) properly means the invocation of woe upon one's self; and shows that the mode of swearing, which the Jews employed, was a professed contraction of divine vengeance on the party, if the aseveration made were not true; while ἱππος (from ἱππος, seven) literally signifies to seven one's self, to produce seven, i.e. to make a declaration confirmed by seven victims, or before seven witnesses, because, as Ibn-Ezra (comp. Gen. 57, 41 a.), who is followed by most modern expositors and lexicographers, rightly remarks, seven animals were used in ancient times when mutual promises were given and when alliances were effected (Gen. xxxi, 28-30). This is moreover confirmed by the practice of the ancient Arabs, who, in pledging their faith, drew blood by an incision made in their hands, and smeared it on seven stones (Herod. iii. 6). The principles of such a contract, therefore, between the two oaths is, that in the case of the former an imprecation was used, while in the latter no imprecation was employed. Hence in Numb. v, 21, where an oath with an imprecation is described, the phrase ἤππος or ἱππος is used, and the formula of imprecation is forthwith given.

II. Nature and Sanction of Oaths. The term juramentum or juramento is defined by Cicero (De Officia, iii. 29) as an affirmation vouchèd for by an appeal to a divinity. To these two elements which every oath contains—1, an affirmation or promise; 2, an appeal to God as omniscient and the punisher of falsehoods—a third is commonly added, a solemn or judicial occasion. To these three requisites the canon law refers when it enumerates juramentum, veritas, iustitia, as entering into the constitution of an oath. An oath is accordingly a religious undertaking either to say (juramentum asseratorium) or to do (juramentum promissorium) something entered into voluntarily with the customary forms. Being a religious undertaking, the appeal will vary according to the religion of him who makes it. In some instances it will be an appeal immediately to God; in others, to objects supposed to have divine power; and by a natural declension, when men have left the only true God, then to the "powers of this world" (put ev,' in the English version). When the Romans swore by their own heads or those of their children, or by the genius of the emperor, we shall find similar errors and abuses among the Jews. The essence of an oath lies obviously in the appeal which is thereby made to God, or to divine knowledge and power. The customary form establishes this, "So help me God." The Latin words (hāve a to have been used as early as the 6th century), whence our English form is taken, thus: "Si me Deus adjutor et hae sancta Evangelia," So may God and these holy Gospels help me; that is, "as I say the truth." The present custom of kisining a book containing the Gospels has, in England and the United States, taken the place of the latter clause in the Latin formula.

1. The cardinal principle on which an oath is held to be founded is that it be laid down in Heb. vi. 16—-21, as an ultimate appeal to divine authority to ratify an assertion (see the principle stated and defended by Philo, De Leg. Alleg. iii, 73; 1, 128, ed. Mang.). There the Almithy is represented as promising or denouncing an oath, i.e. doing so in the name of the living and solemn manner (see such passages as Gen. xxii. 16 and xii. 7 compared with xxi. 7; Exod. xvii. 2 and Lev. xxvi. 14 with Dan. ix. 11; 2 Sam. viii, 2. 13 with Acts ii, 30; Ps. cxv, 4 and Rom. vi, 21, 25; Isa. xxxiv,
OATH

20. With this divine assurance we may compare the Stigian oath of Greek mythology (Homer, IL xxv, 37; Hesiod, Theog. 400, 860; see also the Laws of Men, ch. viii, p. 110; Sir W. J. Jones, Works, iii, 291).

21. On the same principle that oath has always been held most binding which appealed to the highest authority for the protection of some holy object, thus believers in Jehovah appealed to him, both judicially and extra-judicially, with such phrases as "The God of Abraham judge;" "As the living lord;" "God do so to me and more also;" "God knoweth, and will bring it to pass;" etc. (Exod. xxxi, 18; Numb. viii, 1; Sam. xiv, 39, 44; 1 Kings ii, 42; Isa. xlvii, 1; xlv, 16; Hos. iv, 15). So also our Lord himself accepted the high-priest's adjuration (Matt. xxvi, 65), and Paul frequently appeals to God in confirmation of his statements (Acts xxv, 39; Rom. i, 5; ix, 1; 2 Cor. i, 21; ii, 31; Phil. i, 8; see also Rev. xv, 6). Appeals of this kind to authorities recognized respectively by adjoining parties were regarded as bonds of international security, and their infraction as being not only a ground of international complaint, but also an offense against divine justice. So Zezechiah, after swearing fidelity to the king of Babylon, was not only punished by him, but denounced by the prophet as a breaker of his oath (2 Chron. xxxvi, 13; Ezra xvii, 18, 18). Some, however, have supposed that the Law forbade any intercourse with heathen nations which involved the use of such oaths. But this appears to be a misapprehension of the Law (Exod. xxvii, 27; Selden, De Jur. Nat., ii, 13; see also Livy, 3; Laws of Men, ch. viii, p. 113; Smith, Dict. of Antiq., s. v. Just Jurisdiction).

3. As a consequence of this principle, (a) appeals to God's name on the one hand, and to heathen deities on the other, are treated in the Scripture as tests of allegiance (Exod. xxiii, 13; xxxiv, 6; Deut. xxiv, 12; Josh. xxii, 27–40; xxiv, 12–14; 2 Chr. xxv, 19, 14; Isa. xiii, 18, 18; xiv, 23; Jer. xii, 18; Amos viii, 14; Zeph. i, 5). (b) So also the sovereign's name is sometimes used as a form of obligation, as was the case among the Romans with the name of the emperor, and of Hophra a custom by which the kings of France used to appeal to themselves at their coronation (Gen. xlii, 15; 2 Sam. xi, 11; xiv, 19; Martyr. Syr. Polycarp, c. ix; Tertull. Apol. c. xxxii; Sueton. Calig. c. xxxvi; Hofmann, Lex. c. xxvi, 2). See also Laws of Men, art. 256, vol. iv, p. 102, ed. Smith).

4. Other objects of appeal, serious or frivolous, are mentioned: as, by the blood of Abel (Selden, De Jur. Nat., v, 8); by the heart; by heaven, the Temple, etc., some of which are condemned by our Lord (Matt. v, 17; 23, 19, 21–22; 26; xxvii, 18, 18); and yet he did not refuse the solemn adjuration of the high-priest (Matt. xxvi, 65, 64; see also Jud. xut, vi, 16; Mart. xi, 94; Mishna, Sanh. iii, 2, compared with Amos viii, 7; Spencer, De Leg. Hebri., i, 1–4).

III. OCCASIONS WHEN OATHS WERE TAKEN.—From time immemorial the Hebrews used oaths both in private intercourse and public transactions.

1. In private intercourse, or on extra-judicial occasions, oaths were taken or demanded when promises were made (2 Sam. xxv, 11; xiv, 20) or exacted (Gen. xxiv, 2–4; 25; Josh. ii, 19, 21; iv, 26; ix, 9; Ezra x, 5); when covenants were concluded (Gen. xxxv, 58; 2 Kings xi, 4; 1 Mac. vii, 15; Joseph. Ant. xii, 1, 2); when a solemn assurance was made (Gen. xiv, 22; Judg. xxi, 1–7; 1 Sam. xiv, 89, 44; xiv, 9); and when a oath was given to God, foreshadowing a covenant, or obedience from an inferior to a superior was promised (1 Kings xviii, 10; 2 Kings xi, 17; 1 Chron. xii, 8; xxiv, 24; 2 Chron. xiv, 14, 15; xxxvi, 13; Eccles. viii, 2; Joseph. Ant. xxii, 1, 1; xxv, 10, 4). A vow was in the nature of an oath (Lev. vii, 4).

2. On judicial occasions oaths were demanded by the Mosaic law on the following four occasions: (a) When goods deposited with any one were stolen or destroyed, the depository was to take an oath that he was not guilty in the loss, and the proprietor was bound to accept it without restitution (Exod. xxvii, 10, 11; 1 Kings viii, 31; 2 Chron. vii, 22). A wilful breaker of trust, especially if he added perjury to his fraud, was to be severely punished (Lev. vi, 2–5; Deut. xix, 16–18). (b) When one was suspected of having found or otherwise possessed something that might be distasteful to any one, he was to be sworn an oath, and thereby vindicate himself of the charge (Lev. vi, 5). (c) When a wife was suspected of inconstancy, she was required to clear herself by an oath (Num. v, 19–22). (d) When a theft was committed or an injury was inflicted by a criminal, the offender was to be brought before a priest, who was to be sworn an oath, and if any one knew the culprit and refused to make him known after hearing this public adhesion, he bore the guilt (Lev. v, 1; Judg. xviii, 2). (e) It appears that witnesses were examined on oath, and that a false witness, or one guilty of suppression of the truth, was to be severely punished (Prov. xxxii, 24; Micah. l. c. art. 206, vol. iv, p. 109; Deut. xix, 16–19; Gro- tius, in Crit. Sacr. on Matt. xxvi, 63; Knobel on Lev. v, 1, in Kurzg. Exeg. Homer.).

It will be seen that the leading feature of Jewish criminal procedure was that the accused person was put upon his oath to clear himself (Exod. xxii, 11; Num. v, 19–22; 1 Kings viii, 31; 2 Chron. vi, 22; Matt. xxvi, 63).

IV. AS TO FORMS OF OATHS, the Jews appealed to God with or without an imprecation in such phrases (cited above) as "God do so and more also if," etc. (1 Sam. xiv, 44); "As the living lord" (1 Sam. xiv, 39, 40, 4; 2 Sam. xxv, 21; 1 Kings xvii, 10); "As the living lord, and as thy soul liveth" (1 Sam. xx, 3); "The Lord be between thee and me forevermore" (1 Sam. xx, 29); "The God of Abraham judge between us" (Gen. xxxvi, 53). The Jews also swore "by heaven," "by the earth," "by the sun," "by Jerusalem," "by the Temple" (Mishna, Sheboth, iv, 2; Matt. v, 34; xxiii, 16; Berachoth, 55; Kiddushin, 71 a; Maimonides, Inst. Law, ch. 6; Bekithoth Sheboth, xix, 3); "by the angels" (Joseph, War, ii, 16, 4); by the lives of distinguished persons (Gen. xlii, 15; 1 Sam. i, 26; xviii, 55; 2 Sam. xi, 11; xiv, 19).

V. The external manner observed when taking an oath was as follows: 1. Originally the oath of a covenant was taken by solemnly sacrificing seven animals, or it was attested by seven witnesses or pledges, consisting either of so many animals presented to the contracting party, or of memorials erected to testify to the act, as is indicated by one of the Hebrew names for oath (יֵצַע), which properly denotes seven, and by the verb to swear (יָשָׂה), which means to swear, to produce seven (comp. Gen. xxix, 28–31; Knobel, Comment. on Gen. ad loc.).

2. Another primitive custom which obtained in the patriarchal age was that the one who took the oath "put his hand under the thigh" of the adjurer (Gen. xxiv, 2; xxvii, 29). This practice evidently arose from the fact that the genital member, which is meant by the euphemistic expression "thigh" (יוֹצָע), was regarded as the most sacred part of the body, being the symbol of the union in the tenderest and most intimate relations, and the seat whence all issue proceeds, and the perpetuity so much coveted by the ancients (comp. the phrase יָשָׂה וְיֵצַע, Gen. xxix, 28; Exod. i, 5; Judg. viii, 30).

Hence this creative organ became the symbol of the Creator and the object of worship among all nations of antiquity (comp. Ezek. xvi, 17; Jerome, Comment. in Hose, v. Nork, Etymologich-sympholc-mythologisch Real-Wörterbuch, s. v. Phallusculus; Paulus, Real-Enzyklopädie der klassischen Alterthumskunde, s. v. Phallus); and it is for this reason that God claimed it as the sign of the covenant between himself and his
OATH

chosen people in the rite of circumcision. Nothing, therefore, could render the oath more solemn in those days than touching the symbol of creation, the sign of the covenant, and the source of that issue which may at any future period avenge the breaking of a compact made with the servitor. To this the counterpart was the laying on of the hands on the head of the future son of David. The formula is the same before the altar, or, as some understand the passage, if the persons were not in Jerusalem, in a position looking towards the Temple (1 Kings viii, 31; 2 Chron. vii, 22; Godwyn, L. c. vi, 6; Carpzov, p. 654; see also Juvenal, Sat. xiv, 219; Homer, Iliad, iv, 272).

VI. Sommery of an Oath—The only oath enacted in the Mosaic code is a cleanness oath, i. e., the prosecutor is not to be put on his oath to prove the guilt of the accused, but the defendant is to swear and thereby clear himself of the charge or suspicion (Exod. xxii, 11; Lev. vi, 1; vii, 6; Num. v, 19-20). Hence the great care exercised in inculcating the sacredness of oaths, and the heavy punishment for perjury or frivolous swearing (Exod. xx, 7; Lev. xix, 12; Deut. xix, 16-19; Psalms, xiv, 4; Jer. vi, 2; vii, 9; Ezekiel, xvi, 59; Hos. x, 4; Zechariah, vii, 17; Mishna, Sheloth, iii, 11; iv, 8). Whether the "swearing" mentioned by Jeremiah (xxxii, 10) and by Hosea (iv, 2) was false swearing, or profane abuse of oaths, is not certain. If the latter, the crime is one which had been condemned by the Law (Lev. xxvi, 11; Matt. xvii, 74).

From the laws deduced many special cases of oaths, which are thus classified: 1. Jurisprudence promissoriorum, a rash considerance promise for the future, and s consciousment to the one party (Lev. vii, 10), 2. Votum, an absolute self-sacrificial assertion; 3. Depositum, breach of contract denied (Lev. xix, 11); 4. Perjury, judicial or private, is v, 1; see Nicodamus and Selden, De Juramentis, in Ugozlin, Theororum, xxii; Lightfoot, Hor. Hebr. on Matt. v, 10, where it is said, Mishna, Sheloth, iii, vi, iv, 1; vi, 2, Oto, Leg. Rubb. s. v. Juramentum).

The Jewish canons enacted that when the demand of the prosecutor is very trivial, the defendant's simple denial is sufficient, and he cannot be compelled to take the judicial oath to clear himself (Mishna, Sheloth, vi, 1-3). For the same reason it is enacted that when the complainant is deaf and dumb, silly, or a minor, the defendant need not take the oath, because such people, not being able to appreciate the solemnity of an oath, may multiply swearing on too trivial grounds; and that a minor is not to be asked to take an oath (Sheloth, vi, 4). Women, though forbidden to bear witness on oath (Deut. xix, 17 with Mishna, Sheloth, iv, 1), are not to be asked to take an oath (Mishna, Sheloth, iii, 7). If one simply says to another, "I adjure thee," the oath is valid; but if any one swears by heaven, earth, or Jerusalem, or any other creature, the oath is invalid (Mishna, Sheloth, iv, 18). As this oath could be taken with impunity, it became very common among the Jews, who, though that, because it involved nothing, it amounted nothing. Hence the remarks of our Saviour (Matt. v, 34-36; xxiii, 18-22). If any one swears frivolously, which is defined by the Jewish canons as follows: If he swears that something is different from what it is known to be true, or that a stone pillar is cold, that a woman is a man; or if it is about anything impossible, that he saw a camel flying in the air; or if any one says to witnesses, "Come and give testimony to what you have seen," and they say, "We swear that we will not bear witness" (Lev. vi, 1); or if one swears to transgress a commandment, i.e. to not to make a tablecloth, or not to put on phylacteries, this is a frivolous oath, for which, if taken deliberately, the man must be scourged (Mishna, Sheloth, iii, 8). So great was the sanctity with which the pious Jews, prior to the days of Christ, regarded an oath, that they could not endure swearing altogether (comp. Esopus, xxiii, 11, etc.; and especially Philo, De decem oraculis, sec. xvii, in Opp. ii, 194, et. ed. Mag.). The Pharisees took great care to abstain from oaths as much as possible (comp. She-
OATH
booth, 39 b; Gittin, 35 a; Midrash Rabba on Num. xxiii), while the Essenes laid it down as a principle not to swear at all, but to say yea yea, and nay nay. How firmly and conscientiously they adhered to it may be seen from the fact that Herod, who, on ascending the throne, had a number of allegiances from all the rest of the Jews, was obliged to absolve the Essenes from it (comp. Joseph. Ant. xv, 10, 4; Ginsburg, The Essenes, their History and Doctrines [Lond. 1864], p. 34).
Whether our Saviour's prohibition of swearing (Matt. v, 37) relates to the same total abstinence from all juridical oaths, or from profane and careless oaths, is a matter of dispute.

VII. Oaths of contemporary and later Nations.

The stringent nature of the Roman military oath, and the penalties attached to its violation, are attested to, more or less, by the laws of the three principal and its successors (Buryhantiz, Notes on Bed. i, 127 sq.; see also Dionys. Hal. xi, 43, and Aul. Gell. xvi, 4. See SACRAMENT.

The most solemn Mohammedan oath is made on the open Koran. Mohammed himself used the form, "By the setting of the stars" (Chardin, Voy. vi, 57; Sale's Koran, i, p. 437).

Belshun Arabus uses various sorts of adjuration, one of which somewhat resembles the oath "By the Temple." The person takes hold of the middle tent-peg, and swears all the life of the tent and its owners (Burckhardt, Notes on Bed., i. 127 sq.; see also another case mentioned by Burckhardt, Syriac, p. 398).

The Christian practice in the matter of oaths was founded in great measure on the Jewish. Thus the oath on the Gospels was an imitation of the Jewish practice of placing the hands on the book of the Law (P. Figuus, on Onkel. ad Exod. xxvi, i; Justinian, Nov. c. viii, Epit.; Matt. Paris, Hist. p. 916). Our Lord's prohibition of swearing was clearly always understood by the Christian Church as directed against profane and careless swearing, not against the serious judicial form (Bürckhardt, Notes on Bed. i, 127 sq.; Aug. Ep. 157, c. iv, 40); and thus we find the fourth Council of Carthage (a. 61) reproving clerical persons for swearing by created objects. See PROFANITY.

VIII. Literature. — The Mishna, Tractate Shevuth; Maimonides, Jed ha-Chatzot, Hilkhot Shevuth, iii, 1 sq.; Lightfoot, Hebrew and Talmudical Exorcisms on Matt. v, 33; Frankel, Die Eidesleistung der Juden in theologischer und historischer Beziehung (2d ed. Breslau, 1847); by the same author, Der gerichtliche Befehl nach Mosescht-talmudischem Rechte (Berlin, 1849), p. 91 sq.; Raddatz, Ch. 7, 1, 4; Aug. Ep. 157, c. iv, 40; p. 608 sq.; Ewald, Die Alterthümer des Volkes Israel (Göttingen, 1854), p. 15 sq. See PERNY.

OATH (Anglo-Saxon, ath) may be defined (see above) as an expressed or implied solemn invocation of a superior power, admitted to be acquainted with all the secrets of our hearts, with our inward thoughts as well as our outward actions, to witness the truth of what we assert, and to inflict vengeance upon us if we assert what is not true, or promise what we do not mean to perform. Almost all nations, whether savage or civilized, use, or have used, the light of revelation in the absence of the practice in any people is one of the clearest proofs of a want of conception of the existence of God. Indeed, it is a noticeable fact that in the earliest state of civilization the belief of the special interference of divinity in the affairs of men, and all but universal idea. Man, it was thought, by certain mystic forms and hallowed ceremonies, could compel the interference of the Divinity either to establish innocence or to detect guilt. Hence came or

deals and trials by battles and by lot; hence the belief that by the eating of bread or by the drinking of water, by walking barefoot over burning ploughshares, by thrusting the hand amid poisonous serpents, or throwing the accusing, bound hand and foot, into water, amid prayers and the imposition of ashes, all from the most remote, God would manifest the truth by a miraculous violation of the laws of nature. So extensively diffused was this idea, that it was alike believed by the polished Athenian on the banks of the Ilissus, the stern Israelite amid the hills of Judaea, the African dweller under the burning heat of the burning zone, the Syrian, the Indian worshipper of Thor or Odin amid the fastnesses of the North. All nations, barbarous or just emerging from barbarism, have resorted to the Divinity for the decision of disputed questions with somewhat similar ceremonies, and with the same success, with like success. Fact and parcel with ordeals, whether of bread or of water, of poisons or of ploughshares, whether of Grecian, Jewish, Hindoo, or Scandinavian form and origin, based upon the same principle, involving the same leading idea, is the oath by which divine vengeance is imprecatcd upon falsehood, and by the truth of their word, bound to inflict the requisite and appropriate punishment in case of its violation. As the analogies traceable amid the radical words of different languages all point to a common origin — a primitively — the analogy, generalizable, that these are capable amid the elemental forms of jurisprudence among nations diverse in their local habitations, with varying customs and sympathies and languages, would equally seem to indicate a common source, from which at some point of time, now uncertain or lost, the darkness of a remote antiquity, they originally sprang. (For an inquiry into the origin of oaths, and an acute disquisition on oaths generally, see Heiniccius, Exercit. xviii, De Lubricitate, etc.)

Among Christians an oath is a solemn appeal for the truth of our assertions, the sincerity of our promises, and the fidelity of our engagements, to the one only God, the Judge of the whole earth, who is everywhere present, and sees and hears and knows whatever is said or done or thought in any part of the world. Such is the Being whom Christians, when they take an oath, invoke to bear testimony to the truth of their words and the integrity of their hearts. Surely, then, if oaths be a matter of so much moment, it well behoves us not to treat them with levity, nor ever to take them without due consideration. Hence we ought, whenever we are confronted with a mingling oaths in our ordinary discourse, and from associating the name of God with low or disgusting images, or using it on trivial occasions, as not only a profane levity in itself, but tending to destroy that reverence for the Supreme Majesty which ought to prevail in society and to dwell in our own hearts. Perhaps all excesses in this case are caused by the extravagant, profane, and wasteful use of oaths among us, so utterly at variance with the command, "Swear not at all," making the oath so powerless for good and so potent for evil.

To develop clearly the use of oaths in early and modern times, we will here briefly notice the purposes for which and the occasions on which they have been taken, their different forms and ceremonies, the various punishments for their violation, the theory which justifies and explains their adoption as a sanction for truth, and their real force and efficiency in the administration of judicial affairs. (We rely mainly upon Appleton's Rule of Evidence Stated and Discussed [Phila. 1860, 8vo], ch. xvi.)

For the usages among the Jews, see the preceding article.

Perjury, by the Mosaic law, was an offence against the civil law; to God alone was left its punishment. The civil magistrate had no jurisdiction of the offence
changed, except in the case of a false charge of crime, when punishment was to be inflicted upon the person falsely charging it. The perjurer might escape his guilt by making the prescribed and predetermined trespass offerings. The misunderstanding or misinterpretation of this may in later times have led to the interpreters to the "Dil melamim" and the sale of indulgences; for it is difficult to perceive much difference in principle whether the offerings made to escape the punishment of the Deity be in certain specific articles or in certain money payments.

The form of swearing among the Greeks was by lifting up the hand to heaven or touching the altar, adding a solemn imprecation to their oaths, for the satisfaction of the person by whom the oath was imposed, as well as to lay a more inviolable obligation upon the person taking it—in terms something like this: If what I swear be true, may I enjoy much happiness; if not, may I utterly perish. In judicial proceedings the oath was administered to the witness before an altar erected in the courts of judicature, and with the greatest solemnity. The parties were likewise sworn—the plaintiff that he would make no false charge, the defendant that he would answer truly to the charge preferred.

An ancient form among the Romans was for the juror to hold a stone in his hand, and imprecate a curse upon himself should he swear falsely, in these words: If I knowingly deceive, why then, the stone which is by me held in my left hand, shall be hurled into the sea where never man shall find it. Among the Greeks and Romans, the oath was not merely used to induce faith in judicial proceedings, but the gods were invoked as witnesses to contracts between individuals and treaties between nations.

When the shrine of Jupiter gave place to that of St. Peter; when the innumerable gods and goddesses of ancient superstition were converted into the equally numberless saints and saintheires of Catholicism; when the Pontifex Maximus of consular and imperial, because the pontifex maximus of papal Rome, without even the change of his sacerdotal vestments; when the rites and ceremonies—the whole ritual of the pagan worship—were transferred bodily to the worship of the papacy, the oath, which was essentially a religious ceremony, was adopted as it had heretofore been administered, except so far as was required by the alteration in the name of the object of worship, and in its purposes and its beliefs. As before this change the altar, or the sacred things upon it, were touched or kissed, as the more gods one swore by the stronger the oath, so we find after this change the same acts of ceremonial adoration adopted with slight variations. The very form of the impregnation used is of pagan origin. So help me Jupiter and these sacred things became So help me God and these sacred relics, or these holy Evangelists. The flamen of Jupiter, from the sacredness of his office, was not compelled to take an oath, and the word of the priest, verbum sacerdotium, in conformity with the old superstition, has sufficed. Justinian prescribes the following form: I swear by God Almighty, and by his co-begotten Son, our Lord Jesus Christ, by the Holy Ghost, by the glory of St. Mary, mother of God, and always a virgin, and by the four Gospels which I hold in my hand, and by the holy archangels Michael and Gabriel, etc., closing with an imprecation upon his head of the terrible judgment of God and Christ, our Saviour, and that he might have part with Judas and the leper Gehazi, and that the curse of Cain might be upon him. Besides oaths on solemn and judicial occasions, the ancients were in the habit of making use of them, as nowadays, as the supplemental ornament of speech—

"as expiatives to plump the speech, and fill up sentences," swearing by the patron divinities of their cities, as in later days by patron saints; by all manner of beasts and creeping things, by the fishes of the sea, and by stones and mountains.

OATH

"Per Solis radios, Tarpejae fulminis jurat St. Martinus flammeae, et Cirrhiss episcopis Vatis; Per calamos Venetiae pharetraque Puellam, Per parasines Aegis, et Neptunae capellam, Adulit et Herculese arcus, hastamque Missure, Quiquid habent telorum armamentaria culta."

Indeed, the common profane oath of the English is but a trasfiguration of the "Dil melamim" with all its ceremonies. But the oaths of the ancients, however absurd or ridiculous, were infinitely exceeded in absurdity by the exuberant and grotesque profanities of the Christians of the Middle Ages. They swore "by Sion and Mount Zion, the Most Holy City," "by the brightness of God," "by Christ's foot," "by nails and by blood," "by God's arms two"—they swore

"By the solitary bones and relics Scattered through the wide arena; By the holy coat of Jesus, And the foot of Magdalen."}

Menn, the great lawgiver of the East, the son of the Self-existent, as he is termed in the sacred books of the Hindos, ordains that the judge, having assembled the witnesses in the court, should in the presence of the plaintiff and defendant address them as follows:

"What ye know to have been transacted in the matter before us, between the parties reciprocally, declare at large and with truth, for your evidence is required. The party also to swear falsely shall be cast bound under water in the sandy coves of Varuna, and he shall be utterly deprived of power to escape torment during a hundred thousand years; let him die in darkness and eternal testimony.

"Per Solis et terrae ardua, tormentum wither, and deprived of sight, shall the man who gives false testimony go with a potsherd to beg bread at the door of his enemy. Himself and in utter darkness shall the impious wretch tumble into hell, who, being interrogated in a judicial inquiry, answers one question falsely.

"The priest must be aware, by his very vocation, that the soldier by his bow, the horseman by his horse, the elephant by his elephant, or the weapon by his weapon; the merchant by his merchandise, and gold and silver by his money; by speaking falsely, all possible crimes."

In this code the guilt of perjury varies in intensity according to the subject-matter of testimony.

"By false testimony concerning cattle in general, the witness incurs the guilt of killing five men; he kills ten by false testimony concerning kine; he kills a hundred by false testimony concerning horses; and a thousand by false testimony concerning human beings."

But what is human life compared with gold, or with land? The scale rises, the atrocity increases:

"By speaking falsely in a case concerning gold, he kills, or incurs the guilt of killing, the born and unborn; by false testimony concerning land, he incurs the guilt of being animated. Beware, then, of speaking falsely concerning land. Marking well all the murders which are comprehended in the word of perjury, be the whole truth as it was heard and as it was seen by thee." Notwithstanding all this, pious falsehood—for instance, perjury to save life which would be forfeited by the rigor of the law—is not merely allowed, but approved, and eulogistically termed the speech of the gods.

To a woman on a proposal of marriage, in the case of grass or fruit eaten by a sow, of wood taken for a sacrifice, or of a promise made for the preservation of a Brahmin, it is no deadly sin to take a slight falsehood. Somewhat famous has been the lubricity of lovers' oaths. The lover swears by a woman, as said by the Greeks, oaths made in love never enter into the ears of the gods. This, probably, is the only code not only allowing and approving falsehoods by lovers, but by others. Various are the modes of administering an oath. A cow is sometime time the court, swearing by pen and writing, but the satisfaction of swearing with her tail in his hand; the leaf of the sweet basil and the waters of the Ganges are swallowed; the witness holds fire, or touches the head of his children or wife; while the less orthodox followers of Brahmin, those of the jungle tribes, impressed with the belief that what is false and lies shall be food for tigers, are sworn in the skin of one. Among the Mohammedans the oath is administered with the Koran on the head of the witness; but it is not binding
OATH

261

OATH

unless taken in the express name of the Almighty, and then it is incomplete unless the witness, after having given in his evidence, again swears that he has spoken nothing but the truth. The oath is not worthy of credit unless all is before the name of God; and the swearer must corroborate it by reciting the attributes of God, as, "I swear by the God besides whom there is no other righteous God, who is acquainted with what is hidden," etc.

Much of the judicial proceedings of our Anglo-Saxon ancestors rested upon oaths, and the punishment of their violators was severe. The penalty was declared unworthy of the ordeal, was incompetent as a witness, de- nied Christian burial, and was cursed with witches, murderers, and the most obnoxious members of society. Oaths were administered to the complainant in criminal proceed- ings and to the accused. The oath of the complainant was as follows: "In the Lord, I accuse not E either from hate, or art, or unjust avarice, nor do I know anything more true; but so my mind said to me, and I myself tell for truth that he was the thief of my goods." The accused swore as follows: "In the Lord, I am innocent, both in word and deed, of that charge of which P accused me." The oath of the witness was: "In the name of Almighty God, as I stand here a true witness, unbidden and unought, so I ovears it with mine eyes, and even heard it in my ears, what I have said." From this time forth, advocates for the law, early in the constituting the invertebrate chicanery of Norman jurisprudence had cursed English soil, it was usual to swear the parties—those who knew something about the matter. The different oaths of modern Europe—oredal oaths, oaths of compurgators, desory oaths, oaths of calumni, oaths military and ma- niac—might well deserve attention; but we have al- ready, perhaps, occupied too much attention in reverting to the forms and usages of the past. There are but two instances of nations among whom oaths have not been adopted in judicial proceedings. Among the Chinese no particular value is given to the magistrates and witnesses. This is true to a great extent of the Indian testimony. When they question each other's testimony, appeals to the gods are only made by cutting off the head of a fowl and wishing they may thus suffer, or blowing out a candle, and wishing they may thus be extinguished, if they do not speak the truth. The other instance is to be found in the code of laws formed with great judgment and much discrimination by the mis- sionaries at Tahiti, where, we believe, oaths have for the first time been abolished by Christian people (comp. Ellis, Polynesian Researches, p. 160).

The form of oaths in Christian countries varies greatly, and are they worse cons- trued, either to convey the meaning or impress the ob- ligation of an oath, than in Great Britain and America. The juror with us, after repeating the promise or affirmation which the oath is intended to confirm, adds, "So help me God," or, more frequently, the substance of the oath is repeated to the juror by the magistrate, who adds in the conclusion, "So help you God." The en- ergy of this sentence resides in the particle so—that is, hoc loco, upon condition of my speaking the truth or performing this promise, and not otherwise, may God have mercy upon me. The years of human life, the value of the oath, holds his right hand upon a Bible, or other book containing the Gospels, and at the conclusion kisses the book. This obscure and elliptical form, together with the levity and frequency of oaths, has brought about a general inadvertence to the obligation of them. This, however, is not a disadvantage to the method; for by the very nature of the case, the usual tendency of speech is in the first place, unshaken. The oath is employed in such a manner as not to be feared, and shame universally attendant upon the ignorance at- tached to falsehood detected, the disgrace of the liar—in other words, similar sentiments only exist in the rare and accidental exceptions—is found tending in the same direction. Much the greater part of what is known, is known only from the testimony of others. Our neces- sities, the necessities of others and of social intercourse, require that, for our own observation as well as for that of others, the truth should be told. Hence among all nations, barbarous and civilized, and among civilized in proportion to their advancement, the oath has been one of deep reproof, never used without inflicting pain on the person to whom it is applied. However great the disgrace, it is immured. The witness is excommunicated, when the falsehood is uttered. It is a judicial one. The more im- portant the occasion, the greater the public indignation and scorn brought upon its violation. The torture and the severity of the oath, which is peculiarly desirable in judicial investiga- tions, may impose severe penalties for false testimony—mendacity—penalties varying in degree of severity ac- cording to the aggravation of the offense, and thus must furnish a still more efficacious check upon the security of trustworthiness. It may happen that the statement of a witness, while true in part, may be defective in detail, either by its want of the true or by its utterance of the true particulars. Correctness and completeness are both included in perfect accuracy. Inaccurate, false or imperfect, not in the material extent, the evils of such incompleteness and in- correctness, when not the result of design, may be as great as falsehood. The intention of the truth is all the more important. How best to attain those indispensable requisites is the problem, the solution of which becomes so important in the practical elucidation of the law; or how to compel the reluctant and evasive witness; how to quicken the careless and indifferent; how to check and restrain
OATH

262

OATH

the rash and presumpitious; how to convict the deliberately and wilfully false; how to extort from recalcitrant lips the oath of faith. An oath—how to effect a perjury which shall not be也不可能 be detected: these results may be attained, is the great question. Interrogation and cross-examination—rigid, severe, and systematic—may produce the system of probabilities, confirmed and strengthened by the sanctions already alluded to, and to these sanctions (in the form of temporal punishment) an additional reliance must be placed. The ordinary motives to veracity, without the aid of cross-examination, and unaccompanied by any Tartar paths of proof, are found sufficient in the common affairs of life to produce veracity. The extraordinary security afforded by punishment may, no doubt, be a means of keeping an oath in force; but it would seem to suffice in the case of evidence judicially given. As, however, the temporary consequences of an oath only appear upon the ceremonial called an oath, it is only punishable, if false, after the oath has been legally adminis-

tered. It is not the punishment but the sanctions of law which should so will, the temporal punishment might as well be inflicted without as with an oath."
to certain words, in what is the difference to the beer, or the general injury to the company? Why in case punish, in the other exempt from punishment? If Dr. P., dispositions, that he is not innocent, but which, not being ascribed to him, give us an unnatural and unde- served advantage. The penalty, however, is provided, and we must be regarded with as much indifference as among the Hindoos; remove all fear of temporal punishment in consistence with our public morals. It is about as to the examination; leave the willing or unwilling witness to strike the subject till the day 'little and little' be shed; and, in the suit of Omichund, the great Hindoos banker, whose melancholy face reflects little credit on British morality. But it is not enough that all infidels, without reference to their religion, might be received and sworn, according to the customs of their respective countries; not because such was the law, but because to exclude them would be a 'most impolitic no- tion, and would only contribute to destroy all trade and commerce.' Even judicial optims, with dim and beclouded vision, saw that if the whole population of a country were excluded as infidels, people might be deficient; but it was thought to be to the advantage of the nation to carry on trade and commerce in foreign countries, and in many cases, by health and by consent, those who might be to trample the law under foot. A judicial cavet, how- ever, was this: 'the same code is, or may be, in another place, the same code, either 'by court or jury, to an infidel witness as to a Christian; provided only the wrath of God be im- moral, nor does it appear for the first time in the case of an infidel. The witness imag- ines that the world has been taken by the most cultivated minds of Europe; by the Lord into the bosom of the Church or the State; by those who, from their sta- tion, their education and intelligence, would be least likely to yield to superstition. Their oaths required, therefore, were an admission of the necessity of obedience to statutes framed centuries ago by and for a set of monks, and are as consonant with the present state of society as fit for the actual condition of the witness. A general-in-chief at the head of his army. Consequently, the consequences of such an event would be a matter of astonishment to all, equally to those sworn to observe and those sworn to require their observ- ance. Another habitual violation of oaths has been seen in the conduct of English judges and jurists in the adminis- tration of the criminal law. The English code was written in blood. Draco would have flustered at the multiplicity of its bloody enactments. Death was inflicted in cases of treason and only upon the value of the thing stolen. With greater regard to the dictates of hu- manity than to their oath-obligations, jurists, at the ang- ragement of the court, and for the express purpose of evad- ing the law, have intentionally returned the article stolen as of less than its true value, to avoid the punishment of death, though they might have benefited by it in the case of conviction. Unanimity, too, is required in jurists. A court is seldom united in its judgments; and in the vast concourse of cases you know how much complexity it is to exist. The really dissenting minority yield to the majority. The court aid or ed- diles, that the man is moved into that condition by partial starvation; thus bringing physical want to their aid to coerce real opinion. The open and profane viola- tion of religion, denote a spirit of disrespect, a ground- less position that in England they have been abolished. In this country a bill that effect, with the application of the late John Quincy Adams, was introduced, but we believed it was defeated. A committee of the British Parliament, in their report on the judicial affairs of British India, recommended the abolition of oaths, on the ground that their moral sanction was void of authority. They accused oaths, or Mohammedans; that the only practical restraint on perjury is the state itself, by the penalty of punishment, for the denial of that oath, and that fear of consequences in a futu- re state, or the loss of character or reputation among their fellow-countrymen. The majority of the people in securing true and honest testi- mony, when they may be influenced by the bias of fear, favor or gain. After the evidence is taken, and the next question upon, and caused by the oath, affords an unanswer- less argument against its being in no nation in the dominion of religion, by the witness. In Barbadoes, and barrenness of the soil, and the natural scarcity of food, there is a characteristic of unenlightened legislation, have excluded with wretchedness of life and the starry heavens. The government, determining what shall be the faith, decrees that dissidents shall be branded as infidels. The term in- fidel, however, is a term of contempt, with a reference to the truth or falsehood of the thing disbelieved. It is the epithet which majorities apply to minorities. And it is one of respect. It has excluded infidels. Hindus and Mohammedans excluded infidels, because of their infidelity, and, by way of reprisal, they in their turn were excluded by Christians for the same cause. Such was the common law, as drawn from its purest fountains—from Flata and Bracton. Coke, its commentators, and the chief political writers, reckoned the worst of all the infidels for, says he, they are perpetual enemies—as between them as subjects, they are, and Christians, there is perpetual hostility and fear for peace; for, as the apostle said, 'And what concord hath men which believe not the same thing, and how can they be at peace with an infidel?' It was not until the East India Com- pany commenced that splendid career of conquest by which the dominium of the Moslem ruler was dispersed. The king was, and it was seen that an urgent necessity required the testi- mony of the natives, that the court, overruling the well- known and long established precedents, established a rule, and in the suit of Omichund, the great Hindoos banker, whose melancholy face reflects little credit on British morality. But it is not enough that all infidels, without reference to their religion, might be received and sworn, according to the customs of their respective countries; not because such was the law, but because to exclude them would be a 'most impolitic no- tion, and would only contribute to destroy all trade and commerce.' Even judicial optimists, with dim and beclouded vision, saw that if the whole population of a country were excluded as infidels, people might be deficient; but it was thought to be to the advantage of the nation to carry on trade and commerce in foreign countries, and in many cases, by health and by consent, those who might be to trample the law under foot. A judicial cavet, how- ever, was this: 'the same code is, or may be, in another place, the same code, either 'by court or jury, to an infidel witness as to a Christian; provided only the wrath of God be im- moral, nor does it appear for the first time in the case of an infidel. The witness imag- ines that the world has been taken by the most cultivated minds of Europe; by the Lord into the bosom of the Church or the State; by those who, from their sta- tion, their education and intelligence, would be least likely to yield to superstition. Their oaths required, therefore, were an admission of the necessity of obedience to statutes framed centuries ago by and for a set of monks, and are as consonant with the present state of society as fit for the actual condition of the witness. A general-in-chief at the head of his army. Consequently, the consequences of such an event would be a matter of astonishment to all, equally to those sworn to observe and those sworn to require their observ- ance. Another habitual violation of oaths has been seen in the conduct of English judges and jurists in the adminis- tration of the criminal law. The English code was written in blood. Draco would have flustered at the multiplicity of its bloody enactments. Death was inflicted in cases of treason and only upon the value of the thing stolen. With greater regard to the dictates of hu- manity than to their oath-obligations, jurists, at the ang- ragement of the court, and for the express purpose of evad- ing the law, have intentionally returned the article stolen as of less than its true value, to avoid the punishment of death, though they might have benefited by it in the case of conviction. Unanimity, too, is required in jurists. A court is seldom united in its judgments; and in the vast concourse of cases you know how much complexity it is to exist. The really dissenting minority yield to the majority. The court aid or ed- diles, that the man is moved into that condition by partial starvation; thus bringing physical want to their aid to coerce real opinion. The open and profane viola- tion of religion, denote a spirit of disrespect, a ground- less position that in England they have been abolished. In this country a bill that effect, with the application of the late John Quincy Adams, was introduced, but we believed it was defeated. A committee of the British Parliament, in their report on the judicial affairs of British India, recommended the abolition of oaths, on the ground that their moral sanction was void of authority. They accused oaths, or Mohammedans; that the only practical restraint on perjury is the state itself, by the penalty of punishment, for the denial of that oath, and that fear of consequences in a futu- re state, or the loss of character or reputation among their fellow-countrymen. The majority of the people in securing true and honest testi- mony, when they may be influenced by the bias of fear, favor or gain. After the evidence is taken, and the next question upon, and caused by the oath, affords an unanswer- less argument against its being in no nation in the dominion of religion, by the witness. In Barbadoes, and barrenness of the soil, and the natural scarcity of food, there is a characteristic of unenlightened legislation, have excluded with wretchedness of life and the starry heavens. The government, determining what shall be the faith, decrees that dissidents shall be branded as infidels. The term in- fidel, however, is a term of contempt, with a reference to the truth or falsehood of the thing disbelieved. It is the epithet which majorities apply to minorities. And it is one of respect. It has excluded infidels. Hindus and Mohammedans excluded infidels, because of their infidelity, and, by way of reprisal, they
OATH

or want of belief, may not merely be conceded, but the oath enacting the same may induce the misfortune of one's life. But because one of the securities for truth may be shamming, and others may rely upon it, all oaths in full force and vigor, the witness should not be heard; and why after, not, as the common law shows, and which belief, such belief not being formed by those who are to decide upon the matter in the disputation of the truth or falsehood of his statements. He is religious and endeavor to believe that he may be be

lively circumstances, that the right of others may be

and, and the law will permit such a person to go unpunished; unless there happens to be a witness whose belief should comport with the judicial idea of competency. Let the witness testify under the pains and penalties of perjury, and the great argument for the wholesale exclusion of testimony by the law is done away with. No intelligent

Judge or juryman ever relied upon the security of an oath alone. Judge of the truth by his appearance, manner, manner and the security of his conscience by his testimony; and, altogether, there is just as much legal 

oath with the lights derivable from every source. Punish

false testimony; they are only affected in proportion to the wrong done, not with one uniform measure of punishment, as if the offence were in all cases the same. Therefore it is, that, under all kinds of oath, the lesser else both are lost. Elevate the standard of versacy by 

requiring it on all occasions, and in this way public mo

really or externally, and the social fabric rests are strengthened.

It may be added in defence of those who approve of the practice of judicial swearing, that such look upon the oath as a reminder of the obligation to tell the truth only, a duty which they claim "man is too prone to forget." The object of all forms of adjuration, they teach, "should be to show us that we are calling the attention of man to God; that we are not calling upon him to punish the wrong-doer, but upon man to re

remember that he will" (Tylor, p. 144). In this sense the oath should be defined as "an outward pledge given by the

jury that his assertion or promise is made under an immediate sense of his responsibility to God." Those who approve of oaths teach that God will punish false swearing with more severity than a simple lie or breach of promise. They regard as the "osaious" of the de

famous: "1. Perjury is a sin of greater deliberation. 2. It violates a superior confidence. 3. God directed the Is

raelites to swear by his name (Deut. vi, 18; x, 20), and was pleased to confirm his covenant with that people by an oath; neither of which, it is probable, he would have done had he not been in the world and intended to have having some meaning and effect beyond the obligation of a bare promise." See PERSY. Promissory oaths, it is generally agreed, are not binding where the promi

se itself would not be so. See PROMISE. As oaths are designed for the security of the imposer, it is manifest that they must be interpreted and performed in the sense in which the imposer intends them.

Refusals to take the oath have been frequent in modern times, but mainly in English-speaking countries. Of Protestants, the Anabaptists were the first to teach their followers not to take it. In the Quakers also this belief was held thus. Like them, the Quakers and the Moravians, applyng literally the words of Christ (Matt. v, 34), re

gard all oaths as unlawful. But other communions generally restrict this prohibition to ordinary and private disputes. Matt. v, 21; i Cor. x, 20; i Pet. iii, 14; 2 Pet. iii, 16; i Thess. iv, 1; Col. ii, 8; and 1 Thess. ii, 5, full warrant for the law

fulness of oaths in judicial and other solemn use. From some passages of the fathers it appears that they had scruples as to the lawfulness of swearing (comp. Brown, Exposition of the XXXIX Articles, p. 840-841); but those Christians whom the fathers reprehend for having the writings of these fathers as for the most part refer

ring to the oaths required of Christians by the pagans, which generally involved a recognition of particular pagan divinities; and that they condemned these pagan oaths, rather as involving, or even directly constituting, a profession of the popular paganism, than as unlawful in themselves. The Christians of the Later ages may perhaps be said to have multiplied in an opposite degree the occasions of oaths, especially of what were called "charitable oaths," in which sense it was sometimes said, in order to avoid a crime justified himself by swearing his innocence. These oaths were commonly accompanied by some impreca

tory form or ceremonial, and were often expected to be followed by immediate manifestations of the divine vengeance upon the perjurer. The common instrument of these was a vow, or promise; this was sometimes a mere formal "taking an oath," but oaths were sometimes sworn on the relics of saints, or other sacred objects; sometimes simply by raising the hand to heaven, or by laying it upon the breast or the head. In canonical processes the oath was often administered to the perjurer, occasionally forms varied very much, the most general being that which the English oath still retains (Sic me Deus adjur.

et). Divines commonly require, in order to the law

fulness of an oath, three conditions (found upon Jer. iv, 2), viz. truth, justice, and judgment; that is to say (1) that it should be true, and that the promise, if the oath be promissory, shall be made and shall be kept in good faith; (2) that the thing promised shall be objectively lawful and good; (3) that the oath shall not be sworn without due discre

tion and deliberation, nor without satisfactory reasons founded on necessity, or at least on grave and manifest utility. Hence the person who is a witness must have sufficient understanding to know the nature and obliga

tions of an oath; and on this ground young children are incompetent to be witnesses. Another condition or qualification required in the case of one who takes an oath as a witness is, that he has a competent sense of religion; in other words, he must not only have some religious knowledge, but some religious belief. He must, in sub

stance, believe in the existence of a God, and in the moral government of the world; and though he cannot be questioned minutely as to his particular religious opinions, yet, if it appear that he does not believe in a God and future state, he will not be allowed to give his evidence, for it is assumed that without the religious sanction his testimony cannot be relied upon. So long, therefore, as atheists are not, in a nominal, in a perfunctory way, and as a mere form of the oath, the mere form of the oath is not material. The usual practice in the United States and in Great Britain is for the witness, after hearing the oath repeated by the officer of court, to kiss the four gospels by way of assurance; and in Scotland the witness repeats similar oaths, and kisses the Bible, in the same way, on the right hand, "swearing by Almighty God, as he shall answer to God at the great day of judgment," but with

out kissing any book. Jews, if they so desire, are sworn on the Pentateuch, keeping on their hats, and the oath ends with the words, "So help you Jehovah." A Mo

hammedan is sworn on the Koran; a Chinese witness has been sworn by kneeling and breaking a China sau

cer against the witness-box. Thus the mere form of taking the oath is immaterial; the witness is allowed to take the oath in whatever form he considers most binding upon his own conscience—the essential thing being, however, that the witness acknowledge some binding effect derived from his belief in a God or a future state. The policy of insisting upon the religious formalities attending the taking of an oath has been much discussed of late years, and it has been disputed whether atheists, who avow an entire absence of all religious be

lief, should be entirely rejected as witnesses (as is some

times the case), and justice be thereby frustrated. See Paley, Moral Philosophy, vol. i, ch. xvi; Grotius, De Jur.

is, i, 11, ch. 8, § 21; Barrow, Works, vol. i, ser. 19; Burnet, Exposition of the Old Testament, vol. ii, part 13, ch. x, 1. Of the science of England, p. 475, 515 sq., Herp, Essay on Truths of Importance and Doctrine of Oaths; Doddridge, Lectures,
OATH OF ABJURATION

Oath of Abjuration is a name for the oath which was administered to the subjects of Scotland after the deposition of King James. The obvious clause in this oath reads as follows:

"And I do faithfully promise, to the utmost of my power, to support, maintain, and defend the succession of the crown against him, the said James, and all other persons whatsoever, who should stand and stand settled by an act entitled 'An Act declaring the Rights and Liberties of the Subject, and setting the Succession of the Crown to her present Majesty and the Heirs of Her Body, being Protestant;' and as the same, by another act entitled 'An Act for the further limitation of the Crown, and better securing the Rights and Liberties of the Subject,' is and stands settled."

See NONJURORS.

Oath of Allegiance. See OATHS OF ALLEGIANCE AND SUPREMACY.

Oath, Burges, an old oath in some Scottish barons. It was:

"Here I protest before God and your lordships that I present to you in my see, among my clergy and my episcopally professed within this realm, and authorized by the laws thereof: I shall abide thereto, and defend the same to my life's end, renouncing the Roman religion called papistry."

Oath of Canonical Obedience. See INSTITUTION; OBEDIENCE; ROMANISM.

Oath of a Christian. See the last of the THIRTY-NINE ARTICLES.

Oath of Conformity and Obedience is the title of the vow taken by all benefited preists, professors, and bishops of the Roman Church. The oaths taken by the priests and professors will be inserted in the article ROMANISM. We make room here only for the bishop's oath, which is translated from the Pontifical Romanum, published by authority of the pope, and reprinted at Rome in 1689 by the Congregation of Rites and the Propaganda:

"I, N., elect of the Church of N., from this hour henceforward will be faithful and obedient to the blessed Peter the apostle, and to the holy Roman Church, and to our lord, the pope (Plano), pope N. [IX.], and to his successors canonically coming in. I will not advise, or counsel, or do anything that they may lose life or member, or be taken by an evil devise, or have hands violently laid upon them in any way, or have injuries offered to them under any pretence whatsoever. The counsell which they shall insist to me, by themselves, or by their messengers or letters, I will not, to their harm, knowingly reveal to any one."

The Roman papacy and the royalties of St. Peter will I help them to retain and defend, without prejudice to my order, or the dignities, and liberties, and worship of the holy apostolic see, in his going and returning, I will treat all manner of persons, and all manner of people, in the same manner as I have treated my predecessors and the apostolic successors. The rights, honors, privileges, and authority of the holy apostolic see, and the crown I am subject to as aforesaid successors, I will take care to preserve, defend, increase, and promote. Nor will I be in any connection, or deal, or working, for which things my predecessor or successors, or I, or anyone of my successors, or any others whatsoever in my name, my order, or my crown, may do to the knowledge of the people. The Holy See, apostles, and all the orders of the holy church, and all things, and if this be necessary, my crown, I will defend and perpetuate. And if I should know any thing that is to be taken in hand or managed by any whomsoever, I will hinder this as far as I can; and as soon as it shall be possible I will be ready, and will submit to our said lord, or to some other one by whom it may come to my knowledge."

See NONJURORS.

OATH OF CONFORMITY

The Roman Bishop elect taking the Oath.

"VII.—9*

[Image of Roman Bishop elect taking the Oath]
With my whole strength I will observe, and cause to be observed by others, the rules of the holy fathers, the decrees, ordinances, or dispositions, and mandates of the apostles. I will hereafter profit by a certain other special cause for this purpose, a priest of the diocese, or by some secular or regular priest of tried virtue and piety, who has been elected on all the above subjects. I will not sell, nor give away, nor mortgage, enfeoff anew, nor in any way alienate the possessions belonging to my table, unless by the leave of the Roman pontiff. And should I proceed to any alienation of them, I am willing to contract, by the very fact, the penalties specified in the common statutes or enactments on this subject. The consecrated bishop, holding the Gospels on his lap, and received the oath from the bishop-elect, olendo, also put both hands upon the book, and said, "So may God help me, and these holy Gospels of God."

The bishop-elect and the assistant bishops now took their seats, and while the consecrated read aloud the epiclesis (examination) the assistant bishops accompanied his words in a low voice. The concluding questions were answered by the bishops elect. "Ita ex toto corde, solo in omnibus consensu et obole" (Thus from my whole heart I desire in all things to consent and to obey). Among the questions in the examination are the following:

1. Observe. — Will thou teach, both by word and example, the people for whom thou art to be ordained those things which thou understandest from the holy Scriptures?
2. Assent. — I will.
3. Oath. — Will thou venerate receive, teach, and keep the traditions of the orthodox fathers and the decrees of the councils of the holy and apostolic sees?
4. Oath. — I will.
5. Oath. — Will thou exhibit in all things fidelity, subjecting thyself to the obedience, according to the duty, to the blessed Peter the apostle, to whom was given by God the power of binding and loosing: and to his vicar, our lord pope Plus IX, and to his successores the Roman pontiffs?
6. Oath. — I will.

The examination having closed, the bishops elect were led to the consecrator, before whom they knelt, and reverently kissed his hand. Mousignor Bedini, laying off his mitre, turned to the altar and commenced the mass, the bishops elect being at his left hand, and the assistant bishops at their seats. See Barnum, Romanism, p. 27.

Oath of Purgation. In an ecclesiastical process, when full proof is not to be had against a person accused and strongly suspected, he is allowed at length to clear himself by an oath:

"I, A B, now under process before the Session of the Congregation of C for the sin of..., alleged to have been committed by me for ending certain cases, and giving satisfaction to all, do declare, before God and this session, that I am innocent and free of the said sin of...; charge that has been cast against me, I hereby declare to be false. Great God, the judge and avenger of all falsehood, to be witness, and judge, and let me in this matter be guilty. And this I do by taking his blessed name in my mouth, and swearing by him who is the searcher of the heart, and that in sincerity, according to the truth of the matter and my own innocence, as I shall answer at the great day of judgment, when I stand before him to answer for all that I have done in the flesh, and as I would partake of his glory in heaven after this life is at an end."

Oath against Simony. Canon xni, in the Church of England, provides the following oath:

"I do swear that I have made no simoniacal payment, contract, or promise, directly or indirectly, by myself or by any other, for any knowledge, or information, to any person or persons whatsoever, for or concerning the punishment of any ecclesiastical person, whose preferment, office, or living, nor will at any time hereafter perform or satisfy any such kind of payment, contract, or promise made by any other without my knowledge or consent. So help me God, through Jesus Christ."

See SIMONY.

Oath of Supremacy. See OATHS OF ALLEGIANCE AND SUPREMACY.

Oaths of Allegiance and Supremacy.

The appointment of these oaths was a measure of defence against the pretensions and practices of Romanism.

1. The Oath of Allegiance (1600), or of submission to the king as temporal sovereign, independently of any earthly power, took its rise from the discovery of the Gunpowder Plot. The Oath of Allegiance is as follows:

"I, A B, do sincerely promise and swear that I will be faithful, and bear true allegiance to her majesty queen Victoria: So help me God." 2. The Oath of Supremacy (1559) was connected with the Act of Supremacy, which was entitled "An Act for restoring to the crown the ancient jurisdiction over the state ecclesiastical, and abolishing all foreign power repugnant to the same." It was the same in effect with an act passed in the reign of Henry VIII., but falls short of that which was afterwards ennobled by being joined to all ecclesiastics, on penalty of forfeiting their promotions, and of being incapable of holding any public office. The taking of this oath was enforced by a stringent act of Parliament in 1558. The Oath of Supremacy is —

"I, A B, do swear that I do from my heart abhor, detest, and abjure, as impious and heretical, that damnable doctrine and position that princes excommunicated or deprived by the pope, or by any other authority of the see of Rome, may be deposed or murdered by their subjects or any other whatsoever. And I do declare that no foreigner, superior or inferior, can have any power or authority to have any jurisdiction, power, pre-eminence, or authority, ecclesiastical or spiritual, within this realm. So help me God in the name of the holy Trinity." 3. Dispensations for violating oaths form one of the most frightful features of popery. Many theologians and canonists in that Church have inculcated this doctrine. Quotations might be given to this effect from Bailly, Denis, Cajetan, Aquinas, Bernard, and the Jesuits. One specimen may be taken from Denis, who says: 'A work is a standard of popery in Ireland.' He says a confessor "should assert his ignorance of the truths which he knows only by sacramental confession, and confirm his assertion, if necessary, by oath. Such facts he is to conceal, though the life or safety of a man, or the destruction of the state, depended on the disclosure." The reason assigned is as extraordinary as the doctrine itself: "The confessor is questioned and answers as a man. This truth, however, he knows not as man, but as God." See Willett, Synop. Pop. (Index in vol. vii.)

Obadjah (Heb. Obadzha, עבּדְזָחא, servant of Je- hovah [1 Chron. ii, 21; vii, 3; viii, 38; ix, 16, 44; Ezra vii, 9]; elsewhere the lengthened form, Obadzha, עבּדְזָחָא; [Sept. variously, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς, Ἀβαίς; v. t. Ἀβαίς, ὁ ἄνδρας τοῦ Ἰβαίς, ὁ ἄνδρας τοῦ Ἰβαίς, ὁ ἄνδρας τοῦ Ἰβαίς]. The name was in use among the Hebrews, corresponding to the Arabic Abudallah.

1. The second in order of the eleven lion-faced Gattites, captains of the host, who joined David's standard at Ziklag (1 Chron. xii, 9). B.C. 1054.
2. The father of Jeshuaiah, which latter was chief of the tribe of Zebulon in David's reign (1 Chron. xxvii, 19). B.C. ante 1014.
3. According to the received text, the third named of the five sons of Izriahah, a descendant of Issachar, and a chief man of his tribe (1 Chron. vii, 3).
4. Only mentioned by the Chronicler. His name is retold in four of Kennicott's MSS., which omit the words "and the sons of Izriahah," thus making Izriahah the brother, and not father, of Obadiah, and both sons of Uzi. The Syriac and Arabic versions follow the received text, but read "four" instead of "five" (Smith). The latter is the less probable reading, as the other can be readily explained as an error of repetition. The five "sons" are doubtless here descendants, of the time of David. B.C. cir. 1014.
5. The second named of five nobles ("princes") whom king Jehoshaphat sent as lieutenant teachers in the cities of Judah (2 Chron. xvii, 7). B.C. 909.
6. An officer of high rank in the court of Ahab, who is described as "over the house," that is, apparently, lord high chamberlain, or mayor of the palace (1 Kings
OBADIAH

viii, 3). B.C. cir. 904. His influence with the king must have been great to enable him to retain his position, though a devout worshipper of Jehovah, during the fierce persecution of the prophets by Jezebel. At the peril of his life he concealed a hundred of them in caves, and fed them there with bread and water. But he himself does not seem to have been suspected (xviii, 4, 13). The occasion upon which Obadiah appears in the history shows the confidential nature of his office. In the third year of the terrible famine with which Samaria was visited, when the fountains and streams were dried up consecutively by long-continued drought, and horses and mules were perishing for lack of water, Ahab and Obadiah divided the land between them, and set forth, each unattended, to search for whatever remains of herbage might still be left around the springs and in the fissures of the river-beds. Their mission was of such importance that it could only be intrusted to the two principal persons in the kingdom. Obadiah was started on his solitary journey by the abrupt appearance of Elijah, who had disappeared since the commencement of the famine, and now commanded him and Ahab to go their way (2 Chr. xiii, 1). Ahab, who had a son, Jezabel, and Arahi, and the king of the house of Jehoshaphat, apparently afraid that his long-continued attachment to the worship of Jehovah should thus be disclosed and his life fail a sacrifice. At the same time he was anxious that the prophet should not doubt his sincerity, and appealed to what he had done in the persecution by Jezebel, and all the evils he had experienced by Jezebel for his intention of encountering Ahab, and Obadiah had no choice but to obey (xviii, 7-16). The interview and its consequences belong to the history of Elijah (q. v.). According to the Jewish tradition preserved in Ephrem Syrus (Assem. Bibl. Or. Clem. p. 70), Obadiah the chief officer of Ahab was the same with Obadiah the prophet. He was of Shechem in the land of Ephraim, and a disciple of Elijah, and was the third captain of fifty who was sent by Ahab (2 Kings i, 13). After this he left the king's service, prophesied, died, and was buried. The "certain woman of the wives of the sons of the prophets" who came to Elisah (iv, 1) was, according to the tradition in Rashi, his widow. 6. The fifth named of the six sons of Azel (1 Chron. vii, 38; ix, 44), and a descendant of Jonathan, son of Saul, in the tenth generation. B.C. cir. 730. 7. A noted prophet, his name being the same with that of his master (2 Kings x, 1). As Obadiah is not mentioned in the Bible except when certain of him except what we can gather from the very short prophecy which bears his name, we shall find it most convenient to consider him personally in connection with his book. In doing this we gather together whatever is available in the ancient testimony with the modern speculations upon it. 1. Date.—The attempts to identify him with one or other of the persons of the same name mentioned in Scripture are mere unfounded conjectures. Entirely baseless also is the suggestion of Augusti (Einlaut, § 225) that ἤδαιμων, in the title of this prophecy, is an appellativum—"a servant of Jehovah, or "some pious person," for the word is never so used, and all the ancient versions give it as a proper name; nor is there any ground for the assertion of Arababnel that he was an Idumean, who, on becoming a proselyte to Judaism, took the name of servant or worshipper of Jehovah (Perey in Ezech. p. 158, col. 4; see also Jarchi on ver. 1 of the Prophecy). The Tarqum on 2 Kings iv, 1, and Josephus, Ant. ix, 4, followed by Christians, e. g. Jerome, as well as Jews, Kircher, Albarani, and others, identify this Obadiah with the husband of that woman "of the wives of the prophets who sought the protection of Elijah for her two sons from their father's creditor (2 Kings iv, 1); for of Obadiah, the governor of Ahab's house, it is said that he "feared the Lord greatly," and of the husband of this widow that he "did fear the Lord," and it is supposed that the gift of prophecy was conferred on him as a reward for his singular faith and clemency. The question of his date must depend upon the interpretation of the 11th and 20th verses of his prophecy. He there speaks of the conquest of Jerusalem and the captivity of Jacob. If he is referring to the well-known captivity by Nebuchadnezzar, he must have lived at the time of the Babylonian captivity, and prophesied subsequently to the year B.C. 588. If, further, the prophecy against Edom found its first fulfilment in the conquest of that country by Nebuchadnezzar in the year B.C. 588, we have its date fixed. It must have been uttered at some time in the five years which intervened between these two dates. Jäger (so also John and others) argues at length for an earlier date. He admits that ver. 11 refers to a capture of Jerusalem, but maintains that it may apply to its capture by Shishak in the reign of Rehoboam (1 Kings xvii, 25; 2 Chron. xii, 2); by the Philistines under King Joab (2 Sam. ii, 8, xvi, 16); by Joash in the reign of Amaziah (xxv, 22); by the Chaldæans in the reigns of Jehoiakim and of Jehoiachin (2 Kings xxiv, 2, 10). The Idumeans might, he argues, have joined the enemies of Judah on any of these occasions, as their invertebrate hostility from their intercourse by sea and by land prevented their uniting, e. g. Joel iii, 19; Amos i, 11. He thinks it probable that the occasion referred to by Obadiah is the capture of Jerusalem by the Ephraimites in the reign of Amaziah (2 Chron. xxv, 22). The utmost force of these arguments is a very questionable possibility. Hengstenberg (Gesch. Bibl., p. 295), Hverringen (Ei. ii, 821), and Caspari (Der Prophet, Obadiah), while admitting that the prophecy relates to the time of the captivity, would assign an earlier date to its composition, placing that in the reign of Uzziah, and regarding the reference to the Chaldaean invasion as prophetic. The only argument of any weight for the early date of Obadiah is his position in the list of the books of the minor prophets. Why should he have been inserted between Amos and Jonah if his date is about B.C. 585? Schnurrer seems to answer this question satisfactorily when he says that the prophecy of Obadiah is an amplification of the last verses of Amos, and was therefore placed next after the book of Amos. The conclusion in favor of the later date assigned to him is that of most critics, including Feilcr, Schnurrer, Rosenmüller, De Wette, Grotius, and Maurer, and the English commentators generally. 2. Originality.—The exceedingly brevity of this prophecy gives no good reason to regard it (with Eichhorn and others) as only a fragment of a longer writing. It is a compact and complete composition, and has no appearance of having been detached from another work. From a comparison of Obad. ver. 1-4 with Jer. xlix, 14-16; Obad. ver. 6 with Jer. xlix, 9, 10; and Obad. ver. 8 with Jer. xlix, 7, it is evident that there was some connection between the two works. It is not easy, however, to decide whether one or other of the two was copied from the other, or whether both were borrowed from a common source (see Horne's Introd. ii, 955, 10th ed.); but from the fact that Jeremiah had made use of the writings of other prophets also, it has generally been concluded that Obadiah was the original writer (see Eichhorn, Einlaut, § 492; Rosenmüller, Commentary, and Jäger, Ueb. die Zeit Obadijah's). That Obadiah borrow- ed from Jeremiah has been maintained by Credner, De Wette, and others. De Wette supposes (Introd. § 283) that Obadiah made use of Jeremiah from recollection; Bähr holds (Einlaut, § 1527) that nothing is to be found ever lived. Those who give an early date to Obadiah thereby settle the question of borrowing. Those who place him later leave the question open, as he would in that case be a contemporary of Jeremiah. Luther
holds that Obadiah followed Jeremiah. Schnurrer
makes it more probable that Jeremiah's prophecy is an
altered form of Obadiah's. Eichhorn, Schlutz, Rosen-
müller, and Maurer agree with him. Whatever be
the relation of Jeremiah to Obadiah, Obadiah is indepen-
dent of Jeremiah. The verses common to the two form
in Obadiah a completely new and unprogressive vision,
in Jeremiah they are scattered and disjointed. This
feeling was so powerful with Ewald that he could not
regard Obadiah as the follower of Jeremiah, but con-
cluded that Obadiah 1-10 and ver. 17, 18 belonged to an
earlier work, which had been appended or added by Obadiah,
i.e. the writer of the present book, and freely
used by Jeremiah (Prophe
eti, I, 599). Stihelin, too,
under the same feeling, though he regards Jeremiah's
original prophecy as having exceeded Obadiah's, yet
fancies that Jeremiah in his latest revision of his
prophecies used Obadiah, and embodied much of him
in his own work! (Ewst, p. 312). Bleek, who also con-
iders Jeremiah prior to Obadiah, yet comes to this con-
clusion because he fancies the day of Jacob's calamity
can be no other than the Chaldean conquest; still he
does not bring the one out of the context of a com-
motion with the other (Ewst, p. 587).
There are likewise remarkable coincidences between
Obadiah and others of the minor prophets, especially
Joel. Both call the treatment of Judah by Edom vio-
ence (Joel iv, 19; Obad, 10, comp. Amos ii, 11); both com-
pare the Edomites to a great serpent (Isaiah ii.
Jerusalem) (Joel iv, 5; Obad, 11); both say it was done by stran-
gers (Joel iv, 17; Obad, 11); both use the formula, cost
lots on Jerusalem (Joel iv, 5; Obad, 11; again in Nah.
ill, 10); both speak of the day of the Lord (Joel iv, 14;
i, 5; Obad, 15); both make prominent the idea of re-
emption in that day (Joel iv, 4, 7; Obad, 15); both speak of
the remnant or refuge that shall be in that day (Joel
iii, 5; Obad, 17), both saying it shall be on Mount Zion
(Joel iii, 5; Obad, 17), and both that it shall be holy
(Joel iv, 17; Obad, 17); both employ the simile of fire
for a destroyer (Joel ii, 8; Obad, 18); and both clinch
their predictions against Jerusalem's foes and in-
vaders with the formula, For the Lord hath said it (Joel
iv, 8; Obad, 18). The correspondences with Amos are
fewer, consisting mainly in the similarity of their allu-
sions to Edom, the absorption of which by Israel is pre-
picted by both (Amos iv, 12; Obad, 21), an advance
over Joel, who merely predicts Edom's destruction.
3. Contents, and their Verification.—The book of
Obadiah is a sustained denunciation of the Edomites, melt-
ing, as is the wont of the Hebrew prophets (comp. Joel
iv, 13), into a vindication of the fortunes of Zion, when
the arm of the Lord should have wrought her de-
livance and have repaid double upon her enemies.
Previous to the captivity, the Edomites were in a simi-
lar relation to the Jews with that which the Samaritans
afterwards held. They were near neighbors, and they
were relatives. The result was that intensified hatred
which such conditions are likely to produce, if they do
not produce cordiality and good-will. The Edomites
are the types of those who ought to be friends and are
not—of those who ought to be helpers, but in the day of
their blessing found themselves on the other side. The
prophet first touches on their basis of justification, and
then denounces their "violence against their brother Jacob" at the time of the capture of Jeru-
salem. There is a sad tone of reproach in the form in
which he throws down his denunciation, that contrasts with the parallel denunciations of Ezekiel (xxv and xxxv),
Jeremiah (Lam, iv, 21), and the author of the 137th Psalm, which seem to have been uttered on the same
occasion and for the same cause. The Psalmist's 'Re-
member the children of Edom, O Lord, in the day of
Jerusalem, how they say, Down with it, down with it,
even to the ground!" coupled with the succeeding reproach on Babylon, is a sternest utter-
ance, by the side of which the "Thou shouldst not" of
Obadiah appears rather as the sad remembrance of
disappointment. He complains that they looked on
and rejoiced in the destruction of Jerusalem; that they
triumphed over her and plundered her; and that they
cut off the fugitives who were probably making their
way through Idumea to Egypt.

The last six verses are the most important part of
Obadiah's prophecy. The parallel denunciation presented to
the prophet is that of Zion triumphant over the Idumeans
and all her enemies, restored to her ancient possessions,
and extending her borders northward and southward and
eastward and westward. He sees the house of Jacob who has been assigned the lands originally occupied by Obadiah, i.e. the writer of the present book, and freely used by Jeremiah (Prophe
eti, I, 599). Stihelin, too, under the same feeling, though he regards Jeremiah's original prophecy as having exceeded Obadiah's, yet fancies that Jeremiah in his latest revision of his prophecies used Obadiah, and embodied much of him in his own work! (Ewst, p. 312). Bleek, who also con-
siders Jeremiah prior to Obadiah, yet comes to this con-
clusion because he fancies the day of Jacob's calamity
can be no other than the Chaldean conquest; still he
does not bring the one out of the context of a com-
motion with the other (Ewst, p. 587).
There are likewise remarkable coincidences between
Obadiah and others of the minor prophets, especially
Joel. Both call the treatment of Judah by Edom vio-
ence (Joel iv, 19; Obad, 10, comp. Amos ii, 11); both com-
pare the Edomites to a great serpent (Isaiah ii.
Jerusalem) (Joel iv, 5; Obad, 11); both say it was done by stran-
gers (Joel iv, 17; Obad, 11); both use the formula, cost
lots on Jerusalem (Joel iv, 5; Obad, 11; again in Nah.
ill, 10); both speak of the day of the Lord (Joel iv, 14;
i, 5; Obad, 15); both make prominent the idea of re-
emption in that day (Joel iv, 4, 7; Obad, 15); both speak of
the remnant or refuge that shall be in that day (Joel
iii, 5; Obad, 17), both saying it shall be on Mount Zion
(Joel iii, 5; Obad, 17), and both that it shall be holy
(Joel iv, 17; Obad, 17); both employ the simile of fire
for a destroyer (Joel ii, 8; Obad, 18); and both clinch
their predictions against Jerusalem's foes and in-
vaders with the formula, For the Lord hath said it (Joel
iv, 8; Obad, 18). The correspondences with Amos are
fewer, consisting mainly in the similarity of their allu-
sions to Edom, the absorption of which by Israel is pre-
picted by both (Amos iv, 12; Obad, 21), an advance
over Joel, who merely predicts Edom's destruction.
3. Contents, and their Verification.—The book of
Obadiah is a sustained denunciation of the Edomites, melt-
ing, as is the wont of the Hebrew prophets (comp. Joel
iv, 13), into a vindication of the fortunes of Zion, when
the arm of the Lord should have wrought her de-
livance and have repaid double upon her enemies.
Previous to the captivity, the Edomites were in a simi-
lar relation to the Jews with that which the Samaritans
afterwards held. They were near neighbors, and they
were relatives. The result was that intensified hatred
which such conditions are likely to produce, if they do
not produce cordiality and good-will. The Edomites
are the types of those who ought to be friends and are
not—of those who ought to be helpers, but in the day of
their blessing found themselves on the other side. The
prophet first touches on their basis of justification, and
then denounces their "violence against their brother Jacob" at the time of the capture of Jeru-
salem. There is a sad tone of reproach in the form in
which he throws down his denunciation, that contrasts with the parallel denunciations of Ezekiel (xxv and xxxv),
Jeremiah (Lam, iv, 21), and the author of the 137th Psalm, which seem to have been uttered on the same
occasion and for the same cause. The Psalmist's 'Re-
member the children of Edom, O Lord, in the day of
Jerusalem, how they say, Down with it, down with it,
even to the ground!" coupled with the succeeding reproach on Babylon, is a sternest utter-
ance, by the side of which the "Thou shouldst not" of
Obadiah appears rather as the sad remembrance of

her adversaries. Whether that fulfillment has already occurred in the spread of the Gospel through the world, or whether it remains to come (Rev. xx. 4), for whether, being conditional, it is not to be expected safely in a limited and curtained degree, is not to be determined here.

The book of Obadiah is a favorite study of the modern Jews. It is here especially that they read the future fate of their enemies and themselves. Those unseen in their literature may wonder where the Christians are found in the book of Obadiah. But it is a fixed principle of rabbinical interpretation that by Edomite is prophetically meant Christians, and that by Edom is meant Rome. Thus Kimchi (on Obadiah) says, "The prophets and their successors have said about the destruction of Edom in the last times has reference to Rome." So rabbi Bechai, on Isa. lxxvi, 17; and Abarbanel has written a commentary on Obadiah resting on this hypothesis as its basis. Other examples are given by Buxtorf (Lex. Talm. in voc. דומא and סננה) and Synagogas Judaicae) The reasons of this rabbinical dictum are as various and as ridiculous as might be imagined. Nachmanides, Dechi, and Abarbanel say that Janus, the first king of Latium, was grandson of Esau. Kimchi (on Joel iii, 19) says that Julius Caesar was an Idumean. Scaliger (ad Chron. Euseb. n. 2192) reports, "The Jews, both those who are comparatively ancient and those who are modern, believe that Titus was Esau, and when the prophets denounced Edom they frequently refer to it as Titus." Aboe-Ezza says that there were no Christians except such as were Idumeans until the time of Constantine, and that Constantine having embraced their religion, the whole Roman empire became entitled Idumean. Levy says that some of the Jews read Roman, Rome, or מרים, Dubrov, in Isa. xxvi, 11. Finally, some of the rabbis, and with them Abarbanel, maintain that it was the soul of Esau which lived again in Christ. The color given to the prophecies of Obadiah, when looked at from this point of view, is most curious. The following is a specimen from Abarbanel on ver. 1: "The true explanation, as I have said, is to be found in this: The Idumeans, by which, as I have shown, all the Christians are to be understood (for they took their origin from Rome), will go up to lay waste Jerusalem, which is the seat of holiness, and where the tomb of their God Jesus is, as indeed they have several times gone up already, nor have any of them ever attempted that, because they were deposed, and that from Edom proceeded the kings who reigned in Italy, and who built up Rome to be great among the nations and chief among the provinces; and in this way Italy and Greece and all the western provinces became filled with Edomites, and the name of Rome is the name of this Edom, which was the whole of that nation by the name of Edom." On ver. 8: "There shall not be found counsel or wisdom among the Edomites, and their children when they go up to that war." On ver. 19: "Those who have gone as exiles into the Edomites, that is, into the Christians' land, and have there suffered affliction, will desire to have the best part of their country and their metropolis as Mount Seir." On ver. 20: "Sarepta is France," "Sepharad" is "Spain." The "Mount of Esau," in ver. 21, is "the city of Rome," which is to be judged; and the Jews are not to be the [Jewish] Messiah and his chiefians, who are to be "Judges." 4. Style, etc.--The language of Obadiah is pure; but John and others have observed that he is inferior to the more ancient prophets in his too great addiction to the interrogatory form of expression (see ver. 8). His sentences are noble, and his figures bold and striking (De Wette's Introduct. Engl. tran.). De Wette's translator observes that his hatred towards other nations is not so deep and deadly as that of some of his younger contemporaries. 5. Commentary.--The special exegetical helps on this prophecy are the following: Ephraem Syrus, Explanation (in Syriac, in his Opp. v, 269); Jerome, Commentarius (in Opp. ii, 145); Hugo & St. Victor, Annotaciones (in Opp. i); Luther, Enarratio (in Opp. iii, 1585); Regius, Regius Commentarius (in Opp. iii, 100); Dagonio, Commentarios (Argent. 1588, 8vo.; Rost. 1548, 8vo.; 1598, 4to.; Del Castillo, Commentarius (Rom. 1556, 4to.; Pontac, Commentarius (Rabbinic, includ. other books) [Par. 1566; Hebr. only]. Jena, 1767, 4to.; Grynus, Commentarius (Basil. 1584, 8vo.; De Loet, Commentarius [includ. all. J.; Samt. 1590, 4to.; Drusius, Lectiones [includ. other books] (Lugd. 1595, 8vo.; Leucht, Erklärung (Darmst. 1606, 4to.; Reynolds, Application (Lond. 1618, 4to.; Reuter, Commentarius (Fr.; ad Od. 1617, 4to.; Gesley, Commentarius (Hamb. 1618, 8vo.; Zieric, Erklärung (Rotenb. 1620, 4to.; Mercier, Commentarius [from the Rabbinics, includ. other books] (Lugd. 1621, 4to.; Tarnovius, Commentarius (Rost. 1624, 4to.; Marbury, Commentarius (Lond. 1689, 4to.; Ellis, Commentarius (ibid. 1641, 4vo.; König, Dissertationes (Alt. 1647, 4to.; Leusden, Commentarius [from the Rabbinics, includ. Joel] (Ultraj. 1657, 4vo.; Stephens, Rabbi's Comment. [in Heb., includ. other books] (Par. 1658, 4to.; Pilkington, Exposition [includ. Hag.] (Lond. 1662, 8vo.; also in Works, p. 201); Pfeiffer, Commentarius (Ultraj. 1666, 8vo.; Croke, Cronicus Rabbinic (Brem. 1678, 4to.; Wasmuth, Rabbin's Comment. [in Heb.] (Jen. 1678, 8vo.; Acoculthus, Adnotationes [on the Armenians] (Lips. 1680, 8vo.; Leigh, Commentaries (Hafn. 1697, 4to.; Heupel, Adnotationes (Argent. 1693, 4to.; Outhoff, Verklärung (Gron. 1700; 8vo.; Dort, 1704, 4to.; Ehrlich, Erklärung (Frankf. und Leips. 1719, 4to.; Abruoch, Specim. philol. [on vers. 1-8] (Fr. ad M. 1757, 4to.; Schrör, Erklärung (Bresl. and Leips. 1766, 8vo.; Hoppach, Anmähr. (Coburg, 1779, 8vo.; Köhler, Anmähr. [on certain parts] (in Eichhorn's Repertor. 2003; 2005; Schnurrer, Dissertation (Tubing. 1787, 4to.; also in his Dissertation. p. 388); Holzapfel, Erklärung (Rinteln, 1796, 8vo.; Plum, Observationes [includ. Hab.] (Götting. 1796, 8vo.; Grimm, Edito [on the Syriac, includ. Jonah] (Duisb. 1799, 8vo.; Venema, Lect. (in Oppus. Ultraj. 1810); Krahmer, Observationes [on parts] (Marb. 1846, 8vo.; Hendewerk, Enucleatio (Regiom. 1886, 8vo.; Jüger, Zeitalter Ob. (Tubing. 1887, 8vo.; Caspari, Auslegung (Leips. 1842, 8vo.; also in Delitzsch and Caspari's Exeg. Handb.). See Prophets, Minor. 9. A descendant of David (1 Chron. iii, 21), probably the same as Arman (1 Sam. and 2 Sam.); carved its standing image, which is the "image," "image of the sons of"; apparently the same with Judah (Luke iii, 20) and Antid (Matt. i, 13) of Christ's genealogy (q. v.). B.C. cir. 470. 10. The son of Jehiel, and descendant of Joab, who led back from captivity, under Ezra, a company containing two hundred and eighteen male kinsmen (Ezra vii, 9). B.C. 450. 11. A Levite, son of Shemiaiah, and descended from Jeduthun (1 Chron. ix, 16). He appears to have been a principal musician in the Temple choir in the time of Nehemiah (Neh. xii, 25). B.C. cir. 446. It is evident, from a comparison of the last-quotation with 1 Chron. 25:17 and Neh. xi, 17-19, that the first three names, "Mattaniah, Bakubiah, and Obadiah," belong to ver. 24, and the last three, "Meshullam, Talmon, Akkub," were the families of porters. The name is omitted in the Vat. MS. in Neh. xii, 25, whereas the Codex Fred. Aug. has it here. In Neh. xi, 17 this Obadiah is called "Abda, the son of Shammua." 12. One of the priests who joined in the covenant with Nehemiah (Neh. x, 9). B.C. 440. Obadiah, a name common to many distinguished Jewish writers, of whom the following are especially noteworthy: 1. OBADIAH IN BOZZOLO, so called from his native place, Bozoozo, in Italy, flourished about the beginning
of the 14th century, and wrote "עֲבֵּד אֲדֹנָי הִימָר a cabalistic exposition and explanations of the Jewish ritual, consisting of four parts, of which the first part, entitled שָׁלֹחַ הַיָּמָּה, "the tree of life," treats of meals of the second, רֹאשִׁי הַיָּמָּה, "the fountain of life," treats of what is to be done when going to bed; the third, מַעָּלָה הַיָּמָּה, "the way of life," treats of the reading of the law in the original and in the Chaldee paraphrase; and the fourth part, entitled מְדַבֵּר הַיָּמָּה, "the path of life," treats of mystical thoughts during prayer. Only the first two parts were printed in Paris in 1546, but the latter is to be found in MS in the Oppenheim Library. See First, Bibl. Jud. i. 129; Wolf, Bibl. Heb. i. 375; iii. 606; Jöcher, Allgemeines Gelehrten-Leben.

2. OBADIAH BEN-DAVID, who flourished about 1522, and wrote a commentary on that section of Maimonides' (q. v.) 1. Jad ha-Cheraka which treats on the Jewish calendar and astronomy, reprinted in the ed. of the Jad ha-Cheraka ed. by D. N. Torres (Amst. 1702, fol., and often since). See First, Bibl. Jud. iii. 43; Wolf, Bibl. Heb. i. 938 sq.; iii. 855 sq.; Jöcher, Allgemeines Gelehrten-Leben.

3. OBADIAH DA BERTRONI, who flourished A.D. 1461, was a native of Citta di Castello, which is the Roman province of Ancona, Italy. In the year 1488 he left his native place for Palestine, where he soon occupied a high position, having been appointed chief rabbi at Jerusalem. This eminent place he held until his death, which occurred in 1520. He is especially known in Jewish literature for the commentary on the Mishnah, the הַיָּמָּה, which is generally reprinted in the editions of the Mishnah, and which has also been translated into Latin by Surenhusius in his excellent edition of the Mishnah. Obadiah also wrote a commentary on Ruth, entitled יִשָּׂה יִשָּׂה, printed at Cracow under the title הַיָּמָּה יִשָּׂה, and reprinted in the collection הַיָּמָּה הַיָּמָּה (Venice, 1585). Besides, he wrote a super-commentary on Rashi's commentary on the Pentateuch, entitled הַיָּמָּה הַיָּמָּה (Pisa, 1810; Solikow, 1837; Censorwitz, 1857). See First, Bibl. Jud. i. 113 sq.; Wolf, Bibl. Heb. i. 988; ii. 965; De Rossi, Dizionario storico degli autori Ebrei (Germ. transl. by Hamberger); Jost, Gesch. der Juden, i. 278 sq.; Gritzner, Gesch. d. Juden, ix. 50, 94, 234; Ederich, "Introduction to Hebrew Literature," p. 414; Steinachendorf, Catalogus librorum Hebr. in Bibliotheca Bodleiana, col. 2075; Kitto, Cyclopedia, s. v. Obad., "Jahrbuch der Gesch. d. Juden u. d. Judenkom.," ii. 945, (B. P.)

Obed (Heb. עָבֵד, בֶּן עָבֵד, a bare district; Sept. Οἰκήμα τοῦ Ὀβαδῆ), son of Joktan, B.C. post 2060, and head of an Arabian tribe, mentioned in Gen. x. 28, and of the region wherein it dwelt, 1 Chron. i. 22 (where it is called עָבֵד, q. v.). Bochart (Phal. ii. 23) understands the עָבֵד, a people on the Syrian coast, near the Strait of Bab-el-Mandeb (Ptol., iv. 57), v. עָבֵד, name of the Sinus Abilites (Piniy, vi. 34). They were a commercial people (Forster, Geogr. d. Arab., iv. 148). Others make Obed the same with the ג 보면ית of Josephus (Phyl. i. 12, ii. 1, 2; iii. 2, 1; see Schultz, Parad. p. 84), but here there is not even a resemblance עבֵד and עבֵד. See ARAMIA.

Obed-edom (O′bēd-ēdōm v. r. 'Oβεδ-ĕdôm; Vulg. Obad), a corrupt form of (1 Esdr. v. 58) of the Heb. name HABABAI (Ezra ii. 61).

Obduracy. See HARDNESS OF HEART; SIN.

Obe, Obesh, or Obi (etymology unknown), designates a species of witchcraft practiced among the Negroes, especially in the West Indies, the apprehension of which, operating upon their superstitious fears, is frequently attended with disease and death. This custom is called an Obah man or Obah woman. It differs in no essential respect from the corresponding superstitions all over Africa. See MAGIC; WITCHCRAFT.

O'bed (Heb. עָבָד דֶּוָד, сера́н, i. e. of Jehovah; Sept. Οὐβέδ in Ruth, and so in the N. T.; Ιουβεδ in Chronicles, the name of several Hebrews. See also OBAD-EDOM.

1. The son of Boaz and Ruth, and father of Jesse the father of David, according to the apparently incomplete genealogical list (Ruth iv. 17; 1 Chron. ii. 12). B.C. cir. 1800. The name occurs in the genealogies of Christ given by Luke (iii. 33) and Luke (ii. 33). See DAVID; GENEALOGY.

2. One of David's mighty men (1 Chron. xi. 47).

3. The third named of the sons of Shemaiah who were gate-keepers of the Temple (1 Chron. xxvi. 7). B.C. cir. 1017.

4. Son of Ephah and father of Jehu, descendant of Jarha, the Egyptian slave of Sheshan in the family of Jerahmeel (1 Chron. ii. 37, 38, from which it appears that he was grandson of Zabad [q. v.], one of David's warriors). B.C. post 1014.

5. Father of Azariah, which latter was one of the captains of hundreds who joined with Jehoiada in the revolution by which Athaliah fell (2 Chron. xxiii. 1), B.C. ante 876.

O'bed-edom (Heb. עָבָד-֚דֶוָד, servant of Edom; Sept. Οὐβαδουὴν ἐν Θέρμω, in Chronicles Φιλάπτεσθαι, Αὐθόπτεσθαι, v. other many other v. r.'s). B.C. consecutively of three Levities.

1. A person in whose premises, and under whose care, the ark was deposited when the death of Uzzah caused David to apprehend danger in taking it further. B.C. 1045. It remained there three months, during which the ark stood in Uzzah's house, so signals prepared that the king was encouraged to resume his first intention, which
As to the nature of this obedience, it must be—(1) active, not passive; yielding to, not performing what is commanded (Col. iii, 8, 10); (2) personal, for though Christ has obeyed the law for us as a covenant of works, yet he has not abrogated it as a rule of life (Rom. vii, 22; iii, 31); (3) sincere (Psa. li, 6; 1 Tim. i, 5); (4) affectionate, springing from love (Psa. lxxix, 10); (5) whole, and not partial, not slothful (Gal. i, 16; Psa. xlviii, 44; Rom. xii, 11); (6) conspicuous and open (Phil. ii, 15; Matt. v, 16); (7) universal; not one duty, but all must be performed (2 Pet. i, 5, 10); (8) perpetual, at all times, places, and occasions (Rom. vii, 7; Gal. vi, 9).

The expression of obedience for the Hebrew verb is (1) it adorns the Gospel (Tit. ii, 10); (2) it is evidential of grace (2 Cor. v, 17); (3) it rejoices the hearts of the ministers and people of God (2 John 2; 2 Thess. i, 19, 20); (4) it silences gainsayers (2 Pet. i, 11, 12); (5) encourages the saints, while it reproves the lukewarm (Matt. xxi, 16); (6) it affords peace to the subject (1 Pet. iv, 12, 18; Acts xxvii, 16); (7) it powerfully recommends religion, as that which is both delightful and practicable (Colos. i, 10); (8) it is the forerunner and evidence of eternal glory (Rom. vii, 22; Rev. xxi, 14).

2. Obedience to God and the parents is held to be the subject matter of the N.T. Scriptures in Ephes. vi, 1 (also in Colos. iii, 20): "Children, obey your parents in the Lord, for this is right." Thus also servants are to obey their masters, as taught in Ephes. vi, 5 (also Colos. iii, 22; 1 Pet. ii, 18): "Servants, be obedient to them that are your masters according to the flesh, not with fear or trembling, but in singleness of your heart, as unto Christ."

3. Obedience to authority (q. v.); this, however, the Christian is taught to exercise only when not out of harmony with the law of God, for it is the duty of the Christian to obey God rather than man (Acts iv, 17; v, 29).

See Krekl, Neu-Testament. Handworterbuch, a. v. Gehorsam; Charnock, Works, xi, 1212; Tillotson, Sermons, ser. 122; Saurin, Sermons, vol. i, ser. 4; Ridgley, Body of Divinity, qu. 92; Dwight, Theology; Walker, Sermons; Fuller, Works; Robert Hall, Works. See Holiness; Liberty; Necessity; Sanctification.

Obedience of Christ (Σεβαστία) is generally divided into active and passive. His active obedience implies what he did; his passive what he suffered. The divines distinguish the two. They refer our pardon to his passive, and our title to glory to his active obedience; though Dr. Owen observes that it cannot be clearly evinced that there is any such thing, in propriety of speech, as passive obedience; obeying is doing, to which an act must be ascribed. The active obedience of Christ, the Scriptures assure us that he took upon him the form of a servant, and really became one (Isa. lxxiii, 8; Phil. ii, 6; Heb. viii). He was subject to the law of God: "He was made under the law," the judicial or civil law of the Jews, the ceremonial law, and the moral law (Matt. xvii, 24; Luke ii, 22; 2 Psa. xi, 7, 8). He was obedient to the law of nature; he was in a state of subjection to his parents; and he fulfilled the commands of his heavenly Father as respects the first and second table. Christ's obedience was (1) voluntary (Psa. li, 6); (2) complete (1 Pet. ii, 22); (3) wrought out in the room and stead of his people (Rom. x, 4; v, 19); (4) well pleasing and acceptable in the sight of God; (5) followed by a glorious reward (Phil. ii, 9). See Atonement. Theologians commonly hold that the active obedience of Christ, in order to oblige us to make a part of his atonement or satisfaction as his passive obedience. This might be more clearly and definitively expressed as follows: The satisfaction which Christ has made consists both in his enduring the punishments incurred by men and in his yielding a perfect obedience to the divine law. The active obedience of Christ is derived from the twofold obligation of men (α) to keep the divine laws, and (β) when they have failed, to suf-
The subject is considered also by Eberhard, Apologie des Socrateii, ii, 310 sq. Of late years, a great number of Protestant theologians have declared themselves in favor of the opinion that the active obedience of Christ is properly no part of his satisfaction, which is the effect solely of his passive obedience. But the views of these men, and of Doderlein, are always connected. All that Christ did and suffered for our good receives its peculiar worth from the fact that he did it from obedience to the divine will. This is the virtue or obedience of Christ. If we would partake of the salutary consequences of his suffering, we must, under divine guidance and assistance, follow his example. This is an indispensable condition. The two things are always connected in the Bible, and should be so in our instructions; and then this doctrine cannot be abused. The remarks made by Mr. 1, p. 171) are of no use. The Bible, indeed, justifies us in saying (that everything which Christ actively performed during his whole life, in obedience to God, is salutary to us, was done on our account and for our good. But (2) we therefore truly affirm that our whole happiness (oραγορια) is the fruit of his obedience (ὑποτελείον), and that both in his command, both in his suffering and in all the actions of his life. Had he not shown this obedience, we should not have attained to this happiness. So the Scriptures everywhere teach. The obedience of Christ in suffering is therefore the foundation, and imparts to us the assurance that all his other obedience, in respect to all the divine commands, will be for our benefit (John vi, 51; iii, 14-16; xii, 24; 1 John iv, 9; 1 Thess, v, 9 sq). No injury to morals need be apprehended if the Scripture doctrine is followed, and things which belong together are not separated. See Knapp, Christian Theology, § 115; Smeaton, Doctrine of the Atonement (see Index); Harless, Christian Ethics (see Index); Ullmann, Simplicity of Jesus (see Index); Graves, Works, vol. i; Edwards, Works; Fletcher, Works; Fresh, Confession; Theol. Medium, or Cumberlé, Fresh, Rev. Oct. 1851; Fresh, Quart. and Prize, Jan. 1871, 4th Edit.; and the references in Malcolm, Theol. Index, s.v.

Obedience (Ecclesiastical), in canon law, means the duty by which the various gradations in ecclesiastical organization are held subject, in all things which concern their spiritual condition and status, to the orders and several superiors placed immediately above them, respectively, in the hierarchical scale. Thus priests and inferior clergy owe canonical obedience to the bishop, and priests are bound thereto by a solemn promise administered at ordination. The bishop primly took a similar oath to the metropolitan; but by the modern law the jurisdiction of the metropolitan is confined to the occasions of his holding a visitation or presiding in the provincial synod. Bishops, by the present law of the Roman Catholic Church, take an oath of obedience to the pope. This obedience, however, is not absolutely limited by the pope, they are held to bind in things consistent with the divine and natural law.

In ecclesiastical history the word obedience has a special signification, and is applied to the several parties in the Church who during the great Western schism (q. v.) adhered to the rival popes, to be contrasted with the Roman obedience, which included all who recognised the pope chosen at Rome, and the "Avignon obedience," which meant the supporters of the Avignon pope. So, again, historians speak of the obedience of Gregory XII, and the obedience of Benedict XIII.

Applied to the monastic institute, obedience means the voluntary submission which all members of religious orders vow, at their religious profession, to their immediate
OBERRNE, Thomas Lewis, D.D., an Irish prelate of note, was born in the County of Longford in 1747. He enjoyed excellent educational advantages, and after taking holy orders rapidly rose to positions of trust in the Church, and was appointed lord bishop of this country as chaplain. In 1796 he was elevated to the episcopate, and given the see of Osorgy; in 1798 he was transferred to that of Meath. He died in 1822. "As a preacher, Dr. O'Beirne ranked in the first class. His sermons seldom related to the thorny points of controversial theology. He was generally satisfied with expatiating on the grand and essential doctrines of Christianity, and his diction was perspicuous, animated, and nervous. He was occasionally sublime, frequently pathetic, always intelligible" (Annual Biog., vol. vii). The bishop was beloved, besides the great sermons (1799, 1818, 1821), a poem on the Crucifixion (1775, 4to), several political pamphlets, and a comedy. See Allibone, Dict. of Brit. and Amer. Authors, vol. ii, t. v.

Obeisance (a frequent rendering of marasch, akhak, in Hitpael, to bow one's self in reverence). In 1 Kings 11, 11, when Bathsheba bowed and did obeisance unto the king; and the king said, What wouldst thou? In India, "When a husband goes on a journey, or when he returns," Robert's says, "his wife on seeing him puts her hands together, and presents them to him as an act of obeisance. When she has an important request to make, she does the same thing; and it is surprising to see the weakness of him who pretends to be the stronger vessel, for, under such circumstances, she will gain almost anything she wants. Hence the force of their popular proverb, 'The woman who regularly makes obeisance to her husband, can make it rain whenever she pleases.' " When Bathsheba made obeisance to the king, he asked, 'What wouldst thou? but the Hebrew has this, 'What to thee?' This accords with the idiom of the Talmud language. Thus it will be asked of a person going to the hands of a great man, 'To thee what?' "If speaking of a third person, 'To him what?' or, literally, 'Him to what?' See ATTITUDE; BOWING; COURTESY; SALUTATION.

Oberamergau is a village of Upper Bavaria, in the county of Amberg, 56 miles S.W. of Munich, containing a population of about 1100, chiefly engaged in carving on wood. The place is celebrated for the devotional performance on twelve consecutive Sundays in the summer season of a play representing the passion and death of Christ, in which three hundred and fifty actors are employed besides sixty members of the orchestra and chorus, all selected from the villagers, some of whom exhibit great dramatic power and genius. The performances generally last from 8 A.M. to 4 P.M. A considerable portion of the space allotted to the theatre is uncovered. There is room for from 5000 to 6000 spectators, but the performance is generally attended by a larger, including visitors from foreign countries. The first performance in 1787 was interrupted by the Franco-German war, but was resumed in 1871. It is the only important passion or miracle play which continues to be performed. It originated in a vow taken by the population in 1884 to perform it every ten years in the event of their escaping from the plague which then prevailed. In the summer of 1875 they inaugurated another drama called the "School of the Cross." It is a series of scenes taken from Old-Testament history, in the original, as many as seventeen, or more being given. The great city of Ammergau will discover, however, that the performance of the passion play once in ten years in fulfilment of a religious vow, and carrying on a dramatic performance continually in response to the popular interest, will soon give to it two very different things. The consecration of the simplicity and talent of the actors gives a charm to the old performance which will soon be lost in the more worldly and unattractive attempt for pecuniary success. See the article MYSTERIES.

Oberli, Jakob Hermann, a Swiss alchemist and mystic, was born at Arbon, in Thurgau, in 1726. Almost the first book he read was the works of Miss Bourignon and Madame Guyon. He first studied surgery, then architecture, and travelled through Germany. He completed his studies at the universities of Hall and Berlin. After graduating, he settled at Lindau in 1750, and soon acquired great reputation as a physician. Here, however, his love for all pure made him lose his confidence of the public, and he fell into deep mystical speculation, the result of which is apparent in his Defence of Mysticism (1775), and Promenade de Gamalet, Juif Philosophe (1780). He died at Jenae in 1798.

Oberhäuser, Benedict, a German canonist, was born Jan. 25, 1719, at Wittenkirchen, in Austria. He joined the Jesuits, became a professor of philosophy, and on the death of the last archiepiscopal, was appointed archiepiscopal counsellor in 1776, and died April 20, 1786. He wrote Prelectiones canonicae juxta titulos librorum Decretalium ex monumentis, authoribus et controversiis (Antwerp, 1762, 1763, 4 vols. 8vo) —Systema historico-criticum divinarum potestatum in legis matris monasticarum superiorum atque inferiorum (Francofurti, 1771, 3 vols. 8vo) —Apologeticus historico-argumentativus (ibid. 1771, and Vienna, 1776, 8vo) —Compendium prelectionum canonum juxta libros V Decretalium (Francofurti, 1776, 2 vols. 8vo) —Thomistaeus obivisceratus, seu et nova Ecclesiae disciplinae de beneficiis et beneficariis (Salzburg, 1777, 2 vols. 8vo) —Moralis, sive moralis canonicae juxta abbatia de Ploey Historiam eclesiasticum (ibid. 1776, 4to) —Specimen cultivii jurisprudentiae canonicae ad justia iderna divinae primitae in Romana ecclesiam (ibid. 1777, 1778, 2 vols. 8vo) —De dignitate uirorum ecclesiasticorum et regularium (ibid, 1786, 8vo) —See Menologium, 3rd edition, 1793; Gekleide Ostreich, vol. i; Hischung, Handbuch; Menou, Lexikon.

Oberkirchenrath (Ger. for Superior Ecclesiastical
Council) is the highest ecclesiastical tribunal of the Evangelical Church of Prussia. It was founded by the King in 1866, with the view of giving to the Church more independence. See PRUSIA.

Oberlin, Jean Frederic, one of the most noted of French Lutheran divines, was born August 81, 1740, in Strasbourg, formerly the capital of Alsace, near the Rhine, and his birth was the more remarkable because it is a common observation that the French are less inclined to religious instruction than the English. His early education was conducted under Christian influences, Frederic from his childhood exhibited evidences of consistent piety, and was noted for the benevolence and gentleness of his disposition, his constant desire to protect the weak, to relieve the suffering, and to promote the comfort and happiness of the races. On the completion of his preparatory course, he entered the university for the purpose of prosecuting his studies, with a view to the Christian ministry. While a student he attended upon the religious instructions of one who was distinguished for the earnestness with which he preached "Christ and him crucified." A permanent change in the character of the young man was effected; impressions and influences at that time were made upon his mind which were never effaced. He was thoroughly awakened to the claims of the Gospel, and brought to make a full surrender of himself to Christ. At the age of twenty, in a solemn covenant, he consecrated himself to the service of God. This act of self-dedication, written and signed January 1, 1760, and renewed ten years afterwards, gives us some idea of his earnest Christian principles at this very early period, the key-note of his unaltering devotion to Christ and his cause. On the conclusion of his theological course he was ordained to the work of the ministry, but he did not immediately enter upon it. He was for several years employed as a private instructor in the family of a physician, with whom he incidentally acquired a large amount of medical knowledge, which proved of great value to him in his subsequent labors. In 1766 he was appointed chaplain in the French army, which position he had concluded to accept, and was already preparing himself for its duties when he received a most earnest appeal to labor in the interests of the parish of Waldbach, in the Ban de la Roche. This changed his plans. So fine a prospect of usefulness was here presented, that with his views of duty he could not disregard its claims, and he at once determined to occupy this field of labor. Waldbach was at the time a desolate, scarcely civilized village in the bleak, wild, and mountainous Ban de la Roche, which derived its name from a castle called La Roche, or the Rock, which the Ban or district surrounds. It is also known by the German name of Steinthal, the Valley of Stone. The district had suffered severely in

View in Ban de la Roche.

the Thirty-years War, and the population that survived its ravages were reduced to poverty and debased by ignorance. It was not until 1870, that any effort was made for the moral improvement and social elevation of this obscure and degraded people. He commenced his labors by combining faithful diligence in the ordinary duties of the pastorate, with wise and earnest endeavors to advance the education and general prosperity of the community. He projected improvements in the plans of improvement than his predecessor had attempted, and, as the best means of preparing the way for his pastoral instructions, he determined to teach the people the ordinary arts and comforts of life. His efforts at the same time were directed to the promotion of the interests of the church. The community had become accustomed to indulge so long in an indolent life that they could not believe that their happiness would be increased by exertion. Some of the more malicious, too, united in a plot to lie in ambush for their good minister, and inflict upon him personal violence. Having been informed of the design, and knowing that the minister had selected, he preached as usual, from the words, "But I say unto you, that ye resist not evil; but whoever shall smite thee on thy right cheek, turn to him the other also," and inculcated the lesson of Christian patience and submission under injury. At the conclusion of the services the conspirators gathered together, wondering whether the preacher would act in accordance with his principles when they were brought to the test; but, to their surprise, in the midst of their discussion he made his appearance among them. "Here am I," said he, "and I will suffer no one to injure me in my designs. If I have violated the rules which I have laid down for your government, chastise me. It is better that I should deliver myself into your hands than that you should be guilty of the meanness of lying in wait for me." Deeply touched by his simple address, and ashamed of their conduct, they implored his forgiveness and mercy, and promised never again to oppose his kind and well-meant efforts. Only a few weeks after this other scheme was concocted, in one of the other villages in the district, to seize him as he was returning from Waldbach. The minister coolly detected and beat him. Having heard of the plot, he preached on the safety of those who put their trust in the Lord, and of the sure protection promised them in all the trials and conflicts of life. He returned home after the exercises by the usual way, although he knew that those who had plotted against him lay concealed in the bushes, and were awaiting his approach. He felt, however, that the everlasting arms were underneath him. Undaunted he passed by his enemies, and so completely were they discomfited that not one ventured to touch him. These incidents had a salutary influence on the district, and greatly aided him in his benevolent mission. Confidence in the man and his work was increased; and these very individuals who had been detected in their wicked designs subsequently became his most devoted friends, and were most faithful in their co-operation. One of Oberlin's enterprises for the improvement of the people was the construction of a road, so that their territory might be accessible, and communication effected with the more civilized districts of the country. The proposition at first was listened to with astonishment and incredulity. His execution seemed to the ignorant and benighted peasants as if it were impossible, and they began to make excuses for not participating in the labor. But when they saw the worthy pastor take up a pick-axe and vigorously engage in the work, they all soon joined him. He continued to direct and share their labors, until a road was opened to Strasbourg, and a bridge thrown over the intervening river. When this was accomplished, he easily persuaded the people to make other roads, by means of which communication with all the five villages was established. He also introduced among the people the mechanical arts by selecting some of the best mechanics of his district, and instructing them in the rudiments of mechanics. He likewise improved their dwellings; neat cottages and comfortable homes were gradually substituted for the miserable huts, which had generally been hewn out of the rocks or erected of logs of timber by the mountain people. He was also acquainted with the improved methods of cultivating the soil, and inspired them among a taste for rear-
of all connected with the society, that they and their households may be saved; and for all God's children of every denomination, that they may be made more and more in the image of Christ, to whom the kingdom was given, to be restored, and the kingdom of God established among the heathen and nominal Christians; also for teachers and magistrates, for all pastors and laborers in the vineyard of the Lord, and for the young, that they may be preserved from the seductive influences of wicked example, and early led to a knowledge of the precious Redeemer. Another of the rules required that every Saturday evening all the members should pray for God's blessing on the preached Word the following day. He also selected various mottos and topics which he desired the mem-

bers to remember in their minds, and which he considered as these, "Bring forth much fruit:" "No lose time:" "Love not the world, neither the things of the world:" "Search the Scriptures diligently." Texts from the Bible were to be seen everywhere on the walls of his house. It was his constant aim to omit no occasion of doing good, or of improving on the heart and conscience important religious truths. He also established in his parish a Bible Society, auxiliary to the British and Foreign Bible Society. Stated meetings were held and collections taken for the parent institution; the Scriptures were also read and prayer offered for the success of the British and Foreign Bible Society. He organized, under the form of the members of which loaned the sacred volume to their neighbors, and read it to those who could not read it for themselves. His success in reconciling differences and adjusting difficulties among the people was so much remarked upon that he became widely known for the integrity of his character and the judiciousness of his counsels that all seemed disposed to trust his decisions and follow his advice. He successfully terminated an angry controversy which had existed for eighty years between the parsonage of Ban de la Roche and some members of the church of the non-conformists, the organization of infant schools, the first established of which there is any record. For each village he appointed a female teacher. In the exercises, amusement and instruction were blended, very much on the same principle on which these schools at the present day are conducted. Two women were employed in each school, one to direct the manual tasks, and the other the lessons and amusements of the children, whose ages were from two to seven years. When they became weary, the teacher would exhibit and explain to them pictures relating to the natural and supernatural; the children would assemble in rotation every Sunday in the church to sing the hymns and to recite the religious lessons which they had learned during the week, and to receive the counsels of their minister. Besides this meeting, all the scholars were once a week collected at Waldbach and examined in their studies. His friends at Stras-

burg contributed liberally in aid of his schools, so that he was enabled to procure books for a library, and also philosophical apparatus and mathematical instruments. At a certain period the scholars were required, each one to plant a beech tree, the trees being impressed upon the youthful mind the duty of contributing something to the general prosperity. He also or-

ganized in 1782, for the religious improvement of the people, a Christian Society similar to the Young Men's Christian Association. The exci-
cises consisted chiefly of prayer and religious conversa-
tion. Among the regulations of the society we find one requiring the members on the first day of every month to pray for the success of missions; and another proposing that every Sunday and Wednesday, at five o'clock P.M., the members offer supplication on behalf

ing fruit-trees, so that in a few years a marvellous change was wrought in the appearance of this wild and sterile country. After instructing them in the various arts of agriculture, of which they were totally ignorant, in 1778 he formed an agricultural soc-

ity, which, in addition to providing books and in-

struction on the subject, also instituted prizes for suc-

cessful competition in this department of labor. His principal efforts were, however, directed to the moral and spiritual improvement of the community. The labors were all made subordinate and tributary to this one great object. On the Lord's-day he carefully in-

structed them in the principles, doctrines, and duties of the Christian religion, and neglected no opportunity of reminding them of their natural depravity, of the necessity of repentance, and the consecration of all their powers to the Saviour. His labors on behalf of the rising generation were most faithful and effective. His confidence in God was so strong that he commenced the erection of a school-

house in each of the villages, although without the means necessary to defray the expenses. He firmly relied on the divine promises. Fervent in spirit and earnest in prayer, he felt that success was sure. His expectations were not disappointed. Assistance came from various quarters, and the joint support sup-

ported him in his measures. The buildings were erect-
ced, teachers were specially prepared for their work, and evidences of a marked change in the community were everywhere visible. The face of the country was completely renovated. Poverty and misery were sup-

planted by rural happiness and contentment. But Oberg,
in his desire to perfect the system of instruc-

tion, so as to make it beneficial to all ages, having ob-

served with concern the disadvantages from which the younger children suffered while their elder brothers and sisters were at school and their parents busily en-

gaged in the daily toil of the fields, provided for the organization of infant schools, the first established of which there is any record. For each village he ap-

pointed a female teacher. In the exercises, amusement and instruction were blended, very much on the same principle on which these schools at the present day are conducted. Two women were employed in each school, one to direct the manual tasks, and the other the lessons and amusements of the children, whose ages were from two to seven years. When they became weary, the teacher would exhibit and explain to them pictures relating to the natural and supernatural; the children would assemble in rotation every Sunday in the church to sing the hymns and to recite the religious lessons which they had learned during the week, and to receive the counsels of their minister. Besides this meeting, all the scholars were once a week collected at Waldbach and examined in their studies. His friends at Stras-

burg contributed liberally in aid of his schools, so that he was enabled to procure books for a library, and also philosophical apparatus and mathematical instruments. At a certain period the scholars were required, each one to plant a beech tree, the trees being impressed upon the youthful mind the duty of contributing something to the general prosperity. He also or-

ganized in 1782, for the religious improvement of the people, a Christian Society similar to the Young Men's Christian Association. The exci-
cises consisted chiefly of prayer and religious conversa-
tion. Among the regulations of the society we find one requiring the members on the first day of every month to pray for the success of missions; and another proposing that every Sunday and Wednesday, at five o'clock P.M., the members offer supplication on behalf
When he heard of the spiritual destitution that existed among brethren of his faith in the United States he wrote a letter to the earnest Macedonian cry, "Come over and help us." He had determined to immigrate to this country, where, it seemed to him, there was so much work to be done for the German population, and his arrangements were nearly completed, when his health gave out. Many of his friends, who were frustrated by the American Revolution. His work evidently was not yet done in the Ban de la Roche, or Providence would have opened the way for his departure. As the population of the Ban increased, Oberlin introduced among the peasants cotton-spinning and weaving; the art of hewing to the land and various branches of agriculture. The flourishing settlement began to attract attention from abroad, and in 1818, in testimony of his services to mankind, and especially in the science of agriculture, a gold medal was presented to the worthy pastor by the Royal Agricultural Society of Paris. The decoration of the Legion of Honor was also awarded him by Louis XVIII as an appreciation of his services to humanity. He was visited, too, by distinguished travellers from different parts of Europe, who expressed their utmost gratification with the order and happiness which prevailed at the settlement and the endearing charm which had been established. Oberlin's influence over his parish continued to the last. As he advanced in years, and physical infirmities increased, he resigned to his son-in-law his more active duties; but there was no abatement of his interest in the work. With a face habitually serene, his life presented one of the finest specimens of happy old age. When he could no longer labor, with unfaltering devotion he prayed for his beloved people; and that no one might be passed by, he was accustomed to keep a list of his parishioners and pray for them individually; and frequently wrote on his door the names of such as claimed special attention, lest they might be forgotten. He also spent a portion of his time in epistolary correspondence, and in writing essays on religious subjects for the instruction of his people. Every sentiment he uttered seemed animated by the spirit of the Master—an earnest desire to do good and to fulfill the object of life, by simple-hearted faith in God and patient submission to his will. His last illness was brief. On the morning of June 2, 1826, in the eighty-sixth year of his age, and the sixtieth of his ministry in the Ban de la Roche, he gently passed to his rest, the place "which sin can never dim, nor cloud." As the intelligence of the good man's death spread through the district it was received with unfeigned sorrow. The peasants in a vast concourse came from all directions, through drenching rains and muddy roads, to pay their last tribute of gratitude and affection to the memory of him who had been so closely identified with their interests, and who had steadfastly and enthusiastically dedicated his life to their moral elevation. With the procession with the corpse, on which were placed the Bible from which he had so long preached and the robes which he had worn in the pulpit, preceded by the oldest inhabitant carrying a cross designed to be placed by the grave, reached the church—a distance of two miles—the mourners had not yet left the house. At the funeral services in the church, which, although closely packed, only a small portion could enter, a paper written by Oberlin many years before in prospect of this event was read. Among other things, the following tender and impressive language occurs: "God will neither forget nor forsake the Ban de la Roche. His sorrow, were frustrated by the..." He had often said, thoughts of peace and mercy. All things will go well with thee. Only cleave thou to him. Forget my name, and retain only that of Jesus Christ, whom I have proclaimed to thee. He is thy Pastor; I am but the servant. He is the Father, he who sent me to thee that I might be useful. He alone is wise, good, and almighty; I am but a poor, fallen, wretched man. Pray, my friends, that you may all become the beloved sheep of his pasture. There is salvation in no other than Jesus Christ. If he knows you, he seeks you, and is ready to receive you. Go to him just as you are, with all your sins and infirmities. He alone can deliver you from them, and heal you. He will sanctify and perfect you. Consecrate yourselves to him, and he will reward you with the fruits of his grace. There have been men, of more brilliant talents, of greater erudition and more varied attainments, but few individuals have been more earnest and devoted to their work, or more successful in the influence which they wielded and the results they accomplished, than this humble Lutheran minister. He was the ideal of a good pastor—holy, harmless, separate from sinners; a man of warm heart and generous impulses, of great simplicity, of a frank, genial nature, uniform kindness, and unsullied integrity. He possessed energy, industry, unconquerable perseverance, and a purposeful and resolute endurance, which characterized the whole of his intellectual pursuits and methodical habits, a lover of order and subordination, sincere and unreserved in his intercourse, practical in his character, and entirely consecrated to the service of the Master. His career was one scene of active benevolence and zealous piety, an exhibition of a loving heart, a blameless life, and a tireless hand. He was thoroughly evangelical in his views, important in prayer, and strong in faith, and strikingly illustrated in his own walk and conversation the power and blessedness of the Gospel. Notwithstanding the comparatively obscure and humble station which he occupied, he became the beloved patriarch of a renovated country and a regenerated people. His fame as a philanthropist has extended over the world, and his example has stimulated and guided others in their Christian efforts to advance the welfare and elevate the character of the race. Oberlin, Jeremiah James, an eminent French educator, was an elder brother of the philanthropist Oberlin, and was born at Strasbourg August 7, 1735. He was educated at the gymnasia of that town. He afterwards spent a few months at Montbéliard for the purpose of learning the French language, and returned to Strasbourg in 1750, where he prosecuted his university studies. He took the degree of doctor of philosophy in 1758, and afterwards paid considerable attention to the study of theology. In 1768 he was appointed a teacher in the gymnasia where he had been educated, and in 1768 was intrusted with the care of the library of the college. He was appointed Master of Arts in 1772, ordinary professor of logic and metaphysics, and in 1787 director of the gymnasia. During the Revolu-
ution his life was in considerable danger. He was impr
Anonished at the beginning of November, 1738, but ob-
Anand his liberty at the end of a few months, and again
Ananomized his lectures at Strasburg, continuing them till
his death, which took place Oct. 10, 1806. Oeburin
was neither a man of恬ent nor oflered, but the story is but
Anfitted by the good editions of severiaf the Latin classics, of
which his Tacitus and Caesar are considered the most valu-
Anable. He had also paid great attention to the study of the
Anicient French language, and travelled more than once
through some of the provinces of France in order to be-
Anome the greatest masters of the language, and to ensure that
his students should be instructed in the best traditions of
the country. He published several works on this subject.
He was also the author of several other works, the prin-
cipal of which are, Dicessario Philologico de Veteris
Ritu ad condendae Mortuos (1757) — Ritual Romanoerum
Tabule in usum Auditorum (1774) — reprinted in 1784:
—Jugendarum Martyrum Flaviorum omnia aut Moll-
imas (1700—1775) — and Dissertations sur les Minne-
singers (the Troubadours of Alasc) (1782—1783).
The life of Oeburin has been written by Schweighäuser in
Latin, and by Winckler in the Magus, Encyclopädi.
(Anobin, 1811)

Oeberin Theology. An impression has very gen-
Anally prevailed that the theological views inculcated at
Oeburin College by the late Rev. Charles G. Finney and
his associates involve a considerable departure from the
accepted orthodox faith; and the term Oeburin Theol-
Anyl involves a term of opprobrium and contempt.
Errors are a real problem to us, and in Italy there is no
fear of "damnable heresies." There has been,
doubtless, much misapprehension on the subject; and
while these teachers have held views of their own on
some points of metaphysical or ethical theology, and
even of practical religion, there has scarcely been such
divergence from the accepted doctrines of the Church
as to warrant the idea of a new theology.

1. The general type of doctrine inculcated has been
the New-School Calvinism, of which the characteristic
thought is that all responsible character pertains to the
will in its voluntary activity and action, and that each
moral agent determines for himself, in the exercise of
his own freedom, under the motives which gather about
him, whatever is morally praiseworthy or blameworthy
in his character and life; that sin is a voluntary failure
to meet obligation, and that nothing else is sin; and
that righteousness or holiness is a voluntary conforming
of obligation, as such is always in the power of every
moral agent. Anything desirable or undesirable in
the nature or the thought or the feeling, which lies beyond
the range of voluntary action, is not a matter of imme-
diate obligation, and can be neither morally praiseworthy
nor blameworthy. Hence neither moral nor holiness
can be infused or inherent, or imputed, in the sense of being reckoned
to the account of one in whom it has not originated.
As punishment can be inflicted only as an expression of
blameworthiness, no one can be liable to punishment for
Adam's sin, because no one can be blameworthy for any
sin but his own; just as impossible is it that one should be
forgiven any sin but his own.

The repentance required as a condition of salvation is the
renunciation of sin, an obligation which presses upon
every sinner, and which is always within his power. The
question is, how can we have the sin renounced? And this
voluntary renunciation of sin is the change required
of every sinner in order to acceptance with God. The
work of the Holy Spirit in the sinner's conversion is a
moral work, accomplished by the presentation of motives
which induce repentance; and the subsequent work of
sanctification and preservation is essentially of the same
nature—a work accomplished by the Spirit through
the truth. The sovereignty of God works always in harmony
with the freedom and responsibility of the creature,
so that one factor in man's salvation must always be
his own. Each man's freedom and responsibility in the
sin of one cannot be imputed to another, so neither can
righteousness or merit. Hence the atonement cannot
involve the transfer either of our guilt to Christ, or of
his righteousness or merit to us, but consists rather in
such an exhibition, in the cross of Christ, of divine love
and faithfulness, and of man's sin and ill-desert, as to
make the remission of penalty safe and right in the case
of the penitent sinner. These views, in general, char-
acterize the particular system known as Oeburin Theology.

2. The ethical philosophy inculcated by Mr. Finney
and his associates of later years is essentially that of
the elder Edwards, which makes the well-being or blessed-
ness of the sentient universe the summum bonum, or uti-
minate good; and the voluntary regard for this good—
for the welfare of all others—constitutes the primary
end or aim of man's life. In this view, benevolence is
called benevolence, the grand element of all virtue.
This benevolence is the love which is the fulfilling of the
law—not a mere kindly or amiable feeling, or any
emotion whatever, but an attitude of will giving to
every apprehended interest its proper place; a good-will
exercised towards every being capable of good, begin-
ning with God, the value of whose being is infinite, and
coming down to the meanest of his creatures, embracing
alike the evil and the good, the just and the unjust.
This benevolence is consistent with every natural emo-
tion, and yet it is exercised towards God and other virtuous beings, and disconsistently exercised towards the wicked, but exhibiting the same
essential character—regard for the well-being of its
object.

The faculty by which the primary duty of benevo-
ience is apprehended is conscience, and its affirmation,
in its own sphere, is inevitable and infallible. Every
moral being affirms the duty by the very necessity of
his nature; and in reference to primary, subjective duty,
the utterance of conscience is forever the same, and
always right. A being whose conscience failed in this
respect would cease to be a moral being. In all execu-
tive action—the carrying out of the benevolent attitude
of the will in the performance of relative duties—the
judgment must decide what on the whole will tend to
promote well-being, or the good; then conscience follows
the judgment, and enjoins the performance of this appre-
prehended duty as an expression of benevolence. But
the judgment is fallible; and there may be and often is
misjudgment on the subject of outward or objective
duty, and conscience may thus require us to do what is
outwardly wrong. Still we must follow the best judg-
ment we can obtain, and the error is a mistake, not a sin.
The moral character is right while the con-
science is followed in the maintenance of the benevolent
nature. Blameworthiness can be involved only in a
failure in this required ultimate attitude of the will.
Hence moral sin is the action of one who has not
loved, which is immediately binding upon him; and meeting
this duty he is truly conscientious, and at the same time
truly righteous. His mistakes are not sins. They re-
quire correction, enlightenment, not forgiveness.

Thus the voluntary attitude called benevolence is the
constant element in all virtuous character, and the
source of all virtuous action. It is the root of all the
particular virtues, and constitutes the virtuous element
in them all. Justice, mercy, obedience, veracity, and
the like, become virtues by being expressions of benevo-
ience under varying conditions, and they cease to be
virtues. Benevolence is the only virtue, and it has a
binding force and its limitations in the primary duty of
benevolence. In this all duties must forever harmonize.
The duty of benevolence is apprehended intuitively and
rationally in connection with the idea of well-being,
and can never fail to be a moral being. It is seen to be
binding from its own inherent nature, irrespective of all tendency, while all executive action
promoted by benevolence is seen to be duty only on
condition of its tendency to promote well-being.
In this respect the Oeburin view is distinguished from ev-
ery scheme of utilitarian and co-operative morality.

As benevolence is the whole of virtue, so the refusal
to be benevolent is the whole of sin, whatever the mo-
tive which induces this refusal. These motives are
always the solicitations of impulse, desire, or passion, which turn the will aside from the requirements of benevolence. The sin takes its form from the immediate impulse to which the will subjects itself; but the essence of the sin is the refusal to assume that benevolent attitude which reason or conscience requires. The sinner, then, is not pursuing his own good as his supreme end. He sacrifices duty and his own good alike, in his subjection to an unworthy impulse. He is "carnally minded"—caries for the flesh or the desires. Benevolence requires seeing one's own well-being as well as that of his neighbor, but he sacrifices both in his voluntary subjection to desire. Every moral being, in the exercise of his freedom, stands between the motives which the reason presents, which urge to benevolence—regard for the well-being of God, and of the sentient universe because of its value—and the motives which the desires or impulses present, urging to self-gratification immediate or more remote, to the neglect of the true good of himself and of the universe at large, including the Creator. The character and action determined by the motives of the reason is right or wrong is determined by the motives of the flesh—the desires and passions—they are wrong, and are in violation of obligation. The righteousness on the one hand and the sinfulness on the other must lie in the voluntary attitude assumed in the acceptance of one or the other class of motives which actuate the moral character of God. The wrong remains while the voluntary attitude remains, whether the circumstances admit of outward action or not. Virtue or righteousness lies in that primary attitude of benevolence, and virtuous action is the action which springs from benevolence. Sin is in the refusal to be benevolent, and sinful action is the expression of the unbenevolent will in the outward life.

Thus it is a peculiarity of the Oberlin ethical philosophy to regard virtue, or righteousness, and sin as in their own nature antagonistic to each other, each being coerced into existence, and necessarily giving rise to the other. Virtue being benevolent, and sin the refusal to be benevolent, they cannot coexist in the same will. The will must be, at any given time, wholly in one attitude or the other. They may alternate, one giving place to the other, but in the unity of action which of necessity belongs to the will they cannot coexist. The supposition of coexistence involves essentially a twofold personality, capable of maintaining at the same instant contradictory ultimate attitudes of will. Hence the sinner, in turning from his sin, discards it utterly for the good of God and yields his whole will; and the good man, falling into sin, fails utterly in the benevolent attitude of the will; and, so far as his moral action is concerned, during that lapse he is wholly wrong. Many of his former experiences and plans and executive purposes may remain unchallenged; but the element of righteousness—the benevolent attitude of the will—is at the time wholly wanting.

3. This view of moral action as necessarily either right or wrong, and of moral character as necessarily, at any given time, either one thing or the other, has shaped what has been known as the Oberlin doctrine of sanctification. The view first promulgated at Oberlin by Mr. Finney and others was based upon the prevalent idea that somewhat of sin still remains in the character and action of the converted man, coexisting with his obedience. The problem of sanctification must be to eliminate this remnant of sin, and make the obedience entire and permanent. This view led to the idea of a special experience, corresponding with the original conversion, in which the Christian rises from a partial to a complete obedience. The attainment of this condition must be always possible and obligatory; just as the original conversion was possible and obligatory to the sinner. The only difficulty in the way must be a partial and imperfect faith. On this view, there would be two classes of Christians—the simply converted, rendering a partial consecration and obedience, and the entirely sanctified, whose consecration and obedience are entire. The teaching of the privilege and duty of entire sanctification, as thus apprehended, in the community at Oberlin, led to a very general quickening of the religious life, and to many marked experiences regarded at the time as miracles of grace. The fuller development of the conception of moral action as necessarily simple, forbidding the coexistence of sin and holiness, a restatement of the doctrine of sanctification became necessary. In this view conversion necessarily becomes entire consecration, and obedience and faith, as moral exercises, are necessarily complete. The difficulty with the regenerate soul is not that he has made only a partial surrender of his will, but that he is weak and inconstant, and inexperienced, liable at any moment to lapse into sin under the pressure of temptation. San- cification, then, becomes a growth, an attainment of experience and strength, not to be found in one special experience, an instantaneous rising from a partial to an entire consecration, but in the attainment of stability and strength and spiritual power by successive en- lightenment and the growth of the Spirit, and by "patient continuance in well-doing." No clear line of division can separate sanctified and unsanctified Christians. Every believer is sanctified in the sense of being entirely consecrated; and there are as many degrees of enlightenment and strength and stability as there are varying experiences of grace. The nature of moral action, the inculcation of the attainment of sanctification by one special experience ceased to be a feature of the religious instruction at Oberlin. The baptism of the Spirit is still presented as an object of faith and prayer, the standing promise of Christ to his people, appealing to him who receives it light and strength and stability.

Oberndorfer, Celestian, a German Roman Catholic theologian, was born at Landshut in 1724. He joined the Benedictines, and became successively pro- fessor of logic, then of natural philosophy, and afterwards of theology in the College of Freytag. He died in 1766. He wrote, Schola catholicae, tum philo- sophicae, jurisprudentiae sum, quae nostrae aedificata est, et usuarum, etc. (Freytag, 1762, 2 vols. 4to); —Resolu- tiones ex psychologia et theologia naturali (ibid, 1762, 4to) —Brevis apparatua eruditionis de fontibus theo- logiae (Augsb, 1760, 5 vols. 4to) —Theologia dog- matico-historico-scholastica (Freiburg, 1762-1765, 5 vols. 8vo); —Systema theologica dogmatico-historico- criticum (Freytag, 1762-1765, 5 vols. 8vo); Zacher added seven more volumes to this work. See Ras- der, Lexikon Baierssche Schriftsteller; Meusel, Lexi- kon.

Oberrauch, Anton Nicolauus (called also Hercu- llanum), a Roman Catholic theologian of note, was born in the Sarmental, in Tyrol, Dec. 1, 1578. On his early edu- cation he received at Innspurke, where he studied philos- ophy and theology. In the year 1570 he joined the Order of Francisans, and continued his studies until the year 1586. After having been engaged as an in- structor in the Franciscan monastery for some years, in 1572 he was appointed professor of theology at Bazet; from 1573 to 1575 he lectured on ecclesiastical law at Halle; from 1576 to 1578 he occupied the chair of moral theology at Innspurke, and died in 1606 at the monastery of Schwaz. He wrote, besides several smaller works,
OBERTHUR

OBIZZINI

Oberthür, Franz Dr., a noted Roman Catholic theologian, was born at Würzburg Aug. 6, 1746. Patronized by the bishop, Adam Frederick, count of Seixis, he was admitted into the Julius Hospital at Würzburg, where from 1763 to 1771 he studied philosophy, theology, and law, and was afterwards sent by his patron to Rome, in order to complete his studies there. In 1773 he was appointed counsellor of curacy and consistory, and in 1774 he was elected professor of dogmatics at Würzburg. In 1782 he was appointed spiritual counsellor and head of the city schools, in which position he labored especially with a view to reform. On account of the liberal dogmatics which Oberthür espoused in his Idea biblica ecclesiae Dei, a division was caused between him and his bishop. Oberthür was tendered another position instead of his professorship, which offer he, however, refused; but he was finally deprived of his position in 1805, and again in 1809, at the conclusion of the revolution of the university. In 1810 he was appointed as theologian of the chapter, which position he held until his death, Aug. 30, 1831. Oberthür was a very learned man, of a practical and catholic mind, who not only had the wants of the students at heart, but also those of the common people, to enable whose ideas was one of his main objects in life. In this his reformatory movement he also perceived the good in those who were not of his own creed, and, as his biographer Rulan states: "Maxime est gavisus ludari ab iis, qui erant alienus confessionis." Oberthür was a fertile writer. He published, Dogmatice et poenitentiae unita (Würzburg, 1776) — Idea biblica ecclesiae Dei (1790-1821, 6 vols.); — Bibliae Anthropologie (Münster, 1807-10, 4 vols.); — Eucalypetica (Würzburg, 1786; Germ. ed. 1828); — Methodologia (1828); — Opera poenitentiales Patrum de veritate religionis Christianae contra errores gentium et judeorum (Ibid., 6 vols., 1825-42); See Rulan, Series et vita professorum S. S. Theologi, qui Wurzburgi a fund. Academia usque in ann. 1804 docuerunt (Ibid. 1885); Dux, in Wetzer und Welte's Kirschen-Lexikon, vol. vii, a. v.; Theologisches Universal-Lexikon, a. v.; Fürst, Bibl. unit. iv, 44; Britih, Gesch. der Kathol. Literatur Deutschlands (1841), p. 713 sq.; Werner, Gesch. der Kathol. Theologie (see Index). (B. P.)

Oberto, Francesco di, was the earliest painter of the Genoese school, and his works are still extant. Lanzi mentions an altar-piece by him in the church of St. Domenico at Genoa, representing the Virgin between two angels, signed "Francesco de Oberto, 1683." Ob'ethur (O'bethur), a Graecized form (1 Esdr. viii, 32) of the name of Ezech (q. v.), son of Jonathan (Ezra viii, 6).

Obi. See Obeah.

O'bil (Heb. Obil, "from the Arabic obbî, an owner of camels; Sept. Oślaca v. 'Aślîa and Oślîa; Vulg. Ubîl), an Ishmaelite, or Arab, doubtless of the nomadic tribes, who had charge of the royal camels for the king of Judah; — an exciting animal, fit for an Arab (1 Chron. xxix, 30). As the name means in Arabic "a keeper of camels," Jerome (ii, 2) infers that the person had his name from his office, which has al-

ways been a very common circumstance in the East (see Bochard, Hieroz. i, ii, 2).

Obit (Lat. obitus, a going down, i. e. to death, therefore decease), of an individual, is used in ecclesiastical language to designate the commemoration of a saint's death; called also his celebration, departure, falling asleep, or surrender, by his people. The term is a contraction of the phrase "Obit mortem," i. e. he meets death, and is used specially to designate a funeral office, performed for the dead, and for his soul's health, as they say, at certain times and places. The Assumption is ascribed to the blessed Virgin, the Deposition to St. John, from the tradition that he laid himself down in his grave.

It was an early practice of the primitive Church to commemorate the martyrs on the anniversary of their death; and when the days of persecution had come to an end the custom was extended, or continued to prevail in respect to others of the departed besides martyrs, such as relatives, friends, and benefactors. Indeed, in former times, under the influence of the Romish priesthood, it was not uncommon for dying persons, though they had children to provide for or debts to pay, to postpone all care of relatives and other charity enterprises in order to secure for themselves masses satisfactory, anniversaries, obits, requiems, dirges, placebos, trentals, lamps, lights, and other offices to be performed daily, monthly, or yearly, as far as the sums left would afford, for the ease and help of the testator's soul. In religious houses, monasteries, and nunneries, where the obits or obitual days of their founders and benefactors, which was thence termed obituary. Thus in many colleges the obit or anniversary of the death of the founder is piously observed. There have been since the Reformation commemoration days at Oxford and Cambridge, on which the names of all the known benefactors to the universities are proclaimed and a special service is recited. For the offices used on the occasion of these commemorations in England, see the Annotated Book of Common Prayer, Appendix to the Burial Office.

Obituary. See Obit.

Obibzini, Tommaso, an Italian Orientalist, who flourished in the first half of the 17th century, was born in Non, near Novara. He entered the Order of the Minor Brothers, and applied himself to the study of the Oriental languages. Devoted to the missions of the East, he went to Jerusalem in the capacity of apostolic consignatory and guardian of a convent of his order. During his stay in the Holy Land he succeeded in restoring to Christian worship two churches dedicated to the Virgin and St. John the Baptist, of which the Turks had taken possession, and by order of pope Paul V he presided over a synod which condemned the heresies of Nestor and Eutyches, still influential in the East. On his return to Rome he taught for several years Arabic, Syriac, and Coptic in the monastery of St. Peter in Montorio, and formed a great number of missionaries. It was there that he died, according to Wadding, in 1638, at an advanced age; but Achilles Venerio, one of his disciples, says he died on the 22nd of December, 1638, in the 41st year of his order. — Grammatica Arabica aurgynia appellatum, cum versione Latina et ibratione expositione (ibid. 1631, viii, 20): this is a valuable edition of the Arabic Grammar entitled Jurumia, and favorably quoted by Silvestre de Sacy: — Thesaurus linguae Arabicae Sanctae (ibid. 1636, 4to): the printing, superintended by Achilles Venerio, is very faulty: this book was largely composed from a Syriac vocabulary whose author is Elias Barzina, a metropolitain of Nisibis, of the 11th century. See Wad-
OBJECT 280 OBLATION

Object, in the language of metaphysics, is that of any thinking being or subject can become cognizant. This subject itself, however, is capable of transmutation into an object, for one may think about oneself when thinking faculty. To conceive of a metaphysical object, actual existence is not necessary; it is enough that it is conceived by the subject. Nevertheless, it is customary to employ the term object as synonymous with real, so that a thing is said to be "objectively" considered when regarded in itself and independent of its relation to us. We perceive an apprehension. Scepticism denies the possibility of objective knowledge; i.e. it denies that we can ever become certain that our cognition of an object corresponds with the actual nature of that object. The verbal antithesis of objective and subjective representation is also largely employed in the fine arts; but even here, though the terms may be convenient, the difference expressed by them is only one of degree, and not of kind.

Objectives to Christianity. See Apolecticis.

Objective is a term which, like the preceding (i.e. object), is much used in scholastic theology for the expression of that phase of a thing which comprehends its existence, but of excluding that phase of anything which comprehends our knowledge of it. Thus applied, the energy of thought may be objectively directed towards the Divine Nature: Objective has a contemplation of the Divine Nature as in itself, and not as in its relation to us; i.e. our contemplation of it as "non ego; subjective, on the other hand, by contemplation of the Divine Nature as it forms part of a system, of which "Ego" is the starting-point, if not the centre. Applying the illustration to faith, it will be seen that Objective faith looks to that in which we believe; Subjective faith to that with which we believe: the first being that phase of belief in God, e.g. which fixes its gaze on God as its object; while the second is that phase of faith which sees the believer in God, and the operation of his mind in believing. Or again, the first represents a dogma, the second a faculty. In the same manner the terms may be applied to worship. Objective worship is adoration in its purest and most unselfish form; adoration of God as its object, without reference to the person adoring it, and according to its nature, admires, prays, offers sacrifices, and engages in any other religious act. For a full account of the history and use of the words, see notes at the end of Hamilton's edition of Reid's Works (Edinb. 1846).

Oblata (Lat. for offered), the name of the host before consecration. The oblates, not consecrated, though blessed on the altar, were given by the priest, before food in the refectory, to those monks who had not received the sacrament. Oblata were made in a kind of mould of a small pattern. Females, called sanctimoniales, had assigned to them the office of making these oblates, but always without let or hindrance, and occasionally placed on the bosoms of the dead. The host, before consecration, was cut in the form of a cross by a knife specially set apart for that purpose, and the vessels in which it was preserved were made in the form of small towers. According to the Mozarabic Liturgy, it was to be mystically divided into eight parts, called Gloria, etc. Information on these particulars may be obtained from Du Cange, s. v. Gloria, Lancela, Oblata, Paris, Turris. Oblates (Lat. oblatus, "offered up") is the name of three different classes of religious bodies in the Roman Catholic Church, which differ from the religious orders strictly so called in not being bound by the solemn vows of the religious profession.

(1.) The institution of the first of these, called the Oblates of St. Ambrose, was one of the many reforms introduced into the Church of Milan by the young bishop towards the close of the 18th century. The members consisted of secular priests who lived among the people and were merely bound by a promise to the bishop to devote themselves to any service which he should consider desirable for the interests of religion. St. Charles made use of their services chiefly as missionaries in the wild and inaccessible Alpine districts of his diocese. He drew up their constitutions, which were revised by St. Philip Neri (q. v.) and St. Felix Cantalici, and approved repeatedly by the papal see. This institute, which had many establishments at Milan, Verona, and other parts of Northern Italy, still exists, and has recently been introduced into England by cardinal Wiseman, and the order possesses at present in London five houses, and serves four city missions.

Attached to the London oblates, but distinct from them in idea and institute is St. Joseph's Society of the Sacred Heart for Foreign Missions, with a central house at Mill Hill, near London, and intrusted by pope Pius IX with the spiritual care of the freedmen of the United States. All missionaries educated by St. Joseph's Society leave Europe for life, devoting themselves to non-European missions. They make vows of obedience, and bind themselves to practice evangelical poverty, and to go wherever sent. This society counts (1875) twelve priests and thirty students in divinity from men of all nations. They have three missions to blacks exclusively, in Baltimore, Milledgeville, Georgia, and Philadelphia, and Bishop Henry H. Vaughan, of Salford, is the superior general.

(2.) Another institute, confined to females, is the Oblates of the Blessed Virgin Mary, a body of French origin, which arose in the present century, and has been very widely extended. Their chief object is to assist the Church by founding missions for the religious instruction of the people in any district to which they may be invited. This body was approved by pope Leo XII Feb. 17, 1828. They have been established in England and in Ireland, the British colonies, the islands of the Pacific, and the United States. Called to Canada in 1844, they immediately occupied the extreme north and west of British America the old Jesuit missionary posts, and extended their labors to the remotest tribes. In Canada they have several colleges, seminaries, and academies, with a constantly increasing body of students. They have also numerous establishments in Northern New York, Minnesota, Texas, and Washington territory. Other similar institutes might be enumerated, but the constitution of all is nearly the same.

(3.) There is also a female institute of oblates, which was established in Rome, about 1445, by St. Francesca of Rome, and which consists of ladies associated for charitable and religious objects, and living in community, but bound only by promise, and not by vow.

(4.) There are besides the Oblates Sisters of Providence, a sisterhood of colored women, founded at Baltimore in 1825 by the Rev. H. Jowber, for educating colored girls, taking charge of colored orphans, and attending to the general needs of the colored people in the United States. These sisters were approved by Gregory XVI in 1831. Their mother house is in Baltimore.

Oblates was also the name of those children who were dedicated from infancy to the cloister (the parents wrapped their boy's hand in altar-cloth, with a petition), and of the dying who assumed the cowl. In 1191 Cesteline III freed children from such vows. See the art. Conversi in Wetzer u. Welte, Kirchen-Lexi; Kanke, Hist. of the Popes, i. 370; Azog, Kirchengeesch., ii. 485; Bamm, Romanism, p. 487.

Oblati. See Oblates.

Oblation is the rendering frequently employed in the A. V. for several Heb. words, elsewhere with equal
OBLATION (CHRISTIAN) designates an offering to God, in certain ecclesiastical senses.

1. In the sacramental service of the Church of England the phrase "alms and oblations" occurs in the prayer for the Church militant, and evidently refers to a very ancient custom. "In the primitive Church, at the administration of the Lord's Supper, communicants were required to bring certain oblations, προσφοράς, or presents, δῶρα, of bread and wine. These were sometimes presented by persons who did not communicate. The bread and wine were enveloped in a white linen cloth called "fag," the wine being contained in a vessel called "ama" or "amula." After the deacon had said, "Let us pray," the communicants carried their offerings towards the altar, which were usually taken by a deacon, and, having been delivered or presented to the bishop, were laid upon the altar or upon a separate table provided for their reception. This custom of offering oblation ceased generally during the 12th and 13th centuries" (Riddle).

The rubric at the same time enjoins that if there be a communio the priest is then, "just before this prayer, "to place upon the table so much bread and wine as he shall think sufficient." Hence it is clearly evident that by that word we are to understand the elements of bread and wine which the priest is to offer solemnly to God, as an acknowledgment of his sovereignty over his creatures, that henceforward they may be peculiarly his. In all the Jewish sacrifices, of which the people were partakers, the viands or materials of the feast were first made God's by a solemn oblation, and then afterwards eaten by the communicants, not as man's but God's provision by whom all shall receive them at his own table declared himself reconciled and again in covenant with them. Therefore the blessed Saviour, when he instituted the sacrament of his body and blood, first gave thanks, and blessed the elements, i.e. offered them up to God as the Lord of the creatures, and then gave them expressly for the communion; and so for that reason, whenever they celebrated the Eucharist, always offered the bread and wine for the communion to God upon the altar, by this or some such short ejaculation, "Lord, we offer thine own into what thou hast freely given." After this they received them, as it were, from him again, in order to convert them into the sacred banquet of the body and blood of his dear Son. Consonant with this, in the first common prayer of king Edward VI, the priest was ordeled in this place to set the bread and wine upon the altar. But at the second review, to conciliate the adherents of the Protestants, this ancient usage appears to have been thrown out. It was, however, restored at the last review of the Prayer-book in the reign of Charles II, when it was ordered that the bread and wine should be placed solemnly on the table by the priest himself. Hence it appears that the placing of the elements upon the altar before the beginning of the morning service by the hands of a lay-clerk or sexton, as is sometimes the practice, is a breach of the aforesaid rubric.

2. In a more extended sense, the word "oblations" signifies whatever Christians offer to God and the Church, whether in lands or goods. It is probable that the practice of St. Paul incited the primitive Christians to offer these gifts to the Church, for he appointed every one of the Corinthians and Galatians to yield something to God for the saints every Lord's-day; but this being thought too much, Tertullian told us often, that after this time it was afterwards done every month, and then ad libitum; but it was always the custom for communicants to offer something at receiving the sacrament, as well for holy uses as for the relief of the poor, which custom was, or ought to have been, observed in his day. In the first ages of the Church those déposita pietatis which are mentioned by Tertullian were all voluntary oblations, and they were received in lieu of tithes; for the Christians at that time lived chiefly in cities, and gave out of their common stock both to maintain the Church and those who served at the altar. But when their numbers increased, and they were spread abroad in the countries, a more fixed maintenance was necessary for the clergy. Yet oblations were made by the people, of which, if offered in the mother church, the bishop had half, and the other was divided among the clergy; but if they passed into the hands of the clergy, the bishop had a third part, and no more. These oblations, which at first were voluntary, afterwards became due by custom. It is true there are canons which require every one who approaches the altar to make some oblation to it; but this thing is not so common as to be certain. It is probable that, in obedience to the canons, it became customary for every man who made a will before the Reformation to devise something to the high-altar of
OBLATIONARIUM

282

OBLIGATION

the church where he lived, and something likewise to the mother church or cathedral; and those who were to be buried in the church usually gave seas: aiming toward its repairs. But at the great festivals all people were obliged to offer something, not merely if convenient, but as a duty; but the proportion was left to the discretion of the giver; and we think with great reason, for the bounty of the Christians in those ages was so great that men built churches on their own hands, on purpose that they might have an equal share of those oblations with the clergy. This might be the reason why the emperors Constantine and Valentineian made laws to prohibit excessive gifts, which in those days were kept in storehouses built for that very purpose. But in succeeding ages there was little occasion for such laws, for the zeal of the people was so considerably abated that, instead of those repositories, the clergy had little chests to contain these gifts, till at last they dwindled into so small a portion that now, as a quaint writer observes, they can scarce be felt in the parson's pocket.

In the Church of England whatever is offered at the altar is termed an obligation. They are principally alms, the bread and wine for the Lord's Supper, and prayers. The four days in the year—Christmas, Easter, Whitsun-tide, and All-souls' day—on which oblations are more especially made, are called offering days; and portion of the Roman Catholic and English Church service at which time the offerings are presented is called the offertory (q.v.). See Hook, Ch. Dict. s. v.; Froster, On Common Prayer, p. 348; Whately, On Common Prayer, p. 279; Nomeology, ii. Sodage, S. v.; S. c. Onrach, ii. 305; Althor, see Index in vol. iv.; Wetzar u. Wele, Kirchenlexicon, s. v. Oblationen.

Oblationarium, a side-table, on which the oblations of the people was which had been collected by the deacons was placed, and from which the officiating minister selected what was necessary for the celebration of the Eucharist. See Oblation. The custom of presenting oblations ceased generally during the 15th and 16th centuries. See Martigny, Dict. des Antiquites Chris. s. v.; Walcot, Sac. Archaeology, s. v.; Riddle, Christ. Antiquities. See Creditence-table.

Obligation (Lat. obligo, "to bind") is that by which we are bound to the performance of any action. In theological science it holds a place in the doctrinal sphere, for it enters into the justification scheme. It is held that the concept of obligation is as old as the idea of moral order. When God comes into the world a debtor to divine justice, and is therefore under an obligation to punish him, being deficient in that form of original justice in which he rendered to God all that service of love which is the great end of God demanded. Hence the terms due and duty to express the obligation (comp. Hampden, Bampton Lectures, vi. 296).

Obligation, as a moral factor, is generally distinguished as internal or rational and external or authoritative, according as the reason for acting arises in the mind of the agent, or from the will of another who has a right or authority to prescribe rules to others. Bishop Warburton (Disc. Leg. bk. i, § 4), however, has contended that all obligation necessarily implies an obliger different from the party obliged; i.e. moral obligation, being the obligation of a free agent, implies a law; and a law implies a lawmaker, and that therefore the will of God is the true ground of all obligation, strictly and properly so called. The perception of the difference between right and wrong can be said to obligate only as an indication of the will of God. This seems reasonable, indeed when we consider that our necessity of doing actions or forbearing them; that is, such a necessity as whoever breaks through it is ipso facto worthy of blame for so doing; another regards it as springing from the moral order, so that the law is to be regarded in that reason and nature; another, from agreement with truth; and another, from expediency and promotion of the public good. A late writer has defined obligation to be "a state of mind perceiving the reasons for acting, or forbearing to act." But we confess this has a difficulty in it, because it carries with it an idea that a man should by his habitual practice of iniquity be so hardened as to lose a sense of duty, and not perceive the reasons why he should act morally, then he is under no obligation. And thus a depraved man might say he is under no obligation to do what is just, because the cause, through his desire of living a licentious life, he is led to suppose that there should be none. Evidently a difference should be made between obligation and a sense of it. Moral obligation, we think, arises from the will of God, as revealed in the light and law of nature, and in his Word. This is binding upon all men, because there is no situation in which mankind have not either the one or the other of these. We find, however, that the generality of men are so far sunk in depravity that a sense of obligation is nearly or quite lost. Still, however, their losing their sense does not remove the obligation. It is a nature;'Obligation is eternal and immutable, but the sense of it is lost by sin." Believing this, we do not accept the theory of those thinkers who lose sight altogether of man's perception of rectitude, and give undue, if not exclusive, prominence—by Lecky, for instance, by Leslie, by Horace, as well as Paley and his followers—to the rewards and punishments of a future life, as prompting to the practice of virtue. For although God, in accommodation to the weakness of our nature and the perils of our condition, has condescended to quicken us in the discharge of our duty by appealing to our hopes and fears, both in regard to the life that now is and that which is to come, it does not follow that self-love, or a concern for our own happiness, should be the only, or even the chief spring of our obedience. On the contrary, obedience to the divine will may spring from veneration and love for the divine character, arising from the most thorough conviction of the rectitude, wisdom, and goodness of the divine arrangements. That this, more than a regard to the rewards of everlasting life, is the proper spring of virtuous conduct, is an argument of the greatest importance, as (1) man is right merely for the sake of everlasting life is evidently acting from a motive far inferior, in purity and power, to love and veneration for the character and commands of him who is just and good, in a sense and to an extent to which our most elevated conceptions are inadequate. That the duty to the true throne is not the iron chain of selfishness, but the golden links of a love for all that is right; and our aspirations to the realms of bliss should be breathings after the prevalence of universal purity, rather than desires for our individual happiness. Self and world are too narrow to hold the heart of man when it is touched with a sense of its true dignity, and enlightened with the knowledge of its lofty destination. It swells with generous adoration of all that is right and good, and expands with a love which refuses to acknowledge any limits but the limits of the nature and will of him from whom all being and all happiness proceed, it acknowledges the only proper object of its adoration and submission; and in surrendering itself to his authority he is purified from all the dross of selfishness; for there is a most unquenchable love for all that is right and good. Dr. Adams (Sermon on the Nature and Obligation of Virtue) has well said, "Right implies duty in its idea. To perceive that an action is right is to see a reason for doing it in the action itself, abstracted from all other consider- ations. This is the reason why the decision of the unweaned rectitude in the action, is the very essence of ob-
OBLIGATION, FEASTS OF

OBERGON

legation; that which commands the approval of choice, and binds the conscience of every rational being." Mr. Stewart (Adv. and Mor. Powers, ii. 294) has put it thus: "The POWER OF COMMAND in law."

And that "The very notion of virtue implies the notion of obligation." See Sanderson, De Juramento Obligatione, precept, i. sect. 11; De Obligatione Concinentiae, precept. v.; Whewell, Morality, bk. i, ch. iv, p. 84-89; King, Essay on Law, Prelim. Dissert. sec.; Dr. Chalmers, Bridgewater Treatise, i. 78; Warburton, Legation, i. 38, 46, etc.; Paley, Moral Philo. i. 54; Robinson, Pref. to vol. iv of Saurin's Sermons; Mason, Christian Morals, ser. 23, ii. 256; Doddridge, Lect. lect. 52; Grove, Philo. ii. 66; Cudworth, Int. System. ii. 505, 606, et al.; Dr. Bush- nell, Distinction between the duties of the Christian Examinor, May, 1866, art. v.; Krauth's Fleming, Vocab. of Philo. s. v. See Right; Sanction.

Obligation, Feasts of, a name in the Roman Church of holy days on which work is suspended. In 1822 forty-one were cited, including Christmas, Circumcision, Epiphany, Ascension, Pentecost, and Easter (each with the feast and fasts); Good Friday; St. John the Evangelist, Holy Innocents, Purification, Annunciation, St. Mark, St. Philip and St. James, John the Baptist, St. Peter and St. Paul, St. James, St. Bartholomew, St. Matthew, St. Michael, St. Luke, St. Simon and St. Jude, St. Agnes, St. Andrew, St. Thomas the Apostle, Invention of Holy Cross, St. Thomas the Martyr; Corpus Christi, Translation of St. Thomas the Martyr, St. Mary Magdalene, Assumption, St. Lawrence, Nativity of the Blessed Virgin, Exaltation of the Holy Cross, St. Nicholas, Conception of the Blessed Virgin Mary, the dedication of the church, the patron saint of the church, and feasts ordained by the ordinary. In Worcester diocese the labor of the plough only was allowed on seven saints' days, and women's work was forbidden on the feasts of St. Agnes, St. Lucy, St. Margaret, and St. Agatha.

In the United States of America the "holy days of obligation," though they hold a very prominent place in the estimation and practice of Roman Catholics, have been reduced to the following: The Circumcision of our Lord (January 1), The Epiphany (January 6), The Annunciation of the Blessed Virgin Mary (March 25), The Ascension of our Lord (see above), Corpus Christi, The Assumption of the Blessed Virgin Mary (August 15), All Saints (November 1), Immaculate Conception of the Blessed Virgin Mary (December 8), Nativity of our Lord, or Christmas (December 25). (Sundays, and the feasts which fall on them, are not included in this enumeration.) See Western Episcopacy, Episcopacy, Annunciation, and Corpus Christi are not even regarded as holy days of obligation. See Barron, Romanism as it is, ch. xvi; Walcott, Sacred Archology (Lond. 1868), p. 407.

Obnam. See Stools.

O'both (Heb. Oboth), u'bh, water-skins, i.e., according to First, hollow pannes; Sept., ḫâbîq, v. zâbâbîq, the forty-sixth station of the Israelites on their way to Canaan, near Moab (Num. xxxii. 10, 11; xxxiii. 45, 44), between Penum and Jezreel; probably south of the Dead Sea, possibly near Wady el-Ghweil. See Exod.

Obotrites, Conversion of the. See Slaves; Viceruins.

Obrecht, Ulrich, a learned German philosopher and jurist, was descended from a noble family, and was born July 23, 1464, at Strasbourg, where he had his first educational training, and then proceeded to learn the elements of the science at Montbeliard and after. He inherited both the inclination and taste of his ancestors, who were all distinguished by the posts they held either in the university or in the senate of Stras- burg. The study of the Latin, Greek, and Hebrew tongues was almost the first amusement of his in-

fancy; and he learned French, Spanish, and Italian by way of play or diversion. At fifteen he was so good a rhetorician that he was ordered to compose and pro- nounce a speech in each of the three subjects and to render his ideas confused; everything was ranged in exact order in his mind; and he surprised the world not more with the prodigious extent of his knowledge than with his admirable neatness in delivering it. As soon as he had taken his licentiate's degree, he resolved to travel abroad for further improvement. With this view he went first to Vienna, in Austria, thence he passed to Venice, where his chief pleasure consisted in visiting the libraries and learned men. At his return from Italy his friends induced him to settle at Strasbourg, and he gave himself up to authorship and to teaching in the university. His skill in law and his business of having taught the Protestant religion; but the king of France having made himself master of Strasburg, and going there in person with the whole court, Mr. Pelis- son, who came among them, and who was acquainted with him, told it to Obrecht, and found Obrecht out, and to discourse with him upon that subject; and his conversion was completed by the Jesuits, who were established at Strasbourg by Lewis XIV. Obrecht abjured his religion in 1684 at Paris, and put the instrument into the hands of the bishop of Meaux. Upon his return to Strasburg he resumed his professorship in the law, and it was about this time that he wrote the notes which we see in some editions of Grotius, De iure belli ac pacis. In 1685 the king of France nominated him to preside, in his majesty's name, in the senate of Stras- burg, with the title of pretor-royal, in imitation of the old Romans; and from that time Obrecht applied him- self entirely to public affairs. The judges of Strasbourg, according to the principles of the Reformed religion, were empowered to dissolve marriages in case of adul- tery, and to enable the injured party to marry again. In opposition to this custom, Obrecht wrote a book, in the German tongue St. Austin's book of adulterous mar- riages, and obtained from the king a prohibition, upon pain of death, either to tolerate or solemnize the marriage, for the future, of any persons that were separated or divorced for adultery. This edict was not in public, which he performed, for the rest, although by the rights of his pretorship everything done in the senate must necessarily pass through his hands, yet he was so expeditious and so good a manager of time that there was some little left for his studies, which served him as a refreshment from the fatigue of business; and several valuable publications of his date from this period. But as all these things could not be done without public, which he performed for the time for his necessary meals, his health became unavoidable impaired, and his life was suddenly brought to a close in 1701. We have other publications of his, besides those already mentioned, which are of interest to us: Contra philosophos origines: De praepoem Celsa. See New Phil. Memoirs, vol. xxxv; Haug, La France Protestant, s. v.

Obregon, Bernard, the founder of the Spanish order of Minorite hospital brethren, was born at Las Huelgas, near Burgos, May 20, 1546. He was at first a soldier, but having been converted, he devoted him-
OBREGÓN 284  OBSEQUIENS

self to the care of the poor in the court hospital of Madrid. He soon found followers, and formed a congregation, which, approved by Don Pedro Caraffa, nunco third order of St. Francis. See MINORITS. In 1592 Obregón went to Lisbon, where he reformed the numerous abuses existing in the administration of the hospitals of that city, and drew up a set of rules for the guidance of his congregation, which was finally completed in 1594. Upon his return to Madrid he cured king Philip II through his last illness, in Sept., 1598, and afterwards resumed the directorship of the general hospital. He died at Madrid August 6, 1599. Obregón wrote Instrucción de enfermos, y verdade prácctico como se hay de aplicar los remedios que enseñan los médicos (Madrid, 1607, 8vo). The Spaniards call the members of the order Obrero.

Obregón, Pedro de, a Spanish painter, was born at Madrid, according to Bemudez, in 1597. He studied under Vincenzo Carducci, and gained a high reputation in historical painting, especially in works of an easel size. Palomino commends a large picture by him, representing the Triumph in the reforesta de la Merced, and another of the Immaculate Conception in the church of Santa Cruz. There are some of his easel pictures in the collection at Madrid, where they are highly esteemed. Benudex says Obregón was also an excellent engraver. He died in 1594. Upon his death, Diego and Marco, whom he instructed in the art, he died in 1659. There was another Pedro de Obregón, who was a miniaturist, and illuminated books of devotion; he flourished about 1564.

O'Brien, James Thomas, D.D., a noted Irish prelate, was born in Ireland in 1792, and was educated at Trinity College, Dublin. He took holy orders immediately after graduation, and soon rose to the first appointments in the Church. In 1842 he was made bishop of Ossory. At the time of his death, which occurred January 18, 1875, he was the senior bishop of the Irish Episcopal Church. He is noted as a work on Jusdict by Faith only (ten sermons, Lond. 1838, 8vo), which is "one of the best expositions of the cardinal article of the Reformed Church extant" (Loudwes, Brit. Lib. p. 763). He also published several minor works, among them one entitled A Charge (1843, 8vo, and often since).

Obscene Prints, Books, or Pictures, so exhibited in public, as to damage the general morality, are not only to be preached and prayed against, but also legislated against; and it is the duty of the Christian public to see that the laws now on the statute books are faithfully executed and strengthened, to prevent the demoralization of the masses from this source. In Great Britain the laws are very strict; in the United States they might be greatly improved. In recent years a Mr. Comstock, of New York, has given much time to the suppression of the nefarious traffic in obscene publications, and has rendered great service to the general American public.

Obscurantists (Lat. obscure, "to darken, obscure") is the term originally applied in derision to a party who are supposed to look with dislike and apprehension upon the progress of knowledge, and to regard its general diffusion among men, taking, as they are ordinarily found, as prejudicial to their religious welfare, and possibly injurious to their material interests. Of those who avow such a doctrine, and have written to explain and defend it, it is only just to say that they profess earnestly to desire the progress of all true knowledge as a thing good in itself; but they regard the attempt to diffuse it among men, indiscriminately, as perilous and often hurtful, by producing presumption and discontent. They profess but to reduce to practice the motto, "A little learning is a dangerous thing."

It cannot be doubted, however, that there are fanatics of ignorance, as well as fanatics of science. There are religious, political, scientific, and artistic obscurantists. In the Reformation period the Humanists (q. v.) called those zealots who opposed all innovation Obscurantists.

Obsequens, Julius, an ancient sage who flourished some time in the early Christian period, is principally known as the author of a work entitled De Prophétia, or Prophétorum libelli. The work affords no geographical data, and there is not accessible from any other source anything which may reveal a knowledge of him personally, not even as to the place of his birth nor the time when he lived. Vossius thinks him anterior to Paul Orosius, and Scaliger claims that St. Jerome made some use of them; but there are mere guesses on both. Obsequens was not a historian, but a compiler. His work, of which a fragment only remains, is a collection of such phenomena as the Romans called Prophétia, or Osénta, and which they looked upon as miraculous manifestations of the divine power, and part of the signs foretold by the Law. It is chronologically divided, and the fragment we possess extends from the consulates of Scipio and Lælius, in B.C. 190, to that of Fabius and Ælius, in B.C. 11. The materials are generally taken from Livy, whom he sometimes copies literally. There is no MS. copy of his work known at present; that which served for the first edition belonged to Jodocus of Verona, and has long been lost. Towards the middle of the 16th century Conrad Woolfard, a professor at Basle—better known by the name of Conradus Lycothinae—published Obsequens' work, with a supplement. Judging from his introduction, he had a high aim in so doing. He says, "The Romans evinced their religious sentiments by the great attention they paid to marvelous phenomena and to omens, while their blindness was manifested by their worshiping false gods. Had they known the true religion, they would have supposed their priests to be their descendants, who are Christians more in name than in fact, and take no account of the events which Christ predicted should occur as the end of the world approached." Among the recent omens, Lycothinae mentions three or four eclipses, earthquakes, earthquakes, earthquakes, earthquakes, etc., which have made no impression upon the minds of the people. Their neglect of the divine warnings and their impious conduct have brought down upon them the wrath of God, who has given them up to civil war, diseases, and famine. Lycothinae thinks the publication of Obsequens' work useful, as showing the importance of the omens which people were neglecting. His supplement contains the phenomena observed since the foundation of Rome to the time when commences Obsequens' fragment, taken from Livy, Orosius, etc. The first edition of Julius Obsequens was published by Alde (Venice, 1508, 8vo; reprinted in 1518), in a volume containing also the letters of the younger Pliny. The second edition is that of Beatus Rhenanus (Strasbourg, 1518, 8vo), in a volume containing also the letters of Pliny, De vita illustrium Aurelii Victor, and De claris mulieribus of Suetonius. Robert Estienne published the third (Paris, 1529, 8vo), together with the letters of Pliny. The first edition, together with the supplement of Lycothinae, was published at Basle (1564, 8vo). Among subsequent editions, the best are those of 1673, by Oudenbost (Leyden, 1720, 8vo); Hase, in Lemaire's collection of Latin classics (Paris, 1822). It was translated into
French by Georges de la Bouthière (Lyons, 1558, 8vo), and by Victor Verger (Paris, 1825, 12mo); and into Italian by Damiano Maraffi (Lione, 1554, 8vo). See the introductions of Kapp, Lycothenses, Scheffer, and Oldendorp, in Hase’s edition. See Hoefer, Nouv. Biog. Générale et Complémentaire, Dict. de la Grèce et Rom. Biog. and Mythol. iii, 1–2. (J.N.P.)

Obsequies. See OBSEQUIUM.

Obsequium (Lat. obsequiens) is the unconditional surrender of one’s will to another’s authority, as demanded of monks and nuns by their monastic vows. See OBEDIENCE. Also the name of the prison in which those who overstep their vows are put; also the office for the departed, and sometimes also the solemn funeral service. See BURIAL.

Observantists (or OBSERVANT FRANCISCANS) are a class of Franciscans who have rejected the observance of the rigid rule prescribed by their order, and have adopted a more liberal interpretation of the rule of St. Francis. They are sometimes called Oscans, or Stricctoria Observans; but both bodies, although free to practice its own rule in its own way, were still required to submit to the general administration of the order, who, as the Fraticelli were by far the more numerous, was a member of that school. By degrees a second reform arose among a party in the order, whose zeal the rigor of the Observantists was insufficient to satisfy, and Clement VII permitted two Spanish friars, Stephen Melius and Martin Guzmán, to carry out in Spain these views in a distinct branch of the order, who take the name of Reformenti, or Reformed. This body has in later times been incorporated with the Observantists under one head. Before the French Revolution it was said to have numbered above 70,000, distributed in more than 300 convents; at a time when the number of the Franciscan order as a whole had diminished, but they were still a powerful and widespread body, as well in Europe as in the New World, and in the missionary districts of the East. In Ireland and England, and for a considerable time in Scotland, they maintained themselves throughout all the rigor of the penal times. Several communities are still found in the British Isles. See Chamber’s Cyclopædia, s.v., and the references to literature in art. Francis- cans; also Mrs. Johnson, Monast. Leg. (see Index); Barron, Hist. of the Reformation (see Index).

Observer of Times is the rendering in the A.V. of the Eng. ‘observer’ (Isa. xxiv. 1), ‘kepes’ (Deut. xix. 15); see also the verb, Lev. xix. 26; 2 Kings xxii. 6; 2 Chron. xxxiii. 6; elsewhere ‘enchanter,’ ‘Moemonim,’ ‘soothsayers’ (comp. Spencer, Leg. rit. II, 11, 3; and see NECROMANCER, SEER), and the superstition, intimately associated with astrology, and widely spread through the ancient world by the influence of the Oriental Magi, which dis- tinguished the day from the night and determined days as lucky or unlucky; seems to be plainly alluded to not only here, but also in the words onemim (כְָנֶמֶמֶמ יָפֵי, Isa. ii. 6; Jer. xxvii. 9) and onemah (יִפְלָפָל, Isa. ixi. 3), commonly rendered ‘soothsayers’ or ‘scourcers’ (q. v.).

Deleying (Oberriat, iii. 128 sq.) finds it mentioned also in Job iii. 5 (יִפְלָפָל), and see Gene. Thes. ii. 698). In Gal. iv. 10, Paul confesses the same practice. This peculiar regard to days originated at a very early period. It had already become prevalent in Greece in the age of Heroid (Works and Days, 770; comp. 768; see Ideler, Chronol. i. 88), and is often mentioned by later authors, both Greek and Roman (see, e.g., Sueton. Octav. 94; Nero, 8; Vitell. 8). Single families had their own peculiar unlucky days (‘dies atros,’ Sueton. Octav. 92). Even between different divisions and hours of the same day a similar distinction was made (Theocr. i. 15; comp. Ps. xiii. 6, in the Sept.; Hesiòd, Works and Days, 710 sq.; Macrobi. Sat. i. 16). The observance of days was not known to the ancient Persians (Ideler, Chronol. ii. 540) or to the early Germans (Cassius, Bell. Gal. i. 50; comp. Dusart, apud Rebecco, 1607; Potter, Greek Archæol. i. 758). The modern Jews make the second and fifth days of the week especially prominent (see Buxtorf, Synag. Jud. p. 279). See DIVINATION.

Obsequiendo, see Obsequium.

Obsequiatio, or obsequiatio sacras, or obsequiatio sacra, a term of the early ecclesiastical language to designate the baptism, or, better, the sealing by the Holy Spirit, as, e.g., in Ephes. i. 18, et al. See BAPTISM; SPIRIT.

Ocampo, Floridán, a Spanish ecclesiastic, noted as a chronicler, was born in Zamora in the beginning of the 16th century. After finishing his studies in the University of Alcalá, where he had as his teacher Antonio de Lebrina, he became an ecclesiastic, was provided with a canonicate, and obtained the title of historiographer of Charles V. In order to fulfil his duties he undertook the history of this prince, but he had the ambitious idea of going back to the deluge. "As one might foresee," says Ticknor, "he lived just long enough to finish a small fragment of so vast an enterprise, scarcely one quarter of the first of his four grand divisions; but he went far enough to show that the time for such writings was past. Not that credulity was wanting—he had too much of it; but it was not the poetical credulity of his predecessors trusting to the old national traditions; it was too ready faith in the bald impostures which bear the names of Berosus and Manetho, works discredited for half a century already, and which he employed as authorities, if not sufficient, at least probability, for an uninterrupted succession of Spanish kings from the mythical, and, according to him, Noah. Such credulity has no sort of chance; and, besides, the work of Ocampo is in its form dry and tiresome, and, as it is written in a formal and heavy style, it is almost impossible to read it. It is little to be regretted that he has brought his annals of Spain only to the period of the Scipions." He died in 1555. The Chronicon of Ocampo (Crónico ge- nelar de España) appeared for the first time in Zamora (1544, fol.); it was reprinted at Medina del Campo (1555, fol.); the best edition is that of Madrid (1791, 2 vols. 4to). See his Life in the introductory pages of his works, and his letters (ed. 1791); Don Alvar de Regalchal y Ugarte, Biblioteca de los escritores que han sido individu- ados de los seis colegios mayores; Hoefer, Nouv. Biog. Générale, xxxviii, 417; Ticknor, Hist. of Spanish Literature, i, 508.

Occam, or Occamism, Nicholas of, an English monastic of the Middle Ages, flourished at Oxford in the first half of the 14th century. He was bred a Franciscan, and was the eighteenth public lecturer of his convent in that university. He is highly praised by writers of his order for his learning, but Bale severely criticised him. See Fuller, Worthies (ed. 1840), iii, 213; Bale, De Scripturis Britannicæ cent. v. No. 17; Allibone, Dict. of Brit. and Amer. Authors, s. v.

Occam, William of, the last of the great schol- ars in the succession of medieval scholasticism, and assuredly one of the most acute, was the notable pre- cursor of John Wickliffe, John Huss, and Martin Luther. His logical perspicacity and dialectical subtlety earned him the designation of the "First of the Gentiles," the "Singular (unique) Doctor." He pursued the refinements of eristic disputations so far as to render it impossible to proceed farther in the same direction. "The force of reason could no further go." But, if "he could divide a house in two, he would not divide a north wind," he next con- sented to "change his coat and still dissent." He was as earnest and sincere, and concealed a large fund of solid sense under the familiar forms of scholastic logomachy. If the wondrous machine of scholasticism did not actu-
ally break down under the strain to which it was subjected by him, it became too complex and rigid for any later Ulysses to bend, and lost its availability with succeeding generations. To this rejection of the great creation of the Middle Ages Occam contributed in another mode. He was not rather himself, in this respect, the creator of the times and of the tendencies of the times. No other schoolman connected dialectics so closely with practical life, or linked speculation and academic dispute so intimately with the pressing questions which agitated contemporaneous society.у. If he did not succeed in bringing scholasticism home to men's business and bosoms—an achievement incompatible with its nature—he did bring logic and metaphysics from the cloisters and from the "shady spaces of philosophy," and associated them with the politics and the ecclesiastical transformations of the day. The letters of Eloise and Abelard show how the desecrated members and hardened sinews of technical ratiorication may be adapted to the poignant expression of frenzied love—"quid non cogit amor?" In the writings of Occam the same dry and dreary formulas are rendered applicable to the popular and instinctive aspirations of the times. Occam thus unconsciously gave predominance to passion, interest, rude instinct, and popular tendency over abstract reasoning and formal controversy, though himself preserving all the externals of his tribe. He maintained himself on the ancient precepts alone, but a more active spirit was springing around him. When the monarch of the woods had fallen, the undergrowth shot up into tall timber, and filled the forest with an unlike production. The school of Occam survived, and the ranks of the schoolmen still continued to be adorned with illustrious names, such as those of John Gerson, cardinal D'Ailly, and others; but the age of the great leaders of sects had passed away, and the generation of the Epiphanes derives distinction from other qualities than those which had given renown to their precursors.

Life. The biography of the schoolmen, from the nature of their pursuits, is usually jejune and obscure. It rarely presents the fascination which is afforded by the romantic story of Abelard, or the calm instruction which is offered by the career of Bonaventura, or the angelical Thomas of Aquino. Until Occam had conquered fame, and had become a power among men, few and trifling are the details of his career that have been transmitted to us, and even the chronology of his fortunes is indistinct and confused. The name of Occam, by which he is habitually known, is derived from the hamlet of Ockham, that he laid in the wastes of Surrey, and straggled along the southern outskirts of what is now designated as Ockham Heath. The growing population of six centuries, and the proximity of London, have cleared and reclaimed the wilderness, and improved culture has converted sterility into productivity. At the close of the 13th century, and in the reign of Henry III or of Edward I, when Occam was born, the country round his birthplace must have been a dreary tract, given up to black cattle and hogs, except in scattered patches which were surrounded by the indomitable perseverance and far-reaching hope of monastic fraternities. The exact date of his birth has not been ascertained, but it may be concluded that he first saw the light before the 13th century had entered upon its last quarter, as he had attained distinction, and was regis, professor of theology in the University of Paris, in the early years of the 14th century, and died at an advanced age before the century had half expired. His brightness as a boy attracted the attention of the Cordeliers, who induced him to take the vows of the Franciscan Order, and who afforded him the best opportunities for cultivating his precocious talents. He was sent by them to Merton College, Oxford—this great university having been brought into renown under the supervision of Robert Grosseteste, bishop of Lincoln, and the teachings of Frater Agnellus, Adam de Marisco, and Roger Bacon. It must have been at this time that Duns Scotus, also an alumnus of Merton, and then at the height of his eminent reputation, was attracting to Oxford the thirty thousand pupils whom he is said to have drawn thither. Occam, on the other hand, found himself a pupil of the Subtle Doctor; but his own mind was of a bold and independent character—"nullius addictus jurare in verba magistri." He did not hesitate to assail the positions of his teacher, and to propound keen and embarrassing objections. After attaining his degree he opened a course of lectures and built almost as much enthusiasm as his master, winning many hearers from him. Duns Scotus was the acknowledged chief of the Realistic School, which had long been dominant, and was then reigning almost without opposition. Occam, however, and ardent for truth and unselfish enthusiasm as his master, was not actually dead, had long been dormant. A violent antagonsim thus arose between the Occamists and the Scotists—a discordance which frequently led to blows and wounds between the disputants. The belli tertii.rum cause may appear trivial and ridiculous to us with our changed habits of thought and diverse aspirations, but in the 12th, 13th, and 14th centuries it was neither a play upon words nor a fantastic difference to contend that abstract notions, or universals, were entia reiula, entia intelligibilia, or entia rationalia. The dissension involved the antagonism of the profoundest convictions, the conflict of two nomens, ideas and institutions, religious, ecclesiastical, political, and intellectual, which were then agitating society, and imperatively demanding a practical solution. See Nominalism and Realism. As Protoegenes divided the delicate colored line of Apelles by one still more delicate of different color, according to the anecdote reported by Pliny, so Occam drew still more attenuated distinctions among the fine and intricate lines of the logical propositions of Duns. Nor were these distinctions and divisions merely caprices of dialectical ingenuity. Occam was earnest, sagacious, and ardent for truth and practical results, under all the disguises of the cumbrous machinery of scholastic ratiorication. It has justly been said of him that "his eager, restless, and active mind was always at work acquiring and testing every kind of knowledge that presented itself, and his uncompromising enthusiasm early marked him out as one who would become a leader of men. The abstract dialect of the times could not veil his powerful, clear, and concrete vision; he must see everything with his own eyes ere he will believe or teach it. He was full of sturdy self-dependent energy and will, which were destined to mould the policy and State policy." How often has it happened that the speculations of the great thinkers of other days have been slighted or misunderstood because their language has been forgotten and their meaning become indistinct!

Of course the antagonism to the Scotists was only gradually developed. Occam was sent to Paris, and became reugieus professor of theology in the university. On his return to England he was appointed by the Franciscans one of their professors at Oxford. This office he was destined to hold with extraordinary constancy, and to effect so many exciting disturbances among the students. The young colleagues of that day were always ready for an uproar—even more so than in our own—whether the question concerned town and gown, battles, or metaphysical questions. Occam's bold despotic pronouncements on compromising polemics might well occasion controversies and quarrels among doctors and disciples, especially as the Dominicans and Thomists mustered strong in the cloisters and halls of Asia. The dates of Occam's scholastic career are exceedingly obscure and uncertain, and cannot be exhibited with any clear consistency. They can be determined only by vague conjecture, or by known synchronism with events historically determined. We cannot undertake their conciliation. Occam is said to have declined the archdeaconry of Stow.
in 1300, but to have accepted, two years later, a prebend at Bedford, and in 1306 to have been inducted into a living at Stow, which he did not resign till 1319. During much of this period he was certainly in Paris; but his benefices and residence were by no means inseparable in that day of papal manipulation, non-consultation, and expediency. It was in the first years of the 14th century that he engaged in the defence of the civil power, and obtained his earliest notoriety beyond the precincts of the schools by advocating the cause of Philip the Fair of France against the arrogant pretensions of Boniface VIII, and by inciting through his advocacy the Balance of power in favor of secular sovereignty. He maintained against the claims of the papacy the independence of princes in all temporal affairs, denied their subordination to the Church, and asserted their responsibility to God alone. It was not the first time that he had been summoned to appear before the pontifical court. They had been thrown into the pontifical dungeons at Avignon. They made their escape by the assistance of the emperor Louis of Bavaria, May 26, 1328, then in the midst of his warfare with the pope. With the emperor they found refuge, and were even communicated for their flight. Pontifical comminations had few terrors for Occam. His convictions andusions were unshaken by spiritual censures, which had lost their force in the wild ravings of Boniface VIII, and in the outrage which had been perpetrated on him which had not the same effect. It was at this time that he promised the emperor to defend him with his pen, if he received in return the protection of the imperial sword. He fulfilled his promise, and the alliance remained unbroken. It marked an era when letters became a ruling power in the world by the side of the Church and the State. Haurda may truly remark that Occam "began a revolution." He lived for years under the shelter afforded by his imperial patron, throwing himself courageously and passionately into the thickest of the strife; indefatigable in his labors, fearless in his opinions, keen in discernment, ingenuous in argumentation, yet just in motive, and possessed of the aura popularis of the approaching age. To his induction, or participation, may safely be ascribed the repudiation of papal jurisdiction in Germany, by the electors at Rense, and by the Diet at Frankfort, 1338—an early anticipation of Hus and Luther. Little information has been transmitted to us in regard to the later years of Occam. The time and place of his death have both been disputed, as has been the statement of his relief from the sentence of excommunication. Luke Warding, in his History of the Order of the Minorites, represents him as having died in 1341; but this writer stands alone in this opinion. The habitual statement is that he died in the monastery of his order at Munich, April 7, 1347, the year in which his protector, Louis of Bavaria, also died. By some authorities, 1348 is given as the year of Occam's death.

Philosophy and Writings.—Occam introduced no new principles into philosophy. He did introduce a new spirit. The tenets on which his system rested had all been advocated before. He recomposed previous opinions, and placed them in a new and clearer light. He was not a profound thinker, though the method is in model and spiriticism in his procedure. He has habitually been represented as the restorer of nominalism. This has recently been denied, and too strenuously denied. Individual Nominalists may, indeed, be found among his immediate predecessors and contemporaries, but they were few and unimportant among the multitudes of Realists—varius sunt in gurrite utro. Occam rendered nominalism again a power in the realm of speculation: it became dominant in his hands, and thenceforward continued to advance in public regard till it introduced a general tendency in rational thought. They had returned to the right channels of knowledge. It is the great and last duty of Occam to accuse the great schoolmen of wasting their powers over vain and abstract disputations. In their most refined abstractions they comprehended the urgent problems of the time, though it is with difficulty that our hasty glance can now Heurn, in their dry light, the vital issues of the hour. They clothed them in the costume of the day, and the fashions have entirely changed. We can recognise the more obviously practical discussions of Occam and his successors, and their rapid move-
ment in the direction of modern thought. If Occam was the last of the great schoolmen, he was the herald of the intellectual revolution which produced the modern world. What was most distinctive in his speculations was his statement of older theses in the language and forms of the Byzantine Logic, lately introduced to the admiration of the West by the Specula of Petrus Hispanus. It is repeatedly asserted that he recognized and exhibited the close coherence between logic and grammar; he preceded Hobbes in regarding words as nothing more than the counters of thought—as *voca hypotheticae repressaritum*, rather than as voces essentiae.* By prefiguring his work, though employing different terms and ascending to higher altitudes, in insisting upon the wide difference between impressions and ideas. These anticipations display both the modern habituses of his mind and his sceptical or antidogmatic tendency. Even a more notable characteristic of his philosophy was his straightforward, unequivocating application of his doctrine and dialectics to the questions which rent the spiritual and the secular society of his century. If he assailed his master, Duns Scotus, and the Realists, he attacked, with less restraint, popes, hierarchies, and synods, and oligarchic errors in politics and government. In all the struggles, disputes, and controversies, political, ecclesiastical, and theological, with emperor, pope, and universities, Occam was the chief actor. He thrust himself into every European strife, the biggest, bitterest figuration of his time, and contended throughout with internal fighting. He has put into clear and authoritative words every great question which men were dumby or inarticulately striving to express; and the whole life of his age centres in him, and is mirrored in his conduct." In the opening of his career he stood by the side of the haughty and tyrannical Philip the Fair, in the defence of temporal sovereignty, against the usurpations of the more haughty and imperious Boniface VIII. In the closing years of his life he maintained with equal resolution the cause of the empire, in the fierce duel between Louis of Bavaria and the popes John XXII, Benedict XII, and Clement VI. In the interval between these congruous extremes he stubbornly insisted upon the strict observance of the vows of his order, advocated apostolical destination with extravagant vigor, and denounced the immoralities of popes, papal courts, and clerical life. He was, indeed, a disturbed man, and lived under the sternest papal compilation, perhaps dying without care for its removal. It will thus be seen how much more prominent and potent was the action of Occam than his theoretical speculations. The natural course of events, however, greatly separated him from his contemporaries both in his philosophy and in his manner of stating it, and from the sincerity and unsparing temper of the man.

Unfortunately, Occam's writings are almost inaccessible, and can scarcely be found outside of the rich repositories of medieval lore and medieval thought in monastic libraries, or in libraries plundered from monastic collections. They have not been revealed to our long research, and we derive our imperfect knowledge, through many successions, from others. Before the middle of the 17th century Naudeus lamented the prospect that "the followers of Occam would be eternally denied the sight of his works;" and declared that "the hope was almost lost of ever seeing them printed." They had been printed a century and a half before, but had become as rare as manuscripts. They may have been consumed in the fires and popular excesses of the Reformations; but their character was calculated to condemn them to early obscurity. Occam gave an impulsion to the times, which enabled ensuing generations to leave him neglected on the strand—*stat magni nominis umbra.* We must note, with much second-hand materials as are available, the most striking opinions of Occam.

In the case of many men, who have occupied a large space in the eyes of the world, "the good they do is buried with their bones;" but in the case of others, and pre-eminently of Occam, all they achieved with their contemporaries constitutes but a small part of their actual service to mankind. This notice would accordingly be incomplete if it neglected to call attention to the relation of its subject to his own and the preceding age, and to illustrate his action on the ages which ensued. Necrology and misunderstood as the long medieval period has too often been, it cherished the accomplishment of the most stupendous labor ever imposed upon humanity—the transmutation of the ancient into the modern world; the transfiguration of panagism into Christianity; the change from the worship of nature and of the manifestations of nature to the worship of nature's God. Each century, in its order, seemed to have its own appointed task in the elaboration of this great *paibgasen* The thirteenth had been the period of premature renovation. It had witnessed the inaugural splendor of the Holy League, the high arrogance and triumph of the papacy, the glory of the schoolmen—Bonaventura, Albertus Magnus, Thomas.*
Occasionalism, or the doctrine of Occasional Causes, is the name of a religious philosophical theory marking an era in the development of the philosophical doctrine as to the relation between spirit and matter, and especially between the human mind and the human body; or, perhaps better, the synchronous action of both on the world, which thereby is dual. The proposition of this system therefore rests is dualism, i.e., the antagonism between spirit and matter. Christianity, by means of revelation, had solved the question concerning this heathen view of antagonism, by considering matter as the sympathy or instrument of the mind and body, and as the seat of the spirit. Yet in the Middle Ages the reminiscence of the heathen dualistic view again got the ascendency, and scholasticism found itself unable to solve the problem of removing that antagonism. While scholastic realism had for a long time permitted the occasional and material to be absorbed as insignificant in the general notion of the mind, the renewed nominalism (q.v.; see also Occam) had used spiritual knowledge as the opponent of empiric reality, and the dualistic opposition between spirit and matter is therefore equivalent to that between realism and nominalism. Descartes, the founder of modern philosophy, was the most ardent exponent of this dualism. According to him, the essence of mind is thought; that of matter, extension; and these two counterbalance each other. Hence the mind and the body, taken in themselves, have nothing in common; nor do they belong in common to the life of the body, the higher intellectual evolution, entirely distinct from the intellectual evolution of the mind. Yet the soul can modify the evolution of the body, as God (by a positive act) has connected it with the body, binding them together, and placing it in the pinal gland, where it is most intimately connected with the body. Descartes did not solve the problem of the manner in which the mind and the body are united. Arnold Geulinx sought to solve it after the manner of De la Forge (see Sigwart, Gesch. d. Philosophie, ii, 198), by saying in his Ethica that mind and body work together through the cooperation of God. In case the will operates, God makes the body act accordingly; and in case the body is affected, God makes the mind to perceive it. Thus in the first case spontaneity, and in the second receptivity, are but the reflex of divine actions; man becomes a simple spectator, for the action of his will, as well as that of his body, is a divine action. The causality is God, and therefore to be considered as absolute, unavoidable. According to this theory, the body ceases to be the mediate cause whenever the mind assumes (though it is only in appearance) this position, and vice versa. Thus, for example, it may be held that the activity, proceeding sometimes from the mind, sometimes from the body, are only perceptible as divine actions. Geulinx, therefore, draws no distinction between the relative action of the creature and the absolute action of God. His system of occasionalism is consequently incorrect, as its starting-point, the occasio, is fallacious. The system cannot be properly called casualism, but by its fatalism stands closely allied to pantheism. Malebranche tried to solve the question in a similar manner, yet in his theory the mediate causes on one side, and both sides of the universe, are stand opposed to each other, connected only at one point; in Geulinx, they are alternately appearing and disappearing; in Malebranche, they really exist only in God; finally, according to Spinoza, they are two opposite human modes of representing the same ontological action of the interchangeable divine substance. Yet these notions correspond to two infinite attributes of the divine nature, which always reveal themselves whole; sometimes the all-powerful body, sometimes the all-powerful mind. The opposition between mind and matter is of a paradoxical nature, as is the opposition between God and his world. Leibnitz, who objected to the occasionalist hypothesis on the ground that it supposes a perpetual action of God upon creatures, and as but a modification
of the system of direct assistance, sought to carry out more fully the idea of Gulinix; his monads are all of the same nature, and each represents one and the same universe, thus producing absolute harmony; but as individuals they are all completely distinct from each other, progressing harmoniously, and thus corresponding to the constituting principles of a pre-established harmony. The body and the soul are subject to different laws; but God has so regulated the parallelism of their action that it results in a harmonious whole. Thus the occasionalism of Gulinix isnullified by the theory of a regular system of causes and effects, or harmony by virtue of which we find in each moment a double series of intermediate causes accompanying an originally combined impulse. Leibnitz perceived a real alternate action of the body and the mind, but rejected it. Sensualism, on the other hand, considers the mind as the reflex of the sensitive faculty, while idealism looks upon the sensitive faculty as the reflex of spiritual spontaneity. From this we may conclude that Descartes had not yet fully reached occasionalism, while Leibniz had gone farther. The real medium is the system of Gulinix.—Herzog, Realencyc., s. v. Philosophy, ii, 42, 54; Newell, Specul. Philos., i, 99.

OCCOM, SAM($)SON, an American Indian preacher, was born at Mohoghan, on Thames River, near Norwich, Conn., about the year 1733. When Occon was a boy, Mr. Jewett, the minister of New London, now Montville, was preaching a sermon at the church on the Merrimack at Mohoghan. During the religious excitement about 1739 and 1740, several ministers visited the Indians, who repaired to the neighboring churches. Occon at this period became the subject of perpetual religious impressions, and was soon desirous of becoming the teacher of his tribe. He could then read by spelling, and in a year or two learned to read the Bible. At the age of nineteen he went to the Indian school of Mr. Wheelock, of Lebanon, and remained with him four years. In 1749 he kept a school in New London, but soon went to Montauk, on Long Island, where he taught among the Indians ten or eleven years, at the same time being the religious teacher of the Indians in their own language, and preaching also to the Skeneecook or Tenequock Indians, distant thirty miles. During a revival among the Montauks many became Christians. He was ordained by the Suffolk Presbytery Aug. 29, 1759, and was from that time a regular member of the presbytery. In 1766 Mr. Wheelock sent him to England with Mr. Whittaker, the minister of Norwich, to promote the interests of Moor's Indian charity school. He was the first Indian who visited England on this occasion. The houses in which he were preaching were thronged. Between Feb. 16, 1766, and July 22, 1767, he preached in various parts of the kingdom between three hundred and four hundred sermons. Large charitable donations were obtained, and the school was soon transplanted to Hanover, N. H., and connected with Dartmouth College. After his return, Occom sometimes resided at Mohoghan, and was often employed in missionary labors among distant Indians. In 1786 he removed to Brotherton, near Utica, N. Y., in the neighborhood of the home of the Stockbridge Indians, who were the Mohoghan root, and who had formerly been under the instruction of Mr. Sergeant and Mr. Edwards. A few of the Mohoghan, and other Indians of Connecticut, Long Island, and Rhode Island, removed about the same time. The Oneicas gave them a tract of land. Occom died in July, 1792. Dr. Dwight says, "I heard Mr. Occom twice. His discourses are not proofs of superior talent; were decent; and his utterance in some degree eloquent. His character at times labored under some imputations; yet there is good reason to believe that many, if not all, of them were unfounded; and there is satisfactory evidence that he was a man of piety." An account of the Montauk Indians, written by Occom, is preserved in the "Historical Collections." He published a sermon at the execution of Moses Paul, an Indian, at New Haven, Sept. 3, 1772 (London, 1789, 4to), with an account of the Montauk Indians, which has been published in the Mass. Hist. Soc. Collec. 1st ser. x, 106. See Buel, Ordination Sermon; Historical Collections, iv, 68; v, 18; ix, 89; x, 105; Dwight, Travels, ii, 112; Allen, Amer. Biog. Dict. s. v.; Grierson, Hist. Presb. Ch. in U. S. A. i, 151, 368; 386. (J. N. P.)

Occurrence, a term used in ecclesiastical language to designate a case when two festivals fall on the same day. The lesser is either omitted or anticipated, or translated, that is, deferred to the nearest vacant day. Festivals concur when at vespres or vespers of one day celebrations before the other is terminated. The lesser day is then only commemorated.

Oceanica, the name given to the fifth division of the globe, comprising all the islands which intervene between the south-eastern shores of the continent of Asia and the western shores of the American continent. It is naturally divided into three great sections: Malay Archipelago, Australasia (q. v.) or Melanesia, and Polynesia (q. v.).

Oceanides and Oceanitides, sea nymphs, daughters of Ocean, from whom they received their name, and of the goddess Tethys, numbered 3000 according to some, who mentioned the following of seven of them: Asia, Styx, Electra, Doris, Eurynome, Amphritrite, and Metis. Hesiod speaks of the eldest of them, and reckons forty-one: Pitho, Admete, Prymnos, Iantho, Rhodia, Hippo, Callirhoe, Urania, Clymene, Idia, Pasithoe, Glytis, Zeuxo, Galaxure, Plexaure, Perseis, Plato, Thei, Polydora, Meliboeus, Dion, Ceres, Xantho, Acasta, Janira, Telesto, Europa, Menesthe, Pe- trea, Eudora, Caipysos, Tyche, Ocyrus, Crisia, Amphiro, with those mentioned by Apollodonus, except Amphi- trite. Hyginus mentions sixteen, whose names are almost all different from those of Apollodonus and Hesiod, which difference proceeds from the mutilation of the original text. The Oceanides, as the rest of the inferior deities, were honored with libations and sacrifices. Prayers were offered to them, and they were entreated to protect sailors from storms and destructions.

Argonauta, before they proceeded on their expedition, made an offering of flour, honey, and oil on the sea-shore to all the deities of the sea, and sacrificed bulls to them, and entreated their protection. When the sacrifice was made on the sea-shore the blood of the victim was received in a basin, and it was in the opinion of the Greeks that the blood was permitted to run down into the water. When the sea was calm, the sailors generally offered a lamb or a young pig, but if it was agitated by the winds and rough, a black bull was deemed the most acceptable victim (Homer, Od. iii; Horst. Apollon.; Virg. Georg. iv, 341; Hesiod, Theog. 349; Apollo. i). See Nymph.
great solemnity a deity to whose care they intrusted themselves when going on any voyage (Hesiod, Theog. 495; Thucyd. 2.57, 81, etc.; Apollod. 1; Cicero, De Nat. D. iii. 29; Homer, IL).

OcédA, Samuel ben-Israel, a Jewish savant of note, flourished towards the end of the 16th century, and was a pupil of the famous Cabalistic Isaac Luria (q.v.) and Chazim Vital. He was a darshan or preacher at Safed, in Upper Galilee, and wrote a very extensive commentary on the treatise Aboth, called יבמ של יבמ, with special reference to the commentaries of Gerundai, Abudalma, Maamoudieh, Aburabiel, Beninore, Almoino, and others (Venice, 1519, and often):—

a commentary on Lamentations, entitled יבנ יבמ, "the Bread of Sorrow," the Hebrew text and Rashi's commentary (Venice, 1600, and often):—a commentary on Ruth, entitled יבמ יבמ, "the Letter of Rabbi Yehoahaz," (Constantinople, 1597, and often; last edition, Zolkiew, 1801). See Fürst, Bibl. Jud. iii, 44; Wolf, Bibl. Hebr. i, 1085; iii, 1070 sq.; H. Adams. History of the Jews (Boston, 1812), ii, 15; Rossi, Dizionario storico degli autori Ebrei, p. 254. (B. P.)

Ocellus Lucanus ('Ockelos [also 'Okoles, 'Ockelos, Ockelos, Ockelos, Heklos, 'Okelos, etc.] Διοκέλως), a Greek philosopher, was born in Lucania, whose surname and, as appears from his works, belonged to the Pythagorean school of philosophers. He was said to have been brought up from infancy prepotent to the Christian era. Philo, who lived in the 1st century, is the first writer who mentions him; for the letter of Archytas to Plato, and the latter's answer, quoted by Diogenes Laertius, cannot be considered genuine. According to Laertius's statement, Archytas wrote that at Plato's request he had been to Lucania and had found out the descendants of Ocellus, and obtained from them the treatises Περὶ νύμμων, Περὶ βασιλίδων, Περὶ θεοτωτίας, Περὶ τῆς τῶν θεῶν γενεᾶς, which he sent to Plato; and that he had been unable to procure any others, but would send as soon as he had discovered them. Plato thanked Archytas for his invoice, declaring that he had read the works of Ocellus with great pleasure, and that he considered him a worthy descendant of those Trojans who emigrated with Laomedon. These apocryphal documents only show that in the time of Diogenes Laertius, or of the author of the two spurious letters, there were four treatises attributed to Ocellus Lucanus, the Pythagorean philosopher, and that it was supposed he wrote others which were lost. Among the above-mentioned works there exists at present but the last, which is quite short. It is divided into three parts: the first, a summary of the spirituality of the species, combined with the mortality of the individuals, the fourth, of his duties, especially in the married state. Ocellus maintains that the universe has no beginning and can have no end; that a part of it is eternal and immaterial—that the heavens, or the whole of the celestial bodies; and another part variable in its form, but immaterial in its elements. He maintains also, in accordance with this cosmic theory, that mankind has always existed, and that man, mortal as an individual, is not more than a transient probability of the species, combined with the mortality of the individuals, leads, with individuals, to the necessity of reproduction. Hence the object of sexual intercourse is not pleasure, but the procreation of children and the perpetuity of the human race. Thus in marriage decency and moderation must be observed; fortune and birth are not the only consideration; but suitability of ages, tastes, mind, etc., must be sought, in order that the union may produce healthy children and a happy family; for the families constitute the state, and the welfare of the one includes that of the other. His treatise of Ocellus, though of no scientific value, is ingeniously conceived, and written with great clearness.

Our short analysis shows that Ocellus did not belong to the old Pythagorean school, whose ideas were more original, but less clear. His system is rather an eclectic mixture of Aristotle's physics with the metaphysics of the Eleatics and the morals of the Pythagoreans. Besides this intrinsic proof of its non-antiquity, which is very strong, we have another no less convincing in the fact that neither Plato nor Aristotle mentions any other philosopher before Philo, makes any mention of Ocellus or his works. Mr. Mullah supposes that the above treatise was written in the 1st century B.C., a time marked by a sort of revival of the Pythagorean system. Greek philosophers, after traversing the fruitful period of the school of Socrates, had to some extent withdrawn the schools of the Academicians, the Stoics, and Epicureans. It is easy to understand how some minds, dissatisfied with the doctrines of these various schools, returned to that of Pythagoras, as more elevated in its dogmas and purer in its morals. Judging of Mani- tiania, favored the revival of the Pythagorean school, by collecting at a great expense the works of Pythagoras and of his disciples, scattered through Greece and Italy. This proceeding, however, gave occasion for frauds, among which we must count the works of Ocellus, and particularly the treatise on the universe and its parts. According to Mr. Mullah's opinion, the forger has proved very skilful, and avoided all coarse anachronisms in language; he, nevertheless, copied sometimes textually the expressions of philosophers of the schools of Epics, Stoics, and Cynics. Besides, we cannot possess the treatise exactly as it was originally written. A fragment of the Περὶ νύμμων, quoted in Stobæus and other indices, shows that the works attributed to Ocellus were probably written in the Doric dialect, while the text now extant of the Περὶ τῆς τῶν θεῶν γενεᾶς is written in the Attic dialect, which had in course of time become the most generally used in literature. Mr. Mullah thinks that the change was made during the Byzantine period, perhaps in the 9th century. The treatise of Ocellus was first published by Conrad Neobar (Paris, 1559, 4to), and translated into Latin by Chretien, physician to Francis I of France (Lyons, 1541, 8vo). The edition published, together with a Latin translation, by Nogareli (Venice, 1559, 8vo), and reprinted by Jerome Comelin (1696), is better. Em. Vizzanius, professor at Padua, reprinted that treatise (Bologna, 1640, Amsterdam, 1660) with a new Latin version, and a useful though diffuse commentary. Gale, who inserted it in his Opuscula mythologico, ethical, et physica, and D'Argens, who published it with a French translation, in his Dissertation sur les principales questions de la Metaphysique, de la Physique, et des différentes sciences des anciens, has corrected the text. Bauche, on the contrary, made good use of one of the MSS. of Ocellus, which are contained at the Imperial Library at Paris, and his edition, together with a French translation, first published in the Recueil de l'Académie des Inscriptions xvi. (492-294), was the best until the appearance of that of A. F. W. Rudolph (Leips. 1801, 8vo), which was in turn surpassed by Mr. Mullah's two editions, the first of them bearing the title Aristotelis de Meliso, Xenophane et Gorgi disputatio, cum Eleaticorum philosophorum fragmenta, et Ocelli Lucani, qui fereur, de universae natura libellu (Berlin, 1846). The second was included in the Fragmenta philosophorum Graecorum (A. F. Didot's Bibliothèque Grecque, Paris, 1860). Ocellus Lucanus's works were translated into English by Thomas Taylor (1841, 8vo). See Diogenes Laertius, vii, 360; Meineke, Gesch. d. Wissenschaften in der Rom. vol. i; Bardill, Epochen d. vorsätzlichen philosoph. Begriffs (Halle, 1788); Fulborne, Beiträe z. Gesch. d. Philosophen, pt. x, p. 1-77; Mullah, Introduction a la Fragm. philosoph. Græc. p. 388; Ueberweg, Hist. der Philosophen i, 48; Butler, Anc. Philos. and Philos. (2 vols. in 1 vol.); Cocker, Christianity and Greek Philosophy.—Hoefcr, Nouv. Bibl. Génér. xxxiiii,
fell into the company of the Reformer of Spain, Juan Valdes, who had imbibed Luther's doctrine of predestination, and became if a protegé. He was then at Naples, and began at once to preach in favor of Protestant doctrines; which being taken notice of, he was summoned to appear at Rome, and, persuaded that he had truth on his side, he at once made preparation to set out on his way. But on his way to Florence Peter Martyr, with whom it is probable he had contracted an acquaintance at Naples. This friend persuaded him not to put himself into the pope's power; and they both agreed to withdraw into some place of safety. Ochino went first to Ferrara, where he discoursed to the effect of a soldier, and he fled thence to Genoa, where he arrived in 1542, and married. But feeling it unsafe to remain in Italy, he set out for Switzerland, and finally passed over to Germany, and settled at Augsburg, where he preached the refashioned doctrines, and also published several sermons, some of which he had brought with him from Italy (Prediche, n. l. [1542-44; 2 ed. Basel, 1562, 5 vols.]; twenty of these have been translated into German [Neuburg, 1545], twenty-two into French [Gen., about 1546-61], and twenty-five into English [Ipswich, 1544]). He continued here until 1547, when the emperor, visiting the city, obliged him to flee to Strasbourg, and thence he passed over into England, together with Peter Martyr (q. v.). There he preached to the Italian refugees living in London; he became a preacher in 1551, and was in great favor with archbishop Cranmer and the princess Elizabeth. On Mary's accession he fled again to Strasbourg, and thence to Geneva, but was obliged to leave that city on account of the opposition he made to the condemnation of Servetus. In 1555 he was in Basel, and shortly after received a call to Zurich. Here he commenced advocating some eccentric views on the doctrine of the Trinity, on marriage, and finally wrote in favor of polygamy, whereupon the authorities expelled him from the city, and in December, 1563, he went to Nuremberg. Here he wrote a justification in Schelhorn's Ergötzlichkeiten (pt. iii, p. 2007 sq.), to which the inhabitants of Zurich answered, March, 1564, by the Spongia adversus apargines B. Ochini, qua vera causa expositionum, ob quas üale ab urbe Tyriarum fuit relegatus (in the same year). In 1567 sq. he was a political and shortly after was exiled to Moravia, where he died, in the beginning of 1566, of the plague, at Slakow. Ochino has been considered by some as one of the heads of the Antitrinitarians. See Socinians.

The character of Ochino is variously represented by different authors, which is not to be wondered at, since men like him, undecided, and constantly changing from one phase of doctrine to another, are likely to make many opponents. Bayle observes that the confession he made publicly on the change of his religion is remarkable. He acknowledges it himself. But he could have continued, without danger of his life, to preach the truth, after the manner he had preached it for some years, he would never have laid down the habit of his order; but as he did not find within himself that courage which is requisite to undergo martyrdom, he took refuge in a Protestant country. Thus to criticise Ochino's conduct is, we think, hardly fair. For the times and circumstances by which Ochino was controlled should be carefully considered. Long before he had been advanced to the highest dignity in his order he began to doubt; and while at Naples, in 1541, was re-elected to the same dignity. But while the favor of both prince and people, he
produce a corresponding change in his strain of preaching, which for some time was felt rather than understood by his hearers. He appealed directly to the Scriptures in support of the doctrines which he delivered, and exhorted the people to rest their faith on the infallible authority of the Word of God, and to build their hopes of salvation on the obedience of Christ alone. But a prudential regard to his own safety, and to the edification of his hearers, whose minds were not prepared for the discovery, prevented him from exposing the fallacy of Romish superstition. Only when Vales encouraged him to take a bolder departure Ochino was so far encouraged, and then he was obliged to quit his native land. Besides, no one can question his piety, however greatly the extreme errors into which Ochino fell may be depreciated. He was always great and good, and there is nothing in his life to condemn, though his doctrines were already heterodox, and in his last years he much weakened the Protestant cause in Poland, and Southern Europe generally. Certainly his great renown as a pupil orator was deserved, and should be remembered. "In such reputation he was held," says the annalist of the Capuchins, after an account of his early life, "we entertain one of the most admirable actions, gave him the command of his audience, especially as his life corresponded to his doctrine" (Deovius apud Bocz, Hist. Antiq. Italye, p. 77). The same is written by the Jesuit, "that he was esteemed incomparably the best preacher of Italy: his powers of elocution, accompanied with the most admirable action, gave him the command of his audience, especially as his life corresponded to his doctrine" (Deovius apud Bocz, Hist. Antiq. Italye, p. 77). Appeared during the appearance of King Henry II in England, he prepared middle age, contributed to heighten this effect. His snow-white head, and his beard of the same color flowing down to his middle, added to a pale countenance, which led the spectators to suppose that he was in bad health, rendered his aspect an object venerable and deeply interesting. "As a preacher," says M'Crie, "he was admired and followed equally by the learned and illiterate, by the great and the vulgar. Charles V, who used to attend his sermons when in Italy, pronounced this high encomium on him: 'That man would make the storms weep.'" Sedolf and Benno, who were still better judges than his imperial majesty, assigned to Ochino the palm of popular eloquence. At Perugia he prevailed on his hearers by his discourses to bury all their animosities and bring their lawsuits to an amicable settlement; and in Naples he preached to such good effect that he was installed as bishop, and his suffragans obeyed him to preach to them during the ensuing Lent. The cardinal wrote to Vittoria Colonna, Marchioness of Pesaro, begging her to intercede with Ochino, over whom she had great influence, to visit Venice, where he would find all the inhabitants in the most passionate desire to hear him. He went accordingly, and was enthusiastically received" (Ref. in Italy, p. 118 sqq.).

Ochino’s writings are rather numerous than bulky. His principal works are, Dialogi VII sacri, dove si contiene, nel primo dell’ impossibilità di Dio, etc. (1542): — Apologi negli quali si scuoprono gli abusi, errori, etc., della sinagoga del Papa, de’ suoi preti, monachi e frati (Genoa, 1544; German, Augsburg, 1550, 4to): — Esposizione sopra la epistola di S. Paolo alli Romani (1545; German, Augsburg, 1546; Latin, ibid. 1546): — Esposizione sopra la epistola di S. Paolo ai Galati (1546; German, Augsburg, 1546; Latin, ibid. 1546): — Dialogo del Purgatorio (Basel, 1556; Latin by Taddeo Duno, Zurich, 1556; French, 1559): — Sincera et vera doctrina de cana Domini defensione in quattuor testimonia (Basel, 1556): — Disputa intorno alla presenza del corpo di Cristo, Christo, in sacramento della cena (Basel, 1551; Latin, Liber de corpori Christi presenti in sacramento (ibid.): — Prediche del R. Padre Don Serafino da Piagone, dette Laboretti del libero out servo arbitrio, etc. (Stam- pati in Pavia, i. e. Basel; Latin, Labyrinthe, hoc est de libero out servo arbitrio, de divinus promotione, destinatione et libertate disputatio, Basel, probably printed in 1563): — II cattichiam, o vero istitutione Christiana, secundum ille formam, et obedientiam divini liberi divini, quorum primus est de Messa; secundus est, cum de rebus variis, tum potissimum de Trinitate (Basel, 1563). In these "Dialogues" Ochino tries to transform the objective satisfaction of the Church into an act of subjective reflection, whereby man comes to see that God has come to forgive and to save, not only men, but especially in Christ alone. (see Schinkel, i. 226 sq.)." See Zanchi, De tribus Elo- him (Neustadt, 1898, fol.); Sandiuss, Bibli. Antirituariorum; Bayly, Dictionnaire histor. s.v.; Struve, De vita, religione et fatis B. Ochini (in Observat. select. Italens. iv, 408 sq. v. 1 sq.); Flussi, Beitrage a. Reformationsgesch. d. Schweiz, v. 418 sq; Treschel, Die protestant. Ochiai. See Ochiai.

Ocidus (O"cidus v. o. "Oc"idus; Vulg. Jug. Jus- rio, Redkis), a corrupt form (1 Esdr. ix, 22) of the Heb. name Jozabab (Izoxa x, 22).

Oci"na [most Oci"na (O"ci"na v. o. "Oc"ina), a city on the sea-coast of Phocinia or Palestine, only mentioned in connection with Sur (x. v.), in the apocryphal book of Judith (ii, 28), as being terraced at the approach of Holophernes. "The name seems to occur in a regular order from north to south; and as Oicina is mentioned between Tyre and Jemmaa (Jabneh), its position agrees with that of the ancient Acco, now Akko, and in medieval times sometimes called Acou (Docraeus; William of Tyre, etc.)" (Smith). The name may thus be a corruption of "Akkad (אָכָד). On an unfortunate conjecture in Gesenius, see Movers, in the Zeitschr. f. Philo- sophie u. Kth. Theolologie, xii, 88.

Ockley, Simon, an English divine and philosopher, eminent for his attainments in Oriental literature and languages, was born of a distinguished family at Exeter in 1678. He studied at Queen’s College, in the University of Oxford, from 1699, and early evinced a peculiar tendency to the study of the Eastern languages. Having entered the Church, he was appointed curate of Swavesey in 1705, through Simon Patrick, bishop of Ely, who had great regard for his talents; and in 1711 he was chosen professor of Arabic in the University of Cambridge. He was thoroughly acquainted with the Eastern languages, and very zealous in promoting their study, which he considered as the basis of theology, declaring that no one could become a great theologian without being more or less acquainted with them. He died at Swavesey Aug. 9, 1720. He wrote Introductio ad linguas orientales in qua tis discendis en mnemiv erum usus ostenditur (Cambridge, 1706, 8vo); it contains a chapter on the famous discussion between Buxtorf and Cappell on the origin and antiquity of the vowel points in Hebrew. Ockley, who at first sided with the former, changed his opinion afterwards:— The History of the present Jews throughout the World (ibid. 1707, 12mo), translated from the Italian of rabbi Leon of Modena, with the addition of a Supplement concerning the Karaites and Samaritans, after Richard Si- mon (1657—1712), The Improvement of Ruman (London 1706—1712), translated from the History of Hai-Ebn-Yokdhah, written about five hundred years ago by Abu Jasfar-Ebn-Tahrih ath (ibid. 1780, 8vo); the original was published by Pococke as early as 1650.
An Account of South-west Barbary, containing what is most remarkable in the Territories of the King of Fez and Morocco (ibid. 1713, 8vo, with a map)—The History of the Saracens (Lond. 1708-18, 2 vols. 8vo; 3d ed. Camb. 1757; 5th ed., augmented, Lond. 1848, royal 8vo; translated into German in 1746, and into French, by Dacier. The most correct is that of Ockley's works, is full of curious information concerning the region, habits, customs, and history of the Saracens from the death of Mohammed (632) to 1705. Ockley compiled a number of Arabic works previously but little known. It may still be read with advantage by those who are unacquainted with the Oriental languages. Gibbon made considerable use of it in his Decline and Fall, and speaks of the author in his autobiography as "an original in every sense, who had opened his eyes." This work, however, does not appear to have brought Ockley much profit; for he complains, in his inaugural oration in 1711, of his straitened circumstances, and dates the second volume of his history from Cambridge Castle, where he was imprisoned for debt:—The second apocryphal Book of Ezechius, translated in 1716 from an Arabian version; and some Sermons, of which one was on The Christian Priesthood, and another on The Necessity of Instructing Children in the Scriptures. See Chalmers, Gen. Biog. Dict. s. v.; Hoefer, Neue Biog. Générale, xxxiv, 441; Allibone, Dict. of Brit. and Amer. Authors, s. v.; English Cyclop. s. v. (J. N. P.)

Ockwallists. See Uckwallists.

Ocaia ve-Ocrah (אוכרא והאר) is the name which, in the course of time, was given by some to one or more redactions of the independent revision of the Masorah to distinguish it from the other Great Masorah, which was written above and below the text of the Bible. It obtained its name, Ocaia ve-Ocrah, from the first two words, הָּאֵּכֹר (1 Sam. i, 9), הָּאֵּכֹר (Gen. xxvii, 19), in the alphabetical list of words occurring twice in the Bible, once without and once with an Ibn, with which the Masorah begins. Dr. Stein- schneider, who in his Jewish Literature, p. 193 (Lond. 1837), says that "the book הָּאֵּכֹר is probably so called because it begins with these two words, is very anxious to claim the originality of this remark, as may be seen from note 31 in Geiger's Jüdische Zeitschrift, i, 316, 317 (Breslau, 1802); but we cannot understand why he should do so, since Elias Levita (q. v.), who made the Ocaia ve-Ocrah the basis of his masorhetic researches, says that it is derived from its beginning words (Massoreth ha-Massoreth, p. 138, ed. Ginsburg, Lond. 1867). By this appellation (viz. Ocaia ve-Ocrah) this particular redaction of the Great Masorah was first quoted towards the end of the 12th century by David Kimchi (q. v.) in his Grammar, entitled Micha'al הָּאֵּכֹר, 35 b, fol. 21; 51 a, col. 2 (ed. Levita, Bomberg, 1545, fol.), or 111 b, 163 a (ed. Heschel, Forth, 1788), and in his Lexicon, הָּאֵּכֹר יַלְעָל (i.e. the Book of Roots), s. v. בֵּית, p. 384 a (ed. Bisenthal and Lebrecht, Berlin, 1847), and Ibn Akinin (q. v.), in his ethical work, הָּאֵּכֹר יַלְעָל, and in his Methodology (comp. Stein- schneider, in Geiger's Zeitschrift, 1802, p. 316, note 31); in the middle of the 13th century it was quoted again by Isaac ben-Jehudah in his הָּאֵּכֹר יַלְעָל (comp. Stein- schneider, Catalogue Libr. Hebr. in Bibl. Bodley. col. 1418; the same author by Geiger, L. c.; Neubauer, Notices sur la Lexicographie hébraïque, p. 9, Paris, 1883), and then again by Levita in 1538, who described it as the only separate Masorah (Massoreth ha-Massoreth, p. 95, 94, 158, ed. Ginsburg). Henceforth it entirely disappeared. Even R. Solomon Norzi (q. v.) the great Biblical critic and masorhetic authority (cir. 1560-1600), who searched through the old massarah (q. v.), the Talmud (q. v.), and the whole cycle of rabbinic literature for various readings, could no longer find it (comp. Norzi's Comment. [ii. 27 b] on 1 Sam. i, 9). The disappearance of this valuable masorhetic work induced many distinguished scholars to believe in its entire loss; for Lebrecht says, in his introductory note to his edition of Kimchi's Lexicon, p. xlix (Berlin, 1847), "Seid postquam tota argumentorum ejus summa in Masorah magnam biblicum rabbinorum transmiserit, ipse liber peribit; magnopere videtur." The same opinion was held by the late Dr. Furst, who, in the introduction to his Concordance, expressly states that the masorhetic work Ocaia seems to be lost for us. Dr. Derenburg, however, while preparing the catalogue of Hebrew MSS. in the Imperial Library at Paris, had the good fortune to discover an independent "Great Masorah," concerning with the words Ocaia ve-Ocaia (Bibliothèque Impériale, Ancien Fonds Hebraïque, No. 56; Ben-Chananja, 1802, No. 7, p. 57 sq.). Shortly after Dr. Frensdorff, who for years has been engaged in masoretic researches, heard of this discovery (January, 1859); in 1862 he went to Paris, copied the MS. and published it, with learned annotations, under the title Das Buch Ocaia ve-Ocaia (Masorah) herausgegeben, übersetzt und mit erläuternden Anmerkungen versehen (Hanover, 1864, 4to). The whole is divided into 574 sections, treating on the most different subjects, which will be illustrated by two examples, quoted at random. Thus sec. 261, p. 142, gives eleven words which are preceded by יִהָּא, and in which this construction occur only once. Sec. 82, p. 88, gives an alphabetical list of words written in the Hebrew Pentateuch with majuscular letters. After this discovery at Paris it was thought that it was the original Ocaia ve-Ocaia, which had been lost for nearly three centuries, and that it was the same which Levita made the basis of his masorhetic labors. Even Dr. Frensdorff, starting from the false hypothesis that there was only one redaction of the Ocaia ve-Ocaia, and that his was the unique copy which had survived the ravages of time, was led to this preposterous conclusion, which, however, it proved to be incorrect by the discovery of another and much larger redaction of the Ocaia ve-Ocaia than that published by Dr. Frensdorff. The MS. is in the library of the University of Halle (T. b. 10), and a description of it by the late Prof. Hufnol has been given in the Zeitschrift der deutschen morgenländischen Gesellschaft, xxxi, 201-229 (Leips. 1867). See Ginsburg, Jacob ben-Chajim ben-Adomiah's Introduction to the Rabbinic Bible (Lond. 1867); Kimchi, Liber radicum (ed. Bisenthal and Lebrecht), p. 83; Geiger, Jüdische Zeitschrift für Wissenschaft und Geschichte, 1894 sqq. Breslau, 1884 sqq.; Stuller, in his Monatschrift für Geschichte und Wissenschaft des Judenthums, p. 31-37, 75-80, 269-277, 318-318 (ibid. 1865); Ocaia ve-Ocaia, ed. Frensdorff, p. iii sq. (B.P.)

O'Connor, Charles, a learned Irish Roman Catholic divine, who for many years was a resident in the family of the duke of Buckingham at Stowe as chaplain to the duchess and librarian to the duke, is the author of Columbia's Letters (2 vols.), a Narrative of the most interesting Events in Modern Irish History, and a collection of the ancient Irish chronicles; his studies having been chiefly directed to the elucidation of the history and antiquities of Ireland. He died in 1839 at Ballinrobe, Galway, the residence of his patron, the duke of Devon. See Allibone, Dict. of Brit. and Amer. Authors, s. v.

Oçtan (Heb. Oçron, שָׁמַע, oft cited; Sept. Ρέο- ραυ), the father of Pajael, which latter was the chief man of the tribe of Asher about the time of the exode (Num. i. 13, ii. 27; vii. 72, x. 26). R.C. ante 1638.

Octagonal Chapels or Churches occur only at Stony Middleton, Wymb, Milan, Perlugia, Ravenna, Hierapolis, and the modern St. Dunstan's-in-the-West, London, where it is formed on one side with a chamfer. The form is mentioned by Eusebius at Antioch in the case of a church built by Constantine, and was a modification of the principle of the round church. There is an octagonal porch at St. Mary's Redcliffe, and a cham-
Octava Infantium (eighth day) of the boles was a frequent designation of the first Sunday after Easter, so called in reference to the newly baptized as born of God. See Siegel, *Christliche Altertümere*, i, 208 sq.; Riddle, *Christian Antiquities*, p. 677.

Octave is, in the ecclesiastical calendar, the period intervening between any of the high days of the week and the eighth thereafter. The whole of this interval was formerly observed with great solemnity; and the Church of England has retained the notion by directing that the "preface" proper to Christmas-day, Easter-day, Ascension-day, and Whit-Sunday shall be used for the seven days immediately following each of these festivals; except that in the latter case (Whit-Sunday), that preface is to be used for six days only, because the eighth day from it is Trinity Sunday, which has a preface peculiar to itself. Sparrow, on the Common Prayer, says, because our whole life is the revolution of seven days or octaves which constitutes eternity, and this was the mystical reason why octaves were annexed to festivals. D. Cange says, because our Lord rose on the eighth day (including Sunday to Sunday), the octave of the feast was the day on which the whole solemnity closed. See Riddle, *Christian Antiquities*, p. 677, 680.

Octavian. Antipope, was born at Rome about 1055. He was a descendant of the Frascati family, and was made cardinal by Innocent II in 1138. Pope Eugeneius III appointed him his legate to Germany, and gave him a mission to the Diet at Ratibison, which he was prevented from fulfilling by the death of the emperor Conrad III in 1152. Under the pontificate of Adrian IV, Octavian began to show his ambitious views, seeking to create troubles in the Church; and it is said he had great influence in fostering the dispute concerning investitures between Frederick I and the pope. Being sent to that prince to induce him to desist from his attacks against the see of Rome, he betrayed his trust, and sided with the emperor. After the death of Adrian IV, Octavian, who aspired to the papacy, contested the election of cardinal Ronaldaini, who had taken the title of Alexander III. Octavian was opposed by two other opposing cardinals, John of Mercone, archdeacon of Tyre, and Guir of Creme, Sept. 5, 1159, and took the name of Victor IV. Alexander had already assumed the scarlet cope of the office when Octavian tore it from him; a senator who was present seized Octavian, and, by his own order, had him beheaded, and in his haste put it on wrong side out. At the same time an armed mob broke into the church to support Octavian. A few days afterwards cardinal Raymond and Simon Borelli, abbot of Subiaco, went over to his side, and he succeeded in inducing lmar, a French cardinal, bishop of Frascati, to consecrate him, Oct. 1, 1159. On the 28th of the same month Octavian wrote to the emperor Frederick and to members of the nobility, asking them to support his election. Frederick, who knew he could rely on him, answered favorably, and assembled a council at Paris, Feb. 5, 1158, which acknowledged Octavian as pope. His death, which occurred at Lucca, April 22, 1164, did not end the schism, and Frederick appointed as his successor Guir of Creme, who took the name of Pascal III (q. v.). See O. de Fracques, *D. Frédéric* (Paris, 1831), vol. xii; *Histoire, Hist. Eclesi. L. xix*, ch. xxxvii sq.; Auby, *Hist. des Cardinalz*, vol. i; Milman, *Hist. Lat. Christ.*, i, 289, 296; Cartwright, *Papal Conclave*, p. 15.

Octaviánius or Octaviánus, Roman emperor. See Augustus.

October-Horse, The, a horse anciently sacrificed in the month of October to Mars in the Campus Martius at Rome. The blood that dropped from the tail of the animal which was sacrificed was carefully preserved by the vestal virgins in the temple of Vesta, for the purpose of being burned at the festival Falia (q. v.), in order to produce a public purification by fire and smoke.

Octochoos is the name of a service-book used in the Greek Church. It consists of two volumes, the one containing the particular hymns and services for every day of the week, a portion of the daily service being appropriated to some saint or festival, besides those marked in the calendar. Thus, Sunday is dedicated to the resurrection; Monday, to the angels; Tuesday, to the Virgin; Wednesday, to the Virgin and the cross; Thursday, to the apostles; Friday, to the Saviour's passion; and Saturday, to saints and martyrs. The prayers being intoned in the Greek Church, the Octochoos enjoins which of the eight ordinarily in use is to be employed on different occasions and for different services.

Od (from the same root as Odis, and supposed to mean all-perceiving), the name given by baron Reichenbach to a peculiar physical force which he thought he had discovered. This force, according to him, pervades all nature, and manifests itself as a flickering flame or luminous appearance at the poles of magnets, in the whirlpools of waters, and wherever other physical action is going on. This would account for the luminous figures said to be sometimes seen over recent graves. The od force has positive and negative poles, like magnetism. The human body is od-positive on the left side, and od-negative on the right. Certain persons, called "sensitive," can see the odic radiation like a luminous vapor in the dark, and can feel it by the touch like a breath. As the meeting of like odic poles causes a disagreeable sensation, while the pairing of unlike poles causes a pleasant sensation, we have thus a sufficient reason for thoselings and anomalies hitherto held unaccountable. Some sensitive persons cannot sleep on their left side (in the northern hemisphere), because the north pole of the earth, which is od-negative, affects unpleasantly the od-negative left side. All motion generates od; why, then, may not a stream running underground affect a sensitive water-finder, so that the divining-rod in his or her hand shall move without, it may be, any conscious effort of will? All the phenomena of mesmerism are ascribed to the workings of this od-force. Reichenbach does not pretend to have entirely made up his own senses for any of these manifestations of his assumed od-force; the whole theory rests on the revelations made to him by "sensitive." It may be added that few if any really scientific men have any belief in the existence of such a force. Those curious in such matters are referred for the details of the subject to Reichenbach's large work, translated into English by Dr. Ashburner, under the title of *The Dynamics of Magnetism*, or to a briefer account in his *Odisch - Magnetische Briefe* (Stutt. 1852). See also *Lond. Qu. Rev.* Oct. 1871, p. 162. See Odius.

Odal or Odal Right (Celtic od, property) is the title of a tenure of land as absolute, and not dependent on a superior. The odal right prevailed throughout Northern Europe before the rise of feudalism. It was founded on the tie of blood which connected freeman with freeman, and not on the tie of service. It was the policy of the sovereign authority everywhere to make it advantageous for the freemen to exchange the odal tie for the tie of service—a change which paved the way for the feudal system. The oddaliers of Orkney were allowed to retain or resume their ancient privileges on paying a large contribution to the crown of St. Magnus's Cathedral at Kirkwall; and the odal tenure prevails to this day to a large extent in the Orkney and Shetland Islands, the right to land being completed with-
ODALY 296

ODERIC

O'Daly, Danait, an Irish monastic, was born in 1596, in the County of Kerry. He was educated in Flanders, and there took the vows in the Order of the Dominicans. Having been called to the court of Spain, he insinuated himself so much into the favor of Philip IV, that this prince, who was then master of Portugal, charged him to oversee the foundation of a convent in Lisbon for the Irish monks. He became the first superior of it. On the accession of the duke of Braganza to the throne he saw his credit increase, and was employed in the most considerable affairs of the kingdom. In 1655 he went to Louis XIV in the capacity of ambassador, in order to negotiate a treaty of alliance and commerce. Having arrived at Paris, he wished no other lodgings than the convenst of the Dominicans, in the street Saint-Honoré, where he dwelt during all the time of his embassy. "This beautiful eulogy has been given to him," says P. Baron, "that no one has ever made a more hearty design of dignity with prudence of modesty and religious humility with the gravity and wisdom of an ambassador." This modesty, however, did not hinder him from discharging the duties of his order, such as censor of the Inquisition, visitator-general and vicar-general of the Order. He died at Lisbon June 30, 1692. We have of his works, Initium, incrementum et exitus familiae Giraldirorum Desmonis comitum Kierria in Hibernia (Lisbon, 1655, 8vo). See V. Baron, Apologieaep, lib. ii, p. 448; lib. iii, p. 241; Echard et Quétif, Script. ord. praedicat. ii, 617.

Oddaxxi (or Odaasi), Giovanni, an Italian painter noted for his attainments in sacred art, was born at Rome in 1683. He first studied under Ciro Ferri, and on the death of that master became the pupil of Gio. Battista Gaulli, called Baciccia. The liveliness of his genius and his remarkable industry gained him great distinction and a multitude of commissions, not only for the churches, but for public edifices, and for individuals. He was one of the twelve artists selected to paint the prothesis in fresco at St. John of Lateran. The prophet Hosea, produced by Oddaxxi, was especially much commended for the manner of designing and dignity of expression. His most remarkable works, however, are the Full of Lucifer and his Angels in the church of Santi Apostoli, and St. Bruno in S. Maria degli Angeli. By aiming at the celerity and rapid execution of Baciccia, without possessing his powers, he proved but a faithful imitator of his master's style; and his painting is frequently careless and incorrect, though he had a commanding facility and great freedom of the pencil. He died in 1731.

Odd-fellows, the name assumed by one of the most extensive self-governed provident associations in the world. The institution, though in its secrecy and many usages closely resembling the masonic order, is so largely devoted to philanthropic labors as to deserve a short historical notice here. The order was originated in Manchester in 1812, although isolated "lodges" had existed in various parts of the country for a century or more previously. These latter were generally secret fraternities, humble imitations of Free-masonry—adopting a similar system of initiatory rites, phraseology, and organization—instituted for social and convivial purposes, and only occasionally extending charitable associations. On its institution in Manchester, the main purpose of Odd-fellowship was declared by its laws to be, "To render assistance to every brother who may apply through sickness, distress, or otherwise, if he be well attached to the queen and government, and faithful to the order." From attempts to establish the charitable character a supply was made in 1813. The Manchester Unity, which was then formed, still constitutes the principal body of British Odd-fellows. In the United States of America the first lodge was instituted in 1819; and from this country, where the order is by far the largest and most powerful, it has spread into Germany, Switzerland, Australia, South America, and the Hawaiian Islands, working under charters received from the American order. Candidates for admission must be free white males, of good moral character, twenty-one years of age or over, who believe in one God, the Creator and Preserver of the universe. Fidelity not only to the laws and obligations of the order, but to the laws of God, the laws of the land, and all the duties of citizenship, is strictly enjoined; but the order is a moral, not a religious organization.

Ode (qīhā, a song) originally meant any lyrical piece adapted to be sung. In the modern use of the word, odes are distinguished from songs by not being necessarily in a form to be sung, and by embodying loftier conceptions and more intense and passionate emotions. The language of the ode is therefore abrupt, concise, and energetic; and the highest art of the poet is called into requisition in adapting the metre and cadences to the varying thoughts and emotions; hence the changes of metre and variation that occur in many odes. The rapt state of inspiration that gives birth to the ode leads the poet to conceive we are all nature as animated and conscious, and instead of speaking about persons and objects, to address them as present.

Among the highest examples of the ode are the Song of Moses and several of the Psalms. Dryden's Alexander's Feast is reckoned one of the first odes in the English language. We may mention, as additional specimens, Gray's Bard; Collins's Ode to the Passions; Burns's Scots wha hae; Coleridge's Ode to Memory and Despondency; Shelley's Ode to the Skylark; and Wordsworth's Ode on the Recollections of Immortality in Childhood. See HYMN; PSALM; SONG.

O'dead (Heb. Oded), יִשְׁעַי, in the O.T., the name of two Hebrews.

1. The father of Azariah the prophet, who was commissioned to meet and encourage Asa on his return from defeating the Ethiopians (2 Chron. xxv, 1-8). B.C. ante 955. It curiously happens that the address which at the commencement is ascribed to Azariah, the son of Oded, is at the end ascribed to Oded himself (xxv, 8). But this is supposed to have been a slip of the copyists, and the versions (Sept., Vulg., and Syr.) read the latter verse like the former.

2. A prophet of Jehovah in Samaria, at the time of Pekah and Menahem (II Kings xix, 2). B.C. 738. 2 Chronicles (xix, 1, 2) calls him Obedas, אָבְדָה. On the return of the victorious army with the 200,000 captives of Judah and Jerusalem, Oded met them and prevailed upon them to let the captives go free (2 Chron. xxvii, 2). He was supported by the chivalrous feelings of some of thechieftains of Ephraim; and the narrative of the restoration of the prisoners, fed, clothed, and anointed, to Jericho, the city of palm-trees, is a pleasant episode of the last days of the northern kingdom.

Odem. See SARDIUS.

Oderic of Pordenone (or Porden) an Italian Franciscan noted as a traveller, was born in 1286 at Cividale, district of Pordenone (Friuli). After having finished his studies, and studied the sacred literature, he was sent by his order to the foreign missions, and resolved to carry the Gospel to Asia. During an absence of sixteen years, consecrated to the preaching of Christianity, Oderic administered baptism to more than 20,000 unbelievers. He returned to Pordenone in 1300; but the sufferings of all the places he had visited, and the misfortunes of the church, induced him to return to his native city. He died in 1320. His letters and the history of the missions, written in Latin and Italian, are of great value for the history of the church; but the best of his works are the Itinerarium, or Journals, of his travels.
ions, and solicit from him new aid for the conversion of the Tartars; but the troubles excited in the Order of the Franciscans by the schismatic election of Peter of Corbie, one of their number, to the papacy, under the name of Nicolas V, and an illness which surprised Odoric at Vienna prevented him from continuing this project in execu-
tion. He came to Padua, where, by order of the pro-
vincial, he dictated, although sick, the relation of his voyage to one of his brothers, called William de Solag-
na. Shortly after he entered his convent at Udine, and there died with the reputation of a saint, suppos-
ed to be a saint number of different authors of his life. His narrative, valuable for the geography of Asia in the 14th century, although we possess but five chapters of it, according to the common
opinion was printed for the first time in the Rerum
Italicae, ed. of 1568, ii. 245; however, Tiraboschi
Haym does not speak of it in his Biblioteca Italiana;
but he quotes an Italian translation of it by an anon-
ymous writer (Pessaro, 1578, 4to). The Bollandists
have inserted it in their Acta Sanctorum, and life of Odoric, and other authors have given edited versions of it at different times. They have also placed upon it different titles; the Bol-
danists call it B. Odorici Peregrinationum, ab Iametum de-
scripta; Wadding, Historia peregrinationum; and certain others, the Itinerarium, 

Odoric, CANONICO, an Italian priest, noted as a
painter, flourished at Siena in 1215. There is a manu-
script book, entitled Ori do orticetorum Seneciae Ecclesiae,
preserved in the library of the Academy at Florence,
written on parchment and dated 1483. In which other
letters are illuminated with little histories, orna-
ments of animals, etc., by this old painter. There are also similar books, illustrated on the borders of the parchments by him, preserved at Siena. They are esteemed valuable not only on account of their an-
tiquity, but as showing the state of the arts at that period.

Odescalchi, Benedetto. See ICONIC XI.

Odescalchi, Marc Antonio, an Italian of high rank, who devoted his time and fortune to acts of phi-
lanthropy. He was cousin to pope Innocent XI, who offered him many high dignities in the Church. Ob-
serving that though Rome contained several hospitals for the relief of the poor of different nations, there were many strangers who could find no asylum in any of them, but were obliged to take shelter in the porches of churches, the porticoes of palaces, or the ancient ru-
sins of the city, he converted his house into a hospital for the reception of these outcasts, without distinction. Here he fitted up 1000 beds, and employed a number of tailors constantly in making clothes for the objects of his bounty. In his rides he chanced to observe a for-
born wanderer, he would stop, take him into his car-
riage, and convey him to his mansion. At his death in 1670, he left all his property to the support of the hos-

tipal.

Odescalchi, Thomas, another member of the
same family, who was almoner to pope Innocent XI. In imitation of the preceding, he gave himself up to
works of charity. Perceiving that in the hospital of
St. Gale there were a number of children destitute of
education, he conceived the idea of erecting an asylum for
their reception; which he carried into execution, be-
ginning with thirty-eight children, who were instructed
and brought up to industry. The number soon increased,
thanks to the liberality of pope Leopold, and on the 27th
January 1686 Thomas Odescalchi laid the foundation of
a large hospital for the education and employment of poor
children in weaving cloth. This pious prelate died in 1692, and left considerable funds for the support of his institu-
tion, to which he gave the name of St. Michael de Rippe-
grande.

Odissa. See AULIUS.

Odilia, Sr., the patron saint of Alase, and especially of Strasburg, and protector of all who suffer with dis-
eases of the eye, born about A.D. 650, was the daughter of Ethicon, or Attich, duke of Alase. Being born blind, and disapproving her father, who expected a male heir, she was turned out of doors. Odilia was first committed to the care of a nurse, and afterwards placed in the mona-
stery of Palma (Became las Nonnes, near Besançon) for her education. Here she received her sight, and be-
came very much attached to monastic life. One day one of her brothers, Hugo, came to the monastery with-
out the knowledge of his father, and induced her to re-
turn home again, which she did. When her father be-
held her approach the castle, and was told that his son was the cause of her return, he became so exasper-
at that at this he treated his son in the most cruel manner, resulting in his death. The duke, repenting of his deed, now bestowed all his care upon his hitherto
neglected daughter, and gave her all his wealth. She
built a convent at Hohenberg (q. v.), of which she was
the first abbess, and there she gathered about her 180
nuns. For forty years Odilia labored in works of char-
ity, and died Dec. 15, 720. That day is observed by the
Himmled church in her honor. See Pfeiffer, Evangelisches
Kalender-Jahrbuch, 1835, p. 69 sq; ; Theologisches
Universal-Lezikon, s. v.; Miss Clemence, Handbook of
Legendary and Mythological Art (N. Y. 1872), p. 244 sq;
; Mabillon, Acta Sanctorum Benuel, ii. 2, 486; Rettinger,
Kirchengesch. Deutschlands, ii, 76 sq. (B. P.)

Odilo of MERCOUR, Saint, fifth abbot of Clugny,
noted as an anti-reformer, born in A.D. 943. He
relations that he was brought up in the church of
St. Julian at Brioude, and that St. Maleul, passing
through that town, induced him to become a monk.
However that may be, after he had entered the convent of Clugny, St. Maloup having having resigned his charge, Odilo was appointed his successor.
Sigebert, Alberic de Trois-
Fontaines, and the authors of the Histoire litteraire, state
that he became a monk only in 991. But the authors of
the Gallia Christiana quote documents showing that
he was already abbot of Clugny in 990. In 1027 Odilo
was present at Rheims at the coronation of Henry, son of
king Robert. In 1082 his reputation had become so
great that pope John XIX appointed him archbishop of
Lyons, and sent him the pallium and ring. The regular
clergy at the time had a very high opinion of the ser-
sives the convent of the Church, and Odilo was elected for the secular clergy. Odilo therefore declined, according to
Raoul Glaber, to accept the appointment. Labbé, in
his Concil. p. 858, quotes a letter of John XIX to the
abbot of Clugny, which mildly reproves Odilo for this
refusal. Odilo was highly esteemed by popes Sylvester
II, Benedict VIII, Urban II, John X, Urban III, John
XIX, and Clement II, and enjoyed the especial consid-
eration of pope Gregory VI, and stood at the head of
the German Reform party. He first introduced the festi-
vale of All-souls' day, and gave the real impetus to the so-called Day of the dead. (Truce of God). Under his adminis-
tration the abbey of Clugny rose to great prosperity and
renown. It is said that three bishops—Sanchez of
Pampeluna, Gautier of Macon, and Lebald, said un-
known—left their churches, and came to Clugny to live
under the direction of Odilo; and that the emperors
ODILON

Otho III, St. Henry, Conrad the Salique, Henry the Black (his son); Hugh Capet and Robert, kings of France; and also Sanchez, Ramir, and Gasias, kings of Spain, showed the greatest veneration for him. Odilo obtained desired praise on account of his many charitable works, especially among the poor people during a severe famine in France, and was so thought of by the populace as to be reputed even to have worked miracles. He died at Souvigny Jan. 1, 1049. The Church commemorates him on Jan. 2 and June 21; Baillet indicates April 12 and Nov. 13. Odilo wrote a life of St. Adelaide, the wife of emperor Otho I, which was first published by Canisius (Lectio Publica, vol. iii). Basnage claims that it is erroneously attributed to Odilo, but his arguments are refuted in the edition accompanied by a preface published by Duchesne and Marrier (Bibliotheca Christiana, p. 558). Odilo wrote also a biography of his predecessor, St. Maleul, published by Suris and the Bollandists under the date of May 11, and in the Bibliotheca Christiana, p. 279; the latter work contains also fourteen sermons of Odilo, and two others are given by Martene (Amoceta, v. 621). Most of his letters, according to Jotsa und, one of his biographers, were very numerous, are now lost; there are four given in the Bibliotheca Christiana, and three others by Loc d'Achery (Spicilegium, ii, 386). Finally, the Bibliotheca Christiana gives under his name some small poems, a writing entitled Credulitas, etc. See Gallia Christiana, vol. iv, col. 1225; (La France, v. 114; Jotsa und, Vite et Fasti, vol. i, 821); and J. P. eodem (ed.); Mabillon, Acta Sanctorum, viii, 680; S. Odiliones (Bibliotheca Christiana); Basnage, Acta Torum Testimonials: Canisius's Lectiones (1725); Baxmann, Politik der Päpste, vol. ii; Gieseler, Ch. Hist. ii, 176; Neander, Ch. Hist. iii, 419; Schroth, Kirchengesch. xxii, 93; etc.

ODILON, a French monastic, flourished in the opening of the 10th century. He died about 999. All that is known of the circumstances of his life is that he had intimate relations with Hubald of Saint-Amaud and Ingranne, dean of Saint-Médard, who was created bishop of Laon in 992. The writings of Odilon are, a record of the removal of the bodies of St. Sebastian and St. Gregory the Great from Rome to Saint-Médard de Soissons, published by Bollandus and Mabillon, Acta Sanctorum, vol. i, 423. Another history, of the removal of the relics of St. Marcellin, St. Peter the exorcist, and others, in the same volume of the Acta Sanctorum, is dedicated to Hubald of Soissons, and addressed to the public by Martene, Amphil. Collect. vol. i. The authors of the Hist. litterar. speak of some other works, but they are attributed to the monk Odilon only by simple conjecture. See Hist. litter. de la France, vi, 117.

Odin is the name of the principal divinity of Northern mythology. According to the sagas, Odin and his brothers, Vile and Vé, the sons of Hoer, or the first-born, slew Ymer or Chaos, and from his body created the world, converting his flesh into dry land; his blood, which at first became a flood into the sea; his bones into mountains; his skull into the vault of heaven; and his bow into the spot known as Midgard, the middle part of the earth, intended for the habitation of the sons of Odin. As the highest of the gods, the Allfather, rules heaven and earth, and is omniscient. As ruler of heaven, his seat is Valaskjal, whence his two black ravens, Hugin (Thought) and Muninn (Memory), fly daily forth to gather tidings of all that is done throughout the world. As god of war, he holds his court in Walhalla, whither come all brave warriors after death to revel in the tumultuous joys in which they took most pleasure while on earth. His greatest treasures are the enchanted spear Griswip, the spear Gungner, and his ring Draupner. As the creative and source of all greatness, excellence, and activity, Odin is called also by many other names. By drinking from Mimir's fountain he became the wisest of gods and men, but he purchased the distinction at the cost of one eye. He is the greatest of sorcerers, and imparts a knowledge of his wondrous arts to his favorites. Frigg is his queen, and the mother of Baldur, the Scandinavian Apollo; but he has other wives and favorites, and a numerous progeny of sons and daughters. Although the gods were wont to rove far and wide over lands and seas, it found its most zealous followers in Denmark, where he still rides abroad as the wild huntsman, rushing over land and water in the storm-beaten skies of winter.

The historical interpretation of this myth, as given by George Struleen, the compiler of the Heimskringla, or Chronicles of the Kings of Norway prior to the introduction of Christianity, and followed in recent times by the historian Suhr, is that Odin was a chief of the Osrirr, a Scythian tribe, who, fleeing before the ruthless conquerors from Rome, made their way to Scandinavia, where, by their noble appearance, super-prowess, and higher intelligence, they easily vanquished the inferior races of those lands, and persuaded them that they were of godlike origin. According to one tradition, Odin conquered the country of the Saxons on his way; and on another course, he is said to have introduced a new religion, in which he, as the chief god, Wotan, received divine honors, advanced on his victorious course, and making himself master of Denmark, placed another son, Skjöld, to reign over the land, from whom descends the royal family of the Skjdöllings. He next entered Sweden, where the king, Gyfle, accepted his new religion, and with the whole nation worshipped him as a deity, and received his son Ygmir as their supreme lord and high-priest, from whom descended the royal race of Tjuglings, who long reigned in Sweden. In like manner he founded, through his son Semming, a new dynasty in Norway; and besides these, many sovereign families of Northern Germany, including the Anglo-Saxon princes, traced their descent to Odin. As it has been found impossible to refer to one individual all the mythical and historical elements which group themselves around the name of Odin, Wotan, or Wotan, it has been suggested by Suhr and other historians that there may have been two or three ancient northern heroes of the name; but notwithstanding the conjectures which have been advanced since the very dawn of the historical period in the North in regard to the origin and native country of the assumed Odin, or even the time at which he lived, all that relates to him is shrouded in complete obscurity. It is much more probable, however, that the myth of Odin originated in nature-worship. See also Clarke, Treatise on the Origin and Worship of Odin (St. Augustine, Mythology, i, 829, 274 sq; Westminster Rev. Oct. 1884, art. i; Smith, Ancient Britain; Anderson, Northern Mythology (see Index). See Norse Mythology. Odin, John Mary, D.D., a Roman Catholic prelate who flourished in the United States, was born at Amherste, department of the Loire, France, near the opening of this century, and was educated in his native country. Entering the monastic life as a Lazarist, he was sent to the United States as missionary, and for a time preached in Missouri. In 1842 he was made bishop of Claudiaopolis, and vicar apostolic of Texas; was transferred to Cleveland in 1847, to New Orleans in 1861, and finally, was made archbishop of that diocese. He died at New Orleans May 25, 1870. See Drake, Dict. of Amer. Biog. v. 2. ODINGTON, Walter, called Walter of Exeorth, after a monastery in Worcestershire to which he belonged, lived in the reign of Henry VIII. He was a very learned ecclesiastic, and noted as an astronomer, mathematician, and musician, on account of which latter he was treated with special favor. De Motibus Planorum et Motuione Aeriae is attributed to him; and Dr. Burney observes of his treatise entitled Of the Spectacle of Music, which is preserved in the library of Benet Col.
le, Cambridge, "that if all other musical tracts, from the time of Boethius to France and John Cotton were lost, this MS our knowledge would not be much diminished."

**Odo of Cambray**, a French ecclesiastic of note, was born at Orleans about the middle of the 11th century. He was first known under the name of Oudard. Having entered the Church at an early age he became professor at Paris, and afterwards superior of the cathedral school at Laon. His reputation was such that he was sent to Rome in 1092 to obtain leave to bring to Church a large number of pupils from various parts, even from Germany and Italy. He was especially renowned for dialectics, in which he followed the method of the Realists. About 1092 he ceased teaching, and with five of his followers retired into the old abbey of St. Martin of Tours, where they followed at first the rule of St. Augustus. By the advice of Aimery, bishop of Anchin, Odo became a regular monk in 1095, and was appointed abbot. The congregation, composed at that time of some twenty persons, rapidly increased. Odo made them follow the customs of Cluny, and maintained the austerity. On July 2, 1105, the Council of Rheims made him bishop of Cambrai in the place of Gaucher, who, nevertheless, protected by the emperor Henry IV, retained his dignity until Henry V ascended the throne, when Odo was installed in his see in 1106. Odo refusing, however, to receive from that prince the investiture which he had already received from his metropolitan, he was expelled from Cambrai, and retired to the abbey of Anchin, where he busied himself in writing religious works. He died there June 19, 1118. His contemporaries ranked him among the saints; he is honored as such in several churches of the Netherlands, and is mentioned by the Bohlandists. Odo had the reputation of being learned in theology, mathematics, and poetry, and Dom Rivet states that he knew Greek and Hebrew. He wrote, Sacri canones missae expositio (Paris, 1496, 1696, 12mo; several times reprinted): De poecato originali, lib. iii.—Contra Judaeum nomine Leonem de advocatus Christi.—De blasphemia in Spiritum Sanctum.—In canones Evangeliorum.—Homilia de villa tugitatis: five tractates inserted in Schott, Bibl. (ed. 1618), vol. xv.—Epistolae Lamberti episcopi Arelatensis, in Bolland. Mem. v, 454. Among the MSS. attributed to him, although their authenticity is not fully established, are a poem on the creation, parables, an introduction to theology, several homilies, conferences, etc. Among the works supposed to be lost, is a poem in honor of St. Trojanus, in which he uses in an elegy on Odo written by Godfrey, a pupil of the school of Rheims. See Amand du Chastel, Vita beat. Odonis, in Acta SS. Juni, iii, 911-918; Tritheim, Scrip. Eccles. c. 370. p. 94 (ed. Fabricius); Molinier, Natales SS. Belg. p. 22; Saint-Sulp., Bolland. Belgica; Mabillon, Annales, v, 650, 661; Gallia Chris- tiana, iii, 25-27, 273; Hist. litter. de la France, ix, 588-606.

**Odo Cantisani.** See Odo of Kent.

**Odo of Châteaubriant**, a French prelate of distinction, was at first canon of the church of Paris, then chancellor in 1238. Ughelli claims that he afterwards became a monk, and was made abbot of Granselve, but this does not seem proved. On the contrary, it is very likely that he was still chancellor of Paris in 1248, when he was made cardinal-bishop of Turcslum by Innocent IV. In 1245 he returned to France as papal legate, preached a crusade in the pope's name, and embarked with Louis IX for Palestine towards the close of May, 1248. With him of Nantes, Joliville, and other historians agree in praising his courage, zeal, and disinterestedness. In 1255 we find him in Italy, and in 1256 he came again as legate to France. He died at Civita Vecchia in 1273. He wrote, Epistolae ad in- somnium (Paris, 1763, unpublished); in D'Anville's Epistol- gium, vii, 215: — Distinctiones de Pontificis et Inquisitio in MS. No. 1237, 1238, Sorbonne Collection, 857, St.

**Vicet's.—Sermones, No. 789, Sorbonne.—Lectio mag. Odonis de Castro Radulphe, postmodum episcopo Tur- culani, quae separata in Thesologia, in the same volume. See Hist. litter. de la France, xxii, 5; Johnville, Histoire de St. Louis, passim.**

**Odo, CLEMET (sometimes called Costier), a noted ecclesiastic who flourished in France, was born in England about the close of the 12th century. He joined the Benedictines, and had already acquired great reputation when at the death of Peter d'Anteuil he was appointed abbot of St. Denis, Feb. 10, 1229. He was consecrated on the same day by cardinal Romain, the papal legate in France, and received the investiture from King Louis. One of Odo's first undertakings was the restoration of the apse and choir of the church of St. Denis, which the monks, claiming that their church was consecrated by God himself, allowed to fall in ruins rather than have it consecrated again. Odo seems to have been as liberal as strong-minded. One of his decrees commands that five hundred poor should every day receive a portion of bread at the expense of the convent, and that moreover a like distribution should be made to a thousand poor on All-saints' day, on the anniversary of his death, and on the anniversary of the funeral of abbot Peter. He was a man of great activity and influence. Made bishop of Meaux, he succeeded in 1248 his son. Made archbishop of Rouen in March, 1248, Odo took part in the same year in the council assembled at Lyons. Matthew Paris accuses him of simony, pride, and ambition, but on what grounds does not appear. Odo died May 5, 1247. See Matthew Paris, Hist. mon., Henrici III, ann. 1247; Gallia Christ. vol. vii, col. 887; vol. xii, col. 61; Hist. litter. de la France, xviii, 527.

**Odo, St., second abbot of Cluny, illustrious for his learning and piety, is supposed to have been born about 879. His father, Abbon, one of the most powerful lords at the court of William the Strong, duke of Aquitaine, consecrated him to the Church before his birth by a solemn vow. Odo was educated in the convent of St. Martin of Tour, under St. Odalric. He afterwards completed his studies at Paris, returned to St. Martin, and not finding the rule sufficiently strict, he entered the Cistercian convent of Baume, in Burgundy, under Abbon, who recommended a strict and severe manner of life to the other houses of the order, Cluny, Massai, and Bourge- deaux. After Bernon's death Odo was elected to suc- ceed him as abbot of Cluny and of Bourdeleux. He proved a wise and energetic administrator, and under his rule the order made rapid progress, both in wealth and in reputation. The school of Cluny became the most renowned throughout Gaul. Odo himself was intrusted with the reform of a large number of conv- ents. The popes called him to Italy for the purpose of restoring peace between princes, and kings employed him in the most important diplomatic transactions, re- lying always on his great sagacity and honorable con- duct for a successful disposal of their annoyances. On his return from one of his journeys to Rome, he died in the convent of St. Julian at Tours, Nov. 18, 948. Odo deserves to be remembered as the founder of the principal foundations of the monastic institutions. "He was a man deeply pene- trated with the consciousness of the corruption of the Church among the clergy, monks, and laity; a man full of zeal for the renovation of the Christian life, while at the same time he was very far from placing the essence of the Christian religion in the asceticism of asceticism, though he endeavored to oppose the se- verity of monoasicism to the secularized life of the clergy and monks of his time, and to awaken an enthusiasm in its favor. As contrasted with the prevailing cor- ruption, the example of his pious zeal and of his integ- rity of life must have been to much the more powerful, and was acquired great authority." Odo left numerous works,
among which we notice Excerptio S. Odomis in Moribus Bus (Paris, 1617, 8vo; reprinted in the Bibl. Patr. (Lyons), vol. xvii); twelve anthems on St. Hubert among the Biblia Sacra and in the Bibl. Patr.; three masses in the Biblia Clunia, besides a poem on the Lord's Supper, and another hymn in Mabillon's Annales, iii, 712. The best-known of Odo's hymns is that for St. Mary Magdalen's day (Hymnus de Sancta Maria Magdalenæ) "Lauda, mater ecclesiae" (Engl. transl. by Neale: "Exult, O mother Church, to-day!"); by Chambers, in the People's Hymnal: "O Church, our mother, speak his praise;" Germ. transl. by Rombach, Königsfeld, Simrock. A dialogue on music, entitled Enchiri- ridon, of which there are several MSS. extant, and published in the Bibl. Clunia. The Life of St. Gerard, and his ascetic labours, has been ascribed to this Odo, but is by another, and is acknowledged by Gerbert himself. Still it appears proved that this Odo wrote on music; and Martin Ger- bert published under his name, from a MS. in Monte Cassino, a treatise entitled Tomara per ordinem, cum suis differentiae (in his Script. eccl. de musicis, i, 247).

The Biblia Cluniaca, gives, under his name, a life of St. Gerard, count of Aurillac, which was repeatedly translated into French, and is full of interpolations. The authentic life of St. Gerard, by Odo of Cluny, is found among the Liber chronicarum (Bibl. Clunia, fol. 754, No. 5991, 3783, and 3899; but the most useful and extensive text in the Biblia Cluniaca is spurious, as is also the De Reverencia B. Martini a Burgundia Tractatus. Among the works attributed to Odo, but whose authorship is not certain, is the Life of St. Geraldus, often referred under his name, as in Thierry Ruinart's edition of the Historia Francorum; the Miracula S. Mauri, attributed to him by Baronius, but written by Odo, abbot of Glenfeul, an exposition of the canon of the mass, written by Odo of Cambrai; and a treatise entitled Quod R. Martinus per divers apotropia, attrib- uted to Odo by Marrier, and to Adam of Perceigne by Martene. The most important of Odo's works was published under the title of Collectanea in the Biblia Cluniaca. In the catalogues and in MSS. that work is also entitled Occupaciones, Tractatus de sucordicio, De virtutibus vitæque animae, De perseverantia pravorum, De hujus vitæ qualitatem, De institutione divinae, De con- templatione, mandi, Liber ad expositionem sacrae Dei Ecclesiae, In Hierarchiam Prophetae, etc. Among some sermons given under the name of Odo of Cluny in Marrier, Biblia Cluniaca, fol. 177, 454; Aedificium Monstr. 1622, 2, 340; 1623, 9, 395; 1624, 9, 395; and 1625, 9, 395; by pope St. Leon, and is given in the edition of the latter's works by P. Quensel, p. 52. See Joanna Tri- themius, De viris illustr. lib. ii; Hist. litter. de la France, vol. vii; Veteran testimonia de Odone (Bibl. Clunia, fol. 754, No. 5991, 3783, and 3899); S. Odonis de origine (id.); Mabillon, Acta SS., ord. S. Bened. sec. v.; B. Hauréau, Hist. litter. du Maine, i, 183; id Simplicitus hist. et litter. p. 129-179; Vies des SS. de la Françoise-Comte; Hoefer, Nouv. Biog. Odo de Costeville, a French prelate, half-brother of William the Conqueror, was born in Normandy in 1032. He was made dean of Fascières, abbot of Lisieux, and, although but seventeen years old, was elevated to the bishopric of Bayeux in 1049 by his brother, the duke of Normandy. He at once took a great interest in the construction of the cathedral, to which he gave rich vessels of gold and silver. In 1050 and 1054 he granted charters to the abbeys of St. Evroult, St. Wandrille, and Mont St. Michel. In 1055 he took part in the provincial synod of Rouen, dedicated the church of Troarn May 18, 1059, reconstructed in 1066 the abbey of St. Vigor, and appointed the bishop of the diocese of Tomblaine. In the same year at Lillebonne he was one of the chief promoters of the expedition against England, and furnished his brother one hundred ships for the undertaking. On the day of the battle of Hastings, Oct. 14, 1066, Odo said mass and blessed the ar- mies, and took an active part in the operations. After the conquest, he received as his reward the town of Do- ver, and distributed the houses among his warriors. When William returned to Normandy, he intrusted the government during his absence to Odo and William Osborn. The Saxons revolted against their despotic rule, and their first attack was against Dover; he raised against them the battle of Fagdon, in 1074. On July 14, 1077, he consecrated the cathedral with great splendor. William was present with a number of bishop- ops, abbots, lords, etc., and gave him the barony and forest of Elton. On Sept. 19, 1077, Odo was present at the consecration of the church of St. Stephen at Caen, and on Oct. 23 at that of Notre Dame du Bec. After taking part, in May, 1080, in an assembly held at Lillebonne in presence of the duke, he went with an army through Northumberlanc, which had risen, putting to death or slavery wherever they came. After the death of his brother, he was made count of Kent and of Hereford. Not satisfied with this, he conceived the desire of becoming pope, the see of Rome having become vacant by the death of Gregory VII. After trying to corrupt all those who could secure his election, he raised troops in England, intending to go with them to Italy, and thus secure the object of his ambition. On hearing of these plans, William, at once returned to England. He assembled his barons in the Isle of Wight in 1085, and proposed to them to imprison Odo. As they did not dare to do this, he arrested him himself, Odo claiming that as a priest he was amenable only to the pope; but William answered that he arrested him not as a priest, but as his subject, and answerable to him. He caused him to be kept a prisoner in the tower of the old palace at Rouen until 1087. Liberated at the death of William, he at once took an active part in intrigues to overthrow William II, and to crown Robert. Besieged in Roch- ester, Odo was obliged to flee to England, and returning to Normandy he regained his ascendency over the weak-minded Robert, and helped him to preserve his power. After this first imprisonment, Odo was con- vinced of the importance of the existence of a legitimate successor. To this end he married his daughter Juana, long- illustrious marriage of Philip I, king of France, with Ber- trade, countess of Anjou, and as a reward received the income of all the churches of Mantes. Yet he was obliged to go to Dijon to be absolved from this marriage. Urbain I, the successor of Urban II, was crowned pope in the Council of Clermont in 1095, and in that of Rouen in Feb., 1096, he started with his nephew Robert for the Holy Land, but died on the way at Palermo in Feb., 1097. See Gallia Christ. vol. xi; Onleucis Vitalis, Historia ecclesiastica; Frevois, Hist. de Guillaume le Conquérant; Hermand, Hist. eccl. de Bayeux.

Odo of Deul (Lat. de Dieplo), a French ecclesi- astic, was born in Deul, in the valley of Montmoren- cy. He was a simple monk in the abbey of St. Denys when the abbé Suiger gave him for a secretary to Louis the Jeune, departing for Palestine. On his return he was appointed by Suiger abbé of St. Cor- neille de Compiegne. After the death of Suiger, in 1151, the monks of St. Denys recalled him, and intu- rmed to him the government of their congregation. His counsel was often sought by the king, who had sharp contests with the archbishop of Bourges and the bishop of Beauvais, who disputed with him the possession of some domains; that was in conform- ity with the spirit of the age, when the principal occupa- tion of an abbé was to curb the power of a king. Odo died in 1162. He had the reputation of being a firm and vigilant abbé. He left a good his-
ory of the second crusade. This narrative was published for the first time by P. Chifflet, at the head of his work entitled Sancti Bernardi genua illustrae asser-tem. See Gallia Christiana, t. vii, col. 387; Histoire litt. de la France, vii, 493.

Odo of Fossés, near Paris, was a French monas- tic. He was a member of the abbey of Fossés, and died 1195. Nothing is known of his life, except that, after having passed his youth in the abbey de Fossés, he was constrained to flee from that asylum. Only one of his writings has been preserved to us; it is the Vie de St. Burcard, comte de Melun, published by F. Porquet, in his supplement to the Antiquités de Paris; by Ducange, in his Glossarium, vol. i, p. 439; and by the editors of the Bibliothèque de Cha- nes, etc. This Vie contains interesting details upon the origin of the abbey de Fossés. It has found a place in his Histoire de Melun, which appeared in Paris in 1628. See Histoire littéraire de la France, vii, 493.

Odo (St.) of Kent (or Cantianus), an English prelate, was born in the province of East Anglia about 875. His parents were Danes, who had followed Ingar and Hubba in their expedition. Driven away from the parental home on account of his conversion to the Chris- tian faith, Odo was protected by Athelstan, the lord of the court of Alfred, king of England, who fur- nished him means to study and to enter the Church. He took him with him to Rome in 897, and Odo was there ordained priest. After his return to England, he was employed by Alfred and by Edward, his son and successor, on several important missions. King Athel- stan appointed him his chaplain, and about 908 made him bishop of Wilton. Edmund I, who succeeded his brother Athelstan in 941, prized so highly the advice of Odo that, in order to have him always near, he appointed him archbishop of Canterbury in 942. Odo now became a Benedictine, as at that time the diocese was always governed by men belonging to some monastic order. In 955 he crowned at Kingston Edwy, the eldest son of Edmund. This was the time when the first Sacramentarians, who rejected the doctrine of the real presence, appeared in England. Odo strenuously opposed them. He excommunicated king Edwy, some say for holding to these opinions, others say for incest. The Mercians and Northumbrians, tired of the excesses of Edwy, rose against him, and appointed his brother Edward in his place. Edward governed by the advice of Odo, who is said to have been the originator of many good and useful laws. Odo died at Canterbury July 4, 961, and was buried in the cathedral. He wrote Syn-odal Constitutions, published in Labbe’s Collection of Councils (vol. iv), together with a letter of the arch- bishop to his suffragans. Pits considers him the au- thor of some other works, which are not now extant.

Wright says: “It would be difficult to clear entirely the writings of Odo of Kent from the confusion in which they have been involved by ascribing to him books written by other persons of the name of Odo; but they seem to have consisted chiefly of commentaries on the Holy Scriptures and of sermons.” See Dom Ceilll, Hist. des auteurs eccles. xx, 97 sq.; Acta Sanctorum, July 4; Godescard, Vita des Pères, des Martyrs, etc.; Mabillon, Annales ordinis S. Benedicti (5th century); Wright, Biog. Britannica Literaria (A.-S. Period), p. 200; Croll, English Monasteries, p. 155 sqq.; Croll, Early English Ch. Hist., p. 227; Collet, Eccl. Hist. of Britain (see Index in vol. viii); Hook, Eccles. Biog. vii, 482; Bosseu, Variations, i, 108-9.

Odo of Morimond died, according to his epitaph, Aug. 31, 1290. We possess no definite information con- cerning his life. It is supposed that he was abbott of Morimond. He was the successor of Robert, abbot of Morimond, but this is not proved. It is also dif- ficult to ascertam among the works bearing his name those which are really his and those which are some other Odo’s. Among those which are undoubtedly are five sermons published by Combeins (Bibliothè. i, 25, 299, 797). He wrote a large number of others, which were never published. There are three collections of them in the Imperial Library of Paris, under the numbers 9701 fond du Roi, 80 of the Cordeliers, and 839 of the Sorbonne. There is also as 332 B, 3532 C du Roi, and 606 of St. Victor, a treatise De numero rerum, etc., which in most catalogues is attributed to him. Oudin and the authors of the Histoire littéraire, think that it was written by William, abbot of Aubervie, a pupil of Odo, under the latter’s inspiration, but this appears doubtful. The work treats on mathematics, theology, philosophy, etc.; and is not of much account, but is well written and full of original truth paradoxical errors. The library of Troyes contains a MS. of this treatise, which is probably the original of the others; it contains also under the No. 888 a MS. coming from Clairvaux, entitled Odois tractatus de Anaeleia ternarii; and under the No. 450 a MS. en- titled Tres gradus quibus pervenitur ad hareditatem salutis, which Mr. Harmand considers as the produc- tion of Odo. See Hist. litter. de la France, xii, 610; Henríques, Hist. dos cismáticos, vol. ii, p. 622; Mgr. Christ. vol. ix, col. 835; Oudin, De script. eccles. vol. ii, col. 1418; De Visch, Bibl. Cisterciensia, p. 258; Ca- tal. des manuscrits des Bibl. départementales, i, 202, 822, 589.

Odo of Soissons, abbé of Ourcarm, died about 1170. The bibliographers who give him the title of cardinal-bishop of Tusculum confound him with Odo- de Châteauneuf (q. v.). Those who, with Mr. Daunou, make him bishop of Préneste are equally mistaken; there is in the Italia Sacra of Ughelli no bishop of Préneste named Odo. The only work of Odo de Sois- sons which has been preserved to us has for a title Questions. Quite a large number of manuscripts of this are in existence. We designate here No. 2444, of the old library of the king, and No. 140 of Troyes. The Questions propounded by Odo de Soissons are all theological, and he treats them, as a faithful dis- ciple of Pierre Lombard, with a delicate prudence. This dogmatic collection is a book little known; it is, however, preferable to many compilations of the same kind composed in the 13th century. As for the two other works inscribed by Mr. Daunou in the catalogue of the works of Odo de Soissons, a Com- mentary on Isocrate, and a treatise on the monasteries, it does not exist, and the second belongs to Hugues de Saint-Victor. See Histoire litt. de la France, tom. xii.

Odoacer, a Gothic chief who, according to some authorities, was of the tribe of the Heruli, originally served as a mercenary in the barbarian auxiliary force which the later emperors of the West had taken into their pay for the defense of Italy. After the two rival emperors, Glycerius and Julius Nepos, were both driven from the throne, Orestes, a soldier from Pannonia, clothed his own son Romulus, yet a minor, with the imperial purple, but retained all the substantial authori- ty in his own hands. The barbarian troops now went for one third of the lands of Italy to be distributed among them as a reward for their services. Orestes having rejected their demand, they chose Odoacer for their leader, and he immediately marched against Orestes, who had shut himself up in Pavia. Odoacer took the city by storm, elected himself king of Italy, and was recognized by his soldiers. Orestes was taken prisoner and led to Placentia, where he was publicly executed, in August, A.D. 475, exactly a twelvemonth after he had driven Nepos out of Italy. Romulus, who was called Au- gustulus by way of derision, was in Ravenna, where he was subsequently murdered by his own officers in his imperial ornaments and banished him to a castle of Campania, but allowed him an honorable maintenance. Odoacer now proclaimed himself king of Italy, rejecting
the imperial titles of Caesar and Augustus. For this
time the Western empire is considered as having
ended with the deposition of Romulus Augustulus, the
son of Orestes. Odoacer's authority did not extend
beyond the boundaries of Italy. Little is known of the
exile of the Ostrogoths, who, at the instigation, as some
historians assert, of Zeno, emperor of the East, marched
from the banks of the Danube to dispossession Odoacer
of his kingdom. Theodoric, at the head of a large army,
defeated Odoacer near Aquileia, and entered Verona
without opposition. The Germans abounded itself in Ver-
nava in 496. The war, however, lasted several years.
Odoacer made a brave resistance, but was compelled
by famine to surrender Ravenna (March, 498). Theodoric
at first spared his life, but in a short time caused him
to be killed, and proclaimed himself king of Italy.

rale, xxxviii, 481.

Odoalam (Odoalam, Vulg. Oddalam), the Greek
form of the name ADULAM (N Mac, 98). Adulam
is stated by Eusebius and Jerome (Quar. et Act. Adul-
lam) to have been in their day a large village, about
ten miles east of Eleutheropolis; and here (if Beza-
Jibirin be Eleutheropolis) a village with the name of
Bet Dulla (Tobler, Bethlehem, p. 29; Dritte Wnder, p.
151) or Bet Ula (Robinson, 1st ed. App, p. 117) now
stands. The obstacle to this identification is not that
Adulam, a town of the Shefelah, should be found
in the mountains, for that puzzling circumstance is not
unrequent, so much as in the catalogue of Joshua
xxi. 19, where it is associated with a group of
(Zareah, Sooch, etc.) which lay at the N.W. corner of
Judah, while Bet Dulla is found with those (Nezib, Khellah,
etc. of a separate group farther south. More re-
cently Mr. Ganneau has proposed to identify the site
of Adulam with that of Adi el-Mia, a hill-side near
Shuweik, burrowed with caves (Quar. Statement of
"Pal. Expl. Fund," Jan. 1875, p. 42) but the corre-
spondence in name is not striking; and he afterwards
expresses himself doubtful, after a prolonged investiga-
tion (ibid, July, 1875, p. 168-177).

The above reasoning is a requisite before we can posi-
tively say if there is any cavern in the neighborhood of
Bet Dulla answering to the "cave of Adulam." The
cavern at Khureitin, three miles south of Bethlehem,
usually shown to travellers as Adulam, is so far distant
as to make a connection difficult. It is probable that
this latter is the cavern in the wilderness of Engeid,
in which the adventure of Saul and David (1 Sam. xxiv)
occurred (see Van de Velde, Spr. and Pol., ii, 33).
Everything that can be said to identify it with the cave
of Adulam has been said by Dr. Bonar (Land of Promise,
p. 248-253), but his argument—an agreement in seven
features from 1 Sam. xxii, 1, in favor of its proximity to
Bethlehem—comes into direct collision with the statement
of Jerome quoted above, which it should be observed is
equally opposed to Dr. Robinson's position to place it
at Deir el-Dubb. The conflict, however, would be some-
what obviated by separating the cave from the town.
The name of Adulam appears to have been first applied
to Khureitun at the time of the Crusades (Will of Tyre,
xv, 6). Dr. Bonar suggests that the name Khureitun
represents the ancient Harath (Khureit). This is in-
graphy a questionable opinion; but Tobler (Umgaubungen,
etc. p. 522, 3) has made out a strong case for the name
being that of Chareidion, or Kretan, a famous Essene
hermit of the 3d or 4th century, who founded a Laura
in the cavern in question (Acta Somc'h, Sept. 28). Mr.
Ganneau reports the present name of the cave as

Otodlorl of Saint-Martial, a French ecclesiastic,
flourished in the first half of the 11th century. He
 commenced his studies in the monastery of Saint-
Marial at Limoges, and finished them at Fleur-sur-Loire.
On returning to Saint-Martial he was elected, in 1068,
by the monks, to 1025, successor of the abbé Hugues.
Odorlic died about 1040. To him is attributed the
compilation of the acts of the council assembled in
the city of Limoges in 1061 (Labbé, Concilia, ix,
470). The principal subject submitted to this coun-
cil was to know if Saint-Martial had been one of the
disciples of Jesus, sent by himself into Gaul.
The question was decided in the affirmative; but
historical criticism has not adopted this decision.
See Gallia Christiana, tom. ii, col. 558; Histoire litté-
ral de France, vi, 345.

Donorakers (Odonrup v. r. Odonrapin; Vulg.
Odoros), the name of a chieftain, apparently in the
vicinity of "Bethbasi, which is in the wilderness" east
of Judea, who was slain with his tribe by Jonathan
Maccabæus (1 Mac. ix, 66).

Odontius, Paul (originally Zohn, but changed into
Odontius in accordance with the fashion of the time),
a German divine of note, was born in 1570 at Lichten-
Pflaum, or the provine of Pfalz. Of his parents or his earliest childhood nothing is known. In March, 1575, he went to Grätz,
Steiermark, and was received as an alumnus in the
institute there, at the same time taking charge of the
education of three young noblemen. For three years
he remained in that position, preaching at the same
time in the Stiftskirche, at Grätz, by the permission of
the ecclesiastical authority. One day the countess Hyp-
polita of Windischgrätz attended Odontius' service,
and was so deeply impressed with his sermon that she
appointed him her court preacher. At Waldenstein,
year 1598 he entered upon his duties, and accompanied
the countess to the castle of Trautmannsdorf,
in Austria, where she died. About this time the
preaching of the Gospel in Steiermark was proscribed.
The emperor Ferdinand, a nursing of the Jesuits, who
had early taken a vow at Loreto before the picture of
the Madonna to extirpate heresy in his dominions, isued
his famous, or rather infamous edicts, dated Sept.
13, 23, and 28 of the year 1598, according to which all
evangelical churches and schools at Grätz, and in the
royal cities and market-places were to be closed, the
preachers and teachers, under penalty of death, were to
leave the country within eight days. From 1599 to 1604 a re-
ligious commission went through the country in order
to convert the inhabitants to the Roman Catholic faith.
Gallows were erected in the streets; the churches in the

Moghâret el-Mîdîd (Quar. Statement, April, 1874, p.
110). Lieut. Conder at first proposed a different loca-
tility as candidate for the honor of representing the cave
in question, namely, Moghâret Um el-Tunamîyeh (Cave
of the Mother of Two Twins), a remarkable cavern in
the mountains of Mt. Saba, not far from the "screvin"
Dibbeh, near Tell Saphieh (Gath) (Quar. Statement,
Jan. 1874, p. 18 sq.); but he admits that little if any
trace of the ancient name remains; and he afterwards
abandoned the position in favor of the above location
by Mr. Ganneau, which he defends with much ingenu-
ity and confidence (ibid. July, 1875, p. 145-149). The
theory of the cave, however, was in the eastern face of the hills of Judah would seem rather probable, from the fact that
at the times of David's adventures there (see especially
1 Sam. xxii, 8; 2 Sam. xxiii, 19) the Philistines had
control of all the other side and centre. On the other
hand, its situation in the Philistia territory seems to
be indicated as opposed to Judah (1 Sam. xxii, 5; xxiii, 8).
It was apparently located between Engedi and Je-
rusalem (if we may so interpret "up" from the former,
1 Sam. xxiv, 22, and "down" from the latter, 2 Sam.
y, 17). But in that case the cave was not in the vicinity
of the town, as we should naturally suppose. See
ADULLAM.
villages were destroyed, those in the cities and market-places of Ancona were given over to the Romans, and their houses were devastated; evangelical books were burned; the preachers expelled; the inhabitants had to swear allegiance to the Roman Catholic Church and the government; those who refused had to leave the country. Thus Steinmarck lost thousands of her most industrious people. In 1908 a special edict, dated August 13, 1639, was directed against the Protestant nobility, according to which within a year they had to sell their possessions and leave the country. The best of the nobility left the country, while others remained; and up to this day there is no more than a most nominal relation of the Church in circumstances Odontius thought that he would never again preach in his pulpit at Waldstein. But the tutors of the counts of Windischgrätz ordered him to come back, and take charge of his ministerial office as before. Finally an edict was issued for his dismissal. All protests were in vain, and on April 20, 1602, a body of soldiers appeared before Waldstein, made Odontius a prisoner, and brought him to Gritz. For ten weeks he was imprisoned there. When all means to convert him to the Romish Church were in vain, he was sentenced to be sent to the galley. On the way he was fortunate, however, to reach on his own accord, during his perilous voyage, the native place of his ancestor, of which in 1608 Odontius was appointed priest at Oderan in Saxony, where he died, Dec. 7, 1608. He had left us a narrative of his imprisonment and deliverance, which was first published in 1681, and reprinted in Jülicher Kalender, 1864, xv, 188 sq.; Jöcher, Algemeines Gelehrten-Lezikon, supplemented by Rottemund, &c.; Willich, Kirchenhistorie der Stadt Freiberg, (B. P.).

ODOR, SWEET (πηράζ, nich'o day, Lev. xxvi, 81; Deu. ii, 46; elsewhere "sweet savour"); was offered to the gods and sovereigns as representatives of all ancient nations. See Incense, But also in common life, not only the natural odors of flowers, but prepared extracts of plants, are far more used by the Orientals than by the Western nations. The odors of the groves of Lebanon were among the very famous (Hos. iv, 7; Cant. iv, 11); flowers, even exotic species, were cultivated in pleasure-gardens for this purpose (Cant. 1, 12; iv, 6, 14). Odorous extracts were used sometimes in the form of incense, sometimes as ointments (Cant. i, 8; iv, 10); sometimes in water, with which clothing, beds, furniture, etc. was sprinkled (Prov. vii, 17). See INCREASE; PERNER; PICASSO.

ODORAN (nus), a French monastic, was born in 965. Now little known, he enjoyed in his lifetime great celebrity. He cultivated letters with success, and excelled even in mechanical arts. He was an inmate of the abbey of Saint-Pierre-le-Vif, in Sens, where he displayed his skill by two works, of which he speaks himself: a crucifix—a remarkable piece of workmanship—and a well, the structure of which, it seems, was original and singular. It is presumed that he was persecuted by envious brothers, because he dared to express himself upon consecrated dogmas in terms of offensive novelty. Obliged to flee from the abbey of Saint-Pierre upon the charge of anthropomorphism, he went to Saint-Denis, near Paris. From thence he was called to Dreme by king Robert, and queen Constance, who commissioned him to execute several shrines of great price. He died some time after 1045. We can appreciate neither the experience nor the merit of the goldsmith or the architect. We know, however, some of his writings. The principal is a Chronica rerum in orbis gestarum, which commences with the year 675, and ends with the year 1032. It is found in the large collection of the Historien of France, vols. viii and x. It had already been published by Du Chaillu, and it is inserted, among the Translations of Saint-Saënsis, inserted by Mabillon in his Acta, viii, 354, and of a manuscript, Histoire de l'Abbaye de Saint-Pierre. See Illut. litté. de la France, v, 356.

Odylism (Gr. οδύλ, path, and ὀδύς, matter) is the doctrine of the supposed material power or influence producing the phenomena of mesmerism (q.v.), called also odistic force. See Od.

Œcolampadius, JOHANNES (more properly Jo- hanns Hausschein, for he Latinized his name according to the fashion of the Reformation age, like Melancthon, etc.), was one of the most eminent Reformers in Switzerland, and, as coadjutor of Zwingli, maintained such a relation to his master as Zwingli often likened to Luther's coadjutor, Melancthon. In German Switzerland he and Zwingli performed the same work that Beza and Calvin effected in the French sections of that mountain country. Œcolampadius was born at Weinsberg, a small town in the north of Wurttemberg, in 1482. His mother, a pious and devoted woman, was a native of Basle, in Switzerland. His father, a merchant, who destined the boy for the legal profession, sent him at first to the school at Heilbronn, and afterwards to the University of Bo- logna, and later to Heidelberg, where he yielded to his own inclinations and relinquished jurisprudence for theology. His early proficiency procured him the degree of bachelor of philosophy in his fourteenth year. He continued his theological studies for a while, and then accepted the appointment of tutor to a son of the noble family of Zähringen: but all too soon his zeal proved too short, and resumed his theological studies. He was next appointed to a benefice founded by his parents, and performed the duties for about six months, preaching with great acceptability. His sermons at this early period evinced a deep spirit of devotion and a close following of the New Testament. He especially exalted the efficacy of the Holy Virgin's intercession, and commended the conventual life. But deeming himself as yet incompetent for the charge, he shortly resigned and visited Tubingen and Stuttgart, where he sought a more thorough acquaintance with the sacred tongues. He acquired Hebrew from a Spaniard, and Greek under Reuchlin, and in a short time wrote a Greek grammar, which was published in 1520. While residing at Hei- delberg he formed a friendship with Capito, who was then preacher at Bruchsal, and was afterwards the Re- former at Freiburg. This acquaintance proved its effects on the individuals according to their various charac- ters: the ancient Capito soon became a zealous Re- former; the mild and studious Œcolampadius hesitated —he feared the misery which would probably result a day too soon, and of captivity in the Church he died till he felt convinced that the cause of truth should over- balance the fear of transient evils. For a short time Œcolampadius resumed his clerical duties at Weinsberg; but in 1518, Capito, then settled at Basle, induced him to undertake the office of preacher. At this important German-Swiss centre Œcolampadius enjoyed the asso- ciation of many of the most eminent minds of the 18th century. Erasmus was then engaged upon his Com- mentary of the New Testament, and in this work secured important assistance from the young preacher Œco- lampadius, who, even at this early time of his life, was distinguished all over the Continent, for vast erudition and mastery of the Hebrew and Greek tongues. But it is not only as a student that Œcolampadius's stay at Basle at this time is memorable. In the pulpit he was as distinguished as in the labors of the study. He not only attracted many hearers by his oratorical skill, but also on account of his outspoken condemnation of whatever he saw to condemn. He preached against many of the abuses which had crept into the Church, and held up purity of life as exhibited by Christ in the flesh. Yet he did not at that time cherish any ten- tion of rupture with the Church of Rome. He sought for reform from within, and hoped for a result which he afterwards learned it is impossible to bring about in the
GEOLOPADIUS 304 GELLOPADIUS
corrupt body of Romanism. His health failing him, he was finally obliged to abandon his position at Basle, and he returned to Geneva in 1519. But he maintained a close correspondence with Erasmus, and also with Luther and Melanchthon, whose views more or less influenced him even in the line of his studies. He devoted himself especially during this season of retirement to the careful study of the Hebrew; he also published a tract, De Fisci-
chitis (1518), in commendation of the broad humor with which the Easter sermons of the day abounded, and, strange to say, he wrote a tragedy containing six thousand lines. His piety during this period of his life was sincere, but so very somber that his friends often raised doubts about his inspiration; while Erasmus de-
scribed in part to his physical distempers, though the main cause of it was his imperfect knowledge of the way of salvation. As soon as his health would permit he went back to Basle, at the earnest request of Eras-
mus, who was getting out the second edition of his New Testament, and wanted his help; but after a sojourn of a few months (1518) Geolopadius removed to Augs-
burg, having been appointed one of the principal preach-
ers of that city. Here it was that he first met Luther, who came to Augsburg in May, 1519, to confer with the pastors of the city. The coldness of Geolopadius' reception, being that of a professor, was very great. During
the first year he had no office of any kind; yet it was a memorable year in his history, for in the course of it he was brought into contact with Zwingli, whose influence mightily quickened his progress in the path of reform, and who more than any other person helped to give to the system of faith and worship afterwards established at Basle its peculiar features. After waiting nearly two years for employment, and when just ready to despair of finding it, the door of entrance into the university was suddenly opened for Geolopadius, in consequence of a dispute between the council and the professors, which resulted in the deposition of two of the latter.
Their places were instantly filled by Geolopadius and Pellican. The chair of the former was that of Biblical learning—the one of all others for which he was best suited. He began his course of lectures with Isaias, and long before he had reached the middle of it his audience—room was unable to hold the crowd of students and citizens who flocked thither, all eager to hear the learned and eloquent expositor. Besides this academic position, Geolopadius occupied some time as a
preacher of St. Martin's; but in accepting this pastorate, he frankly told the council and people that he must be allowed to preach the Word with all freedom, and would not consider himself bound to observe useless or pernicious ceremonies. In his lectures he advanced as il-
logically as he could, with a coldness of manner and a
breath between him and Erasmus. Thus he spoke against the celibacy of the clergy, thinking that it were better for the interest of the Church that they should remain single, but holding with St. Paul that those who could not contain should marry. He even gave a bad example to their congregations, as did many priests of that period. In his sermons he became daily more severe against the abuses of the Roman Cath-
olic Church, which he attacked one by one, comparing them with the principles laid down in the Scriptures. In the mean time the discussion on the sacraments broke out; Karlstadt's works were condemned by the Council of Basle in 1525, and the book-sellers were forbidden to publish any of Geolopadius' writings. The Anabap-
tists also opposed him. Yet, although even his liberty was threatened, he did not flinch, and in 1525 he bap-
tized in German, discontinued the mass, and celebrated for the first time the Lord's Supper in the Reformed manner, having himself composed a liturgy for the pur-
pose. When the dispute arose between Zwingli and Lu-
ther respecting the real presence in the Lord's Supper, Geolopadius supported the latter, and published in 1525 De vero intellectu verborum Domini, Hoc est corpus meum—a work of which Erasmus says that he threatened with forcible expulsion and imprisonment. He finally left it in February, 1522, went to Heidelberg, and then returned to Basle, where he was refused all assistance by his old friend Erasmus, and by Sickingen. In the performance of his ecclesiastical dut-
ties at this place, he introduced an innovation by read-
ing the Gospel and Epistles in German instead of Latin, which it aptly compared to the unknown tongues.
It was written with much skill, good reasoning, and persuasive eloquence. It was answered by the Lutheran party in Syngnoma Suevicum, to which he replied in Respondentum, of which, one of the early English manuscripts, was burned in 1538, because, as Cranmer writes, "he thought it not necessary to be believed as an article of our faith that there is the very corporeal presence of Christ within the host and sacrament of the altar, and holds that there is but after the fashion of Celestianism." This contest with Luther on the subject of the Eucharist was, in many respects, the most painful of any in which Ecolampadius found it necessary to engage. Ecolampadius agreed substantially with Zwingli's view of the sacrament, and he defended it as a great and fundamental dogmatic skill against the Lutherans, especially Brendtius. He differed from Zwingli in the interpretation of the words of the institution, by taking the verb in the literal sense, and placing the figure in the predicate: "This is—really, not figuratively, in the sense of signification, as Zwingli explained it—'the symbol of my body' (figure corporis, as Tertullian once says). He attended, in company with Zwingli, Bucer, and Heliod, the religious conference with the Lutheran divines at Marburg in 1529, and was there confronted with Luther, who accused Zwingli of treachery against the mild Melancthon. But, although the champions of the Lutheran and Reformed churches agreed in fourteen fundamental articles, they could not settle their dispute concerning the real presence of Christ in the Eucharist. Luther even refused the hand of brotherhood to Zwingli, to which Zwingli at first made no reply, in spite of the difference of views. Nevertheless Ecolampadius lent his support to Bucer's efforts to bring about an agreement between the German and Swiss Reformers. It seems also that Ecolampadius modified his theory on the Eucharist, and gave up some of his former unmeasurable assertions. His learned biographer, Dr. Herzog (ii, 280), thinks that the Reformers of Basle held at last firmly to the view "that our souls are truly nourished with the true body and the blood of Christ, and that Christ is present to the believers in the Eucharist, although not in a manner essentially differing from his general presence in the Church." This is also the view which afterwards prevailed in the churches of Basle, as may be seen from the "Second Confession of Basle," called also "the First Helvetic Confession," drawn up by Bullinger, Geusen, and Myconius, in 1529, in which the 22d article follows: "Concerning the holy communion, we maintain that the Lord offers and communicates in it truly his own body and blood, i.e. himself, to his members as nourishment, to the effect that he lives in them more and more, and they in him; not that the flesh and blood of the man, however great his piety, learning, moderation, and tact, could have prevented the split; yet the strife might possibly have been less bitter if the reformer of Basle had declined to join either side. Unhappily for such a result, he was a lurking tendency to that spirituous spirituality which undervalues all external means of grace. Thus he regarded the ordinance of the Supper as purely a liturgia, rather than a means of grace; as a form, from which the Christian should seek to be freed, rising above it to immediate fellowship with God. "Believers," said he, "should use the sacraments more for their neighbors' sake than their own. For themselves they are already under the influence of the Holy Spirit, they are free, they are purified, they are justified, and, being a kingdom of priests, united to Christ, they do not require those external means in them." Now, while it is deeply to be regretted that this occasion was given for the contest between Switzerland and Germany about the ordinance which is at once the feast of Christ's love and the symbol of Christian unity, yet, when we weigh all the circumstances of the discussion, we must allow that there were many reasons for thankfulness that Luther opposed the doctrine of Zurich. The storm, indeed, left many traces of its desolating march; yet we are inclined to believe that the atmosphere was thereby rendered purer than it would have been if no such war of the elements had occurred. The germ of rationalism thus early developed in the system of Zwingli, if not entirely eradicated, was at least in a measure and for a time repressed. Ecolampadius next took part in the discussion of Baden (May, 1530), where he maintained the tenets of Zwingli against the old Roman Catholic party. But the feebleness of the party, their negligence; yet Zwingli and his followers were condemned as heretics, and strong resolutions were passed against the Reformation. The country, however, was too far advanced towards the principles of the Reformation for these resolutions to have much effect, and Ecolampadius and Zwingli were soon compelled to labor faithfully in its cause. On his return to Basle Ecolampadius published a more extended liturgy, and introduced the practice of singing the Psalms in German. The last was a most popular measure, and greatly helped the cause of the Reformation. The popular hymn-books as they might have been, and the Papists made much sport of them; but they supplied a long-felt want of thousands of pious hearts. As dangers thickened, the activity of the Reformer was redoubled; he preached every day, he composed and published a Catechism for children, and during the prevalence of the plague in 1526 he devoted himself with unwearied constancy to the sick and dying. In the mean time the council of Berne introduced the Reformation in that canton, and thus brought on a religious conference (Jan., 1528), in which Ecolampadius was an active and influential participant. The resistance to the Reformation led to the spread of the Reformation through the whole canton, and greatly encouraged its disciples in Basle. The latter city was gradually divided into two opposite parties. In order to bring matters to a crisis, Ecolampadius induced the evangelically inclined citizens to present to the council a petition for the re-establishment of public worship, while at the same time he took such measures with Zwingli as would prevent an outbreak; all passed well, and it was decided that a conference should be held, to determine on the continuation or the rejection of the mass, on the fourteenth day after Whit Sunday, 1529, until which time mass was to be read only in three churches throughout the city. On Feb. 8, 1529, the people assembled, and demanded that such members of the council as were opposed to the Reformation should resign their offices, and that their places should be filled by appointment from the grand council, instead of by the remaining members, as formerly; the emblems of Roman Catholic worship were removed from the churches, and on the following day the council acceded to all demands. Ecolampadius was immediately appointed to the highest offices, and as such took an active part in procuring the adoption of successes of the faithfulness in the faith, which was dated April 1, 1529. The university also was reorganized, and received a new impulse in the hands of its former professors. Ecolampadius was universally recognized as the leading spirit, and while he lived he was, by common consent, allowed to exercise a general supervision over all the parishes of the city and suburbs, as
well as to control the university affairs. He experienced much annoyance from the Anabaptists, who were not by any means satisfied with the Reformation; he had to do with them (especially the Mennonites) until June 10, 1527, and in 1531), but without result, and the sect continued to increase, notwithstanding the stringent measures adopted against them by the council of Basle. In 1531 he abolished the custom of posting the names of parties under excommunication on the doors of the churches, while at the same time he endeavored to establish a regular system of Church discipline. He differed from Calvin, who wished the absolute union of the Church and State, while Ecolampadius argued that, while moving harmoniously side by side, each should preserve its special character. "The Church is the civil power," he says in a letter to Zwingli, "will become even more inoffensive than Antichrist, if it robs the Church of her authority in spiritual things." He disapproved especially the use of violent means for the propagation of truth, and vainly endeavored to moderate the ardor of his friend Zwingli. Thus he warned the latter at the approach of the catastrophe of the Helvetic Reformation against war; and had Zwingli followed this good advice, he might have saved his own life, which was sacrificed in the unfortunate issue of the battle of Kappel, November, 1531. The death of this good but rash Reformer, the ministers of Zurich unanimously chose Ecolampadius as the successor of Zwingli. But he felt it his duty to remain in Basle. Only a few weeks after the death of his friend, he was himself called to pass from the Church militant to the Church triumphant. His last home on earth were full of interest. A severe illness suddenly arrested his incessant labors, which had long since undermined his sickly frame. He took the communion with his family; then assembled the magistrates and the ministers of Basle and of the canton, and moved the hearts with pious exhortations. Concerning himself he said: "The charge that I committed the crime of adulterating the truth does not affect me. By the grace of God, I approach the judgment-seat of Christ with a good conscience. There it will appear that I have not seduced the Church. I leave you behind as witnesses of this my assurance; and I confirm you as such in these my dying moments." He died Nov. 24, 1531, surrounded by ten ministers kneeling in prayer. Shortly before he had fervently recited the penitential psalm of David (Psa. 51), and exclaimed, "I shall soon be with the Lord Jesus. Lord Jesus, help and sanctify all my clustered family through the whole city of Basle."

His remains were deposited in the cathedral church. The mouth of slander circulated the rumor that he had committed suicide, or was killed by a member of his family. Even Luther, under the influence of strong prejudice, brought this charge to the bishop of Rome. But it had the good effect to bring out a minute description of his last days by two eye-witnesses—his friend Grynaeus and his servant Gundelfinger. He left a wife, Wilibrandis Rosenblatt, whom he had married (1520) after the death of his mother; a son, Eusebius, who died the same year; and two daughters, Altheia and Irene. The widow married afterwards successively two other Reformers—his friends Capito and Bucer of Strasburg, the last of whom she followed to Cambridge, in England. But, in 1564, her body was deposited in the same grave with Ecolampadius. The memory of the first Reformer of Basle is still cherished, and the fruits of his pious labors are seen to this day.

As has been truly said, Ecolampadius was the Lord's chosen instrument of leading on to victory those noble souls who had gathered under the banner of reform at Basle, and through the crown of martyrdom, of which he lived long enough to earn the glorious appellation of the Reformer of that city. But his labors entitle him to an appellation more indicative of the wide sphere in which he worked. In his intellectual and moral qualities, his modesty, gentleness, love of peace, eagerness for union, academic tastes, fondness for a meditative life rather than an active life, tendency to melancholy, relish for letters, and exquisite scholarship—he bore a striking resemblance to Luther's great friend and ally. Of his influence in the Church at Basle, and, if in Church or State, was the last one that Ecolampadius would have chosen to assume. If he had dared to follow his own inclinations, his life would have been spent in the quietude of the academy rather than amid the turbulence of the arenas, in converse with books instead of contests with men. He was inclined to look with profound veneration upon everything that bore the marks of hoary antiquity, and hence the reluctance—we may almost call it—with which he abandoned the Romish Church, and severed one by one the ties which connected him with the communion of Basel and with the Continental Reformers, none were less disposed than he to cast aside old forms, simply because they were old, or to introduce novelties merely for the purpose of making the Protestant worship as unlike the Papist as possible. In short, his tendencies and tastes, if yielded to, would have repelled him from the rude work and rough ways of the reformer: and his life supplies one of the many illustrations of the fact that the Lord chooses instruments which in human view are most unsuitable for the accomplishment of his designs.

The lives of both Ecolampadius and Binck were, besides those mentioned above, Annotatio in Genevam in librum Job zecemcapta; in Deiemele prophetam libri duo (1558, fol.); Commentarius omnes in libros prophetae (1558, 2 vols. fol.); Joannis Ecolampadii et Hueldrichi Zwingii epistolam libri ii, praecipue cum religiis a Christo nobis traditis paulum ecclesiasticam administra tionem officia nostro maxime secuto erroribus perturbato, convenieniens, ad amissum expressiorum (Basle, 1586, fol.). He also published translations of Chrysostom, Gregory of Nazianzus, and others of the early fathers. His learning, his knowledge of the fathers, contributed to give his exegetical labors a high value. No complete edition of his works has yet been published.

Economists is the name given to a secret organization of infidel French philosophers, of whom Dr. Duquesnay was the founder. He so ingratiated himself with Louis XV that the latter used to call him his thinker, and gained the affections of the people under pretense of promoting economy in the state. According to abbé Baruel, however, the real object of the majority of the society was to subvert Christianity, by circulating the writings of Voltaire, Rousseau, and other infidels. They did by printing extracts from these popular authors, and circulating them through the kingdom by hawkers and peddlers, who had them for little or nothing, that they might undersell all other literature. Their secret agents among the ministers of the church, and abbeys, were held at baron Holbach's (q. v.). In some of these tracts their object was disguised; in others they were so bold as to avow their object under such titles as "Christianity unmaskt," etc. They also attempted schools, for the avowed intention of preparing children for trade and mechanic arts, in which the same
ECONOMUS

ECONOMUS (steward) was the name of a special official instituted in the midst of the 6th century to conduct the administration of Church property, in place of the earlier deacons. The steward, from the nature of his office, rose in mediæval times to high importance. The bishop, by early law, was not to appoint him, but he was to be chosen by the entire presbytery. The Constitution of Clovis enacted that it should be law, and that the stewards confirmed by the emperor Justinian, and ratified by later Church councils. The ecœnomi were always chosen from among the clergy. See ECOEOMISTS.

Economy (oikosuopia, stewardship) is a term sometimes used to designate the entire suppression or temporary withholding, in the instruction of the great mass of Christians, of a large portion of the Gospel doctrines which are the most earnestly set forth in Scripture, as a sort of esoteric mystery of which ordinary believers are unworthy, and which should be dealt out with the managing discretion of a steward (oikouμένη), only when there is a long period of pius submission. Those who vindicate this system represent it to themselves and others as the same with the gradual initiation of Christians in the knowledge of their religion, in proportion as they "are able to bear it." able that is, and willing to understand each point that is presented to them. Of course, the opponents of the system, on the other hand, maintain that it confounds things essentially different. While they allow the necessity of gradual teaching, as of reading the first line of a passage before a second; and while they readily admit that care is necessary to avoid teaching anything that is not true in itself, would be falsely understood by the hearers, they contend that this necessary caution is not to be confounded with the system of withholding a portion of Gospel truth from those able and willing to receive it, the system of "shunning to set before man the counsel of God," and of having one kind of religion for the initiated few, and another for the mass of the Christian world. The opponents of the "ecumenical" system assert, moreover, that very different was the apostle Paul's Gospel, which he assures us, "if it was hid, was hid from them that are lost" (men on the road to destruction, δραμαγοῦσα, whom the god of this world hath blinded" (2 Cor. iv, 4, 5). See SAVIOR.

Ecumenical (or Universal) Bishop is the title now assumed by the popes of Rome. It was stubbornly claimed by John the Farser, patriarch of Constantinople, in the end of the 6th century. The assumption of so lofty a title by Constantinopolitan patriarchs was strongly resented against by the rival bishops of Rome, particularly by Gregory the Great, who maintained the title to be profane, antichristian, and infernal; and, in order to make sure of a clear claim of Rome's superiority over Constantinople, he assumed the epithet "Servus servorum Dei," in reference to Matt. xxii, 10. (See Alzog, Kirchengesch. i, 341 [R. C.]; Soames, The Latin Ch. in Anglo-Saxon Times, p. 19; Neale, Hist. Eccl. Ch. [Intro.], i, 29.) In A.D. 606, however, the Roman patriarch, Isaac III, obtained this very title from Phocas, the Greek emperor; and from this period down to the present day the Pope claims to be the Ecumenical or Universal Bishop, having authority over the whole Church of Christ upon earth. All other churches except the Roman Catholic Church repudiates such a claim as alike unfounded, antichristian, and blasphemous.

Ecumenical Council is the name of an ecclesiastical convention of cardinals, bishops, and dignitaries of the Church of Rome, called together by the pope to deliberate really on the interests of the Romish Church, but, as it claims, on the interests of Christianity at large. The council is called ecumenical (i. e. an imperial gathering) from oikouμενη, or empire (technical meaning of the word, even in N.-T. Greek), because originally such councils were convened only by the emperor. Thus the Council of the Frankish Church of the year 589 was 21st of the Thirty-Nine Articles that "general councils may not be gathered together but by the commandment and will of princes." This was clearly the assumption of the first ecumenical synod held (see NICAEA COUNCIL), and of all the Eastern councils. "Not only no single priest, but no single private man (as we take the word in its most ancient sense), was sufficient to convene a general assembly from all parts of that vast territory; a council was part, as it were, of the original constitution of the Christian empire; and however summoned afterwards in the enlargement of the civil and ecclesiastical relation in the West, the principle has never been wholly abandoned. When the Western empire fell, the Eastern emperor still retained the inalienable right; and when the Eastern emperor became inaccessible to the needs of European Christendom, and the so-called 'Roman empire' became a thing of the past in the West, then the emperor of Germany (solely, or more properly, conjointly with his Byzantine brother) succeeded to the rights of Constantine" (Stanley, Lect. Eccl. Ch. p. 169). With the establishment of the temporal power of the papacy the bishop of Rome assumed the precedence which he held during the lifetime of the Church, as its spiritual head and sovereign lord. In the article COUNCIL we have already considered the general utility of such gatherings and their ecclesiastical authority. The conditions necessary to constitute an ecumenical council are a subject of much controversy among Romanists. As the subject is of less importance in Protestant divinity, it will be enough to explain here that a council is said by Roman Catholic divines to be ecumenical in three different ways, viz., in convocation, in celebration, and in acceptance. For the first, the summons of the pope, direct or indirect, is held to be necessary; this summons must be addressed to all the bishops of the entire Church. For the second, it is necessary that bishops from all parts of the Church should be present, and in sufficient numbers to constitute a really representative assembly: they must be presided over by the pope, or by a delegate or delegates of the pope; and they must enjoy liberty of discussion and of speech. For the third, the decrees of the council must be accepted by the pope, and by the body of the bishops throughout the Church, at least tacitly. The last of these conditions is absolutely requisite in order that the decrees of a council to the character of ecumenical; and even the decrees of provincial or national councils, so accepted, may acquire all the weight of infallible decisions in the eyes of Roman Catholics. It remains now only to name the councils regarded as ecumenical. Yet this is by no means an easy task, for Church historians are not agreed as to the total number of such synods hitherto held. The well-known mnemonic hexameter, "Ni Co E, Chal Co Co, Ni Co La, La La La, Ly Ly Vi, Fio Tri," standing for Nicea, Constantinople, Ephesus, etc., which counts but seventeen, is not accepted by all. While, e. g., the ecumenical council of Ephesus, in 449, had decided, not without the aid of "swords and sticks, and many monks' beaks," that Eutyches's opinion about the nature of Christ was the orthodox one, another orthodox council, fifteen years later, at Chalcedon, decided that the decision of its predecessor was null and void; and that so far from being an ecumenical council, it was a council of brigands, "Iatrocinium Ephesinum." Even so the Council of Basle was called "Basillicorum episcopis diemunum cunctis," because it rested against the teaching of its master. (See Deutsch, Literary Reminiscences, ch. xi; McElhenny, The Doctrine of the Ch. p. 81-94.) See also SYNOD. The Protstants have in recent times
Oeder, George Ludwig, a German divine noted for his ecclesiastical labors, flourished in the first half of the 18th century. He was born in 1694, and after studying at different high schools of his country, entered the ministry, and finally became rector at Anspach and dean of Feuchtwangen. He died in 1760. He was the author of "Free Inquiries concerning the Revelation, and several other works. Old Testament, in German — Aus
madervisiones Sacra — Observationum Sacrorum Sym
tagma, etc. See Hoefner, Nov., Biog. Générale, s. v.

Oedmann, Samuel, a noted Swedish divine, dis
inguished for his contributions to exegetical theology, was born in 1750, and flourished as professor of theology at the University of Upsala. He died in 1829. His Miserere mei, Deus (Upsala, 1829), was translated into German by Gröning (Rostock and Leipsic, 1786—90). See Hoefner, Nov., Biog. Géné
rale, s. v.

Oegir (from Ogn, "to shudder" at, to dread), or Eier (i. e. the stuffer) is the name in Northern mythology of the god of the sea or ocean. Oegir rules over the stormy, raging sea, far from land, where fishing and navigation cannot well be carried on; he is a giant, and in intercourse with the gods, whom he visits, and they in turn visit him. It was once when the gods visited him that his breathing-kettle was found so small, that Thor had to go to the giant Hymer, who had a kettle a mile deep. In Oegir's hall the bright gold was used instead of fire, and the ale passed round spontaneously. Some of the old Norse heroes are represented as possessing a terrifying helmet. Odin's helmet is the bearing sky; and as the dwarves cover themselves with a helmet of fog, so Oegir wears on his brow a helmet made of dense darkness, and heaven-reaching, terrifying breaker. The name of his wife, Rau (to plunder, to rob), denotes the sea, as craving its sacrifice of human life and of treasures. Sea net with which she catches those who venture out upon the sea; with her hand she is able to hold the ship fast. The ancient Norsemen believed that they who perished at sea were seized by Rau. Loke once bor
rowed Rau's net with which to catch the dwarf And
wari, who in the guise of a fish dwelt in a waterfall. Oegir and Rau have nine daughters, the waves of the ocean, and their names represent the waves in their various magnitudes and appearances. They have pale locks and white veils, and are always angry when the wind blows. Oegir and his family were regarded as mighty counselors, and often his friendship was sought by the gods themselves. See Thorpe, Northern Mythol., i. 67—
69; Kayser, Religion of the Northmen; Anderson, Norse Mythology (Chicago, 1875), p. 548-43.

Oehler, Gustav Friedrich, a very eminent Old
Testament scholar of Germany, was born at Ebingen, in Württemberg, June 10, 1812. Having finished his theological studies at Tübingen, he was appointed a lecturer at the Missionary Institute at Basle, which position he occupied from 1884 to 1887. After this he became a member of the theological seminary in Tübingen, teaching at the same time in the university there. In 1840 he was appointed vicar in Steins
gard, and in the same year professor of the theological seminary at Schönthal. In 1845 he accepted a call from the theological faculty in Breslau, Silesia, where he lectured until 1862, when he returned to Tübingen to occupy the higher position there which he had already held in the lower theological seminary. He died Feb. 20, 1872. He published a great many essays and articles in different reviews, in Herzog's theological and Schmid's pedagogical encyclopedias; and the following works, Prolegomena zur Theologie des Alten Testam
mente (Stuttgart, 1846) — Geschichte der theo
giis pavement, pars 1 (ibid. 1846) — Die Grundzüge der Altestamentlichen Weisheit (Tübingen, 1854) — Uber das Verhältniss der Altestamentlichen Prophezeiheit zur Heil-

Eccumenical Divines is the title given by the Greek Church to St. Basil the Great, St. Gregory the Divine, and St. John Chrysostom. A festival in honor of these three eccumenical divines, as they are termed, is held on January 30 every year.

Eccumenical Judge is the title given to the patriarch of Alexandria. It was first applied to Ariem
uis Philopatris A.D. 325, and is designated as follows: "A dispute having arisen between the emperor Basil and the patriarch of Constantinople, Sergius II, apparently on the subject of tax, which the former had levied, and to which the latter objected, Philo
thus, then at Constantinople, was called in as arbiter of the disagreement. Finding that both the prelate and the emperor were in the wrong, and unwilling to pro
voke their indignation by openly saying so, he had re
course to an ingenious and symbolical method of stating his opinion. Having made two figures of wax, repre
senting, we may suppose, the opposing parties, he carried them before Basil and Sergius, and cut off the right hand of that representing the emperor, and the tongue of that by which the patriarch was imaged, thus reproving the severe actions of the former and the unbridled words of the latter. Sergius placed his hand on him, hating him for his cruelty, since that period the patriarch of Alexandria wears two omopha
ria and a double crown on his mitre. This title was afterwards absurdly assumed by the Jacobite patriarchs, who interpret it as proving their authority to settle any dispute which may arise as to the time of Easter."

Eccumenius (Ecumenio). A Byzantine ecclesi
astical writer of the 10th century, of whose personal history nothing is known except that he was bishop of Tricoca, in Thessaly, and wrote Greek commentaries on various parts of the Gospel. The works attributed to him are: Commentaria in sacramenta quatuor Christi Eceumenica, etc. (Mantua, 1766); Interpretatione vero Joanne Henenio (Louvain, 1543, fol.). The Greek text was published by O. F. Matthei (Leips. 1792, 3 vols. 8vo).— "Eξηυγγείσες εἰς τὰς πραίσες τῶν Ποισίλων (compiled from the ancient Greek fathers, and especially from St. Chrysostom).— "Εξηγήσεις εἰς τὰς ἑταίρεις καθιστικὰς ἐπιστολὰς.—Bείς
τίνων Ἴωνον Ἀποκαλύφθην. These divers commentaries were several times published; one of the best ed
itions is that of Paris, 1851, 2 vols. 8vo. The commen
taries were first published by the Benedictines (ibid. 1846, 8vo). With Eccumenius originated the Catena (q. v.); his commentaries are chiefly composed of extracts from the writings of the fathers, with a few remarks of his own. "The various explanations are linked together, without regard to their agreement or contrariety, by such words as 'another' (αὐτός), 'otherwise' (ἀλλάς), 'and otherwise' (εἰς ἄλλως); and sometimes they amount to ten in one place. The reader is generally left to choose for himself, for Eccumenius seldom prefers one to another. The method of interpretation is gram
matical" (Davidson, Homenage of Eccumenius). It is not improbable that he does not read 1 John v, 7; and that he reads 2 John and not 3 (1 Tim. iii, 16). See Henenius, Pref. ad Eccumen. Comment.; Matthai, Proleg. ad Führinh Comment. in Quatror Evang.; Simon, Hist. crūtic with the principal commentators & Nouv. Trésor de c. xxiii; Possner, Apparatus sacror; Cave, Hist. Litter. ad ann. 990; Fabricius, Bibliotheca, viii, 318; Dupin, Bibl. Nouvelle des Autres ecclés. cent. xii; Cellier, Autres sacres, xix, 742; Oudin, Comment, de Script. ecclés. ii, col. 518; Lardner, Criticall, i, 1; Uramen, Preface to his edition; Hoefner, Nov., Biog. rale, xxxvii, 508; Smith, Dictionary of Greek and Roman Biography and Mythology, s. v.; Hook, Eccles. Biogr. vii, 455.
OEHLMULLER

309

OERTEL.

sichm Munká (ibid. 1881): - Zwei Seminarreden (ibid. 1872); 1, but his main work is Thesaurus Alcoranum Testamenti (1873, 1874, 2 vols.), published by his son immediately after the author's death, and giving the substance of his theological lectures delivered from 1839 to 1871, and of his articles published in different encyclopaedias. Of the last-mentioned work an English translation has been prepared by E. D. Smith, of which the first volume, entitled Thesaurus Alcoranum Testamenti, was published at Edinburgh in 1874. This work, though it is characterized rather by fulness of details than by comprehensive principles, yet exhibits the larger signs of the most conscientious diligence. This is especially the case in all matters connected with Old-Testament exegesis. It is therefore free from the serious blemishes which damage all its predecessors, the valuable work of Schultz not excepted, as it appears as follows by a writer in the Brit. Qu. Rev. (Jan. 1875) p. 147, 148:

"Oehler was a strong believer in the supernatural, and was imbued with the most profound reverence for Old-Testament Scripture. With regard to the relation of the Old Testament to the New, he held a middle position between the liberal. The Hengstenberg and the old-fashioned majority, which did not distinguish between the two, and that of Marcialis and Schleiermacher, which entirely cuts loose the Old Testament religion from the New, reducing it to a level with the other pre-Christian religions, and making it of scarcely greater importance for the explanation of the Christian system than the Homeric of Homer. While Oehler has successfully maintained against Hengstenberg the position that the New Testament, even on an historical basis, had a distinct and separate idea New Testament旧约教义 been fully set forth in the Old, he yet holds that the connection between the two is so close as to make the doctrines of all the ideas of New-Testament salvation lie in the Old, and that both must stand or fall together. He must not be understood, however, as holding the opinion that the growth of religious ideas was owing to a certain religious sense, which became clearer and fuller with the progress of time, for he was entirely orthodox in this respect, and altogether the historian of the rationalistic schools. While admiring the author's moderation and his desire that we cannot help thinking that out of this decided opposition to the above schools arose two radical defects, which pervade the whole work, viz., a painful and unsuccessful attempt to reconcile all discrepancies between the different religious views and tendencies, e.g. to reduce to complete harmony the different parts of the Old Testament; and an entire exclusion of all sidelights from non-Biblical sources. According to his own principles, God must have gradually, and by means of enlightened leaders, removed his people more and more from heathenism; and a complete history of the process would necessarily be in accordance with heathenism with which it must have been a period in which the religious views of Judaeans and heathenists were closely allied. Yet we find scarcely an allusion to the latter. The same exclusive tendency caused him, somewhat inconsistently, to limit his view of the fivefold division of the Old Testament to this. This tendency alone would suffice to render his work, though richer in detail, inferior in breadth and completeness compared to the valuable work of the late Professor Schultz, and will cause the readers of Ewald, who lives in a different plane from ordinary men, to feel that they are entering a new world of thought and freedom."

See Theol. Theolog. Universal-Lexikon, s. v.; Kurtz, Church History (Philadelphia, 1875), ii, 375; Lehrbuch der Kirchengeschichte (Mittau, 1874), ii, 323; Hauck, Theologischer Jahrbuchbericht, vii, 239; viii, 66, 648 sq.; Worte zum Andenken an den E. F. (1872), containing the addresses made at his funeral, and also a brief sketch of his life.

Oehlmuller, Daniel Joseph, an eminent German architect, was born at Bamberg in 1791. He studied under Carl Fischer, and then visited Italy and Sicily, where he passed four years in studying and copying the principal edifices, until he was summoned home in 1819 to superintend the erection of the Glyptotheca at Munich, after the designs of Klenze. In 1821 he was commissioned to make designs in the Gothic style for a church in the suburbs of Munich, which gained him great reputation. He erected in the church of St. Theodora a national monument to the Emperor, and the Otto chapel at Kiefersfelde. Among his other works is the Church of St. Theresa at Halbermoos, in the Italian style, commenced in 1833. At the death of Domenico Quaglio, in 1837, Oehlmuller was employed to complete the works at the castle of Hoenschwangau. He died in 1839. In 1823 and 1825 he published a book containing designs for funeral monuments.

Chnstliria (αὐτοτροπία), a name for the libations of wine poured out to Hercules by the youth of Athens on each day of the month of Phaestus.

Cnonsis (οἰκώμενον, -νήματα, κύρια, διανόησις), a species of divination practiced by ancient Greeks, in which they drew conjectures from the color, motion, and other circumstances connected with the wine used in libations to the gods.

Cnoma (οἰκώμενον, οἰκώμενον, ὑπάρξις, madness) [usually Anglicized Conomana] is a term of modern invention to denote an irresistible or insane craving for alcoholic stimulants, when occurring in a habitual or confirmed form, and requiring confinement or restraint of the person for its cure. Much discussion has taken place in regard to this and other forms of what is often called Moral Insanity, the most recent views of physicians, however, tend to show that the drinking insanity, or furor bibend, as it was called by an early writer on the subject, is often associated with other forms of mental derangement, and is very apt to be, in connection with one or more of these forms, hereditarily transmitted. The subject is one of considerable interest, not only from a physical or insane character of the craving for stimulants, at least in some cases, may be regarded as a well-established fact in medicine. See Conomana. Many of the considerations adduced under the art. Ktismologia (q. v.) apply to the moral responsibility attached to persons suffering under general derangement, and particularly with increased force, as it has a peculiarly physical relation. Other questions relate to the general subject of temperance (q. v.).

Cnoma (οἰκώμενον) of Gadara, a cynic philosopher, flourished in the reign of Hadrian, or somewhat later, but before Porphyry (Synecull. p. 349 b; Suid. s. v.). He was one of those later Cynics whose philosophy consists not so much in any definite system of doctrine as in a free and unrestrained tone of thought and life. Thus the emperor Julian charges him with sensuality and profligacy; and his sarcasms upon the old cynics have led some to believe, with very little reason, that he belonged to some other sect (Julian, Ort. o. 197; vii, 209, ed. Spanheim). Suidas mentions as his works, Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον - Πολυνομον. Considerable extracts from this work are preserved by Eusebius, who tells us that the Cnoma was provoked to write it in consequence of having been deceived himself by an oracle (Eusebius, Prap. Eav. c. 18 sq.; v. 1; Socrates, H. E. iv, 13; Niceth. x, 36; Theodoret. Therap. vi, 36; x, 141 a). Julian also speaks of tragedies by Cnoma (Orat. o. 210).

Oertel, Euchlin Friedrich Christian, a German divine of note, was born at Streitberg in 1765, and flourished at Ansbach as professor at the gymnium. He died about 1845. He is the author of Christologia, or results of the latest exegetical conceptions concerning the divinity of Christ, in which sub- ordination of the other views is held up (Ansbach, 1792); and a version of the Bible from the original languages, with annotations (Ansbach, 1817, vol. i), all in German.

Oertel, Philipp Friedrich Wilhelm (better
known by his *nomenclature*, W. O. von Horne, a German author, was born at Horn, near Simmern, Aug. 13, 1798. He was the son of a clergyman; studied theology at Heidelberg; was in the charge of a parish at Mannheim from 1820 to 1835; was ecclesiastical superintendent at Sobernheim from 1835 to 1863, and subsequently resided at Wiesbaden. He died Oct. 14, 1867. He was much in the number of popular German *Gesammelte Erzählungen* (Wiesbaden, 1850—1859, 13 vols.) has passed through numerous editions.

Oetinger, Friedrich Christoph, a noted German theosophist and religious psychologist, celebrated as a mystical exponent of the sacred writings, was born on Aug. 18, 1825, in Munsterlingen, in Hesse, on May 6, 1702. He studied at the University of Tubingen, where he came in contact with some of the *inspirers*; and his studies thereupon took a decidedly mystical turn. He also devoted himself to the study of the philosophical writings of Leibnitz and Wolff, and was "altogether immersed in the doctrine of the monads." He studied Malebranche, too. After the completion of his course at the university he became intimately related to Bengal, corresponding with him and visiting him frequently. His whole object now was to impregnate the Wollian philosophy with the inspiration of Biblical elements; to make it a living, vital philosophy, and to a large extent of his own invention. He is certain therein the final principles and highest unity of all thought. He read the Church fathers industriously, especially Augustine, and pondered over the Rabbinic and their cabalistic speculations. He visited Jena and Leipsic, and in 1733 became the successor of Franchet, Spangenberg, and Zinendifer, with the last of whom he spent some time in Homburg. He also made many other journeys. He saw Leipsic, Berlin, and the large places of the Low Countries. He finally returned to Tubingen; and after having acted awhile as tutor there, and assisted count Zinendifer in his project for translating the Scriptures, he was appointed reader in theology in the University of Halle. This post he resigned however in order to travel, and especially to consult some of the eminent theologians of Holland. Returning to Wurtemberg, he was in 1738, appointed pastor at Hirschau. He had now fully adopted the views of the Pietists, whose sentiments were then obtaining the approval of many of the most learned and pious men in Germany, while they found very general acceptance among persons of a devotional temperament, with whom Oetinger was particularly acquainted. Oetinger's religious experience, however, was of a speculative character, and involved no mystic or dogmatical theoretical acquirements, and perhaps his mysticism of style, all combined to give him great influence, so that he soon came to be regarded as the Pietistic leader in that part of Germany. Oetinger was an earnest student, and in 1737, became a member of the famous Böhmische, or Bohemian, Academy, as one of the most advanced disciples of Emanuel Swedenborg, some of whose works he translated into German. His teaching of these mystical doctrines having called forth so many remonstrances from his ecclesiastical superiors, he announced his resolve not to publish any more of his writings, but he continued to furnish such of his followers as applied for spiritual advice with his written instructions. He was nominated in 1752 to the superintendence of the churches in the district of Weinsberg, and afterwards in that of Herrenberg, and subsequently bishop of Murrhard. He died February 10, 1782.

During his life Oetinger was regarded with respect approaching to reverence by his co-religionists as a philosopher and theologian, and he is still held in some estimation. He sought to elucidate the Christian system by the speculations of Böhm and Swedenborg; and he was fond of comparing and contrasting the received systems of secular philosophy with Christian philosophy, as so explained. It is only recently that attention has been excited towards his almost forgotten works. He was the theosophist of his age. His contemporaries called him the Magus of the South. He says: "I have made the idea of life which prevails in the Bible the chief feature of my theology. The Bible treats of life: 1, God as the source of life; 2, man as the conservatory of the breath of life; 3, sin as the estrangement of life from God; 4, grace as the communication of new life; 5, the Church as the society where all the qualities of this life are developed; 6, the last things as the end and issue of life." "Magic," says the fantastic old man, "is the science of the friends of God. It is of secret wisdom. But it is the sublime magic to separate yourself from yourself by means of the power of God, in order that you may make your thoughts into harmony with the love of Christ." "In antagonism to the sceptical and volatilizing tendency, he sought," says Hagenbach, "to hold firm the concrete individual, the real and the vigorous in all their picturequeness, vividness, and sensuousness, so as to combine with the spirit of the things of the world and sometimes dark, mysterious, and not comprehensible by every mind. He strives by it to represent everything in a new and original light, and in this effort he confesses that by the confusion of philosophic language it will indeed contribute to the removal of one veiled thing from the mind, leading to speak with new tongues. Men must sometimes be satisfied with only small and weak beginnings, until the knowledge of the Lord shall cover the earth as the sea." His works amount to seventy numbers; the titles of which betray his effort to combine supernatural and natural things in their higher unity; or, as he himself expresses it, "metaphysics in connection with chemistry." Of these numerous works we notice *Die unerschöpflichen Wege der Herablassung Gottes* (Leipsic, 1754) — *Abriß d. evangelischen Ordnung z. Wiederererbung* (ibid, 1735, 8vo) — *Erklärung d. Paulusnach dem historischen Worterstande* (Esslingen, 1748, and Heilbronn, 1756, 8vo) — *Inquisition in seinen communem et rationem pro judaicum philosophorum theoria ad normam Scripturae Sacrae* (Frankfurt a. M., 1748, 8vo; *Handbuch der heutigen und neuesten naturwissenschaftlichen Philosophie* (ibid, 1756, 8vo) — *Theologia ex idea vita deducta* (ibid, 1755, 8vo; trans. into German, Stuttgard, 1852, 8vo) — it is the best work of the author: *Beurtheilung der Lehre von dem Zustande nach dem Tode* (1771, 8vo) — *Einblicke in die Grundwirklichkeit der Erscheinungen* (Franckfort, 1774, 8vo) — *Gedanken von den Fähigkeiten zu empfinden und zu erkennen* (ibid, 1775, 8vo) — *Biblischer u. emblematischer Wörterbuch des Teutschen entstehungsgesetz* (Franckfurt, 1776; Stuttgard, 1849). He translated also into German and annotated the work of Swedenborg on the inhabitants of the earth, planets, and other stars (1771, 8vo). Oetinger's complete works were published at Reutlingen in 1852 sq., and his theological writings have been brought out at Stuttgart as follows: *Sämtliche theologische Schriften*, or *Theologie u. Idee des Lebens* (1856).

GETOSYRUS

The name of a divinity worshiped by the ancient Scythians, and identified with Apollo by Herodotus (iv, 59).

Oetinger, Edward Maria, a German bibliographer, was born Nov. 19, 1806, at Breisau, in Silesia, of Jewish parents. Having studied at the gymnasion of his native place, he went to Vienna, and joined the Roman Catholic Church. After 1829 he edited different periodicals at Berlin, Hamburg, Mannheim, and Leipsic, and wrote several dramas, novels, and romances. His poems, which he published under the title Buch der Liebe, were published at Leipzig in a fifth edition in 1850. Besides a historical work — Geschichte des dänischen Hofes von Christian II, bis Friedrich VII (Hamburg, 1852) — he published (1853-1858) a work on historical work, Bibliographie biographique, ou dictionnaire de 26,000 ouvrages, relatifs à l'histoire de la vie publique et privée des hommes célèbres de tous les temps et de toutes les nations (Leipsic, 1859; the same in 2 vols. Paris, 1868): Historisches Archiv, enthaltend ein systematisch - chronologisch geordnetes Verzeichniss von 17.000 der brauchbarsten Quellen zum Studium der Geschichte (Carlsruhe, 1841): - Moniteur des dates, contenant un million de renseignements biographiques, général, et historiques (Dresden, 1866-1868, 6 vols. 4to) - a work which, as a bibliographic, general, and historical lexicon, is not only of great usefulness to librarians, historians, and bibliographers, but which at its first appearance was unanimously praised as a gigantic work of German industry and scholarship. Oetinger died June 26, 1872. A supplement to his Moniteur des dates, was issued by his neice Dr. P. Schramm, the biographer of Oetinger. See Literarische Anzeigen (1872), p. 368; Kurz, Literaturgeschichte, vol. iv (see Index); Dr. K. Schütte, Deutschlands Dichter und Dichterinnen, s. v. (B. P.)

Offari, an indulgence-box, a sort of charm purchased from the Japanese priests by the pilgrims who go to Ijye.

Offa of Essex, a pious and valiant Saxon prince, deserves a place here for his great devotion to Christianness. He flourished near the opening of the 8th century. He was a youth of great personal beauty, says Lede, and his pleasing manners made him most acceptable to the people, who looked forward with hopes to the time when he should be called to govern them. He was also honorably allied to a princess of Mercia, but he left all the wealth and power and pleasure that courted him for Christ's sake and the Gospel's:

"He gave his honor to the world again, His better part to heaven."

We must confess, though a mistaken sense of duty ruled his choice, that it was no common power of religion which could take him at such an early age from all the advantages of birth and state, to live in a foreign land, in unknown society and an obscure position, and to give himself up to a life of prayer and fasting and almsgiving.

Offa, an Anglo-Saxon prince, who flourished as king of Mercia for about forty years, in the second half of the 8th century, is noted in ecclesiastical history for the dependent relations he held his part of Britain to the papal see. He was a valiant soldier and ambitious ruler; and as he extended his possessions largely, his negotiations with Rome become of importance to every student of English ecclesiastical history. He compelled the king of Kent to acknowledge his authority, and at the instigation of Cynedred, his wife, he put to death Ethelbert, king of East Anglia, and seized his states. Charlemagne called him the most powerful of the Christian kings of the West, and maintained friendly relations with him, except during a short period when traders of Offa were committed depredations upon Frankish merchants. But though Offa was successful in his acquisition of temporal power, he lost much by ecclesiastical relations with Rome, upon the good-will of which he finally came to be very dependent. Anxious to establish the ecclesiastical independence of his kingdom from other British territory, he appealed to pope Adrian—the same pontiff who wrote in defence of image-worship—to send an archbishop's pall to Higbert, bishop of Lichfield, making the six other bishops between the names Ethelbert and Higbert sub- ject to him instead of archbishop Eanbert of Canterbury. It is no great credit to pope Adrian that he consented so easily to this project, for which there was no reason but the worldly ambition of Offa; and his honesty is somewhat impeached by it, inasmuch as Offa began a practice, which was long afterwards continued, of sending a yearly present in money, called "Peters- pence," to Rome. The Saxon law speaks of this present as "the king's alma." It was not a tax paid to the pope, but to the king's officers; it led, however, afterwards to further encroachments of the bishop on the see. A council of the English Church, held at Clifton's-hoe, A.D. 868, censured this royal act as surreptitious and deceitful. King Offa was also the first prince since the days of St. Augustine to receive a papal legate for the ordering of British ecclesiastical affairs. The legates came often, at first, but since 869, when the see was directly connected with England with Rome ever since Augustine's mission. Their object was, however, to give public papal countenance to Offa's ecclesiastical departures. Offa died soon after his cruel slaughter of king Ethelbert, over whom, he was not removed. He was succeeded by his son Egfrith, who reigned only a few months. Offa is commended by the learned Alcuin as a prince of engaging manners, and studious to promote good Christian morals among his people. At the same time the prelate does not disguise that these better qualities were tarnished by deeds of avarice and cruelty; and he mentions it as a probable mark of divine vengeance that his only son Egfrith, whom he had made the sharer of his throne, died a few days after his father, in the flower of his age. Among the oppressive acts of Offa towards the Church, he seems to have usurped the property of bishops and abbeys in the monasteries; not suppressing the religious houses, but giving them as preemptions to his friends, particularly one at March, in Cambridgeshire, and the abbey at Bath, which he made bishop Heatherd of Worcester surrender to him. To establish his power the more, he enriched the abbeys of Breoton and Evesham, founded by his grandfather, with lands taken from the same bishopric or its dependent monasteries. But at a late period of his life he was led, by remorse of conscience, to found the famous abbey of St. Allan's, which he endowed with estates in various counties, which became one of the most splendid of the old Benedictine houses in early Norman times. Offa compiled laws which are mostly included in the Anglo-Saxon code of Alfred the Great. See Charters, Early Engl. Ch. ch. x; Soames, Anglo-Saxon Ch. (Lond. 1856, 12mo), p. 101-104; J. A. H. Latin Ch. during Anglo-Saxon Times (ibid. 1848, 8vo), p. 146 sqq.; Inett, Origines Anglicanae (see Index in pt. ii of vol. ii).

Offence may be either active or passive. We may give offence by our conduct, or we may receive offence from the conduct of others. The original word (exoχiνον), in our version usually rendered "offend," literally signifies "to cause to stumble," and by an easy metaphor, to occasion a fall into sin (Matt. v. 29). It may, therefore, apply to ourselves as well as to others (Matt. xvii. 6-13). Hence the noun exοχινος signifies not only "an offense," in the common use of the term, but also a stumbling-stone, a trap, a snare, or whatever impedes our path to heaven (Matt. xvii. 17; Rom. xiv. 13; I Cor. x. 32). Sometimes offence is taken unreasonably; men, as Peter says, "stumble at the word, being ignorant of it" (1 Pet. ii. 7). Hence we read of "the stumbling-block of the cross" (Gal. v. 11; vi. 12). To positive truth or duty we must adhere, even at the hazard of giving offence; but a woe is on us if we give it unnecessarily.
OFFERING

(Rom. xiv, 13-21; 1 Cor. viii, 9-18). We should be very careful to avoid giving just cause of offense, lest we prove impediments to others in their reception of the truth, in their progress in sanctification, in their peace of mind, or in their general course towards heaven. We are not to abridge or deny ourselves in means things, rather than, by exercising our liberty to the utmost, give unceasing to Christians weaker in mind or weaker in the faith than ourselves (1 Cor. x, 32). On the other hand, we should not take offense without ample cause, but endeavor by our exercise of charity, and perhaps by our increase of knowledge, to think favorably of what is dubious, as well as honorably of what is laudable. It was foretold of the Messiah that he should be “a stone of stumbling and a rock of offense” (Isa. viii, 14; Rom. ix, 32, 33; 1 Pet. ii, 6). Perhaps predictions of this kind are among the most valuable which Providence has preserved to us, as we see by them that we ought not to be discouraged because the Jews, the natural people of the Messiah, rejected him, and still reject him: since the very offense they take at his humiliation, death, etc., is in perfect conformity to and fulfillment of those prophecies which foretold that, however they might profess to wish for the great Deliverer, yet when he came they would overlook him, and stumble at him. OFFENCE, ECCLESIASTICAL. See Penance; Penance; Penance; RECONCILIATION; TRIAL.

Offenhausen, Salomon Zenia, a pietistic who lived about the beginning of the 16th century. We know nothing of him beyond the fact that he wrote an apologetic work against the Jewish convert S. F. Breun and his work, Jüdischer obrstrebester Schlangenbalsam (Nuremberg, 1614), entitled Ὠδεῖαν ίδρύσεως (Hanover, 1615), written in Judaeo-German and in rabbinical letters, which was translated into Latin by Jo. Wulfer, under the title Thetlriaca ad examen revocata (Nuremberg, 1681), of which some excerpts are found in Eisenmenger’s Mainfuss Judenbändchen, vol. vii, p. 145; Först, Bibl. Jud. iii, 46; Wolf, Bibl. Hebr. i, 358; ii, 245; Steinschneider, Jewish Literature, p. 213; Jöcher, Allgemeines Gelehrt-Lexikon, iv, 2194 sq.; de Rossi, Dizionario storico degli autori Ebrei, p. 290 sq. (Germain, transal by Hamberger); by the same author, Bibliotheca Judaeorum Antichristianorum, p. 126 (Paris, 1800); Eisenmenger, Neuentdecktes Judentum, vol. i (index of the Germano-Hebrew books referred to in his work); Fabricius, Delectus argumentorum et syllabus Scriptorum, etc. (Hamburg, 1725, p. 588 sq.). (B. P.)

Offering (the general name for which in Hebrew is מֶפֶן, ἔρος, korban; although several other words are so rendered) is anything presented to God for the accomplishment of certain religious purposes, which being in the Jewish, as well as in all other religions, considered as the one thing needful, has always constituted an essential part of public worship and private piety. In the treatment of this topic we bring together the ancient information with whatever light modern research has thrown upon it.
